JEWISH STUDIES IN NORTH AMERICAN HIGHER EDUCATION: THE VANTAGE POINT FROM 2006. From the 1970s, Jewish/Judaic studies continued to thrive and expand in a variety of North American institutions of higher learning, in significant part though the philanthropy of individual donors. The growth of personal wealth in this era, together with increasing communal concern about strengthening of Jewish identity at a formative period in young people's lives, have led to a proliferation of endowed faculty positions, programs, and Jewish/Judaic studies centers, both at public and private research universities offering graduate degrees and at institutions with a primary focus on undergraduate education. Information from Jewish population surveys which shows that as many as 40% of Jewish students in North America take at least one course in Jewish Studies during their undergraduate careers has added further impetus to such initiatives. Although, definitive data as to the number of such positions, programs, and departments were not available in 2006, an unofficial directory of directors and chairs of Jewish studies entities of one kind or another listed over 70 individuals. Although not all positions in Jewish Studies in North America are dependent on this kind of outside funding, the investment of philanthropic resources to fund Jewish Studies has been a wonderful boon for colleges and universities and for the field itself. However, such dependence on donor generosity has also raised challenging issues of academic objectivity versus parochial communal agendas; questions of undue dependence on donors' particular interests and propensities; and concern over the increasing amounts of faculty time and effort devoted to fundraising activities. Moreover, additional donor-driven funding for lecture series, visiting scholars, student scholarships, etc., has often placed Jewish studies programs in a privileged position in relation to other older and larger academic

departments as well as to newer, struggling academic entities. In the best circumstances, Jewish studies directors have found ways to create intellectual and interdisciplinary partnerships with less well-endowed academic departments and programs in endeavors of mutual interest.

While many donors to Jewish studies programs at colleges and universities with significant Jewish student bodies have expressed particularistic concerns about educating Jewish students as a way to strengthen Jewish identity formation, others have chosen to endow Jewish Studies positions and programs at institutions, both public and private, that do not have a critical mass of Jewish students, including colleges and universities in parts of North America with small Jewish populations and at institutions linked to the Roman Catholic Church and various Protestant denominations. These donors, some of whom were also interested in supporting local institutions, argued that Jewish studies should be integrated into the academic curriculum of all institutions of higher education; they hoped, as well, that exposing diverse groups of students to academic study of aspects of the Jewish experience would increase understanding and tolerance in the larger North American society.

Changing demographics in the early 21st century make clear that the absolute numbers of Jews in the larger population, including student populations, is in steady decline. The future of Jewish Studies in North American universities will depend on the field's appeal to a larger constituency. Most Jewish Studies programs design their curriculum and courses to appeal to the broadest possible student audiences, in part by ensuring that their courses fulfill university "general education" and "diversity" requirements. Already in 2006, more and more students who take courses and choose undergraduate majors and graduate training in Jewish Studies are non-Jews who come to the field out of intellectual curiosity, not out of interest in their own religious or ethnic heritage. Similarly, increasing numbers of scholars and faculty members who work in Jewish Studies are not themselves Jews. This phenomenon is indicative of the increasing integration of Jewish Studies as the field has moved beyond being an academic venture "about Jews, by Jews, and for Jews." While this "normalization" of Jewish studies within the university is desirable from a scholarly point of view, it also points to potential future conflict between academic Jewish studies programs and the concerns of the Jewish communities and donors who have thus far been absolutely essential to the presence and success of Jewish Studies at many North American institutions. Communal funding of positions in Israel studies is one area which has proved particularly contentious when scholars who are supported by endowment funds voice views that do not accord with some local opinions about Israeli history, society, and politics.

Jewish studies programs and departments in North America have consistently encouraged their students, undergraduate and graduate, to study in Israel. Many programs have also welcomed academic colleagues from Israel into their

midst as speakers and visiting scholars. These ties have been strengthened for many by participation in the World Union of Jewish Studies (centered at The Hebrew University), which holds conferences every four years in Jerusalem. Recent decades have also seen the growth of Jewish studies organizations in Western Europe and in Eastern Europe and the former Soviet Union. Among these are the European Association for Jewish Studies (EAJS), founded in 1981, with offices in Oxford, UK, which encourages and supports the teaching of Jewish studies at the university level in Europe and furthers an understanding of the importance of Jewish culture and civilization and of the impact it has had on European cultures over many centuries. In Russia, SEFER, housed at the Moscow Center for University Teaching of Jewish Civilization, is an umbrella organization for university Jewish Studies in the CIS (Commonwealth of Independent States) and the Baltic States. It seems likely that, in the future, Jewish studies professionals from North America will play a growing role in an increasingly vibrant and active international community of students and scholars.

[Judith R. Baskin (2nd ed.)]

In the U.S.S.R., 1950–1990

In the year 1950 Jewish studies in the Soviet Union reached a low point. Research under independent Jewish auspices had ended by fiat in 1930. Jewish departments at Soviet academic institutions, which published their studies in Yiddish – the official Jewish language – had been in decline even before World War II; the Office for the Study of Soviet Jewish Literature, Language, and Folklore at the Ukrainian Academy of Sciences was the only such body which still existed after the war, but it was closed early in 1949 as part of the secret Stalin purge of Jewish culture. Its head, the Yiddish linguist Elijah Spivak, perished in prison in 1950. It has been surmised that the closing at the time of the Chair of Assyriology-Hebrew Studies at Leningrad University was politically motivated. The low esteem in which the Jews and their culture were then held by the Soviet establishment can be seen in the short and prejudiced entry "Evrei" ("Jews") in the second edition of the *Boł'shaia sovetskaia entsiklopediia* ("Large Soviet Encyclopedia"), which went to press in 1952.

After Stalin's death in 1953 there were slow but perceptible changes. Translations from the Yiddish began to appear, followed in 1959 by the resumption of Yiddish publishing and from 1961 by the appearance of the still existing Yiddish journal *Sovetish Heymland*. But these concessions did not include a revival of the scholarship under academic auspices which had been a part of Soviet minority policy between the wars. For a considerable time the only outlet was the traditional one of Jewish studies under the broader aegis of Near Eastern studies. These themselves were then being reorganized, with the "Institut vostokovedeniia" (Institute of Oriental Studies) temporarily renamed "Institut narodov Azii" (Institute of the Peoples of Asia). The Institute of Oriental Studies, being attached to the Soviet Academy of Sciences, was in Moscow but maintained a Leningrad (St. Petersburg) branch, at

which Semitics were more actively cultivated. At the same time Leningrad University remained the instructional center for this branch of learning, continuing a tradition dating back to czarist times.

Around 1951 the “Russian Palestine Society,” moribund since 1930, was revived as an affiliate of the Soviet Academy of Sciences. In czarist days this organization, known then as the “Pravoslavnic Palestine Society,” had been more missionary than scholarly. Its reappearance, and the revival in 1954 of its publication *Palestinskii sbornik* (“Palestine collection”), raised eyebrows and was seen by some as directed against the new State of Israel. It seems more likely that it was part of the wave of Russian patriotism then encouraged by Stalin and was intended to point out the continuing Russian interest in the Near East and its emerging states – while for political reasons avoiding all mention of the State of Israel and indeed the modern Jewish settlement in Palestine. However, this taboo was not extended to ancient Israel or medieval Jewry, so that, beginning with volume 2 (1956), Jewish studies have a modest place in *Palestinskii sbornik* alongside a plethora of articles on Arabic studies, Persian studies, Egyptology, and related fields. Circumspection demanded that studies on biblical and talmudic themes avoid the words “Bible” and “Talmud” in the title of the article; thus, in an article comparing the Samaritan Pentateuch with biblical citations in the Jerusalem Talmud, the latter is called a “Palestinian oral tradition” (v. 15, 1966). The author, Isaac Vinnikov (1897–1973), a veteran Arabist, Aramist, and talmudist, had been the last incumbent of the Chair of Assyriology-Hebrew Studies at Leningrad University, and contributed regularly to *Palestinskii sbornik* until his death. His major contribution was a dictionary of Aramaic inscriptions extending over a number of issues. Vinnikov called on the Judaic scholars of the world to produce dictionaries and concordances of talmudic and targumic literature which would take into account recent research; and as a sample published his material on the letter g (v. 5, 1960).

Another talmudist who wrote in this period but did his most important work earlier was Judah Solodukho (1877–1963), whose studies of the social history of “Iraq” in the first centuries of the Christian era were actually studies of the Babylonian Talmud.

A contributor to *Palestinskii sbornik* was Joel Weinberg, or Veinberg in his Russian-language articles. Weinberg, born in 1922 in what was then independent Latvia, was a professor of ancient history at the University of Daugavpils (Dvinsk), and his interests included the biblical period. In the 1960s he published two books in Latvian on the Bible and its setting. Like many other scholars in this era of more open communication, he wrote frequently for academic journals in the West. Contributors to *Palestinskii sbornik* also included the Hebrew linguist Anatolii Gazov-Ginzberg, the Qumran (Dead Sea community) scholar Klavdiia Starkova, and the versatile Semitist Elijah Shifman. Gazov-Ginzberg (b. 1929) changed his name to Amnon Ginzay and was a translator and editor in

Israel. Starkova (b. 1915) had a book on the Qumran scrolls accepted in the journal’s monograph series (v. 24, 1973). She was also one of Russia’s few experts on medieval Hebrew literature and had written on the poetry of Judah Halevi. Among the many writings of Shifman (1930–1990), a specialist on Phoenician civilization, was *Vetkhii Zavet i ego mira* (“The Old Testament and its World,” 1987) – published at a time when the Bible had again become a legitimate part of world literature for the Soviet reader.

Palestinskii sbornik, which over the years had become more hospitable to Jewish studies, began to include reviews of recent Judaica in its book review section in the 1970s. In the 1980s, however, the journal became more overtly political and published articles on the Palestine problem which depicted Israel as the main obstacle to peace in the area.

The Soviet reorganization of Semitic and Near Eastern studies at the beginning of the 1950s left the journal *Vestnik drevnei istorii* (“Bulletin of Ancient History”) untouched. Among its regular contributors was Joseph *Amusin (1910–1984), a Bible scholar whom Soviet writers and intellectuals used to consult on the subject. Amusin became the Soviet Union’s leading expert on the Dead Sea scrolls after these were discovered and wrote both popular and scholarly books on the topic, including shortly before his death, *Kumranskaia obshchina* (“The Qumran Community,” 1983). In 1971 a translation of the scrolls into Russian under his editorship produced its first volume.

In general, however, book-length studies on Judaic topics in the period covered by this survey were few. Some relatively early examples are: Nikita Meshcherskii’s edition of the Slavonic Josephus (1958); and Mikhail Artamonov, *Istoriia khazar* (“The History of the Khazars,” 1962). The latter book, by a non-specialist, was considered antisemitic by the Israeli historian Shemuel Ettinger, since Artamonov not only rejected the idea of a Khazar heritage in Russian history – an idea generally accepted – but even considered the conversion of the Khazar royal court to Judaism as a negative factor in and of itself (see Ettinger’s review in *Kiryat Sefer*, v. 39, pp. 501–504).

Starkova and Meshcherskii (b. 1906, an expert on translations of old Hebrew classics into Slavic) belonged to the small group of Russians with an interest in classical Hebrew. So did Igor Diakonov (b. 1915), the elder of Soviet Near Eastern studies, whose works on the languages of the ancient East include Hebrew and who has translated biblical poetry into Russian. In this connection we also take note of an outstanding Russian Semitist from an earlier generation, Pavel Kokovtsov (1861–1942), who taught Meshcherskii, Vinnikov, and many others in the interwar period; in Hebraic studies (“gebraistika” in Russian) he is best known for his edition of the correspondence between the Spanish Jewish courtier Hasdai ibn Shaprut and the king of the Khazars (*Evereisko-khazaraskaia perepiska v X veke*, 1932).

In the “First Conference on Semitic Languages” held in Tbilisi (Tiflis), Georgia, in 1964, Hebrew had a prominent

place, and even modern Hebrew entered the discussions. The editor of the conference proceedings – published in 1965 as volume 2 of *Semitskie iazyki* (“Semitic Languages”) – noted in the introduction that “Hebraistics were one of the most important and oldest areas of Semitology,” and singled out the then new Hebrew-Russian dictionary (*Ivrit-russkii slovar’*) by Feliks (Faitl) Shapiro (1876–1961), edited by Ben-zion Grande (1891–1974) and published in 1963. The Iranist Michael Zand (b. 1927), subsequently a professor at The Hebrew University, dealt with Yiddish as a substratum of Hebrew, and the Semitist Meir Zislin (b. 1916) wrote on some medieval Hebrew grammars. The participants also included the leading Georgian Aramaist Konstantin Tsereteli (b. 1921), who helped make the University of Tbilisi a center of Semitic studies alongside the better known institutions in Leningrad and Moscow.

As usual the atmosphere in Georgia was freer than the one found in the north, and Hebrew was not neglected in the work being carried on in Tbilisi. In 1975, Tbilisi University published a Karaite Hebrew grammar, *Ma’or Ayin*, edited by Zislin, while under the patronage of the Georgian Academy of Sciences Nisan Babalikhshvili edited a collection of local Hebrew inscriptions, largely from tombstones: *Evreiskie nadpisi v Gruzii, XVIII–XIX vv.* (“Hebrew Inscriptions in Georgia, 18th to 19th Centuries,” 1971). Babalikhshvili (1938–1986), the son of the rabbi of Tbilisi, unfortunately died at a young age. So did the talented young Georgian Jewish Hebraist Boris (Dov) Gaponov (1934–1972), whose translation of the Georgian national epic, Shota Rostaveli’s “The Man in the Panther’s Skin,” was published in Israel with the collaboration of the Georgian Academy of Sciences (Oteh or ha-namer, 1969). Gaponov’s first-rate translation, which made a strong impression, became the subject of a dissertation submitted in 1985 to the University of Tbilisi by a young Hebraist Manana Gotsiridze. Earlier, in 1982, Yurii Kornienko had defended his dissertation at the same university on the morphology of word formation and word change in contemporary Hebrew.

At the 1964 conference we see the use of the word “Ivrit” in Russian to designate Hebrew in place of the earlier “drevneevreiskii iazyk” (“Old Jewish language”). By the time the third edition of the Large Soviet Encyclopedia appeared in the 1970s, “Ivrit” had become the standard term for the language; the entry “Ivrit” was written by the Soviet Semitist-Hamitist Aaron Dolgoposkii (b. 1930), subsequently teaching at the University of Haifa. In this connection we note that the abovementioned Hebrew-Russian dictionary, the life work of the educational specialist Feliks Shapiro, was scheduled for publication in the 1950s but was withdrawn – whereupon the author turned to the highest party circles in an attempt to prove the work’s importance for Soviet Semitology (see the Russian commemorative volume *Feliks Lvovich Shapiro*, edited in Israel by his daughter Leah Prestin, 1983). The dictionary, which finally appeared after its author’s death, served Soviet academic institutions as well

as the young Jews studying their ancestral tongue more or less surreptitiously.

However, the official language of Soviet Jewry remained Yiddish, and the veteran Yiddish grammarian Emanuel Falkovich (1898?–1982?), who also wrote the entry “Yiddish” for the above-mentioned encyclopedia, contributed a chapter on the language to the linguistic collection *Iazyki narodov SSSR*, v. 1 (“Languages of the People of the U.S.S.R.,” 1966). Dolgoposkii and Falkovich together produced the article on Hebrew scripts (“Evreiskoe pis’mo”) for the encyclopedia. Falkovich also took an active part in the efforts of the journal *Sovetish Heymland* to teach Yiddish to Soviet Jews, although his silence on the future prospects of the language in the 1966 article makes it seem likely that he was pessimistic on the subject.

This brings us to Jewish studies in Yiddish. As noted, the Soviet authorities did not revive the interwar institutional structure to which we owe a number of studies in Yiddish on Jewish history, demography, Yiddish linguistics, Yiddish literary research, and bibliography. The older generation of scholars who had carried on this work was passing on in any case, and the absence of Yiddish schools made the problem of succession insoluble. In addition, the rapid linguistic assimilation of Soviet Jewry made the audience for what was left of Yiddish-language scholarship very small.

Yet even now some work was done. A number of scholars who had been associated with the Jewish subdivisions of the Ukrainian Academy during the 1928–1949 period were released from prisons and camps in the mid-1950s. Among them was the outstanding music folklorist Moses Beregovskii (1892–1961), who was, exceptionally, able to put together a book, posthumously published as *Evreiskii narodnye pesni* (“Yiddish Folk Songs,” 1962). Many of Beregovskii’s writings are now available in Mark Slobin’s English edition (*Old Jewish Folk Music*, 1982).

The main outlet for Yiddish-language studies was naturally the standard-bearing monthly *Sovetish Heymland*. Because of its nature as a literary journal it tended to restrict research to the history of Yiddish literature and related topics. Among the more important literary scholars was Hersh Remenik (1905–1981). Two surviving Soviet Jewish historians, Hillel Aleksandrov (1891?–1972) and Asher Margolis (1891–1976) – the former after 20 years of imprisonment for “Trotskyism” – contributed occasional articles on the borderline of history and literature. Oldtime linguists writing in the journal included Reuben Lerner (1902?–1972), Khaim Loytsker (1898–1970), Moses Maydanski (1900?–1973), and Moses Shapiro (d. 1974). Shapiro, together with the Stalin victim Elijah Spivak (mentioned above), had been working for many years on a Russian-Yiddish dictionary, which finally appeared long after their deaths (*Russko-evreiskii (idish) slovar’*, 1984).

Two other veteran scholars, the historian Israel Sosis (1878–1967?) and the demographer Jacob Kantor (1886–1964) found no outlet in Russia during this period and published

occasionally in the Warsaw Yiddish newspaper *Folksstime*, where Kantor took on the then taboo topic of Jewish participation in the Red Army. Kantor also published his last demographic study, in which he analyzed Jewish data from the 1959 census, in the Warsaw Jewish historical journal *Bleter far geshikhte* (v. 15, 1962/63, translated and annotated by the present writer in *Studies... in Honor of 1. Edward Kiev*, 1971). Sosis' unpublished "History of the Jews in Russia" was said to be in the possession of *Sovetish Heymland*.

As time went on *Sovetish Heymland* became more hospitable to studies not connected with Yiddish literature. Especially noteworthy among these are the articles by Leyb Vilsker (1919–1988), for a number of years head of the Jewish Department of the Leningrad Public Library. Vilsker was *inter alia* an expert on the Samaritan language and literature, and published *Samaritianskii iazyk* ("The Samaritan Language") in 1974. His most important contributions to the Yiddish monthly were previously unpublished Hebrew texts, such as poems of the famous medieval poet Judah Halevi (*Sovetish Heymland*, 1982, no. 2). Vilsker and his wife, Gita Gluskina (b. 1922) – a Hebraist in her own right – also contributed to *Palestinskii sbornik*. Gluskina, daughter of the Leningrad rabbi Mendel Gluskin, worked on medieval Hebrew texts and is best known for her edition of the mathematical treatise *Meyasher Akov* ("Straightening the Crooked," 1983) by Abner of Burgos. Later she moved to Jerusalem.

In the period we are dealing with, the absence of formal Jewish institutions other than synagogues did not stop young Jews from searching for their roots, and this became especially marked after the Six-Day War in 1967. The growing Soviet phenomenon of "samizdat" (private, unauthorized publishing) had a Jewish counterpart, where attempts were made to provide anthologies of Jewish literature in Russian. In 1976 the physicist Benjamin Fain (b. 1930), who later emigrated to Israel, decided to conduct a sociological survey of Jewish self-identification under "samizdat" conditions. About 1,500 Soviet Jews served as his sample, and the results are now available in English in an Israeli publication (*Jewishness in the Soviet Union*, 1984). Fain also organized a cultural symposium in Moscow at the end of 1976, to which the police put a quick end.

In the 1980s growing interest in Russian Jewish history made itself felt both inside and outside "samizdat" circles. In one of the major publications of Jewish "samizdat," *Leningradskii evreiskii al'manakh* ("Leningrad Jewish almanac," 1982–1989) Michael Beizer (b. 1950) published articles on the Jews of St. Petersburg, as the old capital used to be called. These resulted in 1986 in the "samizdat" book *Evrei v Peterburge* (published in 1990 in English translation as *The Jews of St. Petersburg* after Beizer emigrated to Israel). In the 1980s the official *Sovetish Heymland* became more receptive to articles on Jewish historical topics; the editors made a concerted effort in 1986 to print young writers and rejuvenate the journal, even if it meant translating from Russian writers who knew no Yiddish. One such, and probably the most talented of the

younger historians, was Mark Kupovetskii (b. 1955), who was engaged in what in the Soviet Union was called "ethnography." Kupovetskii published in *Sovetish Heymland* short but up-to-date demographic studies on the Jews of Moscow, the Ukraine, and the Baltic republics; a longer version of his article on the Jews of Moscow appeared in *Etnodispersnye gruppy v gorodakh evropeiskoi chasti SSSR*, 1987. Kupovetskii's colleague and fellow Muscovite, Igor Krupnik (b. 1951), contributed a survey of recent accomplishments in Jewish studies to the journal (1986, no. 11 – for an annotated English translation see the bibliography). The author emphasized the youth of many scholars, and the fact that they had no "firm academic tradition" to rely upon and had to prepare themselves through their own efforts. Krupnik devotes much attention to the work being done in Georgia; in the Russian Republic he notes among others the Moscow linguist Aleksandra Eikhenvald (b. 1957), who herself published an article on the formation of modern Hebrew in *Sovetish Heymland* (1986, no. 7 – strongly criticized by Vilsker in issue no. 11 of that year). A Leningrad scholar and bibliographer mentioned by Krupnik was Simon Yakerson (b. 1956), who also contributed to the journal on occasion. Yakerson made a name for himself by his descriptive catalogues of Hebrew incunabula found in Leningrad and Moscow libraries; these catalogues appeared in 1985 and 1988 after Soviet bibliography had neglected Hebraica for almost 50 years.

In 1987, and even more in 1988, the effects of "perestroika" made themselves felt in the field of Jewish culture and scholarship. The very conservative Yiddish monthly now turned course and began to explore a long taboo topic: the fate of Jewish writers and cultural activities in the "black years" of 1948–1952. For the first time survivors of Stalin camps published memoirs of those days in *Sovetish Heymland*. "Samizdat" now became private rather than underground publishing, but tolerance did not mean support, and the contrast between official and unofficial publications remained striking. Scholarship played a relatively minor part in the plethora of Jewish cultural associations which sprang up in the Soviet Union, but efforts were made, often imitating earlier models. In Moscow a Jewish Historical Society now existed; it was instrumental in convening there an unprecedented international conference on Jewish studies (December, 1989) and planned to publish the proceedings. In Leningrad there was a "Jewish People's University" in apparent imitation of the one which existed in the early Soviet regime. This institution organized expeditions to places of Jewish interest and tried to document the Jewish past in Russia while there was still time. The chairman of the Historical Society was Valerii Engel, while the People's University was led by Elijah Dvorkin – both men in their thirties.

Yet it must be said that the massive emigration of Jews from the country, which assumed the proportions of flight, worked against the cultural and scholarly revival. Thus, the continued existence of Moscow's *Evreiskii istoricheskii al'manakh* ("Jewish Historical Almanac," 1987–1988), a "samizdat" publication, became questionable because both of its

editors, Aleksandr Razgon (b. 1949) and Vladimir (Velvl) Chernin (b. 1958), left for Israel. Chernin, a Yiddish poet and folklorist, also wrote for official publications and tried to bridge the gap between the two spheres.

On the more hopeful side we see that modern Jewish topics, spurned for such a long time by Soviet academic editors and university administrators, were now acceptable for articles and dissertations. This was particularly true in the field of ethnography, for example, a joint article by Kupovetskii and Krupnik on the Kurdish Jews of the U.S.S.R. appeared in *Sovetskaia etnografiia* (1988, no. 2) after being reportedly rejected some years previously. Michael Chlenov (b. 1940), who had emerged as the leader of the Vaad (Board of Deputies) of the organized Jewish communities, was himself an ethnographer. Much help was given to younger scholars by the veteran Leningrad ethnographer Natalia Yukhneva, who, although not Jewish, supported Jewish ethnographic work and was actively engaged in the battle against Soviet antisemitism. Yukhneva and others mentioned here were able to visit Israel and were in contact with Israeli academic institutions.

With the breakup of the Soviet Union, Jewish Studies at the institutional level, like Jewish communal life in general, has burgeoned, largely through the Federation of Jewish Communities of the Former Soviet Union, which operates five Jewish universities, and various foreign Jewish organizations and agencies.

[Avraham Greenbaum]

Jewish Studies in France

The academic field of Jewish studies was founded in France at the end of the 19th century with the creation of the *Société des études juives, which then began to publish – and still does – a learned periodical, **Revue des Etudes Juives*, and directed the publication of the classic works of Henrich *Gross (*Gallia Judaica*, 1897) and Theodore *Reinach.

During the 20th century the pioneering works of Bernhard *Blumenkranz on medieval Jewish History, Léon *Poliakov on antisemitism, and Georges *Vajda, Charles *Touati, and Haim *Zafrani on Jewish mysticism were the most notable achievements in the field of Jewish studies in post-World War II France and provided the basis for further development. With their guidance, a process began which allowed Jewish history and Jewish studies eventually to acquire a more respected place in the French academic world, illustrated by the enrollment of researchers on Jewish themes at the National Center for Scientific Research (CNRS) and the running of programs on Jewish themes – like the New Gallia Judaica, headed by Danièle Iancu-Agou in 2005 – and their introduction into the curriculum of the universities. Despite the upheaval of World War II and the discontinuity of organized Jewish life, some scholars managed to preserve the spirit of the past and to transmit the skills of Jewish scholarship to the younger generation. But the goals changed and new horizons were sought by the new researchers.

Reflecting the revival of Jewish cultural life in France, the field of Jewish Studies grew constantly in France during the

second part of the 20th century and, more specifically, in its last decades. The traditional chairs at the Ecole Pratique des hautes études (EPHE) were challenged by the development of many courses and research centers located in universities, at the École des hautes études en sciences sociales (EHESS), and also in community institutions. With courses on Jewish civilization (history, philosophy, Jewish thought, and Jewish languages, the last mainly at Paris VIII and the Institut des Langues orientales INALCO, etc.), Jewish Studies grew out of almost nothing to become an active area of learning in almost all the main French universities (Aix-en-Provence, Lille, Lyon, Montpellier, Strasbourg, Toulouse, etc.). This evolution toward recognition of the particularity of Jewish existence during the past centuries is linked to a cultural phenomenon that brought forth on the one hand a general trend toward a quest for singular roots, and on the other hand a renewed dialogue between religions in the aftermath of World War II. It also owes much to the transformations that occurred within French Jewry: the transformation of attitudes and outlooks in the aftermath of the Six-Day War of 1967 between Israel and its Arab neighbors, and last, to the mass immigration of North African Jews to France. Simultaneously there was a significant expansion in the treatment of Jewish subjects in the press, and from the late 1980s new Jewish periodicals providing information and articles on traditional, modern, or contemporary Jewish issues (*Traces, Pardes, Cahiers du Judaïsme, La Revue d'histoire de la Shoah, Le Monde juif*) or scholarly research. In 1989 the *Alliance Israélite Universelle opened a renewed library which is now the largest Jewish library in Europe, and recently, the three major Jewish libraries (Medem, Séminaire rabbinique, and AIU) joined hands to create a common network. It also has created a College of Jewish Studies focusing its activities on the in-depth study of Jewish thought in its various manifestations, headed by Shmuel *Trigano. Deserving of mention is also the significant push given to the renewal of studies on World War II by the Institut d'histoire du temps présent (IHTP), which also administers a library, founded in 1980 and directed (1994–2005) by Henry Rousso, where a new generation of researchers is at work. The *Centre de la documentation juive contemporaine (CDJC) was initially founded in 1943 by Isaac *Schneersohn to gather all the documents related to the fate of the French Jews during the war, to bear witness, and to prosecute war criminals. In the early 1950s the tomb of the unknown Jewish martyr was dedicated at the CDJC, and it became the central memorial and symbol of Jewish memory and serves as the venue for Holocaust commemorations. In January 2005 the CDJC opened a new site under the auspices of the Memorial of the Shoah, which offers to the public a large research library and an active publication program. The CDJC organizes permanent and traveling exhibitions, conducts wide-ranging educational programs, and provides pedagogic courses for teachers and children. Community organizations, like Centre Rachi, and recently the Institut Elie Wiesel, also began to supply courses and diplomas to promote these studies and give students the opportunity to

learn something about Judaism during their studies. A new generation of scholars born or educated in France has emerged who devote themselves to particular areas of Jewish scholarship. Generally speaking, they range from the translation and interpretation of the traditional texts of Jewish thought to the study of contemporary Jewish issues. Their work falls into a number of broad areas. The first is concerned with the Jewish world as seen from within: Jewish Thought and Philosophy, Sciences, Jewish History. A second area is Textual and Classical Studies and Archaeology. A third deals with the relations of Jews with Israel and France as well as to the Holocaust. One can also distinguish between scholars born before and after World War II. The former were obviously more involved in classical and textual studies, while the latter tended to scrutinize the past to better understand the present. This change signals the passage from learned and scholarly academic work to the much more public sphere of the media. The tendency to secularize traditional teaching and endow it with the flavor of the sciences, inherited from the *Wissenschaft des Judentums, is also less and less felt, since there is an increasing demand for purely religious studies outside rabbinical and consistory circles. It is thus difficult to determine the direction of future Jewish studies.

Among the many active Jewish scholars, we shall only mention those who have published extensively. In the field of Jewish Thought and Philosophy, Charles *Mopsik (1956–2003) was one of the outstanding figures. He worked mainly on the editing and publication of original Kabbalah manuscripts in French, which were subsequently translated into other languages, such as Hebrew, Italian, Spanish, Russian, and English: *Les grands textes de la cabale: les rites qui font Dieu* (1993); *Cabale et cabalistes* (1997); *R. Moses de Leon's Sefer Shekel ha-Kodesh*, (Heb., 1996), *Sex of the Soul: the Vicissitudes of Sexual Difference in Kabbalah* (2005).

Paul B. Fenton (1951–), a disciple of the late Georges Vajda, was the head of Jewish Studies at Paris IV (Sorbonne). He focused on Judeo-Arabic philosophy and thought: *The Treatise of the Pool of Obadyah Ben Abraham Ben Moses Maimonides* (1981); *Philosophie et exégèse dans le Jardin de la métaphore de Moïse Ibn Ezra, philosophe et poète andalou du XIII^e siècle* (1997); *Joseph b. Abraham Ibn Waqar: Principles of the Qabbalah* (2004); he also edited Georges Vajda's *Le commentaire sur le "Livre de la création de Dunas ben Tamim de Kairouan (Xe siècle)* (2002). He succeeded emeritus Roland Goestchel (1930–), who worked mainly on Kabbalah and medieval philosophy: *La Kabbale* (1985); *Isaac Abarbanel: conseiller des princes et philosophe* (1996).

Dominique Bourel (1951–), a researcher at the CNRS, was the director of the Centre de la recherche française à Jérusalem (CRFJ) between 1994 and 2004. Working on German Jewish philosophers, he published *Moses Mendelssohn, la naissance du judaïsme moderne* (2004) and edited many books, such as *Max Nordau: critique de la dégénérescence, médiateur franco-allemand, père fondateur du sionisme* (1996), with Delphine Bechtel (1958–), an associate professor at Paris

IV, who focused on German Jewish literature and published *La renaissance culturelle juive en Europe centrale et orientale, 1897–1930* (2002). Bourel translated Martin *Buber's letters in *Lettres choisies de Martin Buber, 1899–1965* (2004) with Florence Heymann (1948–), a researcher at the CFRJ who wrote *Le crépuscule des lieux, identités juives de Czernowitz* (2003) and had previously published *L'historiographie israélienne aujourd'hui* (1998) with Michel Abitbol.

Shmuel Trigano, born in Algeria (1948–), a sociologist and philosopher, is a professor at Paris X. A prolific writer, he published, among many other books, *Le récit de la disparue: essai sur l'identité juive* (1977); the five-volume *La Société juive à travers l'histoire* (1992); and *Les frontières d'Auschwitz: les ravages du devoir de mémoire* (2005).

On the history of science and philosophy, Gad Freudenthal (1944–), also from the CNRS, published *Science in the Medieval Hebrew and Arabic Traditions* (2005). He edited *Studies on Gersonides: A Fourteenth-Century Jewish Philosopher-Scientist* (1992); and with Samuel Kottek and P.B. Fenton, published *Mélanges d'histoire de la médecine hébraïque* (2003).

In the field of Jewish history, Gérard *Nahon (1931–), emeritus professor at the EPHE, wrote both on medieval France and Sephardi history. He headed the Nouvelle Gallia Judaica from 1981 to 1992, directed the *Revue des Études Juives* (1972–96), and was president of the Société des Études juives. Among his books are *Inscriptions hébraïques et juives de France médiévale* (1986); *Menasseh Ben Israël, The Hope of Israel*, published with Henry Mechoulan (1987; Fr. 1979); *Métropoles et périphéries séfarades d'Occident* (1994); *Juifs et judaïsme à Bordeaux* (2003).

Gilbert Dahan (1943–) a researcher at the CNRS and professor at the EPHE, continued and deepened the work of Blumenkranz on medieval France: *Les intellectuels chrétiens et les juifs au Moyen Age*, (1990); *The Christian Polemic against the Jews in the Middle Ages* (1998, Fr. 1991), and edited *Les Juifs au regard de l'histoire: mélanges en l'honneur de Bernhard Blumenkranz* (1985).

Danièle Iancu-Agou (1945–), a researcher at the CNRS in Montpellier, also published on France: *Les Juifs en Provence (1475–1501)*, *De l'insertion à l'expulsion* (1981); *Les juifs du Midi: une histoire millénaire* (1995); *Juifs et néophytes en Provence: l'exemple d'Aix à travers le destin de Régine Abram de Draguignan* (2000).

Simon Schwarzfuchs (1927–), professor emeritus at Bar-Ilan University, who settled in Israel, published among other works *Napoleon, the Jews and the Sanhedrin* (1979); *A Concise History of the Rabbinate* (1993); and *A History of the Jews in Medieval France* (2001).

On other themes, Jean Baumgarten (1950–) a researcher at the CNRS, participated in the creation and publication of the main Jewish French periodicals and engaged in the study of Yiddish literature: *Introduction to Old Yiddish Literature*, (2005; Fr. 1993); *Récits hagiographiques juifs* (2001); *La Naissance du Hassidisme. Mystique, rituel et société* (2006).

Sylvie Anne Goldberg (1953–), at the EHESS, works

on the cultural history of traditional Judaism. She published *Crossing the Jabbok, Illness and Death in Ashkenazi Judaism in Sixteenth through Nineteenth Century Prague* (1996; Fr. 1989) and two volumes on the Jewish uses of time: *La Clepsydre. Essai sur la pluralité des temps dans le Judaïsme* (2000); *La Clepsydre II, Temps de Jérusalem, temps de Babylone* (2004).

Maurice Kriegel (1949–) headed the Centre d'études juives at the EHESS and was editor of a series on Judaism. He published *Les Juifs à la fin du Moyen âge, dans l'Europe méditerranéenne* (1979).

Daniel Tollet (1945–), at the Paris IV Sorbonne, focused on the history of the Jews in Poland, and edited a series on Jewish Studies. He published *Histoire des juifs en Pologne: du XVII^e siècle à nos jours* (1992); *Accuser pour convertir: du bon usage de l'accusation de crime rituel dans la Pologne catholique* (2000); and *Marchands et hommes d'affaires juifs dans la Pologne des Wasa (1588–1668)* (2001).

In the field of textual studies, Judith Olszowy-Schlanger (1967–), born in Poland and trained in England, was a professor of codicology and paleography at the EPHE. She published *Karaite Marriage Documents from the Cairo Geniza. Legal Tradition and Community Life in Mediaeval Egypt and Palestine* (1998); *Les manuscrits hébreux dans l'Angleterre médiévale: étude historique et paléographique* (2003); and with Geoffrey Khan and María Ángeles Gallego, *Abu al-Faraj Harun ibn al-Faraj, The Karaite Tradition of Hebrew Grammatical Thought in its Classical Form, a Critical Edition and Translation* (2003). She succeeded professor emeritus Colette Sirat (1934–), who moved to Israel after pioneering the field in France. Sirat published, among other books, *Les papyrus en caractères Hébraïques trouvés en Égypte* (1985); *Hebrew Manuscripts of the Middle Ages* (2002; Fr. 1994); and *A History of Jewish Philosophy in the Middle Ages*, 1993 (French 1983).

Classical studies are represented by Mireille Hadas-Label (1940–), former professor at INALCO, now at Paris IV Sorbonne. She published several books on Hebrew language and later focused on Jewish Greek and Latin authors: *Philon d'Alexandrie: un penseur en diaspora* (2003); *Flavius Josephus: Eyewitness to Rome's First-Century Conquest of Judea* (1993; Fr. 1989); and *Jerusalem against Rome* (2005; Fr. 1990).

Archaeology and Qumran studies are also well represented by André Caquot (1923–2004), who taught at the Collège de France: *Ugarit-Forschungen*, 35 (2003–4); *Festschrift André Caquot*, edited by Manfred Dietrich and Oswald Loretz. Caquot published with René Labat *Les Religions du Proche-Orient asiatique: textes babyloniens, ougaritiques, hittites* (1970) and, with Maurice Sznycer, *Ugaritic Religion* (1980; Fr. 1974).

André Lemaire, (1942–), archaeologist and a professor at the EPHE, whose works deals with Aramean and Hebrew epigraphy, published *Les écoles et la formation de la Bible dans l'ancien Israël* (1981) and *Naissance du monothéisme: point de vue d'un historien* (2003)

Joseph Méléze-Modrzejewski (1930–), born in Poland, was a professor at Paris I and a scholar in Greek and Egyptian papyri, focusing his research on ancient legal history:

The Jews of Egypt: from Rameses II to Emperor Hadrian (1995; Fr. 1991); *Droit impérial et traditions locales dans l'Égypte romaine* (1990).

On contemporary France, Pierre Birnbaum (1940–), professor of political science and sociology at the University of Paris I (Sorbonne), director of *Les cahiers du judaïsme*, opened a new vista on the relationship between Jews and the French Republic. He is the author of numerous books, several of which have been translated into English: *Anti-Semitism in France: a Political History from Leon Blum to the Present* (1992; Fr. 1988); *The Jews of the Republic: A Political History of State Jews in France from Gambetta to Vichy* (1996; Fr. 1992); and *The Anti-Semitic Moment: A Tour of France in 1898* (2003; Fr. 1998).

On the history of World War II France, Anne Grynberg (1951–), who was active in the AIU and editor of *Les cahiers du judaïsme*, wrote *Les camps de la honte: les internés juifs des camps français, 1939–1944* (1991). And, although living in Israel, Renée Poznanski (1948–) contributed as well with her *Jews in France during World War II* (2001; Fr. 1994).

The field of Holocaust studies developed relatively late in France, initiated with a literary approach by Rachel Ertel (1939–), professor at Paris VII, who wrote *Le shtetl, la bourgade juive de Pologne* (1982); *Dans la langue de personne* (1993); and *Brasier de mots* (2003).

Annette Wieviorka (1948–), a researcher at the CNRS, began with the problematics of remembrance, publishing with Itzhok Niborski (b. 1947 in Buenos Aires and a scholar in Yiddish) *Les Livres du souvenir: mémoriaux juifs de Pologne* (1983). Later she wrote *Déportation et génocide, Entre la mémoire et l'oubli* (1992), *The Era of the Witness* (2006; Fr. 1998), and *Auschwitz, 60 ans après*, (2005).

On Israel, Alain Dieckhoff (1958–) published *Les espaces d'Israël: essai sur la stratégie territoriale israélienne* (1987) and *The Invention of a Nation: Zionist Thought and the Making of Modern Israel* (2003; Fr. 1993).

Esther Benbassa (1950–) and Jean-Christophe Attias (1958–), professors at the EPHE; both moved from history to more polemical essays on Jewishness and the State of Israel, writing together: *Israel, the Impossible Land* (2003; Fr. 1998) and *Jews and Their Future: A Conversation on Judaism and Jewish Identities* (2004; Fr. 2001). Previously Benbassa had published, among other books, *The Jews of the Balkans: The Judeo-Spanish community, 15th to 20th centuries*, with Aron Rodrigue (1995; Fr. 1993); and *The Jews of France. A History from Antiquity to the Present* (1999; Fr. 1997). Attias published works on Karaism: *Abraham Aboulafia, L'Épître des sept voies* (1985); *Le Commentaire biblique. Mordekhai Komtino ou l'herméneutique du dialogue* (1991); and *Isaac Abravanel, la mémoire et l'espérance* (1992).

JEWISH SUCCESSOR ORGANIZATIONS in Germany, organizations for tracing and recovering heirless Jewish property of those Jews who were victims of the Nazis.

Jewish Restitution Successor Organization (JRSO)

The Americans were foremost in setting up a framework, and the first Jewish body for claims in the American Zone, the Jewish Restitution Successor Organization (JRSO), was established in 1948 with offices in Nuremberg. In 1950 a similar body, the Jewish Trust Corporation (JTC), was established in the former British Zone (northwest Germany) with the approval of the British government. Later a separate branch was established in the French Zone. A joint office was created by them for the three sectors of West Berlin.

Where the former Jewish property owner within the American Zone had died without an heir, or where no claim was made, the JRSO was empowered to file claims and apply the proceeds to the relief of needy refugees anywhere in the world. The JRSO also claimed restitution of Jewish communal property. The proceeds served primarily the religious and cultural needs of the surviving communities in West Germany and were then handed over to the general refugee funds. Where an individual claimant subsequently appeared too late to lodge his own claim application, the JRSO, as well as the JTC, adopted an equity procedure for settlement up until Dec. 31, 1958. The American organization recovered by the end of 1967 nearly 200,000,000 DM (\$50,000,000) in addition to the immovable property restored to the communities, and the operation was not yet completed. The amount recovered includes the value of property in West Berlin. The overwhelming part of the fund was obtained by a global settlement made with the authorities of the German Laender and of West Berlin, in the areas in which the property was situated or had been confiscated. The authorities were asked to pay a lump sum and, in return, were subrogated to the remainder of the unsettled claims of the organization against German individuals who had acquired the immovable property. The authorities could then make their settlement with the German owner.

[Norman Bentwich]

Jewish Trust Corporation (JTC).

The primary task of the JTC was to locate within an 18-month time limit property that remained unclaimed after June 30, 1950, the deadline established by the Restitution Law for the British Zone for claims by the original owners or their heirs. The declaration of former Jewish property by those who had acquired it under the Nazi regime proved unreliable and incomplete, so that 70% of JTC's claims for landed property resulted from its own search activities. Not a single item of former communal and organizational property remained undiscovered, and in only a very few cases did former individual property come belatedly to the notice of the JTC. The JTC en-

forced proceedings before restitution courts for the recovery *in natura* of property claimed by it, or arrived at cash settlements with those who had acquired it under the Nazi regime. Certain claims (those resulting from mass confiscatory measures of the Third Reich) were settled in bulk with the Federal German Republic and other claims (damage to former Jewish communal organizational property) with the Laender, or with Hamburg and Berlin. By the end of 1967, the JTC had recovered a total of 169,500,000 DM (approx. \$42,375,000). The Corporation by that time almost reached the end of its operations, but it was expected that about four million DM (approx. U.S. \$1,100,000) might still accrue to its funds. The major recipients of JTC funds were the Jewish Agency for Israel, for Youth Aliyah work; the American Jewish Joint Distribution Committee for *Malben work; the Central British Fund for assistance to Nazi victims in the U.K.; the Leo Baeck Charitable Trust, for assistance to Nazi victims in various countries; equity claimants; Jewish communities in Germany and their organizations; organizations for the building of synagogues and maintenance of yeshivot in Israel; and the *Hebrew University of Jerusalem.

Branche française de la Jewish Trust Corporation for Germany

In the French Zone of occupation the right to heirless and unclaimed Jewish property was originally vested by the French authorities in the Laender governments, and the proceeds were used for general indemnification purposes. In September 1951 the rights of the Laender were abrogated. In March 1952 the French Haut Commissaire for Germany appointed a specially created department of JTC, the so-called Branche Française, as the Jewish successor organization for the French Zone. The branch was fully autonomous. It had its seat in Paris and was directed by its own Conseil d'Administration. The operational office was in Mainz. The claiming period accorded to the branch ended on April 30, 1953, and the branch was limited to claims on such property as had not already been adjudicated with the Laender governments. The total amount recovered by the end of 1967 was 27,550,000 DM (approx. \$6,888,000).

After the 1960s the role of the Jewish Successor Organizations diminished. All activities ended in the 1970s.

[Charles I. Kapralik]

JEWISH TEACHERS' SEMINARY AND PEOPLE'S UNIVERSITY, the only Yiddish teachers' training college and school for advanced Yiddish studies in North America. It was founded in 1918 under the auspices of the Labor Zionist movement by Joel *Entin and Judah *Even Shemuel (Kaufman), who headed it during its formative years and provided opportunities for adult education in both secular and Jewish studies on the model of the European "Folks-Universitet." In 1935 it was incorporated by an act of legislature of the State of New York with the right to grant degrees. A Jewish Music Division was inaugurated in 1964 and in 1965 it merged with

the *Herzliah Hebrew Teachers' Institute. It acquired new premises in 1970 and had a library of 40,000 volumes, in Yiddish and Hebrew.

The Seminary provided teachers for all the groups in the Yiddish school movement, except for the Communists. Its program emphasized "the historic and religious values and institutions, the cultural heritage of Yiddish and Hebrew ... the national renaissance in the Land of Israel, the ideas of the Jewish labor movement, and the American democratic way of life." Its graduate program offers study and research in Yiddish Language and Literature, Hebrew Language and Literature, and Jewish Social Studies (the last embracing Education, History, Philosophy, and Sociology). The institute was governed by an independent board of trustees which includes representatives of the Labor Zionist Movement, the Workmen's Circle, and the Zionist Organization of America. The Seminary published a scholarly Yiddish-English quarterly *Kultur un Leben* in the 1940s.

With American Jewish education evolving along religious denominational lines in the post-World War II period, and with the Yiddish secular movement failing to rally behind its own institute of higher learning, the Seminary could not keep pace with developments in the Jewish community. A similar situation in the Hebraist Herzliah Hebrew Teachers' Institute was the cause of their merger. In spite of the centrality of Yiddish in the Seminary as against the formerly exclusive emphasis upon Hebrew in the Herzliah curriculum, the common ideological commitment to modern Jewish education within a national-cultural frame of reference allowed for parallel continuation of each program in accordance with differing linguistic commitments. The merger of the two hitherto weakened institutions prolonged the life of both for a time but was ultimately unsuccessful, and the school closed.

[Gershon Winer]

JEWISH TELEGRAPHIC AGENCY (JTA), bureau for the gathering and distribution of Jewish news. Established by Jacob *Landau in the Hague in 1914 as the Jewish Correspondence Bureau, the Jewish Telegraphic Agency was reestablished in London by Landau in collaboration with Meir *Grossman in 1919. In 1922 its headquarters was moved to New York. Under a 1950 reorganization, Landau divested himself of his stock and control passed nominally to an independent board of directors although the operating deficit on operations was being met by the *Jewish Agency. From 1960 the stock was vested in the American Jewish News Foundation. The debts due to the Jewish Agency were canceled, and the JTA became eligible to receive subventions from Jewish Welfare Funds which were essential to its survival, since less than one-third of its income came from subscriptions to its publications and the sale of its services to the press. Apart from its wire services, the JTA has published the *Jewish Daily Bulletin* from 1924. In 1962 it began a weekly bulletin, *Community News*. Boris Smolar was editor-in-chief from 1924 to 1968. Subsequently it continued to operate as a global news

agency covering Jewish affairs around the world with correspondents in more than 30 cities.

WEBSITE: jta.org.

JEWISH THEOLOGICAL SEMINARY (JTS). JTS is the primary educational and religious center of *Conservative Judaism and a leading institution for the academic study of Judaism. With its main campus in New York City, JTS is currently comprised of a rabbinical school, a cantorial school, a graduate school of Jewish Studies, a graduate school of Jewish Education, an undergraduate school, a supplemental religious high school, and several research institutes. It houses a world-class Judaica library on campus; its museum, now called the *Jewish Museum, occupies another Manhattan site.

Inception and Early History

JTS arose from the debate within the ranks of 19th century American Jewish leaders concerning the scope of religious reform. Its founders, a diverse group of religious centrists, with both traditionalist and modernist leanings, nonetheless shared the consensus that Reform was breaking too radically with Jewish norms. Responding to the highly-publicized banquet celebrating the ordination of the first class of rabbinical students at the Reform *Hebrew Union College, featuring a variety of non-kosher foods, and to the promulgation of the Reform movement's 1885 Pittsburgh Platform, dismissing biblical and rabbinic rituals regulating diet and dress as anachronisms, moderate rabbis and scholars, principally Sabato *Morais, Henry Pereira *Mendes, Alexander *Kohut, and Cyrus *Adler, organized support for the establishment of a new and more traditional rabbinical seminary. At the same time, the new academy was intended to reflect the 19th century Historical School's conception of Judaism as a developing religion. By January 1887, the Jewish Theological Seminary Association opened in New York City, with the mandate to preserve "the knowledge and practice of historical Judaism." The new school modeled its curriculum after the *Juedisch-Theologisches Seminar, Breslau, stressing biblical, historical and philosophical subjects in addition to the traditional Ashkenazi focus on rabbinics. As a self-consciously American institution, the Seminary Association sought to acculturate its largely immigrant student body to life in their new country. Despite initiatives in Jewish educational outreach and community organizing, however, Seminary Association leaders were not successful in creating a congregational base to sustain their school. Without significant congregational support, the school struggled financially during its first fifteen years and was at the point of closing in 1902. In this first phase of its existence, the Seminary Association graduated 14 rabbis and three *hazzanim*, including Joseph H. *Hertz, who became chief rabbi of the British Empire, and Mordecai M. *Kaplan, theologian, long-time faculty member at the Jewish Theological Seminary, and founder of *Reconstructionist Judaism.

Reorganization and Growth

While revered as the first president of the Seminary, Morais,

occupied with his congregational duties, had never been able to attend to the school on a full-time basis. As early as 1890, lay leaders of the Seminary began circulating the idea of approaching Solomon *Schechter, and months before Morais' death in 1897 members of the Seminary Association board offered Schechter the presidency of their school. Fluent in traditional Jewish disciplines of study and loyal to norms of ritual behavior, and yet also a leading critical-academic Rabbinics scholar and a gifted popularizer of Jewish scholarship for an English-speaking audience, Schechter exemplified the kind of religious leader the Seminary backers hoped their school would train. As Adler and the financial supporters of the Seminary Association, Louis *Marshall, Jacob *Schiff, and Judge Mayer *Sulzberger, concluded that the school needed reorganization, they invited Schechter to become the president of the faculty of the new entity, The Jewish Theological Seminary of America (JTS), completing the transition in March 1902.

Schechter saw Judaica scholarship as an instrument for strengthening Jewish life, and thus embraced the vision that JTS would provide leadership for American Jewry by training religiously observant and intellectually open-minded rabbis. To accomplish that goal, he focused on raising the level of scholarship practiced and taught within the school. Schechter engaged a faculty of young, promising academicians, including the literary scholar Israel *Davidson, the biblical scholar Israel *Friedlander, the talmudist Louis *Ginzberg, and the historian Alexander *Marx. Schechter and Marx oversaw the creation of what would ultimately become the largest Judaica library in America. Schechter transformed rabbinical training into a graduate-level course of study.

As regards undergraduate students, a 1908 New York City police report about Jewish criminality spurred Schechter to overcome earlier ambivalence on the part of the Seminary board and to extend the mission of JTS to include training teachers. This was meant to create an additional channel for providing beneficial spiritual influences to the "downtown" immigrant population. In 1909, he appointed Mordecai Kaplan as principal of the Teacher's Institute. Over time, Kaplan broadened the scope of that school's activities to include general academic undergraduate courses, and in 1931, he became the dean of the Seminary College of Jewish Studies. Under Kaplan's direction, the Teacher's Institute/Seminary College imbued JTS students with the values of cultural Zionism, Hebraism, and consciousness of Jewish community – in short, with a Kaplanian interpretation of Judaism as a religious civilization.

Schechter did not envision that JTS would become the fountainhead of a new denomination, Conservative Judaism, but rather that it would offer an Americanized and enlightened traditionalist alternative to Reform. After Schechter's death in 1915, his successor at JTS, Cyrus Adler (temporary president, 1915–24; president, 1924–40), maintained the school's ideological posture and social program, resisting calls to formulate partisan ideological platforms. Rather, he focused on the Seminary's institutional growth. During his tenure, JTS gradu-

ated 236 rabbis and 364 teachers. Working with the *Rabbinical Assembly, the successor organization to the JTS Rabbinical School alumni association, Adler began the process of professionalizing the placement of graduates in pulpits. Drawing on his experience as an administrator at the Smithsonian Institute and *Dropsie College, Adler systematized the Seminary's administrative procedures and, in 1925, amassed the core collection of its Jewish Museum. He presided over the construction of the Seminary's new campus at its current location in Manhattan. He labored to stabilize its financial condition and guided it through the difficulties of the Great Depression, while nonetheless adding to its library and hiring additional faculty members, including the Bible scholars H.L.*Ginsberg and Robert *Gordis.

The most consequential of those additions to the faculty was the hiring of Louis *Finkelstein in 1925 as a lecturer in theology. With an eye to an orderly succession, Adler promoted him steadily. By the time of Adler's final illness (1939–40), Finkelstein was the school's actual administrator and, in May 1940, became its president.

The tenure of Louis Finkelstein (1940–72), a JTS alumnus himself, represents a coming of age of the institution. By these decades, JTS was growing rapidly, and to staff its expanded programs, Finkelstein recruited administrators from the ranks of the Seminary's own graduates, notably Max *Arzt, Moshe *Davis, Simon *Greenberg, and Bernard *Mandelbaum. As part of the restructuring of administrative responsibilities, Finkelstein became chancellor, rather than president, in 1951.

While maintaining the largely traditionalist religious outlook of Schechter and Adler, Finkelstein dramatically revised the role of the Seminary. In the post-war and post-Holocaust era, JTS was to be the leader of the effort to save American Jewry from assimilation and to inculcate in society at large the values of toleration, democracy, and respect for Judaism. Among the many programs he fostered, in support of the goal of having JTS influence American Jewry and the broader American society, Finkelstein created ecumenical institutes, notably the Institute for Religious and Social Studies, and expanded JTS educational outreach to include radio and television programming. The post-war Jewish reckoning, in which JTS would help remedy the huge void in Jewish knowledge caused by the Holocaust, also figured in the reasoning behind the Seminary's opening a Cantorial School in 1952.

The expansion of the role to be played by JTS included cooperative work with the neighboring Columbia University. In 1953, the two schools opened a dual degree program for undergraduates.

Moreover, JTS moved into pre-undergraduate education. In 1945, JTS sponsored a youth leadership program, the Leaders' Training Fellowship, and three years later, it embraced the recently-opened Ramah educational summer camps. In a similar vein, in 1951, JTS opened the Prozdor, an honors-level Hebrew High School, and the Melton Research Center for Jewish Education in 1960. The Leader's Training

Fellowship initiative waned by the 1970s, but the others have flourished.

Finkelstein also presided over the geographical expansion of JTS, opening a West Coast affiliate, the *University of Judaism, in 1947, and a Seminary Center in Israel in 1962. All these activities succeeded in raising the profile of JTS dramatically.

There were tensions at JTS in the Finkelstein era. The revolutionary turbulence of the 1960s, which rocked many college campuses, also impacted on JTS. Students lobbied for greater recognition from their teachers and administrators in the conduct of seminary life and learning, and also sought to synthesize their political views with their Jewish studies. They rallied around the theologian Abraham Joshua *Heschel, who broke ranks with the apolitical profile of JTS by marching in the Civil Rights movement, working in the Soviet Jewry movement, and most controversial of all, voicing opposition to the Vietnam War.

Tension also mounted in the relationship between JTS and the Conservative Movement. In matters of religious practice, the school was frequently more traditional than the denomination as a whole, as in the maintenance of separate seating, rather than mixed seating, in the JTS synagogue. The faculty appointment of the talmudist Saul *Lieberman in 1940, and his designation as rector of JTS in 1958, decisively reconfirmed the traditionalist atmosphere at JTS for the duration of the Finkelstein administration. Finkelstein's critics, notably the leading Conservative rabbi Solomon *Goldman, criticized JTS for refusing to position itself unambiguously as a denominational school and building up the institutions of the denomination. In fact, Finkelstein's focus on affecting all of American or even world Jewry was at cross-purposes with the agenda of denominational service.

The price of engagement of a broader public affected JTS as well as the development of the Conservative Jewish denomination. During the Finkelstein era, JTS successfully sought to train a group of rabbi-scholars who were to occupy academic chairs in the expanding field of Judaic Studies. Several of the most eminent of these JTS alumni were honored at the 100th anniversary of JTS, including Robert L. Chazan, Naomi Wiener Cohen, Seymour Feldman, Jonathan Goldstein, David Weiss *Halivni, Arthur *Hertzberg, Arthur Hyman, Baruch Levine, Samuel Morell, and Jacob *Neusner. While these scholars have enriched their Judaic Studies disciplines, most of them did not work in the schools or synagogues of the Conservative Movement. Moreover, by serving other schools of higher education, they advanced a decentralization of Jewish learning that denied JTS the exclusivity that it once enjoyed.

Recent History

During the tenure of Finkelstein's successor, Gerson D. *Cohen (1972–86), the tensions between school and denomination came to a head, precipitated by the debate over the ordination of women as Conservative rabbis. The influence of the feminist movement of the 1960s and 1970s had led to the ordination

of women in the Reform and Reconstructionist seminaries, and a growing number of Conservative rabbis and laity called for JTS to admit qualified women to its Rabbinical School. Although initially opposed to that change, in the course of a movement-wide study process, Cohen became an ardent proponent of women's ordination. To his traditionalist critics, he insisted that women's ordination was fully within the parameters of Conservative Judaism. As custodian of his institution, Cohen also argued that JTS risked forfeiting its leadership position within the denomination if it failed to ordain women rabbis, seeing that the Rabbinical Assembly was moving closer to admitting women candidates ordained elsewhere. In 1983, four years after the JTS faculty rejected his first attempt to revise school policy, Cohen succeeded in gaining approval for the proposed reform. In the aftermath of that decision, with some movement traditionalists abandoning the Conservative denomination, the renowned talmudist, Weiss Halivni, resigned from the JTS faculty. Weiss Halivni, whom Cohen had not appointed rector to succeed Lieberman, became the leading scholar at the rabbinical seminary of the break-away group, the Union for Traditional Judaism.

The evolution of JTS policy on women's ordination reveals that, by the end of Cohen's tenure, the school having decisively embraced its identity as a Conservative Jewish institution, it thereby abandoned its earlier hopes to provide a non-denominational unifier for traditional and moderate American Jews. Consistent with this development, JTS opened its Ratner Archives for the Study of Conservative Judaism in 1985. Cohen likewise aligned JTS more vigorously with the development of Conservative (Masorti) Judaism in Israel. Cohen involved JTS in several educational initiatives in Israel, requiring all JTS rabbinical students to live and study for a period at the school's expanded Jerusalem campus, Neve Schechter, creating Midreshet Yerushalayim, a Conservative yeshivah program there, and, in 1984, opening a Masorti rabbinical school in Israel, the Beit ha-Midrash le-Limudei ha-Yahadut.

Cohen implemented changes in JTS governance and presided over a process of curricular revision. He established a faculty senate, unifying the faculty of the Seminary's several schools and organizing them by academic departments, and revamped the rabbinic training program to take cognizance of the diminished level of Jewish knowledge and practice among entering students, as compared to students of earlier days. He consolidated the undergraduate programs of JTS, merging the Seminary College of Jewish Studies with the Teacher's Institute. This further curtailed the Teacher's Institute's autonomy, which had begun to wane with Kaplan's retirement in 1945.

Extending Finkelstein's program of reaching audiences beyond JTS, Cohen focused on influencing the study of Judaism on the secular college campus. In 1974, Cohen replaced the underperforming JTS graduate program, the Institute for Advanced Studies in the Humanities, with a non-sectarian graduate school encompassing all non-theological graduate training. Under Cohen's aegis, the JTS graduate school became the largest institution of its kind in the Diaspora, train-

ing many of the scholars filling Judaic Studies chairs in North American universities in the late 20th century.

The desire to remain in close contact with other institutions of high learning influenced the 1973 JTS decision to remain in its Morningside Heights, Manhattan, location, despite rising crime in that neighborhood. Having decided not to relocate, JTS intensified its collaborative work with the neighboring Columbia University and Union Theological Seminary. Cohen also presided over a major enhancement of the Seminary's physical campus, building a new library to replace the structure damaged in the Seminary's disastrous library fire of 1966, and dedicating the new library in 1983. The library has grown to over 340,000 volumes and houses the most complete collection of Judaica in the Western Hemisphere. Thirty years after the fire, JTS refurbished its historic library tower, part of the continuing expansion of its physical plant. These building projects have strained the school financially but enhanced its capabilities.

When Cohen resigned in 1986, for health reasons, the JTS board appointed as his successor its provost, Ismar *Schorsch (to retire in 2006). During his tenure, JTS has built upon the developments of Cohen's era, opening a graduate school of Jewish education in 1996 and strengthening the Seminary's Israel campus. It has also embarked on new initiatives: In 1991, JTS, YIVO and the Russian State University for the Humanities opened Project Judaica, a Jewish studies training program in Moscow aimed at fostering the revival of Jewish life and learning in Russia.

As JTS chancellor, Schorsch emerged as an outspoken advocate for Conservative Judaism, publishing a monograph outlining its fundamental tenets, speaking out against discrimination faced by Masorti Jews in Israel, and opening the Schechter Institute of Jewish Studies in Jerusalem. He also brought JTS into closer relationship with the Conservative movement's network of Solomon Schechter Hebrew Day Schools. Schorsch disseminated a Conservative perspective to a wide readership, addressing the public directly in his weekly Torah commentary. On certain contemporary issues affecting JTS, however, notably the debate over the acceptance of avowed homosexuals as rabbinical candidates, Schorsch's traditionalist position was challenged within the denomination. Moreover, as the leading spokesman for his denomination, Schorsch was also criticized for the declining percentage of American Jews who self-identify as Conservative.

The American Jewish community having decentralized, JTS is no longer the sole Conservative Jewish center of higher learning and rabbinic training. In 1996, the University of Judaism opened its own Ziegler School of Rabbinic Studies. A harsh reaction by the mother institution led to a formal separation of the two institutions. Nonetheless, JTS remains the most influential Conservative higher-educational institution in the world.

JEWISH WAR VETERANS OF THE U.S.A. (JWV), active war veterans organization in the United States. From the beginning of Jewish life in America, there has been a strong tradition of military service; dating back to 1654, when Jewish settlers in New Amsterdam demanded the right to help stand guard at the stockade. The JWV has more than 300 branches in all parts of the country. Organized on March 15, 1896, in New York City by Jewish veterans of the American Civil War, it was first known as the Hebrew Union Veterans Organization. In 1917 it amalgamated with the Hebrew Veterans of the War with Spain, and in 1918 changed its name to Hebrew Veterans of the Wars of the Republic. In 1923 the word "Jewish" was substituted for "Hebrew." The present name was adopted in 1929. In 1954 the national headquarters moved from New York City to Washington, D.C. In its headquarters building the JWV maintains a National Shrine to the Jewish War Dead, consisting of a chapel, museum, library, record rooms, and a Hall of Heroes. The JWV maintains veterans service offices in 14 of the largest American cities. The JWV and its women's auxiliary carry on an active program on behalf of the war wounded and those who are patients in Veterans Administration hospitals. The group also participates in and organizes several Jewish as well as patriotic programs across the country. During the past 100 years JWV has stood for a strong national defense and for just recognition and compensation for veterans. JWV supports the rights of veterans in promoting American democratic principles, in defending universal Jewish causes, and in vigorously opposing bigotry, antisemitism, and terrorism – in the U.S. and abroad. The Jewish War Veterans cooperates with other veteran groups and is a visible reminder of American Jewish patriotism and of the fact that Jews have served in the armed forces and paid the ultimate price for that service.

[David Max Eichhorn / Ben Paul (2nd ed.)]

JEWISH WOMAN, THE, a quarterly journal that began as the in-house newsletter of the *National Council of Jewish Women (NCJW) in 1921. By the time it ceased publication in 1931, *The Jewish Woman* had reached out to a wide audience of American Jewish women through its articles and its advocacy of social issues and programs. To a great extent, the forward-looking agenda of NCJW during a crucial period of growth and redefinition in the 1920s can be gleaned by reading its journal.

Founding editor Estelle Sternberger of Cincinnati was a leading force behind *The Jewish Woman's* two-pronged

approach to its mission (and, by proxy, to NCJW's mission). The publication's first stated goal was to inform the public about issues and projects of importance to NCJW. Its second, and loftier, aim was to provide a platform for "the ideals and aspirations of Jewish womanhood in every field of endeavor." Subjects addressed in editorials and articles included the rise of antisemitism in America, anti-immigration legislation in Congress (which the magazine vehemently criticized), and the separation of church and state in public education.

Articles in *The Jewish Woman*, including those written by NCJW officers, sometimes demonstrated ambivalence with regard to the social role of NCJW members. In particular, a careful balance was maintained with regard to the organization's relationship to Jewish women who were recent immigrants to America. Pride in such developments as the opening of a Jewish School of Social Work, which the magazine's writers felt would offer opportunities for positive growth to immigrant women, was tempered by an oft-voiced concern that outsiders might perceive the Jewish community in America to be mostly foreign-born "aliens." This occasional discomfort reflected debates raging in the U.S. Congress and the public square over the increasingly restrictive quotas placed on immigration in 1921 and 1924. Journal articles that lauded pacifism, meanwhile, were indicative of a popular antiwar sentiment following U.S. involvement in World War I.

In its later years, *The Jewish Woman* embodied something of a paradox: while increasing coverage of general issues in order to appeal to women outside NCJW, the magazine showed signs of losing its audience even within its sponsoring organization. The number of articles in each issue was pared down, and attempts to institute a subscription price failed. After its October 1931 issue, the journal ceased publication. In succeeding decades, NCJW's mission and activities were represented by other magazines; first, the *Council Woman* in the 1940s and 1950s, and then the *Council Journal*.

JEWISH WORLD, English Jewish weekly newspaper published in London from 1873 to 1934. It was founded by George Lewis Lyon, a financial journalist (1828–1904), and its first editor was Myer Davis (1830–1912). Among other editors were S.L. *Bensusan, Jacob de *Haas, John Raphael, Lucien *Wolf, Stanley Fay, M.J. Landa, and David Spiro. For a time it published a Yiddish supplement, edited by Jacob *Hodess. In its time the *Jewish World* filled a position of some importance in Anglo-Jewish life, publishing articles by various Zionist leaders, as well as by non-Jewish precursors of Zionism such as Henry Wentworth Monk, and Holman Hunt, the painter. It was taken over in 1913 by the **Jewish Chronicle*, with which it was merged in 1934.

BIBLIOGRAPHY: *The Jewish Chronicle, 1841–1941 – A Century of Newspaper History* (1949). **ADD. BIBLIOGRAPHY:** D. Cesarani, *The Jewish Chronicle and Anglo-Jewry, 1841–1991* (1994).

[Josef Fraenkel]

JEWNIN, ABRAHAM JONAH (1813–1848), Russian talmudist, born in Parichi, province of Minsk. Abraham settled in Grodno, where he remained until his death. Despite his premature death he achieved renown as an outstanding scholar. He wrote novellae on the *Sefer ha-Mitzvot* of Maimonides under the title *Makhshevet Moshe*, part of which appears in the Vilna 1866 edition of the *Sefer ha-Mitzvot*, and other parts in the Warsaw 1882 edition of the *Mishneh Torah*. Abraham had three sons: NATHAN, author of *Nitei Or* (1900), novellae on the Talmud, and *Binyan Yerushalayim* on the Passover *Haggadah* (1914); SAMUEL, author of *Divrei Hefez* on the Torah (1873); and BEZALEL, who became renowned in America as a preacher.

JEW'S COLLEGE, rabbinical seminary in London. Jews' College was founded in 1855 by the Ashkenazi chief rabbi, Nathan Marcus *Adler (but with support from the Sephardi community). It had two objectives: to train English-speaking ministers and laymen in Jewish and secular subjects; and to educate boys in a Jewish secondary school. The secondary school was closed in 1879, as middle-class pupils increasingly entered secular schools, but the college continued to train ministers, readers, and teachers for the English-speaking world. From 1883 onward its pupils normally graduated at London University. The first principal, Louis Loewe (who resigned in 1858), was succeeded by Barnett Abrahams. Continental standards of scholarship were upheld by Michael *Friedlaender (1865–1907) and especially Adolph *Buechler (1907–39). He was succeeded by Isidore *Epstein (1945–61), a former student, who developed the college's activities, including a teachers training faculty, a cantors' institute, and extension lectures. On his retirement a controversy arose over the refusal of Chief Rabbi Israel *Brodie, the college president, to confirm the appointment of its tutor, Louis *Jacobs, as principal. Eventually, H.J. *Zimmels was appointed principal. Subsequent principals were Nahum Rabinovitch (1971–83), Jonathan Sacks (1984–90), Irving Jacobs (1990–93), and Daniel Sinclair (1994–). Among those who lectured at the college were such distinguished scholars as Israel Abrahams, S.A. Hirsch, H. Hirschfeld, A. Marmorstein, Samuel Daiches, and C. Roth.

Despite the distinction attained by staff and graduates, attendance at Jews' College was never high. Between 1883 and 1967, 91 qualified as ministers with a university degree, and between 1896 and 1967, 65 obtained the rabbinical diploma (47 from the course instituted by I. Epstein and conducted by K. Kahana). Twenty-two rabbis graduated between 1971 and 1995 (15 of them since 1989). The college has not always found it easy to be both a committed seminary for Orthodox minis-

ters and a college in the liberal academic tradition. Since 1989, the college has seen a resurgence of interest never experienced before in Anglo-Jewry. The College is an Associate Institution of the University of London. The 1995 student population of the college was 140. The college offers B.A. (Honours) degrees in Jewish Studies and an M.A. in Hebrew and Jewish Studies. Both degrees are accredited by the University of London. The college offers facilities leading to M.Phil. and Ph.D. degrees of the University of London in areas within the research interest of its staff.

In addition to the rabbinate, many of those who graduate with a university degree enter into the burgeoning educational field or serve the Social Services in Great Britain and lately also in Israel.

The college publishes a biannual magazine, *Le'ela*, which contains both scholarly articles and review of books of Judaic interest. The series of *Jews' College Publications* comprises a number of important contributions to Jewish scholarship. In 1995 the library, founded in 1860, contained 80,000 printed books, 30,000 pamphlets, and 700 manuscripts (including the Montefiore collection).

JEW'S TEMPORARY SHELTER, charitable institution in London. In 1885 Simon Cohen, a baker, opened a refuge for East European immigrants who had been arriving in England in large numbers since 1881. It was maintained by Cohen himself and by other immigrants; the Jewish communal authorities, opposing it as encouraging immigration, succeeded in having it closed as unsanitary. Following protests, a new Poor Jew's Temporary Shelter was opened in October of the same year by communal leaders, including Samuel *Montagu and Herman Landau, O.B.E. (1849–1921), an immigrant teacher who became a prosperous stockbroker and communal leader in Jewish religious and charitable work. The Shelter, located in Leman Street, in the East End of London, arranged for immigrants to be met at the docks and provided accommodation for a maximum period of 14 days.

After some difficulties, the Shelter established a modus vivendi with the London Jewish Board of Guardians, the main charitable body of the community, which was anxious not to encourage immigrants, although it later realized that conditions in Eastern Europe made immigration inevitable. It was largely due to the Board's influence that the Shelter prohibited a long stay and did not give cash doles to immigrants. Finally, in 1900, the problem of immigrants from Romania (the *fussgayer* movement) led to a formal agreement between the two bodies. Until 1914, between 1,000 and 4,000 immigrants and transmigrants a year stayed there.

After the main Russo-Polish immigration ended with the outbreak of World War I in 1914, the Shelter continued to receive immigrants from other countries, although separ-

ate arrangements were made for some 9,000 Belgian refugees. During the war the Shelter moved temporarily to Poland Street, in the West Central district of London, but later returned to East London, first to Leman Street and then, in 1930, to Mansell Street.

It was estimated that from 1885 to 1937 the Shelter had been responsible for meeting 1,180,000 immigrants at the docks and that 126,000 had stayed at the Shelter. During the 20th century, the Shelter was associated especially with the brothers Otto M. (1875–1952) and Ernst Schiff (1881–1931). Born in Frankfurt on the Main into the famous Schiff banking family, they settled in London and became members of the Stock Exchange. They were active communal leaders, especially in religious, charitable, and educational work. Ernst Schiff became president of the London Jewish Religious Education Board and warden of the Great Synagogue. Coming under the influence of Herman Landau, the two brothers were active on behalf of refugees, first the Belgian immigrants in World War I and then Jewish refugees in general. Otto Schiff was president of the Shelter in 1922–48, then life president. Both were honored for this work, Ernst Schiff being appointed M.B.E., and Otto Schiff first O.B.E. for his work for Belgian refugees and C.B.E. for his services to German refugees.

After World War II, the Shelter continued to help immigrants, especially refugees from Hungary and from the Middle East (Aden, Egypt, and other countries), India, and Pakistan. In 1973, it moved from East London to Willesden, an area in North-West London with a considerable Jewish population.

[Vivian David Lipman]

JEZEBEL (Heb. אֵיזֶבֶל, perhaps from זָבַל, “the exalted one” with the prefix [i:] meaning “Where is the Exalted One / Prince?” (cf. Ichabod, “Where is the Divine Presence?”). Another possibility is “The Prince Lives,” by assimilation from *ʔs zbl > yzbl > ʔyzbl and the addition of prothetic *aleph*; see Cogan, 420). “Prince” should be connected to an attested epithet of Baal. Jezebel's father's name, Ethbaal, would indicate devotion to Baal going back at least two generations, and presage her own Baalistic enthusiasm. Jezebel was the daughter of Ethbaal king of the Sidonians, wife of *Ahab king of Israel, and mother of *Ahaziah and *Jehoram (Joram), sons and successors of Ahab (note their Yahwistic names). Jezebel was born about the end of the first decade of the ninth century and was killed in the insurrection of Jehu in 841 B.C.E. Her marriage to Ahab, arranged evidently by Ahab himself (1 Kings 16:31), sealed a mutually advantageous alliance between Israel and the Tyrian Empire. She instituted the worship of the Tyrian Baal in Israel, and for her sake Ahab built a temple to Baal in Samaria that not only served the court of the queen and the Tyrian merchants, artists, and craftsmen, but deeply influenced the aristocracy of Israel. In the stories

about *Elijah, Jezebel is the prototype of the enemies of the god of Israel and his prophets. She is depicted as a zealot for the deities of her homeland, who slaughtered the prophets of YHWH (1 Kings 18:4) and supported the prophets of Baal and Asherah (1 Kings 18:19). Jezebel is a vigorous character with a strong will. She is also literate (1 Kings 21:8). The addition in the Septuagint (to 1 Kings 19:2), "As you are Elijah, and I am Jezebel," emphasized her position as the true enemy of the prophet. When Naboth defied Ahab by refusing to sell his vineyard, Jezebel instigated a judicial murder (1 Kings 21) of Naboth, a deed regarded with great reprobation in Israel. The story depicts Ahab as a weakling dominated by his wife. It must be observed that the account of the misappropriation of Naboth's vineyard in 1 Kings 21 differs from 11 Kings 9, and, significantly, omits a reference to judicial murder. After Jehu's murder of her son Jehoram, Jezebel adorned herself as a queen, perhaps as a gesture of defiance to Jehu, and Jehu ordered her thrown out of the window. Still he saw to it that she was buried, because she was "a king's daughter" (11 Kings 9:34). Jehu's baiting of Joram by referring to Jezebel's harlotries and sorceries (11 Kings 9:22) may be the rhetoric of hostility: "Your mother is a whore and a witch." It is noteworthy that rivalries at the court of the Hittite kings Murshili II (mid-14th century B.C.E.) led to similar accusations against the queen mother (Cogan and Tadmor, 110).

In 1964 Avigad published a seal from the ninth or eighth century B.C.E., which reads *yzbl*, but it is doubtful whether one can identify this name with the name of the queen.

[H. Jacob Katzenstein / S. David Sperling (2nd ed.)]

In the Aggadah

Jezebel was the instigator of the sins of her husband, Ahab (TJ, Sanh. 10:2, 28b). When R. Levi expounded the verse "But there was none like unto Ahab, which did sell himself to work of wickedness in the sight of the Lord, whom Jezebel his wife stirred up" (1 Kings 22:25), Ahab appeared to him in a dream and reproved him for dwelling overmuch on the first part of the verse. He thereupon spent two months demonstrating that Jezebel was the instigator of the sins of her husband (TJ, Sanh. 10:2, 28b). Every day she used to weigh out golden shekels for idol worship (Sanh. 102b). She also placed portraits of harlots in Ahab's chariot in order to excite him, and it was these which were smeared with his blood (cf. 1 Kings 22:38) when he was killed (Sanh. 39b). However, she was not without virtue. Whenever a funeral passed her residence, she would join in the mourning by clapping her hands, say words of praise for the deceased, and follow the cortege for ten steps. As a reward her palms, skull, and feet were not consumed by the dogs when the prophecy of Elijah was fulfilled (PDR 17).

In Christianity

In the New Testament (Rev. 2:20–23) the church at Thyatira is admonished "because you allow that woman Jezebel who calls herself a prophetess to teach and seduce my servants to commit sexual immorality and eat things sacrificed to idols." While Jezebel was probably an epithet rather than the wom-

an's name, this passage based on the accounts in the Hebrew Bible served to immortalize the name Jezebel as a byword for an utterly wicked woman.

JEZREEL (Heb. יִזְרְעֵל), city in ancient Israel. The city of Jezreel (in Heb. *Yizre'el*, "May God give seed") was founded by Israelites of the tribe of Issachar south of Shunem (abandoned in the El-Amarna period, cf. Josh. 19:18). With the decline of Beth-Shean in the Iron Age, Jezreel became the head of a district in Saul's kingdom (11 Sam. 2:9). It served as the base for Saul and his army before the disastrous battle with the Philistines at Mt. Gilboa; they camped by the spring in Jezreel (1 Sam. 29:1). Under Solomon it was excluded from the main Jezreel Valley district and was evidently assigned to the tenth district of Issachar, administered by Jehoshaphat, the son of Paruah (1 Kings 4:12, 17). Omri chose it to be the winter capital of the Israelite kingdom and all the kings of his dynasty, down to Joram, resided there. The royal palace at Jezreel was provided with a tower from which the whole vicinity could be surveyed (11 Kings 9:17). The palace bordered on the vineyard of Naboth, whose property passed to Ahab through fraud and a perversion of justice (1 Kings 21); according to the biblical tradition the dynasty of Ahab was exterminated at Jezreel in retribution for this deed – Jezebel was thrown to the dogs from the palace window and Joram was killed there along with his courtiers (11 Kings 10:11). According to the Bible, Jezreel at that time contained a wall and a gate and was administered by a council of elders and nobles (*ibid.*, 10:1, 8). After the downfall of the Omri dynasty, Jezreel declined. It appears in Judith in connection with its plain, as Esdraelon (1:8). Eusebius speaks of it as a village between Scythopolis and Legio (Onom. 108; 13 ff.); the Bordeaux pilgrim (333 C.E.) calls it Stradela (19:20). The Crusaders called it "le Petit Gerin" to distinguish it from "le Grand Gerin" (Jenin) and built a church there. The ancient remains of the city are located at the site of the kibbutz with the same name (Zarlin in Ar.; see *Yizre'el), 1½ mi. (7 km.) south of Afulah; they include Iron Age and Roman pottery.

Excavations at the tel were conducted by Tel Aviv University and the British School of Archaeology between 1990 and 1995 by D. Ussishkin and J. Woodhead. Although Early Bronze Age and Iron Age I pottery was found at the site, the first archaeological finds of significance date from the ninth century B.C.E. It appears to have served as a royal center of some importance during the Omride Dynasty (882–42 B.C.E.) and a large rectangular enclosure (332 × 184 m.) was uncovered, surrounded by a casemate wall with projecting towers

at the corners and with an outer rock-cut moat. The site was briefly in use during the eighth century B.C.E. and strata from the Persian, Hellenistic, Roman, Byzantine, and Early Islamic periods were also uncovered.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

JEZREEL, VALLEY OF (also known as the "Plain of Esdraelon"; (Heb. עֵמֶק יִזְרְעֵאל, *Emek Yizre'el*, named after the city of *Jezreel), the largest of the inland valleys of Israel, after the Jordan Valley. It consists of the alluvial plain of the Kishon River, forming a rough equilateral triangle with its base at the Carmel range and its continuation and its apex at Mount Tabor. Each side is about 20 mi. (33 km.) long and the total area about 96.5 sq. mi. (250 sq. km.). Whether the valley of the Naḥal Ḥarod (the Ḥarod Valley), its southeastern extension in the direction of the Beth-Shean Valley, should be included in the Jezreel Valley is disputed. The first mention of the "Valley of Jezreel" occurs in Joshua 17:16 where it appears together with the region of Beth-Shean as an area dominated by the iron chariots of the Canaanites and therefore outside the control of the tribe of Manasseh of the House of Joseph (cf. also Josh. 17:11–12; Judg. 1:27). When Manasseh became stronger, however, it put the cities in the Valley of Jezreel to tribute and Issachar was able to establish a foothold at the city of Jezreel itself. As a result of the battle Deborah and Sisera fought in the Kishon Valley, the northern slopes of the valley became Israelite. In their thrust westward the Midianites passed into the valley and camped in its eastern part near Gibeah-Moreh (Jebel al-Daḥī), while Gideon camped opposite them at En-Harod (Judg. 7:1). Gideon's victory secured the valley from the east. The Philistines advanced against Saul through the valley where they had bases at Shunem and Beth-Shean and tried to split his kingdom in two; however, even after Saul's defeat the district of Jezreel remained in Israelite hands (11 Sam. 2:9). David eliminated the foreign enclaves in the valley and secured it for Israel. The establishment at Jezreel of the winter capital of the kingdom of Israel strengthened its hold on the region, especially as the kings were interested in creating a royal estate in its fertile lands – an activity of which the dispossession of Naboth was but one instance. Subsequently the main part of the valley remained a royal estate of whatever power dominated the country. When Tiglath-Pileser III reduced Israel to the mountains of Ephraim, he made Megiddo the capital of an Assyrian province. After the fall of Assyria, Josiah, king of Judah, who expanded his kingdom northward, tried to bar the passage of the valley to Pharaoh Nechoh at Megiddo, but lost the battle as well as his life (609 B.C.E.).

The status of the valley is not clear under Babylonian and Persian rule. In Hellenistic times it was administered from the royal fortress of Itabyrion (Tabor). In 1 Maccabees 12:49 and in the writings of Josephus it is called "the great plain." Its position between Galilee and Samaria is not clearly defined: Galilee ended at Exaloth (I'ksol) at the foot of Mount Tabor and Samaria began at Ginae (Jenin; Jos., Wars, 3:39, 48). The villages in the plain were the property of the Hasmonean dynasty; they were taken from the Jews by Pompey but restored to Hyrcanus II by Julius Caesar (Ant., 14:207), and the valley later belonged to the Herodian dynasty. Queen Berenice had her grain stored at Besara (Bet She'arim) on the northern side of the plain. With the extinction of the Herodian dynasty the plain passed to the emperor. When the Legio VI Ferrata was posted near Megiddo at Caparcotnei (whence the place was called Legio, in Arabic Lajjūn), it was given the Jezreel Valley which was thus known in late Roman and Byzantine sources as Campus Maximus Legionis. It formed the territory of the city known as Legio-Maximianopolis in later times. The northern slopes of the valley belonged to Sepphoris from which they were separated in the fifth century and formed into the territory of Naim, which included the Plain of Exaloth (Bikat Iksalo of the Midrash; Gen. R. 98:17). In the Middle Ages the valley of Jezreel was known as the Campus Fabae ("Plain of the Bean") after the castle called La Fève. In Mamluk times it was called Merj Bani Amir after the Bedouin tribe who had occupied it. After the Crusader period the valley developed into a marshy plain, abandoned to the nomads; the swamps bred malaria which made settlement impossible. In 1799 a battle between the French army under Napoleon and the Turks was fought at Afulah. In 1918 the swift passage of Australian cavalry across the plain decided Allenby's victory. Soon after the establishment of the British Mandate, large tracts of the valley were acquired by the *Jewish National Fund (following the founding of a pioneer settlement at Merḥavyah in 1911). In the 1920s the valley was drained and settled, making it the showpiece of Zionist pioneering and progressive regional development. In 1948, after the establishment of the State of Israel, an additional 19 rural settlements were founded as well as two urban settlements – Migdal ha-Emek and Nazareth. The present-day Jezreel Valley maintains its rural character, while the major urban settlement is Afulah, also known as the "Jezreel valley capital." Kibbutz Yifat houses the Museum of the Beginning of Settlement, exhibiting items and photos of the pioneer settlement in Israel. In 2003 the Jezreel Valley numbered 412,600 inhabitants.

JHABVALA, RUTH PRAWER (1927–), novelist and screenwriter. Ruth Praver Jhabvala was born in Cologne and emigrated with her family to England in 1939. There she married an Indian architect, C.S.H. Jhabvala, and moved to Delhi, where she made her home.

Her experience as a refugee is a dark, albeit not a dominant, theme in her work. In the best of her stories of India there appears, invariably, the misplaced European, a tragic wanderer of middle age and older, a person of no means and no occupation, without a place in his adopted society, living on sufferance. The story, "A Birthday in London," depicts a gathering of German-Jewish refugees in London, long after the war, where they recall the first bitterness of their exile.

The dominant theme of Mrs. Jhabvala's work, however, is that of caste and class in India. She is a satirist, and the object of her satire is the particular element in Indian society which she knows well, that of the progressive-minded, the upper-mobile, and the culture-hungry. The world of her novels and short stories is peopled with prim Indian civil servants and their faintly dissatisfied young wives, with dreamers and faded beauties of waspish temper. To these are added the forlorn Europeans, who yearn to discover the true India, to merge with it, but who forever remain inveterately European.

Her first novel *To Whom She Will* (1955) was followed by *The Nature of Passion* (1956), *Esmond In India* (1958), *The Householder* (1960), *Get Ready For Battle* (1962), and *A Backward Place* (1965). *Travelers* (1973; published in England under the title *A New Dominion*, 1972) was acclaimed for its wit, its deft parody, and its assault on the spiritual humbug of the *gurus* and their devotees, both Indian and European. Her novel *Heat and Dust* (1975) won the 1975 Booker Prize for fiction.

Jhabvala has also published three collections of short stories, *Like Birds, Like Fishes* (1964), *A Stronger Climate* (1968), and *An Experience of India* (1971), and wrote the script of three films, *Shakespeare-Wallah* (1965), *The Guru* (1959), and *Bombay Talkie* (1971).

Jhabvala achieved worldwide fame in the 1980s through her collaboration with the film production-direction team of Ishmael Merchant and James Ivory, for whom she scripted several highly successful films, including adaptations of E.M. Forster's novels *A Room with a View* (1986) and *Howards End* (1992). Both earned Jhabvala Academy Awards for best screenplay, while the 1993 Merchant-Ivory Production *The Remains of the Day* was nominated for the same honor. More recent screenplays include *Surviving Picasso* (1996), *The Golden Bowl* (2000), and *Le Divorce* (2003).

[Dorothy Rabinowitz and Rohan Saxena]

JIHĀD, "struggle or striving, but often understood both within Muslim tradition and beyond it as warfare against infidels" (*Enc. of the Qur'ān*, s.v. *Jihād*); in other words, the Holy War. During the period of *Muhammad's stay in *Medina some of his revelations deal with the problem of the

jihād, the holy war to be waged against Allah's enemies and the infidels (e.g., Sura 2:186–90, 212–15, 245, 247). Those who fight according to Allah's way may hope for His mercy. Muhammad promises that everyone who is killed while fighting in Allah's way will win the highest reward (Sura 4:76). Such a man is a *shahīd*, a martyr.

According to Muslim religious law, the caliph is obliged to lead the *jihād* against the inhabitants of those countries which did not adopt *Islam. These countries are called *dār al-ḥarb* ("war territory"), while the countries under Islamic rule are referred to as *dār al-Islām* ("territory of Islam") – Jews and Christians could live there only as **dhimmī* ("protected people") and have to pay a poll tax (*jizya*), thereby recognizing the superiority of Islam. In practice, this bipartite division of the world was only able to last a short time during the first hundred years of Arab-Muslim expansion. For the later period the Muslim constitutional-religious law was obliged to create a third category, the *dār al-ṣulḥ* or *dār al-'ahd* ("territory of treaty") of non-Muslim countries not subject to Muslim sovereignty but connected with the *dār al-Islām* by temporary treaties; this sometimes involved the payment of a token tribute. The main cause for the creation of this compromise category was that many non-Muslim governments were considered too strong, or too far away from the center of Muslim power, to be overthrown by force. In the modern Muslim national movements and states there does not seem to be a place for the idea of a holy war against infidels. Nevertheless, it still plays a very important role among the masses. They can easily be incited by the fanaticism of leaders, preaching in the name of the *Koran and Muhammad, to initiate riots against unbelievers inside the country and at least plan a war against infidels outside the Muslim state.

The last proclamation of a *jihād* occurred during World War I when the Turkish sultan proclaimed it against his enemies, the Entente powers. This proclamation, however, proved a failure, particularly in view of the pro-British Arab revolt which started in the holy cities of *Hejaz, and also because the Sultan himself was allied with Germany, a Christian power. When some Muslim authorities later tried to proclaim their struggle against Israel as a *jihād*, they were equally unsuccessful mainly because of the Arab nationalist character of the anti-Israel campaign, which included many non-Muslims. This was the case also in many inter-Muslim wars in the second half of the 20th century, when the leaders of both sides declared the *jihād* (*Yemen-*Egypt, *Iraq-*Iran, *Algeria, and al-Qā'ida-*Saudi Arabia); but after the establishment of a Communist regime in *Afghanistan and the Soviet invasion, the declaration of *jihād* attracted Muslims from different countries who fought there for years. Some of them formed groups of warriors who were ready to take part in the wars of different Muslim minorities or states (Bosnia-Herzegovina, Chechnya and Iraq), seeing them as *jihād*. Those *jihadists* claimed that "Muslims who interpret their faith differently are infidels and therefore legitimate targets of *jihād*. Today, *jihād* is the world's foremost source of terrorism, inspiring a

worldwide campaign of violence by self-proclaimed jihadist groups" (D. Pipes, *N.Y. Post*, December 31, 2002).

The idea of the *jihād* has certain analogies to *milhemet hovah* ("the prescribed [by the Torah] war") as it is discussed in the Talmud (Sot. 44b; TJ, Sot. 8:10, 23a) and in some aspects of *kiddush ha-Shem* (the sanctification of God's name).

[Haim Z'ew Hirschberg / Isaac Hasson (2nd ed.)]

JIHLAVA (Ger. **Iglau**), city in W. Moravia, Czech Republic. Jews are first mentioned in Jihlava in 1249. In 1345 *Charles IV induced the municipality to invite Jews to settle there and promised to grant them an exceptional status. After a fire in 1353 the Jews, like the rest of the citizens, were released from paying taxes. City records covering the years from 1359 to 1420 note 2,700 financial transactions between Jews and gentiles. In 1426 *Albert V expelled the Jews because of their alleged support of the *Hussites. They settled in nearby Puklice (Puklitz), Pulice (Pullitz), Pyrnice (Pirnitz), and *Trest (Triesch). The synagogue was converted into a church in 1511. Between 1708 and 1782, Jews were admitted to the town for business purposes on payment of a special tax. In 1837, 17 Jews lived in Jihlava legally, but more were present illegally. After 1848 a community grew rapidly, opening a prayer room in 1856, a synagogue in 1863, and a cemetery in 1869. Jews were instrumental in developing industry. The community numbered 1,179 persons in 1869, 1,180 in 1921, and in 1930, 1,025 (3.3% of the total population), 327 of whom declared themselves as Jewish by nationality as well as religion. After the Sudeten crisis (1938) many Jews sought refuge in Jihlava. On Nov. 10, 1938, the synagogue was burned down, and Jewish shops were demolished on April 28, 1939. In 1940 the remaining Jews were compelled to move to the villages where Jews had lived previously. They were deported to the Nazi extermination camps in 1942. The synagogue equipment was sent to the Central Jewish Museum in Prague (see *Museums, Jewish). The congregation was revived briefly after the liberation in 1945. The cemetery is still in use. Jihlava was the birthplace of the composer Gustav *Mahler, and of Theodor Herzl's collaborator, Siegmund *Werner. The parents of Gustav Mahler and his two siblings are buried there.

[Oskar K. Rabinowicz]

JINDRICHUV HRADEC (Czech **Jindřichův Hradec**; Ger. **Neuhaus**), town in S. Bohemia, Czech Republic. In 1294 the

local lord asked permission to settle eight Jews in the town and receive royal prerogatives over them. The Jews built a small hut outside the city walls in 1315 to shelter those who arrived after dark or those visiting the town. A settlement of Jews is noted in 1389. At the request of the burghers, in the 15th century the number of Jewish families in Jindrichuv was reduced to four and its economic activities were restricted. Among the permitted occupations was that of glazier. Of the six families (31 persons) recorded in 1682, one was expelled as exceeding the limit; at that time the Jews mainly traded in textiles. Jews expelled from Prague settled in Jindrichuv in 1745. The synagogue and Jewish houses were burned down in a fire in 1801. The cemetery, consecrated around 1400, was extended in 1576. Samuel Judah b. David *Kauder served as rabbi in the town from 1822 to 1834.

Severe anti-Jewish excesses occurred in Jindrichuv in 1859, when the Jews were suspected of opposing the Hapsburgs, and again during World War I, when they were accused of being pro-Hapsburg. Jewish shops were plundered in 1919. The pro-Czech Jewish movement (*Cechů židů), led by Eduard (Leda) *Lederer, was very active in Jindrichuv. In 1905 it had the Jewish German-language school in the town closed down. There were 791 Jews in the district in 1869 and 617 in 1880; the community had 339 members in 1902 and 234 (2.5% of the total population) in 1930, eight of them of declared Jewish nationality.

The remainder of the community who had not left by 1942 was deported to the Nazi death camps. The community was not reestablished after World War II. The synagogue equipment was sent to the Central Jewish Museum in Prague. The synagogue was used from 1952 by the Hussite church. The cemetery was also used after World War II.

[Meir Lamed]

°**JIRKU, ANTON** (1885–1972), German Bible scholar. Born in Birnbaum, Moravia, Jirku was a pupil of Ernst *Sellin and the Assyriologist Friedrich *Delitzsch. From 1914 he taught at Kiel University and then held professorships at Breslau (1922), Greifswald (1934), and Bonn (1935–45). The basic trend in his work, prolific and often forced in its scholarly presentation (see his collected works *Von Jerusalem nach Ugarit*, 1966), is the attempt to understand biblical phenomena by comparing them with their ancient Oriental environment. His early works are mainly concerned with the popular religion of ancient Israel, in particular with its miraculous and magical elements (*Die Dämonen und ihre Abwehr im Alten Testament*, 1912; *Mantik in Altisrael*, 1913; *Materialien zur Volksreligion Israels*, 1914). He collected ancient Near Eastern parallels to the separate books of the Bible in his *Altorientalischer Kommentar zum Alten Testament* (1923). Numerous single studies

led up to his *Geschichte des Volkes Israel* (1931), and *Geschichte Palästina-Syriens im orientalischen Altertum* (1963). The point of departure in his later works was mainly Ugaritic texts, a selection of which he translated (*Kanaanäische Mythen und Epen aus Ras Shamra-Ugarit*, 1962). Jirku was generally conservative with regard to the Bible's historicity, accepting the biblical account of the invasion of Canaan and the attribution of the Decalogue to Moses.

JITTA, DANIEL JOSEPHUS (1854–1925), Dutch expert in private international law. Jitta believed in an international world order and he considered the creation of something like the United States of Europe a possibility. He also believed in world peace, even after World War I. People had to understand that they were not only citizens of nations, but also members of the human race, citizens of the world. He was not naive, he used to say, because he would not live to see the day.

Born in Amsterdam, Jitta was the third generation of a family which originated in Bamberg in Germany. His father was a jeweler in the family business, which was the official purveyor of jewelry to the Dutch queens Sophie and Emma, the French princess Mathilde, and the Duke of Saxe-Coburg-Gotha. Aged three Jitta moved to the Belgian capital of Brussels because of his mother's health problems. Being a very bright boy he finished the Royal Athenee when he was only 16 and went to university to read law. After graduation four years later he returned to the Netherlands, where his Belgian diploma turned out to be invalid. He went back to university in Leyden, graduated in 1880, and became a lawyer.

He began to publish on international private law. One of his earliest publications, *La Méthode du Droit International Privé* (1890), is still considered one of his most important and influential works. In 1894 he succeeded T.M.C. Asser as professor of commercial and private international law at Amsterdam University. Nine years later he succeeded Asser again, this time as member of the Netherlands Council of State.

Jitta also had a political career. From 1884 to 1894 he was a member of the Amsterdam city council for the liberals of Burgerpligt, like his father-in-law, banker and philanthropist A.C. Wertheim, and his uncle Simon Josephus Jitta (1818–1897), director of the Amsterdamsche Kanaalmaatschappij, which built the North Sea Channel.

As a student Jitta was a passionate rower and later he was one of the driving forces behind gymnastics and public swimming pools in the Netherlands. He was also a firm believer in hygiene, probably influenced by his younger brother Nicolaas (1858–1940), an eye doctor who later became chairman of the League of Nations International Office for Public Hygiene and belonged to the Hygiënisten (Hygienists), a group of medical doctors who used statistics to stimulate more care for public health. For hygienic reasons Jitta and his younger brother, unlike their parents and elder brother and sister, wished to

be cremated after their death. Although no longer a religious Jew, Jitta was still affiliated with Jewish institutions. He was a member of the board of the Jewish orphanage and mental home in Amsterdam.

JIZFĀN, JUDAH BEN JOSEPH (d. 1837), Yemenite author of scholarly books on biblical themes and scribe. Jizfān was known for two works (both still extant in manuscript): *Minḥat Yehudah*, a voluminous collection of commentaries on the Pentateuch based on some 300 printed works and manuscripts, and quoting a large number of sources; and *Panim Ḥadashot*, containing original comments on the Pentateuch by the author. Jizfān also composed threnodies on several events that took place in his lifetime, such as the drought of 1808 and the pillaging of the Jewish quarter of *San'a on Passover night in 1818. Both he and his sons Joseph and Solomon were known as gifted scribes of *Tājs* ("Torah scrolls"), prayer books and collections of Yemenite songs. Jizfān edited Yemenite songs and wrote an introduction to the poems of R. Shalem *Shabazi; this introduction, as well as his writings on biblical subjects, indicate that Jizfān was a kabbalist.

[Yehuda Ratzaby]

JOAB (Heb. יוֹאָב; "YHWH is father"), David's commander in chief; son of Zeruiah, one of David's sisters (1 Chron. 2:16). Although Joab's kinship with David no doubt helped him to attain the high post of Israelite commander in chief, his bravery on the battlefield, his powers of leadership in war, and his loyalty to David all proved him fully worthy of occupying a position of eminence in the apparatus of state government established by David. Joab first appears in David's service in the armed encounter at the pool of Gibeon between the servants of David and the followers of *Abner son of Ner. At that time Joab was already the leader of David's armed force and was empowered to muster all the men of Judah for war (11 Sam. 2:28). However, from the mention of Joab's brothers, Asahel and Abishai, in the list of David's captains (which is most probably from the early days of David's reign in Hebron), it would appear that Joab occupied a leading position in David's band of warriors even before David was proclaimed king in Hebron. In the stories about the period of David's reign in Hebron, Joab appears as the leader of David's force; but in the account of the capture of Jerusalem given in 1 Chronicles 11:6, one finds: "And David said, 'Whoever shall smite the Jebusites first shall be chief and commander.' And Joab the son of Zeruiah went up first, so he became chief." According to this verse, Joab was

appointed commander in chief only after the capture of Jerusalem, i.e., at the end of David's reign in Hebron.

Joab's successes in the wars against the supporters of Ish-Bosheth, son of the slain Saul, and the heroism that he displayed in the conquest of Jerusalem, confirmed David's confidence in his fitness to be the commander of the whole Israelite army, both in peace and in war. David demonstrated his trust in Joab in the wars in which the latter commanded the army in the field, while David himself remained in Jerusalem. When Hanun son of Nahash, the Ammonite, deliberately provoked David, the Israelite king sent Joab to wage war against the Ammonites and their allies (II Sam. 10; I Chron. 19). In this battle Joab showed his military resourcefulness and his ability to inspire his soldiers with enthusiasm and confidence (II Sam. 10:9–12). He also played a leading role in the defeat of the Edomites (II Sam. 8:13–14; I Kings 11:16; Ps. 60:2).

Despite his personal desire for honor and power, Joab displayed extraordinary loyalty to David, never attempting to diminish the respect due to his royal master. When Joab was about to reduce the besieged city of Rabbath-Ammon, he did not hurry to claim the credit of the victory for himself, but called on David to come and complete the conquest, "lest I take the city, and it be called by my name" (II Sam. 12:28). As the king's confidant and right-hand man, Joab performed various important functions in the consolidation of David's kingdom (II Sam. 24; I Chron. 11:8) and took the lead in the suppression of the revolts which threatened it from within, such as the revolts of Sheba son of Bichri (II Sam. 20:7–23) and that of Absalom (II Sam. 15–18). Joab's handling of the affair of Absalom shows his deep understanding of his royal master's nature. Knowing the king's yearning for his son, he found a way to make the king decide to bring Absalom back to Jerusalem (II Sam. 14:1–23). At the same time, Joab's concern for his own position and for the stability of David's kingdom led to his acting, in many matters, on his own initiative. Thus, he murdered Abner, after the latter had made a covenant with David and promised to bring the supporters of the house of Saul over to him. Joab's ostensible reason for killing Abner was that he was a spy (II Sam. 3:25); but, at the same time, the murder enabled Joab to take revenge for Abner's slaying of his brother, Asahel (II Sam. 2:23; 3:26–27), and also to remove from his path an obvious rival for the post of commander in chief.

Although David cursed Joab for the murder, he was too well aware of the power wielded by the sons of Zeruiah to dare to dismiss him (II Sam. 3:39). Again, Joab ordered Absalom to be killed, even though the king had urgently commanded that his son's life be spared. In this case Joab's decision was probably wise, if unsentimental. Similarly, Joab displayed political acumen by rebuking David for mourning his son, urging him instead to express gratitude to his supporters who had enabled him to defeat Absalom (II Sam. 19:6–8). Some acts performed by Joab aroused the king's anger against his commander in chief and eventually led to his tiring of him. When David promised to appoint Amasa in Joab's place (II Sam. 19:14) as the price of his leading Judah to welcome him back from his

flight to Transjordan, Joab took the first opportunity to murder Amasa (*ibid.*, 20:9–11). Though expressing his disgust at Joab's murders (I Kings 2:5), David never penalized Joab even when his reign was well established. Toward the end of David's life, Joab tried to maintain his position of power in the royal court by taking an active part in the intrigues that developed in connection with the succession to the throne, giving his support to Adonijah (I Kings 1:7). In so doing, Joab sealed his own fate, since by supporting Adonijah he was outmaneuvered by the pro-Solomon party, which moved quickly to eliminate him. According to I Kings 2:5–6, David ordered Solomon to take vengeance on Joab for the murders he had committed, and "not let his head go down to Sheol (the netherworld) in peace." When Joab realized that his life was in danger, he fled to the Tent of the Lord and seized hold of the horns of the altar. Nevertheless, Solomon ordered Benaiah son of Jehoiada to strike Joab down, justifying the action on the grounds that he was determined to carry out his father's dying injunction to remove "from me and from my father's house the guilt for the blood which Joab shed without cause" (I Kings 2:31).

[Bustanay Oded / S. David Sperling (2nd ed.)]

In the Aggadah

When David fought against the Jebusites, the inhabitants of Jerusalem, Joab the son of Zeruiah was the first to go up on the wall. David bent down the top of a young cypress growing near the wall, and Joab, climbing onto David's head, grasped the tree which, when released, enabled him to jump onto the wall (Mid. Ps. to 18:24, a story reminiscent of Sinis, "the pine bender," see Apollodorus, *Bibliotheca*, 3:9, 2). Although Joab was loyal to David throughout his life, the latter before his death commanded that he be brought to trial for having killed Abner and Amasa (I Kings 2:5). Joab was acquitted for the murder of Abner since he had thereby avenged the blood of his brother Asahel whom Abner had killed, but his defense that he was justified in killing Amasa, since he had been guilty of treason in delaying to fulfill David's command (II Sam. 20:4), was not accepted. Joab was himself accused of treason by Solomon (Sanh. 49a).

JOAB BEN JEREMIAH (d. 1810), Hungarian rabbi. Joab's father went to Hungary from Oswiecim (Auschwitz), Poland, and was *av bet din* and head of a yeshivah in Mattersdorf, one of the "seven Hungarian communities," and later in Santov (Abaujszanto). Through the efforts of Aaron Chorin, a former pupil of his father's yeshivah who then lived in Nemetkeresztur-Deutschkreutz, Joab was appointed rabbi of that community; he was subsequently appointed rabbi of Hunsdorf (Huncovce-Hunfalva) and, on the death of his father in

1806, was appointed his successor in Santov. He was one of the outstanding talmudists of his time and was eulogized as a great scholar and saint by Moses Sofer. Well-known is his work *Moda'ah Zuta*, a commentary on the work *Moda'ah ve-Ones*, which he published together with his father. His other works are *Sha'arei Binah*, on the *Sha'arei Shevu'ot* of Isaac ben Reuben *al-Bargeloni; *Hen Tov ve-Zeved Tov* (Zolkiew, 1806), on chapter 17 of the Shulḥan Arukh *Even ha-Ezer*; and *Imrei No'am*.

[Samuel Weingarten-Hakohen]

JOAB THE GREEK (Ha-Yevani; c. 1400), liturgical poet. His Arabic surname Shuau (Heb. שׁוּאוּ) and the fact that his poems are known only from manuscripts and the printed texts of the Aleppo rite, indicate that he must have lived in the Near East, apparently in Aleppo. In a religious poem Joab expressly mentions the Jewish community of this city. The surname ha-Yevani may indicate that he was born in Greece or was the son of Greek parents. In the acrostics of his 12 poems he always introduces his Arabic surname. It is possible that he may be identical with the שׁוּאוּ בֶן־נָחַם, a fragment of whose Arabic translation of Samuel ha-Nagid's *Ben Kohelet* is extant.

[Jefim (Hayyim) Schirmann]

JOACHIM, JOSEPH (1831–1907), violinist. Born in Kittsee (Kopczeny), Joachim moved with his family to Budapest where his musical education began at the age of five. He gave his first concert at seven and at nine he was taken to Vienna to study with Hellmesberger and Boehm. At 12 he went on to Leipzig, where his studies were supervised and fostered by Felix *Mendelssohn, Ferdinand *David, and Moritz Hauptmann. From 1849 to 1854 he was concertmaster of Liszt's orchestra at Weimar, and from 1854 to 1864, concertmaster and conductor of the Royal Hanoverian Orchestra. He finally settled in Berlin in 1866 as director of the newly founded Hochschule fuer Musik. There he also founded the Joachim Quartet which became the leading quartet in Europe. His pedagogical talent attracted a great number of pupils, among whom were Leopold *Auer, Jenő Hubay, and Tivadar *Nachez.

Joachim's concert activity in Europe and England continued steadily throughout his career. Although he eschewed the character and role of a "traveling virtuoso," he became, at an early age, the most notable violinist of his generation (and its most distinguished teacher): an artist in whom technique, taste, intellect, and emotion were combined to a rare degree. His interpretation of the Beethoven Violin Concerto, for example, was considered definitive. He also re-edited Mendelssohn's Violin Concerto in conformity with the original manuscript; revived the works of Tartini; and established in the repertoire Bach's works for solo violin in their original form,

without the accompaniments added by 19th-century "improvers." Joachim's friendships with the great composers and performers of his time are an important factor in the history of music in the 19th century, especially his association with Mendelssohn, Liszt, Robert Schumann, Clara Schumann, and Brahms. Joachim introduced the young Brahms to Liszt, and arranged the fateful meeting between Schumann and Brahms in 1853. Of his own compositions, which include works for violin and orchestra, violin and piano, and songs, only the Violin Concerto op. 11 ("Hungarian") survived. His cadenzas for the Beethoven and Brahms concertos, however, are still performed. He also wrote a violin method with A. Moser. Although Joachim had converted to Protestantism in 1855, his decision to resign from the Hanoverian service was finally brought about in 1864, when the violinist J.M. Gruen was refused tenure as a Jew (a principle which had not been observed in Joachim's case). Joachim tendered his resignation on the grounds that he "would never be able to surmount the purely personal feeling of having been enabled through my earlier conversion... to enjoy worldly advantages in the Royal Hanoverian Orchestra while the members of my race occupy a humiliating position there." His *Hebraeische Melodien* for viola and piano, op. 9 (1854), were inspired mainly by Schumann's enthusiasm for Byron's poems. Although Wagner thought that Joachim's break from the Liszt-Wagner circle in 1857 was due to the republication at that time of *Das Judentum in der Musik* in Wagner's name (it had first been published anonymously in 1850), the break was undoubtedly caused by musical considerations.

Hundreds of works were dedicated to Joachim, including the Schumann, Brahms, Dvorak and Bruch (nos. 1 and 3) violin concertos, Liszt's *Hungarian Rhapsody* no. 12, and Schumann's Fourth Symphony (second version, 1853).

Joachim's grandnieces, the sisters Adila Fachiri (d'Aranyi, 1888–1962) and Jelly E. d'Aranyi (1895–1966), were well-known violinists.

[Bathja Bayer]

JOACHIMSEN, PHILIP J. (1817–1890), U.S. jurist and communal worker. Joachimsen, who was born in Breslau, Germany, was taken to New York in 1827. He was admitted to the bar in 1840, and held several municipal attorneyships. Joachimsen was made brevet brigadier general for his service in the Civil War as organizer and commander of the 59th New York regiment. He served as judge of the Marine Court of New York from 1870 to 1876. Joachimsen was a leading figure in New York Jewry. He was president of the Hebrew Benevolent Society (1855), first president of the Hebrew Orphan Asylum (1859), and organizer of the Hebrew Sheltering Guardian Society for Children in New York (1879).

[Edward L. Greenstein]

JOASH (Heb. **יְאֹשָׁא**, **יְאֹשָׁא**; “YHWH has given”), son of Ahaziah, king of Judah (835–798 B.C.E.). Joash ascended the throne in the seventh year of the reign of Jehu, king of Israel (II Kings 12:2), and ruled until the second year of the reign of Joash (Jehoash) of Israel (*ibid.*, 14:1). According to II Kings 11, he was the youngest of the sons of *Ahaziah. After the death of Ahaziah, the king’s mother *Athaliah had all his sons murdered; but the infant Joash was saved by Jehosheba, sister of Ahaziah and wife of *Jehoiada, the high priest (II Chron. 22:11). Joash was hidden in the Temple for six years; in the seventh year Jehoiada plotted against Athaliah, then regent, to have him crowned. He was supported in this carefully planned plot by the captains, the messengers, and the citizens. Athaliah was killed, and Joash was appointed in the Temple in a festive ceremony. (The first mention of the decisive role of the citizens (*am ha-arez) in the choice of the kings appears in this connection.)

The ceremony seems to have been in the nature of a renewal of the dynasty (cf. the display of King David’s armament emblems and spear, II Kings 11:10; II Chron. 23:9). Accordingly, it was augmented by a joint covenant between the king and the people, in which the royal privileges and responsibilities were reestablished, and by a covenant between God, the king, and the people against the worship of Baal, which marked the beginning of religious reform in Judah. The city was cleansed of the Tyrian cult, which had taken root during Jehoram’s reign and flourished during Athaliah’s reign, and Mattan, the priest of Baal, was killed. It is not known if the “high places” in Judah were destroyed, but it is clear that the Temple in Jerusalem and the priesthood headed by Jehoiada gained in importance and achieved decisive influence in national affairs for the first time in the history of Judah. Later, the Temple was repaired (II Kings 12:7–17; II Chron. 24:4–14 is a later version with variations in details); the work was completed in the 23rd year of Joash’s reign. (The role of the king in building and maintaining temples figures prominently in ancient royal inscriptions from Egypt and Mesopotamia.) In that same year Hazael, king of Aram, attacked Israel, reached Aphek in the Sharon Plain and *Gath, and prepared to attack Jerusalem. Joash was forced to yield to Hazael; and according to II Kings 12:19, he gave him all the gold that was found in the treasuries of the Temple and the palace, and all the votive gifts that the preceding kings had dedicated to the Temple. After this surrender, Judah entered a period of political decline. The Philistines attacked the western boundaries of Judah, and Edom attacked it from the south. (Evidently, the prophecy of Amos 1:6 refers to these events.) After the death of Jehoiada during the last years of Joash’s reign, the king came into conflict with the priests. As a climax to this quarrel, according to the late narrative in II Chronicles 24, Joash commanded that Zechariah, the son of Jehoiada, be stoned in the Temple courtyard. II Chronicles 24:23–24 also relates that one year later the Arameans attacked and despoiled Judah “and destroyed all the princes of the people from among the people, and sent all the spoil of them unto

the king of Damascus.” However, the credibility of this story is very doubtful. Joash died a violent death in a conspiracy, the circumstances of which are unknown and which seems to have gained considerable support. His murderers – Jozakar (var. Jozabad), the son of Shimeath and Jehozabad, the son of Shomer (II Kings 12:21–22 [but cf. II Chronicles 24:26]) – were apparently high state officials (i.e., royal “servants”). It is of significance that they were not punished immediately. Only when *Amaziah, son of Joash, felt that he was firm on his throne did he put to death the murderers of his father. Years later, however, he too was killed in a court conspiracy (II Kings 14:19). According to II Kings 12:1 Joash reigned 40 years. But, to judge from other chronological evidence in II Kings, his reign could not have exceeded 37 or 38 years. It is still debated whether Athaliah’s 6 (or 7) year usurpation of the Davidic dynasty was retroactively included by Joash in his regnal years (i.e., Joash’s first regnal year was regarded in his official reckoning as his seventh). However, the synchronisms between the contemporary kings of Israel and Judah make it clear that the editor of the chronological framework of the Book of Kings regarded Athaliah’s regency as an independent reign, not counting it within Joash’s “40” years. Na’aman argued that the account of the temple repairs (II Kings 12) was probably based on a royal inscription. An unprovenanced tablet purporting to be the very inscription hypothesized by Na’aman, and widely publicized in the media in 2003, was shown to be a forgery (Cross).

[Hayim Tadmor /S. David Sperling (2nd ed.)]

JOB, BOOK OF (named for its hero (Heb. **יֹב**), ancient South Arabian and Thamudic *y³b*; Old Babylonian *Ayyābum*, Tell el-Amarna tablet, no. 256, line 6, *A-ia-ab*; either from *y³b*, “to bear ill-will” or compounded of *ay* “where?” and *ab* “[divine] father”), one of the Hagiographa, Hebrew *Ketuvim*, which constitute the third division of the Hebrew Canon.

Position within the Hagiographa

In most printed Hebrew Bibles the first three books of *Ketuvim* are Psalms, Proverbs, Job; in BH³ and BH⁵ however (which are based on the Leningrad manuscript of 1008 C.E.), they are Psalms, Job, Proverbs. The latter sequence is the one prescribed by the famous *baraita* in *Bava Batra* 14b. As in the case of the Prophets (*Nevi'im*), the *baraita* requires that the nonhistorical books constitute a solid block arranged according to descending numbers of **sedarim*. Proverbs contains the

same number of *sedarim* (eight) as Job; the deciding factor in its being placed after it, however, was not that it contains fewer verses but that it shares with the book which has the next highest number of *sedarim* (four) in the group, namely Ecclesiastes, the attribution to Solomonic authorship in its superscription. The proof is the sequence of the remaining two books in the group: although the Song of Songs has fewer verses than Lamentations, the circumstance that it has the same number of *sedarim* (neither book being divided into *sedarim*) left the arranger free to place it first, so that it might stand next to its Solomonic fellow Ecclesiastes. So, too, Ezekiel has fewer verses than Isaiah (1,273 as against 1,291), but the *baraita* gives it the precedence because it has more *sedarim* (29 as against 26). The *baraita*, however, separates the historical book Ruth from the body of historical Hagiographa that follow the non-historical block and places it before this block – in order that David-authored Psalms may be preceded by the Davidic genealogy at the end of Ruth. The foregoing is a refinement of L. Blau, in: JE, 3 (1902), 143–4 (following H.L. Strack).

CRITICAL ANALYSIS

The Framework and the Poem: Job the Patient and Job the Impatient

It is customary to speak of Job as a wisdom book. But it is so much more sophisticated, not only in its message but also in its technique, than Proverbs, Ecclesiastes, or even the extracanonical book of *Ben Sira, that it is really in a class by itself. To begin with, it exhibits the striking feature of consisting of a narrative prose framework – the Prologue, chapters 1–2, and the Epilogue, 42:7–17 – and a poetic disputation, 3:1–42:6. The Prologue is easy to follow, and the transition from it to the Poem is natural. The Epilogue, taken by itself, is also fairly easy to follow, except that 42:11–17 seems to come much too late (see below). Puzzling, however, is the logic of such an Epilogue, especially verses 7–10 thereof, to such a Poem.

THE STORY OF THE PROLOGUE. (Chapter 1). Job was an inhabitant of the land of *Uz. This location places Job within the territory of Edom (see Lam. 4:21), the nation to which Job's three friends also belong (see below). Moreover, it clearly places the mortal protagonists, with the possible exception of Elihu, in the land whose wisdom was proverbial (see Jer. 49:7; Obad. 1:8).

His wealth, consisting (like that of the Patriarchs in Genesis) primarily of livestock and slaves, exceeded that of any other man among the *Kedemites. He also had seven sons and three daughters. After the children's (annual?) week of feasting, he used to offer burnt offerings for all of them to make expiation for any irreverent thought they might have admitted into their hearts when their consciences were dulled by wine. The *Satan (accusing angel), however, argued with the Lord that piety coupled with such wealth could not be termed disinterested. Let the Lord try depriving Job of it, and he would surely denounce the Lord to his face. So Job in a series of calamities lost all his property, and his sons and daughters, all

in one day. Job learned of these disasters from four successive messengers. On hearing the message of the last one, he performed the usual acts of mourning (1:20), but never a disparaging word about God crossed his lips. On the contrary, he declared: "Naked I came out of my mother's womb,/ And naked again I will depart.// The Lord has taken what the Lord gave:/ The name of the Lord be blessed."// The resourceful Satan now argued that after all the true test of disinterested piety was bodily suffering. With God's permission, he struck Job with a terrible inflammation of the skin from head to foot, and Job sat in the dust scratching himself with a sherd. But still Job did not "sin with his lips." On the contrary, to his wife's suggestion that he denounce the God who had requited his loyalty so shabbily, he retorted indignantly, "You talk like a base woman! Can we both accept the good from God and not accept the bad?" Job had three friends in three different parts of the Kedemite world: Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite. These, on learning of Job's misfortunes, met, and journeyed together to the home of Job in order to console with him and comfort him. This is stated explicitly, and their reaction to the spectacle of his misery (2:12–13) leaves no doubt about the sincerity of their friendship.

THE EPILOGUE. Not everybody can be a Job, and if the foregoing were followed by an account of how, moved as was Job's wife by their grief for him but equipped with more education and eloquence, the friends declared that the God who requited Job's loyalty so shabbily was unworthy of it and delivered themselves of some critical reflections on God's conduct of the world – and how Job again demonstrated his unique steadfastness, and not only by not heeding these suggestions but by replying to them forcefully – nobody would be surprised. Indeed, some scholars have suggested that the first three verses of the Epilogue presuppose just such an exchange between Eliphaz and his two companions, on the one hand, and Job, on the other. However, it is primarily on the Prologue and the Epilogue that the traditional picture of Job as a patient sufferer (in English, the King James Version of Epistle of James 5:11 has made "the patience of Job" a household word) is based, for in the Poem, Job is for the most part a critic of Providence. In fact some moderns deny that 42:7–10 does presuppose a conventionally saintly Job and claim that it wishes to teach that God approves just of honest critics like the Job of chapters 3ff. and is mildly contemptuous of apologists like the friends of chapters 4ff. Proponents of this view argue (1) that if the Lord rebuked the friends for speaking as Job's wife had spoken, he might be expected to rebuke Job's wife too, and (2) that 13:7–10 actually predicts that God is going to rebuke the friends for "speaking falsely for God." These arguments are easily disposed of. With regard to the former, the Bible does not place women wholly on a par with men. The limited influence of Job's wife as a woman – and one not even distinguished enough for her name to be recorded – made her expression of objectionable views a less serious matter than that of the friends. Besides, she was not fully a person in her own right, but largely an ex-

tension of her husband. Thus in 31:9–10 Job thinks that if he were guilty of adultery it would be a fitting punishment for him if another man enjoyed his wife; how she might feel about it does not concern him; much worse are Deuteronomy 28:30a; Amos 7:17a; etc. To the second argument, all that Job says in 13:3ff. is that God will rebuke his friends if they butt in with their stupid apologetics while he is addressing his indictment to God, for then they would be speaking falsehood directly to – not for – God. Since therefore, the friends do hold their peace until Job has finished his arraignment of God, 42:7–10 is not a fulfillment of 13:10. The author of the bulk of 3:1–42:6 was indeed of the opinion that the facts of life are as Job presents them rather than as Eliphaz and his friends do; but their honest error (it is not the monstrous one that is commonly imputed to them; see below 3 (A) (i)) is a less serious offense in his estimation than Job's presumptuous demand of an explanation from God. He represents God as rebuking Job, not his friends, 38: 1–42:6, and Job as humbly and contritely admitting his fault – twice, 40:3–5 and 42: 1–2, 3ab–b, 5–6 (42:3aa and 4 are out of place). It simply cannot be denied that “the prose framework” presupposes between Prologue and Epilogue a very different disputation from chapters 3–26; 29–31; 38:1–42:6. Fortunately, a large fragment of this very different disputation has been preserved. H. Fine has demonstrated that chapters 27–28 are a reply by Job as known from chapters 1–2 – we shall call him “Job the Patient” – to people whom he addresses in the masculine plural and accuses of having urged him to “stop being a sucker” who “does not sin with his lips” and, as the Lord has noted approvingly after the first trial (2:3) and Job's wife uncomprehendingly after the second (2:9), “still holds fast to his integrity” instead of denouncing God. That this is the case with most of 27:2–6 had already been seen, though Fine was unaware of it, 30 years before by F. Buhl, and one can only marvel that Buhl had failed to see that the following is the only natural and honest interpretation of all of 27:2–6: “(2) Witness God who denies me redress,/ Shaddai who has made me wretched!// (3) So long as my breath is in me,/ The life-breath from God in my nostrils,// (4) My lips shall never speak godlessness,/ My tongue never utter impiety. // (5) Far be it from me to declare you right!// I will not give up my integrity until I die.// (6b) Never in my life has even my heart blasphemed.// (6a) I have held fast to my righteousness and I will not let go of it.”// (Notes: *On 5b*. In an attempt to harmonize this line with chapters 3–26, most writers interpret it to mean, “I will never give up my assertion of my integrity.” But such a forced meaning could at most be justified if the friends in 3–26 disputed Job's claim to be a good man or if Job himself in those chapters claimed to be without sin; neither is the case, as will be demonstrated further on. *On 6a*. Since, therefore, 5b can only mean what it says, *we-lo' arpeha* must be given its natural future meaning – in 6a, idiom sanctions the imperfect before *mi-yamai*, as can be seen from I Sam. 25:28.)

There can be no doubt but that just as the rebuke of the traditional saint Job to his friends who had fallen into error is many times longer and more detailed than his rebuke to

his wife for the rash suggestion she made under stress, so the friends had expressed their view in a many times longer and more elaborate speech than Job's wife. For the unmistakable implication of 27:7ff. is that the friends had argued that very often just the wicked fare best on earth – exactly as the unconventional Job (Job the Impatient (JIP)) does in chapter 21. And conventional Job opposes this view in 27:7ff. with no less warmth than the unconventional Job's conventional opponents do in 15:20ff., 18:5ff. or 20:4ff. As for chapter 28, N.H. Tur-Sinai's rearrangement appears correct, as does his interpretation in the main. Its theme is: Wisdom is God's, and He has taught man that it is wise to be godly. The concluding and climactic sentence, “Behold, wisdom is to revere my Lord (perhaps to be emended to *'Elohim*, “God,” cf. 1:1, 8; 2:3), understanding is to shun evil,” is unmistakably intended to recall the description of Job the Patient in 1:1, 8; 2:3, and to imply that the smartest thing a man can do is emulate Job the Patient. For chapters 27–28 constitute a single speech by this very Job the Patient, and it is to this that 42: 7–8 refers when it says, twice, that “my servant Job” (cf. 1:8; 2:3) “spoke properly” about YHWH. Only the speech in which Eliphaz and his companions “did not speak properly” about God has not been preserved, though it is unmistakably presupposed by chapter 27. The original book of Job the Patient (JP), then, was made up as follows: (i) 1:1–2:8, Job's disinterested piety. Put to much crueler tests than the one by which Abraham (Gen. 22) proved that he was a true *yere' 'Elohim* (Gen. 22:12) or god-fearing, i.e., pious, man, Job proved that he was a *yare' 'Elohim hinnam* (cf. Job 1:9), i.e., was unconditionally god-fearing or pious. (ii) 2:9–10. Job defends, against his wife, the view that men must remain devoted to God under all circumstances. (iii) 2:11–13. Arrival of Job's three friends. (iv) Now missing: the urging of the friends that Job repudiate the God who has so shamefully failed him. (v) Chapters 27–28. Job's emphatic refusal (27:2–6), citing the unwisdom of wickedness (27:7ff.) and the wisdom of godliness (chapter 28). (vi) A second missing passage, in which God assured Job that he would reward his steadfastness (cf. Gen. 22:16). It is far more likely that 42:7a is an integral part of JP and refers to such a revelation of approval and promise than that it was written by an editor or – even less likely – by the author of the book of Job the Impatient (JIP) for the purpose of connecting 38:1–42:6 with 42:7bff. For in the former God intimates to Job in no uncertain terms that he has spoken improperly about Him, and Job contritely admits it, twice: 40:3–4 and 42:2, 3ab–b, 5–6 (verses 3aa and 4 are variants of 38:2–3). (vii) 42:7b–17. God's rebuke to the friends for their aberration and reward to Job for his constancy.

[Harold Louis Ginsberg]

Against the Buhl-Fine-Ginsberg theory of two books of Job – JP and JIP – Gordis (1978, p. 578) argues that “the existence of one book of Job is a *datum*, while the theory of two books of Job is a *hypothesis*. Thus the burden of proof rests upon the proponent of the new theory. Its power to persuade depends upon the degree to which it is free from difficulties

of its own.” In fact, Gordis (1978, pp. 287–311) endeavors to work around the canonical Book of Job’s bracketing chapters 27–28 with the expression “Job again took up his discourse, saying” in 27:1 and 29:1. The demonstration by Buhl, Fine, and Ginsberg that chapters 27–28 can and should be read as a document distinct from chapters 3–26 and 29:1–42:6 accounts for the bracketing of these chapters in the canonical Book of Job. Moreover, the Buhl-Fine-Ginsberg theory accounts for chapter 28 as a long and involved rhetorical question posed by Job, “As for wisdom where may it be found?” (28:12) culminating in Job’s answer to his impious friends, “To humankind He [God] said, ‘Behold: piety [lit., fearing of God] is wisdom, and ethical behavior [lit., shunning of evil] is discernment’” (28:28). The latter assertion is reminiscent of the description of Job in 1:1, 8 and 2:3 as indeed “fearing God and shunning evil.” Gordis’s, albeit more conventional (in terms of the trends in 19th- and 20th-century biblical studies) theory, no less than the Buhl-Fine-Ginsberg theory, also ignores the datum of a single book of Job. Indeed, Gordis treats chapter 28 as a separate composition, which he calls “The Hymn to Wisdom,” and which he describes as “clearly an independent lyrical poem.” In fact, it is not a “Hymn to Wisdom,” but a declaration that the fear of God is the true wisdom. Moreover, again ignoring the bracketing of chapters 27–28 as a unitary entity within the canonical Book of Job, Gordis (with a majority of modern commentators) assigns 27:13–23 to Zophar while he combines 27:1–8 with 26:1–4 to create an enigmatic reply of Job to Bildad. In reconstructing Bildad’s speech in this manner, Gordis (and even Tur-Sinai 1967, p. 378) ignore one of Gordis’s monumental contributions to the understanding of the Book of Job (Gordis 1965, p. 187): Job always addresses his friends in the plural so that when as in chapter 12:7–8 “the use of the singular verb and suffixes ‘ask thou,’ ‘will teach thee,’ ‘to thee,’ ‘speak thou’” indicates “a restatement by Job of the Friends’ admonition to him.” Gruber (*Jewish Study Bible*, 2003) solves this problem by going beyond Tur-Sinai’s and Ginsberg’s re-assigning 25:2–6 to Job and assigning 26:2–14 to Bildad. All that is required is to understand that the headings of the two chapters were mistakenly reversed in antiquity.

[Mayer I. Gruber (2nd ed.)]

Job the Impatient (JIP)

CHAPTERS 3–26; (B) 29:1–42:6. All this has been grafted onto the foregoing. Its two constituent blocks may be titled:

(a) Job and the Three Friends; (b) Job, the Intruder Elihu, and God and Job.

JOB AND THE THREE FRIENDS, CHAPTERS 3–26. If one thing is obvious, it is that here, far from being a conventional saint, Job strongly criticizes providence while the friends defend it. In chapter 3, Job terminates the seven days’ leaden silence of himself and his visitors (2:13) with a bitter outcry against the unreasonableness of allowing men to be born who were fated, like himself, to have such a life that they can only wish for death. Thereupon, in the order in which they have

been introduced, each of the friends tries to reason with him but is rebutted (chapters 4–14). The cycle is repeated (chapters 15–21). A third cycle is begun, but at least in the book as it has come down to us it remains incomplete. There is a complete speech by Eliphaz (22) and there is a complete reply by Job (23–24), but after that there is only a fragmentary speech which is attributed (with questionable propriety) to Bildad (25) and a fragmentary speech by Job (26).

The First Cycle (chapters 4–14). Job’s friends try hard to comfort him. Things are bound to end up well for Job, says Eliphaz, since he is a good man and only the wicked end badly (4:6–7). Since no human being is impeccable, a good man sometimes incurs chastisement, which redounds to his own benefit, 5:17ff. Segal rightly argues that Job 5:17, “Nay, happy is the man whom God reproves! – Do not reject Shaddai’s discipline,” can only be a modification of Proverbs 3:11, “My son, do not reject the Lord’s discipline; Do not spurn his reproof,” since it destroys the parallelism of the latter and does it by substituting in the first hemistich for the negative imperative of Proverbs 3:11 the “happy is the man” construction of Proverbs 3:13. Thus Eliphaz utilizes the very passage in classical wisdom literature which is incompatible with a view that Job’s misfortunes prove that he is a moral degenerate. That the classical doctrine of retribution requires such a conclusion and that the friends draw it (then why don’t they curse him and walk away in disgust?) is itself a dogma of current Job exegesis. To be sure, Eliphaz is of the opinion that it is dangerous for Job to disregard the teachings of wisdom, for a man may ruin his own and his children’s future not only by wickedness but also by folly: 5:1–5; 4:21; 5:6–7 (see Ginsberg, 1969, 95–96). But if Job will do what wisdom prescribes for cases like his – namely, turn to God in humble repentance and, where possible, make restitution for the wrongs he had done – it is absolutely certain that his latter estate will be even more enviable than his former one (5:8–27). Like Eliphaz, Bildad and Zophar conclude their perorations with this assurance, and they add to it at the very end: Such are your prospects, Job, the diametrical opposite of those of the wicked (8:20–22; 11:16–20). In the case of Zophar (chapter 11), this exuberant conclusion might seem to be at variance with 11:5–6. But if it were, the former would prove that Zophar did not mean the latter seriously, not the other way around. In fact, the latter passage is nothing more scathing than an assertion that Job’s impression that the sum total of his guilt is too insignificant to warrant even benevolent chastisement, and merely illustrates the truism that human memories cannot compare in retentiveness with God’s memory. Job, however, has no patience with his friends’ well meaning defense of God and advice to himself. In his first and second replies, he maintains that it is unreasonable of God to be so harsh with a human being like Job – whose years are so short; who, whatever his sins, represents no threat to God (chapter 7); and who, after all, is God’s handiwork, for which He might be expected to have some positive sentiments (chapter 10). As for the friends, Job accuses them of lack of feeling. In his

third reply, finally, Job contemptuously dismisses his friends' competence to judge his case and rudely asks them to shut up while he formally arraigns God. And whereas in chapter 7 Job merely complained to God (see 7:11) and in 9:33–35a; 10:1ab he merely indulged in the fancy of how he would indict God if he could plead with Him on equal terms, he now takes his life in his hands (13:13–14) and does challenge God to justify his spiteful treatment of him. What sort of sadism (13:25) he demands, is this, requiring purity of that which is impure by its very nature (14:4), showing not the slightest magnanimity in view of man's helplessness (13:25) and his pitifully short span of life (14:5–12), but jealously guarding Job's guilt (14:21) as a usurer might guard the proofs of his debtors' indebtedness? Contrary to the prevailing belief, 13:7–10 does not mean that God will under all circumstances take the friends to task for painting a false picture of a just world order, but only if they do so while Job is formally indicting God; since, therefore, Eliphaz and his two companions hold their peace until Job has finished indicting God, our passage does not anticipate 42:7–8. But Job has both questioned their sincerity (for the first cycle, this must be admitted) and made hash of their wisdom.

The Second Cycle (chapters 15–21). Between that and his daring arraignment of God, no wonder that in the second cycle (chapters 15–21) the tone of the three sages is notably chillier than in the first. Of course they do not, any more than in the first cycle, declare that Job is a scoundrel, for that would be contrary to their innermost convictions. Eliphaz, in fact, again (as in 4:6) alludes to Job's proverbial piety (15:4: Or would you, of all people, offend against piety/ And eavesdrop on God's deliberations?) Nor do they deny that Job may still have a glorious future, because that too would be contrary to their belief. Instead, Eliphaz repeats his original warning of the evil consequences of forsaking the teachings of the wise (15:19: To them alone (i.e., to the sages – not the ancients – of verse 18) has earth been given;/ No outsiders have shared it with them.), and all three of the friends subtly indicate their pique by dwelling only on the negative aspect of the law of retribution – the unenviable fate of the wicked – leaving its complementary aspect, the happy fate of the just, only to be inferred. And Job? With consummate art the author makes him soften his tone toward the three others just in face of their hardened tone toward him. By beginning his response to Eliphaz' admonition with (16:2) “I have heard such talk countless times./You are all illusory comforters,”// he admits that at any rate their intention is to comfort him, and he immediately adds that he realizes that they are not aware that their consolations are illusory: “If (16:4) you were in my place,/ I would be talking just as you are// I would speak to you words of condolence/ And shake my head in commiseration.// (5) With my mouth I would brace you,/ Sympathy from my lips would give you strength (for *yhsk*, which arose through contamination by verse 6, read *yhzqkm* after 4:3).”// To be supplied mentally at this point is: “As Eliphaz remarked at the beginning of the discussion, that is exactly what I used to do formerly (4:3–4).”

Eliphaz, however, had added an expression of his surprise that Job should be helpless (verb *l'y*) now to render to himself the same service that he used to render to others in misfortune. In obvious allusion to this, Job continues: “(16:7) Alas, now God's enmity has made me helpless,/ His hostility (8) has overpowered me./ / He has arisen against me as an accuser;/ It is his vexing (read *כעשו*, cf. 10:17) that testifies against me.” // Job then enlarges in sundry figures of speech on God's persecution of him, and then repeats:(16:19)/ “Truly, now my opponent is in heaven,/my adversary is on high.”// In his second speech (chapter 19), Job tearfully begs his friends not to address him harshly but rather (19:21), “Oh, pity, pity me, at least you, my friends, / For I have been struck by the hand of God.” // And in his last speech in this cycle (chapter 21), Job takes up the theme on which they have all harped in order to comfort him, of villains always getting their deserts. Significantly enough, he begins with “Just listen to my statement,/ And see what becomes of your comfortings”// (21:2) and ends with “So alas, you comfort me with futilities,/ Your arguments remain illusory” (21:34, reading *'ml* as in 16:2.) // What he says in between is naturally that the facts are the opposite of what they claim (21:7–16). Actually, he demands, how often does calamity overtake the wicked (21:17–18)? And Job refuses to be comforted by the assurance that if retribution fails to overtake the reprobate it will yet overtake his children: what does the scoundrel care about what happens to his household after his death (21:19–21)? After verse 22, which is not clear, the same thought is repeated to the end of the chapter. All this is said not in anger but in sorrow, and Job's listeners would be the hyenas that the prevailing exegesis makes them out to be if they did not respond accordingly. But they do.

The Third Cycle (chapter 22). The third cycle is a torso, and only one friend's speech, that of Eliphaz, has been preserved; but it is enough. Like all of the friends' speeches in the first cycle, so the one preserved in the third (chapter 22) concludes with an assurance that as soon as Job makes his peace with God, God will restore him to greater bliss than ever, because (22:30) “God (read *El*, apparently) saves the blameless;/For your innocence you shall be saved.” // As in the case of the first speech of Zophar (chapter 11, paragraph i above), the concluding reassurance seems to be at odds with the opening. But as in that case, in the first place, the conclusion is, by definition, the speaker's final word and, in the second place, the opening does not mean what it seems to mean at a superficial glance. Job 22:4 means, “Does he fear you that he should arraign you, enter into a lawsuit with you?”; 22:5–7, 9–11 “are a tongue-in-cheek parody of the sort of bill of particulars of his offenses that Job has been demanding of God (12:18 ff.); Eliphaz does not wish to imply that Job is such a monster”; and 22:12 means, “You surely cannot expect God to deign to take the trouble to oblige you with such a bill of particulars.” Job's reply (chapters 23–24) to Eliphaz is much in the spirit of his replies in the second cycle, except that he says nothing about the friends. For he expresses perplexity rather than bitterness about his own

fate and the world order generally, and he expresses the wish rather than a demand to be able to talk it over with God (chapter 23). Chapters 25 and 26 are but fragments – probably the former (despite its superscription) as well as the latter from a speech or speeches of Job – and nothing more has been preserved of the third round of speeches. That a large block of material from “Job the Patient,” namely chapters 27–28, should be preserved just where a large block of “Job the Impatient” is missing are two facts which it seems must somehow be connected, but just how cannot be considered here.

[Harold Louis Ginsberg]

Concerning the reassignment of 25:2–6 to Job (so already Tur-Sinai and Ginsberg) and the reassignment of 26:2–14 to Bildad see above at the end of the discussion of Ginsberg’s theory of two books of Job, JP and J1P. For the reasons for assigning 25:2–6 to Job see below concerning the place of the dream vision in the ideology of Job.

As for the common perception that the third cycle has undergone significant damage, this perception is fostered by the notion that one is meant to reconstruct the speeches of Bildad and Zophar from 27. Once, however, one recognizes (a) that 27–28 represent an alternative response of Job to a different set of challenges than those posed in J1P; and (b) that by reversing 25:1 and 26:1 one has rediscovered the missing speeches of Job and Bildad, it is plausible to accept the contention of Mayan Ganim (12th century) and S.R. Driver that Zophar had simply said everything he had to say in the first and second cycles, and that little if anything was lost from the third cycle.

[Mayer I. Gruber (2nd ed.)]

JOB; ELIHU THE INTRUDER; GOD AND JOB. CHAPTERS 29:1–42:6. *Job* (chapters 29–30). In his classic study of the Book of Job in the 1971 EJ Ginsberg writes: “No longer arguing with his visitors, Job first laments his appalling change of fortune (29–30). He was once fabulously prosperous (expressed figuratively in 29:6) and influential: even the oldest and most honored and revered deferred to him, for he was friend, champion, and benefactor of the poor, the weak and the unfortunate. And he was confident that he would live long in undiminished vigor and power (29:18–20). Now, alas, he is despised and abused even by the children of outcasts (30:1–15). His grief is so intense that he suffers physically; he feels that God is implacably pursuing him and that his days are numbered (30:16 ff., 25–26 belong in chapter 31, e.g., after 31:20). Then in chapter 31, Job utters an elaborate declaration of innocence: he has lived up to the highest ethical standards, and has not even strayed from the path of strict monotheism (31:26–28). (31:37–40 are properly the conclusion of verse 8, and verse 1 a preface to verses 9 ff.) The conclusion is: (31:35–37) This is my case; I desire nothing so much as a statement of God’s case.” By stating, “His grief is so intense that he suffers physically,” Ginsberg reflects the conventional view in modern biblical scholarship, which ignores the presentation in chapters 1–2 of the circumstances that brought Job to curse the

day on which he was born (2:1), and which brought his three friends – Eliphaz, Bildad, and Zophar – to visit him. In fact, 2:7b records that, with God’s permission, the Adversary “afflicted Job with a foul pox from head to toe” while 2:12 records that – apparently because of the debilitating effect of the aforementioned dermatological affliction – when the friends saw Job in the distance on their way to his home, “they could not recognize him.” Job himself refers to his diseased condition in the so-called dialogue or symposium (chapters 3–26). For example, in 19:17, Job declares, “My breath is offensive to my wife// my stench to my own children” (so Pope), and in 19:20 he declares, “My bones stick to my skin and flesh// I escape with the skin of my teeth” (NJV), and in 19:21 he pleads with his three friends, “Pity me, Pity me, you [who are supposed to be] my friends, for a plague [Hebrew idiom known also from Ugaritic and Akkadian; the literal meaning is ‘a divine hand’] has struck me.” So it is not that overreacting, as it were, to the death of Job’s seven sons and three daughters that made Job sick and possibly in need of psychological counseling. Rather, it is the fact, as often happens, Job’s debilitating illness struck him precisely when he was in mourning over the sudden and untimely death of his sons and daughters. Job’s friends, as it is reported in 2:11, set out “to comfort him and console him.” The Hebrew *lanud* commonly translated “to comfort” (see again in 42:11) is a gesture-derived expression referring originally to shaking one’s head in sympathy for a sick or bereft individual (see also Jer. 15:5; 18:16; and see the extensive discussion in Gruber, *Aspects*, pp. 406–7). Indeed, the prologue relates that when Job’s three friends saw his debilitated physical condition, they expressed complete empathy by crying and by throwing dust upon their heads and sitting on the ground with Job for seven days and seven nights without saying a word to Job. However, when Job himself finally speaks up at the end of those seven days and seven nights and says, “I wish I were dead, or, better yet, that I had never been born, or at least that I might have died at birth,” his highly educated and well-meaning friends do not simply respond with, “We hear you; tell us more about how you feel” (see Gitay; and see Gruber 1998). Instead, similar to what takes place nowadays during many a hospital visit and in many a house of mourning, Job’s three friends get carried away with themselves, and suggest again and again that people who suffer death, bereavement, and disease have it coming to them (Eliphaz in 4:7–8: “Think now, what innocent man ever perished? Where have the upright been destroyed? As I have seen, those who plow evil and so mischief reap them” (so NJV); Bildad in 8:4: “If your sons sinned against Him, He dispatched them for their transgression”). Zophar even suggests that the reason that Job declares, “I have been innocent” (Zophar quoting Job in 11:4; precisely what the reader is supposed to remember from the prologue, chapters 1–2) is that Job is the victim of a divinely bestowed loss of memory: “God made you forget your sin” (Zophar to Job in 11:6c; translation following Tur-Sinai 1967).

Indeed, the Book of Job is a complex and profound literary work that may not be reduced to a single message.

However, a major theme of both the prose and the poetry of the Book of Job, from beginning to end, is the failure of Job's friends to provide him with moral support. Instead they argue with Job and blame him for his suffering. As the dialogue in the Book of Job indicates, the well-intentioned comforters insult the mourner. They tell him that he talks too much (8:2; 11:2–3; 15:2–3; 18:2). Job takes note and quotes their having said this in 16:3 where the 2d person singular pronominal suffixes prove that it is Job rather than the friends, who are being addressed (see below on the use of 2d person singular and plural as keys for when Job and the friends, respectively, are addressed). Job, in contrast, continually has to remind his friends that they are supposed to console/condole rather than insult him (6:14–30; 13:4–12; 16–2, 4; 19:1–5: “How long will you [plural, clearly addressing the three friends] grieve my spirit and crush me with words? Ten times you have humiliated me, And are not ashamed to abuse me. If indeed I have sinned, My error remains with me. But, in fact, you are overbearing toward me, reproaching me with my disgrace” (cf. NJV). In 21:2 Job has the daring to say, “Listen well to what I say, and let that [i.e., just being quiet long enough to give a fair hearing to what I have to say] be your consolation” (so Rashi!).

Unfortunately, many of the modern commentators seldom remind the reader that both Job (chapter 13) and God (chapter 42) tell us that persons who insult the mourner or the victim of illness must be called to account and must seek expiation for their sin (see Gruber 2003). In contrast, the talmudic rabbis (מק 28b) and the halakhic codes (e.g., Sh. Ar., *Yoreh De'ah* 376:1) took to heart Job's repeated suggestion that the best his friends might have done would have been to maintain their silence. They derive from the initial silence of Job's friends in 2:13 the profound lesson that would-be comforters should not say a word to the mourner unless and until she/he indicates verbally or nonverbally a willingness to listen. In fact, in the Shulḥan Arukh, *Yoreh De'ah*, the *halakhah* provides two concise and profound manuals of pastoral care. One of these manuals is called “Laws of Visiting the Sick” (chapter 335), and the other is called “Behavior of Comforters” (chapter 376). Perhaps, the Book of Job is underutilized in the literature of pastoral care because the Book of Job itself was damaged in the early Middle Ages after Yannai had already utilized the original Book of Job in which the dream vision was properly assigned to Job and not to Eliphaz, in whose mouth the dream vision seems to justify blaming the victim (in fact, the latter interpretation is embodied in Maimonides, *Guide for the Perplexed*. Book 3, chapter 25).

[Mayer I. Gruber (2nd ed.)]

Elihu (chapters 32–37). This is a famous enigma. If not for 32:1–5, one would have had the distinct impression that Job's three visitors were no longer with him when he spoke chapters 29–31, especially as God himself answers Job, chapters 38ff. – hardly after letting a mortal speak first. Now we suddenly learn that not only they but still a fourth visitor, who has not been mentioned before, is still present: Elihu. As a

younger man, he has waited while they conversed with Job (read *hikkah be-dabberam 'et 'Iyyov*), but when they fail to respond to Job's last utterance he feels that the duty of justifying God has devolved upon him. Y. Kaufmann has well summarized Elihu's pronouncement. Elihu's purpose is to refute Job's denial of providence. He seeks to do so by citing alternately examples from what occurs occasionally and from what occurs constantly or regularly, three of each. First (32:6–22) he explains to the three friends why he is intruding: his elders have failed to refute Job, which goes to show that wisdom is a matter not of age but of genius; therefore his urge to say what they ought to have is irrepressible. Here his conceit makes his bombast somewhat amusing, after that the latter is merely irritating. Then (33:1–13) he turns to Job, “You claim you could prove you are in the right but a tyrannical God refuses to talk to you. Well, I am no god; if you do not win against me, it is because your case is without merit.” *Example no. 1 from the occasional*, 33:14–33. God does so communicate with men, and in more ways than one. You cannot deny that he sometimes warns a man to mend his ways by means of a dream or an illness; the man “gets the message,” acts accordingly and his life is spared. *Example no. 1 from the permanent*. This time the preface is addressed to the wise (34:1–12): Job, by asserting that God has wronged him, has associated himself with rogues and villains. *The proof itself* (34:13–14): Every living creature exists only by God's kindness; if he withdrew the breath of life from it, it would perish forthwith. *Example no. 2 from the occasional*, 34:16–37. Potentates are often overthrown suddenly. By whom but by God? For what but for misrule, oppression, and injustice? *Example no. 2 from the permanent*, chapter 35. God has distinguished man from the beasts by endowing him with a conscience. Surely, he to whom we owe our sense of right and wrong does not do wrong. *Example no. 3 from the occasional*, 36:2–21. It is a variant of no. 1. Besides illness other forms of suffering may serve as a warning from God, and a man may determine his own fate by heeding or ignoring it. *Example no. 3 from the permanent*. 36:22–37:24 is not a mere introduction to the third example, which is itself chapter 28 (so Kaufmann). Chapter 28 quite rightly follows directly on chapter 27, and the character of chapters 27–28 has already been elucidated under 2 (b). 36:22–37:24 itself is Elihu's example no. 3 from the permanent: the rain by means of which God supplies the food needs of nations (36:27–31) and (chapter 37) the majesty and terrors of thunder and tempest, of snow and rain and cold, by which God may either benefit or castigate (37:12–13), as also the wonders of the firm dome of heaven, which God can utterly darken with clouds and then clear up again (37:15–22). Wise people cannot but revere such a God. But 38:22–35 says the same thing as Elihu's example no. 3 from the permanent, and says it lucidly and succinctly instead of turgidly and long-windedly. The effort to understand the Elihu speeches is often great, all out of proportion to the profundity of the thought; and since the gem chapter 28, as has been said, is no part of them and so cannot be regarded as redeeming these shortcomings, Kaufmann's view that the Elihu chapters are, and were

from the start, integral to what we have called “Job the Impatient” is untenable. More plausible is R. Gordis’s view that the author added them in his old age, since the styles of good writers have been known to deteriorate in old age (but to such an extent?). But the more widely held view of Pope that they are by a later hand is at least equally plausible.

[Harold Louis Ginsberg]

Greenstein, in “Job’s Initial Speech,” in *Studies in Honor of Menahem Cohen*, ed. S. Vargon et al. (2005), pp. 256–58, demonstrates that Elihu’s reference to the description of a dream in 33:15 supports the Tur-Sinai-Ginsberg thesis that assigns 4:12–21 to Job rather than Eliphaz (see above and below).

[Mayer I. Gruber (2nd ed.)].

God and Job (chapters 38:1–42:6). Twice God answers Job “out of the storm,” 38:1 and 40:6. The original opening formula of the second reply has been superseded by a verse (40:7) from the opening of the first (38:3), but it has been preserved, telescoped into Job’s second acknowledgment of defeat, as 42:3aa, 4. Since, however, God’s first attack has already elicited from Job the abject surrender: “(40:4) Behold, I am worthless – / What can I say in reply? // I put my hand to my mouth. (5) I spoke once – I shall not a second time;/twice, but I shall not again,” // the need for a second attack is not obvious, and many claim that the second one is also inferior from an artistic point of view and is a later interpolation. Neither speech can be said to offer a direct answer to Job’s questions about the reasons for his own suffering and about the general lack of any discoverable relationship between men’s characters and their fortunes. The first, the more sparkling and pointed of God’s two replies, may be summarized and paraphrased as follows: You did not even exist when the world was created, you haven’t even seen more than a fraction of it, and the idea of your running it is grotesque. Pity the world if it had to depend on you to make the sun rise and set, the gazelle drop her young at the proper season and the young scramble to their legs and grow up all without any help, etc.! In the context of the book, this can only mean that for such an insignificant being as man to ask the Lord of the Universe for an explanation is “to darken/obscure counsel ignorantly with words” (38:2; 42:3aa); and whatever those words may mean exactly, the implication is that one must serve God not only in spite of all adversity but without even the expectation of an explanation.

[Harold Louis Ginsberg]

Israel Knohl, *The Divine Symphony* (2003), p. 116, asks what it is about God’s description of the wonders of Creation in chapters 38–41 that prompts Job to declare: “I had heard You with my ears, but now I see You with my eyes. Therefore, I recant and relent, being [that I am] only dirt and dust” (42:5). The answer to Knohl’s question is to be found through careful attention to what Job asks of God throughout the cycle of speeches in chapters 3–26. Indeed, Job and his friends have been arguing as to whether or not the friends know how to provide comfort. Likewise, Job and his friends have been ar-

guing as to whether or not Job, the paradigmatic sufferer, has it coming to him. On both of these counts, Job, in chapter 42:7 is vindicated while the friends are asked to seek forgiveness and to ask that Job intervene on their behalf with God. There is, however, a third issue that appears in Job’s speeches in chapters 3–26 when he addresses God in the second person singular. He asks that God acknowledge that Job has asked to have a dialogue with him (13:18–28; 23). In so doing, it is Job who brings up the subject of the personified sea (Hebrew and Ugaritic *yam*; 7:12), who is also called *Leviathan. The latter entity is commonly understood to be a mythological monster. This monster, in turn, is commonly understood to be a personification (in Israel’s Canaanite heritage best known from the epic poetry of *Ugarit) of the yearly struggle for dominion over the cosmos between the deified storm and rain (*Baal) the pair Sea/River [e.g., Ps. 114:3, 5], and the deified summer drought. Concerning the interpretation of references to the Sea personified as Leviathan or Serpent (Heb. *tannin*; see in Job 7:12) or Rahab or the Elusive Serpent (Job 26:13) or the Twisting Serpent (Isa. 27:1) as reflections of the aforementioned seasonal pattern, see T.H. Gaster, *Thespis* (1961), especially pp. 141–48. Two of the most prominent Jewish interpreters of Job in the 20th century – M. Bultmann (1925) and Gordis – argued, on the other hand, that Leviathan in the Book of Job is simply the crocodile. For the demonstration that Heb. *tannin* refers to the crocodile only in Ezekiel 29:3 and 32:2 see C. Cohen in *Studies in Honor of H.M.Y. Gevaryahu*, vol. 2 (1991), pp. 75–81.

In fact, the seasonal pattern posited by Gaster is not a feature of life in the southern Levant. Moreover, the treatment of references to a battle between either the God of Israel or the Canaanite Baal as mythology (from Greek *mythos* meaning “lie”) suggests that the idea that there was at some time in the remote past a battle between God and the personified Sea, which seriously challenged God’s omnipotence is a kind of collective false memory. In fact, the record of destructive tidal waves generated by earthquakes far out at sea, which killed thousands and even hundreds of thousands of people, seems to belong more to collective repressed memory than to collective false memory because it is virtually unmentioned in history books. When just such a tidal wave – now commonly known by the Japanese term *tsu-nami* – killed more than 100,000 people in Southeast Asia in December 2004, suddenly the newspapers recovered from humankind’s repressed memory the distinct possibility that such a tidal wave had put an end to the Minoan Civilization in 1628 B.C.E. and the fact that, inter alia, such a tidal wave had destroyed the city of *Acre in 1303 C.E.

Now it is precisely this natural force – the sea or tidal wave described as a monster or serpent – that Job mentions in 7:12 when he asks God, “Am I the sea or the Dragon [*tannin*] that You have set a watch over me?” Bildad (in Gruber’s reassignment of 26:2–14) brings up this monstrous entity again in 26:12–13: “By His power He stilled the sea; By His skill He struck down Rahab. By His wind the heavens were calmed;

His hand pierced the Elusive Serpent.” And so, Job has every reason to be satisfied that in finally acceding to his oft-repeated request that God only show that He is listening to Job’s entreaties. God responds and indeed refers to the monstrous Leviathan, the personification of the forces from beneath the depths of the sea that wreak havoc. And here God does not engage in theodicy, confirming Eliphaz’s, Bildad’s, and Zophar’s contention that people suffer because they have it coming to them. On the contrary, he intimates that in his own home suffering from his undeserved illness and his undeserved bereavement Job should have been the center of a universe in miniature and should have merited the empathy of Eliphaz, Bildad, and Zophar. However, in the larger world out there God has endowed with a measure of free choice not only humans but also other entities including the *tsu-nami*, a.k.a., the Leviathan. In this grand scheme of things, Job’s debilitating case of what appears to be a not uncommon, life-threatening form of psoriasis assumes vastly less cosmic significance. In the end, however, God as portrayed in the Book of Job does, as it were, take out time from dealing with the monstrous *tsu-nami* to address Job directly and not, as many a modern mortal potentate might be wont to do, by way of some minor official. In so doing, God suggests that at least for the readers of Job – humans, who have not yet harnessed the forces of destruction from beneath the sea – the abiding challenge is to learn how to speak and, better still, how to keep silence in the face of our friends and neighbors, who have a right to cry out in their physical and emotional pain. Indeed, all people can learn to simply nod their head in empathy (Heb. *lanud*). After all, even God listens and even answers with empathy, even if only in chapter 38 of one of the Bible’s longest books.

In Job 40:9–14, in God’s second speech out of the whirlwind, which conventional biblical scholarship (see Ginsberg above) has found wanting, God challenges Job, “Have you an arm like God’s? Can you thunder with a voice like His? ... See every proud man and humble him, And bring them down where they stand. Bury them all in the earth; Hide their faces in obscurity. Then even I would praise you for the triumph your right hand won you.” Harold S. Kushner, *When Bad Things Happen to Good People* (1981), argues that the profound message of this passage is that although God would like us to have all the happiness we deserve, He cannot or will not save innocent victims from cruelty or chaos. A century before Kushner, Benjamin Szold (*Job* 1886; in Hebrew) warned against expecting to find in God’s speeches from out of the whirlwind in Job 38–41 an answer to the question as to *why* bad things happen to good people. After all, argued Szold, the book was not written by God; it was written by a theologian. At the end of the day, therefore, the best that this theologian can offer us is not a theodicy but an anthropodicy. And this, no less than the beautiful Hebrew poetry of the Book of Job, is one of the abiding messages of this great book of Scripture (see below).

C. Newsom (*Job* 2003, pp.234–58) points out, “Almost every commentator notes that the divine speeches refuse to en-

gage Job’s arguments on his terms.” This fact prompts Newsom to compose a brilliant essay, which almost rivals Job 38–41 in its literary artistry and intellectual sophistication. Nevertheless, it appears that “almost every commentator” has failed to heed not only Szold’s sound advice that the Book of Job cannot be expected to supply an answer to the question as to why bad things happen to good people but also to heed the simple fact that while Jeremiah may have asked, “why do the wicked prosper,” Job, strange to relate, does not ask, “Why do the innocent suffer bereavement and disease?” Consequently, the author of the divine speeches cannot and should not be faulted for not providing an answer to the question Job does not ask. All the more, no holistic reading of the Book of Job, can fault the divine speeches for not repeating the answer given to Job’s own particular suffering in chapters 1–2. There it is related that Job was, like the proverbial albino mouse in the proverbial laboratory maze, the subject of a highly successful experiment. In this experiment, Job did not curse God. A highly sophisticated theory as to how each and every individual is duly rewarded in good measure for virtuous behavior and duly punished for misbehavior is set forth, in fact, in Moses’ Nahmanides, *The Gate of Reward*, which includes a short commentary on the Book of Job. Indeed, Nahmanides may have been inspired to work out a veritable higher mathematics of reward and punishment precisely because neither JP or JIP offers an adequate explanation of the brilliant question, which Job does not actually ask in the canonical Book of Job. This question is, “Just how are people rewarded for their virtue and punished for their misdeeds?” After all, much human experience often seems aptly described by Job 9:22: “It is all one; therefore I say, ‘He [God] destroys the blameless and the guilty’”; and Job 21:30: “For the evil man is spared on the day of calamity, on the day when wrath is led forth.”

What does Job actually ask, and what precisely does God reply? In fact, the Book of Job contains altogether 16 questions introduced by the interrogative particles *lammah* (9), *maddu’a* (6), and *mah* (1). None of these 16 questions is, “Why do good people suffer?” On the other hand, Job does ask three times in chapter 3 (v. 11, 12, 30) and once more in 10:20, “Why was I born?” This rhetorical question seems to mean simply, “I wish I had not been born.” In 18:3 it is Bildad who asks Job why he thinks that Bildad and his two friends are foolish while in 19:22; 21:4; 27:12 Job addresses “why” questions to his three friends. In 33:13 it is Elihu who asks Job why he can possibly call God to account for not replying to people when, in fact, God does respond to people in dreams. Elihu supports his argument by quoting almost verbatim from Job’s account of a dreadful dream (Elihu in 33:15ff. referring back to 4:13, on which see above).

In 7:20 Job asks, “Why [*lammah*] do you make *me* your target?” The holistic reading of the canonical Book of Job does not require an answer for this, which was provided in chapters 1–2. This answer, that Job was being tested and did not deserve to suffer, is confirmed in 42:7: “You [Eliphaz and your two friends] did not speak right about me as did my ser-

vant Job." In 7:21 Job asks, "Why [*mah*] do you not forgive my transgression and forgive my iniquity?" The latter question is certainly not about why bad things happen to good people. Indeed, in 9:29; 21:7, and 24:1 Job does echo Jeremiah in asking, "Why do the wicked prosper?" Asking the question is itself a challenge to the contention of Eliphaz (4:7), Bildad (8:12–22), and Zophar (20) that the wicked are punished and the just rewarded.

This search for the "why" question, which, scholars often contend, the divine speeches ought to answer, leaves us with only two more candidates: 30:2 and 13:24. The first of these, 30:2, "What can I gain from the strength of their hands, from men whose vigor is spent?" is most assuredly not addressed to God. It is, as Gordis (1978, p. 330) explains, a virtual quotation, explaining why Job did not employ as shepherds the fathers of the young men, who now scorn him. This leaves us with only 13:24 where Job asks God, "Why do you hide your face?" And this is precisely the question, which the divine speeches answer most directly in 38:1 and again in 40:1: "the LORD answered Job from out of the whirlwind." In fact, God even responds directly to Job's challenge in 9:19, 13:8, 31:35 that God please grant him a day in court to bring a veritable lawsuit against God. This response is stated in 40:2 in the form of a rhetorical question: "Will the reprover contend with Shaddai// Will He [God] provide an answer to one who seeks to reprove God?" (cf. Tur-Sinai 1967, p. 554) God's question seems to mean, "Job, you summoned God into the courtroom. Are you certain that you want to go through with this lawsuit?" What could be a more appropriate response to Job's having asked for a day in court? Moreover 42:5, in which Job says, in response to the last of the God speeches, "I have heard about you with my ears, but now I see you with my eyes," Job acknowledges that God has indeed granted Job's wish, expressed in 19:25–27 (in NJV): "But I know that my Vindicator lives; In the end He will testify on earth – This, after my skin will have been peeled off. But I would behold God while still in my flesh, I myself, not another, would behold Him; would see with my own eyes."

So – in the end – the circle is closed. God meets Job in court, and He confirms to Job's friends and to all readers of the Book of Job (42:7) that indeed bad things do happen to good people and that victims should not be insulted by would-be comforters – quite a profound lesson in anthropodicy, albeit it not the theodicy we might have expected from a theophany. For such a theodicy one must look instead to Maimonides' and Nahmanides' demonstrations that bad things do not really happen to impeccable people or to the promise in the Book of Daniel (12) that in the long run those who sleep in the dust – the good and the bad (cf. Job 3:13) – will all receive their appropriate eternal rewards. In the interim, the abiding message of God to Job's would-be comforters is enshrined in *halakhah*. And that is no small achievement of the book's author and of the faith community that preserved and cherished the Book of Job.

[Mayer I. Gruber (2nd ed.)]

The Origin and the Literary Evolution and Character of the Book of Job

Ezekiel 14:12–20 reveals an acquaintance on the part of a writer of the early sixth century B.C.E. with a tradition about a saint of old by the name of Job who was presumably identical with the hero of the canonical book of that name. Of the two saints whom Ezekiel names together with Job, namely, Noah and Daniel, the former is the well known hero of the Flood. For Daniel, he is apparently the one who is also known from Ugaritic literature, see *Daniel. Details about Job are known only from the Book of Job. It is held that in this book a later composition, "Job the Impatient" (JIP), has been grafted onto an older one, "Job the Patient" (JP), and it stands to reason that the latter is closer to the original tradition about Job than the former. But JP itself consists of more than one stratum. Observations made by writers like W.L. Batten, A. Alt, and H.A. Fine point to the following stratification: (a) JPa, 1:1–5, 13–22; 42:11–17. These 22 verses constitute a simple but complete story, which knows nothing about any role of Satan; for (1) in 1:13, "his sons" refers back to the "Job" in verse 5b, not to "the Satan" in verse 12b; (2) the text does not say that the calamities of 1:13–19 were caused by the Satan (contrast 2:7), and in 42:11 we read that the friends comforted Job "for all the misfortune that God had inflicted upon him"; and finally (3) the blessing of God in 42:12–13 presupposes the previous loss of his property and his children in 1:13–19 but not the inflicting of an unbearable dermatitis in 2:7–8, 13. (b) JPB, 1:6–12; chapter 2; chapters 27–28; 42:7–10 plus some lost sections on which see the last part of section 2. The author of JPB was a writer of high quality. Finding in JPa that Job lived in the Kedemite region of Uz (see above, Sec. 2a) he furnished him with friends from three other Kedemite tribes or localities. He obviously created Eliphaz the Temanite out of two of the names in Genesis 36:11, and it is probable that he spun Zophar the Naamathite out of two other names in the same verse. Some texts of the Septuagint actually have Zophar there for Zepho, and the writer either had an aberrant reading *n'mt* for *g'tm* or was bold enough to modify *g'tm* to *n'mt* for his purpose. How he arrived at the name Bildad is uncertain (perhaps he thus modified Bedad, Gen. 36:35), but the gentilic Shuhite was obviously suggested to him by the last name in Genesis 25:2. Remembering that his characters are non-Israelite (and probably pre-Mosaic) he has them employ the divine names El, Eloah, and Shaddai, but never יהוה. He is the author of the lovely poem which is chapter 28. By introducing the Satan, an angel with the permanent office of accuser, he reveals that he dates from the Persian period, since the earliest datable passage in which he occurs with this role is Zechariah 3:1ff. JPa may possibly be of late pre-Exilic authorship, though one has the feeling that it too is post-Exilic. The real genius of the Book of Job is, of course, the author of JIP (whether or not it originally included the Elihu chapters and the second God-Job exchange, see end of 3). He not only changed Job from a conventional saint to a negator of retribution and providence, but he built up a structure of consummate literary art. To the

limiting of their speech to pre-Yahwistic divine names, he adds a Kedemite linguistic coloring. Kedem, the cradle of the Kedemite stock, is primarily the Middle Euphrates region (those Kedemites who lived farther south were believed to be descendants of Abraham and Lot, both of whom migrated from the original Kedem). Now, Kedem in this sense stands in synonymous parallelism with Aram in Numbers 23:7, and a famous native of this region is styled Laban the Aramean and represented as speaking Aramaic, Genesis 31:24, 47. It is therefore for the sake of local color that this writer, whose knowledge of Hebrew (and of Hebrew Scriptures) was excellent, not only makes his characters keep using the noun *millin* ("words," infrequent in Hebrew) and interlard their speech with such hair-raising Aramaisms as *sahed* (the classical parallel synonym of 'ed "witness" is *yafeah*, and he surely knew it) and *geled* ("skin"), and such forms as *minhem* ("from them," Heb. *mehem*). The subtle devices by which he makes the friends express their pique in the second round by dwelling only on the punishment of the wicked, or Job employ against his opponents telling allusions to words previously spoken by one of them, have already been pointed out. A serious hindrance to the modern reader's appreciation of his art are, apart from minor corruptions, the many displacements of lines. Both are particularly liable to occur in lyrical texts, where the logic of the story and of prose syntax, which are such an effective check on corruption in prose narrative, are totally wanting. Torczyner (Tur-Sinai) observed that a principal reason why the characters often seem to be speaking pointlessly or even arguing against themselves is that in the received text 4:12–19 stands in a speech of Eliphaz. The critics never tire of deprecating the complacency of Eliphaz and his friends. Yet here he cites a terrifying nightmare in which he was told that God accounts no man righteous because He is an impossible tyrant even with the angels. On the other hand it is Job who has just said: I wish I were dead because there I would have calm and rest and I would not have trouble. As it is (3:26) I have no calm, no tranquility, and no rest, and trouble has come upon me (3:25) For I had a dread and it has come true, just what I feared has come to pass. It is in 4:13–16, 12, 17–20 that Job goes on to tell what that premonition of disaster was: a dream in which an angel informed him obliquely that he was living in a fool's paradise if he imagined that his righteousness was a guarantee against ruin: God, who found fault with his angels, certainly did not recognize any such category as righteous men. This, so far from being the view of Eliphaz, is so repugnant to him that in chapter 15, in verses 14–16 of which he cites it as Job's view, he berates him for it mercilessly. On the other hand, it is Job who says in 6:10 end, "I have not withheld the words of a holy being," and who throughout the discussion keeps complaining that God is unreasonable. This insight of Torczyner's (Tur-Sinai's) makes many other things in the disputation fall into place. Grafted onto Jpb, J1P must be younger than Jpb. In effect, Segal has shown that it abounds in parallels to other books of the Bible, and that in all but a small fraction of cases Job is either demonstrably or probably dependent on

those other books. The clear case of Proverbs 3:11–13 > Job 5:17 has already been cited (in 3, a, i), but since the age of Proverbs 1–9 is controversial this observation is of little help in arriving at a terminus post quem for J1P. A decisive case, however, is Isaiah 44:24b > Job 9:8. Not only has the former perfect parallelism and the later none, in the former *levaddi*, "I alone," is just the point: God made everything, no one else had any part in the creation of either the sky or the earth. In the latter, on the other hand, the only reason why the author added *levaddo*, "all alone," after *noṭeh shamayim* was that he found *levaddi* after *noṭeh shamayim* in the former, which served him as model. (It follows that the parallelism is also due to borrowing on the part of Job in the case of Isa. 41:20 > Job 12:9; Isa. 50:9 > Job 13:28; Isa. 59:4 > Job 15:35; et al.). On these grounds Segal dates Job (i.e., J1P) after Deutero-Isaiah, that is, after the third quarter of the sixth century B.C.E. (That J1P, in borrowing the phrase in question, assigned to the word *noṭeh* a different meaning from the one it has in its original context is an observation for which see Ginsberg, 1968.)

[Harold Louis Ginsberg]

The Name Eliphaz

As the name of the leader of the three wise men who enter the house of the bereft and infirm Job, and, despite their initial good intentions, insult him and blame his dead children for their own untimely death, the name *Eliphaz is most appropriate. According to Genesis 36:10 Eliphaz was the first born son of Esau. Esau, according to Gen. 25:30 and 36:1, is the progenitor of Edom, the nation depicted as Israel's arch-enemy in Malachi 1:2–4. Moreover, Eliphaz, the son of Esau is identified as the father of Amalek in Genesis 36:10. Amalek, of course, is the enemy of Israel, who is described in Deuteronomy 25:18 as follows: "undeterred by fear of God [the foremost quality of Job in 1–2; and the essence of true wisdom in Job 28:28], he surprised you on the march, when you were famished and weary, and cut down all the stragglers in your rear." Other than to ascend a ladder and hold up a sign as to who is the hero and who is the villain in Job 3–26, the author of the canonical Book of Job, could not have done more than naming that villain Eliphaz to suggest that the anti-hero of the Book of Job is the wise person who comes to a house of mourning and insults both the mourner(s) and the mourned by saying that they had it coming to them. This author has done his/her very best by suggesting that as Isaac is the link between Abraham and Jacob so is Eliphaz the link between Esau and Amalek. Yet, most of the standard commentaries attach no special meaning to the deliberate choice of the name Eliphaz for one who, like his son Amalek, hits the book's real hero when he is down. Acutely aware of the not so subtle message of calling Job's protagonist by the name of the son of Esau and the father of Amalek, a number of midrashim quoted in Ginsberg's *Legends*, 1, p. 422 suggest that when Job reminded Eliphaz that he was, after all, the son of Esau, Eliphaz replied, "I have nothing to do with him; 'a child shall not bear the iniquity of one's parent'" (Ezek. 18:20). Another midrash quoted in Ginsberg's

Legends, 5, 322 accounts for Amalek's reprehensible behavior not as something he might have learned from his parents but as the kind of behavior that results when a great prophet neglects the education of her/his children because of excessive involvement in the public domain! Obviously, both of these midrashim seek to tone down the biblical author's message that people who insult the bereaved and the infirm belong to the enemies of Israel.

Why Kedemites?

Gruber 1998 noted that the characterization of Job as "greater than all the Kedemites" (1:3) ought to remind one of King Solomon, whose "wisdom was greater than the wisdom of all the Kedemites ..." (1 Kings. 5:10). Here again as in the choice of the name Eliphaz (son of Esau and father of Amalek) for the anti-hero the author of the canonical Book of Job already intimates that the true wisdom is not with Eliphaz and his friends but with Job as Job will argue in 12–14 and as God will concur in 42:7 where again God, not fortuitously, addresses specifically Eliphaz and says, "you and your two friends" (i.e., Bildad and Zophar). And yet, perhaps part of the greatness of the artistry of the Book of Job is that despite all the not so subtle hints scattered all over the book, readers must rediscover who spoke rightly and who did not. Ultimately, the difficulty lies not in the difficult vocabulary that requires years of study of ancient languages but in the unpleasant realization that if bad things really do happen to good people on a regular basis (as is suggested in the talmudic dictum in Bava Batra 15a, which sees Job not as a one-time historical personage but as a paradigm (Heb. *mashal*) of all innocent victims), then it could happen to anyone of the innocent readers of the Book of Job. Just as some persons go into what psychologists call denial when they receive a death sentence from a cardiologist or oncologist, so do many readers and commentators on the Book of Job go into denial when they face up to the fact that the Book of Job says a great deal about the fact that bad things happen to good people and as little as possible about why this happens.

The Dream Vision in the Book of Job and Beyond

In the 1960s Tur-Sinai and Ginsberg were alone in construing the teaching revealed in the dream vision (chapter 4:12–19; and referred to again by Job in 6:10 ("I have not withheld the words of a holy being"; see Ginsberg 1967, p. 99) and in 9:1 ("Indeed, I know that it is so: 'how can a human be vindicated before God?") and clearly mocked by Eliphaz in 5:1, 8 ("Just call – see if anyone answers you! To whom of the 'holy' beings can you turn? I [Eliphaz], on the other hand, resort to God, to God do I address my plea"; Ginsberg 1967, p. 99) and again in 15:11–19:

Do these comfortings [by Eliphaz, Bildad, and Zophar] fail to satisfy you
Because you know some word that reached you by stealth?
What sinful haughtiness!
What monstrous pride!
To blow your wind at these men

And to belch forth such words:

"How can a mortal be judged righteous
a human born of a woman accounted just?
If he [God] disapproves of his sacred abode [the sky]
If the very skies [whose purity is described in Exod. 24:10]
are not pure in His sight,
How much less a thing loathed and detested,
a human, who drinks godlessness like water!"
Listen [says Eliphaz to Job], and let me [Eliphaz] tell you
[Job],
relate what I have seen ...

(translation from Ginsberg 1967, pp. 100–2 with modifications for the sake of greater clarity)

On the basis of the clear evidence that Job saw in the dream vision a vindication of his own position that his suffering is not the cause of some heinous sin since, as is revealed in the vision, even the sky and the stars and moon therein would not pass muster if summoned to account before the divine Judge, Tur-Sinai and Ginsberg assign also chapter 25, vv. 2–6 to Job:

Dominion and dread are His;
He imposes peace in his heights [Heb. *oseh shalom bi-meromav*;
the source of the first
clause of the final line of the Kaddish!; see below]
Can His troops be numbered?
On whom does His light not shine?
How can a human be in the right before God?
How can one born of a woman be cleared of guilt?
Even the moon is not bright,
And the stars are not pure in His sight.

By the end of the 20th century numerous other scholars adopted and elaborated upon the Tur-Sinai-Ginsberg thesis with respect to the place of the dream vision in the Book of Job. These scholars include G.V. Smith, in: VT, 40 (1990); Margaret B. Crook, *The Cruel God* (1959); J.C.L. Gibson, in: *Scottish Journal of Theology*, 28 (1975), Y. Gitay, in: JNWSL, 25 (1999), and especially E.L. Greenstein in numerous publications including the commentary on Job in the Hebrew Commentary Series *Mikra LeYisrael* (2006). Gruber (1998; 2003) demonstrated that, in fact, the treatment of the dream vision as a defense of the individual who must give an account of himself before the divine Judge rather than an attack by Eliphaz upon Job's claim of integrity is reflected in a series of Jewish liturgical poems associated with the penitential season that precedes the Jewish New Year (Rosh Ha-Shanah) and culminates in the Day of Atonement. Moreover, he suggested that rather than attributing to the sixth century C.E. liturgical poet *Yannai a radical rearrangement of the Book of Job, anticipating Tur-Sinai, Ginsberg, and Greenstein, one can assume the following: at least the earliest of the synagogal poets who elaborated upon the dream vision as a defense of humankind standing before the divine tribunal on Rosh Ha-Shanah and the Day of Atonement read Job in its original form before the unfortunate series of displacements in the current Hebrew text, which the aforementioned modern scholars recognized. Gruber was able to buttress this claim by pointing to various biblical texts recovered from *Qumran in which the order of verses, peri-

copies, and even chapters differs radically from the standard Hebrew text of Hebrew Scripture. For additional data as to how blocks of text were displaced in the copying of ancient manuscripts, see Greenstein 2005, pp. 260–62.

Holistic Interpretation of the Book of Job: Beyond Ginsberg and Gordis

One of the most important trends in late 20th century and early 21st century biblical scholarship is holistic interpretation. Holistic medicine, which developed during the same era, utilizes the data and techniques developed in treating specific maladies of specific organs and tissues to treat the entire person far more effectively than either the new techniques alone or the old-fashioned family physician. By the same token, holistic biblical interpretation seeks to utilize the data garnered by classic 19th and 20th century atomistic exegesis in order to fully understand not only individual units but also entire books as they appear in the ancient Hebrew and Greek versions of the Jewish Bible. Two of the important exponents of holistic interpretation, who have contributed immensely to improved understanding of the Book of Job, are E.L. Greenstein and Carol Newsom.

Following up on Gordis's argument that the canonical Book of Job is a datum while its division into previous compositions is only a theory, holistic interpretation tends to see 42:7b–17 not only as the fitting rebuke of Job's friends for having urged him to curse God and the fitting laudation of Job for having rebuked his friends in 27–28 but as the equally fitting conclusion to the canonical Book of Job, which has privileged the infinitely more profound work which Ginsberg calls JIP. In 42:7b–8 it is stated, "And the LORD said to Eliphaz the Temanite, 'I am angry at you and your two friends because you did not speak rightly about me as did my devotee Job. Now take for yourselves seven bulls and seven rams and go to my devotee Job and offer a burnt offering for yourselves. And let Job, my devotee, pray for you; for him will I accept and not treat you badly, since you have not spoken rightly about me as did my devotee Job.'"

Significantly, in this passage God employs the expression "show deference" (literally, "lift up someone else's face") for precisely the generally forbidden activity (see e.g., Lev. 19:15) of which Job, himself accused Eliphaz and his friends in 13:6–10:

Will you tell lies on behalf of God
speak falsehoods on his behalf?
Will you show bias in his favor,
play the advocate for God?
Will it be pleasant when he takes you to task?
Can you mock him as you mock mortals?
And accuse you he surely will
If you show partiality in the dispute.
(Translation adapted from Ginsberg 1967, p. 98.)

Thus it turns out that Job in the very heart of his debate with Eliphaz, Bildad, and Zophar has accused these friends of showing partiality in a dispute in order to justify God in the

face of Job's undeserved suffering. What the reader of the canonical book is meant to know from chapters 1–2 is that, in fact, Job is totally innocent. He is the subject of an experiment. Job does not know this, nor do the friends. Job proves that God was correct and "the Adversary" mistaken. Contrary to the dire prediction of "the Adversary" in 1:10 and 2:5, Job does not curse God. He insists again and again that (a) he has done nothing to deserve the untimely tragic death of his seven sons and three daughters; (b) his three friends who have come to visit a bereft and infirm individual have misbehaved by blaming the victim rather than sitting silently and nodding their heads; and (c) all he wants from God is that God should dialogue with him and acknowledge him.

Consequently, when God rebukes the friends in 42:7–8, he confirms the correctness of what Job has insisted throughout his speeches in chapters 3–26; 29–31. Moreover, when God does address Job in 38–41 he has acceded to Job's simple request uttered in 9:32–35: "For God is not a man, like me, whom I could answer when we came to trial together. If only there were an arbiter between us, who would lay his hand upon us both, who would remove God's rod from me so that my dread of Him would not terrify me. Then I would speak, and not fear Him, for He is far from just to me." And, in fact, at the end of the book, God does address Job (see below concerning the God speeches). Moreover, by God's saying that Job has spoken rightly and the friends not, God has vindicated Job both in his complaint that his friends do not know how to comfort a bereft and infirm individual and in his conviction that his suffering is totally undeserved.

[Mayer I. Gruber (2nd ed.)]

The Message and Meaning of Job

The problem of the final meaning and message of the book, no less than that of its provenance and composition, has elicited over the centuries a wide variety of responses. To some sages of the Talmud and Midrash, Job is to be regarded as one of the few truly God-fearing men of the Bible (Mid. Lekah Tov to Gen. 47:12), the most pious gentile that ever lived (Deut. R. 2:4), exceeding even Abraham in this regard (BB 14b). To others, he was a blasphemer (*ibid.*). According to R. Joshua b. Hananiah (second century), Job served God out of love, the highest possible motivation; according to R. Johanan b. Zakkai (first century), it was only fear that prompted Job to serve God (Sotah 5:5). Maimonides (*Guide*, 3:22–23) attributes Job's defiant questioning of God's justice to his defective knowledge of God; defective, since it was based on the mere acceptance of authority. However, when Job attained a true, philosophical knowledge of God (after the theophany from the whirlwind), he realized that it alone constitutes true happiness. No misfortune, however grave, can trouble a man once he is in possession of a truly philosophical knowledge of God gained through revelation. The latter instructs him that God's knowledge, rule of the world, and providence are in no wise to be compared to man's conception of these matters. "If a man knows this, every misfortune will be borne lightly by him."

Modern commentators are sharply divided as to what the author of Job meant to teach his readers. The problem arises from the fact that in the speeches of God from the whirlwind (Job 38–42), God majestically ignores the issue as Job has posed it. Instead of giving an explanation of Job's sufferings, God confronts Job with a series of seemingly irrelevant, ironic questions intended to convince him of the paltriness of human knowledge and power. The rhetorical questions, encompassing the unfathomable wonders of creation, the immensity of its expanse, and the marvels of nature, in whose presence man's understanding and power are as nought, seem to imply that it is presumptuous of man to question God's justice. This reading appears to be borne out by God's challenge: "Wilt thou even make void My judgment? Wilt thou condemn me that mayest be justified?" (40:8). Even more, Job acknowledges (40:4) that he is "of small account" and that in view of God's unanswerable questions, he will "proceed no further" (*ibid.*) with his questioning of God's justice. Indeed, Job is mildly rebuked by God for speaking out of ignorance and of "darkening counsel" (38:2). Yet, the friends are even more sharply rebuffed by God, since by their words they have enkindled his wrath: "For ye have not spoken of me the thing that is right, as My servant Job hath" (42:7). Taken at face value, the implication is that Job's repeated assertion of the lack of a visible correlation between his life of rectitude and the dreadful fate visited upon him disproves the friends' contention that suffering is proof of sin. If one were to employ the argument from silence, then the absence of any charge of guilt against Job in God's reply would constitute divine vindication of both Job's innocence and his argument. In sum, the book would teach (Terrien): (1) that the old doctrine of a causal connection between suffering and moral evil is untenable; (2) that the splendors of creation and their marvelous sustainment (38:39, 40), phenomena beyond the capacities of man, are proof of the justice of God; and (3) that the question of man's actual lot as contrasted with his rightful deserts is one on which God prefers to maintain silence. Moreover, in the face of an awareness of the divine power, as expressed in God's series of questions to Job (38:4–39; 40:9–32), Job's question becomes irrelevant. Conceivably, the thought is implied that if man could match God's power and wisdom, only then could he grasp the workings of God's providence. Job admits the total impossibility of such a feat (42:3) and concludes by abhorring his words and repenting, "Seeing I am but dust and ashes" (42:6).

The enigmatic character and dubious relevance of God's reply to Job have suggested an interpretation that, in the first instance, denies that the book was written as an attempt to solve the mystery of the suffering of the innocent. Neither the colloquy nor the theophany penetrate to the reason for Job's suffering. That reason, however, emerges quite clearly from the prologue and epilogue. Job's suffering is merely a divine test of his piety. In addition to controverting the conventional view that suffering is punishment for sin, the book proposes not an answer but an experience. The message of Job is neither theological nor philosophical. It is profoundly religious.

Its origin is to be sought in the biblical concept of the consequence of sin as isolation from God (Gen. 4:14). In his agony, Job feels not only isolated from God but that God has become his implacable enemy (7:20; 9:16–18; 13:21, 25; 16:9, 12:19:6–9; 30:20) and has hidden his face from him (13:24). He insists that death would be preferable to his life of unmitigated woe (3:17) and that never to have seen the light of day would have been an even more desirable fate (3:11, 12), since in either case he would have been beyond God's hostile power. No isolation from God could be more total than this. God's reply from the whirlwind is tantamount to the assurance that suffering need not spell isolation from God. The divine revelation is itself an act of grace, so much so that in its presence, Job does not ask to be delivered from his suffering. Even more, he admits that whereas heretofore he "had heard of Thee by the hearing of the ear; But now mine eye seeth Thee" (42:5). God's presence is more than enough to sustain him. "It may be good to understand the cause (of suffering); but it is better to be sustained to endure" (H.H. Rowley). Unknowingly, then, Job in his suffering was vindicating God's trust in him and thus honoring God.

Georg Fohrer's interpretation is a nuance of the foregoing. The essential question the book sets out to answer is: what is the conduct proper to suffering man? The final reply of Job (40:2, 3; 42:5) is the answer to the question, conceptualized by Fohrer in the following: "In his unreserved devotion to God and in his personal fellowship with him, Job bears and endures his fate.... This is the true understanding and appropriate attitude for man towards suffering; the humble and reverential silence sustained by repose in God." Marcus sees Job as the "first existentialist." Basing himself on 40:7–14, he sums up the book's message: "Just as God exerts his heroic will to subdue the demonic elements of the universe and to sustain his creation by bringing light to the stars, rain to the sea and land, and food to all living creatures, so man must exert his will to subdue evil and overcome frustration." Thus, the book is "an exhortation to emulate God's unconquerable will." Freehof, after reviewing the various theories of the reason for suffering as put forth in the book (Prologue: suffering is a divine test; the Friends: suffering is divine punishment for sin acknowledged or unacknowledged; Job: a denial of the latter; Elihu: suffering is a divine warning and is educative), interprets the denouement as bearing a twofold meaning: (1) If God's mysterious power and wisdom fill the universe, it should not be unendurable to accept one more expression of it, human innocent suffering; (2) the very divine power manifest in creation should by implication serve man as a mandate to extend human control over nature as a means of conquering much human suffering. Gordis regards the book as aiming at two central conclusions. Since the world contains so much that is not intended for man's use and that is beyond his sway, neither the universe nor its Creator can be judged from the limited human perspective. There is implied acknowledgment on the part of God that much in the world order is imperfect. But, then, could Job, if he were to mount God's throne, do much

better; could he humble the arrogant and crush the evildoers? Again, the order and harmony that pervade the natural world though faintly grasped by man is, by analogy, evidence of order and meaning in the moral sphere, though the latter, too, is often incomprehensible to man. Though the book offers no justification for suffering from the human viewpoint, it does demonstrate that “it is possible for men to bear the shafts of evil that threaten their existence if they cultivate a sense of reverence for the mystery and miracle of life ... and strive to discern intimations of meaning in its beauty.”

[Theodore Friedman]

Spiegel shows that the prose tale of Job “revolves around the question, “Is there such a thing as unselfish virtue.” The prose tale of Job provides an affirmative answer to this question. In addition, Spiegel shows that the poem of Job “boldly assails the dogma of retribution as both untrue and unfair.” Consequently, anticipating by more than half a century the post-modern holistic interpretations, Spiegel reads 42:7, “for you [Eliphaz, Bildad, and Zophar] have not spoken the truth about me as did my servant Job,” as both the conclusion of the prose tale and as the conclusion of the poem [Ginsberg’s JIP]. This, Spiegel explains, means that Job 42:7 constitutes “the disavowal [by God] of the doctrine of individual retribution.”

[Mayer I. Gruber (2nd ed.)]

The most radical interpretation is that offered by Tsevat. According to him the book maintains that there is no principle of divine retribution in the world. “The assertion of punishment of the wicked and reward of the righteous is without foundation.... Justice is not woven into the stuff of the universe nor is God occupied with its administration.” Justice is simply a human ideal. “He who speaks to man in the Book of Job is neither a just god nor an unjust god but God.” Hence, Job’s denial of the notion that his suffering is evidence of his sin is closer to the final truth as enunciated in God’s reply from the whirlwind than the conventional doctrine put forth by the friends.

This summary of diverse current interpretations underlines the problematic character of the book no less that its endless fascination for those who ponder the “impossible problem of reconciling infinite benevolence and justice with infinite power in the creator of such a world as this” (J.S. Mill). In the words of the sages (Avot 4:15), “It is beyond our power to understand why the wicked are at ease, or why the righteous suffer.”

[Theodore Friedman]

The Book of Job as Anthropodicy Rather than Theodicy

In 1710 Baron Gottfried Wilhelm von Leibniz (1646–1716) published his book, *Théodicée*, “the vindication of the divine attributes, especially justice and holiness with respect to the existence of evil.” The English form of the French term *théodicée*, i.e., “theodicy,” is first attested in 1797. The term invented by Leibniz is based upon the Greek noun *theos*, “God,” and the Greek infinitive *dikein*, “to justify.” Consequently, the term

theodicy is a close semantic equivalent of the Hebrew term *zidduk ha-din*, “justification of the [divine] decree,” which is the name of the central liturgical poem recited at the Jewish funeral service since Late Antiquity. Numerous common interpretations of the Book of Job see this book as a treatise on theodicy. Notable exceptions are the interpretations of Spiegel, Tsevat, and Kushner (see above). The Book of Job and the God who speaks to Job from the whirlwind and ultimately defends Job and castigates his friends cannot or will not justify God with respect to Job’s suffering from the undeserved, untimely death of his sons and daughters. Nor does this book or the God who is represented as speaking through this book justify Job’s being afflicted with a severely debilitating disease. Consequently, neither the book as a whole nor the God speeches can be construed as a treatise or treatises on theodicy. In fact, the canonical Book of Job three times skirts the entire issue of theodicy. The first time that the Book of Job skirts the issue of theodicy is by telling the readers in chapters 1–2 that, in fact, Job’s suffering is totally undeserved; it is simply an experiment designed to vindicate God’s trust in Job’s virtue despite the charges leveled against Job by “The Adversary.” The second time that the issue of theodicy is skirted is in the God speeches. Tsevat and Kushner have simply made explicit to large audiences of biblical scholars and laypersons respectively the rather unpleasant ideas, which the author of Job left to the imagination of those learned enough to plumb the depths of the author’s high register Hebrew poetry. The third time that the canonical Book of Job skirts the issue of theodicy is in 42:13, “He also had seven sons and three daughters.” The latter verse does not assert, God forbid, that there were born to Job seven sons and three daughters as stated in 1:2. To have said that would imply that while in the course of God’s performing an experiment on an unwitting human victim God had the original children killed. Thereafter, as it were, God simply replaced them with new children. This would not be justification of God but condemnation of God. Instead, as Gordis often explained orally in his classes (but not in his published commentary), in the fairy-tale like epilogue of the book, Job’s original children were restored to him just as in the Ugaritic Epic of Danel (paired with Job and Noah in Ezekiel 14:14, 20; cf. Gordis 1965, p. 68), the son Aqhat is brought back to life as a reward for the virtue of his parents and in response to his sister Pughat’s eloquent and heartfelt prayers.

The Book of Job does not justify God in the face of human suffering, be it the suffering of a person who is being experimented upon as is described in chapters 1–2 or in the face of tidal waves (tsu-nami or Leviathan) that kill as many people as did the Americans at Hiroshima in 1945. Consequently, the Book of Job is not a work of theodicy. Most of the Book of Job, however, is devoted to Job’s defending himself in the face of the charge reiterated again and again by his friends that people (such as Job and his children) suffer because they have it coming to them. Since, the book portrays God as vindicating Job’s claim to innocence and condemning his friends for suggesting that he had it coming to him, the book may best be

described not as theodicy but anthropodicy. If theodicy is the justification of God, then *anthropodicy* (from Greek *anthropos*, “human,” and Greek *dikein*, “to justify”) is the justification of suffering humans in the face of people, who add insult to injury by blaming the victim, including the bereaved and the infirm. James Moore, *Post-Shoah Dialogues* (2004, p. 232) previously used this same term to mean “evil [committed] by man.” The essay on pastoral care by Rabbi Myriam Klotz (see Bibliography) is a rare example of the utilization of the Book of Job in a handbook on pastoral care. To be more precise, the Book of Job is not about the vocation of rabbis and other clergy that includes visiting the sick and the bereaved. In fact, most of the Book of Job deals with the question of how *not* to behave when attempting to carry out the two most ubiquitous *mitzvot*, i.e., holy obligations, which the Jewish religion regards as incumbent upon all people – regardless of their vocation – with respect to the sick and the bereaved among us. It would seem to be very simple: one needs no *shofar*, no *lulav* and no *mazzah*, not even a prayerbook. One needs only to know when to keep one’s mouth shut. This was a lesson, which some of the greatest of the sages of antiquity – Eliphaz, Bildad, and Zophar – learned only after God Almighty emerged from the whirlwind to rebuke them for the untoward consequences of their very, very good intentions.

In Halakhah and Liturgy

Mishnah, *Bava Mezia* 4:10 asserts that just as there is defrauding (and some translate overreaching; the Hebrew term is *hona’ah* or *ona’ah*) in commerce so is there defrauding in speech. Tosefta, *Bava Mezia* 3:25, followed by Babylonian Talmud, *Bava Mezia* 58b, explains that defrauding in speech is exemplified by a person who in response to someone else’s suffering, becoming sick, and/or having the misfortune of having his children predecease her/him says to that person as did Job’s friends, “Is not your piety your confidence, Your integrity your hope? Think now, what innocent person ever perished,” quoting Eliphaz to Job in 4:6–7. The *halakhah* thus canonizes the view of Job and of God as portrayed in 42:7 that such despicable verbal behavior is an offense against the Torah.

As noted above, the initial silence of the friends of Job recorded in 2:13 until Job himself had spoken in 3:1–16 is cited as the inspiration for the rule set forth in TB, *Mo’ed Katan* 28b and canonized in Shulhan Arukh, *Yoreh De’ah* 376:1 that would-be comforters not address the mourner until the mourner indicates either verbally or nonverbally that she/he would like to be addressed.

Shulhan Arukh, *Orah Hayyim* 492 canonizes a medieval practice of observing three successive fasts on the first Monday-Thursday-Monday following the New Moon of Marheshvan in order to atone for any minor sin committed during the jolly festival of Sukkot (Tabernacles) and a similar three successive fasts on the first Monday-Thursday-Monday following the New Moon of Iyyar to atone for any minor sin committed during the jolly festival of Passover. The two series of three fasts are called *behab* (בִּהַב) following the Hebrew nu-

merals designating Monday-Thursday-Monday. The inspiration for these fasts of atonement is Job’s offering sacrifice at the end of each of his children’s series of parties, for “perhaps my children have sinned and blasphemed God in their thoughts” (1:5); see J.D. Eisenstein, *Digest of Laws and Customs* (Heb., 1917), pp. 35–36.

The daily service in the synagogue begins with the benediction, Praised are You, O Lord, our God, king of the world, who gave the rooster the discernment to distinguish between day and night. According to TB, *Berakhot* 60b this benediction is to be recited upon hearing the sound of the rooster at dawn. This benediction is based upon Job 38:36 where God addresses to Job the rhetorical question, “Who gave wisdom to the ibis//or who gave discernment to the rooster?” (See extensive discussion in Gordis 1978, pp. 452–453.)

Just as the daily service in the synagogue begins with a quotation from the Book of Job so does virtually every service conclude with the Mourner’s Kaddish, whose last line quotes Job 25:2b, “He establishes peace in the heavens.” The very same utterance, with which the Mourner’s Kaddish invokes Job 25, namely, “May He who establishes peace in the heavens establish peace among us and upon all Israel, and say, ‘Amen,’” is recited silently by individuals at the conclusion of the *Amidah, and it is recited also at the close of the *Grace After Meals.

[Mayer I. Gruber (2nd ed.)]

In the Aggadah

The rabbis were fascinated and troubled by Job, as is evident in the large number of *aggadot* about him. A primary concern is when Job lived. Opinions expressed in Bava Batra 14b–16b include the time of Abraham, the time of the tribes (when he married Jacob’s daughter Dinah), the time of the Exodus, the period of the Judges, and the return of the exiles from Babylon. He is said to have been contemporaneous with both the Queen of Sheba and Ahasuerus. Some said Job never existed and his story is an allegory. The most widespread rabbinic view is that Job lived in the time of Moses and served as an advisor to Pharaoh (see below).

A closely linked question is whether Job was a Jew or a gentile. Some say that he was “a righteous proselyte” and “one of the seven gentile prophets,” others that “he was an Israelite” and that *halakhah* can even be deduced from him. Most rabbinic opinion presents Job as a righteous gentile and sages praise his positive qualities, including modesty and hospitality. Nevertheless, this admirable non-Jew falls short in comparisons to Abraham (ARN², 7; BB 16a). Abraham is said to have served God out of love while Job served God only out of fear of losing his reward (TJ, Ber. 14b), although others disagree (Mish. Sot. 5:5 and TJ, Sot. 20c). Resolution is achieved in Sotah 31a, where a tradition attributed to R. Meir equates “fearing God” with “loving God” for both Abraham and Job.

Job’s sufferings are explained variously. According to TB, Sotah 11a, Job joined Balaam and Jethro in advising Pharaoh on how to deal with the enslaved children of Israel. Balaam,

who advised slaying male children, was himself slain. Job, who remained silent, was sentenced to suffering. Jethro, who fled, became a proselyte to Judaism (similarly TB, Sanh.106a; Exod. R. 27:3). Job is also accused of questioning divine justice in his heart, even before his actual afflictions began (TB, BB 16a–b).

Rabbinic ambivalence towards Job is based not only on the difficulties of the book of Job, itself, but on the predominant identification of Job as a gentile. Job's complaints during his suffering are frequently compared unfavorably to the endurance of the patriarchs, kings, and prophets of Israel who faced far greater trials (Deut. R. 2:4; Pes. R. 47). Some sages explain Job's restoration with the claim that "the Holy One doubled his reward in this world in order to banish him from the world to come" (TB, BB 15b). Conversely, *Pesikta Rabbati* links Job's punishments and redemption with the chastisements and ultimate consolation of the Jewish people (26:7, 29/30).

There may be an element of anti-Christian polemic in rabbinic efforts to denigrate Job, or in contrast, to claim him as a Jew. Such approaches, already in tannaitic sources, may be responding to Christian portrayals of Job as a patient sufferer and to Job's inclusion in Christian constructions of a pre-existent community of gentile priests outside the nation of Israel. Evidence of disputes over Job's identity appears in one of the letters of the Church Father *Jerome, where he identifies Job as descended from Esau and not Levi, "although the Hebrews declare the contrary" (Lt. 73).

[Judith R. Baskin (2nd ed.)]

In Islam

Ayyūb (Job) is briefly mentioned in several suras as the servant of Allah who underwent hardship (4:161; 21:83–84; 38:40–43); Allah therefore restored all of the fortune which he had lost. Post-Koranic literature greatly enlarges on the descriptions taken from the Bible and the Midrashim. As in Jewish literature, there are various opinions as to Ayyūb's origin and the period during which he lived. Some believe that he was a *Rūmī*, that is, an Edomite, and that he lived during the days of Lot, Abraham, Jacob, or Ephraim son of Joseph. His wife was Leah(!), the daughter (!) of Jacob (Gen. R. 57:4, Dinah, the daughter of Jacob was the wife of Job). Ayyūb died at the age of 93. His son Bishr succeeded him as prophet and was known as Dhū al-Kifl. It is interesting that many of the legends about Ayyūb are connected with the immediate environs of Jerusalem, Transjordan, and Hauran, and the vicinity of Damascus.

[Haïm Z'ew Hirschberg]

In the Arts

IN LITERATURE. The sorely tried Job, canonized by the medieval Church, has inspired far more literary, artistic, and musical work by Christians than by Jews. Two of the earliest treatments in literature were the *Mystère de Job* (part of the famous *Mistère du Viel Testament*, 1478?) and *L'Hystoire Job*, a French verse adaptation of the *Compendium in Job* by Pierre de Blois. The Book of Job contains all the stuff of drama – man's struggle

to understand the reason for injustice in the world – which should have made it a natural choice for Protestant writers of the 16th and 17th centuries. However, Job's very perfection and his daring and blasphemous questioning of God led to widespread neglect of the theme. Among the very few works on the subject to appear in the 16th century were the *Meistersinger* Hans Sachs's play *Der Hiob* (1547); Ralph (Robert) Radcliffe's biblical drama *Job's Afflictions* (c. 1550); and Robert Greene's *The Historie of Job* (1594). *Job*, a drama of the same period, is one of the few surviving literary works in Romansch (Rhaeto-Romance) and was published in 1896. Rather more interest was shown in the theme during the 17th century. In Spain, the Marrano playwright Felipe *Godínez published *La gran Comedia de los trabajos de Job* (1638) and Pedro Calderón de la Barca devoted one of his *autos sacramentales* to the subject.

The subject acquired more significance in literature from the early 19th century onward. Works based directly on the theme include *Az ember tragédiája* ("The Tragedy of Man," 1862) by the Hungarian writer Imre Madách; *Hiob* (1866), a drama by Johann Adolf Philipp Zapf; *Giobbe* (1872), a five-act Italian tragedy by Marco Wahltuch; and a dramatic poem (1898) by the Romanian author G. Gârbea. One outcome of the controversy roused by the biblical criticism of Ernest *Renan was a curious work by the French Socialist philosopher Pierre-Henri Leroux – *Job, drame en cinq actes... par le Prophète Isaïe, retrouvé, rétabli dans son intégrité, et traduit littéralement sur le texte hébreu ...* (1886). During the first decade of the 20th century there were some interesting treatments in German: *Geschichte des Heimkehrenden (Das Buch Joram;* 1905), a pastiche by Rudolf Borchardt; *Sphinx und Strohmann* (1907) reissued as *Hiob* (1917), a drama by the painter and author Oskar Kokoschka; and *Der Blumenhiob* (1909), a novel by Hans Kyser. In Germany, works on the theme included Fritz Weege's modern miracle play, *Das Spiel Hiob* (1926) and Bartholomaeus Pönholzer's religious drama, *Job, der fromme Idealist* (1927). Three other modern interpretations were the Swedish writer Karin Maria Boye's unfinished cantata, *De sju dödssynderna* ("The Seven Deadly Sins," 1941), on the theodicy issue; H. de Bruin's Dutch epic, *Job* (1944); and Giovanni Battista Angioletti's Italian dialogue drama, *Giobbe, uomo solo* (1955). Two of the most original and interesting modern treatments were those by the U.S. writers Robert Frost and Archibald MacLeish. Frost's *A Masque of Reason* (1945), a poetic drama in the guise of an apocryphal chapter of the Book of Job, humanized the story without robbing it of essential dignity. MacLeish's *J.B.* (1958), a verse play that won the Pulitzer Prize, made the hero a prosperous businessman whose life is shattered by a series of disasters. Reversing the arguments in the Bible, MacLeish has J.B.'s plausible comforters (a clergyman, a scientist, and a Marxist) exonerate him, while he insists on condemning himself. Among the very few Jewish writers who turned to the subject were the Austrian novelist Joseph *Roth, author of *Hiob* (1930); *Job: The Story of a Simple Man*, 1931); the Egyptian Karaite Murād *Faraj, whose *Ayyūb* (1950) was a prose version in rhymed Arabic; the Yiddish writer H.

*Leivick, who published the dramatic poem *In di Teg fun Iyov* (c. 1953); and the French author Henri *Hertz, whose short story “Ceux de Job” (in *Tragedies des temps volages*, 1955) describes the grandeur and despair of the Jewish experience.

IN ART. In art, Job has been a popular subject since early Christian times. In the Middle Ages he was regarded as the type of the suffering Jesus, the persecuted Church, or of the Christian soul’s endurance. He was portrayed sitting covered with boils, half-naked on a “dungheap,” as the Septuagint picturesquely mistranslated “ashes” (Job 2:8). Sometimes Job sat on a tortoise, the symbol of patience. He was afflicted by Satan with sore boils (Job 2:7), reproached by his wife (Job 2:9–10), and visited by Three Friends (Job 2:11). All these events are represented in illustrations of Job’s ordeal. The reproaches of his wife were expanded in medieval pious literature and miracle plays, with the result that she came to be depicted as a shrew; and Job’s Three Friends were sometimes shown mocking him by playing musical instruments (see below). Cycles of paintings or sculpture illustrating the trials of Job include 13th-century carvings from Chartres and Rheims and *The Story of Job* (1480–83), a 15th-century painting by the Master of the Legend of St. Barbara (Cologne Museum). The subject was treated in an altarpiece by Rubens for the Church of St. Nicholas, Brussels, and in a series of watercolors and engravings by the English poet and painter William *Blake which include *Job Laughed to Scorn* (Job 30). The destruction of Job’s children (Job 1:18–19) is shown in a crowded painting by Bernart van Orley (c. 1491–1542; Brussels Museum). Figures of the suffering Job, alone or accompanied by his wife and friends, or afflicted by the Devil, are found in early Christian frescoes from the Roman catacombs and from the graveyard of St. Peter and St. Marcellino; and on Roman sarcophagi. From the ninth century onward, other figures appear in Byzantine and European manuscripts, including the 12th-century Admont Bible (Vienna State Library) and the *Hortus Deliciarum*. At Chartres, there is a 13th-century carving of the ulcerated Job sitting on his dungheap and watched by his family. A demon places his right hand on Job’s bald head and his left hand under his foot, in accordance with the biblical description: “So Satan went forth from the presence of the Lord, and smote Job with sore boils from the sole of his foot even unto his crown” (Job 2:7). There is also a 13th-century bas-relief at Notre Dame, Paris. From the 15th century onward there are impressive German woodcarvings and an illumination by Jean Fouquet to the *Hours* of Etienne Chevalier (Musée Condé, Chantilly). During the Renaissance, the subject was mainly popular in northern Europe. It was represented in the wings of the Jabach altarpiece by Durer (Staedel Institute, Frankfurt, and Cologne Museum), in which Job’s wife is shown dousing her husband with a pail of water. It also appears in the work of Dutch and Flemish painters, in carved choirstalls at Amiens, and in French *Books of Hours*. In the 17th century, the subject was treated by the Spanish masters Murillo and Ribera (both paintings are in the Parma Pinaco-

theca); by Georges de La Tour in a characteristic night scene also thought to represent St. Peter released from prison by an angel; and by *Rembrandt in a pen and ink drawing. Modern representations of Job include those by Max *Liebermann and Yehuda Epstein.

IN MUSIC. Among the saintly patrons of music and the professional musician, “Saint Job” appeared – suddenly, but prominently – during the 14th–18th centuries in France, Germany, and England, and especially in Holland and Belgium. The tradition is thought to derive from an interpretation of Job’s complaint: “Therefore is my harp (*kinmor*) turned to mourning, and my pipe (*uggav*) into the voice of them that weep” (Job 30:31); another possible source lies in the Job mystery plays, which were themselves largely based on the apocryphal *Testament of Job*. All these traditions are reflected in the many paintings and illustrations which show Job being consoled (and sometimes also mocked – cf. Job 30: 1, 7, 9, 14) by musicians, mostly wind-instrument players. Where the musicians were three in number, a conflation with the motif of the Three Friends is sometimes noticeable (for a survey of the subject see: V. Denis, in *MGG*, 6 (1957), 458–60). Motet collections of the first half of the 16th century include a number of settings from the Book of Job (by C. de Sermisy, P. de La Rue, L. Senfl, L. Morales, T. Crecquillon, and J. Clemens non Papa), mainly of the sadder verses, a symptom of the early Baroque period’s emphasis on demonstrative repentance scenes. These treatments culminate in Orlando di Lasso’s two extended settings: *Sacrae lectiones novem ex propheta Hiob* (1565, repr. 10 times by 1587), for four voices; and *Lectiones sacrae ex libris Hiob excerptae musicis numeris* (1582), also for four voices. The first setting is extremely pathetic, the second more restrained. Further settings of the period were those by Jacobus Gallus (Handl) and Joachim à Burck (1610).

From about the turn of the century, Protestant composers increasingly favored the half-verse “I know that my Redeemer liveth” (Job 19:25), of which there are two settings by Heinrich Schuetz. The rise of the oratorio form had meanwhile produced several works on the subject (by G. Carissimi and P. d’Albergatti). The authenticity of Bach’s Cantata no. 160, *Ich weiss dass mein Erloeser lebt*, has sometimes been doubted. The most famous setting of this text is the contralto aria, *I know that my Redeemer liveth*, in G.F. Handel’s *Messiah* (1742); its opening is engraved on the scroll held by Roubillac’s statue of Handel on the composer’s grave in Westminster Abbey. There were a few oratorios on the theme in the 19th century. Frederick Shepherd Converse’s *Job* (performed in Worcester, 1907; and Hamburg, 1908) was one of the first works by a U.S. composer to be presented in Europe. There has been a marked predilection for the subject in the 20th century, probably because of its philosophical connotations. Ralph Vaughan Williams’ *Job; a masque for dancing* (1927–30), based on a libretto by Sir Geoffrey Keynes and Gwen Raverat, was composed for the Ballet Rambert and here the decor and

the dancers' movements follow Blake's illustrations. Vaughan Williams later adapted a suite for orchestra and "The Voice out of the Whirlwind," for choir and organ, from this work. For Nicolas Nabokov's oratorio *Job* (1932), Jacques *Maritain adapted the text from the Bible. Other modern works include György Kósa's *Hiob* (cantata, 1933); Hugo Chaim *Adler's *Hiob* (oratorio, 1933); Lehman Engel's *Four Excerpts from "Job"* (for voice and piano, 1932); and Luigi Dallapiccola's *Giobbe* (oratorio – also for scenic performance – 1949).

JOB, TESTAMENT OF (Gr. Διαθήκη τοῦ Ἰωβ), Greek pseudepigraphon purporting to reveal the secrets and last wishes of *Job. In its present form the Testament of Job is closely linked with the Greco-Jewish historian *Aristeas, who flourished about 100 B.C.E., and with the Greek version of Job. It is likely, however, that a Hebrew or Aramaic model was known to the author(s) of the Testament of Job. This ex-

plains the Palestinian background of certain terms as well as the kinship with such works as the Testaments of the Twelve *Patriarchs and *Jubilees.

The author(s) of the Testament of Job aimed to present a Job who would conform to the stringent ideals of the pietistic sects more than the canonical figure. Omitting the lengthy discourses, they are a richer narrative than found in Scripture. By making Job the narrator and by introducing hymns and a chorus, the work frequently resembles a Greek tragedy. The integrity of the work, however, has been compromised by later additions. The double self-identifications, first as Job and afterward as Jobab (Gen. 36:33), and the allusions to missing sections suggest that parts of the book are abridgments of a larger pseudepigraphon. The view that a Christian retouched this book is to be rejected since no Christian would have invented a Jesus-like Job. More likely is the link of the original version of the Testament of Job with the Qumran sect, and the present Greek text with the *Therapeutae of Alexandria. The Palestinian version was probably the source of the talmudic traditions about Job.

Despite the unsatisfactory state of the text, the Testament of Job tells a moving story. Jobab (Job) the son of Esau, the king of Edom, reveals his secrets to his seven sons and three daughters by his second wife Dinah, Jacob's daughter. It is God who instigates the antagonism between Job and Satan. An archangel tells Job that the Lord wishes him to destroy the popular shrine where the people worshiped Satan's image. Job is forewarned that Satan will avenge the wrong done to him, but he is also promised that, if he endures Satan's trials, his final exaltation is assured. Job now assumes an even higher role than that ascribed to Abraham. He becomes a protagonist in God's struggle against evil. Describing his own remarkable deeds of charity and hospitality, Job relates how Satan disguised himself as a beggar to gain entrance into his home. Failing in his purpose, Satan succeeds in persuading the king of Persia to besiege Job's city. Job's fellow citizens pillage his palace, killing his ten children by his first wife, Sitis. Again with God's permission, Satan, appearing in the form of a whirlwind, smites Job with a plague, ulcers, and worms (cf. Genesis Apocryphon, 20:16ff.). The hero's patience is exemplified by his putting back on his body every single worm that crawled off. Suffering from hunger, Sitis (etymologically related perhaps to Satan or *sotah*, "unfaithful wife") unknowingly barter her hair to Satan for three loaves of bread, whereupon she addresses Job: "The feebleness of my heart has crushed my bones, rise then and take these loaves of bread and enjoy them, and speak some word against the Lord and die" (Job 2:9). Job realizes that it is Satan who is speaking through Sitis' mouth. After selling herself into slavery, Sitis reappears momentarily as Jobab's royal friends come to visit him. She begs them to dig up her ten sons from the ruins, but Job refuses permission, saying that they are now in the presence of God. When Sitis dies in her master's stable, Satan speaks through Elihu, who unjustifiably upbraids Job for his overbearing pride and boasting. The evil Elihu is thereupon damned in a long hymn

led by Eliphaz. In the last part of the book (which may be an addition by another hand), the angels come to take Job's soul. He divides his possessions among his sons, but to his daughters he offers miraculous belts which would enable them to bless the approaching angels. Although it was quoted in James 5:11, Pope Gelasius I (492–496) removed the Testament of Job from the apocrypha, as a result of which it was lost, and recovered only in the 19th century. Its novel characterization of the antagonists, its lively use of dialogue, and deep understanding of human feeling make the Testament of Job a classic among the perennial attempts to reinterpret the meaning of the most tragic of biblical figures.

[Ben Zion Wacholder]

JOCHEBED (Heb. **יֹכֶבֶד**), wife of Amram and mother of Moses, Aaron, and Miriam (Num. 26:59). Exodus 2, which describes the birth of Moses, does not name her, or, for that matter, the father or sister of Moses. She is described as the daughter of Levi, born to him in Egypt (Num. 26:59; cf. Ex. 2:1), and thus was Amram's paternal aunt (Ex. 6:20). Marriage with an aunt violates the law of Leviticus 18: 12. This is in keeping with biblical traditions that trace the birth or ancestry of important figures to sexual relations generally prohibited: Abraham and Sarah, his half-sister (Lev. 18:9); Judah and Tamar, his daughter-in-law (Lev. 15:15); Jacob and the two sisters Rachel and Leah (Lev. 18:18); and the marriage of the Moabite Ruth to Boaz (Deut. 23:4). The meaning of the name is problematic. No personal name formed with the component *yo* (Heb. יו) is otherwise attested before the time of Moses.

[Nahum M. Sarna / S. David Sperling (2nd ed.)]

In the Aggadah

Jochebed was so called because her face was like the *ziv hakavod* ("splendor of glory"; Mid. Hag. Gen. 23:1). She was born during the journey of the children of Israel to Egypt (Gen. R. 94:9). She was therefore 130 when she gave birth to Moses. Despite this she is called the "daughter" of Levi (Ex. 2:1) because her youth returned to her, her skin becoming smooth and the wrinkles of age disappearing (Gen. R. 94:9). She gave birth to Moses after she had remarried her husband who had divorced her because of the decree that all male children be killed. Her second marriage was as happy as her first; Amram placed her in a palanquin and Aaron and Miriam danced before her (Sot. 12b). Due to her righteousness, the birth of Moses was a painless one, indicating that she had been excluded from the decree against the descendants of Eve (cf. Gen. 3:16; Sot. 12b).

Jochebed is identified with *Shiphrah (Ex. 1:15), because the Israelites were fruitful – *she-peru* – in her days (Sot. 11b), and with Jehudijah the Jewess (1 Chron. 4:18), because she brought Jews into the world (Lev. R. 1:13). The "houses" given to the two Hebrew midwives (Ex. 1:21) means that she was destined to become the ancestress of the priestly family (Ex. R.

1:17). She survived all her children and was permitted to enter Erez Israel with Joshua when she was 250 (SOR 9).

JOHELSON, VLADIMIR (Waldemar; 1855–1937), Russian anthropologist. Born and educated in the Rabbinical Institute in Vilna, together with Zundelevich and Liberman he organized there in 1872 a group to study revolutionary literature. In 1879 Jochelson became involved in the revolutionary movement of “Narodnia Volia,” working in the underground laboratory which prepared dynamite and false passports. In 1880 he immigrated to Switzerland, where he headed the movement’s printing shop in Geneva. In 1885 he tried to cross the border back to Russia, but he was arrested and sentenced to three years imprisonment and then ten years of exile in Siberia. Here Jochelson became interested in the study of the native peoples of the region and in scientific ethnography, as did his fellow prisoners Vladimir *Bogoraz and Lev *Sternberg with whom he was to be associated in a lifetime of work in this discipline. Their articles on the nomadic tribes in the area began to attract attention. By special permission Jochelson and Bogoraz were attached to the Yakut expedition organized by the Russian Geographic Society (1894–97) and studied the ethnology of the northern districts of the Yakut provinces of Verkhoiansky and Kolyma. After the Bolshevik revolution Jochelson became professor of ethnology at the University of Leningrad.

Jochelson participated in the Jesup North Pacific expedition under the auspices of the American Museum of Natural History and engaged in an investigation of the Koryak of the Sea of Okhotsk and Yukaghir of the Kolyma district. Jochelson prepared studies on the Yukaghir, the natives of the Kolymsk and Virkhoian regions, which were published in *Izvestia* on his return to St. Petersburg. Subsequently he participated in expeditions to Kamtchatka and later to other sites in East Asia and Alaska. Later he left Russia and spent his last years in the United States working for the American Museum of Natural History, endeavoring to complete his work on the Yukaghir ethnology. His stance in ethnology, like that of his associate Bogoraz, was that of a positivist and naturalist.

[Ephraim Fischhoff / Shmuel Spector (2nd ed.)]

JOCHSBERGER, TZIPORA (1920–), composer, musicologist, and educator; founder of the Israel Musical Heritage Project. Born in Leuterhausen, Germany, Jochsberger entered the Palestine Academy of Music, now the Rubin Academy for Music and Dance, in 1939, where she studied piano and trained as a music teacher. She later earned an M.A. (1959) and Ph.D. (1972) in Jewish music from the Jewish Theological Seminary.

Her many books include *Bekol Zimra: A Collection of Jewish Choral Music* (1966) and *A Harvest of Jewish Song* (1980). Jochsberger hosted and produced three 13-part television series, *Music of the Jewish People* (1976); *Experiences in Jewish Music* (1977); and *A Kaleidoscope of Jewish Music* (1978). She was also executive producer of an 11-part documentary video series, *A People and Its Music* (from 1991), devoted to the musical traditions of a variety of Jewish communities. Her published musical compositions include *Four Hebrew Madrigals* and *A Call to Remember: Sacred Songs of the High Holidays*.

[Judith R. Baskin (2nd ed.)]

JOEL (Heb. יוֹאֵל; “YHWH is God”), the second book in the *Minor Prophets. The superscription of the book names the prophet Joel son of Pethuel as the author. No indication of the author’s life, time, or place of residence is given, and the name of the prophet is not mentioned again either within the book itself or anywhere else in the Bible.

The four chapters of the book fall into two distinct parts:

(1) Chapters 1 and 2 give a vivid, graphic description of a plague of locusts of unprecedented severity which strikes the land like a marauding enemy, leaving in its wake ravished fields and vineyards, depriving the people of food and the sanctuary of its grain and wine offerings. Though most of the work is couched in literary images, the locusts are described realistically – even to their various forms, apparently stages in their development: there is the cutting insect (*gazam*), the swarming one (*arbeh*), the hopping one (*yelek, yeleg*), and the destroying one (*hasil*) (1:4). The prophet exhorts the priests, the elders, and all the people to seek the Lord’s mercy through repentance, fasting, and prayer. He promises that the Lord will have pity on His people, bringing an end to the plague, rains in their season, new blossoming and abundant harvests, and a time of fruitfulness and peace.

(2) Chapters 3 and 4 consist of a prophecy of the end of days, “of the great and awesome *Day of the Lord.” Then the spirit of the Lord, the gift of prophecy and vision, will be poured out on all flesh, and awesome signs will be seen in the heavens and on earth. Only those “who call on the name of the Lord,” the remnant of Israel who had remained true to Zion and Jerusalem, will escape total destruction. The Lord will gather all the nations into the valley of Jehoshaphat and deliver judgment on those who drove the people of Israel into exile, scattering them among the nations, on those who divided the land of the Lord among themselves; the land of the inhabitants of Tyre and Sidon and the regions of Philistia are singled out as those who sold the people of Judah and Jerusalem to the Greeks. The nations will be destroyed on the day of judgment; God will restore His exiled people, fructify His land, and avenge the blood spilled by Egypt and Edom.

Early and later commentators alike disagree on the connection between the two parts of the book, which, though remote from one another in content, are close in vocabulary and imagery – notably in the use of the phrase “the day of the Lord” (1: 15; 2:11 and 3:4; 4:14) and in the description of changes in the order of nature (2:2, 10 and 3:4; 4:15, 16). Among earlier scholars, Rothstein, Duhm, and Hölscher maintain that only chapters 1 and 2 can be attributed to the early Joel, while chapters 3 and 4 are the work of a post-exilic seer, and they include in this later composition even those verses from the first two chapters which deal with “the day of the Lord.” Another opinion (held by Y. Kaufmann among others) holds that the entire book is an eschatological unity and the plague of locusts is a symbol heralding the day of judgment of the Lord, a view already found in the Aramaic Targum Jonathan. A third group of scholars (J. Wellhausen and K. Marti) believes that Joel composed the book after an actual plague of locusts, which he saw as a first sign of the approach of the end of days. It would therefore seem that “the day of the Lord” was not used with the same meaning in the first part of the book as in the second: in the first part it is simply a general name for the day of upheaval, while in the second it is the day when the nations shall be punished, the herald for Israel of the time to come (U. Cassuto). To come to some conclusion in this argument it is necessary to take account of the similarity of the imagery in both sections, which would appear to be convincing evidence of the unity of the book. There is no reason categorically to assume that a prophet who could give a realistic description of a plague of locusts could not on another occasion prophesy in a different spirit concerning the day of judgment and the end of days. More recently, Woolf analyzed Joel from a form-critical perspective and concluded that it is the work of a single author, with some later additions. On the basis of historical allusions, Cogan suggests a date in late 6th–early 5th century. The destruction and exile are fresh in memory (4:2); the temple is standing and there is no mention of royalty, only the priesthood. Cogan also demonstrates the familiarity of Joel with earlier biblical literature, as well as his artful use of the work of his predecessors (Cogan, 6–8), an indication of relative lateness.

The role of Greeks as buyers of slaves from the Sidonians and Philistines points in the same direction. The date of the Book of Joel still cannot be determined with certainty, and scholars differ by centuries in their estimations. Nonetheless, it is probably safe to accept Cogan’s dating of the bulk of the book and to view Joel 4:4–8 as a fourth century interpolation.

In the Arts

The prophecies of Joel inspired some medieval artists and Renaissance composers, though scarcely any works of importance in literature. Joel announced an invasion of locusts, described as a people with lions’ teeth (Joel 1: 1–6), which stripped the land of vegetation; later, however, there would be a period of abundance. His attributes in art are therefore

a lion, a swarm of locusts, and a cornucopia. In another passage (Joel 2:1–12), he announced the day of the Lord and was therefore sometimes shown blowing a trumpet of judgment. The passage in which the prophet said that God would pour out His Spirit upon all flesh (Joel 3:1–2) caused him to figure in representations of the Pentecost. A mosaic in St. Mark’s, Venice, and a fresco by Pinturicchio (1434–1513) in the Vatican show Joel holding 12 scrolls, representing the gospel preached by the 12 apostles in 12 languages, as a manifestation of the outpouring of the Spirit. The prophet was chiefly represented during the Middle Ages. He appears in medieval manuscripts, including the 12th-century *Hortus Deliciarum* (Strasbourg University Library), the Admont Bible (Vienna State Library), and the 14th-century French Bible of Robert de Bylling, illustrated by Jean Pucelle (Bibliothèque Nationale). Other representations include a statuette from the 12th-century Shrine of the Three Magi (Cologne Cathedral) and 13th-century carvings and stained glass. In the 16th century, Joel is represented by Michelangelo on the Sistine Chapel ceiling. He is shown seated, reading a scroll. In music there are several late 16th- and early 17th-century settings of *Canite tuba in Syon* (Joel 2:1). These catered for the predilection for festive compositions allowing “trumpet fanfare” imitations by the choir, and include motets by Regnart (printed 1568); and by Palestrina and Ingegneri (both printed in the collection *Corollarium Cantionum Sacrarum*, Nuremberg, 1590).

JOEL, SIR ASHER (1912–2004), Australian businessman and politician. Born in Sydney, Sir Asher Joel became a journalist and then a public relations consultant. He organized New South Wales’s ceremonies for the coronation of King George VI in 1937 and, after the World War II (in which he was decorated) many public events in Sydney, including the opening of the Sydney Opera House in 1973. Joel served as an Independent and, later, a Country party member of the New South Wales Legislative Council from 1957 to 1978. He was knighted in 1974. Joel served on a wide variety of Jewish and pro-Israeli bodies in Sydney.

JOEL, BILLY (1949–), U.S. singer and songwriter. Born in the Bronx, New York, Joel grew up in Levittown and went

to high school in nearby Hicksville. The son of a Holocaust survivor who came to New York by way of Cuba, Joel first climbed the music charts with his self-confessed autobiographical sketch "Piano Man" (1976). This was followed by a series of eclectic hit singles such as "Just the Way You Are" (1977), "She's Always a Woman to Me" (1978), "It's Still Rock and Roll to Me" (1979), and "Allentown" (1981). Other popular songs of Joel's include "Honesty," "The Longest Time," "New York State of Mind," "Tell Her About It," "Uptown Girl," and "We Didn't Start the Fire." His albums were so successful, that by 1994 he was the only artist to have four albums at the septupleplatinum (7 million units) mark.

A musical based on Joel's music, called *Movin' Out*, debuted in Chicago in 2002 and then moved to Broadway. In 2003 it received 10 Tony nominations. Joel, who wrote the music, the lyrics, and did the orchestration, won a Tony for Best Orchestrations. Joel has won five Grammy Awards for his music, as well as receiving the Grammy Legend Award in 1990.

Joel went to Cuba in 1979 for a historic three-day musical event, Havana Jam, at the Karl Marx Theater in the Cuban capital. Then, in the summer of 1987, he made a significant cultural breakthrough by performing in Moscow and Leningrad, becoming the first American pop star to bring a fully staged rock production to the Soviet Union.

Joel has performed in many benefit concerts in support of a variety of causes, such as AIDS, the rainforest, earthquake relief, and the environment. In 1985 he headlined a benefit concert for the Long Island-based organization Charity Begins at Home; that year he also participated in the star-studded "We Are the World" recording; in 2001 he performed at the benefit Concert for New York City after 9/11. In 2002 he was named Music Cares' Person of the Year.

Among his other awards and accolades, Joel was inducted in the Songwriters Hall of Fame 1992. In 1994 he was awarded the Billboard Century Music Award. In 1997 he received ASCAP's Founder's Award for lifetime achievement. He was inducted into the Rock and Roll Hall of Fame in 1999 and, in the same year, received the Award of Merit from the American Music Awards. In 2000 he was presented with the Smithsonian Institution's James Smithson Bicentennial Medal. In 2001, the Songwriter's Hall of Fame bestowed on him its highest honor, the Johnny Mercer Award.

JOEL, DAVID HEYMANN (1815–1882), rabbi and scholar. Born in Inowroclaw (Poznan province), Joel studied under his father, a rabbi, and under R. Akiva *Eger. In 1836 he went to Berlin to continue his studies and took courses at the university. In 1842 he was ordained as a rabbi and in 1843 was appointed rabbi in Swarzedz (Poznan region). There he wrote his major work: *Midrash ha-Zohar: Die Religionsphilosophie des Sohar und ihr Verhaeltnis zur allgemeinen juedischen Theologie*

(Leipzig, 1849). This book was one of the first Jewish studies which made a serious, scholarly approach to Kabbalah. Joel criticizes the work of A. Frank on Kabbalah and attempts to prove that there is no essential difference between Kabbalah as formulated in the Zohar and the Jewish theology current in the Middle Ages, the differences amounting only to the choice of daring metaphors in Kabbalah. Joel denies the decisive influence of Persian religion, Platonism or neoplatonism, Christianity, or Gnosis on the Kabbalah, which he regards as an original Jewish creation. From 1859 to 1879 Joel served as rabbi in Krostoszy, and from 1880 until his death was teacher of Talmud and rabbinic literature in the Jewish Theological Seminary of Breslau. There he wrote his valuable work, *Der Aberglaube und die Stellung des Judentums zu demselben*, of which only two parts were published (Breslau, 1881–83).

[Gershom Scholem]

JOEL, KARL (1864–1934), philosopher. His father R. Herman Joel, had been a pupil of Schelling and apparently had a great influence on his son's attitude toward philosophy. He was born in Hirschberg, studied in Leipzig, and spent some time in Berlin (1887–92), where he became a friend of Georg *Simmel. In 1897 he was appointed to the University of Basle, where he taught until his death. Joel called his philosophical system "New Idealism." He defended the completeness of philosophy against the attempts to divide it up into "specialized" branches and compartments, and he emphasized the necessity of a comprehensive outlook. He opposed methodological positivism and metaphysical naturalism and sought to ridicule those who claimed "objectivity" in the study of reality, that is, spiritual activity deprived of all subjective and emotional ingredients. His main works include *Nietzsche und die Romantik* (1905), *Der Ursprung der Naturphilosophie aus dem Geiste der Mystik* (1906), *Seele und Welt* (1912), and *Die philosophische Krisis der Gegenwart* (1914). An autobiographical sketch appeared in *Die deutsche Philosophie der Gegenwart in Selbstdarstellungen*, 1 (1921), 71–90. He was a nephew of Manuel *Joel.

[Aaron Gruenhut]

JOEL, MANUEL (1826–1890), rabbi and scholar. Joel, who was born in Birnbaum, Poznan province, was the son of the local rabbi. He studied classics and philosophy at Berlin and obtained a doctorate at Halle. In Berlin he came under the influence of Leopold *Zunz and M. *Sachs. Joining the staff of the *Juedisch-Theologisches Seminar in Breslau on its foundation in 1854, he taught classical languages, religious philosophy, and homiletics

there. In 1864 he was appointed rabbi of the Breslau community, succeeding A. *Geiger. At the *rabbinical assemblies of Kassel (1868) and Leipzig (1869), he defended moderation in Reform against Geiger's radicalism and stressed the need for preserving the Jewish character of synagogue worship and respect for the historical past. He also expressed these views in a number of publications, particularly in his prayer book (1872) and his sermons (1867, 1893–98), which were highly influential.

Joel's scholarly importance lies mainly in the field of religious philosophy. He wrote on Ibn Gabirol, Maimonides, Crescas, and Levi b. Gershom, investigating their Greek and Arabic sources, and their influence, in turn, on Christian scholasticism and Spinoza. These essays were collected in his two-volume *Beitraege zur Geschichte der Philosophie* (1876). His two-volume *Blicke in die Religionsgeschichte...* (1880–83) was an important and influential contribution to comparative religion. Joel presented (apart from his sermons) his own religious philosophy, based on Kant and also on Schleiermacher's religion of emotion, in his *Religionsphilosophische Zeitfragen* (1876) and in a posthumously published article "Mosaismus und Heidentum" (in *JJGL*, 7 (1904), 35 ff.), as a belief in revelation as the "thinking of the heart."

[*Encyclopaedia Judaica* (Germany)]

JOEL, OTTO J. (1856–1916), Italian banker of German origin. Joel was born in Danzig, East Prussia, the son of a lottery collector. As a young man he was sent to Italy for his health, stayed there, and became a successful banker and completely revamped the financial and industrial Italian life. Together with Federico Weil (1854–1919), and with the cooperation of German banks, he formed the Banca Commerciale Italiana in 1894. In 1908 he became its central manager, and eventually its managing director. Despite the fact that he had become an Italian citizen several years before World War I, Joel had to resign from active work at the bank in 1915 on account of his German descent, and a year later, although he remained a vice president, was forced to withdraw from the board of directors. Otto Joel's son, ALESSANDRO (1891–?), joined the Banca Commerciale Italiana in 1920. He became manager of the London branch, but severed his connections with the bank in 1932.

JOEL, RAPHAEL (1762–1827), the first Jewish advocate in the Hapsburg Empire. Born in Volyne, western Bohemia, Joel availed himself of the rights granted by the patents of toleration of the emperor *Joseph II and studied law at Prague University. When in 1790 he was about to be awarded a doctorate, Prague advocates petitioned the emperor Leopold II, claiming that there was no precedent at any university for such an

award to a Jew. They contended that a rescript of 1731 prevented Jews from representing Christians, and that notwithstanding the patents of toleration Jews were still considered doubtful witnesses at law and should certainly not deal with canon law. The archbishop, as chancellor of the university, supported the advocates' opposition, but the academic authorities were adamant, and the emperor Leopold II decided that Jews could become doctors of civil though not of canon law, and could represent both Jews and Christians. Joel was awarded his doctorate. In 1798, however, he was baptized in Vienna, adopted the name Carl after divorcing his wife, a daughter of the physician Abraham *Kisch, who refused to follow him. In 1817 he was ennobled as "von Joelson." His offspring became high-ranking army officers.

JOEL, RICHARD M. (1950–), U.S. lawyer, educator, administrator, and president of Yeshiva University. Born in New York City in 1950, Joel grew up in a modern Orthodox family in Yonkers, New York, the only child of Avery and Annette Joel. His father had immigrated to Cape Town, South Africa, from Vilna, Lithuania prior to moving to the U.S. Raised in a musical home steeped in Jewish tradition and values, Joel spent a formative year with his parents in South Africa during the 1950s. His father tragically passed away in 1964 a few months after the Bar Mitzvah of his only child.

Joel graduated from Yeshiva University High School (1968), New York University (1972), and New York University Law School (1975). He spent three years as an assistant district attorney in the Bronx, prosecuting violent criminal behavior during some of the borough's most challenging years. Joel joined the Yeshiva University (YU) administration full-time beginning in 1978, first as director of Alumni Affairs and then as associate dean and professor of law at Benjamin N. Cardozo School of Law. In 1988, Joel interviewed for the top post in *Hillel, the oldest and largest organization in the Jewish world serving college and university students, and received an offer to head the organization, a position traditionally held by experienced Hillel professionals and rabbis.

Joel dramatically transformed Hillel during his 14-year tenure. Articulating a vision of a revitalized Hillel able "to provoke" a Jewish renaissance in America, Joel jettisoned the synagogue on campus model to promote a vision of campus communities supporting a wide range of Jewish organizations and interest groups. He set aside rabbinic ordination as the *sine qua non* of Hillel employment by expanding and diversifying the ranks of Hillel professionals. He encouraged Hillels to eliminate student membership and dues and championed open-architecture participation over more traditional affiliation models. He inspired Hillels to become less building-centered, even as more and newer buildings opened each year, to connect with Jewish students in multiple campus and com-

munity settings. He attracted major financial support from key Jewish philanthropists and foundations, including Edgar Bronfman, Michael Steinhardt, and Lynn Schusterman. He engineered Hillel's independence from B'nai B'rith and deepened the partnership with a Jewish Federation system alarmed by the implications of the 1990 National Jewish Population Survey (NJPS). He increased Hillel's global presence by adding affiliates in the former Soviet Union and Latin America.

Following the announced retirement of Yeshiva University President Rabbi Norman Lamm, the YU Board of Trustees, unable to find a suitable rabbinic candidate to replace Lamm, became deeply interested in Joel.

Inaugurated as the fourth president of Yeshiva University in 2003, Joel would break new ground – though not without some initial opposition – in becoming the first non-rabbinic scholar to head Yeshiva University in its 117-year-history.

[Jay L. Rubin (2nd ed.)]

JOEL, SOLOMON BARNATO (1865–1931), South African mining magnate and financier. He was one of three brothers, sons of a Whitechapel shopkeeper and nephews of Barney *Barnato. They succeeded to Barnato's financial empire after his suicide in 1897. Joel (who was known as "Solly Joel") and his two brothers had joined their uncle on the Kimberley diamond fields in South Africa and were the earliest to reach the Rand after the discovery of gold. Joel faced his biggest challenge when the gold market was shaken by the aftermath of the Jameson Raid in 1896, when he was arrested but freed. This was followed by his uncle's suicide and the death of his brother Woolf, who was shot and killed in his Johannesburg office. Joel succeeded Barnato as a director of De Beers and chairman of the Johannesburg Consolidated Investment Company and other companies. Despite criticism, he successfully followed a policy of restricting diamond output to keep pace with demand and became one of the richest men of his time.

Solly Joel, who had a different suit for each day of the year, came to typify the new generation of millionaires produced by South Africa at the turn of the century, who were well known in London as well. He was a sportsman and a lavish host, a patron of the theater, and owned yachts, racing stables, and the Maiden Erleigh stud farm. In 1915 his horse won the Derby and the St. Leger and in 1921 he headed the list of winning owners. The career of his brother ISAAC BARNATO "JACK" JOEL (1862–1940) resembled, in part, that of Solly, whom he succeeded as chairman of the Johannesburg Consolidated Investment Company. He was also prominent on the English turf, won the Derby twice (1911, 1921) and three times headed the list of winning owners (1908, 1913, and 1914). Jack Joel left a fortune of £3,684,000 at his death.

[Lewis Sowden]

JOEL BEN ISAAC HA-LEVI (1115?–1200), one of the eminent talmudic scholars of Mainz. Little is known about his life. He was related on his maternal side to some of the most distinguished families of the generation, including that of *Samuel b. Natronai (his cousin, or uncle, later his brother-in-law) and *Eliezer b. Nathan (his father-in-law). He himself founded a family of talmudic scholars, beginning with his son *Eliezer, and leading to *Mordecai b. Hillel, five generations later. He acquired the foundation of his learning at Regensburg and is known to have spent some time in Wuerzburg, and also lived for a period in Cologne; but his place of residence was Bonn and he is referred to in literary sources as R. Joel of Bonn (*Sefer ha-Terumah*, 130 et al.). His teachers in Regensburg were *Isaac b. Mordecai, *Ephraim b. Isaac, and Moses b. Joel. With Ephraim b. Isaac he had a sharp exchange of views concerning the eating of abdominal fat, a custom which he permitted contrary to the opinion of Ephraim. Although as head of a yeshivah he had many pupils, only *Ephraim of Bonn is known, apart from his son Eliezer. Quotations from his works have survived in the *Sefer ha-Ravyah* of his son Eliezer and in the works of many contemporary scholars with whom he carried on a correspondence, particularly in the *Raban* of Eliezer b. Nathan, and a little in the *Yihusei Tanna'im va-Amora'im* of *Judah b. Kalonymus; from there it is known that Joel was the author of talmudic novellae and decisions of *tosafot* to many tractates, and of numerous responsa. Several of his liturgical hymns, reflecting the horrors of the Second Crusade, are also known. He was held in great esteem by all his contemporary German and French scholars, and Isaac b. Samuel, the most distinguished French scholar of his time, refers to him with great admiration (*Ravyah*, 933). Joel's gentle nature is evidenced in the above-mentioned exchange of letters between himself and R. Ephraim, and in his decision on the proselyte of Wuerzburg (*Ravyah* 2,253–6), whom Joel not only befriended but even permitted to conduct prayers, contrary to the opinion of other scholars.

[Israel Moses Ta-Shma]

JOEL BEN MOSES GAD (17th century), Polish talmudist. Joel was the author of *Meginnei Zahav*, in which he defended the *Turei Zahav*, the commentary on the Shulhan Arukh by his grandfather, *David b. Samuel ha-Levi, against the strictures of *Shabbetai b. Meir ha-Kohen in his *Nekuddot ha-Kesef*. Joel was supported by leading talmudists, who praised his work and, at an "assembly at the Fair at Gremnitz" in 1683, resolved that the views of the author of the *Turei Zahav* were not to be rejected on account of Shabbetai's criticism. However, fortune frowned upon the *Meginnei Zahav*. Most of the manuscript was lost. In 1720 part of it was published by the author's grandson, but it was defective and badly printed (Prague, 1720). Primarily for this reason, Joel's views were not quoted and discussed by later commentators on the Shulhan

Arukh. However, it was largely the favorable opinion engendered by his work which caused the author of *Turei Zahav* to be accepted without demur as a halakhist of the first rank. Joel also wrote novellae to a number of talmudic tractates (Altona, 1736). JOEL B. MOSES GAD, his grandson, prepared for publication the manuscript of the *Turei Zahav* to *Evenha-Ezer*, but died before seeing it through the press. It was published by his son Gad (Zolkiew, 1754).

[Abram Juda Goldrat]

JOEL BEN SIMEON (called **Feibush Ashkenazi**), scribe and illuminator active in Germany and Italy in the second half of the 15th century. Of German origin, probably from Cologne or Bonn, he established a workshop in northern Italy. In his signed manuscripts he referred to himself as a *sofer* (“scribe”), *lavlar* (“scrivener”), and a *zayyar* (“painter”). Probably he himself was not the copyist and illuminator of all the manuscripts signed by him, but he was head of an atelier which moved from town to town, with several craftsmen in his service. In style and iconography his workshop combined Ashkenazi and Italian art.

Of the 11 surviving manuscripts signed by him, only six are dated; several others are attributed to him on stylistic grounds, both in script and illumination.

Dated Manuscripts

1. *The Parma Siddur* of 1449. Parma, Biblioteca Palatina, Ms. 3144 (De’Rossi) 1274, signed by the “scribe Joel ben Simeon, called Feibush of Bonn.” Decorated. 2. *Mahzor Cremona* of 1452. Formerly Turin, Royal Library Ms. 63; destroyed by fire. Signed by “Joel ben Simeon... Feibush of Bonn.” 3. *The Second New York Haggadah* of 1454. N.Y., Jewish Theological Seminary, Mic. 8279. Signed by the “scrivener Joel ben Simeon, called Feibush Ashkenazi of Cologne on the Rhine who wrote, punctuated and painted it.” Illustrated. 4. *The Lady’s Mahzor* of 1469. London, British Museum, Add. Ms. 26957. Signed by the “scrivener Joel ben Simeon.” Illustrated. 5. *Washington Haggadah* of 1478. Library of Congress. Signed by “the humblest of scribes Joel ben Simeon.” Illustrated. 6. *Commentary on the Psalms*. Modena, 1485. Parma, Biblioteca Palatina, Ms. 2841. Signed by “the scrivener Joel ben Simeon Ashkenazi, for Manuel ben Isaac of Modena.” Not illuminated.

UNDATED MANUSCRIPTS. 7. *The First Nuremberg Haggadah*, Jerusalem, Schocken Library (formerly Nuremberg, National Museum, Ms. 2170b). Signed by “the scribe Joel ben Simeon.” Illustrated. The manuscript was incorrectly dated to 1492 by Mueller, to 1410 by Fooner, to 1400 by Landsberger, and to after 1454 by Italiener (the last by interpreting the name Proyna mentioned in the manuscript, as Bruenn, from where the Jews were expelled in 1454.) It should be noticed that Joel was already in Cremona by 1452 and elsewhere in Italy by 1449. 8. *The British Museum Haggadah*. Add. Ms. 14762. Signed “Feibush called Joel, [who] painted it.” Illustrated. 9. *The First*

New York Haggadah. New York, Jewish Theological Seminary, Ms. 75048. Signed by the “scribe Joel ben Simeon.” Illustrated. 10. *Implements of the Temple*, six leaves. *Ibid.*, Ms. o822. Signed by “Joel the painter called Feibush.” Illustrated. 11. *The Dyson-Perrins Haggadah*. Cologne and Geneva, Martin Bodmer Collection (formerly: Malvern, Dyson-Perrins Collection Ms. 124). Signed by the “scribe Joel ben Simeon called Feibush Ashkenazi of Cologne on the Rhine.” Illustrated.

Attributed Manuscripts

12. *Haggadah*. Parma, Biblioteca Palatina, Ms. 2998 (Ms. De’Rossi 111). Illustrated. 13. *Haggadah*. Stuttgart, Württembergische Landesbibliothek, Cod. Or. 4°, I. Illustrated. 14. *The Murphy Haggadah*: Yale Univ., Heb. Ms. +143. Illustrated.

Most of the manuscripts signed by Joel ben Simeon are illustrated, but some are merely decorated. The illuminations are primarily initial-word panels and marginal text illustrations, typically Ashkenazi. The only full-page illuminations are the six leaves of *Temple Implements* which may have been used as models in his workshop.

Most of Joel’s illuminations consist of colored-pen drawings in Florentine style. The best example is the expressively drawn *Washington Haggadah* of 1478, which has more illustrations than any of his other signed *Haggadot*. Two undated and signed *Haggadot* are problematic because of their German stylistic elements. The *First Nuremberg Haggadah*, now in the Schocken Library, Jerusalem, must be one of the earliest manuscripts which Joel executed in Italy; the style of the illumination, painted in sepia, is still essentially German, though at times quite Italianized. It is related in style to the *First New York Haggadah*. The *British Museum Haggadah* was painted by at least three different artists, two definitely German and one Italian, though in his colophon Joel claims to be the one painter. As the *Parma Mahzor* of 1449 was decorated in Italian style, the *British Museum Haggadah*, *The First New York Haggadah*, and the *First Nuremberg Haggadah*, may have belonged to a transition period around 1450.

[Bezalel Narkiss]

JOEZER, SON OF BOETHUS, high priest (23–5 B.C.E.), appointed shortly before *Herod’s death, as successor to *Matthias b. Theophilus. The latter had been deposed for his part in tearing down the golden eagle which Herod had ordered to be placed over the Temple gate. He was a brother of Mariamne, Herod’s wife, and of Eleazar, who also served as high priest. Joezer played an important role in pacifying the people when

they resisted the attempts of *Quirinius, governor of Syria, to conduct a census in Judea, after the deposition of Archelaus in 6 C.E. Though Joezer ensured the cooperation of the people, Quirinius nevertheless deposed him soon after.

[Lea Roth]

JOFFE, ABRAHAM FEODOROVICH (1880–1960), Russian physicist. Joffe was born in Romny, Ukraine. Between 1907 and 1913, he conducted intensive research on the quantum theory of light. In 1913 he was appointed professor extraordinary of physics at the Polytechnic Institute, an appointment only open to baptized Jews. In 1915, the Institute made him a full professor, and he received the prize of the Academy of Sciences. After the Bolshevik revolution, he and M. Nemnov founded the Roentgenological and Radiological Institute, out of which was born the Physical-Technical Institute of the Soviet Academy of Sciences. In 1919, Joffe opened and became dean of a Physical-Mechanics department. In 1921, while visiting Berlin, he met Einstein, who was sympathetic to Zionism. In their discussion, Joffe favored assimilation as the solution to the Jewish problem.

In 1932, Joffe initiated the opening of an Institute for Metal Physics in the Urals, and founded an Agrophysics Institute in Leningrad. In 1933, he helped to found a Physical-Technical Institute at Dnepropetrovsk, with a large laboratory for technical radiological examinations. Joffe edited several scientific journals and in 1958 founded the journal of the physics of solids.

Joffe's main scientific work belongs to three fields: the mechanical properties of crystals; the electrical properties of dielectric crystals; and semiconductors. His most important works are *Fizika poluprovodnikov* (1957²; *The Physics of Semi-Conductors*, 1960), which was translated into many languages, and *Osnovnye predstavleniya sovremennoy fiziki* ("Basic Concepts of Modern Physics," 1949). Joffe received many honors including election to the presidium of the Academy of Sciences of the Soviet Union. In 1942 he joined the Communist Party.

[Isaac Kalugai]

JOFFE, ADOLPH ABRAMOVICH (1883–1927), Russian revolutionary and diplomat. Born in Simferopol to a very rich merchant, he studied medicine at the universities of Berlin and Vienna. Joffe joined the Mensheviks in 1903, lived abroad, and was a member of the committee of the RSDRP (Russian Social Democratic Workers Party.) In 1908, after meeting *Trotsky, by whom he was greatly impressed, he became coeditor and contributor to the Bolshevik periodical *Pravda* in Vienna. He organized the smuggling of *Pravda* into Russia and was arrested while trying to get into Russia, and imprisoned by the Czarist authorities in 1912. Joffe was released by the Kerensky government following the February revolution of 1917 and in July of that year joined the Bolsheviks, and was elected a member of the Central Committee of the party. After the Oc-

tober revolution, he led the Soviet delegation to the peace talks with Germany at Brest-Litovsk, but as he was in favor of continuing the war he was replaced by Trotsky, but remained there as adviser. He was made ambassador to Germany in the following year. In 1920 he headed the Russian delegation at the peace talks with Poland and the Baltic republics, and subsequently was Soviet ambassador to Peking (Beijing) (1922–23), Vienna (1923–24), and Tokyo (1924–25). In the years 1925–27 he was one of the leaders of the left (Trotskyist) opposition. As a supporter of Trotsky, Joffe was not favored by *Stalin when the latter came to power, and he was relegated to professor at the Oriental Institute at Moscow. After Trotsky's expulsion from the Communist Party, Joffe committed suicide. A letter he left for Trotsky giving the reason for his suicide was considered an important document in the history of the Soviet Union.

His wife, MARIA JOFFE, was a member of the Bolshevik party from 1917 and worked as a journalist and editor in the Soviet press. In a meeting in 1929 she protested against the expulsion of Trotsky and the attacks on him in the press. She was arrested in the same year and spent 28 years in camps and exile. From 1975 she lived in Israel, where she published her memoirs (1977).

[Shmuel Spector (2nd ed.)]

JOFFE, ELIEZER LIPA (1882–1944), Erez Israel pioneer; father of the idea of the moshav *ovedim. Joffe was born in Yanovka (Ivanovka), Bessarabia, and in 1902 published a call to young Jews to settle in Erez Israel (in the Hebrew daily, *Ha-Meliz*). He went to the United States in 1904 to study advanced agricultural techniques in preparation for his own settlement in Erez Israel. In 1905 Joffe founded the Ha-Ikkar ha-Za'ir ("Young Farmer") association for *aliyah* to Erez Israel in Woodbine, New Jersey, whose members were students at the agricultural school there. He also published *Ha-Ikkar ha-Za'ir*, which advocated agricultural training and preparation for life in Erez Israel. At the same time, he founded *He-Halutz in New York City. In 1910 he settled in Erez Israel, establishing an experimental farm at *Ein Gannim near Petaḥ Tikvah. He settled in Galilee in 1911 and in 1913 organized American pioneers in the Ha-Ikkar ha-Za'ir group for the autonomous cultivation of the *Kinneret farm. Joffe expounded his idea of the moshav ovedim in a brochure, *Yissud Moshevei Ovedim* ("Establishment of Agricultural Smallholder's Cooperatives," 1918) and in 1921 was one of the founders of *Nahalal, the first moshav ovedim, based on the principles he had formulated. In 1928 he became a founder of Tenuvah (the largest marketing cooperative in Israel), serving as its director until 1936.

A leader of the Ha-Po'el ha-Za'ir party, Joffe served as its representative at Zionist Congresses. He published books on agricultural subjects and was the first editor of *Ha-Sadeh* ("The Field"), a monthly agricultural magazine. His works,

Kitvei Eliezer Joffe, were published in six volumes, together with a biography, in 1956.

[Yosef Shapiro]

JOFFE, HILLEL (1864–1936), Erez Israel pioneer, doctor, and specialist in malaria. Born in Bristovka, Ukraine, he was educated at a Russian high school in Berdyansk. Under the influence of his brother-in-law, the writer M. Ben-Ami, he became an adherent of Ḥibbat Zion. Upon completing his medical studies in Geneva in 1891 Joffe went to Erez Israel and served as doctor of the Jewish community in Tiberias. Two years later he accepted the invitation of Baron Rothschild's officials to practice in Zikhron Ya'akov. He treated malaria victims in Ḥaderah and Athlit and, on his advice, a forest of eucalyptus trees was planted in the Ḥaderah swamps. From 1895 to 1905 he served as chairman of the Ḥovevei Zion executive committee. In 1898 Joffe accompanied Herzl on his tour of the settlements in Judea, and, in 1903, was a member of the Zionist commission which examined possibilities for Jewish settlement in *El-Arish. In 1907 he returned to Zikhron Ya'akov to establish a hospital and medical center for Galilee and Samaria, also organizing an anti-malarial service there. Joffe devoted particular attention to the health problems of the Jewish workers in the settlements and wrote many papers on preventive medicine. In 1919 he moved to Haifa where he practiced medicine and remained active in public life until his death. His reminiscences, letters and diaries appeared as a book, *Dor Ma'pilim* ("Generation of First Pioneers," 1939). The moshav Bet-Hillel and a hospital in Ḥaderah are named for him.

[Yehuda Slutsky]

JOFFE, JUDAH ACHILLES (1873–1966), Yiddish philologist. Born in Bakhmut (southern Russia), Joffe excelled from earliest youth in his linguistic abilities. As a musicologist and expert on Slavic languages, he was a contributor to such publications as *New International Encyclopedia* (1902), *International Yearbook* (1900, 1901, 1902), and *Nelson's Looseleaf Encyclopedia* (1910). His main interest, however, was Yiddish philology, for the purpose of which he built up a large library which included many rare early Yiddish texts. Prominent among his achievements is the critical edition (1949) of the **Bove-Bukh* ("Bove Book," 1541) by Elijah Baḥur *Levita, which was intended to be the first in a three-volume series of that noted scholar's Yiddish literary works. Also noteworthy are Joffe's studies of the Slavic component in Yiddish (in: *Pinkes*, 1 (1927/28), 235–56, 296–312), of Yiddish in America (in: *YIVO Bleter*, 10 (1936), 127–45), of Yiddish deluxe editions since 1534 (in: *YIVO Bleter*, 16 (1940), 45–58), as well as various etymo-

logical issues. Joffe translated and edited books from several languages including Yiddish, English, and French. He assisted editorially with the *Psychiatric Dictionary* (1940) by L.H. Hensie and J. Shatzky (1940), and the *Groyser Verterbukh fun der Yidisher Shprakh* ("Great Dictionary of the Yiddish Language," 1961–), the first volume of which he edited jointly with Yudel *Mark. Joffe was a pioneer of Yiddish orthographic reform and a man with controversial linguistic ideas. For his 85th birthday, *YIVO published the Yiddish *Yuda A. Yofe-bukh*, edited by Yudel Mark (1958, includes bibl.).

[Mordkhe Schaechter]

JOFFEN, ABRAHAM (1887–1970), *rosh yeshivah* and leading exponent of the Novogradok school of *Musar, Joffen was born near Pinsk and studied under Rabbis Zalman Sender Shapiro in Krinki and Joseph Horowitz in Novogradok (whose daughter he married in 1913). He became an ardent follower of Horowitz's dynamic approach to *musar*. Joffen was appointed *rosh yeshivah* in the Novogradok yeshivah and assisted his father-in-law in administering the branches of this school. Upon the latter's death (1920) Joffen succeeded him as head of the movement. In 1921 he and ten of his students were imprisoned by the Communists on suspicion of disloyalty to the new regime. After their release, they escaped to Poland, where Joffen reorganized the central Novogradok yeshivah in Bialystok. In 1929 he visited Erez Israel, where he aided in the organization of the "Novogradok Bet Joseph" yeshivah in Tel Aviv. After the outbreak of World War II, Joffen emigrated to the United States, where he reestablished the central Novogradok (= Novogradok) yeshivah in Brooklyn. In 1964 he settled in Jerusalem where he continued to guide the various Novogradok yeshivot. Joffen's reputation as a leading talmudic scholar gained acceptance for his school in the Lithuanian yeshivah world and nullified the criticism previously leveled against the Novogradok yeshivot that they stressed the study of *musar* instead of Talmud. Joffen's talmudic lectures on *Hullin* and *Bava Mezia* were published under the title *Derekh Eitan* (1958), and his *musar* discourses under the title *Sefer ha-Musar ve-ha-Daat* (1957).

JOGICHES, LEON (Jan Tyszka; 1867–1919), socialist leader in Poland and Germany. Born in Vilna, Jogiches in 1885 became a member of the revolutionary party Narodnaya Volya. He was a leading member of the Vilna group and was connected with its terrorist organization. He was later arrested by the Czarist authorities. On his release he emigrated to Switzerland and from 1890 to 1893 worked with Plekhanov's Marxist group Osvobozhdeniye Truda ("Emancipation of Labor"). Jogiches was a founder and leader of the Social Democratic Party of Poland and Lithuania and considerably influenced Rosa *Luxemburg, with whom he was in close personal contact. He edited the party organ *Sprawa Robotnicza*

(“The Workers’ Cause”) with Rosa Luxemburg and others and later edited four other periodicals: *Czerwony Sztandar* (“Red Banner”); *Przegląd Socjaldemokratyczny* (“Social-Democratic Review”); *Trybuna Ludowa* (“People’s Tribune”) and *Trybuna*. Jogiches returned to Poland on the outbreak of the Russian revolution in 1905 and organized the Warsaw workers’ strikes of December 1905. He was arrested in 1906 and sentenced to eight years hard labor. In 1907, however, he escaped to Germany where he became active in the Polish, Russian, and German Socialist movements. During World War I, Jogiches was a leading figure in the left-wing groups *Internationale* and *Spartacus* until his arrest in 1918. After the revolution in Germany (Nov. 1918) he joined Rosa Luxemburg and Karl Liebknecht in forming the German Communist Party (KPD), but early in 1919 was rearrested and murdered in prison.

[Abraham Wein]

JOHANAN (Heb. יְהוֹנָן; “יְהוָה has been gracious”), the son of Kareah, the principal military officer in the entourage of *Gedaliah the son of Ahikam at Mizpah. After Gedaliah’s assassination he led Jeremiah and other Jews down to Egypt (Jer. 40:8, 13–16; 41:11–16; 42:1,8:43; 2–5).

JOHANAN BEN BEROKA (beginning of the second century C.E.), *tanna*. Johanan’s halakhic opinions are cited ten times in the Mishnah and as often in the Tosefta. He was an associate of *Eleazar Ḥisma. Although he considered himself a pupil of *Joshua b. Hananiah, whom he visited in his home in Peki’in (Tosef., Sot. 7:9), he came chiefly under the influence of *Johanan b. Nuri, whom he also visited in his home in Bet She’arim (Tosef., Ter. 7:14), and whose customs he followed (Tosef., RH ed. by Lieberman 316–7).

[Zvi Kaplan]

JOHANAN BEN GUDGADA (first–early second centuries C.E.), *tanna*. According to the Tosefta Johanan served in the Temple, where it was his duty to see to the closing of the Temple gates (Tosef. Shek. 2:14). It was his custom to eat food “in the ritual purity required for sacred food” throughout his life (Ḥag. 2:7). He testified with regard to a number of *halakhot* (Git. 5:5). His children were deaf-mutes (Tosef. Ter. 1:1), and according to the Talmud his daughter’s sons, who were dumb but not deaf, studied in the academy of Judah ha-Nasi. Judah prayed for them and they were healed, and it was found that they had complete knowledge of the whole Torah (Ḥag. 3a). It is striking that one of his testimonies (Git. 5:5) concerned a deaf-mute given in marriage by her father, to the effect that she could be divorced by a bill of divorce.

JOHANAN BEN HA-ḤORANIT (also ha-Huranit, ha-Horoni, or ha-Hurni; mid-first century B.C.E.), *tanna*. A contemporary of *Shammai and *Hillel, he was probably named after his place of origin, the *Hauran region south of Damascus. He is only mentioned once in the Mishnah (Suk. 2:7) as having been visited in his *sukkah* by the elders of the academies of Shammai and of Hillel, who found him observing the *sukkah* ritual according to the rules of Hillel, though he is generally regarded as a disciple of Shammai (Tosef. Suk. 2:3). This is also reflected in the story that he refused once, during a famine, to eat moist olives until he was assured that, according to the rules of Hillel, they were ritually clean (*ibid.*). His most famous disciple was the *tanna* *Eliezer b. Zadok (*ibid.*).

BIBLIOGRAPHY: Hyman, Toledot, 674.

JOHANAN BEN JEHOIADA, (fifth century B.C.E.), high priest. Opinions differ as to the name of Johanan’s father. In a number of places he is called Eliashib (Ezra 10:6; Neh. 12:23), whereas Josephus refers to him as “the son of Joiada and grandson of Eliashib” (cf. also Neh. 12:22 and 5:11; reading Johanan instead of Jonathan). In the opinion of A. Schalit Johanan was a nephew of *Manasseh. Johanan served as high priest after the reforms of Ezra and Nehemiah and is mentioned in one of the *Elephantine papyri of 408 B.C.E. According to this papyrus (Cowley, Aramaic 108–19, no. 30), he opposed the construction by the Jews of the Elephantine Temple and did not reply to a letter which they addressed to him on the subject. Johanan murdered his brother Jeshua in the course of a dispute with him in the Temple area. In consequence of this crime, the Jews were punished by Bagoas (*Bagohi), the Persian governor. These events are better understood in light of the fact that Johanan was a supporter of Ezra and Nehemiah (Jos., Ant. 11:297–301), whereas the connections between Jeshua and Bagoas, and between the latter and the Samaritans, suggest that Jeshua favored closer relations with the Samaritans.

[Uriel Rappaport]

JOHANAN BEN JOSHUA HA-KOHEN (c. ninth or tenth century), liturgical poet. *Zunz assumed, with reservations, that Johanan, one of the principal representatives of the older *piyyut*, lived in the period after Eleazar *Kallir, and was of Greek extraction. The discovery of Johanan’s poems among the *Genizah* fragments in Cairo, and the new light on synagogal poetry that has been acquired over the past century indicate that Johanan lived in Palestine, and that although it is difficult to determine his dates he may have lived before the Muslim conquest. Johanan composed three lengthy *piyyutim*: (1) a *kerovah* for Shavuot (found in a number of manuscripts of the Greek ritual); (2) a *kerovah* for *Musaf* of the Day of Atonement (printed in two different versions in the *Maḥzor*

Romania (see *Romaniot and Roman rituals); (3) an **Avodah* for the day of Atonement (which figures in the Roman ritual). Other *piyyutim* by Johanan are found in manuscript form, notably in the *Genizah* texts.

[Jefim (Hayyim) Schirmann]

JOHANAN BEN NAPPAḤA (c. 180–c. 279), one of the most prominent Palestinian *amoraim* of the second generation whose teachings comprise a major portion of the Jerusalem Talmud (TJ), and a significant portion of the Babylonian Talmud as well. The fact that R. Johanan's name is more frequently mentioned in the Jerusalem Talmud than that of any other *amora* led Maimonides to ascribe to him the compilation of this Talmud (Intro. to Yad), though R. Johanan certainly could not himself have served as the final redactor of the Jerusalem Talmud as we possess it today (see Jerusalem *Talmud). His cognomen "bar Nappaḥa," which is found in this Aramaic form throughout the Babylonian Talmud (see Rashi, Sanh. 96a) is usually understood to mean "the son of a smith" (cf. the parallel Hebrew form "*ben ha-nappaḥ*" found in TJ, RH 2:7, 58a, Sanh. 1:2, 18c), and it has even been understood as a reference to R. Johanan's extraordinary physical beauty (Rashi ad. loc., presumably interpreting *bar nappaḥa* to mean "capable of inflaming [one's desires]"; cf. TB, BM 84a, Ber. 20a, 5b). It is nevertheless quite likely that it originally refers to his home town, the village of "*nappaḥ*" (Epstein, *Introduction*, 238). He is generally cited as "R. Johanan," sometimes by his cognomen only (e.g., Mak. 5b), but never by both together.

Like many of the *tannaim* and like many other prominent *amoraim*, R. Johanan's life quickly became the subject of numerous *aggadot*, which developed and changed as the stories were told and retold, each time in accordance with the literary and theological aims of the different storytellers. As a result it is difficult to give a precise account even of those few events from R. Johanan's life which are actually related in talmudic sources, since they are often reported in various ways in different versions of the same story. Similarly, R. Johanan's own halakhic and aggadic teachings were subjected to intense scrutiny, not only by his immediate disciples, but also by virtually all subsequent scholars. This process of study and analysis gave rise to varying and often conflicting interpretations of his words. These differing interpretations in turn were formulated as independent and sometimes contradictory statements, and then disseminated under R. Johanan's name (see, for example, Wald, *Pesahim III*, 59–65). This problem is further compounded by the fact that in the eyes of the Babylonian Talmud virtually any authoritative tradition deriving from the Land of Israel may come to be ascribed to R. Johanan, whether he was the original author of the statement or not.

For example, the halakhic statement ascribed to R. Johanan in TB, Shabbat 73b top, is virtually identical to the anonymous tannaitic statement found in Tosefta Shab. 8:3 (see Wald, *Shabbat VII*, sugya 11). Similarly, the famous aggadic statement ascribed to R. Johanan in TB, Git. 56a, "The humility of R. Zekharia b. Avkulas destroyed our Temple, burned our Holy of Holies, and exiled us from our land," is in fact a slightly expanded version of the statement of the *tanna* R. Yose found in Tosefta Shab. 16:7 (see *Five Sugyot*, 106–111). After describing in outline the life and career of R. Johanan as it is reflected in talmudic sources, we will examine a few of the problems involved in the critical evaluation of these traditions, using one halakhic tradition and one aggadic tradition as examples.

Apparently born at Sepphoris, Johanan was said to be descended from the tribe of Joseph (Ber. 20a). According to the Babylonian Talmud, his father died before his birth and his mother in childbirth (Kid. 31b), and according to the Jerusalem Talmud R. Johanan was raised by his grandfather (TJ, Ma'as. 1:2, 48d). One tradition relates that R. Johanan inherited fields and vineyards from his parents, all of which he sold to support himself during his student years, claiming that he was disposing of objects created in six days to acquire the Torah, which was given in 40 days (Song R. 8:7). While this source represents him as having chosen poverty voluntarily, another mentions his poverty without any such qualification (Ta'anit 21a). These representations of R. Johanan as a struggling scholar are consistent with his view – quoted by R. Abbahu – that a *talmid hakham* is one who neglects his business for study (TJ, Moed Katan 3:7, 83b). According to the Babylonian Talmud, R. Johanan's family life was marred by tragedy, and during his lifetime he buried ten of his sons. He is said to have retained a "bone" (according to the commentaries "a tooth") of the last of his sons, showing it to people in mourning to induce in them a spirit of resignation such as he himself had found in his successive bereavements (Ber. 5b; Arukh ad. loc.). In a parallel version of this *aggadah* (Song R. 2), however, there is no mention either of this tragedy or of this particular practice, and in another source reference is made to the marriage of a daughter who survived (Kid. 71b).

The Babylonian Talmud states that in his youth he studied with *Judah ha-Nasi for a short time, although R. Johanan apparently could not then comprehend his master's teachings (Ḥul. 137b). Nevertheless, according to this *aggadah*, Judah recognized Johanan's talents and predicted that he would be a leading teacher in Israel (Pes. 3b; cf. Yoma 82b). His primary teachers were R. *Yannai (BB 154b; TJ, Ket. 9:5, 33b), and *Oshaiyah Rabbah (Eruv. 53a; TJ, Ter. 10:3, 47a). From Ḥanina b. Hama, he apparently received homiletic traditions on almost all the biblical books, as we are told that Ḥanina once noticed unusually large crowds hurrying by to hear R. Johanan's lectures on the *aggadah*; whereupon Ḥanina thanked God for permitting him to see his life's work bearing such blessed fruit (TJ, Hor. 3:7, 48b). Johanan also is described as having mastered the mystical traditions of the *Merkabah* (Ḥag. 13a), the

science of intercalating months (TJ, RH 2:6, 58a, b), and medicine (Shab. 109b; 110b).

R. Johanan began teaching in his native city, Sepphoris, in the yeshivah of R. Bana'ah, and his classes became very popular. Later, R. Johanan opened his own academy in Tiberias (TJ, Bezah 1:1, 60a) which soon attracted the most gifted students of his generation, among whom were Abbahu, Ammi, Assi II, Eleazar b. Pedat, Hiyya b. Abba, Yose b. Haninah, and Simeon b. Abba. His disciples spread his teachings, and R. Johanan also visited other localities, deciding questions of law there (Ket. 7a; Yev. 64b). His fame spread afar, and in certain circles in the Diaspora the impact of his teaching was felt almost as strongly as in his native land (Z.M. Dor).

According to a tradition in the Babylonian Talmud, R. Johanan recognized no authority outside Erez Israel except for Rav, with whom he corresponded, addressing him as "our master in Babylon." After Rav's death, R. Johanan addressed his colleague, Samuel, as "our colleague in Babylon." However, after Samuel had sent him his calendar calculations and responsa concerning *terefah*, R. Johanan reportedly exclaimed that Samuel was also his master. He therefore resolved to visit Samuel, but to spare him from the hardships of the long journey to Babylon, "God caused him incorrectly to believe that Samuel had in the meantime died" (Hul. 95b).

R. Johanan is represented not only as authoritative among other rabbis (cf. TJ, Ber. 8:1, 12a), but also outside of rabbinic circles. A litigant in Antioch is said to have agreed in advance of adjudication to abide by whatever R. Johanan decided (TJ, Sanh. 3:2, 21a), while another source stresses his popularity as a preacher (TJ, Hor. 3:7, 48b; TJ, BM 2:11, 8d). R. Johanan is also described as giving orders to the Kifra synagogue (TJ, RH 4:4, 59c) and to midwives (TJ, Shab 9:3, 12a), descriptions which presuppose some degree of receptivity on the part of the persons and communities in question.

R. Johanan is also represented as a man of affairs. He is described as having enjoyed the regard of the archon of Sepphoris (TJ, Ber. 5:1, 9a), and he is also represented as having regard for the honor of the patriarchate (e.g., Gen R. 97:48, Theodor-Albeck, p. 1245). R. Johanan reportedly felt that there should only be one leader in a generation (Sanhedrin 8a) – presumably the patriarch – whom he is also represented as urging to dress in a manner more appropriate to his office (TJ, Sanh. 2:5, 20c). On one occasion when the patriarchal house was late in informing R. Johanan and Resh Lakish of the proclamation of a public fast, R. Johanan insisted that they nevertheless had to observe it, since – presumably as the patriarch's subjects – they were legally presumed to have accepted the fast when it was proclaimed (Ta'an. 24a). R. Johanan also reportedly made a journey to perform a service on behalf of the patriarch (TJ, Av. Zar. 2:4, 41b). Descriptions of R. Johanan's willingness to submit to the authority of the patriarch may be connected to the accounts of how he was able to mediate between the patriarch and Resh Lakish (TJ, Sanh. 2:1, 19d–20a; TJ, Hor. 3:2, 47a), and how he had the stature to intervene in a conflict involving two of the most prominent

families in Sepphoris (TJ, Shab. 12:3, 13c). R. Johanan also reportedly used his connections with the patriarchate in order to begin integrating rabbinic scholars into the patriarchal bureaucracy, as well as into positions of communal leadership. R. Johanan's students continued his policy of appointing scholars for such posts. This expansion of R. Johanan's influence into the political realm may account at least in part for his influence over Palestinian rabbinism overall. The Talmud also ascribes to R. Johanan an almost unbounded respect for the previous generations of scholars, quoting him as saying that "the hearts of the ancients were like the larger outer door to the Temple [*ulam*], but that of the later generations is like the smaller inner door [*heikhal*], while ours is like the eye of a fine needle" (Er. 53a), and that "the fingernail of the earlier generations is better than the whole body of the later generations" (Yoma 9b).

In addition to his numerous halakhic and aggadic statements (*memrot*), which touch on virtually every aspect of talmudic law and lore, the Babylonian Talmud also ascribes to R. Johanan a number of general rules which were accepted as authoritative in determining the *halakhah*. (e.g., Sanh. 31a, Er. 46b). One notable example of this sort of statement is the widely quoted (cf. the list in the margin of Shab. 46a) principle that "the *halakhah* is in accordance with an anonymous Mishnah." Nevertheless, it is difficult to accept the accuracy of this tradition on face value. In every case where this statement is quoted in the Babylonian Talmud, it is contradicted by another explicit statement of R. Johanan in which he decides the *halakhah* in opposition to the view of an anonymous Mishnah. In many cases the Talmud manages to "resolve" these contradictions, but some of these resolutions require textual emendations (Shab. 147b, 157b), some involve explicitly forced interpretations (Shab. 46a, 112b), and some remain unresolved (Yev. 16b, Nid. 56b).

The source of this problematic tradition can be traced to a passage in the Jerusalem Talmud, (Yev. 4:11, 6b; cf. TB, Yev. 42b–43a, and TJ, Ta'an. 2:14, 66a; Meg. 1:4, 70d), where R. Johanan decided the *halakhah* in favor of the position of R. Jose, and in opposition to an anonymous halakhic position, both of which are brought in Mishnah Yev. 4:11. The Jerusalem Talmud explains that R. Johanan did not consider an anonymous halakhah binding unless it represented the position of the majority of scholars, whereas in this case the anonymous *halakhah* was only the opinion of R. Meir. Further on the Jerusalem Talmud indeed quotes a tradition in the name of R. Eleazar, according to which the *halakhah* always follows the anonymous position of the Mishnah, even when it is only the view of an individual *tanna*. It is clear, however, that this is not the view of R. Johanan himself, but rather only of his disciple R. Eleazar.

Why then was this tradition ascribed to R. Johanan in the Babylonian Talmud? The answer to this question can be found in another statement by R. Johanan in the Jerusalem Talmud there (TJ, Yev. 4:11, 6b): "R. Johanan said: Any place where [Rabbi] taught an anonymous Mishnah, that [anon-

ymous Mishnah] is [presumed to represent] the majority position, until one receives explicit information from one's teacher [to the contrary]." Assuming that the *halakhah* is generally in accordance with the majority opinion, one could summarize R. Johanan's rather convoluted statement in the following way: "The *halakhah* is in accordance with an anonymous Mishnah" – but only if one recalls that R. Johanan's statement is not a universal and binding legal rule, but rather a generalization, which may serve as a legal presumption, so long as it has not been contradicted by other evidence. When this simplified, but still correct, version of this tradition was transmitted to Babylonia, however, these qualifications were blurred or lost altogether, and it was interpreted as a universal and binding legal rule: "the *halakhah* is [always] in accordance with an anonymous Mishnah" – as if R. Johanan himself agreed with the position of his disciple R. Eleazar! As a result of the conflation of these two traditions, a contradiction arose between this tradition (as understood by the Babylonian Talmud) and more than 20 other explicit rulings ascribed in the Babylonian Talmud to R. Johanan, in which he decided the *halakhah* in opposition to the position of an anonymous Mishnah.

Similar problems arise when one tries to trace the origin and to verify the authenticity of aggadic traditions relating to R. Johanan. Talmudic storytellers frequently elaborated and reformulated historical traditions, transferred stories from one narrative to another, and even from one historical figure to another. For example, the Talmud In טב, ב"מ 84a provides a detailed account of the manner in which R. Johanan first met his life-long study partner, R. *Simeon b. Lakish (Resh Lakish), and of the tragic events surrounding their deaths. We are told there that R. Johanan was once bathing in the Jordan, when Resh Lakish, who at that time was a highway robber by profession, passed by. Resh Lakish was so impressed with R. Johanan's beauty that he "jumped over the Jordan" to get a better look. R. Johanan was so impressed by Resh Lakish's physical strength that he said to him: "Your strength should be devoted to the study of Torah." Resh Lakish replied: "Your beauty should be devoted to women." Johanan responded: "If you come back with me [to study Torah], I will give you my sister [in marriage], who is even more beautiful than I am." As soon as Resh Lakish agreed to return and study Torah, he lost all his physical strength, and was unable to jump back across the Jordan in order to bring his things. The story then breaks off and picks up some years later, with R. Johanan and Resh Lakish engaged in a dispute over the halakhic status of various weapons – "The sword, the dagger," etc. – in which Resh Lakish disagreed with R. Johanan's view as to when such weapons are considered finished and ready for use. R. Johanan quipped that Resh Lakish's apparent expertise in this matter would seem to be due to his former occupation as a highway robber. Resh Lakish was taken aback by this insensitive reference to his former life of crime, became despondent and eventually died. R. Johanan, in turn, also became increasingly despondent, not so much because he had

caused the death of his lifelong friend, but rather because he was unable to learn Torah effectively without the assistance of an aggressive study partner like Resh Lakish, who was always both willing and able to challenge him on every point. R. Johanan's mental state eventually deteriorated into insanity, whereupon R. Johanan's colleagues prayed for him that he might find peace – and so he died.

This story is fascinating in many respects, but it is also highly suspect as a report of events that supposedly occurred in the lives of these two scholars. The opening scenario is remarkably similar to another story found in Song R. 2, in which a member of Rabban Gamaliel's household, who is described as possessing superhuman strength, becomes enfeebled as soon as he begins to learn Torah. Even R. Johanan's comment to Resh Lakish in the Babylonian Talmud is remarkably similar to Rabban Gamaliel's words there: "You have all this great strength (*hela*), and you do not learn Torah (*oraita*)?" (Song R.) = "Your strength (*helakh*), should be devoted to the study of Torah (*l-oraita*)." Also, the story of R. Johanan's pathetic inability to study Torah in the absence of Resh Lakish is the subject of another, very different, *aggadah* found in Yerushalmi Sanh. 2, 19d and Hor. 3, 47a (see Friedman, Rav Kahana, 265–67). Moreover, the entire halakhic discussion between R. Johanan and Resh Lakish in this story seems artificial and somewhat improbable (cf. Tosefot ב"מ 84b bottom). Finally, the striking description of R. Johanan's insanity and resulting death are not reflected in any parallel description of R. Johanan's death (cf. מ"ק 25b; ת"י, Kil. 9:3, 32b, Ket. 12:3, 35a; Gen. R. 100:2, Theodor-Albeck 1285).

The lives of great figures such as R. Johanan inevitably become enmeshed in a web of legend, as their teachings are subjected to reinterpretation and reformulation. It is often difficult, if not impossible, to disentangle the more original elements of these traditions from later accretions and elaborations. Notwithstanding these difficulties, these traditions bear clear witness to the enormity of the achievement and legacy which R. Johanan left to posterity.

[Stephen G. Wald and Alyssia Gray (2nd ed.)]

JOHANAN BEN NURI (first half of the second century), *tanna*. Johanan lived in Bet She'arim (Tosef., Ter. 7:14; *ibid.*, Suk. 2:2) and was also in Ginnegar and Sepphoris. His teacher was apparently *Eliezer b. Hyrcanus, since he transmits sev-

eral sayings in his name and engaged in discussions in his presence (Tosef., Kelim, BK 6:3; et al.). During the war of Lucius *Quietus (115–17 C.E.), Johanan was in Sepphoris in the company of outstanding scholars (Tosef., Kelim, BB 2:2). He had great influence in molding the laws and customs of the Jews of Galilee, who followed his rulings, in contrast to Judea where they followed *Akiva (TJ, RH 4:6). Despite the fact that *Joshua b. Hananiah praised him for his great knowledge and as one who “was able to estimate the number of drops of water in the sea,” he was extremely poor and “went out with the last of the gleaners to bring home his living for the whole year” (TJ, Pe’ah 8:1). Even after Rabban *Gamaliel appointed him a member of the Sanhedrin, he continued to behave with simplicity: “It happened that Rabban Gamaliel promoted Johanan b. Nuri and Eleazer b. Hisma, and the disciples did not recognize them. In the evening they took their place among the disciples... [Rabban Gamaliel] entered and found them sitting among the pupils. He said to them: ‘You have already shown publicly that you deserve no position of authority. In the past you were your own masters, henceforth you are servants subject to the community’” (Sif. Deut. 16; and cf. Hor. 10a). He is frequently mentioned in the Mishnah, chiefly in discussions with Akiva with whom he was intimate. Johanan b. Nuri said: “I call heaven and earth as witnesses that on more than five occasions Akiva was criticized because of me before Gamaliel in Jabneh, because I complained about him and Gamaliel rebuked him, but despite that I know that his affection for me grew” (Sif. Deut. 1). He is frequently mentioned as conveying the teaching of the scholars of Jabneh to the older scholars of Galilee (Tosef., BB 2:10; *ibid.*, Oho. 5:8; et al.). His *halakhot* are frequently mentioned in the Mishnah and *baraita* and he was called “a basket of *halakhot*” (ARN¹ 18–68). Johanan b. Beroka is referred to as one of his pupils (Tosef. Ter. 7:14), and Yose transmitted *halakhot* in his name (Ket. 1:10; et al.). He was still alive after the *Bar Kokhba war and the fall of Bethar (Yev. 14:2–15:1), and Judah ha-Nasi still went to visit him in Bet She’arim (Tosef. Suk. 2:2; see Lieberman, *Tosefta ki-Feshutah*, 4, 850/51).

[Shmuel Safrai]

JOHANAN BEN TORTA (first half of the second century), *tanna*, a contemporary of *Akiva. Only one statement by him is known, in which he gives the reasons for the destruction of the Temple. “Why was Shiloh destroyed? Because of the contempt in which the sacred objects there were held. Why was the first Temple destroyed? Because of three evil things which prevailed then – idolatry, immorality, and bloodshed. But in the period of the Second Temple we know that they labored in Torah and were careful to give tithes; why then were they exiled? Because they loved wealth and hated one another. This is to teach thee that hatred of one’s fellow men is considered by God as grave as idolatry, immorality, and bloodshed”

(Tosef. Men. 13:22, cf. Yoma 9a, b). Johanan b. Torta vigorously opposed Akiva’s acceptance of Bar Kokhba as the Messiah, saying to him, “Akiva! Grass shall grow from your jaws before the son of David appears” (TJ, Ta’an. 4:8, 68d). According to a late *aggadah*, Johanan was a proselyte who became converted when he saw that the cow he bought from a Jew refused to work on the Sabbath (PR, Parah, 56b–57a). This, however, would appear to be merely a homiletical interpretation based on his name (*torta*, “cow”) which, in fact, refers to his birthplace.

[Shmuel Safrai]

JOHANAN BEN ZAKKAI (first century C.E.), *tanna*, considered in talmudic tradition the leading sage at the end of the Second Temple period and the years immediately following the destruction of the Temple. Johanan b. Zakkai’s personality and work are depicted in a blend of fact and legend, neither of which gives information concerning his family or place of origin. Compared to Moses and *Hillel before and to *Akiva after him, Johanan is said to have lived 120 years, divided into three periods: “For 40 years he was in business, 40 years he studied, and 40 years he taught” (Sif. Deut. 357; RH 31b; Sanh. 41a). In the chain of the tradition of the Oral Law it is mentioned in general terms that he received the tradition from Hillel and *Shammai (Avot 2:8). Other statements, however, refer to him only as the pupil of Hillel, although these too contain no direct evidence of any discussions between them. According to a talmudic *aggadah* (TJ, Ned. 5:6, 39b, TB, Suk. 28a, BB 134a; ARN¹ 14, ARN^b 28), Johanan was the least among Hillel’s many pupils, 80 according to some traditions, 160 according to others. Nevertheless, Hillel (according to TJ and ARN²) singled Johanan out on his deathbed, calling him “father of wisdom and father of the generations,” and according to another tradition (TB; cf. ARN¹) “it was said of him that he did not leave unstudied the Bible and Mishnah, Talmud, *halakhah*, and *aggadah*, exegetical details of the Torah and of the Scribes, inferences *a minori ad majus* and analogies, calendrical computations and *gematriot*, the speech of the ministering angels, of spirits, and of palm-trees, fullers’ parables and fox fables, and any matter great and small, ‘great’ meaning: *ma’aseh merkavah* (mystical speculation); ‘small’ meaning: the discussions of Abbaye and Rava.”

Very little is known of Johanan’s activity as scholar or teacher in Jerusalem before the destruction. One talmudic *aggadah* states that for 40 years before the destruction of the Second Temple the doors of the *heikhal* (front part of the Temple building) were locked at night and in the early morning were found open. Johanan b. Zakkai said to it: “*Heikhal*, why do you agitate us? We know that you will eventually be destroyed, as it is said [Zech. 11:1]: ‘Open thy doors, O Lebanon, that the fire may devour thy cedars’” (TJ, Yoma, 6:3, 43c; TB, Yoma 39b; and see Jos., Wars, 6:293). Another tradition (see Mid. Tan. on Deut. 26:13), tells of his relations with Rabban *Simeon b. Gamaliel, indicating that he occupied a special

place among the sages and filled a role – either with or without any particular title – alongside the *nasi*.

Johanan and the Temple

According to tradition Johanan expounded and taught “in the shadow of the Temple” (TJ, Av. Zar. 3:13, 43b; Pes. 26a), and it may be there that he came into contact with “the sons of high priests” mentioned in Ket. 13:2. On the other hand Johanan’s dispute there with Dosa ben Hyrcanus over the words of “the sons of high priests” may reflect a later stage in the development of this *halakhah* which occurred after the destruction. Tannaitic sources report a number of explicit disputes between Johanan and the Sadducees. In one, Johanan clashed openly with one of them and was able to give practical expression to the Pharisaic view (Tosef., Par. 3:8; and see Mish., Par. 3:7). The Mishnah also records a controversy between Johanan and the Sadducees on whether the Holy Scriptures “render the hands unclean” (Yad. 4:6). The other accounts of his disputes with them (BB 115b; and see Men. 65a; Meg. Ta’an. 338) are legendary in character. These accounts were apparently composed when the Sadducees had ceased to exist. By his active opposition to them Johanan undoubtedly sought to curtail their influence in the Temple and in its service. He was also opposed to the special privileges which the priests had arrogated to themselves, such as exempting themselves from paying the half shekel. Johanan declared against them: “Any priest who does not pay the shekel is guilty of a sin ...” (Shek. 1:4; and see Maimonides’ Mishnah commentary, ad loc.). It was however clear to him that the sages were powerless to impose their views fully on the priests (Eduy. 8:3, 7). Nevertheless he may have succeeded in increasing the number of Pharisaic priests who accepted his decisions (see Tosef., Oho. 16:8; Tosef., Par. 10:2) and in influencing their ways and the order of the Temple service.

No information is extant of the regulations issued by Johanan before the destruction of the Temple. The Mishnah (Sot. 9:9) does indeed declare that he discontinued the ceremony of the ordeal of the bitter water which the woman suspected of adultery had to drink, but the passage “Rabban Johanan b. Zakkai discontinued it” was apparently not part of the original Mishnah, he having merely testified to its discontinuance on account of prevailing circumstances, as stated in the Tosefta (Sot. 14:1–2): “R. Johanan b. Zakkai said: With the increase in the number of murderers an end was put to the ceremony of breaking the heifer’s neck [Deut. 21:1 ff.], for the ceremony of breaking the heifer’s neck applies only to a doubtful case, whereas now they murder openly. With the increase in the number of adulterers, an end was put to the ceremony of the bitter water, for the ceremony of the bitter water applies only to a doubtful case, whereas now there have already increased those who are openly guilty of it.”

As a Teacher

Johanan’s chief activity was directed to spreading the knowledge of the Torah (RH 18a; Yev. 105a); but while regarding its study as the aim of man’s life, he warned that this did not jus-

tify claiming any credit for oneself: “If you have learnt much Torah, do not ascribe any merit to yourself, since it was for this that you were created” (Avot 2:8). Five of his pupils are mentioned by name: Eliezer b. Hyrcanus, Joshua b. Hananiah, Yose ha-Kohen, Simeon b. Nethanel, and Eleazar b. Arakh (*ibid.*), but frequently reference is made to his pupils without mentioning their names. He used the dialogue as his method of instruction. He asked questions of his pupils, probed their answers, and praised the correct reply (Avot 2:9). The earliest tannaitic sources describe him as teaching *halakhah* and *aggadah*, ethics and the reasons for the commandments, and mysticism as well – *ma’aseh bereshit* and *ma’aseh merkavah* (see below). His tendency to base *halakhot* on biblical texts is evidenced by his fear that “another generation is destined to pronounce clean a loaf that is unclean in the third degree on the ground that no text in the Torah declares it to be unclean” (Sot. 5:2). A *baraita* (Tosef., BK 7:3 ff.) enumerates five things which R. Johanan b. Zakkai interpreted “as a kind of *homer*,” an expression that has not been satisfactorily explained. This *baraita* contains allegorical interpretations and homilies based on analogy, on an inference from a similarity of biblical phrases, and on a conclusion *a minori ad majus*. Their common feature is that they give reasons for biblical statements: “Why, of all the organs of his body, was it specifically the ear of the Hebrew servant who, although able to go free after six years’ service yet chose to continue serving his master, which was pierced? [Ex. 21:2–6]. Because the ear was the organ that heard at Mt. Sinai ‘for unto Me the children of Israel are servants’ [Lev. 25:55] but this one elected to serve a human master. Therefore, declares the Bible, let his ear be perforated ... The Bible says [Deut. 27:5]: ‘And there shalt thou build ... an altar of stones; thou shalt lift up no iron tool upon them.’ For fashioning the stones of the altar, which symbolizes atonement, iron is not to be used, since from it the sword, symbolizing calamity, is manufactured. If this applies to the altar which makes atonement between Israel and their Father in heaven, by a conclusion *a minori ad majus*, students of the Torah, who are the atonement of the world, should not be touched by any one of all the harmful agents” (Tosef., BK loc. cit.).

Johanan’s method of minutely studying a biblical passage, inquiring into its motivation, and finding the grounds for some detail which he then converts into a universal idea transcending the specific context of the passage, is evident also in his other expositions not designated “as a kind of *homer*.” On the verse (Ex. 21:37: “he shall pay five oxen for an ox, and four sheep for a sheep,” he said: “Come and see to what extent God shows consideration for the dignity of human beings. For an ox, which walks with its legs, the thief pays fivefold; for a sheep, since he carries it, he pays only fourfold” (Tosef., BK 7:10; Mekh., ed. Horowitz-Rabin, *Nezikin*, 12). In later sources mention is made of questions addressed to Johanan in the presence of his pupils by a Roman general who in the main posed problems raised by contradictory biblical passages (see Bek. 5a; TJ, Sanh. 1:7, 19 c–d; Num. R. 4:9). At times Johanan gave him an evasive answer, which failed to satisfy his pupils.

On one occasion when “he saw his disciples looking at one another, he said to them, ‘You are doubtless surprised that I should have dismissed him with a vague reply ...’” (Hul. 27b, and see Tos., ad loc.). On another occasion his pupils said to him: “Him you have dismissed with a vague reply, but to us what answer do you give?” (TJ, Sanh. 1:3, 19b). According to another tradition, a certain non-Jew once asked Johanan about the ceremony of the red heifer which “seems like sorcery.” In this story, too, it is said that Johanan’s answer to the general failed to satisfy his pupils “who, when he left, said, ‘Our master, him you have dismissed with a trivial reply. What answer do you give us?’ He said to them, ‘By your life, a corpse does not defile nor does water make levitically clean, but it is the decree of the Holy One Blessed Be He who declared, I have issued an ordinance and enacted a decree, and you are not permitted to question My decree’” (PDRK 71; Tanh., Hukkat, 8).

Johanan is the first sage explicitly mentioned in tannaitic sources as having engaged in mysticism – standing at the head of a chain, as it were, of sages who engaged in the subject, given by Yosef b. Judah of the latter half of the second century C.E. (Tosef., Hag. 2:2). Recent studies, however, have raised questions about the historical foundations of these traditions. They may have originated in an attempt of later *tannaim* to use the figure of Eleazar b. Arakh (otherwise largely ignored in tannaitic sources) as a prototype for the “sage who is able to achieve understanding through his own abilities” (Hag. 2:1), but nevertheless remains in need of the approval and supervision of his master in order successfully to engage in mystical speculation (Goshen-Gottstein; Wald). Similarly, the traditions concerning the “chain of mystical tradition” may have arisen out of a need to explain Akiva’s unique success in the mystical ascent to the *pardes* (Tosef. Hag. 2:3–4), leading the Tosefta to connect Akiva through R. Joshua to an officially sanctioned rabbinic mystical tradition (Rabban Johanan b. Zakkai), to which the other three – all of whom were harmed in one way or another during the mystical ascent – were not privy. All the same, these traditions concerning Johanan’s close connection with the origins of tannaitic mysticism are firmly rooted in the earliest sources, and they are progressively expanded and elaborated in later talmudic sources (Neusner, *Development of a Legend*, 247–52; Wald). Closely connected to these traditions are two statements ascribed to Johanan, the one describing the entrance to Gehinnom (Suk. 32b) and the other the size of the world (Hag. 13a; and see Pes. 94 a–b). Only very few of *halakhot* (Kelim 2:2, 17:16) report Johanan’s own wording. Remnants of his teaching have apparently been preserved in tractate *Sotah*, too, particularly in chapters 8 and 9, in which there are many references to *tannaim* of the end of the Second Temple period.

Aggadot of the Destruction

Nothing is clearly known concerning Johanan’s attitude to the events that took place in Jerusalem during the tempestuous years preceding the destruction of the Second Temple. There is certainly no reason to believe that he belonged to the party

of the Zealots. Statements ascribed to him concerning the establishment of peace “between nation and nation, between government and government, between family and family” (Mekh., Ba-Hodesh, 11) were certainly intended to promote peace for everyone, even for a heathen in the street (Ber. 17a), this being borne out by his admonition: “Do not be precipitate in tearing down the high places of the non-Jews, that you shall not rebuild them with your hands, that you shall not tear down those of bricks and they will tell you to make them of stones, those of stones and they will tell you to make them of wood” (Mid. Tan. on Deut. 12:2). Johanan may have expected a peaceful issue of the conflict and the preservation of Jerusalem. According to amoraic and post-amoraic tradition, he even worked to this end, and only after becoming convinced that all hope was lost decided to leave the city. This aggadah has been preserved in four versions (ARN¹ 4, 22–24, ARN², 19; Lam. R. 1:5, no. 31; Git. 56a–b), in which there are not a few substantial differences and variants. Various editorial interpolations reflecting the spirit of the narrator’s outlook can be discerned in the different versions of this story, such as Johanan’s prophecy to Vespasian that the latter was destined to become emperor, ascribed by Josephus to himself (Wars, 3:399ff.), as well as the motif emphasizing Johanan’s wisdom in the eyes of the non-Jews. All these sources agree that he succeeded in outwitting the extremists, left the besieged city, and arrived at Vespasian’s camp, probably in 68 C.E. Scholars have offered radically differing evaluations of the historical reliability of these traditions. Based on an analysis of extra-talmudic evidence, G. Alon rejected much of these traditions, while favoring certain elements – Johanan’s requests to the emperor – found only in Lam. R., largely because they fit well with his historical reconstruction. Others hold that the most probable tradition concerning his requests to the emperor is that preserved in the Babylonian Talmud, according to which he asked only that the sages of the generation be saved – Jabneh with its sages, the dynasty of Rabban Gamaliel, and R. Zadok – requests that were personal and circumscribed in character. Another, totally different approach to these traditions was begun with Neusner’s groundbreaking synoptic studies in his *Development of a Legend* (228–34), in which he argued that the version in Lam. R. is literarily dependent on the version in the Babylonian Talmud, thus negating its value as an independent source of reliable historical information. In general, Neusner’s literary and synoptic approach has led to a general reevaluation of the use of talmudic *aggadah* in the writing of history, with the emphasis moving away from the reconstruction of actual concrete events – which are rarely the concern of the later amoraic and post-amoraic *aggadah* – toward the analysis of the development of talmudic legends themselves and the changing perspectives and agendas of the different later talmudic storytellers. While a recent study has tried to show that the differing versions found in ARN manuscripts preserve a number of relatively early fragmentary traditions (Kister), this in no way affects the evaluation of the historical reliability of these works as a whole.

According to the legend, the destruction of the Temple, which he foresaw, stunned Johanan no less than his contemporaries, and his immediate reaction was one of profound grief: “Rabban Johanan sat and watched in the direction of the wall of Jerusalem to learn what was happening there, even as Eli sat upon his seat by the wayside watching [I Sam. 4:13]. When R. Johanan b. Zakkai saw that the Temple was destroyed and the *heikhal* burnt, he stood and rent his garments, took off his *tefillin*, and sat weeping, as did his pupils with him” (ARN² 7, 21). The cessation of the Temple service, one of the three things on which the world is based (Avot 1:2), led to a movement of excessive abstinence (Tosef., Sot. 15:11) and to a despair of the possibility of atoning for sins. Johanan took it upon himself to give guidance to the bewildered: “Once when R. Johanan b. Zakkai was leaving Jerusalem, R. Joshua was walking behind him and saw the Temple in ruins. R. Joshua said, ‘Woe is us that this has been destroyed, the place where atonement was made for the sins of Israel.’ ‘No, my son, do you not know that we have a means of making atonement that is like it? And what is it? It is deeds of love, as it is said [Hos. 6:6]: ‘For I desire kindness, and not sacrifice’” (ARN¹ 4, 21).

According to the *aggadah*, Johanan ascribed the destruction of the Temple to Israel’s failure to perform the will of God; but the *aggadists* were also witness to the consequences of the Jewish people having been delivered “into the hands of a low people” (Ket. 66b). This led to differing attitudes toward the charitable acts of the non-Jews. Thus, according to one tradition, Johanan said: “Just as the sin and guilt offerings make atonement for Israel, so charity and kindness make atonement for the nations of the world” (BB 10b; see Dik. Sof., ad loc.). But, according to another post-talmudic tradition, Johanan praised his pupil Eleazar b. Arakh’s exposition of the verse (Prov. 14:34): “Righteousness exalteth a nation, but the kindness of the peoples is sin,” saying to his pupils, “I approve the words of Eleazar b. Arakh rather than yours, for he assigns charity and kindness to Israel and sins to the nations of the world” (PDRK 21). According to this view, after the destruction of the Temple the atonement of sins was denied not to Israel but to those who had destroyed it.

Johanan at Jabneh

According to these traditions, Johanan was not content merely with such expressions of consolation, but took concrete steps toward the renewal of the nation’s religious and national leadership by raising the prestige of the *bet din* at Jabneh. The tannaitic traditions preserve a number of decrees established by Johanan, concerning the blowing of the *shofar* on Shabbat, the “day of waving,” the taking of the *lulav* outside of the Temple, the acceptance of testimony concerning the new moon (Neusner, *Development of a Legend*, 206–9). These decrees all reflect the need to bring accepted *halakhah* in line with the changed circumstances after the destruction of the Temple. However, only one of these decrees is linked explicitly to Jabneh, and then only according to one version of the tradition (RH 4:1). Johanan is mentioned once in the context of a

halakhic debate at Jabneh, but he is not explicitly described as playing any official role (Shek. 1:4). On the other hand, the Mishnah (Shab. 16:7; 22:3) quotes two decisions which Johanan gave in Arav in Lower Galilee, and according to the *amora* Ulla, he lived there for 18 years, during which time these were the only two incidents which came before him – hence the statement ascribed to him complaining of the hatred of the Torah in Galilee (TJ, Shab. 16:7, 15d). Johanan’s name is connected in a tannaitic source (Tosef, Ma’as. 2:1) to another location – the village Beror Hayil – and a later talmudic tradition (TB, Sanh. 32b) even describes Johanan as having had a “*yeshivah*” there. All this stands in sharp contrast to Rabban Gamaliel, who is regularly described as playing an official leading role in the *bet din* at Jabneh (RH 2:8–9; Kelim 5:4; Tosef. Demai 2:6; Tosef. RH 2:11; Tosef. Sanh. 8:1).

These facts have fueled a sharp scholarly debate over the question whether Johanan ever occupied the position of *nasi*, and if so, whether he was universally recognized or exercised full authority (see Frankel, Brüell, Halevy, Alon, Safrai). A moderate view of events might suggest that Johanan helped to prepare the groundwork for the eventual reestablishment of the office of *nasi*, under Rabban Gamaliel, who was accorded the recognition due to him as the legitimate heir of that office. The date of Johanan’s death is unknown, but the esteem of the generations for his image and work was expressed in the mishnaic statement (Sot. 9:15) that “when R. Johanan b. Zakkai died, the luster of wisdom ceased.”

The *aggadah* of the Bavli provides this moving account of his death: “When he fell ill, his disciples went to visit him. When R. Johanan b. Zakkai saw them, he began to weep. His disciples said to him: ‘Light of Israel, pillar of the right hand, mighty hammer! Why do you weep?’ He replied: ‘If I were being taken today before a human king who is here today and tomorrow in the grave, whose anger – if he is angry with me – does not last forever, who if he imprisons me does not imprison me forever, and who if he puts me to death does not put me to everlasting death, and whom I can persuade with words and bribe with money, even so I would weep. Now that I am being taken before the supreme King of Kings, who lives and endures for ever and ever, whose anger is an everlasting anger, who if He imprisons me imprisons me forever, who if He puts me to death puts me to death forever, and whom I cannot persuade with words or bribe with money – nay more, when there are two ways before me, one leading to Paradise and the other to Gehinnom, and I do not know by which I shall be taken, shall I not weep?’” It is possible that the reference to appearing before an earthly king may be connected with his appearance before Vespasian. At the moment of his death, he said to his disciples: “Remove the vessels so that they shall not become unclean, and prepare a throne for Hezekiah the king of Judah who is coming to accompany me into the next world” (Ber. 28b).

JOHANAN HA-SANDELAR (first half of the second century C.E.), *tanna*, one of the last pupils of *Akiva (Ber. 22a; Gen. R. 61:3). Johanan's surname may mean “the sandal-maker,” though it has been suggested that his surname reflects his place of origin (“of Alexandria”) and not his profession (TJ, Ḥag. 3:1). Johanan is mentioned a number of times in the Mishnah and in the Tosefta, mainly discussing *halakhah* with the pupils of Akiva or transmitting it in his name. He is also mentioned in a tannaitic story, together with Eleazar b. Shammua, which relates that they “were on the way to Nisibis to Judah b. Bathyra to learn Torah from him, but when they reached Sidon and remembered the land of Israel, they raised their eyes, their tears flowed down, and they rent their garments ... and said: dwelling in Erez Israel is equal to all the precepts of the Torah, and so returned to their own place” (Sif. Deut. 80). The *aggadah* tells that when Akiva was imprisoned after the Bar Kokhba War for teaching Torah, the sages sent Johanan to him to obtain an answer to a problem arising from the harsh realities of those days – as to whether **halizah* is valid if not executed before the *bet din*. Johanan pretended to be a peddler and by this ruse was able to bring the answer from the prison that it was valid (TJ, Yev. 12:5). Similarly, Johanan is enumerated among the scholars who convened in the valley of Bet Rimmon in order to revive the study of Torah and communal life after the persecutions had abated (TJ, Ḥag. 3:1). His favorite maxim was: “Every assembly which is for the sake of Heaven will in the end be established, and every assembly which is not for the sake of Heaven will not in the end be established” (Avot 4:11).

[Shmuel Safrai / Stephen G. Wald (2nd ed.)]

JOHANAN THE HASMONEAN (d. 161 B.C.E.), son of *Mattathias the Hasmonean and brother of Judah Maccabee,

Jonathan, Simeon, and Eleazar. If their names in 1 Maccabees 2:2–5 are given in the order of their ages, he was the oldest son of Mattathias. His cognomen was “Gaddi” (alternate form “Gaddis” or “Gaddim”), the exact meaning of which is uncertain. The name Gaddi occurs in the Bible (Num. 13:11); some connect it with *gad*, “fortune,” and others with “grain” (or “produce”). Johanan did not play an important role in the Hasmonean wars. He appears only in the difficult period following the death of Judah (160 B.C.E.), when he and his brothers were pursued by *Bacchides. He is referred to as “a leader of the multitude” (1 Macc. 9:35), an office whose meaning is unknown. He was sent by his brother Jonathan to the Nabateans to deposit a large quantity of baggage with them. On the way he was attacked by the sons of Ambri (in Jos., Ant. 13:11 *Amaraios*) who dwelt in Madeba on the eastern bank of the Jordan but whose identity is not clear. They plundered the goods and killed Johanan and his men (1 Macc. 9:36 ff.; Jos., *ibid.*, 11 ff.). Subsequently, Jonathan and Simeon made a surprise attack on the sons of Ambri while they were celebrating a wedding and avenged the blood of their brother by a mass slaughter (1 Macc. 9:37–42.).

[Uriel Rappaport]

JOHANNESBURG, largest city in the Republic of *South Africa; center of the world's most important gold producing industry. The city was founded in 1886, when gold was discovered on the Witwatersrand. The first Jewish inhabitants came mainly from Britain and Central Europe, but they were soon followed by immigrants from Eastern Europe, chiefly Lithuania, who later formed the bulk of the city's Jewish population. Some leading Jews – most of them not recent East European immigrants – were prominent among the “Uitlanders” whose demands for greater rights precipitated the South African War of 1899–1902. In 1896 there were 6,253 Jews in the city, more than half of them from Eastern Europe. By 1899 the Jewish population had risen to between 10,000 and 12,000. After the South African War ended the number increased rapidly, making the Johannesburg Jewish community the largest in South Africa, with half the country's total Jewish population. In 2001 Jews numbered approximately 48,000, about 66 percent of all Jews in South Africa. The vast majority live in the northern and northeastern suburbs.

Jews have been prominent in Johannesburg life from its earliest days. They were among the leaders of the gold mining industry and helped build up the city as South Africa's commercial, industrial, and financial center. Prominent among the Jewish “Randlords” were the colorful Barney *Barnato, Solly *Joel, and Samuel *Marks. From the earliest days of local government Jews were members of the municipal councils and Johannesburg had a long line of Jewish mayors, first of whom was Harry Graumann (1910). Jewish contributions to all aspects of cultural life have been considerable. Between the World Wars there was an active Yiddish theater with Sarah Sylvia as the leading actress. Four weekly Jewish newspapers

(one in Yiddish, others in English) were published in Johannesburg and three monthly journals – one in English and the others in Yiddish and Hebrew. Jews are well represented in the teaching staff and student body of the Witwatersrand University and in the professions.

Communal Life

The first congregation in Johannesburg (the Witwatersrand Old Hebrew Congregation) was formed in 1887 and the first synagogue built in 1888. In 1892 the Johannesburg Hebrew Congregation built the Park Synagogue, which was opened by President Paul Kruger and served the community until the Great (Wolmarans Street) Synagogue was built. J.H. *Hertz was rabbi of the Old Hebrew Congregation (1898–1912); J.L. *Landau became rabbi of the Johannesburg Hebrew Congregation in 1903 and chief rabbi of the United Hebrew Congregation in 1915. He was succeeded from 1945 to 1961 by L.I. *Rabinowitz and by B.M. *Casper in 1963. C.K. *Harris became chief rabbi of the whole of South Africa in 1988, a position he held until the end of 2004 when he was replaced by W. Goldstein. After its foundation in 1892, the Johannesburg Orthodox Hebrew Congregation, whose members were primarily Eastern European immigrants, opened a synagogue the following year and moved to new premises (Beth Hamedrash Hagodal) in 1931. The first minister was Moshal Friedman and later incumbents were Isaac Kossowsky (1877–1951), who came to South Africa in 1933, and his son Michel (1908–1964). The growth of Johannesburg's suburban areas led to the establishment of many new congregations and synagogues. They numbered 55 in 1969, including three Reform temples, whose chief ministers have included rabbis Moses Cyrus Weiler (d. 2000) and Arthur Saul Super (d. 1979) and one Masorti congregation. There are 33 Orthodox synagogues, three Reform temples, and one Independent temple, affiliated to the Conservative movement. There has been a large growth in the *ba'al teshuvah* movement (returnees to Judaism), and 27 small *shtieblach* (synagogues) function in and around Johannesburg. The Lubavitch movement has made inroads into the community since its establishment in 1972. Ohr Somayach, Aish HaTorah, and Bnei Akiva also run highly successful programs. Bnei Akiva inaugurated a synagogue at its headquarters.

Johannesburg has a number of educational institutions set up or supervised by the South African Board of Jewish Education: a seminary for training teachers; three King David primary and two high schools (with a total enrollment in 2001 of 3,300). There are 18 Hebrew nursery schools. More intensive Jewish education is provided for approximately 2,000 pupils by Yeshiva College, the Torah Academy of the Lubavitch Foundation, the Bais Yaakov Girls' School, the Sha'arei Torah Primary School, Yeshivas Toras Emes, Yeshiva Maharsha, the Johannesburg Cheder and Hirsch Lyons. Yeshiva College, the largest of these schools, began as a part-time yeshivah in 1951 and became a full-time day school in 1958. The Menorah School (later called the Laila Bronner School) for girls was

added in 1969. In 2004, Yeshiva College had a total of 850 students from nursery age to matriculation.

The United Hebrew Schools of Johannesburg provides Jewish education for pupils attending the government schools. Two religion schools are maintained by the S.A. United for Progressive Judaism in Johannesburg. There is a department of Hebrew with a full-time chair at the University of the Witwatersrand.

The Johannesburg Jewish Helping and Burial Society (Chevra Kaddisha) is the most important welfare institution in Johannesburg. Founded in 1887, in 2004 it incorporated a number of other important welfare institutions under its umbrella, amongst them the Jewish Women's Benevolent Society, Jewish Community Services, the Arcadia Jewish Orphanage, and the two Jewish aged homes – Sandringham Gardens and Our Parents Home. Other important welfare institutions include the free-loan societies the Witwatersrand Hebrew Benevolent Association (founded 1893) and the more recent Rambam Trust, the Selwyn Segal Home for Jewish Handicapped (1959), Yad Aharon, Hatzollah (medical rescue), Kadimah Occupational Centre, B'nai B'rith, and Nechama (bereavement counselling).

Zionism took early root in Johannesburg. The South African Zionist Federation was formed there in 1898, and the Zionist Center built in 1958 became an important cultural center until it was eventually sold in 1999. The headquarters of all Jewish national and many semi-national institutions are situated in Johannesburg. In addition to the three major organizations – the South African Jewish Board of Deputies (SAJBD), the South African Zionist Federation (SAZF), and the South African Board of Jewish Education – a large number of other institutions have their head offices in the city. In 2000, the SAJBD, SAZF, Union of Jewish Women, Israel United Appeal-United Communal Fund and a number of smaller organizations moved into single, shared premises, known as Beyachad. A range of welfare institutions, including the Chevra Kadisha and the South African Union of Jewish Students are affiliated to the SAJBD. The Jewish community is not to be measured merely in terms of its numerical strength. The intensity of Jewish life and identity and its strong Zionist devotion is to many a model for community organization.

°JOHN, kings of Portugal.

JOHN II (1455–1495), king of Portugal from 1481; one of the most distinguished Portuguese kings, he succeeded his father Alfonso V and became a most capable, but tyrannical ruler. He harshly repressed the feudal nobility, strengthened

the monarchy, and promoted his country to greatness. John captured Tangier from the Moors, and the Portuguese exploration of Africa was extended during his reign. Two years after John succeeded to the throne, Don Isaac *Abrabanel had to flee Portugal because of his relations with the duke of Braganza, who was executed by John with several other members of the nobility in 1483. After the expulsion of the Jews from Spain in 1492, John authorized many refugees to settle temporarily in Portugal, mainly out of financial considerations. About 120,000 Jews then moved from Spain to Portugal, among them 600 wealthy families whom the king allowed to settle in his realm against payment of 100 ducats per head. Among the newcomers there was also Abraham *Zacuto who was appointed physician and astronomer to the king. John further allowed numerous refugees to stay in Portugal for eight months on payment of eight gold cruzados each; those who remained after that period were to be considered slaves. This proviso was effectively implemented in 1493, when he ordered those exiles from Spain who had stayed on in Portugal to be sold as slaves. Their children were removed and many of them sent to the Santo Tomé islands off the African coast, where they died because of the harsh conditions.

JOHN III (1502–1557), king of Portugal from 1521; son of Emanuel I, grandson of Ferdinand and Isabella, the Spanish monarchs, and brother-in-law of Emperor Charles V. In 1525 David *Reuveni arrived in Portugal and succeeded in rousing the king's interest in his fantastic projects. That year John asked the pope for permission to establish the Inquisition in Portugal, but this was delayed through negotiations by the *Marranos and their supporters with the pope. However, in 1531 the king appointed the monk, Diego da Silva, head of the Inquisition in Portugal without waiting for papal authorization, which was given in 1536. In that year a tribunal of the Inquisition began activities in *Évora against the Marranos there. In 1547, after numerous Marranos had fled from Portugal, John revived the law enacted in 1499 prohibiting the Marranos from leaving the country.

°JOHN II (“The Good”; 1319–1364), king of France from 1350. His son *Charles V, who assumed the regency while John was in captivity in England, authorized the return of the Jews to France in 1359; it was largely due to their financial contributions that John's ransom could be paid to the English. This was probably the kernel of truth on which Giannino Guccio of Siena, an impostor who claimed to be John I of France, based the story related in his memoirs, that he had received considerable sums from a Venetian Jew, Daniel, in return for promising to grant the Jews freedom of residence in France, once he was restored to the throne. Although John II confirmed his son's decree concerning the return of the Jews, he

renewed the obligation to wear the Jewish *badge in 1363. A draft ordinance, which apparently was never promulgated, ordered the strict isolation of the Jews, prohibited theological disputations with Christians and possession of any books except the Bible, and, finally, ordered that circumcision should be delayed until children were able to answer questions concerning their faith.

[Bernhard Blumenkranz]

°JOHN XXII (Jacques Duèse; b. c. 1245), pope at Avignon, 1316–34. Pragmatically adapting his attitude to suit the current situation, John XXII could be called neither benevolent nor severe in his dealings with the Jews. He wished to encourage the conversion of the Jews and advised employing a convert with a perfect knowledge of Hebrew and Aramaic to teach these languages to Christians (1319); he also allowed converts to keep their possessions (1320). In 1320 he intervened on at least five occasions to protect the Jews from the *Pastoureaux. However, in this same year, he once more determined to seize the Talmud and other Jewish books and considered expelling the Jews from Church lands. Although the expulsion order was revoked on the payment of large sums by a delegation of Jews from Rome, John XXII nevertheless proceeded to burn the Talmud in 1322, at the same time instituting local expulsion orders. He confirmed the jurisdiction of the Inquisition over converts who, suspected of Judaizing practices, had found refuge in monasteries (1317; 1322); only when Church revenue from the Jews was endangered, as in Apulia in 1328, did John take back from the Inquisition, for a temporary period, the jurisdiction over the Jews.

[Bernhard Blumenkranz]

°JOHN XXIII (1881–1963), pope 1958–63. Born Angelo Giuseppe Roncalli, he convened the Second Vatican Council (1962–65) and raised the papacy to new popularity with his warm, friendly style after the severe formality of his predecessor, *Pius XII. He served as a parish priest and seminary professor from 1904 to 1925 in Bergamo, Italy, and was appointed archbishop and papal nuncio to Bulgaria and later apostolic delegate to Turkey by Pope Pius XI (1922–39). While serving as nuncio in Istanbul, Turkey, during World War II, Roncalli distributed quasi-official-looking documents and other papers for Jewish refugees seeking to enter Palestine, sending thousands of such documents also to the papal nuncio in Budapest, Angelo Ratti, who was working closely with Raoul *Wallenberg and other neutral diplomats to save tens of thousands of Jewish lives. Roncalli intervened personally with the Queen of Bulgaria, a Catholic, eliciting her help in convincing her husband to protect the Jews of that country.

In 1944, he received the key post of France. When he saw a newsreel of the liberation of the death camp at Bergen-Belson, he is reported to have said: “*This* is the mystical body of Christ!” (a reference to Pope Pius XII’s encyclical on the nature of the Church). Roncalli was made primate of Venice and a cardinal in 1953. When Pius XII died in 1958 after a long pontificate that began in 1939, the College of Cardinals looked for a candidate with a fresh touch and appeal, but who would not make any radical changes. Roncalli, popular with both the Italian and French cardinals (then the two largest groups) and 77 years old, seemed to fit the bill. In Venice, he was strict with his priests with regard to personal morality. He appeared decisive in making decisions quickly, relying on his faith in the Holy Spirit to guide him. Closer to the earth and the working community than his aristocratic predecessor, John did not see the world simply divided into simple good and evil (free world and communist), but was willing to work across the lines of division of the times, politically and theologically, startling many with his *apertismo* (policy of openness). He granted some 120 private audiences to Jewish individuals and groups, including representatives of the government of Israel, who were accorded the dignities of a state visit.

In an early act of his papacy, in March 1959, John XXIII suppressed the term “perfidious” from the Good Friday prayer, turning it into a “prayer for the Jews,” though it was not until after the Council that it ceased to be a prayer for their conversion. That same year, he ordered an end to an annual pilgrimage to the shrine in *Deggendorf, Bavaria, where thousands of pilgrims came annually to “celebrate” the massacre in 1338 of the town’s Jewish community. Also in 1959, he deleted from the Mass a petition made during the consecration referring to “the blood called upon (the Jews) of old,” and from the rite of baptism the formula in which the baptized were to “abhor Jewish unbelief and reject the Hebrew error.”

Finally in 1959, inspired, he said, by the Holy Spirit, John called for a world-wide synod of bishops, or Ecumenical Council. The Council he called was to be distinctive. It was not to condemn errors but to “open the windows” of the Church to the world and to other religions, an “*aggiornamento*” (updating) of the whole life of the Church. John’s encyclicals, *Mater et Magistra* (1961) and *Pacem in Terris* (1963), established the spirit of the Council, just as Pope Pius XII’s *Divino Afflante Spiritu* and *Mystici Corporis* (both in 1943) established its theological foundations by mandating the use of modern biblical scholarship in the former and offering a vision of the Church not as a hierarchy but a spiritual community.

In 1960, receiving a delegation of American Jewish leaders, he was presented with a Torah scroll to express gratitude for the Jewish lives he had saved during the Holocaust, and replied: “We are all sons of the same heavenly Father. Among us there must ever be the brightness of love and its practice.” He concluded: “I am Joseph, your brother” (Genesis 45:4). In using his baptismal name, the pope was not only quoting the biblical self-revelation of Joseph to his brothers in Egypt, he was also making an unprecedented gesture of filial warmth to-

ward all Jews, who he considered deserved their full dignity as descendants of the Patriarchs of the Bible. It was a statement pregnant with theological implications.

In October of 1960, John XXIII received French scholar Jules *Isaac, whose personal family losses during the Holocaust had caused him to study the origins of antisemitism in Christianity’s ancient “teaching of contempt” against Judaism. He responded positively, placing the issue on the Council’s agenda, and assigning Cardinal Augustine *Bea, S.J., a German biblical scholar and the pope’s own confessor. Indeed, the first formal request by Catholics that the Council consider directly the bond between the Church and the Jewish People came on April 24, 1960, when the Pontifical Biblical Institute of Rome presented its formal *petitio*. It argued on the basis of the Pauline epistles and the Council of Trent that it was part of “the deposit of faith” that the Jews could not be seen as “rejected” by God or collectively guilty of the death of Jesus, despite the “erroneous interpretation of certain New Testament citations” over the centuries. After many adventures and the Pope’s death, the statement, *Nostra Aetate*, was overwhelmingly approved by the Council Fathers on October 28, 1965. In just 15 Latin sentences, the document rejected the charge of Jewish guilt for the death of Jesus, established a new, positive understanding of the Jewish People in covenant with God, and called on the Church to engage Jews in a “dialogue of mutual esteem.”

[Michael Berenbaum (2nd ed.)]

JOHN THE BAPTIST, the forerunner (*prodromus*) of Christ. There are two main sources of data regarding the life of John: the Gospels, the earliest of which were in circulation during the latter part of the first century, and Josephus’ *Jewish Antiquities*, written following the fall of Jerusalem in 70 C.E. In addition there are apocryphal texts, such as the *Protevangelium of James*, from the mid-second century. If one accepts the infancy narrative in Luke 1:5–80 as based on factual biographical information, then John was born to parents (Zacharias and Elizabeth) from a priestly background. The OT allusions underline John the Baptist’s role as ushering in the NT and his birth to the elderly Zechariah and his barren wife Elizabeth (a parallel to Abraham and Sarah) served to indicate the divine origin of his conception. His relation to Jesus is emphasized even before they were born: when Elizabeth heard Mary’s greeting, her baby leaped in her womb (Luke 1:41). Even John’s name (meaning “God shows grace”) was given to him by the angel Gabriel. John’s mother and Mary, mother of Jesus, are assumed to be cousins, but the Greek word in Luke 1:36 is not very specific and indicates only that they were kinswomen. The house of Zacharias was situated in a “city of Judah” in the hilly country, presumably at *Bet Cherem west of Jerusalem, identified at En Kerem. The apocryphal *Protevangelium of James* has Elizabeth fleeing with her baby from Herod’s sol-

diers and hiding in a cave in the hilly country. Luke 1:80 suggests that the child John grew up in “wilderness places” before he came of age. It is unlikely that the child John would have been able to survive for very long in the inhospitable Judean Desert all by himself. Hence, there is nothing to support an oft-quoted theory that John was brought up by the *Essenes. Indeed, the Greek word *eremos* means a desolate or lonely region, i.e., a place that could be frequented by an occasional shepherd. Hence, there is no need to seek a childhood for John in a barren desert. John may have been brought up as a shepherd boy and as such would by necessity have spent spells of time by himself away from his parent’s home (or from the house of the extended family if his parents had died). John wore an outer garment (an *adderet*) made of camel’s skin and a leather girdle (Matthew 3:4; Mark 1:6), echoing the appearance of the Prophet Elijah (11 Kings 1:8). There is no evidence that John was a Nazarite (cf. Num 6:1–4) or that he led an ascetic life. The reference to John not eating bread or wine probably indicates that John preferred to eat foods that had not been processed by human hands and would not therefore be susceptible to impurity. For this same reason John was said to have eaten locusts and honey (Matt. 3:4), both of which were regarded by his fellow Jews as pure items of food.

In terms of chronology, it would appear that John was born before the death of *Herod the Great (i.e., in 4 B.C.E. at the latest) and that he was called on his mission to the Jordan River in the 15th year of Tiberius Caesar (Luke 3:1–2), which would have been in 28 or 26 C.E. if one counts from the time of Tiberius’ co-regency. It would appear therefore that we know nothing whatsoever about the events in John’s life between the ages of 12, the time of his “shewing unto Israel” (Luke 1:80), and until he was about 30 and began his baptisms at the Jordan River. John evidently was attracted to the Jordan River because of its associations with the Prophet Elijah and his message was “repent, for the kingdom of heaven is at hand” (Matt. 3:2).

John baptized his followers to signify the drowning of their old life and their emergence from the water into a new life. Significantly, John is mentioned particularly as baptizing in the Jordan River, through which the 12 tribes of Israel passed into the promised land. John, like *Jesus later, immediately ran into conflict with the *Pharisees and *Sadducees for whom he had sharp words (Matt. 3:7–12). The Gospel of John relates that they asked him who he was; when John answered that he was neither the Christ nor the prophet Elijah, they queried his baptizing activities. John replied that he was baptizing in water only (“unto repentance,” Matt. 3:11), but that he was to be followed by one who would baptize with the Holy Spirit and fire (that is, eternal punishment, cf. Matt. 3:11–12; John 1:19–28). According to the Gospels when John saw Jesus, he proclaimed him “the Lamb of God who takes away the sin of the world” and testified that he saw the Spirit descending as a dove out of heaven and abiding in him (at Jesus’ baptism) going so far as to declare that “this is the Son of God” (John 1:29–34).

Jesus himself appraised his forerunner in Matthew 11:7–15: John was much more than a prophet, surpassing his predecessors in greatness and comparable to Elijah. Nevertheless, John’s generation did not accept him, alleging instead that he was demon-possessed (Matt. 11:17–18), as was later said of Jesus himself. John was beheaded at Machaerus by the tetrarch Herod Antipas, who imprisoned him in revenge for John’s condemnation of his incestuous marriage to his brother’s wife, Herodias (Luke 3:19–20). Herodias’ daughter danced for Herod, who rewarded her by offering her whatever she wished. On the advice of her mother, she requested the head of John the Baptist on a platter. Herod, who enjoyed listening to John (Mark 6:20), was grieved at being required to execute him; but having given his oath before witnesses, he commanded that it be done (Matt. 14:1–13; Mark 6:14–29). Luke 9:7–9 relates that when Herod later heard that Jesus was being identified with the resurrected John, he became curious about the subject of the rumor.

Recent archaeological work is shedding new light on John’s early baptism activities in the “wilderness places” (Luke 1:80) and prior to his mission at the Jordan River. A cave was uncovered in 2000 at Suba/Tzova close to his traditional hometown at En Kerem (see *Bet Cherem) that was used in the early first century C.E. for ritual immersions in water, remarkably resembling John’s baptism procedures at the Jordan River as described in the Gospels. The cave at Suba brought to light cultic installations and a foot-anointing stone. The cave was used later in the Byzantine period as a memorial cave and drawings of John the Baptist and symbols of his relic head and arms were found inscribed on the walls.

New archaeological work on the banks of the lower Jordan River has revealed churches of the Byzantine period, as well as sparse remains from the Roman period, associated with the traditional baptism spot.

[Shimon Gibson (2nd ed.)]

***JOHN CHRYSOSTOM** (354–407), most distinguished *Church Father of the East and one of the most virulently anti-Jewish preachers. Born in Antioch, the son of pagan parents, he was baptized in 373 and ordained a priest in 384. His eight sermons (homilies) against the Jews were delivered during his first two years of preaching activity in Antioch (386–387). They were written down verbatim by his audience and subsequently circulated. Thus their great anti-Jewish influence was felt beyond the period in which they were written. Chrysostom attacks not only the teachings of Judaism, but more especially the way of life and the views of contemporary Jews (incidentally, thereby giving valuable information on the life of Antioch Jewry in the fourth century and on the influence they exerted on their non-Jewish environment), accusing them of missionary activity, which dangerously competed with that of the Christians. The defeated and dispersed Jews, he ironically adds, were becoming the teachers of the whole world. He criticized those Christians in Antioch who cooperated with Jews in religious matters, kept the Sabbath, the “great fast,” and other Jewish festivals; they even submitted to circumcision and participated in pilgrimages to Jewish holy places. Chrysostom claimed that on the Sabbaths and festivals the Jewish synagogue was full of Christians, especially Christian women, who loved the solemnity of the Jewish liturgy, enjoyed listening to the *shofar* on Rosh Ha-Shanah, and applauded famous preachers (according to contemporary custom). Chrysostom attempted to defame the synagogue, which he compared to a pagan temple and which he represented to his audience as the source of all vices and heresies. In this connection he reported that actors appeared in the synagogues on Jewish festivals. His claim that among the Jews the priesthood may be purchased and sold for money is specified by his biographer, Palladius, who writes that “the patriarch – as well as the head of the synagogue – is changed every year so as to replenish the cash-boxes.” In other respects as well, Chrysostom, the pioneer of ascetic monkish life, criticized the Jews for their avarice and viciousness. He also testified to the Jewish influence on the judiciary of Antioch by reporting that Christians often took refuge in Jewish law courts and, when on oath, often used the Jewish oath formula. Even his sermons on the Maccabees were not in praise of the Jews, but in order to emphasize the difference between Jews and Christians, and it is not a mere coincidence that the destruction of the synagogue of Callinicon (also in Syria, cf. *Ambrose of Milan) took place immediately after a series of anti-Jewish sermons on the occasion of a procession in honor of the Maccabees in 388.

After a short period of activity in Constantinople, Chrysostom fell victim to court intrigues and was deposed by Emperor Arcadius. He then admitted that Jews, heretics, and pagans felt sorry for him, but Christians closed their hearts.

Whether this “confession” was only a rhetoric paradox, or whether there were really Jews in Constantinople who behaved to him in a friendly manner, is hard to determine. Nor is it possible to decide if his downfall was not engineered by some influential Jews at Arcadius’ court.

Like the writings of other Church Fathers, Chrysostom’s books contain various exegetical commentaries that concur with talmudic *aggadah*.

[Yohanan (Hans) Lewy]

JOHN (Johannan) THE ESSENE (d. 66 C.E.), patriot and leader, described by Josephus as a man of outstanding courage and sagacity. Already recognized for his ability at the beginning of the revolt against the Romans, he was placed in command of the province of Thamna by the revolutionary government. Shortly afterward, in association with Niger of Perea, the deputy governor of Idumea, and Silas the Babylonian, a trained soldier formerly in the service of King Agrippa (both of whom had distinguished themselves in the victory over *Cestius), he was put in charge of the disastrous expedition against Ashkelon.

He and Silas were killed in the first attack. It is doubtful if “the Essene” implies that he belonged to that body. It may mean “a man of Esse,” i.e., Gerasa in Transjordan.

JOHN OF CAPUA (Johannes de Capua; 13th century), Italian translator who lived in Rome during the pontificate of Bonifacius VIII (1294–1303). Probably born in Capua before 1250, John of Capua, an apostate, is known for his translation of *Kalila and Dimna* from Hebrew into Latin. John translated this famous collection of tales, working on the basis of a previous Hebrew version done from Arabic in the 12th century by a Jew named Joel. He worked on this Latin translation between 1263 and 1278 and dedicated it to Cardinal Matteo Orsini. The work was thereafter widely known under its Latin name, *Directorium humanae vitae, alias parabola antiquorum sapientium* (“The Guide of Human Life, or Proverbs of the Ancient Sages”). The influence of the *Directorium* on the writers and collectors of fables with an ethical-didactic purpose was immense, and eminent writers and novelists dealt with this work until the 17th century. The *Directorium* was first published between 1484 and 1493; a critical edition was established by F. Geissler only in 1960. John of Capua also translated – always from the Hebrew translations of the Arabic – treatises dealing with medicine, including the *al-Taysir* (“The Facilitation”), a treaty on pathology and therapeutics by Abu Marwan ibn Zuhr (1090–1162); several medical texts by Maimonides: “On

Hygiene" (*De regimine sanitatis*) dedicated to Bonifacius VIII, "On the Causes of Accidents" (*De causis accidentium*), *De haemorrhoidibus*, on the initiative of one of the papal physicians and possibly also *De coitu*.

[Joseph Baruch Sermoneta / Alessandro Guetta (2nd ed.)]

JOHN OF GISCALA (Johanan ben Levi), a leader of the revolt against Rome (66–70 C.E.). John was a native of *Giscala (Gush Ḥalav) in Galilee. Little is known of him before the war. When the inhabitants of Tyre, Gadara, and others sacked and burned his native town, he rebuilt it and took revenge on the invaders. His realization that the Romans had stood by and even encouraged the invaders to attack Jews made him alter his former attitude of loyalty toward the Romans, and he began to prepare Galilee for the coming struggle. In the spring of 66, *Josephus arrived as commander of Galilee and was soon involved with John in a conflict which developed into a lasting and bitter struggle. Josephus' account is prejudiced by his personal animosity toward John, but he nevertheless gives credit to John's efforts in preparing for the struggle. John suggested to Josephus that funds be provided from the sale of grain belonging to the Romans, and from olive oil sold to Jews in Syria. He presumably needed these funds for defense, although Josephus accuses him of desiring to use them for personal purposes. Open conflict erupted between them at Tiberias when John learned that Josephus intended to restore the property plundered from the steward of King Agrippa, who was considered a Roman sympathizer. John's supporters included many Galileans; fugitives from Tyre; men of Gabara, including their leader, Simon; Justus of Tiberias and his father Pistus; and the archon of Tiberias, *Joshua (Jesus) son of Sapphas. John dispatched a delegation to Jerusalem, demanding that Josephus be dismissed from his position for failing to fulfill his tasks loyally. This request was acceded to, according to Josephus, as a result of John's bribery and exploitation of his friendship with *Simeon b. Gamaliel. Emissaries were sent to dismiss Josephus from his command and advise the citizens of Galilee to support John. Josephus ignored all this and went so far as to threaten John's supporters. Josephus claims that he succeeded in weaning most of John's followers away from him. John's efforts to organize Galilee for war were unsuccessful and, with the exception of his native city, the whole province fell to the Romans. In the winter of 67, when Titus was at the gates of Giscala and offered terms of surrender, John seized on the intervening Sabbath as a pretext for delaying negotiations and escaped to Jerusalem.

John in Jerusalem

John encouraged the insurgents in Jerusalem to continue the war against Rome. At first he cooperated with *Anan b. Anan and members of the government. Relations between the Zeal-

ots and the government, however, steadily deteriorated and reached a crisis when *Phinehas (Phanni) b. Samuel, the high priest, was selected by lot. In the ensuing struggle the priestly circles aroused the people against the Zealots; John tried to serve as mediator. Josephus accused him of betraying the trust placed in him, but it seems that John became convinced that it was impossible to bridge the gulf between the two camps and went over to the side of the Zealots. He may possibly have been influenced by rumors that the moderate elements were thinking of surrendering the city to the Romans. On his advice, the Zealots, who had fortified themselves in the Temple, made common cause with the Idumeans and together overcame the moderates. The government of Jerusalem was thus concentrated in John's hands, causing division for a time among the Zealots, as those in Jerusalem disapproved of the supremacy of the Galilean, and one of their leaders, *Eleazar b. Simeon, actually opposed John for a time. John gradually prevailed and the Jerusalem Zealots joined his camp. Josephus portrays the period of John's rule in Jerusalem in the most somber terms, depicting complete anarchy and lack of regard for human life. Even if it is conceded that the Zealots avenged themselves on their opponents with scant regard for judicial procedure, John's positive efforts to fortify the city and properly equip it against the coming siege cannot be overlooked. His opponents, however, would not reconcile themselves to his victory and invited *Simeon Bar Giora to the city to head the opposing forces. Incessant internecine strife between the two leaders was checked in part, but not entirely, only when Titus appeared at the gates of the city. As the siege intensified, John did not hesitate to melt down the vessels of the Temple to provide weapons and used the Temple's supplies set aside for ritual purposes to ease the famine. With the city's capture, John was among the prisoners taken to Rome and included in Titus' triumphal victory procession. Simeon Bar Giora was apparently regarded by the Romans as the Jewish commander in chief and was executed, while John was sentenced to life imprisonment.

[Lea Roth]

°**JOHN PAUL II** (1920–2005), pope from 1978 to 2005. Born Karol Wojtyła in Wadowice, Poland, he was a student in the University of Cracow when the Germans invaded Poland, effectively closing the university. Under the occupation he worked in a stone quarry, continuing his involvement with theatrical and literary circles that engaged in anti-Nazi resistance, and possibly helping Jews escape, while studying in an "underground" seminary. He established early and lasting friendships with Jews. Ordained a priest in 1946, Wojtyła was sent to Rome, where he earned a doctorate of theology, with a thesis on St. John of the Cross. He then took a doctorate in philosophy at the Jagellonian University, with a dissertation on Max Scheler. He published numerous theological and phil-

osophical articles and books of poetry, the latter often under the name "Jawien."

Consecrated auxiliary bishop of Cracow in 1958, he participated in the Second Vatican Council, where he was credited with the compromise that led to the document "The Church in the Modern World" (*Gaudium et Spes*). He became archbishop of Cracow in 1964 and cardinal in 1967.

As pope, he continued the theological renewal begun by the Council, although his approaches were not without controversy, and wrote numerous encyclicals on Christ, human dignity, and various social issues. His support for the Polish labor movement, Solidarity, and other such groups in Eastern Europe, even while maintaining a diplomatic *Ostpolitik*, is credited as one of the factors leading to the collapse of Soviet hegemony. He traveled more widely throughout the world than any of his predecessors, invariably meeting with Christian, Jewish, and other leaders of major world religions, many of whom he brought together in prayer in late 1986 in Assisi, Italy. In 1981 he survived an assassin's bullet. He worked assiduously for the cause of world peace.

John Paul was the first pope to visit a death camp, *Auschwitz, in 1979. The Communist monument there, as at *Babi Yar, intentionally obscured the Jewish and Polish specificities of the camp, making it a memorial to humanity in general. Stones in different languages were set up representing the countries from which the victims came. The pope stopped and prayed at only two: first the Hebrew inscription, and then the Polish, subtly rebuking the memorial's ideology.

In 1986 the pope again made history by being the first since St. Peter to visit and pray in a synagogue, the Great Synagogue of Rome. He had condemned antisemitism as "sinful" earlier that year in Austria. At the synagogue, he affirmed the validity of Jewish faith and God's covenant with the Jews: "The Jewish religion is not extrinsic to us, but in a certain way intrinsic to our own religion. With Judaism, therefore, we have a relationship, which we do not have with any other religion. You are our dearly beloved brothers and, in a certain way, it can be said that you are our elder brothers." Though some Jews thought this referred to Jacob usurping the divine promise from his elder brother, Esau, the reference was most likely to the parable of the prodigal son, in which the father reassures the elder son: "My son, you are here with me always; everything I have is yours" (Luke 15:31).

In 1987 the pope met with the Jewish leadership of both Poland, which had the world's largest Jewish community before World War II, and the United States. In Warsaw, he called Jewish witness to the *Shoah* a prophetic "warning voice for all humanity." In the U.S. that same year, the pope called for the integration of Holocaust education on every level of Catholic education and for the world to recognize the right of the Jews "to a homeland," an important point in view of the infamous United Nations resolution attacking Zionism as "racism."

When the newly reunited Germany sent its first ambassador to the Vatican in 1990, the pope for the first time spoke of "the heavy burden of guilt for the murder of the Jewish people"

that for Christians "must be an enduring call to repentance." In December 1993 the Vatican and Israel entered into a "Fundamental Agreement," exchanging ambassadors the next summer. In 1994, too, the pope presided over a Shoah Day concert within the Vatican itself, yet another "first."

Controversies, many of them centered on Holocaust issues, also marked John Paul's long pontificate. The longest-running, the Auschwitz Convent controversy, began in early 1986 and was not resolved until 1993 when the pope personally sent a letter to the Carmelite nuns to move to the new property a short distance away which had been built for them. They left, however, the large cross that had been in their garden, which came to be surrounded by numerous smaller crosses erected by some Polish Catholics. These were removed by the government on the eve of the pope's eighth trip to Poland in 1999, though the large cross remains.

In summer 1987, only weeks before the Pope was to meet with representatives of the U.S. Jewish community, the world's largest, a papal audience was arranged for the president of Austria, Kurt Waldheim, who had just been revealed to have been a member of the Nazi Party during World War II, creating a crisis that was resolved only by a meeting of Jewish leaders with the Pope at Castel Gandolfo ten days before the scheduled Miami meeting.

Controversies have also revolved around candidates for sainthood, such as Edith Stein (a Roman Catholic nun who was a Jewish convert to Catholicism and died in Auschwitz because she was defined by the Nazis as a Jew), *Pius XI (who raised in his household as a Catholic a Jewish boy forcibly taken from his parents on the word of a family maid that she had baptized him), Catherine Emmerich (a 19th century nun whose reputed visions of Jesus' death typified and intensified anti-Jewish elements found in passion plays in the period), Queen Isabella (see *Ferdinand and Isabella) of Spain (who ordered the expulsion of the Jews in 1492 and institutionalized the Inquisition), and *Pius XII (who served as pope during World War II).

In February of 2000, the pope led a Liturgy of Repentance in which he articulated the Church's repentance for the sins against Jews by Catholics over the centuries. Later that month the pope went to Israel. His predecessor, *Paul VI, had very briefly come to Jerusalem in 1964, entering Jerusalem without acknowledging the borders of the State of Israel, but this was the first extensive visit by a pope to the Jewish state. As was his custom, the pope kissed the soil of the land. The pope visited *Yad Vashem, Israel's memorial to the victims of the Holocaust, meeting there with a group of survivors. Finally, he went to the Western Wall, the last remnant of the Jerusalem Temple. There, he placed a prayer of petition to the God of Israel.

God of our fathers,
you chose Abraham and his descendants
to bring Your name to the nations:
we are deeply saddened
by the behavior of those
who in the course of history

have caused these children of Yours to suffer
and asking Your forgiveness
we wish to commit ourselves
to genuine brotherhood
with the people of the Covenant

John Paul died on April 2, 2005. He was succeeded by Pope Benedict XVI.

[Eugene J. Fisher (2nd ed.)]

JOHNSON, LYNDON BAINES (1908–1973), 36th president of the United States. As Democratic floor leader, he opposed President Eisenhower's plan for sanctions against Israel after the 1956 Arab-Israel war.

As president, Johnson was extremely effective in pushing through Congress significant and far-reaching liberal measures which were strongly welcomed by Jews and other American minority groups to whom they were of obvious benefit. These "Great Society" programs sought to remove poverty, discrimination, and ignorance, and included important welfare, civil rights, tax reduction, education, and employment legislation. As a result, the customary strong affinity of American Jews for the Democratic Party, especially its liberal wing, continued under the Johnson administration. In the Middle East Johnson proved a friend to Israel. In addition to providing political and economic support, he was instrumental in creating a joint U.S.-Israeli study program for a large water desalinization project to meet Israel's pressing need for more fresh water. In 1966 he met with President Shazar of Israel who was on an unofficial visit to the U.S. At the time of the 1967 Six-Day War, he worked closely with the Soviet Union to prevent a major power confrontation, while at the same time firmly upholding Israel's basic rights. Subsequently he withstood various pressures and continued to uphold Israel's right to have "secure and agreed frontiers" as a precondition to her evacuating territories occupied as a result of the Six-Day War. In 1968 he received the Israel premier Levi *Eshkol. Later that year Johnson announced that he had acceded to Eshkol's request to supply Israel with Phantom jet planes. One of Johnson's close associates was the Texas businessman J. *Novy.

[Stanley L. Falk]

JOIGNY (Heb. יוֹיִנְי), town in the Yonne department, central France. The present Rue des Juifs is a reminder of the medieval Jewish community, known only through the scholars who originated there. Most important of these were the tosafists and exegetes Menahem b. Perez of Joigny (12th century) and *Yom Tov b. Isaac of Joigny (martyred at *York in 1190), a tosafist named Joseph, and an exegete, Samson.

[Bernhard Blumenkranz]

JOKNEAM (Heb. יְוֹקְנֵאִם), royal Canaanite city near Mount Carmel. Jokneam appears in the list of Canaanite kings defeated by Joshua (Josh. 12:22) and is already mentioned in the list of conquests of Thutmosis III in about 1469 B.C.E. (no. 113: 'n qn'm, "the spring of [Jo]kneam"). It was a levitical city of the Merari family (Josh. 21:34) in the territory of the tribe of Zebulun, whose boundaries reached as far as the "brook that is before Jokneam" (Josh. 19:11). Some scholars maintain that Solomon's fifth district extended "as far as beyond" Jokneam, but the city Jokneam is in fact mentioned in this connection (1 Kings 4:12; cf. 1 Chron. 6:53). It was apparently destroyed by the Assyrian Tiglath-Pileser III in 733/2 B.C.E. and does not appear in later sources. Eusebius called it Kammona, a village six Roman miles north of Legio (Lajjun – the mishnaic Kefar Ot-nay). It was called Caimont in Crusader times, when it was a fief of the royal domain with its own court of burgesses. Jokneam is identified with Tell Qamūn (today Tel Jokneam near the village of the same name), a prominent mound of 23½ dunams which contains pottery from the Canaanite and Israelite periods.

[Michael Avi-Yonah]

Contemporary Period

Modern Jokneam is a semi-urban community and moshav on the southwestern rim of the Jezreel Valley. Jokneam was founded as a village in 1935 by settlers from various countries, Holland, Yemen, and Eastern Europe. After World War II, demobilized soldiers joined the first settlers. Jokneam then adopted the form of a *kefar shittufi*, similar to a moshav, and later became affiliated with Ha-Mo'azah ha-Ḥakla'it. The inhabitants mainly engaged in farming intensive field, fruit (including melon), and garden crops, as well as raising livestock. In 1968 the moshav had 440 inhabitants and at the end of 2002 it numbered 1,020 residents. In the first years of statehood, new immigrants received temporary, and later permanent housing at Jokneam. The local labor force, which in the initial years had to rely mainly on public works, was eventually absorbed in metal and other industries. In 1967 the semi-urban settlement was separated from the moshav and in 1968 given municipal council status, at which time it had 3,640 inhabitants. By the end of 2002 the population had grown to 16,700. The municipality's jurisdiction includes 3 sq. mi. (8 sq. km.).

JOKTAN (Heb. יֹכְתָן), younger son of Eber and brother of Peleg in the line of *Shem (Gen. 10:25; 1 Chron. 1:19). He fathered 13 sons or nations (Gen. 10:26–29; 1 Chron. 1:20–23), the names of most of which can be identified with Arabian tribes or place-names. Indeed, their settlements are said to have extended from Mesha which is in the north of Arabia to Sephar, the hill country to the east (Gen. 10:30). The origin of the name is uncertain.

JOLLES, JACOB ZEVI BEN NAPHTALI (c. 1778–1825), Galician talmudic scholar and kabbalist. Born in Przemysl, he served as rabbi in Glogow and Dinow. He leaned toward Ḥasidism, and was among the disciples of Jacob Isaac ha-Ḥozeh of Lublin. His most famous work was *Melo ha-Ro'im* (Zolkiew, 1838), an encyclopedic work on the rules and principles of rabbinic law which made a great impression and was reprinted several times. His other published works are *Ḥinnukh Beit Yehudah*, a homiletic work in philosophic style (Warsaw, 1869); *Kehillat Ya'akov*, an encyclopedic treatment of kabbalistic topics (Lemberg, 1870); *Emet le-Ya'akov*, a homiletic work in ḥasidic style (Lemberg, 1884); *Beit Va'ad le-Hakhamim*, a directory of talmudic sages (Cracow, 1884); *Parashat Derakhim Zuta*, homiletic discourses (Cracow, 1885); *Zikhron Ya'akov vi-Yhudah* also consisting of homiletic discourses (Munkacz, 1928); and *Yashresh Ya'akov*, on Kabbalah (New York, 1945). His notes and novellae on the Talmud are printed in the Vilna edition. Jolles composed many other books (27 are referred to in his foreword to *Melo ha-Ro'im*), but most of them have disappeared.

JOLLES, ZECHARIAH ISAIAH (1816–1852), talmudic scholar and *maskil*. Jolles was born in Lemberg. He corresponded with the great contemporary rabbis including Akiva *Eger and Z.H. *Chajes on halakhic topics, and with *maskilim* (such as H.Z. *Slonimski, I.H. Jost, and others) on Jewish scholarship. He was critical of “talmudists without secular scholarship” and of scholars “who had forgotten Torah.” In his youth he published two pamphlets: *Dover Meisharim* (Lemberg, 1831) in which he established that the *Haggahot ha-Shas* attributed to Mordecai *Jaffe was not by him; and *Et Ledaber* (*ibid.*, 1834), a kind of letter of moral advice to a younger rabbi in the spirit of moderate *Haskalah. Jolles welcomed the plans of Uvarov, the Russian minister of education, to establish Jewish schools and was one of Max *Lilienthal's supporters when the latter came to Minsk in 1842. After his death in Minsk, his son Sussman Jolles published his writings: *Zekher Yeshayahu* (2 vols., 1882), novellae on Maimonides' *Mishneh Torah* and responsa; *Sefer ha-Torah ve-ha-Hokhmah* (1913), containing his other writings including letters and poems. These writings are interesting, as they reveal the intermediate position of one who lived during the transition between the traditional rabbinic outlook and Haskalah.

BIBLIOGRAPHY: Z.I. Jolles, *Sefer ha-Torah ve-ha-Hokhmah* (1913), introduction; B.Z. Eisenstadt, *Rabbanei Minsk ve-Hakhameha* (1898), 29–31, 46.

JOLLES, ZVI ENRICO (1902–1971), organic chemist. Born in Lemberg, Jolles was a pioneer in Erez Israel in 1920 and

worked on the land until 1924. He immigrated to Italy and studied at the University of Florence, where he subsequently became associate professor of applied chemistry and was consultant to the Italian Directorate of Naval Armaments (1931–34). In 1938, when the Fascists applied racial laws in Italy, he was dismissed from all appointments. He found refuge in London, joining the biochemical department of the Lister Institute. In 1940 Jolles joined the dyestuffs division of Imperial Chemical Industries in Manchester, where he pioneered novel dyestuffs applications, in particular fiber-reactive dyes. In 1955 he was appointed research director of two commercial firms, where he established a successful range of flame-retardants and other additives for polymers. On retiring he became adviser to the national Council for Research and Development of Israel. He contributed numerous papers, mainly in the field of nitrogen compounds. He was the author of more than 30 patents in fields of applied chemistry. He edited and contributed to *Bromine and its Compounds* (1966).

[Samuel Aaron Miller]

JOLOWICZ, HERBERT FELIX (1890–1954), British legal scholar. Probably Britain's foremost scholar of Roman law, Jolowicz was born in London and educated at St. Pauls School, Cambridge University, and in Germany. After service in World War I, Jolowicz became a barrister and, in turn, reader in Roman Law at University College, London, and then, from 1948, Regius Professor of Civil Law at Oxford. Because of England's common law system, Roman law had been relatively neglected by scholars. Jolowicz established an international reputation with such works as his *Historical Introduction to the Study of Roman Law* (1932) and his posthumously published *Roman Foundations of Modern Law*. He was noted for the excellence of his classroom teaching.

JOLSON, AL (*Asa Yoelson*; 1886–1950), U.S. singer, vaudeville and film star. Born in Srednik, Lithuania, the son of a cantor, Jolson worked for some years in circuses, minstrel shows, and vaudeville houses in the U.S. In 1911 he was an instant success in his first Broadway appearance, *La Belle Paree*. Then came a long succession of starring roles in musicals, including *Vera Violetta* (1911); *The Whirl of Society* (1912); *The Honeymoon Express* (1913); *Sinbad* (1918), which had a two-year run; *Bombo* (1921), at Jolson's 59th Street Theater (named in his honor by the Shuberts); *Big Boy* (1925); *Ziegfeld Follies* (1927); and *Wonder Bar* (1931). Known in show business as “the world's greatest entertainer,” Jolson had a dynamic personality. He received unparalleled rave reviews; and his adoring fans would explode with enthusiasm when he came on stage, often holding up the progress of the show with their unbridled cheers and applause.

In 1927 Jolson made screen history in *The Jazz Singer*, the first full-length talking film made in America. This was fol-

lowed by *The Singing Fool*. Jolson's hearty, exuberant style was particularly well suited to early "talkie" technique. His other films, mainly musicals, included *Say It with Songs* (1929), *Mammy* (1930), *Big Boy* (1930), *Hallelujah I'm a Bum* (1933), *Wonder Bar* (1934), *Go into Your Dance* (1935), *The Singing Kid* (1936), *Rose of Washington Square* (1939), and *Swanee River* (1939).

Some of the songs that Jolson is credited to have co-written are "California, Here I Come," "Me and My Shadow," and "Sonny Boy."

The film *The Jolson Story* (1946) was based on his career and starred Larry Parks in the title role, using Jolson's dubbed voice. It was such a success that a second film followed three years later, entitled *Jolson Sings Again* (1949). To date, it is the only biography sequel in film history.

In 1948, Jolson was voted Most Popular Male Vocalist by a *Variety* poll, superseding such top singing stars of the time as Frank Sinatra, Bing Crosby, and Perry Como.

Jolson died shortly after returning from Korea, where he had gone to entertain the UN troops. He was awarded the Medal of Merit posthumously. His will divided more than \$4,000,000 equally among Jewish, Protestant, and Catholic charities and established scholarships for undergraduates.

JONA, GIOVANNI BATTISTA (1588–1668), apostate scholar. Jona was born Judah Jona at Safed in Galilee and for that reason was known also as Galileo. After a life of wandering, apparently as a teacher and, according to his own account, as a rabbi, in Italy, Holland, and Germany, he, his wife, and children converted to Christianity in Warsaw in 1625. The kings of Poland and Sweden were among their godparents. Contrary to normal practice, he retained his previous Jewish surname. After further wanderings he arrived in Rome in 1638, where he became a reader in Hebrew at the College of *Propaganda Fide*. Among his publications are Hebrew translations of the Christian catechism, *Limmud ha-Meshihim* (Rome, 1658), and of the New Testament (1668), which he dedicated to Pope Clement IX. Extant in manuscript are a dictionary of talmudic idioms and a work on Targum variants which was completed by Giulio Morosini.

JONAH (mid-fourth century C.E.), Palestinian *amora*. Jonah and his associate Yose (Yosi) were the heads of the "Beit Va'ad" (the Sanhedrin) in Tiberias. The Jerusalem Talmud is replete with the halakhic discussions of these two scholars; there is not a single tractate in which they are not mentioned. However, whereas Jonah is frequently referred to in the order *Zera'im*

and progressively less and less in the succeeding orders until in *Nashim* and *Nezikin* he is hardly talked of at all, his associate Yose, who outlived him (TJ, Ma'as. Sh. 4:9, 55b), is consistently mentioned throughout. Jonah, a pupil of Johanan's pupils, such as Ilai and Ze'ira, established original principles for the study of the Talmud and the understanding of the Mishnah. For instance, he established that the minimum quantities given by the Talmud, such as an olive's bulk or that of an egg, are of rabbinic and not biblical origin (TJ, Pe'ah 1:1, 15a); that when the Mishnah introduces a law with the comprehensive word "all" or "these," it does not imply that the laws referred to are of permanent validity (TJ, Yev. 2:5, 12d), and that many incidents related in the Bible and the Mishnah are given not in order to establish the *halakhah* for future generations, but mainly to provide information about how they were practiced in earlier generations (TJ, Shev. 1:7, 33a). In many cases he rejects the formula of the Mishnah and the order of its statements, preferring that of the Tosefta. He emends the Mishnah in various ways and asserts that it should be taught accordingly, in contrast to Yose who endeavors to justify the text of the accepted Mishnah (TJ, RH 2:1, 57d; Pes. 1:2, 27c). One of his novel interpretations is in the story told of him that he gave his *tithes to Aḥa b. Ulla, not because he was a priest but because he was occupied with study (TJ, Ma'as. Sh. 5:5, 56b). Many of the *amoraim* of the succeeding generation, including some of the "scholars of the south," were his pupils.

Jonah is also mentioned several times in the Babylonian Talmud, and in one place is referred to as one of "the resolute men of Palestine" who are "more saintly than the pious of Babylon" (Ta'an. 23b). Jonah, like Yose, was not only the head of the Sanhedrin, preaching in public and teaching *halakhah*, but was also politically active. During their time, the rebellion of Gallus broke out (351) and some of their halakhic rulings are connected with this event. While the Roman armies were stationed in the country they both permitted the Jews of Galilee to bake bread for the army of Ursicinus on the Sabbath because, in demanding this, "the aim [of the soldiers] was not to apostatize, but merely the desire for fresh bread" (TJ, Shev. 4:2, 35a). They forbade the inhabitants of Sennabris, whose *Sefer Torah* had been burnt by Ursicinus, to use a defective scroll. The Talmud adds that they gave this ruling not because it was the *halakhah*, but so that the people of the locality should purchase another scroll (TJ, Meg. 3:1, 74a). Another tradition tells of their journey to Antioch, their meeting with Ursicinus, and the great honor he showed them (TJ, Ber. 5:1, 9a). It is possible that this visit was not during the revolt but during Ursicinus' second journey to Syria in 361 for the Parthian war (but see Lieberman, in JQR, 36 (1946), 341 n. 89). Very little of Jonah's *aggadah* has been preserved, but accounts of many of his pious deeds have been transmitted, particularly his deeds of charity. When a person of good family became impoverished he said to him: "My son, I have heard that you have been left a legacy, take this money; you can repay it when you receive the legacy." When he had taken it he would say: "Let it be a gift"

(TJ, Pe'ah 8:9, 21b). He was succeeded by his son Mani *II as head of the council of the Tiberias community.

[Shmuel Safrai]

JONAH, BOOK OF (Heb. **יְהוֹנָתָן**), the fifth in the collection of the 12 short prophetic books (*Minor Prophets). Unlike the other books of this collection the Book of Jonah contains a prophecy of only five words (3:4); the rest of the book is a story about Jonah son of Amittai. The book was added to the prophetic books, probably because a prophet of this name was known from the time of Jeroboam II (11 Kings 14:25.) and because the book deals with the problem of a man whose task it was to bring the word of God to Nineveh.

Outline of Contents

Jonah son of Amittai is ordered by **YHWH** to go to Nineveh and proclaim judgment upon its people for their wickedness. Jonah refuses to fulfill the mission and tries to escape. At Jaffa he boards a ship bound for Tarshish, a direction precisely opposite to Nineveh. **YHWH** brings on a great storm. The sailors try to avert the danger by praying to their gods and jettisoning the cargo. Jonah, who has gone to sleep, is awakened by the captain who asks him to pray to his God, in the hope that He may prove responsive. The sailors then decide to find out by casting lots on whose account the misfortune has come upon them. The lot falls on Jonah, and they try to find out what wrong he has done. Jonah discloses that he is fleeing from a mission of his god, **YHWH**, and that the only way they can make the storm abate is by heaving him overboard. The sailors first try to row back to land, but this proves futile, so they throw Jonah overboard and pray to the Lord not to hold them guilty for his murder, since it was He who has left them no other way of saving themselves. The storm subsides at once and the sailors, who now fear **YHWH**, offer sacrifices and make vows (Jonah 1). Jonah himself is swallowed by a great fish, from inside of which he prays to **YHWH**, and after three days and nights in the fish's belly he is spewed out on dry land (Jonah 2).

Jonah is called by **YHWH** a second time to bring His message to Nineveh. This time Jonah does go to Nineveh, a huge city. He proclaims that in 40 days Nineveh will be overthrown. The people of Nineveh believe God, proclaim a fast, and put on sackcloth. The king of Nineveh too takes part in the acts of repentance and orders all the inhabitants to pray to God and to repent of their evil ways: "God may turn and relent" (3:9). As a result of Nineveh's repentance, God renounces the punishment He had planned to bring upon it (Jonah 3). Jonah is greatly displeased by this mercy and complains of it to **YHWH**: he had tried to escape his mission in the final place for fear that **YHWH** would be moved to renounce His punishment out of mercy. In his vexation Jonah asks **YHWH** to take his life. At this time Jonah is outside Nineveh sitting in the shade of a booth

waiting to see what will happen to the city. The Lord causes a ricinus plant (see *castor oil plant) to grow unexpectedly over Jonah to provide shade over his head, to his great relief. On the following day, however, the Lord provides a worm, which attacks the plant causing it to wither. When the sun rises, the Lord causes a sultry east wind to beat down on Jonah's head. Jonah becomes faint and asks for death. Then the Lord says: "You cared about the plant, which you did not work for and which you did not grow, which appeared overnight and perished overnight. And should I not care about Nineveh, that great city, in which there are more than a hundred and twenty thousand persons who do not yet know their right hand from their left, and many beasts as well?" (4:10–11).

The Unity of the Book

The Book of Jonah raises exegetical problems, such as the question why the king had to order the people (and the cattle too!) to wear sackcloth and to fast, after they had already done so on their own initiative (3:5–8), or why Jonah needed the ricinus plant while he sat in the shade of the booth (4:5–6). Some scholars have tried to solve these problems by the application of the source-theory. However, some 20th century scholars argued for the unitary authorship of the book while allowing for the possibility of later additions. Some scholars regard verse 4:5, which seems out of place, as one of these additions. Others place this verse after 3:4. The Psalm of Jonah (2:3–10) is regarded by many scholars as an interpolation, particularly because it is neither an expression of penitence nor a plea for deliverance, but is a thanksgiving psalm. The conditions referred to in the psalm also have nothing to do with the distress experienced in a fish's belly. The psalm could, therefore, have been added to the book later. However, it has been shown that the psalm is probably an integral part of the book. Some of the main expressions in the psalm relate directly to the language used in the previous chapter (cf. 1:2, 6 with 2:3; 1:16 with 2:10) and apparently came to determine the choice of psalms by narrative authors at an early date; cf. the choice of "Hannah's psalm" solely on account of 1 Sam. 2:5b (Y. Kaufmann). Besides, the removal of the psalm from the book would unbalance the symmetry of the two major parts (G.H. Cohen, G.M. Landes). It may therefore be assumed that the psalm – though perhaps borrowed or compiled from another source – was always part of the book.

Special attention should be given to the changes in the use of God's names. **YHWH** ("the Lord") is His name as the God of the "Hebrew" (1:9) Jonah. In connection with the non-Israelite people of Nineveh He is *Elohim*, "God." The sin for which Nineveh is judged is not idolatry but lawlessness (3:8). Jonah objects to God's habit of renouncing a punishment which was merited and has already been decreed, but God's purpose in sending prophets to announce His punishments is precisely to make them unnecessary. For He has precisely the "sentimental" attachment which Job 10:3a, 8ff. accuses Him of lacking; and besides there are always the innocent children and dumb beasts (Jonah 4:10–11).

The Motifs of the Book

The main motifs of the book are similar to those found in the literature of other cultures. Many stories tell about a person's being swallowed by a great fish and rescued thereafter (Hercules the Hesione, Perseus and Andromeda, etc.). However, only in the Book of Jonah is the man in the fish rescued not by force (fire from inside or sword from outside) but by prayer, his salvation thus resulting from the combined action of God and humans. It should also be noted that in the Jonah story the fish and the man remain unharmed. Thus the story of Jonah – despite its similarities to other stories – has a unique biblical character. Basically, the same situation of the Book of Jonah is found in the story of Daniel's rescue from the lion-pit and the salvation of the three boys from the fiery furnace (Dan. 3 and 6). In all these stories the motif of swallowing becomes a symbol for the act of faith between God and humanity.

The common factor in all parts of the story is the acceptance of God's commands. Jonah tries to escape God's will but he learns that this cannot be accomplished. Even the sea and the great fish, which according to myth are great independent powers in the universe (cf. Isa. 51:9–10; Ps. 74:13–15; 89:10–11; Job 26:12), have to obey the orders of God. The sea becomes stormy and calm according to the wish of God (1:3, 15); the fish swallows and spews out according to God's order (2:1, 11); the castor-oil plant, the worm, and the east wind are all obedient servants of God (4:6–8).

The Teaching of the Book

The purpose of the book has been explained in various ways. According to many scholars the book is to be understood in its historical context. The best-known opinion connects the book with the times of Ezra and Nehemiah and assumes that it is the expression of universalistic opposition to the particularistic ideas of that time. This has been challenged by the observation that a book which uses Nineveh as the symbol of the repenting city and which does not mention the name Israel even once has such a historic tendency.

The book has also been regarded as an essay dealing with the profession of the prophet. The prophet cannot escape his mission and he should not regard it as weakness or failure if his prophecy is not fulfilled. However, since the book does not speak explicitly about prophets and prophecy (the word is not mentioned even once) and since Jonah's argumentation contains no aspects of his personal life, this explanation seems improbable too. In addition, the whole point of classical biblical prophecy is to bring sinners to repent so that they may avoid destruction. In that case any successful prophet of rebuke would fail the test of prophecy (e.g., Ezek. 3:18).

The Book of Jonah has to be understood as a lesson in divine governance, forgiveness and mercy. Jonah tries to escape his mission, explaining to God that he had fled because he knows that God often relents after having decreed punishment (Jonah 4:2; cf. Joel 4:13). Indeed, God renounces his punishment after the repentance of the city out of mercy for the inhabitants.

As pointed out by Simon, underlying Jonah's complaint is the notion that divine forgiveness should not wipe out all penalty (cf. Jonah 4:2 with Exod. 34:6–7), the threat of penalty serving as a deterrent. But whereas human rulers require deterrence in order to maintain the social order, God does not require it. As the story shows, God has the power to intervene at anytime. He sends the storm (1:4); "appoints" the fish to swallow Jonah (2:1); commands the fish to spew him out (2:11); "appoints" the plant (4:6); and the worm that makes it wither (4:7). The book begins and ends with the word of God, an assertion of God's absolute power over all creation, the sea and the dry land (1:9). The greatest theological challenge facing the author was the identity of the god in whose name Jonah's prophecy (3:4) was delivered. To use the specifically Israelite name Yahweh as the source of Jonah's words would have implied conversion of the Ninevites. In contrast, to have had the Ninevites turning to their native gods, Asshur and Ishtar for example, would have been a theological enormity for a Hebrew writer. Accordingly, the neutral *elohim* (3:5) was employed.

The Date of Origin

Opinions vary greatly concerning the date of the book's composition. Some date it as early as the eighth century B.C.E. and accept it as a story told about Jonah the prophet who lived in the time of Jeroboam II similar to stories about Elijah and Elisha (cf. II Kings 8:4). Others date it as late as the third century B.C.E. As the book is mentioned by Ben Sira (49:10) it cannot have been written later than his time.

The main points for fixing the date are the following:

(1) The language: Some words seem to be late like the relative pronoun *she* and the Aramaisms *mallaḥ* (1:5); *yit'ashet* (1:6); *ta'am* (3:7); and *ribbo* (4:11). However, *she* is attested very early in northern Israel (Jud. 5:7; 6:17) and, for geographical reasons, Aramaisms may likewise have penetrated there at an early date. The presence of many Aramaisms however, suggests a relatively late date.

(2) Reference to Nineveh: It is said about Nineveh that it "was an enormously large city" (3:3) and it seems therefore that the book was written after the destruction of this famous city (612 B.C.E.). In contrast, it has been pointed out that the past tense can also be used to describe a continuous existing situation (cf. Jer. 1:18). This, however, does not account for the unhistorical title "king of Nineveh" and the legendary size of the city.

(3) The identity of the prophet: The question of the date of the book is related to the time of the prophet, who, apparently, was a historical figure (II Kings 14:25). However, if the prophet's name was chosen only to give a later book more authority, the prophet's identity cannot be helpful in fixing the date of the book's composition, especially since it is possible that the story is connected with a historical prophet, but the book itself was written much later.

(4) Parallels to other books: The Book of Jonah contains parallels to the stories about Elijah (cf. Jonah 4:3 with I Kings

19:4); to the prophecies of Jeremiah (cf. Jonah 3:8–10 with Jer. 18:7–8); and particularly to the Book of Joel (cf. Jonah 3:9 with Joel 2:14; Jonah 4:2 with Joel 2:13). It is, however, impossible to prove if and in which way these sources influenced the Book of Jonah or were influenced by it.

It is quite probable that the book recounts an early story, since the people of Nineveh are worshipping idols, but the prophet only speaks, as in early times, against their moral sins. The lack of any national aspect has also been cited in favor of an early date of the story, which was perhaps first told orally and written down only at a later date.

The Book of Jonah aroused special interest throughout the ages not only because of its dramatic content and literary devices but also because of its important role in the religious world. The book of Jonah is read in the synagogue at the Day of Atonement afternoon service (Meg. 31a).

[Gabriel H. Cohn / S. David Sperling (2nd ed.)]

In the Aggadah

When sent to prophesy against Nineveh, Jonah suppressed his prophecy, although liable to suffer death at the hands of Heaven for doing so (Sanh. 11:5), and did not go, preferring rather to honor the son (the people of Israel) than the Father (the Almighty). For were he to go to Nineveh, Jonah argued, its people would immediately repent, with the result that the Almighty would have mercy on them and hold Israel blame-worthy, declaring that, unlike the gentiles, they became stubborn whenever He sent His prophets to them (cf. Matt. 12:41). Jonah tried to flee abroad to a gentile country “where the Divine Presence neither dwells nor appears.” First the sailors plunged him in the sea up to his knees and then up to his neck, each time the sea became calm but grew stormy again when they lifted him back on deck. Thereupon they hurled Jonah into the sea, which immediately stopped its raging (Mekh., Bo, Introduction: Tanh., Lev., 8; PDR 10).

[Elimelech Epstein Halevy]

In Christianity

Jonah is regarded in Christianity as the proof of the capacity of the gentiles for salvation and the design of God to make them partake of it. This is the “sign of Jonas” referred to in Luke 11:29–30. In the same passage he is referred to, as are many of the prophets, as a forerunner of Jesus. “The men of Nineveh ... repented at the preaching of Jonas; and behold, one greater than Jonas is here” (*ibid.*, v. 32). Similarly the three days and three nights which he spent in the whale’s belly are seen as a prefiguration of the three days and three nights he would be “in the heart of the earth” (Matt. 12:40).

In Islam

Yūnus (Jonah) the prophet, “the man of the fish,” was one of the most prominent descendants of Abraham. He was one of the apostles of Allah, even though he fled from his mission because he thought that Allah did not control him (Sura 6:86; 22:87). Sura 10 of the *Koran is named after him. In Sura 37:139–49, *Muhammad relates how Jonah hid in a ship loaded

with freight. His fate, however, designated him for destruction. Had he not praised Allah, he would have remained in the belly of the fish until the day of the resurrection of the dead. The myriads who were warned by Jonah believed in Allah and continued to enjoy His mercies for a time (Sura 10:96–98). Umayya ibn Abi al-Ṣalt (Schulthess, 32:21) knew that Jonah had stayed only a few days in the belly of the fish. The story of Jonah was a favorite subject in Islamic legend; several motifs worthy of adaptation are found in it: the repentance of the inhabitants of Nineveh on the day of *‘āshūra’*: the sojourn of Jonah in the belly of the fish; his prayer, etc.

[Haim Zew Hirschberg]

In the Arts

The allegorical nature of the Book of Jonah and the colorful episodes which it contains have inspired writers, artists and musicians throughout the ages. One of the earliest literary works based on Jonah was *Patience*, an anonymous English adaptation in verse probably dating from the mid-14th century. The theme of the punishment awaiting the “sinful city” was exploited by English puritanical writers of the 16th and 17th centuries. Thus, *A Looking Glasse for London and England* (London, 1594), a play by Robert Greene and Thomas Lodge, weaves the story of Jonah into a dramatic account of the kingdom of Israel after the overthrow of Jeroboam. In their comparison of Nineveh with vice-ridden London, the playwrights mingled Elizabethan satire with biblical and moralistic elements in the spirit of the Reformation. The subject also inspired *A Feaste for Wormes* (1620), a paraphrase of Jonah by the English royalist writer Francis Quarles, in whose *Divine Poems* (1630) the story later reappeared. Two other works of the 17th century were the anonymous English tragicomedy *Nineveh’s Repentance* (c. 1656) and *Jonas* by the German Protestant poet Martin Opitz. The subject fell into comparative neglect until the second half of the 19th century, when the *Historie of Jonah*, a dramatic poem, appeared in Zachary Boyd’s *Four Poems from “Zion’s Flowers”* (1855). This was followed by John Ritchie’s dramatic poem *The Prophet Jonah* (1860), John T. Beer’s play *The Prophet of Nineveh* (1877), and *Profeta-lomb* (“The Prophet Bough,” 1877), a work by the Hungarian writer János Arany.

There was a revival of interest in the theme among writers of the 20th century. A.P. Herbert’s *The Book of Jonah (As almost any modern Irishman would have written it)* (1921) was a novel, comic dramatization of the biblical story written in a broad Irish brogue. Behind the superficial frivolity of the Scots playwright James Bridie’s *Jonah and the Whale* (1932; revised as *Jonah 3* in *Plays for Plain People*, 1944) lies a more serious and sympathetic approach to the central issue. This contrasts with Laurence Housman’s playlet *The Burden of Nineveh* (in *Old Testament Plays*, 1950), an attempt to debunk the Bible. Two other works in English were *A Masque of Mercy* (1947), a play in blank verse by the U.S. poet Robert Frost presenting the theme of man’s relationship with God in Christian terms; and the English novelist and critic Aldous Huxley’s poem “Jo-

nah” (in *The Cherry Tree*, 1959). *Der Mann in Fisch* (1963) was a novel about Jonah by the German religious writer Stefan Andres. Perhaps because of its nautical interest, the subject has also inspired works by several Scandinavian authors, notably Haakon B. Mahrt’s Norwegian novel *Jonas* (1935), Harald Tandrup’s Danish novel *Profeten Jonas privat* (1937; *Jonah and the Voice*, 1937), and Olov Hartman’s modern Swedish miracle play *Profet och timmerman* (1954). Works about Jonah by 20th-century Jewish writers include the U.S. novelist Robert *Nathan’s *Jonah; or the Withering Vine* (1925; published in Britain as *Son of Amittai*, 1925); M.C. Lichtenstein’s Yiddish novel *Yonah ben Amittai* (1929); a Hebrew play of the same title by Meir Foner (1930); and *It Should Happen to a Dog* (1956), a one-act play by Wolf *Mankowitz utilizing the humor and idiom of London’s Jewish East End.

In art, there are no less than 57 examples in catacombs in Rome and on numerous sarcophagi, from the second to the first centuries, some of which may possibly be Jewish. The four scenes are: the storm, the swallowing and spewing forth by the whale, and Jonah chiding God. In specifically Christian typology, the story has three parts, the parallelism between Jonah and the whale and the visit to Limbo by Jesus being paramount. The Jewish tradition appears fully in the four-part Jonah sarcophagus of the British Museum. The Jonah cycle may well be older than its Christological interpretation, and the sarcophagus would thus afford an indication of a lost Jewish pictorial prototype.

[Helen Rosenau]

Individual representations of Jonah are rare. The two major examples are the figure by Michelangelo in the Sistine Chapel, Rome, and the marble statue designed by Raphael and executed by his pupil Lorenzetto di Ludovico Lotto(?) in the church of Santa Maria del Popolo, Rome. The prophet, who is generally represented as bald, is here shown as a nude youth with curly hair. The story of Jonah and the fish as a prefiguration of the Entombment and Resurrection and the resurrection of the individual soul and the hope of life hereafter accounts for its extraordinary popularity in the funerary art of the early Christians. An interesting fourth-century ivory relief of the subject is found on the Lipsanoteca in the Museo Civico Cristiano at Brescia.

Jonah was also a popular subject in Byzantine manuscripts of the 6th–11th centuries, including the sixth-century Rabula Codex, the Topography of Kosmas Indikopleustēs (Vatican), the ninth-century Homilies of Gregory of Nazianz, and the 11th-century Khlyudov Psalter (Moscow). In these, new episodes are illustrated, such as the “calling” of Jonah (Jonah 1:2), his embarkation at Joppa (Jonah 1:3), and his preaching before the king of Nineveh (Jonah 3:4ff.). The theme was less popular in the Middle Ages, but survived as one of the types of the Resurrection. Some notable medieval examples are the early 13th-century sculpture at Bamberg showing the bald Jonah engaged in animated conversation with the prophet Hosea; and the delightful illuminations in the 12th-century *Hor-tus Deliciarum* (University Library, Strasbourg) and Admont

Bible (National Library, Vienna). In both manuscripts, Jonah is shown emerging from a fish, in the latter case with a rhetorical gesture, as if about to make a speech. Illuminations of Jonah were also included in medieval Hebrew Manuscripts, such as the Spanish Cervera Bible (1300; Lisbon National Library) and the Kennicott Bible (1476; Bodleian Library, Oxford). In an early 15-century German *mahzor* (Academy of Sciences, Budapest), there is a casual, but vivid, sketch of a bald and mustachioed Jonah sitting under the gourd (Jonah 4:6).

After the Middle Ages, the subject was comparatively rare. Rubens included a painting of Jonah thrown into the sea as the predella of a triptych of the miraculous draught of fishes ordered by the Malines Fishmongers Corporation in 1618; and there is a stormy landscape of the same subject by Gaspard Poussin at Windsor Castle, England. In Italy, Salvatore Rosa painted a picture of Jonah preaching to the Ninevites. The Israel wood-engraver Jacob *Steinhardt illustrated the Book of Jonah in 1953.

Musical compositions on the Jonah theme are less abundant. One of the early masters of the oratorio, Giacomo Carissimi (1605–1674), wrote an oratorio, *Jona* (of which a 19th-century revision by Ferdinand *Hiller has remained in manuscript); two notable oratorios dating from 1689 are G.B. Bassani’s *Giona*, which has an opening instrumental “Sea Symphony,” and the *Giona* of G.B. Vitali. In the 18th century P. Anfossi (1727–1797) composed *Ninive conversa* and, in the 19th century, the subject was represented, like most biblical stories, in the English festival-oratorio production. Some increase in musical interest has been noticeable in the 20th century, with Hugo Chaim *Adler’s cantata *Jonah* (1943) and oratorios by Lennox Berkeley (*Jonah*, 1935), Mario *Castelnuovo-Tedesco (*Jonah*, 1951), and Vladimir *Voegel (*Jonah ging doch nach Ninive*, for speaker, baritone solo, speaking-choir, mixed choir, and orchestra, 1958).

JONAH, MOSES (16th century), kabbalist and one of the most important disciples of Isaac *Luria. Ḥayyim *Vital places him in the second group of Luria’s pupils (*Sha’ar ha-Gilgulim*) and states that this is his first transmigration as a human being, and therefore he is a great jester and his conduct is not seemly (*Sefer ha-Gilgulim*, “The Book of Transmigrations,” 1875, 66). These remarks attest to some personal tension between the two kabbalists, which is also borne out by the story quoted in Menahem *Lonzano’s book, *Omer Man*, on Luria’s last words before his death. According to this story, Jonah asked Luria if Vital understood his doctrine and Luria answered “A little.” Jonah headed a yeshivah in Safed for a time and also spent some time in Egypt and Constantinople. His signature occasionally appears (c. 1590) on letters sent from Safed to Worms. His fragmentary notes on Luria’s Kabbalah (of 1586) are in an autograph in the Schocken collection. However, several years earlier, apparently in the 1570s, he had written a systematic treatise on his teacher’s Kabbalah. In 1582 he himself copied this book, called *Kanfei Yonah* in the complete manuscripts, and dedicated it to one of the rich men of Constantinople. The bulk of this copy is preserved in Sassoon Ms. 993. This work is clear and well arranged and is superior in several respects to Vital’s different editions of *Ez Ḥayyim*. Menahem Azariah da *Fano compiled extracts from this book in five parts, 1–4 (1785) and 5 (1899); manuscripts of the original book also circulated widely (Ms. Ben Zvi Institute, 2218). Jonah taught Jacob Schweinfurt, who brought some of his kabbalistic traditions to Germany in 1613. A summary of Jonah’s major work in 13 chapters was printed under the title *Sha’ar ha-Kelalim* at the beginning of the published editions of *Ez Ḥayyim*. It is said in many manuscripts that this summary was written by three kabbalists: Moses *Najara, Jonah, and Joseph *Arzin.

[Gershom Scholem]

JONAH BEN ABRAHAM GERONDI (c. 1200–1263), Spanish rabbi, author, and moralist. In his youth Gerondi studied in the French yeshivot under Moses b. Shneur and his brother *Samuel of Evreux, and later under *Solomon b. Abraham of Montpellier. When in 1232 the latter began his campaign against Maimonides’ philosophical works, Jonah followed his teacher and became one of his most devoted assistants in the conflict, which ended, according to tradition, in the burning of these books by the Inquisition. A few years later, in 1240, in the same square in which Maimonides’ books had been

burnt, tractates of the Talmud were burnt and Jonah saw this as divine retribution. Tradition has it that he repented, proclaiming in the synagogues: “I undertake to prostrate myself at Maimonides’ grave and to confess that I spoke and sinned against his books” (letter of Hillel of Verona). Consequently, Jonah devoted himself to the study of Maimonides’ works. Legend tells that Jonah tried to travel to Erez Israel to ask forgiveness at Maimonides’ grave, but was delayed in Toledo, where he later died violently. Modern scholars disagree as to the veracity of this account. Everyone is in agreement that Jonah reversed his opinion of Maimonides in the latter part of his life. Gerondi was in contact with *Isaac the Blind, son of *Abraham b. David of Posquières, concerning Kabbalah. Naḥmanides was his cousin and in-law. Jonah returned from France to his birthplace, Gerona, and began to preach publicly his *torat ha-musar* (doctrine of ethics and morality) – a subject which was near to his heart all his life. Later he left Gerona and settled in Barcelona, where pupils from Spain and elsewhere flocked to him. These included some of the outstanding rabbis of the next generation, such as Solomon b. Abraham *Adret and *Hillel b. Samuel of Verona. Years later, he left for Erez Israel, but on passing through Toledo, the Spanish community approached him and importuned him to stay in the city for a year or two. He consented to remain and established a large yeshivah there, and there he died.

Jonah was famous not only as a scholar, but as “father of the virtues” of piety, humility, and ascetism. He acquired enduring fame through his ethical books. In these books he protested forcefully against the many Spanish Jews who disregarded the *mitzvot* and against widespread sexual immorality. He proclaimed a “ban on concubines” and reacted sharply to the failure of society to keep the *mitzvot* governing the relations of man and his neighbor. Among the “ten gravest sins of the generation” which he specified, were: “disregarding the poor, slander, senseless hatred, confusion of the heart, and causing others to fear.” Jonah condemned the actions of despots and tyrants, warning the large estate owners among the Jews of Spain against using force to evict small landowners from their plots. Not content with warnings, Jonah called for action and suggested that instead of strong community leaders who strike fear into the hearts of the public, “in every town volunteers should be ready to take action whenever a Jewish man or woman is in trouble” (*ibid.*). According to Jonah, communal activities should be incumbent on every Jew and not confined to communal leaders (*ibid.*). Even prayer in time of public or private sorrow and even the formulation of prayers are not matters for the pious or sages alone; it is the duty of every man to pray “every day, in accordance with his ability, on behalf of all the sick among the Holy People ... and for the release of all prisoners...”

Jonah was doubtless familiar with the teachings of the *Ḥasidei Ashkenaz, but his ethical doctrine differed fundamentally from theirs. It was not based upon mystical speculation but on the *halakhah* and the popular *aggadah*. His ethical works were widely read. His repeated emphasis on the practice

of social justice and social ethics undoubtedly contributed to their popularity throughout the Jewish world and to the influence they exercised upon the socio-religious thinking of later generations.

Jonah's works include: (1) Commentary on Proverbs (1910); (2) Commentary on *Avot* (Berlin-Altona, 1848, and compared to Mss., 1966); (3) novellae to tractate *Bava Batra*: "Aliyyot de-Rabbenu Yonah" up to page 77b (1966), and to *Sanhedrin* (in: *Sam Hayyim*, Leghorn, 1803); (4) Commentary on Alfasi to *Berakhot*, and printed with it, the commentary was compiled by his pupils; (5) Laws of examining the knife and lungs during *shehitah* (at the end of the *Teshuvot ha-Ge'onim*, 1871); (6) *Iggeret Teshuvah* (Constantinople, 1548); (7) *Sefer ha-Yirah* (Fano, c. 1505; Salonika, 1529; Yiddish translation Freiburg, 1583); (8) *Sha'arei Teshuvah* (Fano, 1505; Constantinople, 1511); a chapter out of this work, by name "Sha'arei ha-Avodah," which was known as lost, was printed in 1967 from an unknown manuscript but there are still grave doubts whether it is really his; (9) Novellae of Rabbenu Jonah's pupils on tractate *Avodah Zarah* (1955); (10) Sermon and explanation on the Torah, *Sefer Derashot u-Perushei Rabbenu Yonah Gerondi le-Hamishah Humshei Torah*, were published from manuscript in 1980; (11) Novellae on the laws of the Passover *Seder* were published from manuscript in 2001.

In addition to these works, there is reference in medieval rabbinic works to his novellae on *Pesahim*, *Megillat Setarim*, laws of *Hanukkah*, and sermons.

JONAS, EMILE (1827–1905), French composer, conductor, and cantor. He studied at the Paris Conservatoire where he received a second prize for harmony (1847). Jonas was professor of solfège at the Paris Conservatoire from 1847 until 1866. He composed several light operas in the style of *Offenbach and enjoyed success abroad as well as in France. He was music director at the Portuguese synagogue in Paris, for which he wrote two collections of songs, *Shirot Yisrael* (1854) and *Shirei Yisrael* (1886).

[Amnon Shiloah (2nd ed.)]

JONAS, HANS (1903–1993), philosopher. Jonas studied with Martin Heidegger and Rudolf Bultmann in Marburg. Adhering to Zionist convictions since his youth, he left Nazi Germany in 1933 for Jerusalem, where he was a lecturer at the

Hebrew University before World War II. During the war he served in the British Army (in the *Jewish Brigade Group) in the Middle East, taught in Palestine, and was a lieutenant in the Israeli Army 1948–49. In 1949 he went to McGill University in Montreal, in 1950 to Carleton College, Ottawa, and from 1951 was professor of philosophy at the New School for Social Research in New York.

Jonas' original work was on philosophy and religion in late antiquity and early Christianity, writing on *Augustin und das paulinische Freiheitsproblem* (1930), and *Gnosis und spaetantiker Geist* (2 vols., 1934–54; partial Eng. tr., *The Gnostic Religion*, 1958). His revolutionary study on Gnosticism initiated the movement to understand religions by demythologizing them and revealing their existential meaning. The Nazi's abandonment of all that is human as well as the confrontation with Heidegger's affinity to Nazism inspired Jonas to set forth a counterphilosophy to modern nihilism. He wrote on phenomenology and existentialism (*Zwischen Nichts und Ewigkeit*, 1963) and on philosophical biology (*The Phenomenon of Life*, 1966), offering an anti-dualistic understanding of organic life that interprets human existence as part of a nature that is meaningful in itself. In his *The Imperative of Responsibility* (1984), Jonas explored the ethical consequences of his speculative ontology for a world dominated by the dangers inherent in science and technology, especially genetic engineering, suggesting strategies of human self-limitation and respect for the integrity of life. In his essay *The Concept of God after Auschwitz* (1987), Jonas radically transformed the question of theodicy into the question of the justification of man and rejected the notion of God's power in history; stimulated by ideas of Lurianic Kabbalah, he employed a speculative myth to unfold a process of theogony and cosmology in which God, in the course of evolution, withdraws completely back into Himself, relinquishes His omnipotence, and makes the world subject to human responsibility.

[Richard H. Popkin / Christian Wiese (2nd ed.)]

JONAS, JOSEPH (1792–1869), English-born jeweler who was Ohio's earliest permanent Jewish settler. Jonas arrived at Cincinnati in 1817 and in 1824 became president of the newly founded Bene Israel Congregation, the first in Ohio. He and his brother Abraham both married daughters of Gershom Mendes Seixas. Some years after Rachel Seixas' death, Jonas married Martha Oppenheim. Jonas wrote "The Jews of Ohio" for Isaac Leeser's *Occident* in 1842. He was a leading freemason and politician and helped organize Cincinnati's Democratic Party. While serving in the Ohio legislature in 1860–61, he advocated compromise with the South. Jonas moved to Alabama in 1867. His brother ABRAHAM (1801–1864) arrived in Cincin-

nati several years after Joseph. He then moved to Kentucky where he was several times elected to the state legislature, and was also prominent in the Masonic lodge. He later moved to Illinois, where he was active in the Republican party as a supporter and friend of Abraham Lincoln. Abraham's son, BENJAMIN FRANKLIN (1834–1911), moved to New Orleans where he was active in the Democratic party, served in the Louisiana state legislature, and was elected U.S. senator (1879–85).

[Stanley F. Chyet]

JONAS, NATHAN S. (1868–1943), U.S. banker and philanthropist. Jonas was born in Montgomery, Alabama, and was raised in Brooklyn, N.Y. Starting work at the age of 13 as an errand boy, Jonas became a traveling salesman and then went into the insurance business. In 1905 he was made president of a new bank, which later became the Manufacturers Trust Company, and led it until 1931, when its total resources were \$327 million, with 45 unit offices. Active in civic and philanthropic affairs, Jonas was a founder and president of the Brooklyn Jewish Hospital, organizer and first president of the Brooklyn Federation of Jewish Charities, and a member of the New York City Board of Education during 1902–09. He wrote an autobiography, *Through the Years* (1940).

[Morton Rosenstock]

JONAS, REGINA (1902–1944), German rabbi and Holocaust victim. Born in Berlin in 1902, Regina Jonas completed her secondary education, receiving a license to teach in girls' schools in 1924. Shortly afterwards, she began studying at the Berlin rabbinical seminary, the *Hochschule fuer die Wissenschaft des Judentums (College of Jewish Studies). Ordinarily the Hochschule awarded female students a diploma certifying them as Academic Teachers of Religion. Jonas, however, desired rabbinic ordination. In 1930, she completed her thesis, "Can a Woman Hold Rabbinical Office?" in which she argued that Jewish law permitted female ordination. Although the distinguished scholar Professor Eduard Baneth accepted her thesis, he died before he could administer the oral exam in Jewish law required of all rabbinical candidates. Whether or not Baneth would have ordained her is not known. His successor believed Jewish law forbade women's ordination, and would not ordain Jonas. Instead she received a special transcript noting that she was becoming a skilled preacher.

In the years immediately following her graduation from the Hochschule, Jonas indeed found opportunities to preach. In 1935 Rabbi Max *Dienemann, one of the leaders of German Liberal Judaism, examined her and privately ordained her.

She thus became the first woman rabbi, and from then until her death, many knew her as Fräulein Rabbiner Jonas. In 1937 the Jewish community of Berlin hired her to teach and also to provide rabbinical spiritual care for the elderly and the ill. As Nazism intensified its anti-Jewish persecution, Jonas was an active community presence, serving congregations whose rabbis had emigrated or been arrested. In late 1942, she was deported to Theresienstadt. Her work there included meeting new arrivals at the train station, trying to alleviate their horror as they confronted this terrible ghetto. She also lectured on biblical, talmudic, and religious themes for the ghetto's cultural programs. From there, Fräulein Rabbiner Jonas made her final journey. Sharing the fate of her people, the first woman rabbi was murdered in Auschwitz.

[Pamela S. Nadell (2nd ed.)]

JONATHAN (Heb. יְהוֹנָתָן, יוֹנָתָן; "YHWH has given"), name of several biblical characters.

(1) Son of Gershom, son of Moses (Judg. 18:30; MT, "Manasseh" written with suspended *nun*, apparently a scribal insertion in deference to Moses). He is apparently to be identified with the levite from Beth-Lehem in Judah who was taken into the service of Micah the Ephraimite as "father and priest" (Judg. 17:10) in the sanctuary which Micah had founded. Not long after he had taken up residence there, 600 Danites, on their way northward to find a more suitable homestead, induced Jonathan to leave Micah and to assume the more honorable position of priest to the tribe of Dan (Judg. 17–18). The family of Jonathan served as priests to the tribe of Dan until the captivity (Judg. 18:30).

(2) Son of *Saul.

(3) Uncle of David, a counselor, wise man, and scribe (1 Chron. 27:32).

(4) Son of Shimea (or Shimei), David's brother. He slew a Philistine giant who taunted Israel at Gath (11 Sam. 21:20–21; 1 Chron. 20:6–7).

(5) One of David's "valiant men" known as the "Thirty" (11 Sam. 23:32–33; 1 Chron. 11:34).

(6) Son of Uzziah. He was in charge of the royal treasuries of David in the cities, villages, and towers outside the capital (1 Chron. 27:25).

(7) Son of Abiathar, descendant of Eli, a priest in the time of David. During his flight from Absalom, David was joined by Jonathan who was, however, sent with *Zadok, *Abiathar, and *Ahimaaz, to spy on Absalom. Jonathan and Ahimaaz were appointed runners for the purpose of transmitting information from Jerusalem to the fleeing David (11 Sam. 15:36). The two men hid at En Rogel, where a lad eventually discovered and betrayed them. Fleeing from Absalom's forces, both runners arrived at Bahurim, where they were saved by a woman

who hid them in a well. Before morning, however, the runners reached David, bringing the information which permitted the king and his people to cross the Jordan in time to avoid a premature clash with Absalom's army (II Sam. 17:15–22). During Solomon's struggle for the throne (I Kings 1) Jonathan had, like his father Abiathar the priest, supported Adonijah as king. It was Jonathan who came to Adonijah at the stone of Zoheleth to inform him that Solomon had been anointed king (I Kings 1:9, 42–48). After Solomon's accession to the throne, nothing more is said about Jonathan who, together with his father, probably fell into disgrace and was sent to Anathoth (I Kings 2:26–27).

(8) A levite during the reign of Jehoshaphat (II Chron. 17:8).

(9) The scribe whose house was converted into a prison in which Jeremiah was confined on an alleged charge of desertion during the siege of Jerusalem (Jer. 37:15, 20; 38:26).

(10) Son of Kareah, an officer who joined Gedaliah at Mizpah, and the brother of Johanan (Jer. 40:8). The name Jonathan is omitted in some Hebrew manuscripts, in the Greek, and in the parallel passage in II Kings 25:23, and may have resulted from a dittography of Johanan.

(11) A son of Jerahmeel (I Chron. 2:32–33).

(12) A priest from the family of Shemaiah in the days of Joiakim the high priest (Neh. 12:18).

(13) Father of Ebed, who was head of the family of Adin. He joined Ezra in his journey to Jerusalem (Ezra 8:6).

(14) Son of Asahel, who, it seems, opposed Ezra in the matter of the foreign marriages (Ezra 10:15).

(15) Father of the priest Zechariah, who took part in the dedication of the walls of Jerusalem during the days of Nehemiah (Neh. 12:35).

(16) Son of Joiada, one of the high priests of the post-Exilic period (Neh. 12:11). However, Jonathan here appears to be a corruption of Johanan, by which name he is known in Ezra 10:6 and Nehemiah 12:22–23.

[Shlomo Balter]

JONATHAN (Heb. יֹנָתָן, יְהוֹנָתָן), eldest son of *Saul, the first king of Israel (I Sam. 14:1). At the beginning of Saul's reign, during the revolt against the Philistines, Jonathan already was the commander of a part of the army (I Sam. chs. 13–14). He was a constant friend and companion of *David and assisted him when David was forced to escape Saul's wrath (I Sam., chs. 18, 19, 20, 23). Jonathan died together with his father and two of his brothers in the battle with the Philistines at Mount Gilboa (ch. 31). Their corpses were despoiled by the Philistines and exposed on the wall of Beth-Shean (I Sam. 31:12). David lamented their death in a moving elegy (II Sam. 1:17–27).

In the stories of the Book of Samuel the character of Jonathan is idealized, with no contrasting bad qualities. He is portrayed as the intrepid and heroic son of the king, a loyal comrade to the end. In the biblical account he stands in sharp contrast to Saul, whom God had rejected as king, and who was obsessed by an evil spirit. In the portrayal of Jonathan pure

literary motifs are employed: the heroic son of the king leads an assault on the enemy with only his armor-bearer; he unwittingly transgresses the king's adjuration and faces all the danger resulting from such an action (ch. 14), and he becomes a faithful friend of the very man who is destined to deprive his father's house of its royal inheritance. In the story as a whole, there is a marked tendency to show Jonathan on the one hand as the war hero who played a decisive role in the struggle for freedom from the Philistine yoke, and on the other hand as David's faithful friend who recognized fully that even though he was himself heir to the throne, David would succeed Saul as king. (Jonathan's recognition of David's ultimate rule is displayed with some subtlety. Jonathan takes off his robe and gives it to David, along with his armor, sword, bow, and belt (I Sam. 18:3). Jonathan expresses the hope, "May YHWH be with David as he was with my father" (I Sam. 20:13)). Apparently these two elements became intertwined from the very outset in the book of Samuel, and in David's lament over Saul and Jonathan the two themes are combined (II Sam. 1:17–27). Both themes are based on reality, and there is no reason to doubt the tradition of the pact of friendship between David and Jonathan, even though these events occur in the context of stories designed to justify David's right to the kingdom. Indeed, Morgenstern raised the possibility that in early Israel the son-in-law of the king might have had a greater presumptive right to the throne than his son, and so a pact between Jonathan and David would have been appropriate. Even after Jonathan's death, David was careful to honor this pact and dealt very kindly with Jonathan's son *Mephibosheth (II Sam. 9:1ff.). In the list of Saul's descendants, which is included in the genealogical lists of families of the tribe of Benjamin in I Chronicles 8:33ff., ten generations are mentioned after Jonathan through Merib-Baal (that is Mephibosheth). It would seem that the object of this list is to illustrate the maintenance of the pact between the house of David and the house of Jonathan.

[Jacob Liver / S. David Sperling (2nd ed.)]

In the Aggadah

The Midrash applies the verse "For love is strong as death" to the love that Jonathan bore for David (Song R. 8:6, 4). Because of that great love, he risked his life for him (Ar. 16b), when he said to his father, "Wherefore should he (David) be put to death? What hath he done?" (I Sam. 20:32). His humility is revealed in his statement to David "Thou shalt be king over Israel and I shall be next to thee" (I Sam. 23:17). But the opinion is also expressed that he said this only because he saw that the people were flocking to David (BM 85a), and that "even the women behind the beams of the olive press knew that David was destined to be king" (TJ, Pes. 6:1, 33a). Jonathan, however, committed an inadvertent transgression which was regarded as reprehensible as though it had been deliberate, in that he failed to provide David with food when he advised him to flee (I Sam. 20:42), "for had Jonathan given David two loaves of bread for his travels, the priests of Nob would not

have been massacred, nor would Saul and his three sons have been killed” (Sanh. 103b–104a). The love of David and Jonathan did not depend upon any material cause, and it is taken as the prototype of disinterested love which never passes away (Avot 5:16). This distinction between two types of love is also made by Greek scholars (Aristotle, *Magna Moralia*, 1209b; *Nichomachean Ethics*, 1156a).

JONATHAN, second-century *tanna*. Although his patronymic is never given when he is mentioned, as he most frequently is, with his colleague *Josiah, he is identical with the Jonathan b. Joseph and Nathan b. Joseph mentioned elsewhere in rabbinical literature. Like his colleague, he was a disciple of R. Ishmael b. Elisha and followed his system of hermeneutics, the main feature of which is the interpretation of scriptural verses according to the rules laid down by him in order to establish the *halakhah*, in oppositon to the system of R. Akiva (see *Midreshei Halakhah), and his exegesis is largely confined to this. His statements therefore appear mostly in the halakhic Midrashim which emanate from the school of R. Ishmael, the *Mekhilta of R. Ishmael* and the *Sifre to Numbers* (but see also *TB Yoma* 57–58 and *TB Sotah* 74–75). Apart from one Mishnah in his name in *Avot* 4:9, “Whosoever observes the Torah in poverty shall be vouchsafed to observe it in affluence, and he who neglects its observance in affluence will live to neglect it because of poverty” (Chap. 4), like his colleague, he is not mentioned in the Mishnah, and it has been assumed that this was due to the fact that Rabbi Judah ha-Nasi, the compiler of the Mishnah, based himself on the Mishnah of R. Meir.

After the death of his master he seems to have adopted part of the system of R. Akiva (see *TJ Ma'as* 51b).

Jonathan is the author of the rule that the saving of human life transcends the Sabbath (*TB Yoma* 85b). After the Hadrianic persecution, like his colleague, he decided to leave Erez Israel. Whereas, however, Josiah emigrated to Nisibis in Babylonia, Jonathan relented. Together with Mattiah ben Heresh, Hananiah, the nephew of R. Joshua, and R. Judah b. Hai, he set out, but when they reached the frontiers of Israel, their love for the Land of Israel prompted them to relinquish their plan and they returned (*Sifre*, *Deut.* 80).

JONATHAN BEN ABRAHAM ISAAC (Abelman; 1854–1903), rabbi and talmudist. Born in the Kovno province, Jonathan went at the age of 15 to study under R. Israel *Lipkin in Vilna, where he later married the daughter of Abba Levinsohn, his teacher's brother-in-law. In 1877 he accepted the position

of rabbi in the small town of Choroszcz, where he stayed until 1883. That year he was appointed a member of the *bet din* in Bialystok and became its *av bet din* when Samuel *Mohilever was chief rabbi of the community. Jonathan held the position until his death. His works include *Torat Yehonatan* (1889), dealing with the question of *shemittah*, which became particularly relevant as a result of the newly established agricultural settlements in Erez Israel. He also wrote *Zikhron Yehonatan*, published after his death by his son (1905), consisting of novellae on parts of the *Shulhan Arukh*. Some of his responsa are included in David Kempner's *Le-Mattheh Yehudah* (1892).

BIBLIOGRAPHY: B. Eisenstadt, *Dor Rabbanav ve-Soferav*, 1 (1895), 7.

JONATHAN BEN AMRAM (late second and early third century), sage of the transitional period between the **tannaim* and the **amoraim* and a pupil of *Judah ha-Nasi. He is rarely mentioned in the Talmud (some two or three times). The Talmud relates that once, during a period of famine, when Judah ha-Nasi opened a house of food to scholars only, he failed to recognize Jonathan, who, too humble to proclaim himself a scholar, asked to be fed “as a dog is fed.” When Judah later learned Jonathan's true identity, he decided to distribute food to everyone, without distinction (*BB* 8a). The few *halakhot* quoted by him (*Ḥag.* 20a; *Av. Zar.* 36b) center around details of the laws of levitical cleanness, and he was apparently one of those who observed, even for ordinary meals, all the prescriptions attaching to the eating of *terumah* (the Priestly Portion), which had to be eaten in a state of ritual cleanness.

[Israel Moses Ta-Shma]

JONATHAN BEN ANAN, high priest in 36–37 C.E. Jonathan was appointed high priest by Vitellius, governor of *Syria, succeeding Joseph *Caiaphas (*Jos., Ant.*, 18:95). After a year he vacated the office in favor of his brother, Theophilus (*ibid.*, 123). When Agrippa I wished to reappoint him, he declined, and another brother, Matthias, was appointed (*ibid.*, 19:313–6). Jonathan was apparently greatly respected and occupied an important place in the community even after his removal from the high priesthood, as is evidenced by the events during the final days of the governorship of Cumanus (52 C.E.). When disturbances broke out following the murder of a Galilean pilgrim by the Samaritans, Jonathan b. Anan complained to Quadratus, governor of Syria, pointing to Cumanus as the chief culprit. Quadratus, after severely punishing those responsible for the disturbance, sent the former high priests, Jonathan and Hananiah, as well as the latter's son, Anan, and a number of Jerusalem notables to Rome for trial before the emperor Claudius. The decision was in favor of the Jews, and at the request of Jonathan, Cumanus was dismissed and exiled (*Jos., Wars*, 2:232–47; *Ant.*, 20:162). Felix, appointed to succeed Cumanus, hated the former high priest, who rebuked him for the cruelty of his rule. Felix suborned a certain Doras, a native

of Jerusalem, to hire assassins who mingled with the crowd ascending to the Temple and murdered Jonathan. This, according to Josephus, was the precedent for many other murders by *Sicarii (Jos., Ant., 20:162–6; Wars, 2:256).

[Abraham Schalit]

JONATHAN BEN DAVID HA-KOHEN OF LUNEL (c. 1135–after 1210), talmudic scholar of Provence, the leading rabbi of Lunel after the death of *Meshullam b. Jacob. He was a pupil of Moses b. Joseph Merwan in Narbonne and possibly of Meir ibn Migash – the son of Joseph ibn *Migash – in Spain, a fellow student of Zerachiah ha-Levi *Gerondi, and a pupil-colleague of *Abraham b. David of Posquières.

Jonathan was in the vanguard of the defenders of Maimonides in the controversy stirred up against him by Meir *Abulafia. In his reply (signed, however, by *Aaron b. Meshullam of Lunel) to Meir's letter to the sages of Provence, Jonathan strenuously countered Meir's accusation, at the same time highly praising Maimonides and his work. Jonathan's correspondence with Maimonides, which in the course of time created strong bonds of mutual affection and admiration, originated from a copy of Maimonides' *Letter to Yemen*, which found its way into his hands. Greatly impressed by its contents and the writer's wide vision, he sent him a letter full of praise, containing questions on the authenticity of astrology and the possibility of guarding against its prognostications. In his reply, delayed for several years, Maimonides referred Jonathan to his *Yad ha-Ḥazakah*, enclosing a copy with his reply. There followed a halakhic correspondence in which Jonathan submitted to Maimonides questions and strictures on the work by himself and the other scholars of Lunel. Maimonides was thus made aware of the vast talmudic knowledge of the Lunel scholars, and his replies were phrased in terms of great esteem. The whole exchange, permeated with a spirit of humility and reverence, is among the finest in the literature of Hebrew correspondence. In the course of it, Jonathan also requested Maimonides to send him his *Guide of the Perplexed*, which he thereafter submitted to Samuel ibn *Tibbon for translation into Hebrew. Jonathan was among the leaders of the "300 French and English rabbis" who emigrated in 1210 to Erez Israel, and there he died.

Jonathan wrote commentaries on the Mishnah, Talmud, and Alfasi, embracing most of the Talmud. Much of his work, hitherto in manuscript, has recently been published. It includes commentaries on the tractates *Megillah*, *Mo'ed Katan* (1956), *Berakhot* (1957), *Shabbat*, *Pesaḥim*, *Bezah*, *Ḥagigah*, *Ketubbot*, *Bava Kamma* (critical edition ed. S. Friedman, 1969), *Bava Me'zia*, *Sanhedrin*, *Makkot*, *Avodah Zarah*, and on *Halakhot Ketannot* and laws of ritual uncleanness (in *El ha-Mekorot* – Pardes ed. of the Talmud, 1959–63); *Eruvin* (standard editions of Alfasi); *Rosh Ha-Shanah*, *Yoma*, *Ta'anit Sukkah* (in *Ginzei Rishonim*, 1962–63); *Horayot* (in *Ḥizzei Menasheh*, 1901); *Hullin* (in *Avodat ha-Leviyyim*, 1871). It is possible that he also wrote a treatise resolving David of Posquières' strictures on Maimonides (A. Neubauer, *Sefer ha-Ḥakhamim*,

2 (1891), 232, etc.). Numerous quotations from his teachings are to be found in the statements of other *rishonim*.

[Israel Moses Ta-Shma]

JONATHAN BEN ELEAZAR (beginning of the third century C.E.), *amora*. He is the R. Jonathan mentioned in the Talmud and Midrash without patronymic. Jonathan was of Babylonian origin but went to Erez Israel in his youth and *Johanan Nappaḥa referred to him as "our Babylonian colleague" (Git. 78b). He was a pupil of Simeon b. Yose b. Lakunya in whose name he frequently transmits dicta. He was the teacher of *Samuel b. Naḥman and one of the associates of *Ḥanina b. Ḥama. Jonathan lived in Sepphoris and was called *Sar ha-Birah* ("the prince of the city") – a designation whose exact connotation is unknown. He belonged to the intimate circle of the **nasi* and together with Johanan went to the "south" (Lydda) on his mission, apparently, of "peacemaking" (TJ, Ber. 9:1, 12d; the reading there is not clear). He once paid a visit to Jerusalem to see the ruins of the Temple (TJ, Ma'as. Sh. 3:3) and to Tiberias to bathe in the hot springs (TJ, Er. 6:4, 23c). Several scholars, including Johanan, transmit statements in Jonathan's name.

Jonathan is hardly referred to in the *halakhah*. On the other hand he is regarded as one of the great aggadists. His well-known defense of such biblical personalities as Reuben, the sons of Eli, the sons of Samuel, David, Solomon, and others (despite the explicit reference in the Bible to their transgressions) begins with the words: "Whoever maintains that so-and-so sinned is in error!" (Shab. 55b–56a). He also engaged to a considerable extent in polemics with heretics. He comments, for instance, on Genesis 1:26, "let us make man in our image": "When writing the Torah, Moses wrote down the acts of creation of each day. When he came to this verse, 'let us make man in our image after our likeness,' he said to God, 'Sovereign of the universe! Why dost Thou provide an opening for heretics? [since the plural form of the verse suggest dualism].' Replied [the Almighty] 'whoever wishes to err, let him err. From this man that I have created, great and small men shall spring. If the great man should say, "why do I need to request permission from one of less importance than I," they will answer him: Learn from thy Creator who created all that is above and below, yet when He came to create man, He took counsel with the ministering angels'" (Gen. R. 8:8).

[Israel Moses Ta-Shma]

JONATHAN BEN JACOB (17th century), Hungarian rabbi. Jonathan was born in Ofen, Hungary, where, according to the

testimony of David Oppenheim, he was one of the leaders of the community. When Ofen was captured from the Turks by the Austrian emperor Leopold I in 1686, Jonathan was taken captive and was ransomed by the Jews of Nikolsburg. He dwelt for a time in the home of Simḥah Ephraim b. Gershon ha-Kohen *Freudemann in Belgrade and transmitted various customs in his name. Jonathan became known through his *Keset Yehonatan* (Dyrhenfurth, 1697), a collection of the laws of prayer and moral sayings garnered from the *Sefer Ḥasidim* and the *Shenei Luhot ha-Berit* of Isaiah Horowitz. He also compiled the *Neu Maaseh Buch* (*ibid.*, 1697), a collection of stories in Yiddish.

[Yehoshua Horowitz]

JONATHAN BEN JOSEPH OF RUZHANY (late 17th–early 18th century), talmudist and astronomer. Jonathan was born in Ruzhany (Grodno province) and in his youth acquired an extensive knowledge of mathematics and astronomy in addition to that of Talmud. When a plague broke out in his native town in 1710, he vowed that, should he be spared, he would spread the knowledge of astronomy among Jews. In fulfillment of this vow, he proceeded to Germany, although already blind, and finally settled in Frankfurt. There he wrote *Yeshu'ah be-Yisrael*, a commentary on *Kiddush ha-Ḥodesh* (the laws concerning the blessing of the New Moon) of Maimonides' *Mishneh Torah* (Frankfurt, 1720). He also wrote a commentary on *Abraham b. Ḥiyya's astronomical work *Zurat ha-Arez*, and glosses to the translation of Sacroboscus' *Sphaera Mundi* (entitled *Mareh ha-Ofannim* or *Asferah ha-Gadol* by its translator Solomon b. Abraham Avigdor) and to another Hebrew translation of the same work, entitled *Sefer ha-Galgal*. These three works were published by Jonathan with his own commentaries, and others by Perez Nasi, Mordecai b. Abraham *Jaffe, Mattathias b. Solomon *Delacrut, and Shemariah Manoah Hahndel (Offenbach, 1720). In 1725 Jonathan made the acquaintance of the Christian bibliographer and Hebraist, Johann Christoph *Wolf, in Hamburg.

[Moshe Nahum Zobel]

JONATHAN BEN UZZIEL (first century B.C.E.–first century C.E.), translator of the Prophets into Aramaic (see *Bible: Translations) Jonathan is mentioned as the outstanding pupil of *Hillel (BB 134a; Suk. 28a). All that is recorded of him, however, is that he translated the prophetic books into Aramaic “from the mouth of Haggai, Zechariah, and Malachi” (an anachronistic statement meant to claim unbroken continuity between the latest prophets and the Aramaic translation), and that the translation evoked a storm of criticism, “rocking Erez Israel over an area of 400 parasangs by 400 parasangs.” The same account continues that a Heavenly Voice came forth,

demanding to know who it was that had revealed divine mysteries to humans, and Jonathan replied that he had done so, not for the sake of personal honor “... but in order that disputes should not multiply in Israel” (Meg. 3a). It would appear that the translation was midrashic, and it is possible that it contained eschatological elements. In the same passage it is stated that Jonathan was desirous of translating the Hagiographa also, but a Heavenly Voice deterred him, saying “Enough.” It has been suggested that the Targum to Job, which Gamaliel the Elder ordered to be hidden away (Shab. 115a), was the work of Jonathan, and that the ensuing furor deterred him from continuing with his self-appointed task. The extent to which the existing Aramaic translation of the Prophets is derived from the Targum attributed by the Talmud to Jonathan is difficult to say. Yet, it is clear that there is no connection between Jonathan and the Aramaic translation of the Pentateuch at first called *Targum Erez Yisrael* and later *Targum Yerushalmi*. It was erroneously attributed from the 14th century to Jonathan, because the initials ך״ן were taken to refer to Targum Jonathan instead of *Targum Yerushalmi* (Palestinian Targum).

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

JONATHAN THE HASMONEAN (also called **Apphus**; d. 143 B.C.E.), head of the Jewish state (160–143); youngest son of *Mattathias. Jonathan fought, together with his brother Judah Maccabee, in the first battles at the beginning of the Hasmonean revolt and took over the command after the latter's death. In the disastrous encounter at Elasa (160 B.C.E.) Jonathan assumed the command and took refuge with his followers in the wilderness of Tekoa. Here he was ineffectually attacked by *Bacchides, the Syrian commander, and succeeded in inflicting serious losses on the enemy. Bacchides thereupon returned to Judea. After the death of the high priest *Alcimus, Bacchides went back to Syria, but was persuaded by the Hellenists to return in the hope of attacking Jonathan by surprise. When the plan failed, Bacchides turned against those who had urged his return, while Jonathan seized the opportunity to proffer a peace pact. This was agreed upon and Jonathan returned the prisoners in his hands. From about 158–157 Jonathan resided at Michmash as the *de facto* leader of the Jewish people, without any official status. In the civil war between *Alexander Balas and *Demetrius I for the Syrian throne Jonathan supported the latter, and after receiving various concessions removed his headquarters to Jerusalem (153). The hostages in the *Acra citadel were released and, to the dismay of the Hellenists, Jonathan was permitted to recruit an army. His first act was to fortify Jerusalem. Alexander Balas, equally anxious to secure Jonathan's support, offered him even more attractive terms than Demetrius, including appointment as high priest. Jonathan accepted, and took up his duties as high priest on the festival of Tabernacles in 153. He remained loyal to his pa-

tron despite further extravagant offers from Demetrius. After Demetrius was killed in battle (150), Balas invited Jonathan to the celebration of his marriage to Cleopatra, daughter of Ptolemy Philometor. Jonathan was royally received and was appointed *strategus* and *meridarch*, thus acquiring both military and civil authority. During the ensuing struggle against Demetrius II for the Syrian throne, Jonathan remained loyal to Balas, who rewarded Jonathan with the city of Ekron and its environs for his defeat of the army of Appolonius in a campaign along the coast. After the death of both Balas and Ptolemy Philometor, Demetrius II emerged victorious from the struggle. When Jonathan sought to extend his authority in Judea by besieging the Acra citadel, the irate monarch summoned him to an audience at Acre. Although he did not raise the siege, Jonathan went laden with presents, and an agreement was reached whereby the Samaritan districts of Lydda, Aphaerema (Ephraim), and Ramathaim were added to Judea, the whole of which was exempted from taxes. Jonathan's status as high priest and leader was confirmed. In matters of domestic policy he took care not to appear as the sole ruler, and the "elders of the nation" are always mentioned as supplementing his authority. The internal struggle in Syria flared up again when *Tryphon sought to wrest the crown from Demetrius II. Jonathan at first gave his support to Demetrius, sending an army to help suppress the rebellion against him in Antioch, but he went over to Tryphon's camp when Demetrius reneged on his agreement to hand over the Acra citadel to him. Uneasy over his ally's strength, Tryphon persuaded him to disband most of his army, promising to award him Acre and other cities. When Jonathan arrived at Acre, Tryphon ordered him seized and his companions put to death. In addition, he took two of Jonathan's sons hostage and extorted large sums of money. In frustration at the failure of his assault upon Jerusalem, Tryphon put Jonathan to death. The fate of his sons is unknown. Jonathan was succeeded by his last surviving brother *Simeon. Josephus (*Life*, 4) claimed descent from a daughter of Jonathan. Notwithstanding his tragic end, Jonathan may be regarded as the true founder of the Hasmonean state.

[Lea Roth]

JONATHAN SON OF ABSALOM, one of the army commanders of *Simeon the Hasmonean. Jonathan was sent to Jaffa in 135 B.C.E. by Simeon, who feared that the local population might surrender to *Tryphon. Jonathan succeeded in holding the city after having driven out the gentile population. Some identify him with Mattathias b. Absalom, but it seems more likely that Jonathan and Mattathias were brothers who belonged to the Hasmonean family.

[Edna Elazary]

JONAVA (Rus. **Janovo**), town in Lithuania, northeast of Kovno. Jews were invited to settle there when the town was founded in 1775. They numbered 813 in 1847. Jonava developed through its position at the junction of the routes to the Baltic Sea (Viliya River, the Romny–Libava railroad) and on the St Petersburg–Warsaw road. The surrounding forests supplied timber for the local industry (carpentry, furniture, matches) and for export. There were 3,975 Jews living in Jonava (80% of the total population) in 1897. The town was destroyed by fire in 1905 but was quickly rebuilt. In the spring of 1915 the Jews in Jonava were expelled to the Russian interior, and only part of them returned. The community numbered 1,800 in 1921 and 3,000 (60% of the total population) on the eve of the Holocaust. The Germans occupied the town on June 22, 1941. On June 29, 2,108 Jews were executed in the woods outside the town.

Jonava was the birthplace of the poet Morris *Vinchevski and the scholar Israel *Davidson.

[Yehuda Slutsky]

JONG, ERICA (1942–), U.S. novelist and poet. Born Erica Mann in New York, where she was educated and began to write poetry, she lived in Heidelberg, Germany, from 1966 to 1969, where her husband (from whom she was later divorced) was serving in the U.S. Army. Her experiences there were featured in the autobiographical novel *Fear of Flying* (1973). In Germany she continued to write poetry which began to evolve a feminist outlook. In 1971, she published her first collection of poetry, *Fruits and Vegetables*, much of which explored the position of women as artists. Her second volume of poetry, *Half-Lives* (1973), continued to explore feminist and psychological issues.

The publication of *Fear of Flying* established her popularity as a novelist. The novel, which describes the search for self-identity and analyses the upbringing, neuroses, and sexuality of its heroine, Isadora Wing, mirrored much of Jong's own intellectual background and Jewish upbringing. It includes a chapter describing her life in Germany and its effect on her Jewish consciousness. The novel's sexual frankness sparked much controversy.

In 1977, she published her second novel, *How to Save Your Own Life*, a sequel to *Fear of Flying*, which explored Isadora Wing's experiences with fame, divorce, and new relationships. This was followed in 1980 by *Fanny: Being the True History of the Adventures of Fanny Hackabout-Jones*, a contemporary "18th-century novel" describing the adventures of a female Tom Jones.

Jong has also published volumes of poetry, *Loveroot* (1975) and *At the Edge of the Body* (1979). Numerous novels and books of poetry followed. In 1994 Jong published her autobiography, *Fear of Fifty*, followed in 2006 by *Seducing the Demon* on the writing life. In 1982 she was awarded title of Mother of the Year, while she served as president of the Au-

thors Guild of the United States between 1991 and 1993. In 1998 she published a collection of essays. *What Do Women Want?* She is regarded as one of the most significant authors to have been produced by the feminist movement.

JONG, LOUIS (Loe) DE (1914–2005), Dutch historian. Born in Amsterdam into a secular socialist family, De Jong studied history in Amsterdam and started his career in 1938 as foreign editor of the anti-Nazi weekly *De Groene Amsterdammer*. Upon the German invasion in May 1940 De Jong and his wife managed to flee the European mainland, leaving behind his parents, sister, and twin brother – none of whom survived the war. De Jong spent the war years in London, working for Radio Oranje, the voice of the Dutch government-in-exile. He also wrote four volumes on the events in the occupied Netherlands.

In September 1945 De Jong was appointed head of the Netherlands State Institute for War Documentation, which had been founded in Amsterdam immediately after the liberation. In 1953 he earned his doctorate with a study of the German fifth column. In 1955 he was commissioned by the government to write the history of the Netherlands in World War II. Between 1969 and 1991 *Het Koninkrijk der Nederlanden in de Tweede Wereldoorlog* (“The Kingdom of the Netherlands in World War II”) was published in 14 volumes.

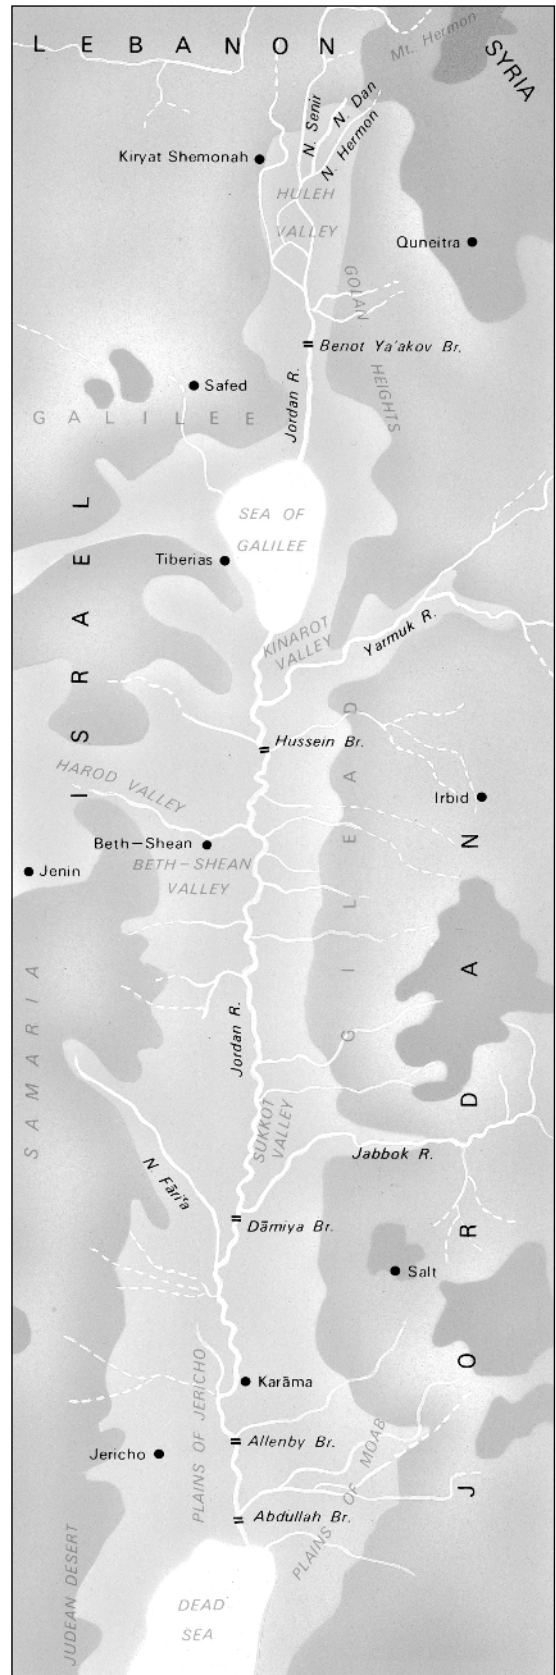

Aside from his position as head of the RIOD, De Jong also gained recognition and respect in television appearances. He worked as a commentator on international current affairs and from 1960 to 1965 presented a series on the Netherlands during World War II.

He always remained an assimilated, secular Jew. During the Six-Day War (1967), however, he identified with the Israeli cause. De Jong became more and more a conscious Dutch Jew rather than a Dutchman of Jewish descent.

[Conny Kristel (2nd ed.)]

JORDAN (Heb. יַרְדֵּן), river flowing from the Anti-Lebanon mountains south through Lake Kinneret and emptying into the Dead Sea. The name Jordan is first attested in the 13th-century B.C.E. Papyrus Anastasi 1 (13:1). In the Septuagint the Hebrew form Yarden is transliterated Yordanes or Yordanos. Some scholars argue that the name is derived from an Indo-European root such as the Persian *yar* (“year”) and *dan* (“river”), i.e., a river that flows the year round; others note similarly named rivers in Crete, Greece, and Asia Minor. The majority view, however, is that the name Jordan is connected with the Semitic root *yarod* (“to descend”) or the Arabic *warad* (“to come to the water to drink”). The alternative Arabic name of the Jordan – Nahr al-Sharī’a (“the water trough”) – sometimes

The Jordan River and Valley.

used with the addition *al-kabīr* (“the great”) – has the same meaning. The talmudic interpretation (Bek. 55a) of the name Jordan as a combination of *ye’or* (“river”; actually an Egyptian word) and *Dan*, i.e., the “river that descends from Dan” was generally accepted in the Byzantine period and the Middle Ages but it is no longer regarded as valid. The Jordan has its source in three headstreams whose waters are drawn mainly from the precipitation on top of Mount *Hermon and also from scores of springs. Near Sedeh Neḥemyah in the *Ḥuleh Valley they unite into a single watercourse to form the river Jordan. The three streams are Naḥal Senir, issuing from the foot of the Hermon or its western side opposite the Lebanese village Ḥaṣbiyyā and hence called Nahr al-Ḥaṣbānī in Arabic; Naḥal Hermon emerging from the Paneas cave in the village of *Banias, and thus called Nahr al-Bāniyās in Arabic; and Naḥal Dan (Ar. al-Liddhān) rising at the foot of the ancient Tell Dan (Ar. Tell al-Qāḍī), near kibbutz Dan. The Senir is the longest of the sources. From its start until it empties into the *Dead Sea, the Jordan covers a distance of c. 127 mi. (205 km.) and its meanderings between the Sea of Galilee and the Dead Sea increase its length to c. 186 mi. (300 km.). The Senir in its upper course is an intermittent stream (called Wadi al-Taym) which covers a distance of c. 15½ mi. (25 km.) before reaching the Ḥaṣbiyyā spring. During heavy rainstorms it receives much surface runoff. The Senir discharges an annual average of c. 152 million cu. m. of water into the Jordan of which about 37% is runoff; its seasonal and annual variations are considerable. Naḥal Hermon (Banias) provides c. 123 million cu. m. of which 12.5% is runoff and Naḥal Dan discharges c. 240 million cu. m., almost all from springs and with little fluctuation.

The drainage area of the Jordan is 6,380 sq. mi. (16,335 sq. km.), 5,312 sq. mi. (13,600 sq. km.) south of Lake *Kinneret (the Sea of Galilee) – 4,531 sq. mi. (11,600 sq. km.) to the east, and 781 sq. mi. (2,000 sq. km.) to the west. The water network of the Jordan is asymmetrical; the watershed between the Jordan and the Mediterranean streams is close to the Jordan while the watershed of the desert streams east of it is farther away. Since the drainage of the Ḥuleh Valley, the water flows through two canals, one to the west c. 12 mi. (19.5 km.) long, and one to the east c. 10 mi. (16 km.) long, with a lateral canal connecting them. In the area of the drained Ḥuleh Lake the tributaries unite into a single stream and flow through the old riverbed which has been deepened to provide an exit for the waters of the lake and the marshes. In descending the 10 mi. (16 km.) between the drained area and Lake Kinneret, the Jordan falls from approximately 197 ft. (60 m.) above sea level to 695 ft. (212 m.) below it. The point of sea level is reached about 7.5 mi. (12 km.) north of Lake Kinneret. Before emptying in Lake Kinneret, the Jordan creates a small delta. Between its entrance and outlet from Lake Kinneret (c. 13 mi.; 21 km.), much of the water of the Jordan is carried off by evaporation but it is replenished from streams and springs, both above and below the water level. Some contain salts, especially chlorides, and the water is much more suitable for irrigation before reaching Lake Kinneret than after leaving it. For political reasons the

pumps for the National Water Carrier had to be installed, in the 1960s prior to the Six-Day War, at Lake Kinneret and not in the Ḥuleh Valley. The amount of water flowing out of Lake Kinneret is now regulated, according to the requirements of irrigation, by sluice gates installed at Deganyah Alef. Before that, a maximum of 915.2 million cu. m. was recorded for the year 1929 and a minimum of 466 million cu. m. the previous year. A monthly maximum of 227 million cu. m. was once registered for March and a minimum of 29 million cu. m. for August. The *Yarmuk, the Jordan’s largest tributary, empties into it 5 mi. (8.5 km.) south of Lake Kinneret. It carries an average of c. 450 million cu. m. a year, mostly runoff water. Its annual maximum was 893 million cu. m. in 1929 and its minimum, 268.5 million cu. m. the previous year. Exploiting the floodwaters of the Yarmuk is possible only by diverting the river to Lake Kinneret or by constructing a high dam of 558 ft. (170 m.) or more in its gorge. The Jordan discharges c. 875 million cu. m. into the Dead Sea a year; its yearly fluctuations are great and are caused mainly by the Yarmuk: in 1933, 287 million cu. m. and in 1935, 1,313 million cu. m. On its way to the Dead Sea the Jordan loses a great quantity of water through evaporation – up to 1,900 m. a year near the Dead Sea – and through seepage. Only some 18% of the rainfall in its drainage area reaches the Dead Sea through the Jordan’s channel. Between Lake Kinneret and the Dead Sea the Jordan constitutes a geologically recent river. In the Upper Pliocene period, Lake Kinneret possessed an outlet to the Mediterranean when the Jordan together with the Yarmuk apparently flowed to the Harod Valley and the Kishon River. In the Middle Pleistocene, Lake Kinneret and the Dead Sea formed a single saline lake which deposited thick strata of Lisan marl. At the end of the Middle Pleistocene the two lakes separated and a channel was created through which the water flowed from the upper to the lower lake. As the two lakes shrank in size, the channel became longer and deeper. The bed of the ancient lake is the *kikkar* of the Jordan on both sides, called Ghawr in Arabic. Within the *kikkar* (central part of the Jordan Valley) is a broad plain 1–2 mi. (2–3 km.) wide through which runs the narrow channel of the Jordan. Only when the river floods do its waters inundate the broad plain, called *ge’on ha-Yarden* (Ar. *al-Zawr*). Because of the great heat and humidity in the *ge’on ha-Yarden* a dense vegetation covers both banks of the river. The Jordan weaves its course through the soft marl strata which are 164 ft. (50 m.) thick in the northern part of the *kikkar* and up to 492 ft. (150 m.) thick in the south. Because of the great quantity of eroded material which the Jordan carries and deposits in its channel, forming sandbars, and because the high steep banks of the plain occasionally collapse, fall into its bed, and dam it, the path of the Jordan leaves its channel. Sometimes in its meanderings it cuts through a serpentine loop shortening the course and many oxbows thus remain which are clearly seen in air-photos. In flood times the water also reaches these abandoned channels. South of the *Jabbok’s outlet into the Jordan (25 mi. (38 km.) north of the Dead Sea) are the remains of a bridge above an abandoned channel. The outlet of the Jordan

into the Dead Sea is a delta of 5.8 sq. mi. (15 sq. km.). The river splits into two arms, a western one and a shorter eastern one, c. 4,100 ft. (1,250 m.) apart. From the coarse sediment the western arm forms a shoal strip c. 5,900 ft. (1,800 m.) long. West of this strip extends a lagoon, 11,480 ft. (3,500 m.) long and c. 1,640 ft. (500 m.) wide, a tongue c. 330–660 ft. (100–200 m.) wide separates the lagoon from the open waters of the Dead Sea which in the winter of 1954 dropped to a low of c. 1,300 ft. (398 m.) below the level of the Mediterranean. At present the Jordan falls c. 3,018 ft. (920 m.) from the springs of the Senir to the Dead Sea. The delta below the surface of the Dead Sea is small even when compared with several small streams in the Judean Desert because of the sharp declivity of its bottom. The light muddy waters of the Jordan spread like a fan with a radius of several miles over the heavy waters of the Dead Sea. The influence of the Jordan on the upper level of the Dead Sea is evident for c. 31 mi. (50 km.) to the south. The Jordan is not navigable; only with great difficulty can small flat boats sail between Lake Kinneret and the Dead Sea and they must be towed over the sandbars.

History

In the Bible the Jordan is associated in particular with *Jericho and is frequently mentioned with that city in whose vicinity the Israelites crossed the Jordan (Num. 22:1, et al.). Other biblical terms connected specifically with the Jordan are the *kikkar* (usually translated “plain of the Jordan,” Gen. 13:10, et al.) which refers to the cultivable middle section of the three terraces composing the Jordan Valley. (It was this part of the valley whose fertility attracted Lot recalling “the garden of the Lord, like the land of Egypt.”) The upper lands of the Jordan Valley are called *geliot ha-Yarden* (the “region about the Jordan”; Josh. 22:10). The lowest terrace, bordering on the river itself and densely wooded, is called *ge'on ha-Yarden* (“thickets of the Jordan”; Jer. 49:19); there the “sons of the prophets” went to cut wood (II Kings 6:4); it was the haunt of dangerous beasts, even lions (Jer. 49:19, et al.) and is cited as the opposite of lands where man is safe.

In biblical times the Jordan was crossed by means of its fords; Jacob passed over it with a staff on his way from Beth-El to Haran (Gen. 32:10[11]) and in returning recrossed it into Canaan near Succoth. The most famous passage of the Jordan was that of the Israelites opposite Jericho, as related in Joshua 3. As it was very difficult to ford the river at that place and in that season the sudden cessation of the Jordan's flow was regarded as miraculous. Such occasions, however, have actually been recorded several times in history: in 1267 the Jordan ceased flowing for eight hours; in 1546, for two whole days; and in 1927 for 21½ hours. In all three cases the cessation was the result of earthquakes which caused the high banks to collapse blocking the river bed and stopping its flow. The crossing of the Jordan is recorded as one of the great miracles of the Lord (Ps. 114:3ff.) and was remembered as such in later times. The river thus acquired a sacred character; its waters were expected to heal Naaman (II Kings 5:10–14). Other miraculous cross-

ings were made by Elijah before he was taken up to heaven near the Jordan and by Elisha, both accomplished with Elijah's mantle. As a serious obstacle to movement the Jordan played an important part in Israel's military history. The occupation of the fords was generally intended to complete the discomfiture of a retreating army or to prevent an attack. Thus the fords were taken by Ehud after the assassination of Eglon king of Moab (Judg. 3:28) and by Gideon to deny passage to the Midianites and the Ephraimites (*ibid.* 7:24; 12:5–6). The Jordan was crossed mostly on foot or on animals but David and his army may have used a ferryboat (II Sam. 19:19). In prebiblical times the Jordan was not only a military obstacle but also a political boundary. With the decline of settlement east of the river in the Middle Bronze Age, the limits of the Egyptian province of Canaan – as recorded in the biblical description of the boundaries of the Promised Land (Num. 34) – extended along the Jordan from the Sea of Chinnereth to the Dead Sea (*ibid.* 34:12). After the establishment of the kingdoms east of the Jordan, the river formed the boundary of the kingdoms of Sihon the Amorite and of Og king of Bashan. Their territories were allotted to the tribes of Reuben, Gad, half of the tribe of Manasseh. Thus from an interstate boundary, the Jordan became a tribal one. Its function as the eastern border of Canaan, however, was well remembered and it was the eastern tribes who were anxious not to lose contact with their western brethren (Josh. 22). Throughout Israelite history its people held lands on both sides of the river, although its main territory was west of it. In later times it was usually the weaker party which retired east of the Jordan – as did Abner with Ish-Bosheth the son of Saul after the defeat at Mount Gilboa (II Sam. 2:8) and David after the initial success of Absalom's rebellion (*ibid.*, 17:22). In post-biblical times the Jordan formed the eastern boundary of the Persian and Hellenistic province of Judea, although the land of the Tobiads east of the Jordan was also Jewish territory. The Hasmoneans freely crossed the river to fight on both banks; Jonathan made one such passage against the army of Bacchides who tried to use the Jordan as a tactical barrier (I Macc. 9:43). Alexander Yannai retired beyond the Jordan from the army of Ptolemy, king of Cyprus, but throughout the Hasmonean period, its kingdom extended on both sides of the river. Even under Roman domination the Jewish district of the Perea (“the land beyond” [the Jordan]) remained part of Judea. In the Hellenistic and Herodian periods the digging of irrigation channels in the Jordan Valley led to its economic development and it became one of the most fertile areas of Erez Israel. In March 68 c.e. during the Jewish War, the Jews retreating from Bethennabris across the Jordan fords were surprised by a sudden rise of the river's level; they were partly drowned and partly destroyed by the enemy (Jos., Wars, 4:432–436). Jewish villages continued to exist on both banks of the lower Jordan up to the Byzantine period. In the Talmud the Jordan is mentioned as one of the four rivers of the Holy Land (TJ, Kil. 9:5, 32d; BB 74b) and the word is regarded as derived from *Yored Dan* (Bek. 55a). According to the same source, the Jordan issues from a cave at Paneas,

traverses the seas of Samkho (Ḥuleh), Tiberias, and Sodom (Dead Sea), and falls into the Mediterranean (!). It is called the Jordan only from Bet Yerah and below (the standard version has "Bet Jericho"). In Roman and Byzantine times the Jordan did not form a boundary; the provinces of Palaestina prima and secunda both overlapped it. The first three attempts to bridge the river were apparently made then: one at the Ford of Jacob's Daughters (Gesher Benot Ya'akov) and two below the Sea of Galilee at Sinnabra-Bet Yerah and Gesher Naharayim (Jisr al-Mujāmi'). Two ferries are marked on the Jordan on the Madaba Map, one at Aenon below Beth-Shean, and the other near Archelais (Khirbat 'Awja al-Taḥtā). The waters of the Jordan became sacred in Christian eyes because on its banks John the Baptist performed baptisms and there too Jesus was baptized. The exact location of his baptism is in doubt: the usual assumption, based on Matthew 3 and Mark 1:5ff., is near Jericho, but another tradition, based on John 3:23, places it at Aenon near Salim in the vicinity of Beth-Shean.

After the Arab conquest the Jordan continued to separate the province of Filasṭīn (formerly Palaestina prima) from Palaestina secunda, now called al-Urdunn ("the Jordan") after the river itself. In Crusader times a series of bridges were built or repaired across the river which then did not form a boundary; one at the Ford of Jacob's Daughters (end of the 13th century); one known as the Bridge of Sinnabra (12th century), one at Naharayim (before 1300) and one at Dāmiya, built by Baybars in 1266/67. During the construction of the last, the waters of the Jordan stopped flowing on December 7/8 because of a landslide. During the Mamluk and Turkish periods the Jordan Valley was first included in the *mamlaka* ("province") of Damascus, and later in the sanjak of Nablus. It was only in 1921 with the setting up of the Emirate of Transjordan that most of the Jordan again became a political frontier, remaining so through the Mandate period up to 1948. In the War of Independence the Arab Legion of Transjordan occupied the mountains of Nablus and Hebron west of the river. Syrian attempts to cross the Jordan at Deganiyah were foiled; the Syrian bridgehead at Mishmar ha-Yarden was evacuated after the armistice in 1949. From 1948 to 1967 the upper course of the Jordan was inside the territory of Israel and the lower course in the Kingdom of Jordan. In 1953 Israel started work south of the Ḥuleh Lake, in the demilitarized zone at the Syrian border, on its project to channel part of the Jordan waters to the Negev. This project evolved into an international issue debated at the UN Security Council. In 1955 Israel accepted the so-called Johnston plan, initiated by the United States government, for the utilization of the Jordan and Yarmuk waters by dividing them among Israel, Syria, Lebanon, and the Kingdom of Jordan, but the Arab League rejected the plan. Israel then decided to implement its part of the Johnston plan by diverting water from Lake Kinneret to the Negev through the construction of the National Water Carrier. In 1964 the Arab States tried to frustrate Israel's plans by diverting the headwaters of the River Jordan into Arab territories, but in 1965 Israel took military action against Syrian preliminary works at the head-

waters, and Israel's water carrier to the Negev was completed without further interference.

After the Six-Day War of 1967 the Jordan from Gesher southward to the Dead Sea formed the ceasefire line between Israel and Jordan; communications between the two banks were kept open by the Israel Defense Forces. The Senir (Ḥaṣbiyyā) source of the Jordan was in Lebanese territory and the Hermon (Bāniyās) and Dan sources were held by Israel.

[Abraham J. Brawer and Michael Avi-Yonah]

JORDAN, CHARLES HAROLD (1908–1967), U.S. social worker. Jordan was born in Philadelphia and educated in Germany. He joined the *American Jewish Joint Distribution Committee (JDC) in 1941 as a social worker in Cuba. After service in the U.S. Navy during World War II, Jordan became JDC director in Shanghai, responsible for the care and emigration of Jewish refugees. After serving as head of the JDC Emigration Department in Paris from 1948, Jordan became JDC assistant director general, and in 1955 director general in Europe. In these capacities Jordan was a key figure in the mass migration of Jews to Israel from Europe and the consequent closing of the displaced person camps in Europe. He sponsored the development of *Malben in Israel for immigrant social care, and the work of the JDC in North Africa. In 1965 he became executive vice chairman of the JDC. As chairman of the Governing Board of the International Council of Voluntary Agencies from 1962, Jordan gained recognition as an international expert in his field. In 1967 he became chairman of the American Council of Voluntary Agencies for Foreign Service, and interested himself especially in world refugee problems. On August 16, 1967, he was mysteriously murdered in Prague.

[Yehuda Bauer]

New light has since been thrown on Jordan's death. His body was found floating in the Vltava River in Prague, and the Czechoslovak government issued a terse statement that he had committed suicide.

According to Josef Frolik, who for 17 years worked for Czechoslovak intelligence and later defected to the United States, Jordan was suspected by the Arabs of being an Israeli spy and was kidnapped after leaving his hotel to buy cigarettes. He was brought to the Egyptian embassy for interrogation, during which he was killed by three Palestinians. Early the next morning his body was carried out to a car by four men and thrown into the river. The Czech authorities were aware of the facts but decided not to inform the American embassy of the fate of Jordan. Three days after the body was found the First Secretary at the Egyptian embassy at Prague left the country at the government's request, and the three Palestinians left a week later.

JORDAN, HASHEMITE KINGDOM OF (Ar. *al-mamlaka al-Urdunniyya al-Hashimiyya*), an independent state in W. Asia, bordering on Israel and the West Bank of the Jordan River in the west, *Saudi Arabia in the south and south-east, *Iraq in the east, and *Syria in the north. Transjordan, the territory east of the Jordan River – including the biblical *Bashan and *Gilead – was an important center of Israelite and Jewish life in biblical times and until well after the destruction of the Second Temple. Under Byzantine rule the Jewish population declined rapidly, and after the Muslim conquest there were only occasional cases of Jews living there, though “the Land of Gilead” played no small part in Zionist dreaming and planning.

Transjordan was included in the area of the British *Mandate for Palestine, but in 1921 *Abdullah, a son of the sharif Hussein of Mecca, who had moved into the territory with a band of Arab guerrillas, was recognized by Winston *Churchill, then British colonial secretary, as emir of Transjordan, and the emirate was later excluded from the applicability of the articles in the Palestine Mandate relating to the Jewish National Home. At the time it had a population of some 200,000, mostly Bedouin. In 1946 Abdullah was crowned king of Transjordan, and its independence was recognized by the British.

In the Arab-Israel war of 1948 and its aftermath, the Jordanian Arab Legion occupied East Jerusalem and the Arab-inhabited areas of Judea and Samaria on the west bank of the river, which were finally unified with the east bank under the name of the Hashemite Kingdom of Jordan in April 1950. Israel and most Arab states defined this step as a unilateral act of annexation, though it was recognized by Britain. The influx of Palestinians enormously swelled Jordan's population, which in 1965 totaled some 2,000,000, of whom about 900,000 lived on the West Bank.

In the *Six-Day War of 1967 Israel occupied Judea and Samaria, leaving Jordan in control of the area of the old emirate, apart from adjustments (in 1965) of the frontier with Saudi Arabia. The area of Jordan thereafter was about 34,500 sq. mi. (about 86,000 sq. km.) and its population was estimated at 1,500,000, including a net influx of some 250,000 persons from the West Bank after the 1967 War. *Amman, the capital, has grown within fifty years from an inconsiderable village into a sprawling city of over 400,000 inhabitants. At the turn of the 21st century Jordan's population exceeded five million, over 40% of which lived in the greater Amman-Zarqa area.

Geography

The country is divided into three main zones, all running north-south: the Jordan river depression, the hill country, and the arid plateau sloping east toward the Euphrates and the Persian Gulf. The first two zones are cut laterally by steep-walled valleys opening into the Jordan depression, the Dead Sea and the Aravah, making north-south communication difficult except by detours through the desert in the east. Only the second zone is suited by nature to settlement on a considerable

scale, possessing a bracing climate, good soil, and relatively abundant winter rain; here a settled, grain-growing population provided the country with its main sources of livelihood until the revolutionary changes from the late 1940s on. The east-west historical and administrative differentiation of these zones is parallel to the geographical division. From the Syrian border (the *Yarmuk River) to the biblical Yabok River (Wadi Zarka): the Ajlun area (biblical *Gilead); from the Yabok to the *Arnon River (Wadi Mujib): the Amman and Balqa area (biblical *Ammon); from the Arnon to *Zered River (Wadi Hasa): the Karak area (biblical Moab) and from there to the Red Sea: the Ma'an area (biblical *Edom). The population speaks Arabic, except for the elder generation of some 15,000 Circassians, who cling to their Caucasian tongue. Sunni *Islam is the prevailing religion. Christians, mostly Greek Orthodox, number 5–10%. There are probably less than 50,000 true nomads or Bedouin, though a far greater number are still tribally organized.

Economy

The economy of Jordan has always rested on heavy subsidies from abroad. These were provided in the main by Britain till 1957, then by the United States, and after the Six-Day War by the oil-rich Arab states of Saudi Arabia, *Kuwait, and *Libya. Another important item in the balance of payments is money transfers from Jordanians abroad. Jordan's international trade has always been unbalanced, exports paying in 1966 for only about one-eighth of imports; the picture has grown even darker since, and the tourist trade suffered disastrously after 1967. Main exports are phosphates, Dead Sea minerals, and agricultural produce. Akaba, Jordan's only port, is distant from the center and suffered from the closure of the Suez Canal. The outlet via *Beirut was hampered by the chronic political tension with Syria. The outsized army provided the livelihood of an important sector of the population. In the early 1980s the Jordanian economy showed an impressive recovery, but from the second half of the 1980s it again plummeted, owing to the termination of the Iran-Iraq war (from which Jordan had benefited considerably), the *intifada*, and the Iraqi invasion of Kuwait. In the early 2000s Jordan's economy suffered mainly from an unemployment rate of over 20% and from an external debt of over \$7 billion. King Abdallah II has invested most of his time and energy in economic affairs.

Governance

Jordan's constitution (1952, with later amendments) describes the country's government as “a hereditary monarchy, parliamentary in form.” There are two houses: the Senate, appointed by the king, and the Chamber of Deputies, elected on the basis of general (in practice male) franchise. The Council of Ministers is responsible to the Chamber of Deputies. In reality, however, the king has always exerted much greater influence than the constitution would suggest. Their unpopularity with a majority of their subjects – especially Palestinians – compelled Abdullah first, and later his grandson *Hussein, to set

aside “the will of the people” to a considerable extent. Their rule was maintained, despite internal disaffection and calls from *Cairo, *Damascus, and *Baghdad for Hussein’s destruction as a “tool of imperialism,” by favors proffered and withheld, press supervision, and directed elections, while coercion – from martial law and the suspension of parliament to the wholesale imprisonment and exile of malcontents – played a prominent part. The army, recruited as far as possible from the East Bank and preferably from Bedouin, was considered the main prop of the regime, its senior officers being hand-picked for their loyalty. Shortly before the 1967 war, a new press law forced all newspapers to close down, and carefully circumscribed the conditions under which new ones might appear.

Although the Six-Day War improved Hussein’s relations with the Arab world, his position within his own country soon started to deteriorate. Numerous organizations for “the liberation of Palestine” succeeded in constituting themselves as “kingdoms in themselves,” first in and near the Jordan Valley, and then in mounting measure in the interior. Various agreements to coexist failed, mainly because the Palestinian leaders would not, or could not, coerce their followers. By the summer of 1970 the sovereignty of the state had become nonexistent. In the first half of September, when an attempt on Hussein’s life by one of the Palestinian organizations (The Democratic Front for the Liberation of Palestine) was followed by a virtual siege laid on Hussein’s residence, the king realized the inevitability of armed confrontation. A week’s warfare, mainly in and about Amman, went in favor of the army. By July 1971 the Palestinian organizations had been by and large liquidated in Jordan and subsequently moved mostly to *Lebanon.

Jordan sat out the 1973 war with Israel. After Anwar *Sadat’s visit to Jerusalem in 1977, Jordan–PLO relations improved.

King Hussein’s historic decision to give up Jordan’s claim to the West Bank of the Jordan River in 1988 and food riots in southern Jordan in 1989 paved the way for a democratization process in Jordan’s political life. General elections (the first since 1967) were held in 1989. A new Chamber of Deputies was democratically elected by the inhabitants of the East Bank only. Political parties were formed and political freedoms were restored. The democratic process was somewhat slowed down in the late 1990s, out of fear that more political reforms (as demanded by the opposition, whose backbone was the Islamic movement) might challenge the authority of the monarch.

In 1994 Hussein became the second Arab head of state, after Sadat of Egypt, to sign a peace treaty with Israel. During the *Rabin years relations between the two countries were warm, but cooled off somewhat with the Likud in power under Binyamin *Netanyahu and with the second intifada.

When King Abdullah II came to the throne in 1999 after the demise of his father, King Hussein, the democratization process had almost completely stopped, as the cross-

purposes of democracy and survival of the regime seemed unbridgeable. From 2003 there have been more than a few indications that Abdullah had decided to return to the democratization path.

[Uriel Dann / Joseph Nevo (2nd ed.)]

JORTNER, JOSHUA (1933–), Israeli physical chemist. He was born in Tarnow, Poland and gained his Ph.D. from the Hebrew University of Jerusalem (1960). He joined the staff of the university’s department of physical chemistry (1961–65) before moving to the department of chemistry at Tel Aviv University (1964) where he became professor (1966), head of the school of chemistry (1966–72) and deputy rector (1966–69), acting rector, and vice president of Tel Aviv University (1970–72). He was research associate and then visiting professor at the University of Chicago (1962–71) among many visiting distinctions. His initial research concerned energy dynamics and transfer in materials and between molecules. Later he studied order and oscillations in molecules and nanosystems including femtosecond chemistry which concerns very fast chemical reactions and biological processes such as protein folding and conformational changes. His later research concerned the fragmentation on molecular structure induced by ions and had fundamentally important implications for understanding stability in physical and biological systems and perturbing influences such as radiation effects. He continued to work actively in this field. Jortner had a major and continuing influence on the development of science and technology and on scientific education in Tel Aviv University, Israel, and the wider world. He consistently emphasized the importance of inter-disciplinary research. He served on the National Council for Higher Education and the National Council for Research and Development; he was scientific adviser to three Israeli prime ministers. He was also president of the International Union of Pure and Applied Chemistry which represents sixty member states (1998–99). His many honors include the Weizmann prize (1973), the Rothschild Prize (1976), the Israel Prize in chemistry (1982) the Wolf Prize in chemistry (1982), and the RS Mulliken Medal (1998). He was a foreign associate of the U.S. Academy of Sciences and was elected to the Israel Academy of Sciences and Humanities of which he was vice president (1980–86) and president (1986–95).

JOSCE OF YORK (d. 1190), English financier and martyr. He was a leading agent of *Aaron of Lincoln and one of the

Jewish representatives at the coronation of Richard I (1189), but escaped when the mob attacked the Jews. He survived the first attack on *York Jewry in March 1190 and led those who took refuge in the castle keep. When the keep was attacked, he died in the act of mass self-destruction, reputedly at the hand of R. *Yom Tov of Joigny. He is admiringly described as a patron of learning in the elegy on the York martyrs by *Joseph b. Asher of Chartres.

JOSELEWICZ, BEREK (Berek, son of Yosel; c. 1770–1809), colonel of the Polish armed forces, participant in the *Kosciuszko rising and the Napoleonic Wars. Born in Kretinga, Lithuania, he later became court factor to Bishop Massalski of Vilna. In the course of his assignments abroad on behalf of the bishop, he visited Paris on the eve of the revolution and there came into contact with revolutionary ideas. Later Berek and his wife Rebekah settled in Praga, a suburb of Warsaw. The vociferous debate on the status of the Jews then in progress in the Sejm (1788–92) and the movement toward Jewish *emancipation led some Jews to identify with the Polish struggle against the partition of Poland-Lithuania. At first their number was small, but when the insurrection led by Thaddeus Kosciuszko broke out in 1794, numerous groups of Jews joined in the uprising. During the siege of Warsaw, Jewish inhabitants fought alongside the Polish population of the capital against the Russian army. Berek appealed to the Jewish population to join the struggle and fight “like lions and leopards.” On September 17, the official *Gazeta Rządowa* announced that two Jews, Berek Joselewicz and Jozef Aronowicz, had requested permission to create a separate Jewish light-cavalry regiment. Warmly praising this initiative, Kosciuszko granted the request, and a regiment of 500 Jews was organized, some of them volunteers.

After the defeat of the insurrection, Berek fled to Austria and later reached France, where he established contact with Polish emigrés. Joining the French army, he served in the cavalry of Napoleon’s Polish Legion. In 1801 his unit crossed the Alps. He was promoted to the rank of captain of a dragoon regiment in the French army and was awarded the cross of the Légion d’Honneur. After the establishment of the grand duchy of Warsaw (1807), his detachment was incorporated into the regular Polish army; becoming a squadron leader, he received the order *Virtuti Militari*. Berek’s military career was greatly hampered by the antisemitism prevailing in army circles, but he was respected by the Polish liberals of his day and was admitted to the aristocratic Masonic lodge Bracia Polscy Zjednoczeni (“United Polish Brethren”). During the Austrian campaign in 1809, he commanded two squadrons of Prince Jozef Poniatowski’s army. After fierce resistance against the numerically superior Austrian forces, Berek was killed at Kock in May 1809. He became a hero and was often cited in apologetics in support of assimilation in Poland.

His son Joseph *Berkowicz was also an army officer.

[Nathan Michael Gelber]

JOSEPH (Heb. יוֹסֵף, יְהוֹסֵף), son of *Jacob and Rachel. He was born in Paddan-Aram after his mother had been barren for seven years (Gen. 29:20, 30; 30:22–24, 25; 31:41). Nothing is related of his childhood.

Joseph and His Brothers

At the age of 17 Joseph tended his father’s sheep in the land of Canaan. He became completely alienated from his brothers because he used to report their misdeeds to their father, because Jacob showed obvious favoritism toward him even to the extent of presenting him with a ceremonial robe, and because of a series of dreams in which he, Joseph, was the object of his brothers’ adoration (37:1–11). On one occasion Jacob sent Joseph to visit his brothers and to report back on their welfare. The road led from Hebron to Shechem and on to Dothan, a route which corresponds to the ancient north-south road west of the Jordan which traversed the central hill country along the entire length of the Palestinian watershed. Each of the cities mentioned was an important site, whose mention would have resonated with the ancient audiences. When the brothers saw Joseph from a distance their hatred and hostility welled up into a desire to murder him. The present story combines different traditions about which brother attempted to save Joseph. According to Genesis 37:22, Reuben suggested it would be better to throw him into a nearby pit. He secretly hoped, thereby, to save Joseph’s life and to take him back home. When Joseph approached, the brothers stripped him of his robe and cast him into the pit.

While they were partaking of a meal, and in Reuben’s absence, a caravan of traders from Gilead bearing gum, balm, and laudanum passed by on its way to Egypt (cf. Jer. 8:22; 46:11). These items played an important role in the life and economy of ancient Egypt, and such a caravan would have come from Gilead by way of the *Beth-Shean Valley and would indeed have passed through Dothan in order to join the road leading to Egypt. At this point a different tradition surfaces, according to which Judah suggested selling Joseph to the traders who bought him for 20 pieces of silver (Gen. 37:25–6). The conflation of the two traditions is most obvious in Gen. 37:29–30, describing Reuben’s discovery that Joseph was gone. At this point the story proceeds to describe how the brothers sought to deceive their father about Joseph’s fate. They dipped the robe in the blood of a slaughtered kid and brought it to Jacob for identification. The patriarch recognized it, convinced that his son had been torn to pieces by a savage beast. He mourned for Joseph many days and his grief was inconsolable (Gen. 37:12–35).

Joseph in Potiphar's House

Meanwhile, Joseph was sold in Egypt to Potiphar, a courtier and chief steward of Pharaoh (37:36; 39:1). The sale into slavery in this manner accords with what is known from 18th-century B.C.E. and later slave inventories which well document the commercial traffic in human misery between Canaan and Egypt. Another authentic background note is the name and title of Joseph's master. "Potiphar" (*ibid.*) is generally regarded as an abbreviated form of "Poti-Phera," the name of Joseph's father-in-law (41:45), which appears in Egyptian sources as *Pa-di-pa-re*, "He whom Re (the sun-god) had given." The first two syllables are quite common in Egyptian personal names. The title "chief steward," literally "chief cook," corresponds to the title *wḏpw*, "cuisinier," which came to designate those who served as superintendents and judicial functionaries in pharaonic court, although it has parallels in Neo-Assyrian usage as well.

In his new situation, Joseph soon earned the confidence of his master, who promoted him to be his personal attendant and overseer of his estate (39:2–6), a function conforming to that frequently encountered in Egyptian texts as *mer-per*, or comptroller. Joseph's favorable turn of fortune did not last long, for after a while Potiphar's wife – unnamed in the text – attempted to seduce him. Notwithstanding her repeated blandishments, he resisted the temptation. In revenge, she slandered him before her husband, who had Joseph thrown into the prison where prisoners of the king were confined (39:7–20).

This episode in Joseph's life has aroused special interest on account of the presence of the same motif in an Egyptian narrative known as the "Tale of Two Brothers," which has been preserved in late sources, but which is undoubtedly more ancient. It tells of an unsuccessful attempt to seduce a bachelor brother-in-law, whose honor is then impugned by the temptress. The story provides local coloration for the biblical account, and if it were a popular piece of Egyptian fiction it could well have influenced the artistic form in which the biblical narrative has been presented; its moral climate is far different in that Joseph stresses the sin against God involved in the proposed act of treachery and adultery (39:9).

The focus of attention in the Genesis narrative is the nobility of Joseph's character and the salvation that came through suffering, placing the incident in the concatenation of events that led eventually to the migration of the Israelites to Egypt, their enslavement and redemption. It was precisely as a result of Joseph's innocent suffering that he was enabled to rise to power.

Joseph in Prison

During his incarceration, Joseph won the trust of the chief jailer who placed him in charge of his fellow prisoners. Among these were the chief *cupbearer, a title with Assyrian parallels, and the chief baker to Pharaoh (39:21–40:4). One night the two experienced disturbing dreams. That of the cupbearer was favorably interpreted by Joseph to mean that in three days'

time a royal amnesty would restore him to his former position. The baker's anxiety, however, was not relieved; impalement awaited him.

Joseph then took the opportunity to beg the cupbearer to use his regained influence in order to get him freed from his undeserved imprisonment. The predictions were indeed fulfilled, but the cupbearer soon forgot Joseph (40:5–23). In this connection it must be remembered that the office of chief cupbearer carried with it far more than the name implies.

Pharaoh's Dreams

Some two years later, the fateful role played by dreams in Joseph's life manifested itself again. The inability of Pharaoh's magicians and sages to interpret his dreams reminded the chief cupbearer of his own experience in prison. Joseph was brought to the palace and Pharaoh related his dreams, which the Hebrew slave proceeded to explain as portending seven years of great abundance in Egypt to be followed by a similar period of famine. Joseph then offered some unsolicited advice on how to deal with the situation. He proposed the appointment of a supreme commissioner of supplies to be aided by overseers, and the organization of a reserve bank of food during the years of plenty (41:1–36).

It should be noted that on none of the occasions in which Joseph is involved with dreams does God figure explicitly. Nevertheless, it is naturally assumed that He is the ultimate source of the message being conveyed. Since throughout the ancient Near East, including Israel, dreams were recognized as a means of divine communication (cf. 20:3; 28:12–15; 31:11–13, 24), it is not surprising that they were productive of anxiety, heightened in this instance by their duplication. The science of dream interpretation was especially well developed in Egypt and in the rest of the ancient Near East. Neither Joseph nor his brothers needed the services of an interpreter and Joseph himself was careful to disclaim any innate ability, simply ascribing all to God (40:8; 41:16).

Further local background in the narrative of Pharaoh's dreams is provided by both the imagery and vocabulary employed. It is not an accident that the king saw cows rather than sheep, for the latter played a very minor role in the Egyptian economy while cows were abundant and important. Moreover, the motif of seven cows is attested in the literature. At the same time, the Hebrew terms used for the Nile (*ye'or*, 41:17) and for the reedgrass (*ʾahu*, 41:18) are borrowed from Egyptian. As for the predicted seven year cycles, this, too, is a very common motif in ancient Near Eastern sources. A special Egyptian twist is given to the famine cycle through a text dealing with the reign of the Third Dynasty king Djoser (c. 28th century B.C.E.), which reports on a severe famine attributed to the failure of the Nile to rise for seven years.

Joseph's Elevation

Joseph's advice to Pharaoh struck a responsive chord. The king was impressed by the man's mature wisdom, at once adopted his suggestions, and appointed him, then aged 30 (41:46), to be in charge of their practical application (41:37–40).

The possibility of the rise of a foreigner to high station in the Egyptian court and administration is well substantiated. A Semite named Yanhamu was Egyptian commissioner for Canaan and Syria in the time of Akhenaten (14th century B.C.E.), and a certain Ben-Ozen from northern Canaan rose to the position of marshal at the court of Merneptah (13th century B.C.E.). This same king's brother married the daughter of a Syrian sea captain named Ben-Anath, and in the following century one of the judges in the trial of the murderers of Ramses III bore the Semitic name Mahar-Baal.

The biblical account of the elevation and office of Joseph is unusually rich in detail. The multiplicity of titles and functions bestowed on Joseph reflects a well-known feature of the great Egyptian bureaucracy about which much is now known.

On the biblical account, Joseph assuredly penetrated the highest echelons of the Egyptian nobility and government. He reported directly to the king (41:40), a prerogative shared by several officials. He supervised the king's personal estates (45:8), a function that usually carried with it the titles "Great Steward of the Lord of the Two Lands" and "The Great Chief in the Palace." Pharaoh further put him in charge of all the land of Egypt (41:41), an office that corresponds to the title "Chief of the Entire Land." As the token of authority Pharaoh handed Joseph his signet ring (41:42). This recalls the title "Royal Seal Bearer" accorded selected high officials. In placing the gold chain about Joseph's neck (*ibid.*), the king was simply following another typically Egyptian form of investiture and conferring one of his highest distinctions. When Joseph described himself as "father to Pharaoh" (45:8) he was citing a known Egyptian title "God's [i.e., the king's] Father." Finally, as the one responsible for the storage and distribution of food as well as for the collection of tax payments on produce (41:48–49; 47:24), Joseph undoubtedly performed the functions of the high office known as "Overseer of the Granaries of Upper and Lower Egypt."

In addition to his generous distribution of honors and titles, Pharaoh had Joseph ride in the chariot of his second-in-command, while men cried before him "Abrech!" (41:43), a word of uncertain meaning. He also gave him an Egyptian name, Zaphenath-Paneah (41:45), which means "the god speaks; he lives." This, indeed, is in conformity with the known practice of Asiatics in Egyptian service acquiring local names. The king also married his new administrator to Asenath, daughter of the high priest of On, or Heliopolis (41:45, 50). The lady's name is also explicable as good Egyptian and means "she belongs to (the goddess) Neith."

Joseph set to work in pursuance of his duties. He traveled the length and breadth of the land, organizing the establishment of store cities into which the good surpluses were garnered during the years of abundance (41:46–49). During this period he became the father of two sons, *Manasseh and *Ephraim, both of whose names signify a desire to forget the past (41:50–52).

The Reconciliation

With the onset of the cycle of famine years, Joseph saw his boy-

hood dreams fulfilled as his unsuspecting ten older brothers, who had arrived in Egypt to buy food, bowed low before him (42:1–6). He recognized them, but suppressed the fact, spoke harshly to them, interrogated them, accused them of spying, confined them in the guardhouse for three days, then sent them home with food, but not before he had detained Simeon, insisted on their bringing Benjamin, and had their purchase money put into the brothers' sacks of grain (42:7–26).

Under the pressure of severe famine and the importuning of his sons, Jacob agreed to let Benjamin go. Once again the brothers presented themselves before Joseph who invited them for a meal and freed Simeon. They presented Joseph with gifts, offered to repay the cost of the original purchases, and exchanged greetings. When Joseph saw Benjamin he was overcome with emotion and had to rush from the room to weep. All the brothers later dined together (Gen. 43).

Joseph once again instructed the house steward to restore the purchase money in each bag of grain and also to put his personal silver divining goblet into Benjamin's. The men left early next morning and had not gone far from the city when Joseph sent his steward after them to accuse them of the theft of his goblet. The surprised brothers protested their innocence and offered to become slaves if it be found in their possession. The steward, however, insisted that only the culprit would be enslaved, but when a search disclosed the goblet in Benjamin's sack the disconsolate brothers all started back for the city where Joseph was waiting for them. They prostrated themselves before him and resigned themselves to a fate of slavery, but Joseph, too, stressed that Benjamin alone would suffer (44:1–17).

Judah then made an impassioned plea reciting Joseph's insistence on seeing Benjamin, Jacob's reluctance to let him go, and the fatal impact upon their father that a misfortune to Benjamin would have. He offered to take upon himself his brother's punishment (44:18–34). Now Joseph could contain himself no longer. He ordered everyone else out of the room and, sobbing with emotion, revealed to his dumbfounded brothers his true identity, even as he tenderly and generously propounded the notion that his original kidnapping had proved to be an act of Providence to ensure the family's survival in the harsh years of famine. He bade them hurry back to Canaan to bring their father and families to him. He then embraced Benjamin and his other brothers (45:1–15). The news of what had occurred reached Pharaoh who sent orders supporting Joseph's invitation to his family and placed baggage wagons at their disposal, while Joseph sent expensive gifts (45:16–24).

The Migration to Egypt

The brothers returned to Canaan to tell their father the startling news. His initial incredulity soon gave way to acceptance and a strong desire to see his long-lost son (45:25–28). The patriarch set out for Beer-Sheba where he received divine reassurance and then moved toward Goshen as Joseph set out to greet him. The two met in a tearful embrace (46:29–30), after a separation of 22 years (cf. 37:2; 41:46, 53; 45:11).

Joseph arranged an audience with Pharaoh for his brothers and the king granted their request to settle in the Goshen region and even offered to appoint some of them as the superintendents of his cattle (47:1–6). Joseph then introduced his father to Pharaoh (47:7–10). The family settled in the choicest part of Egypt and Joseph sustained them throughout the next five years of famine (47:11–12).

The migration of Joseph's family from Canaan to Egypt in this fashion was not an extraordinary phenomenon in itself. This is verified by a papyrus bearing a report of an official on the eastern frontier to his superior relating how he had granted Edomite shepherd tribes permission to make use of the Nile Delta pasturage "to keep them and their flocks alive." It is clear that the official had the power to make ad hoc decisions of this type without having to refer to higher authority.

What is remarkable about the Israelite experience is that a routine family visit (45:28) has been transformed in the narrative into an event of national significance (46:3–4) transcending by far its immediate import. The Exodus from Egypt and the return to the land of Canaan henceforth became the major biblical motif.

Joseph's Agrarian Measures

The rest of the Joseph story is mainly taken up with various administrative measures wholly unrelated to the fortunes of the Israelites. Joseph secured for the crown the silver and livestock that the people possessed, as payment for rations supplied. Next, he nationalized the farmlands except for those held by the priests. He reduced the population to the status of bondmen and imposed a land tax of one-fifth of the produce of the soil (47:13–26).

As a matter of fact, the state of affairs here described as having been instituted by Joseph actually corresponds to the situation of state slavery that prevailed in Egypt following the expulsion of the Hyksos toward the end of the 16th century B.C.E. It must have come about over a long period of time which covered the life-spans of several pharaohs. The biblical narrative is probably intended to emphasize the great indebtedness of the crown to Joseph and hence the base ingratitude of the later pharaohs, "who did not know Joseph" (Ex. 1:8).

Joseph's Last Days

Jacob lived with his son in Egypt for 17 years. When he felt his end nearing, he extracted a pledge from Joseph to bury him in the ancestral vault in Canaan (Gen. 47:28–31; cf. 49:29–32). Joseph brought his two sons to be blessed by their grandfather and he witnessed their adoption by Jacob as well as the transference of the birthright from the elder, Manasseh, to the younger, Ephraim (48:1–20).

Joseph was present at his father's death (50:1; cf. 46:4). He had him embalmed and fulfilled his father's wishes, returning to Egypt after the burial (50:1–14). At this point, the brothers apparently feared that Joseph would take revenge for their

cruel treatment of him in his youth. He, however, dispelled their fears by citing once again his personal theological interpretation of the kidnapping (50:15–21; cf. 45:5–8).

Joseph lived another 54 years after his father's death to see great-grandchildren by both his sons. He died at 110 – considered an ideal age, incidentally, among the Egyptians. In his last words he reiterated his faith in the ultimate fulfillment of the divine promises to the Patriarchs and he made his brothers swear that when the time came they would transfer his remains to the Promised Land. He was embalmed and placed in a coffin in Egypt (50:22–26), a tradition linking Joseph with the mummies for which Egypt was famed.

The Nature of the Narrative

Of all the Genesis narratives, those about Joseph are the longest and most detailed. They are not a collection of isolated and fragmentary incidents, but a continuous biography, novelistic in complexion, the artistic creation of a consummate storyteller even though it may have utilized variant traditions (cf. the interchange of Ishmaelites and Midianites in Gen. 37:25, 27, 28, 36). The account contains an unprecedented wealth of background material, especially relating to the mores of a non-Israelite people. From this point of view it provides greater opportunity for archaeological illumination than do the earlier Genesis stories. The Joseph stories preserve traditions of the Northern kingdom, which viewed Joseph as its eponymous ancestor.

Most striking and, in fact, unique, is the secularistic complexion of the narrative. Although there are no miraculous elements; no divine revelations experienced by Joseph, no associations with altars or cultic sites, the discourse is permeated with the consciousness of God at work, and if there is no direct intervention by Him in human affairs, no doubt is left that the unfolding of events is the directed act of Providence (Gen. 45:4–8; 50: 19–20).

Joseph in the Rest of the Bible

Outside of Genesis, the personality of Joseph receives scant attention. The Pentateuch indirectly refers to his services to the Egyptians (Ex. 1:8) and records only the fulfillment by Moses of Joseph's last wish (Gen. 50:25; Ex. 13:19). The Book of Joshua (24:32) completes this story by reporting the burial of his mortal remains in Shechem (cf. Gen. 33:19). A brief reference to the sale of Joseph into slavery is to be found in Psalm 105:17 which, in context, appears to be dependent on Genesis 45:5–8; 50:20. Another Psalms passage (81:6) may also relate to Joseph's experience in Egypt, but the exact meaning of the text is unclear and the name may be a generic term for all Israel, as in Psalms 80:2. In such cases a Northern Israelite origin for the composition may be supposed.

All other references to "Joseph" are either to the twin tribes Ephraim and Manasseh (Gen. 49:22, 26; Deut. 27:12; 33:13; Ezek. 47:13; 48:32; et al.), or to the Northern Israelite Kingdom in general (Ezek. 37:16, 19; Amos 5:15; 6:6; Ps. 78:67), otherwise referred to as the "House of Joseph" (Amos 5:6;

Obad. 18; Zech. 10:6; cf. Judg. 1:22, 23, 35; II Sam. 19:21; I Kings 11:28).

The Name

The name Joseph is explained in Genesis 30:24 as meaning "May the Lord add another son for me." As a verbal form it is probably abbreviated from a fuller name containing a divine element (cf. Josiphiah, Ezra 8:10). The name once appears in the expanded form Jehoseph (Ps. 81:6), which is frequent in post-biblical inscriptions.

[Nahum M. Sarna]

In the Aggadah

The extraordinary career of Joseph as related in Genesis provided a vast amount of material for the aggadists who utilized the biblical story to emphasize various social, religious, and political ideas. Joseph's steadfastness in the face of temptation, his filial love for his father, his loyalty to his family, and his conduct in high office became favorite object lessons in rabbinic homiletics. To some extent Joseph's adventures in Egypt were symbolic of Israel's fate among the nations and of the frequent change of fortune characterizing Jewish history. Joseph's life was accordingly compared to that of Jacob (Israel) whom he resembled in many respects (Gen. R. 84:6, et al.). Joseph's brothers were secondary to him, for his merits and learning exceeded theirs (84:5). Unlike his brothers who refused even to greet him, he would go out of his way to salute them even after he had risen to power, and he generally behaved with due modesty despite his high position. This was cited as an example to officeholders inclined to assume an attitude of arrogance (Tanḥ. B., Gen. 180; Ex. R. 1:7).

Despite Joseph's merits, both he and his doting father are taken to task for various faults which the rabbis were anxious to discourage among their disciples. Jacob is criticized for favoring Joseph over his other sons – an educationally unsound attitude (Shab. 10b) – and for his original failure to recognize the significance of Joseph's dreams (Gen. R. 84:11). Joseph's troubles were attributed to such acts as "painting his eyes, curling his hair, and walking with a mincing step" (84:7; cf. 87:3). He had also wrongly charged his brothers with serious offenses for which he was appropriately punished (87:3, et al.). Significantly, similar faults among the "disciples of the wise," including excessive pride in personal appearance, mutual slander, and lack of respect for each other are castigated in rabbinic literature (RH 26b; Yev. 62b; TJ, Pe'ah 1:1, 15d–16a). Joseph was highly praised for honoring his father and obeying him even at the risk of his life (Mekh., 2, Proem; Gen. R. 84:13). When his brothers saw him at Dothan, they intended to kill him by setting dogs at him (84:14) – a punishment deserved by slanderers (Pes. 118a), but also a midrashic device to exonerate the tribal ancestors from legal culpability, since indirect murder of this type was not punishable by law (Sanh. 9:1). Joseph's righteousness is frequently stressed by the rabbis. As a result of it he emerged unharmed from the pit into which he had been cast, although it was full of snakes and scorpions (Shab. 22a; Gen. R. 84:16). The Ishmaelites who carried him to

Egypt had with them sacks filled with spices instead of their usual merchandise which had an offensive odor (Tosef., Ber. 4:4; Gen. R. 84:17, et al.).

Potiphar's wife, who tried to seduce Joseph, is depicted in the *aggadah* as the prototype of the immoral pagan woman. The story of the wiles she used to win Joseph's heart was imaginatively expanded to serve as a perfect text for sermons on sexual morality. Her depravity is emphasized with a view to warning Jewish youths against the temptations of the flesh. Not only did she use the most indecent language (cf. Gen. 39:7) – in sharp contrast to Ruth in a comparable situation (cf. Ruth 3:9) – but she plotted to murder her husband so as to be free to marry Joseph (Gen. R. 87:4–5; Ruth R. 6:1). All her seductive efforts and threats were of no avail. She even became sick and wasted away on account of her unfulfilled love; but her pleading and weeping proved equally unsuccessful (Yoma 35b; ARN¹ 16, 63; Gen. R. 87:5–6). Nevertheless some rabbis believed that Joseph had in fact been on the point of yielding to temptation, and only the timely appearance of his father's and/or mother's image had cooled his passion and prevented him from sinning (Sot. 36b; TJ, Hor. 2:5, 46d; Gen. R. 87:7; 98; 20).

The rabbis also criticized Joseph's request to the butler to intercede with Pharaoh on his behalf (Gen. 40:14). He should not have put his trust in man, and for this reason had to stay in prison another two years (Gen. R. 89:2; Tanh. B. Gen. 189). The butler, represented as the archetype of the ungrateful and vicious pagan, not only "forgot" Joseph, but also did his best to discredit him in his report to Pharaoh (Gen. R. 89:7). The angel Gabriel, however, taught Joseph the traditional 70 languages, so that he could qualify to be ruler of Egypt (Sot. 36b). His elevation to power was the reward for his virtuous life (Gen. R. 90:3, et al.). Joseph's marriage to Asenath, daughter of Poti-Phera, priest of On (Gen. 41:45), is legitimized by late Midrashim which represent Asenath as Dinah's daughter (and hence Joseph's niece) later adopted by Potiphar, who is identified with Poti-Phera (PdRE 38; Targ. Jon., Gen. 41:45 and 46:20). The possibility of Asenath's conversion from paganism is implicitly rejected. Earlier Midrashim, however, which depict Asenath as the natural daughter of Potiphar and his wife and represent Joseph as refusing to sell grain to Egyptians who would not be circumcised (Gen. R. 85:2; 90:6; 91:5), reflect the view of those who favored active proselytizing.

In contrast to the biblical account that Joseph had forgotten his "father's house" (Gen. 41:51), the rabbis maintained that he was in mourning, wearing sackcloth and fasting, and refrained from drinking wine during all the years he was separated from his family (Gen. R. 85:1; 92:5; 93:7; 98:20; Shab. 139a). The Midrash also softens the harsh treatment accorded by Joseph to his brothers, and points out that he had behaved like a brother to them when they were in his power, while they had not treated him like a brother when he was in their power (Gen. R. 91:7; et al.). Simeon, who had cast Joseph into the pit (84:16; 91:6), was only ostensibly chained by Joseph; but as soon as the other brothers had left, "he gave him to eat and drink, and bathed and anointed him" (91:8). According

to one view, however, Joseph died before his brothers because he had assumed superior airs toward them (Ber. 55a; Sot. 13b.). The confrontation between Joseph and his brothers is depicted in the Midrash as a clash between warriors endowed with superhuman strength. Judah especially, representing no doubt the Jewish people, is shown to be a man of fantastic physical powers which he threatens to use not only against Joseph, but against Pharaoh and the Egyptians (Gen. R. 91:6; 92:8; 93:6–8). The anti-Egyptian trend of the midrashic narrative reflects the violent hostility between Jews and Egyptians during the first and second centuries C.E.

Joseph's order to have Jacob embalmed – an Egyptian custom not practiced among Jews – was criticized by R. Judah ha-Nasi, but other rabbis maintained that it had been done in accordance with Jacob's own instructions (Gen. R. 100:3). A similar difference of views arose regarding Joseph's embalment, carried out, according to one opinion, by the (Egyptian) physicians, and according to another, by his brothers (100:11). The issue in the case was apparently whether non-Jews could be permitted to handle the body of an Israelite. According to the *aggadah*, Joseph's body was placed in a metal coffin which the Egyptians dropped into the Nile so that its waters should be blessed. Others maintain that he was buried in a royal sepulcher as befitted his station in life. At the time of the Exodus from Egypt, Moses miraculously raised the coffin from the Nile or royal mausoleum and took it with him. During the 40 years' wandering in the wilderness, the coffin was carried next to the *Ark of the Covenant because "This one [Joseph] fulfilled all that was written in the other" (Sot. 13a–b; Tosef., Sot. 4:7; Mekh. 2, Proem., et al.).

[Moses Aberbach]

In Islam

Yūsuf was one of *Muhammad's most beloved characters; he consecrated a whole sura (the 12th) to him ("the Sura of Joseph"), which contains "the most beautiful tale," in 111 continuous verses. The tale begins with Jacob's warning to his son not to tell his dream of the sun, the moon, and the stars to his brothers because it might arouse their jealousy. Indeed, Joseph became the object of his brothers' hatred and they availed themselves of the first opportunity to throw him into the pit. Muhammad continues in light of the Bible and the *aggadah* and he embellishes his words when he tells of Joseph's enticement by the wife of his master (see Qitfir = *Potiphar), whom Muhammad knows only by the name of al-'Aziz ("the Mighty"; verses 30, 51). Joseph was saved from her designs because Allah was with him. His shirt, which was torn from behind, was definite proof that the woman had not protected herself from the intentions of Joseph, but that she had attacked and attempted to seize hold of him when he had fled from her presence. The Egyptian women mocked the stupid woman, and when the latter invited them to a feast, she presented each of them with a knife, together with the refreshments. She then ordered Joseph to appear before the guests, and when they looked upon him, they were so enraptured by his beauty that they cut their fingers with the knives. The

tale then returns to its biblical course. Before Joseph was appointed head of the king's granaries, the woman came to Pharaoh and confessed that Joseph was one of the *al-ṣādiqīn*, "the righteous" (verse 51), and that she had sought to entice him (similarly, the chief butler refers to him (Joseph) as *al-ṣiddīq*, "the righteous one"; verse 46). According to Speyer, this was due to the influence of a Syrian legend, so that Joseph would not desire vengeance against her and her husband, who had imprisoned him. Before the brothers went to Egypt for the second time, their father advised them not to enter together, through one gate (verse 67). The latter detail is taken from the Jewish *aggadah* (Gen. R. 91:2).

In post-koranic literature the tale of Joseph and Zulayka (the name of Qitfir's wife) was considerably enlarged upon. It is developed into an independent subject which undergoes a romantic adaptation in prose and poetry in the Arabic and Persian languages. It is evident that many tales which stem from Jewish and Christian legends have been incorporated in this episode.

[Haim Z'ew Hirschberg]

In the Arts

Few biblical figures have inspired more extensive and more universal literary treatment than Joseph. He appears in most of the medieval mystery cycles, in *L'Estoire Joseph* (an Old French poem), and in the early 13th-century *Jacob and Iosep*, where the biblical account is conveyed in lively English paraphrase. At about the same period, Shaiyad Hamza wrote a Turkish poem on the theme of Joseph and Potiphar's wife (Zulayka). The theme was popular in the Islamic world, where writers based their work on the 12th sura of the Koran. Though differing in detail, the Islamic legend follows the Hebrew Bible in broad outline. The Persian poet Jāmi (Maulānā Nūreddin Abd'el-Rahmān Jāmi) wrote his most famous romance, *Yūsuf o Zuleikhā*, toward the end of the 15th century. In several variations a poem about "Yuçuf" (written in the 13th or 14th century) was current in Muslim Spain and gave rise to later Christian adaptations (*El poema de José*). The Jews of medieval Spain also created a tradition of their own which, in *Ladino literature, was entitled the *Poema de Yosef* or *Coplas de Yosef*. A definitive form of the latter, by Abraham de Toledo, was *Coplas de Yosef ha-Zaddik* (1732). The story of Joseph gained fresh popularity during the Renaissance and the Reformation. By 1560 there were 12 English plays on the subject and dozens more in French, Spanish, Italian, Dutch, and German. Protestant writers especially favored a moralistic treatment of Joseph's temptation, imprisonment, and final rise to glory and power, which gave them the opportunity of composing long speeches on virtue and the reward of the righteous and the punishment of evildoers. The many other colorful episodes in Joseph's career were, however, generally ignored. Some works of the 16th century were Sixtus Birck's German drama *Joseph* (1539); *Iosephus... Fabula sacra ...* (Antwerp, 1544), a neo-Latin verse play by the Flemish Catholic Georgius Macropedius (Joris van Langhveltdt); Miguel de Carvajal's Spanish *Tragedia Josephina* (Seville, 1545); and *Żywot Józefa z pokolenia*

żydowskiego (1545), a play by the Polish Calvinist Mikołaj Rej. One of the oldest Russian poems is the *Istoriya o prekrasnom Yosife*, which was probably the basis for later works about Joseph in the Slavonic languages. The rhymed allegorical *Joseph* by the Alsatian writer Thiebolt Gart (1540), based on a Latin school play by Cornelius Crocus (1536) and first staged in Schlettstadt, was the outstanding German drama of the 16th century. The Italian *sacre rappresentazioni* of the era included Simone Martelli's *Joseph figliuolo di Jacob* (Florence, 1565).

Interest in the subject during the 17th century was more or less confined to writers in England, Holland, and Germany. The late English cycle of mystery plays known as the *Stonyhurst Pageants* (c. 1625) includes a *Pageant of Joseph*. Two other treatments of the period were Sir Francis Hubert's poem, *Egypt's Favorite: The Historie of Joseph* (London, 1631), and Sir Thomas Salisbury's versified *History of Joseph* (London, 1636). Among the Dutch Catholic Joost van den Vondel's biblical verse plays were *Josef* (1635), *Joseph in Dothan* (1640), and *Joseph in Egypten* (1640); while Hugo de Groot (Grotius), the eminent jurist and statesman, wrote *Sophomopaneas* (Eng. tr. 1652), a verse tragedy partly reflecting his own career as a diplomat in the service of Sweden. Two outstanding works by German writers were the *Histori vom keuschen Joseph* (1667) by Hans Jakob Christoffel von Grimmelshausen, later reworked as *Des vortrefflich keuschen Josephs in Egypten... Lebensbeschreibung* (1671²); and *Assenat* (1670), a baroque novel by Philipp von Zesen. The subject continued to attract literary attention during the 18th century, particularly in England, where the works which it inspired included Hannah More's *Joseph Made Known to his Brethren* (in *Sacred Dramas*, 1782). In Switzerland, Johann Jacob Bodmer published several dramatic treatments, notably the epic *Joseph und Zulika* (1753) and two tragedies, *Der erkannte Joseph* and *Der keusche Joseph* (both 1754). Three other works of the period were *Joseph reconnu par ses frères* (Paris, 1786), a sacred drama by Félicité Ducrest de Saint-Aubin, countess of Genlis; the Spanish play *El mas feliz cautiverio, y los sueños de Josef* (Madrid, 1792); and *Gedullat Yosef, or Milhamah be-Shalom... be-Inyan Mekhirat Yosef* (Shklov, 1797), an early Hebrew drama by Abraham b. Aryeh Loeb Hayyim ha-Kohen of Mogilev.

The theme retained its popularity throughout the 19th century, when it was exploited by a number of Jewish writers. In Hebrew, Suesskind Raschkow (d. 1836) wrote the drama *Yosef ve-Asenat* (Breslau, 1817); N.S. Kalckar in Denmark was the author of *Gedullat Yosef* (1834); and the Palestine kabbalist Joseph Shabbetai Farhi (c. 1802–1882) produced his romance *Tokpo shel Yosef* (1846). Later, the Czech half-Jew Julius *Zeyer published *Asenat* (1895), a short novel about Joseph in Egypt. In Aden, Baghdad, and Tunis, there were from the late 19th century onward, many Judeo-Arabic versions of the biblical story under such titles as *Ma'aseh Yosef ha-Zaddik*. Non-Jewish authors who dealt with the subject included the Serbian Milovan Vidaković (*Istoriya o prekrasnom Josife*, 1805); the prolific French dramatist Alexandre Duval, whose *Joseph* (Paris, 1807) was set to music by the composer Méhul; and

the U.S. poet John Eyre (*The Story of Joseph and his Brethren*, 1854). The theme retained its vogue in England, with works headed by Charles Jeremiah Well's epic *Joseph and his Brethren* (1824), which aroused much interest in its day. One British curiosity was the Gaelic work, *Each draidh Joseph, Mhic Jacoib* (1831). There were also two distinct, but similarly titled, Italian works in verse, *Giuseppe, figlio di Giacobbe* (Lucca, 1817; Naples, 1820); and *Lyubimets* (1872), a Russian short novel by D.L. Mordovtsev.

Some of the most significant treatments of the subject have been produced by 20th-century authors. In the U.S., Louis Napoleon Parker wrote a pageant play, *Joseph and his Brethren* (1913), which was staged successfully in both America and England, Sir Herbert Beerbohm Tree playing the title role in the British production. There were many works of note in the Old World. *Jāzeps un viņa brāļi* (1919), a play by the Latvian writer J. Rainis (Jānis Pliekšāns, 1865–1929), was staged in London as *The Sons of Jacob* in 1924. French biblical dramas included Camille Renard's *Joseph vendu par ses frères; figure du Messie* (1920) and Benoît L'Hermite's four-act tragedy *Joseph, victime et sauveur* (1932). The characteristic eroticism of the Flemish writer Hubert Léon Lampo is revealed in his novel *De belofte aan Rachel* (1952). One of the greatest literary treatments of all time is that contained in Thomas *Mann's novel cycle *Joseph und seine Brueder* (1933–42; *Joseph and His Brothers*, 1934–44) begun in the year of Hitler's rise to power in Germany. This tetralogy, a subtle blend of biblical history, legend, and psychological characterization, consists of *Die Geschichten Jaakobs* (1933; *Joseph and his Brothers*, 1934), *Der junge Joseph* (1934; *Young Joseph*, 1935), *Joseph in Aegypten* (1936; *Joseph in Egypt*, 1938), and *Joseph, der Ernaehrer* (1942; *Joseph the Provider*, 1944). The subject has also formed the basis of several important works by Jewish writers of the 20th century. The three earliest were *Josef, das Kind* (1906), a verse play by Emil (Bernhard) *Cohn; *Die Josephslegende* (1914) by Hugo von *Hofmannsthal; and *Josef und seine Brueder* (1917) by Micha Josef *Berdyczewski. One of the first biblical works of the Yiddish novelist Sholem *Asch was his play *Yosef-Shpil* (1924), and two Yiddish novels of the 1930s were *Der Prints fun Mitsrayim* (1931) by Saul Saphire and *Kanaan un Mitsrayim* (193?) by Hirsch Melamed. There have also been a large number of plays and stories on the theme written for Jewish children by authors in Britain and the U.S.

IN ART. Joseph does not appear before the fifth century. He does not figure in the art of the Christian catacombs, since he was not mentioned in the prayers of the *Commendatio Animae* from which its subjects were mainly drawn. However, in the Middle Ages, Joseph was popularly regarded as the type of Jesus, and the tradition remained in vogue among Christians. Joseph was seldom presented on his own but was sometimes found among the sculptures of patriarchs and prophets surrounding the doors of medieval cathedrals. There are many cycles representing the story of Joseph. They are found in manuscripts, including the fifth/sixth-century Vienna Genesis

(Vienna State Library), and Cotton Bible (British Museum), the 13th-century St. Louis Psalter, and the 14th-century Queen Mary Psalter, and also in Hebrew manuscripts such as the Sarajevo *Haggadah*. There are cycles in ivory, such as that on the sixth-century ivory chair of Bishop Maximian (Ravenna), and in mosaic, including eighth-century mosaics in Rome and 12th-century mosaics from the cupolas of the narthex of St. Mark's Cathedral, Venice, and from the Baptistery in Florence. Among early cycles of wall paintings are eighth-century frescoes from Santa Maria Antica, Rome, 12th-century Romanesque frescoes from Saint-Savin, France, and a very detailed 14th-century cycle from Sopočani in Serbia.

During the Renaissance, the story of Joseph figured in the celebrated bronze doors made for the Baptistery in Florence by Lorenzo Ghiberti and in the frescoes in the Campo Santo, Pisa, by Benozzo Gozzoli. The theme also occurs in the frescoes of the Raphael *loggie* in the Vatican. Other 16th-century cycles include the *Storia di Giuseppe Ebreo* by Jacopo da Pontormo, medallions by the Master of the Joseph Cycle (Berlin Museum), the Chaise-Dieu tapestry (1518), and carvings on the choir stalls at Amiens. Joseph also inspired a series of murals by Philipp Veit, Friedrich Overbeck, Wilhelm Schadow, and Peter Cornelius – members of the early 19th-century German Nazarene brotherhood – for the Casa Bartholdy in Rome. They are now in the Berlin Museum. Veit contributed frescoes of Joseph and Potiphar's wife and of the fat and lean years in Egypt.

There are a number of paintings by great masters of individual episodes from the life of Joseph. In the Six Gallery in Amsterdam, there is a grisaille painting by *Rembrandt of Joseph relating his dreams to his family (Gen. 37:1–10). A painting by Murillo (Wallace Collection, London) shows Joseph sold to the Midianites by his brothers (Gen. 37:28). There are two paintings by Rembrandt of Jacob receiving the bloodstained coat of Joseph (Gen. 37:31–36), one in the Hermitage, Leningrad, and another in the collection of the Earl of Derby. In addition, there is a pen drawing by Rembrandt. The subject is also treated by Velasquez in a painting in the Escorial and by the English pre-Raphaelite painter, Ford Madox Brown, in *The Coat of Many Colors* (1866; Walker Art Gallery, Liverpool). The attempted seduction of Joseph and his subsequent denunciation by Potiphar's wife (Gen. 39) is a picturesque episode much illustrated by artists of the 16th and 17th centuries. There is a painting in the Prado by Tintoretto and several by the later Italian artists, including one by Carlo Cignani (Dresden), showing a young woman who throws herself at Joseph, while the latter reels back in virtuous horror. In northern Europe, Lucas van Leyden made an engraving on the subject, and Rembrandt painted it twice (Berlin Museum and National Gallery, Washington). Here, Potiphar's wife is shown sitting on her bed in the act of denouncing Joseph to her husband. There is a sensitive painting by Barent Fabritius, a pupil of Rembrandt (Mauritshuis, Hague), of Jacob permitting Benjamin to leave with his brethren (Gen. 43:11–15), and another by Jacopo da Pontormo of *Joseph and his Brothers in*

Egypt (National Gallery, London). In a work by the French artist Paul-Gustave Doré, Joseph is seen dramatically revealing his identity to his awestruck brethren. Jacob blessing his sons (Gen. 48:1–21) is the subject of a wood engraving by Holbein and of paintings by Guercino and Rembrandt. The painting by Rembrandt (Cassel Museum, Germany) shows Joseph standing over the dying Jacob, while the latter places his hands on the heads of Joseph's children.

IN MUSIC. Joseph and his brothers make an early appearance in music in a 12th-century liturgical drama from Laon, France. The theme is found among the earliest oratorio subjects at the beginning of the 17th century. The greatest number of settings are those of Pietro Metastasio's *Giuseppe riconosciuto* (Vienna, 1733, for M. Porsile), its composers including J.A. Hasse (1741), L. Boccherini (1756), and K. Fr. Fasch (1774). Other librettos of the period were J.B. Neri's *Giuseppe che interpreta i sogni*, set by A. Caldara (1726), who had already set a libretto by A. Zeno in his opera *Giuseppe* (Vienna, 1722); and Handel's oratorio *Joseph and his Brethren*, to a text by James Miller (first performed at Covent Garden Theatre, London, 1744). The 19th century opens with Méhul's opera *Joseph* (1807; text by Duval), for male voices only, which has remained a classic; the century ends with two parodies: Victor Roger's *Joséphine vendue par ses soeurs* (Paris, Bouffes Parisiennes, 1886) and Edmond Diel's operetta *Madame Putiphar* (Paris, 1897). Richard Strauss's ballet *Die Josephslegende* (1914) had a libretto by Hugo von Hofmannsthal and H. Kessler. Another ballet, Werner Josten's *Joseph and his Brethren* (première in New York, 1936), was also arranged as a symphonic suite (1939). The Israel composer Erich Walter *Sternberg wrote a suite for string orchestra entitled *The Story of Joseph* (1942). Two settings are based on Thomas Mann's novel cycle: David *Diamond's *Young Joseph* for three-part women's chorus and string orchestra (1944, publ. 1947), and Hilding Rosenberg's cycle of four opera-oratorios, *Josef och hans bröder* (composed between 1945 and 1948).

JOSEPH (d. 38 B.C.E.), son of *Antipater and *Cypros, brother of *Herod I. When the Parthians invaded Judea (40 B.C.E.), they forced Herod to flee, and he left his family in the care of Joseph at *Masada, where a sudden thunderstorm enabled the fortress to hold out against the siege of *Antigonos. Later Herod returned with reinforcements and set his family free. Then, in 38, he set out for Samosata to meet Antony, after forbidding Joseph to get involved in battle with Antigonos until his arrival. Disregarding this advice, Joseph took his army into the hills near Jericho to harvest grain for his soldiers and was attacked by Antigonos and killed. His death caused some unrest in Judea and was later avenged by Herod.

JOSEPH, king of the *Khazars. As his correspondence with *Ḥisdai ibn Shaprut demonstrates, he ruled in the tenth century. In the heading of his presumed reply to Ḥisdai's letter, the Reply of Joseph, he is called "the Togarmian [i.e., Turkish] king" (cf. Gen. 10:3), and in the text of the Reply is referred to as Joseph b. Aaron b. Benjamin. His descent is traced back to *Obadiah, king of the Khazars. In the fragment known as the Cambridge Document, which was found in the Cairo *Genizah*, his father Aaron and grandfather Benjamin are also mentioned by name and the document adds (line 59) that Joseph was married to a daughter of the king of the Alans.

[Douglas Morton Dunlop]

***JOSEPH II** (1741–1790), king of Germany (1764–90) and Holy Roman emperor (1765–90); co-regent with his mother, *Maria Theresa, until her death in 1780. Although educated in the spirit of the Enlightenment, he nevertheless remained a practicing Roman Catholic. After the death of his father in 1765 he became emperor of the Holy Roman Empire and married his second wife Josepha of Bavaria (his first wife was Isabella of Parma, 1760–1762). Strongly influenced by the ideas of Joseph von Sonnenfels, his rule was based on a system of "benevolent despotism"; his paramount belief was in the power of the state when directed by reason and his main aims religious toleration, unrestricted trade and education, and a reduction in the power of the Church. Additionally he saw himself as emperor as first servant of the state system. These views were reflected in his policy toward the Jews, first outlined in his "Judenreformen" of May 1781. Intending to end the long-standing isolation of the Jews and integrate them into the general social fabric, he wished to increase their means of gaining a livelihood and enable them to acquire general education, "thus rendering them more useful to the state." This attitude was deeply connected to his vision of a centralized state, in which every individual has its function. Like many of his other ideas, such as the abolition of serfdom or new legal code, his Jewish reforms were only

partially realizable and had to contend with the opposition of his provincial civil servants. Joseph abolished the most humiliating measures, the yellow *badge and the body tax (*Leibmunt* see **Leibzoll*) in 1781, and on Jan. 2, 1782, he issued the first of the Edicts of Tolerance (**Toleranzpatent*). Although enthusiastically hailed by the enlightened and well-to-do, they were considered a *gezerah* ("oppressive decree") by the broader strata of Jewry, who wished to pursue their traditional way of life. They had even more influence because under his and his mother's reign the Austrian Empire had expanded after the Polish Partition (1772–1795) and annexation of Galicia and the Bukowina with their massive Orthodox Jewish population. In several other laws Joseph II damaged the traditional fabric: in 1781 he prohibited the use of Hebrew and Yiddish in business and in communal and public records. Of profound importance for the structure of Jewish life was the abolition of rabbinical jurisdiction from 1784 onward, as well as the introduction of liability for *military service in 1787. A special law in 1787 obliged Jews to adopt German-sounding family names and personal names, which had to be chosen from a list. The majority of Jewry did not benefit from Joseph's legislation, because neither the restrictions on residence in *Vienna and other cities nor the *Familiants Laws in Bohemia and Moravia were affected; the policy of curtailing the size of the Jewish population was explicitly perpetuated. However, the founding of the German-language schools and the permission to attend universities offered new opportunities to the rising merchant class and led to the development of a Jewish intelligentsia. Joseph's decrees imposed all the duties of a citizen on the Jews but did not grant them all the rights. Nevertheless, the bulk of Jewry in Hapsburg lands was thankful for the alleviations he had introduced. In the modified form of the *Systemalpatent* of 1797, his legislation remained the basis for the status of the Jews until the revolution of 1848.

[Jan Herman / Bjoern Siegel (2nd ed.)]

JOSEPH, pioneer family in Canadian business and Jewish life. The Canadian-Jewish branch of the Joseph family (some converted to Catholicism and others intermarried with Protestants) was founded by HENRY JOSEPH (1775–1832), a nephew of Aaron Hart, regarded as the first permanent Jewish settler in Canada. In 1790, 15-year-old Henry arrived from England and settled in Berthier, Quebec, where he entered the fur trade. He later moved to Quebec City and established a chain of successful trading posts in the interior of the country (for a time, John Jacob Astor was one of his employees). He also became known as the “father of Canada’s merchant marine” because of a shipping network he set up to move goods to and from his posts. He was one of three Jews among the founders of the Bank of Montreal in 1817, Canada’s first bank. Henry Joseph and his son Samuel died in the cholera epidemic of 1832.

After Henry’s death, his firm passed to his son ABRAHAM (1815–1886) of Quebec City. Besides the family business, Abraham served as president of the Quebec and Dominion Boards of Trade, a director of the Banque Nationale, president of the Stadacona Bank (when it failed during the panic of 1873, he used personal funds to repay investors and depositors), and a member of the Quebec city council (he failed in a bid for the mayoralty). He was a Grand Master of the Grand Masonic Lodge of Quebec and vice consul of Belgium in Quebec City. A memorial horse trough was erected there in his memory. Abraham’s son, MONTEFIORE JOSEPH (1851–1943), took over the family firm, as, in turn, did his sons and grandson after him.

Two others of Henry Joseph’s sons, JACOB HENRY (1814–1907) and JESSE (1817–1904) also made their mark in the Montreal business world. Jacob Henry Joseph, who married a niece of Rebecca *Gratz, the Philadelphia pioneer of Jewish Sunday-school education, was a railway promoter and director with his brother, Jesse, organizing Canada’s first railway, the Saint Lawrence and Champlain. He founded Canada’s first telegraph line and was a partner in the Newfoundland Telegraph Company, president of the Montreal Elevator Company, vice president of the Montreal Board of Trade, a bank director, a real estate mogul, and a supporter of charitable and cultural institutions in Montreal.

Jesse Joseph, a life-long bachelor, studied law but eventually followed the family tradition into business. He served as president of both the Montreal Gas Company (he sold his interest in the Montreal Electric Company because he did not believe electricity had a future) and the City Passenger Railway, which formed the nucleus of Montreal’s mass transit, and operated the Theatre Royale, the city’s premier theater. A promoter of trade between Canada and Belgium, he was named Belgian consul in Montreal, and was one of the largest real-estate owners in the city. He was a member of the executive of the SPCA and known for giving lavish parties in the Sherbrooke Street mansion, which, after his death, became the McCord Museum of McGill University.

Like others of Canada’s pre-1900 Jewish elite, the Josephs were proudly British and staunchly patriotic. Abraham Joseph

belonged to the St. George’s society, and his daughter-in-law, Annette Pinto Joseph, was a member of the Imperial Order Daughters of the Empire. Henry, the family patriarch, fought in the War of 1812, and his son, Abraham, fought with the Royal Volunteers during the Rebellion of 1837. The family firm boasted of having provisioned the troops in every war from 1837 to World War II and never profiteered. Family members took full part in the social life of the English-speaking community in Quebec and seemed to suffer no discrimination because of their faith.

Although Henry’s brother, Judah, became a Roman Catholic (one of his descendants, Joseph Olivier Joseph, was among the organizers of the French-Canadian, nationalist Saint Jean Baptiste Society in the 1870s), and some of Henry’s grandchildren intermarried, the Josephs were remarkably faithful to their Jewish roots, despite the difficulties of practicing Judaism far from any sizeable community. Henry Joseph was a traditional Jew who instructed his children in Jewish living and taught himself ritual slaughtering so that the family would have a supply of kosher meat. His daughter, Esther (1823–1898), married Abraham *de Sola, the most significant Jewish minister of 19th century Canada; his son, Jesse, was a trustee of the Spanish and Portuguese Synagogue in Montreal; and another son, GERSHOM (1820–1893), a lawyer and the first Jewish Queen’s Counsel in Canada, served as president of that synagogue when his nephew, Meldola de Sola, succeeded his father, Abraham, as minister.

[Michael Brown (2nd ed.)]

JOSEPH, British family. SIR SAMUEL GEORGE (originally “GLUCKSTEIN”) JOSEPH (1888–1944) was born in London and was an officer in the British army in Salonika, Egypt, and France in World War I, being twice mentioned in dispatches. He later became chairman and managing director of Bovis, the large building contracting firm. Joseph held several positions in London municipal government before serving as sheriff of the city of London (1933–34) and was lord mayor of London from 1943 to 1944, the sixth Jew to have held this position. He was made a baronet in 1934.

His son, SIR KEITH JOSEPH (1918–1994), inherited his father’s title. Educated at Harrow and Oxford, he was a captain in the British army in World War II and was mentioned in dispatches. After the war he was admitted to the bar and, from 1946 to 1960, was a fellow of All Souls College, Oxford. He also held various industrial posts before becoming a director in the family building contracting firm. In 1956 Keith Joseph entered Parliament and three years later was made parliamentary secretary of the Ministry of Housing in the Conservative government. He became minister of state at the Board of Trade in 1961 and, from 1962 to 1964, was minister of housing and local government and minister for Welsh affairs. When the Conservatives returned to power in 1970, he

was appointed minister of health and social services, serving until 1974. He earned a reputation for intellectual brilliance and integrity and was one of his party's chief advocates of social welfare reforms. After the Tories lost office in 1974, Joseph was often mentioned as a potential leader of the Conservative Party. He was a founder of the influential "Think Tank," the Centre for Policy Studies, which set the intellectual stage for "Thatcherism" by its advocacy of free enterprise policies. Joseph, however, never became a serious challenger for the party's leadership: he was viewed as cold and distant and, in October 1974, made a regrettable speech advocating birth control among alleged "problem families." Instead, he became a strong supporter and advisor of Margaret Thatcher who appointed him minister for industry (1979–81). From 1981 to 1986 he was minister of education. On retiring from the government he was made a peer. Joseph was treasurer of the British Friends of The Hebrew University and in 1966 became chairman of the Research Board of the Institute of Jewish Affairs.

JOSEPH (Yosef), DOV (Bernard) (1899–1980), Israeli politician and lawyer, member of the First to Third Knessets. Born in Montreal, Canada, as a teenager he was among the founders of Young Judea in Canada and served as its president. In 1918 he joined the *Jewish Legion, and within its framework reached Palestine. After his return to Canada Joseph studied economics and political science at McGill University in Montreal, and after that law at Lavale University. He studied in London, where he became a barrister and received his Ph.D. After his studies he settled in Jerusalem, and started working as a lawyer in the office of Horace Samuel. In 1933 Joseph was involved in the preparation of a claim for civil compensation in the case of the assassination of Haim *Arlosoroff and he joined *Mapai. In 1936 Joseph was appointed legal adviser and deputy head of the *Jewish Agency's Political Department, in Jerusalem, under Moshe *Sharett. During World War II he coordinated the enlistment of volunteers for the Jewish units in the British Army. In the years 1945–46 he served as a member of the executive of the Jewish Agency and was sent to the United States on special missions. On "Black Saturday," June 29, 1946, he was among the leaders of the Jewish Agency arrested by the British and held at Latrun until November.

Towards the establishment of the State in 1948 Joseph was appointed military governor of Jerusalem, during the siege on the city. After the establishment of the State he was elected to the First Knesset on the Mapai list and remained a Knesset member until 1959, serving as minister of supply and rationing in 1949–51, in which capacity he initiated a policy of rationing. Until 1959 Joseph served in numerous ministerial posts including agriculture (1950–51), transportation (1950–51), commerce and industry (1951–52), justice (1951–52 and again

1961–66), development (1953–59), and health (1956–59). From 1956 to 1961 he served as treasurer of the Jewish Agency. After the establishment of the *Israel Labor Party in 1968 he served as head of a party committee that proposed an amendment to the Israeli electoral system.

He wrote *Nationality, Its Nature and Problems* (1929); *The White Paper on Palestine: A Criticism* (1930), *British Rule in Palestine* (1948), and *The Faithful City* (1960).

[Susan Hattis Rolef (2nd ed.)]

JOSEPH, HENRY (1838–1913), first rabbi of the Argentine Republic. Born in England, Joseph arrived in Argentina in 1860 and became a successful businessman. He was very active in organizing the first Jewish institution of the country, the Congregación Israelita de la República Argentina, in 1862. He was elected by the members of the congregation as their "rabbi," and his nomination was approved by the chief rabbi of the French Consistory, Isidor Lazare, in 1882. His election as rabbi originated principally in the need for a religious authority to register Jewish births, marriages, and deaths. Joseph's wife, a Christian, converted to Judaism immediately after his appointment, but his children married out of the Jewish faith. Joseph was very active as a religious and social leader, performed weddings, religious services, and occasionally preached in Spanish to the community of West European Jews in Buenos Aires. In the early 1880s he organized a fund to help the persecuted Jews in Russia. He also was of great help to the first group of East European Jews to arrive in Argentina in 1889.

[Victor A. Mirelman]

JOSEPH, JACOB (1848–1902), rabbi. Jacob Joseph was born in Krozhe, province of Kovno. He studied at the yeshivah of Volozhin under R. Hirsch Leib Berlin and later under R. Israel Salanter, and served the communities of Vilon, Yurburg, and Zhagovy before becoming rabbi and *Maggid* of Vilna in 1883. Although a brilliant student of Talmud, Joseph was especially known for his homiletical talents. In 1888 he arrived in the U.S. to assume the post of chief rabbi of the Orthodox congregations of Russian Jews in New York City. As he was primarily concerned with the taxed supervision of meat *kashrut*, much opposition was expressed against him from sectors of the Jewish community who rejected this supervision and objected to the imposition of a kosher meat tax. Although an invalid from 1895, Joseph founded the Bes Sefer Yeshiva (1900), which was renamed the Rabbi Jacob Joseph Yeshiva upon his death. His works include the collection of sermons, *Le-Veit Ya'akov* (1888) and a contribution to the only issue of the publication *Sefer Toledot Ya'akov Yosef be-New York* (1889). His funeral procession, said to have been attended by tens of thousands of Jews, occasioned a riot as workmen of the R. Hoe & Co. factory on the East Side pelted the procession with nuts and bolts. Many mourners were injured by the assailants and police.

His grandson LAZARUS JOSEPH (1891–1966), who was

born in New York City, was a U.S. public official. He was elected to the state senate in 1934, and became a financial adviser to Governor Herbert H. Lehman. After serving six terms, he was elected New York City controller in 1946 and remained in office until 1954. Joseph was active on behalf of the United Jewish Appeal and the Federation of Jewish Philanthropies of New York.

JOSEPH, MORRIS (1848–1930), English Reform rabbi, preacher, and writer. The son of a London minister, Joseph served as minister (rabbi) successively at the North London Synagogue, the Liverpool Old Hebrew Congregation, and, after an interval of nearly 20 years, at the West London (Reform) Synagogue. When in 1890 the newly founded Hampstead Synagogue, a constituent of the *United Synagogue, elected him as their minister, Chief Rabbi Hermann *Adler vetoed the appointment because of Joseph's unorthodox views, in particular regarding the restoration of the sacrificial cult. This was apparently no obstacle to his teaching homiletics at Jews' College in 1891–92. His views on Reform were very moderate. He expressed them in his *Judaism as Creed and Life* (1903 and several editions to 1958), which became a widely read and popular book. Joseph also published three volumes of sermons, *Ideal in Judaism* (1893), *Message of Judaism* (1906), and *Spirit of Judaism* (1930). He also contributed to the *Jewish Quarterly Review*, the *Jewish Chronicle*, and Hasting's *Encyclopaedia of Religion and Ethics*. Joseph was active in Jewish literary societies and the Jewish Peace Society.

BIBLIOGRAPHY: JC (Apr. 25, 1930), 10–12; *West London Synagogue Magazine*, 4 (1930), 146–83; R. Apple, *The Hampstead Synagogue 1892–1967* (1967), 9, 14, 17, 18, 23–6, 35–7.

JOSEPH, NORMA BAUMEL (1944–), Canadian professor, Orthodox feminist, activist. Joseph received her B.A. from Brooklyn College in 1966 and M.A. from the City University of New York in 1968. She became associate professor in the Department of Religion at Concordia University in Montreal, where she served in various administrative positions, including director of the women and religion specialization. Her teaching and research areas include women and Judaism, Jewish law and ethics, and women and religion. Her doctoral dissertation, completed in 1995 at Concordia University, focused on the legal decisions of Rabbi Moses *Feinstein concerning the separate spheres for women in the Jewish community. The dissertation was nominated for a Governor General's Gold medal award for excellence. From the early 1970s she promoted women's greater participation in Jewish religious and communal life. Joseph appeared in, and served as consultant to the films *Half the Kingdom* (1990) and *Untying the Bonds...Jewish Divorce* (1999). A founding member of the Canadian Coalition of Jewish Women for the Get (Jewish

divorce), Joseph successfully worked with the Jewish community and the Canadian Federal Government to pass a law in 1990 (Divorce Act, ch.18, 21.1) that would protect Jewish women in difficult divorce situations and aid them in their pursuit of a Jewish divorce. Following the Canadian success, Joseph helped form and presided over the International Coalition for Agunah Rights, an organization for women whose husbands refuse to consent to a Jewish divorce. Author of many publications in the field of feminism and Jewish Law, Joseph won the Leo Wasserman Prize from the American Jewish Historical Society for the best article of 1995 in the journal *American Jewish History*.

[Randal F. Schnoor (2nd ed.)]

JOSEPH, SAMUEL (1881–1959), U.S. sociologist. He was taken to the U.S. from Russia as a child. He joined the Sociology Faculty of City College, N.Y., in 1928 and became professor and chairman of the department in 1940, one of the first Jews to hold a leading academic position in American sociology. An expert on immigration problems, and especially Jewish immigration, his major publications were *Jewish Immigration to the United States from 1881 to 1910* (1914), and *History of the Baron de Hirsch Fund* (1935).

[Werner J. Cahnman]

JOSEPH, SAUL ABDALLAH (1849–1906), merchant-scholar in *China. Born in *Baghdad, he was a merchant and money changer by profession. At the age of 18, he traveled to India and China, finally settling in Hong Kong. He was an interesting example of a scholar who dwelt in an environment foreign to Judaism and yet played an active role in Hebrew literature and culture. Writing for the Hebrew newspapers *Havazzelet* and *Ha-Levanon*, he published articles on the Jews of China and on medieval poetry. His profound knowledge of the Bible, the Hebrew language, Arabic literature, and the Oriental way of life enabled him to understand Spanish Hebrew poetry. His principal contribution lay in pointing out the influence of Arabic poetry on the Hebrew poetry of Spain (he himself translated Arabic stanzas written in the Spanish meter). By nature hot-tempered, he wrote essays noted for their sharp controversies and lack of courtesy toward contemporary scholars. Two of his works were posthumously prepared for publication by Samuel *Krauss: *Givat Sha'ul* (1923), an extensive commentary to 138 secular poems of Judah Halevi, which were previously published by H. Brody; *Mishbezet Tarshish* (1926), a commentary to *Sefer ha-Tarshish* or *Ha-Anak* of Moses ibn Ezra, first published by David Guensburg in 1886. The divan of Todros *Abulafia, *Gan ha-Meshalim ve-ha-Hidot* ("Garden of Apologues and Saws"), which was discovered and copied by Joseph, was published in phototype by Moses *Gaster (1926).

BIBLIOGRAPHY: S. Joseph, *Givat Sha'ul*, ed. by S. Krauss (1923), xxvii–xxx (Eng. and Heb.); T. Abulafia, *Gan ha-Meshalim ve-ha-Hidot*, ed. by D. Yellin, 2, pt. 2 (1936), xlvi–ci.

[Yehuda Ratzaby]

JOSEPH AND ASENATH, pseudepigraphic work – the story of how Asenath, daughter of Pentephres, priest of Heliopolis, converted to the worship of the God of Israel and married Joseph. The tenuous basis of this anecdote is one verse in Genesis (41:45). The marriage of the chaste and pious Joseph to the pagan Asenath was problematic for strictly observant Jews. Targum Pseudo-Jonathan solves the problem by making Asenath the daughter of Dinah, who was raped by Shechem (Gen. 34:1–3). The author of Joseph and Asenath is clearly aware of the theory of Asenath's Jewish origin, but implicitly rejects it. He makes Asenath an Egyptian who converts to Judaism in order to marry Joseph. Joseph and Asenath is extant in Greek as well as in Slavonic, Syriac, Armenian, and Latin versions and, in common with other hagiographic texts, has passed through the hands of many editors. There appear to be one short and three long recensions. The short recension is the oldest and is witnessed to by two Greek manuscripts and the Slavonic version. The original text is Greek and most of the Hebraisms it contains are derived from the Septuagint. Joseph and Asenath should be classified among the pseudepigraphs of the Bible. It provides some interesting points of similarity with the Testaments of the Twelve *Patriarchs. Just as each of the Testaments illustrates a particular virtue, Joseph and Asenath can be held to illustrate the virtue of repentance. The book can also be compared with certain Greek and Latin romances. It contains the stock situations of ancient romantic literature, such as the exceptional beauty of the hero and heroine (1:6; 6:7), love at first sight (6:1), lovesickness (7:4), the kiss (19:3), the separation (26:1), the unscrupulous rival (24), and the hero's virginity (8:2). The author had no intention, however, of writing a frivolous romance, but rather a puritan story designed for Jewish readers, while using a literary style alien to their spirit. Joseph and Asenath presents the precise social situation of Jews and Egyptians confronting each other. One of the aims of the story is to demonstrate the mutual repulsion and attraction of these two groups. The emergence of a third group, the proselytes, is one result of these tensions. Although the author's style is restricted, the literary structure of Joseph and Asenath is sophisticated. The plot contains three elements. The first of these is the missionary story. Asenath is the prototype of the proselyte, who, through repentance, passes "from shadow to light, from error to truth, from death to life" (8:10). Then there is the *roman à clef*; the author has realized that the Egyptian name Asenath means "belonging to Neith." Many almost imperceptible details of the story can only be explained as referring to the goddess of Sais, such as, for example, the fact that the heroine is hermaphrodite (15:1). These references show an extensive knowledge of late Egyptian theology. Finally, there is the mystic element, which is more complex in structure. It contains an astrological allegory, in which Joseph represents the Sun and Asenath the Moon, their marriage being the "*hieros gamos*" of Helios and Selene. There is also the gnostic drama, Joseph representing the Savior and Asenath, Fallen Wisdom. Here, there is a foretaste of Valentinian gnosticism. The text contains a liturgy of initia-

tion comparable in many ways to that of the mystery cults. The entry of the proselyte into the community is marked by a sacred feast. The neophyte eats "the bread of life," drinks from "the cup of immortality," and is anointed with the "unction of incorruptibility" (15:4). He is then "renewed," "reformed," and "revivified" (8:11; 15:4). Joseph and Asenath is thus seen to be valuable evidence for the "mystical Judaism," whose existence has been the subject of much controversy. The short recension of Joseph and Asenath is a Jewish version. It contains no trace of Christian modification or interpolation. The text is certainly the product of Egyptian Jewry, but is not necessarily the work of a Therapeut (Essene). The author may have been an Egyptian of the *Chora* ("region," i.e., outside of Alexandria) converted to Judaism, or, more probably, the Jewish issue of a mixed marriage. Joseph and Asenath must have been composed shortly before the Jewish revolt against Trajan. Joseph and Asenath is also of interest, since the story is repeated in the passions of Saint Barbara, Saint Christine, and Saint Irene. Joseph and Asenath is also the basis for the Persian tale *Yūsuf o Zuleikhā*. There is an English translation by E.W. Brooks, *Joseph and Asenath* (1918).

[Marc Philonenko]

JOSEPH AND AZARIAH BEN ZECHARIAH, two commanders in the army of Judah Maccabee. When, in 165 B.C.E., Judah and his brother Jonathan went to the help of the Jews in Gilead and Galilee who were being oppressed by the gentiles, Joseph and Azariah were entrusted with the defense of the people and strictly forbidden to engage in active hostilities while Judah was absent from Judea. When the news arrived of the victories of Judah and Jonathan, Joseph and Azariah decided on their own initiative to march against Jabneh. The Syrian general Gorgias counter-attacked. The Jewish army was routed and pursued to the borders of Judea, 2,000 Jews falling in the campaign. The author of 1 Maccabees (5:56–62) explains this defeat by saying that Joseph and Azariah were not of the stock that had been entrusted with the salvation of Israel.

JOSEPH BAR ABBA, *gaon* of *Pumbedita 814–816. Joseph was a student of Shinai *gaon* of Pumbedita and successor of Avumai (or Akhumai). In his noted epistle, *Sherira Gaon relates that, as a scholar, his contemporary Mar Rav Kemoi was a more suitable choice for the gaonate, but he did not possess the miraculous powers of Joseph b. Abba, who was very pious and advanced in years. It was believed that Elijah revealed himself to Joseph b. Abba. Sherira relates that on the day of Joseph's death the earth trembled. R. Judah *gaon*, the grandfather of Sherira, was Joseph's secretary. Only a few of his responsa have been transmitted, and it is even uncertain

whether these are his or were written by other *geonim* named Joseph (e.g., *Joseph b. Ḥiyya).

BIBLIOGRAPHY: J. Mueller, *Maftēaḥ li-Teshuvot ha-Ge'onim* (1891), 79–82; B.M. Lewin (ed.), *Iggeret Rav Sherira Ga'on* (1921), 109; Abramson, Merkazim, 10.

[Meir Havazelet]

JOSEPH BAR ḤIYYA (ninth century), *av bet din*, *gaon*, later *av bet din* again, and once more *gaon* of Pumbedita (828–833) during one of the most crucial periods in the history of Pumbedita and the relationship between the academies of Pumbedita and Sura and the exilarchate. In the controversy between the exilarch David b. Judah and his brother Daniel, Joseph b. Ḥiyya and Abraham b. Sherira presided jointly over the academy until peace was restored, when Joseph b. Ḥiyya volunteered to renounce the office, temporarily resuming the position of *av bet din*. The two academies were then enabled to assert their full independence: according to the decree by the caliph al-Mu'min the exilarch was henceforth forced to submit to the judicial authority of the two academies.

[Meir Havazelet]

JOSEPH (Josse) BAR NISSAN, early liturgical poet of uncertain date. His birthplace appears repeatedly in the acrostic to his poems as Shaveh-Kiriathaim (Gen. 14:5). As in the case of Kiriath-Sepher, similarly used by Kallir, this is obviously intended as the designation of an actual but differently named town: Samuel Klein identified it with Nawe in Transjordan. Joseph's *kerovot*, preserved in numerous *genizah* fragments in Oxford, Cambridge, and elsewhere, were composed according to the triennial Palestinian cycle (see *Torah, Reading of). For this reason, among many others, he cannot be identified with the Babylonian poet Joseph al-Baradani who wrote poems in conformity with the one-year cycle. Joseph's poems are written in a highly involved style.

[Jefim (Hayyim) Schirmann]

JOSEPH BEN AḤMAD IBN ḤASDAI (also known as **Ibn Hasdai**; 12th century), student of medicine, born in Spain of a father who converted to Islam. Joseph emigrated to Egypt, where the vizier Ma'mun became his patron. Joseph maintained a friendship with Ibn Bajja (Avempace), the Spanish philosopher, with whom he continued to correspond after his departure from Spain. Among his works are (1) *Al-Sharḥ al-Ma'mūnī* (Commentary on the Oath (Kitāb al-Imān) of Hippocrates). (2) *Sharḥ al-Fuṣūl* (Commentary on the *Aphorisms* of Hippocrates). (3) *Fāwā'id* (useful observations and extracts from the Commentary of Ali Ibn Riḍwān on the *Glaukon* of

Galen). (4) *Al-Qawl 'alā Awwal al-Šinā'āt al-Šaghīra* (Study of book one of *Mikrotechnē* of Galen).

[Isidore Simon]

JOSEPH BEN ASHER OF CHARTRES (12th–13th centuries), liturgical poet. Joseph was the brother-in-law of Joseph b. Nathan of Etampes, and granduncle of Joseph b. Nathan Official. The latter reports in his apologetic for Judaism (*Yosef ha-Mekanne*, no. 24) that Joseph engaged in a disputation with a Christian clergyman. To the latter's question as to why God had appeared to Moses in a bramblebush, rather than in a tree, Joseph is said to have replied that it was because a cross could not be made from a bramblebush. According to Gedaliah *ibn Yahia, Joseph was a pupil of Jacob b. Meir *Tam and *Samuel b. Meir. His notes on the Bible are cited in a few commentaries in manuscript (Oxford, Bodleian Library, Ms. Bodl. Or. 604; Ms. Marsh. 225; Ms. Opp. 724). He is also known as the author of an elegy on the massacre at York, 1190.

BIBLIOGRAPHY: Zunz, Lit Poesie, 470, 480; Z. Kahn, in: REJ, 1 (1880), 238, 240, 246; Gross, Gal Jud, 603–5; C. Roth, in: *Mezudah*, 2 (1944), 116–21; A.M. Habermann, *Gezerot Ashkenaz ve-Zarefat* (1945), 152–4, 260f.

JOSEPH BEN BARUCH OF CLISSON (first half of the 13th century), French tosafist. Joseph lived in Paris and was associated with *Judah b. Isaac Sir Leon. He was one of the leaders of the 300 scholars who went to settle in Erez Israel in 1211. On his way there he passed through Egypt where he met Abraham, the son of Maimonides. In Erez Israel the poet and traveler Judah *Al-Ḥarizi met him and refers to him in his *Taḥkemoni* (ed. by A. Kaminka (1899), 353) with great respect. Joseph is frequently mentioned in the standard *tosafot* to several tractates under different names such as "Joseph of Jerusalem," "Joseph who has gone to the Pleasant Land" (*Erez ha-Zevi*; Jer. 3:19), and "Joseph of Israel." A comparison of parallel passages shows that they all refer to Joseph of Clisson or Joseph b. Baruch. His rulings are mentioned in many of the works of the *rishonim*, including *Meir b. Baruch of Rothenburg. Joseph's brother Meir was also one of the emigrants to Israel, but few statements by him have been preserved. There is reason to suppose that Joseph was the teacher of Samuel b. Solomon of Paris, the teacher of Meir of Rothenburg.

[Israel Moses Ta-Shma]

JOSEPH BEN DAVID HA-YEVANI ("the Greek"; early 14th century), Hebrew grammarian and lexicographer who lived in Greece. He was the author of the unpublished work *Menorat ha-Ma'or* containing a short grammar and a lexicon which, in the solely preserved Bodleian manuscript (Neubauer Cat, 1 (1886), 525 no. 1485), goes only as far as the word ושב. Dukes

published excerpts from the lexicon (see bibl.). The author quotes the works of Judah b. David *Ḥayyuj, Jonah *Ibn Janah, *Rashi, Abraham *Ibn Ezra, David *Kimḥi, and *Naḥmanides. In his grammar he relies on *Midrash ha-Ḥokhmah* by Judah b. Solomon ha-Kohen ibn Matka of Toledo. Fuerst, Benjacob, and Rosanes confused Joseph b. David with Joseph b. Moses Kilti. Joseph b. David died before 1337.

[Moshe Nahum Zobel]

JOSEPH BEN ELEM, temporary high priest during the reign of *Herod the Great. Numerous talmudic sources describe how Joseph b. Elem of Sepphoris substituted “for one day” as high priest, on the Day of Atonement. Josephus also relates that when the incumbent high priest, Mattathias the son of Theophilus, was rendered unclean just before the day of the fast, his relative Joseph b. Elem was appointed to serve in his place. According to the rabbinic version, Joseph was removed immediately after the fast from all subsequent priestly service.

[Isaiah Gafni]

JOSEPH BEN ELIJAH OF ZASLAW (first half of 17th century), rabbi and preacher. He was author of the exegetical-moralistic works *Rekhev Eliyahu* (Cracow, 1638) and *Yesod Yosef* (Lublin, 1638). In *Rekhev Eliyahu*, which he named in honor of his father Elijah, he printed as an introduction a moralizing letter by Elijah, containing much self-criticism as a merchant-scholar. Joseph demanded sincerity and humility from his own circle of scholars: “Brethren and companions, see how all of us have gone astray through the bad trait of priding ourselves on learning loudly, openly, and publicly. Whosoever praises himself more appears the better in his own view; each one thinks himself wiser than his fellow, as if the Torah was given to him alone; only he knows how to clarify talmudic problems and teach pupils. This self-glorification is very frequent, in particular among the leaders of the people, who say ‘There is none but me. Is there a teacher like me?’” (*Rekhev Eliyahu*, fol. 27b). He attacked false humility: “This evil I have seen – each and every false and boastful man likes to say as if in amazement: ‘Is there any pride in me? You would not find a more humble person than myself’” (*ibid.*, fol. 22a–b). He devoted a special paragraph against bankruptcy and warned that bankrupts should not give charity or buy candles for the synagogue (*ibid.*, fol. 12b). He demanded earnest *kavvanah* in prayer. Joseph’s personality and work show that, in the new era of Jewish settlement and economic activity in Poland-Lithu-

ania, a high level of Jewish culture and exacting standards of individual and social morality had been set by the first half of the 17th century.

[Haim Hillel Ben-Sasson]

JOSEPH (Joselmann) BEN GERSHON OF ROSHEIM (c. 1478–1554), the greatest of the Jewish **shtadlanim* in Germany during the Middle Ages. According to one tradition, his family originated in Louhans, France, and he himself once added “of the Loans family” to his signature, as did his sons after him. However, it is very doubtful if he was a relative of Jacob Jehiel Loans, physician to emperor Frederick III. During the 15th century, Joseph’s family lived in Endingen, in Baden. Three of his father’s uncles, Elijah, Aberlin, and Marcolin, were martyred there in 1470 as a result of a *blood libel. When the Jews were expelled from Endingen his father settled in Obernai, Alsace, and fled from there in 1476 after the pillage campaigns of the Swiss mercenaries and settled in Haguenau, Alsace. Orphaned at the age of six, Joseph was brought up by his mother’s family. He earned his livelihood from moneylending and commerce and settled in Mittelbergheim, near Strasbourg. In 1507 the Jews who had been expelled from Obernai appealed to him to intercede with the provincial authorities and the emperor to repeal the expulsion decree. Because of his success, he was appointed in 1510, together with R. Zadok, as *parnas u-manhig* (“leader”) of the Jews of Lower Alsace. He once referred to himself in one of his appeals to the imperial diet in Speyer (1535) as *Gemeiner Judischheit Regierer im deutschen Land* (“ruler of all Jewry in German lands”) and was penalized for so doing because only the emperor could be considered as the ruler of the Jews. He also signed himself *Befehlshaber der ganzen Judenschaft* (“commander of all Jewry”), and was referred to by similar titles by the emperor and government bodies.

While acting on behalf of the Jews of Mittelbergheim in 1514, Joseph first came into the presence of the emperor, Maximilian I. In 1520, in the course of his activity on behalf of the Jews of Obernai, he obtained a general letter of protection for the Jews in Germany from Emperor *Charles V at the coronation celebrations held at Aachen. During the Peasants’ Revolt in 1525, he saved the Jews of Alsace – and his town of *Rosheim in particular – from the peasant bands in exchange for a gift of 80 guilders. He also intervened with King *Ferdinand I, the future emperor and brother of Charles V, on behalf of the Jews of Haguenau in 1529, and in the same year was called upon to protect the Jews of *Pezinok (Poelsing) in Hungary when they were threatened by a blood libel. In 1530 he succeeded in convincing the emperor and Ferdinand I that the accusation that the Jews had spied for the Turks was false, and the emperor renewed the letter of protection. During the same year the emperor ordered Joseph to engage in a disputation with the apostate Antonius *Margarita, author of the anti-Jewish work *Der gantz juedisch Glaub* (1530). When Jo-

seph succeeded in refuting his accusations, the apostate was expelled from Augsburg. Joseph was called upon to protect the Jews of Silesia in 1535, when the danger of a blood libel threatened the Jews of Jaegerndorf, and a year later he intervened with Elector John Frederick to avert an expulsion decree against the Jews of Saxony. Martin *Luther, whose attitude toward the Jews had already become hostile, refused to receive him and act as mediator between him and the elector. In 1539, at the Protestant convention of Frankfurt, he succeeded in proving the innocence of the martyrs of Brandenburg who had been put to death as a result of an accusation of *Host desecration. Phillip *Melanchthon himself made a declaration to the convention on this subject. In 1544, after he had complained to the emperor over a renewed blood libel in Wuerzburg, he obtained a further letter of protection for the Jews of Germany, "the most liberal and generous letter of protection ever granted to Jews" (S. Stern). During the emperor's war against the Protestant princes, the Smalkaldic League, in 1546, he interceded on behalf of the Jews, who were oppressed by both sides. In 1548 he was again compelled to appeal to the emperor with a complaint against the towns of Alsace. His intervention in favor of the Jews of *Colmar continued until 1551, when at the imperial diet in Augsburg he worked against the severe restrictions on Jewish money-lending, such as the prohibition on selling promissory notes to Christians, and the threat of expulsion from the duchies of Wuerttemberg and Bavaria. His last activities – like his earlier ones – once more concerned the Jews of Alsace, when he came to the aid of the Jews of Dangolsheim and those of Rosheim.

As well as his memorandum against the blood libel of Pezinok (1530) and the disputation with Antonius Margarita, Joseph took up the defense of Judaism in his work *Iggeret Neḥamah* (1537) against the anti-Jewish attacks of the Protestant minister M. *Bucer. The Hebrew original, which has been lost, was read on the Sabbath in the synagogues of Hesse in order to raise the morale of the Jews and strengthen their faith. In 1530 he convened a meeting of communal delegates at Augsburg in order to establish a code to regulate their money-lending and trade affairs. Similar regulations covering the relations between the Jews and the general population of Alsatian towns were proposed and carried out by him. Joseph was called to Prague in 1534 in order to mediate in the dispute between the local Jews and the *Horowitz family. One of the members of the family, Sheftel, who objected to outside intervention, even planned to assassinate him. Joseph was also opposed to the messianic movement of David *Reuveni and Solomon *Molcho. Appealing to the municipal council of Strasbourg against the anti-Jewish writings of Luther in 1543, Joseph obtained a ban on the propagation of these libelous documents within the city.

Joseph wrote several religious, ethical and historical works, which in part are still extant (see bibl.). His *Derekh ha-Kodesh*, a work of ethics and guidance for a life of sanctity and martyrdom (*Kiddush ha-Shem), written in 1531

while he was in Brabant waiting for an audience with the emperor, has been lost and only a few extracts from it were copied by R. Joseph Yospa *Hahn in his *Yosef Omez*. His grandson was the kabbalistic scholar R. Elijah b. Moses *Loans.

[Jacob Rothschild]

JOSEPH BEN ḤIYYA (d. 333 C.E.), Babylonian *amora* and head of the Pumbedita academy for two and a half years, after the death of *Rabbah. Joseph was a pupil of Judah b. Ezekiel. Hundreds of his sayings in *halakhah* and *aggadah* are to be found throughout the Babylonian and Jerusalem Talmuds, and a large number of his pupils transmitted statements in his name. He devoted himself particularly to the text of the Mishnah, which he would clarify by means of the *beraitot*. His knowledge was exceptionally comprehensive, his teaching was well ordered, and his halakhic decisions clear, so that he was called *Sinai*, i.e., a scholar with wide knowledge (Hor., end). He also delved into mysticism, and was one of the "masters of the merkabah" (see Merkabah *Mysticism; Ḥag. 13a). He was also distinguished in biblical exegesis and left an Aramaic translation of parts of the Bible, which is often quoted. It is not to be assumed, however, that Joseph translated the whole Bible, though the Aramaic translation of the Book of Chronicles is ascribed to him and is called "the Targum of Rav Joseph."

Despite the fact that Joseph was recommended for the position of head of the yeshivah, he deferred this honor for the 22 years that Rabbah headed the yeshivah, and during this period Joseph accepted Rabbah's authority, declining even the slightest external signs of honor or office (Ber. 64a). According to the Talmud, he had an overwhelming love of the Torah and its students and, possessing considerable wealth (he owned fields and vineyards and his wine was praised), he undertook the support of 400 of his pupils (Ket. 106a). He stressed the importance of the Torah and its students in his *aggadah* and underwent many fasts, until he received assurance from heaven that the study of Torah would not depart from his descendants during the course of three generations (BM 85a). One of the central events in his life was a severe illness which caused him "to forget his learning," and Abbaye – his pupil – re-taught him what he had forgotten (Ned. 41a; cf. Er. 10a), and this illness may have been the cause of his blindness (Kid. 31a; cf. Pes. 111 b).

Many remarkable stories of his conduct are related, and even the details of his death and burial were embellished by legends. His teachings and rulings stress concern for the plight of the poor and the improvement of social life. His aspiration to raise the importance of the academy above that of the exilarch, which would lead to the dependence of the latter upon the academies, is discernible in his aggadic dicta, and can also be seen in the tendency in his teachings toward giving increased authority to the courts of law and their decisions (see e.g., Bezah 5a; Ket. 81b; Git. 88b; et al.). The first struggle in the conflict of the academies with the exilarch originated with Joseph. Another noteworthy detail in his *aggadah* is that he is the only one to mention conversations with *Asmodeus (Asmedai), king of the demons (Pes. 110a).

[Israel Moses Ta-Shma]

JOSEPH BEN ISAAC HA-LEVI (17th century), philosophical writer. Born in Lithuania, he later settled in Prague, where he taught medieval religious philosophy to many rabbinical scholars. Ephraim Solomon of Luntschits reports that after Joseph settled in Prague, he became known as a scholar and philosopher and some of the greatest scholars of Prague came to learn from him (see S. Fuenn, *Kiryah Ne'emanah* (1915), 64). Joseph's short commentary on *Maimonides' *Guide*, under the title *Givat ha-Moreh*, was published by Yom Tov Lipmann *Heller, author of the Mishnah commentary *Tosafot Yom Tov*, with his own introduction and annotations (Prague, 1611). Joseph also wrote *Ketonet Passim* (Lublin, 1614), dealing with the basic ideas of the *Guide*.

[Samuel Abba Horodezky]

JOSEPH BEN ISRAEL (late 16th–early 17th centuries), the most prominent among the poets of the town Mashtā who molded Yemenite Jewish poetry into its religious, national, and mystic character. Joseph was the earliest member of the group and the predecessor of his younger contemporary, Shalem *Shabazi. (According to legend, he was of the same town and was the latter's relative.) His works consist of about 150 poems and *piyyutim* in Hebrew and Arabic (most of them are extant in manuscript). Their contents deal with religious subjects and are marked by sublime emotion, flowing style, and power of expression. He developed the category of poems which open with *Mi Nishkani* ("Who Has Kissed Me"). Superficially, these are sensual love poems, but in reality they are fiery allegoric religious poems characterized by supplications and "embraces" of the bride (the Jewish People) for her

husband, the bridegroom (God). He wrote about 25 graceful *piyyutim* and *seliḥot*.

[Yehuda Ratzaby]

JOSEPH BEN ISSACHAR BAER OF PRAGUE (end of 16th century), rabbi and author. Joseph was a pupil of Mordecai Jaffe and of Judah Loew b. Bezalel (the Maharal of Prague). He was the author of *Yosef Da'at* (Prague, 1609), a supercommentary on Rashi's commentary to the Pentateuch, in which he corrects mistakes in the text and gives illustrations for understanding it. The work also includes some notes on the biblical commentary of Jacob b. Asher. In the introduction Joseph mentions his commentary to the *Behinat Olam* of Jedaiah ha-Penini Bedersi, which has not been published. *Alei Ayin*, a reference work to the *Ein Ya'akov* of Jacob Ibn Ḥabīb, has also been attributed to him, though this is doubtful. It is stated that Joseph used a manuscript of Rashi's commentary on the Pentateuch dating from the year 1300.

[Yehoshua Horowitz]

JOSEPH BEN JACOB (11th century), liturgical poet. His compositions, among which was a *kerovah* in four parts for *Ne'ilah (unpublished) as well as *ma'araviyyot* for Pesah and Shavuot, were part of the French rite at a very early period. Single poems by him have been included in both the Roman and German-Polish *maḥzor*. His *ma'aravit* for the seventh evening of Passover is attributed by S.D. Luzzatto to the younger Joseph b. Jacob *Kalai.

[Jefim (Hayyim) Schirmann]

JOSEPH BEN JACOB BAR SATIA (tenth century), *Gaon* of *Sura. The derivation and meaning of the name Bar Satia is not clear. He was appointed *gaon* by the exilarch *David b. Zakkai, some time after 930 C.E., after the exilarch had become embroiled in a dispute with Saadiah Gaon and had deposed him as *gaon* of Sura. Even though the exilarch and Saadiah were reconciled in 937, Joseph was not entirely deposed and, on Saadiah's death in 942, he was reappointed *gaon*. Not of a very strong character, he was unable to stand up to his wealthy and influential opponent in Pumbedita, Aaron *Sargado, and the academy of Sura declined during his days. Some time after 943, Joseph left Sura and went to Basra, where he died shortly after.

[Eliezer Bashan (Sternberg)]

JOSEPH (Jossel) BEN JOSHUA MOSES OF FRANKFURT (d. 1681), German *dayyan*. Joseph was born in Frankfurt. Until his death he served as *dayyan* in Fuerth. He was the author of *Torat Yosef* (Wilmersdorf, 1725), which contains homilies and explanations of the *Masorah and achieved considerable fame. In the preface he points out that in earlier generations people had a wide knowledge of Scripture, with the result that the meaning of the Masorah was plain to all, but that this had changed during recent generations. The aim of the book was to explain the Masorah on the Torah in accordance with the *halakhah*, as well as to explain Rashi's commentary, and to justify statements of his which had been queried by later commentators. In his preface, Joseph mentions his work on the 613 commandments, *Torat Moshe* (in manuscript), which he named after his father "who gave his life on my behalf, as is known to all my father's family in Frankfurt."

BIBLIOGRAPHY: Loewenstein, in: JJLG, 8 (1911), 117.

[Yehoshua Horowitz]

JOSEPH BEN JUSTU OF JAÉN (early 12th century), Spanish scholar. Joseph was a pupil of Isaac *Alfasi. *Zerahiah b. Isaac ha-Levi (*Ha-Ma'or*, to Alfasi Pes. ch. 2) notes that he came from "the province of Jaén" but the exact location is unknown. From a parallel passage in *Ma'or* (Av. Zar. ch. 5, fol. 31b) it may possibly be inferred that Joseph lived in North Africa for some time after the death of Alfasi. The material extant by him or about him is very scanty. It is known that Alfasi charged him with circulating his "amendments" to various *halakhot* of his large work (see *Teshuvot ha-Ge'onim* by A. Harkavy (1887), 258, no. 519), and on one occasion he is found testifying after Alfasi's death to the fact that Alfasi had changed his mind (*Ha-Ma'or*, loc. cit.). *Teshuvot ha-Ge'onim* contains a collection of his queries to Alfasi and the latter's replies, but it is not possible to determine where the collection ends or how many paragraphs it contained. Only a fragment of one of Joseph's own responsa remains preserved in a responsum of Joseph *Ibn Migash (quoted in *Shitah Mekubbezet* to BK 108b). Some scholars are of the opinion that the name Justu is an abbreviation of Justus (Zedekiah). It may be that Joseph is identical with Joseph b. Abraham b. Seth (Shet), a collection of whose queries to Alfasi and the latter's replies were also published in *Teshuvot ha-Ge'onim* (51 no. 83 ff.), and that Seth (תש, Shet) should read תש" (Yeshet), i.e., Justu.

[Israel Moses Ta-Shma]

JOSEPH BEN KALONYMUS HA-NAKDAN I (13th century), grammarian and poet from a family of grammarians and *nakdanim* in Germany. Joseph copied and vocalized many manuscripts and signed with the addition "the scribe who gives goodly words" (see Gen. 49:21). *Abraham b. Azriel, author of the *Arugat ha-Bosem*, cites him in his book on matters of language and *piyyut*. His extant *piyyutim* include the *selihah* he composed in memory of the martyrs of 1235 of

Laudna and Bischofsheim, beginning with the words "Ezak *Ĥamas Korotai*" ("I cry for the violence that has befallen me") and a *piyyut* for Rosh Ha-Shanah, *Melekh Elyon Addir ba-Marom Adonai* ("Exalted King, God, mighty on high") found in a French festival prayer book of 1278. It is possible that he is to be identified with Jose of Heidelberg, who corrected Torah scrolls and lived in Bohemia where the aforementioned Abraham b. Azriel dwelt. Joseph's nephew was Joseph b. Kalonymus ha-Nakdan II (died after 1294). He too was a grammarian and *paytan*. He lived in Xanten and studied under his maternal grandfather, *Samson ha-Nakdan. He was much occupied in copying and vocalizing of manuscripts and composed poems for learning the correct reading and the intonations of the books of the Bible, one of which, entitled *Ta'amei Emet*, for Job, Proverbs, and Psalms, was published with the author's explanation by A. *Berliner (see bibliography).

[Abraham David]

JOSEPH BEN MORDECAI GERSHON HA-KOHEN OF CRACOW (1510–1591), Polish halakhic authority. Joseph, who was born in Cracow, was a brother-in-law of Moses *Isserles and a member of his *bet din*. For about 50 years he served as head of a yeshivah in Cracow. He is the author of *She'orit Yosef* (Cracow, 1590), comprising responsa, expositions of the *Mordekhai* of *Mordecai b. Hillel to the orders *Nezikin* and *Mo'ed*, the tractate *Berakhot*, and the Minor Tractates, and of *Tur Ḥoshen Mishpat*. The responsa were also published separately (Fuerth, 1767). In the introduction he notes that his sons, TANḤUM (d. 1618) and AARON MOSES (d. 1616) "persuaded me to have it published." Most of his responsa deal with commercial and financial matters, in which he was especially expert. He was approached with problems from Moravia (nos. 7, 9, 40), Italy (33), and Turkey (6) and corresponded with Meir *Katzenellenbogen (no. 1) and Solomon *Luria (no. 17). The latter asked him to look into a certain ruling and express his opinion on it, and in reply Joseph wrote a complete responsum. He was inclined to be stringent, as Isserles (no. 111) testified, and when a grain of wheat was found on a salted piece of meat during Passover, he prohibited all the pieces that were in the vessel at the time (no. 46). At the end of this responsum he stressed that many "of my colleagues opposed me, saying that it was a new prohibition and one should take into account only those prohibitions imposed explicitly by our predecessors." Only after he adduced additional evidence in support of his ruling was it accepted as binding in Cracow. His individuality and independence in determining halakhic ruling is marked; for instance he opposed a ruling by Solomon Liebermann in the case of a doubtful betrothal and relied upon Katzenellenbogen, who agreed with his opinion (no. 28). He wrote glosses to and published *Sefer ha-Aguddah* (Cracow,

1571) by *Alexander Susslin ha-Kohen. In the introduction Joseph states that he found it necessary to add his glosses because of the succinct style of the work and the difficulty in understanding it. David *Gans, the author of *Zemah David* wrote that Joseph “was adorned with four crowns: the crown of Torah, the crown of the priesthood, the crown of greatness, and the crown of a good name.”

[Yehoshua Horowitz]

JOSEPH BEN MORDECAI HA-KOHEN (late 17th and early 18th century), talmudist of *Jerusalem. Joseph was a pupil of Moses b. Jonathan *Galante. From 1706 to 1718 he wandered through various European countries and, while in Venice, arranged for the printing of his own and other works. Toward the end of his life he was appointed rabbi in Ankara, Turkey.

He was the author of: *Sha'arei Yerushalayim*, a collection of religious poems and prayers in praise of Jerusalem (both his own and those of other authors), printed with the annotations of Moses Cohen (Venice, 1707); *Divrei Yosef*, homilies (*ibid.*, 1710); *Likkut Yosef*, responsa on the laws of *shehitah* (unpublished). Joseph further edited *Zevaḥ ha-Shelamim* of Moses Galante (Amsterdam, 1708), as well as the *Idrot ha-Kedoshot*, based on the manuscripts of the *Zohar brought by Nathan Shapiro from Jerusalem (*ibid.*, 1708), and also a work entitled *Leket ha-Omer*, containing diverse prayers according to the custom of the Jews of Corfu (*ibid.*, 1718).

[Samuel Abba Horodezky]

JOSEPH (Joselein) BEN MOSES (1423–1490?), talmudist and author. Born in Hoechstaedt, Bavaria, he studied under Jacob *Weil at Augsburg, Judah *Minz at Padua, and Joseph *Colon at Mestre. His principal teacher, however, was Israel *Isserlein under whom he studied at Wiener Neustadt for 10 years, and whose statements, customs, and daily conduct he noted carefully. From these notes he wrote his work *Leket Yosher* (ed. by J. Freimann, 1903), which is a compilation of his teacher's customs, together with his responsa and halakhic decisions. He was apparently the first to base his work on the *Arba'ah Turim*, but only the sections on the *Orah Hayyim* and *Yoreh De'ah* are extant. The language of the author is not clear, as he himself admits. He was, however, an extremely precise and conscientious compiler, regularly indicating his sources, comparing different manuscripts, and, on several occasions, pointing out that a responsum he had found was a revised version and not a true copy of the author's original statement. At times he added brief annotations from the Talmud and halakhic authorities. The work is significant also because of the many new responsa of contemporary scholars which are cited and because of its great value for the history of the

Jews and scholars of Germany, whose important communities he visited.

[Yedidya A. Dinari]

JOSEPH BEN MOSES (Ashkenazi), DARSHAN OF PRZEMYSLANY (17th century), rabbi, preacher, and *dayyan*. He was noted for his *derashot* of admonishment. The *Councils of the Lands approved the publication of *Ketonet Passim* (Lublin, 1691) and *Zafenat Pa'ne'ah he-Ḥadash* (Frankfurt on the Oder, 1694), two collections of his sermons. Joseph is also the author of *Keter Yosef* (Berlin, 1700), a commentary on liturgy. He was suspected of Shabbatean leanings.

BIBLIOGRAPHY: I. Halpern (ed.), *Pinkas Va'ad Arba Arazot* (1945), 209, 213f.; idem, *Yehudim-ve-Yahadut be-Mizrah Eiropah* (1968), 85, 95.

JOSEPH BEN MOSES OF KREMENETS (second half of the 16th century), Polish talmudist. Joseph's teachers in Cracow included Moses *Isserles, Israel ben Shalom *Shakhna, and R. Mardush in Ostrog. The influence of his teachers is seen in his *Be'urei ha-Semag* (Venice, 1605), a commentary on the section on negative precepts in the *Sefer Mitzvot Gadol* of *Moses of Coucy. He also wrote *Be'urei Rashi*, a supercommentary to Rashi's commentary on the Pentateuch (Prague, 1615), as well as *Be'urei Sha'arei Dura* (*ibid.*, 1609), on the work of that name by Isaac ben Meir *Dueren (Cracow, 1534). A halakhic decision of Joseph appears in the *Mashbit Milḥamot* about the *Mikvah* of Rovigo (Venice, 1606, 88a–89b).

[Samuel Abba Horodezky]

JOSEPH BEN MOSES OF TROYES (known as **Joseph Porat**; 12th century), French scholar of Epernay. Joseph was an older contemporary of Jacob *Tam and a principal pupil of Tam's brother, *Samuel b. Meir, during whose lifetime he wrote *tosafot*. Many scholars studied his works in order to acquaint themselves with Samuel's teachings. Tam himself, as well as *Eliezer b. Samuel of Metz, and, particularly, *Judah Sir Leon, already made use of his *tosafot* to tractate *Shabbat*. His name is frequently mentioned in the printed *tosafot*, particularly to the tractates *Berakhot* and *Shabbat*, and in the *Tosafot Yeshanim* on tractate *Yoma*, and it is possible that wherever “Joseph” is mentioned without qualification in these tractates, it is he that is being referred to. Mention is also made of his *tosafot* to *Mo'ed Katan* and *Ketubbot*. Joseph corresponded with Tam and submitted problems to him (*Sefer ha-Yashar*, section of responsa ed. by F. Rosenthal (1898), 25–28) – even before Tam had left Ramerupt in 1146 – and the latter replied in terms of great respect. Tam's pupil, Aaron, may have been Joseph's son.

[Israel Moses Ta-Shma]

JOSEPH BEN MOSES PHINEHAS (1726–1801), Polish talmudic scholar and author. Joseph was a son-in-law of Ezekiel *Landau, who described him as the “unrivaled” scholar of his generation. He was renowned for his piety and is usually referred to as “Joseph the Righteous.” His insistence on imposing punishment on members of his community in accordance with Jewish law brought him into conflict with the authorities, who had withdrawn this privilege from the Jewish communities.

Joseph carried on an extensive correspondence with scholars, including his father-in-law; his scholarly exchange of letters with Akiva *Eger is particularly noteworthy. A large part of his writings was destroyed by fire in Dubno, where his widow had taken up residence; the remainder was collected and published by his grandson, Samuel Schoenblum, under the title *Zikhron She'orit Yosef* (1881). Some of his decisions and novellae are quoted in the *Noda bi-Yhudah* (e.g., to EH 63, HM 25–28) and *Ziyyun le-Nefesh Hayyah* (1783, 1855) of his father-in-law; a number of his novellae appear in the *Beit Shemu'el Aḥaron* (1816) of his brother.

[Elias Katz]

JOSEPH BEN NOAH (**Abu Ya'qub Yūsuf ibn Nūh**; early 11th century), Karaite scholar. According to a report by *Ibn al-Hitī, he lived in Jerusalem and was principal of an academy of 70 scholars (possibly to conform with the number of members of the *Sanhedrin). His contemporaries were *Sahl b. Mazli'ah and *Japheth b. Ali, who opposed him on certain questions. Joseph b. Abraham ha-Kohen ha-Ro'eh (Abu Ya'qub al-Baṣīr) and *Abu al-Faraj Harun ibn al-Faraj refer to him as their teacher. Judah *Hadassi, who mentions Joseph several times in *Eshkol ha-Kofer*, reports that he rejected one of the basic tenets of Karaite doctrine, deduction by analogy. Joseph's works are no longer extant. They included a commentary on the Pentateuch, which Abu al-Faraj is supposed to have summarized and which Ali ibn Suleiman used for his commentary on Deuteronomy. He also wrote a grammatical work, likewise quoted by Abu al-Faraj.

[Isaak Dov Ber Markon]

JOSEPH BEN PHINEHAS (d. before 928), *Baghdad businessman and banker. By 877 he was already engaged in large and far-flung business transactions, with *Aaron b. Amram as his partner. In 908 the two had financial dealings with the vizier Ibn al-Furāt, and in 911/12 they were appointed court bankers to the caliph al-Muqtadir – this was regarded as the most important post under the *Abbasid regime. There are

records of their activities as court bankers until 924, and it appears that Joseph b. Phinehas retained his post until his death. He knew how to use his high office to further the cause of Babylonian Jewry in government circles. A report by R. *Nathan ha-Bavli refers to a bitter controversy between the exilarch *Ukba and the *Gaon* *Kohen Zedek (according to Mann, the exilarch's controversy was with R. Judah Gaon, the grandfather of R. *Sherira Gaon, and not with Kohen Zedek) about revenues from Khorasan for the academy of *Pumbedita. Joseph b. Phinehas and his son-in-law *Netira, who also held a high position in the administration, gave their support to the *gaon* and twice succeeded in having the exilarch Ukba removed from his post. Joseph's position at court was inherited by his grandsons, the sons of his son-in-law Natira who died in 916.

[Abraham David]

JOSEPH BEN SAMUEL BEN ISAAC HA-MASHBIR (**Rodi**; d. 1700), Karaite author and scholar. Born in Derazhnya, Volhynia, Joseph was a pupil of Nisan Kukizow and a teacher of his son Mordechai b. Nisan *Kukizow. He helped Mordechai to answer the questions on the Karaites received from the Leiden professor Jacob Trigland (incorporated in *Dod Mordechai*). About 1670 Joseph moved from Derazhnya to *Halicz, where his innovations brought the Galician Karaites into closer contact with those of the Crimea. This earned him the name “*ha-Mashbir*” (“provider of bread”; cf. Gen. 42:6). He endeavored to raise the educational level of Halicz's Karaites and established a number of regulations that were observed also by following generations of that community.

He was an author of several treatises. Most of them are known only by title: *Ner Hokhmah* (Ms. JTS, NY), a commentary on the prayer book that was never finished; *Porat Yosef* or *Tiferet Yosef*, a work on Hebrew grammar (Mss. Oxford, Strasbourg); *Er ve-Onah*; *Perush al Asarah Ikkarim* (Ms. Strasbourg); *Shever Yosef*, an exegetical work, written in the form of questions and answers.

Fourteen of his *seliḥot*, prayers, and hymns are incorporated in the Karaite prayer book.

[Isaak Dov Ber Markon / Golda Akhiezer (2nd ed.)]

JOSEPH BEN SHALOM ASHKENAZI (also called **Joseph ha-Arokh**, “the tall”; early 14th century), Spanish kabbalist. According to his own testimony, he was a descendant of *Judah b. Samuel he-Ḥasid. Only two of his works have survived:

(1) a commentary on the Sefer *Yezirah (Mantua, 1562), erroneously published under the name of R. *Abraham b. David of Posquières. An abridged version of this commentary was published in Constantinople in 1719. The commentary is often cited in kabbalistic works and even gained Isaac *Luria's appreciation; (2) a commentary on the portion of Genesis in the *Midrash Rabbah* (in Ms.). Although Ashkenazi made use of many talmudic, philosophical, and kabbalistic sources, he cites very few of them. He did not regard the *Zohar as an authoritative work. Despite his opposition to the Aristotelians, he admired *Maimonides, and his works reveal a tendency to merge philosophy and Kabbalah. Joseph Solomon *Delmedigo of Candia stated that Ashkenazi was "a sophisticated and knowledgeable philosopher." He was opposed to mythical speculation.

Ashkenazi's Teaching

Ashkenazi's philosophical inquiry led him to the conclusion that there must be one cause for all causes which cannot be in potentiality, in change, or in motion. Ashkenazi calls this the *Illat ha-Illoṭ* ("cause of causes") and, infrequently, *Ein-Sof ("the Infinite"). By using this causal term, he wished to emphasize the revelatory aspect, although he stressed the cause of all causes as being above the world of emanation (*Azīlut*). Even the first *Sefirah*, *Keter* ("crown"), is neither identical nor coexistent with the cause of all causes despite certain resemblances between them. Thus Ashkenazi opposed a number of Spanish kabbalists who identified *Ein-Sof* with *Keter*. At a certain point, the *Ein-Sof* intended to elevate the *Sefirot* hidden within it, which served as manifestations of the concealed divinity. The *Sefirot* constitute inclusive unity and variegated activity into which man is integrated by his theurgic activity.

The principle of paradigm is valid for the entire structure of existence. The emanating element in the *Sefirot* is described in the image of male and female. And just as the microcosm was created as an amorphous mass, according to the Midrash, the macrocosm began as hyllic matter "which was neither potential nor actual" and thus, preceding the *Sefirot*, there was an amorphous mass called *havayot* ("essences") or *omakim* ("depths") – a conception resembling Platonic ideas. The force of evil (*temurot*, "changes") is considered a real entity, deriving from a supernal source and dependent on good. Evil's main tasks are provocation, accusation, and punishment. In the world to come man will inevitably fulfill the *mitzvot* and evil will be abolished. Ashkenazi approved of magic as a science, but opposed those who practiced it.

According to Ashkenazi, all existence is merely a system of layers. He posits as a cosmic rule that all that exists, including the seven lower *Sefirot* (and herein lies his great innovation), will undergo transmigration (*gilgul); through transmigration, a being changes form, either rising or declining. Death is a metamorphosis and not the cessation of existence, and man, in part or as a whole, may be reincarnated into any entity in the world. Ashkenazi is the source of the idea that the Messiah is a reincarnation of Moses.

[Moshe Hallamish]

JOSEPH BEN SHESHET IBN LATIMI (c. 1300), Hebrew poet. Joseph, who lived in Lérida (Spain), was a member of a well-known Jewish family. His best-known work is a prayer, composed in the year 1308, consisting of 1,000 words, each of which begins with the letter *alef*. Aside from this bit of ingenuity, the piece is distinguished by a highly complicated structure and a long acrostic. It is found in a number of manuscripts, as well as in an edition by Isaac Akriš, *Kovez Vikkuḥim* (Breslau, 1844). Joseph is also the author of numerous liturgical poems and elegies, which have remained unknown to most scholars in the field.

[Jefim (Hayyim) Schirmann]

JOSEPH BEN SOLOMON OF CARCASSONNE (11th century), liturgical poet. One of the first representatives of the *piyyut* in France, Joseph is already quoted by *Rashi. His *yozer* for the first Sabbath of Ḥanukkah (*Odekha Ki Anafta*) appears in the German-Polish and in the Roman rites, and has repeatedly been printed and commented upon. The poem is composed in the old poetic style, in strophes of three lines, with a nine-fold alphabetical acrostic. Its content is largely based on the Scroll of Antiochus, the Book of Judith, and the Books of the Maccabees (I, ch. 1 and II, chs. 6–7).

[Jefim (Hayyim) Schirmann]

JOSEPH BEN TANḤUM YERUSHALMI (b. 1262), Hebrew poet, son of the grammarian-exegete *Tanḥum b. Joseph Yerushalmi of Cairo. It seems that he spent most of his life in Egypt, though he traveled to Jerusalem, Hebron, and other cities of Palestine. At the age of 15 Joseph composed '*Arugot ha-Besamim*', a collection of poems with *tajniš* rhymes, distributed in 10 sections (*arugot*), in imitation of Moses ibn Ezra's *Sefer ha-'Anak*; the book was published by J. Dishon in 2005. As a means of earning a livelihood Joseph had to write poems in honor of several Jewish patrons. Many of his poems were dedicated to Maimonides' grandson David b. Abraham *Maimuni, who had befriended him. Joseph also addressed verses to David's son, Abraham, to several relatives of this family,

and to many others. He celebrated the familiar events (births, circumcisions, weddings) of his sponsors and wrote elegies in case of illness. On the death of his father in 1291 he composed a lamentation in which he mentions the conquest of Acre by the Crusaders. He may have still been alive in 1330.

Beside the poems collected in the *Arugot ha-Besamim*, with Arabic glosses, other of Joseph's poems were collected in a *Divan*, divided into seven sections (*abwāb*). The extant manuscripts are all fragmentary and contain only poems of section 2 (Letters and *maqāmāt*), 4 (Eulogies and Congratulations), 5 (Love and Wine), 6 (Elegies and Dirges), 7 (Miscellaneous). He knew the most important Andalusian Hebrew poets very well and was particularly influenced by Moses *Ibn Ezra and Judah *Al-Harizi; most genres of the Spanish-Hebrew poetry are represented in the *Divan*. There are poems with verses in different meters, strophic verse (*muwashshah*) occasionally with Arabic endings, *maqāmāt* in which the narrator is called Aḥiṭūb b. Ḥakmoni, and plays on words (*tajnis*). A small number of liturgical poems also appear. Although the compositions are without originality, and often even devoid of precise expression, Joseph displays a knowledge of Arabic and Hebrew literary tradition and stylistic skill and is no doubt the most representative Hebrew poet of Egypt in the 13th century. A.M. Habermann published a number of his shorter wine and love poems. Several other poems and *maqāmāt* were published by H. Brody, J. Schirmann, S.M. Stern, P. Naveh, H.V. Sheynin, J. Yahalom, and J. Dishon.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

JOSEPH BEN UZZIEL, name of the grandson of *Ben Sira, according to two pseudepigraphical sources. In the first source, the Alphabet of *Ben Sira (a late-geonic work, which contains some heretical tendencies), the unknown author used the literary device of a dialogue between two or three characters, his intention being to create a satirical imitation of midrashic forms. These characters were Ben Sira, his son Uzziel, and the latter's son Joseph b. Uzziel. Probably the idea of Ben Sira's grandson originated from the author's knowledge that the historical Ben Sira had a grandson who had edited and translated his book. The second text, the *baraita* of Joseph b. Uzziel, is a short treatise found in several manuscripts, usually followed by a religious poem which might be part of the pseudepigraphi-

cal work. The *baraita* was written by one or more of the early Ḥasidei Ashkenaz, probably in the 12th century. It claims to contain revelations which the prophet Jeremiah handed to his great-grandson (Ben Sira was described as Jeremiah's daughter's son). This treatise is a commentary on *Sefer *Yezirah* ("Book of Creation") and contains some of the main ideas of Ashkenazi ḥasidic esoteric doctrines, in addition to some ideas unknown from any earlier source, e.g., the "Special Cherub," which shines in the east (*Shekhinah* ("Divine Presence")) shines from the west), and is described as the main vehicle of divine revelation. The *baraita* of Joseph b. Uzziel served as a major source for a group of Ashkenazi ḥasidic thinkers, who wrote some numerous works based on its ideas. The most extensive of these works is the commentary on the *Sefer Yezirah* attributed to *Saadia Gaon. Some quotations from a lost commentary on the *baraita* by one Avigdor ha-Zarefati are found in the writings of the Ḥasidei Ashkenaz. *Elhanan b. Yakar used the *baraita* extensively in his esoteric writings.

[Joseph Dan]

JOSEPH BEN ZADDIK (late 15th century), rabbinic scholar and chronicler of Arévalo (central Spain). From 1467 to 1487 he was engaged in writing a compendium on ritual law, which he entitled *Zekher Zaddik*. The final chapter comprises a chronicle of significant events, with special emphasis on Jewish history, from the creation down to the author's own day; the last entry is dated 1487. This chapter was edited by Neubauer from the manuscript in the Bodleian Library. The contents agree to a considerable extent with the *Sefer ha-Kabbalah* of *Abraham b. Solomon of Torrutiel, which Baer attributes to their borrowing from common sources (see bibl.). Often faulty in its citation of names and dates, Joseph's chronicle contains a number of anachronisms and contradictions; thus, in one passage, Romulus is made a contemporary of David, with whom he allegedly signed a peace treaty, while elsewhere the date of the founding of Rome is placed more correctly in the time of Hezekiah, about 725 B.C.E. However, the chronicle does have some value for the Spanish period from the 11th to the 15th centuries, approximately from the time of *Ferdinand I to *Ferdinand and Isabella, since Joseph frequently cites non-Jewish sources and has a broader and more objective viewpoint than some of the later chroniclers, who were embittered by the final edict of expulsion in 1492.

Cantera Burgos, *Libro de la Cabala* (1928), 8f., 47–64 (annotated Spanish translation of chronicle covering events from 1015 on); Neubauer, *Chronicles*, 1 (1887 repr. 1965), xiv; Waxman, *Literature*, 2 (1960²), 462f.

[Jacob Haberman]

JOSEPH (Josel) BEN ZE'EV WOLF HA-LEVI (first half of the 18th century), rabbi and author. Originally from Lissa, he

served as a rabbi in Hohensalza and in Dubno. The following of his works have been printed: *Tiferet Yosef*, the first part of a supercommentary on Rashi's Bible commentary (Prague, 1725), dealing with the first three books of the Pentateuch; *Ateret Yosef*, a collection of his halakhic and aggadic novellae to the tractate *Kiddushin* (Berlin, 1746); *Sugyot ha-Shas* (Berlin, 1736–39); a collection of supplements to the 1734–39 Berlin and Frankfurt on the Oder editions of the Talmud, in which old *tosafot* to the Talmud and *tosafot* to *Horayot* and *Keritot* are quoted. This work was criticized as having been largely copied from the Frankfurt on the Main edition of the Talmud (1720–22).

BIBLIOGRAPHY: R.N.N. Rabinovicz, *Ma'amar al Hadpasat ha-Talmud* (1952), 103, 116; O. Muneles, *Bibliographical Survey of Jewish Prague* (1952), 72, no. 240.

[Elias Katz]

JOSEPH DAVID (Joseph ben David; 1662–1736), rabbi of *Salonika. Born in Salonika, at an early age he was appointed as preacher and, on the death of Solomon *Amarillo in 1721, he was appointed *av bet din*, despite the objection of Amarillo's son Moses, who claimed the succession. In 1728 he became chief rabbi of Salonika, succeeding Joseph *Covo. He tended toward leniency in his rulings, and a considerable controversy arose when he gave a lenient punishment to a Jew who had been intimate with a married woman and had a child by her. The local rabbis protested against his ruling and demanded that the man be put to death in accordance with Jewish law. In his defense, Joseph David argued that at that time no Jewish court had the right to inflict capital punishment.

His works, which were published in Salonika, include: *Beit David* – halakhic novellae and responsa (pt. 1, 1740; pt. 2 (*Petaḥ Beit David*), 1746), and *Zemaḥ David* (2 pts., 1785–1811) – sermons on the Pentateuch, including a few on the prophets and hagiographa. A number of his works are still in manuscript.

[Abraham David]

JOSEPH DELLA REINA, hero of a kabbalistic legend who attempted to bring an end to Satan's power and thus lead to the redemption. The earliest version of the story, which evolved between the 15th and 17th centuries, is recorded by *Abraham b. Eliezer ha-Levi in his treatise *Iggeret Sod ha-Ge'ullah*, written in Jerusalem in 1519. The author used terms current only in kabbalistic literature of the period of the expulsion from Spain (1492). The story is very short and dwells more on a detailed description of Satan and his hosts than on the hero and his deeds. However, its salient feature is Joseph's burning of incense before Satan; this, being tantamount to idolatry, caused Joseph's failure and undoing. Nothing about the subsequent fate of the hero is reported. Abraham used this story to explain

that Joseph's crime caused the redemption, which should have occurred in 1490, to be postponed for 40 years (one generation later) to 1530, according to the author's calculations the proven year of the beginning of the redemption and the coming of the Messiah. Abraham states that Joseph undertook his task in about 1470, a conclusion attested to by various sources which show that Joseph was actually a known kabbalist in the mid-15th century, probably from the Ibn *Gabbai family. Some factual basis for the story exists, though it serves the purposes and reflects the beliefs of later generations.

The story of Joseph was known in 16th-century Safed. Moses *Cordovero and Ḥayyim *Vital mention his name in descriptions of the dangers of messianic and magical activity. Ḥayyim Vital also recalls that his teacher Isaac *Luria once recognized Joseph's soul in the body of a black dog, Joseph's punishment for his crime. However, until the mid-17th century, a full and detailed written description of Joseph's deeds and fate does not exist, although apparently such a story was repeated orally in Erez Israel. Solomon Navarro (b. 1606), the author of the most complete, detailed, and artistic version, lived for a long time in Jerusalem. Sent as emissary to Italy, he married a Christian, was converted to Christianity in 1664, and was involved in the Shabbatean movement. He wrote a book predicting that the redemption would occur in 1676. Navarro claimed that in Safed he had discovered an ancient manuscript of the story, written by a surviving disciple of Joseph. It is clear, however, that he himself had written the story, using the literary and oral traditions which had developed in the 200 years following Joseph's deed. Navarro's version is the first which contains a description of Joseph's fate after his failure to bring about the redemption. He became an ally of Satan and a lover of *Lilith, and later fell in love with the wife of the king of Greece, whom Lilith had brought to his bed every night. After some time this was revealed to the king and Joseph had to commit suicide. Both Eastern and Western folkloristic motifs appear in this last part. In contrast to earlier versions, Navarro describes Joseph's mistake as accidental. The earlier moral of the story, that a man should not try to use magic to bring forth the redemption, does not emerge clearly.

In Navarro's version, the tale may be interpreted as encouragement to follow Joseph's example and as a demonstration of the dangers of such practice, an aspect which interested the Shabbatean writers. Solomon *Ayllon, a leading Shabbatean thinker after *Shabbetai Zevi's conversion to Islam, composed a version of the story which has been preserved in Yiddish. It reveals a more sympathetic attitude toward Joseph. The Shabbateans, naturally, noticed the similarity between Joseph, who became a servant of Satan, and their converted messiah. In the late 17th century a Shabbatean Jew who belonged to the *Doenmeh wrote a mythical biography of Shabbetai Zevi, using a motif found in this story to describe his messiah's struggle against the cosmic forces of evil.

Navarro's version became very popular in the 18th and 19th centuries, was translated into many languages, and is included in almost every anthology of Jewish stories. Joseph

della Reina has served as the subject of many poems, short epics, ballads, and plays.

[Joseph Dan]

JOSEPH HA-KOHEN (1496–1578), historiographer, physician, and philologist active in Italy. His parents were originally from Spain, and, after the expulsion of the Jews from that country, went to Avignon. In 1501/02 they moved to *Genoa, where Joseph received a comprehensive education, including languages, history, literature, and medicine, in which he specialized and became celebrated. With the expulsion of the Jews from Genoa in 1516, Joseph moved with his family to Novi, where he married the daughter of Abraham b. Moses ha-Kohen, one of the most prominent rabbis of Italy. Joseph subsequently moved from place to place. In 1538 he returned to Genoa, and in 1550, when the Jews were expelled from there a second time, he was invited by the inhabitants of Voltaggio to settle in this town as their physician. Seventeen years later a decree ordering the expulsion of the Jews from Voltaggio was issued, and although the townsmen obtained permission for him to stay, Joseph refused to dissociate himself from the rest of the community. Joseph did much to assist in the ransom and rehabilitation of Jewish captives brought to Italy, contributing to this from his own resources. The loss of his three sons caused him bitter grief.

Joseph's writings evince his versatility. His first historical work was *Divrei ha-Yamim le-Malkhei Zarefat u-le-Malkhei Beit Ottoman ha-Togar* (Sabbioneta, 1554; Amsterdam, 1733), a history of the kings of France and Turkey, which earned him the title of the "second Josephus" from the Hebraist Jacques *Basnage. The first part deals with the period from the downfall of the Roman Empire until 1520 and dwells particularly on the Crusades and events close to them. The second part deals with the period 1520–53 and contains a description of events in the author's own generation. The work is a general history and includes some events concerning the Jews, such as the exile, persecutions, and massacres. His knowledge of Latin and other languages gave him access to various sources, and his conclusions are well based and objective. A Latin summary of the first two parts of this work was printed in 1670, and an English translation in 1835–36. The third part, dealing with the period 1554–75, was first published in 1955, in Hebrew. After the publication of Samuel *Usque's *Consolaçam as tribulaçoens de Ysrael* in 1552, Joseph decided to compose a similar book in Hebrew, which appeared in 1558 under the title *Emek ha-Bakha* ("Valley of Tears"; cf. Ps. 84:7). In it he tells of the "hardships which befell us since the day of Judah's exile from its land." In the second edition he added events of his own day. A complete edition, with additions until 1605 by an unknown editor, was prepared by S.D. *Luzzatto and published in Vienna in 1852 by M. Letteris. Passages from the

Emek ha-Bakha, which list at length the sufferings, persecutions, expulsions, and forced conversions undergone by the Jews, were read in some of the Italian communities on the Ninth of Av. The work was translated into German in 1858 and French in 1881. Other works by Joseph have been preserved in manuscript on various subjects – geographical-historical themes, linguistics and medicine. They include *Maziv Gevulot Amim*, a translation from the Italian version of Boemus' work *Omnium gentium mores leges et ritus*, a geography of Africa, Asia, and Europe; *Sefer ha-India* and *Sefer Fernando Cortes*, a two-part translation of Francisco López de Gómaras *Historia General de las Indias*, and *La Conquista de Mexico*, a description of the lands of South America and Mexico, and of their conquest by the Spaniards; and *Mekiz Nirdamim*, a translation of a medical treatise by the physician Meir *Alguadez, to which Joseph added a chapter on "remedies for the French disease." Several poems by Joseph were published at the end of *Sefer Sha'ashu'im* by Joseph b. Meir Zabara (published in New York, 1913).

Musso, in: *Scritti in Memoria di L. Carpi* (1967).

[Ephraim Kupfer]

JOSEPH ḤAYYIM BEN ELIJAH AL-ḤAKAM (1833 or 1835–1909), *Baghdad rabbi. He was the son of Elijah al-Ḥakam and the father of Jacob al-Ḥakam (see *Al-Ḥakam). Born in Baghdad, he studied with his maternal uncle, David Ḥai b. Meir. In 1848 he began to study under Abdallah *Somekh. He succeeded his father (1859) as preacher, a post he held until his death. In 1869 he visited Erez Israel. In 1876 Jacob Obermeier of *Vienna, who had come to Baghdad to teach French, insulted Joseph Ḥayyim. The community excommunicated him and compelled him to request the rabbi's pardon. Al-Ḥakam was renowned as a great halakhic authority who instituted many *takkanot*. He wrote some 60 works on all aspects of Torah, only a few of which have been published. He is best known for his *Ben Ish Ḥai* (1898), homilies blended with *halakhah* and Kabbalah. This work achieved immense popularity, particularly in Oriental communities, where it is studied extensively and has gone through many editions. His other published works include *Ben Yehoyada* (1898–1904), five volumes of commentaries to the aggadic portions of the Babylonian Talmud and *Rav Pe'alim* (1901–12), responsa. He wrote approximately 200 *piyyutim* and *pizmonim*, about 50 of which are incorporated in the liturgy of Baghdad Jewry; the rest are still in manuscript.

[Abraham David]

JOSEPH HA-ZAREFATI, illuminator of the *Cervera Bible* of 1300 (see Illuminated *Bibles). Joseph ha-Zarefati (“the Frenchman”) is one of the first Jewish artists known from medieval Europe. His colophon (fol. 449) stating: “I, Joseph ha-Zarefati, illustrated this book and completed it,” which terminates the manuscript, is written in large anthropomorphic letters, each line framed by a colored band. Joseph’s illustrations to the Bible are important as an example of early illuminated Castilian Bibles. No other extant illuminated manuscript was signed by Joseph, but the accomplishment of his work indicates an experienced artist. His style is influenced by 13th-century northern French illumination; the iconography of his illustrations is partly Castilian and partly French, but mostly his own invention. It is probable that his work influenced many artists, especially Joseph *Ibn Ḥayyim, who in 1476 used the *Cervera Bible* as a model for illustrating the *First Kennicott Bible*, where even the colophon is a direct imitation.

[Bezalel Narkiss]

JOSEPH ḤAZZAN BEN JUDAH OF TROYES (13th century), French scholar, grandson of *Baruch b. Isaac of Regensburg, author of the *Sefer ha-Terumah*. As ḥazzan in his town, Joseph carefully studied the customs and versions of the liturgy of that community and its synagogal customs in their various traditions, adding customs of his own. After his death, his son Menahem, who succeeded him, wrote, at the request of many, *Seder Troyes* (ed. by M. Weiss, 1905), in which he summarized all of his father’s research. Joseph was one of the few scholars of Germany and France who wrote grammatical works as well: *Yedidut*, on biblical grammar, and (apparently) *Sefer Sarim Rim* (Rim being acronym of Rabbi Joseph Mi-Troyes), on Hebrew grammar. Another book of his was *Yesod ha-Ibbur* (“The Basis of Calendar Intercalation”). With the exception of a few pages of *Yesod ha-Ibbur*, these works have been lost.

[Ephraim Kupfer]

JOSEPH IBN SHRAGA (d. 1508–09), kabbalist. Ibn Shraga lived in Italy apparently before the expulsion. He stayed for a long time in Argenta, near Ferrara, and was the father-in-law of Joseph b. Ḥayyim *Jabez. Ibn Shraga was considered the greatest Italian kabbalist in his generation and trained many students in Kabbalah, including Moses b. Mordecai Basola (I. Sonne, *Mi-Paulo ha-Revi’i ad Pius ha-Ḥamishi* (1954), 135), Elijah Menahem b. Abba Mari *Ḥalfan in Venice, and Isaac b. Joseph Jabez (according to his introduction to *Ḥasdei ha-Shem*). He wrote a treatise on the language of the Zohar

on redemption which was widely circulated after the expulsion from Spain (printed at the end of *Likkutei Shikhḥah u-Fe’ah*, 1556) and denounced by *Abraham b. Eliezer ha-Levi as a forgery in *Mashreh Kitrin*. In addition, Joseph wrote (1) a kabbalistic commentary on the prayers; (2) a commentary on the blessings (both in *Brit. Mus. Alm. Coll. Ms. 140*); (3) a commentary on the Torah (*Alm. Coll. Ms. 140*); (4) *Seder Tikkun ha-Magefah* (printed in *Moshi’a Ḥosim*, 1587); (5) polemical observations on some kabbalistic responsa by the pseudo-prophet Asher *Lemlein (A. Marx, in *REJ*, 61 (1911), 135–8); (6) on different kabbalistic topics (*Alm. Coll. Ms. 124*). In 1505 he was living in his son-in-law’s house in Padua and perhaps died there.

[Gershom Scholem]

JOSEPH IBN ṬABŪL (c. 1545–beginning 17th century), kabbalist and one of the foremost students of R. Isaac *Luria. He came from North Africa (*Maghreb*, *Ma’arav*) and was therefore called “Joseph ha-Ma’aravi.” He went to Safed in its most flourishing period and joined the circle of the disciples of Luria in 1570. After Luria’s death, Ibn Ṭabūl remained in Safed and began to spread his teacher’s doctrines. Tension grew between him and Ḥayyim *Vital. In his old age he went to Egypt and remained there for several years. Apparently at the beginning of the 17th century he returned to Erez Israel and died in Hebron. His expositions on the Lurianic system served as one of the primary sources through which it became known in kabbalistic circles. It is preserved in many manuscripts and in time it was given the name (not by the author) *Derush Hefzi-Bah*, and it was even attributed to his rival Ḥayyim Vital, under whose name the book was published when included in *Simḥat Kohen* by Maṣ’ūd ha-Kohen al-Ḥaddād (Jerusalem, 1921). In addition, several of Ibn Ṭabūl’s kabbalistic works, *yihudim* (hymns on the unity of God), sermons, and several commentaries on different portions of the *Zohar, including on the *Idra*, have been preserved in manuscript. Toward the end of his life, the question was raised if he had the right to leave the *Musta’arabi community (to which he belonged throughout his life) in order to join the Sephardi community. His students in Kabbalah included R. Samuel ben Sid and R. *Israel Benjamin I.

[Gershom Scholem]

JOSEPH ISSACHAR BAER BEN ELHANAN (also called **Baer Frankfurter**; c. 1642–1705), author of rabbinical and kabbalistic works. The son of the kabbalist Elhanan b. Zevi, Joseph Issachar Baer served in his youth as rabbi in Moravia but then withdrew to Frydek in order to devote all his time to the study of Torah. In 1677 he was living in Eibenschitz (now Ivančice). Around 1680 he was rabbi of Frankfurt on the Oder, and from 1687 to 1694 district rabbi of Kromeriz (Kromeriz), where

he signed with David Oppenheim the resolutions prepared by the synod there in 1694. In 1696 he left Kremsier to travel to Palestine but during his journey made lengthy stays in Nikolsburg, in Vienna (where he enjoyed the hospitality of Samson *Wertheimer), and in Venice (1700–01). Baer's published works are *Arba Ḥarashim* (Frankfurt on the Oder, 1681), an anthology of kabbalistic homilies in four parts, and *Sheloshah Sarigim* (Venice, 1701), homilies on the *haftarot. His *Mei Beer*, *Matteh Oz*, and *Peraḥ Levanon* remain in manuscript.

[Joseph Maier]

JOSEPH JOSKE BEN JUDAH JUDEL OF LUBLIN (1659?–1706), talmudist and kabbalist. Joseph studied with his father, who was rabbi at Lemberg and later at Kowel. He was appointed rabbi, first of Minsk, and in 1698, of Dubnow where he lived until his death. Zevi Hirsch *Koidonover, one of his pupils, mentions in his *Kav ha-Yashar* the kabbalistic lore he learned from him. Joseph is the author of several works dealing with ethics and moral conduct: (1) *Yesod Yosef* (Sklow, 1785); (2) *Lu'ah Hanhagot* (Wilhelmsdorf, 1719); (3) *Ne'imah Kedoshah*, including a Sabbath hymn (Zolkiew, 1720); and (4) *Hanhagot Yesharot* (Zhitomir, 1868).

In his *Yesod Yosef* he describes realistically the conduct of the communal leaders and exhorts the community to behave morally.

[Yehoshua Horowitz]

JOSEPH MAMAN AL-MAGHRIBI (1741–1822), rabbi and emissary of *Safed. Born in *Tetuán, *Morocco, Joseph Maman later settled in Safed with his family. Ḥayyim Joseph David *Azulai, the great Safed scholar, suggested he be sent on a special mission to the Jewish communities in *Syria, *Iraq, *Turkey, and *Persia to collect funds for the victims of the great famine in Safed. He traveled to Constantinople, Kermanshah, *Hamadan, *Teheran, and *Meshed, where he met Siman Tov Melamed, who persuaded him to visit the Jews in *Bukhara, then living in isolation and ignorance. On his mission, Joseph Maman was accompanied by Mulla Daniel of Meshed, who served him as interpreter. He arrived in Bukhara in 1793 and stayed there for 30 years, completely revitalizing the communities in Bukhara and the vicinity. He established Jewish schools in Bukhara, introduced the Sephardi rite in place of the Persian, and obtained books from *Baghdad, Constantinople, and particularly from Russia. Joseph Maman can be regarded as the spiritual father of the Ḥibbat Zion movement in Central Asia which, under the impact of

his personality and teachings, brought thousands of Bukharian Jews to the Holy Land.

[Walter Joseph Fischel]

JOSEPH MOSES BEN JEKUTHIEL ZALMAN (d. 1781), rabbi and kabbalist. At first he served as rabbi in Drohiczyn (near Pinsk), subsequently in Pinsk itself, and from 1746 in Sambor (Galicia). In his old age he migrated to Erez Israel and died in Safed. He was the author of *Maggid Mishneh*, a commentary on *Maftē'ah ha-Olamot*, the first part of *Mishnat Ḥasidim*, the kabbalistic treatise of Immanuel Ḥai *Ricchi (printed with the text, Zolkiew, 1745); *Kiryat Arba*, a kabbalistic commentary to the *Shema*, together with a supplement to his *Maggid Mishneh* and *Hillukei de-Rabbanan*, talmudic novellae (*ibid.*, 1768). His *Hokhmat ha-Tekhunah*, a commentary on the astronomical portions of Maimonides' Code, was published in the introduction to the *Toledot Avraham* of Abraham b. Isaac Eisenberg (1881), while his *Mareh Ofannim* on astronomy and the calculation of the new moon has remained in manuscript, as has his *Mirkevet ha-Mishneh*, talmudic novellae.

[Encyclopaedia Judaica (Germany)]

JOSEPH MOSES OF SALOSITZ (c. 1735–c. 1815), ḥasidic preacher. He was active in spreading Ḥasidism in Zborov and Salositz (Zalosce) and gave clear formulation both to his own ḥasidic teachings and those of others. Following *Dov Baer, the Maggid of Mezhirech, Joseph emphasized the theory that absolute evil does not exist but that there are different levels of good. According to him “justice (*din*) in itself is mercy (*hesed*).” *Zimzum* (“concentration”), the creation of the world according to justice, is the equivalent of mercy which enables those created to receive and attain the divine emanation “because man is unable to attain divine emanation and God's mercies alone.” He wrote *Berit Avraham* (Brody, 1875), a lengthy commentary on the Pentateuch, and *Be'er Mayim* (Medzibezh, 1817), on the Passover *Haggadah*.

JOSEPH OF GAMALA, Jewish patriot leader in the Jewish War (66–70/73 C.E.). Together with Chares, he organized the defense of Gamala when it was besieged by Vespasian in 67 C.E. The Romans were decisively repulsed in their first attack. The town fell, as a consequence of severe famine and lack of water, after a siege lasting nearly a month. Joseph was killed when trying to cut his way through the Roman ranks.

[Edna Elazary]

JOSEPH ROSH HA-SEDER (12th century), Egyptian rabbinical scholar. There is very little biographical information about him. He was born in *Baghdad. His father, Jacob, who died before 1211, was a pupil of *Samuel b. Ali, who sent him in 1187 to visit the communities of Babylonia as an emissary of the Baghdad yeshivah. Joseph emigrated to *Egypt in middle age, leaving behind him in Babylonia an extensive library. He earned his living as a scribe and copyist, and perhaps also as a bookseller. He is unique in having worked out for himself a series of rabbinic-literary projects of very wide scope, and even took preliminary steps for their implementation. Among the *Genizah documents, there are many fragments from planned works which never got beyond their first stage. His projects included compiling a *Gemara* for those tractates which have none, by assembling the relevant passages from the rest of the Talmud; connecting the oral with the written law by assembling Midrashim according to the weekly scriptural readings; a commentary on the Pentateuch and the *haf-tarot* taken from previous commentators; commentaries on the Mishnah, the Talmud, the code of *Alfasi and the prayer book of *Saadia Gaon. Some of the extant fragments have been published. In order to facilitate his work, Joseph made a collection of numerous geonic responsa according to the order of the tractates, and for the same purpose compiled several lists of books, a number of which are extant. These lists contain material valuable for the history of rabbinical literature. It is worth mentioning Joseph's peculiar habit of applying to himself various honorific titles, some of them self-devised, e.g., *Rosh be-Rabbanan* ("Chief of the Scholars").

[Israel Moses Ta-Shma]

JOSEPH SAMUEL BEN ZĒVI OF CRACOW (d. 1703), rabbi and talmudist. After having served for 26 years as a member of the Cracow *bet din*, he was in 1689 appointed rabbi in Frankfurt. There he established a yeshivah and headed charitable institutions. In his approbation (*haskamah*) to Hayyim Krochmal's *Mekor ha-Ḥayyim* (1697), he protested against the excessive publication of rabbinic literature in Germany, accusing the writers of many such works of "writing books not for the sake of Heaven... but seeking only their own benefit and advantage." He himself wrote several works on *halakhah* and *aggadah* but refrained from publishing them. His annotations to the Talmud were published by his son Aryeh Loeb in the Frankfurt and Amsterdam editions of the Talmud (1714–21), and appeared afterward in the Vienna and Sulzbach editions. Only one of his responsa has been published (in Enoch b. Abraham's *Hinnukh Beit Yehudah*, 137 (Frankfurt, 1710)).

[Yehoshua Horowitz]

JOSEPH SOLOMON ZALMAN BEN MEIR (18th cent.), Hungarian rabbi and author. Joseph Solomon Zalman was born in Pressburg in 1727. At the age of 19 he married the daughter, apparently, of Ezekiel *Landau, but he separated from her after 13 years of domestic unhappiness (he refers to his wife as "more bitter than death"; *Minḥat Ani*, introd.; cf. Eccles. 7:26). His life as a whole was one of suffering. In the introduction to his book he alludes to the baseless hatred of his enemies who "deprived me of property and of lives," and to the three of his children "sweet and pure" whom he buried in his lifetime. He wandered from place to place but found no peace. He was in Prague, Frankfurt on the Main, and Fuerth, and everywhere was welcomed with respect and love by the great scholars of his time. He writes (*Minḥat Ani*, 2nd ed., p. 29b) that he did not succeed in clarifying a certain subject "because of lack of strength and brokenheartedness, for I have not yet succeeded in returning in peace to my father's house and my native land, and if I succeed in this I shall fulfill my vows." It is not known where he died or was buried. In 1780 Joseph Solomon published in Prague his *Minḥat Ani*, novellae on talmudic themes; it was republished with additions in Fuerth in 1787. On the title page he mentions his book *Kunteres Aḥaron*, on Maimonides and Abraham b. David of Posquières, that he wanted to publish. Some of his novellae were published at the end of the *Noda bi-Yhudah Mahadura Kamma* (Prague, 1801) of Ezekiel Landau and in his *Ziyyun le-Nefesh Ḥayyah* (*Zelah*) to *Pesaḥim* (Prague, 1783). His son, GABRIEL ISAAC PRESSBURGER, served as secretary to Ezekiel Landau, and his son SAMUEL was a teacher in Prague and also published *Religioese Gespraech* (1825) and *Asefat Ḥakhamim* (1846), a collection of explanations of verses in the Pentateuch in Hebrew and German. Pressburger is also mentioned in the *Noda bi-Yhudah, Mahadura Tinyana* (E.H. nos. 67 and 120).

[Naphtali Ben-Menahem]

JOSEPHSON, Swedish family which had emigrated from Prussia in the late 18th century.

JACOB AXEL JOSEPHSON (1818–1880), conductor, composer, and writer, was born in Stockholm, the son of Salomon Josephson, a merchant. He studied at Uppsala University and, from 1841 (the year in which he converted to Christianity) to 1844, held various conducting and teaching posts. A grant by the famous singer Jenny Lind enabled him to tour and study on the Continent from 1844 to 1847. After directing the Stockholm Harmonic Society for two years, he was appointed *Director musices* of Uppsala University in 1849. In the same year he founded the Uppsala Philharmonic Society, which he headed for 30 years, and in 1867, the choir of Uppsala Cathedral. From 1864 onward he lectured at the university on music history. Under his direction, the Philharmonic Society Orchestra and the cathedral choir became the foremost performing bodies in Sweden and the first to achieve there, in the 19th century,

a level comparable with the major European orchestras and choirs. Josephson's writings and his publications of musical anthologies were equally influential. Among his compositions, which were mostly in the Mendelssohn-Schumann vein, the vocal works predominate, and for many of these he wrote the words himself. Some of the works for chorus and orchestra and for male chorus have remained in the Swedish repertoire until today.

[Bathja Bayer]

His brother, LUDVIG OSCAR JOSEPHSON (1832–1899), was a stage director noted for his productions of Ibsen and Strindberg. Born in Stockholm, he began his career as an actor. His talent, however, lay in directing, and from 1865 to 1868 he was administrator of the national theaters. During this time he directed Shakespeare's *Coriolanus*, Byron's *Sardanapalus*, and Meyerbeer's opera, *L'Africaine*, as well as historical plays of his own. From 1873 to 1877 he worked in Christiania (now Oslo), where he became known for his brilliant presentations of Ibsen's *Peer Gynt* and *Pretenders*. Returning to the Swedish Theater in Stockholm (1879–87), he directed plays by the world's great dramatists and staged Strindberg's first important theatrical success, *Master Olof*.

[Viveka Heyman]

His nephew, ERNST ABRAHAM JOSEPHSON (1851–1906), was a well-known painter. He was born in Stockholm. A series of tragic events contributed to his eventual mental breakdown. As long as he adhered to traditional painting and acceptable subject matter, his talent was appreciated by both the Stockholm Academy and the Paris Salon. Difficulties arose after he became a follower of Courbet and then of Manet. Josephson's robust *Spanish Blacksmiths* was roundly rejected by all conservatives when displayed at the Paris Salon, as were his vital, non-posed portraits.

In Paris, Josephson became the leader of The Opponents, a group of Swedish artists who were dissatisfied with the aesthetic backwardness of Sweden. They sought far-reaching reforms and addressed a "Letter of Opposition" to the Swedish king. Josephson soon found out that he had become too radical to please his patron, the Swedish banker Pontus Fuerstenberg, who withdrew his support, and even too uncompromising for The Opponents, who selected a more conciliatory and prudent man as their new leader.

With his patronage lost and his inheritance exhausted, Josephson had recourse only to a friend, the Swedish painter Österlind, with whom he retreated to an island off the coast of Brittany. There the two experimented with spiritualism. Josephson began to have hallucinations: he believed himself to be in communication with Holbein, Velasquez, and Rembrandt, and signed his drawings with the name of the great one under whose "dictation" he had produced it. Realizing that his colleague had become seriously ill, Österlind took him to Sweden (1888), where Josephson was confined to a mental hospital. After he had regained some of his strength and balance he returned to live in Stockholm. In a novel, August Strind-

berg described the invalid as sitting in a cafe and gazing "far off into space as if he were alone with dreams and visions he could not communicate."

Yet the "sick" man did communicate – through art works, including over a thousand pen-and-ink drawings and about a hundred watercolors and oils. While his "healthy" work, though excellent, was largely eclectic, the work Josephson created after his breakdown was highly original. He became a full-fledged Expressionist more than 20 years before the term was coined, and he is treated with respect and even admiration in works of general art history as one of the precursors of Expressionism. His paintings are to be found in all major museums in the Scandinavian countries. In 1964 and 1965, a Josephson exhibition toured the United States.

[Alfred Werner]

GUNNAR JOSEPHSON (1889–1972) was also born in Stockholm and was a bookseller, community director, and magistrate. From 1936 to 1962, he was chairman of the governing board of the Stockholm Jewish community and was a member of the Swedish State Committee for Refugees during the Nazi period. Josephson was involved specifically in aiding the Jewish refugees who reached Sweden. He represented Jewish interests before the Swedish authorities.

RAGNAR JOSEPHSON (1891–1966), Gunnar's brother, was also born in Stockholm. An author and historian of the fine arts, he served as professor of the history of art at the University of Lund from 1929 to 1957. In a series of monographs he wrote about both North European and other works of art, especially those from the period of the Baroque. In Lund he founded a museum for the study of the North European monumental art and its development. In 1940 he published *Konstverkets födelse* ("Birth of the Work of Art"), the subject of his main interest. He was director of the Dramatic Theater in Stockholm from 1948 to 1951 and wrote dramatic works. He also published some anthologies, including *Judiska dikter* ("Jewish Poems," 1916; new edition 1943 as *Valda judiska dikter*) and in 1961 was elected to the Swedish Academy.

ERLAND JOSEPHSON (1923–), another member of the Josephson family, was an actor and author. He was a member of the City Theater Companies of Helsingborg (1945–49) and Göteborg (1949–56) before joining the national Dramatiska Teatern, Stockholm, of which he became administrator in 1966. Although he came from an assimilated family and knew little about Jewish tradition, Josephson often dealt with the theme of antisemitism in his writings. These include the novel *En Berättelse om herr Silberstein* ("A Tale About Mr. Silberstein," 1957) and the plays *Benjamin* (1963) and *Doktor Meyers sista dagar...* ("Doctor Meyer's Last Days," 1964). He acted in some of Peter Weiss's plays, playing the Marquis de Sade in *Marat-Sade* (1964) and Mulka in *The Investigation* (1965).

terton, *Vägen till försoning* (Thesis, Göteborg, 1957; on Ernst); E. Blomberg, *Ernst Josephson, hans liv* (1951); idem, *Ernst Josephsons konst* (1956); *Vision och Gestalt. Studier tillägnade Ragnar Josephson* (1958), index.

JOSEPHSON, BRIAN DAVID (1940–), British physicist. Josephson was born in Cardiff, Wales, where he was a brilliant pupil. He studied physics at Cambridge, receiving his doctorate in 1964. In 1962, at the age of only 22, he discovered the Josephson effect, showing the special characteristics of tunneling between superconductors, which led to the attainment at IBM of switching speeds up to 100 times faster than those obtained with conventional chips and incomparably greater data-processing capabilities. In the same year he was made a fellow of Trinity College, Cambridge, subsequently becoming assistant director of research and reader in physics at the university and professor in 1974. He was appointed a fellow of the Royal Society in 1970. In 1969, he received a \$10,000 Research Corporation award for his outstanding contribution to science and, in 1973, was awarded the Nobel Prize for physics (jointly with Dr. Ivar Giaever and Dr. Leon Esaki), one of the youngest men ever to receive this award.

JOSEPHSON, MANUEL (c. 1729–1796), merchant and leader in the Philadelphia and New York Jewish communities. Josephson was born in Germany and emigrated to New York City. During the French and Indian War he was a sutler, and during the Revolution supplied the Congressional Army with weapons. In 1762 Josephson was named president of Congregation Shearith Israel in New York. He fled to Philadelphia during the American Revolution, remaining there permanently. Having a considerable Hebrew education, Josephson quickly rose to a position of eminence in Philadelphia, and was appointed president of Congregation Mikveh Israel in 1785. He was given the honor of extending the congratulations of four Jewish communities to George Washington on his assumption of the presidency in 1790.

[Leo Hershkowitz]

JOSEPHSON, MATTHEW (1899–1978), U.S. author and historian. Born in Brooklyn, he lived for a time in Paris. He was a member of the editorial board of the international arts magazine *Broom* (1921–24), U.S. editor of *Transition* (1928–29), and assistant editor of the *New Republic* (1931–32). After a brief period in Wall Street, Josephson returned to literature in 1930 and became known as a writer on 19th-century French literature and American economic history. His books on French literature include biographical studies such as *Zola and His Time* (1928), *Jean-Jacques Rousseau* (1931), and *Victor Hugo* (1942). He made a significant contribution to the revival of American interest in Stendhal with the study he published in 1946. Josephson's books on American history are moderately leftist in their approach, particularly in regard to the growth of industry. *The Robber Barons* (1934) dealt with the emergence of

the 19th-century industrial and railroad magnates. His study of political corruption appeared in two volumes: *The Politicos, 1865–1896* (1938) and *The President Makers: 1896–1919* (1940). His other works include *Portrait of the Artist as American* (1930); *Empire of the Air* (1943), the story of an airline; *Sidney Hillman, Statesman of American Labor* (1952); *Union House, Union Bar* (1956); and *Edison* (1959), a biography. Josephson also wrote two volumes of recollections, *Life among the Surrealists* (1962) and *The Infidel in the Temple: A Memoir of the 1930's* (1967).

[Hans L. Trefousse]

JOSEPH TAL, LOUIS MAURICE (1869–1929), U.S. naval officer. Born in New Rochelle, N.Y., Joseph Tal joined the New York naval militia in 1891 and during the Spanish-American War (1898) was an assistant paymaster. During World War I he was a captain (paymaster) at the naval militia headquarters. In 1923 he was appointed rear admiral in the supply corps and was later commander of the New York naval militia. An observant Jew, Joseph Tal was active in Jewish affairs and was a director of Mount Sinai Hospital for many years.

JOSEPH TAL, GIORA (Georg Josephthal; 1912–1962), Israeli social worker and labor leader. Born in Nuremberg, Germany, to an assimilated family, Joseph Tal joined the pioneering Zionist youth movement during the period of the Nazi rise to power. As a social worker in the Munich Jewish community, he established the *Berufsumschichtung*, a professional training project for Jewish youth preparing for settlement in Palestine. In 1934 he became director of the *Youth Aliyah office in Berlin and two years later secretary of the *He-Ḥalutz movement in Germany. He went to Palestine in 1938 and led the group that established kibbutz Gal-Ed in 1945. In World War II he joined the British army. After the war he began organizing the *Jewish Agency's Absorption Department and was successively director of the Absorption Department and treasurer of the Jewish Agency's executive. In 1952 he participated in the *reparations negotiations with West Germany. In 1956 he became general secretary of *Mapai and, three years later, was elected to the Fourth *Knesset and appointed minister of labor. In this capacity he continued the work of absorption through the building of housing projects and the development of technical training and an employment service. His last post was that of minister of housing and development. His wife, SENTA (1912–), was born in Fuerth, Germany, settled in Palestine in 1938, and was also a founding member of kibbutz Gal-Ed. She served in various positions in the *Histadrut and the Iḥud ha-Kevuzot ve-ha-Kibbutzim and was a member of the Third Knesset.

JOSEPHUS FLAVIUS (c. 37–after 100 C.E.), Jewish historian and one of the chief representatives of Jewish-Hellenistic literature.

BIOGRAPHY

Early Life

Born in Jerusalem into an aristocratic priestly family belonging to the *mishmeret* of Jehoiarib, through his mother Josephus was related to the Hasmonean dynasty. Josephus relates of himself that in his youth he was so renowned for his knowledge of the Torah that high priests and leading men of the city would come to consult him on matters of *halakhah*, and he was apparently distinguished in his youth as an aggadist. At all events, he was certainly not ignorant of the Torah, as many scholars have maintained. From the age of 16 he spent three years with a certain Bannus, who appears to have been a member of one of the many contemporary sects (but not necessarily an *Essene), who lived an ascetic life in the wilderness, wore clothes made of leaves, fed on wild herbs – like John the Baptist (Matt. 3:4) – and made ablutions in the morning and evening. In 64 C.E., at the age of 26, Josephus was sent on a mission to Rome to secure the release of some priests who had been seized and delivered to Rome by the procurator *Felix to render an account to the emperor for some offense they had committed. Josephus was probably selected for this mission because of his knowledge of Greek. With the help of the Jewish actor Aliturus he obtained an introduction to the empress *Poppaea Sabina; his efforts were crowned with success and the priests were released. The visit had a profound effect on Josephus, Rome making an indelible impression on him.

As Commander of Galilee During the Jewish War

At the outbreak of the Jewish War (66 C.E.), Josephus was appointed commander of Galilee, which was probably the most important military assignment during the first stage of the war. Despite this he seems to have belonged to the moderate party that had gained control after the victory over Cestius *Gallus, and it was hoped that he would exert his influence at a critical juncture to achieve a compromise settlement. Simeon b. Gamaliel could have found no one more suitable for this purpose than Josephus, since the latter was quite capable of outwitting his rivals until an opportune moment arrived to work for peace. However, it remains uncertain whether John of Giscala was actually ousted from the leadership in Galilee on explicit instructions from Jerusalem and overall command given to Josephus by the Sanhedrin, since his account of his operations in Galilee (contained in the *Life*) is extremely vague, and gives the impression that he conceals more than he reveals. Josephus may have acted on his own responsibility when he sought to supersede John. In any case there is no justification for the theory that Josephus was never sent to Galilee but seized control there against the wishes of the Sanhedrin even before the outbreak of the revolt. In fact Josephus seems to have come to Galilee only after Cestius Gallus' defeat, which marked the beginning of the revolt.

The position of the Sanhedrin's envoy was a difficult one, since the local Galilean leaders had no wish to accept a man who had been appointed over them by the central authority in Jerusalem. Because of this there was continuous strife, and clashes took place between Josephus and John and his Galilean supporters. John failed in his attempt to induce the Sanhedrin to recall Josephus, and the conflict in Galilee persisted until the arrival of *Vespasian in the spring of 67 C.E. The country, unprepared for hostilities, was wholly unable to wage an offensive war. The cities, which Josephus claimed to have fortified, were isolated from one another and could only defend themselves singly, without any cohesion or plan. The decisive battle took place around the city of Jotapata, to which Josephus had retired and which resisted for six weeks. When the city fell on Tammuz 1, 67, Josephus fled with 40 men to a cave. There each man resolved to slay his neighbor rather than be taken captive by the enemy. Josephus artfully cast the lots, deceitfully managing to be one of the two last men left alive and then persuaded his companion to go out with him and surrender to the Romans.

Josephus' "Prophecy" Regarding Vespasian

Josephus relates that when he appeared before Vespasian he foretold the greatness in store for the Roman commander, who spared his life, binding him in chains only. This is a very surprising account, for the Talmud tells a similar story except that there the prophecy was made by R. *Johanán b. Zakkai. In fact, there is some substance in both accounts. Presumably under no circumstances would Josephus have dared so brazenly to misrepresent the truth had the story been a complete fabrication, since *The Jewish War* was written under the patronage of the emperor and its contents sanctioned by the imperial dynasty. The emperor would hardly have assented to the account had it not contained a nucleus of truth, which led him to accept the fictitious element in the story as well. The primary fabrication was that the "prophecy" was not made by Josephus when he appeared as a captive before Vespasian, who received the rebel commander as a prisoner of war punishable with death. It was apparently Vespasian's intention to have him taken to Rome and there to execute him during his triumph, as he later did to *Simeon b. Giora. Josephus was held prisoner in the Roman camp for the duration of Vespasian's campaign until the news was received of Nero's death (68 C.E.). This information undoubtedly caused a stir in Vespasian's camp too, and the ferment increased greatly when word was heard of the death of Galba (69 C.E.), who had been proclaimed emperor. The officers and troops began to entertain the idea of appointing an emperor of their own.

His Exploitation of Circumstances Surrounding Nero's Death

Josephus was determined to exploit this new state of affairs to his own advantage, shrewdly perceiving it as an opportunity for obtaining his freedom – and perhaps even more – if only he was able to make proper use of the favorable turn of events. He was fully aware of the prophecy, which was widespread in

Judea and throughout the east, that the ruler of the world was destined to come forth from Judea. An echo of it even reached the Romans. The basis of the prophecy was undoubtedly messianic, and Josephus, when mentioning it in *The Jewish War*, adds that the Zealots interpreted it as referring to the Messiah. It was then that Josephus, having decided to make use of the belief to gain his freedom, gave it added force by dilating on the prophecy. To convince the Romans, Josephus attributed to himself the qualities of a diviner, which gave great encouragement to the soldiers. It may be asserted that Josephus' "prophecy" was uttered between January 15, the date of Galba's death, and July 1, 69 C.E., the day on which Vespasian was proclaimed emperor in Alexandria, Egypt. The role played by Josephus is somewhat similar to that of Agrippa I at the time of Claudius' accession, and in both instances the intermediary was richly rewarded by the victor. Vespasian undoubtedly learned of Josephus' share in the propaganda on his behalf and, bearing it in mind, awaited coming events.

While all this was taking place in Vespasian's camp, the conquering army advanced still nearer to Jerusalem, a move made necessary by the appearance of Simeon b. Giora and his troops. The whole of Judea was now taken, except for Jerusalem and its immediate environs. The proximity of the Roman army spread the knowledge in the city of events in the enemy camp. Realizing immediately that Vespasian would become emperor, R. Johanan b. Zakkai reasoned that a new ruler, confronted as he would be with weighty problems, might be prepared to reach a peaceful solution, and would be disposed to bring this provincial war to a speedy conclusion.

In Jerusalem with Titus

When Vespasian was proclaimed emperor at Caesarea, Josephus, who was with him there, was released from his chains. From there he went to Alexandria, and when *Titus was given command of the army with orders to take Jerusalem, Josephus accompanied him. Josephus tried several times to induce the rebels to lay down their arms, but they treated him with contempt, and during one of his exhortations injured him. Nor was his position an enviable one in the Roman camp, for the Romans suspected him of being a spy and would have killed him had he not enjoyed Titus' protection. He continued to accompany Titus after the capture of Jerusalem. When Titus permitted him to remove from the ruins of Jerusalem whatever he wished, he took a *Sefer Torah*. His estate in the neighborhood of Jerusalem was confiscated by Titus and instead he received land in the valley of Jezreel.

Favored by Roman Rulers and Hated by Jews

Josephus left to settle in Rome where he was granted Roman citizenship and a pension by the emperor, who allowed him to live in his palace. He never again saw his native land. Although generally a favorite among the members of the courts of Vespasian and Titus during their lifetime, Josephus' position vis-à-vis the Jews was wretched in the extreme. Both in and outside Rome, they despised and hated him for his past and tried to harm him at every turn. After the suppression of the

revolt of the *Zealots, who had escaped to Cyrene, the rebels accused him of having been the organizer, but Vespasian refused to believe them.

Inauspicious Family Life

Josephus' family life, too, was inauspicious. In all he was married four times. His first wife died during the siege. The second, whom he married on the advice of Vespasian, left him. In Alexandria he took a third wife who bore him three children, of whom one son, Hyrcanus, born in 72/73 C.E., survived. Having divorced this wife, Josephus married an aristocratic woman from Crete who bore him two sons, Justus and Simonides-Agrippa. The year of Josephus' death is unknown, but it was probably after 100 C.E.

WORKS

The Jewish War

It is very probable that Josephus' decision to become the historian of the Jewish War stemmed primarily from the fact that he was subject to the emperor's wishes and obliged to support his political aims. His history was probably the price exacted by the emperor in return for the grant of freedom and property. Fully appreciating Josephus' talents, Vespasian knew that the freedman could be of use to him in both his foreign and internal policy. After the events in the east and west of the Roman Empire, the fate of the entire state hung in the balance and Vespasian found himself obliged to warn the still powerful enemies of Rome that she could destroy any foe who intended to renew the war.

LOST ARAMAIC VERSION. In the introduction to *The Jewish War* Josephus clearly mentions that he wrote two versions of "the war of the Jews against the Romans," first "in my vernacular," that is, in Aramaic, "for the up-country barbarians." These were the Aramaic-speaking peoples in the lands of the Parthian kingdom, principally the Jews living in Babylonia, who, contrary to the rebels' hopes, had played no considerable part in the war but who were likely to flock to join the fighting should hostilities break out afresh. In this version, which unfortunately has not been preserved, Josephus undoubtedly included material not found in the extant Greek rendering. It presumably also contained factual accounts different from those in the Greek version. At the beginning of the century the German-Baltic scholar Behrends published an ancient Slavonic translation of *The Jewish War*, which he claimed was based on the original Aramaic version, a contention, however, without foundation; nor did Robert Eisler succeed in substantiating it in his great work (see bibl.).

THE EXTANT GREEK VERSION. The extant Greek version, which was adapted by Josephus from the Aramaic work, was divided into seven books by the author himself. However it seems that at first it was intended to comprise only six books, up to the destruction of Jerusalem, as attested by the title "The Capture" (ἄλωσις) given to the work in most manuscripts. The Greek version also served the internal political purpose

of bolstering the dynasty which had recently acceded to the throne. Through it the emperor sought to prove to the Roman aristocracy, who despised the Sabine peasant who had risen to eminence, that although he and his sons were *homines novi* in the Roman polity their merit was by far the greater. Since Josephus' Greek rendering of *The Jewish War* was intended to serve as the new dynasty's mouthpiece in Rome, Vespasian and Titus consented to accept the text of the work from him and to sanction its contents. This approval was used by Josephus as proof that he had told the truth and only the truth.

PRINCIPLES PROFESSED BY JOSEPHUS AND DEFECTS IN THE WORK. In his introduction the author declares that he has described the war without bias. Unlike other writers, who had not been eyewitnesses of events and whose obvious intention was to flatter certain persons, he, a native of Jerusalem, had himself fought against the Romans as long as resistance was possible but afterward had become reconciled to the enemy; hence his account was credible. His undoubted aim was to give his work a pragmatic character in keeping with the theory developed by Polybius, in particular, which, rejecting historiography, espoused "truth" and "accuracy." Although Josephus advocated these principles, he cannot be said always to have applied them in practice. As well as being subject to the imperial dynasty, he had a personal interest in revealing some things and in concealing others, better passed over in silence. His own reprehensible actions are shrouded in obscurity or completely evaded. There is no hint of his incompetence on the battlefield, and instead there is boasting based on obvious lies. The Romans' methods of warfare are always portrayed as pure and unsullied. Titus and Vespasian act only under constraint for which they deserve no censure. They refrain from excessive cruelty and are anxious to save the Jews, but the "bandits" are responsible for deterioration in the situation. The Jewish people did not want war at all; it was forced on them by the "robbers." An entirely different picture of the complete participation of the whole people, both men and women, in the war is presented by the anti-Jewish Tacitus, but every historical fact likely to support this view is deliberately omitted by Josephus. In one passage only – Titus' speech to the Zealots – does he have the former voice a comment which was undoubtedly current, namely, that the Jews were always the sworn enemies of Rome. A more serious defect is his distortion of the messianic movement in Judea and its role in fanning the flames of war, doubtless an intentional perversion of the state of affairs in order to represent the Jewish War as the action of limited circles, with the aim of exculpating the nation as a whole in the eyes of the Roman administration.

ITS LITERARY AND HISTORIOGRAPHIC VALUE. These defects naturally diminish the value of Josephus' work as history and in this respect it must be treated with considerable caution. Nonetheless it must be emphasized that the excellence of the work, in both its literary and historiographic qualities, earns it an honorable place in Jewish and in general literature. Its literary skill is considerable: the descriptions are epic in

the full sense of the word, scenes are plastically and impressively portrayed, the horrors and the vast spectacle of war are graphically depicted, culminating in one great panorama with the destruction of Jerusalem and the burning of the Temple. Much of *The Jewish War* derives from the author's personal observation. This is especially true of the description of the actual siege. Josephus noted everything he saw, and in addition made use of evidence obtained from those who defected to Titus' camp. These details have a documentary or semi-documentary value.

Great significance attaches also to some descriptions of the war which are almost certainly based on Roman military reports, their Roman origin being apparent in their style, which is concise, dry, and devoid of all rhetorical embellishment. Official material on the stationing of Roman garrisons throughout the kingdom can be discerned in Agrippa's great speech. In this passage, Josephus apparently used an official document made accessible to him from the imperial archives: the speech is a remarkably fervent recapitulation of official propaganda by a lackey of the lord of the Roman Empire. In addition, Josephus made use of works compiled by other writers on the Jewish War. The book is constructed in three sections, with the account of the war as the principal, central one. The first section opens with the events that preceded the revolt of the Maccabees and continues with a description of the history of the Hasmonean and Herodian dynasties up to the outbreak of the Jewish War (bk. 1 and about half of bk. 2). The second section recounts various episodes of the war, such as the siege of *Masada and the final death agonies of the Jewish people's opposition, as well as several important details about the kingdom of the Parthians. Josephus' sources for the material in the introductory section were a work on the Hasmonean dynasty written originally in Hebrew and Nicholas of *Damascus' great work which provided him with the information on the Herodian dynasty recounted in this section.

ITS LANGUAGE AND STYLE. The Greek of *The Jewish War* is often excellent, but very probably the style was largely the result of polishing by Josephus' literary assistants. According to his own testimony his accent was defective, and his insufficient command of literary Greek is attested by his large work *Jewish Antiquities*, the language of which is poor, sometimes even labored, largely artificial, and much inferior to the clear, flowing style of *The Jewish War*. The careful attention paid to the style of this latter work probably resulted from its official character. It was, moreover, Josephus' first production, the one which would gain him a place in the literary world in Rome. Among the auspicious circumstances of the work was his comparatively youthful age when he wrote it, for he was about 40 years old when it was published, whereas he completed the *Antiquities* at the age of 56. Furthermore the *Antiquities*, unlike *The Jewish War*, was written with the aim of enlightening the non-Jewish world about the nature of Judaism, that it might understand the extent to which it was mistaken in its judgment of the Jewish people.

Jewish Antiquities

The work was the outcome both of the objective circumstances of Jewish life in the Diaspora, and of Josephus' personal conclusions drawn from his experience in Rome, where he saw the Jewish people living in a non-Jewish environment and yet preserving its character and observing its religion.

ITS PURPOSES: ENLIGHTENMENT OF THE GENTILES; PROOF OF THE ANTIQUITY OF THE JEWS. For the first time he came face to face with the gentiles' hatred of the Jews and it appeared to him that nothing but their ignorance of the religion of Israel was responsible. Feeling that if only the gentiles knew and understood the light that permeated Judaism, they would certainly forsake their capricious behavior and cease their hostility toward the Jews, Josephus drew the clear and simple conclusion: he had to teach the non-Jews a lesson in Jewish history so as to show them the error of their ways. The title, *Jewish Antiquities*, was apparently chosen by him on the analogy of *Antiquitates Romanae* by Dionysius of Halicarnassus who lived during the reign of the emperor Augustus; but it also hints at the chief aim which Josephus set himself in this work: to prove the antiquity of Jews and to dispel the slander that the Jewish nation was not an ancient one.

HELLENISTIC, AGGADIC, AND HALAKHIC ASPECTS. He recounts the biblical events, but not as they are given in the Bible. Josephus' approach is that of a Hellenistic writer who, never forgetting his audience, adapts his writing to their taste. A Hellenistic flavor is often added to the narrative, as, for example, in the story of Joseph and Potiphar's wife. The Jewish reader, too, is rewarded with aggadic statements which, taken from literary sources, embellish biblical tales. Some of Josephus' aggadic Midrashim are known from existing sources, others have not been preserved in the extant literature and Josephus is their only source. In these passages he reveals himself as an outstanding aggadist. Nor were halakhic subjects alien to him. Book 4 of his great work contains *halakhot* which are not in agreement with the existing *halakhah*, which should not be interpreted as ignorance on Josephus' part but rather as a halakhic tradition no longer extant, either because it was rejected or because it was forgotten in the course of time.

HELLENISTIC SOURCES FOR BIBLICAL NARRATIVES. In his version of the biblical narratives Josephus preserved many quotations and notices from Jewish-Hellenistic and also from general Hellenistic literature insofar as the latter touches on Jewish subjects, including such writers such as *Artapanus, *Cleodemus Malchus, Berosus, *Manetho, *Menander of Ephesus, and others. There are divergent views on the sources of Josephus' information, some maintaining that he had read the authors in the original, others that he had only an indirect acquaintance with them. In all probability the former view is correct, at least with regard to an author such as Berosus. For a recently published, new Babylonian source, a chronicle of the days of Nebuchadnezzar, reveals Josephus' accuracy on the events preceding the destruction of the First Temple, making

it clear that he could only have derived his remarkably precise knowledge from Berosus' work itself. He undoubtedly also used compilations such as that of Alexander Polyhistor as an important source.

USE OF THE SEPTUAGINT FOR BIBLICAL NARRATIVES AND FOR THE PERSIAN PERIOD. There is no basis for the contention that Josephus was ignorant of Hebrew and did not read the Bible in the original. Nevertheless he used mainly the *Septuagint, in a version significantly different from the existing one, as several clear indications testify, notably the personal names found primarily in the *Antiquities*. As stated, Josephus' first work was written in Aramaic and only later, at the request of the imperial court, in Greek. His progress along the path of Hellenistic literature, so completely strange to him, was not easy. It is reasonable to assume that his original draft was in Aramaic and that assistants helped him to give it a Greek garb worthy of the name. In the course of time however there naturally came a change for the better, since there is no doubt that with his talents Josephus had ample opportunities in Rome to improve his knowledge of the language. Yet from his own evidence, referred to previously, it may be concluded that Greek remained a strange tongue to him throughout his life. Using the Septuagint apparently made it easier for him to cast the biblical narratives in a Hellenistic mold than following the Hebrew original, though the language of the Septuagint, which was the Greek spoken by the Jewish masses in Egypt and the rest of the Diaspora, was not agreeable to the fastidious Atticist taste of the public in Rome. Nevertheless, copying the biblical narratives on the basis of the Septuagint version made matters somewhat easier for him, a consideration that presumably played a part in his decision to use it. There is however not a single reference to the prophetic books in the work. This omission apparently resulted from the fact that Josephus wrote for a non-Jewish public, to whom the figure of Moses was familiar, while the Prophets were, it seems, completely unknown to the enlightened Hellenistic world.

The second section of the *Antiquities*, which begins near the end of book 11, opens with an account of the period of Persian rule in Erez Israel. From this account it can be seen that few of the sources extant at present were available to Josephus. Using the Septuagint, he filled out the gaps in the Book of Esther, which he regarded as historical.

POSSIBLE SAMARITAN SOURCE FOR PERSIAN PERIOD. In addition, book 11 contains an extract from an unknown source with regard to the murder committed in the Temple in Jerusalem during the rule of the Persian governor *Bagohi, which Josephus may have taken from a Samaritan source that probably included the description of Alexander the Great's arrival in Erez Israel and the foundation of the Samaritan temple on Mount Gerizim. That there is a historical background to this account of the murder can be seen from the *Elephantine papyri which mention two of the men who figure in it: Bagohi, the Persian governor, and Johanan, the high priest. Thus for

the obscure Persian period, too, great importance attaches to the scanty material furnished by Josephus.

TREATMENT OF THE PTOLEMAIC PERIOD AND EVIDENCE OF JOSEPHUS' WEAKNESS AS HISTORIAN. He was however almost entirely ignorant of the rule of the Ptolemies in Erez Israel, filling in the void with the Letter of *Aristeas and with the story of Joseph the Tobiad, the tax-collector, which has at least a historical background and substance (see *Tobiads). Instead of revealing his importance as a transmitter of historical information, Josephus here demonstrates his weakness as a historian. The story about Joseph the tax-collector undoubtedly refers to the time of Ptolemy III and Ptolemy IV, that is, up to the end of the third century B.C.E. Josephus however tells the story as though it took place after the conquest of Erez Israel by Antiochus III, that is, after 200 B.C.E., and resolves the incongruity between the contents of the story and its insertion within the context of the Seleucid conquest by the comment, which has its origin in propaganda for the restoration of Ptolemaic rule in Erez Israel, that Erez Israel and the cities of *Coele-Syria were given by Antiochus III as a dowry to his daughter Cleopatra on her marriage to Ptolemy V, the king of Egypt.

Josephus' lack of awareness of the contradiction attests to his weakness as a historian. He was guilty of inaccuracy, and many passages indicate that his critical sense was not highly developed. He skims over the surface of events rather than penetrate into their inner significance. He gives scant attention to the events preceding Antiochus III's conquest of Erez Israel without mentioning anything of the development in Judea on the eve of the conquest. In this respect he is far inferior to the later *Porphyry whose brilliant analysis of the historical background of the Book of Daniel is incorporated in *Jerome's commentary on that book.

THREE DOCUMENTS FROM THE PTOLEMAIC PERIOD. Josephus quotes three extremely important documents: the first is Antiochus III's proclamation in favor of the Temple in Jerusalem; the second prohibited unclean animals from being brought within the limits of the holy city; while the third decreed the transfer of 2,000 Jewish families from Babylonia to Phrygia and Lydia as military colonists, who were charged with preserving law and order in those countries, then in a state of rebellion following the revolt of Achaeus (see: *Antiochus III).

THE MACCABEAN AND HASMONEAN PERIOD. The account of the Maccabean and Hasmonean period commences in the middle of book 12. Josephus' source for this period is primarily 1 Maccabees, but there are indications that the history of the Hasmonean dynasty up to the death of *Salome Alexandra, or perhaps only to the end of Alexander *Yannai's reign, was copied by him from a comprehensive work written originally in Hebrew and later translated into Greek. The contention of some scholars that Nicholas of Damascus was the source of Josephus' information on Salome Alexandra is untenable.

NICHOLAS OF DAMASCUS AS SOURCE FOR HERODIAN PERIOD. Nicholas' share in Josephus' work is to be found in books 14–17, that is, from the end of the Hasmonean dynasty to the establishment of the rule of the procurators in Judea in 6 C.E. The main part of this lengthy section describes Herod's accession and his great achievements during his rule in Judea, though Josephus undoubtedly adopted a critical attitude toward Herod's rule and did not accept all Nicholas' statements about him. For example, he rejects the story of Herod's Babylonian origin, regarding it as expressive of Nicholas' flattery of Herod who wished to free himself from the disability of being a "half-Jew" and to be considered as descended from those Jews of pure descent who came back from Babylonia. Against Nicholas, Josephus declares that Herod throughout his life craved honor and that it was this craving that prompted him to squander his money with the aim of acquiring a great reputation in the Hellenistic-Roman world. Josephus regards the murder of Herod's sons as an abhorrent deed, which only a man with the soul of a murderer could perpetrate.

INFORMATION ON DIASPORA COMMUNITIES IN ROMAN TIMES. Because of his admiration for Rome, Josephus included in his work a number of documents, most of them in book 14, which testify to the favorable attitude of the Roman Empire toward the communities in the Diaspora. Although preserved in a state that is far from satisfactory, their importance is inestimable. The view put forward in the 19th century that these documents are forgeries has now been discarded. They reveal the position of the Jewish communities in Hellenistic society, the pent-up hatred of the gentile world for the Jewish religion, and the suspicions that accompanied the Jews everywhere, even to the extent of the wish to extirpate them. On the other hand they show how the Roman administration endeavored to act impartially and to protect the Jews from the attacks of the more populous nations. They also mirror the struggle of the communities for the observance of the precepts of Judaism and their loyalty to Jerusalem, as a result of which they aroused the anger of the gentiles. The documents are also important for the information they provide on the many privileges granted to the Jews by the Roman administration, first and foremost exemption from military service for religious reasons. The source from which Josephus obtained these documents is not known. He may have copied them from Nicholas of Damascus' work, but more probably they came from special collections of documents dealing with the rights granted to the Jews, which were to be found in large communities, like Alexandria, Ephesus, Rome, and great cities in the empire such as Cyrene.

The last part of the *Antiquities*, consisting of books 18–20, presents a difficulty both in its sources and the manner in which the events are recounted.

CONTROVERSIAL PASSAGE ON JESUS. One of the great riddles of the work, and perhaps of ancient history in general, is the well-known passage about Jesus of Nazareth in book 18 which scholars have not yet succeeded in elucidating. Some

regarded it as a Christian forgery of the third century C.E., others still consider it as historical evidence of the activities and death of Jesus; but the passage contains statements which could not have been made by a Jew such as Josephus, as Schuerer recognized. Around the 1930s–1940s there was a change in scholarly outlook, the passage being regarded not as a forgery, but as Josephus' original statement tampered with by a Christian. The foremost proponent of this view was Robert Eisler (see bibliography) who even made an unsuccessful attempt to reconstruct the original version. For the period from the procurators to the reign of Agrippa I, Josephus apparently used material from the Roman archives and the works of other authors, but on the whole he writes as a contemporary eyewitness.

FAVORABLE ACCOUNT OF AGRIPPA I. The account of Agrippa I which occupies part of book 18 and the whole of book 19 gives the impression of a uniformity that undoubtedly proves that it had a single source. The division of the material seemed reasonable to Josephus, desirous as he was of giving an account of Agrippa's reign in relation to the events which took place in the days of the emperors Gaius Caligula and Claudius. In this part of the *Antiquities*, it is very likely that Josephus copied the work of his rival *Justus of Tiberias ("On the Crowned Kings of Judah" as it is to be translated, in contradiction to Schuerer, who understands *στέμματα* as meaning "pedigree"). In it Justus gave an account of the Jewish kings up to Agrippa I, apparently on the instructions of Agrippa II, who wishing to glorify the memory of his father, assigned to his secretary, Justus of Tiberias, the task of writing a work describing the activities of Agrippa I. Clearly the account had to be favorable; and indeed Agrippa I is depicted in the *Antiquities* in a decidedly complimentary light.

ACCOUNTS OF THE TWO BABYLONIAN JEWS AND OF THE ADIABENE ROYAL HOUSE. A large part of book 18 consists of the gripping story of two Babylonian Jews, the brothers Anilaus and Asinaeus. Book 20 contains the remarkable episode of the proselytization of the royal house of *Adiabene. The two events took place in adjacent regions in which Aramaic was the vernacular. What prompted Josephus to incorporate them in his work? He apparently used the story of the two Babylonian brothers for Roman propaganda purposes aimed primarily at the Jews throughout the Roman Empire, in order that, in the days following the destruction of the Second Temple, they should not entertain any further idea of rebellion, since Rome was ultimately the empire of law and justice with which, unlike countries beyond its borders, it was possible to negotiate. The account of the proselytization of the Adiabene royal house was apparently included by Josephus in book 20 (which deals with the 22 years prior to the outbreak of the Jewish War) because of the part played by the Adiabene royal family in the final days of the Second Temple in general and in the Jewish War in particular. Josephus describes the events contained at the end of book 20 as an actual eyewitness. This book concludes with a list of the high priests from the time of

Alexander the Great until the Jewish War, the source for this being, at least from the days of Herod onward, the genealogies of the priests in general and of the high priests in particular which were kept in the Temple archives. Josephus' list is far from clear: much in it is obscure, and the problems it raises have not been satisfactorily solved.

The Life

Finally, there are Josephus' last two works, the *Life* and *Against Apion*. The former was written in response to the attacks of Justus of Tiberias, who accused him of misconduct in Galilee before the arrival of Vespasian and his army, charging in particular that he belonged to the war party, was an enemy of Rome, had suppressed the peace party in Tiberias, committed acts of brigandage, and violated women. Such allegations were highly unpalatable to Josephus, in his position of access to the upper circles in Rome. Josephus' defense conceals more than it reveals, clearly evading any straightforward answers and thereby indirectly confirming Justus' accusations. The testimony of King Agrippa, intended as evidence in his favor, is so worded that it is actually tantamount to an indictment. The *Life* apparently appeared as an appendix to the *Antiquities*, which was published in 93/94 C.E., according to Josephus' own testimony. It seems that Justus' accusation became current shortly before, and Josephus took the first available opportunity to answer him. The *Life*, then, was written either in continuation of, or soon after, the *Antiquities* but before it appeared on the book market in Rome, that is, in 93/94 C.E. or, as held by Laqueur (see bibliography), together with the second edition of the *Antiquities*, between 93/94 and 100 C.E.

Against Apion

In *Against Apion* (or, *On the Antiquity of the Jews*, the original title of the work), which consists of two parts, Josephus lashes out against various antisemites and seeks to refute their accusations with logical arguments and with biting derision. The work reveals outstanding literary skill and great persuasiveness. The first part, a lengthy series of extracts from works no longer extant, in particular from the Egyptian Manetho, is especially significant since it is the only record of a whole body of literature which would otherwise have been completely unknown. This part constitutes a negative defense of the Jews, i.e., it sets out to refute the contentions of the antisemites. The purpose of the positive defense in the second part was to reveal the inner value of Judaism and its ethical superiority over Hellenism. In this part especially Josephus appears as a Jew completely committed to his people and his religion. Here the true Josephus is revealed, not the one who acted treacherously toward his comrades to save his life, but Josephus the Jew who fights his people's fight, and suffers with them.

EVALUATION OF JOSEPHUS

As a Jew

On this subject there are opposing views. By some he is regarded as a traitor who, deserting his people in their hour of need, defected to the enemy, and acting as the apologist of

the Romans, distorted the facts. A more charitable view contends that he was essentially a Pharisee who acted in conformity with this outlook, had faith in the future of the Jewish people whose survival depended on submission to Rome, and sordid though the manner was in which he saved his life, he did so in order to devote himself to the highest interests of his people.

As a Writer

As for his merit as an author, it may be said that in point of literary talent Josephus ranks among the leading writers in world literature. His style is epic, his portrayals plastic, his gift of description captivates the reader alike by its fidelity and its colorful presentation. All these qualities apply to what, from the literary aspect, is his principal work, *The Jewish War*, which is marked by a complete identity between the author and his calamitous subject. The reader believes the writer as he mourns over the city, becomes an actual eyewitness as he presents the dramatic picture of the burning of the Temple or the tragic bravery of the heroes of Masada. The pathos inherent in the occasion communicates itself to the reader.

As a Historian

Not so, however, is his merit as a historian. Josephus is, of course, not to be judged according to the criteria of a modern historian. The expression "historical science" does not apply to ancient historiography, for in ancient times the historian was a writer and his craft part of general literature. This aspiration of the historian proved his misfortune, since the requirements of literature did not accord with the demands of historiography, and most often the writer prevailed over the historian. Josephus shared all the defects that characterized contemporary and earlier historians. Nonetheless, he occupies a place of prime importance also as a historian, an importance which is greatly increased because his work is the only surviving source and without it little would have been known of the history of the Second Temple nor would it have been possible to write such a history.

The historian must be grateful to the Christian Church for preserving this treasure. As early as in the first centuries the Christians eagerly translated the writings of the "Greek Livy" into Latin – *Antiquities* and *Against Apion* were translated through the efforts of Cassiodorus in the sixth century C.E. and *The Jewish War* apparently already at the end of the fourth. A distinction must be made between the accurate rendering, ascribed to Rufinus, of *The Jewish War* and the freer version known as Hegeippus or Gegesippus. The first edition of the Greek text of Josephus' writings was printed in 1544 by Frobenius and Episcopus in Basle. The new, scholarly edition, that of Niese, was begun in 1887 in Berlin. The main English editions of Josephus are *Josephus: Complete Works* (1969), translated by W. Whiston; *The Jewish War* (1959), by G.A. Williamson; and the Loeb Classical Library edition translated by H. St. John Thackeray, R. Marcus and L.H. Feldman (1926–65).

[Abraham Schalit]

In the Arts

The Jewish historian and his writings made an imprint on art and literature. In the 11th century, an East Slavonic version made Josephus' *Jewish War* a popular source of legend in the Slav lands and later influenced Russian heroic literature. The rediscovery in the 15th century of the writings of Josephus created a vogue in Western Europe for dramas about the Maccabees and the Herodians. After early translations of Josephus into Latin (1481), German (1531), French (1558), and Italian (1574), the English poet Thomas Lodge (1558–1625) produced the first complete edition in English, *The Famous and memorable workes of Josephus, a man of much honour and learning among the Jewes...* (London, 1602). While there was practically no early fiction about the Jewish historian, there were many 17th-century English dramas dealing with subjects such as *Herod and Mariamne and the fall of Jerusalem which acknowledged their indebtedness to "Josephus, the learned and famous Jew." English dramatists anxious to exploit such themes on the stage found in Josephus a convenient post-biblical authority, enabling them to circumvent Puritan objections to dramatization of the Bible. There was a renewal of interest in these subjects during the Restoration era, and Josephus' account of the destruction of Jerusalem, for example, continued to attract the attention of English playwrights well into the 19th century. In general, however, Josephus himself became significant in fiction only toward the end of the 19th century. The Jew's need to fight for equality was stressed by the Russian author Vladimir Galaktionovich *Korolenko in his tale *Skazaniye o Flore, Agrippe i Menakheme syn Yegudy* ("Tale of Florus, Agrippa, and Menahem ben Judah," in *Ocherki i Razskazy*, vol. 3, 1894²). Practically all of the works dealing with the theme in the 20th century were written by Jews. They include *Az áruló* ("The Traitor," 1923), a historical drama by the Hungarian author Lajos *Szabolcsi; Yehiel Yeshai'a *Trunk's Yiddish short story *Yosepus Flavius fun Yerusholayim* (1930); Julius Wolffsohn's German play *Joseph ben Matthias* (1935; staged in 1934); and *Yerushalayim ve-Romi: Yosifus Flavius* (1939), a Hebrew drama by the writer Nathan *Agmon (Bistritski). The outstanding work on the subject was the German novelist Lion *Feuchtwanger's *Josephus* trilogy: *Der juedische Krieg* (1932; *Josephus*, 1932); *Die Soehne* (1935; *The Jew of Rome*, 1936); and *Der Tag wird kommen* (1941; *The Day Will Come* (U.S. ed., *Josephus and the Emperor*), 1942). After World War II, the Israel writer Shin *Shalom published his play *Me'arat Yosef* (in *Ba-Metaḥ ha-Gavoha*, 1956) and Naftali Ne'eman the Hebrew novel *Beino le-Vein Ammo* (1956–57). Josephus also appears in a number of interesting works of art. A striking first-century marble bust (found in Rome and formerly in the Carlsberg Glyptotek, Copenhagen) has been thought to represent the Jewish historian because of its pronounced "Semitic" features. Two outstanding French manuscripts that have survived are copies of his works. The first, a late 12th-century Josephus text (Bibliothèque Nationale, Paris), contains stylized figures and elongated, convulsive forms resembling those of French Romanesque sculpture of the same period. In one illustration

Josephus is shown presenting his work to Vespasian. The emperor sits enthroned like a medieval monarch, while Josephus – complete with the notorious “Jew’s hat” – is depicted in the stance of one of the four Evangelists. Assembled behind Josephus is a group of Jews also wearing the obligatory pointed headgear. The second manuscript, a masterpiece of illumination, is the French *Antiquités judaïques* with miniatures by Jean Fouquet (1415–1480; Bibliothèque Nationale). Painted toward the end of the Middle Ages, these freshly colored works betray the influence of the Italian Renaissance, although the soft landscape backgrounds are those of 15th-century France. In this work Fouquet, a master of grouping, action, and drama, interpreted biblical scenes such as David lamenting the death of Saul and Solomon building the Temple. The *Antiquities* also inspired Altichiero and Avarizi to paint a series of triumphs for the great hall of the palace at Verona (c. 1377). These later served as models for Renaissance masters seeking to evoke the glory of Rome, notably Andrea Mantegna (1431–1506), whose *Triumph of Caesar* (1484–92) is now at Hampton Court Palace, near London. Many printed editions of Josephus’ works have also been illustrated by well-known artists.

JOSHUA (Heb. יְהוֹשֻׁעַ; “YHWH is salvation”), son of Nun of the tribe of Ephraim and leader of the Israelites in the conquest and apportionment of the land of Canaan; his name was originally Hosea (Num. 13:8, 16; Deut. 32:44). Joshua, who appears in the Bible as a commander and as “Moses’ attendant, led Israel against *Amalek in the battle of Rephidim

(Ex. 17:9–14). He accompanied Moses during his ascent and descent of Mt. Sinai (24:13; 32:17–18), and was placed in charge of security at the tent of meeting (33:11). One of the 12 spies sent from Kadesh, Joshua, together with Caleb, opposed the negative report of the other ten (Num. 13:8; 14:6–9). Because of their trust in the Lord, they were the only two privileged to enter Canaan (14:30). Moses appointed Joshua as his successor (27:15–23; Deut. 1:38) with the duty to conquer and apportion the land among the Israelites (Num. 34:17; Deut. 31:7, 14, 23). He himself received Timnath-Serah in the hills of Ephraim as his lot (Josh. 19:50). On his death at the age of 110, he was buried there (*ibid.* 24:30; cf. Judg. 2:9, as Timnath-Heres). Joshua is portrayed in the Bible as combining the qualities of a military leader and a prophet. His major function lay in the conquest and settlement of Canaan (Deut. 3:21; 31:3–8; Josh. 13:22), but he “was filled with the spirit of wisdom because Moses had laid his hands upon him” (Num. 27:18–20; Deut. 34:9). Like Moses, he is called “servant of the Lord” (Josh. 24:29), and it is also said of him: “And the Lord spoke unto Joshua saying” (20:1) – the form of address used for Moses. He begins his farewell address to Israel: “Thus says the Lord” (24:2). The event of Mt. Ebal (Josh. 8:30–35; cf. Deut. 27) is a kind of act of prophetic leadership continued from Moses to Joshua. In his parting words of chapter 23 and those at Shechem (24), the Bible attributes to him the character of a prophet-legislator in the style of Moses (24:1–28). (For fuller details see *Joshua, Book of.)

The historical role of Joshua has been variously evaluated. There is a general consensus that the Joshua traditions in the Pentateuch are secondary. He appears to have been inserted into the spy story of Numbers 13–14; Deut. 1:34–7, which in an earlier form included only Caleb. As to his historicity E. Meyer and G. Hoelscher deny his existence as a historical reality and surmise that he is the legendary hero of a Josephite clan. Others, especially Y. Kaufmann, accept the biblical tradition in essence and view him as the historical leader of an alliance of tribes during the conquest of Canaan. Before the extensive archaeological excavations of the recent decades demonstrated that the Bible’s account of the conquest of the land are unhistorical, most modern scholars did not doubt his historicity, but suggested that he was the leader of only part of the Israelite conquerors, and that he became a national hero associated with Moses only after the passage of time, when numerous stories and traditions accumulated about him. W.F. Albright, T. Meek, B. Mazar, and others held that Joshua was only the leader of the house of Joseph and that he conquered Jericho, Ai, and Beth-El, and won the battle of Gibeon. In the opinion of Alt and Noth, Joshua won only the battle of Gibeon, and following this victory he became the first judge, consolidating the tribes of Israel around their religious center in Shechem, in the center of the hills of Ephraim (Josh. 24). In the present circumstances it seems best to conclude that if there is a historical person ultimately behind the Joshua legends, he cannot be recovered.

[Yohanan Aharoni / S. David Sperling (2nd ed.)]

In the Aggadah

Joshua received the Torah from Moses (Avot 1:1). He was worthy to succeed him and to receive the gift of prophecy because of his faithful service to him both by day and night (Num. R. 12:9). That his inspiration was derived from Moses is indicated in the statement “the face of Moses was as the face of the sun, the face of Joshua as the face of the moon” (BB 75a). Joshua was designated as the “first of the conquerors” at the time of the creation of the world (Esth. R., Proem 10). The rabbis solve the moral problem that Joshua had taken by conquest a land which was occupied by another nation by maintaining that it was divinely designated for the children of Israel, and the Canaanites were merely acting as caretakers of the land until their arrival (Sifra 7:9). The identical plea was used by the Spartans to justify their right to Sparta and Messene, namely, that Heracles conquered Sparta with his own hands and ordered it to be preserved for his descendants (Diodorus 4:33, 5). Before attacking a city Joshua issued an edict wherein was written, “Whosoever desires to go, let him go; and whosoever desires to make peace, let him make peace; and whosoever desires to make war, let him do so. The Gergashites departed, and so were given a land as good as their own ... Africa [Carthage]. The Gibeonites made peace. The 31 kings waged war and were defeated” (Deut. R. 5:14; Lev. R. 17:6). Joshua’s dedication of the spoils of Jericho to God was done of his own accord, Joshua reasoning that since it was captured on the holy Sabbath, then all that was taken should be holy to the Lord. Moreover, as the first city to be captured, it was to be regarded as the first of the produce, which belongs to God (Tanḥ B., Num. 42; Jos., Ant., 5:26). When the Gibeonites appealed to Joshua to save them (Josh. 10:6), his first thought was that he should not put the congregation to trouble for the sake of these proselytes, but God pointed out that Joshua himself was a descendant of proselytes (Num. R. 8:4), since he was descended from Ephraim, son of Joseph and Asenath, daughter of Poti-Phera. Joshua succeeded where Moses did not. He allotted and apportioned the land and was vouchsafed the wholehearted cooperation of the entire people which Moses had failed to achieve (Tanḥ B., Lev. 23). He was one of the three for whom the sun stood still (Ta’an. 20a). Joshua married *Rahab after she became a proselyte (Meg. 14b).

[Elimelech Epstein Halevy]

In Christianity

The similarity of the names Yehoshua and Yeshua brought about an early identification, in Christian symbolism, of Joshua as a “type” or prefiguration of Jesus. The typology is first mentioned in the Epistle to the Hebrews (4:8–9), where Joshua, who brought the children of Israel to an imperfect rest only, is contrasted with Jesus who brought his believers to the true and perfect rest. Other events of Joshua’s life are similarly interpreted as prophetic anticipations of the life of Jesus. Thus Joshua fights with Amalek, the symbol of the Devil, with whom Jesus too must fight, and he leads the Israelites in battle while Moses folds his arms in the “crossed” position.

According to the Church Father Irenaeus, Joshua, who leads the people into the Holy Land, succeeds Moses, the symbol of the superseded Law.

In Islam

When the people of Israel refused to enter Erez Israel out of fear of the people of Anak (see Num. 13–14), they were encouraged by two men who feared Allah and who said to them: “Verily, we shall be victorious and upon God do ye rely if ye be believers” (Sura 5:23–26). The commentators explain that these two were Yūsha‘ (Joshua) ibn Nūn and Kalāb (Caleb) ibn Yūfannā (Jephunneh). Ṭabarī (*Tārīkh*, p. 306) mentions that there were divergences of opinion among the earlier authorities (cf. Kisā’ī, 240) as to whether the conquest of Jericho occurred during the lifetime of Moses, and that Joshua commanded the vanguard of the army in this campaign, or whether it occurred after the death of Moses, solely at the hands of Joshua. Ṭabarī (*Tārīkh*, p. 311), however, was familiar with the order of the events of the conquest as they are described in the Bible: Joshua conquered more than 30 towns (cf. Josh. 12). In the traditions of Ṭabarī (*Tārīkh*, p. 312) the tale of Joshua is connected with that of the Amalekites who were driven out of *Yemen by Shamīr, the first of the *Ḥimyar kings and the same person who was at first the viceroy of the king of Persia in Yemen. The remnants of the Canaanites, who remained after the wars of Joshua, headed by Ifrīqīs, a descendant of the Ḥimyarite kings, went to Africa – which they conquered – put its king Jarjīr (or Jarjaš – the Gergasite) to death and settled there; these people are the *Berbers. Ibn Khaldūn, the celebrated Arabic-Maghribi historian (late 14th–early 15th century), objected to this genealogy. These confused legends are an echo of the tale of Procopius (sixth century C.E.), and of the Jewish legends – which go back to the period of the *tannaim* – on the expulsion of the Canaanites by “Joshua the Robber” to Africa, or their voluntary departure. They later appear in Arabic literature as the expulsion of the Philistines from Canaan and are connected with the Jālūt (see *Goliath).

[Haim Z’ew Hirschberg]

In the Arts

Among writers, artists, and musicians the siege and capture of Jericho was the most popular episode in Joshua’s career. In literature, Joshua drew little attention during the Middle Ages. One of the earliest works on the subject was a late Elizabethan play by the English writer S. Rowley, whose *Joshua* – though the text has not survived – is known to have been staged in 1602. The theme became more popular in the 18th century, with works beginning with García Aznar Vélez’s Spanish drama *El sol obediente al hombre* (Seville, 1720[?]). Thomas Morell’s *Joshua. A Sacred Drama* (1748), enhanced by the music of Handel, was one of the oratorios on Old Testament themes which appealed to the patriotism of a British public unable to see biblical plays on the stage because of rigid censorship. There were also strong patriotic undertones to *The Conquest of Canaan* (1785), an epic poem by the theocratic U.S. writer and preacher Timothy Dwight. Dwight, one of the leading

“Connecticut wits,” injected references to the American War of Independence into his allegorical account of the Israelite *The Battles of Joshua* (1843), an anonymous American ballad – generally attributed to Samuel B.H. *Judah – portraying the Israelite leader as a cruel invader. Works on the subject by two other 19th-century Jewish writers were less controversial: *Yehoshua*; *Sar Zeva’ot Yisrael* (1853), a Hebrew epic in ten cantos by Benjamin Kewall (1806–1880), and *Joshua* (1890; *Joshua: A Story of Biblical Times*, 1890) by the German Egyptologist Georg Moritz *Ebers, who was raised as a Christian. The subject has retained its popularity in the 20th century, and a three-act drama *Rahab* by the U.S. literary critic Richard Burton appeared in 1906. Another work of the same period was “Josuas Landtag” (composed 1906), a poem by the Prague-born Austrian writer Rainer Maria Rilke. Other works on the theme by modern writers include Tadeusz Breza’s Polish novel, *Mury Jerycha* (“The Walls of Jericho,” 1946); *The Seven Days of Jericho* (1944), a poem by Patrick Dickinson; a drama, *Das rote Seil* (1952), by the Swiss-German writer Gerhard Wipf; and Frank G. Slaughter’s *The Scarlet Cord: a Novel of the Woman of Jericho* (1956). Among treatments by Jewish authors are Saul Saphire’s Yiddish novel, *Moyshe Rabeynes Nakhfolger, Yehoshue* (1935), and Israel Isaac Taslitt’s *At the Walls of Jericho* (1961). There have also been several works for Jewish children, such as Shlomo Skulsky’s *Aggadot Yehoshua bin Nun* (1958; *Legends of Joshua*, 1961).

In art, Joshua was regarded as the type of Jesus (Yehoshu’ah = Yeshu’a), both because of his name and because of the symbolic meaning attached to his actions. The crossing of the Jordan, like the crossing of the Red Sea, was regarded as foreshadowing the baptism of Jesus and was therefore represented on baptismal fonts. Joshua also owed much of his popularity in the medieval Christian world to the miracle he performed in arresting the course of the sun in the heavens (Josh. 10:12). He was regarded as one of the Nine Worthies, and was represented in this role in sculpture, painting, and tapestries. The cycles of episodes drawn from the Book of Joshua comprise the fourth-century mosaics from the church of Santa Maria Maggiore, Rome; the tenth-century Greek *Joshua Roll* (Vatican Library); the bronze doors by Ghiberti for the Baptistery at Florence; and a series of 16th-century Brussels tapestries (Vienna Museum). In the mosaics of Santa Maria Maggiore, the scene of the crossing of the Jordan is based on the triumph over the fall of Jerusalem from the Arch of Titus. There is a statue of Joshua by Donatello at the Campanile, Florence, and scenes from his life are found in Byzantine and western manuscripts, including the 12th-century Admont Bible (British Museum); the 13th-century St. Louis Psalter (Bibliothèque Nationale, Paris), in which the priests are shown wearing the pointed hats of medieval Jewry; the 14th-century Queen Mary Psalter (British Museum); and the 16th-century *Hours of Henry II* (Bibliothèque Nationale). Similar scenes are also found in medieval frescoes and sculpture. Among other notable representations are an illustration of the fall of Jericho

by Jean Fouquet (1415–1480) in his famous manuscript of Josephus (Bibliothèque Nationale); frescoes by the school of Raphael in the *loggie* of the Vatican; and a painting by Tiepolo (1696–1770; Poldi-Pezzoli Museum, Milan) showing Joshua arresting the course of the sun, a subject also treated by Italian artists of the 17th century.

IN MUSIC. Joshua has also inspired a comparatively large number of compositions. The sudden appearance of several oratorios on the subject – mainly about the fall of Jericho – beginning with G.M. Bononcini’s *Il Giosuè* (1688) is no doubt directly linked with political events of the time, particularly the victories of Charles of Lorraine over the Turks at Mohács, and of Prince Eugene of Savoy and the Duke of Marlborough. Some early 18th-century works of note are M.-A. Charpentier’s *Josué* (c. 1700); the oratorio-pasticcio *I trionfi di Giosuè* (1703), jointly written in Florence by more than ten composers (including Veracini and Bononcini); and other oratorios by Veracini (c. 1715), Logroscino (1743), and Hasse (1743). Handel’s oratorio *Joshua* has been mentioned above. The subject was taken up by some relatively undistinguished composers in France. The only noteworthy – or notorious – example there is of slightly later date, *La Prise de Jéricho*, an opera put together from various sources (chiefly Mozart) by Lachnith and Kalkbrenner (1805). Of the very few works on the subject written during the 19th century only Moussorgsky’s retains significance. His *Jesus Navin* (“Joshua, the Son of Nun”), for baritone, alto, mixed choir, and piano, is based on melodies which he heard from Jewish neighbors in St. Petersburg in about 1864. Moussorgsky first utilized some of the material in 1866 for the “Chorus of the Libyan Warriors” in his projected opera *Salammbô*. Between 1874 and 1877 he reworked and completed it as a choral scene on the battle of Gibeon, adapting the text himself from the Bible. The work was first performed and published in 1883 by Rimsky-Korsakov, who had arranged the piano accompaniment for orchestra. The opening theme of the main chorus, “Thus saith the Lord of Hosts,” is engraved on Moussorgsky’s tombstone. It was translated into Hebrew by Saul *Tchernichovsky for the *Lider-Zamlbuch* (1911) published by Z. Kisselgov, A. Zhitomirski, and P. Lwow for the *Society for Jewish Folk Music.

Later works about Joshua include C. Franckenstein’s opera *Rahab* (première in Hamburg, 1911), Franz Waxman’s oratorio *Joshua* (première in Dallas, 1959), and Ben-Zion *Orgad’s *The Story of the Spies* for chorus and orchestra (1953). The Afro-American spiritual “Joshua fit de battle of Jericho” is among the most famous of its type.

JOSHUA (mid-second century C.E.), *tanna*, son of *Akiva. It is told that he stipulated in his marriage contract that his wife had to support him so that he could devote himself to study. Later, during a famine, she contested the validity of the stipulation but under the extraordinary conditions of the time the court upheld the original agreement (Tosef., Ket. 4:6). It is possible that he and his wife are also mentioned in the *Midrash Tehillim* (ed. Buber (1959), p. 302). Joshua is once mentioned as asking his father a halakhic rule (Tosef., Neg. 1:1), and it is also related that his father charged him with seven rules of behavior (Pes. 112a). Some *rishonim*, among them Rashi (Bek. 58a), identify Joshua with *Joshua b. Korḥa. It can be assumed that he perished during the persecutions at the time of *Hadrian. The Talmud mentions that Akiva mourned for the loss of his sons (MK 21b).

JOSHUA, early liturgical poet of unknown period. Joshua, who apparently lived in Palestine, is mentioned by *Saadia in his introduction to the *Iggaron*, in conjunction with Eleazar (i.e., *Kallir) and *Phinehas, as one of the first composers of *piyyutim*. Some liturgical compositions by Joshua, who bore the surname “ha-Kohen,” were recently found among *Genizah* fragments. Only a few of these texts have been published. In Zulay’s opinion, Joshua could have been the father of the well-known poet Johanan ha-Kohen. Joshua is not to be confused with poets of similar name of a later period.

[Jefim (Hayyim) Schirmann]

JOSHUA, BOOK OF, the first book of the Former Prophets, which relates the conquest of *Canaan and its early settlement from the death of *Moses to the death of *Joshua. The Book of Joshua is divided into three main sections: the conquest of the land (chs. 1–12); the division of the land among the tribes and the establishment of cities of refuge for the levites (chs. 13–21); and the final chapters, which include the negotiations with the tribes dwelling east of the Jordan and the covenant at Shechem (chs. 22–24). (See Table: Book of Joshua – Contents.)

BOOK OF JOSHUA – CONTENTS

1:1–12:24	The Conquest of Canaan
1:1–5:12	Crossing the Jordan.
5:13–8:35	First conquests (Jericho, Ai).
9:1–10:27	Success in south-central Canaan.
10:28–43	Southern campaign.
11:1–15	Northern campaign.
11:16–12:24	Summary of conquest.
13:1–21:43	Allotment of the land
13:1–6	Land still unconquered.
13:7–33	Inheritance of Transjordanian tribes.
14:1–19:51	Allotment of Canaan.
20:1–9	Cities of refuge.
21:1–43	Levitical cities.
22:1–34	Departure of Transjordanian tribes
23:1–24:33	Joshua’s last days
23:1–16	Joshua’s farewell address.
24:1–28	Covenant at Shechem.
24:29–31	Death and burial of Joshua.
24:32–33	Two burial traditions: Joseph’s at Shechem, Eleazar’s at Gibeah.

THE COMPOSITION OF THE BOOK

According to talmudic tradition, “Joshua wrote his own book” (BB 14b), although the talmudic sages found it necessary to add the qualification that Joshua’s death was recorded by *Eleazar son of Aaron, and the latter’s death by his son *Phinehas (BB 15a). No mention of the author is made in the book itself, and the statement that “Joshua wrote these things in a record of divine teaching” (24:26) does not refer to the book in its entirety but only to the last section concerning the covenant. Both the date and the editing of the book are subjects of controversy.

The traditional exegetes (Rashi, 15:14–16; Rashi and David Kimḥi, 19:47; Levi b. Gershon, Judg. 1:10) held that most of the book is from the time of Joshua, but mentioned additional details from a later period, which were added in subsequent generations, such as the Danites’ wanderings northward (19:37) and the conquest by Caleb and Othniel (15:14–19), who also lived after the time of Joshua (Judg. 1:10–13). Abrabanel rejected this view. According to him the statement “until this day” which recurs throughout the book (Josh. 4:9; 5:9; 7:26; 8:28; 9:27; 13:13; 14:14; 15:63; 16:10) reflects a distinct lapse between the events themselves and their description in the book. An additional important proof, according to him, is provided by the mention of the Book of Jashar (10:13), which is not very early since it contains David’s lament over Saul and Jonathan (11 Sam. 1:18). For this reason, Abrabanel held that the author of the book was probably the prophet Samuel; “and if you desire ... to agree with the words of the sages, you would have to say that Jeremiah ... or Samuel collected these sayings, arranged them in a book, and added to them with God’s benevolent aid” (Introduction to commentary to Former Prophets). There are significant differences between the Hebrew and

Greek texts of Joshua. Fragments of Joshua have been found at Qumran (see in Ahituv, 28–37). These demonstrate that the text of Joshua was somewhat fluid as late as the Hasmonean period and perhaps even later.

A group of scholars suggest that the Book of Joshua be considered, together with the Five Books of Moses, as part of a six-book literary creation, or Hexateuch. There is no consensus concerning the P, D, E and J sources found in the book (see *Pentateuch). Some scholars hold that not all of the conjectured Pentateuchal sources are represented here. Beatrice Goff thinks that the bulk of the J source for the story of Joshua's conquest of the land has been lost. W. Rudolph denies the existence of the E source in Joshua. A. Alt and M. Noth assume that the first part consists of stories of various origins edited about 900 B.C.E. by one editor, while the second part consists of two separate geopolitical documents, one dating from the end of the period of the Judges, the other from Josiah's time, both of which were combined and edited near the end of the pre-Exilic period. Then during the Babylonian Exile, the Deuteronomist combined these disparate sources and added a historical framework. Finally, some sections were added from the P source, while other small additions were made before the book assumed its present form. For an updated summary of scholarly opinions on Joshua see Auld in Bibliography.

Y. Kaufmann disagrees with all these theories and maintains the unity and antiquity of the Book of Joshua. He is of the opinion that the Book of Joshua correctly reflects the historical events of the conquest and early settlement of Canaan and was written soon after these events took place. The geographical chapters also belong to the period of early conquest; they are partially a realistic description and partly a utopian ideal – a plan that was only partially realized. The current consensus based on extensive excavation of biblical Israel is that the conquest is unhistorical (see *History: Beginning until the Monarchy). As such Kaufmann's views cannot be sustained. Other solutions must be sought for the differing “maps” in the book. The commentary by Ahituv is extremely helpful in identifying the many geographic sites in Joshua.

[Yohanan Aharoni / S. David Sperling (2nd ed.)]

THE CONTENT OF THE BOOK

The Conquest of the Land of *Canaan (chs. 1–12).

The book introduces Joshua as continuing the work of Moses (1:1–9), beginning preparations for crossing the *Jordan, and calling upon the tribes who settled east of the Jordan to participate in the war of conquest (1:10–18). After sending the spies to *Jericho (ch. 2), the crossing of the Jordan is described (chs. 3–4). It is followed by the description of the circumcision of the people at Gibeath ha-Araloth and the Passover festival in *Gilgal (ch. 5). Then stories are told about the miraculous conquest of Jericho (ch. 6) and the destruction of *Ai, after the punishment of *Achan in the valley of Achor (ch. 7; 8:1–29); the construction of the altar on Mt. *Ebal (8:30–35); the covenant with the cities of *Gibeon (Gibeon, Chephirah, Beeroth, and

Kiriath-Jearim, ch. 9); the victory over the alliance of the five *Amorite kings of the Judean hills and the lowland (Jerusalem, Hebron, Jarmuth, *Lachish, and *Eglon), and their flight from Gibeon, through Beth-Horon, to the valley of Ajialon, Azekah, and Makkedah; the conquest of Makkedah, Libnah, Lachish (despite the help of the king of Gezer), Eglon, and *Debir (ch. 10); and finally the victory at the waters of Merom over the alliance of the northern kings (*Hazor, Madon, Shimron, and Achshaph) and the capture of Hazor (11:1–15). The description of the wars concludes with a summary of the battles, the conquered areas (11:16–12:6), and a listing of the vanquished Canaanite kings.

In this section, the editor wove several battle stories into a geographical and contextual unit in order to depict a single campaign of conquest under Joshua's leadership. It would appear that this is actually a selection of stories about the conquest, as is apparent from the concluding catalog of vanquished Canaanite kings (12:9–24). This list includes the cities mentioned in the stories of the conquest, such as Jericho and Ai; the alliances of southern and northern cities; cities which do not appear in the biblical stories, such as Geder (Gerar?), Hormah, *Arad, and Adullam in the south, *Beth-El, Tappuah, Hopher, Aphek in the Sharon (according to LXX), Tirzah in the central area, and Taanach, *Megiddo, Kedesh, Jokneam, and Dor in the north; and finally the king of Goiim in Gilgal (according to the LXX in Galilee: i.e., king of the region [Heb. *galil*] of Goiim). There undoubtedly were stories about the conquest of these cities which were not handed down.

Most scholars believe that the stories of the battles originally were related to individual tribes and were only associated with Joshua, and with Israel as a whole, at a later period. Such earlier sources are preserved mainly in Judges 1 and in a few sections in the Book of Joshua, e.g., the conquest of Hebron and Debir which is attributed to Caleb and Othniel (Josh. 15:13–19; 21:12–15), to Judah (Judg. 1:10–11), and finally to Joshua and all of Israel (Josh. 10:36–39). Other cities appearing in the concluding list (ch. 12) were captured, according to Judges (1:16–17, 22–26), by individual tribes: Arad by the Kenites, Hormah by Simeon, and Beth-El by the house of Joseph. Judges 1:4ff. describes a separate campaign launched by Judah against Jerusalem via Bezek and from there to the Judean hills, which concludes with the words “and he drove out the inhabitants of the hill-country; for he could not drive out the inhabitants of the valley, because they had chariots of iron” (1:19).

Among the modern scholars, G.E. Wright prefers the tradition in the Book of Joshua because it presents a total viewpoint in comparison with the fragmentary contradictory data of Judges 1; the progress of the conquest is logical both circumstantially and topographically, and archaeological investigations, particularly in the mounds of the plains, have disclosed ruins dating from the 13th century B.C.E., i.e., the period of Joshua. However, it is impossible to deduce from the ruins of a city whether the destruction was accomplished by individual tribes or as part of a unified campaign of conquest. Nor can

the ruins be dated with absolute certainty, so that one cannot rule out the possibility that some towns, such as Lachish, continued to exist until the beginning of the 12th century B.C.E. While it is clear that the editor of the Book of Joshua organized the chapters in logical topographical fashion, this does not necessarily indicate that the events themselves occurred in this same order. Other scholars, such as W.F. Albright, associate the stories of the conquest with the various waves of immigration by different tribes; in his opinion archaeological findings prove the basic historicity of the stories. While the date of Jericho's destruction has not been established with certainty, it is clear that its great decline preceded the period of Joshua. A more complicated problem has arisen in the excavation of *Ai (et-Tell); it is clear that a large city existed there in the early Canaanite period and was destroyed about 1,000 years before Joshua's time. Albright assumes that there was a confusion between the stories of Ai and Beth-El (Josh. 8:17; cf. 8:9, 12). A. Vincent conjectures that the men of *Beth-El temporarily defended themselves in the destroyed city of Ai; others doubt the identification of Ai with et-Tell – but all these are tenuous guesses. Only the destruction of Beth-El, Lachish, Eglon (Tell el-Hesi), Debir (Tell Beit Mirsim?), and Hazor can be dated approximately to the 13th century B.C.E.

Various scholars assume that some of the stories in the Book of Joshua are only etiological legends created in order to explain the existence of outstanding objects in the landscape, as is evident in the emphatic reference to the existence of these objects “unto this very day” at the end of each section, e.g., the stones in the midst of the Jordan (4:9), the house of *Rahab in Jericho (6:25), the heap of stones in the valley of *Achor (7:26), the mound of ruins known as Ai (8:2–8), the heap of stones at the conjectured gate of the city (8:29), the inferior condition of the Gibeonites (9:27), and the great stones by the mouth of the cave in Makkedah (10:27). A. Alt and M. Noth view most of these stories as purely etiological legends and believe that only the stories about the wars of Gibeon and the waters of Merom have an historical basis. The Gibeonite war was apparently associated with Joshua, since he became, in the course of time, the central figure in the stories of the conquest, a result of this decisive victory in the center of the country. In the light of archaeological excavations, one cannot doubt the conquest of the southern cities. Libnah, Lachish, Eglon, and Makkedah were neighboring cities on the plain which evidently fell to the families of Judah at the end of the 13th or the beginning of the 12th century B.C.E. Hebron and Debir were conquered at about the same time by the families of Caleb and Kenaz. The battle of the waters of Merom undoubtedly reflects an historical event, but it should be associated only with the tribes of Galilee.

The Division of the Land Among the Tribes and the Establishment of Cities of Refuge and the Cities of the Levites (chs. 13–21)

These chapters constitute the richest collection of geographical source material in the Bible. They include “the remaining

land” which was not conquered by the Israelite tribes (13:1–6); a description of the portions of Reuben and Gad, whose lands lay east of the Jordan (13:7–32); and after an introduction (ch. 14), a description of the lands of Judah (ch. 15), Ephraim (ch. 16), and Manasseh (ch. 17), with introductory and closing remarks which pertain exclusively to the households of Joseph (17:1–4; 14–18). The last seven tribes are apportioned their lands by casting lots at Shiloh before the Lord (18:1–10; 19:51): Benjamin (18:11–28), Simeon (19:1–9), Zebulun (19:10–16), Issachar (19:17–23), Asher (19:24–31), Naphtali (19:32–39), and Dan (19:40–48). The catalog ends with an enumeration of the cities of refuge (ch. 20) and of the 48 cities of the Levites, which were given to them as an inheritance by the 12 tribes of Israel (ch. 21).

Most scholars now generally agree that this is a collection of geographical and administrative documents dating from various periods which were gathered together in order to describe the inheritances of the tribes. One can differentiate among the following documents:

A DESCRIPTION OF THE “REMAINING LAND” (13:1–6). The editor made use of the document in order to introduce the subject of the land which is to be inherited and divided among the tribes. In fact, this is a document completing the boundaries of the tribes and describing those regions of the land of Canaan (cf. Num. 34) which “remained” and were not settled by the Israelite tribes, e.g., all the Philistine provinces from the Egyptian border to north of Ekron; the Phoenician-Sidonian coastal area, from Misrephoth (-Maim, or reading Misrephoth-Miyyam) on the west to the Amorite border in the northern area of Lebanon; and all of Lebanon and the valley of the Lebanese from Baal-Gad at the foot of Mount Hermon to the Lebo-Hamath at the northern limit of Canaan (cf. Num. 34:8; Judg. 3:3).

THE BOUNDARIES OF THE *TRIBES. A. Alt distinguished two separate documents, different in type and in date, describing the territories of the tribes, the tribal boundaries, and the lists of towns. The boundary descriptions consist of a series of consecutive border points on the four corners of the tribal territory. M. Noth showed, through a comparison of parallel sections in the documents, that the original document only enumerated the border points, the connecting verbs between points being added at a later period. The list of boundaries includes the following sections: Judah (15:1–12), the house of Joseph (16:1–3), Ephraim (16:5–8), Manasseh (17:7–10), Benjamin (18:12–20), Zebulun (19:10–14), Asher (19:25–29), and Naphtali (19:33–34). The document therefore contains only the boundaries of seven tribes (Ephraim and Manasseh are included in the house of Joseph); the others – Simeon, Issachar, Dan, and the tribes east of the Jordan – are missing. Noth attempted to prove that the lists of towns belonging to Issachar, Reuben, and Gad are the original boundary descriptions in which the connecting verbs are missing; but there would not seem to be any basis for this theory. The descriptions vary in detail; they are more specific in the case of the southern tribes and briefer

for the northern tribes. The most detailed description is that of the boundary between Judah and Benjamin in the area of Jebus (= Jerusalem; 15:8; 18:16), which ran south of the city, an integral part of the area of Benjamin.

On the basis of the detailed description of the border in the Jerusalem area, Albright and others hold that the list does not predate the time of David, who captured Jerusalem. Alt surmises that the list predates the monarchy and comprises both the actual situation and the theoretical Israelite claims to territories still held by the Canaanites (similarly to Judg. 1:27–35). S. Mowinckel, on the other hand, claims that one cannot conceive of a union of tribes, which would include both Israel and Judah, in the period of the Judges. None of these hypotheses has taken the connection between the list of tribal boundaries and the borders of the land of Canaan into consideration (Num. 34) – the southern border of Judah is none other than the southern border of Canaan (Josh. 15:2–4; Num. 34:3–5), and as the Jordan is the eastern border of Canaan, it serves as the boundary of the tribes which have no portion east of the Jordan. It therefore seems that the list did not include Judah (its northern boundary is the southern boundary of Benjamin, and its remaining – theoretical – boundaries are the borders of Canaan) and that it originated in the alliance of the six tribes of the hill-country of Ephraim and Galilee (cf. Judg. 1:27–35; 5:14–18; 6:35). These, then, are the tribes of Israel (as opposed to Judah) as they appear at the beginning of the monarchial period. It would seem that these boundaries were established by the league of tribes whose center was Shiloh (18:8; 19:51) and that the original document included detailed descriptions of the boundary points. It was the Judahite editor who shortened them to their present form. Therefore, no chronological and substantive conclusions can be drawn from the more detailed bits of boundary description.

THE TOWN LISTS. Alt was the first to identify the list of the Judean cities in chapter 15 as a list of the 12 regions of the kingdom of Judah. In his opinion the list included the Judahite cities (15:21–62), arranged in geographical groupings in the south, the lowland, the hill region, and the wilderness, together with the district of *Beth-Lehem, which is preserved only in the Septuagint (v. 59), and the towns of Benjamin (18:21–28) and of Dan (19:41–46). In view of the enlarged territory of the kingdom as reflected in this regional list, Alt dated it to the reign of Josiah. Alt's basic assumption has been accepted by many scholars, but with some modifications. F.M. Cross and G.E. Wright are opposed to the inclusion of the towns of Dan in the list; they believe that the list dates from the time of *Jehoshaphat (11 Chron. 17:2) and includes the region of Beth-El, which was conquered in the time of his grandfather, *Abijah (11 Chron. 13:19). However, from the days of Abijah to those of Jehoshaphat territorial changes occurred in the boundaries of Judah and Israel (1 Kings 15:17–22). It therefore appears that only the southern group of Benjaminite cities (18:25–28) belongs to the list of the regions of Judah, while the northern group (18:21–24) comprises the towns of Benjamin, which be-

longed to the kingdom of Israel. In this form, a description of Judah does, in fact, reflect the age of Jehoshaphat or Uzziah rather than that of Josiah. The remainder of the town lists are apparently associated with the regional division of the northern kingdom of Israel as it crystallized from the time of *Solomon (1 Kings 4:7–12). The absence of city lists for the tribes of Ephraim and Manasseh suggested to Alt that the lists of the cities of the tribes of Galilee are derived from a description of the Assyrian province of *Megiddo, which was formed in the days of *Tiglath-Pileser III and comprised these regions.

CITIES OF REFUGE (CH. 20). The list of the cities of refuge is associated with the ancient law of blood vengeance and the establishment of places of sanctuary for the accidental manslayer (Deut. 4:41–43; 19:1–13). Three cities of refuge were established east of the Jordan River (Bezer, Ramoth-Gilead, and Golan; cf. Deut. 4:43) and three west of the Jordan (Kedesh, Shechem, and Hebron). The formulation of the law apparently belongs to the conjectured D source with additions from the P document, but there is no evidence for the establishment of these sacred sites during the period of Josiah or the Babylonian Exile. More likely is the view of I. Lohr and Y. Kaufmann that the list is early and belongs to the period of the Judges or of the united kingdom.

The Levite Cities (ch. 21)

The list of the *levitical cities concludes the collection of geographical documents in the Book of Joshua. S. Klein and Albright have shown that the composition of the list indicates that it dates from the united kingdom. Based on the parallel version in 1 Chronicles 6:39–66, Albright reconstructed an original version consisting of 48 cities – four in each tribe (see Num. 35:1–8; Josh. 21:41). Alt showed that the list consists mainly of cities in the border areas and the Canaanite regions; B. Mazar suggested the identification of them as centers of administration to which levite families from Judah, loyal to the house of David, were appointed “for all the business of the Lord and for the service of the king” (1 Chron. 26:30–32). It is thus understandable why the levite families were expelled from their towns in the kingdom of Israel during the reign of Jeroboam and were resettled in Judah by Rehoboam (11 Chron. 11:13–14).

The Concluding Chapters (22–24)

These chapters include the negotiations with the Transjordanian tribes concerning the altar in the region of the Jordan (ch. 22), Joshua's concluding address (ch. 23), the covenant in Shechem (24:1–20), the death of Joshua and of Eleazar the Priest, and the transfer of Joseph's bones and their burial in Shechem (24:29–33).

Construction of the Altar in the Region of the Jordan

The introduction (22:1–8), which evidently belongs mainly to the supposed D source, associates the construction of the altar with the period of the return of the Transjordanian tribes from the wars of conquest in the land of Canaan. The story itself (22:9–34) belongs mainly to the P source. The Transjordanian

tribes – apparently, at first only Reuben and Gad (22:25, 33, 34) – build an altar “in the forefront of the land of Canaan, in the region about the Jordan, on the side that pertains to the children of Israel” (22:11). This arouses the suspicions of the Israelites gathered at Shiloh who consequently send a delegation to Gilead. In response, the Transjordanian tribes state that it is not their intent to rebel against the Lord, but rather that the altar was constructed as a witness to the tie between them and the remaining tribes; they feared that future generations should say that they had no part in the worship of the Lord since they did not dwell in the land of Canaan. There is hardly a basis for the theory that this is a later tradition which belongs to the period of the unification of the cult. It refers rather to the fear of the Transjordanian tribes, who live outside the land of Canaan (Num. 34), and to the boundaries of the tribes (see above).

JOSHUA'S FINAL ADDRESS AND THE SIGNING OF THE COVENANT IN SHECHEM. Most scholars see a redundancy in chapters 23–24; they associate chapter 23 with the D source and the Shechem covenant (ch. 24) with an earlier source (according to some, the E document). Alt and Noth hold that the covenant of Shechem was connected from the beginning with the historical figure of Joshua, through whom the Sinai covenant was extended to include the tribes who lived in Canaan and had not originally participated in it. The covenant of Shechem is the appropriate conclusion to the Book of Joshua and the zenith of Joshua's accomplishments. It is therefore possible to assume, according to Alt, that “the victor in battle against the Canaanites, and the judge of disputes among the tribes, is also the man who, in the dawn of Israel's existence, set it upon the firm foundation of its history by uniting it about a new sanctuary of the Lord in the heart of the land.”

JOSHUA (Jesus), SON OF SAPPHAS, patriot leader at the outset of the first revolt against Rome. When, after the defeat of *Cestius Gallus in the late summer of 66 C.E., the Jewish defense forces were reorganized, Joshua, together with Eleazar

son of Neus (Ananias?), was appointed to the command of Idumea, with *Niger the Perean serving under him. According to Josephus, Joshua was one of the “chief priests,” which possibly may only mean that he belonged to one of the families from which high priests were chosen, since this name is not found in any of the lists of high priests. Nothing further is known of him.

[Edna Elazary]

JOSHUA (Jesus), SON OF SETH, high priest during the reign of Archelaus (4 B.C.E.–6 C.E.), Herod's son. Joshua, preceded by Eleazar the son of Boethus, was the second high priest to be appointed by Archelaus, but nothing further is known of him (Jos., Ant., 17:341). His father's (or family's) name (Σεέ) is reminiscent of that of a subsequent high priest, Ananus, the son of Seth (Σεθ, Σεθι; *ibid.*, 18:26), and it is possible that both were of the same family.

[Isaiah Gafni]

JOSHUA BEN ABRAHAM MAIMUNI (1310–1355), *nagid* of Egyptian Jewry who lived in Cairo. Joshua was the third son of *Abraham b. David Maimuni. His brother Moses was probably *nagid* of Egyptian Jewry before him. He was a respected scholar, and his responsa on religious and halakhic questions are quoted by such prominent halakhic authorities of the 16th century as *David b. Solomon ibn Abi Zimra and Joseph *Caro. The majority of his extant responsa were answers to questions asked by the Jews of Yemen. Most of them deal with the subjects of prayer and ritual. Joshua's answers are generally based on the *Mishneh Torah* of his ancestor *Maimonides.

[Eliyahu Ashtor]

JOSHUA BEN DAMNAI, high priest in 62–63 C.E. Joshua was appointed to succeed *Anan b. Anan after the latter had been deposed by Agrippa II at the request of Albinus, because of the execution of James, brother of Jesus (cf. Jos., Ant., 20:200–3). These were the days immediately preceding the Roman War when the anarchy which prevailed in Jerusalem began to assume major proportions. The high priesthood ceased to be a purely religious office, becoming more and more a position of power contested among influential members of the priestly families, of whom Joshua b. Damnai was one. When the high priesthood was taken from him and given to *Joshua b. Gamla, street fighting broke out between their followers (Jos., Ant., 20:213).

[Abraham Schalit]

JOSHUA BEN ELIJAH HA-LEVI, collector and final editor of Judah Halevi's *divan* (Oxford, Bodl. Ms. No. 1971). Joshua lived, at the latest, in the 15th century, and was probably of Yemenite origin. From his Arabic preface to the Oxford *divan* (Ms. No. 1971 formerly in the possession of S.D. Luzzatto) it is learned, among other things, that three scholars, Ḥiyya al-Dayyan, David b. Maimun, and Ibn al-Kash, had preceded Joshua in collecting Judah Halevi's poems. Joshua states that he has employed for his *divan* all the previous collections, and in particular the first one, by the Maghrebi Ḥiyya, introducing the "improvements" of the two other compilations; as is usual in similar Arabic collections, he follows the alphabetical order of the rhymes, dividing the materials into three parts (monorhymed compositions, strophic poems and letters, and rhymed prose), with an Arabic introduction. Moreover, Joshua mentions his collection of Abraham Ibn Ezra's poems, which is the *divan* of Ibn Ezra now available in an edition by Egers (see bibl., Ms. Berlin, 1233). The name of the earlier collector of Ibn Ezra's *divan* is not known because the part of the Arabic preface in which Joshua must have mentioned him is missing. It is not excluded that Joshua may be identical with the author of an Arabic grammatical work of which only a small fragment has been preserved (A. Harkavy, *Zikkaron la-Rishonim ve-gam la-Aḥaronim*, 1 (1879), 114).

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

JOSHUA BEN GAMLA (d. 69/70 C.E.), a high priest in the last years of the Second Temple. Joshua was married to one of the wealthiest women of Jerusalem, *Martha, daughter of Boethus (Yev. 6:4; *ibid.*, 61a; Yoma 18a and Tos. *ibid.*; Git. 56a). He is apparently to be identified with the Joshua b. Gamaliel referred to by Josephus (Ant., 20:213) as a high priest appointed by *Agrippa II. In common with the high priests at the end of the Second Temple period Joshua, too, was appointed to office because of his wealth. Although most of the others were deprecated in rabbinic literature, Joshua was singled out for praise for his establishing a universal system of education after all previous attempts failed. He evolved a system whereby "teachers of young children be appointed in each district and each town," whereas previously they were to be found only in Jerusalem. In addition he laid down sound pedagogical principles. Because of this, it was said of him: "Truly, the name of that man is blessed... since but for him the Torah would have been forgotten in Israel" (BB 21a). Some scholars deny the historicity of this story, maintaining that the establishment of the schools was wrongly attributed to Joshua by later

writers. However, Klausner affirms its historical accuracy. The Mishnah also mentions an improvement made by Joshua in the Temple appurtenances. He substituted for the boxwood casket from which the lots were drawn for the scapegoat on the Day of Atonement one of gold, "and his memory was therefore kept in honor" (Yoma 3:9).

Josephus, who describes Joshua as his intimate friend (Life, 204), says he was one of the most vehement opponents of the extremist Zealots at the time of the Roman War (Wars, 4:160). He cites the speech made by Joshua (apparently son of Gamla), the high priest, to the Idumeans who had been invited by the Zealots to assist them against their enemies. He tried unsuccessfully to influence them to desist from this step (*ibid.*, 238ff.). After the Idumeans entered Jerusalem, they put him to death, together with other opponents of the Zealots (*ibid.*, 316). Josephus praises him greatly, saying of him that "he stood far above the rest" (*ibid.*, 322).

[Zvi Kaplan]

JOSHUA BEN HANANIAH (first and second centuries C.E.), *tanna*, one of the five disciples of *Johanan b. Zakkai's inner circle (Avot 2:8), and the primary teacher of *Akiva. Joshua (together with *Eliezer ben Hyrcanus) served as the bridge between the earlier (pre-destruction) and later (post-destruction) periods of tannaitic tradition. Hundreds of statements in *halakhah* and *aggadah* are ascribed to him in both the Mishnah and the Tosefta, distributed fairly evenly over five of the six *sedarim*, with a slightly smaller presence of his teachings in *seder Nezikin*. In the eyes of later storytellers, the period of the *tannaim* was a heroic age, and even the slightest scrap of information about the least of the *tannaim* can develop in the later *aggadah* into a tale of epic proportions. In the case of truly significant and heroic figures, like Joshua, this process of literary expansion and elaboration is inevitable. Since the narrative traditions in which Joshua eventually played a leading role developed over a period of centuries, it is essential to distinguish between the earlier forms of these traditions, found in the tannaitic sources themselves, and later developments found only in the *Talmudim* and the amoraic Midrashim. At the same time, the tannaitic traditions themselves are not necessarily free of redactional bias, and must be critically evaluated before using them to reconstruct the life and career of Joshua.

For example, the Mishnah of *Rosh Ha-Shanah* (2:8–9) tells the story of a conflict between Joshua and *Gamaliel of Jabneh, in which Joshua reportedly challenged Gamaliel's authority to fix the Jewish calendar, and so to determine the precise dates of the Jewish holidays. (RH 2:8–9). According to this tradition, on one occasion Gamaliel, as head of the rabbinic court, accepted the testimony of two witnesses, who claimed to have seen the new moon, and on the basis of their

testimony Gamaliel fixed the date for the Day of Atonement. Joshua had reason to view this testimony as suspect and unreliable and was at first unwilling to accept Gamaliel's ruling. Gamaliel, asserting his authority as *nasi*, commanded Joshua to appear before him with his "staff and money on the Day of Atonement according to your reckoning." After Akiva's attempt to persuade Joshua to accept Gamaliel's ruling in this matter failed, *Dosa b. Harkinus told Joshua: "If we question the rulings of Rabban Gamaliel's court, we would have to question the rulings of every court, all the way back to the time of Moses." The argument that the authority of the *nasi* takes precedence over all doubts – even legitimate doubts – concerning the truth of his rulings finally convinced Joshua. When Joshua appeared before Gamaliel, "Gamaliel rose and kissed Joshua on his head, saying: 'Come in peace, my master and my pupil – my master in wisdom, and my pupil, in that you accepted my words.'" On one level this tradition deals with the tension between the authority of duly constituted communal authority and the autonomy of wisdom. On another level it describes a very human drama involving arrogance and condescension, pride and submission. As one of the most prominent narratives found in the Mishnah, the story also provides a theoretical justification for the preeminent authority of R. Judah ha-Nasi himself – both personally, as grandson of Gamaliel and as inheritor of his role as *nasi*, and for the Mishnah which he redacted and in which this story appears. All of these factors no doubt influenced the way in which this story is told in Mishnah Rosh Ha-Shanah, and must be taken into account when evaluating its worth as historical evidence concerning events which reportedly occurred three generations earlier.

Another stage in the aggadic saga of the ongoing conflict between Joshua and Gamaliel is found only in later amoraic traditions (TJ, Ber. 4:1, 7c–d, Ta'an. 4:1, 77d; TB, Ber. 27b–28a). This tradition concerns a dispute – ascribed in these sources to Joshua and Gamaliel – over the question whether the evening prayer is obligatory or optional. While there is no clear evidence that Joshua and Gamaliel ever actually disagreed over this rather minor point of law, the *Talmudim* describe in detail the dramatic events surrounding this dispute, including the eventual removal of Gamaliel from the office of *nasi*. According to the Jerusalem Talmud, Gamaliel, upon discovering inadvertently that Joshua disagreed with his view on this matter, arranged for the question to be raised in public the following day, whereupon he deliberately attempted to provoke Joshua into contradicting him in front of all the sages and students. Despite repeated taunting, Joshua refused to contradict him in public, and so Gamaliel continued humiliating Joshua in public, until the sages finally were forced to depose Gamaliel, and to appoint another sage in his place. After seeing that his arrogant abuse of authority had undermined his position as *nasi*, Gamaliel decided to go around to all those whom he had offended, in order to appease them. When he arrived at Joshua's house Gamaliel was shocked to find Joshua making needles, from which labor he apparently supported himself. In response to Gamaliel's expression of surprise, Joshua ex-

claimed: "Woe to the generation that has you for its leader," thereby expressing his contempt for an aristocratic leadership which is so removed from the ordinary existence of the common people that it is totally unaware of the physical and economic conditions under which they must live. Before addressing the question of the historical reliability of this late tradition, it should be noted that the redactional tendencies of the amoraic continuation of this tannaitic story are totally at odds with the original story as found in Mishnah Rosh Ha-Shanah. Rather than justifying the authority of the *nasi*, the amoraic tradition shows how the irresponsible and arrogant abuse of the office of the *nasi* actually undermines the *nasi*'s very right to hold his office and to exercise its authority. This story in the Jerusalem Talmud is told from the perspective of sages who apparently feel that they have suffered mistreatment and humiliation at the hands of a leadership which, while legitimately possessing office and authority, exercises that authority in an illegitimate and unjustifiable fashion. While this *aggadah* could reflect a different historical perspective on the life and times of Joshua and Gamaliel of Jabneh, it is more likely that it is symptomatic of the problematic relations between the sages and the person and institution of the *nasi* characteristic of a far later period. The expansion and elaboration of these events in the Babylonian Talmud (Ber. 27b–28a; Bekh. 36a) are largely consistent with the redactional tendencies found in the Jerusalem Talmud. It would therefore be fair to say that any attempt to use these later amoraic traditions in order to describe the social or political tensions which may have existed among the rabbinic leadership (Joshua and Gamaliel) in the newly established center of Jabneh shortly after the destruction of the Temple would probably be misguided.

Similar care must certainly be taken when examining historical *aggadot* for which little or no evidence can be adduced from tannaitic sources. For example, as a close disciple of *Johanan b. Zakkai, Joshua reportedly plays a central role (together with Eliezer ben Hyrcanus) in the events surrounding Johanan's dramatic and fateful escape from besieged Jerusalem. According to this story, which has reached us in several different versions (TB Git. 56a, Lam. R. 1:5, 31, ARN¹ 4, ARN² 6), Joshua and Eliezer carried Johanan b. Zakkai out of Jerusalem in a coffin so that their master might meet with Vespasian. According to one of them (Lam. R.), Joshua and Eliezer were even sent back into the city to help bring out R. Zadok. Since, however, "in Tannaitic sources we find not the slightest reference to an escape" (Neusner, *Development of a Legend*, 228), and in fact all the traditions concerning this episode are late amoraic (TB Git. 56a, Lam. R.) or post-amoraic (ARN), it would probably be ill advised to use this or other similar "events" in order to draw historical conclusions concerning Joshua's attitude toward the Roman conquest of Judea, or toward the policies of various Jewish factions during the struggle. The same must be said about Joshua's role in the dispute over the "oven of Akhnai" (TB, BM 59b). According to this *aggadah*, Joshua boldly articulated and defended the principles of the autonomy of rabbinic legal reasoning and

majority rule, in opposition to the repeated attempts of Eliezer to circumvent the decisions of an earthly court by an appeal to divine authority in the form of a heavenly voice. The tannaitic sources themselves, however, make no mention of any dramatic or supernatural events surrounding this dispute, nor is Joshua mentioned by name as playing any special role in it (cf. Kelim 5:10, Eduyot 7:7, Tosefta Eduyot 2:1; cf. TJ, MK 3:1, 81d). While no one can dispute the dramatic power and theological significance of the later versions of this story, it is also true that they almost certainly reflect the synthetic literary activity of many generations of scholars, and so cannot be used as evidence for history of the early tannaitic period or the personal biography of R. Joshua.

Various other legends developed around the figure of Rabbi Joshua, many of them also rooted to some degree in early tannaitic sources. For example, in *Avot* Johanan b. Zakkai praises Joshua, saying: "Happy is she who bore him" (*Avot* 2:8). A later *aggadah* reports that, when Joshua was still an infant, his mother used to bring him to the synagogue so that "his ears might become accustomed to the words of Torah" (TJ, Yev. 1:6, 3a). According to Ma'as. Sh. 5:9 Joshua was a Levite. A later tradition describes him as having actually served as a chorister in the Temple (Ar. 11b). According to the Tosefta (Sanh. 13:2) Joshua held that "pious gentiles have a share in the world to come," while Eliezer denied them any such reward. Later Midrashim ascribe to Joshua a positive attitude toward the acceptance of proselytes, while Eliezer was described as harsh and unreceptive (Gen. R. 70:5; Eccles. R. 1:8; 4; cf. TB, AZ 17a), thus paralleling somewhat the stereotypical opposition between Hillel and Shammai found in other late *aggadot*. It is reported in *Nega'im* (14:13) that the people of Alexandria once asked Joshua a certain question in *halakhah*. According to the Babylonian Talmud (Nid. 69b–70a) they asked him no fewer than 12 questions: 3 in *halakhah*, 3 in *aggadah*, 3 in practical matters, and 3 questions of *borut* (understood by Rashi as "silly questions," but interpreted by Lieberman to mean idle theoretical questions characteristic of Hellenistic rhetorical education). In line with his leading role in the Jewish community, Joshua may indeed have participated in a number of official missions. The later *aggadah* describes Joshua as having engaged on such occasions in discussions on both theological and quasi-scientific matters with eminent non-Jews, notably the emperor Hadrian and the "elders" of Athens (Bekh. 8b; cf. Ein Ya'akov ad loc.). Similarly his discussions with the Roman emperor are described in the Babylonian Talmud (Hul. 59b–60a) and Palestinian Midrashim (see *Hadrian in *aggadah*). Finally, according to the testimony of the Tosefta (Hag. 2:2, and cf. 2:6), Joshua served as the primary teacher of Akiva in matters of esoteric speculation, transmitting to him the traditions of the *merkavah* which he had received from Johanan b. Zakkai, though here also Joshua's role in this tradition expanded significantly with the passage of time (Neusner, *Development of a Legend*, 247–52).

[Stephen G. Wald (2nd ed.)]

JOSHUA BEN HYRCANUS (beginning of the second century C.E.), *tanna*. He is only once mentioned in the Mishnah (Sot. 5:5) expounding that Job served the Lord from love (not from fear). For this aggadic teaching he is praised by *Joshua b. Hananiah, who calls him the pupil of the pupil of *Johanan b. Zakkai, referring most probably to *Akiva (see Rashi, Sot. 27b; but see Maimonides, in his Mishnah commentary). Since this saying starts with the formula, "On that day," which often refers to the day on which *Eleazar b. Azariah was installed as a member of the Sanhedrin (Epstein, *Tannaim*, 424), it is assumed that Joshua was a member of the Sanhedrin in *Jabneh at that period.

BIBLIOGRAPHY: Hyman, *Toledot*, 623.

JOSHUA BEN KORĤA (middle of the second century C.E.), *tanna*. He is quoted four times in the Mishnah. In two of these cases (Ber. 2:2, Ned. 3:11) his statements have an aggadic character, and in two others (RH 4:4, San. 7:5) they are of a more halakhic nature. He is quoted dozens of times in the Tosefta and in the tannaitic midrashim, and here also his statements divide fairly evenly between *halakhah* and *aggadah*. He is often quoted together with students of Rabbi Akiva, and in one passage (Sifra, Shemini, parsh. 8:8) he discusses the impurity of drinks with R. Judah at length. He transmits two *halakhot* in the name of *Eleazar b. Azariah (Tosef., Kelim, BB 2:6; Neg. 7:3), and in the Jerusalem Talmud Rabbi Johanan relates a story connecting Joshua with *Johanan b. Nuri (TJ, Kil. 4:4, 29b). He favored compromise in legal suits, rather than the strict application of judicial rulings, since the judge is thereby able to effect both truth and peace at the same time (Tosef., Sanh. 1:3). He laid down the rule (later accepted; cf. Av. Zar. 7a and Maim. Yad, Mamrim, 1:5) that when the sages differed over a matter of law, one follows the more stringent view with regard to biblical injunctions and the more lenient view with regard to rabbinic injunctions (Tosef., Eduy. 1:5). His testimony on the situation that prevailed in Erez Israel in the aftermath of the Bar Kokhba war is instructive: "Joshua b. KorĤa said: We were once sitting among the trees when the wind blew and knocked the leaves against each other. We got up and ran, saying: Woe unto us! Perhaps the cavalry will overtake us; after a time we looked back and saw that no one was there, and we sat in our places and wept, saying: Woe unto us for whom the verse has been fulfilled [Lev. 26:36]: and the sound of a driven leaf shall chase them ..." (Sifra, Be-Hukkotai 7:4).

The later *aggadah* describes him as sitting together with the *nasi*, *Simeon b. Gamaliel, while the latter's son, *Judah ha-Nasi, sat on the ground before them (BM 84b; Mid. Ps. to 1:8). According to the Talmud, Joshua lived to an exceptionally advanced age (which he attributed to the fact that he never looked into the face of a wicked man) and blessed Judah ha-Nasi that he should attain to half his age (Meg. 28a). According to a late *aggadah* he sired a son at the age of 100 and played with him in a spirit of abandon ("as though he had become crazy"; Mid. Ps. to 92:13). In a talmudic *aggadah* he referred to his pupil, *Eleazar b. Simeon, as "vinegar son of wine" for serving as a police officer under the Roman government (TJ, Ma'as. 3:8, 50d; BM 83b; PDRK 92a), since, according to this tradition, Joshua was opposed to all collaboration with the Romans, even in the apprehension of criminals. In post-talmudic *aggadic* tradition he is described as roundly castigating the sectarians (possibly Judeo-Christians; ARN² 3) with whom, as well as with non-Jews, he engaged in disputations (see Lev. R. 4:6; et al.). An *aggadah* in the Babylonian Talmud (Shab. 152a) reports an interchange between Joshua and a certain eunuch, in which the eunuch tries to ridicule Joshua's alleged baldness (a play on Joshua's name: Korḥa = baldhead). Joshua, of course, gets the upper hand in this exchange. For other late associations between the name Korḥa and baldness, see: Arukh s.v. *qrh*; in the name of Gershom b. Judah, Rashi to Bek. 58a, and *Tosafot*, Bek. loc. cit., Pes. 112a.

[Moshe David Herr / Stephen G. Wald (2nd ed.)]

JOSHUA BEN LEVI (first half of the third century C.E.), Palestinian *amora* of the transition period from the *tanna'im* to the *amora'im*. In his youth he was apparently in the company of Judah ha-Nasi, since Joshua mentions the customs which he followed (Shab. 46a; Yev. 60b; TJ, Meg. 1:1, 70a; et al.). He was a native of Lydda and studied under its scholars Eleazar ha-Kappara (Av. Zar. 43a; et al.), Bar Kappara (Ber. 34a; et al.), and Judah b. Pedaiah (TJ, Or. 1:3, 61b; Gen. R. 94:5). He also transmitted teachings in the names of Antigonus (TJ, Hor. 3:7, 48a) and Oshaiah (TJ, Ḥag. 3:8, 79d). He was an associate of Ḥanina b. Ḥama (TJ, Kil. 9:4, 32c), who, however, was his senior (Yoma 49a; Shab. 156a) and was in contact with Ḥiyya (Lam. R. 3:17, no. 6). According to the Babylonian Talmud, Joshua's son was a son-in-law of Judah Nesiah (Judah II; see Kid. 33b). Joshua b. Levi taught in his native town (Lam. R. *ibid.*), and occupied himself greatly with communal needs (Tanḥ. Va-Era 5). He was also active in matters affecting the community in their relations with the Roman authorities and was a member of various missions to them in Caesarea and in Rome (TJ, Ber. 5:1, 9a; Gen. R. 78:5). His sound practical common sense in these matters is evident (see TJ, Ter. 8:10, 46b). He transmitted sayings in the name of "the holy community of Jerusalem" (Yoma 69a).

Joshua was a halakhist whose opinions were widely ac-

cepted (Tos. to Meg. 27a; Tos. to Ḥul. 97a), but he was especially renowned as an *aggadist* (BK 55a). Talmudic tradition relates that in his *bet midrash* particular attention was devoted to *aggadah*, and it included a special scholar who was called "the arranger [*mesadder*] of the *aggadah*" (Ber. 10a). He was, however, opposed to committing the *aggadah* to writing (TJ, Shab. 16:1, 15c). He preached in praise of humility: "He whose mind is lowly is regarded by Scripture as if he had offered all the sacrifices, as it says [Ps. 51:19] 'The sacrifices of God are a broken spirit'" (Sot. 5b); he also asserted that humility is greater than all the virtues (Av. Zar. 20b). He emphasized the need for pure speech: "One should never utter a gross expression, for the Bible employs a circumlocution rather than utter a gross expression, for it is said (Gen. 7:8) 'Of every clean beast ... and of the beasts that are not clean' instead of 'every unclean beast'" (Pes. 3a). He vehemently denounced slander (Zev. 88b; Lev. R. 16:6) and even unnecessary speech: "A word is worth a *sela*, but silence is worth two" (Lev. R. 16:5).

His love of and devotion to Torah also found expression in the story that he attached himself to sufferers from *ra'atan* (an acute festering disease) and studied the Torah (see Ket. 77b). He also said: "If a man is on a journey and has no company, let him engage in the study of Torah ... if his head aches, let him occupy himself with the Torah ... if he feels pain in his throat, let him occupy himself with the Torah ... if he feels pain in his bowels, let him occupy himself with the Torah ... if he feels pain in his bones, let him occupy himself with the Torah ... if his whole body aches, let him occupy himself with the Torah" (Er. 54a). He had discussions with Christian heretics, but he refrained from cursing them despite his annoyance with their questions, because it is written (Ps. 145:9), "And His tender mercies are over all His works" (Ber. 7a; but see TJ, Shab. 14:4, 14d). He was accustomed to fast on the two successive days, the ninth and the tenth of Av "because most of the Temple was burned on that latter day" (TJ, Ta'an. 4:9, 69c). He said of himself that he had never excommunicated any man (TJ, MK 3:1, 81d). It was also said of him that by virtue of his prayers rain fell in the south of Israel (TJ, Ta'an. 3:4, 66c), and that because of his merit the rainbow was not seen during his lifetime (Ket. 77b; see also Gen. R. 35:2). He himself was a hero of the *aggadah*, which narrates that he became worthy of and achieved the revelation of Elijah (Mak. 11a; TJ, Ter. 8:10, 46b; Gen. R. 35:2).

He once asked Elijah: "When will the Messiah come?"

Elijah replied: "Go and ask him himself"

"And by what sign may I recognize him?"

"He is sitting among the poor, who are afflicted with disease; all of them untie and retie [the bandages of their wounds] all at once, whereas he unties and rebandages each wound separately, thinking, perhaps I shall be wanted [to appear as the Messiah] and I must not be delayed."

Joshua thereupon went to the Messiah and greeted him:

"Peace unto thee, master and teacher!"

To this he replied, "Peace unto thee, son of Levi."

"When will you come, master?"

"Today."

He returned to Elijah ... and said: "He spoke falsely to me. For he said he would come today and he has not come." Elijah rejoined: "This is what he said! [Ps. 95:7]: Today – if you would but hearken to His voice" (Sanh. 98a as adapted by J. Ibn-Shmuel, *Midreshei Ge'ullah* (1954²), 292–4, 306–8).

Joshua b. Levi had a son named Joseph (see Hul. 56b and Dik. Sof. ad loc.), who, according to the *aggadah*, on one occasion became ill and fell into a trance. When he recovered, his father asked him what he had seen in the upper world. The son replied: "I saw a topsy-turvy world. The upper [class] below and the lower [class] on top." "My son, you saw the world clearly," observed his father (Pes. 50a; BB 10b; however see Dik. Sof. ad loc.).

Descriptions of the future life of the righteous (Sanh. 92a), of the punishments of the wicked after death, and of Joshua b. Levi's conversations with the angel of death (Ber. 51a; Ket. 77b) served as the basis for stories about Joshua b. Levi's journeys to the Garden of Eden and Gehinnom which have been preserved in various forms (see A. Jellinek, *Beit ha-Midrash*, 2 (1938²) 48–51; M. Higger, *Halakhot ve-Aggadot* (1933), 141–50). One of them has been preserved only in a Latin translation in the work of Peter of Cluny against the Jews and apparently derives from the "Alphabet of Ben Sira." These stories contain motifs known from the legends about the journeys of Pythagoras.

Although he was an *amora*, some of Joshua b. Levi's sayings are attached to collections of tannaitic sayings. The Mishnah concludes with one of his aggadic statements: "In the world to come the Holy One will make each righteous person inherit 310 worlds." In the chapter on "The Acquisition of Torah," appended to *Avot* in the prayer book, appears his saying: "Every day a *bat kol* [heavenly voice] goes forth from Mt. Horeb proclaiming, 'Woe to mankind for contempt of the Torah ... for no man is free but he who labors in the Torah. But whosoever labors in the Torah constantly shall be exalted'" (*Avot* 6:2).

[Zvi Kaplan]

JOSHUA BEN MORDECAI FALK HA-KOHEN (1799–1864), rabbi. Joshua was born in Breść Kujawski in the district of Warsaw. In his youth he settled in Kurnik (Kornik), Poznań, and was therefore called Joshua of Kurnik. In c. 1854 he emigrated to the United States, was appointed rabbi in Newburg, New York, and also acted as an itinerant preacher. His career in the U.S. is obscure. He subsequently left the rabbinate and died in Keokuk, Iowa. His *Avnei Yehoshua* (New York, 1860), a commentary on *Avot*, is of special importance in that it was the first work of rabbinic learning published in the United States. In the commentary he utilizes talmudic sources and the works of Maimonides, Judah Halevi, Isaac Arama, and Joseph Albo. In the introduction he mentions his unpublished

works, *Binyan Yehoshua*, on religious philosophy, and *Homat Yehoshua*, on *halakhah*.

BIBLIOGRAPHY: Lebrecht, in: HB, 4 (1861), 27f.; Fuenn, *Keneselet*, 431; E. Deinard, *Sifrut Yisrael ba-Amerikah*, 2 (1913), 1 no. 2; idem, *Kohelet Amerikah*, 2 (1926), 5, no. 4; M. Davis, *Yahadut Amerikah be-Hitpattehutah* (1951), 197.

[Yehoshua Horowitz]

JOSHUA BEN PERAḤYAH (second half of the second century B.C.E.), one of the **zugot* ("pairs" of scholars), together with **Nittai* of Arbela. Joshua was a pupil of Yose b. Joezer of Zeredah and of Yose b. Johanan of Jerusalem. According to the Mishnah, he was the **nasi* (see **Sanhedrin*), and in the well-known difference of opinion on **semikhah* (laying of hands upon the sacrifice) on the festival his view was "not to lay on the hands" (*Ḥag. 2:2*). One *halakhah* has been preserved in his name (but see: Lieberman, *Tosefet Rishonim*, 4, 116 top) concerning the laws on what renders food liable to become impure: "Joshua b. Peraḥyah said: wheat coming from Alexandria is impure because of their *antlia* (ἀντλία, watering device). The sages said: If so, they shall be impure for Joshua b. Peraḥyah and pure for all Israel" (*Tosef.*, *Makhsh. 3:4*). One aggadic dictum is ascribed to him in the Mishnah: "Provide thyself with a teacher; get thee a companion; and judge all men charitably" (*Avot 1:6*).

The Babylonian Talmud (*Sot. 47a* and *Sanh. 107b* in mss. and non-censored editions) contains an *aggadah* that Joshua b. Peraḥyah was the teacher of **Jesus*, and that on their return together from Alexandria, having fled there out of fear of Alexander Yannai, Joshua found Jesus guilty of sin and was responsible for his failure to repent. It would seem likely that this *aggadah* is an enlarged reworking of an earlier *aggadah* concerning **Judah b. Tabbai* and one of his pupils of unknown name when they were about to return from Alexandria to Jerusalem (TJ, *Ḥag. 2:2, 77d*). One of the statements attributed in the Babylonian Talmud (*Men. 109b*) to Joshua b. Peraḥyah appears in *Avot de-Rabbi Nathan* (version 1, 10, 43; version 2, 20, 43) in the name of Judah b. Tabbai, and in TJ, *Pes. 6:1* this dictum occurs in the name of Joshua b. Kabsai. The statement that Hillel the elder witnessed the preparation of the ashes of a **red heifer* in the time of Joshua b. Peraḥyah (*Sif. Zut. 19, 3*) cannot be reconciled according to chronology, and so the mention of Joshua b. Peraḥyah (and perhaps Hillel also) in this context would seem to be anachronistic.

Moshe David Herr / Stephen G. Wald (2nd ed.)

JOSHUA BEN PHABI (1st century B.C.E.), high priest. According to Josephus, Herod the Great ousted Phabi from office to replace him by **Simeon the son of Boethus*, an Alex-

andrian, and father of Herod's wife Mariamne II. The house of Phabi (פִּיאָבִי, פִּיאָרִי) was a well-known priestly family, and at least two other members, both named *Ishmael b. Phabi, served as high priests (Jos., Ant., 15:322).

BIBLIOGRAPHY: Schuerer, *Gesch.*, 2 (1907^A), 269 n.6.

[Isaiah Gafni]

JOSHUA BOAZ BEN SIMON BARUCH (16th century), Italian scholar and printer. One of the Spanish exiles (from Catalonia), Joshua Boaz settled in Italy and took up residence in Sabbioneta and in Sarigliano. He was the author of several talmudic reference works: (1) *Ein Mishpat*, giving the references where the laws of the Talmud can be found in the early codes – *Mishneh Torah*, *Sefer Mitzvot Gadol*, and *Arba'ah Turim*; (2) *Ner Mitzvah*, an enumeration of the laws cited in the *Ein Mishpat*; (3) *Torah Or*, giving source references of the biblical verses in the Talmud, which were first added to M.A. Giustiani's edition of the Babylonian Talmud (Venice, 1546/51), and have since appeared in almost every edition of the Talmud; (4) *Shiltei ha-Gibborim* on the Rif of Isaac Alfasi and the Mordekhai of *Mordecai b. Hillel (published with the *Hilkhot Alfasi*, Sabbioneta, 1554/55), containing supplementary *halakhot*, differing views and criticisms of Alfasi by the greatest posekim, as well as the talmudic novellae of Isaiah di Trani (the Younger).

It is as a result of these quotations by Joshua Boaz that the main teaching of Trani has been preserved. In his extensive introduction to the *Shiltei ha-Gibborim*, he writes that “when the pillars of the exile collapsed... as a result of which dissension increased in Israel, he decided to remedy the situation, attributing the failings to the lack of yeshivot and insufficient study of the words of the scholars.” As a result he planned two halakhic works: *Sefer ha-Tamim* or *Ha-Peshutim*, to summarize all the *halakhot* on which there was no difference of opinion, and a second work, *Sefer ha-Mahaloket*, on disputed *halakhot*, giving all the valid arguments from which the *posekim* derived their differences. H.J.D. *Azulai states that he saw *Tamim* in manuscript, and in his view the *Sefer ha-Mahaloket* is identical with the *Shiltei ha-Gibborim* on the Rif. Other scholars, however, hold that the two works are not identical.

In 1553 Joshua Boaz commenced the great work of publishing the Talmud in Sabbioneta, but only succeeded in issuing tractate *Kiddushin*. He also wanted to write a *Masoret ha-Tosafot* giving the halakhic rulings of the *tosafot* according to their halakhic order, and he arranged these rulings accordingly, giving the sources for these decisions. He planned to add a halakhic index, entitled *Hikkur Dinim*, at the end of the Talmud which would follow the order of Maimonides' *Mishneh Torah*, enumerating the *halakhot* of the Talmud and giving their source according to the tractate and chapter. Only the part to *Bava Batra* was published (Pesaro, 1510). Joshua Boaz emphasized that it is forbidden to be satisfied merely with the decisions of the *posekim*, but reference must be made to the talmudic sources.

[Yehoshua Horowitz]

JOSHUA HA-GARSI (middle of the second century C.E.), mentioned only once, indirectly, in a tannaitic source (Tosef. Makh. 3:13; TB, Bekh. 10b) by R. Jose, who transmits a *halakhah* in the name of “Onomis, the brother of Joshua the Garsi.” The Babylonian Talmud relates that Joshua the Garsi was once asked a question concerning the writing of *tefillin*, which he answered by means of an *aggadah* (Shab. 108a, but cf. TJ, Meg. 1:9, 71d). According to the Babylonian Talmud (Er. 21b), Joshua attended upon *Akiva when he was sentenced by Tinneius Rufus. Stories about the deeds of Joshua and his ministrations to Akiva when the latter was in prison are also preserved in the Midrash (Lam. R. 3, Mid. Prov., ch. 9). Opinions differ on the meaning of his name. Some hold he was named for his locality Gerasa in Transjordan, one of the towns of the Decapolis; according to others his locality was Garsis (or Doris) in Galilee, near Sepphoris (cf. Jos., Wars, 3:129). A third opinion is that the name refers to his avocation, a grinder of *gerisim* (“grits”).

[Israel Moses Ta-Shma / Stephen G. Wald (2nd ed.)]

JOSHUA HOESCHEL BEN JACOB (1595–1663), Polish rabbi, also called “**the Rebbe Reb Hoeschel**.” Joshua Hoeschel was apparently born in Lublin. He studied under his father *Jacob b. Ephraim Naphtali Hirsch. Because of his many talents, his father brought him into the administration of the yeshivah which he had established in Brest-Litovsk. When in 1635 his father was appointed rabbi and *rosh yeshivah* of Lublin, Joshua Hoeschel continued to assist him there in its administration and was responsible for it after the death of his father in 1644. In 1650 he was appointed to succeed his father as rabbi of the Lublin community. On the death of Yom Tov Lipmann *Heller, rabbi of Cracow, in 1654, he was invited to succeed him and held the post until his death. As a result of the *Chmielnicki massacres of 1648–49 and the consequent impoverishment of the Jewish communities of Poland and Lithuania, as well as the pogrom in Lublin in 1656, he moved to Vienna around 1657, exerted himself with the government for the benefit of his people, and urged the wealthy Jews to intensify their assistance during this difficult period. About 1659 he returned to Poland, where he continued his educational activities and enacted various *takkanot. Among his distinguished pupils were *Shabbetai b. Meir ha-Kohen (the Shakh) and Samuel *Koidanover.

The profound acumen of Joshua Hoeschel was a byword among the Jews of Poland, and he himself became a legendary figure, many remarkable tales being told about him. His method of study was distinguished by a profound penetration into the theme and a reliance upon Rashi and **tosafot*, without allowing extensive scope for *pilpul* introduced by Jacob b. Joseph *Pollak and then customary in most Polish yeshivot. Jair Hayyim *Bacharach approved this method, stressing that, to the extent that he used *pilpul*, it was “on genuine difficulties.” Joshua Hoeschel’s great modesty prevented him from publishing his many works, and only a small part has appeared, among them: (1) *Toledot Aharon* (Lublin, 1682, named after his pupil, Aaron Klinger, who collected the material), consisting of novellae on *Bava Kamma*, *Bava Mezia*, and *Bava Batra*. They were republished in an enlarged form under the title *Hiddushei Halakhot* (Frankfurt, 1725); (2) novellae and glosses on the *Sefer Mitzvot Gadol* of Moses of Coucy (Kopys, 1807); (3) *Ḥanukkat ha-Torah* (1880), novellae on the Bible collected by H. Ersohn. His many responsa are scattered in various collections: two of them were published in the *Ammudei Shittim le-Veit ha-Levi* (Prague, 1791; 58–66) by Levi b. David Pollack. He occupied himself to a considerable extent with the problem of permitting **agunot* to remarry, but in consequence of a mistake in one such case he resolved to refrain from giving decisions on this in the future.

[Yehoshua Horowitz]

JOSHUA HOESCHEL BEN JOSEPH OF CRACOW (1578–1648), Polish rabbi. Joshua Hoeschel was born in Vilna. In his youth he studied under Samuel b. Feibush in Przemysl and then in the yeshivot of *Meir b. Gedaliah of Lublin and Joshua *Falk of Lemberg. From 1634 to 1639 he served as rabbi in the towns of Grodno, Tiktin, Przemysl, and Lemberg. At the beginning of 1640 he was appointed head of the yeshiva of Cracow in succession to Nathan *Spira, and from 1640 to 1644 he served there as rabbi in an honorary capacity. He died in Cracow. His pupils included *Shabbetai b. Meir ha-Kohen, Gershon Ulif *Ashkenazi, and Menahem Mendel *Auerbach. Halakhic problems were addressed to him from many countries. He corresponded on kabbalistic topics with his relative, the kabbalist Samson b. Pesah of Ostropol. Joshua Hoeschel did not follow the method of *pilpul*; he strove toward greater independence in the domain of *halakhah* and directive ruling, stating, “according to the custom of our country anything printed in the Shulḥan Arukh may not, God forbid, be changed, any more than the law of Moses... God spare us from such a view. The judge may decide only according to the facts before him... and anyone may dis-

agree, even with the words of the *rishonim*, if he has definite proof.”

He wrote (1) *Meginnei Shelomo* (Amsterdam, 1715), on eight tractates of the Talmud, in which he defends Rashi against the difficulties raised by the *tosafists*; (2) the responsa *Penei Yehoshu'a* (pt. 1, *ibid.* 1715; pt. 2, 1860), on the four divisions of the Shulḥan Arukh. Other responsa were published in various collections of responsa: *Ge'onei Batra'i* (Zolkiew, 1795); *Beit Ḥadash ha-Yeshanot* (Frankfurt, 1697); *Beit Ḥadash ha-Ḥadashot* (Koretz, 1785) of Joel Sirkes, in the *Gevurat Anashim* (Dessau, 1697) of Meir Katz and his son Shabbetai, author of the *Shakh*; and elsewhere. There remain still in manuscript novellae to the Tur *Yoreh De'ah Hilkhot Sheḥitah*, and a commentary to the *Asarah Ma'amarot* of Menahem Azariah de Fano.

[Yehoshua Horowitz]

His grandson, JUDAH LOEBUSH BEN ISAAC (d. 1731?), was a talmudist. Judah was appointed rabbi in Raków at a youthful age and in 1701 became rabbi at Szydlowiec. Thereafter he was referred to as “R. Leib of Szydlowiec.” In 1713, together with Benjamin Ze'ev Horowitz of Wodzislaw, he represented Cracow and the district at the session of the Council of the Four Lands in Jaroslaw, Cracow being then without a rabbi. At the end of 1713 he was appointed rabbi in Cracow. Of his six sons, one, David Schmelka, succeeded his father in Cracow, while Joshua, Isaac, and Joseph served as rabbis in Szydlowiec, Tarnow, and Pinczow, respectively.

JOSHUA IBN NUN (second half of the 16th century), Safed scholar, kabbalist, and *rosh yeshivah*. Joshua was one of the leaders of the Safed community. He was in charge of the local charities, and from his own considerable means supported the scholars and the poor of Safed. He became attracted to the teaching of Isaac *Luria and implored Hayyim Vital to reveal to him Luria’s esoteric doctrines. Vital, however, refused to comply though Joshua, according to one report, humbled himself before him, following him wherever he went, even to Jerusalem and to Egypt. According to that report, which is substantially correct, Vital became ill in 1587, whereupon Joshua bribed Moses, the brother of Hayyim, with 50 gold pieces, to copy Luria’s writing that his brother had recorded. Moses hired scribes who copied the writings in three days and from then they became available to a select coterie in Israel. Joshua endorsed many of the rulings of Yom Tov *Zahalon.

According to H.J.D. Azulai, some of his responsa are to be found in the responsa *Zera Anashim* (Mss.). The date of his death is usually given as 1587 but if reliance is to be placed on a recently discovered document he was no longer alive in 1585. In that case the above-mentioned incident must have occurred some years earlier than was previously thought.

[David Tamar]

JOSIAH (Heb. יְאֹשָׁיָהוּ, יְאֹשָׁיָהוּ), son of Amon, king of Judah (640–609 B.C.E.). When his father was assassinated, Josiah, then only eight years old, was proclaimed king. His reign was marked by a great national revival, and the author of the Book of Kings in evaluating Josiah says: “Before him there was no king like him ... nor did any like him arise after him” (II Kings 23:25; cf. II Kings 18:5 in connection with Hezekiah, the forerunner of Josiah). Josiah not only acted as the king of a completely independent Judah, but his kingdom extended northward into the erstwhile Assyrian provinces of Samaria (II Kings 23:19). Archaeological discoveries in the 1960s brought to light new facts about Josiah’s expansion. Following archaeological findings in *Yavneh-Yam (cf. Naveh, in bibl.), it became quite clear that Josiah established feudal estates on the shore of Philistia. Unwalled settlements of the time of Josiah were discovered in the south and east of Gaza (Gophna, in bibl.). In the eastern part of Judah, excavations uncovered the town of En-Gedi (cf. Josh. 15:62), which had been founded at the time of Josiah as a balsam plantation of the king (Mazar and Dunayewski, in bibl.). During Josiah’s reign, Jerusalem developed greatly, and it is at this time that a new wall was built on the western slopes of the city, and new quarters (Mishneh and Maktesh) were constructed which served mainly as industrial and commercial centers. Remains of buildings and walls discovered in the Jewish quarter of Old Jerusalem prove that the city expanded even more to the west. The extent of Judah’s expansion in this period may be deduced from the list of Ezra 2 (= Neh. 7), where Beth-El and Jericho (previously Ephraimite cities), on the one hand, and the cities of the coastal plain Lydda and Ono, on the other, are considered part of Judah. The borders of Judah as presented in this list undoubtedly go back to the times of Josiah and remained the same until the destruction of Jerusalem. According to A. Alt (in bibl.), the lists of the cities of Judah, Simeon, Dan, and Benjamin in Joshua 15, 18, and 19 also reflect the Josianic administrative reorganization of Judah. Though one has to take into account previous organizations by *Jehoshaphat and *Hezekiah which might be reflected in these lists, there is no doubt that the final formulation of these lists was done in the Josianic period; this may be corroborated by the archaeological evidence cited above. These lists actually cover the area of Josiah’s rule: Ekron, Ashdod, and Gaza in the coastal zone (Josh. 15:45–47), Beth-El and Geba al-Tell, 22 mi. (35 km.) to

the north of Jerusalem (according to Mazar) in the north, En-Gedi and the other towns of Joshua 15:61–62 in the east, and the Simeonite settlements in the south. The stamped jar handles with the inscription לַמֶּלֶךְ and the inscribed weights characteristic of this period may serve as a good indication of the scope of Josiah’s dominion. These have been found not only in the area of the Kingdom of Judah but also in Acre, Shechem, Ashdod, Gezer, etc. This territorial expansion was accompanied by a religious upsurge, which found expression mainly in: (1) the cultic reform, including both the purification of worship (in Judah as well as in the northern areas) and the centralization of the legitimate worship in Jerusalem; (2) the publication and authorization of the “Book of the Torah” (see *Deuteronomy) discovered in the 18th year of the reign of Josiah, i.e., 622 B.C.E., which ultimately turned the book into the main vehicle of the Jewish religion (see below). These religious-spiritual enterprises, though reflecting inner developments of Israelite religion, were conditioned by contemporary political events and especially by the gradual decline of the Assyrian Empire. Assyria, which had acquiesced in Psammetichus I’s disregard of its claim to suzerainty over Egypt about 655 B.C.E., was compelled by its strenuous wars in Asia Minor, and then by the enormous effort of pacifying the rebellious Babylonians and the independent peoples to the south and east of them who supported them, to relax its hold on Palestine as well.

The Reform and Its Historical Antecedents

Josiah’s reform activities are given in two parallel accounts: II Kings 22–23 and II Chronicles 34–35. According to the account of Kings, the reform was motivated by the discovery of “Book of the Torah” in 622 B.C.E.; before that no reformative action had been reported. Chronicles, in contrast, tells about three stages of the reform:

- (1) in the eighth year of his reign (632 B.C.E.) he started “to seek the God of David” (II Chron. 34:3);
- (2) in the 12th year (628 B.C.E.) he began to extirpate objectionable cults in Judah and Jerusalem (34:3b–5), as well as in other parts of the land of Israel (34:6–7);
- (3) finally, in the 18th year (622 B.C.E.), when the “Book of the Torah” was discovered, he concluded the Covenant before the Lord (34:29–33) and celebrated the Passover (35:1–18).

Each account has its problems. Scholars have observed that the story of the temple repairs in II Kings 23 is modeled on the repairs ordered by *Joash, an earlier king of Judah described in II Kings 12. In addition, the account in Kings telescopes all of Josiah’s activity into one year. If that account is accurate, then pious King Josiah had been tolerating a temple “overloaded with idolatrous objects” (Japhet, 1019) for 17 years of his reign, as had the high priest Hilkiyah. It strains credibility to believe that such a drastic change in Judahite religion (which included the purge of ancient native Israelite practices as well as the newer astral cults that had become popular in the eighth century), as described in II Kings, would have been inspired by the chance finding of the book. The chronology

in Chronicles is more plausible, but as noted by Japhet, the Chronicler depends on the Deuteronomistic source in Kings and gives no indication that he had access to any other. For the Chronicler there was need to purge the temple because he had already attributed that to the repentance of wicked King Manasseh (11 Chron. 33). The fact that this picture absolves both Josiah and Hilkiah from complicity in a polytheistic temple cult is perhaps too convenient. The contradictory accounts in 11 Kings and Chronicles are each motivated by the agenda of their writers. The goal of the Deuteronomists was to highlight the importance of the book. The goal of the Chronicler was to make the account in Kings plausible and to show that Josiah had always been a pious religious reformer. According to Chronicles, it was only after the completion of the reform that the book was found (11 Chron. 34:8), so that its role is limited to bringing the people into a covenant to purge the land of the idolatrous practices in the former northern kingdom (11 Chron. 34:33) and the celebration of the Passover.

There are good reasons for antedating Josiah's reform to the discovery of the book: (1) The reforms of the other Judahite kings, e.g., Asa, Jehoshaphat, Jehoash, and Hezekiah, were put into effect without relying upon a written book. (2) It would be inconceivable to suppose that Josiah concluded the covenant in the House of God while all the idols still stood there. The establishing or renewing of the relationship between God and the people was always preceded by the removal of the foreign gods (Gen. 35:2–4; Josh. 24:23ff.; Judg. 10:16; 1 Sam. 7:3–4). (3) In his account of the king's message to Huldah the prophetess (11 Kings 22:13), the narrator has Josiah confess not his own sins but the sins of his ancestors, which clearly indicates that at this time (622 B.C.E.) the Judahite cult of Yahweh no longer tolerated other gods. It is the sins of Manasseh hanging over the people (cf. 11 Kings 21:11; 24:3; Jer. 15:4) with which he is concerned.

(4) The book was discovered in the midst of an action taken in connection with the repairs of the Temple which apparently followed the removal of the cultic objects installed by Manasseh (11 Kings 23:4ff.). 11 Chronicles, in fact, informs us that the repairs were connected with the restoration of the Temple, or rather with its "undergirding," which had been demolished by the previous kings of Judah (11 Chron. 34:11).

The Stages of the Reform

It is not known whether the purgative activities in Judah were contemporaneous with those in the northern territories (Beth-El, Samaria, and the Galilee). The presentation of the events in 11 Kings 23:4–20 leaves the impression that the reform had been performed step by step. The first move of Josiah was the abolition of objectionable cults from Jerusalem and the cities of Judah (23:4–14), then came the destruction of the altar of Bethel, and afterwards the destruction of the high places of the Samaritan province (23:19–20). According to 11 Chronicles 34:6, the reform extended as far as the cities of Naphtali in Galilee. The gradual political deterioration of the Assyrian Empire adds support to the supposition of a gradual takeover

of the northern territories by Josiah. A fortress unearthed at Megiddo may be Josianic.

Centralization of Cult

No exact date can be given for the centralization of the cult. Centralization of worship is the great innovation of the Book of Deuteronomy, and therefore its implementation by Josiah might be the result of the "discovery" of the book. But the way Josiah implements the centralization is not in full accord with the prescriptions of Deuteronomy. Deuteronomy 18:6–8 gives the provincial levite equal rights with the priests of the central shrine: "to serve at the altar and to share the dues," whereas, according to 11 Kings 23:9, the provincial priests are to share the dues with the Jerusalemite priests but are not permitted to officiate along with them (though one must admit that the levite is not necessarily to be identified with the "priest of the high place"). The contracting of the covenant and the celebration of Passover are performed, according to Kings and Chronicles, in the 18th year, so that in this case there is an established date.

The Significance of the Reform

Josiah's death probably brought an end to his reforming efforts, and in any event, the state of Judah fell in 586 B.C.E. The reform found its full implementation beginning in the Persian period, which saw the reconstruction of the temple in 520. That temple stood as the only Jewish sacrificial shrine in the Land of Israel for almost 600 years until its destruction in 70 C.E. by the Romans. Ultimately, of even greater significance for the history of Judaism was the relocation of divine revelation. Thanks to Josiah's circle, Jews began to seek God's word in the book of Torah. The pledge of the people to observe the Law "as written in the book" brought about a metamorphosis in Israelite religion. To observe the law meant that one had to study it. As a result, the Second Temple period saw the rise of scribes and scholars alongside of the temple cult as well as the gradual eclipse of prophecy. By the time of the destruction of the Second Temple other sacred books had joined the Torah to make up Holy Scripture (*kitvei ha-kodesh*; Mishnah Yad. 3:5), whose study and exposition led to the crystallization of rabbinic Judaism, which survived for almost 2,000 years.

The Death of Josiah

Assyria, weakened by her struggle with Babylon, found the Egyptians as allies. In 616 B.C.E. the Egyptians went up to the north to help the Assyrians, but to no avail. After the fall of Nineveh in 612, the Assyrian army consolidated its positions in the western part of the empire, Harran and Carchemish. This time they were assisted by the newly enthroned Egyptian king, Neco II (610–595; son of Psammetichus), who in the summer of 609 marched with a large force to help the Assyrians retake Harran from the Babylonians. Josiah went to Megiddo to meet the Pharaoh, who killed him there. According to 11 Chronicles 35:20–24, Josiah ignored God's word and engaged Necho in battle. But the account is suspect because: (a) it is modeled on the account of Ahab's death (1 Kings 22:30, 34–37); (b) it

is characteristic of the Chronicler's theology to find some sin to account for the downfall of an otherwise righteous king. 11 Kings 23:29–30 says only that Necho put Josiah to death as soon as he saw him and gives no account of a battle nor any motive for Necho's action. Josiah's death, especially in light of subsequent events, was considered a heavy loss for the nation, as may be learned from 11 Chronicles 35:24–25: "All Judah and Jerusalem held mourning rites for Josiah ... and the singers have spoken of Josiah in their laments to this day and have made these a rule in Israel..."

[Moshe Weinfeld / S. David Sperling (2nd ed.)]

In the Aggadah

According to one opinion, Josiah was pious from infancy, and his "repentance" (11 Kings 23:25) consisted in his reviewing and revising all the judgments he had given from the time he ascended the throne at the age of eight until his 18th year (Shab. 56b). According to another opinion, he is considered a perfect example of a truly repentant individual (OR 24). Because of his righteousness, his father, Amon, was permitted to enjoy the world to come (Sanh. 104a). When he opened the Torah which had been found, the first verse to meet his eyes was, "The Lord shall bring thee and thy king unto exile, unto a nation which thou hast not known" (Deut. 28:36; Yoma 52b). He sought to enlist the intercession of the prophets in his behalf. He addressed his request to the prophetess *Huldah rather than to Jeremiah since he felt that a woman would be more compassionate (Meg. 14b). When informed of the impending destruction of the Temple, Josiah hid the Holy Ark and all its appurtenances, in order to guard them against desecration at the hands of the enemy (Yoma 52b).

The king's efforts on behalf of God found little echo with the majority of the people. Though successful in preventing public idolatry, he was deceived by the people. He sent his pious sympathizers to inspect the homes of the people and was satisfied with their report that no idols were found. In reality, the recreant Israelites had fastened half an image on each wing of the doors, so that they were not recognizable when the doors were opened, but reappeared when they were closed (Lam. R. 1:53). His death was due to this godless generation. When Pharaoh, in his campaign against the Assyrians, wished to travel through the Land of Israel, Jeremiah advised the king not to deny the Egyptians passage. Josiah, innocent of the deception practiced by the people and therefore unaware that they were idol worshipers, retorted that Moses had promised that the sword would not pass through the land and therefore refused permission. In the ensuing battle no less than 300 arrows pierced the king. In his death agony he uttered no word of complaint, proclaiming, "the Lord is righteous for I have rebelled against His word" (Lam. 1:18), thus admitting his guilt in not having heeded the prophet's advice. On hearing the king's confession, Jeremiah exclaimed, "the breath of our nostrils, the anointed of the Lord" (Lam. 4:20; Ta'an. 22b).

Josiah was the only monarch since Solomon to rule over both Judah and Israel, since Jeremiah had brought the ten ex-

iled tribes of the north back to Israel and made them subject to him (Meg. 14b). The mourning for him was profound (MK 28b), and Jeremiah perpetuated his memory in Lamentations (4:20; SOR 24).

JOSIAH (middle of the second century C.E.), *tanna*. His father's name is not known. He originated in Babylon and apparently taught in Huzal (Git. 61a). He discussed law in Nisibis with *Judah b. Bathyra. At that time he was already quoting *halakhot* he heard in the name of "the Men of Jerusalem" (Sif. Num. 123; Deut. 218). Later he moved to Erez Israel, where he studied under R. Ishmael (Men. 57b). He is mentioned in the Talmud about 50 times, never in the Mishnah, and once in the Tosefta (Shevu. 1:7). He is quoted very often in the *Mekhilta*, and in the *Sifrei* on Numbers, both of which belong to the school of R. Ishmael. Very frequently he appears alongside his colleague Jonathan, another of R. Ishmael's pupils, with whom Josiah often disagrees. Their disagreements as a rule depend on different methods of biblical interpretation, both variants of R. Ishmael's particular method (Yoma 57–58; Sota 24–25, et al.). A characteristic method of his is *Sares ha-Mikra ve-Doreshehu*, i.e., "transpose the order of the words [lit. "emasculate"] of the verse and then interpret it." His talmudic dicta cover a wide variety of subjects. One of his most famous rulings, which was accepted by the *posekim*, concerns heterogeneous sowing in a vineyard and so limits culpability as to make the interdiction almost nonexistent as far as the biblical law is concerned (Kid. 39a et al.). Many of his other rulings also incline to leniency. Although from Babylon, he firmly upheld the authority of the Great *Bet Din in Jerusalem as the sole body competent to intercalate the year (Mekh. Pisha 2). Josiah was still alive in the first age of the *amoraim* and is therefore sometimes called Josiah the Great, to distinguish him from an *amora* of the same name (Sanh. 19b). Of his few aggadic dicta, the following may be noted: "the deeds of the righteous yield fruit ... the deeds of the wicked do not produce fruit, for if they produced fruit they would destroy the world" (Gen. R. 33:1); "If a good deed comes your way, do it immediately" (Mekh. Pisha 9).

man, Toledot, 529–31; Neusner, *Babylonia*, 1 (1965), 128–35; idem, in: *PAAJR*, 30 (1962), 92 ff.

[Harry Freedman]

JOSIAH (third century C.E.), Palestinian *amora*. Josiah was a pupil of Johanan, in whose name he transmitted teachings (TJ, Kil. 9:4, 32b; Hul. 128a; et al.). He also studied under Kahana (TJ, RH 1:1, 56d), who upon his death ordered that part of his legacy be given to Josiah (TJ, Sanh. 3:9, 21d; cf. Gen. R. ed. by Theodor and H. Albeck (19652) 53n. 1). He discussed halakhic problems with Eleazar b. Pedat (Sot. 19a; et al.), and some of his other colleagues were Hiyya b. Abba, Ammi, and Assi (TJ, Ta'an. 2:1, 65a–b). On one occasion, when preaching on a public fast day, he interpreted *hitkosheshu va-koshu* (Zeph. 2:1) as if the verb were from the root *kash*, meaning stubble, and rendering it as “let us remove our own stubble before removing the stubble of others,” i.e., “let us mend our own ways before pointing out other peoples’ faults” (TJ, Ta'an. 2:1, 65a–b; and cf. BM 107b). He was held in high esteem by his contemporaries. When Isaac b. Redifa came to ask a halakhic question of Jeremiah, the latter replied, “the lions are available and you enquire of the foxes! Go and ask Josiah” (TJ, Shev. 9:5, 39a). A number of *amoraim* with the name Josiah are mentioned in the Talmud, and it is possible that one of them, Josiah of Usha (Git. 33b; et al.), is the same as this Josiah.

[Yitzhak Dov Gilat]

JOSIAH BEN AARON HE-ḤAVER (fl. 11th century), Palestinian *gaon*. Josiah belonged to the family of the *gaon*, *Aron b. Meir. He was the head of Yeshivat Geon Ya'akov in Jerusalem, and later in Ramleh, to which the yeshivah was transferred, presumably as a result of pressure by the Karaites. Josiah engaged in a controversy with a Karaite leader, possibly Solomon b. David b. Boaz. The exact years of his *gaonate* are not known; his signature appears on a document of the year 1015, and it is thought that he was active until 1020. He appointed *Ephraim b. Shemariah, head of Palestinian Jews in Egypt, as a “*haver*” (a rabbinical title of honor). His letters to the Jewish community of Egypt, appealing for help, reflect the sufferings endured by the Jews of Erez Israel as a result of the persecutions of the Fatimid caliph Ḥakim.

[Eliezer Bashan (Sternberg)]

JOSIAH BEN JESSE (d. after 1235), *nasi* of the Jews in *Damascus during the first half of the 13th century. Judah *Al-Ḥarizi met him when he visited Damascus, about 1216, and wrote poems of praise in his honor. In these Al-Ḥarizi mentions Josiah's lineage, which could be traced to *Zerubba-

bel. He refers to him by the title of *Nesi Galuyyot Kol Yisrael* (“prince of the Diasporas of all Jewry”). It appears that there was a special significance to this title and that it was more than mere rhetoric, because in the ban which he issued in 1235 the title appears again. In this ban his brother, Solomon b. Jesse (d. after 1244) who lived in Fostat, is also mentioned. He is also referred to by the title of *Nesi Galuyyot Yisrael* (“prince of the Diasporas”). Hodayah b. Jesse ha-Nasi, referred to as *Nesi Nesi'ei Galuyyot Kol Yisrael* (“chief of the princes of Diasporas of all Jewry”), was also Josiah's brother. It is known that Hodayah was in Alexandria for a few years, since he came into conflict with the *dayyan* R. Joseph b. Gershon, who lived at the same time as Abraham b. Moses b. *Maimuni. One of his descendants was the *nasi* *Jesse b. Hezekiah.

[Abraham David]

JOSIAH BEN SAUL BEN ANAN (late eighth to ninth century), Karaite authority, presumed grandson of *Anan b. David, the titular founder of the sect, and son of *Saul b. Anan. His writings have not been preserved. Judah *Hadassi (in *Eshkol ha-Kofer*, 258, letter ṭ) refers to Josiah as a “shining light of knowledge” and reports that he ruled that, in the case of inheritance, the brothers of the deceased should have an equal share with the dead man's sons. *Elijah b. Abraham, author of *Hilluk ha-Kara'im ve-ha-Rabbanim*, mentions him as “Josiah, crown of the Torah”; *Aaron b. Elijah (*Gan Eden*, 144b) and Elijah *Bashyazi (*Adderet Eliyahu*, 80b) refer to him as “Prince Josiah” and quote his opinion on the preconditions necessary for entrance into matrimony. Only in the genealogical tables and the “chain of tradition” of the later Karaite authors is Josiah mentioned definitely as a grandson of Anan.

[Isaak Dov Ber Markon]

JOSIPHIAH (Jehosiphia) THE PROSELYTE (early 12th century), French liturgical poet. Josiphiah is quoted by *Jacob ha-Levi of Marvège and is also mentioned in *Sefer ha-Gan*, and by *Judah b. Eliezer (1313) and Moses *Rieti (15th century). Of the known eight poems which bear Josiphiah's signature, only three have been published, among them an introduction to *Illu Finu*, translated into German by S. Heller (*Die echten hebraeischen Melodien* (1908³)) on the basis of S.D. Luzzatto's edition in *Tal Orot* (1881), 34, no. 43.

[Jefim (Hayyim) Schirmann]

JOSIPOVICI, GABRIEL (1940–), English novelist, playwright, and literary critic. Born in Nice, France, Josipovici was educated at Victoria College, Cairo, and at Oxford University. From 1963 he taught at the University of Sussex where he became a professor of English Literature. In 1981 he was made the Northcliffe Lecturer at University College, London. His first novel, *The Inventory*, was published in 1968 and his outstanding work of literary criticism, *The World and the Book: A Study of Modern Fiction*, appeared in 1971. He also wrote *The Lessons of Modernism and Other Essays* (1977) and edited *The Modern English Novels. The Reader, The Writer, and the Work* (1976). As well as his acclaimed literary criticism, Josipovici published *Four Stories* (1977), a collection of short stories, and ten stage and radio plays. *Mobius the Stripper: Stories and Short Plays* (1974) contains an important selection of this work.

Josipovici is a consciously postmodernist writer who has rejected the tradition of 19th-century realism. Instead, his literary tradition is made up of Marcel Proust, Franz Kafka, Rainer Maria Rilke, T.S. Eliot and, more recently, Samuel Beckett, Alain Robbe-Grillet, Jorge Luis Borges and George Perec. All of these writers transcend a too easy identification with a national culture. Their “rootlessly self-contained” art, in the words of one critic, corresponds to Josipovici’s own abstract, vulnerable, inconclusive short novels. Much of his fiction, such as *The Inventory*, *Words* (1971), and *Conversations in Another Room* (1984), juxtaposes the lightness and musicality of the author’s dialogue with a series of haunting, unanswered questions. *Migrations*, on the other hand, lacks a narrative thread as it moves between nameless, displaced individuals who are related only by the author’s recurring images.

Josipovici’s disdain for fiction which is based on large historical questions means that his novels do not deal explicitly with Jewish themes. The Jewish writers which interest him the most are, therefore, those that write outside of a defined Jewish tradition – such as Saul Bellow, Bernard Malamud, and, of course, Kafka and Proust – and not such “insiders,” in Josipovici’s terms, as Isaac Bashevis Singer and S.Y. Agnon. It was only after the Six-Day War that Josipovici began to explore his Jewishness with considerable interest. He wrote the introduction to the English edition of Aharon Appelfeld’s *The Retreat* (1985), and he was a regular contributor to *European Judaism* and *The Jewish Quarterly*.

BIBLIOGRAPHY: J. Vinson (ed.), *Contemporary Novelists*, (1982) 356–357; *The Jewish Quarterly*, 32 (1985). **ADD. BIBLIOGRAPHY:** M. Fludermik, *Echoes and Mirrorings: Gabriel Josipovici’s Creative Oeuvre* (2001).

[Bryan Cheyette]

JOSIPPON, historical narrative in Hebrew, of anonymous authorship, describing the period of the Second Temple, written in southern Italy in the tenth century. The author starts his narrative by listing the different nations and their places of settlement, based on the catalog of the descendants of Japheth mentioned in Genesis 10, and relating these to peoples of his own times. The author proceeds to recount the history of an-

cient Italy and the founding of Rome; he then passes to the period of the Second Temple. The book – like Josephus’ *The Jewish War* – ends with the fall of Masada. A large part of the work is devoted to the wars of the Jews against the Romans.

The author states that the Hungarians, the Bulgarians, and the Pechenegs dwelt “on the great river called the Danube, i.e., Donau,” and this was a geographical situation existing after 900 C.E. The author also observes that the “Ishmaelites” (i.e., Arabs) lived in Tarsus, which is in Asia Minor. Since this town was conquered by Byzantium in 965 C.E., it is clear that the book was written between these two dates. In one of the manuscripts of *Josippon* the precise date of the book is given: “and we wrote from the book, from the book of Joseph ben Gorion ha-Kohen in the year 885 from the Destruction.” Since it was customary then to reckon the Destruction of the Temple from the year 68 C.E., it follows that the book was composed in 953 C.E. All signs point to the fact that the Hebrew book was written in southern Italy which, at the time, was one of the important Jewish centers. The author’s place of birth was part of the Byzantine Empire, where the official language was Greek. The author, however, could not read Greek, only Latin. The main source of *Josippon* was a Latin manuscript which included 16 of the 20 books of Josephus’ *Jewish Antiquities* and the Latin adaptation of *The Jewish War*. The latter was written in the second half of the fourth century C.E. and called *Hegesippus*. The author of *Josippon* also knew random facts from *The Jewish War* itself with which he was acquainted only incidentally; he knew also about the *Contra Apionem* of Josephus. The author calls Josephus “Joseph ben Gorion,” although Josephus’ father was called Mattathias. He was misled by the inaccurate language of the *Hegesippus*, and he identified Josephus with Joseph b. Gorion who had also been a general in the war against the Romans. The author’s second important source was the Latin version of the *Apocrypha; thus he learned about the Hasmonean period from the two books of Maccabees. The remainder of his secular sources were various medieval chronicles; from these he mainly gained information concerning the gentile kingdoms. He had, of course, a certain knowledge of talmudic literature, but his main sources were Latin. Considering the period in which he lived, the author was a gifted historian, aware of his responsibilities and endowed with excellent historical insight. Fables drawn from obscure sources are only rarely found in his book, mainly in the chapters dealing with the ancient history of Italy. The author also had great literary gifts. His narrative is filled with national pride and is written in an excellent biblical Hebrew style. In the Middle Ages, the book was already called *Sefer Josippon*; this is the Jewish-Greek form for *Josephus*. In the original version found preserved in manuscripts the author speaks in the first person and defines the purpose of his writing thus: “I have collected stories from the book of Joseph b. Gorion and from the books of other authors who wrote down the deeds of our ancestors, and I compiled them in one scroll.” Since the name of the author was not known, the book was ascribed, by the time of Rashi, to Josephus himself. This mistaken ascrip-

tion later became explicit in an expanded and revised version of the book written not later than 1160, and edited in the 14th century by Judah Leon *Moskoni. This edition served as a basis for the Constantinople edition of 1510 which was the source for all subsequent editions. This version, too, was composed in Italy. Its author restyled the book, ascribed it to Joseph b. Gorion, and added fictitious elements, although he himself was lacking neither in Jewish nor in secular knowledge. The most famous among the passages to be found in the expanded version is a fictitious description of the crowning of Vespasian in Rome. This was written under the influence of the crowning of emperors in Rome during the Middle Ages. Today the book is known to the reader in this rewritten and popular version. Another early edition of *Josippon* is that of Mantua (c. 1480), based on a carelessly restyled, and at times even abbreviated, manuscript of the original version. In this edition, all reference to Joseph b. Gorion as author has been omitted. The original form and the true character of the book of *Josippon* can, therefore, be known only from manuscripts. Among the better known manuscripts, three are based on a manuscript that R. *Gershom b. Judah copied "in his own hand." In one of these appears the date of composition. R. Gershom probably copied *Josippon* to use as a textbook on the history of the Jews during the time of the Second Temple.

During the Middle Ages, *Josippon* served as a source of information about the period of the later books of the Bible (such as the books of Esther and Daniel) and about the whole period of the Second Temple. This is the reason that Bible and Talmud commentators frequently quoted it during the Middle Ages and at the beginning of the modern period. The book of *Josippon* attained great importance during the Middle Ages. For instance, a passage on Alexander the Great translated from it appeared in the early Russian chronicle of Nestor, without mentioning the source. The book is referred to by name, however, by the Arab scholar Ibn Ḥazm (d. 1063). The importance attached to the book stemmed from its ascription to Josephus, who had been a contemporary of events described in it.

An Arabic translation of *Josippon* by a Yemenite Jew was probably in existence already in the 11th century. From Arabic it was translated into Ethiopian (c. 1300). Translations into European languages, such as Latin, English, Czech, Polish, and Russian, were generally made from printed editions. The author of the book of *Josippon*, following his sources, mentions John the Baptist, but he refers neither to Jesus nor to the beginnings of Christianity. Brief mention of Jesus is made in the manuscript of the expanded version of *Josippon*, and a polemical story about Jesus and the beginnings of Christianity was inserted in a number of manuscripts. *Josippon's* relationship (or lack of relationship) with Christianity interested both Muslims and Christians. From the age of humanism, leading Christian humanists discussed the question of whether the book of *Josippon* had really been composed by Josephus. The book was also known to the Karaites and, in a Samaritan chronicle written in Arabic, *Josippon's* account of Alexander the Great's visit to Jerusalem is included; the place of the visit

was changed to Mt. Gerizim. A short Hebrew narrative translated from the Greek was inserted into some versions of *Josippon*. The narrative is an abridgment of a legend about Alexander the Great, ascribed to Calisthenes, and an anonymous Greek-Byzantine chronicle on the period from Alexander to Tiberius. This important narrative has been preserved independently in one manuscript.

Two works on *Josippon* by Professor David Flusser were published almost simultaneously in 1978. The first is an edition based upon the original manuscript with a photostatic reproduction of selected extracts from *Josippon*, with an introduction (Mercaz Zalman Shazar). The second was the first volume of a critical edition, based upon all existing manuscripts and giving the text with an introduction; the second volume of the critical edition appeared in 1980, completing the work.

[David Flusser]

JOSKO (or **Jossko**; end of 15th–beginning of 16th century), wealthy Jewish merchant in Lvov. He was a customs duties collector and a banker to King Alexander of Poland (1501–06), and for many years was a purveyor of cloth and fur to the court. In 1503, as a result of Josko's intervention, the king ordered that the Jews of Lvov be permitted to trade at fairs and the town's markets, despite vigorous opposition from the townsmen. Josko assisted the community against them on several occasions.

[Arthur Cygielman]

JOSPE, ALFRED (1909–1994), rabbi, educator, author, and editor. Jospe was born in Berlin to Josef and Rosa Jospe; his father and both his grandfathers, Israel Jospe and Selmar Cerini (Steifmann), were cantors. An active Zionist from his youth, Jospe received his doctorate in philosophy at the University of Breslau in 1932. In 1935 he married Eva Scheyer and received his rabbinic ordination from the Juedisch-Theologisches Seminar in Breslau. After serving for two years (1934–35) as district rabbi of the province of Grenzmark, he was appointed to the community rabbinate in Berlin (1936). Following **Kristallnacht* (November 9–10, 1938), Jospe was interned in the Sachsenhausen concentration camp. In March 1939 he was able to leave Germany for the United States (via England) with his wife and daughter.

Jospe's first American rabbinical position, and only pulpit, was in Morgantown, West Virginia (1939–44), where in 1940 he also assumed the responsibility for directing the Hil-

l Foundation at the University of West Virginia. In 1944 he became director of Hillel at Indiana University, and in 1949 joined the national leadership of Hillel in New York, becoming its director of programs and resources. Jospe and his family moved to Washington, D.C., in 1957, when B'nai B'rith (including the Hillel Foundations) moved its headquarters there from New York. In 1971 he was elected Hillel's international director, a position he held until his retirement at the end of 1974.

For most of his career Jospe was involved in educational administration, and in many respects he provided the intellectual leadership shaping the Hillel Foundations during its years of great growth, seeking to formulate an evolving "philosophy of Hillel" that would enable Hillel to meet changing student needs (especially in the "turbulent years" of the 1960s and early 1970s), while remaining faithful to abiding underlying principles.

At the same time, Jospe retained an active interest in philosophy and Jewish thought. His many publications include academic works (on Moses Mendelssohn, on *Wissenschaft des Judentums*, on the history of the German rabbinate, and on the teaching of Jewish Studies at German universities); essays in Jewish thought; anthologies he edited of thematically arranged lectures by leading thinkers and scholars, based on programs at successive national summer institutes of Hillel; and professional guides relating to Hillel as the "Jewish presence on the campus." The rapid expansion of purely academic programs in Jewish Studies in many universities began to take place during the last few years of Jospe's career. Until then, on many campuses, Hillel, besides its other functions in offering religious, cultural, and chaplaincy services, provided the only link for students with an academic (even if extracurricular) presentation of Judaism, to combat what Jospe called the "pediatric Judaism" of many alienated young Jews, whose minimal childhood exposure to Jewish education could not compete with their advanced secular education for intellectual respectability and serious commitment. A proper Jewish education should be both cognitive and affective, involving both mind and heart: "Both celebration and cerebration have a legitimate place, but not at the expense of the other."

Jospe's publications, reflecting his diverse areas of interest, include *Die Unterscheidung von Mythos und Religion bei Hermann Cohen und Ernst Cassirer in ihrer Bedeutung fuer die juedische Religionsphilosophie* (1932); *The Legacy of Maurice Pekarsky* (1965); an annotated English translation with introduction of *Jerusalem and Other Jewish Writings* of Moses Mendelssohn (1969); *Tradition and Contemporary Experience: Essays on Jewish Life and Thought* (1970); *Bridges to a Holy Time: New Worship for the Sabbath and Minor Festivals* (with Richard Levy; 1973); *Studies in Jewish Thought: An Anthology of German Jewish Scholarship* (1981). *To Leave Your Mark: Selections from the Writings of Alfred Jospe*, ed. E. Jospe and R. Jospe, was published posthumously (2000). For a complete bibliography until 1980, see *Go and Study: Essays and Studies in Honor of Alfred Jospe*, ed. R. Jospe and S. Fishman (1980).

His wife EVA (1913–) was born in Oppeln, Germany (now Opole, Poland) and pursued graduate studies in philosophy at the New School for Social Research in New York and Georgetown University in Washington, DC. She taught modern Jewish thought at Georgetown and then at George Washington University until the age of 80. Her publications and translations include Martin Buber's "Early Addresses" in *On Judaism*, ed. N. Glatzer (1967); *Reason and Hope: Selections from the Jewish Writings of Hermann Cohen* (1971; reissued 1993); *Moses Mendelssohn: Selections from His Writings* (1975); "Hermann Cohen's Judaism: A Reassessment," in: *Judaism* 25:4 (1976), 461–72; "Encounter: The Thought of Martin Buber," in: *Judaism*, 27:2 (1978), 135–47; "Moses Mendelssohn: Some Reflections on His Thought," in: *Judaism* 30:2 (1981), 169–82; Franz Rosenzweig's commentary to *Ninety-Two Poems and Hymns of Yehuda Halevi*, ed. R. Cohen (2000).

Eva and Alfred Jospe had three children: SUSANNE GREENBERG (1935–), a rabbi in West Chester, PA; NAOMI PISSETZKY (1942–), a teacher in Petaḥ Tikvah; and RAPHAEL JOSPE (1947–) of the department of Jewish Philosophy at Bar-Ilan University and the Hebrew University Rothberg International School, and editor of the Jewish Philosophy division of the second edition of the *Encyclopaedia Judaica*.

Alfred Jospe's brother, ERWIN JOSPE (1907–1983), was a musician, choir director, professor of music and dean of fine arts at the University of Judaism. He edited with Joseph Jacobsen a collection of Jewish music, *Hawa Naschira: Auf! Lasst uns Singen* (1935; reissued 2001).

JOST, ISAAC MARCUS (1793–1860), German educator and historian. Jost was born in Bernburg, central Germany. He received his primary education at the Samson-Schule in Wolfenbuettel, where he became an intimate friend of Leopold Zunz. After studies at the universities in Goettingen and Berlin, he became head of a private high school in Frankfurt on the Main. The school was attended by both Jewish and Christian boys until the Prussian government prohibited this "revolutionary" project; the school then became exclusively Jewish. From 1835 onward he taught at the Philanthropin high school in Frankfurt. In 1853 he founded an orphanage for Jewish girls in Frankfurt. In conjunction with his educational activities Jost published a Pentateuch for young people (1823) and a vocalized Mishnah text (1832–34), with translation and notes; he also published a textbook of English (1843³), a dictionary of Shakespeare (1830), and a manual of German style (1852²).

In Frankfurt he edited (with M. Creizenach) the short-lived Hebrew journal *Zion* (1841–42), and from 1839 to 1841 the *Israelitische Annalen*. He founded, with Ludwig Philippson and others, the Institut zur Foerderung der Israelitischen Literatur, which published the *Jahrbuch fuer Geschichte der Juden und des Judentums* (4 vols., 1860–69).

A moderate supporter of the Reform movement, he helped prepare the second Rabbinical Conference at Frankfurt in 1845 and acted as its secretary. Jost, however, opposed

extremist tendencies and vigorously defended the use of Hebrew in synagogue and school.

Jost was a pioneer in the field of modern Jewish historiography and his works in this field include: *Geschichte der Israeliten seit der Zeit der Maccabaeer bis auf unsere Tage* (9 vols., 1820–28); *Neuere Geschichte der Israeliten von 1815 bis 1845* (3 vols., 1846–47); *Allgemeine Geschichte des Israelitischen Volkes* (2 vols., 1832); and *Geschichte des Judenthums und seiner Sekten* (3 vols., 1857–59). Jost wrote his work while others were still laying the foundations of the new Science of Judaism; Zunz himself shrank from writing a comprehensive history, and Graetz soon afterward wrote *Geschichte der Juden*, which exhibited far greater brilliance and scholarship. However, the adverse criticism by A. Geiger, H. Graetz, and S.D. Luzzatto tended to overlook the real merits of Jost's pioneering work with its high standard of objective scholarship. Although a rationalist who felt little sympathy with the religious view of Jewish history and who concentrated mainly on writing political history to the almost complete exclusion of cultural history, Jost anticipated later historiography by his critical approach to the sources, the individual treatment of Jewish history in different countries, and his recognition of the importance of social institutions for the understanding of history. His *Neuere Geschichte* has, in addition, great value as a contemporary record.

BIBLIOGRAPHY: J. Pascheles, *Sippurim*, 3 (1854), 141 ff. includes an autobiography by Jost; H. Zirndorf, *Isaac Markus Jost und seine Freunde* (1886), includes bibliography; S.W. Baron, *History and Jewish Historians* (1964), 240 ff. **ADD. BIBLIOGRAPHY:** R. Michael, *Y.M. Jost* (Heb., 1983); U. Wyrwa, in: K. Hoedl (ed.), *Historisches Bewusstsein* (2004), 99–108.

[Marcus Pyka (2nd ed.)]

JOTABAH, an island in the Gulf of Elath (Aila) inhabited by a colony of Jewish merchants. In the second half of the fifth century C.E., it was seized by a Persian adventurer called Amorke-sos, who controlled the Red Sea trade from there and levied customs. The emperor Leo confirmed the position of Amorke-sos in 474, but in 498 Anastasius sent an expedition under the general Aratus against him and the fortress was stormed. The community remained unmolested till the time of Justinian (527–65), who expelled the Jews. Procopius located the island 1000 stadia from Alia, a position which corresponds to that of the island of Tiran at the mouth of the gulf. A Hebrew University expedition to Tiran in 1956, however, found no evidence of a Byzantine settlement. Recently, Jezirat el-Far'ūn, 7½ mi. (12 km.) south of Elath, which has remains of Byzantine fortifications, has been proposed as an identification.

[Michael Avi-Yonah]

JOTAPATA or **Yodefāt** (Heb. יִדְפָּת), Galilean fortress. It appears as [Ia]-at-bi-te among the cities captured by Tiglath Pi-

leser III in 732 B.C.E., together with Qana and Ruma. Four hundred of the inhabitants were deported by the Assyrians. It was possibly the home town of Haruz of Jotbah, the wife of Manasseh, king of Judah (II Kings 21:19). In the Mishnah it is described as a fortress dating from the time of Joshua (Ar. 9:6; as Yodefāt). In 66 C.E., at the beginning of the Jewish War against Rome, *Josephus turned it into a strong fortress, which served as the key to his line of fortifications protecting Galilee. After the dispersal of his army, he proceeded there and withstood a siege by Vespasian and his army for 47 days (Jos., Wars, 3:141–288, 316 ff.). The fortress, as described by Josephus, was built on a ridge surrounded by ravines on all sides but the north, where a suburb lying on the next ridge was also fortified.

Jotapata continued as a Jewish town after it fell to the Romans. Following the destruction of the Temple, the priestly family of Miyamin settled there. In the period of the Bar-Kokhba rebellion Jotbah was the seat of the priestly family of Miyamin; it may also be the Gopatata referred to in the midrash (Eccles. R. 108a). The Babylonian Talmud also mentions a R. Menahem of Jotapata (Zev. 110b) and it may have been the episcopal town of Jotabe from 536 C.E. The site was identified by E.G. Schultz in 1847 with Khirbet Shifat, 6 mi. (c. 10 km.) north of Sepphoris, near Mt. Azmon. The site was subsequently explored by C. Conder and H.H. Kitchener for the Palestine Exploration Fund in the 1870s.

Excavations were conducted at the site in 1992 by D. Edwards, M. Aviam, and D. Adan-Bayewitz, revealing remains dating from the Hellenistic period through to medieval times. A fortification wall from the Ptolemaic period was uncovered with three phases of construction evident. To the northwest were the remains of a ramp dating from the time of the Roman siege in 67 C.E. The finds included remains from the battle including ballista balls and iron bow and catapult arrowheads. Rubble walls built at this location seem to have been part of the Jewish preparations prior to the arrival of the Romans. An oil press, pottery kilns, and several ritual baths (*mikva'ot*) were uncovered. The lower part of the site was reoccupied in the late first or early second centuries C.E., and there were also signs of occupation of medieval date.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

The modern kibbutz of Yodefāt is situated north of the ancient mound. It was founded in 1961 by Israel-born youth, mostly from Haifa, unaffiliated with any countrywide settlement federation. In 1968 Yodefāt had 47 inhabitants, mostly vegetarians. Fruit orchards were its main farm branch. Since then it has become a large-scale flower bulb exporter, with around 1,000 acres of land under cultivation and 369 residents in 2004.

JOTBATH, JOTHBATAH (Heb. יֹתְבַתַּח), a station of the Israelites during their wanderings in the wilderness, situated between Hor-Haggidgad and Abronah (Num. 33:33–34). It is also described as “a land of brooks of water” (Deut. 10:7). The identification of Jotbath depends on the view held of the route taken by the Israelites between Mt. Sinai and Ezion-Geber (Elath). Scholars who favor the northern route to Elath identify Jotbath with ‘Ayn Ghadyān near a marsh called Sabkhat al-Ṭāba. The name ‘Ayn Ghadyān is derived from the Roman Ad Dianam, which is located on the Peutinger Map 26 mi. (40 km.; erroneously given on the map as 16 mi.) north of Aila (Elath) (see also *Yotvatah). According to this map the Damascus-Elath road joined the Jerusalem-Elath road at Ad Dianam, but this, however, is disputed. Its name suggests that it contained a temple dedicated to Diana. Remains of forts from the time of the Judahite kings and of a fort and pool from the late Roman and Byzantine periods have been discovered at ‘Ayn Ghadyān; a kibbutz called Yotvatah has been established there. Other scholars who maintain that the approach to Ezion-Geber was from the south place Jotbath at Wadi al-Ṭāba, which is rich in water and falls into the Red Sea 7 mi. (11 km.) south of Elath.

[Michael Avi-Yonah]

JOTHAM (Heb. יוֹתָם; “YHWH is perfect”), the youngest son of *Gideon the judge. Jotham was the only one to survive the massacre conceived by his half brother *Abimelech, whose hired assassins slew 70 of the 71 sons of Gideon (Jerubbaal) “on one stone” (Judg. 9:1–6). Jotham alone survived. Perhaps the writer is punning on his name in that in Hebrew *yatom* means orphan. He escaped to Mt. Gerizim above the city of Shechem and, with sparkling irony, denounced the Shechemites for accepting Abimelech as king. Jotham relates the fable of the trees (Judg. 9:8–15) which tells how the trees once anointed one of their number king. The good trees – the olive, fig, and vine – to whom the crown was offered, refused to trade their unique capacities for honoring both God and man in return for mere power, but the fruitless bramble accepted the throne. From the subsequent verses (16–20) it is clear that the trees represent the rulers of Shechem, while Abimelech, whom they had crowned, is the bramble. The oration concludes with a curse upon both the Shechemites and Abimelech.

Jotham’s fable has frequently been interpreted as a piece of anti-monarchical irony exposing the unproductive and ultimately disastrous nature of kingship. However, the fable does not denounce the institution as such nor are its details in consonance with the historical reality. Unlike the trees, the Shechemites had not taken the initiative, nor had they offered

the crown to anyone; Gideon’s sons had inherited their position of rulership, and no reference to the murder of the 70 brothers is to be found in the fable. Therefore Jotham’s fable is probably an ancient etiology explaining how the lowly, useless thornbush became an incendiary danger to all trees, even to the mighty cedars. The trees, in their folly, gave the bramble power because the good trees had evaded their duty. But in the mouth of Jotham, the fable becomes a parable warning of the fatal danger of placing royal power in the wrong hands (Kaufmann, p. 202 in bibl.). After he delivered his oration, Jotham fled to Beer (Judg. 9:21) and is not heard of again. The subsequent downfall of Abimelech is seen as the fulfillment of the curse (9:57).

[Nahum M. Sarna and Robert G. Boling]

JOTHAM (Heb. יוֹתָם; “YHWH is perfect”; c. 758–743 B.C.E.), king of Judah; son of *Uzziah (Azariah) and Jerusha, daughter of Zadok (II Kings 15:32–33; II Chron. 27:1). Jotham became king at the age of 25 and, according to II Kings 15:33, reigned 16 years. This contradicts the statement three verses earlier that “*Hoshea son of Elah, made a conspiracy ... in the twentieth year of Jotham son of Uzziah” (II Kings 15:30), indicating that Jotham reigned at least 20 years. This may be the result of a miscalculation by a late historian who did not take the coregency (below) into account (Cogan and Tadmor, 181). The concluding phrase is missing from the Lucianic recension of the Septuagint. Apparently Jotham died close to the time of his father’s death. According to II Kings 15:5, he was coregent with his father after the latter had contracted a dread skin disease (*zara’at*; traditionally but inaccurately rendered “leprosy”), and was isolated outside the city, while Jotham was “in charge of the palace” (*al ha-bayit*), and thus was actually second in rank to the king.

According to II Chronicles 27, Jotham built cities and fortresses and engaged the Ammonites in battle to defend Judah’s claims in Trans-Jordan. He was successful in subjugating the Ammonites to Judah and in collecting tribute from them for three years (II Chron. 27:5). The rule of Judah in Transjordan is attested indirectly by I Chronicles 5:17, which tells of the census of the tribes of Israel in the area during the reigns of Jotham king of Judah and Jeroboam king of Israel. The notice that “the Lord began to send Rezin ... and Pekah ... against Judah” (II Kings 15:37) may indicate that the King of Israel and the King of Aram were responding to Jotham’s expansionist moves (Cogan and Tadmor, 182–83). The prosperity of the country during his reign enabled him to undertake projects of fortification throughout the country. The general description given by the Chronicler is that Jotham continued his father’s work. He fortified the wall of the Ophel in Jerusalem (II Chron. 27:3) and undertook repairs and made additions in the Temple area (*ibid.*, II Kings 15:35). The Chronicler contrasts the piety of Jotham with the impiety of his father Uz-

ziah, whose skin disease he attributes to Uzziah's attempt to usurp priestly functions (11 Chron. 26:16–21). According to Josephus, Jotham built chambers in the Temple and possibly raised the height of the building.

[*Encyclopaedia Hebraica* / S. David Sperling (2nd ed.)]

In the Aggadah

Jotham was one of the most righteous of the kings of Judah. He loyally observed the fifth commandment by being content to act as regent during his father's reign, without even aspiring to the throne. Moreover, he always gave a ruling in his father's name. Simeon b. Yoḥai referred to Jotham's piety in the statement: "I alone am able to exempt the world from judgment from the day I was born until now; were my son Eliezer with me, we could exempt it from creation until now; and were Jotham with us, we could exempt it from the creation of the world until its end" (Suk. 45b).

The difficulties presented by the conflicting scriptural datings of the reigns of Amaziah and Jotham are explained by the statement that Jotham ruled for 20 years during the illness of his father, Uzziah. The scriptural reference to the 20th year of Jotham's reign (11 Kings 15:30), as against the statement that he reigned only for 16 years (11 Chron. 27:1), is resolved by pointing out that because of his piety four years were deducted from Ahab's reign and added to those of Jotham (SOR 22).

JOURNALISM.

Jews have played a major role in journalism since the early years of the profession. Publishers, editors, columnists, and reporters contributed to the development of political analysis, mass circulation techniques, methods of worldwide news gathering, chain journalism, and techniques that deepened the influence and impact of the written word. The overall number of Jews engaged in journalism in various countries is actually small. The significance of their contributions is readily apparent, however, in any examination of the relatively new, constantly changing and developing field of communications.

There have been Jews who distinguished themselves in journalism by their direction of some of the leading and most influential papers of the day. In the United States there were Adolph S. *Ochs and Arthur Hays *Sulzberger of *The New York Times*, Joseph *Pulitzer of the *St. Louis Post-Dispatch*, *The World*, and the *Evening World*, and Samuel *Newhouse, newspaper chain owner; in Germany, Leopold *Ullstein and Bernhard *Wolff; in Britain, Baron Paul Julius *Reuter of the news agency bearing his name, Lord *Southwood of the *Daily Herald*, and Joseph Moses Levy and his son Lord Burnham (see *Lawson family) of the *Daily Telegraph*, the newspaper

which, selling at a penny and aiming at popular appeal, started the trend toward brighter newspapers. In the 1890s Rachel *Beer edited two leading London weeklies owned by her husband. The overwhelming majority of publishers and editors, however, were and are non-Jewish, notwithstanding the old canard that the world's press is controlled by Jews. Jews entered the main currents of journalism when they entered the mainstream of life in Europe. In the late 18th century, emancipation broke down the ghetto walls and Jews were able to enter a world from which they had been excluded.

Modern journalism was born after the French and American Revolutions. The freedom to think, to speak, and to write sought expression in the journals then developing, which were read by the rapidly growing educated and semi-educated population of the cities and towns. The Jew emerging from the ghetto was thus in the right place at the right time. German Jews, excluded before 1848 from the professions for which they had been trained, were disproportionately prominent in journalism during this early period and tended to advocate "radical" liberal views. His gift of adaptability permitted the Jew to act as an intermediary, the link between the event and the reader, as the journalist has often been called.

Jewish journalists were active during the 19th century in Austria, Czechoslovakia, Germany, and Hungary, and to a somewhat lesser degree in the United States, England, France, and Romania. Small numbers also worked with the general press in Scandinavia, the Baltic states, Italy, Belgium, Russia, the Netherlands, Spain, Portugal, the Balkans, and Switzerland. Involvement of the Jew in journalism in other areas of the world came later. The activities of Jewish journalists were proscribed, of course, in those countries where antisemitism was practiced officially during the 20th century. Jewish journalists and publishers who led some of Germany's most important newspaper enterprises became the special targets of the Nazis. Some were killed; others fled their homeland to practice their craft in a different land. For at least two decades the voice of Jewish journalists was stilled in Germany and for years also in countries overrun by the Germans.

In the United States, Jews became part of the developing journalism of the new land early in its history. But it took almost a century and a half for any measurable numbers of Jews to enter the profession. Jewish engagement in journalism in the United States began with Mordecai Manuel *Noah, editor of the *Enquirer* in New York. Similarly, in Europe, Jewish participation began almost with the birth of modern journalism.

The impact and influence of Jews on the general press increased markedly during the 19th and 20th centuries. Jews did not work as Jews. In Europe, talented Jewish writers turned to journalism as the best means of expressing themselves. The emancipated mind and spirit often eschewed such traditional forms of expression as poetry and fiction in favor of journalism, which had brightness and novelty. In Germany and Austria, Jewish influence in the new craft was marked by the contributions of such outstanding men as Heinrich *Heine and

Ludwig *Boerne (in the *Augsburger Zeitung*), and Karl *Marx (in the *Rheinische Zeitung*), and by the efforts of Daniel Spitzer (1835–93) and Moritz *Saphir, by the work of Theodore *Herzl, Max *Nordau, and Alfred *Polgar. David Kalisch founded *Kladderadatsch* in 1848 and made it famous as a satirical journal. His collaborator was the poet Rudolf Loewenstein.

Important publishing enterprises were begun by Rudolf *Mosse, who in 1872 founded the *Berliner Tageblatt*; Leopold *Sonnemann, who founded the *Frankfurter Zeitung* in 1856; and Leopold Ullstein, publisher, whose *Morgenpost* reached a circulation of 600,000. Herzl, Nordau, and Spitzer wrote for the *Neue Freie Presse* of Vienna, making it one of the outstanding journals of its day. Eduard Bacher was its publisher. Moritz Saphir published the witty paper *Der Humorist* (1837), and Polgar won a reputation through his contributions to *Die Weltbuehne*. Bernhard Wolff founded the Wolff Telegraphic Bureau in 1848.

This fruitful period of the 19th century was also marked by the journalistic work of Gabriel *Riesser, Johann *Jacoby, and Edward *Lasker. The primary contribution of the most famous of these was in the form of the feuilleton, a personal essay or commentary that has no precise counterpart in present-day journalism. The feuilleton was marked by a highly personal character and a well-developed style. In America only Simeon Strunsky could be said to have reflected this special skill. Several decades later the field attracted such names as Karl *Kraus, Egon Erwin *Kisch, Kurt *Tucholsky, Theodore *Wolff, who served as editor in chief of the *Berliner Tageblatt*, and Georg *Bernhard, editor in chief of the *Vossische Zeitung*. The early 20th century also saw the development of a large group of art, music, and drama critics, such as Alfred *Kerr, who produced a quantity of creative criticism which influenced and fostered the arts.

In Great Britain, first mention of a Jewish journalist is made by Oliver Goldsmith in his *Haunch of Venison* (1776). Emanuel Samuel (d. 1818) contributed to the *Morning Post* as early as 1786 and later worked in *The World*. He is the first Anglo-Jewish journalist on record, followed at the end of the century by Lewis *Goldsmith, a vigorous political writer and propagandist. The contribution of Jews was greater in publishing and organizing than in writing. Men like Ralph D. *Blumenfeld of the *Daily Express*, Lord Burnham (Levy), founder of the *Daily Telegraph*, Paul Julius Reuter, founder of Reuter's news agency, and Lord Southwood (Elias) of the *Daily Herald*, were among the builders of the modern British press. Other important names in British journalism were Sidney *Low, editor of the *St. James Gazette*, Lucien *Wolf, foreign editor of the *Daily Graphic*, Henri Georges Stephane Adolphe Opper de *Blowitz, correspondent of *The Times*, and Bernard Falk, editor of the *Sunday Dispatch*. While a number of leading columnists in the British press in recent years have been Jewish, such as *The Times'* Bernard *Levin, Jewish ownership of the British press in recent decades has been slight, with only the ill-fated period of ownership of the *Daily Mirror* by Robert *Maxwell being an exception. In the 1990s the *Daily Telegraph*

was owned by the non-Jewish but strongly pro-Zionist Canadian, Conrad Black (Lord Black of Crossharbour), whose Jewish wife, Barbara Amiel, had an influential pro-Israeli column in the paper.

In France, Jewish journalists were concerned primarily with politics, although several were active in literature. Perhaps the nation's foremost journalist was Leon *Blum, who did his principal journalistic work in the period 1920 to 1939 in such papers as *L'Humanité* and *Le Populaire*. Blum, Joseph *Reinach, and Bernard *Lazare were three of France's greatest journalists at the turn of the 20th century. Other French journalists of repute were Marcel Hutin of *L'Echo de Paris* and *L'Epoque*, Pierre Lazareff, general director of *Paris Soir*, George London of *Le Journal*, Jacques Kayser of *La Dépêche de Toulouse*, Arthur Meyer of *Le Gaulois*, and Louise Weiss of *L'Europe nouvelle*.

In Italy, with its relatively small Jewish population, Jewish journalists made important contributions to the country's liberal movements. Among the most prominent were Cesare Rovighi; Angiolo *Orvieto, who with his brother Adolfo founded the Florentine weekly, *Il Marzocco*; Giacomo Dina, editor of *Opinione*; Salvatore *Barzilai, foreign editor of *La Tribuna*; and Margherita Sarfatti, literary editor of *Il Popolo d'Italia*, who became a member of Mussolini's inner circle.

In Russia and Poland where the suppression of Jews was a continuing governmental policy, several journalists of importance emerged. During the Bolshevik period, many Jewish revolutionaries engaged in newspaper work for political purposes, and Ilya *Ehrenburg won international fame as a journalist of uncommon ability. In Poland the name of Isaac Ignac *Schwarzbart stands out with those of Wilhelm Berkelhammer, Joseph Perl, and Florian Sokolow. Schwarzbart directed the most important paper in Lvov. In Scandinavia, Jews held important posts on papers in Denmark. Among the journalists were Carl *Brandes, who helped to found *Politiken*, M.A. *Goldschmidt, Moritz Nathansen, and Gottlieb Siesby. In Holland, Marcus van Blankenstein, Louis de *Jong, Eduard Elias, Joseph F. Stoppelman, and Arnold Vaz Dias were important.

Jews entered the general Hungarian press during the 1840s when newspapers appeared mainly in German. Active in liberal organs and in the production of pamphlets which preached assimilation, most of them changed their faith. In the revolution of 1848, they attained high posts in the government service. After 1867, the year of "The Compromise" (which ended Austrian domination) and the year of emancipation of Hungarian Jewry, Jews had an important part in the founding of a modern press and its technical organization. Jews worked on almost every paper (except those openly antisemitic), from the nationalist papers which preached complete assimilation for all minorities to the radical and socialist, where the Jews were in a majority. In 1910, out of 1,214 journalists in Hungary, 516 were Jews; but in 1920 their number had dropped to 358, and continued to fall. From 1938 onward Jews were ousted from editorial posts under the provisions of antisemitic legislation; only a small percentage retained their jobs. During

the first hours of the German invasion in 1944, the Hungarian Nazis, using prepared lists, hunted down the Jewish journalists still at work and had them sent to the extermination camps. From 1945, during the period of the coalition administration, which was set up after World War II, Jews regained important positions, especially in the socialist and communist press; but after the rise of the communist regime they tried to conceal their Jewish identity.

Unlike the European press (primarily concerned with ideas), the press in the United States focuses its attention on information and news. It is chiefly devoted to reporting the events of the world and not to the propagation of opinions. Jews became active in journalism not long after the first papers made their appearance in the colonies (1704–30). In the first quarter of the 19th century Mordecai Noah was the editor of the *City Gazette* of Charleston, South Carolina and later the editor and publisher of the *New York Enquirer*. Noah also helped James Gordon Bennett to establish the *New York Herald* in 1835. A visionary and dreamer with a Zionist ideal long before the word itself was invented, Noah may be said to have been the first important Jewish journalist in the New World. He was among the first to attempt to enliven his paper for the benefit of the ordinary reader. As in Europe, Jewish journalists participated in all sections – in publishing, chain journalism, circulation techniques, and writing. Their overall numbers are small. Of the 1,800 dailies published in the United States at the end of the 20th century about 50 were owned by Jews, among them some of the most influential – *The New York Times*, *The Daily News* in New York, and the 22 papers owned by Samuel I. Newhouse.

As on the Continent, it is difficult to define the distinctive Jewish contribution. Most Jewish journalists on the staffs of the general press were entirely integrated into American newspaper routines. An early figure of importance was Edward *Rosewater, who worked during the second half of the 19th century in Nebraska as a correspondent and owner of the *Omaha Bee* (1871). The earliest papers in the New World were commonly called penny papers. They were sensational in their treatment of news, and their attitude was to influence the journalism of two outstanding American Jewish publishers, Joseph Pulitzer and Adolph Ochs, whose papers were among the most important in the nation.

Pulitzer purchased *The New York World* in 1883 after having followed an aggressive policy in earlier penny-paper journalism, both in news and editorial columns. He engaged in numerous crusades, one of the most important of which was the exposure of the mismanagement of life insurance companies in New York City. He introduced political cartoons, striking illustrations, colored pictures, and colored comics. The circulation of *The World* rose and in 1886 it claimed the largest circulation of any newspaper in the United States – 250,000. Pulitzer and William Randolph Hearst, who had purchased the *Morning Journal* in 1895, vied with each other in sensationalism. Their rivalry gave rise to the expression “yellow journalism.” Pulitzer was an ardent believer in professional training,

and provided a large endowment for a school of journalism, which was opened at Columbia University in 1912, as well as for the prizes in journalism and the arts that bear his name. Adolph Ochs took another road. When he became publisher of *The New York Times*, he issued a statement of purpose under a signature that is still the basic credo of the paper: “... to give the news impartially, without fear or favor, regardless of any party, sect or interest involved...” Ochs recognized that New York was beginning to tire of sensationalism and he promised to give straight news as fast as, or faster than, any other paper. He thought of *The New York Times* as a kind of public institution of which he had only temporary charge, and was fiercely determined that no individual, or favored group, would ever use it selfishly or for self-glorification. When he died he was succeeded by his son-in-law, Arthur Hays *Sulzberger, whose youngest son, Arthur Ochs Sulzberger, became publisher in 1963. His son, Arthur Sulzberger Jr., succeeded him and was publisher and chairman of the board of the New York Times Company, a publicly traded corporation, through the early years of the 21st century. The latter Sulzbergers, along with their advisers and editors, including Executive Editor A.M. *Rosenthal, played prominent roles in putting *The Times* on a sound financial footing, in uncovering government misfeasance, and in furthering the aims of a free press.

In the early 1970s *The Washington Post*, under Katharine Graham, took the lead in exposing an attempted cover-up of the break-in at Democratic Party headquarters in the Watergate office complex in Washington. That reporting, by the team of Robert Woodward and Carl *Bernstein, got Graham's personal backing and eventually resulted in the resignation in 1974 of President Richard M. Nixon in disgrace. During that period, *The New York Times* came into possession of a secret history of the war in Vietnam, which came to be known as the Pentagon Papers when it was published at great length in 1973. The Nixon administration tried to suppress publication of the historic documents and their analyses on the grounds of national security, but the United States Supreme Court upheld the right of the press to publish the information. The case was a landmark ruling against prior restraint of the press, and its champion was *The Times*.

Other important Jewish figures in American journalism include Emanuel Philip Adler who founded the Lee Syndicate, a chain of papers in the Midwest; Eugene *Meyer, former owner of *The Washington Post*; Paul Block (1877–1941), who helped to foster the growth of chain journalism; Moses *Koenigsberg, the creator of the King Features Syndicate; Walter *Annenberg, publisher of *The Philadelphia Inquirer*; J. David *Stern, owner and publisher of papers in Camden, NJ, and Philadelphia; Dorothy *Schiff, owner and publisher of *The New York Post*; Edwin S. Friendly who served on the former *Evening Sun*; Herbert Bayard *Swope of *The World*; and Harry *Golden who, in the 1950s, achieved the distinction of making his *Carolina Israelite* a weekly with general readership. After Dorothy Schiff's death, *The Post* changed hands a few times. The other major New York City newspaper, *The*

Daily News, was bought by Robert Maxwell in 1991 and then, with the paper in bankruptcy, shortly afterward by Mortimer Zuckerman, a Boston builder and the publisher of the magazine *U.S. News and World Report*. *The Post* and *News* became embroiled in a bitter advertising and circulation war in the first years of the 21st century.

Jews scored successes in two special areas of American journalism – commentary on current affairs and the “gossip” column. In the first, Walter *Lippmann, Arthur *Krock, and David *Lawrence commented on domestic and foreign affairs in some of the nation’s most important journals, winning attention in world capitals. As gossip columnists, Walter Winchell, Leonard Lyons (d. 1976), Louis Sobol, and Sidney Skolsky (d. 1983) attracted a wide readership and developed an influence by their reporting on the lives of stage and screen personalities, government officials, and public and political figures. Identical twin sisters from the Middle West, Pauline Esther Friedman, writing as Abigail Van Buren, and Esther Pauline *Lederer, writing as Ann Landers, dispensed homespun advice in their newspaper columns, each appearing daily in over 1,200 newspapers and reaching 20 million readers. Each received 10,000 letters a week for help, and both sisters dispensed blunt, common-sense remedies for most of the second half of the 20th century. Other Jewish journalists were active as foreign correspondents and as writers on science, economics, politics, and sports. Among American journalists, Franklin Pierce Adams, Meyer Berger, and Ben *Hecht had especially keen eyes for the unusual. In sketching the human condition they successfully translated the stories of ordinary people into newspaper prose of high quality. As Jews assimilated into the mainstream of American life, they rose to prominent positions in journalism. Rosenthal of *The Times* was succeeded by Max *Frankel, who was succeeded by Joseph *Lelyveld. All had been star reporters and winners of the Pulitzer Prize. And Thomas L. *Friedman of *The Times* became the most influential foreign affairs columnist as well as the first reporter to win a Pulitzer for reporting on Lebanon and another for reporting from Israel. At least one Jewish American journalist lost his life, Daniel *Pearl of *The Wall Street Journal*, while affirming his faith.

The participation of Jews in Latin American journalism began at an early stage of their immigration. Since the publications for which they wrote were oriented toward the Jewish public, the newspapers, journals, and publications in general were in Yiddish during the first years, and with the immigration from Central Europe in the 1930s, also in German. However, publication in Spanish and Portuguese commenced very quickly, and these became the main languages of communication in the community framework with the decline of Yiddish.

Jews were active in general journalism in almost all the Latin American countries. Some of them achieved prominent positions and can be considered pioneers in their field. The first Jewish journalist who published in Argentina in a general daily was Enrique Lipschutz (1864–1937), who wrote in

La Prensa from 1895. After him, many Jewish journalists and writers published in general newspapers and journals and some of them also became section editors and also chief editors. One of them was Alberto Gerchunoff (1884–1950), who was with the leading daily *La Nación* for 40 years and part of the time was its editor in chief. Other leading journalists were Bernardo Verbitsky (1907–1979) in *El Mundo* (his son Horacio Verbitsky became editor in chief of *Página 12*), Santiago Nudelman (1904–1961) editor in chief of *Crítica* from 1958, and Antonio Portnoy at *La Gaceta*. In the 1960s and 1970s one of the best-known journalists was Jacobo Timerman (1923–1999). In the 1960s he founded and directed two successful current affairs magazines, *Primera Plana* and *Confirmado*, and in 1970 the daily *La Opinión*, which tried to be a new kind of newspaper in the style of the French *Le Monde*. Timerman became known worldwide when was kidnapped by the military junta in 1977. International pressure, especially from the U.S. and Israel, led to his release in 1979. In those years of dictatorship the weekly *Nueva Presencia* (1977) was founded, which started as a Spanish offshoot of the Yiddish daily *Di Prese*. Under the editorship of Herman Schiller, it adopted an opposition stance against the repression in Argentina. This journal became one of the referents of the Argentinean Human Rights Movement, and Schiller, who participated in the organization of the Jewish Movement for Human Rights, was recognized as one of its leaders.

In the early 21st century there were many well-known Jewish journalists who published in the printed press as well as in the electronic media – radio, television, and the internet. These included José Eliashev, Marcelo Zlotogwiazda, Ernesto Tenenbaum, Roman Lejtman, Martín Liberman, and Juan Pablo Varsky.

Jews were prominent in Chilean journalism. Ana Al-bala-Levy was editor of *Las Últimas Noticias* of Santiago; her husband, Robert Levy, wrote for many newspapers and journals; Max Dickmann, was literary and managing editor of *El Ateneo* of Santiago and an author of substantial reputation; and Marcos Chamudes was chief editor of the magazine *Política, Economía y Cultura* (PEC) and later of the newspaper *La Nación*.

In Brazil Jews were prominent as journalists as well as entrepreneurs in the news media. One of the most important media companies was Bloch Editores owned by Adolfo Bloch, which at its peak included 25 magazines, among them the famous weekly *Manchete*, six radio stations, and a TV network, *Rede Manchete*. Two important Jewish journalists collaborated in many stages of their career with this group. Zevi Ghivelder (1934–) worked for many years for the magazine *Manchete* and directed the news magazine on its TV network, also publishing numerous books that won national prizes. Henrique Veltman (1936–) was editor in chief of Bloch Editores publications from 1971, including the magazine *Manchete*, and was also editor in chief of the most important newspapers of Rio de Janeiro – *Última Hora* and *O Globo*. Both of them were much involved in Jewish community life and Zionist action. Also

Naum Sirotzky was editor in chief of *Manchete* in the 1950s. Alberto Dines (1932–), who started his career as a journalist with *Manchete* under Naum Sirotzky, became one of the most prominent and innovative in the field. As a professional who combined writing and news photography, he was editor in chief of many major newspapers, such as *Jornal do Brasil* and the *Folha de São Paulo* branch in Rio de Janeiro. Besides teaching journalism in many universities, he developed a new kind of journalistic criticism in Brazil with *Observatorio da Imprensa* on TV programs and the internet. Diane Kuperman (1949–), a journalist at *Jornal do Brasil* and director of the Instituto de Comunicação Social da Universidade Gama Filho, and Osias Wurman (1950–), a journalist at *O Globo* and *Jornal do Brasil*, were also the leaders of the Jewish Federation of Rio de Janeiro.

Samuel Wainer (1912–1980) is also considered one of the professionals responsible for a revolution in Brazilian journalism. In 1930 he started his career at *Diário de Notícias* and in 1938 he founded the monthly magazine *Diretrizes* with an agenda in politics, culture, and economic affairs. In 1971 he founded the magazine *Domingo Ilustrado* as part of Bloch Editores, and in 1973–75 was editor in chief of *Última Hora* of São Paulo. From 1977 he was a member of the editorial board of *Folha de São Paulo*.

Arnaldo Niskier (1935–) was, in addition to his more than 40 years in journalism, a teacher at the University of Rio de Janeiro State and secretary of the state for science, technology, education, and culture. He was also chairman of the Academia Brasileira de Letras.

One of the most prominent journalists in Mexico was undoubtedly Jacobo Zabludovsky (1928–). He started his career in 1946 as assistant editor of news magazines at Cadena Radio Continental. In 1950, at the very beginning of TV transmissions in Mexico, he initiated the production and direction of the first professional news magazine on Mexican television, and subsequently directed and presented many news magazines. He also directed the cinema news magazine *El Mundo en Marcha*, wrote for the newspapers *Observaciones* and *Novedades*, for the weeklies *Claridades* and *El Redondel*, and from 1959 edited the magazine *Siempre*. He held official posts in radio and television and also wrote many books on politics and the Mexican media and containing interviews with Mexican painters.

There were also important contributors to the local press like Luis Rubio, Ezra Shabot, Enrique Krauze, Hellen Krauze, and Alberto Musacchio, all of them on the daily *Reforma*, and Esther Shabot on *Excelsior*. Enrique Burak and Abraham Faltelson are sports journalists on TV.

In Canada, Jews were prominent in all facets of the journalism professions, and in ways unimaginable even 30 years ago. In 2000, the Asper family acquired the Hollinger media holdings, thereby controlling a large number of newspapers both in Canada and abroad, including the *National Post*, one of Canada's two English-language newspapers. They also own Global Television Network, Canada's second large indepen-

dent television network. Another Jew, Edward Greenspon, is the editor in chief of Canada's other major national English language paper, *The Globe and Mail*. Michael Goldbloom is the current publisher of the *Toronto Star*, which is the largest mass circulation newspaper in Canada. Jews are also prominent as reporters, columnists, and feature writers in newspapers across the country, and have achieved a high profile in the electronic media. Peter C. Newman, Joe Schlesinger, William Weintraub, Barbara Frum, Simma Holt, Robert Matas, Michelle Landsberg, Rick Salutin, Ralph Benmergui, Avi Lewis, and Naomi Klein, to name only a few over the last four decades, have become journalistic icons in Canada.

In Australia, an outstanding newspaper owner and builder was Theodore *Fink. In recent decades, none of Australia's newspapers had a Jewish owner, although Michael Gawenda, a Melbourne Jew, was editor of the *Melbourne Age* from 1996 to 2004.

In South Africa, the leading weekly *The Sunday Times* was edited (1912–40) by J. Langley Levy. From 1960 the same paper was edited by Joel Mervis and its companion paper the *Sunday Express* by Meyer Albert "Johnny" Johnson from 1961. Johnson subsequently assumed the editorship of the conservative daily *The Citizen* in 1979. In 1987, the left-leaning weekly *Weekly Mail* (later *Mail & Guardian*) was founded by Irwin Manoim and Anton Harber.

[Kalman Seigel / Stewart Kampel, Richard Menkis, Harold Troper, William D. Rubinstein, David Saks, and Efraim Zadoff (2nd ed.)]

JOY, a term used to render into English a number of Hebrew words expressing a response of pleasure to persons, things, situations, and acts. Commenting on the phrase, "We will be glad and rejoice in thee," the Midrash (Song R. 1:4) notes that there are ten words used in the Bible to describe Israel's pleasurable response: "Israel is summoned by ten expressions of rejoicing, *gilah*, *sisah*, *simhah*, *rinnah*, *piṣṣah*, *zahalah*, *alzah*, *alizah*, *hedvah*, *teruah*." The primary root used is *smh*, occurring as a verb and as a noun. On the level of interpersonal relationships it covers a range from sexual enjoyment: "and have your pleasure [*u-semah*] with the wife of your youth" (Prov. 5:18); to a satisfactory political arrangement: "rejoice in Abimelech and let him rejoice in you" (Judg. 9:19); and social status: "there is nothing better for a man than to be happy in what he is doing, since that is his lot" (Eccles. 3:22). This word also refers to a particular response on the part of man, as when letters and gifts were sent by the king of Babylon, "and Hezekiah was pleased [*va-yismah*] with them" (Isa. 39:2). There is, too, a kind of joy which is judged negatively: "Rejoice not [i.e., have not malicious joy; *a'l tismehi*] against me, O mine enemy" (Micah 7:8); "because you clapped your hand and stamped your foot and rejoiced [*va-tismah*] with all your disdain against the land of Israel" (Ezek. 25:6).

The Bible often warns that purely worldly pleasure brings sorrow, tears, and suffering: "Even in laughter the heart acheth; and the end of mirth is heaviness" (Prov. 14:13). Joy is, however, not an emotion experienced solely on this level. It is viewed in

the Bible as a true response to divine action: “I rejoice in your saving action” (1 Sam. 2:1); “Be glad and rejoice, for the Lord has done great things” (Joel 2:21). Man’s presence in the Temple was considered reason for such a response: “And you shall rejoice before the Lord seven days” (Lev. 23:40); “I rejoiced when they said unto me; let us go into the house of the Lord” (Ps. 122:1). The divine commandments, too, are viewed as a source of human joy (Ps. 19:9). In addition, even nature is called upon to respond joyfully to the divine presence (1 Chron. 16:31–33; Ps. 97:1). Joy is even thought of as a response which is proper to God: “Let the Lord rejoice in His works” (Ps. 104:31), and its absence is caused by human misbehavior: “Therefore the Lord shall have no joy in their young men” (Isa. 9:17).

The biblical themes were taken over by rabbinic Judaism and developed in terms of the changed and changing situations of the community. This is particularly noticeable in the period following the destruction of the Temple. The disasters of the period, reflected in extra-biblical literature as well, provided an impulse for a negative judgment on life in the world, and the rise of radical asceticism. Thus rabbinic Judaism warned against the rejection of the world, but at the same time against making the world the sole source of joy. R. Eliezer ha-Kappara viewed self-affliction, i.e., refraining from legitimate pleasure, as a sin similar to that for which the Nazirite was required to bring an atoning sacrifice (Sif. Num. 30; see *Asceticism). Some rabbis went so far as to say that, “He who has seen something pleasant and not enjoyed it will be held responsible” (Yal. Ps. 688). However, the truest source of joy was understood to lie in the performance of the divine commandments (*mitzvot*). In connection with the apparent contradiction between Ecclesiastes 8:15: “then I commended joy,” and 2:2: “and of joy I said what does it accomplish?” it was taught (Shab. 30b) that the first phrase refers to the joy present in the performance of a commandment (*simḥah shel mitzvah*), while the second refers to joy which is unconnected with such an act. It must be noted, therefore, that Judaism in this period, while rejecting radical asceticism, did not endorse sensualism. Perhaps the best statement of the disciplined joy prescribed by rabbinic Judaism is found in the comment on Deuteronomy 14:2: “‘For you are a people consecrated to God.’ Sanctify yourselves even in that permitted you: things allowed to you, but forbidden to others, do not regard as permissible in their presence” (Sif. Deut. 104; see C. Montefiore and H. Loewe, *A Rabbinic Anthology* (1963), 202–3, 523–9). Joy was stressed in many aspects of Jewish life, especially those concerned with the observance of practical commandments. In public observances it was particularly connected with the Sabbath and certain festivals including *Purim, *Sukkot, and *Simḥat Torah – in Temple times – with the Water Drawing Festival (of which it was said that a person who had not witnessed this festival had never witnessed real joy; Suk. 5:1), and in the modern period, with Israel Independence Day. In private circles, there were many joyous occasions of which the outstanding were the circumcision, bar mitzvah, and wedding ceremonies and festivities. Matrimony was regarded as a precondition for

happiness and “the man who lives without a wife lives without joy” (Yev. 62b).

While the element of joy was never totally absent from the life of the Jewish community (see I. Abrahams, *Jewish Life in the Middle Ages* (1932), passim), ascetic and restrictive attitudes and practices did hold sway during the Middle Ages.

In the pietist revival of 18th century *Ḥasidism, the emotional quality of joy was once again renewed. Thus, while eating, drinking, sleeping, and the other ordinary functions of the body are regarded by the older Jewish moralists as mere means to an end, to the Ba’al Shem Tov, Ḥasidism’s founder, they are a service of God in themselves: “All pleasures are manifestations of God’s attribute of love” (S. Schechter, *Studies in Judaism*, 1 (1911), 28). For the Ba’al Shem Tov “weeping is evil indeed, for man should serve God with joy. But if one weeps for joy, tears are commendable” (L.I. Newman and S. Spitz, *The Ḥasidic Anthology* (1963), 204). More than a hundred years later, R. *Ḥanokh of Aleksandrow underscored Ḥasidism’s emphasis on joy with these words: “Do you wish to know how important it is to be full of joy at all times? Moses enumerated a long series of curses (Deut. 28) and then remarked in verse 47, ‘because you did not serve the Lord your God with joyfulness, and with gladness of heart’” (Newman and Spitz, 202).

Hermann Cohen (*Religion der Vernunft* (1929), 540) saw in the joy of the Sabbath “the symbol of the joy that will spread throughout humanity when all men will be free and ready to serve in the same way...” It is this joy, the joy of the messianic era, that will disclose the reality of peace as a dynamic quality of the human spirit.

[Lou H. Silberman]

JÓZEFOWICZ (also **Ezofovich**), family of financiers prominent in Lithuania during the early 16th century. Its founder, JOSEF RABCHIK (Rebi), from whom the additional name of the family Rabinkovich (Rebichkovich) derives, was the tax collector of Kiev. In 1482, after the capture of Kiev by the Tatars, he settled first in Lutsk and later in Brest-Litovsk, where he continued to engage in commerce and the leasing of the state incomes. Of his three sons, ABRAHAM JAN EZOFOVICH (c. 1450–1519), was a merchant and tax collector and successful head of the treasury (*Podskarbiak Litewski*) of the grand duchy of Lithuania (1509–18). Having left Kiev with his father in about 1488, he became an apostate, converting to the Orthodox Church, and entered the service of the grand duke of Lithuania. In 1494 he was appointed commander of the fortress of Kovno. From 1496 he leased or administered customs stations and the collection of taxes in Smolensk, Polotsk, Minsk, Novogrudok, Kovno, and Vilna. Over the years he accumulated a vast fortune, in part from the income derived from gifts of land granted him by the grand duke. From 1507 he served as court banker in Lithuania for King Sigismund I, when he was granted a title of nobility. During the last years of his life, Abraham acquired, with the consent of the king, additional estates in various places, and even ownership of the town of Solec in the province of Sandomierz, in Poland. In 1519 the

king still owed Abraham the sum of 12,000 zlotys. He left two sons and a daughter who became Catholics.

His brother MICHAEL EZOFOVICH (d. c. 1529), merchant, banker, and agent of King Sigismund I, was also appointed the elder (senior) of the Jews of Lithuania. Until 1519 he traded in grain, wax, textiles, furs, jewelry, and ironware in partnership with his brother Isaac. When the partnership was liquidated they owned, in addition to valuables and large amounts of money, considerable real estate in houses and lands. The apportionment of these between the brothers was confirmed by the king in 1527 upon the request of Isaac Ezofovich. Michael Ezofovich became one of the leading tax collectors and lessees of the state incomes of his time. At first he supervised the customs administration of Brest-Litovsk (1506) and the provinces of Volhynia and Podolia. Later, in conjunction with partners, he rented the state incomes in additional provinces. After the death of his brother, Abraham Jan, the king effectually appointed him over the customs administration of the whole country. He succeeded in raising the revenues by carrying out stringent controls on the roads. To strengthen his position, his headquarters and residence were established in the fortress of Brest-Litovsk. He granted loans in exchange for pledges in real estate. In 1514, by royal authorization, Michael built a bridge over the River Bug, near the town of Drohiczyń, and was granted the right to collect tolls. In 1514 he was appointed elder (senior) of the Jews of Lithuania to facilitate tax collection and impose a central leadership over the Jews of the grand duchy. The same considerations motivated the appointment of *Abraham Judaeus Bohemus and Moses *Fishel in Poland. Despite the wide powers granted to them, and their activity on behalf of the community, the appointed leadership was resented by the Jews and failed to gain their acceptance. Michael did much for the Brest-Litovsk community, which was to become the most important in Lithuania, thanks to the foundation laid by him. Of his sons are known Moses (who held rabbinical office), Abraham, Chemio, and Ducko (David?).

[Arthur Cygielman]

JUAN (Poeta), DE VALLADOLID (c. 1420–after 1470), Spanish *Marrano poet, nicknamed “el judío.” As many of the 15th-century cancioneros clearly show, Juan Poeta was long a center of controversy and a butt for satire, owing to the ambiguity of his religious position. Antón de *Montoro sneered at his humble origins, while others maintained that he was “neither a Jew nor a Christian, but an excellent Marrano.” He is reputed to have been an astrologer and to have enjoyed the favor of Queen Isabella. While on a voyage to the Holy Land, Juan Poeta was said to have been captured by Moslems and

to have embraced Islam, for which reason he was bitterly attacked by Gómez Manrique. Like other members of his family, Juan Poeta seems to have retained or reverted to his ancestral Jewish traditions, at least after he left Spain. He was one of the group of poets associated with Alfonso V of Aragon in Naples, and a number of his poems appear in the *Cancionero* of Juan Alfonso de *Baena and in other collections of the period.

JUAN DE CIUDAD (15th century), Castilian Converso. In 1465 Juan and his son arrived at Huesca in Aragon, then the main center in Spain of Jewish activities for encouraging Conversos to return to Judaism. Juan approached the *hakham* Abraham *Bibago and his circle, and after they had become convinced of his sincerity, he and his son were circumcised in a festive ceremony. Subsequently they immigrated to Erez Israel, as customary among many Conversos who regarded this as a means of atonement for adopting Christianity. In 1489 the community of Huesca was charged by the Inquisition with helping Conversos to return to Judaism, the chief indictment being responsibility for the reversion of Juan de Ciudad. The inquisitors arrested the Jews who had been present at the circumcision ceremony, including prominent members of the community such as R. Isaac *Bibago, the brother of Abraham, R. Abraham Almosnino, and others, who confessed their action under torture. At the end of that year the accused were sentenced and burned alive, except Isaac Bibago, who in return for adopting Christianity was strangled before being committed to the pyre.

JUAN DE ESPAÑA (El Viejo); c. 1350–c. 1420), Spanish Marrano poet and controversialist. Born in Villamartín, Juan de España apparently embraced Christianity under the impact of the preaching of Vicente *Ferrer, but may also have been influenced by the arguments presented by the apostate Geronimo de Santa Fé at the Tortosa disputation (1413–14). An accomplished talmudist, Juan de España became a fervent apologist for his adopted faith and turned his rabbinic knowledge against the Jews. His experiences and opinions are contained in the *Memorial de los misterios de Christo* (1416), the original manuscript of which is in the Madrid National Library. His *Declaración del Salmo LXXII del Salterio* also bears the stamp of wide learning.

JUBAL (Heb. יִבְלַי), son of Lamech and Adah; mythical culture hero, inventor of “the lyre and the pipe” (Gen. 4:21) in the seventh generation after Adam.

ADD. BIBLIOGRAPHY: N. Sarna, *JPS Torah Commentary Genesis* (1989), 37.

JUBAR (Djobar), village N.E. of *Damascus; settled by an ancient Mustarabian (Arabic-speaking) Jewish community which was frequently mentioned by early travelers, such as *Pethahiah of Regensburg (1180) and Samuel b. Samson (1211). The community owned fields, orchards, and vineyards; in addition to farming, the Jews of Jubar worked as artisans and were engaged in commerce and peddling in the nearby villages. After the expulsion of the Jews from Spain, several families settled in Jubar. At the beginning of the 16th century the village had a population of approximately 60 families. There is an ancient synagogue located on top of a cave which tradition associates with the prophet Elisha. Damascus Jews attributed special powers to the synagogue and it was customary for them to hold Sabbath prayers there. The synagogue possessed a “Tāj,” or “*Keter Torah*,” i.e., an illuminated Hebrew Bible on vellum, written in 1252. The place is sacred to the *Karaites also. In the 20th century Jews ceased living there, but a beadle remained in charge of the synagogue and the large cemetery. Residents of Damascus and Jewish visitors from abroad continued their pilgrimages to the synagogue and the village; according to reports, there are several deeper layers of graves and tombstones underneath the visible tombstones in the cemetery, which date back to the early Jewish settlement.

[Abraham Haim]

JUBAYL (Djubayl, Jubail, Gebal-Byblos), a small town N. of *Beirut, *Lebanon. When Jubayl was annexed to the military province (*Jund*) of *Damascus at the beginning of the Muslim rule, there was a medium-sized Jewish community some of whose members were wealthy merchants. When the *Fatimid caliph al-Ḥākim issued (c. 1010) his decrees against the Jews and Christians, the Jews of Jubayl had their synagogue seized from them but were later authorized to rebuild it. In a document of the late 11th century, the community is mentioned as one of those visited by the messengers of the *nasi* *David b. Daniel in their attempt to gain recognition for him as exilarch. *Benjamin of Tudela found some 150 Jews in the town during the period of Genoese rule in the 12th century. Some documents concerning the Jews of Jubayl were found in the Cairo **Genizah*. After the return of the town to Muslim rule, the Jewish population decreased in numbers until it finally disappeared.

[Eliyahu Ashtor]

JUBILEES, BOOK OF, pseudepigraphic work dating from the middle of the Second Temple period. It purports to be the secret revelation of the angel of the “Divine Presence” to Moses, upon his second ascent to Mount Sinai.

Names

The original title of the book seems to have been: “Book of the Divisions of the Seasons According to their Jubilees and

their Weeks” (see R.H. Charles (ed.), *Fragments of a Zadokite Work* (1912), 20:1). It was later shortened to “The Jubilees” (οἱ Ἰωβηλαῖοι or τὰ Ἰωβηλαῖα) or “The Little Genesis” (ἡ λεπτή Γένεσις), but it was also given such incorrect titles as “The Testament of Moses,” and “The Apocalypse of Moses.” Although the original language of the book was Hebrew, all the extant versions (Latin, Ethiopic) are translations from the Greek, as is clearly evident from the exegesis of the proper names, scribal errors, etc. Several fragments, apparently in the original Hebrew, have been found in the Qumran caves.

Contents

The book is in the form of a monologue in the first person on the part of the angel of the “Divine Presence,” in which he recapitulates the contents of the Bible, at the same time providing an exact date for the events and stories, calculated according to the jubilee year, the sabbatical year and the year of the sabbatical cycle, and sometimes giving even the month and the day. Occasionally he remains entirely faithful to the biblical narrative, but more often he makes changes. He adds material, deletes, gives novel and different reasons for occurrences, and also adds names of wives to those of the men mentioned in the biblical narrative. Besides the new aggadic material (only some of which is hinted at or contained in talmudic and traditional midrashic sources), the author also makes halakhic innovations. According to the author, the Commandments were written on the “tables of heaven” before they were given to man. Some of them (such as circumcision, the Sabbath, and Shavuot) are also performed by the angels, and some were also kept by the patriarchs. The reasons given for the commandments frequently differ from those found in the Bible. In contrast to the traditional view, Shavuot is said to commemorate the renewal of the covenant between God and man after the Flood (6:17); Noah and his descendants, as well as Abraham and Jacob, already observed it; Sukkot is said to have already been celebrated by the patriarch Abraham (16:21–31), and the “Eighth Day of Assembly” (Shemini Azeret) to have been instituted by Jacob (when he received the appellation “Israel”). The Day of Atonement was also given a “historical” etiology, it being the day that Joseph was sold (34:18–19). The hallowed position of the tribe of Levi is also explained – not as due to their zeal at the time of the transgression of the Golden Calf (Ex. 32:29 et al.), but as a reward for the action of Levi in Shechem, where they killed those guilty of immoral conduct (30:17–20; 32:1–3).

The book opposes all intimacy with gentiles (22:16; 25:5) and is extremely stringent in its interpretation of the Sabbath laws. It even opposes mandatory fighting and sexual intercourse on the Sabbath. According to it, even slaves are obligated to fulfill the commandment of dwelling in *sukkot* (16:21). Like the rabbinical *halakhah* (cf. Mishnah Rosh Ha-Shanah 1:1), the author is cognizant of four different “new years,” but neither all the dates nor the significance ascribed to them are identical. His four new years are the first day of the first, the fourth, the seventh, and the tenth months. Their significance

is not a function of normal agricultural life but, rather, of cosmic events which occurred at the time of the Flood (the beginning of the construction of the ark and the day when the land became dry after the Flood; the day when the mouths of the depths of the abyss of the earth were opened and the waters began to descend into them; and the day when the tops of the mountains became visible: 6:15–28). The date of Shavuot is fixed in accord with the interpretation that “the morrow of the Sabbath” (Lev. 23:16) refers to the first Sunday after Passover, so that it always fell on Sunday. It is mainly for this reason that the author ordained the use of the solar *calendar (already familiar from the Book of *Enoch and the *Dead Sea Scrolls), which contained exactly 52 weeks, each month having 30 days except for the third, the sixth, the ninth, and the twelfth months which have 31. In contrast to the *Pharisees (who also disagreed with this interpretation of “on the morrow of the Sabbath”), Jubilees maintains the literal observance of the phrase “an eye for an eye.” Neither does the author believe in the Pharisaic doctrine of the resurrection of the dead, but only in the immortality of the soul (23:31) and, again in contrast to the Pharisees, he lays stress on the deterministic element in human affairs. Angels (both good and bad) rule the world, but the war between good and evil will continue until “the day of judgment.” At the end of days, the author envisions a Messiah from the tribe of Judah (31:12f.) and another from the tribe of Levi.

The biblical text reflected in the work is not always identical with the Masoretic Text. Sometimes it parallels that of the Septuagint and sometimes the Samaritan text, e.g., in the calculations connected with the enumeration of the ten generations from Adam to Noah. In view of this, as well as several other points which also differ from the traditional interpretation, it is obvious that the author was not a Pharisee (nor do his *halakhot* represent any stage of “early halakhic development”). The author’s views are similar to those found in the First Book of Enoch and, to a lesser extent, in the Testaments of the Twelve *Patriarchs.

Influence

Jubilees is mentioned in the literature of the community of *Qumran, and fragments of it were found in the Qumran caves. Its ideological tenets are similar to those of the community of Qumran (the immortality of the soul, the calendar, and the hegemony of Belial in the mundane sphere). In short, it was most probably one of the basic texts written and used by this sect – which was apparently early *Essene (see *Dead Sea Sect). From several details concerning events which he relates, and from the particular religious prescriptions which he stresses – for example, he “knows” that the children of Israel will abandon the ordinance of circumcision (15:33) and that the children of Israel will acquire hegemony over the Philistine cities (24:28–32; cf. I Macc. 5:68; Ex. 84) and over Idumea (38:14) – the author seems to have lived at the end of John Hyrcanus’ reign (135–104 B.C.E). The book greatly influenced later midrashic literature (*Midrash Tadsheh*; *Pirkei de-Rabbi*

Eliezer; *Genesis Rabbati*). It is the source of the legend found in the famous liturgical *piyyut* (“*Elleh Ezkerah*”) recited on the Day of Atonement, according to which Joseph was sold by his brethren on the Day of Atonement. The book had a particularly great influence over *Beta Israel, whose ritual observances and whose calendar (particularly in respect to the date of Shavuot) are based upon it.

[Yehoshua M. Grintz]

JUDA, WALTER (1916–), U.S. inventor. Born in Berlin, Juda settled in the U.S. in 1939. He did research and development at the Harvard Chemistry Department from 1939 to 1948, including production of novel fungicides and fire-retardants for the war effort (1940–45) and a brackish water desalination prototype plant tested at the Weizmann Institute in the winter of 1947–48. He joined the division of industrial cooperation at the Massachusetts Institute of Technology and co-founded Ionics Inc. In 1948 he became its executive vice president and technical director, until 1960, pioneering water desalting by electro dialysis; he also was a consultant to the Oak Ridge National Laboratory in 1951–54. Juda founded and ran the Prototech Company from 1960 to 1992, developing and producing gas electrodes (for electrolysis applications and fuel cells) and air pollution control catalysts. Prototech sold its electrochemistry business in 1990 and its catalyst businesses in 1992. From 1992, his third company, Hy9 Corporation (formerly Walter Juda Associates, Inc.), developed new hydrogen generation technology.

[Gali Rotstein (2nd ed.)]

JUDAESAPTAN, legendary kingdom in Austria. The legend, first printed in Hagen’s chronicle (15th century), relates how the Jew Abraham of Theomanaria arrived in Austria 860 years after the flood and founded the kingdom of Judaesaptan with its capital, Stockerau; there he reigned for 33 years, while his sons ruled as tetrarchs in Korneuburg, Tulln, and Vienna. The 16th-century historian, Wolfgang Lazius, attempted to establish the truth of the legend (which was considered historic fact even in 1738) by interpreting Hebrew inscriptions on tombstones. Another version speaks of two men, Saunas and Juda Saptai, who established the kingdom in 1700 B.C.E. Yet another version credits them with the founding of Vienna.

One chronicle enumerates 72 Jewish princes, ruling in Austria until 200 B.C.E.

BIBLIOGRAPHY: H. Gold, *Geschichte der Juden in Wien* (1966), 1; H. Tietze, *Die Juden Wiens* (1933), 13–14; E. Scherer, *Die Rechtsverhältnisse der Juden in den deutsch-oesterreichischen Laendern* (1901), 112.

JUDAH (Heb. יהודה), fourth son of Jacob and Leah. The biblical explanation of the name Judah connects it with “thanksgiving” and “praise” (Heb. יָדָה, *o'deh*; Gen. 29:35). However, if one compares the names Judith (Gen. 26:34) and Jahdai (1 Chron. 2:47) it is clear that this explanation is a popular etymology. According to Yeivin, the name is derived from the Arabic root *whd* (Heb. *yhd*), which yields, for example, the Arabic noun *wahd*, meaning “low ground.” The name originated either in the tribe’s connection with the land west of the hill country of Judah (the lowland; see below), or in its original lowly social status. As to the latter, the traditional placing of Judah fourth in the first group of Leah’s sons should be noted, as well as his Canaanite matrimonial connections (see below). These indicate that the tribe once had a low social status, having contained more non-Israelite elements than any other tribe. It was only subsequently that Judah acquired an honorable and leading place for itself by virtue of its size and its political activity.

Judah in the Pentateuch

Apart from the sons of Rachel (Joseph and Benjamin), Judah is one of the few of Jacob’s children (see *Reuben, *Simeon) about whom the traditions of the patriarchal period speak in detail. They tell first and foremost of his marriage to the daughter of a Canaanite named Shua who bore him three sons (Gen. 38). Although they reached adolescence, two of his sons (see *Onan, *Er) had no descendants, while the third, *Shelah, had many children and grandchildren (1 Chron. 4:21ff.). In connection with the childless marriages of Judah’s older sons, tradition recounts the affair of *Tamar who bore Judah *Perez and *Zerah, the main ancestors of the tribe of Judah. In the *Joseph stories an important role is ascribed to Judah as spokesman for the sons of Jacob (Gen. 37:26; 43:3–5, 8–10; 44:16–34). In the first census in the wilderness (Num. 1:27; 2:4), the tribe numbered 74,600 and had the largest population of the tribes of Israel. In the second census the tribe numbered five families of 76,500 souls (26:19–22), and was again the largest. In the camping and marching arrangements, “the standard [or division] of the camp of Judah,” comprising Judah, Issachar, and Zebulun, camped on the eastern side of the Tabernacle and marched at the head of the host (Num. 2:1–9; 10:14–16). (On Judah in the blessings of Jacob and Moses, see below.)

History of the Tribe

*Othniel son of Kenaz, a descendant of Judah, was regarded as the first judge (Judg. 3:4ff.), but this narrative is to be connected, it seems, with the end of the conquest and the settlement of Debir and its vicinity by the sons of Kenaz (cf.

Judg. 1:11ff.; see *Cush, *Cushan Rishathaim, and the Book of *Joshua). If this passage be disregarded, no explicit mention of the tribe of Judah is to be found during the greater part of the period of the Judges. In the Song of Deborah the tribe of Judah is not mentioned, although ten of the tribes are enumerated. During this period of 200 years or more (c. 1250–1030 B.C.E.), the Judahite patriarchal families settled in the mountains, in the Shephelah, and in the pasture lands of the wilderness of Judah. It seems that they also had border skirmishes with the Philistines. At the beginning of the Philistine penetration of the coastal strip the Judahites were capable of inflicting local defeats upon them, apparently in concert with the pre-Israelite elements who dwelt in the Shephelah. The deeds of *Shamgar son of Anath, alluded to in two verses of the Book of Judges (3:31; 5:6), belong, as far as can be seen, to this stage of the struggle. However, once the Philistines were entrenched in the coastal strip and began to extend the area of their rule to the hinterland, they imposed their authority over the whole of the Shephelah and Wadi Sorek, as far as the approaches of the mountains (cf. Judg. 14–16); they also settled, as far as one can tell, in the northwestern part of the Negev (cf. “Negev of the Cherethites,” 1 Sam. 30:14). On the other hand, it appears that in the course of time the Judahites succeeded in checking the advance of the Jebusite kingdom in the north and in depriving it of very extensive areas, until they were able to break through toward the northwest and to penetrate into the area in which the Danites first settled before their northward migration. Here they came into conflict with the Benjamites who also wanted to take possession of the Danite inheritance. This rivalry fanned the quarrels between Benjamin on one side and Judah and Ephraim on the other. At the close of the era of the judges (c. 1070 B.C.E.) it led to the fratricidal war between Benjamin and its two neighbors to the north and the south, who were also apparently joined by many units from some of the other tribes of Israel (see *Gibeah; *History; *Judges, Book of). As a result of the defeat of the Benjamites, the Israelite opposition to the Philistine invaders was weakened, and the latter now ruled over almost the entire mountain area of western Israel (c. 1050 B.C.E.).

It seems that while the Judeans were establishing themselves in western Canaan, the tribes of *Reuben, *Simeon, and *Levi were simultaneously spreading southward over the hill country of Judah. However, the Judahites, who were more numerous, did not allow them to settle in their midst. In the course of time, apparently after the Moabites had been defeated by *Ehud son of Gera, the Reubenites crossed eastward into Transjordan and settled the territory between the wadis Jabbok and Arnon, while the Simeonites and Levites were squeezed together on the periphery of Judah’s territory in the northern Negev. The close tie with the tribe of Simeon is evidenced also by the fact that its inheritance was actually included within the borders of Judah.

When the Benjamites recovered from their defeat at the hands of the Judahites and took the leading position in the struggle against the domination of the Philistines, Judah par-

Territory of the tribe of Judah. After Y. Aharoni in *Lexicon Biblicum, Dvir*, Tel Aviv, 1965.

ticipated actively in this war. With the ascendancy of David, the main initiative passed into Judahite hands, a situation reflected in the blessing of Jacob: “The scepter shall not depart

from Judah, nor the ruler’s staff from between his feet” (Gen. 49:10). This blessing also extols the economic and political status of the tribe (49:8 ff.). This text has apparently to be as-

signed to the time of the united kingdom. Since Levi's office is not mentioned it can be dated to the second half of David's reign (see *Gad, *David), but before the appointment of the Levites to their religious administrative offices (see *Levi). The blessing of Moses, on the other hand, attaches no particular importance to Judah who is alluded to being outside the circle of the other tribes of Israel (Deut. 33:7). This seems to describe the situation from the Israelite point of view in the first years of the reign of *Jeroboam son of Nebat.

Land of Judah

The use of the expression "land of Judah" (Heb. אֶרֶץ יְהוּדָה, *Erez Yehudah*) is not uniform in the Bible. In Deuteronomy 34:2 it serves to indicate the southern part of the hill country west of the Jordan – in contrast to Galilee, the hill country of Ephraim, and the *Negev – and includes the whole area between the plain of the Jordan and the Mediterranean Sea. In other passages it seems to indicate only the tribal territory of Judah (cf. 1 Sam. 22:5; Ruth 1:7). From the dissolution of the union between Israel and Judah to the fall of the latter, "Judah" designates the kingdom of Judah (cf. 1 Kings 19:3 with 12:17), and after the return to Zion it signifies the province of Judah (cf. Zech. 2:4; for the political transformations of the expression, see *Israel, Names of). The territory of the tribe is delineated in Joshua 15:1–12. The southern boundary passed from the southern end of the Dead Sea in the Arabah by way of the ascent of Akkrabbim, skirted the oasis of *Kadesh-Barnea, and ran with the Wadi of Egypt to the Mediterranean Sea. This line corresponds to the southern boundary of the land of Canaan (cf. Num. 34:3–5). The eastern boundary ran along the shore of the Dead Sea from its southern tip to the mouth of the Jordan. The northern boundary was so drawn as to include within Judah Beth-Hoglah and Beth-Arabah in the western plain of the Jordan. From here it ascended by way of the valley of *Achor and the ascent of Adummim to *En-Rogel, passed through the valley of Ben-Hinnom up to the northern extremity of the valley of *Rephaim, and, progressing by way of the waters of Nephtoa, extended through *Kiriath-Je'arim, Chislon, and *Beth-Shemesh to *Timnah through the Wadi *Sorek, continuing along the southern edge of the wadi until it emptied into the Mediterranean Sea. The western border was the seashore between Wadi Sorek (Wādi Rūbīn) and the Brook of Egypt (Wadi el-Arish). From the enumeration of the Judahite towns (Josh. 15:21–61), which follows the delineation of the boundaries, it would seem that the list was drawn up in the reign of King *Jehoshaphat and expanded in the wake of the conquests of King *Uzziah (Azariah). The last verse (Josh. 15:63) appears to be a gloss by a later editor made to correlate the record before him with the situation at the time of the Judges. This list of cities comprises only ten compact groups, if verses 45 to 47 are excluded. These verses are exceptional in that they do not give a complete enumeration of towns, but merely indicate city-territories (in Philistia), and the usual total at the end is missing. In the enumeration of the towns of Benjamin (Josh. 18:21–28), on the other hand, we have two fur-

ther compact groups of towns (18:21–24, 25–28). Clearly these combined compact enumerations of Judahite and Benjamite towns are simply an exact marking of the twelve administrative divisions of the kingdom of Judah which included the territories of the tribes of Judah, Simeon (cf. Josh. 19:3–7 with 15:27–32), and Benjamin. Attempts have been made to assign the list to the time of Josiah or Hezekiah, but it would seem that the area described can correspond only to the situation in the time of Jehoshaphat. The area ruled by Josiah extended north of the border described in this list and included only part of the addition recorded in verses 42 to 47. In the time of Hezekiah, too, the situation differed both on the northern border and on the west. Moreover, in the Septuagint, there is an additional verse between verses 59 and 60 that enumerates another group of 11 towns in the vicinity of Jerusalem, i.e., it includes an additional administrative division, which was necessary for the economy of the country in a leap year (verse 59a). Some time after the conquests of Uzziah (apparently in the time of *Hezekiah) a later editor, it seems, added verses 45 to 47, listing the king's conquests in the lowland.

The geographical area from south to north included (1) part of the Negev region (cf. also Judg. 1:15 and parallel passages) and the region of Geshur north of it; from west to east (changing according to political circumstances) parts of the coastal plain, the *Shephelah, and the hill country of Judah, which has a Mediterranean climate; (2) and the wilderness of Judah, small areas of the Jordan plain (north of the Dead Sea), and the Arabah (south of the Dead Sea), whose climate is partly arid. The livelihood of the inhabitants of the different regions varied accordingly (rain agriculture, some irrigated agriculture, horticulture; cattle rearing, some exploitation of the natural resources).

[*Encyclopaedia Hebraica*]

In the Aggadah

Judah was honored more than all his brothers in that all descendants of Jacob are called *Yehudim* ("Jews," lit. "Judah-ites"; see *Jew; Gen. R. 98:6). His superiority was recognized by his brothers who appointed him their king (Gen. R. 84:17). Judah earned these distinctions for saving Joseph's life, for his candor in confessing his relationship with *Tamar (Gen. 38:1–27), and for his admirable traits of character. Although it was at his suggestion that *Joseph was sold rather than put to death, Judah should nevertheless have returned him to their father (Gen. R. 85:3). Indeed, his brothers later blamed him for their crime, since they claimed they would have obeyed him had he suggested it (Tanḥ. B., Gen. 181). The subsequent death of his wife and two sons (Gen. 38:7–12) was divine retribution for the suffering he caused his father by selling Joseph (Tanḥ. B., Gen. 209). Judah was sent on ahead of his father to Egypt (Gen. 46:28) to erect a *bet midrash* in Goshen so that Jacob might begin instructing his sons at once after his arrival. This honorable task was a compensation for the wrongful suspicion that he had slain Joseph which Jacob had previously harbored against him (Gen. R. 95:2).

Judah would never have sinned with Tamar, but God sent the “angel of desire” to entice him, for kings and redeemers were destined to issue from this union (Gen. R. 85:8). Judah’s father, grandfather, and brothers wished to condemn Tamar, since they felt that she may have found the signet, cord, and staff (Ex. R. 30:19). At first, Judah also wanted to deny his guilt, but he was moved by Tamar’s plea that he “acknowledge his Creator and hide not his eyes from her” (Gen. R. 85:11). Judah never separated himself from Tamar after this incident. Because he rescued Tamar and her two sons from death by burning, three of his descendants, Hananiah, Mishael, and Azariah, were later to be delivered from the fiery furnace (Sot. 10b). Judah was the first to institute the levirate marriage when he insisted that Onan marry Er’s widow (Gen. R. 85:5).

Judah revealed his profound wisdom when he induced his father to send Benjamin to Egypt. He reasoned that it was doubtful whether Benjamin would be seized, whereas it was certain that without grain they would all die (Gen. R. 91:10). His wisdom is also displayed by his not responding to Joseph’s inquiries until he fully perceived Joseph’s intentions (Gen. R. 93:4). Judah also possessed remarkable physical strength. When he became angry, the hairs on his chest became so stiff that they pierced his clothes, and he could chew iron bars into dust and powder (Gen. R. 93:6). His voice traveled 400 parasangs when he shouted so that his conversation with Joseph in Egypt was heard in Erez Israel (Gen. R. 93:7). Judah was the key warrior during the battles which the children of Jacob had to fight after Simeon and Levi destroyed Shechem. When the enemy warriors caught sight of Judah’s lion-like face and teeth (cf. Gen. 49:9) and heard his powerful voice, they were terrified, and Judah without difficulty slew thousands of them (Midrash publ. by S. Schechter from Ms. in *Semitic Studies in Memory of A. Kohut*, 490–1; *Sefer ha-Yashar, Va-Yishlah*). Judah’s pledge to ban himself from the community if he did not return Benjamin to his father (Gen. 43:9) is regarded as proof that a conditional ban, even if the condition is not fulfilled, still takes effect. As a result of this vow, his bones rolled about in his coffin without rest during the 40 years the Children of Israel wandered in the wilderness. Moses finally secured rest for his remains when he prayed to God, arguing that the example of Judah’s confession had induced Reuben likewise to confess his sin with Bilhah (Sot. 7b).

JUDAH (Nesiah), *nasi* from about 230 to 270 C.E., son of Gamaliel III, and grandson of Judah ha-Nasi. During his period

of office the power of the *nasi* began to decline and the struggle between him and the scholars became intensified. Judah and his brother Hillel were apparently regarded favorably (Sem. 8:4, ed. Higger), and Judah conducted his relationship with his opponents among the scholars with skill and understanding, with the aim of drawing them to him. One of his most determined opponents was *Simeon b. Lakish, who criticized him for levying taxes on scholars (BB 7b) and accepting gifts from the people (Gen. R. 78:12). On one occasion Lakish even states that “a *nasi* who sins is flogged,” which incidentally was not in accordance with Roman law. As a result Lakish was compelled to flee. On the advice of Johanan, however, with whom he was intimate, Judah himself went to appease him (TJ, Sanh. 2:1). Complaints of persecution were also heard from other scholars (Yose of Oni – Gen. R., Theodor-Albeck edition, p. 950 et al.; Mani – Ta’an. 23b, et al.), all of whom openly preached against him. Although it is not certain whether the *nasi* was made responsible for the collection of taxes from the inhabitants of Judea, it is nevertheless certain that in Judah’s time the office of the *nasi* was in great financial straits, and this apparently was the reason for Judah’s actions, which included his appointment of unsuitable judges in exchange for money, a step which widened the rift between him and the scholars.

Judah is referred to as “a great man” (TJ, Av. Zar. 1:1). Not only did he go out of his way to appease his opponents, but he also used his authority to impose the decisions of the scholars upon the community (TJ, Ket. 9:2). He himself was a scholar and a member of a *bet din* which became known as “the permissive *bet din*” because it permitted, among other things, oil of the gentiles, which had been long prohibited (Av. Zar. 35b–37a, et al.). This permission was recognized also in Babylon. As a result he is sometimes referred to in the Mishnah as “Rabbi,” the title by which his grandfather was known. Simeon b. Lakish, his great opponent, himself transmitted *halakhot* in his name, and also aggadic statements on the importance of Torah study, such as: “The world is sustained for the sake of the breath of schoolchildren,” and “Every town in which there are no schoolchildren shall be destroyed” (Shab. 119). Judah’s prayer for rain was answered (Ta’an. 249). When he died, it was proclaimed that “the priesthood was abolished for that day” (TJ, Ber. 3:1) to enable kohanim to participate in his funeral. His son was *Gamaliel IV. A tradition dating from the Middle Ages states that his grave was in Upper Galilee.

[Israel Moses Ta-Shma]

JUDAH III (Judah Nesiah II), *nasi* from 290 to 320. Judah III was the son of Gamaliel IV and the grandson of Judah Nesiah. It is sometimes difficult to determine from the sources whether a reference is to Judah II or III. Judah III was a pupil of Johanan (see RH 20a). He was especially intimate with *Ammi and *Assi, who headed the academy of Tiberias after the death of Johanan. Halakhic problems raised by him with

Ammi are mentioned (Av. Zar. 33b; Bezah 27a), and it is also related that Ammi was particularly insistent that Judah should conduct himself beyond that which was required by the strict letter of the law, as was befitting for "a prominent person" (MK 12b). These two scholars were sent by Judah to found schools for children throughout the land of Israel (TJ, Hag. 1:7, 76c). Although the status of the office of *nasi* had deteriorated greatly in his time, dignity was preserved internally and the people obeyed his directives. Judah was himself a scholar and Zera established *halakhah* from his conduct (TJ, Bezah 1:9, 60d). He was in contact with the scholars of his time (see TJ, Shab. 6:9), and there is a suggestion of a dispute between him and Jeremiah and of a letter of appeasement sent by the latter (TJ, Meg. 3:2, 74a). It is stated that he imposed 13 fasts upon the community in a time of drought (Ta'an. 14a), and mention is made of his slave, Germanius, a member of the Gothic guard, presented to him by the government (TJ, Shab., 6:9; TJ, Yoma 8:5; et al.). During his time the Roman emperor *Diocletian stayed in Tiberias while waging war against the Persians, and the *aggadah* describes a meeting between the two at the invitation of the emperor, embellishing the account with miraculous details (TJ, Ter. 8:10, 46b–c; Gen. R. 63:8).

BIBLIOGRAPHY: Hyman, Toledot, 612–5; Alon, *Mehkarim*, 2 (1958), 16–17.

[Israel Moses Ta-Shma]

JUDAH IV (fl. c. 385–400 C.E.), patriarch, son of *Gamaliel v. Very little is known about him, and even that little is doubtful. He seems to have been unpopular with contemporary rabbis, and when his sister Mana died, a leading Palestinian scholar refused to attend her funeral (TJ, Ber. 3:1, 6a; cf. Ta'an. 23b). Epiphanius (*Adversus Haereses*, 30:7, 3) reports, in the name of a convert called Joseph, that under the influence of his evil companions, the young patriarch had become dissipated. Under Judah IV the general decline of the patriarchate continued, although Jewish religious and judicial privileges were confirmed by Arcadius and *Honorius in 396. According to Bacher (Pal. Amor, 3 (1899), 312f.), Judah IV is identical with the R. Judah Nesiah who asked Phinehas b. Hama why Boaz had demeaned himself to "lie down at the end of the heap of grain" (Ruth R. 5:15 on Ruth 3:7). This identification, however, is uncertain, since Phinehas may have been a contemporary of Judah III. Judah IV was the father of *Hillel, the patriarch who fixed the calendar.

[Moses Aberbach]

JUDAH, surname of at least three colonial American families not known to be related.

New York Judahs

BARUCH JUDAH (c. 1678–1774), who was born in Breslau, founded a family appearing in New York, Newport, Rhode Island, and Richmond, Virginia, in colonial times. Baruch

became a freeman of New York in 1715 or 1716. He was active in the affairs of Congregation Shearith Israel. A son, HILLEL (c. 1730–1815), a *shohet* in Newport and a New York merchant, married Abigail, daughter of Isaac Mendes *Seixas. Three of their sons were connected with Beth Shalom Congregation in Richmond: BARUCH H. (1763–1830) as a founder, ISAAC H. (1761–1827) as *hazzan*, and MANUEL (1769–1834) as a trustee. SAMUEL (1728–1781), another son of the elder Baruch, was a well-known New York merchant. In 1770 he signed the Non-Importation Agreement, a boycott of British goods. His eldest child, BENJAMIN S. (1760–1831), conducted an extensive trade with the West Indies and was a founder of the New York Tontine (1786). His youngest child, WALTER JONAS (1778–1798), a student at the medical school of Columbia College, died while treating patients during a yellow fever epidemic.

Another son, NAPHTALI (1774–1855), was a New York printer, publisher, and merchant. In 1797 he published D. Levi's *Defence of the Old Testament*, against attacks by the deists Thomas Paine and Joseph Priestley. Naphtali Judah was active in Congregation Shearith Israel, serving as president and committee member, particularly in matters involving cemetery maintenance. He also established strong ties with the non-Jewish community, as a member of the Tammany Society, holding the office of sagem; as a prominent Mason; and as one of the original subscribers of New York Hospital in 1811.

The oldest child of Benjamin S. was Samuel Benjamin Helbert *Judah, the playwright. His son EMANUEL (d. 1839) achieved some reputation as an actor.

Canadian Judahs

Another family of Judahs, also originating from Breslau, was established in Canada by SAMUEL JUDAH (1725–1789). He went to Canada with Lord Amherst's army and was one of the founders of the Montreal Jewish community, establishing himself there by 1761. He and his brother-in-law Aaron *Hart of Trois Rivières, Canada, later conducted an extensive business in furs with London. He sympathized with the colonists during the Revolutionary War, lending them a considerable sum of money which was never repaid. His brother URIAH (1714–1782) became prothonotary of Trois Rivières in 1768. His son BERNARD S. (1777–1831) married Aaron Hart's daughter Catherine.

The eldest of their nine sons, SAMUEL (1799–1869), who was born in New York City, became a pioneer Middle Western lawyer and politician. He graduated from Rutgers College in 1816, studied law, and was admitted to the bar. He settled in Vincennes, Indiana, in 1818. From Vincennes he practiced law widely. He was a close friend of Henry Clay. Samuel became active in politics and was elected several times to the Indiana legislature, in 1840 serving as speaker of its house of representatives. In 1830 he was appointed U.S. attorney for the district of Indiana, serving to 1833. He was a man of culture, known for his proficiency in Greek and Latin.

Connecticut Judahs

MICHAEL JUDAH (D. 1786) was a businessman of Norwalk and Hartford, Connecticut, and New York City. He willed his

property to the Jews of New York City. His descendants were not Jewish.

[Irving I. Katz and Leo Hershkowitz]

JUDAH, SAMUEL BENJAMIN HELBERT (1799–1876?), U.S. playwright. A member of a prominent Sephardi mercantile family, Samuel Judah was born in New York City. One of the first Jews to contribute to American literature, he was successful with his earliest play, *The Mountain Torrent* (1820), which was followed by other melodramas such as *The Rose of Arragon* (1822). According to the author, it took him just four days to complete his historical drama of the American Revolutionary War, *A Tale of Lexington* which was received “with unbounded applause” when it was performed in New York on Independence Day 1822. His career as a dramatist ended, however, when he wrote *Gotham and the Gothamites* (1823), which satirized well-known New Yorkers, including his eminent fellow playwright Mordecai M. *Noah. He was sued for defamation and imprisoned but on his release took up law. Judah’s later writings appeared under the pseudonym Terentius Phologombos. They included a biblical play, *The Maid of Midian*, which, probably because of its sacrilegious approach, was never performed.

[Sol Liptzin]

JUDAH, SON OF ZIPPORAI (first century), patriot. According to Josephus, Judah was a sophist of highest reputation among the Jews, an unrivalled interpreter of their ancestral laws, and educator of the youth. Taking advantage of Herod’s illness (4 B.C.E.) he, together with his friend and fellow scholar Mattathias son of Margalot, persuaded their disciples to pull down the golden eagle, the symbol of Rome, which Herod had erected over the great gate of the Temple, since it was contrary to Jewish law. The two scholars, together with their disciples, were burnt alive on the command of Herod shortly before his death.

[Edna Elazary]

JUDAH ARYEH LEIB BEN DAVID (d. 1709), rabbi and author, also called Leib Kalish. He was a grandson of Joel *Sirkes and Abraham Ḥayyim Schor, the author of *Torat Ḥayyim* (Lublin, 1624). He served as rabbi and *rosh yeshivah* in the communities of Kremsier (Moravia) and Lobsens (Posen) for 22

years, and Kalisz. In 1708 he accepted an invitation to become the rabbi of the Ashkenazi community of Amsterdam, but he died a year and a half later. He was succeeded in the rabbinate of Amsterdam by Zevi Hirsch b. Jacob *Ashkenazi (the Ḥakham Zevi). Judah Aryeh Leib was the author of *Gur Aryeh* (Amsterdam, 1733), homilies on the Pentateuch, to which was appended the *Bedek ha-Bayit*, composed by his grandfather Abraham Ḥayyim Schor. Many of Judah Aryeh Leib’s aggadic novellae are mentioned in the introduction to *Shama Shelomo* (Amsterdam, 1710) by Solomon *Algazi. His responsa have remained in manuscript.

[Yehoshua Horowitz]

JUDAH BAR EZEKIEL (d. 299), Babylonian *amora*, founder of the academy at *Pumbedita. Judah’s father was a famous *amora* and “wonder worker” (see Kid. 32a, 33b; TJ, Ta’an 1:3, 64b). Judah’s brother was the *amora* Rami b. Ezekiel, who appears to have gone to Erez Israel and returned to Babylonia (Ket. 21a; Kid. 32a; Ḥul. 44a, etc.). According to the Talmud “on the day R. Judah ha-Nasi passed away ... Judah [b. Ezekiel] was born,” and on his deathbed Judah ha-Nasi said “today R. Judah is born in Babylonia” (Kid. 72a–b; cf. Guttman, in: *HUCA*, 25 (1954), 241 ff. for a discussion of the date on which this took place). Judah was a pupil first of Rav in Sura, then of R. Assi of Huzal, and finally of *Samuel in Nehardea, and he quotes many *halakhot* in their names (see Suk. 9a; BB 139b; Yev. 17a and Rashi *ibid.*; Av. Zar. 16b and Rashi *ibid.*). Notwithstanding Judah’s boundless esteem for Samuel, he once directed an admonishing remark at him (see Shab. 55a), and in several instances took issue with him (Ber. 36a). Samuel’s affectionate nickname for his pupil, “Shinena” (*ibid.*; Shab. 7a, 152a) is generally taken to mean “sharp in talmudic knowledge,” although some interpret it as “big-toothed” (*Arukh*, s.v. *shen* 2). So great was Samuel’s admiration for his pupil that he said of him, “he is not of woman born” (Nid. 13a).

After the destruction of Nehardea by *Papa b. Nezer in 259, part of the academy of Nehardea moved to Pumbedita, where Judah became its head (Git. 60b and Rashi *ibid.*). Pumbedita was considered the heir to Nehardea, in that it continued the tradition of being a purely “Babylonian academy,” as opposed to *Sura, where the Palestinian influence – due to Rav’s way of learning – remained very strong. However, throughout the lifetime of Huna, Sura remained the main center of learning. Only after Huna passed away in 297 did Pumbedita come to the foreground, where indeed it remained for the next 800 years. The main subject of study there was the order **Nezikin* (Ber. 20a), the importance of which was emphasized by Judah (BK 30a). Judah’s *halakhah* is extensively quoted in both the Babylonian and the Jerusalem Talmuds.

His main disputant is Huna, and their discussions occupy a prominent place in the Babylonian Talmud. Judah was highly esteemed by the sages of his day, among them R. Naḥman (see Kid. 70a–b), and R. Eleazar “the master from Palestine” and Ulla, who were loath to give decisions in Pumbedita (Nid. 20b). Among his prominent pupils were Kahana and Joseph (Yev. 17a), Zeira (Ber. 39a) and Abba (Ḥul. 19b).

Judah was opposed to returning from Babylonia to Erez Israel before the coming of the Redeemer (Ket. 110b–111a). When Zeira and Abba decided to do this, they had to do it clandestinely without his knowledge (*ibid.*; Ber. 24b). Nevertheless his devotion to Erez Israel is attested (see Ber. 43a). He was accustomed to speak Hebrew, even in daily conversations with his servant (Shab. 41a). He considered the use of Hebrew mandatory for prayer and enjoined the Aramaic-speaking Jews of Babylonia, “Never should a person plead his needs in Aramaic” (Shab. 12b; see however Sot. 33a).

Judah was noted for his saintliness and piety (Ḥag. 15b; Nid. 13a), and in consequence wonderful powers were popularly ascribed to him. For example, it is stated that in times of drought he had but to remove one shoe (an indication that he was about to undertake a fast) and rain would immediately begin to fall (see Ber. 20a; Ta’an. 24b; Sanh. 106b). Judah was distinguished by the firmness of his convictions and his not indulging anyone (MK 17a; Kid. 70a–b). The *amora* Isaac b. Judah was his son (Yev. 63b; Kid. 71b). When, according to legend, Joseph, the son of R. Joshua b. Levi, ascended to heaven and returned, and was asked by his father what he had seen, he replied, “A world upside down; the exalted below and the lowly above” (BB 10b). This statement is interpreted by geonic tradition to refer to the fact that he saw Samuel sitting at the feet of his pupil Judah, who was thus honored because he had not refrained from admonishing his master (*Arukh*, s.v. *neged* 1; Tos. to BB 10b).

[Zvi Kaplan]

JUDAH BAR ILAI (mid–second century C.E.), *tanna*. He is the R. Judah mentioned in the Talmud and tannaitic literature without patronymic. Judah came from Usha in Galilee (see Song R. 2:5 n. 2). He studied under his father, who was a pupil of *Eliezer b. Hyrcanus (Tosef. Zev. 2:17).

While still young Judah went to reside in Lydda, close to *Tarfon (Tosef. Meg. 2:8, Neg. 8:2), becoming one of his pupils (Ned. 6:6; Tosef., Yev. 12:15, et al.). He also studied under *Akiva (Tosef., Kel. BM 6:7, Oho. 4:2).

Judah played a central role in the establishment of the new centers of learning in Galilee after the suppression of the Bar Kokhba revolt. The sources preserve a number of contradictory *aggadot* concerning these events. According to one tradition in the Babylonian Talmud, Judah was one of the five

ordained by *Judah b. Bava, at the cost of his life, during the time of the Hadrianic persecutions (Sanh. 14a). The historical authenticity of this account has been seriously and convincingly challenged (Oppenheimer, 78–79). According to another tradition he was among “the seven elders” who convened to intercalate the year in the valley of Rimmon (TJ, Ḥag. 3:1, 78c). According to a third tradition, Judah played a leading role in the convention of scholars in Usha at which the Sanhedrin was reestablished, being granted the honor of speaking first, since Usha was his home town (Song R. loc. cit.). In a later Babylonian version of this tradition, there is a “shift of venue,” from Usha to Jabneh (Ber. 63b). Judah is still portrayed as the opening speaker at this convention of the Sanhedrin, but this honor is no longer explained by Judah’s connection to the location, but rather by means of an obscure title: “R. Judah, the first speaker in every situation” (Oppenheimer, 80–82). This title is then explained by the Talmud as resulting from Judah’s role in the events which eventually led to R. Simeon’s flight from the Romans with his son, seeking refuge for years in a cave (Shab. 33b). However, there is no evidence in earlier Palestinian sources for the title “first speaker in every situation” with respect to Judah, nor does Judah play any role in the parallel Palestinian versions of the saga of R. Simeon and his son (cf. TJ, 9, 38d, Gen. R. 79:6, PDRK 11:16). As a further sign of Judah’s prominent position in the eyes of later tradition, all the scholars of his generation were described as “the generation of Judah b. Ilai” (Sanh. 20a). Judah was the halakhic authority in the house of the *nasi*, *Simeon b. Gamaliel II (Men. 104a), and *Judah ha-Nasi was one of his pupils (Shevu. 13a), as was *Ishmael b. Yose (Suk. 18a).

Tannaitic literature has many statements and teachings by Judah. Long series of *mishnayot* and *halakhot*, as well as whole chapters in the Mishnah and the Tosefta, are from his Mishnah. In his Mishnah Judah had a special place for the *halakhot* of Eliezer b. Hyrcanus which he had received from his father Ilai (cf. Tosef. Zev. 2:17), and for early *halakhot* that he received from Tarfon, particularly with regard to the Temple and its service. He gave the Mishnah of Akiva as the view of an individual (Ma’as. Sh. 5:8) and recorded the disputes between Bet Shammai and Bet Hillel in accordance with a tradition which differed from that of Akiva. The Babylonian Talmud describes Judah’s share in the Sifra – the halakhic Midrash to the Book of Leviticus – by the words, “an anonymous Sifra is by Judah” (Sanh. 86a). Though this statement is ascribed in the Babylonian Talmud to R. Johanan, neither its authenticity nor its accuracy can be confirmed. Rules explaining the language used by Judah have been laid down, and in the view of the *amora*, Joshua b. Levi: “Wherever Judah said ‘when’ or ‘these words apply’ in our Mishnah, his intention was only to explain the words of the scholars; but where Johanan said ‘when’ he introduces an explanation, while ‘these words apply’ indicates disagreement” (Er. 81b–82a). His tendency to generalize is also discernible in his own statement: “Collect the words of the Torah as general rules – and divide them up like the drops of dew which are small ... for if a man col-

lects them in items, they will weary him and he will not know what to do” (Sif. Deut. 306). In a dispute between Meir – or Simeon – and Judah, the *halakhah* follows Judah, but in a dispute with Yose, the *halakhah* follows Yose, but some disagree with regard to this (Er. 46b). Another rule laid down was: “Wherever Judah taught a law concerning the *eruv*, the *halakhah* follows him” (Er. 81b).

Explanations of Scripture by Judah have been preserved, which give the plain meaning; some explain difficult words, and some explain the subject matter. Judah issued a warning about the difficulty of giving an accurate Aramaic translation of the Bible: “He who translates a verse literally is a liar, and he who adds to it is a libeler” (Tosef., Meg. 4:41). In his view in several places Scripture removes anthropomorphic or offensive expressions (Mekh. Shirata, 6). His interpretations touch upon many and varied topics. His main disputant in *halakhah* is *Simeon b. Yoḥai and in *aggadah* *Nehemiah; no less than 180 disputes between Judah and Nehemiah have been preserved in both tannaitic literature and in the amoraic Midrashim, particularly in the early *Genesis Rabbah*. Their style shows them to be the product of a dialogue – at times there is not even a substantial difference of view between them – and from them it is possible to discern the aggadic exegetical method of the *tannaim*. Their disputes touch upon all the books of the Bible except Leviticus and Job.

Judah was known for his piety, so that the Talmud states that wherever it is stated, “it once happened with a certain pious man,” the reference is either to Judah b. Bava or to Judah b. Ilai (BK 103b). Several of his practices were transmitted by the *amora* Judah in the name of Rav: “This was the practice of Judah b. Ilai. On the eve of the Sabbath a basin filled with hot water was brought to him. He washed his face, hands and feet, and wrapped himself in fringed linen robes, and was like an angel of the Lord of Hosts” (Shab. 25b); “On the eve of the Ninth of Av, dry bread with salt was brought to him, and he sat between the baking oven and the cooking stove and ate and drank with a pitcher of water and looked as if a dead relation were lying before him” (Ta’an. 30a–b); he used to take a myrtle twig, dance before the bride, and say: “Beautiful and graceful bride” (Ket. 17a). A memory of the impressive figure of Judah is found in the story (TJ, Pes. 10:1, 31c and parallels; and cf. Ned. 49b) of a Roman matron who, because of Judah’s shining countenance, suspected him of being either a moneylender or a pig breeder – his shining face being due to his wealth – or of having drunk excessively, but he referred her to Ecclesiastes 8:1 (“A man’s wisdom maketh his face to shine”).

[Zvi Kaplan / Stephen G. Wald (2nd ed.)]

JUDAH BAR SHALOM (occasionally with the addition **ha-Levi**; Tanh. B., Gen. 141; Mid. Ps. to 119:1), Palestinian *amora* of the fourth century C.E.; aggadist. Judah was apparently a pupil of the Palestinian *amora*, Yose (TJ, Dem. 6:3, 25c; Ma’as. Sh. 4:4, 55a). His aggadic sayings are scattered throughout the Talmud and the Midrashim, especially the *Tanḥuma* (Noah 13; Va-Yera 13; Va-Era 14; Tanḥ B., Gen. 88, et al.). Halakhic statements by him are found in the Jerusalem Talmud (Shab. 12:4, 13d; Er. 5:5, 22d; Shevu, 7:5, 38a). They consist mainly of amplifications, comments, and explanations of the statements of his predecessors. Of special importance are his anti-Christian polemics, in which he emphasizes the importance of the Oral Law: “Moses wished the Mishnah too to be committed to writing. God, however, foresaw that the nations of the world would translate the Torah, read it in Greek, and say: we too are Jews. So God said to him: ‘Shall I write for him so many things of My law?’ and as a result ‘they shall be accounted as strange?’ [his interpretation of Hos. 8:12]. Why was He so opposed? Because the Mishnah is God’s secret. God reveals His secret only to the righteous, as it is said [Ps. 25:14]: ‘The counsel of the Lord is with them that fear Him’” (Tanḥ. B, Gen. 88).

BIBLIOGRAPHY: Bacher, *Pal Amor*, 3; Hyman, *Toledot*, s.v.

[Zvi Kaplan]

JUDAH BAR SIMEON (**Sima**; late third–early fourth century C.E.), Palestinian aggadist. Judah was the son of *Simeon b. Pazzi. In the Jerusalem Talmud he is usually referred to as Judah b. Pazzi, but in the Babylonian his full name, Judah the son of Simeon b. Pazzi, is given. He studied under his father, in whose name he transmitted both *halakhah* and *aggadah*. He was a priest (TJ, Ber. 5:4, 9c) and members of his family apparently married into the house of the *nasi* (Shab. 12:3, 13c). His homilies, interpretations of Scripture, poems, and parables are quoted in the Talmud (Sanh. 100a; TJ, Ta’an. 4:8, 68c; et al.) and in the Midrashim (Gen. R. 35:3; Lev. R. 7:2, et al.). The Babylonian Talmud also quotes a *baraita* that he “learned in the [tractate] *Nezikin* of the school of Karna” (BK 47b; see Dik. Sof. *ibid.*). In his sermons he deals with the suffering of the people and pleads for its redemption. For example, interpreting the word *aḥar* (“behind”) in Genesis 22:13 as meaning “after,” he comments: “What is meant by ‘after’? After the passage of all the generations, your children will be caught by their sins and entangled in troubles but will finally be redeemed through the horns of this ram, as its says [Zech. 9:14] ‘The Lord God will blow the horn and will go with the whirlwinds of the south’” (TJ, Ta’an. 2:4, 65d). Similarly he interprets Psalms 10:12, “Arise O Lord, O God, lift up Thy hand,” as “Israel said to God, ‘Lord of the Universe! Troubles are about to destroy us like a man drowning in the sea; stretch out Thy hand and save us’” (Mid. Ps. 10:6).

[Zvi Kaplan]

JUDAH BEN ASHER (1270–1349), rabbi and talmudist. Judah was born in Cologne, Germany. His father was *Asher b. Jehiel (the Rosh), in whose yeshivah he studied; *Jacob b. Asher was his brother. Because of his impaired eyesight, from which he suffered all his life, he did not succeed in compiling large works. In consequence of the violent anti-Jewish outbreaks of 1283 in Germany, Judah left his father's house and made his way to Spain, reaching Toledo in 1285 (this according to Schechter, but according to Abrahams, in 1305). When his parents reached Spain, Judah renewed his studies under his father. In 1314 he signed a *takkanah* of his father, continuing a family tradition of tithing one's income for charity, a custom that his children also undertook to observe. He married first the daughter of his elder brother, Jehiel, and after her death, Miriam, the daughter of his second brother, Solomon.

In 1321 Judah was appointed his father's successor by the Toledo community, and on the latter's death in 1327 he immediately inherited his position as head of the *bet din* and of the Toledo yeshivah, serving until his death. He conducted his rabbinical office justly and impartially and was considered authoritative in his rulings. The Castilian government took account of his judgment even in non-Jewish cases. Taking into consideration the interests of the Jewish communities in Castile, he maintained that in principle the death sentence could be imposed, but he demanded restraint from the rabbis in imposing punishments and took care to preserve the legal autonomy of Jewish communities. From his responsa he appears to have tended toward stringency. The leaders of the Toledo community attempted to compel his *bet din* to give halakhic rulings only in conformity with the rulings of Maimonides, and to depart from them only where his father Asher had ruled accordingly, in order to avoid differences of practice; Judah vehemently opposed them and threatened to resign his post, though he finally agreed to remain. Among his pupils were *Menahem b. Aaron ibn Zerah, author of the *Zeidah la-Derekh*, and Machir, author of the *Avkat Rokhel*.

Among his works may be mentioned *Zikhron Yehudah* (ed. by J. Rosenberg and D. Cassel, 1846), comprising 83 responsa, and *Iggeret Tokhehah* (ed. by Schechter, see bibl.), his testament to his children, which contains ethical sayings, an account of his family history, and instruction in the method of learning; apart from its ethical value it also has great historical importance, as it gives details of the social life of the Jews in the 14th century and the mutual relationship between the rabbi and the community in Spain. Also ascribed to him are "a confession" included in the *Zeidah la-Derekh* (4:5, chap. 17) and a commentary to tractate *Shabbat*, the last part of which is included at the end of his volume of responsa, and the *Hukkat ha-Torah*, consisting of an anthology of *halakhot*. The collection *Ta'am Zekenim* (ed. by A. Ashkenazi (1854) 64b–66a) contains a responsum by Judah "on the subject of metempsychosis and the reply of Asher b. Jehiel." Two *piyyutim* in his name have been preserved.

[Yehoshua Horowitz]

JUDAH BEN BARZILLAI ("ha-Nasi"), AL-BARGELONI (late 11th and early 12th century), rabbi of Barcelona. Nahmanides claimed descent from him, referring to him as "zekeni" ("my ancestor"). According to one statement (responsa, *Tashbez*, 1:15), he was a pupil of R. *Isaac b. Reuben of Barcelona, but this is not substantiated from any other source and is open to question. The assumption that *Abraham b. Isaac of Narbonne was his pupil is unfounded, even though Abraham constantly refers to his teachings. He was a contemporary of *Abraham b. Hiyya, with whom he engaged in an interesting controversy on the question of postponing a wedding date for astrological reasons. Judah was strongly opposed, since he regarded it as contrary to Jewish law. Judah's works consist mostly of codes which were highly regarded in their time, but most of them were subsequently lost. Quotations from them by other authors show that they embraced all the *halakhah* which applied in practice.

His works are (1) *Sefer ha-Ittim*, dealing with Sabbath and festivals in the Jewish calendar, and of which there have been published – with many errors – only those concerning the Sabbath, with commentaries by R.J. Schorr (Cracow, 1902), and two further fragments, by J.L. Zlotnick (see bibliography); (2) *Yihus She'er Basar*, on marriage and personal law, known through a few quotations; (3) *Sefer ha-Din*, on civil law, of which the *Sefer ha-Shetarot* only has been published (Berlin, 1898). In 1928 S. Assaf published *Likkutei Sefer ha-Din*, a précis of the original book (*Madda'ei ha-Yahadut*, 2, 1926); (4) commentary on *Sefer Yeẓirah* (Berlin, 1885). This work is a mine of information on geonic and philosophical literature.

One important aspect of Judah's commentary on *Sefer Yeẓirah* is that in it he quotes extensively from the *Ishrūn Maqālāt* ("Twenty Tractates") of *Al-Mukammis. Since only a small portion of this work has been published, Judah's summaries are the major source of Al-Mukammis' teachings. Among Judah's own philosophical contributions were his polemics against dualistic and trinitarian doctrines (Commentary on *Sefer Yeẓirah*, 75, 175), and especially against Christian allegorism (*ibid.*, 77). Even when not polemicizing, he tried to interpret all of Scripture with a view to removing doubts about God's total spirituality. Among other philosophic doctrines he held that the revelations received by the prophets were emanations of the Divine Spirit, the first created being, to which Scripture also refers as the "glory of God" (*ibid.*, 16, 119, 174). At the end of his commentary Judah reproduced a considerable portion of one early Hebrew translation (no longer extant) of

about half of *Saadia's commentary on *Sefer Yezirah* (see H. Malter, *Saadia Gaon, His Life and Works* (1921), 355–8).

The *hassagot* ("strictures") of the "Ri [ר"י] of Barcelona" on the early work, *Shimmusha Rabba*, quoted in the *Halakhot Ketannot* (laws of *tefillin*) of R. Asher b. *Jehiel are not to be attributed to Judah, but to the aforementioned Isaac, of Barcelona.

Judah based himself mainly on the *halakhot* of Isaac *Alfasi, his older contemporary, on the latter's responsa, and especially, on the geonic responsa and the *Hilkhata Gavruta* of *Samuel ha-Nagid. He also made use of the works of *Isaac b. Judah ibn Ghayyat and Isaac b. Baruch *Albalia, without mentioning them by name. Though the book was planned as a halakhic codex, the author adopted the practice of commenting extensively on the subject under discussion, thus rendering the work of great importance, both for the study of talmudic themes and for *variae lectiones*. Until the 16th century Judah's works were much used and extensively quoted but were increasingly neglected in favor of other codes, mainly because of their enormous range and prolixity. Nevertheless, many extracts and selections from his work have been published: the *Sefer ha-Eshkol* of Abraham b. Isaac of Narbonne is merely a précis of the *Ittim*, indicating its original magnitude; such too are the collections of geonic responsa, *Sha'arei Teshuvah* (Leghorn, 1869) and those published by Jacob Musafia (Lyck, 1864) which are anthologies taken from the *Ittim*. The *Sefer ha-Orah*, from the "school" of Rashi, contains many extracts from *Ittim* (S. Buber (ed.), *Sefer ha-Orah*, 1 (1905), 27). The *Temim De'im* of *Araham b. David of Posquières contains many quotations from Judah's works. Judah was in possession too of the most ancient version of *Hisdai ibn Shaprut's letter to the king of the Khazars, though, with the critical approach which characterizes all his works, he doubted its authenticity.

[Israel Moses Ta-Shma]

JUDAH BEN BATHYRA, *tanna* of the second century C.E. He was apparently a student of Eliezer b. Hyrcanus and *Joshua b. Hananiah (Pes. 3:3; Eduy. 8:3; Neg. 9:3, 11:7), and an associate of *Akiva (Kelim 2:7) and Tarfon (Peah 3:6). His name is regularly associated with *Nisibis in Babylon (Tosef. Yev. 12:4; Tosef. Ket. 5:1; Sifre Num. 117), and the story is told that Simeon ben Shamma and *Johanan ha-Sandelar were on their way to Nisibis to learn Torah from Judah ben Bathyra, but when they reached the border, "tears streamed down and they tore their garments..., saying: 'Residence in the Land Israel is equivalent to the fulfillment of all the precepts of the Torah,' and they returned to the Land of Israel" (Sif. Deut. 80). His yeshivah in Nisibis is mentioned in the Talmud among

the centers of study which were recommended to students as worthy of attendance (Sanh. 32b). According to the *aggadah*, Judah b. Bathyra claimed to be a descendant of the dead whom Ezekiel (ch. 37) brought to life, and that the *tefillin* left to him by his paternal grandfather came from them (Sanh. 92b). Another talmudic *aggadah* tells of a certain gentile who once boasted to Judah b. Bathyra that, despite the fact that gentiles are forbidden to eat of the paschal sacrifice, he would regularly go up to Jerusalem, and passing himself off as a Jew, eat from the "juiciest parts" of the paschal lamb. Judah b. Bathyra advised him: "When you go there, tell them to let you eat from the tail fat." Since the tail fat is not eaten, but rather burned up on the altar, his request brought suspicion upon himself, and after an investigation the gentile was exposed. The sages in Jerusalem then sent Judah a message, saying: "Peace be upon you, R. Judah b. Bathyra, for while you remain in Nisibis, your trap is set in Jerusalem" (Pes. 3b). This somewhat fanciful and anachronistic story created problems for some overly literal-minded scholars, who posited the existence of another, earlier Judah b. Bathyra, who must have lived during the time of the second Temple – also in Nisibis – despite the fact that virtually all traditions transmitted in the name of Judah b. Bathyra in talmudic literature clearly refer to the "second" Judah b. Bathyra (Margalioth), the "first" Judah b. Bathyra having left virtually no record in talmudic sources other than this story itself. Compare Mik. 4:5, where Judah b. Bathyra reports a precedent in the name of Bet Shammai, which occurred in Jerusalem during the time of the Second Temple, which has been construed by some as further "evidence" that Judah b. Bathyra himself lived during the time of the Second Temple. See also, *Tosafot* to Men. 65b.

[Stephen G. Wald (2nd ed.)]

JUDAH BEN BAVA (second century C.E.), *tanna*, and according to the later *aggadah*, a martyr of the era of *Jabneh. A number of *halakhot* are reported in his name in the Mishnah, the Tosefta and the tannaitic Midrashim. One dealt with the case of a husband's death in order to permit his wife to remarry (Yev. 16:3, 5), and Judah was the only one of the scholars of Erez Israel in his generation to permit this on the testimony of a single witness (Yev., 16:7), giving evidence that that was the halakhic decision to this effect. He also testified concerning many other *halakhot*, including some belonging to the period before the destruction of the Temple (Eduy. 6:1, 8:2). After the crushing of the Bar Kokhba revolt, Judah, as a sign of mourning, forbade the use of *foliatum* (aromatic oil of spikenard; Tosef., Sot. 15:9). The Tosefta of *Bava Kama* (8:13) states:

"It was said of Judah that all his actions were for the sake of Heaven," except for one: he transgressed the injunction against the rearing of small cattle. The Tosefta then tells a story of a painful and protracted illness from which Judah suffered. The only remedy for the pain was to drink warm milk from a small

goat which he kept in his house. When he eventually died (apparently from this same illness), the sages determined that this was in fact his only sin. As a result of this piety the Talmud states (BK 103b): "Wherever the phrase occurs, 'It once happened to a certain pious man' [*hasid*], it refers either to Judah b. Bava or to Judah b. Ilai." According to another tannaitic tradition, despite the fact that he was renowned for his piety and modesty, Judah was not properly eulogized, apparently because of the troubled times (Tosef., Sot. 13:4).

According to an *aggadah* in the Babylonian Talmud, Judah's death occurred as a result of Hadrian's decrees of religious persecution, because he transgressed a Roman decree forbidding the *ordination of scholars. This tradition, ascribed to the early *amora* Rav, stated that Judah "sat between Usha and Shefaram and there ordained five scholars, namely Meir, Judah, Simeon, Yose, and Eleazar b. Shammua, and according to some, also Nehemiah. When they were surprised by the Romans, Judah said to them: 'My children, flee.' They said to him: 'What will become of thee, Rabbi?' He said: 'I lie before them like a stone which none can overturn' [i.e., let them do their will]. It was said that the enemy did not leave the spot until they had driven 300 iron spearheads into his body, making it like a sieve" (Sanh. 14a). The historical authenticity of this tradition has been seriously questioned, both because of the alternative tradition concerning the circumstances of his death (Tosef. BK 8:13), and also because of an alternative tradition concerning the ordination of Meir and Simeon by Akiva himself (cf. TJ, Sanh. 1, 19a; Oppenheimer, 78–79). According to other late *aggadot*, when the report of the execution of R. Akiva in Caesarea was received, Judah and Hananiah (Hanina) b. Teradyon said that his death was an omen: very soon there would be no place in Erez Israel where corpses would not be found, and the city councils (see *Boule) of Judea would come to an end. Their forebodings were fulfilled (Sem. 8:9, ed. by M. Higger (1931), 154). The *aggadot* about the *ten martyrs, contrary to these earlier aggadic traditions, describe the execution of Judah as the result of a verdict given after judicial proceedings.

[Moshe David Herr / Stephen G. Wald (2nd ed.)]

JUDAH BEN DOSOTHEOS (Dostai; first century C.E.), *tanna*. In *Simeon b. Shetaḥ's name he transmitted the legal rule that a sentence passed by a Palestinian court over a person who later escaped abroad is not set aside for a new hearing, but in the case of a person who escaped to Palestine the sentence is set aside (Mak. 7a). In some versions, however, the reading here is Dosotheos b. Judah. The former reading is almost certainly a scribal (or printer's) error and, in all likelihood, no such first century C.E. *tanna* ever existed. On the other hand, the halakhic dictum that an "eye for an eye" (Ex. 21:24)

refers only to pecuniary compensation, which is rendered in the name of Dosotheos b. Judah (BK 83b), is quoted in some manuscripts in the name of Judah b. Dosotheos.

[Stephen G. Wald (2nd ed.)]

JUDAH BEN ELEAZAR (Riba; 17th century), Persian physician and philosopher, considered the greatest scholar to emerge from the Jewish community of Persia. His most valuable work is titled *Ḥovot Yehudah* ("Duties of Judah"), which was completed in 1686. He also produced works on astronomy and medicine. *Ḥovot Yehudah* deals with the fundamental principles of Jewish belief and philosophy. These are presented systematically, from a traditional religious-legal and a philosophical – or, as the author puts it, rational – perspective. The work consists of an introduction, four main parts, and an epilogue, which are further divided into 18 sections comprising a total of 50 chapters. Its four main parts correspond to the four principles of Jewish faith asserted by the author (as opposed to Maimonides' 13 principles of faith). *Ḥovot Yehudah* is written in *Judeo-Persian, apart from the epilogue, which is in Hebrew.

By virtue of his training and intellectual inclination, Riba, like *Maimonides, belonged to the school of religious scholars who chose to explain issues of belief in rational terms. His knowledge of the Torah, philosophy, and other intellectual fields of his time was comprehensive and profound. This is indicated by the large variety of texts he analyzed and expounded and by his systematic handling of a broad range of complex subjects. Thanks to his extensive, diligent study of the Persian language and literature, he had a masterful command of the language, as well as knowledge of Arabic, Hebrew, and Aramaic. Thus, Riba stands among the giants of Jewish philosophy.

We have no information concerning the life and activities of the author from other sources. Since he lived before 1686, there is no doubt that he, like the rest of the Jews of *Kashan, suffered persecutions and forced conversions. Riba made use of a wide array of sources. In addition to the Bible, the Talmud, midrashic texts, and the Zohar, all of which he quoted extensively, he also used the New Testament, the Apocrypha, and the Koran. He reveals solid knowledge of the writings of Plato, Aristotle, *Avicenna, *Averroes and al-*Ghazali, paying the most attention to Aristotle's metaphysics, against which he polemicizes. However, the work in its entirety has to do with the principles of Jewish belief, as represented by Jewish thinkers, Maimonides in particular. Special attention is given to Maimonides' *Guide*; *Shemonah Perakim* ("Eight Chapters"); *Perek Ḥelek*; and *Hilkhot Yesodei ha-Torah* in *Sefer ha-Madda* of the *Mishneh Torah*. Also much admired is Rabbi David Messer *Leon, whom Riba calls "the perfect and great rabbi, divine erudite scholar." Quotations from Leon's book, *Tehillah le-David*, may be found throughout the treatise. At times, Riba refutes Maimonides, especially with respect to his 13 principles of faith. He is not satisfied with the explanations

of the great commentators, such as Rashi. He criticizes those who do not understand the basic issues of the Torah, but instead play with *sefirot* (divine emanations) and consider themselves kabbalists: "In my opinion, who is a heretic? He who has no knowledge of the rational world and the literal meaning [of the Torah] and occupies himself with the *sefirot* in his wish to be considered a divine mystic. (Concerning him) the Sages said: 'He lacks the outside keys but searches for the inner ones.' We might call him – and certain Ashkenazim with their convoluted treatises – a pious fool (*hasid shoteh*)" (Part 1, Sec. 1/28).

In its 18 sections and epilogue, *Ḥovot Yehudah* discusses on one hand the accounts of Creation and the Divine Chariot, the nature of God, prophecy, human free will, knowledge, divine providence, the eternal nature of the Torah, immortality of the soul, reward and punishment, the messianic era and resurrection of the dead, and on the other hand, mathematics, astronomy, cosmology, medicine, music, logic, and rhetoric.

The last chapter of the work is a kind of short *summa contra gentiles*. By means of biblical exegesis, Riba attempts to show that there is no passage in the Hebrew Bible that verifies Muslim claims regarding the emergence of their Prophet. In addition, he rejects Muslim contentions that the Torah now in the hands of Jews is a forgery. However, Riba writes, he prefers not to argue with them too much, for according to their custom, anyone who does not believe as they do may be executed; he continues, "they do not hesitate to apply this practice" (*ibid.*, 70).

[Amnon Netzer (2nd ed.)]

JUDAH BEN ELI (**Elan**; d. 932), Karaite grammarian and liturgical poet. Although *rosh yeshivah* in Jerusalem, the city in which he died, Judah is known as "the Tiberian." He has been identified by J.L. Duker (Duker (ed.), *Kunteres ha-Masoret* (1850), 2) and A. Geiger (*Ozar Neḥmad*, 2 (1857), 158) with the Eli b. Judah ha-Nazir quoted by David Kimḥi in his *Mikhlol* (Fuerth 1893 ed., 406). S. Pinsker in his *Likkutei Kadmoniyot* (1860, 105–6) identifies him with the scholar of Jerusalem mentioned by Abraham ibn Ezra at the beginning of his *Moznayim* as the author of eight grammatical works.

Judah is best known as the author of the grammatical work *Me'or Einayim* or *Me'irat Einayim* in which he divided the Hebrew nouns into 35 classes. He also wrote *piyyutim* included in the Karaite prayer book and a dirge on the destruction of Zion containing his name in acrostic (see: Pinsker, op. cit. Supplement, 139).

JUDAH BEN ELIEZER (known as **Yesod**, the Heb. initials of Yehudah Safra ve-Dayyan; "scribe of the *bet din*," lit. "judge") d. 1762, Lithuanian talmudist, communal worker, and philanthropist. Judah was born in Vilna where he served as communal secretary, *dayyan*, and for a while as rabbi, deputizing for his son-in-law, *Samuel b. Avigdor. He used his position and wealth for the benefit of the community and the needy, rendering valuable service in the community's struggle with the local authorities (1742). His name frequently appears in the communal records of the time. A yeshivah in Vilna was named after him. Judah attended the rabbinical conference at Mir (in 1751), where he supported Jonathan *Eybeschuetz in the latter's controversy with Jacob *Emden. He died in Vilna.

[Samuel Abba Horodezky]

JUDAH BEN GERIM (mid-second century C.E.), *tanna*. Ben Gerim (*Bar Giore* in Aramaic) means "the son of proselytes" (see Rashi, Shab. 33b). In Gen. R. 35:3 it is told that Judah bar Giore went, together with R. Isaac and R. Jonathan, to study with *Simeon b. Yoḥai. In the parallel version cited in the Babylonian Talmud, Judah ben Gerim went together with Jonathan b. Asmai (or Johanan b. Akhnai) to study with Simeon, and they both pleased their teacher to such an extent that he counseled his son to let himself be blessed by these students. When he asked for a blessing, they apparently cursed him, though Simeon himself managed to interpret their words in a positive light (MK 9 a–b). In sharp contrast to this idyllic description of the warm relationship between these two sages, we are told in another *aggadah* (Shab. 33b–34a) that Simeon b. Yoḥai once uttered critical remarks against the Roman authorities, and Judah b. Gerim, who overheard these remarks, repeated them to others, and thus they became known to the Roman authorities, who sentenced Simeon to death. Simeon escaped by hiding in a cave for 13 years. According to this version of the story, after emerging from his hiding place, he saw Judah in the street. Simeon then "set his eyes upon him" and Judah immediately "turned into a pile of bones." However, in the parallel versions of this story (TJ, 9, 38d, Gen. R. 79:6, PDRK 11:16) Judah ben Gerim is not mentioned at all, and it is a different character upon whom Simeon "set his eyes," and who immediately "turned into a pile of bones." S. Friedman has suggested, however, that this figure was intentionally identified as Judah b. Gerim in the tradition of the Babylonian Talmud, because of the latter's apparently harsh and cruel behavior toward Simeon and his son as described in Mo'ed Katan 9b.

BIBLIOGRAPHY: Hyman, *Toledot*, 11, p. 559.

[Stephen G. Wald (2nd ed.)]

JUDAH BEN ḤIYYA (end of the second and beginning of the third century C.E.), *amora*. Judah and his twin brother *Hezekiah moved with their father *Ḥiyya from Babylon to

Erez Israel and assisted him in his work of teaching Torah to the people (Suk. 20a). Like their father, they studied under Judah ha-Nasi (Sanh. 38b). They were called “*ha-rovim*” (“the youths,” TJ, Hag. 3:4) and several halakhic dicta were transmitted in their name (*ibid.*; Av. Zar. 46a; Zev. 15a; et al.). Judah’s father-in-law was *Yannai, who referred with respect to his son-in-law as “*Sinai*” (a profound scholar) and stood up in his presence. Judah apparently died at an early age, since it is stated that he was accustomed to visit his father-in-law every Sabbath eve, and when he failed to arrive on one occasion his father-in-law understood that he was dead (TJ, Bik. 3:4). His aggadic sayings include: “Come and see how the dispensation of mortals is not like that of the Holy One. Among mortals, when a man administers a medicament to a fellow it may be beneficial to one limb but injurious to another, but with the Holy One, it is not so. He gave a Torah to Israel and it is a medicament of life for all the body” (Er. 54a); “Exile atones for half of man’s sins” (Sanh. 37b).

[Zvi Kaplan]

JUDAH BEN ISAAC (Judah Sir Leon of Paris; also called **Gur Aryeh** (“lion’s whelp”) or **Aryeh**, after Genesis 49:9 (*Or Zaru’a*, pt. 1 no. 17; *Tosefot Yeshanim* to Yoma 8a); 1166–1224), French tosafist. Judah headed the Paris *bet ha-midrash*, which was apparently reopened on the return of Jews after the expulsion of 1192. He studied many years under his teacher *Isaac b. Samuel of Dampierre who was his relative, together with his teacher’s son Elhanan. Judah was numbered among the most distinguished pupils of Isaac, in whose presence he wrote *tosafot* to various tractates and whose rulings and responsa he collected (Assaf, in *A. Marx Jubilee Volume* (Heb., 1950), 11). Much of Judah’s teaching is based upon that of his teacher Isaac which he incorporated into his own works (as did Isaac’s other pupils), particularly into his *tosafot*.

Of his teachings there remain only his *tosafot* to the tractates *Berakhot* (first edition in *Berakhah Meshulleshet*, 1863; a supplement to pages 2a–8b was published by Sachs in: *Sinai*, 37 (1955) 87–105), and a new edition by N. Sachs collated with additional manuscripts began to appear in Jerusalem in 1969 under the title *Ginzei Rishonim; Shitat ha-Kadmonim* (ed. M.J. Blau), *Avodah Zarah* (1969), and a fragment of *Nedarim* (J.N. Epstein, *Perushei R. Yehudah Ben Natan*, in: *Musaf le-Tarbiz*, 3 (1933) 171–80). Although this fragment is attributed in the manuscript (Montefiore, see *Kohelet Shelomo, Catalogue... A.J. Halberstam*, (1890) 58 no. 323) to Judah b. Nathan, Epstein proved that it was really by Judah b. Isaac. Many of his statements can be detected in the standard *tosafot* printed with the Talmud, particularly the *Tosafot Yeshanim* to the tractate *Yoma*, which are an adaptation by his pupil *Moses of Coucy (Urbach, *Tosafot*, 394), *Megillah* (*ibid.*, 483f.) and *Bava Kamma* (*ibid.*, 275). It is clear that he wrote *tosafot* to other tractates since he mentions them in the aforementioned works, where he alludes to his commentaries on 12 additional tractates: *Shabbat*, *Pesaḥim*, *Bezah*, *Rosh Ha-Shanah*, *Sukkah*, *Yevamot*, *Ketubbot*, *Kiddushin*, *Bava Kamma*, *Bava Batra*,

Hullin, and *Niddah* (*ibid.*, 273 and n. 67). Those *tosafot* were known and used by scholars even at a later date, for instance by his pupils Moses of Coucy and *Isaac Or Zaru’a of Vienna, the latter’s pupil Meir of Rothenburg, and even later by Aaron ha-Kohen in the *Orḥot Ḥayyim* and by Joseph Colon (*ibid.*, and n. 68, p. 274 and n. 72). In addition there are references to other *tosafot* compiled by him on *Eruvin*, *Yoma*, *Ta’anit*, *Nedarim*, *Bava Me’zia*, and *Shevu’ot* (*ibid.*, 274 and n. 73, 74). To these may be added references of his *tosafot Mo’ed Katan* (commentary of Talmid R. Jehiel of Paris to MK, 14b (in: *Kitvei Makhon Harry Fischel* (1937) and the *Mordekhai* (MK, no. 862), to *Gittin* (*ibid.*, n. 73), and to *Zevaḥim* (Tos. Ri to Av. Zar. 51). Great scholars of France and Germany of the following generation, such as Jehiel of Paris, Moses of Coucy, Isaac Or Zaru’a of Vienna, and others, were his pupils (Isaac b. Abraham was not his pupil as stated by H.J. Michael), and they faithfully transmitted his decisions and customs in their works. Only a few of his responsa have survived. Judah also apparently occupied himself with the *masorah* and there is report of a *Sefer Rabbenu Judah of Paris* (G. De Rossi, *Catalogue... Parma*, no. 721). Judah has been erroneously confused at times with Judah he-Ḥasid (b. Samuel) and this error still persists, very likely because Judah was also occasionally referred to as “He-Ḥasid” (“the pious”; see Michael Or, no. 999).

[Shlomoh Zalman Havlin]

JUDAH BEN ISAAC (14th or 15th century), author of a Hebrew treatise on music. Judah ben Isaac, who was probably a native of Southern France and seems to have been connected with the Jewish cultural renaissance in 14th-century Provence, adapted his treatise from several Latin sources. The text is preserved in a manuscript in Paris (Bibliothèque Nationale, Cod. heb. 1037, fol. 22b–27b), and is one of the very few theoretical treatises known to be the work of Jews of the period living in a Christian environment; it was also published in *Yuval* (vol. 1 (1968), 1–47), with a French translation and footnotes by I. Adler.

[Claude Abravanel]

JUDAH BEN ISAAC IBN SHABBETAÏ (13th century), Spanish Hebrew poet. Born around 1188, presumably in Toledo (according to some scholars, in Burgos, or in a town of Aragon), he lived for some time in Toledo and Saragossa. Judah composed at the age of 20 his best-known work, the rhymed prose narrative “*Minḥat Yehudah Sone ha-Nashim*” (“The Gift of Judah the Misogynist”), which aroused a poetical polemic for and against women, continuing into the 16th century. Even Judah *Al-Ḥarizi’s “*Maqāma of Marriage*” in the *Taḥkemoni* (Gate 6) is unmistakably composed under Judah’s influence. He follows the Andalusian Arabic pattern of a long narrative with different episodes. The story told in “The Misogynist” is of a young man, Zerah, who had to take a vow

of continence at his father's deathbed but who soon fell prey to the vengeance of the offended fair sex: after having established a celibate brotherhood that preaches dissuasion from marriage and incites to divorce, he is seduced by a fair maiden, but through some hoax finds himself married to an ugly witch. When he tries to get a divorce, he almost has to face a death sentence thanks to the intrigues of the women. The fable is not directed against women, but describes the arguments of medieval misogynist discourse and has a very ambiguous attitude in respect to marriage; it may be interpreted as having a twofold aim – to warn men of female vengeance and against rash marriages. In consonance with similar ideas expressed in Latin and Romance narratives of the time, women are presented as the cause of quarrels and troubles, who will turn cosmos back into chaos. The book is dedicated to a patron by the name of Abraham Alfakhar; the work was very popular during the Middle Ages and early Renaissance, and has been preserved in many manuscripts, but the unreliable texts of both complete editions (Constantinople, 1543, and in E. Askenasi, *Ta'am Zekenim* (1854), v. 1a–12b) make it impossible to determine the precise date of composition. Halberstam and Davidson believe there must have been three versions: 1188, 1208, and 1225, but very likely the book was composed in 1208, and substantially modified and enlarged in 1225 or 1228. The two versions, plus a revised form of the first one, were edited by M. Huss in his dissertation (1991). In the epilogue Judah attacks a certain Ibn Samun who had accused him of plagiarism. A certain Isaac published around 1210 two short writings attacking the apparent misogynist attitude of Ibn Shabbetai: *Ezrat ha-Nashim* and *Ein Mishpat*.

Judah wrote around 1214 a second narrative in rhymed prose, called *Millhemet ha-Hokhmah ve-ha-Osher* ("Strife of Wisdom and Wealth"), which apparently was dedicated to Todros b. Judah, the father of Meir *Abulafia, who acted as judge in the quarrel in question between two brothers, one of them rich and the other wise, disputing about a tiara left to them by their father (Constantinople, 1503). Judah is also the author of another rhymed prose narrative, *Divrei ha-Alah ve-ha-Niddui* ("The Curse and the Ban"), a parody, or a satirical work, in which he settles accounts with five respected Jews of Saragossa (published by Davidson in *Ha-Eshkol*, 6 (1909), 165–75). It seems that another work on history was destroyed or burned by the leaders of the community of Saragossa, and has not been preserved.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

JUDAH BEN JACOB HA-KOHEN (18th century), German rabbi. Judah served as *rosh yeshivah* in Berlin and was later appointed *dayyan* in Lissa. He carried on an extensive correspondence with Ezekiel b. Judah *Landau and Ephraim Zalman *Margolioth. All his possessions were lost in the great fire that raged in Lissa in 1767, from which however he succeeded in rescuing some of his manuscripts. His writings, relating mainly to the priesthood, include a comprehensive work in the form of novellae to the order of *Kodashim*, of which only the portions to the tractates *Zevaḥim* and *Menahot* have been published, under the titles *Mareh Kohen* (Frankfurt, 1776) and *Minhat Kohen* (Prague, 1775, 1778, or 1788), respectively. In these two books, Judah mentions *Mattenot Kehunnah*, his novellae to the tractate *Bekhorot*, and *Mishpat ha-Kelal*, methodological rules for the study of the Talmud.

[Elias Katz]

JUDAH BEN JOSEPH OF KAIROUAN (end of 10th and beginning of 11th century), talmudic scholar of the geonic era. Judah is referred to as *resh sidra*, **resh kallah*, and **alluf*. He corresponded on halakhic problems with *Sherira and his son *Hai, *geonim* of *Pumbedita, as well as with *Samuel b. Hophni, *Gaon* of *Sura. His last extant letter is dated 1021 C.E. From Cairo **Genizah* fragments and laudatory poems written by Hai Gaon and by an anonymous poet, it is clear that he was a wealthy merchant who had considerable influence with the government. Together with Joseph b. Berechiah and Abraham b. Nathan, **nagid* of *Kairouan, Judah assisted the Jews expelled from *Fez in 979/980 following the revolt of the Beni Ziri against the *Fatimids. Judah was a patron of scholars and contributed to the Babylonian yeshivot. He opposed the *Karaites and is thought to have written a biblical commentary.

[Eliezer Bashan (Sternberg)]

JUDAH BEN KALONYMUS BEN MEIR (d. 1196/99), German scholar, and *dayyan* in his native Speyer. His father was a communal leader and was one of those responsible to the king regarding the collection of community taxes. His mother was the daughter of Judah, the brother of *Samuel b. Kalonymus he-Ḥasid. Judah frequently quotes *Abraham ben Samuel he-Ḥasid, the brother of *Judah he-Ḥasid. Meir b. Kalonymus, Judah's elder brother, was a well-known scholar who is often

quoted by the talmudic scholars, including Judah himself, and there are grounds for thinking that David of Minzburg, the well-known *posek* and formulator of *takkanot*, was also his brother. *Ephraim of Regensburg was one of Judah's teachers, and one of his important pupils was *Eleazar b. Judah of Worms, author of the *Roke'ah*. Judah was in Speyer at the time of the anti-Jewish decree of 1196, and his elegy on this event was published by A.H. Habermann. Judah is known mainly for his *Seder Tanna'im ve-Amora'im*, apparently the original name of the book, the beginning of which is missing in the manuscripts. The work is an extensive and valuable talmudic lexicon of the names of the *tannaim* and *amoraim*. Statements of those scholars found in the works available to Judah are listed, sometimes in the context of the discussion where the quoted statements are found and with a comprehensive and extensive exposition, so that it reads like a commentary on the Talmud itself. The book reveals a strong critical tendency, and throughout it the author attempts to establish the correct reading by comparing parallel sources and manuscripts. Judah had a sense of historical perspective and noted many historical details which were found in the sources. The book is infused with the spirit of the *Hasidei Ashkenaz, and in explaining the anthropomorphisms in the *aggadah* relies upon the theory of the *Kavod* of that school. There is no doubt that Judah obtained much of his kabbalistic knowledge from Judah he-Hasid, even though the latter's name is only once mentioned explicitly in the book. R.N.N. Rabbinovicz, who was the first to publish part of the book (the section containing the letter *bet*), called it *Sefer Yihusei Tanna'im ve-Amora'im*, in order to differentiate it from the earlier work known as *Seder Tanna'im ve-Amora'im*. The letters *Bet* to *Tet* were later published by J.L. Fishman (Maimon), at first as a series in *Sinai*, and later in book form with an introduction by M.H. Katzenellenbogen (Jerusalem, 1963). The original manuscript gets only as far as the name *Kruspedai*, and it is not clear whether the manuscript is incomplete, or whether Judah did not complete the work. The extensive nature of the work was a hindrance to its being copied, for which reason it was hardly used by scholars until recent times. Judah also wrote other works that are no longer extant, including *Sefer ha-Agron*, which was apparently a kind of dictionary of realia on the names of the minerals, vegetables, and animals in the Talmud, and, like his first work, included many digressions; a special work on benedictions; and *tosafot* on a number of tractates. (Those to tractates *Bezah* and *Sotah* are explicitly mentioned by him.)

[Israel Moses Ta-Shma]

JUDAH BEN KALONYMUS BEN MOSES OF MAINZ (d. c. 1200), German scholar, halakhic authority, *paytan*, and kabbalist. He was the pupil of Shemariah b. Mordecai in Speyer, and of *Judah he-Hasid, who taught him mysticism. During the Third Crusade (1189–93) Judah braced his com-

munity to face the approaching trials and inspired them to repentance. Among his prominent pupils were his son Eleazar (who stated that he had received the mystical interpretation of the prayers and other kabbalistic knowledge from his father), *Eliezer b. Joel ha-Levi, and *Baruch b. Samuel, the author of *Sefer ha-Hokhmah*. His halakhic decisions are quoted in the works of the earlier authorities. He wrote *selihot* and *piyyutim*.

[Yehoshua Horowitz]

JUDAH BEN MENAHEM OF ROME (early 12th century), liturgical poet. Judah, whose son Menahem was the head of the Talmud academy in Rome, is one of the major Italian *paytanim*. His poems must have been fairly popular in the Middle Ages, since they have come down in a number of manuscripts of the Roman ritual. At present, 15 of Judah's poems are known, of which only six have appeared in print: the *Yozerot* for **Shabbat ha-Gadol*, *Shabbat Naḥamu*, *Simḥat Torah*, and *Shavuot*; the *ofan* for the last; and a poem for Purim. He was perhaps the compiler of *Seder Hibbur Berakhot*, the oldest work on the Roman rite.

[Jefim (Hayyim) Schirmann]

JUDAH BEN MOSES HA-DARSHAN (11th century), French scholar, son of *Moses ha-Darshan, under whom he studied and whose teachings he transmitted. He apparently also studied under *Gershom b. Judah in Mainz, then returned to Narbonne where *Isaac b. Merwan ha-Levi was among his disciples, many of whom later became distinguished. He lived for some time in Toulouse, where *Menahem b. Helbo was his pupil. Menahem thus served as the main channel for the transmission of the works of Moses ha-Darshan from Narbonne in the south to northern France. One saying quoted by his son Joseph has been preserved by Samuel *Ibn Jama.

[Israel Moses Ta-Shma]

JUDAH (Judel) BEN MOSES OF LUBLIN (17th century), rabbi and author. Judah was rabbi and *rosh yeshivah* of Kovel, and district rabbi and *rosh yeshivah* of Lemberg in 1652. From 1691 to 1699 he also served in Lublin, but whether as rabbi as well as head of the yeshivah is uncertain. He was regarded as one of the important rabbis of his generation, his commendations appearing in many books, and was one of the rabbis of the *Council of Four Lands. He wrote commentaries to the Shulḥan Arukh, *Oraḥ Ḥayyim* (called *Kol Yehudah*), as well as notes to *Asher b. Jehiel's Talmud commentary, which

he intended to have published along with *David b. Samuel ha-Levi's *Turei Zahav*. The money he sent for this purpose was used without his knowledge to publish David ha-Levi's commentary on the Pentateuch, *Divrei David* (Dyhrenfurth, 1689). Some of his comments are quoted in the *Kav ha-Yashar* (Frankfurt, 1705) of Zevi Hirsch *Koidanover. He died in Dubnow. Of his sons, Joseph was rabbi in Dubnow, Ze'ev Wolf in Minsk, Aryeh Leib in Slutsk, and Moses in Posen.

[Itzhak Alfassi]

JUDAH BEN NAḤAMANI (Nahman; third century C.E.), Palestinian *amora*. Judah was the *meturgeman* (“interpreter”; see **amora*) of *Simeon b. Lakish in the *bet ha-midrash* of Tiberias. He was also known as a preacher and preached in the *bet ha-midrash* of Johanan (TJ, Suk. 5:1, 55a). Many of his homilies are cited in the Talmud (Ḥag. 16a; Ket. 8b, et al.). On one occasion he was acting as a *meturgeman* for one who had been appointed *dayyan* by the *nasi*. Although the *dayyan* was not a scholar, Judah bent down, as it was the custom for the *meturgeman*, to listen to what the *dayyan* said to him in a low voice, and then explain and convey it to the audience audibly. The *dayyan*, however, was incapable of saying anything to him. Thereupon Judah delivered his own address, taking as his text the verse Habbakuk 2:19: “Woe unto him who sayeth unto wood: Awake! – to the dumb stone: Arise! Can this teach? Behold it is overlaid with gold and silver, and there is no breath at all in the midst of it” (Sanh. 7b), a patent allusion to the circumstances.

[Zvi Kaplan]

JUDAH BEN NATHAN (known as **Rivan**; 11th–12th centuries), tosafist. Little is known of his life. He was one of Rashi's most eminent pupils and married his daughter Miriam. R. Yom Tov of Falaise was his son, and his daughter Elvina was known for the traditions which she transmitted from her mother. R. Judah wrote extensively, mainly elaborating on Rashi's teachings, but he did not arrive at a crystallized system of study, such as is found in the *tosafot*. For this reason he is to be regarded as occupying an intermediate stage between Rashi and the *tosafot*. Judah was the author of glosses to Rashi's Talmud commentary, and of independent commentaries to most of the talmudic tractates, extensively quoted in the *tosafot* and by other *rishonim*. He made frequent use of the commentaries of the sages of Mainz as well as that of R. *Hananel b. Ḥushi'el. Most editions of the Talmud include his commentary on *Makkot* from p. 19a onward. Judah also wrote the commentary, sometimes erroneously attributed to Rashi, on chapter ten of *Sanhedrin*. A large part of his commentary on *Ketubbot* has been preserved in Bezalel *Ashkenazi's *Shitah*

Mekubbezet. Fragments of his commentaries on the tractate *Yevamot* have been printed by A.N.Z. Roth (see Bibliography). The suggestion that the commentary on *Nazir*, generally ascribed to Rashi, is by Judah is ill-founded. Some sources mention a commentary on the Pentateuch by him.

[Israel Moses Ta-Shma]

JUDAH BEN NISSAN (b. early 17th century), Polish talmudic scholar. He was related by marriage to many important rabbinic personages. He held rabbinic positions in Olkusz, Sieniawa, and Tomaszow (all in Poland). The great respect for his scholarship is evidenced by his being appointed to the important rabbinate of Kalisz at the time when Abraham Abele *Gombiner was *dayyan* there. He participated in the Council of the Four Lands in 1681. Judah wrote *Beit Yehudah*, containing novellae on the more frequently studied tractates of the orders *Nashim* and *Nezikin*, as well as on *Hullin*. It is in two parts: the first part (Sulzbach, 1687) covers the aggadic sections of the tractates, while the second, edited by his son Abraham (Dessau, 1698), deals with the halakhic material.

BIBLIOGRAPHY: H.N. Dembitzer, *Kelilat Yofi*, 1 (1888), 82a; Lewin, in: *Festschrift... A. Harkavy* (1908), 149 f.; Michael, Or, no. 1029; Weinberg, in: *JJLG*, 1 (1903), 123 f.

[Jacob Haberman]

JUDAH BEN PEDAYA (Padah); early third century C.E.), Palestinian *amora*. His statements, both in *halakhah* and *aggadah*, are numerous in both Talmuds and the Midrash, but he was recognized as a master of *aggadah*. In the Babylonian Talmud he was known as Bar Pada, in the Jerusalem Talmud as Bar Pedaya, and in the Midrash by his full name. He studied under *Judah ha-Nasi or *Hiyya (according to an alternative reading), and he was a pupil of his uncle, *Bar Kappara. Among his disciples were *Joshua b. Levi, Johanan, *Hezekiah, and *Ilfa. His statement concerning the belated attempt of the wicked to repent on Judgment Day has become popular: “If a man has not prepared before the Sabbath, how can he eat on the Sabbath?”

JUDAH BEN SAMUEL HE-ḤASID (c. 1150–1217), main teacher of the *Ḥasidei Ashkenaz movement. Judah was one of the most prominent scholars of the Middle Ages in the fields of ethics and theology. He probably lived some time in Speyer and then moved to Regensburg (he was sometimes called “Rabbi Judah of Regensburg”). Very little of his life is known from contemporary sources. However, many legends about his life dating from 15th- and 16th-century sources have survived. In them, he is described as a mystic (whereas his

brother Abraham is described as a scholar of *halakhah*) who performed many miracles in order to save the Jews from the gentiles. Judah taught and practiced extreme humility. He even forbade an author to sign a book he wrote, because his sons might take pride in their father's fame. This seems to be the reason why his works were circulated as anonymous works. Even his pupils did not quote his works by name; *Abraham b. Azriel, the author of *Arugat ha-Bosem*, used the title *Re'ah Bosem Niho'ah* (רֵאָה בֹּסֵם נִיחוּאָה) when he quoted him, an appellation which hints at his name by the use of *notarikon and *gematria. His descendants helped propagate his teachings. His son Moses wrote a commentary on the Pentateuch; his grandson *Eleazar b. Moses ha-Darshan wrote works in esoteric theology, and his great-grandson, Moses b. Eleazar, who was a kabbalist, tried to harmonize Ashkenazi-Hasidic teaching with the Kabbalah. However, his most prominent pupil, whose writings popularized Judah's teachings among the Jews in Germany and elsewhere, was *Eleazar b. Judah of Worms. Even though Judah did not write in the field of *halakhah* and ritual practice, many later Ashkenazi writers depended on his teachings and practices in their works. Most of Judah's writings in esoteric theology have not survived. His major work was probably *Sefer ha-Kavod* ("Book of Divine Glory"), of which only quotations in later works have survived. He also wrote a voluminous commentary on the prayers, of which only a small part is known today. Besides these major works, a few small ones have survived: *Sod ha-Yihud* ("The Secret of God's Unity"); exegesis of a few *piyyutim*; and some short magical treatises. Because he did not sign his writings, some works by others have been attributed to him, e.g., Eleazar of Worms' *Sefer ha-Hokhmah*. In ethics, his main work was his contribution to the *Sefer Hasidim*, of which he was the principal author. Eleazar edited a short treatise on *teshuvah* ("repentance") which Judah wrote, and a short collection of ethical and magical paragraphs was published as *Zavva'at Rabbi Yehudah he-Hasid* ("The Will of Rabbi Judah the Pious," Cracow, 1891).

[Joseph Dan]

JUDAH BEN SHAMMUA (second half of the second century C.E.), *tanna*, presumably a pupil of R. *Meir. He is not mentioned in the Mishnah, and only once in the Tosefta (Kel. BB 7:9, RH 19a) where he is quoted transmitting a ruling about the ritual cleanness of glass vessels in the name of Meir. His name is also found in the manuscript readings of the parallel text in Shab. 15b, the omission of his name in the printed editions being almost certainly a scribal (or printer's) error. An *aggadah* relates that he succeeded in his intercession with the Roman authorities in having their decree forbidding the study of Torah, Sabbath observance, and the circumcision of

children repealed (RH 19a; Meg. Ta'an., 22). In this venture he was aided by a Roman matron, probably the widow of *Tinneius Rufus (v. Av. Zar. 20a). In commemoration, the day on which the decrees were abrogated, Adar 28, was proclaimed a feast day. The sons of Judah b. Shammua are mentioned in the Palestinian Talmud as having possessed a great flock of sheep, of which over 300 were killed in a raid by wolves (TJ, Beza'ah 1:1, 60a).

BIBLIOGRAPHY: Hyman, *Toledot*, s.v.; Graetz, *Gesch.*, 4 (1904³), 169; B. Lewin, *Megillat Ta'anit* (1964), 198–9. V. Noam, *Megillat Ta'anit* (2003), 312–15.

[Stephen G. Wald (2nd ed.)]

JUDAH BEN TABBAI (first century B.C.E.), one of the **zugot*, the colleague of *Simeon b. Shetaḥ. A disciple of Joshua b. Peraḥyah and Nittai of Arbela. According to one tradition he was the *nasi* (see *Sanhedrin) and Simeon b. Shetaḥ the *av bet din*, but another tradition reverses their roles (Ḥag. 2:2; Tosef., Ḥag. 2:8; cf. TJ, Ḥag. 2:2, 77d and Sanh. 6:9, 23c; TB, Hag. 16b). According to one tradition (Tosef. Sanh. 6:6) Simeon b. Shetaḥ once criticized a halakhic decision of Judah b. Tabbai who thereafter accepted upon himself "never to make a halakhic ruling without Simeon b. Shetaḥ's consent." An attempt in the Babylonian Talmud (Ḥag. 16b) to use this tradition in order to determine which of them was *nasi* and which *av bet din* was inconclusive. Moreover, in the parallel version of this story (Mekh. Nezikin, 20), the roles of Judah b. Tabbai, and Simeon b. Shetaḥ are reversed, and S. Friedman has recently shown that the version in the Mekhilta is more original. A story is told of how Judah b. Tabbai fled from Jerusalem to Alexandria, and the people of Jerusalem wrote to Alexandria, "How long will my betrothed stay with you while I sit grieving for him," whereupon he returned (TJ, Ḥag. 2:2, 77d; cf. TJ, Sanh. 6:9, 23c). Judah's saying in *Avot* (1:8) contains advice for a judge: "Do not play the part of an advocate [or presiding judge]; while the litigants are standing before thee, let them be regarded by thee as if they were guilty; and when they leave thy presence [after] having submitted to the judgment, let them be regarded by thee as guiltless." In the well-known dispute regarding **semikhah* ("the laying on" of hands on the head of the sacrifice on the festival), Judah held that it may not be done (Ḥag. 2:2). According to a Palestinian *amora*, Judah decreed, alone or together with Simeon b. Shetaḥ, the impurity of metal vessels (TJ, Shab. 1:7, 3c; TJ, Pes. 1:6, 27d, TJ, Ket. 8:11, 32c). A *baraita* in the Babylonian Talmud, ascribes this decree to Simeon b. Shetaḥ alone (Shab. 14b).

BIBLIOGRAPHY: Frankel, *Mishnah* (1923²), 35–39. **ADD. BIBLIOGRAPHY:** S. Friedman, "If They Have Not Slain They Are Slain; But If They Have Slain They Are Not Slain," in: *Sidra*, 20 (2005).

[Moshe David Herr / Stephen G. Wald (2nd ed.)]

JUDAH BEN TEMA, *tanna*. He is mentioned only once in the Mishnah (*Avot* 5:20), and twice in the Tosefta (Er. 2:6, and Git. 5:12). It is difficult to determine his date, but from these two passages it would seem that he belonged to the last gen-

eration of *tannaim*. His saying in *Avot* 5:20 is, “Be bold as a leopard, swift as an eagle, fleet as a hart, and strong as a lion, to do the will of thy Father in heaven.” The Babylonian Talmud refers to “Judah and his colleagues” as examples of “masters of the Mishnah” (*Ḥag.* 14a), and later tradition ascribes to him the saying: “Love Heaven, fear Heaven, quiver and rejoice with all the precepts. If you have done your fellow a slight harm, let it be regarded as a grievous one in your eyes; if you have done him a great favor, let it be regarded as slight in your eyes; but if your fellow has done you a slight favor, let it be as great in your eyes, and if he has done you great harm, let it be a slight one in your eyes” (ARN¹, 41, 133). The Babylonian Talmud (*Pes.* 70a) quotes a *halakhah* in the name of “ben Tema,” which in the parallel tannaitic traditions (*Tosef. Pes.* 9:8, *Zev.* 8:11; *Sifra*, *Nedava* 18) is quoted in the name of “Ben Azzai.”

BIBLIOGRAPHY: Frankel, *Mishnah*, 213; Hyman, *Toledot*, s.v.; J. Kanowitz, *Ma'arekhot Tanna'im*, 2 (1968), 49–51. S. Friedman, in: Y. Elman et al. (eds.), *Netivot Ledavid, Jubilee Volume for David Weiss Halivni* (Hebrew), (2005).

[Stephen G. Wald (2nd ed.)]

JUDAH BEN YAKAR (d. between 1201 and 1218), talmudist and kabbalist, teacher of *Nahmanides. Judah was born in Provence, but in his youth he moved to northern France where he studied under *Isaac b. Abraham, the tosafist. Subsequently he went to Barcelona where his signature is found on a document of 1175. From other documents signed by Abraham b. Judah of Narbonne, who was apparently his son, the years of Judah's death can be established as between 1201 and 1218. Judah was also a kabbalist, having studied under *Isaac the Blind. In his lifetime Judah was famous for two large works. One – which has been completely lost – was a commentary on the Jerusalem Talmud and was one of the earliest systematic commentaries on it. It is frequently quoted by the early authorities and covered at least a large part of the orders of *Mo'ed* and *Nezikin*. His other work is the *Ma'yan Gannim*, a rational commentary on the liturgy and blessings, though the esoteric element is by no means absent. His aim in this work was to show the scriptural and rabbinic versions and sources of the prayers and to detail the various laws connected with them. The commentary was published on the basis of a number of manuscripts by S. Yerushalmi (1968). The work is frequently cited by the *rishonim*, among them Jacob ha-Kohen of Lunel and David *Abudarham. The latter quotes him literally in almost every *halakhah*, without, however, mentioning his name. Judah's main claim to fame in subsequent generations was that he was one of the teachers of Nahmanides, who refers to him in his works. It seems that he was one of the channels through which Nahmanides became acquainted with the literature and methods of study of the tosafists.

[Israel Moses Ta-Shma]

JUDAH THE GALILEAN (d. c. 6 C.E.), considered by many scholars identical with Judah, the son of *Hezekiah who was put to death by Herod in Galilee. Judah came from Gamala in the Golan (*Jos., Ant.*, 18:4). Immediately after the death of Herod (4 B.C.E.) Judah participated in the widespread disturbances in the country. He had put himself at the head of a band of rebels near Sepphoris and had seized control of the army in Herod's palace in the city. According to Josephus, he had even aspired to the throne (*Ant.*, 17:271–2; *Wars*, 2:56). Though the rebels were defeated, Judah apparently succeeded in escaping (*Jos., Ant.*, 17:289ff.). Together with *Zadok the Pharisee, he was one of the founders of the “fourth philosophy,” i.e., the Sicarii (*Ant.*, 18:23–5). When Sulpicius *Quirinius, the governor of Syria, arrived in Judea in 6 C.E. to take a census, as the first step toward converting the country into a Roman province, Judah and Zadok urged the people to resist, maintaining that submitting to a census in Judea was a religious sin, the Jewish people being forbidden to acknowledge any other master but God (*Jos., Wars*, 2:118, 433). Judah's doctrine struck root among the embittered people, especially among the youth, and its consequences were visible in the period of the procurators, particularly in the last years before the Roman War and during the war itself.

Of his three sons, Jacob and Simeon both continued the zealot tradition and headed the rebels. Both brothers were arrested and crucified during the procuratorship of Tiberius Alexander (46–48 C.E.; *Jos., Ant.*, 20:102). Their brother Menahem was one of the Jewish leaders in the Roman War. For the “fourth philosophy” founded by Judah the Galilean, see *Zealots and *Sicarii.

[Abraham Schalit]

JUDAH HALEVI (before 1075–1141), Hebrew poet, philosopher, and physician. Halevi was one of the most distinguished and emblematic medieval intellectuals, perhaps the most mature and representative model of Jewish culture in al-Andalus; he was deeply involved in the life of his times and, because of his prestige, he had a deep influence on future Judaism. Judah Halevi's own work constitutes his most important biographical source: his poems tell of his journeys in Spain and in other countries, of his relations with his contemporaries, of his position in society, and of his spiritual development. Many biographical particulars are also contained in his extant letters and in poems of his contemporaries, as well as in later writers (e.g., Ibn Ezra's commentary to the Pentateuch, and *Maḥberet he-Arukh* of Salomon ibn *Parḥon). Publications of letters from the Cairo *Genizah* have clarified many aspects of the last period of Judah Halevi's life. Wider acquaintance with the many manuscripts and fragments of his writings preserved in the libraries of Russia have notably helped in the last years to increase our knowledge of his person and work.

Biography

EARLY YEARS AND ADULT LIFE. Despite the traditional location of Judah Halevi's birthplace in Toledo, modern research (since Schirman's study in *Tarbiz*, 10 (1939), 237–9) prefers the town of Tudela, still under Muslim rule and close to the border of Castile, as birthplace of both Halevi and Abraham *Ibn Ezra. Judah Halevi, apparently from a wealthy and learned family, received a comprehensive education in both Hebrew and Arabic. His childhood years were spent during a peaceful period for the Jews of the region. He lived for some time in Christian territory, as confirmed by his own words in a letter and by the testimony of his contemporaries. In some manuscripts he is called "the Castilian." Some researchers have pushed forward the date of his first visit to al-Andalus. But it is very likely that he was still very young when he traveled to the Muslim South with the intention of proceeding to the large Jewish center in Granada. Among the various communities he passed through on his way were Córdoba and Lucena; it was probably in one of these places that he participated in a poetry writing contest (styled after those of the Arabs). He won the competition for imitating a complicated poem by Moses ibn Ezra, who invited Judah Halevi to his home. The two developed a close friendship and Judah Halevi seems to have spent some time in Granada, in an atmosphere of wealth and culture. There he also wrote his first important poems – primarily eulogies and poetical letters – and apparently some of his wine and love poems, which reflect his easy-going, hedonistic life during those years. Judah Halevi also became friendly with Ibn Ezra's brother, Isaac, and was in contact with other great poets in Granada, Seville, and Saragossa.

With the coming of the Almoravides from Africa and their conquest of Muslim Spain (after 1090), the position of the Jews in Andalusia deteriorated, and Judah Halevi left Granada. For the following 20 years he traveled through numerous communities. In various places he was in contact with Jewish and non-Jewish nobles and dignitaries (e.g., Joseph ibn Migash in Lucena and the vizier Meir ibn Kamniel in Seville). He spent some time in Christian Toledo, practicing medicine, apparently in the service of the king and his nobles. Like many of his fellow Jews at that time, he trusted that the status and influence of the Jewish nobles and community leaders who were close to the royal house would ensure security and peace for the Jews in the Christian lands. However, he was disillusioned by the murder in 1108 of his patron and benefactor, the nobleman Solomon ibn Ferrizuel, who had achieved a high rank in the service of Alfonso VI. Judah left Toledo apparently before the death of Alfonso VI (1109) and again began to travel. His fame continued to spread, and the circle of his friends and admirers, to whom he wrote many poems, broadened greatly. Judah Halevi also had contact with the Jewish communities in North Africa, Egypt, and Narbonne.

His financial situation was generally sound; it seems that he was only rarely dependent on gifts. Aside from his profession as a physician, he also engaged in trade, apparently with Jewish merchants in Egypt, and, in particular, with the great

Jewish merchant, Abu Sa'īd Ḥalfon ha-Levi of Damietta, who on one of his many travels came to Spain. Five letters of Halevi to Ḥalfon have been found in the **Genizah*, written by the poet between 1127 and 1140. Active in community affairs, too, he helped to collect money for the ransom of captives.

FRIENDSHIP WITH ABRAHAM IBN EZRA. Of all his ties with various people, Judah Halevi's friendship with Abraham ibn Ezra was especially close and long-lasting. Some scholars believe that both wandered through the various cities of Muslim Spain, and even traveled to North Africa together. They were both in North Africa, but it is not sure that they were there together. In his biblical commentaries, Abraham ibn Ezra quotes Judah Halevi numerous times in matters of grammar, exegesis, and philosophy (e.g., Ex. 9:1; 20:1; Dan. 9:2). Various traditions maintain that the two were related by blood or by marriage. According to a later tradition (*Sefer ha-Yuḥasin* of Abraham Zacuto, ed. by A. Freimann, 1925) they were cousins, while another – no doubt legendary – mentioned in Abrabanel's commentary on the Torah and in the *Shalshet ha-Kabbalah* of Gedaliah ibn Yaḥya (Cracow, 1596), asserts that Judah Halevi gave his daughter in marriage to Abraham ibn Ezra, despite the latter's poverty. On the basis of letters from the Cairo *Genizah*, however, it may be surmised that his son-in-law was Isaac, the son of Abraham ibn Ezra, who traveled with him to Egypt.

Last Days in Erez Israel

Judah Halevi's decision to emigrate to Erez Israel, a gradual one, reflected the highest aspiration of his life. It resulted from a complex of circumstances: intense and realistic political thought; disillusionment with the possibility of secure Jewish existence in the Diaspora; intense longing for a positive, redeeming act; and the prevalent messianic climate, which so affected him that he once dreamt that the redemption would come in the year 4890 (1130 C.E.).

The decision was strengthened by his religious philosophy, developed at length in his book the *Kuzari* and in many of his poems. This philosophy maintained the unity which ensues from the relationship between the God of Israel, the people of Israel – to whom He chose to reveal His truth through His prophets, Erez Israel – the "Gate of Heaven," the only place where prophecy is possible, and Hebrew – the language of Israel. From this it clearly followed that the ideal existence for the Jews was attainable only in their own land. Throughout the philosophical and poetic work of Judah Halevi, as in his life, one can sense the intellectual effort to make other Jews conscious of this. In his philosophical work as well as in his poetry, Judah Halevi spoke out harshly against those who deceived themselves by speaking of Zion and by praying for its redemption while their hearts were closed to it and their actions far removed from it. Judah, however, understood the problems which emigration to Erez Israel posed for many people; he decided to realize his own *aliyah* – the educational act of an individual who also seeks personal redemption.

Great difficulties lay before him. The long journey by both sea and desert was perilous. He knew that he would en-

counter very difficult living conditions in Erez Israel, which was under Crusader rule at that time. Moreover, Judah Halevi had to counter the arguments of his friends who tried to deter him; he had to overcome his attachment to his only daughter and son-in-law, to his students, his many friends and admirers; and he had to give up his high social status and the honor which he had attained in his native land. He struggled deeply with his intimate attachment to Spain, the land of “his fathers’ graves”: at one time he had even looked upon Spain with pride and thankfulness, as a homeland for the Jews. These indecisions, which occupied him in the last period of his life, find expression in his “Poems of Zion,” in the *Kuzari* (mainly in the fifth and final part), and in the *Genizah* letters which date from the same period. On the other hand, Judah Halevi was encouraged to make the journey by his friend Ḥalfon ha-Levi, whom he met in Spain in 1139.

Important new letters and documents published by Goitein on the one hand (five of them are holographs of Judah Halevi himself), and by M. Gil and E. Fleischer (2001) on the other, have illuminated in a decisive way his last days in Egypt and his trip to Palestine. Thanks to the letters found in the *Genizah* we know that on the 24th of Elul (Sept. 8, 1140) Judah Halevi, accompanied by Isaac, the son of Abraham Ibn Ezra, among others, arrived in Alexandria. His arrival caused great excitement, and the *dayyan* Aaron ibn al-ʿAmmānī was his host. Several months later he went to Cairo where he stayed with Ḥalfon ha-Levi. The scenery, pleasures, the admiration and honor generally accorded him everywhere, and the friendships he enjoyed all served to prolong his stopover in Egypt. He wrote there a substantial number of poems, no fewer than 50, praising his Egyptian friends. He wanted to continue his trip to Jerusalem and began to fear that he would die before reaching his destination. His friends tried to convince him to remain in Egypt, claiming that Egypt was as important as Erez Israel, since the first prophecy as well as great miracles took place there. He tried the land route from Cairo to Jerusalem, but had to return. Isaac Ibn Ezra decided to follow his own route and did not return with him to Alexandria. Judah Halevi boarded a ship at Alexandria on May 8, 1141, bound for Erez Israel, but its departure was delayed by inclement weather. The ship finally set sail on May 14. The sea journey to Ashkelon or Acre took about 10 days, and it seems very likely that he actually arrived in the Holy Land. A letter by Ḥalfon informs us that Halevi died in the month of July. It seems that he succeeded spending his last month in the land of his dreams. What was denied him in life, however, the famous legend, first mentioned in *Shalshet ha-Kabbalah*, and later by Heinrich Heine in his *Hebraeische Melodien*, has supplied. It relates that he managed to reach the city of Jerusalem, but, as he kissed its stones, a passing Arab horseman (Jerusalem, in fact, was then under the Crusaders) trampled on him just as he was reciting his elegy, “*Ziyyon ha-lo tishali*.”

Poetry

About 800 poems written by Judah Halevi are known, cover-

ing all the subjects commonly found in Spanish Hebrew poetry, as well as the forms and artistic patterns of secular and religious poetry.

LOVE POEMS. His love poems, which number about 80, are addressed to a deer or gazelle, or – as marriage poems – to the two together. His short poems with internal rhyme, and his girdle poems, as well as those of the *zajal* type, in which plays on sound and rhyme sometimes add a musical grace, attained great artistic perfection (“*Ḥammah be-ad rekiʿa zammah*,” “*Bi bi ha-zevi, bi adoni*”). Their content and form are those generally found in Arabic-Hebrew love poetry, such as the yearnings and travails of the lover, the cruelty of the beloved who delights in mocking her victims, her countenance shining from the darkness of a stormy night, and her “lethal” glances. Sometimes there is a particularly original description of feminine beauty, such as the one comparing the face surrounded by a red fall of hair to the setting of the sun which reddens the clouds of the horizon (“*Leil gillela elai*”); sometimes the light playful spirit unites with a surprisingly graphic description. A popular vein is discernible in the clear and simple style of the epithalamia. Interpretations of Judah Halevi’s love poems vary: some assert that they reflect his personal experiences, while others maintain that they are simply artistic compositions, with accepted literary themes and descriptions. Following contemporary trends, Judah Halevi also composed poems in praise of wine and its pleasures. A playfulness can also be felt in his entertaining riddles and in his various epigrams, which in the main are witty (“*Lo nikreti*”).

POEMS OF EULOGY AND LAMENT. The largest number of Judah Halevi’s secular poems deal with eulogy and friendship. A small portion of the approximately 180 were written for unnamed individuals but the majority for his famous contemporaries – poets, philosophers, religious scholars (e.g., Moses ibn Ezra, Judah ibn Ghayyat, Joseph ibn Zaddik, Joseph ibn Migash), nobles, and philanthropists. Their form is the *qaṣīda* and their language, rich and brilliant, with much embellishment. Splendid poetic descriptions, such as that of the night in the poetic eulogy composed for Solomon ibn Ghayyat (“*Ayin nedivah asher tashut ke-soheret*”), or that of the garden, the wine, and the party of friends in a poem in honor of Isaac ibn al-Yatom (“*Erez ke-yaldah hayetah yoneket*”) are attained. The opening is generally the most artistic part of the poem, whereas the eulogy itself – which for the most part comprises the content – is usually pedestrian, lacking any mark of individuality, and tending to extreme exaggeration. The frank and sensitive poems within this type were written for those people, like the Ibn Ezra family, toward whom Judah Halevi felt deep affection and admiration.

The *qaṣīda* is also the form of most of the laments (approximately 45) on the deaths of many of his friends and acquaintances. His grief is combined with pessimistic meditation on omnipotent death, and on fate which strikes arbitrarily, and with exaggerated eulogies of the deceased – all in the contemporary style. The death of close friends, however,

evoked a strong personal feeling which succeeded in investing the usual motifs with originality (*"Aleï zot tivkeinah"* on the death of Moses ibn Ezra and his brother Joseph). As was common in this period, Judah Halevi combined a conscious intellectual structuring of the whole poem with an expression of genuine emotion, as exemplified in particular by the lament on the murder of Solomon ibn Ferrizuel at the hands of Christian mercenaries. Here the tragedy of the individual unites with the catastrophe of the people, and perplexity with rage against Christendom, which is cursed in this poem. Stylistically the openings of the laments are unique. The poems themselves, adapted to different mourning situations, are written in strophic forms, free from the stylized contents and the representations of the classic laments. The influence of folk songs is clearly discernible in them; the ballad verse form is sometimes used, especially in dialogue between the living who stand by the grave and the deceased.

PIYYUTIM. Outstanding among the 350 *piyyutim* which Judah Halevi composed for all of the Jewish festivals is a large group, which may be entitled *"Shirei ha-Galut"* (*"Poems of the Diaspora"*). The realism of these poems clearly reflects the tragic events suffered by the Jewish people. Their main value, however, is to be found in the lyric fashioning of his own world by the poet, who identified deeply with the fate of his people and whose poetry afforded true expression to many others. The combination of stylistic aspects of Spanish-Hebrew poetry with the various characteristics of the ancient Hebrew style results in rare achievements of perfection and beauty. Job's lament, the cries of Lamentations and of the psalmist, and the bitter complaints of Jeremiah resound in these poems, together with the joy of the prophetic visions of redemption. By relating his personal experience, the poet particularizes the idea of suffering – heightened by imagery and descriptions drawn from ancient sources. In their rich language and imagery, in the force of their varied style, and in the magic effect of their sound patterns, these poems rank among the most outstanding Hebrew poetry of all time (e.g., *"Yonah nesatah al kanfei nesharim"*).

In discussing the problem of the "end of days," Judah Halevi uses the obscure eschatology of the Book of Daniel. He sometimes expresses depression arising from his fear at the delay of the redemption and of the danger of destruction of his people. In these *piyyutim* Judah Halevi expresses his yearning for redemption in an urgent demand for its realization and in rejoicing over its expected realization. Following an ancient midrashic motif, he allegorically expressed the pain of God's chosen and faithful people, whom He had seemingly forsaken to idolators, in terms of the anguish of a prince whose servants have captured him and whose father delays in rescuing him; in contrast God, the lover, promises to keep His covenant and assures His people of His love and the future redemption. In this section the poetry is replete with descriptions of love and spring taken from the Song of Songs. In these poems Judah Halevi takes a polemical stand against false belief;

against the enticements of monks and apostates, the beloved, wounded and insulted, vows unconditional faithfulness to her lover (*"Yode'ei yegoni"*), proclaiming happiness in her pains which are but wounds of a lover (*"Me-az me'on ha-ahavah"*). He emphasizes the superiority of the Jewish religion, which alone is divinely revealed (*"Ya'alat hen mi-me'onah rahakah," "Yekar im ha-shabbat tagdil"*). The poems are imbued with sometimes strongly contrasting emotions: loneliness and suffering; rejoicing in the light of the past and sufferings in the darkness of the present; despair and security; lust for revenge and yearning for redemption. The strong tensions between these opposites find imagistic expression in such figures as a dove escaping the hunter (the Jewish people carried, in the past, on the wings of eagles); the degradation of the slave (the lost kingdom); the loneliness of the exiled son (the essential chosenness of the people).

PERSONAL LYRIC POETRY. Along with *piyyutim* of a national nature on such biblical and historic themes as the description of the miracles in Egypt in the poems for Passover, the miracle of Purim, the *Avodah* for the Day of Atonement, are found lyric poems expressing personal religious experiences: *yozerot*, *kerovot*, *reshuyyot*, and mainly *selihot*, which are among the greatest in Jewish religious poetry after the Psalms. Judah Halevi expresses man's reverence for God, his dread of sin, and the desperate struggle against his carnal nature. He repeatedly admonishes the soul with harsh words, instills in it the fear of judgment and death, entices it with the idea of the reward of paradise, and deters it with the threat of the fire of hell. In this conflict God, a harsh judge, is too lofty to be approached and known. On the other hand, he writes of his happiness with God, which pervades his entire being; his powerful love of and devotion to God increase the light in his soul, mitigate its fear, and protect it from the power of evil. At that time, God is revealed to the heart. Traces of contemporary philosophical views can be discerned in these poems, as well as influences of similar motifs in earlier Hebrew poetry. Exalted style is only rarely used (*"Yehav lashon hazot ishon," "Elohim el mi amshilkha"*); generally the poetic tone is gentle, humble, and quiet. Some poems confront the great paradoxes of religious experience; some combine deep meditation with emotional feeling (*"Yah, anah emza'akha"*); others occasionally border on the mystical, as the poet ventures into areas of the ancient revelation in quest of his "lover," his God, "and no one answers."

SONGS OF ZION AND SONGS OF THE SEA. The most famous of the poetic works of Judah Halevi are the *"Shirei Ziyyon"* (*"Poems of Zion,"* or *Zionides*), approximately 35 in number. Their originality is evident in the very topic, which was at that period an uncommon one, but even more so in their varied and beautiful artistry. Several categories of these poems can be differentiated, although they were written over several decades, and contain recurring motifs and similar tones.

(1) The poems of longing for Erez Israel express the inner tension between love and pain, between the dream and

the reality, and the effort required to bridge the West and East (“*Libbi be-mizrah*,” “*Yefeh nof*,” “*Elohai, mishkenotekha yedidot*”).

(2) The poetic disputations exhibit a strong intellectual base, overpowered by personal emotion. At times the controversy is an expression of the poet’s own inner uncertainties. To Judah Halevi it seemed that for many life in Spain was a kind of slavery, a pursuit of worthless enticements, and a betrayal of God. He found true freedom in servitude to God and in subservience to His will, realized by his emigration to Erez Israel. Prior to his voyage, Judah Halevi lived in his imagination and poetry, overcoming deep fears in this way; he even taught himself to anticipate happily and excitedly the dangers of the future (“*Ha-tirdof ne’arut*,” “*Ha-yukhlu pegarim*”). It was in his poems of dispute with others – in which Judah Halevi appears a vigorous opponent – that his doctrine on Erez Israel was developed and the national consciousness elevated to a hitherto unknown level. In the 12th century he was able, as a result of reasoning and clear political understanding, to argue that there is no secure place for the Jewish people except Erez Israel. As for its being desolate, it was also given that way to the forefathers.

(3) Some of the poems of the voyage were actually written aboard ship; others are imaginary descriptions composed before the journey, while still others were written after it. Important descriptive poems are structurally influenced by ancient biblical poetical forms (e.g., Ps. 107:23–32). They begin with a description of the world, but the subsequent descriptions diminish in perspective: the stormy Mediterranean Sea, the weak ship at its mercy, and finally the poet himself in prayer. Following that is the final calm after the storm. The roaring of the waves dominate the rhythm and sound patterns. His prayer is identified with Jonah’s, and the roaring of the sea is consciously identified with the moaning of his heart. The best of his “*Shirei Ziyon*” is “*Ziyon ha-lo tishali*” (“Zion, wilt thou not ask the welfare of thine prisoners?”).

How shall it be sweet to me to eat and drink while I behold
Dogs tearing at thy lion’s whelps?
Or how can light of day be joyous to mine eyes while yet
I see in ravens’ beaks torn bodies of thine eagles.

Numerous imitations and translations of this poem have appeared. By virtue of its inclusion (according to the Ashkenazi rite) in the *kinot* for the Ninth of Av, many generations have lamented the destruction of the Temple and dreamt their dream of redemption in the words of this poem. All aspects of the poem focus on Zion. The single rhyme of all the stanzas is η , which produces a trance-like effect. Deep attachment to Erez Israel alone permeates the meaning of everything in the poem. The holy qualities of the land are specified at length with a lyric feeling which imaginatively transplants the poet to places of former revelation, prophecy, monarchy, and to the graves of the forefathers. In a unique poetic outcry, he expresses his grief at its destruction and his humiliation in subjugation:

As the deep groans and roars beneath me
Learning from my inmost fears.

He expresses the happiness of his hope in the quiet lines which end the poem. With these lines he blesses those who will be fortunate enough to see the real redemption in the dawn.

Judah Halevi’s poems were widespread in manuscript from an early period. Thousands of fragments of his poems were preserved in the *Genizah*, and also in other manuscripts collections that are kept today in Russia and many other countries. During his lifetime they were already known outside of Spain. Not long after his death his poems started to be collected in *diwānīm* by different scholars. The best known of them is the large *diwān* compiled, probably in Cairo, by Hiyya al-Dayyan al-Maghribī, not long after Halevi’s visit to Egypt (Oxford, Bodl. Ms. 1970). Other editors tried to increase the number of poems of the *diwān*, as the Cairene compiler *Joshua ben Elijah Halevi did at least one century later, including an appendix with more compositions (Oxford, Bodl. Ms. 1971). Before him David ben Maimon and Sa’id ibn al-Kash also collected Halevi poetry.

From the beginning of printing many of Judah Halevi’s *piyyutim* were included in *maḥzorim* and in collections of *piyyutim*, *seliḥot*, and *kinot*. From the 19th century scholars began to publish his secular and liturgical poems from manuscripts in literary journals and periodicals, e.g., A. Geiger, in *Melo Hofnayim* (1840); S.H. Edelman in *Ginzei Oxford* (1850); J.L. Dukes in *Ozar Nehmad* (1857); S.D. Luzzatto in *Tal Orot* (1881) and in *Iggeret Shadal* (1882–84). The first scholar to publish collections of Judah Halevi’s poems as individual books and to publish his complete diwan was S.D. Luzzatto. He received from Oxford a copy of the manuscript of the diwan made by Joshua Elijah bar-Levi (14th century) and published the poems in it in *Betulat Bat Yehudah* (Prague, 1864). He also began to publish the entire diwan but he only managed to publish the first section of it (Lyck, 1864). Afterward many collections of Judah Halevi’s poems were published, completely or in part. The following may be mentioned: A.A. Harkavy, *Rabbi Yehudah Halevi, Kovez Shirav u-Melizotav*, 2 vols. (Warsaw, 1893–94); H. Brody, *Diwan Jehudah ha-Levi*, 4 vols., of which two are annotated (Berlin, 1894–1930); S. Bernstein, *Shirei Rabbi Yehudah Halevi* popular edition (with notes and an explanation; New York, 1945); Y. Zmora, *Kol Shirei Rabbi Yehudah Halevi*, 3 vols. (Tel Aviv, 1955). A commentary on the first section of Judah Halevi’s diwan was published by Abdallah Saul Joseph, *Givat Sha’ul* (Vienna, 1923), edited by S. Krauss. In the various anthologies of Hebrew poetry much space was devoted to Judah Halevi’s poems, e.g., H. Brody-K. Albrecht, *Sha’ar ha-Shir* (1905); H. Brody-M. Wiener, *Mivḥar ha-Shirah ha-Ivrit* (1922, 1946², ed. A.M. Habermann); H. Schirmann, *Ha-Shirah ha-Ivrit bi-Sfarad u-ve-Provence*, vol. 1 (1959). A new comprehensive and critical edition of all Halevi’s poems is one of the great desiderata of medieval Hebrew poetry in our days. J. Yahalom is working on it.

Part of Judah Halevi’s poetry has been translated and

published either alongside the Hebrew original or by itself, e.g., by J.M. Sachs (in *Die religioese Poesie der Juden in Spanien*, 1845); by A. Geiger (*Divan des Castiliens Abu'l-Hassan Juda ha-Levi*, 1851); by Franz Rosenzweig (*Zionslieder*, 1933); into English by N. Salaman (*Selected Poems of Jehudah Halevi*, 1924), G. Levin (2002), etc.; into Dutch by S. Pinkhof (1929); Hebrew and Spanish by A. Sáenz-Badillos and J. Targarona (1994); Italian by S. de Benedetti (1871); Hungarian by J. Patai (1910).

CHARACTERISTICS OF HALEVI'S POETRY. Halevi's poetry has received countless commentaries and very different interpretations. No other medieval author has been received with the same enthusiasm by all subsequent generations. His poetry is considered one of the outstanding models of the Andalusian school. Some scholars have shown reserve about his conservative attitude, in sharp contrast, for example, to the much more liberal Ibn 'Gabirol. But no one has doubted the literary and esthetic value of his poetry.

Halevi follows the conventions of the time in poems that may be considered "formalist," like most of his love or bacchic poems that are sometimes almost literal translations from Arabic; but even in these cases he has his own particular and personal style. He can also write with the most profound lyricism, expressing in a wondrous way his own aspirations or those of his people in exile. His words of friendship are not simple formulas, and his affection for his people is entirely sincere. As a poet, he feels like a prophet proclaiming the liberation of Israel.

Coming from the Christian North, as a stranger, Halevi became fully integrated in the Andalusian world with its Arabic lore, exhibiting the maximum degree of cultural adaptation. Even some of the most significant topics and images that he employs in his poetry, including the feelings of the exile and the heart's separation from the object of its affection, are taken from Arabic poets, always with the nuances imposed by a Jewish mind. But he seems to have become disenchanted with the life of al-Andalus, gradually rejecting the Andalusian-Jewish courtly cultural and social values; a consequence of this may have been the trip to Jerusalem in the last days of his life and his possible decision to abandon the writing of poetry.

Analyzing this particular situation of Halevi, R. Brann sees in the poet's contradictory attitudes toward poetry a sign of the conflicts inherent in living in two quite different worlds, in cultural ambiguity; for him, Halevi did not undergo a "conversion" in his adult years; he remained an Andalusian and compunctious Hebrew poet conflicted about the ambiguity of his literary identity. However, in the last 15 years of his life, Brann observes in Halevi a clear deviation from literary traditions and cultural conventions that produces a "culturally subversive discourse" tending to replace the dominant values of this society.

R. Scheindlin has examined the individual vision and religious experience of Halevi (in contrast to that of Ibn Gabirol) as reflected in liturgical poetry. Although both poets share the Neoplatonic psychology, they are in fact widely separated:

Halevi attributes great importance to the distance between God and man, to His transcendence, introducing in his poems a climate of tranquil confidence in God and a passive acceptance of His will that seem to have their main sources in Arabic religious poetry. In a very beautiful study Scheindlin (2003) has contemplated Halevi's pilgrimage as a literary phenomenon, underlining the significance of his pervasive use of imagery involving birds. Birds can be connected with Israel, with the human soul, or with the pilgrimage itself. In particular, he frequently employs the image of the dove to represent the nation Israel, combining it many times with the words "silence" and "distance" to express the exile or the dream of redemption. When finally he focused his literary energies on the pilgrimage, the distant, silent dove served him also as an image of his search for the land of his dreams.

Halevi's poetry was not an isolated phenomenon. When he arrived in al-Andalus he met a large number of poets in all the important Jewish centers. He learned from them and became the friend of many of them. Poetry was one of the most highly esteemed activities of Andalusian society, a sign of intellectual distinction and an ideal of life. Literary meetings, competitions, proof of inventive capacity and imaginative talent, correspondence between poets, riddles, plays on words and images were usual practices among these groups of cultivated Jewish Andalusians. Judah Halevi was surrounded by the members of the Ibn Ezra family, by Joseph ibn Zaddiq, Joseph ibn Sahal, Judah and Solomon ibn Gayyat, Ibn al-Mu'alim, Levi ibn al-Tabban, and other minor poets that represented the rich life of a Golden Century close to its end.

[*Encyclopaedia Hebraica* / Angel Sáenz-Badillos (2nd ed.)]

His Philosophy

Judah Halevi was one of medieval Jewry's most influential thinkers, and his arguments for the truth of Judaism and the essential superiority of the Jewish People are invoked to this day in traditionalist circles. Although Halevi rejected Islamic Aristotelianism, which was beginning to be adopted by his fellow Jews and would soon be considered by most Jewish philosophers (such as Maimonides) as scientifically authoritative, he maintained that Judaism could be defended rationally by emphasizing its empirical basis. Hence, his rejection of the leading philosophy of the day did not mean that he was an anti-rationalist.

Halevi's thought is developed in *Kitâb al-Radd wa-'l-Dalîl fi 'l-Dîn al-Dhalîl* (*The Book of Refutation and Proof on the Despised Faith*, 1140), commonly called *The Kuzari*, after the king of the Khazars, who is portrayed as initiating a search for the correct religion after repeated dreams in which an angelic figure tells him that his intentions were pleasing to God, but his actions were not. The story is based on the historical conversion of the central Asian Khazars to Judaism in the eighth century, even though Halevi's account of the king's search for truth is purely his own literary invention. As the story is told by Halevi, the king first heard and rejected the doctrines of an Aristotelian philosopher, a Christian, and a Muslim. The

philosopher presented a theory of a wholly impersonal God who does not care which actions humans choose; such a stance contradicted the evidence of the king's own dream. In contrast, both the Christian and Muslim claimed that the actions of their religion are those which are pleasing to God, but the king rejected their creeds as illogical (Christianity) and unsubstantiated (Islam).

Having had the king reject the dominant intellectual and religious doctrines of his day, Halevi then presented the king as finally inviting a Jew to hear his views. Eventually he was persuaded by a Jewish sage (the *ḥaver*) of the truth of Judaism. After the king's conversion to Judaism, described at the beginning of *Kuzari*, Book 2 (out of 5), his discussions with the *ḥaver* continued until the latter announced his departure to the Land of Israel at the end of the treatise. This dialogue provided Halevi with the framework for presenting his defense of Judaism.

SOURCES. Halevi used the Bible as the basic text for his reconstruction of Jewish history, paying only scant attention to rabbinic interpretations of the biblical narrative. His use of midrash is selective, highlighting those traditions which emphasize Jewish particularity. There is very little legal material in *The Kuzari*, but Halevi was well aware of rabbinic *halakhah*, especially compared to the Karaite practices. Certain trends in the Jewish mystical tradition, especially *merkavah* speculation, also had an impact on Halevi's ideas; in turn, his thought had a vital impact on later Kabbalah.

The Kuzari benefited greatly from an assortment of non-Jewish sources. While Halevi rejected Greek philosophy as it was developed in the Islamic world, he was very much aware of the Aristotelian system (of which he may have been enamored in his youth). His portrayals of philosophy were indebted to the works of Abū Bakr Muhammad ibn Bajja and Abū Ali al-Hussain Ibn Sīnā (*Avicenna, whose treatise on the soul is transcribed in *Kuzari* 5:12). Halevi's opposition to philosophy seems to have been inspired in part by Abū Hāmid Al-Ghazālī. He also drew from the kalam sources used by his Jewish predecessors, such as *Saadia Gaon and *Bahya ibn Paquda, but he considered Kalam useful only to the extent that one is searching for a rationalistic defense of Jewish theology. Greek science, as moderated by the Islamic environment, had an impact on his thought as well. In recent years, attention has been paid to the way in which Shi'ite and Sufi concepts and terms helped frame Halevi's religious outlook, especially vis-à-vis the special status of the Jewish People.

METHOD. Halevi rejected the two regnant scientific/philosophical models of his day: Kalam and Aristotelianism. He believed that both relied on theoretical constructs rather than hard, empirical truth. Kalam arrived at the correct conclusions, such as the creation of the world and the existence and unity of God, but it was useful mainly for apologetics. Aristotelianism, in contrast, taught many incorrect doctrines, since Aristotle lacked reliable tradition when he set out to

understand the world by use of his syllogistic reasoning (*qi-yās*) alone. For instance, he believed that the world is eternal; if he had known the Bible, he would have used his reason to defend the proposition that the world was created (*Kuzari* 1:67). Furthermore, philosophy can go only so far: philosophical, syllogistic knowledge of God, for instance, is possible, but it is deficient compared with immediate, unmediated experience (*dhawq*, literally "taste") of God through prophecy (*Kuzari* 4:15–17).

The Jewish tradition provided true knowledge based on the experience of the Jewish people. The reliability of the tradition is guaranteed by the large number of witnesses to the miraculous exodus from Egypt, the revelation on Mt. Sinai, and the entrance into the Land of Israel. Not only were there hundreds of thousands of observers of these events, but also the original testimony of these witnesses has been transmitted publicly over the centuries. Since, Halevi claimed, all Jews accepted the accuracy of the biblical account as having been passed down to them by previous untold generations, there is no possibility of error or falsification of the tradition. If the Bible were a fabrication, there would not be universal Jewish consent to its truth. In contrast, Christianity and Islam claimed to have been revealed to only a small number of people, and, therefore, cannot be validated. Although this historical argument for the certainty of the Jewish tradition is not totally original (it has an antecedent in the work of Saadia Gaon), Halevi's formulation of it is probably his most significant legacy.

Once Halevi established the veracity of Judaism, he employed reason to explain its truths. Nothing in Scripture or tradition, he claimed, contradicted reason (*Kuzari* 1:67, 89). Thus, one may look for justifications of problematical doctrines (such as the superiority of the Jewish people) or historical occurrences (such as revelation). These explanations may strike the modern reader as rationally invalid, but they were based in part on medieval scientific notions or commonplace notions of the time. In any event, it is too facile to dismiss Halevi as solely a doctrinaire religious critic of philosophy; he attempted to replace Aristotelian rationalism, which to his mind was insufficient, with a form of Jewish empiricism.

SINGULARITY OF THE JEWISH PEOPLE. According to Judah Halevi, the Jewish people were capable of achieving prophecy and receiving the Torah because they are essentially different from other nations. Borrowing notions common in Shi'ite literature, Halevi argued that Adam was the original perfect human whose status was passed on biologically to a selective line of his descendants. At first, this singular distinctiveness (Arabic: *safwa*, usually translated into Hebrew as *segulah*) was confined to individuals such as Seth, Noah, Shem, Abraham, Isaac, and Jacob. With the generation of Jacob's sons, this special characteristic became universal among all Jews. As a result of their distinctiveness, the Jewish people were able to conjoin with an aspect of God called "the divine influence" or "the divine order" or "the divine faculty" (Arabic: *al-amr*

al-ilahi, usually translated into Hebrew as *ha-inyan ha-elohi*) and become prophets (*Kuzari* 1:95 and other places). It is this special relationship which marks Jews off from all non-Jews; a convert to Judaism can aspire at most to a sub-prophetic level of inspiration but will never be equal to the native-born Jew (*Kuzari* 1: 27, 115; the status of the proselyte's Jewish-born progeny is not clarified in the *Kuzari*, although there is reason to think that Halevi believed they would also be inferior to other Jews). The fact that the non-Jewish king of the Khazars chose to become Jewish, despite the convert's lower status, is presented as a strong argument for the essential truth of Judaism.

Even though Jews were a persecuted minority, they actually functioned as the "heart" of humanity; without a heart, a living organism could not exist, but the heart can be very weak when other limbs are strong. Humanity could not exist without Jews, who are like a sick man who once was vibrant and can still return to his earlier state. The nations of the world are like a beautiful statue which is externally impressive but which was never truly alive (*Kuzari* 2:29–44).

THE LAND OF ISRAEL AND THE HEBREW LANGUAGE. A corollary to the theory of the superiority of the Jewish people was the concept of the superiority of the Land of Israel (usually called by the Arabic geographical term *al-sham*, namely "greater Syria") and of the Hebrew language (*Kuzari* 2). For instance, prophecy is possible only in the Land of Israel (or "for its sake"; Halevi was aware that a number of biblical prophets were not in the Land of Israel). In order to explain this geographical uniqueness, Halevi adopted a climatological theory, originally innovated by the Greeks and developed by the Arabs, which postulated that the center of the populated areas of the earth is superior to the northern and southern areas. The Land of Israel is the most perfect of all lands. This is yet another example of the use of what was considered a scientific theory to justify Jewish exclusivity.

The sad state of the Land of Israel in Halevi's own time was explained as a result of the destruction of the Temple and the dispersion of the Jews. Just as a particular piece of land might have all the natural attributes to produce a wonderful vineyard, if other factors necessary to grow grapes (e.g., rain, fertilization, weeding) are missing, the vineyard will not produce as it should. Thus, without the ongoing observance of the commandments, especially the sacrifices, the visible *Shekhinah* is no longer present; the Jewish inhabitants of the Land of Israel have temporarily lost their special status, although it remains latent in both the land and the people. Nevertheless, Jews should return to the Land of Israel, even in its unredeemed state. The *haver's* departure from Khazaria at the end of the *The Kuzari* mirrors Judah Halevi's own departure from Andalusia.

The Hebrew language has also deteriorated despite its intrinsic superiority. Although it was the language in which the world was created, the language spoken by Adam and Eve, and the language of prophecy, in the exile it has suffered

the same fate as the Jewish people. It should be noted that, although Halevi wrote his poetry in Hebrew, *The Kuzari* was written in Arabic.

REASONS FOR THE COMMANDMENTS. Halevi accepted Saadia Gaon's distinction between rational and revelational commandments, but in contrast to the Gaon, he stressed the value of the revelational commandments as distinguishing Judaism from other religions. Everyone, including a gang of thieves, can observe the basic societal norms (the rational commandments) in their own limited communities; only Jews can observe the specific commandments given in the Torah. Those religions which teach the observance of "intellectual nomoi," and not the divine commandments of the Torah, are human in origin and are merely "syllogistic" and "governmental" or "political" (*Kuzari* 1:13, 81; 2:48).

One should accept observance of the Torah as the will of God, without searching for the reasons for the revelational commandments. For those who were incapable of reaching such a level of belief, Halevi offered a number of different justifications of the commandments, including their contribution to harmony in the world and to personal harmony of the individual worshipper (*Kuzari* 2:25–65; 3:1–22). Unlike those Jewish rationalists who gave historical reasons for many of the commandments, such as the sacrifices, thereby undermining their intrinsic worth, Halevi believed that each of the commandments has its own value and fits into a way of life which, by pleasing God, results in prophecy and divine providence.

INTERRELIGIOUS POLEMIC. Halevi attacked not only Aristotelian philosophy in his *Kuzari*. He was equally opposed to Judaism's rival religions, Christianity and Islam, as well as to Karaism, a Jewish sect which challenged the truth of rabbinic Judaism. Writing at a time of Christian-Muslim warfare both in Iberia and in the Land of Israel, Halevi was sensitive to the claim that numerical, military, and economic successes were signs of the truth of a religion. Compared to both Christianity and Islam, Jews were at a distinct material disadvantage, a fact which called into question the Jewish claim of superiority and divine favor.

Halevi maintained that temporal success is not a measure of truth, and even early Christianity and Islam themselves pointed to the martyrdom of their believers as a sign of the certainty of their religions. The fact that Judaism had survived adversity for such a long time, despite the ease with which individual Jews could have escaped persecution by converting to one of the other religions, is a sign of divine providence (*Kuzari* 1:112–115). Furthermore, Judaism's competitors thrive in this world specifically since they promise their adherents great rewards without demanding a concomitant commitment to observing divine commandments. Christianity and Islam are poor imitations of the one true religion, Judaism, but, in the messianic future, their adherents will recognize the superiority of the People of Israel. In the meanwhile, they prepare the way for the coming of the Messiah (*Kuzari* 4:23).

Refutation of the Karaite interpretation of Judaism may have been one of the Halevi's motivations when he composed an early version of *The Kuzari* (the question of possible changes in Halevi's views has recently been discussed in the scholarly literature, but meanwhile no consensus on the issue has emerged and the suggestions which have been proposed are highly speculative). Halevi regarded Karaism as parallel to philosophy because its adherents used personal exertion (*idjtihād*) and syllogistic reasoning (*qiyās*), rather than reliable tradition, as a source of interpreting the Torah and its commandments. Despite the worthiness of their intentions, their lack of reliable legal traditions resulted in behavioral anarchy, since each Karaite interpreted the Torah as he saw fit; in like manner the philosophers' lack of reliable metaphysical traditions resulted in a form of intellectual anarchy, such as their denial of creation of the world (*Kuzari* 3:22–74).

BIBLIOGRAPHICAL NOTE. The Judaeo-Arabic original of *The Kuzari* was first published by Hartwig Hirschfeld (Leipzig, 1887) on the basis of the unique manuscript of the text. A more definitive edition was prepared by David Baneth and completed by Haggai Ben-Shammai (Jerusalem, 1977). A medieval Hebrew translation was executed by Judah ibn Tibbon and has been reprinted many times, but there is no scientific edition. Hirschfeld's edition of this translation, which took into account the Judeo-Arabic original and restored censored passages, has served as the basis of most 20th century editions of the Ibn Tibbon text, despite its problematic nature. Johannes Buxtorf the Younger published a good version of the Ibn Tibbon text, accompanied by a Latin translation (Basel, 1660).

Two modern Hebrew translations exist: Yehudah Even Shmuel (Tel Aviv, 1972; the translation is not strictly literal; for instance it blurs some of Halevi's more ethnocentric statements, among its other idiosyncrasies); and Yosef Kafih (Kiryat Ono, 1997). Hirschfeld's English translation (many editions) is superseded by a new translation being prepared by Barry S. Kogan on the basis of the original work of Lawrence V. Berman. A number of other contemporary English editions have been translated from the Hebrew and have little scholarly significance. Charles Touati's French translation from the Arabic (Louvain, 1994) is of great value. *The Kuzari* has also been translated into a number of other European languages.

[Daniel J. Lasker (2nd ed.)]

In Jewish Literature

It is as the romantic "singer of Zion," rather than as the religious philosopher, that Judah Halevi has figured in literary works written by Jews. Perhaps the most memorable of such portrayals is that by the German poet Heinrich *Heine in "Jehuda Ben Halevi," one of the *Hebraeische Melodien* contained in his late *Romanzero* (1851). In lines which reecho the Psalms and the verse of the Spanish poet himself, Heine fondly traces the early education and later career of the courtly troubadour whose heart was set on Jerusalem. Indeed, Heine wrongly credited him with the authorship of the Sabbath Eve *Lekhah Dodi hymn (both here and in "Prinzessin Sab-

bat," in *Hebraeische Melodien*). A Yiddish version of Heine's "Jehuda Ben Halevi" was published by Zelig I. Schneider in 1904. Later in the 19th century, Ludwig *Philippson wrote the historical novel *Rabbi Jehuda Halevi, der juedische Minister* (Yid. tr., 1895), a Hebrew version of which later appeared as "Sefarad vi-Yrushalayim..." (in *Ha-Asif*, 3 (1886), 481–564). The subject has retained its popularity in the 20th century with works including the U.S. writer Eisig *Silberschlag's Hebrew epic poem *Yehudah Halevi* (1925) and the Yiddish poet A. Leyeles' "Yehudah Halevi" (in his *Labyrinth*, 1918). In his Hebrew novel *Elleh Masei Yehudah Halevi* (1959), the Israel writer Yehudah *Burla emphasized Judah Halevi's call for the Jewish people's return to Zion.

JUDAH HA-LEVI BEI-RABBI HILLEL, medieval paytan, some of whose work was recently discovered in the Cairo *Genizah*. Judah's *piyyutim* are based on customs prevailing in Erez Israel, which would indicate that he lived there or in Egypt, where there was a Palestinian community. He is the only *paytan* known to have composed *piyyutim* for Tu bi-Shevat. Two of his *kerovot* for the *Shemoneh Esreh are preserved; one, published by M. Zulay (*Leket Shirim u-Fiyyutim* (1936)) contains names of trees growing in Palestine.

[Menahem Zulay]

JUDAH HA-NASI (latter half of the second and beginning of the third century C.E.), patriarch of Judea and redactor of

the *Mishnah. He is referred to also as “*rabbenuha-kadosh*” (“our holy teacher”) or simply as “Rabbi.” Judah was the son of Rabban Simeon b. *Gamaliel and the seventh (or sixth?) generation descended from Hillel (see **Nasi*), having been born, according to an aggadic tradition, “on the day that R. Akiva died” during the Hadrianic persecutions (Kid. 72b). Both his contemporaries and later generations held him in veneration, and regarded him as the savior of Israel, as much as *Simeon the Just, *Mattathias the Hasmonean, and *Mordecai and Esther (Meg. 11a). In him the sages found all the qualities which they enumerated as becoming to the righteous (Avot 6:8). They even associated his name with messianic hopes to the extent of applying to him the verse (Lam. 4:20): “The breath of our nostrils, the anointed of the Lord” (TJ, Shab. 16:1, 15c), and in his days chose for the proclamation of the new month the password: “David, King of Israel, lives and exists” (RH 25a). His wisdom, sanctity, and humility, as well as his wealth and close ties with the Roman emperor, became the subject of numerous legends. In addition to his father, his teachers included *Judah b. Ilai (TJ, BM 3:1, 9a), *Simeon b. Yoḥai (Shab. 147b), *Eleazar b. Shammua (Er. 53a), *Jacob b. Korshai (TJ, Shab. 10:5, 12c), and, apparently, R. *Meir (Shab. 13b). His mastery of the vast volume of tradition, his great application to his studies (Ket. 104a), his humility (Sot. 9:15), coupled with self-confidence, sound judgment, and a rule that was based on a strict discipline (Ket. 103b), combined to give authority to his leadership and an undisputed status to the patriarchate.

His Power in Erez Israel and Relationship with Rome

Judah lived in *Bet She'arim where he had his yeshivah (Sanh. 32b) but, because of ill-health, moved toward the end of his life to *Sepphoris where the air was salubrious (Ket. 103b); according to one tradition he lived there for 17 years (TJ, Ket. 12:3, 35a). He applied himself to the strengthening of the economic position of the Jews in Erez Israel, their settlement on its soil, and to shaping the country's national religious institutions. He devoted himself to spreading a knowledge of the Torah and the observance of its *mitzvot* among all sections of the people, and to maintaining the unity of the nation. His position was recognized by the Roman administration, and this, together with his wealth, enabled him to reinforce the dignity of the patriarchate and give it a quasi-royal status. Various identifications have been suggested for *Antoninus whose friendship for, and discussions with, Judah ha-Nasi form the subject of aggadic stories. These *aggadot* and conversations, which reveal a Stoic influence, were intended to demonstrate the wisdom of Judah and the superiority of the Torah. For this purpose a philosopher-emperor was chosen – probably Marcus Aurelius – who was on friendly terms with the patriarch and respected the Jewish religion. Judah ha-Nasi's contacts with the Roman authorities in the economic and political spheres probably provided the historical background to these aggadic stories, which tell that Antoninus gave him the tenancy of estates in Golan (TJ, Shev. 6:1, 36d) and that they were partners in cattle breeding (*Midrash Bereshit Rabbah*, ed. by Theodor

and Albeck, 20:6, p.190). The balsam trees of his household are mentioned along with those on the emperor's estates (Bet. 43a), the reference being undoubtedly to the plantations of balsam trees at En-Gedi and Jericho which were "imperial estates." The grant of greater judicial autonomy, attested by Origen in his letter to Julius Africanus (J.P. Migne (ed.), *Patrologia Graeca*, 11 (1857), 47 ff.), was presumably the result of such contacts, and it is possible that Judah ha-Nasi actually met one and perhaps two Roman emperors during their stay in Erez Israel, most probably Septimius *Severus and Antoninus *Caracalla, whose good relations with the Jews are attested by the inscription of Kazyon near Safed dated 197–198 C.E. (S. Klein (ed.), *Sefer ha-Yishuv*, 1 (1939), 151) and also by Jerome (commentary on Dan. 11:34).

Circumspection marked Judah ha-Nasi's relations with the Roman authorities. In contrast to the Samaritans, the Jews adopted a policy of nonintervention in the civil war which broke out after the murder of Clodius in 192 C.E. between Septimius Severus and his rival Pescennius Niger. Judah was also careful not to flaunt his position outside Erez Israel, as is illustrated in the following story: "Rabbi said to R. Afes: 'Write a letter in my name to our lord, the emperor Antoninus.' He arose and wrote: 'From Judah ha-Nasi to our lord, the emperor Antoninus.' [Judah] took and read it, tore it up, and wrote: 'To our lord the emperor from your servant Judah.' He [R. Afes] said to him: 'Rabbi, why do you lower your dignity?' He answered him: 'Am I, then better than my ancestor? Did he not declare [Gen. 32:5]: 'Thus shall ye say unto my lord Esau: Thus saith thy servant Jacob'?" (Gen. R. 75:5). When he went to the Roman authorities at Acre, he refrained from taking with him "Romans," apparently soldiers stationed in his neighborhood (Gen. R. 78:15). His attitude toward the Roman Empire was a negative one, there being ascribed to him the statement that "the destroyers of the Second Temple [Rome] are destined to fall into the hand of Persia" (Yoma 10a). Despite the external splendor of the empire, he realized its faults. At the sight of a legion of fine and distinguished men, whose heads reached up to the capital of the pillars at Caesarea, his son Simeon exclaimed: "How fattened are the calves of Esau!" But Rabbi answered him: "These legions are worth nothing" (Tanḥ Va-Yeshev, 3), knowing as he did that they both raised up and murdered emperors and were a source of weakness and degeneration. Certain that God would bring an end to the Roman Empire, even as He had done to the kingdoms of Babylonia, Media, and Greece, Judah ha-Nasi referred to those who wished to hasten the advent of the redemption as "complainers, the descendants of complainers" (PdRK 130). Aware that the Jews in Erez Israel were unable to influence the course of great political events which were to be left to "Him that called the generations from the beginning," Judah realized that the time was nevertheless opportune to work for the unity of the nation and its internal consolidation.

Judah's Bet Din and Its Rulings

After the destruction of the Second Temple, and especially

after the Bar Kokhba revolt, the non-Jewish population increased in several parts of Erez Israel. In order to ease the financial burden on the Jews, enabling them to remain on their lands, Judah ha-Nasi exempted several places from the tithes (Beth-Shean, Caesarea, Bet Guvrin, Kefar Zemaḥ: TJ, Dem. 2:1, 22c) by excluding them from the sanctity ascribed to Erez Israel. In order that lands which had been confiscated from Jews should not remain in the possession of non-Jews, Rabbi assembled a *bet din* which decided by a vote "that if the property had been in the hands of the **sikarikon* [the occupier of confiscated property] for 12 months, whoever first purchased it acquired the title, but had to give a quarter [of the price] to the original owner" (Git. 5:6; *ibid.*, 58b). Judah ha-Nasi also attempted to permit the produce of the sabbatical year in an effort to ease the grave economic situation (TJ, Ta'an. 3:1, 66b–c). Although several of Judah ha-Nasi's regulations are given as those of his *bet din* ("Rabbi and his *bet din* decided by a vote": Oho. 18:9), the sources testify to the antagonism and even the opposition of contemporary sages (see Tosef., Oho. 18:18; Ḥul. 6b), but he subjected the *bet din* to his authority, maintaining that "the Holy One, blessed be He, left this crown to us that we may invest ourselves therewith" (TJ, Dem. 2:1, 22c and see Ḥul. 6b). Judah ha-Nasi was not assisted, as his father had been, by an *av bet din* or a *hakham*, but instead concentrated all authority in his own hands (TJ, Sanh. 1:3, 19a) including the supervision of the various communities and their religious and judicial institutions (Gen. R. 81:2; TJ, Yev. 12:7, 13a).

Judah ha-Nasi and his *bet din* exercised their influence not only over Galilee but also over the south, and sages of the south were close to him. He showed a special interest in the *Holy Congregation in Jerusalem, which included two sages who were on intimate terms with him – *Simeon b. Menasya and *Yose b. Meshullam (TJ, Ma'as. Sh. 2:10, 53d; Eccles. R. 9:9). The proclamation of the new month and the intercalation of the year were significant areas of the Diaspora's dependence on Erez Israel as the religious center of the Jewish people. After the destruction of the Second Temple the year was intercalated in Judea (Tosef., Sanh. 2:13) but was transferred in the days of Judah ha-Nasi to Galilee (TJ, Sanh. 1:2, 18c), in order to enhance the prestige of the patriarchate, whose seat was there. He also abolished the fire signals announcing the new month and instead introduced regulations calculated to expedite both the hearing of witnesses and the dispatch of messengers (TJ, RH 2:1, 58a). At all events there is no reference to an attempt at intercalating the year in Babylonia as had been done in the preceding generation by *Hananiah, the nephew of R. Joshua (in TJ, Ned. 6:8, 40a, the name is wrongly given as Rabbi: see Ber. 63b). In his relations with the Babylonian Diaspora Judah ha-Nasi displayed the same blend of concession and strength: the *nasi* was king, with none superior to him. He was, however, prepared to show honor to the exilarch (Hor. 11a–b; TJ, Kil. 9:4, 32a). He opposed the sages of Erez Israel who wished to make Babylonia as "dough" in comparison with Erez Israel, that is to declare the Jews of Erez Israel to

be of pure descent and those of Babylonia as descended from families suspected of containing an alien element, so that if a Babylonian Jew wished to marry into an Erez Israel family he would have to prove the purity of his descent. Judah ha-Nasi said: "You are putting thorns between my eyes. If you wish, R. Ḥanina b. Ḥama will join issue with you." R. Ḥanina b. Ḥama joined issue with them and said to them: "I have this tradition from R. Ishmael b. Yose who stated on his father's authority: 'All countries are as dough in comparison with Erez Israel and Erez Israel is as dough in comparison with Babylonia'" (Kid. 71a). Furthermore, the inclusion of Babylonian sages in his intimate circle helped to cement Judah ha-Nasi's ties with the important Babylonian Diaspora.

The Aristocracy of Learning

Judah ha-Nasi's numerous activities designed to resuscitate Jewish settlement in Erez Israel are reflected in his desire to give Hebrew precedence over Aramaic, as shown by his remark: "What has the Syrian tongue to do with Erez Israel? Speak either Hebrew or Greek" (BK 82b–83a). Even the maid-servant of his household knew Hebrew, and it is related that the sages learned from her the meaning of rare Hebrew words (RH 26b; Meg. 18a). Judah's preference for Hebrew is shown in a *halakhah* quoted in his name: "I declare that the *Shema* is to be said only in Hebrew," thus controverting the earlier *halakhah* that it may be said in any language (Tosef., Sot. 7:7).

The patriarchate, which Judah ha-Nasi elevated to the spiritual and social leadership of the nation, was marked by a lordly manner and a regal splendor. He had guards (eunuchs – Ber. 16b) who punished recalcitrants (Eccles. R. 10:2). There was a hierarchy in the patriarch's court, sages close to him being engaged in special functions and dining at his table (Er. 73a). His wealth enabled him to give generous assistance to students. Affluent circles were attracted to his court, and support for the saying "Rabbi showed respect to rich men" (Er. 86a) can be found in the stories about the son of Bonyis and the son of Elasaḥ (Judah ha-Nasi's wealthy son-in-law) who were not learned in the Torah (Er. 85b; TJ, MK 3:1, 81c; Ned. 51a). Judah's aristocracy of learning found expression in a bluntly negative attitude toward the unlearned. By exempting sages from the city taxes (BB 8a), he undoubtedly increased the burden of taxation on artisans and intensified the hostility between the sages and the uneducated; this hostility was mainly religious and intellectual, but was tinged with economic and class antagonism and is a conspicuous feature of the story told in the *baraita* that he opened his storehouse of food in a year of scarcity to the learned but not to the ignorant. When, however, he was told that there were scholars who refused to disclose their learning because they had no wish to benefit from the honor due to the Torah, he thereafter gave to all the needy without distinction (BB 8a). Yet his negative attitude toward the ignorant did not change, there being ascribed to him the statement: "Trouble comes to the world only on account of the unlearned" (*ibid.*).

There was opposition to several other actions of Judah

ha-Nasi. Simeon b. Eleazar criticized his method of making appointments (Mid. Tan., ed. by Hoffmann, 8; and TJ, Ta'an. 4:2, 68a). Even R. Ḥiyya, one of his intimate circle, did not refrain from demonstrating opposition to Judah ha-Nasi's interference in the freedom of teaching by his decree that "pupils are not to be taught in the open public market place" (MK 16a). On one occasion, when *Judah and *Hezekiah, the sons of Ḥiyya, dined with Judah ha-Nasi and were somewhat under the effects of wine, they said: "The son of David [i.e., the Messiah] cannot come until the two ruling houses in Israel will have come to an end, namely, the exilarchate in Babylonia and the patriarchate in Erez Israel" (Sanh. 38a). This remark of theirs echoes the views of the sages who belonged to pietistic circles and were ill-disposed to the domination of the patriarchate and to its affluent and regal habits.

Tradition bestowed on Rabbi the title of *Ha-Kadosh* (the Holy One), but the very form in which this is transmitted: "Why were you called our holy teacher?" (Shab. 118b) testifies to its late date. Unlike sages who were given the title of "holy" because they did not look at iconic statues or at the human figures engraved on coins (TJ, Av. Zar. 3:1, 42c), Judah ha-Nasi, since he was concerned with the needs of others (Eccles. R. 5:11) and in contact with the Roman authorities, was quite unable to act in this manner, especially in view of the statement of his uncle Ḥanina b. Gamaliel that "members of my father's household used seals with human features engraved on them" (TJ, Av. Zar. 3:1, 42c). It is very doubtful whether his preference for Greek over Aramaic, which was widely used by the people (Sot. 49b), his injunction that it is a father's duty to teach his son civics (Mekh., Pisha, 18), and even his statement: "Which is the right course that a man should choose for himself? That which is honorable to himself and also brings him honor from men" (Avot 2:1) were able to satisfy the pietists and activists among the sages. The reply of Eleazar b. Simeon's widow to Judah ha-Nasi's proposal of marriage, "Shall a utensil, in which holy food has been used, be used for profane purposes?" (BM 84b) reflects the opposition of the sages to the secular aspect of the sway exercised by him in his patriarchate, an opposition that also found expression in *Phinehas b. Jair's refusal to accept the patriarch's hospitality (Ḥul. 7b; and see TJ, Dem. 1:3, 22a). Whereas Judah ha-Nasi was severe with sages close to him, such as Bar Kappara and Ḥiyya, even to the extent of punishing them (MK 16a), he adopted a conciliatory attitude toward Phinehas b. Jair, as he did to the other pietists among the sages (see Shab. 152a), thus allaying tension and preventing a breach between them and himself. General esteem for Judah ha-Nasi's momentous achievements most probably played a decisive role in the attitude of the majority of the sages toward him. For at no other time did the sages exercise such a sway over all sections of the nation, and at no other period did the honor of the Torah reach such heights. At the head of the nation was one who was not only a courageous personality but also a sage whose indisputable religious and halakhic greatness is shown in his work of codifying the Mishnah, with which his name is permanently associated.

The Redaction of the Mishnah

There is no clear tradition extant regarding Judah ha-Nasi's approach and method in his redaction of the Mishnah. But from the work itself, as also from a comparison with the *beraitot* in the Tosefta, in the halakhic Midrashim, and in the Jerusalem and Babylonian Talmuds, the picture which emerges is that the Mishnah was not intended to serve as a collection of legal judgments in the accepted sense of the word, for in the main it does not constitute the definitive and decided *halakhah*, nor "a receptacle for the Oral Law," but rather a legal canon. The *amoraim* did indeed attribute to him emendations, interpolations, additions, and judgments with regard to the sources at his disposal. Not a few Mishnayot show such elaboration, while many quoted anonymously are the subject of divergent views in the *beraitot*. However, Judah ha-Nasi's redaction was not limited only to such instances but is apparent in the selection and compilation he made from the mishnaic collections of various *battei midrash* without even altering their phraseology. He apparently aimed at giving his Mishnah a variegated form and at making it representative of all the known collections of *mishnayot*, in order that it might be generally acceptable. Mention is made of the "thirteen different interpretations" of the Mishnayot, some of which Judah ha-Nasi taught to Ḥiyya (Ned. 41a), and from which he, exercising his judgment, selected and polished his Mishnah. Due to the pains he took, his compilation became the Mishnah and all the other collections – the "outside *mishnayot*," the **beraitot*. A "canon" was fixed, a standard by which the remainder of the *mishnayot* were judged. It marked the conclusion of the Mishnah, to which no new material was added as had hitherto been done to the other *mishnayot*. Instead, the new material was included in the Talmud, which was studied as a commentary on the Mishnah. Thus, although Judah ha-Nasi produced a legal codex, it did not put an end to the development of the *halakhah* but rather provided it with a solid foundation. His status and personal authority likewise helped to make his collection of *mishnayot* the basis of study and of legal decisions, second in significance and sanctity only to the Scriptures.

The admiration of Judah ha-Nasi's contemporaries for him and their appreciation of his personality found expression in Bar Kappara's announcement of his death: "The angels and the mortals took hold of the holy ark. The angels overpowered the mortals and the holy ark has been captured" (Ket. 104a; and TJ, Kil. 9:4, 32b), and in Yannai's proclamation on that day: "There is no priesthood today" (i.e., the laws pertaining to the priests were suspended for Judah ha-Nasi's funeral; TJ, Ber. 3:1, 6a); in the statement of Hillel b. Vallas that "not since the days of Moses were learning and high office combined in one person until Rabbi" (Git. 59a); and in the addendum to the Mishnah that "when Rabbi died humility and the fear of sin ceased" (Sot. 9:15; and see Maimonides' commentary ad loc.).

Many *amoraim* of the first generation were Judah's pupils: *Ḥanina b. Ḥama, *Yannai ha-Kohen, *Levi, *Rav, and also Ḥiyya, who was both his pupil and associate. On his death-

bed he gave the following instructions: "My son Simeon [is to be] *hakham*, my son Gamaliel patriarch, Ḥanina b. Ḥama shall preside" (Ket. 103b). A comparison between this version and that in the Jerusalem Talmud (TJ, Ta'an. 4:2, 68a) shows that Judah ha-Nasi's intention was clearly to reinstate the form of group leadership which had prevailed before his time: patriarch, *av bet din*, and *hakham*, but that he left the right of appointment in the hands of the patriarch – his son – and not of the Sanhedrin, as had previously been the case [but cf. Goodblatt, 371–72]. Judah ha-Nasi was buried at Bet *She'arim (TJ, Kil. 9:4, 32b; TJ, Ket. 12:3, 35a; Eccles. R. 7:12; cf. Levine, 112–13). The medieval tradition that his tomb is at Sepphoris is not supported by the sources.

Tendencies in Recent Research

From about 1975 there has been a radical change in the scholarly attitude toward the talmudic *aggadah* as a source for the historical biography of the *tannaim* and the *amoraim*. Starting with J. *Neusner's later work on Johanan ben Zakkai (*Development of a Legend*) attention has shifted away from the critical analysis of talmudic traditions, in order to isolate "kernels" of historical fact which may then be used in order to reconstruct the image of a concrete historical figure, and has focused instead on the development of the talmudic legends themselves. This approach has been particularly successful with respect to figures like *Beruryah and *Elisha ben Avuya, whose very existence as historical figures is questionable at best, or like Rabban *Johanan ben Zakkai, whose historical identity lies buried in the shadowy past of the earliest tannaitic traditions, and is known to us primarily through the medium of a far later "normative tradition" consisting mostly of legend. The case of Judah ha-Nasi is exceptional, however, in that his concrete historical identity is present to us, both in the form of the Mishnah which he himself redacted, and as reflected in many contemporary reports and traditions which were recorded and redacted in or shortly after his own lifetime, sometimes by his own disciples and in his own academy. Therefore, even in the "post-Neusner" era historians have profitably continued to investigate the concrete historical role which Judah ha-Nasi played in Erez Israel at the end of the second and the beginning of the third centuries, on the basis of talmudic tradition and contemporary archaeological and documentary evidence (see, for example, Levine). Nevertheless, two of Neusner's insights must be kept in mind when evaluating the historical reliability of different and often conflicting talmudic traditions. The first is that the Rabbis themselves were uninterested in talmudic biography as such, and almost never preserved continuous historical records concerning even the most significant rabbinic figures. Historical accounts – even the earliest and most "authentic" – are fragmentary, usually describing some particular episode or anecdote, and almost always reflecting some ethical, theological, or polemical agenda. The second insight derives from Neusner's synoptic studies, in which he concluded that later talmudic traditions are often literary expansions and elaborations of earlier literary sources, and

therefore cannot always be considered to be independent historical sources. This second insight has been most thoroughly and rigorously developed in recent decades by S. *Friedman, who, in a series of studies on the historical *aggadot* of the Babylonian Talmud, has shown that its elaborate and colorful descriptions of events in the lives of the *tannaim* and the *amoraim* are often the product of deliberate and considered editorial revision of earlier sources. Using Friedman's method, S. Wald ("Hate and Peace") has recently analyzed an important Babylonian *aggadah* concerning Judah ha-Nasi found in BB 8a. This tradition has been used by various scholars as evidence for Judah ha-Nasi's vast wealth (Levine, 100), his establishment of an "aristocracy of learning" (see above), the kinds of taxes imposed by the Roman government on the Palestinian Jewish community (Levine, 103–4), and even as evidence for the "portrait of Judah ha-Nasi as a leader" (Meir, 226–27). Wald has shown that the first half of this tradition represents a conscious Babylonian revision of various Palestinian traditions, reflecting a particularly virulent form of consistent anti-*am-ha-arez* polemic characteristic of an important trend in post-amoraic Babylonian tradition (see Wald, *Pesaḥim III*, 211–39). The second half of this tradition – which was viewed by Levine as independent corroboration of the imposition in the time of Judah ha-Nasi of the "aurum coronarium" mentioned also in Bavli BB 143a – was shown by Wald to be a later Babylonian reworking of the earlier Babylonian tradition found further on in TB, BB 143a, whose relative originality and authenticity is confirmed by a parallel tradition found in TJ, Yoma 1:2, 39a. The second half of this tradition also reflects the same post-amoraic anti-*am-ha-arez* polemic. This example may serve as a warning against accepting the historical *aggadot* of the Babylonian Talmud at face value, even under the best of circumstances. When examined against the background of its immediate literary sources, and in the context of the ideological tendency of the family of Babylonian traditions to which it belongs, this *aggadah* is seen to reflect the ideological agenda of its redactor, who had little or no interest in the historical figure of Judah ha-Nasi or even in providing a coherent "image of Judah ha-Nasi as a leader."

[*Encyclopaedia Hebraica* / Stephen G. Wald (2nd ed.)]

JUDAH HA-PARSI ("the Persian"), medieval scholar. No details are known about his personality or period. He is first mentioned by Abraham *Ibn Ezra (12th century), who states that Judah wrote a work attempting to prove that the ancient Israelites calculated the calendar according to the solar year, like the other peoples of antiquity. S. *Pinsker, and later H. *Graetz and I.H. *Weiss, identified him with the eighth-century sectarian leader *Yudghān, of Persian origin, but this identification seems highly doubtful. Some scholars consider Judah to have been a Karaite. These include S.I. Luzki, who ascribes to Judah a commentary on the Pentateuch. There is, however, no mention of Judah in Karaite literature.

[Isaak Dov Ber Markon]

JUDAH ḤASID (Segal), HA-LEVI (1660?–1700), Shabbatean preacher, born in Dubno. Of his early life nothing is known, but it is possible that he is "the ḥasid Judah Ashkenazi," who stayed in Italy in 1678 and is mentioned in the responsa of contemporaries. His affinity with the Shabbatean movement in Poland has been proved from reliable sources which have been verified by modern research. Judah was *Maggid* in Szydłowiec, Lithuania, in 1695, when the Shabbatean preacher Zadok b. Shemariah visited that town. Judah became active in preparing the people for the second appearance of *Shabbetai Zevi (in 1706) which was anticipated by many. An impressive preacher, he traveled throughout the communities and urged total repentance, mortifications, and fasts. In 1697, a "holy community" (*ḥavurah kedoshah*), consisting of 31 families of scholars, organized itself in order to emigrate together to Jerusalem and there await the revelation of the Messiah. Early in 1699 they left Poland for Moravia and stopped for a long time at Nikolsburg, where there were many Shabbateans. It is reported that in the spring of 1699 about ten scholars assembled there, "all believers" (i.e., Shabbateans), among them Judah, Heshel *Zoref, and Ḥayyim Malakh, who discussed matters pertaining to Shabbetai Zevi "with great joy until midnight" (Ms. Ben-Zvi Institute, Jerusalem). Some leaders of the group, among them Judah, left Nikolsburg and wandered through Germany and Austria in 1700, where they urged the communities to repent and to contribute toward the support of the emigrants in Erez Israel. They received sympathy and support from some rabbis and wealthy men in the communities, but some opposed them and suspected Judah of being Shabbatean in secret. Emigrants from numerous circles joined the group, including some scholars, apparently mainly from circles with Shabbatean ten-

dencies. It is reported that the number of emigrants traveling from Germany and Moravia via Turkey or Italy reached 1,300, of whom approximately 500 died en route. These numbers perhaps are exaggerated, but there is no doubt that several hundred journeyed to Jerusalem.

Judah traveled through Italy and arrived in Jerusalem on Oct. 14, 1700; he died suddenly a few days later. His death disheartened the remnants of his followers. After they had been in the country for a few years, disputes broke out among them. Some remained in Jerusalem, others returned and joined various Shabbatean groups in Poland and Germany, and others, out of disappointment, converted to Islam or to Christianity. Among the latter was Judah's nephew. Judah's group was the first organized Ashkenazi immigration to Erez Israel. It left a deep impact on his contemporaries, and there are many testimonies to its appearance and customs, as well as sermons and *zemirot* by some of its members. According to tradition, Judah succeeded in buying a large plot in the Old City, on which was built 150 years later the chief synagogue of the Ashkenazi community in Jerusalem, *Hurvav R. Yehudah he-Hasid*.

[Gershom Scholem]

JUDAH LEIB BEN BARUCH (fl. 1800), talmudic scholar and kabbalist. Judah was the brother and disciple of *Shneur Zalman of Lyady, the founder of the *Chabad movement, and preacher at Yanovichi. He recorded his brother's teachings in Hebrew, including his homilies which appeared later as *Torah Or* (Kopys, 1837). Some contributions by Judah are included in the *siddur* of Shneur Zalman. After his brother's death, he corrected Shneur Zalman's *Shulhan Arukh* and approved a new edition (*ibid.*, 1822). There was a three-sided dispute among the latter's son, the "middle rabbi," and *Aaron of Starosielce over who was to succeed Shneur Zalman. Judah, in a letter addressed to Aaron, supported his nephew. The "third rabbi," Menahem Mendel of Lubavich (see *Schneersohn family), included several contributions by Judah in his responsa. After Judah's death, his grandson, Ze'ev Wolf, published a tract by Judah *She'erit Yehudah*, which contains instructions for the salting of meat as well as responsa and elucidations of his brother's teachings (Vilna, 1841).

[Samuel Abba Horodezky]

JUDAH LEIB BEN ENOCH ZUNDEL (1645–1705), German rabbi. Judah Leib's father was rabbi of Gnesen (Gniezno), Poznan. As a result of the *Chmielnicki persecutions (1648) he fled to Germany and became rabbi of the district of Swabia, settling in Oettingen. Judah Leib succeeded him in 1675 but took up his residence in the town of Pfersee, where he

remained until his death. He was the author of *Hinnukh Beit Yehudah* (Frankfurt, 1708), containing 145 responsa, some of which are by his father, on the four sections of the *Shulhan Arukh*. It was published posthumously by his son Hanokh Enoch, *av bet din* of Schnaittach. Another work, *Reshit Bikurim* (*ibid.*, 1708), sermons by Judah Leib and his father, was also published by the son. It contains homilies for festivals and Sabbaths based upon Joseph Albo's three principles of faith – the existence of God, revelation, and reward and punishment. According to his son, this work consists of excerpts from a commentary on the whole Bible which Judah Leib had intended publishing.

[Yehoshua Horowitz]

JUDAH LEIB BEN HILLEL OF SCHWERSENZ (17th century), rabbi of Schwersenz (Posen). He was the author of *Hakham Lev* (Fuerth, 1693), a short commentary on the 613 biblical and rabbinical precepts according to the *Mishneh Torah* by Maimonides and the *Sefer Mitzvot Gadol* by *Moses b. Jacob of Coucy. A Latin translation was published (Lund, 1731) with notes by Karl Schulten. In his apologia in the introduction to *Hakham Lev*, the author points out that he dealt only briefly with precepts of practical application which are to be found in the *Shulhan Arukh*, but at greater length with laws which have no practical application. The succinct style of the book is due to the fact that it was intended for those who wished to study daily the 613 precepts with their reasons and explanations.

[Yehoshua Horowitz]

JUDAH LOEW (Liwa, Loeb) BEN BEZALEL (known as **Der Hohe Rabbi Loew** and **MaHaRaL mi-Prag**; c. 1525–1609), rabbi, talmudist, moralist, and mathematician. Judah Loew was the scion of a noble family which hailed from Worms. His father, Bezalel b. Hayyim, was the brother-in-law of R. Isaac Klauber of Posen, the grandfather of Solomon *Luria. Judah Loew's older brother, Hayyim b. *Bezalel, and his two younger brothers, Sinai and Samson, were also scholars of repute. (According to one tradition, however, Judah was the youngest son.) His teachers are unknown. From 1553 to 1573 he was *Landesrabbiner* of Moravia in Mikulov (Nikolsburg) after which he went to Prague. There he founded a yeshivah called Die Klaus, organized circles for the study of the Mishnah, to which he attached great importance, and regulated the statutes of the *hevra kaddisha*, founded in 1564. He remained in Prague until 1584, and from then until 1588 served as rabbi in Moravia (according to others, in Posen), eventually return-

ing to Prague. On the third of Adar 5352 (Feb. 16, 1592) he was granted an interview by Emperor *Rudolph II, but it is not known what its purpose was. There seems little basis for the belief that it was due to their common interest in alchemy. Shortly afterward he left Prague for Posen, where he became chief rabbi; several years later he returned to Prague, becoming its chief rabbi and remaining there until his death.

Judah Loew was revered for his piety and asceticism. He was a great scholar, whose knowledge was not confined to religious subjects, but embraced secular studies as well, particularly mathematics. He was an outstanding personality, held in the highest repute by Jews and non-Jews alike. The astronomer, Tycho Brahe, with whom he enjoyed a social relationship, is said to have arranged his audience with the emperor. Judah preferred recourse to talmudic sources rather than the use of Maimonides' code or the *Tur* for deciding cases of Jewish law (cf. *Netivot Olam, Netiv ha-Torah*, 15). He was a great educationalist whose pedagogic views are of contemporary relevance. Dissatisfied with current methods of education, he strongly criticized his contemporaries for not following the manner of education indicated in Mishnah *Avot* 5:21, which takes into consideration the age of the student and the subjects taught. The "fools nowadays," he said, "teach boys Bible with the commentary of Rashi, which they do not understand, and also Talmud, which they cannot yet grasp" (see the references in Assaf, *Mekorot*, 1 (1925), 48ff.). Furthermore, he claimed that they neglected the study of the Mishnah. He also strongly opposed *pilpul*, and although he sharply criticized Azariah de' *Rossi (*Be'er ha-Golah*, ch. 6), he favored scientific study which did not contradict the principles of Judaism. According to S.J. Rapaport, he did not engage in Kabbalah; G. Scholem, on the other hand, regards him as the forerunner of Ḥasidism in that he popularized kabbalistic ideas. His language is not kabbalistic, and this fact stands in the way of a full understanding of his teaching to the present day. He stresses that philosophy and esoteric love are diametrically opposed to one another ("two things each of which contradicts and opposes the other" – *Derekh Ḥayyim*, ch. 5) and unhesitatingly associates himself with the world of Kabbalah.

Judah Loew's works in the fields of ethics, philosophy, and homiletics are all based on the same homiletical system: exegetical and homiletical interpretation of the sayings of the rabbis of the Talmud. His whole life's work may be regarded as a new interpretation of the *aggadah*. Every chapter (and nearly every paragraph) in his many works opens with a quotation from the traditional sources, which he then goes on to interpret in his unique fashion. His close attachment to the *aggadah* may be the reason for his strong defense of oral tradition against its Italian critics, which was incorporated in his *Be'er ha-Golah*. Even his systematic work on ethics, *Netivot Olam*, which was to become one of the most popular and influential works in the field, is also based on reinterpretation of aggadic passages. Although chapters of his works may be read as a late offspring of the philosophical moralistic literature of the Spanish period, the philosophical terms which he

employs do not bear their original meanings but are given new ones geared to the expression of his ideas. Some passages in his writings, as well as some of his basic views regarding the transcendent meaning of the Torah, of prayer, etc., seem to point to familiarity with Kabbalah. He never states kabbalistic ideas as such but seems to have made use of them in his interpretation of talmudic passages. The question has not been sufficiently studied, however, to permit definite conclusions. The most important questions which he tried to solve in his many works were the problem of the relationship between Israel and God, with the Torah serving as mediator between them, and the problem of the *galut*, the reasons for it, and the manner of its termination. His *Tiferet Yisrael* and *Gevurot ha-Shem* are completely devoted to these subjects, and he deals with them in his other works as well.

Judah Loew rejects the Aristotelian view, which is adumbrated mainly by Maimonides, that intellectual perfection is the supreme human goal. In his opinion the study of Torah and observance of its precepts bring man to this goal, and study of the Torah for its own sake has a metaphysical influence and brings about communion with God. The precepts, implemented by means of physical actions, are symbols whereby man comes closer to the Creator and penetrates to the secrets of the Divine; this is the true purpose of the ceremonial precepts.

He lived in an era of the revival of the sciences and displayed some familiarity with scientific studies, but the new discoveries did not influence his cosmic outlook. He knew about Copernicus but remained faithful to the rabbinic view of cosmogony, for, he said, it was received by them from Moses at Sinai who received it from God Who alone can possibly know the truth (*Netivot Olam, Netiv ha-Torah*). An echo of the discovery of America also reached his ears: "They say that recently a certain place has been found, called by them a new world, previously undiscovered" (*Nezah Yisrael*, ch. 34); in consequence he expressed the hope that the ten tribes too would one day be discovered in a country still unknown. He drew his scientific explanations, generally speaking, from Aristotle's natural philosophy which was generally accepted in the Middle Ages, and his psychological outlook was chiefly Platonic with the addition of Aristotelian and other elements. He also took from Plato the division of people into three classes: philosophers (= talmudic scholars), watchmen (= those who observe precepts), and breadwinners (= merchants). Although the spirit of the Renaissance and of humanism reached him, he remained fundamentally anchored to the outlooks common in the Middle Ages. A number of his formulations in social problems would appear to be very forward looking, but the subject has still to be investigated.

In fixing the standard for *halakhah*, he develops the view that the source of dispute in *halakhah* lies in the diversity of reality and its numerous aspects, which human intelligence cannot fully comprehend, and since human methods of understanding differ – "each one receives one aspect in accordance with his lot" (*Be'er ha-Golah*, ch. 1).

Fundamental Doctrines

NATURAL ORDER. By the terms “nature,” “the natural order,” “natural reality,” and the like, that run like a golden thread throughout all his writings, he refers to the regular physical order of the universe. The various phenomena are connected one with another in a logical connection of cause and effect that can be rationally explained. This order, however, has no validity for the relationship between the Creator and the universe, for two reasons: (a) God created the system of regularity in nature of His own free will; (b) there exist phenomena outside the natural order which are deviations from the fixed order, i.e., the miracles. Since it is inconceivable that God should lay down laws and abrogate them, establish an order and destroy it – he assumes that in principle the natural order is only enduring and valid in this world, while in the upper world, a different order, “the discrete,” exists. The miracle has its source in this upper world and occurs when this upper world temporarily penetrates and intrudes into this world. Hence even phenomena that at first sight appear as deviations are ab initio subject to special rules of their own.

THE UNIQUE NATURE OF THE JEWISH PEOPLE AND ITS STATUS. Since the time of Judah Halevi no one had stressed the unique nature of the people of Israel, its mission and its destiny, as did Judah Loew. God chose Israel per se and not because of the merits of the patriarchs. Hence it cannot be said that only when Israel fulfills the will of the Omnipresent the choice exists, but when they rebel it is annulled. This being so, the claim of Christians that the exile is proof that God has forsaken His people is similarly nullified. Cancellation of the choice would have involved a change in reality “until the world would have become different from what it was previously,” and this is an impossibility. He terms the choice of Israel *beḥirah kelalit* (“general choice”), and the tie with God which constitutes the nature of the choice *devekut kelalit* (“general attachment”).

Israel constitutes the “form,” whereas other nations constitute the “matter.” From this stem the differences in their ethical conduct and in their comprehension of divine matters. In Israel the forces of the soul prevail, among the nations – physical forces.

EXILE AND REDEMPTION. The natural order is not limited to natural phenomena, it also comprehends human relations. He holds that the exile is a “departure” (deviation) from the natural order of the world, a breakdown in the universal system of relations, in the otherwise unchangeable regularity. The exile expresses itself in three ways:

(1) uprooting from the natural locality; every nation has a country specifically its own, and separation from one’s country and dwelling beyond it deleteriously affect the natural order;

(2) loss of political independence and subjection to aliens – “for the subjection of one nation to another does not accord with the proper order of reality, for it is the right of each nation to be free”;

(3) the dispersion – every nation is a distinct entity and in the absence of a territorial center it loses its unity; it is not “a complete compact nation” (*Nezah Yisrael* ch. 1).

However, every departure from the natural order is but a passing phenomenon – hence the conviction of, and faith in, the messianic redemption which will inevitably come about and remedy the anomaly of the exile (see *Galut). Yet despite all his attachment to the messianic faith, he was utterly opposed to “forcing the end” (of the exile) and to the actual messianic speculations of his time. Not only the natural order but its consequences were established by the will of God, and man should not attempt to change them; the decree of God may not be nullified by force. One must pray for the redemption but not “too much,” not even in a generation of religious persecution. Even to calculate the time of the redemption is forbidden; it will come in its due time. Shortly before the redemption “the degradation of Israel will be greater than it ever was,” and precisely from this “absence” will the redemption emerge. The apocalyptic *aggadot* are explained allegorically by Judah Loew in such a way that the image of the personal Messiah is blurred. He explains the *aggadah* about the birth of the Messiah on the day the Temple was destroyed to the effect that “this birth is not an actual physical birth ... but it means that the Messiah was born from the point of view of the messianic potentiality existing in the world.”

He discusses the cosmopolitan basis of the exile. Though indeed it is fitting that the Israelite nation, which is the essence of the world, should have for its dwelling place Erez Israel, which is the essence of the geographical world, nevertheless, when they were exiled from the land the whole world became their locality. In accordance with the midrashic saying “wherever Israel went into exile the Divine Presence accompanied them,” he stresses that it is fitting that the Divine Presence should be with Israel in exile more than in Erez Israel. In consequence he emphasizes the need for the Jewish people to work for their survival in exile by separating themselves from the nations and by observing the precepts, such as congregational prayer, practice of charity, and study of Torah.

Judah Loew was a prolific writer. His works include:

(1) *Derekh Ḥayyim*, commentary on *Avot* (Cracow, 1589);

(2) *Netivot Olam*, on ethics, the second part of *Derekh Ḥayyim* (Prague, 1596);

(3) *Tiferet Yisrael*, on the excellence of the Torah and the commandments (Prague, 1593);

(4) *Be’er ha-Golah*, on difficult talmudic passages, and, at the same time, a defense of the Talmud, the second part of *Tiferet Yisrael* (Prague, 1598);

(5) *Nezah Yisrael*, on exile, messianic redemption, and repentance (Prague, 1599);

(6) *Or Ḥadash* on *Megillat Esther* and Purim, and

(7) *Ner Mitzvah* on *Ḥanukkah* (Prague, 1600);

(8) *Gur Aryeh*, commentary on Rashi, including comments on Bible, Targum, and Midrash (Prague, 1578);

(9) *Gevurot ha-Shem*, on the Exodus from Egypt, the *Haggadah*, and the laws of Pesah (Cracow, 1582);

(10) *Gur Aryeh*, novellae on tractates *Shabbat*, *Eruvin*, and *Pesahim* (Lvov, 1863);

(11) *Haggadah shel Pesah*, with a discourse on *Shabbat ha-Gadol* (1589);

(12) *Hiddushei Yoreh De'ah*, novellae on *Tur Yoreh De'ah* (Amsterdam, 1775);

(13) *Sefer Perushei Maharal mi-Prag le-Aggadot ha-Shas* (1959–60);

(14) sermons, novellae, and responsa, some published and others still in manuscript. Most of the above-mentioned works have appeared in several editions.

He is unique in the history of Hebrew literature by virtue of his not having belonged to any defined school, or having been followed by disciples who subscribed to his ideas. He was a lone thinker, who developed his own philosophy as well as its method of presentation. It is ironic that he is better known to later generations for the unfounded and atypical legend that he was the creator of the famous Prague *golem* (he seems not to have dealt with magic) than for his original and profound ideas (see *Golem). Rabbi A.I. Kook used his sayings and methods extensively in his works, and a considerable revival of his ideas has taken place among 20th-century Jewish thinkers. Of his pupils, particular mention should be made of Yom Tov *Heller, Elijah *Loans, and David *Gans (the author of *Zemah David*).

JUDAH MACCABEE, one of the great warriors of history, who laid the foundation of the future Hasmonean state. Judah, the third son of *Mattathias the Hasmonean, assumed leadership of the revolt against *Antiochus Epiphanes in accordance with the deathbed disposition of his father. No suggestion that has been put forward to explain the meaning of his name (Heb. יְהוּדָה or יְהוּדָי (Gr. Μακκαβᾱιος)) or those of the other Hasmonean brothers is satisfactory. His exceptional military

talent made him the natural choice as military commander of the rebels, and the author of I Maccabees is unstinting in praise of his valor. Because of the disparity between the contending forces during the first days of the revolt, Judah's strategy was to avoid any involvement with the regular army of the Seleucids, but to attack the enemy from ambush, in order to give them a feeling of insecurity. Already at the beginning of the struggle he succeeded in defeating a small Syrian force under the command of *Apollonius, who was killed. Judah took possession of his sword which he used until his death as a symbol of vengeance. More important was his success in battle against Seron, "the commander of the Syrian army." The choice of the neighborhood of Beth-Horon as the field of battle and the coordination of the limited forces at his disposal testify to Judah's outstanding tactical skill, but his military talent was revealed in all its brilliance in the third battle, near Emmaus. This time he faced regular forces led by *Gorgias, an experienced officer. This force had not been dispatched by Antiochus, who at the time was in the northern provinces of his kingdom, but by Lysias, whom the king, on the eve of his departure for the east, had appointed as regent of the western sector of the kingdom and tutor to the young crown prince, the future Antiochus v Eupator. By forced night march, Judah succeeded in eluding Gorgias, who had intended to attack and destroy his enemy in their camp. He then made a surprise attack upon the Syrian camp near Emmaus while Gorgias was searching for him in the mountains. The Syrian commander had no alternative but to withdraw to the coast. This defeat convinced Lysias that he must prepare for a serious and prolonged war. He accordingly assembled a new and larger army and marched to meet Judah. Once again, however, the Jewish commander succeeded in overcoming the numerically superior enemy in a great battle near Beth-Zur. This victory opened up the road to Jerusalem, which Judah entered at the head of his army; he purified the defiled Temple and instituted a festival of eight days on the 25th of Kislev of the year 148 of the Seleucid era corresponding to 164 B.C.E., which became a permanent festival, *Hanukkah. It was the first step on the road to ultimate independence.

Hard upon these events came news that the enemies of the Jews had attacked the sparse Jewish settlements in Gilead, in Transjordan, and in Galilee. Judah immediately went to their aid. His brother, Simeon, sent to Galilee at the head of 3,000 men, successfully fulfilled his task and transplanted a substantial portion of the Jewish settlements, including women and children, to Judea. Galilee, however, does not apparently seem to have been evacuated of its Jewish population, since two generations later, when John Hyrcanus conquered it, he found it largely inhabited by Jews. A more difficult task was undertaken by Judah and his younger brother Jonathan, who were compelled to engage in fierce fighting with the Arabian tribes before they could rescue the Jews concentrated in fortified towns in Gilead. At the conclusion of the fighting in Transjordan, Judah turned against the Edomites in the south, captured and destroyed Hebron, and, after marching against

the coastal land of the Philistines, returned to Judea with much booty. Judah now laid siege to the Syrian army garrison in the *Acra, the fortress of Jerusalem. In response to desperate appeals from the besieged – who included not only Syrians but also hellenized Jews – Lysias the regent, together with the young king Antiochus Eupator (Antiochus Epiphanes having died in the meantime in the east) came out to do battle at the head of a powerful army. Lysias skirted Judea as he had done in his first campaign, entering it from the south, and besieged Beth-Zur. Judah raised the siege of the Acra and went to meet Lysias, but was defeated in a battle near Bet Zekharyah and withdrew to Jerusalem. Beth-Zur was compelled to surrender and Lysias reached Jerusalem, besieging Judah on Mount Zion. The defenders found themselves in dire straits; their provisions were exhausted, it being a sabbatical year. The situation changed unexpectedly, however; news reached the Syrian camp that Philip, commander in chief of Antiochus, having been appointed regent by the monarch before his death, was about to enter Antioch and seize power. Lysias thereupon decided to propose a peaceful settlement to the Jews based on the restoration of religious freedom, i.e., the repeal of the edicts of Antiochus Epiphanes.

The order of events thus far has followed I Maccabees. According to II Maccabees, however, the order is: Judah's victory over Gorgias and Nicanor, his conquest of Jerusalem, the death of Antiochus Epiphanes, the purification of the temple, the rise to power of Antiochus Eupator, and the wars with the neighboring peoples. Only after these does II Maccabees give the details of the first campaign of Lysias, as a result of which peace was established between the Jews and the Syrians. It continues with the wars between the Jews and their neighbors, and finally relates the second campaign of Lysias against Judah and the subsequent signing of a peace treaty. With this the war for religious freedom came to an end, but it did not bring peace. In place of war against the external enemy, an internal struggle now took place between the nationalist party led by Judah and between the Hellenist party. Changes in the situation in Syria led to a strengthening of the Maccabees and a weakening of the Hellenists among the people. Demetrius I, who fled from Rome in defiance of the Roman senate, appeared on the scene in Syria. Lysias and the young Antiochus Eupator were brought captive before him and put to death. In view of the happenings in Judea and the strengthening of the nationalists, the Hellenist party turned to the new king with a request for help. The delegation was led by Alcimus, a priest who did not, however, belong to a high priestly family. He complained to Demetrius of the persecution of the Hellenist party in Judea and was granted his request to be appointed high priest under the protection of the king's army. Demetrius sent to Judea a new army led by Bacchides, and Alcimus accompanied him as high priest. The *Hassideans, taking it for granted that the religious war was over, received him cordially, but Alcimus, acting in Judea with an iron hand, had 60 of them executed. This again changed the internal situation in Judea in favor of the nationalist party. Judah wreaked havoc

among the followers of Alcimus, so that after Bacchides' return to Antioch, Alcimus was again compelled to seek help from the Syrians. Demetrius dispatched a new army with *Nicanor at its head, but Nicanor's plan to seize Judah by guile failed and the war was renewed. The decisive moment came in a battle near Adasa, on the 13th Adar, 161 B.C.E., in which Nicanor was killed and his army destroyed. The annual "Day of Nicanor" was instituted to commemorate this brilliant victory.

Judah then sent a delegation to Rome headed by Eupolemus son of Johanan and Jason son of Eleazar (the fact that their names were Greek and their fathers' Hebrew is noteworthy), with the request for an alliance. The outcome of the mission was less than Judah had hoped for, the Romans committing themselves only to such obligations as were in their own interests. The letter dispatched by the senate to Demetrius, forbidding him to act in a hostile manner against the Jews, failed to exercise any influence on him, for on receipt of the news of Nicanor's defeat he dispatched a new army commanded by Bacchides. This time the Syrian forces were numerically so superior that most of Judah's men left the field of battle and advised their leader to do likewise and to await a more favorable opportunity. Despite this, Judah decided to try his fortune once more. His final battle was near Elasa (so far unidentified). The outcome was inevitable: Judah and those who remained faithful to him were killed. His body was taken by his brothers from the battlefield and buried in the family sepulcher in Modi'in. Virtually all that is known about Judah Maccabee is contained in the Books of the Maccabees (in the Apocrypha) and in Josephus, largely dependent on this source.

[Abraham Schalit]

In the Arts

As warrior hero and national liberator, Judah Maccabee has inspired many writers, and several artists and composers. In literature, however, he makes an unexpectedly late appearance, little of significance having been written before the 17th century. William Houghton's *Judas Maccabaeus*, performed in about 1601 but now lost, is thought to have been the first drama on the theme; however, the earliest surviving literary work is *El Macabeo* (Naples, 1638), a somewhat bombastic Castilian epic by the Portuguese Marrano author Miguel de *Silveyra. Two other 17th century works were *La chevalerie de Judas Macabé* by the French dramatist and tragedian Pierre du Ryer (c. 1600–1658) and the anonymous neo-Latin "melodrama" *Judas Machabaeus* (Rome, 1695). Interest in the subject only revived in the 19th century, with *Giuda Macabeo, ossia la morte di Nicanore...* (1839), an Italian "azione sacra" on which Vallicella based an oratorio. One of the best-known literary works on the theme was *Judas Maccabaeus* (1872), a five-act verse tragedy by the U.S. poet Henry Wadsworth Longfellow. In verse rising at times to a Miltonic grandeur, Longfellow shows how Antiochus, bent on forcibly hellenizing the Jews, finds a compliant tool in the high priest Jason. Act II retells the tragic Apocryphal story of Hannah ("Máhala") and her seven sons, the resolute Judah first appearing only in Act III.

A Hebrew version of Longfellow's play was published by J. Massel in 1900. Two later 19th-century interpretations of the story were *Judas Maccabaeus*, a novella by the German writer Josef Eduard Konrad Bischoff which appeared in *Der Gefangene von Kuestrin* (1885); and *The Hammer* (1890), a book by Alfred J. Church and Richmond Seeley. Several Jewish authors of the 20th century also turned to the subject. They include Jacob Benjamin Katznelson (1855–1930), who wrote the poem *Alilot Gibbor ha-Yehudim Yehudah ha-Makkabi le-Weit ha-Hashmona'im* (1922); the U.S. novelist Howard *Fast (*My Glorious Brothers*, 1948); the Yiddish writer Moses Schulstein, who wrote the dramatic poem "Yehudah ha-Makkabi" (in *A Layter tsu der Zun*, 1954); and Jacob *Fichmann, whose "Yehudah ha-Makkabi" is one of the heroic tales included in *Sippurim le-Mofet* (1954). Many children's plays have also been written on the theme by various Jewish authors. During World War II the Swiss-German writer Karl Boxler published his novel *Judas Maccabaeus; ein Kleinvolk kaempft um Glaube und Heimat* (1943), the subtitle of which suggests that Swiss democrats then drew a parallel between their own national hero, William Tell, and the leader of the Maccabean revolt against foreign tyranny.

In art, during the Middle Ages, Judah Maccabee was regarded as one of the heroes of the Old Testament. He figures in a tenth-century illuminated manuscript of the *Libri Maccabaeorum* (Leyden University Library); and the late medieval French artist Jean Fouquet painted an illustration of Judah triumphing over his enemies for his famous manuscript of Josephus (Bibliothèque Nationale, Paris). A painting by Rubens of Judah Maccabee praying for the dead is of special interest. In II Maccabees 12:39–48 there is an account of an episode in which Judah's troops found stolen idolatrous charms on the corpses of Jewish warriors slain on the battlefield. He therefore offered prayers and an expiatory sacrifice for these warriors who had died in a state of sin. During the Counter-Reformation the passage was used by Catholics against Protestants in order to justify the doctrine of purgatory. Accordingly, Rubens painted the scene for the Chapel of the Dead in Tournai Cathedral. This painting is now in the Nantes Museum. In the 19th century, Paul Gustave Doré executed an engraving of Judah Maccabee victoriously pursuing the shattered troops of the Syrian enemy.

In music, almost all the compositions inspired by the Hasmonean revolt are primarily concerned with Judah. The first of distinction – and still the outstanding work – was Handel's oratorio *Judas Maccabaeus*, which had its première in London in 1747. This work, with libretto by Thomas Morrell, had been written for the celebrations following the Duke of Cumberland's victory over the Scottish Jacobite rebels at the battle of Culloden (1746); and its heroic and martial spirit was set off, but in no way lessened, by the doleful and lyrical passages of the composition. The oratorio's most famous chorus is "See, the conqu'ring hero comes." Handel's *Judas Maccabaeus* was often performed in Erez Israel, and the "conqu'ring hero" melody has become a Hanukkah song.

JUDAISM, the religion, philosophy, and way of life of the Jews.

DEFINITION

The term Judaism is first found among the Greek-speaking Jews of the first century C.E. (*Judaismes*, see II Macc. 2:21; 8:1; 14:38; Gal. 1:13–14). Its Hebrew equivalent, *Yahadut*, found only occasionally in medieval literature (e.g., Ibn Ezra to Deut. 21:13), but used frequently in modern times, has parallels neither in the Bible (but see Esth. 8:17, *mityahadim*, "became Jews") nor in the rabbinic literature. (The term *dat Yehudit*, found in Ket. 7:6, means no more than the Jewish law, custom, or practice in a particular instance, e.g., that a married woman should not spin or have her head uncovered in the street.)

The Term "Torah"

The term generally used in the classical sources for the whole body of Jewish teaching is *Torah, "doctrine," "teaching." Thus the Talmud (Shab. 31a) tells the story of a heathen who wished to be converted to the Jewish faith but only on the understanding that he would be taught the whole of the Torah while standing on one leg. Hillel accepted him and, in response to his request, replied: "That which is hateful unto thee do not do unto thy neighbor. This is the whole of the Torah. The rest is commentary. Go and study." Presumably if the Greek-speaking Jews had told the story they would have made the prospective convert demand to be taught Judaism while standing on one leg.

Modern Distinctions Between "Judaism" and "Torah"

In modern usage the terms "Judaism" and "Torah" are virtually interchangeable, but the former has on the whole a more humanistic nuance while "Torah" calls attention to the divine, revelatory aspects. The term "secular Judaism" – used to describe the philosophy of Jews who accept specific Jewish values but who reject the Jewish religion – is not, therefore, self-contradictory as the term "secular Torah" would be. (In modern Hebrew, however, the word *torah* is also used for "doctrine" or "theory" (e.g., "the Marxist theory"), and in this sense it

would also be logically possible to speak of a secular *torah*. In English transliteration the two meanings might be distinguished by using a capital *T* for the one and a small *t* for the other, but this is not possible in Hebrew which knows of no distinction between small and capital letters.)

A further difference in nuance, stemming from the first, is that “Torah” refers to the eternal, static elements in Jewish life and thought while “Judaism” refers to the more creative, dynamic elements as manifested in the varied civilizations and cultures of the Jews at the different stages of their history, such as Hellenistic Judaism, rabbinic Judaism, medieval Judaism, and, from the 19th century, Orthodox, Conservative, and Reform Judaism. (The term *Yidishkeyt* is the Yiddish equivalent of “Judaism” but has a less universalistic connotation and refers more specifically to the folk elements of the faith.)

It is usually considered to be anachronistic to refer to the biblical religion (the “religion of Israel”) as “Judaism,” both because there were no Jews (i.e., “those belonging to the tribe of Judah”) in the formative period of the Bible, and because there are distinctive features which mark off later Judaism from the earlier forms, ideas, and worship. For all that, most Jews would recognize sufficient continuity to reject as unwarranted the description of Judaism as a completely different religion from the biblical.

THE ESSENCE OF JUDAISM

The Hebrew writer *Aḥad Ha-Am (*Al Parashat Derakhim*, 4 (Berlin ed. 1924), 42) observed that if Hillel’s convert (see above) had come to him demanding to be taught the whole of the Torah while standing on one leg, he would have replied: “‘Thou shalt not make unto thee a graven image, nor any manner of likeness’ (Ex. 20:4). This is the whole of the Torah. The rest is commentary,” i.e., that the essence of Judaism consists in the elevation of the ideal above all material or physical forms or conceptions.

Aḥad Ha-Am’s was only one of the latest attempts at discovering the essence of Judaism, its main idea or ideas, its particular viewpoint, wherein it differs from other religions and philosophies. This is an extremely difficult – some would say impossible – task, since the differing civilizations, Egyptian, Canaanite, Babylonian, Persian, Greek, Roman, Christian, Muslim, with which Jews came into contact, have made their influence felt on Jews and through them on Judaism itself. It is precarious to think of Judaism in monolithic terms. Developed and adapted to changing circumstances throughout its long history, it naturally contains varying emphases as well as outright contradictions. Belief in the transmigration of souls, for example, was strongly upheld by some Jewish teachers and vehemently rejected by others. Yet the quest has rarely ceased for certain distinctive viewpoints which make Judaism what it is. Some of these must here be mentioned.

Talmudic Attempts to State Essence

In a talmudic passage (Mak. 23b–24a) it is said that God gave to Moses 613 precepts, but that later seers and prophets re-

duced these to certain basic principles: David to eleven (Ps. 15); Isaiah to six (Isa. 33:15–16); Micah to three (Micah 6:8); Isaiah, again, to two (Isa. 56:1); and, finally, Habakkuk to one: “The righteous shall live by his faith” (Hab. 2:4). This would make trust in God Judaism’s guiding principle.

In another passage the second-century rabbis ruled at the council of Lydda that, although the other precepts of the Torah can be set aside in order to save life, martyrdom is demanded when life can only be saved by committing murder, by worshipping idols, or by offending against the laws governing forbidden sexual relations (e.g., those against adultery and incest). The historian Heinrich Graetz (in *JQR*, 1 (1889), 4–13) deduces from this ruling that there are two elements in the essence of Judaism: the ethical and the religious. The ethical includes in its positive side, love of mankind, benevolence, humility, justice, holiness in thought and deed, and in its negative aspects, care against unchastity, subdual of selfishness and the beast in man. The religious element includes the prohibition of worshipping a transient being as God and insists that all idolatry is vain and must be rejected entirely. The positive side is to regard the highest Being as one and unique, to worship it as the Godhead and as the essence of all ethical perfections.

Maimonides’ 13 Principles

In the 12th century, *Maimonides (commentary to the Mishnah, on Sanh., ch. Ḥelek (10)) drew up 13 principles of the Jewish faith. These are:

- (1) Belief in the existence of God;
- (2) Belief in God’s unity;
- (3) Belief that God is incorporeal;
- (4) Belief that God is eternal;
- (5) Belief that God alone is to be worshiped;
- (6) Belief in prophecy;
- (7) Belief that Moses is the greatest of the prophets;
- (8) Belief that the Torah is divine;
- (9) Belief that the Torah is unchanging;
- (10) Belief that God knows the thoughts and deeds of men;
- (11) Belief that God rewards the righteous and punishes the wicked;
- (12) Belief in the coming of the *Messiah;
- (13) Belief in the *resurrection of the dead.

A close examination of Maimonides’ thought reveals that his principles are far more in the nature of direct response to the particular challenges that Judaism had to face in his day than conclusions arrived at by abstract investigation into the main ideas of Judaism. The third principle, for instance, is clearly directed against cruder notions of deity which were popular among some talmudists in Maimonides’ day. (Maimonides’ contemporary critic, *Abraham b. David of Posquières, while believing with Maimonides that God is incorporeal, refuses to treat a belief in God’s corporeality as heretical since, he says, many great and good Jews do entertain such a notion because they are misled by a literal understanding of the

anthropomorphic passages in Scripture and the rabbinic literature; see Maim. Yad, Teshuvah, 3:7). The seventh principle seems to be aimed against the Christian claims for Jesus and the Muslim claims for Muhammad. The ninth principle similarly serves as a rejection of the Christian and Muslim claim that Judaism had been superseded (see S. Schechter, *Studies in Judaism*, 1 (1896), 147–81).

Reactions to Maimonides

Joseph *Albo (*Sefer ha-Ikkarim*, 1:26) reduces Maimonides' principles to three basic ones – (1) Belief in God; (2) Belief that the Torah is divine; (3) Belief in reward and punishment – while Isaac *Arama (*Akedat Yizhak*, Gate 55) reduces them to (1) Belief in *creatio ex nihilo*; (2) Belief that the Torah is divine; (3) Belief in the hereafter. On the other hand Isaac *Abrabanel (*Rosh Amanah*, 23) is out of sympathy with the whole enterprise of trying to discover the basic principles of Judaism, in that it implies that some parts of the Torah are less significant than others. Similarly, the 16th-century teacher *David b. Solomon ibn Abi Zimra writes: “I do not agree that it is right to make any part of the perfect Torah into a ‘principle’ since the whole Torah is a principle from the mouth of the Almighty. Our sages say that whoever states that the whole of the Torah is from heaven with the exception of one verse is a heretic. Consequently, each precept is a principle and a basic idea. Even a light precept has a secret reason beyond our understanding. How, then, dare we suggest that this is inessential and that fundamental?” (Radbaz, Resp. no. 344; see also *Articles of Faith).

Modern Trends

In modern times two new factors have been operative in the search for the essence of Judaism, one making the task more difficult, the other more urgent. The first is the rise of the Wissenschaft des Judentums movement in the 19th century. This had as its aim the objective historical investigation into the sources and history of Judaism. Its practitioners succeeded in demonstrating the complexity of Jewish thought and the fact that it developed in response to outside stimuli, so that there could no longer be any question of seeing Judaism as a self-contained unchanging entity consistent in all its parts. The second new factor was the emancipation of the Jew and his emergence into Western society, calling for a fresh adaptation of Judaism so as to make it viable and relevant in the new situation. The historical movement had demonstrated the developing nature of Judaism and seemed, therefore, to offer encouragement to those thinkers who wished to develop the faith further in accord with the new ideals and challenges. Yet this very demonstration made it far more difficult to detect that which is permanent in Judaism when so much is seen to be fluid and subject to change. Among modern thinkers, Leo *Baeck was so convinced that the quest was not futile that his book carries the revealing title, *The Essence of Judaism* (1948²). Acknowledging the rich variety of forms and differing phenomena in Judaism's history, Baeck still feels able to declare:

“The essence is characterized by what has been gained and preserved. And such *constancy*, such *essence*, Judaism possesses despite its many varieties and the shifting phases of its long career. In virtue of that essence they all have something in common, a unity of thought and feeling, and an inward bond.”

The Concept of “Normative Judaism”

Jewish thinkers who hold that an essence of Judaism can be perceived tend to speak of “normative Judaism,” with the implication that at the heart of the Jewish faith there is a hard, imperishable core, to be externally preserved, together with numerous peripheral ideas, expressed, to be sure, by great Jewish thinkers in different ages but not really essential to the faith, which could be dismissed if necessary as deviations.

Unfortunately for this line of thinking, no criteria are available for distinguishing the essential from the ephemeral, so that a strong element of subjectivity is present in this whole approach. Almost invariably the process ends in a particular thinker's embracing ideas he holds to be true and valuable, discovering these reflected in the tradition and hence belonging to the “normative,” while rejecting ideas he holds to be harmful or valueless as peripheral to Judaism, even though they are found in the tradition. Nor is the statistical approach helpful. An idea occurring very frequently in the traditional sources may be rejected by some thinkers on the grounds that it is untrue or irrelevant, while one hardly mentioned in the sources may assume fresh significance in a new situation, to say nothing of the difficulties in deciding which sources are to be considered the more authoritative. The absurdities which can result from the “normative Judaism” approach can be seen when, for example, contemporary thinkers with a dislike for asceticism, who wish at the same time to speak in the name of Judaism, virtually read out of the faith ascetics such as *Bahya ibn Paquda and Moses Ḥayyim *Luzzatto (see, for instance, Abba Hillel Silver, *Where Judaism Differed* (1957), 182–223).

Recognition of Constant Ideas

However, if due caution is exercised and no exaggerated are claims made, the idea of a normative Judaism is not without value in that it calls attention to the undeniable fact that for all the variety of moods in Judaism's history there does emerge among the faithful a kind of consensus on the main issues. It has always been recognized, for instance, after the rise of Christianity and Islam, that these two religions are incompatible with Judaism and that no Jew can consistently embrace them while remaining an adherent of Judaism. The same applies to the Far Eastern religions. This, of course, is very different from affirming that there are no points of contact between Judaism and other faiths, or no common concerns. Nor has the idea of a Judaism divorced from the peoplehood of Israel ever made much headway, even in circles in which the doctrine of Israel's chosenness is a source of embarrassment. Nor does Jewish history know of a Torah-less Judaism, even though the interpretations of what is meant by Torah differ widely. The

most important work of Jewish mysticism, the Zohar, speaks of three grades or stages bound one to the other – God, the Torah, and Israel (Zohar, Lev. 73a–b). Historically considered, it is true that Judaism is an amalgam of three ideas – belief in God, God’s revelation of the Torah to Israel, and Israel as the people which lives by the Torah in obedience to God. The interpretation of these ideas has varied from age to age, but the ideas themselves have remained constant.

The Development of Judaism

THE BIBLICAL PERIOD. Any account of the development of Judaism must begin with the Bible as the record of those ideas, practices, and institutions which became prominent in the faith. With regard to the biblical record, as with regard to Judaism itself, the monolithic view has yielded among modern scholars to that of development and change, so that it is unsatisfactory to speak of the faith of the Bible, as if the Bible were a unit rather than a collection of books produced over a period of many hundreds of years and stemming from diverse circles with divergent views. The opinions of biblical criticism are frequently at variance with the traditional viewpoint on such questions as to whether the biblical accounts of the lives of the patriarchs are factually accurate, or whether all the legislation attributed to Moses really goes back to the great lawgiver or was fathered by him. Nevertheless, it is possible to trace certain key ideas, which eventually assumed importance in the Bible and which were influential in shaping Judaism.

MONOTHEISM. The usual description of the biblical faith is ethical *monotheism. Whether, as a minority of scholars suggest (e.g. Y. Kaufmann), monotheism erupted spontaneously among the people in ancient Israel or whether, as the majority would have it, there can be traced a gradual progress from polytheism through henotheism to complete monotheism (see the survey and critique by H.H. Rowley, *From Moses to Qumran* (1963), 35–63), the doctrine that there is one God, Lord of the universe, is clearly taught in a large number of biblical passages (e.g., Gen. 1:1–2:3; 5:1–2; 6:1–7; 9:1–8; 11:1–9; 14:18–22; Ex. 19:5; 20:1–14; Deut. 4:15–19; 5:6–8; 10:14; 32:8; 1 Kings 8:27; Isa. 2:1–4; 11; 45:5–8; 66:1–2; Jer. 32:17–19; Amos 5:8; Jonah 1:9; Micah 1:2; Hab. 3:3; Zech. 8:20–23; 14:9; Mal. 1:11; Ps. 8:2–4; 33:8–11; 47:6–9; 67:2–5; 86:9; 90:1–4; 96:5; 104; 113:4–6; 115:16; 136; 139:7–18; 145; 148; Job 38; 39; 40). What later became Israel’s declaration of faith – the **Shema* – is found in Deuteronomy 6:4: “Hear, O Israel: The Lord our God, the Lord is one.” The probable meaning of *ehad* (“one”) in this verse is not only “not many” but also “unique.” God is transcendent and different from all His creatures (S.R. Driver, ICC, *Deuteronomy* (1896²) 89–91). From the critical standpoint these passages are comparatively late, but they are present in the Bible and were consequently adopted by Judaism.

CHARACTERISTICS OF THE ONE GOD. This one God is holy (Lev. 19:2; Isa. 6:3) and demands holiness (Ex. 22:30; Lev. 19:2), righteousness, and justice from His people (Gen. 18:19; Ex. 23:2; Deut. 16:18–20) and from all mankind (Gen. 6:13; Amos

1; 2:1–3). He has compassion over all His creatures (Ps. 145:9), and man can respond to His love in love and fear of Him (Deut. 6:5; 10:20). This God, Lord of all the earth, has chosen the people of Israel, the descendants of Abraham, Isaac, and Jacob, to serve as a “nation of priests” (Ex. 19:6) and to assist in the fulfillment of His purposes (Isa. 43:10; Zech. 8:23). It is incorrect to see the biblical idea of Israel’s choice in terms of the relationship between the god of a tribe and the tribe: a tribal god cannot choose; his destiny is bound up with that of his people. When the tribe is vanquished he, too, suffers defeat. In the biblical record it is the God of all the earth who chooses Israel (Heinemann, in *Sinai*, 16 (1944/45), 17–30). God has given Israel the holy land as its place of abode (Gen. 28:13; 50:24; Ex. 6:8; Deut. 26:15). The special place in which God is to be worshiped by the sacrifices is the *Temple (Deut. 12:11–14; 1 Kings 8).

CEREMONIAL AND ETHICAL LAWS. Prominent among the ceremonial laws are the observance of the *Sabbath (Ex. 20:8–11; 31:12–17; Lev. 25:1ff.; Deut. 5:12–15), the *New Moon feast (Num. 28:11–15; Amos 8:5; Hos. 2:13; Isa. 1:14; 11 Kings 4:23), and the celebration of the festivals of *Passover (Ex. 12:14–20; 23:15; Lev. 23:5–8; Deut. 16:1–8), *Shavuot (Ex. 23:16; Lev. 23:15–21), and *Sukkot (Ex. 23:16; Lev. 23:33–43). Males were to be circumcised (see *Circumcision) as a sign of the covenant made with Abraham (Gen. 17:9–27; 34:13–15; Josh. 5:2–8). The *dietary laws (Lev. 11:1–23; Deut. 14:3–21) were to be observed, as well as laws governing dress (Deut. 22:11; Num. 15:37:41; Lev. 19:27) and agriculture (Lev. 19:9–10; 23:22; Num. 18:8–32). Numerous are the laws governing human relationships and social justice (Ex. 21; 22; 23:1–9; Lev. 19; Deut. 22; 23; 24; 25).

SPIRITUAL LEADERS. The spiritual leaders of the people were of different kinds: the *priest (kohen) who served in the Temple and was the custodian of the law (Lev. 21; 22:1–25; Deut. 17:8–13); the prophet (*navi*) who brought a particular message from God to the people (Deut. 18:18; 1 Sam. 9:9); and the sage (*hakham*), the teacher of worldly wisdom and good conduct (Jer. 9:22; Eccles. 7:4–5).

MESSIANIC BELIEFS. The belief became more and more pronounced that a day would eventually dawn when God’s kingdom would be established over all the earth and war would be banished (Isa. 2:1–4; 11:1–10; Micah 4:1–4; Zech. 14:9). After the destruction of the Temple and the exile of the people to Babylon, this hope became associated with that of national restoration under a Davidic ruler, later called the *Messiah, and the resurrection of the dead (Dan. 12:2).

UNIVERSALISM AND PARTICULARISM. Israel, it was taught, had been chosen to be a light unto the nations (Isa. 42:6; 49:6) and to be God’s special treasure (Ex. 19:5). But both universalism and particularism are found in the Bible, with all the tensions inseparable from belief in God as Father and King of all men and belief in His special concern with Israel. This people were to lead lives of absolute faithfulness

to God. The greatest sin they could, and did, commit was idolatry.

There are many prayers in the Bible but these are private and individualistic. Communal prayer was a later development (see *Prayer).

The Pre-Rabbinic Age

The period after the return from Babylon is shrouded in obscurity, but some of the main lines of development can be traced. Not later than the fifth century B.C.E. the Pentateuch had become the Torah, sacred Scripture, with the prophetic books and the books of the Hagiographa being added later on as holy writ. The process of canonization of the biblical books, other than the Pentateuch, was a lengthy one, the full acceptance of all 24 books which constitute the Hebrew Bible, taking place as late as the second century C.E. (see *Bible: Canon).

THE RISE OF ORAL TRADITION. The concept of Torah was, of course, known in the earlier biblical period, but there it referred to groups of laws taught by the priests (Lev. 6:2, 7; 7:11, 37; 13:59; 14:2; 15:32; Num. 5:29–30; 6:13, 21) or to general “teaching” or “doctrine” (Isa. 2:3). In this period, for the first time, the new idea of the Torah (i.e., the Pentateuch) as a sacred text came to the fore. The regular reading of the Torah in assembly began at this period. Out of these assemblies the synagogue and the whole system of public worship evolved. The reading of the Torah was accompanied by its exposition and its application to new situations (see Reading of the *Torah). It is commonly assumed that the notion of an Oral Law, as distinct from the Written Law, was the invention of the *Pharisees in their determination to make Judaism viable by freeing it from the bonds of a text written down in former ages. It is said, further, that the *Sadducees rejected the whole notion of an Oral Law. While it is undoubtedly true that the full development of the Oral Law idea was the work of the Pharisees, the issue must not be oversimplified. The Sadducees, too, must have had some traditions of Torah interpretation, if only because the literal reading of the Torah text cries out for further amplification. Buying and selling, for instance, are referred to in the Torah, but no indications are given there as to how the transfer of property is to be effected. There are references in the Torah to keeping the Sabbath, but hardly any indication of what is involved in Sabbath work (see *Sabbath).

PERSIAN AND GREEK INFLUENCES. The two civilizations with which the Jews came into contact at this period, first the Persian then the Greek, made their influence felt on Jewish beliefs. Under Babylonian and Persian influence there came into Jewish life and thought the notion of angels as identifiable, sentient, but not necessarily corporeal beings, each with his own name: Michael, Gabriel, Raphael and so forth (see *Angels and Angelology). The personification of the evil in the universe as Satan probably owes much to Persia, as do the beliefs in demons and the resurrection of the dead. It was probably under Greek influence that the doctrine of the immortality of the soul came into Judaism. The doctrine of the

resurrection also established itself, possibly at the time of the *Hasmoneans when young men were dying for their religion, so that the older solutions to the problem of suffering, in terms of worldly recompense, became increasingly untenable. There are no doubt indications of this belief in the earlier period, but it had not at that time obtained a complete foothold in the faith. Basically, the two beliefs of resurrection and the soul's *immortality are contradictory. The one refers to a collective resurrection at the end of days, i.e., that the dead sleeping in the earth will arise from the grave, while the other refers to the state of the soul after the death of the body. When both ideas became incorporated into Judaism it was held that, when the individual died, his soul still lived on in another realm (this gave rise to all the beliefs regarding heaven and hell), while his body lay in the grave to await the physical resurrection of all the dead here on earth (see also *Garden of Eden, and *Netherworld). However, the pronounced this-worldly emphasis of the early biblical period was not abandoned completely. This life was still held to be good in itself as a gift from God. But the thought took shape that, in addition, this life was a kind of school, a time of preparation for eternal life.

ESCHATOLOGICAL ELEMENTS. Toward the end of the Second Temple period, when ominous clouds of complete national catastrophe began to gather, the eschatological note was sounded particularly loudly. Speculations were rife regarding the end of days and hope for a new era to be ushered in by direct divine intervention. The doctrine of the Messiah and the messianic age, heralded by the prophets, was seen as a hope shortly to be realized. Some groups of Jews fled into the desert, there to await the coming of the Messiah, as is evidenced by the sect of *Qumran (held by most scholars to be identical with the *Essenes).

CHALLENGES FROM OTHER RELIGIONS. From the time of Judaism's contact with Zoroastrianism, faith in the unity of God had to be defended against dualistic theories that there were two gods, one of light and goodness, the other of darkness and evil. With the rise of Christianity the challenge came from the doctrines of the incarnation and the trinity. These challenges took the place of the polytheism and idolatry of the earlier biblical period, though, of course, idolatry continued to exist in the form of the Greek and Roman gods, and made polemics and legislation against *avodah zarah* (“strange worship”) all but academic.

The Rabbinic Period

Rabbinic Judaism, the heir to all these tendencies, emerged at the beginning of the present era and lasted until the year 500, but many of the ideas put forward by the great rabbis had their origin in an earlier age. In the rabbinic literature there is a fairly consistent treatment of the three ideas of God, Torah, and Israel, with much debate among the rabbis on this or that detail.

PARTICULARISTIC TENDENCIES. With regard to the doctrine of Jewish peoplehood, the greater the degradation and

the more intense the feelings of national rejection, the stronger became the need for national consolation and the assurance that God still cared. All the poignancy of Israel's hope against hope is expressed in the typically rabbinic, imaginary dialogue between God and Israel, in which Israel complains that she has been forgotten by God, and God replies "My daughter, 12 constellations have I created in the firmament, and for each constellation I have created 30 hosts, and for each host I have created 30 legions, and for each legion I have created 30 cohorts, and for each cohort I have created 30 maniples, and for each maniple I have created 30 camps, and to each camp I have attached 365 thousands of myriads of stars, corresponding to the days of the solar year, and all of them I have created only for thy sake, and thou sayest that I have forgotten thee" (Ber. 32b). It can hardly be accidental that the groupings are taken from the divisions of the Roman army. The universalistic tendencies in Judaism are apt to become obscured by the particular in this period. Nevertheless, conversion to Judaism is possible. The biblical *ger* ("sojourner") had long been interpreted to mean a *proselyte to the Jewish faith, and the equal rights demanded in the Bible for the *ger* are applied. "Our rabbis taught: If at the present time a man wishes to become a convert, he is to be addressed as follows: 'What reason have you for wishing to become a convert; do you not know that Israel at the present time is persecuted and oppressed, despised, harassed, and overcome by afflictions?' If he replies 'I know and yet am unworthy,' he is accepted forthwith and is given instruction in some of the minor and some of the major commandments" (Yev. 47a).

DOMINANT VALUE OF TORAH STUDY. The study of the Torah is now the supreme religious duty, the closest approach to God, the Pharisaic form of the beatific vision (R. Travers Herford, *The Ethics of the Talmud, Sayings of the Fathers* (1962), 15). Typical is the saying in the Mishnah (Pe'ah 1:1): "These are the things whose fruits a man enjoys in this world while the capital is laid up for him in the world to come: honoring father and mother, deeds of lovingkindness, making peace between a man and his fellow; but the study of the Torah is equal to them all." When a rabbi took an unduly long time over his prayers it was not considered incongruous for his colleague to rebuke him: "They neglect eternal life [Torah study] and engage in temporal existence [prayer]" (Shab. 10a). Only such devotion to Torah study can explain the remarkable ruling in the Mishnah (BM 2:11): "If a man is called upon to seek the lost property of his father and that of his teacher, his teacher's comes first – for his father only brought him into this world but his teacher, that taught him wisdom, brings him into the world to come; but if his father was also a sage, his father's comes first. If his father and his teacher each bore a burden, he must first relieve his teacher and afterward his father. If his father and his teacher were taken captive, he must first ransom his teacher and afterward his father; but if his father was also a sage he must first ransom his father and afterward ransom his teacher." The reference to wisdom in this passage comes at the

end of a long process in which wisdom no longer means, as it does in the Bible, worldly knowledge and practical philosophy but the wisdom of the Torah. Moreover, Torah is no longer the province of the priest but the heritage of all the people.

ANTHROPOMORPHISM. Anthropomorphic descriptions of God abound in the rabbinic literature but, when excessively bold, are generally qualified by the term *kivyakhol* ("as it were"). The two most popular names for God in this literature are *Ribbono shel olam* ("Lord of the universe"), used in direct speech, and *ha-Kadosh barukh Hu* ("the Holy One, blessed be He"), used in indirect speech.

THIS WORLD AND THE WORLD TO COME. The idea of this life as a preparation for eternal bliss in the hereafter looms very large in rabbinic thinking, yet the value of this life as good in itself is not overshadowed. The second-century teacher, R. Jacob, said: "Better is one hour of repentance and good deeds in this world than the whole life of the world to come; but better is one hour of bliss in the world to come than the whole life of this world" (Avot 4:17). The same teacher said (Avot 4:16): "This world is like a vestibule before the world to come: prepare thyself in the vestibule that thou mayest enter the banqueting hall." In the same vein is the saying that this world is like the eve of Sabbath and the world to come like the Sabbath. Only one who prepares adequately on the eve of the Sabbath can enjoy the delights of the Sabbath (Av. Zar. 3a). Bliss in the hereafter is not limited to Jews. The view of R. Joshua, against that of R. Eliezer, was adopted that the righteous of all nations have a share in the world to come (Tosef., Sanh. 13:2).

The Middle Ages

During the Middle Ages Judaism was confronted with the challenge of Greek philosophy in its Arabic garb. The Jews mainly affected were those of Spain and Islamic lands. The French and German Jews were more remote from the new trends, and their work is chiefly a continuation of the rabbinic modes of thinking. The impact of Greek thought demanded both a more systematic presentation of the truths of the faith and a fresh consideration of what these were in the light of the new ideas. A good deal of the conflict was in the realm of particularism. There is definite hostility in much of Greek thought to the notion of truths capable of being perceived only by a special group. Truth is universal and for all men. There is a marked tendency in medieval Jewish thought to play down Jewish particularism. This is not to say that Judaism was held to be only relatively true, but that the doctrine of Israel's chosenness had become especially difficult to comprehend philosophically. The greatest thinker of this period, Maimonides, hardly touches on the question of the chosen people and, significantly enough, does not number the doctrine among his principles of the faith. For most of the thinkers of this age a burning problem was the relationship between reason and revelation. What need is there for a special revelation of the truth if truth is universal and can be attained by man's unaided reason?

In rabbinic times, wisdom is synonymous with Torah. The tendency in medieval thought is to give wisdom its head but to incorporate this, too, under the heading of Torah. Greek physics and metaphysics thus not only become legitimate fields of study for the Jew but part of the Torah (Maim. Yad, Yesodei ha-Torah, 2:5).

LAW CODES AND BIBLICAL EXEGESIS. The great codes of Jewish law were compiled in this period, partly in response to the new demand for great systemization, partly because the laws were scattered through the voluminous talmudic literature and required to be brought together, so that the *posekim* could easily find the sources of their decisions. A further aim was to render decisions in cases of doubt.

In addition to the incorporation of secular learning into Torah, the scope of Torah studies proper was widened considerably. The *Karaites were responsible for a new flowering of biblical scholarship. The *Kabbalah was born, its devotees engaging in theosophical reflection on the biblical texts. According to the Kabbalah every detail of the precepts mirrored the supernal mysteries, and the performance of the precepts consequently had the power of influencing the higher worlds. In the writings of the later kabbalists, Judaism becomes a mystery religion, its magical powers known only to the mystical adepts.

THEOLOGICAL SPECULATIONS. Under the impact of Greek thought the emphasis in medieval Jewish thinking among the philosophers is on the impersonal aspects of the Deity. Not only is anthropomorphism rejected but the whole question of the divine attributes – of what can and cannot be said about God – receives the closest scrutiny. Bahya ibn Paquda (*Duties of the Heart, Sha'ar ha-Yiḥud*, 10) and Maimonides (*Guide*, 1:31–60) allow only negative attributes to be used of the Deity; to say that God is wise is to say no more than that He is not ignorant. It is not to say anything about the reality of the divine nature in itself which must always remain utterly incomprehensible. In reaction to the philosophers' depersonalization of the Deity, the kabbalists, evidently under Gnostic influence, developed the doctrine of the *Sefirot*, the ten divine emanations by which the world is governed, though among the kabbalists, too, in the doctrine of *Ein Sof* ("the Limitless"), God as He is in Himself – the Neoplatonic idea of *deus absconditus* – is preserved. Indeed, from one point of view, the Kabbalah is more radical than the philosophers in that it negates all language from *Ein Sof*. The utterly impersonal ground is not mentioned in the Bible. Of it nothing can be said at all. No name can be given it except the negative one of "Nothing" (because of it, nothing can be postulated). By thus affirming both the impersonal ground and the dynamic life of the *Sefirot*, the kabbalists endeavor to satisfy the philosophical mind while catering to the popular need for the God of Abraham, Isaac, and Jacob.

The Period of Transition

The 18th century was a period of great ferment in Jewish life, the old world dying, the new not yet coming to birth. The pio-

neer Jewish historian *Zunz correctly sees the Jewish Middle Ages as lasting until the end of this century. The repercussions following on the adventures of the pseudo-messiah *Shabbetai Zevi caused Jewish leaders to retreat into the past. There was a fear of new tendencies in Jewish thought and a pronounced suspicion of mystical fervor. Yet revivalist tendencies were in the air, and not only among Jews. The century which saw the phenomenal successes of a Wesley in England, and movements addicted to what Father Ronald Knox calls "enthusiasm" in America and the European continent, also witnessed the rise of *Hasidism. The three towering Jewish figures of this age each represented a prominent trend important at the time and influential for the future. R. *Elijah b. Solomon, the Gaon of Vilna (1720–97), "the last great theologian of classical Rabbinism" (L. Ginzberg, *Students, Scholars and Saints* (1928), 125), spent his days and nights shut up in his study with drawn shutters and setting standards of utter devotion to Torah study in the classical sense as man's noblest pursuit. In the 16th century, Poland had become a home of Torah. The complete devotion there to talmudic studies on the part of so many was unparalleled. The Gaon was an outstanding but not untypical product of this type of hermit-like dedication. The old teaching (Avot 6:4), "This is the way of the Torah. Thou shalt eat bread with salt and thou shalt drink water by measure, and on the ground shalt thou sleep and thou shalt lead a life of suffering the while thou toilest in the Torah," became, in large measure through the Gaon's influence, the pattern for many thousands of talmudists in Russia, Poland, and Lithuania.

ḤASIDISM. It is extremely difficult to disentangle fact from legend in studying the life and work of R. *Israel Ba'al Shem Tov (d. c. 1760), but Ḥasidism, the movement he founded – with its message that simple faith is superior to scholasticism untouched with fervor, that joy is to be invoked in God's service, and that there are "holy sparks" in all things to be redeemed by a life of sanctity – spread so rapidly, despite the most powerful opposition of established rabbinic authorities, that by the end of the 18th century it had won over to its side numerous Jewish communities in Galicia, the Ukraine, Poland, and Belorussia.

MENDELSSOHN AND THE ENLIGHTENMENT. Moses *Mendelssohn (1729–86) is rightly looked upon as the pioneer in bringing the Jewish people face to face with the modern world. Religious truth, taught Mendelssohn, was universal and could be attained by the exercise of the free human reason. No special revelation was required. The Torah, for Mendelssohn, is not revealed religion but revealed legislation. The eternal truths that there is a God, that He is good, and that man's soul is immortal are revealed in all places and at all times. Mendelssohn, thus speaking as a child of the Enlightenment, succeeded in paving the way for those Jews – and they were many – who wished to eat of its fruits. But Mendelssohn was not able to explain adequately why a special revelation to Israel was necessary if the basic truths were attainable by all men.

What was the purpose of this special revealed legislation and, if it had value, why was this confined to a special group? He speaks of “a special favor” for “very special reasons,” but nowhere states what these reasons were (M.A. Meyer, *The Origins of the Modern Jew* (1967), 37). Moreover his advice to his fellow Jews to comply with the customs and civil constitutions of the countries in which they lived while, at the same time, being constant to the faith of their forefathers, was easier said than done. Nevertheless no modern Jew is immune from Mendelssohn’s influence, and, by the same token, opponents of any kind of modernism in the Jewish camp have laid all the ills of subsequent Jewish faithlessness at Mendelssohn’s door.

With the possible exception of the Oriental communities, every Jew in the post-emancipation era, insofar as he strove to remain Jewishly committed, was a disciple of the Gaon, or the Ba’al Shem Tov, or Mendelssohn, with many Jews disciples of more than one of these great figures at the same time.

The Emancipation

The entrance of the Jew into Western society at the beginning of the 19th century presented Judaism with a direct confrontation with modern thought, without the long period of preparation and adjustment that had been available to Christendom since the Renaissance. On the practical side there were the problems connected with the new social conditions. How, for example, were Jews to participate in life in a non-Jewish environment without surrendering their distinctiveness and the claims of their ancient past? How were they to avoid being dubbed antisocial or outlandish? How were they to earn a living if they refused to work on the Sabbath? How were they to mix freely with their neighbors and keep the dietary laws? On the intellectual plane fresh challenges were being presented to the ancient faith by the new scientific viewpoints, by modern philosophy, by art, music, and literature, cultivated independently of any dogmatic considerations, and later, by the historical investigations into the Bible and Jewish origins. It was in Germany that Judaism had to bear the brunt of the new thinking, though, as evidenced by the emergence of a Russian *Haskalah movement, other Jewries were not unaffected by the revolutionary trends.

THEOLOGICAL CHALLENGES. It is not surprising that atheism and agnosticism had their unprecedented appeal for some Jews, and Christianity in one form or another for others. But among the faithful, traditional theism remained the accepted philosophy of life until more recent years, when a number of Jewish thinkers began to explore the possibility of a radical reinterpretation of theism in naturalistic terms. The main tensions, however, in post-emancipation Judaism centered on the ideas of Torah and Israel rather than God.

THE NATIONALISTIC QUESTION. With regard to Jewish peoplehood, the *Zionist movement at the end of the century posed in acute form a problem which had agitated Jewish minds from the beginning of the century – the role of nationalism in Judaism. Were the Jews merely adherents of a com-

mon religion – as it was put, Germans, Frenchmen, Englishmen of the Mosaic persuasion – or were they a nation? Was Judaism dependent for its fullest realization on residence in the Holy Land, or was it desirable that Jews be dispersed in many lands to further there the “mission of Israel” in bringing God to mankind in the purest form of teaching? These questions were being asked, and the replies varied considerably. The early Reformers deleted from the prayer book all references to national restoration. Exile was not seen as an evil to be redressed but as an essential step in the fulfillment of the divine purpose (see *Reform Judaism). The Reformers were not alone in their opposition to a nationalistic interpretation of Judaism. When political Zionism became a practical policy for Jews, many of the Orthodox opposed it as a denial of Jewish messianism according to which, it was believed, the redemption would come through direct divine intervention, not at the hands of men. There were not lacking, however, religious leaders who advocated a form of religious Zionism, claiming that, as in other spheres, the divine blessing follows on prior human effort.

With the actual establishment of the State of Israel the older attitudes became academic. With the exception of the fringe groups of the *Neturei Karta (Orthodox) and the *American Council for Judaism (Reform), the majority of Jews now accept the special role the new state has to play as a spiritual center (over and above the haven of refuge it provides), while generally acknowledging that to uncover the full implications of this concept requires a good deal of fresh thinking. Some Orthodox thinkers have taken refuge in the notion of the establishment of the State of Israel as *athalta di-ge’ullah* (“the beginning of the redemption”), i.e., that while complete redemption is at the hands of God through the Messiah, the present life of the State still has messianic overtones and belongs in a realm far removed from the secular. Some see this as an unsuccessful attempt literally to have the best of both worlds.

THE QUESTION OF HALAKHAH. The great divide between Orthodoxy and Reform was on the question of Jewish law (*halakhah*). According to the Orthodox position, the traditional doctrine of *Torah min ha-Shamayim* (“the Torah is from Heaven”) means that both the Written and the Oral Laws were communicated by God to Moses and that, therefore, all the Pentateuchal laws, in their interpretation as found in the rabbinic literature, are binding upon Jews by divine fiat. The Sabbath, for instance, is to be kept in the manner set forth in detail in the Talmud; the dietary laws are to be observed in all their minutiae. On this view nothing in the law is trivial or unworthy or out-of-date, since every law is a direct command of God for all time. Reform Judaism rejects the idea of a permanently binding religious law. In the Reform view, the moral law alone is eternally valid, together with those religious ceremonies which are still capable of inspiring contemporary Jews to appreciate the beauty, dignity, and supreme worth of a God-orientated life. A middle of the road position was advocated by the followers of the historical school in Germany

and later by the *Conservative movement in the United States. In this view, Reform is in error in rejecting the *halakhah*, but Orthodoxy is also mistaken in wedding adherence to *halakhah* to a fundamentalism which recognizes no change or development in Jewish law.

Contemporary Judaism

There are a number of groupings in contemporary Orthodox Judaism. Reform has made little headway among Sephardi or Oriental Jews, and the majority of these, if religious, are at least Orthodox, with many of their own rites and customs.

ORTHODOXY OF THE LITHUANIAN PATTERN. Among the Ashkenazim, possibly the most prominent Orthodox group is that represented by the yeshivot of the Lithuanian pattern and the rabbis educated in these institutions, most of them in Israel and the U.S. The main emphasis here is on Torah study, to the virtual exclusion of all else, and the carrying out of the detailed practical observances. In this group the stress is on intellectual comprehension, particularly of the difficult logic and reasoning of the Talmud, the most admired figure being the *lamdan*, the man proficient in these studies. Religious feeling and ethical content is provided by the *Musar movement, which succeeded in capturing the Lithuanian yeshivot at the end of the last century. Secular learning is either entirely frowned upon or treated as necessary for earning a living, and little more.

NEO-ORTHODOXY. Neo-Orthodoxy (not generally called by this name) has a far more positive attitude to secular learning, with a particular fondness for the physical sciences. In this group are the followers of the Samson Raphael *Hirsch school, which aims at combining Torah (i.e., strict adherence to *halakhah*) with *derekh erez* ("the way of the earth," in this context, the values of Western civilization). In this group, too, are the majority of Orthodox synagogues in the U.S. (the rabbis mainly alumni of *Yeshiva University) and Great Britain (the rabbis mainly alumni of *Jews College).

HASIDISM. The Ḥasidim still owe their allegiance to various dynasties of rabbis. Ḥasidism is emotional and mystical. Most of the Ḥasidim wear a special garb, consisting of a girdle for prayer, a long black coat, and fur hat. Beards are generally worn long and earlocks (*pe'ot*) cultivated. Ritual immersion plays an important part in ḥasidic life. The best-known ḥasidic rabbis with large followings today are the Lubavitcher and the Satmarer in New York, and the Gerer, Viznitzer, and Belzer in Israel. Neo-Ḥasidism, as presented in the writings of Martin Buber, is not a movement but a mood of sympathy with some of the ḥasidic values as relevant to the spiritual predicament of Western man.

The two major world groupings of Orthodoxy, embracing members of all preceding groups, are the Zionist *Mizrachi movement and the more right-wing *Agudat Israel.

CONSERVATIVE JUDAISM. This movement is especially strong in the U.S., with its teaching center at the *Jewish Theological

Seminary in New York. It is organized in the *United Synagogue of America and has sympathizers in other parts of the Jewish world. It has been said that, while contemporary Reform stresses the God idea and contemporary Orthodoxy the idea of Torah, Conservative Judaism stresses that of Israel (i.e., Jewish peoplehood). This is too much of a generalization, but it is true that an important plank in the Conservative platform is the unity of the Jewish people amid its diversity.

REFORM JUDAISM. This movement is strong in the U.S., with its teaching headquarters at the *Hebrew Union College in Cincinnati, but with followers in other parts of the Jewish world. Reform congregations are loosely organized in the World Union of Progressive Synagogues. (The term "Traditional Judaism" is used, nowadays, to denote either Orthodox or Conservative Judaism. The term "Torah-true Judaism" is used by some of the Orthodox as a synonym for Orthodoxy in order to avoid the possible pejorative implications of the latter term as suggesting reaction or obscurantism. "Liberal Judaism" is the term used in Great Britain for the Reform position, though there are in Great Britain both Liberal and Reform congregations, with the Liberals more to the left.)

There are very few Reform or Conservative congregations in the State of Israel. Orthodoxy is the official religious position in Israel, with the majority of the rabbis belonging to the old school of talmudic jurists. Here and there in recent years a number of small groups have emerged with the aim of seeking a religiously orientated outlook, but one not necessarily Orthodox.

THE INFLUENCE OF JUDAISM

Judaism's main influence on civilization has been in the sphere of religion. This influence has been especially felt by the daughter religions, Christianity and Islam. The institutions of church and mosque are direct descendants of the synagogue, with many of their forms of worship adapted from the mother faith. Words like amen and Hallelujah have become part of the religious vocabulary of a large portion of mankind. The Church uses the Bible in its worship. The Sabbath, the Psalms, the prophetic readings, the weekly sermon, are, through Judaism, the common heritage of the Christian world. The language of the Bible has helped to mold the tongues of the Western world, so that the peoples of Great Britain and the U.S., France, Germany, Spain, and Italy, speak without incongruity in the idioms of ancient Judea. The prophetic vision of a world at peace is still a potent force in human affairs despite the war-blackened pages of human history. Judaism's insistence on justice and righteousness, and the brotherhood of man founded on the Fatherhood of God, has been, in part at least, responsible for the emergence of Western democratic patterns and social reforms.

The rise of modern science was due to a number of factors, prominent among them the Greek element in Western thought. But Judaism's teachings regarding the unity of nature as the creation of the one God are not to be underestimated in

their effects on early scientific thought. It is doubtful whether science could have emerged in its full boldness and confidence against a polytheistic backcloth in which each god is allotted only a portion of the world.

The concrete nature of Jewish thought, its concern with the deed, its practical application of lofty ideals, has been responsible, perhaps more than any other factor, for the emergence of ideas connected with social justice. Individual Jews have stood on both sides of the debate on the major social issues. "Yet the determination not to abandon Justice to the realm of the abstract is independent of the machinery suggested for its establishment, and in so far as any movement sets before itself the task of bringing the good things of life within the reach of the masses, it is carrying on the work of the prophets" (L. Roth, in: E.R. Bevan and C. Singer (eds.) *The Legacy of Israel* (1928²), 468).

In speaking of the influence of Judaism it is sometimes customary to refer to the contributions made by individual Jews, but this is a highly questionable procedure. Adapting a maxim of Rabbi *Kook, it can be argued that these are the contributions of Jews who were great rather than of great Jews. It is certainly a moot point to what extent the thought of a *Spinoza, a *Marx, a *Bergson, an *Einstein, or a *Freud, was nurtured by his Jewish background. Yet it would seem that some of Judaism's influence is to be detected even here in a round-about way. It can be argued, not unconvincingly, that something of Judaism's spirit contrives to live even in the souls of those of her children who have abandoned her.

[Louis Jacobs]

JUDAIZERS, persons who, without being Jews, follow in whole or in part the Jewish religion or claim to be Jews. The prototype of the Judaizer was *Naaman, the minister to the king of Syria, who, after being cured by Elisha, worshiped the God of the Hebrews while continuing outwardly to follow the idolatrous state religion. During the counter-attacks at

the time of Esther, it is stated that many of the terror-stricken population "acted as Jews" (מִתְיַהֲדִים), though it is difficult to tell what precisely is implied by this term. In the classical period, the principles and certain practices of Judaism exercised a powerful attraction on some segments of the general population even in Rome, who changed the tenor of their lives, becoming "God-fearers" (σεβόμενοι) who rejected pagan worship and observed the Sabbath. The obligation of submitting to circumcision was of course a deterrent for male sympathizers, who, probably more than women, contented themselves, therefore, with half-way conversion, which became recognized too in rabbinic law. With the rise of Christianity, the differentiation between the followers of the new faith and the old was sometimes not easy to impose, and the Church inveighed violently against Judaizers within the Church, who wore Jewish ritual vestments, followed some of the dietary laws, kept the seventh-day Sabbath, and observed Easter on the Passover or with Jewish rites. In the Church, over a prolonged period (for instance at the time of the Albigensian schism), the accusation of Judaizing was frequently made against dissidents. In fact, some of them, such as the "Passagi" and "Circumcisi," were, it seems, Judaizing sects in the full sense of the term. Similar accusations were common at the time of the Reformation, sometimes even within the internal polemics of the Reformers (see *Disputations and Polemics). The ambivalence of the period of the rise of Christianity was long perpetuated in North Africa, where a good part of the population seems to have been affected by Judaism both before and after the spread of Christianity among them. The "Hebrewisms" which have been discerned down to the present day in some African tribes may be a relic of this. With the rise of Puritanism in England and the North Atlantic area generally, including America, the study of the Old Testament led to a relatively wide spread of Judaizing tendencies, expressed in the demands of some extremists for the use of Hebrew in the liturgy, the modeling of the constitution on biblical prescriptions, the observance of the seventh-day Sabbath, and rigorous abstention from blood. In certain cases, as that of the followers of John *Traske in England in the first half of the 17th century, these Judaizing tendencies had as their inexorable sequel in due course the formal adoption of Judaism. The same occurred in the 18th to 19th centuries with the Sabbath-observing sects in Hungary (see *Somrei Sabat) and in Russia (see below), and recently with the proselyte community of *San Nicandro in southern Italy. At the present time, the Seventh Day Adventists, while they have adopted certain Jewish practices based on the Bible, remain a closely organized separate sect. On the other hand, it is difficult to determine whether certain other groups who claim to be Jewish, such as the Mexican Indians or some groups of the black Jews in the United States, should properly be considered Jews or Judaizers. Some of the "Old Christian" victims of the Inquisition in Spain convicted of following Old Testament rites, and therefore termed Jews, are also in this category.

[Cecil Roth]

Present-day Judaizers or Judaizing sects are mostly to be found outside Europe. On the American continent, apart from the black Jews of the United States there are the so-called “Indian” Jews in *Mexico and the Iglesia Israelita de Chile, consisting of less than one thousand people in the southern Chilean province of Cautin. Many of them joined the Zionist movement and some even settled in Israel. They originated in the early 20th century in a Christian fundamentalist sect which gradually adopted Old Testament rites and festivals. Some Protestant Sabbath-observing “Israelitas” in Peru are sometimes mistaken as Jews. In *Japan several Christian sects are deeply interested in Judaism, the Old Testament and the Hebrew language, and their members often visit Israel. In Uganda a Judaizing sect called *Bayudaya, of which only about 500 remained faithful to Judaism, was founded in the 1920s by the political and military leader Semei Kakungulu. It was recognized in 1964 by the Uganda government as a religious community under the name “The Propagation of Judaism in Uganda – Moses Synagogue.”

In Russia

There were various Judaizing sects and trends in Russia from the second half of the 15th century on. Occasionally they even adopted Judaism and its precepts, in part or completely, sometimes leading to formal conversion. The emergence of Judaizers in this area stemmed from ancient Byzantine oppositional traditions to the established Church, going as far back as iconoclasm and the *disputations with Jews and encounters with them in the Kievan principality. In the 16th century and later, the Judaizers were influenced by the radical wing of the *Reformation. Long-held critical opinions simmering in the Athos monasteries influenced the many Russian pilgrims who visited them. The first open appearance of Judaizers occurred in Novgorod, the principal commercial city of northern Russia, where heretical expressions had already been known in the 14th century. An ancient Russian chronicle relates that in 1471 Prince Michael Alexandrovich of Kiev came to Novgorod with several Jewish merchants in his retinue; “The Jew Zechariah” (Skhariya Zhidovin) is stated to have “corrupted to Judaism” two clergymen, Alexis and Denis. They were joined by the Lithuanian Jews, Joseph Samuel Skorovey and Moses Khanush, thus forming the nucleus for the new sect. In 1479 Grand Prince Ivan Vasilevich (Ivan III) of Moscow visited Novgorod and invited Alexis and Denis to officiate in the Church of Moscow. There they influenced many members of the grand prince’s court, among them his daughter-in-law Helena.

In 1487 Archbishop Gennadi of Novgorod denounced the “atheists,” whose numbers were increasing throughout the kingdom, to the grand prince. An investigation was entrusted to Gennadi. Manuscripts of hymns and prayers which did not accord with the doctrine of the official Church were uncovered. Several members of the sect were arrested and severely tortured at Novgorod. Others fled to Moscow, where they found influential protectors. At the Church council of 1490, Gennadi

called for the adoption of severe measures against the Judaizers and suggested the establishment of an *Inquisition. The grand prince rejected this project, but it was agreed that the Judaizers were to be confined to monasteries. In 1494 the metropolitan of Moscow, Zosima, was accused of being a Judaizer and deposed. The struggle against the Judaizers became rapidly enmeshed with the underground struggle between various factions of the nobility over the succession to the throne and the course of Russian policy. The Judaizers supported Dmitri, the son of Princess Helena. In 1502 Ivan III nominated his son Vasili (Basil) as his successor; a campaign of persecution against the Judaizers began, and in 1504 the leaders of the sect were condemned to be burned at the stake. The sect rapidly disappeared from the political and cultural scene in Russia.

The extent of actual Judaizing within this sect is disputed among scholars. Some rely on the few extant remains of its literature – among them numerous translations of the Bible from the traditional Hebrew text and extracts from *Millot ha-Higgayon* of “Moses the Egyptian” (Maimonides) – and stress its proximity to Judaism. Others claim that the faulty style of these translations proves that they are not the work of Russians, but of Jews, and do not prove much about the Russian sect. Adherents of the sect were certainly named “Judaizers” by its opponents, who thus sought to impugn its standing among the masses (Joseph Volotski, one of the most violent opponents of the sect, referred to its members as *zhidovomudrstvuyushchiye*, “Jewish wiseacres”). According to some scholars, the Judaizers were a Christian rationalist sect, which tended to reject the Church hierarchy, the religious ceremonies, and icon adulation, whilst some of them even negated belief in the Trinity. Whatever may have been the true character of this sect, the propaganda against it, which emphasized its affinity with Judaism, aroused a persisting fear of the Jews among all classes of the Russian population. The consequences were felt in the Russian attitude toward the Jews during the 16th to 18th centuries.

At the beginning of the 18th century Judaizers reappeared in Russia, but there is no proof of any link between them and the Judaizers of the 15th century. The origin of the later groups was essentially due to a profound study of the Bible. St. Dimitri of Rostov, who concerned himself with tracking down sects which deviated from the Church, mentions the sect of Sabbath observers in his work of the early 18th century. During the second half of the 18th century, sects of Judaizers and Sabbath observers appeared in the interior provinces of Russia, as well as in the Volga provinces and the northern Caucasus. Among the most prominent was the Molokan sect, which broke away from the Dukhobors. Its founder was Simeon Uklein, noted for his biblical erudition, who introduced many Jewish customs among the members of his sect. His disciple Sundukov called for greater association of the sect with the Jews; this resulted in a split within its ranks and the creation of the “Molokan Sabbath Observers.”

During the early 19th century, the authorities began to persecute the Judaizers systematically. The existence of Sab-

bath observers was discovered in the province of Voronezh. After a series of persecutions, many of them were brought back within the fold of the ruling Church. The others were impressed into the army. According to official figures, the number of members of this sect was 3,770 in 1823. In 1805 the authorities of the province of Moscow announced the existence of Sabbath observers, and in the province of Tula about 150 persons were discovered as claiming that they had been attached to their faith from ancient times, but that they had concealed this so as not to provoke their Christian neighbors. The Judaizers succeeded particularly in the province of Saratov, where the preacher Milyukhin won over whole villages to his faith. In 1817 Milyukhin submitted a memorandum to the minister of the interior in which he complained against the persecutions of the local authorities and the Christians. He argued that his followers did not observe the Jewish laws because they had no leaders versed in the customs of Judaism. He requested that the members of the sect be authorized to establish relations with Jewish scholars. In 1820 the Council of Ministers decided to instruct the local authorities to act with lenience toward the Judaizers and to content themselves with banishing their preachers to the Caucasus, where they were to settle. The remainder were not to be attacked so long as they did not propagate their faith. In a memorandum of 1823, submitted by Count Kochubey to the Council of Ministers, he claimed that the Judaizers' sect was widespread throughout Russia and that its adherents were estimated at about 20,000 persons. It was decided to enlist all who propagated the beliefs of the sect into the army, whilst those who were unsuitable for military service were to be banished to Siberia and settled in such a way as to preclude them from any intercommunication. It was also decided to expel the Jews from all places to which the sect had spread. Another decision prohibited the issue of passports to the Judaizers, so as to restrict their movements, prevent them from meeting with Jews, or propagating their faith. In order to arouse the masses of the people against them and ostracize them, it was emphasized that they were merely members of a Jewish sect. At the same time, the Judaizers were prohibited from holding prayer meetings and carrying out circumcision, marriage, and burial ceremonies according to Jewish custom. Many members of the sect decided to accept Christianity outwardly while continuing to practice their customs clandestinely.

With the accession of *Nicholas I to the throne, the position of the Judaizers deteriorated. Those who were apprehended in the observance of Jewish customs were forced to join the army or were exiled to Siberia. Entire villages were thus depopulated and destroyed. Many of the Judaizers were expelled beyond the Caucasus Mountains, where they settled, founded flourishing villages, and spread their religion among the Russian settlers. Near Aleksandrovsk, in the Caucasus, almost all the inhabitants adhered to the Judaizers' sect. During the 1840s, the Russian government supported the settlement of members of the sect in the northern Caucasus because it regarded them as an industrious and desirable element. The

expulsion of Judaizers from their former places of residence was nevertheless continued. In Siberia, large settlements of Judaizers of various categories were also established (as in the town of Zima).

With the accession of *Alexander II, the administrative pressure was alleviated and the authorities did not insist on the application of the law. Many of the Judaizers began to observe their religion openly. They were particularly numerous in the provinces of Voronezh and Saratov. In 1887 the government officially recognized the right of the members of the sect to perform marriage and burial ceremonies according to their customs. With the manifesto issued on Oct. 17, 1905, which included freedom of religion for all the citizens of Russia, all the discriminatory legislation against the Judaizers and Sabbath observers was abolished. The government even emphasized, in special circulars issued by the ministry of the interior, that the Sabbath observers were not to be regarded as Jews, and that the special laws directed against the Jews did not apply to them.

All those who came into contact with the members of the sect, even their opponents, pointed out that they were mainly industrious peasants, moral, literate, charitable, and sober in their lives. Their main divisions were (1) the Molo-kan Sabbath Observers, believers in the New Testament and in Jesus as Christ, but not as God. Their observance of precepts of the Jewish religion (circumcision, the Sabbath, dietary laws, and the like) stemmed from their interpretation of the evangelists; (2) the Sabbath Observers (Subbotniki), who accepted the Hebrew Bible only, but not the Talmud. They were also occasionally referred to as the "Karaitic Sabbath Observers" or the "Bareheaded"; (3) the proselytes (Gery), considered themselves Jews in every religious aspect and were also known as the "Covered Heads" (because they covered their heads, according to Jewish custom, both when at prayer or in other places). The proselytes endeavored to intermingle with the Jews as much as possible. Marriage with Jews was regarded by them as an important achievement. They sent a number of their children to yeshivot. Some Jews were secretly active among them as rabbis, *shohatim*, and teachers. David Teitelbaum of Lithuania, who was active in the proselyte settlements during the 1880s, became particularly renowned among them. These proselytes traveled to Erez Israel among the masses of Russian pilgrims, and many of their families settled there. They were especially associated with settlements in Galilee (Yesud ha-Ma'alah, Bet Gan, etc.). In Erez Israel they became completely integrated within the Jewish population.

There is no information available on the lives of the Judaizers and the proselytes under the Soviet regime.

°**JUDAS**, Christian writer, probably at the beginning of the third century C.E., author of a work (not extant) on the “seventy weeks” prophecy in Daniel (9:24ff.). Influenced by the persecution of the Christians, he predicted the imminent coming of the Antichrist. He is mentioned in Eusebius (*Historia Ecclesiastica* 6:7).

[Jacob Petroff]

JUDE, DER, name of four periodicals in the German language. The first appeared in nine issues between 1768 and 1772 in Leipzig and was published by an apostate, Gottfried Selig, with the intention of making the Christian world familiar with Jewish ritual, religion, and habits.

The second, edited by Gabriel *Riesser, was published for two years (1832–33) with one further issue. It consisted mainly of Riesser’s own articles, in which he criticized the political negotiations within various German states concerning the emancipation of the Jews. Riesser chose the name “Der Jude,” which had become almost an insult, in order to rehabilitate it.

The third, a monthly (1916–24), was founded and edited by M. *Buber, who adopted the name of Riesser’s periodical but pointed out that “the Jew” was meant as representative of the Jewish people, and that he demanded liberty and freedom of work for this oppressed people. The Jewish problem had again been brought to the fore during the latter years of World War I, which had also given rise to nationalist ideas. Nearly all leading personalities among German-speaking Jewry contributed to the periodical during the eight years of its publication. Buber himself published in it his most important essays in that period. After monthly publication ceased, five special issues appeared on antisemitism, education, Jewry and German nationality, Jewry and Christianity (1925–27), and on M. Buber’s 50th birthday (1928).

The fourth publication of this name, a Zionist periodical, appeared in Vienna between 1934 and 1938.

[Reuven Michael]

JUDEA, Latin form of Judah, the southern province of Erez Israel during the period of Roman hegemony. Although this article deals with Judea as a Roman province, it should be pointed out that the name precedes the period. It was the natural name, in its various forms, for the area. The return to Zion, which consisted overwhelmingly of the exiles of the kingdom of Judah, settled in the territory from which they had been exiled (cf. Neh. 11:25–36), and during the Persian period the

territory was called Yehud (cf. Dan. 2:25, 5:13; Ezra 5:1, 8) and the name has been found on coins and jar handles of the period. The actual name Judea occurs from the Hellenistic period. It is first used by Clearchus, a disciple of Aristotle (Jos. Apion 1:179), and *Hecateus of Abdera and *Manetho (*ibid.* 1:90) use it to define the area where the Jews of Erez Israel lived. With the direct Roman rule of Erez Israel, which dates from the banishment of *Archelaus to Gaul in 6 C.E., a special governor was appointed over Judea who was given the title *procurator and was responsible to the governor of Syria. The procuratorship was confined to Judea until the accession of *Agrippa I to the throne in 41. On the resumption of Roman rule after his death in 44 the procurator’s rule was extended over the whole of Palestine.

Josephus (*Wars*, Wilkinson’s translation, Excursus 2) gives the borders of Judea as follows: Ayanot, also called Barkai, on the north, the frontier with Arabia in the south, and on the east from the Jordan to Jaffa. “Nor is Judea cut off from seaside delights, since it has a coastal strip which stretches all the way to Ptolemais.” This incomplete description can be supplemented from other references in Josephus and from the Mishnah. In the same passage Josephus states that it was divided into 11 toparchies, which he details, Jerusalem being the most important. Although Judea was primarily a political geographical term, defining one of the three districts into which Roman Palestine was divided, the other two being *Samaria in the center and *Galilee in the north, the division was a natural one, and it is often mentioned with regard to the agricultural laws. “Three countries are to be distinguished in what concerns the laws of removal—Judea, Transjordan, and Galilee” – and Judea is subdivided into “the hill country, the Shephelah and the valley” (Shev. 9:2; Tosef. Shev. 7:10). This subdivision is further expanded by the Jerusalem Talmud (TJ, Shev. 9:2, 38d) which explains that “the mountains are the Royal Mount [not identified], the Shephelah is the plain of the south, and the valley the area between Jericho and En-Gedi,” while R. Johanan gives another division: “From Beth-Haran to Emmaus is the mountain country, from there to Lydda the Shephelah, and from Lydda to the sea, the valley.”

JUDEAN DESERT CAVES. Following the discovery of the *Dead Sea Scrolls in the *Qumran caves, frantic searches for additional documents were carried out by Bedouin in all the caves of the valleys in the area of the Dead Sea. As a result of evidence of such activities by Arab infiltrators from Jordanian territory into the territory of Israel, an expedition directed by Y. Aharoni set out to survey the area (November–December 1953). This was followed by a full-scale expedition, divided into four groups, which was undertaken jointly by the Hebrew University, the Israel Department of Antiquities, and the Israel

Exploration Society, assisted by the Israel Defense Forces. In two campaigns (March 24–April 5, 1960; March 15–27, 1961) caves were explored in the valleys between Masada and En-Gedi as far as the Jordanian border. The investigations revealed two major periods of occupation in the Judean Desert Caves – during the Chalcolithic period and as shelters at the time of the Bar Kokhba War (132–135); some had also been inhabited during the First Jewish War (66–70/73). Expedition A, directed by N. Avigad, explored the vicinity of En-Gedi, clearing burial caves from the Second Temple period (including one which contained a wooden sarcophagus inlaid with bone ornaments) and the “Cave of the Pool,” which had been inhabited by refugees who had constructed a reservoir to ensure a sufficient water supply; they apparently survived and left the cave when the danger had passed. Expedition B, directed by Y. Aharoni, investigated the caves of Naḥal Zēelim where they discovered several biblical texts and Greek papyri containing lists of names. They also explored the “Cave of Horror” on the southern bank of Naḥal Hever where some 40 fugitives took refuge at the end of the Bar Kokhba War. A Roman camp was perched above them on the cliff. In the end the besieged succumbed from lack of water; they buried their dead and made a bonfire of their possessions, apparently choosing to die rather than surrender. Expedition C, led by P. Bar-Adon, explored the “Cave of the Treasure” in the Mishmar Valley. The main finds dated to the Chalcolithic period and consisted of a cache of 429 objects, 416 of copper, six of hematite, six of ivory, and one of stone. These included 240 mace heads of metal, six of hematite, one of stone, about 20 metal chisels and axes, 80 metal wands, ten metal “crowns” ornamented with birds and gate-like structures, five sickle-shaped objects made from hippopotamus teeth, and a box of elephant tusks. These were apparently ritual articles and may represent the treasures of a temple which were hidden from or by robbers. Other finds in this cave include plant remains, among them grains of emmer, which is the “missing link” between wild emmer and durum wheat. Expedition D, under Y. Yadin, worked in the “Cave of the Letters” on the northern bank of Naḥal Hever. In this cave, also guarded from above by a Roman camp, Jonathan b. Bayan, one of Bar Kokhba’s commanders at En-Gedi, took refuge together with his family which included a woman named Babatha. Objects found here included 19 metal vessels (a patera, jugs, and incense shovels), apparently booty from the Romans; several glass plates, a great number of keys, clothing, sandals, etc., as well as palm mats, a hunting net, and wool for working. Together with these articles were hidden 15 letters from Bar Kokhba to the commanders of En-Gedi, and an archive of 35 documents (17 in Greek; 6 in Nabatean; 3 in Aramaic; and 9 in Greek with Nabatean or Aramaic subscriptions). They are dated to 93/4–132 and represent the family and property archives of Babatha who was related by marriage to the Jonathan mentioned above. The absence of jewelry or coins in the cave together with the meticulous care with which the objects were cached suggests that the inhabitants of the cave survived and left it in the end.

Along with the finds at the Murabba’at caves these discoveries have revolutionized the conception of the Bar Kokhba War and have opened new vistas on the material and religious culture of the Chalcolithic period. By providing precisely dated material they are of great significance for the archaeology of the Roman and talmudic periods.

[Michael Avi-Yonah]

Further Exploration

The archaeological exploration of the Judean Desert, made possible following the victory of the Six-Day War, was continued in subsequent years by a joint expedition headed by Pesah Bar-Adon on behalf of the Hebrew University, the Government Department of Antiquities, and the Israel Exploration Society, and with the assistance of the Military Government. A preliminary archaeological survey of the Judean Desert, the Jericho Plain, and the Jordan Valley revealed large numbers of hitherto unknown sites which have completely changed the previous historical-archaeological picture. Additional information has been gained of the Chalcolithic period as well as settlements, a planned defense system of strongholds, and secret water supplies, belonging to the periods of the First and Second Temples. These strongholds were used to protect flocks and herds, agricultural and manufactured products as well as caravans. Among the important discoveries on the shore of the Dead Sea mention should be made of the uncovering of a large house, 20 × 45 m., consisting of a hall and two rooms, in ‘Ein al-Ghuweir. In the area which served as the kitchen were found stoves, granaries, and large vessels in cavities surrounded with stones. An additional floor had been built on a layer of ashes, 10–20 cm. thick. Coins of the reigns of Herod, Archelaus, and Agrippa I were found and earthenware vessels identical with those found at *Qumran. The building seems to have served as a communal one for the Qumran sect, a supposition reinforced by the discovery of a cemetery to the north. Twenty graves were excavated which were in every respect identical with those in the cemetery of Qumran. On a potsherd in one the name Jehohanan could be deciphered.

In the area of ‘Ein al-Ghuweir and ‘Ein at-Turaba sites were uncovered belonging to the 8th–7th centuries B.C.E. A building was uncovered typical of the Israelite period, but unique in that it had a square chamber, divided in three by inner walls. The utensils discovered, all of the Israelite II period, were similar to those found at Tel Goren in En-Gedi, which have been ascribed to the manufacture of balsam perfume. There was evidence of more houses. A defense wall, to which were attached rooms, suggests that they were part of a general defense system extending from the stronghold of Rujm al-Baḥr to Qumran and south and west. Three such fortresses have been excavated. One of them, on which only experimental soundings had previously been made by I. Blake, has now been excavated in its entirety. It contains eight rooms with sloping walls built of large unhewn stones. The entrance, to the north, was approached by a sloping ramp. Utensils were found belonging to the Israelite II period. A small fortress was

found at Rujm a-Sejra, and another fortress, 33 × 55 m., was discovered at the sources of Wadi Mezān = Wadi al-Nār. The excavations revealed a tower 7 m. high containing four rooms and two plastered water cisterns, more than 5 m. in depth. In it were found typical Herodian ashlar, and an adorned frieze or capital. Also found were fragments of plaster in red and black paint, with diagrammatic figures. The utensils found were similar to those of Qumran and coins of Alexander Yannai were also found. All these discoveries raise the interesting question of whether these settlements were founded by the *Dead Sea Sects in view of the statement of Josephus as to their simple and modest way of life. It seems probable that they settled in former estates which had been established as part of a royal network of defense and agriculture in the desert which may be ascribed to John Hyrcanus or to another ruler of the Hasmonean dynasty, and the question is how these sects fitted in with this system.

[Pessah Bar-Adon]

During the 1980s and early 1990s new surveys of caves in the Judean Desert were made by Hanan Eshel and others, and these brought to light Bar Kokhba period remains, as well as fragments of written documents. In 1993 a new project consisting of surveys and excavations was conducted within caves in the northern Judean Desert ("Operation Scroll"). The project was undertaken by the Israeli Antiquities Authority and their stated goal was to find new scrolls. This IAA survey was undertaken by a large number of archaeologists at the time when the first Oslo Accords were being agreed upon; as a result the timing of the survey by the IAA was heavily criticized and the survey was seen by some to be an act of opportunism. The survey was undertaken along the eastern cliffs of the Judean and Ramallah anticlines, from Wadi ed-Daliya in the north to Nahal Deregot in the south. A total of about 650 caves and sites were surveyed, and 70 were excavated. Finds were made dating from all periods from the Neolithic through Ottoman times, including numerous finds dating from the time of Bar Kokhba.

JUDENBURG, city in Styria, S. central Austria. The name Judenburg first appears between 1074 and 1087, bearing witness to Jewish settlements there in the early Middle Ages (see *Carinthia, *Graz). It may be assumed that the name was also derived from the city's ancient Latin name Idunum. The first documentary mention of Jews in Judenburg dates from 1290; a *iudex Judaeorum is recorded in 1308. There is a report of

a massacre in 1312, which is probably legendary. That Jews made their living primarily as moneylenders may be deduced from several instances of financial transactions between Jews and the clergy, dating from 1329. At the beginning of the 15th century there are reports of 22 Jews, each with a fortune of 100,000 florins, and 38 with 50,000 each. In 1467 Emperor *Frederick III permitted the city to expel all Jews who did not pay taxes. After the expulsion of the Jews from the whole of Styria (1496) there was no community in Judenburg until the second half of the 19th century, when there was a small congregation (affiliated to the Graz community) with a prayer room and a cemetery. Thirteen Jews lived in the town in 1869 and 92 in 1880. The municipal arms (at least from 1488) depicted a head wearing a Jewish hat (see *dress). Under the Nazi regime this was replaced (1939) by a seal showing a city gate, but in 1958 the Jew's head was reintroduced. At the time of the 1938 *Anschluss* 16 families (42 persons) lived in Judenburg. The prayer room was closed and its contents confiscated. By February 1939 all Jews had left the city, most of them for Vienna. In 1968 three Jewish families lived in the whole district. The *hevra kaddisha* (founded 1887) was still in existence, but there was no community.

[Meir Lamed]

JUDENPFENNIGE (Ger. for "Jews' Pennies"), small coins issued by Rhineland Jews. When Prussia stopped issuing small change in 1808, a serious lack of coins in the lower denominations was felt in the Rhineland. To overcome these difficulties, some Jews issued copper coins in denominations of *Pfennig* and *Heller*. As these were nonofficial issues, they gave them imaginary names, such as "Atribuo," "Halbac," or "Theler." These coins were somewhat lighter than the official coins. They bear fictitious designs, such as a coat of arms, a star, a wreath, a lion, a cock, and others, and carry the dates of 1703, 1740, 1807, 1809, 1810, 1818, 1819, 1820, and 1821. In 1821, however, the Prussian mint renewed the issue of small change, thereby putting a rather abrupt end to these illegal monetary enterprises. The authorities appointed a special unit, the *Muenzpolizei* ("coin police"), whose task was to confiscate these coins and to bring to court those who produced and distributed them. It is not known where they were struck. Some Jews seem to have made immense profit by handling them. One Jew from the city of Neuss is said to have made 54,000 florins profit. One single Westphalian customs office collected about 940 kilograms of such coins.

[Arie Kindler]

JUDENRAT (Ger. for “Jewish Council”), a body heading a Jewish community, appointed by the German occupying authorities during World War II, which was responsible for the enforcement of Nazi orders affecting the Jews and for the administration of the affairs of the Jewish community. From its inception, Judenrat leaders faced an impossible dilemma. To the Germans, the Judenrat represented Jewish needs, and they were essentially uninterested in fulfilling or responding to Jewish needs, but the Judenrat was also an instrumentality for maintaining control of the ghetto and thus freeing German personnel for other activities. To the Jews, the function of the Judenrat was to provide for their needs, much like municipal officials, in conditions that were not conducive to fulfilling their needs. The power of the Judenrat was severely limited, fully derivative from their German masters, although it did not necessarily appear so to the Jews within the ghettos of Eastern Europe.

The Nazi leadership came to the conclusion that the existence of comprehensive councils representing all the Jewish factions of a city or state would make the execution of their anti-Jewish policies easier. Such bodies were in existence in Germany, Vienna, and Prague, but they were called by various names other than Judenrat and differed in their varying degrees of dependence on Nazi factors (principally the Gestapo). With the German occupation of Poland in September 1939, the decision to set up bodies under this name was endorsed by the central authorities, and *Heydrich sent this decision to the commanders of the *Einsatzgruppen* in a secret letter dated Sept. 21, 1939, which included the following paragraph: “In each Jewish community a council of Jewish elders is to be set up which, as far as possible, is to be composed of the remaining influential personalities and rabbis. The council is to be composed of (up to) 24 male Jews (depending upon the size of the Jewish community). It is to be made fully responsible (in the literal sense of the word) for the exact and punctual implementation of all instructions released or yet to be released.”

Since Heydrich used the term Judenrat, this body came to be known as such, and in many places the head of the council was called *Judenaeltester*. According to Heydrich’s document, the Judenrat was to be responsible for the transportation of Jews from small towns to large concentrations (ghettos) and their settlement there, and for arranging the entrance to and departure from the ghettos. In the course of time the functions of the Judenrat expanded in two directions. After the establishment of the ghettos they were responsible for everything that happened within them. All the institutions that had been in existence beforehand were given new tasks, and additional institutions, as they became appropriate, were created. The Judenrat quickly became the dominant body and controlled the police, court of law, fire brigade, and employment agency, and departments for economic affairs, food supplies, housing, health, social work, statistics, sanitation, burial, education, and religion. The large working staff necessary for these activities was artificially increased on the assumption that a person working for the Judenrat would not

be sent to a forced labor camp or elsewhere. In 1942, as resettlement to the East, what we now know as deportation to death camps, began, it was assumed that those working for the Judenrat would be exempt. In addition, the Germans placed upon the Judenrat other duties, principally the supplying of a work force, choosing people for the work camps, and, later in 1942, choosing those to be sent to camps that were in reality death camps. It seemed at first that the Judenrat had wide authority in this extremely difficult task, but it very quickly became apparent that the Germans did not always pay attention to the decisions of the Judenrat, and at the most the Judenrat had only the opportunity to postpone the dispatch to the death camps.

Fully fledged Judenraete were not set up in all occupied areas. The Germans refrained from appointing Judenraete in France, Belgium, and Greece, apparently because they had no intention of annexing these states to Germany. Under German pressure, however, bodies representing the Jews were created there. According to Heydrich’s instructions, men of standing in Jewish public affairs, most of whom were active in Jewish political parties and in religious and charitable institutions, were appointed to the Judenrat. Often many appointees were chosen arbitrarily by local officials or because they knew German. When the German-Soviet war broke out (1941), Jews were largely opposed to joining the Judenrat in the occupied cities, though many saw in it a possibility of saving Jews. The German administrators almost always coordinated the council’s authority in the hands of the *Judenaeltester*, and the measure of cooperation given by the other members of the Judenrat to its decisions and activities were contingent upon the character and position of the *Judenaeltester*. Since he was the direct and often only line to the Germans, he seemed to many in the ghettos to be a ruler with great influence on the Germans, while in reality he had to accept and enforce every German decree without objection. Efforts were made to delay, block, argue, plead, postpone, and alleviate the harshness of the decrees. Sometimes these met with modest temporary success; most often the result was failure.

In every ghetto the defining moments that tested the courage and character of Judenrat leaders came when they were asked to provide lists of those to be deported. A decision had to be made. In some ghettos such as Kovno and Vilna rabbis were consulted, seeking guidance from tradition for an unprecedented situation. In Vilna, Judenrat chairman Jacob Gens proceeded with the deportation, hoping that the loss of some would protect the majority. In Lodz, Chaim Mordechai *Rumkowski felt it his duty to “preserve the Jews who remained ... The part that can be saved is much larger than the part that must be given away.” He confronted his critics: “You may judge me as you wish.” In Sosnowiec, Moshe Merin also complied. When faced with the deportation of the children of Warsaw, Judenrat chairman Adam *Czerniakow closed the ninth book of his diary with a tragic confession of failure: “The SS wants me to kill children with my own hands.” This he could not do. He swallowed a cyanide pill and the order

for deportation appeared without his signature. Some saw his suicide as an act of personal integrity and public responsibility. Emanuel *Ringelblum was far more harsh: "Suicide of Czeraniakow, too late, a sign of weakness – should have called for resistance – a weak man."

Other Judenrat leaders would not deliver their people. Dr. Joseph Parnas, the first Judenrat leader in Lvov, refused to deliver several thousand Jews. He was shot. Leaders of the Judenrat in Bilgoraj were also shot. On October 14, 1941, the entire Judenrat of Bereza Karuska committed suicide. The leader of the Jewish Council at Nieswiez Magalif marched to his death rather than turn Jews over. He said: "Brothers, I know that you had no trust in me. You thought I was going to betray you. In this last minute, I am with you – I and my family. We are the first ones to go to our death."

The membership of the Judenrat changed frequently. Many were incarcerated and sent to death camps even before the final liquidation of the ghettos, or were killed. This even happened to the *Judenaeltesten* who for some reason would cease to please the German authorities or when, as a matter of principle, they would not carry out German orders, knowing full well that it would cost them their lives. About 40 members of Judenraete committed suicide when they saw that they could do nothing to prevent the transportation of Jews to the death camps. Others felt that, by executing the orders of the Nazis and sending some people to the camps, they would be able to save others until the Nazis were overcome by the Allies. In the end, however, the fate of the Judenrat was the same as that of the Jewish population at large. The majority of them were deported to death camps, and of the *Judenaeltesten* in Eastern Europe (Poland, the Soviet interior, and the Baltic countries) practically none remained alive. Only in rare circumstances (Holland or Greece, for instance) did the *Judenaeltesten* receive special treatment.

From its establishment a sharp controversy about the role of the Judenrat spread among Jews. The contemporary assessment in diaries, and most especially among the leadership of the resistance, was often most harsh. Even men of unquestioned integrity, who were trusted by their communities, were shattered by their responsibility. In Kovno, the leader of the Judenrat, Dr. Elchanan Elkes, wrote dispassionately of his situation.

We are trying to steer our battered ship in furious seas, when waves of decrees and decisions threaten to drown it every day. Through my influence I succeeded at times in easing the verdict and scattering some of the dark clouds that hung over our heads. I bore my duties with head high and upright countenance. Never did I ask for pity; never did I doubt our rights ... The Germans killed, slaughtered and murdered us in complete equanimity ... I saw them when they sent thousands of people – men, women, children, infants to their death – while enjoying their breakfast, and while mocking our martyrs ... There is a desert inside me. My soul is scorched. I am naked and empty.

At the end of World War II a negative view of the Judenrat and its members prevailed among members of the underground

and the survivors from the camps. In Israel, the Judenrat was viewed as the exemplar of Diaspora weakness, often with scorn. Over time, research has tended to show that the intentions of members of the Judenrat were often guided by a sense of communal responsibility, and that they did not really have the means to foil the methods of the Nazis, who had not only a strong army but also enjoyed the active support of many non-Jews in the local population. These were reinforced by the findings during the *Eichmann trial, and specific research conducted for the trial shed more light on the subject.

[Jozeph Michman (Melkman) / Michael Berenbaum (2nd ed.)]

Holocaust Historiography's View

The *historiography of the *Holocaust has produced two extreme views regarding the role of the Judenraete ("Jewish Councils"). One view sees them as an instrument of collaboration in the Nazi policy of extermination. Hannah *Arendt made that very argument in her work *Eichmann in Jerusalem: A Report on the Banality of Evil*. She charged that, had the Jewish people remained leaderless, they could never have been killed in such massive numbers, the German task would have been far more difficult. The other view regards them as a continuation of the Jewish communal structure of the pre-World War II period which contributed greatly to the continued existence and functioning of Jewish communal life during the Holocaust.

Both of these views stem from inadequate information and a lack of sufficient perspective immediately after the Holocaust. In recent years, however, considerable research has uncovered much new material which enables a more objective view to be taken of the Judenraete. Isaiah Trunk's work on the Judenrat presented a far more complete view of the complexity of their role, the diversity of their composition, their fate, and their decisions. Raul *Hilberg, who had been improperly identified with Arendt's view, introduced the *Warsaw Diary of Adam Czerniakow* with a long and distinguished essay on the Judenrat.

It is now possible to distinguish between the various stages of the Judenrat activities corresponding to the changes which took place in the policy of the Nazis, and, in addition, one can now investigate the differences arising from changes in personnel during the various stages of the Judenraete and their composition.

It is, of course, true that the Judenrat organizations were imposed on Jewish communities as their only central representative bodies, and that the Nazis saw in them an instrument for the realization of their policies, from persecution to total annihilation. But the Jewish leaders could not know that, at least not at the outset. Nevertheless, it now appears that the Jews were not only a passive suffering element in this process, but developed their own initiative. As a result, two aims were in direct conflict with one another – the German and the Jewish.

*Heydrich insisted that important and influential personalities be included in the Judenraete, in order to exploit

their influence among the Jews on the one hand, and to discredit them in the eyes of the Jewish populace on the other hand, thus neutralizing a potentially active opposition, The Jewish communities on their part tried to include veteran and devoted leaders in the councils, in order to utilize them for the welfare of the community. This was not an easy task in Poland since many Jewish leaders fled eastward toward the Soviet Union in the face of the advancing Germany armies. There were, indeed, instances of communal workers who were reluctant to join the Judenraete. However, those who joined, whether as a result of Nazi pressure or because of the desire of the community, were most conscious of the experience which the Jews had accumulated during different periods of Diaspora history, when a similar organic framework had been enforced and had lent itself to further the interests of the community. Consequently, during the early period of the Judenraete there was some significant continuity of personnel between the Judenraete and the prewar communal institutions.

An analysis of the composition of 128 Judenraete in the Generalgouvernement (German-occupied Poland) showed that more than 80% of the personnel held similar positions of responsibility and authority in the *kehillah*, city councils, and other organizations.

The Judenraete developed a wide range of communal activities in which they applied the dual principle of fulfilling the demands of the Nazis (forced labor and financial levies) as well as the needs of the community (health, education, supervision of communal kitchens, aid to refugees and the poor). A sticking point in many ghettos was the relationship of established Jewish leadership to emerging Jewish leadership, whether it be youth groups or the resistance, self-help groups or even those who fought for memory and documentation.

During the early period of their establishment, the Judenraete regarded obedience to the Nazi demands as a means of ensuring the continued survival of their communities, even when they were faced with the tragic contradictions of this situation. Supplying the Nazis with a labor force, which often provided vital supplies to the Germans and enriched local German supervisors, should have strengthened the position of the Jews and prevented attacks on them. However, this labor force strengthened the German war potential at a time when the fate of the Jews depended upon its weakening. Rational policy considerations would have suggested that the ghettos be sustained, but Judenrat leaders did not comprehend the depth of the Nazi commitment to the "Final Solution." During the first period, the Judenraete employed every tactic and subterfuge in order to alleviate the burdens of the community: bribery, protectionism, and exploitation of conflicts between the various German authorities. It should be taken into consideration, however, that the political, social, and psychological conditions which would have made rebellions possible did not exist for the Jewish communities. The members of the Judenraete did not, and could not, know that Nazi policy was destined to reach the stage of mass extermination. Among other factors which militated against a large-scale anti-Nazi

resistance movement in the Jewish communities during the early period of German occupation were: the hostile attitude of the surrounding non-Jewish population, which prevented any possibility of effective dispersion or concealment; the collective punishments inflicted by the Nazis; their threats against any budding opposition; and finally, the belief that, as the war progressed, the tide would turn and this would lead to a collapse of the German war machine.

These factors led to the strategy combining the demands of the Germans with provision for the internal needs of the community.

It would be wrong and misleading to describe the relationship between the Judenraete and the Nazis as "collaboration" in any meaningful sense of the term, as "collaboration" implies a degree of partnership, even if an unequal one; its basis is a *voluntary* agreement between the two parties. This was certainly not the case with the Judenraete and the Nazis – whose relationship was that of a murderer and his victims. The Judenraete were a passive object of pressure in the realm of German policies, and their initiative was used to strengthen the standing of the community within the official framework of Nazi authority and to promote illegal activity.

As soon as the Nazi policy of mass extermination was embarked upon, the Judenraete were no longer able to strike a balance between the demands of the Nazis and the interests of the community. It was at this point that a split occurred in the reactions of the Judenraete. An investigation reveals that 80% of the early Judenraete did not succumb to Nazi pressures. Some refused to carry out the economic decrees, others warned the Jews against imminent *aktionen*, and many refused to hand Jews over for expulsion. The Nazis eliminated those who failed to implement their policies and replaced them with more acquiescing individuals who had a much weaker sense of communal responsibility.

During the later stage, in 89 communities in the Generalgouvernement area, only 40 were headed by individuals who had been associated with communal activity before World War II. The others had no such association with Jewish community life, and it is of interest to note that 23 of them were refugees, some from Germany, Austria, or Czechoslovakia. Even during this latter period, examples of self-sacrifice in the interests of the community were not lacking. However, the number of those who succumbed to Nazi pressure – putting their own personal interest before that of the community – exceeded the number of those who did not. Some of the members of the Judenraete came to the conclusion that, if the Nazis were indeed intent upon the total extermination of the Jews, it might still be possible to save a remnant by acquiescing in, and reconciling oneself to, the destruction of the rest. There was also a policy of deliberate misrepresentation and deceit on the part of the Germans, so as to prevent opposition on the part of their victims, by deluding them into the belief that they were not all being sent to their death. In addition, the members of the Judenrat, even when they had no more doubt as to the fate awaiting those transported, nevertheless

harbored another hope – that the course of the war was running in favor of the Allies, and that the approaching victory would result in the liberation of at least that remnant of the Jews which had succeeded in remaining alive.

In conclusion, one can distinguish four lines of Judenrat conduct *vis-à-vis* the Nazis:

1. Limited cooperation – even in the economic and material spheres.
2. A willingness to acquiesce in Nazi demands when it was merely a question of expropriating Jewish property and of other material pressures, but a total opposition to the handing over of Jews.
3. Reluctantly agreeing to the deportation to near certain death of one part of the Jewish population in the hope that the other part might, as a result, be saved.
4. Complete submission to Nazi demands in order to safeguard the narrow interests of those concerned.

The majority of members of the Judenraete who belonged to the veteran leadership of the community chose to act according to the first two of these lines of conduct. The last two were pursued by relatively few Judenrat leaders and were characteristic of the final stages, when the leaders were men with no communal background or past association with the *kehillah*. However, it is impossible to indulge in generalizations when judging the actions of the members of the Judenraete. The fact that the framework was forcibly imposed upon the community did not necessarily transform those involved into willing tools of the Nazis. The behavior of each Judenrat must be examined separately and in relation to the different periods of their activity.

In the final analysis, the Judenraete had no influence on the frightful outcome of the Holocaust; the Nazi extermination machine was alone responsible for the tragedy, and the Jews in the occupied territories, most especially Poland, were far too powerless to prevent it.

JUDENREIN (Judenfrei; Ger. for “cleansed [or free] of Jews”), National Socialist term applied in the “Final Solution

of the Jewish Question.” The creation of a “Germany and of German living space and ultimately of a Europe free of Jews” was the definitive aim of the National Socialist “Final Solution.” In National Socialist terminology and in the Nazi policy of extermination of the Jews, the term referred to towns and regions after their entire Jewish population had been deported to the extermination camps. Especially in occupied Poland (General Government), the term *judenfrei* formed a permanent part of the unofficial and official language used by Nazi officials (see also *Nazi-deutsch). The “cleansing of Jews” was first accomplished by deporting Jews from Germany and other countries to the east. There were discussions about the shipment of Jews to reservations – the Nisko and Lublin plans – and of Jews to Madagascar, where they would be contained. Eventually, as the “Final Solution” evolved, the solution became final, namely the “cleansing of Jews” was accomplished by systematic murder.

[Wolfgang Scheffler]

JUDEO-ARABIC. The Jewish population of North Africa is divided by language into Arabic and Berber-speaking communities, and groups speaking *Ladino (Judeo-Spanish). Arabic-speaking communities include descendants of the *megorashim* (expellees from *Spain) who were arabicized, and the majority of the *toshavim* (“residents”), the Jewish population which existed in the Maghreb before the expulsion of Jews from Spain. The date of earliest settlement and the ethnic origin of the latter group have posed historical problems which have still to be solved satisfactorily. An examination of documentary evidence reveals the existence within this group of a variety of branches, which provide different means of expression. The various so-called classical or pseudo-classical languages used by authors of the period of Spanish rule for all philosophical, scientific, or religious literature are not within the scope of this survey. The educated Jew in the Maghreb is no longer able to understand these works in their original form and knows them only in their Hebrew translations. However, an exception must be made for certain poetical works in Hispanic Arabic (which has become Zajal), and certain *muwashshahāt*, which formed the lyrics of the so-called Andalusian music. This poetic form remains the preserve of a very small Jewish elite, unable to read Arabic script and thus taught orally, by Muslim or Jewish teachers. There is a collection of these verses in an extremely rare edition published in *Tunis in 1886 in Hebrew and Arabic, and entitled *Sefinah Maluf*.

There is also a later type of poetry, the *qiṣṣa*, composed in a type of *koine* (i.e., a form of colloquial Arabic), which is understood by all North African communities. It is extremely popular in cultured circles, as well as among the masses. The *qiṣṣa* includes as its main genre rhymed adaptations of Bible stories or liturgical poems, songs of joy or lamentation, songs in praise of saintly men in Erez Israel or North Africa, homilies on virtue, and satirical works. Folksongs sung on family

occasions (funerals and celebrations) are written in a language close to colloquial speech.

Of all North African dialects, those of the Jews have best preserved the oldest characteristics of the language introduced during the early centuries of Arab rule. This conservatism has also produced a paucity of expression. When the realm of the concrete and of everyday life is abandoned for abstract concepts, it is necessary to resort to the vocabulary and morpho-syntactical structure of Hebrew and Aramaic. This constitutes the heterogeneous language of preaching, talmudic instruction, circular letters, and decisions of the rabbinical courts or of the community council. The *sharh*, or commentary on sacred writings, such as the Bible and liturgical texts, has a special place because of its basic role in traditional education and its special linguistic rules. Beside these, there is an epistolary language and a Jewish slang called *lashon* (Heb.: "language") used to mislead strangers.

Judeo-Berber

There is no written literature, but *Berber society in general possesses an oral literature, whose basis (still scarcely investigated) consists of fables, legends, proverbs, and poetic works, generally on the theme of love and war, or else of a homiletical nature. Apart from their living dialects and folklore, which are no less rich than those of their Muslim neighbors, the Berber-speaking Jews have a traditional and religious oral literature, of which, unfortunately, very little has been preserved and recently collected. Without dealing with the controversial subject of the origin of these communities, it should be noted that Berber was one of the vernaculars of the Jewish communities of the Atlas mountains and the Moroccan Sous (and, apparently, of certain parts of *Algeria and *Tunisia). Most Jews were bilingual, speaking both Berber and Arabic, but others spoke only Berber, and until the 1950s there were a few isolated immigrants to Israel, who settled in Ashkelon, belonging to this latter group. Traditional education employed Berber as the language of interpretation and translation of sacred texts (and sometimes of the liturgy). Several biblical passages have been recorded in their Berber form, but the most important document, which is of vital importance for a knowledge of the linguistic and cultural traditions of this part of the Diaspora (which long remained unknown), is a Passover *Haggadah*. This *Haggadah* has been entirely translated into a dialect which resembles Tamazigt; the antiquity of its literary form appears to be beyond dispute.

[Haim Zafrani]

JUDEO-ARABIC LITERATURE, written in Arabic by Jews for Jews. It is written in an idiom which is linguistically closer to the spoken form of Arabic than is the idiom used in Muslim literature. It may plausibly be assumed that, prior to the rise of Islam in the early seventh century, the Jews who lived in the Arabian peninsula spoke Arabic and belonged to the more or less cultivated class, which may have included some

writers. If this is so, almost nothing of their works has survived. The one Jewish poet whose work is extant, *Samuel ibn Adiya, can be distinguished so little from his non-Jewish colleagues in theme, imagery, and style, that only history has preserved the knowledge of his Jewish identity. The writings of *Muhammad, which contain a considerable amount of biblical and midrashic material, suggest that the Torah and the Midrash were studied during the period, but concrete testimony is wanting.

The remarkable spread of Muslim domination over vast territories in Southwest Asia, North Africa, and *Spain, and the diffusion of Arabic in these areas, did not leave the Jews unaffected. It may be surmised that Arabic gradually displaced the Aramaic vernacular, initially in the larger centers, and that the Jewish population began to use it in its everyday intercourse from about the eighth century. The more inquiring Jews also began to acquire a knowledge of Arabic literature and science, which were undergoing a tremendous growth as a result of the large number of Greek, Syriac, Pahlavi, and Hindi works that had been translated into Arabic. The language became a storehouse for much of the world's knowledge and learning, and there was an upsurge of writing in Arabic on subjects which originated in other cultures. The participation of non-Arab Muslims and of other minorities in this activity was very great, and it likewise stimulated an intensive study of the imported learning among interested Jews. From the eighth century onward, there appeared in the Jewish communities under Muslim rule men who presumably received a traditional education, but who also turned their attention to the recently developed or rediscovered areas of secular studies. They took a particular interest in medicine, mathematics, astrology and astronomy, and philosophy and theology. Of equal importance with their pursuit of these studies was the influence this acquaintance with foreign lore had on their understanding of their Jewish heritage. Not only did they introduce into Jewish culture the investigation of theology, secular Hebrew prose and poetry, Hebrew grammar and lexicography, they also subjected traditional areas to the rationalism and orderliness which they acquired from their excursions into foreign fields. In the biblical commentaries of the time, in the compilations of talmudic law and the expositions on diverse topics particularly relevant to the Jewish world, a novel organization and presentation of the material can be discerned. With the exception of certain *Karaite circles around 1000 C.E., Jews wrote Arabic in Hebrew characters. In the first millennium two methods of transcription into Hebrew characters developed, one phonetic, the other mostly imitating the Arabic spelling. At the beginning of the second millennium, this second way of transcription prevailed (see J. Blau and S. Hopkins, *Zeitschrift fuer arabische Linguistik*, 1984, 9–27).

The East

Just as the Muslims of Spain for a time looked to the East for learning, and for scholars and literary personalities, so in Judeo-Arabic letters it was *Babylonia, *Palestine, and *Egypt,

the ancient centers of Jewish cultural activity, which were the first to flourish. Mashallah (770–820) of Egypt was an astrologer and astronomer of note who is credited with a considerable number of works on astronomical phenomena. Māsarjawayh of *Basra (late 9th cent.) was among the first to translate medical works into Arabic, among them the *Pandect* in Syriac of the archdeacon Ahron. Māsarjawayh probably also wrote original works, since Uṣaybi'a, the historian of medicine, states that the quotations from "the Jew" in the encyclopedic *al-Hāwī* by the celebrated physician al-Rāzī are taken from his writings. Isaac b. Solomon *Israeli (c. 850–950), of Egypt and, later, *Kairouan, established a reputation as a philosopher and medical scholar. His writings include *Kitāb al-Ḥudūd wa al-Rusūm* ("The Book of Definitions and Descriptions"), an explanation of logical and philosophical terms; *al-Ustuqṣāt* ("The Elements"), a treatise on the components of the physical world, based on the works of Aristotle, Hippocrates, and Galen; a study of the nature and value of different foods (*Fī Ṭabā'ī al-Aghdhiya wa-Quwāhā*); a study of the knowledge of urine and its components (*Fī Ma'rifat al-Bawl wa-Aqṣāmuḥu*); an introduction to the study of medicine (*al-Madkhal ilā ṣinā'at at-Ṭibb*); an introduction to logic (*al-Madkhal ilā-al-Mantiq*); an essay regarding philosophy (*Fī Ḥikma*); and commentary on the Sefer *Yeẓirah.

*Saadia b. Joseph Gaon (882–942) left his native Egypt and traveled through Palestine to Babylonia, where he was appointed *gaon* of the Academy of Sura. Possessing encyclopedic knowledge and capable of enormous productivity, he wrote works which include a translation of the Bible into Arabic, a long and a short commentary on the Pentateuch, and comments on and introductions to other books of the Bible. He codified the laws relating to such topics as inheritance, trusts, and oaths. In addition, he compiled a list of *hapax legomena in the Bible, which he sought to explain with the aid of rabbinic Hebrew, a Hebrew grammar, and a rhyming dictionary. In expounding the *Sefer Yeẓirah*, a theosophical tract, Saadia attempted to interpret it as a philosophical monograph. He also wrote a theological work, the *Kitāb al-Amānāt wa-al-Itiqādāt*, made great contributions to liturgy and chronology, and composed polemics against the *Karaites and other heretics. His vigorous attack on the Karaites roused their anger, and he was designated their arch-enemy. He also encountered criticism from the Rabbanite R. Mevasser ha-Levi, who raised objections to explanations of rulings in his works, either because they did not agree with tradition or because they appeared to contradict a previous statement of the author. David ibn Marwān *Al-Mukammiṣ, a contemporary of Saadia who converted to Christianity and subsequently returned to Judaism, wrote the theological treatise, *lshrūn Maqālā* ("Twenty Tracts"; S. Stroumsa's edition, 1989). The work deals with the attributes of God, and, in accordance with the Mu'tazilite view, regards them as aspects of His essence.

R. Samuel b. Hophni (d. 1013), who was a *gaon* in the Academy of Sura, devoted all his writings to the exposition of traditional Jewish lore. However, the influence of Arabic lit-

erature and theology is very evident in his works. More verbose than Saadia, Samuel supplied commentaries on those parts of the Torah which the former did not annotate, as well as on Ecclesiastes and on some of the Later Prophets. He did not hesitate to include an excursus on any subject related to his theme, for example, his digression on dreams in general after having dealt with the dreams of Pharaoh. He produced a refutation of the doctrine held by Muslim theologians that God would void His revelation to Moses in favor of one to be revealed later. His major work, however, was on the Talmud, to which he wrote an introduction, and he compiled monographs on various topics in Jewish law, such as ritual slaughter, benedictions, partnership, and gifts. As with Saadia, what distinguishes Samuel's writings is his systematic organization and treatment: in each case, he provides an introduction and a table of contents, and he divides his material into chapters with headings summarizing what is to be dealt with. His son-in-law, *Hai b. Sherira Gaon (939–1038), wrote both in Hebrew and in Arabic. His well-known work *Purchase and Sale* is in Arabic, as is his monograph *Oaths* and a number of other writings. Although his responsa were generally in Hebrew, they were written in Arabic when the inquiry was written in that language. Of particular interest is his glossary of difficult words in the Bible and Talmud, *al-Hāwī* ("The Comprehender"), which works on the basis of trilateral roots. The glossary was used in Spain and was directly consulted until at least the end of the 11th century. Of the writings of Hai's father, *Sherira b. Ḥanina Gaon, only one responsum is a manifest translation from Arabic, and although it is said that he wrote halakhic works in that language, nothing has survived. But he did use Arabic in the course of his Hebrew and Aramaic writings.

*Ḥefeẓ b. Yaẓli'ah (late 10th or early 11th cent.) was the author of *Sefer ha-Mizvot*, a work which enumerated and discussed in detail the 613 commandments of Jewish law (edited and translated by B. Halper, *A Volume of the Book of Precepts by Ḥefeẓ b. Yaẓli'ah* (Philadelphia 1915); appendices by S. Asaf, *Tarbiz* 15 (1954), and M. Zucker, *Proceedings* etc. 29 (1960–61), *Ha-Do'ar*, 23 (1963; reprinted by Zion, Tel Aviv, 1972). He began every elucidation with either "It is commanded" or "It is required," in the case of positive precepts, and "It is prohibited" in the case of negative commandments. First the biblical law is summarized, and then follows the rabbinic expansion and ramification. His work was used by scholars who read or wrote Arabic, among them *Maimonides; but since it was not translated into Hebrew, later citations are secondary. Moreover, only a relatively small part of what must have been a large work has so far come to light; from the table of contents of the extant section only an idea of the probable extent of the entire production can be formed.

The Karaites

Although they adopted an antagonistic stance toward rabbinic traditions and initially asserted every individual's right, nay duty, to make his own intensive study of the Holy Scriptures, the Karaites gradually restricted this prerogative to the

learned, whose conclusions were then followed by the masses. Originating in the eighth century, the movement's earlier leaders – first as Ananites led by *Anan b. David, and in the middle of the ninth century as Karaites, led by Benjamin b. Moses *Al-Nahawendi, and afterwards by Daniel b. Moses *Al-Qūmisī – used Aramaic or Hebrew in their writings. But as Arabic came into wider use, Karaite writers began to adopt it as their means of communication. Among the more renowned was *David b. Boaz (c. 930), a descendant of the movement's founder, Anan, who translated the Pentateuch into Arabic and also wrote a commentary on it. *Salmon b. Jeroham, one of the most vitriolic opponents of Saadiah, wrote a polemic in Hebrew against the *Gaon* which, following the manner of the time, heaped abuse on him as part of the attack. His outlook was in general narrow and partisan, and he was also opposed to the pursuit of secular studies. In Arabic he composed commentaries on the Five Scrolls and also on the Psalms. Jacob *Al-Qirqisānī (c. 930) produced a large work, *al-Anwār wa al-Marāqib* (“The Lights and the Lookouts”), which is in the main an exposition of Karaite beliefs and laws and a somewhat polemical defense of them against criticism from the ranks of the Rabbanites and from fellow Karaites. In addition, the book contains a historical survey of the Jews and Karaites, as well as of heretical sects, which is highly esteemed by modern scholars, particularly for its information about the early divisions among the Karaites and the attitudes toward Anan of his immediate successors. Qirqisānī also wrote a commentary on the book of Genesis, which makes extensive use of Saadiah's interpretations. In the field of Bible study, *Japheth b. Eli ha-Levi holds a high place. He lived in Jerusalem, where the Karaites had established a community in 950–980. He translated the Bible into Arabic, much more literally and unidiomatically than Saadiah, and wrote extensive commentaries which contain a considerable amount of grammatical analysis. He tended toward making as much of the text as he could contemporary in application; this is particularly true of his explanation of Daniel. He made attacks upon Saadiah, Christianity, and Islam; and he is also credited with the authorship of a polemical tract directed against Jacob b. Ephraim, a disciple of Saadiah. His son, *Levi b. Japheth (Abu Sa'īd), was likewise a writer. Levi's most important work, a book on the precepts called *Sefer ha-Mitzvot* in its Hebrew translation, was completed in 1007 and is a codification of Karaite *halakhah*. It deals with such topics as the calendar, the nazirite prayer, and civil law, and it is cited by many later Karaites. He may also have composed commentaries on the Early Prophets and on the Psalms.

David b. Abraham *Alfasi (second half of 10th cent.) compiled a dictionary of the Bible in 22 parts corresponding to the letters of the Hebrew alphabet. The various usages of a word are cited, and every entry is translated into Arabic. He refers to Onkelos and Jonathan b. Uzziel, the Aramaic versions of the Bible, and also to the Mishnah, the Talmud, the masorah, and even the Rabbanite prayerbook. He occasionally compares the vocable with Arabic, Aramaic, and mishnaic Hebrew. *Abu al-Faraj Hārūn ibn al-Faraj (c. 1000–1050),

who lived in Jerusalem, wrote a grammar of Hebrew called *al-Mushtamil* (“The Encompasser”), which he completed in 1007. It consisted of seven parts and dealt with the manifold aspects of the language. He utilized his knowledge of Arabic and Aramaic for comparison and elucidation. Abu al-Faraj, when giving paradigms of the Hebrew verb, started from the infinitive and showed the difference in the use of this form in Hebrew and Arabic; he also discussed Hebrew particles and syntax. His work was known in Spain and is cited by Jonah *Ibn Janāh, and Moses and Abraham *Ibn Ezra. An epitome of the *Mushtamil*, which was probably intended as an appendix, also exists; this may explain why Abraham ibn Ezra speaks of the book as having eight parts. Joseph b. Abraham al-*Baṣīr (called the Seer, a euphemism for “the Blind”) was a widely traveled theologian, a polyglot, and a student of Rabbanite lore. He was held in high esteem by the Karaites as a religious authority. His works include *al-Muḥṭawi* (“The Compendium,” or, in Hebrew, *Sefer Ne'ḥmot*), a theological study which reveals deep Mu'tazilite influence. Consisting of 40 chapters, the book presents a Karaite adaptation of the *kalām* doctrines, as well as polemics against Christians and pagans. He also left an epitome of his major work, *al-Tamyīz*, and a book on inheritance and on ritual cleanliness, *al-Istibṣār* (“Investigation”). His pupil Joshua b. Judah Abu-l-Faraj Furqān ibn Asad (c. 1050–1080) is known as the teacher par excellence. He made an Arabic translation of the Torah together with a commentary on it, which were completed about 1050. His detailed commentary on the Decalogue is available only in the Hebrew translation, which covers only the first four commandments. He also produced *Bereshit Rabbati*, philosophic homilies on Genesis, partially translated into Hebrew. His most important work is on the precepts and is called *Sefer ha-Yashar*. Because of the comparative relaxation of the strict system of relationships (*rikkūb*) which prevailed among the Karaites, the best-known section of the book is on incestuous marriages. He defends his personal views, arguing with his Karaite predecessors and criticizing *Halakhot Gedolot* and the *Hilkhot Re'u*, compilations of Rabbanite law.

The West

The Jewish communities of North Africa and *Spain were as influenced by the Islamic-Arabic environment in which they existed as were their brethren in the East. Although the Jews in those lands (as the Muslims) were for a considerable time pupils of their coreligionists in *Iraq, Palestine, and Egypt, some of them began to write books at about the same time as the Jews in the East. Abu Sahl *Dunash ibn Tamim (10th cent.) was a grammarian, theologian, astronomer, and physician. His work on grammar, of which a small fragment may have been found, is cited by several Spanish Jewish writers. He appears to have undertaken a comparative study of the cognate Semitic languages, lexical rather than morphological; he believed Hebrew to be the mother of Semitic languages, and therefore Arabic to be only a derivative of Hebrew. In his work on astronomy he included a critique of astrology for the

Fatimid Imam Maṣṣūr Ismaʿīl, and in another study on the same topic he answered the inquiries of *Hisḏai ibn Shaprut. There is also mention of works on philosophy and medicine. It is not clear whether his commentary on the *Sefer Yezirah* is a revision and editing of Isaac *Israeli's commentary or an entirely independent study. Judah *Ibn Quraysh of Tahert in Morocco (first half of tenth century) was the physician of the emir of Fez. He knew *Eldad ha-Dāni, the self-styled traveler from a distant Jewish land, and believed in his account. His work, called *Risāla* (Epistle; ed. D. Becker, 1984), or possibly *Av va-Em* after the first vocables, is an attempt at comparative linguistics. He states that he composed it in order to rebuke his fellow Jews for neglecting the reading of the Aramaic version of the Torah, which he believed important for the knowledge of Hebrew. In the first of the three parts of the book he compares Aramaic and biblical Hebrew words in alphabetical order; in the second he does the same with Aramaic and Hebrew words in the Mishnah and the Talmud. The final section deals with Arabic and biblical Hebrew.

Talmudic studies flourished in North Africa in the 10th and 11th centuries. One scholar writing in Arabic was *Nissim b. Jacob ben Nissim of Kairouan (c. 990–1060), who headed a school in his native city. His works (a discussion and selections in S. Abramson, *Rav Nissim Gaʿon*; Heb., 1965) in chronological order are: *Ha-Mafte'ah she-le-Manulei ha-Talmud* ("The Keys to the Locks of the Talmud"), in Arabic, which apparently covered the entire Babylonian Talmud, although only parts of it have so far come to light; comments on the Talmud in Arabic and Hebrew, of which some portions are known and more are being discovered; *Piskei Halakhot* ("Legal Decisions"), in Arabic, fragments of which have been discovered; *Megillat Setarim* ("Scroll of Secrets"), a collection of explanations on difficult passages in the Talmud and on sundry religious topics; and *al-Faraj ba'd al-Shidda* ("Relief After Distress"; in Hebrew, *Ḥibbur Yafeh me-ha-Yeshu'ah*), a book of consolation, a genre current in classical Arabic literature, made up of stories written to bring comfort, faith, and acceptance of God's judgment. This last work has appeared both in Hebrew and in its Arabic original, but it is not yet clear what the author's form and arrangement were.

Jewish works of importance written in Arabic were far more abundant in Muslim Spain than in the East. Among the men who were primarily grammarians and only incidentally biblical exegetes, two names are distinguished. The first, Judah b. David *Ḥayyuj (10th–11th cent.), a native of Fez who died in Spain, devoted two works to the geminated verbs and the verbs with weak letters in their roots. He established the principle that all Hebrew verb-roots, regardless of what happens to them in inflection, consist of three letters; and in this manner he worked out the rules which govern the classes of weak verbs. He also compiled a book of random comments on the books of the Bible, parts of which have been found and published. The second name of importance is Ḥayyuj's outstanding disciple, Jonah *Ibn Janāḥ (first half 11th cent.), who compiled a comprehensive work, *al-Tanqīḥ* ("Polishing"),

consisting of a grammar and a lexicon. The former, called *al-Lumā'* ("Brightness"; in Hebrew, *Ha-Rikmah*), is a presentation of the rules of Hebrew grammar and their exceptions. The lexicon, which consists of the Hebrew roots, gives their definition, together with examples from the Bible, to illustrate their secondary and tertiary meanings as well as their most common usage. He also composed three smaller works which examine and explain the classes of weak verbs. As a result of culling illustrations from the Bible, his writings contain considerable exegetical material.

Moses b. Samuel ha-Kohen ibn *Gikatilla (11th cent.) occupies a prominent place among biblical commentators who used Arabic. A native of Cordoba who lived in Saragossa, he produced commentaries on most of the books of the Bible, which unfortunately have been lost, with the exception of part of his commentary on the Book of Psalms. However, many of his views are known from extracts quoted in the writings of others, notably of his critic Judah b. Samuel *Ibn Ba'ām, who condemned him for his "radical" views on the messianic prophecies. Ibn Gikatilla interpreted these prophecies as predictions of events to take place soon after they were uttered, and he also made efforts to explain miracles rationally. Another work, his short grammatical treatise on gender in Hebrew, is extant. Ibn Ba'ām, Ibn Gikatilla's younger contemporary, whose exegetical work has survived, was an eclectic commentator who frequently made use of the works of others. True to the practice of the time, he mentions authors only when he disagrees with them. He charges both Saadia and Ibn Gikatilla with violating Arabic usage in their translations, and occasionally finds fault even with his master, Ibn Janāḥ. In the field of grammar, he compiled a list of Hebrew particles and their uses, a list of homonyms with their different meanings, and a list of verbs derived from nouns. He is known to have had a remarkably good memory and a very sour disposition.

While many halakhic responsa by Spanish Jews were penned in Arabic, legal compilations were composed in Hebrew or hebraized Aramaic. Even Maimonides, who wrote most of his works in Arabic, turned to Hebrew for his *magnum opus*, the compendium of Jewish law entitled *Mishneh Torah* or *Ha-Ḥibbur*. However, as an aid to making his great compilation well-arranged and complete, he prepared in Arabic a list of the 613 commandments before embarking upon his enterprise. He provided this propaedeutic because he had his own ideas, which differed from those of his predecessors, on the nature of the laws which ought to be included in the 613. He insisted, for example, on the need to distinguish between a biblical and a rabbinic prescription and to exclude general admonitions, such as "Be ye holy." By laying down these principles of selection he hoped to establish an unchallengeable list, a hope that was not fulfilled.

Both Maimonides and his father wrote epistles in Arabic. The latter addressed a letter of comfort to the Jews in North Africa who were victims of religious persecution by the Almohads, a fanatical Muslim movement preached by Ibn Tūmart

and adopted by a Berber tribe. The letter seeks to fortify the Jews with the faith that God will not forsake them and that the promises of reward to the righteous will be realized. Maimonides himself discussed the same persecution, but in a much more pragmatic fashion. His missive is in fact in response to a question asked of him by a North African crypto-Jew, who had been told by a local rabbi that his secret practice of Judaism was of no use, since he was outwardly a Muslim. Maimonides refutes the rabbi's ruling, adding, however, an analysis of the talmudic principle that certain demands made by persecutors should not be acceded to, even if the consequence is martyrdom. He exhorts Jews in the same position as the inquirer to leave the locale where the oppression exists, or, if this is too difficult, to practice Jewish law as much as possible without endangering their lives. A second letter, *Iggeret Teiman*, deals with the religious persecution in that country in 1172, which was complicated by the rise of a pseudo-Messiah who promised imminent salvation and the return to Zion. Maimonides offers consolation, and gives warning against the readiness to believe in the pseudo-Messiah out of despair. He also wrote the monograph *Resurrection*, the object of which was to refute accusations that he did not believe the dead would eventually return to life. His refutation was that, since he included this hope as one of the 13 articles of the Jewish faith, it was unnecessary to repeat it; and his failure to discuss resurrection in other appropriate places was due to the distinction between rational doctrines and those accepted on faith.

A unique volume in Arabic was composed by the celebrated poet Moses b. Jacob ibn Ezra. It is a study of the art of Hebrew, especially biblical poetry, called *Kitāb al-Muḥāḍara wa al-Mudhākara*, but it is in fact much more than that, for it also contains a brief history, and occasionally characterizations, of the literary figures who flourished in Spain, a disquisition on the composition of poetry in sleep, and an explanation of why the Arabs excel in poetic composition. The whole work is presented in the style of *adab*, a popular Arabic genre in which the author enjoyed the freedom to digress on any subject. The digression was accompanied by an occasional reminder that it was time to return to the major theme.

Religious Philosophy and Theology

These subjects were cultivated more actively in Muslim Spain than in the East; but like most other cultural activities, they flourished initially in the Levant. Ibn Mukammiṣ has been discussed above. Saadia's *Emunot ve-De'ot*, though not blindly following Mu'tazilite thought, was nonetheless considerably influenced by it. In general he used reason to buttress the accepted articles of the Jewish faith. With the exception of *Baḥya b. Joseph ibn Paquda (11th cent.), who in the first chapter of his *Hovot ha-Levavot* gives a brief resume of a theological position deriving from Saadia, the works of the other great Spanish Jewish thinkers show that they were under the influence of Plato and Aristotle, or a combination of the latter and neoplatonism. The most philosophic of the group, Solomon

b. Judah ibn *Gabirol (1021–1058), was drawn to the views of the Muslim thinker Ibn Masarra (883–931), who was strongly influenced by pseudo-Empedocles and who taught the doctrine of universal matter and universal soul. Basing his philosophy on the Aristotelian principles of matter and form, Ibn Gabirol in his writings cited no passage from biblical or rabbinic sources and made no reference to the Jewish tradition. He did not treat matter and form as opposite ends of being, rather he defined matter as the substrate, common to all being, and form as the differentiating principle which gives individuality to every existent. He regarded matter and form as the universal constituent factors in every object, from the lowest species to the highest intellectual being, and he ascribed the appearance of corporeality to some quality in matter which gives it body. In Ibn Gabirol's view, since matter is the subject, it is logically prior to form, which specifies it; nevertheless, both universal matter and universal form are the sources of all being. The beginning of the world, the first cause, was God's Will, which is intermediate between Infinite God and the universe. Ibn Gabirol did not, however, define God's Will with sufficient clarity to make it plainly comprehensible, and his philosophy did not win favor among Jews. Although neglected by Jewish theologians, it was adopted by some Christian thinkers, and it subsequently exerted considerable influence on the Kabbalah.

As stated above, Baḥya ibn Paquda (11th–12th century) employed the reasoning of *kalām* to prove the existence and oneness of God. But these issues were not his primary concern, they were merely the first requirement of the correct attitude to be taken toward God.

Baḥya's real interest was in emphasizing the duties of the heart (the title of his book), the state of mind and of emotion prerequisite to the true performance of the practical religious precepts. He feels doubly impelled to undertake this task, first because among the community in general performance of ritual acts is the backbone of Judaism, and, secondly because concern with the approved manner of practice occupies the time and mind of the learned. Essentially, Baḥya preached the inward experience of faith: trust, humility, asceticism, repentance, and self-examination. His book, therefore, may be regarded as a guide which, though written about Judaism for Jews and replete with quotations from the Bible and the Talmud, actually belongs to the sphere of religion in general; and for this reason Baḥya does not hesitate to adduce proofs from outside sources. Of all the religious literature produced in the Islamic world, his work was probably the best known and most widely studied among Jews. The monograph *Ma'ānī al-Nafs* ("Matters of the Soul") falsely ascribed to him, although probably dating from the same period, deals primarily with the fate and duty of the human soul from the time it separates from its source to join the body until it is once again free to return to its original home. In the course of this exposition, the author also gives his views on the emanation and creation of the world, its constituent factors, and other religious and philosophical issues.

Joseph ibn *Zaddik (d. 1149) wrote his *Olam Katan* (*Microcosm*) as a guide to help man gain, through introspection and self-analysis, the necessary knowledge of the world, its Maker, the human soul, and the ethical life. This short tract is not endowed with originality, following neoplatonism in its psychology, Aristotelianism in its physics, and *kalām* in its proof of the existence of God. A far better known poet and literary figure, Moses ibn Ezra, mentioned above, is the author of *Kitāb al-Ḥadiqa fī mā'nā al-majāz wa al-ḥaqīqa* ("The Garden of the Subject of Metaphor and Reality"; in Hebrew, *Arugat ha-Bosem*), a semiphilosophical study in which there is the usual discussion of God and His attributes, and man and his psychology, but in addition there is much attention given to metaphor in the Bible.

The well-known poet *Judah Halevi (1080–1141) was also the author of a philosophical work which was unique in its time among the books in this field. Its title, *Kitāb al-Ḥujja wa al-Dalīl fī Naṣr al-Dīn al-Dhalīl* ("The Book of the Argument and the Proof in Defense of the Despised Faith" (crit. ed. D.H. Banett, prepared for publication by H. Ben-Shamai, Jerusalem 1977), popularly called *Sefer ha-Kuzari*, indicates that it was produced in defense of the Jewish religion, which, the author says, was held in low esteem by the Gentiles. Although critical of philosophy, Judah Halevi is not, like the extremely orthodox, against it; in fact, in his discussion of ethics and of God's uniqueness, he concedes the correctness of the philosophic approach. However, he criticizes metaphysics on the grounds that it simply cannot attain to the ultimate truths, but nevertheless pretends that its conclusions are totally valid. Because their revelation is historically attested, the Jewish Scriptures and tradition are the only unimpeachable sources for the essential truths. The revealed source teaches that man's highest attainment is the gift of prophecy, a gift reserved for the people of Israel in Erez Israel. The Jew receives this gift when he lives in full accord with the Law revealed to Moses. Halevi makes the interesting point that the essence of Judaism is not found in the prescriptions which are rational and apprehensible by human reason, but in the irrational precepts known to us only because they were revealed. He thus demonstrates that the Jewish tradition contains not only the basic truths but also the highest good. The book is written in the form of a dialogue between the author and the king of the Khazars, who wanted to learn about the Jewish faith. It is interesting, although not surprising, that this spokesman for Judaism concludes his discussion by announcing his decision to settle in Erez Israel, which he in fact did, as we know from his poetry. Abraham *Ibn Daud (d. c. 1180), the compiler of an original history of the Jewish tradition, was the first Jewish thinker in Spain to attempt a fusion of the doctrines of the Jewish faith with Aristotelian philosophy (the latter, it must be remembered, was suffused with the neoplatonic system of emanations). Ibn Daud did not examine all theological issues, but he provided summaries of topics such as proofs of the existence of God, the Creation, the Revelation, immortality, and providence. His work, *Sefer ha-Emunah ha-Ramah*, was appar-

ently disregarded in favor of Maimonides' celebrated synthesis; its Arabic original is unknown, and the two translations into Hebrew, one of them published in 1852, were both prepared in the late 14th century.

As stated above, Maimonides (1135–1204) wrote most of his works in Arabic. Of these the most celebrated is his *Guide of the Perplexed* (*Moreh Nevukhim*), a philosophical analysis of Jewish law and theology. Believing like many others that revealed truth and philosophical conclusions reach one and the same end, he proposed to establish the principles of Jewish theology according to doctrines of Aristotelian philosophy, which he accepted as the valid interpretation of the sublunar cosmic process. On this basis he discusses the person of God, the Creation, prophecy, providence, the afterlife, and the content and purpose of the revealed law. In order to anchor his philosophy in Jewish doctrine, he used proof texts from the Bible and traditional Jewish sources. The *Guide* became the most important philosophic work in the Jewish world. Its Hebrew translation had been eagerly awaited by admirers of his earlier works. Two Hebrew renderings, almost simultaneously produced, became available, one by Samuel ibn Tibbon, and the other by Judah b. Solomon *Al-Ḥarizi. The former has always been treated as the authentic and reliable version, although it was severely criticized by Shem Tov b. Joseph *Falquera, one of the early commentators on the work. In modern times the work has been translated again into Hebrew, by Rabbi J. Kafih, and more recently by Prof. M. Schwartz, who produced a brilliant critical edition (*Maimonides: The Guide of the Perplexed*, Tel Aviv, 2002).

The *Guide's* popularity resulted in two contrary developments. For many it became the basic text, the authoritative reconciliation between the two sources of the one truth, so that the philosophically-minded in subsequent centuries invariably took it as their point of departure for commentary, summary, or controversy. At the same time, there were scholars who were wary of the intrusion of philosophical reflection into the religious sphere, because they sensed that reconciliation meant setting up philosophy as the judge of what in religion could be maintained, and what had to be interpreted, no matter how far the interpretation carried it from its literal meaning. Even students who were not particularly interested in philosophical speculations were compelled to confront it since Maimonides introduced a number of philosophical concepts into the first of the 14 books of his legal compendium. This alignment of admirers and antagonists led to serious conflict in the 13th and 14th centuries.

Joseph b. Judah ibn *Aknin (c. 1150–1220), a contemporary and friend of Maimonides, settled in Fez after his departure from his native Spain. By his own admission he lived there as a crypto-Jew, although his energetic literary activity seems to show that his private life did not suffer any interference. Save for his commentary on *Avot*, which was originally in Hebrew, his other writings were probably all in Arabic, although there is naturally uncertainty in the case of those of his writings which are no longer extant. Of his surviving works,

Tibb al-Nufūs al-Salīma ... (“Medicine for Healthy Souls...”), is an ethical treatise which includes a chapter on the soul and its needs and destiny. The book also contains chapters on friendship, speech and silence, keeping a secret, lying, food and drink, and asceticism. In every chapter there is an exposition, followed by relevant rabbinical sayings and epigrams culled from Arabic anthologies. The work is concluded by a chapter on persecutions, and Jewish behavior in relation to them, and a chapter on repentance. A threefold commentary on the Song of Songs, dealing with the plain meaning, the rabbinic elaboration, and a philosophical-psychological interpretation, which Joseph claimed to be an original contribution, has the distinction of providing an explanation of every word in the Scroll. He wrote an *Introduction to the Talmud* (*Mevu ha-Talmud*) and a tract on quantities and measurements in Jewish literature. An as yet undiscovered compilation, *Hukkim u-Mishpatim*, may have resembled the legal compendium of Maimonides, and his *Risālat al-İbāna fī Uṣūl al-Diyāna* (“A Religious Clarification of Religious Fundamentals”) was apparently theological in character.

From the 13th Century

In Judeo-Arabic literature, in both Spain and the Middle East, the 13th century marks a division between what preceded it and what followed. In Spain, Christendom’s final victory over Islamic power in 1212 led to the gradual elimination of Arabic from Jewish life in favor of the Romance languages in daily intercourse, and of Hebrew in writing. During the 11th and 12th centuries, the continuous shift of the Jewish population from Andalusia to Christian territory, where Arabic had never been the dominant language, accelerated the abandonment of Arabic. However, knowledge of the language remained essential for the translation of texts on philosophy and logic, medicine, mathematics, and astronomy into Hebrew, Latin, and Spanish. It was at this time that the cultural heritage which originated in the East and was enriched during the period of Islamic ascendancy was transmitted to the West. Among the authors who continued to write in Arabic, Judah b. Solomon ibn *Matkah (13th cent.), who corresponded with Emperor Frederick II of Sicily, compiled an encyclopedia of logic, physics, and metaphysics, which he translated into Hebrew under the title *Midrash ha-Hokhmah*. He also produced *Mishpetei ha-Kokhavim*, a digest of Ptolemy’s astronomical *Almagest*. Joseph b. Isaac Israeli of Toledo (d. 1331) wrote a compendium on astronomy which was based on his father’s well-known monograph, *Yesod Olam*. Samuel ibn Waqār, the personal physician of Alfonso XI of Castile, may have been the author of the medical work “Castilian Royal Medicine” (1376). Solomon b. Ya’ish (d. 1345) composed a supercommentary on Abraham ibn Ezra’s commentary to the Pentateuch, as well as a six-volume commentary on Avicenna’s *Canon*, which remained the standard medical text for centuries. In the field of theology, Moses ibn Crispin Cohen, who in 1336 left his native Cordoba to settle in Toledo, composed a tract on providence and the afterlife. Joseph b. Abraham *Ibn Waqār (14th cent.),

a philosopher and kabbalist, also wrote a book on theological matters, for which only a Hebrew title, *Ma’amar ha-Kolel*, is suggested by the name of one of the two extant translations. Judah b. Nissim *Malkah (14th cent.) of North Africa was a neoplatonist who wrote a tripartite work in the spirit of that philosophy; the first two sections were a commentary on the *Sefer Yeẓirah*, the former being an introduction to the theosophic booklet, *Uns al-Gharīb* (“Consolation of the Foreigner,” i.e., man’s soul on earth) and the latter was on the Midrash *Pirkei De-Rabbi Eliezer*.

The composition of works in Arabic by Jews was much more prevalent in the East, where Arabic continued to be used as the spoken language. However, the general reaction against foreign influences, which gradually eliminated from Muslim intellectual life the variety of interests that had attracted earlier generations, also affected Jewish literary productivity. There was a marked decline in the pursuit of secular subjects, with the exception of medicine; and studies in humanistic areas became confined to theological and ritual topics. Salāma b. Mevorakh (12th cent.), a physician and philosopher, and a student of Ephraim b. āl Zafāh (who was physician to the court), wrote *Niẓām al-Mawjūdāt* (“Arrangement of the Existents”), which was probably philosophic in character, *al-Sabab al-Mūjib li-Qillat al-Maṭar fi-Miṣr* (“The Reasons for the Paucity of Rain in Egypt”), and *fi-al-‘Ilm al-Ilāhī* (“On Theology”). Hibat Allah ibn al-Ḥasan b. Ephraim was possibly the head of the academy and community of Fostat, whom the traveler Benjamin of Tudela mentioned by the name of Nethanel and who wrote, among other works: *Irshād li-Maṣāliḥ Anfus al-Ajṣād* (“Guide to the Well-Being of Souls and Bodies”), which treats of illnesses, cures, and hygiene; and *al-Taṣrīḥ fī Tanqīḥ al-Qānūn* (“Revelation of the Hidden in Correcting the Canon of Avicenna”). The Karaite *David b. Solomon (1161–1240), physician to Sultan al-Malik al-‘Adil, and possibly the teacher of Ibn Abī Uṣaybi’a, wrote a celebrated history of medicine and physicians. He compiled the 12-chapter antidotary *Akrabadhin* or *Dustūr al-Adwiya al-Murakkaba* (“Register of Compound Remedies”) and *Risālat al-Mujarrabāt* (“Epistle on Experiences”). Jacob b. Isaac (al-Asad al-Maḥallī; c. 1200) was the author of *Maqāla fī Qawānīn al-Ṭibbiyya* (“Treatise on the Fundamentals of Medicine”) and *Masā’il Ṭibbiyya wa-Ajwibatihā* (“Questions and Answers on Medicine”), addressed to the Samaritan author Ṣadaqa ibn Munajja in Damascus. Abū-al-Munā ibn abi Naṣr al-Kohen al-‘Aṭṭār (13th cent.) compiled a popular pharmacopoeia, *Minhāj al-Dukkān wa-Dustūr al-Āyān* (“Practice of the Shop and List of the Important”), which is a painstaking collection, arranged in alphabetical order, of pertinent material gleaned from diverse sources, both oral and written. It includes a moralizing first chapter addressed to his son, which in fact may be an addition written by someone else. Nūmān ibn abi al-Riḍā’ (14th cent.) wrote a medical treatise which he considered to be a collection of glosses on the work of al-Masīḥī. There were a large number of other physicians in the Arabic-speaking Jewish communities who tended to write on religion rather than on their profession. *Abraham

b. Moses b. Maimon (1186–1237), who succeeded his father as court physician and head of the Jewish community, composed a voluminous work, *Kifāyat al-Ābidīn* (“Enough for the Worshipers”), most of which has yet to be discovered. Although he was an ardent defender and great admirer of his father, Abraham’s work exhibits a piety which was independent of his father. While not minimizing the importance of learning, he stressed that worship requires humility, concentration, devotion, and other qualities characteristic of pietists such as the Sufis. He also wrote a commentary on Genesis and Exodus and composed two works in answer to his father’s critics, as well as responsa (still extant) in answer to religious and legal inquiries. Attributed to one of his two sons, *David b. Abraham (1212–1300), who succeeded him as *nagid*, is a commentary on the *Avot*, which enjoyed great popularity. Also attributed to David is a collection of homilies on the weekly portion of the Torah, but the authorship of both works has been rightly disputed. Like his father, David also had occasion (1290) to rise to the defense of Maimonides. Obadiah (1228–1265), David’s brother, composed a *vade mecum* for his son, called *al-Maqāla al-Ḥuḍiyya* (“The Inclusive Treatise”), in which biblical and rabbinic passages were interpreted allegorically, in order to provide moral instruction (ed. P. Fenton).

An ardent admirer of Maimonides, *Tanḥum b. Joseph Yerushalmi (d. 1291), wrote the commentary *al-Ijaz wa al-Bayān* (“Short and Clear”), which was probably on the entire Bible and is still largely extant, although only very few of his remarks on Ezra and Nehemiah have so far been discovered. His *Commentary on the Minor Prophets* has been published by H. Shay (1991). A rationalist, entirely rejecting any mystical approach to the text, he strove to explain every facet of it with the aid of medicine, *realia*, chronology, geography, and philosophy. Of philosophy he made use on numerous occasions, particularly where the literal meaning of the text was difficult to accept. He employed allegory and included digressions on subjects such as prophecy and the allegorical method. He occasionally disagreed with the *Seder Olam*, the chronological monograph which was almost undisputed during the Middle Ages, although he sometimes assumed approximate dates in the Bible in order to explain away discrepancies. He showed an appreciation for the aesthetic quality of the Bible and also a recognition that copyists’ errors may have found their way into the masoretic text. In a comprehensive introduction to his vast enterprise, Tanḥum discussed grammatical and philosophical principles at length and also dwelt on the relation between exegesis and *aggadah*. In addition, he compiled a lexicon of the Hebrew in Maimonides’ Code, *al-Murshid al-Kāfi* (“The Adequate Guide”). In the introduction to this work he elaborated upon the tremendous importance of the Code, especially at a time when there was a decline in the study of the Talmud. He criticized the *Arukh*, the lexicon of *Nathan b. Jehiel of Rome (11th cent.), because it did not include all the words in the language and operated on the basis of biliteral roots. Despite his criticisms, he was in fact extremely indebted to the lexicon. Moreover, in his own lexicon he strayed from

his objective. Not all the words in the Code are listed, nor are all the vocables given there taken from the Code, since he also provided explanations of a number of mishnaic terms. His tendency to go into philosophical and theological matters emerges even in this work. His son, *Joseph b. Tanḥum ha-Yerushalmi, a gifted writer of Hebrew poetry, may also have been the author of a book in Arabic on theology and philosophy, a fragment of which is extant.

*Ibn Kammuna (Sa’d b. Maṣūr; d. 1184) lived in Baghdad; toward the end of his life he was the target of attack by orthodox Muslims, who took offense at his statements about Islam in *Tanqīḥ al-Abḥāth lil-Milal al-Thalāth* (“Examination of the Inquiries into the Three Faiths”), a study of Judaism, Christianity, and Islam. The book, interesting and enlightened, opens with a general discussion of religion and prophecy and continues with sections on each of the three religions. Ibn Kammuna’s method is to present the principles of each faith in a general essay, and then to list questions and objections, followed by replies of the adherents of the particular faith. The work is outstanding for its fairmindedness and objectivity, which may be the reason for the belief, now discredited, that the author was a convert to Islam. His other writings include *al-Hikma al-Jadīda* (“The New Science”), on logic; *Risāla* (“Epistle”), on the immortality of the soul; and *Sharḥ Talwīḥāt*, a commentary on the *Notes* of the Muslim mystic Suhrawardi (d. 1191). He also wrote on chemistry and ophthalmology.

*Israel ha-Dayyan ha-Ma’aravi (14th cent.) lived in Cairo and was judge of the Karaite community there. His works include a legal compendium known only by its Hebrew name, *Sefer Mitzvot*, a compilation of the personal and ritual laws of the Karaites. His *Shurūt al-Dhabāḥa* (“Requirements of Ritual Slaughter”) may have been part of his original *Arabic Code*. He also wrote *Tartīb al-‘Aqā’id al-Sitta* (“Classification of the Six Articles of Faith: God, Moses, the Other Prophets, the Torah, Jerusalem, and the Final Judgment”), as well as a book on the calendar. *Samuel b. Moses al-Maghribi (15th cent.), a physician living in Cairo, compiled *al-Murshid* (“The Guide”), which was a book of laws in 12 sections; he also wrote a commentary on the Pentateuch and a history of Mount Moriah and the Temple. David b. Saḍel al-Hiti (15th cent.) composed a bibliography of Karaite scholars, which, although uncritical and sometimes unreliable, has been of service to modern scholars.

The Jews of *Yemen, who were subjected to many trials and persecutions, probably constituted the most cultivated among the Jewish communities living under Islam in the second millennium. In any case, they can boast of a larger number of literary figures than can other centers. One of the earliest, *Nethanel ibn al-Fayyūmī (d. c. 1170), was probably the head of the community and was the father of *Jacob b. Nethanel whose inquiry to Maimonides brought about the latter’s *Iggeret Teiman*. Nethanel wrote *Bustān al-‘Uqūl* (“The Garden of the Intellects”), a theological study with chapters on the unity of God, man the microcosm, the worship of God, repentance, reliance on God, messianic times and the after-

life, influenced by the Isma'ili. He quoted a good deal from extraneous sources and did not hesitate to invoke the support of the Koran and other Islamic works. *Abraham b. Solomon (1350–1400), probably of Yemen, compiled a commentary on the Prophets and probably also on the Hagiographa. His *Midrash al-Šiyāna* is eclectic, quoting copiously from a number of predecessors. Its chief value lies in the fact that it preserves material from works no longer extant. Several Yemenite compositions are midrashic in character, probably because there were frequent occasions in the community when a small sermon was preached at some religious ceremony. *Nethanel b. Yesha, a 14th-century scholar and preacher, composed the midrash *Nūr al-Zulām* (“Illumination of the Dark”) in 1329. It was written in a combination of Hebrew and Arabic and made up of citations from other sources. In the 15th century *Zechariah b. Solomon ha-Rofe (Yaḥyā b. Suleiman al-Ṭabīb), a physician in San‘a, produced *Midrash ha-Hefez*, a commentary on the Pentateuch, Lamentations, and the Scroll of Esther. It, too, is eclectic and shows the author’s preference for ethical and philosophical interpretations. Zechariah is also credited with a *Sharḥ* (“Commentary”) to Maimonides’ *Guide*. Another 15th-century author, Abu Maṣṣūr al-Daimari, composed in a philosophic tone the midrashic commentary on the Pentateuch, *Sirāj al-‘Uqul* (“The Light of the Intellects”).

In conclusion, it is to be noted that composition of Jewish works in Arabic continued to appear until there ceased to be Jewish communities in the Arabic-speaking lands. However, it must be admitted that there is little value in these works, most of which are liturgical, exegetic, or translations of Hebrew pietistic works. The European influence, which from the end of the 19th century began to affect Arabic literature as it had affected Jewish literature in Europe a century earlier, does not seem to have played a part in the intellectual life of the Jews in the East. Nevertheless, their output of Hebrew or predominantly Hebrew poetry, rhymed prose, and religious works is of higher quality.

[Abraham Solomon Halkin]

Judeo-Arabic Culture

INTRODUCTION. We are dealing here with that particular body of Jewish religious writings of all types, written in the shadow of *Islam, usually in Arabic, but in Hebrew characters, during the period from before Saadiah Gaon until after the days of Maimonides and his son Abraham, i.e., from approximately the 8th century to the end of the 13th century. This culture is not merely a Jewish culture in Arabic language, but rather a Judeo-Islamic culture. Consequently, it is needless to point out that the Jewish writers who wrote in Arabic during this period were influenced by ideas then current in Islam, but their work should be viewed as the fruit of a period of centuries of creativity and cultural fertility shared by both religions. Similarly, the Arabic language used by the Jews in this period should not be regarded as a mere instrument employed by them, but as an integral part of the religious culture they had absorbed.

The extent to which a culture has absorbed and assimilated influences from another culture, as well as the precon-

ditions which enabled their absorption and assimilation, is well known. The renowned Orientalist H.A.R. Gibb, who studied the influence of Islam on the European Renaissance,¹ laid down, among others, three basic theses which may constitute also a suitable starting point for a discussion of the influence of Islam on medieval Judeo-Arabic culture. These are the following:

(1) No culture absorbs influences from another culture unless the two possess certain similar and related qualities and the ground has been further prepared by similar activities.

(2) The absorption of foreign influences is a sign of the vitality of the absorbing culture or religion, but “the borrowed elements conduce to the expanding vitality of the borrowing culture only insofar as they draw their nourishment from the activities which led to their borrowing in the first place.”

(3) Additional evidence of the vitality of the absorbing culture is provided if it confines this foreign influence to certain limits, thus preventing it from becoming too strong and undermining the foundations of the absorbing culture. “A living culture disregards or rejects all elements in other cultures which conflict with its own fundamental values, emotional attitudes or esthetic criteria.”

There is no doubt that all this applies to the interrelationship of Judaism and Islam. The essential similarity of these two monotheistic religions which, unlike other religions, are based on law, created from the very beginning a sense of special relationship and led to extensive reciprocal borrowing. The fact that the new religion of Islam assimilated many Jewish elements at the time of its origin and during the years of its consolidation was the reason that many Jewish Sages adopted a much more lenient attitude toward it than toward other religions, and even declared explicitly that it was not to be regarded as idolatry, and differed from Christianity in essential aspects.² On the other hand, there is no doubt that Judaism had at least some reservations with regard to borrowing and assimilating Islamic influences. As we will see later on, these reservations were especially strong in the field of mysticism, though many Jews were strongly attracted by Sufi (Islamic mystical) teachings. It is also an established fact that much Islamic material absorbed by Jewish culture has been adapted and developed in a clearly Jewish spirit.

To be properly appreciated, at least three interesting and important viewpoints should be added, however, to these three theses:

(1) Two periods can be clearly distinguished in the interrelationship of Judaism and Islam. During the first period – the 7th and maybe also the 8th centuries – Judaism, more than any other religion and culture, left a decisive impact on Islam, a new religion in the process of consolidation. In the second period – probably from the 8th century, and in particular from the 9th century onward – Islam, which had become a rich and variegated culture, profoundly influenced Jewish culture. Consequently, the interrelationship of these two cultures may be regarded as a closed circle, a rare phenomenon in cultural relationships. Thus it is sometimes possible to trace an idea,

concept or custom that was absorbed by early Islam from Judaism, assimilated by it in a genuine Islamic spirit and, subsequently, in its Muslim guise, left its impact on Judaism. As an example, the concept of intention (*kavanah*, the devotional frame of mind which has to accompany compliance with a religious duty) was doubtless taken from Jewish – mainly Talmudic³ – sources by Islamic thinkers, who turned it into a Ḥadith saying, allegedly of the prophet, or into a saying of the Sufi (mystic pietists). However, Islam also transformed this concept into a formula which may sometimes deprive it of its very spirit: every believer must declare, before performing a commandment, that he is about to perform it with intention, by reciting a formula: “I now intend to perform the commandment of morning prayer (or midday prayer, etc.)” Pietist Jewish circles seem (at a rather late stage) to have accepted and translated it into Hebrew.⁴

(2) The interrelationship of these two cultures – Judaism and Islam – always took place in the presence of a third religious culture, Christianity, which has strong links with both Judaism and Islam. This permanent Christian presence left its imprint on the interrelationship of these religions. Islam, for instance, regards Judaism and Christianity as belonging to the same category in many respects. They are recognized by Islam as the two earlier monotheistic religions, even though Islam claimed to have superseded and abrogated them. The “People of the Book” (*Ahl al-Kitāb*) or the “Protected People” (*Ahl al-Dhimma*), as both Jews and Christians were called, were granted freedom of worship, though many humiliating restrictions were imposed upon them.⁵ The Jews, on their part, generally regarded Islam either as a counterpart of Christianity (as did Judah Halevi, for instance, in his *Kuzari*, Book IV, par. 11), or as its opposite (Maimonides, for instance, in his above-mentioned *Responsa*). Only seldom did they deal with Islam in a specific way unlinked to Christianity.

(3) This leads us to the central and principal feature of the relationship of Islam and Judaism (and we may now add: and Christianity) in the medieval Arab East: there was a profound religious-cultural alliance among these three positive religions in their common confrontation with the pagan cultural legacy which, in its philosophical Arabic disguise, threatened equally the existence of the three revelational religions.⁶ The extent and depth of their spiritual collaboration is highly astonishing and probably has no parallel in any other period of human history. It seems that only against the special cultural background of medieval Islam could such a spiritual alliance have sprung up. The rich Arabic language, with its advanced religious and philosophical terminology, in which the scholars and thinkers of all three religions wrote, was an additional factor. One striking example may be given: it had long been noticed that the “Duties of the Heart” of Bahya ibn Paquda contains a chapter (“The Ways of Discernment of the Creatures,” *Bāb Al-ʾIṭibār Fi-al-Makhlūkīn*) which is surprisingly similar to the book “The Wisdom of God in His Creatures” (*Al-Ḥikma fī makhlūkāt Allah*), probably written by al-Ghazālī (d. 1111), one of the greatest Muslim thinkers of all times. Some pas-

sages of these works, which praise God’s creation, especially man, are literally identical, and their general contents are the same. It was long believed that Bahya had copied al-Ghazālī. D.Z. Baneth, however, discovered a manuscript upon which both based their work, and he maintains that it was written by a Christian Arab author. Both Bahya ibn Paquda and al-Ghazālī adapted this book, each in the spirit of his own religion, mainly by adding verses from the Torah of the Jewish Sages in the case of the former, or verses from the *Qurʾān* or sayings of the Prophet and his companions, by al-Ghazālī.

STUDYING JEWISH CULTURE IN THE SHADOW OF ISLAM. The relationship of Judaism and Islam has so far been considered, as it were, from the outside – a step which is necessary if one wishes to study the Arabic period of Jewish history or the form of Jewish culture that was created in the shadow of Islam. Only thus is it possible to obtain an overall picture of the relationship between two cultures, without which one is bound to get entangled in details, without being able to discern the general framework clearly. However, these cultures must now be considered “from within” in order to determine their characteristic and striking features.

But first an important methodological problem has to be faced. There is a widespread tendency to ascribe a phenomenon occurring in two cultures to the influence of the earlier culture on the later. A. Geiger, in the introduction to his “Was hat Mohammed aus dem Judentum aufgenommen?” (Leipzig, 1830), and I. Goldziher already warned against this tendency with regard to the relationship of Judaism and Islam. Similar developments and phenomena in different cultures are not necessarily the result of the influence of one on the other, but may also be the fruit of equal external conditions or of the religious needs and developments of the individual believer or the community, etc.

A few examples may illustrate this point.

Both Judaism and Islam are unique in that they have a sacred oral law in addition to the Divinely given written law.⁷ It is, nevertheless, questionable whether this phenomenon in Islam is necessarily the fruit of the influence of the older religion. It is true that when the Muslim oral law (*al-Sunna*) was committed to writing, the opponents of this act used arguments very similar to those of the Jewish Sages, who opposed the redaction of the oral law into a book. Nevertheless, Goldziher strongly rejects the assumption that this is a case of direct Jewish influence. An oral law is bound to appear sooner or later in a religion that possesses a written law, in order to answer new questions and needs which arise and are not solved by the written law. It is also natural that initially such a suggestion will meet with fierce opposition, but gradually the oral law will take its place alongside the written law and even overshadow it, in matters of both doctrine and practice. In Islam this is even explicitly expressed by the saying that the oral law, the *Sunna* of the Prophet, may change or even abrogate explicit statements of the *Qurʾān*. Both in Judaism and Islam it is explicitly stated that the later sayings of the oral law are

as sacred and binding as the early words of the legislator. In Judaism this was formulated by Rabbi Joshua ben Levi: "Even what an outstanding student may point out to his teacher in the future was already said to Moses on Mount Sinai" (TJ, Hag. 1, 8); and in Islam, in the paradoxical sayings ascribed to the Prophet Muhammad, such as: "All beautiful things that are said stem from me, whether I have said them or not."⁸

Another example is the commandment of Islam to make, at least once in a lifetime, the pilgrimage to the holy places in Mecca. Abraham I. Katsh maintains that this practice was adopted from Judaism (see Ex. 23:14ff; Deut. 16:16–17).⁹ Yet the assumption is unfounded. The Hajj was a common practice in the Arabian peninsula already in pre-Islamic times, and it was adopted by Islam, which gave it an ethiological and monotheistic interpretation, just as Judaism did with the many pagan relics it preserved.

There are, of course, many cases in which direct influence of one religion on another can be established with certainty, especially direct influence of Judaism on Islam; not only in basic concepts and ideas, biblical narratives¹⁰ (such as the stories of the Patriarchs) and laws, but also with regard to minor details, of which two examples are given here, though the main subject of this article is the second stage of Muslim–Jewish interaction, in which Judaism was influenced by Islam.

Originally, the Islamic fast, which is now Ramadan, was held on the tenth day of the first month, from sunset to sunset, like the Jewish Day of Atonement. The change to a whole month's fast was probably the result of Muhammad's disillusion with the Jews and his wish to sever relations with Judaism. Nevertheless, an interesting example of Jewish influence is seen in the verse of the *Qurʾān*: "... and eat and drink until you distinguish between the white thread that becomes distinct to you from the black thread at dawn (or: of the dawn)" (Sura II, 187). The source of this verse is almost certainly the Mishnah Ber. 1, 1: "When is the morning prayer said? When blue can be distinguished from white." For the Jew, wrapped in his usually white prayer shawl with blue stripes, these words had a real meaning, but transferred to an entirely foreign sphere they reveal the direct influence of Judaism.¹¹

To the same category belongs a passage of the story in the *Qurʾān* of Joseph (Sura XII) and its commentaries. When Potiphar's wife heard that the women were gossiping about her passion for Joseph, she invited them to a meal and gave each a knife. When Joseph entered, they were so overwhelmed by his handsomeness that they cut themselves. The knife was presumably to cut fruit which was placed before them, but the name of the fruit is not given in the *Qurʾān*. The story is also found in later Midrashim, e.g., the *Midrash ha-Gadol*, which was composed under Muslim influence of the *Qurʾān*. But the commentators state that it was the etrog, the citron, a fruit which was completely unknown in the northern Arabian peninsula. The Israelites, on the other hand, already knew this fruit, perhaps even as early as the Babylonian captivity, and they perhaps transmitted this story to Islam together with the story of Joseph.¹²

ISLAMIC INFLUENCE ON JUDAISM. We now return to the second period in the history of Jewish-Muslim relations, the long period in which Islam exerted its influence on Judaism. This investigation is still in its initial stage, even though many scholars – mainly Jewish – have dealt with it since the 19th century, and the results of their research are published in scores of books and hundreds of articles scattered through periodicals and books.

The philosophical and theological influence of Islam on Jewish thought in the Middle Ages, or on the history and way of life of the Jews in Muslim culture, is now generally recognized. The many studies of Goldziher (published mainly in REJ and MGWJ), and most of them now collected in several volumes by D. Desomogyi) have perhaps also brought about a general recognition of the fact that Muslim sources contain much material for the study of Jewish history and the religious way of life. But only few scholars, especially S.D. Goitein, G. Vajda, N. Wieder and M. Zucker, have hitherto discussed the influence of Islamic religious terminology and practice on Jewish literature and practice. S.D. Goitein's monumental *A Mediterranean Society* has become a major breakthrough in this respect as well, although its more important contributions lie, of course, in the completely new description and analysis of Jewish social and economic history under Islam in the Middle Ages.

Judeo-Arabic also has been studied so far mainly from its linguistic angle – as the counterpart of Christian-Arabic – or as an additional aspect of middle Arabic. Arabic was the main language of the Jews in speech and religious literature in all its varieties; a close examination may help to appreciate the tremendous religious influence of Islam on Jewish medieval scholars, which is more than a mere linguistic phenomenon. Scores of religious Islamic terms permeated Jewish literature, including denominations of the Torah by *Qurʾānic* terms such as *al-Kitāb*, *al-Shariʿa*, *al-Maṣḥaf*, *al-Nūzūl*, *Um al-Kitāb* and even *al-Qurʾān*. Chapters of the Torah were called "Suras" (verses retained their Hebrew name, *Pasuq*, although for the plural an Arabic form was used, *Pawāsiq*). The oral law was called *Sunna* or *Fiqh*, the cantor *Imām*, Jerusalem became *Dār-a-Salām*, Abraham *Khalīl Allah*, Moses *Rasūl-Allah* like Muhammad; the Messiah was called *al-Qā'im al-Muntazar* like the awaited Messiah of the Shi'ites; the direction of prayer to the east was named *al-Qibla*, which is the name the Muslims gave their direction of prayer to the south towards Mecca. There are, in addition, hundreds of religious words that may be classified as mere linguistic phenomena, such as *al-Mu'minūn* (the believers); *Nawāfil* (optional prayer); *Jamā'a* (congregation, community; also minyan, the quorum of ten men required for Jewish prayer); *Bid'a* (undesirable religious innovation), etc.¹³ In contrast to the west, where Jews never used their non-Hebrew names for religious purposes, Jews used their Arabic names in the synagogue, in marriage contracts, etc.

Combined Hebrew-Arabic phrases, such as *Ṣalāt al-Shaharit*, or *Laylat al-Pesaḥ*, and such terms as *Qādī* and

Muftī (judge) and *Fatwā* (*halakhic* responsa) were also widely used. Apart from these, Jewish literature is full of literal quotations from the *Qurʾān* and the Ḥadīth, as well as from later religious literature of Islam. Medieval translations of Arabic works into Hebrew, such as Abraham ben Ḥasdai's translation of al-Ghazālī's *Mizān al-Amāl* ("The Scales of Justice"), also retained Qurʾānic verses and Ḥadīth sayings in the Hebrew version, but sometimes added biblical verses and sayings of the Jewish Sages.¹⁴ The Jewish authors often changed the proper names, but seldom the quotation itself. For instance, instead of "Aisha," the wife of the Prophet Muhammad, they quoted "the Prophetess Deborah"; instead of writing "said Umar ibn Khattāb," they wrote "said Rabbi Akiva"; they replaced Abū Ḥanīfa and al-Shāfiʿī by Ravina and Rav Ashi; the expression "said the Messenger of Allah" by "said one of the Prophets" or "one of the sons of the Prophets" and "the words of al-Saḥāba" ("the Companions of the Prophets") by "the words of our Sages," etc.¹⁵ Moreover, in the Cairo *Genizah* (see below, note 32) and other places, verses of the *Qurʾān* (especially the two last Suras) and fragments of Arabic religious literature (for instance, verses of the mystic martyr al-Ḥallāj or of al-Ghazālī's autobiography) were found in Arabic, but in Hebrew transcription, apparently for use as amulets or for study. During the Middle Ages the whole *Qurʾān* was also transcribed word for word in Hebrew characters. Unlike some scholars, who consider the use of Hebrew characters in writing Arabic proof of the fact that the spiritual assimilation of the Jews to Islamic culture was less extensive than their assimilation to modern European culture, it is maintained that the Jewish use of Arabic is much more than a mere linguistic phenomenon and had far-reaching cultural-religious repercussions. Medieval Judaism in the Arab East was not only arabicized, but in almost every sphere of life – and not only in philosophy and theology – it bore the stamp of Islam.¹⁶

A few examples, some better known than others, are given here. The first is taken from the field of linguistics, but its significance exceeds this field by far. The linguistic skill of the Arabs and their veneration of the Arabic language, from the dawn of their civilization (cf. pre-Islamic poetry), may be one of the reasons that the *Qurʾān*, the Word of Allah, may have been one of the best miraculous proofs of the truth of Muhammad's message (just as, according to the Ḥadīth, the previous prophets had performed their own miracles, each in conformity with the characteristics of either his people or times).¹⁷ Hence the interesting Muslim theological doctrine, according to which the *Qurʾān* is superior to other holy writs not only from the religious, but also (and mainly) from the linguistic-stylistic viewpoint and, therefore, cannot be imitated by men.¹⁸ This veneration of language as such was adopted by the medieval Jews (Moses ibn Ezra was one of the intermediaries) and even led to a revival of Hebrew among them to attempt to demonstrate that Hebrew was in no way inferior to the rich language of their Muslim neighbors. Even the Muslim belief that the Quraish, the tribe to which the prophet belonged, spoke a purer language than the other

Arabs, had its Jewish parallel in the belief that the tribes of Yehuda and Binyamin, or the Jerusalemites, spoke the purest form of Hebrew.¹⁸

The second example is from the field of history. It was a strange phenomenon, alien to the spirit of the People of the Book, that some of our false messiahs, who appeared in the shadow of Islam, boasted of their illiteracy and were proud to claim that they could neither read nor write. This motif is found in Judaism only in the appearance of some later false messiahs. Again, we may have here an obvious case of Muslim influence, namely of the concept of *al-Nabī al-Ummī*, a title conferred on Muhammad on the basis of an obscure expression in the *Qurʾān*, the original meaning of which was that Muhammad considered himself the prophet who was sent to all nations, but very soon it was interpreted as "the prophet who cannot read and write."¹⁹

This motif was transmitted to Judaism, but it is so alien to the spirit of Judaism that it justifies the assumption that it was a Muslim motif which the false messiahs needed to rally the ignorant masses of Israel behind them.

The next example belongs to an entirely different sphere. Judaism and Islam both possess a special class of literature which, to a large extent, fulfills the part that is taken in other cultures by the written law, the responsa literature. This literature consists of legal decisions given in answer to questions by individuals. These responsa (*Fatwā*, pl. *Fatāwā*, in Arabic) have the force of decisions of law, and have been collected in tens of books which, both in Judaism and Islam, serve as textbooks of legal precedents and as the basis of subsequent decisions. It is true that Roman law also knew this genre of legal literature (*Jus Respondendi*), and the assumption that the Jewish and Muslim responsa literature was derived from the Roman practice cannot be rejected out of hand.

However, with regard to Judaism and Islam, it is difficult to establish with certainty what preceded what. In general, one can state, however, that a great part of Muslim religious law developed in Iraq was influenced to a certain extent by the Jewish *halakhic* activity, which reached its zenith there under the *Geonim*. It seems, therefore, reasonable to assume, with Goitein, that the well-developed *halakhic* literature left its imprint on the early law of Islam, but, on the other hand, the possibility should be considered that the development of Jewish *halakhah* received momentum as a result of the rise and influence of Islam.²⁰ Moreover, it should be kept in mind that Islam had the same needs as Judaism, which led to the growth of a similar *halakhic* literature, and vice versa. The tremendous socioeconomic revolution the Jews faced under Muslim rule (their transition from a people of farmers to a people of merchants) led to the rise of laws similar to those of Islam, which is, to a considerable extent, the product of a middle-class, mercantile civilization.²¹

However this may be, the fact remains that the two religions, Judaism and Islam, seem to be the only *halakhic* religions in the world (the Muslim name for *halakhah* is *Shariʿa*, meaning the main road; and the various *halakhic* schools are

called *Madhāhib*, a root also related to “going” and expressing – just like the Hebrew term **halakhah* – the idea of a “way of life”). As mentioned above, both possess a sacred oral law alongside the written law, and both have created a huge literature of religious law, chiefly by means of rational analogy. In both, this was the work of independent religious scholars (*Fuqahā*, *Ulamā* – in Arabic), and in both, different schools of law are all considered equally orthodox. In both, religious preoccupation with the religious law is considered a Divine precept, and both even believe that God Himself engages in the same activity together with His heavenly companions; both have similar basic principles (cf., for instance, the idea that “the power of permission is preferable,” in the Babylonian Talmud, *Ber.* 60a, with the end of Sura 11 in the Koran) and categories to classify all human deeds and scores of identical legal details. It is, however, impossible to determine with certainty when the literary genre of Responsa first appeared, or whether it was the result of the influence of one religion on another. There are hardly any Jewish responsa from the time preceding R. Yehuda Gaon (middle of the 8th century), and in Islam there were, up to the same time, only a few “private” responsa from such individuals as Ibrāhīm al-Nakh’i of al-Kufa, who lived in the first century of the Hegira. According to those scholars who believe that this literary genre already occurs in the Talmud, and that the *geonim* only continued the work of earlier Jewish Sages, the responsa literature would have been taken over by Islam from Judaism, but the question still requires thorough research.²² I. Goldziher, on the other hand, showed that, in some details at least, the influence of Islamic responsa literature on Judaism can be asserted with some certainty. Much of the Jewish responsa literature in Islamic countries was written in Arabic, and the questions addressed to the Sage from all over the world sometimes open with this formula: “Let our master teach us, and may the Lord give him a double reward.” But why a double reward? Goldziher showed that this formula is based on a popular Ḥadīth saying, ascribed to the Prophet, which says: “If a judge rules with deliberation and his decision is right, he shall receive a double reward from the Lord.”²³

One more example of responsa literature illustrates Islamic influence on Judaism, even though this whole literary religious genre may have first started in Islam under Jewish influence. Jewish religious literature proscribes the playing of any musical instrument as a token of mourning over the destruction of the Temple. However, during the period between Saadiah Gaon and Maimonides, another strange argument for this prohibition was added: here it is linked to the immoral ways of musicians and singers (especially female singers). It seems that this reflects the general religious Muslim negative attitude to music (with the exception of the pietist Sufis, who cultivated religious music). Some Muslim scholars even forbade singers and musicians to appear as witnesses in court, since their profession made them unfit to give evidence. Jewish Sages in the same period followed this example and forbade singers to give evidence in court since they were considered transgressors.²⁴

RABBI ABRAHAM, THE SON OF MAIMONIDES. This final chapter deals with the interesting topic of Rabbi Abraham, the son of Maimonides, who succeeded his father as the head of the Jewish community in Egypt (1204–37), and more generally with the influence of Muslim Sufi pietism and mysticism on Judaism. This Muslim movement and its marvelous religious literature had a tremendous impact on the Jews, who were attracted by it even more than by Arab philosophy.²⁵ That some Jews actually joined Sufi groups is attested by Muslim sources, as well as by Jewish letters from the *genizah*. S.D. Goitein published a heartrending letter from a poor Jewish woman to the Nagid David (probably the David 11 Maimonides who, in the middle of the 14th century, became one of the leaders of Egyptian Jewry), in which she implores him to help her bring her husband Basir back to her from the company of “al-Fuqarā” (the Muslim mystics; literally: the poor). Basir had forsaken his wife and children and taken up residence in a Sufi convent on a mountain near Cairo. His wife expressed her fear that he would abandon Judaism and that their three children would follow his example.²⁶

Fragments of poetical and prose works of the Muslim mystics, in their original language but in Hebrew transcription, were found in the Cairo Genizah, and R. Abraham Gavi-son of Tlemcen in Algeria (d. 1605) says in his commentary on the Proverbs that “every educated man must be impressed by the great philosopher Abu Ḥamid al-Ghazālī,” whose books are studied by many Jewish scholars.²⁷ Al-Ghazālī was, of course, not only one of the great Muslim thinkers, but also an outstanding Sufi pietist. Jewish writers, however, never reached the same degree of extreme ecstasy which the Muslim mystics sought, and which induced them to tear down the partitions between religions, between good and evil, and even between God and man.

The story of R. Abraham the son of Maimonides is one of the most striking episodes in the history of this influence.²⁸ R. Abraham (d. 1237), who had inherited the function of *Ra’īs al-Yahūd* (leader of the Jews) from his father, was not only a leader and a *halakhic* scholar (see the volume of his responsa published by C. Freiman and S.D. Goitein), but also an outstanding Sufi. He wrote a great pietist Sufi compendium named *Kifāyat al-‘ābidīn* (“The Sufficient Book for the Servants of God”), and tried to win his generation over to the Sufi way of life and to prove to them, with the help of a great many quotations from Jewish sources, that this was the true way for God-fearing men. Although opinions differ as to his sources, there is no doubt that he was deeply influenced by the world of Sufism, with which he had become closely acquainted in Egypt.²⁹ Rabbi Abraham argued that Islam, especially in its Sufi version, preserved many elements of the practices and teachings of the ancient Jewish Sages, which the latter had intentionally neglected with the appearance of pietist heretic circles. Among these elements were kneeling and prostration during prayer, ritual immersions, nightly prayers, etc. Early Islam adopted these ceremonies, as well as the attendant feelings of awe for the Day of Judgment and disgust at this world.

In the world of Islam all these elements were developed in a special way in the Sufi movement, and that is why they are so closely related to the ancient Jewish Sages.

R. Abraham did not, however, content himself with theoretical study alone. His conviction induced him to demand the return to the ancestral customs by imitating the Muslim surroundings, for instance in the matter of prayer. In one section of his work he suggests the removal of pillows from the synagogues and, instead, the spreading of prayer mats and carpets on the floor as in the mosques, and to the practice of prostration in prayer, like the Muslims,³⁰ and he praises the respectful silence in the mosques, which was in flagrant contrast to the noise and lack of devotion in the synagogues of his day. R. Abraham's suggestion, however, was not adopted, as we learn from the *genizah* documents. The members of his congregation filed a complaint against him with al-Malik al-'Adil, the ruler, the brother and heir of Saladin, that he tried to force upon them innovations (*bid'a*) forbidden by their religion. This was in contravention of the laws of Islam, which in this respect were also applied to the non-Muslim communities under its jurisdiction. R. Abraham was compelled to apologize to the Muslim ruler and to announce that he did not intend to abuse his authority as leader of the Jewish community by introducing such religious innovations.³¹

Judeo-Arabic culture should not, therefore, be treated as a Jewish culture which merely expressed itself in Arabic, but as a common Jewish-Muslim culture cultivated by Jews who lived under the rule of Islam, spoke Arabic, and were deeply influenced not only by some spheres of Islamic civilization, such as Muslim philosophy, but by Islam as a religion in its widest sense.

Notes

1. H.A.R. Gibb, "The Influence of Islamic Culture on Medieval Europe," in: *John Rylands Library Bulletin* 38 (1955–56), 82–98, esp. 85–87.
2. See, e.g., R. Moses b. Maimon, *Responsa*, ed. and transl. from the Arabic into Hebrew by J. Blau, Jerusalem, 1957, II, 726ff (in Hebrew). This does not mean that Jewish Sages, Maimonides included, refrained from stressing the basic differences and points of dispute between Judaism and Islam.
3. Cf. *Mishnah*, Ber. 5:1, 5: "None may stand up to say the *Tefillah* save in sober mood. The pious men of old used to wait an hour before they said the *Tefillah*, that they might direct their heart towards God."
4. S.D. Goitein, *Jews and Arabs: Their Contacts through the Ages*, Schocken, N.Y. 1955, 178–79.
5. Many of those regulations were taken over by Islam from Byzantine legislation. Cf. A.S. Tritton, *The Caliphs and Their Non-Muslim Subjects* (London, 1930) and *Encyclopaedia of Islam*, v. dhimma.
6. This aspect was especially stressed by J. Guttmann in his studies. See, e.g., his *Philosophies of Judaism* (transl. by D.W. Silverman), The Jewish Publication Society of America, Phila., Pa., 1964, Ch. II, and see his article, "Religion u. Wissenschaft

im mittelalterlichen u. modernen Denken," in: *Festschrift zum 50. Bestehen der Hochschule für die Wissenschaft des Judentums, Berlin*, 1922, 146–240. In spite of the feeling of alliance, as it were, there also flourished, of course, a whole genre of polemic literature, especially Islamic polemics against Judaism and Christianity, often composed by Jewish or Christian converts to Islam. Cf. M. Perlmann, "The Medieval Polemics between Judaism and Islam," in: S.D. Goitein (ed.), *Religion in a Religious Age*, Association for Jewish Studies, Ktav Publishing House, New York, 1974, 103ff., and especially the general bibliography mentioned there on 135–38. Cf. now also his ed. and transl. of *Shaykh Damanhuri on the Churches of Cairo*, University of California Press, 1975, and see Hava Lazarus-Yafeh, *Studies in Al-Ghazzali*, Jerusalem, Magnes Press, Appendix A.

8. Cf. I. Goldziher, *Vorlesungen über den Islam*, Heidelberg, 1925, Ch. II, 44.
9. See A.I. Katsh, *Judaism in Islam, Biblical and Talmudic Backgrounds of the Koran and its Commentators*, New York, 1954, Sura II, 193, 137–39, and cf. my review of the Hebrew translation of this book (in Hebrew) in: *Ha-Mizrah he-Hadash (The New East)*, *Quarterly of the Israel Oriental Society*, 9 (1958–59), 111–12.
10. A. Geiger's above-mentioned study was translated into English by M. Young as *Judaism and Islam*, Madras, 1848 (and reprinted by Ktav, New York, 1970, with a prolegomenon by M. Perlmann), and was followed by many studies. It should be noted here again that many of these Jewish (and Christian) stories (*Isrā'īliyyāt*) were "islamicized," as it were, and elaborated upon in special Muslim collections called *Qīṣaṣ al-Anbiyā*. Afterwards these Islamic versions of ancient biblical stories exercised clear influence on late Hebrew Midrashim, thus proving once more the "closed circle" relationship mentioned above between the two cultures. Cf. e.g., J. Heinemann, *Aggadah and Its Development* (Hebrew), Jerusalem, 1973, Ch. 12 (on the late Midrash "Pirkei de Rabbi Eliezer"). The study and translation of the various "*Qīṣaṣ al-Anbiyā*" as a literary genre of Arabic religious literature has only recently been begun.
11. G. Vajda, "Jeune Musulmane et Jeune Juif," in: HUCA, 12–13 (1938), 369. *Encyclopaedia of Islam*, v. Ramaḍān (S.D. Goitein).
12. Cf. *Encyclopedia Judaica*, **Etrug*." See also S.D. Goitein, *Jews and Arabs*, 193. According to Goitein, this specific Arabic version of the Joseph story may have its origins in early Persian literature, *ibid.*, 194–95.
13. Cf. J. Blau, *The Emergence and Linguistic Background of Judeo-Arabic*, Oxford, 1965 (third revised edition, Jerusalem, 1999), 158ff (Appendix II, c). *Idem*, in: *Tarbiṣ*, *Quarterly for Jewish Studies*, 15 (1970–71), 512–14; see also the innumerable Judeo-Arabic texts, such as Saadia Gaon's *Siddur* (Book of Prayers), his translations of the Bible into Arabic or his famous

Kitāb al-Amānāt wal-ʿItiqādāt (*Book of Beliefs and Opinions*; transl. into English by S. Rosenblatt, Yale University Press). The same holds true for Judeo-Persian Literature. Cf. e.g., H.H. Paper, *A Judeo-Persian Pentateuch*, Jerusalem, 1972, passim. This may mean that we deal not only with Arabic linguistic influences, but with Islamic influences.

14. The Hebrew translation of the book was published with a Hebrew introduction by J. Goldenthal, Paris, 1839, with the title *Compendium Doctrinae Ethicae, auctore al-Ghazzali Tusensi, philosopho Arabum clarissimo, de arabico hebraice conversum ab Abrahamo bar Chasdai Barcinonensi (liber argumento luculentissimus et oratione dulcissimus...)*. Cf. also M. Gottstein, "Translations and Translators in the Middle Ages," in: *Gotthold E. Weil Jubilee Volume*, Jerusalem 1953, 74–80.

15. A.S. Halkin (ed. and transl. into Hebrew), Moshe b. Ya'akov ibn Ezra, *Kitāb al-Muḥadāra wal-l-Mudhākara, Liber Discussiones et Commemorationis (Poetica Hebraica)*, passim, and see A.S. Yahuda (ed.), *Al-Hidāya Ilā Farā'id Al-Qulūb des Bahja ibn Jōsēf Ibn Paqudā aus Andalusien*, Leiden 1912. Introduction (German), Ch. 3.

16. See S.D. Goitein's monumental *A Mediterranean Society*, especially Vol. 2, *The Community*, University of California Press, 1971, and Vol. 3, *Daily Life and the Individual*, 1976. As for specific influences cf. also N. Wieder, *Islamic Influences on Jewish Worship* (Hebrew), Oxford, 1957, or M. Zucker, "The Problem of 'Isma – Prophetic Immunity to Sin and Error in Islamic and Jewish Literatures" (Hebrew), in: *Tarbiz*, 35 (1966), 149–73 (English summary p. vii). Yet one has to be very careful, especially when dealing with details. Cf. e.g., S.D. Goitein's review of J. Blau's edition of Maimonides' *Responsa*, "Maimonides as Chief Justice," in: *JQR*, 49 (1958–9), 191–204, especially 198, n. 25. Nevertheless, the fact of Islamic influence on medieval Oriental Judaism is today acknowledged almost unanimously among students of Jewish history. Cf. also A.S. Halkin, "Judeo-Arabic Literature," in: L. Finkelstein (ed.) *The Jews, Their History, Culture and Religion*, Vol. 2, New York, 1960, 1116–48; G. Vajda, *Introduction à la Pensée Juive au Moyen Age*, Paris, 1947. It is interesting to discern the same acknowledgement of general influence and the same reservation with regard to specific religious influences in the study of Islamic influences on the Christian West. As against this, see, e.g., G. Makdisi's studies, for example his article "The Scholastic Method in Medieval Education..." in: *Speculum*, 49 (1974), 640–61, esp. 641, 661.

17. Cf. EIS² v. *iḏjāz*.

27. *Omer ha-Shikhḥah* (Hebrew), Livorno, 1748, 138a.

28. For a full account, see S.D. Goitein, "Abraham Maimonides and his Pietist Circle" (English), in: A. Altmann (ed.), *Jewish Medieval and Renaissance Studies*, P.W. Lown Institute of Advanced Jewish Studies, Brandeis University, Studies and Texts 4, Harvard University Press, 1967, 145–64; and the bibliography mentioned there in note 1. Cf. also *idem*, i.e., "A Treatise in Defense of the Pietists by Abraham Maimonides," in: *JJS*, 16 (1966), 105–14; *Jews and Arabs*, 182ff.; *A Mediterranean Society*, Vol. 2, 1971, 156–57, 406–7; G. Cohen, "The Soteriology of R. Abraham Maimoni," in: *PAJR*, 35 (1967), 75–98; 36 (1968), 33–48. An analysis, edition, and English translation of parts of R. Abraham's *Kifāyat al-ʿAbidīn* is to be found in S. Rosenblatt (ed.), *The Highways to Perfection of Abraham Maimonides*, 1, New York, 1927; 2, Baltimore, 1938.

29. Scholars are divided upon the question, and some, like G. Cohen, try to minimize Islamic influences on R. Abraham.

30. It may be important to note here that in many aspects there is a much greater affinity between a synagogue and a mosque than between the former and a church, especially a Catholic church. Cf. for example, the common prohibition of paintings and sculptures of men and animals, based on Exodus 20:4–5 and Sūra v, 91 and the commentaries thereon. (This prohibition did not hinder the rise of the fine arts, especially in Islam. Cf. K.A.C. Creswell, "The Lawfulness of Painting in Early Islam," in: *Ars Islamica*, 11 (1946), 159–66, and cf. EI-Sūra; cf. now

also the general survey of R. Ettinghausen, “Decorative Arts and Paintings: Their Character and Scope,” in: J. Schacht and C.E. Bosworth (ed.): *The Legacy of Islam*, Oxford, 1974; 274ff. and the bibliography mentioned there 291–92.) Suffice it to mention here that the religious laws of both Judaism and Islam permit paintings, sculptures, etc., of people and animals, only if they are maimed or put on the earth to be trodden upon.

31. The most interesting documents concerning this affair were preserved in the Cairo Genizah (see S.D. Goitein, *A Mediterranean Society*, Vol. 1, Introduction, and idem (ed.) *Religion in a Religious Age*, 139ff.).

JUDEO-FRENCH, the Old French spoken and written by medieval French and Rhenish Jewry. It should be stated from the outset that there probably never existed a Judeo-French dialect, with specific Jewish traits. The term applies only to Jewish activities in medieval France, which had French as their vehicle. The mother tongue of the Jews in France during the Middle Ages was what is now called Old French. It was identical with the language spoken by the other inhabitants of the region with whom they lived in close contact. The Latin which they originally spoke underwent the same evolution and the same geographical diversification: thus the Jews of Normandy spoke the Norman dialect, those of Troyes that of Champagne, those of Dijon, Burgundian. They spoke it at home, in the market, at the synagogue, and at school. Rabbinical discussions were conducted in Old French, and it was sometimes even the language of prayer. The pronunciation of Hebrew was gallicized, *היי* being pronounced *agin*. Very few Hebrew words relating exclusively to Jewish traditional practices were used even in prayers: most were gallicized, such as *plain* for *פֿאַשט*; *bonteable* for *הַסִּיד*. The names adopted by Jews were French: *Colon* (= *יוֹנָה*), *Bendit* (= *בְּרִיךְ*), *Vives* (= *חַיִּים*), *Quinet* (*Jacquinet* = *יַעֲקֹב*), *Monet* (*Simonet* = *שִׁמְעוֹן*), *Belasez* (*Belle assez*), *Fleurdelis*.

The written word, however, had a different appearance, since the Jews preferred Hebrew characters, the Latin ones being too strongly identified with the Church. This transliteration had undergone its own evolution from the Latin period and obeyed its own orthographic rules. The Latin *k*, when pronounced [tʃ] in Old French, was still rendered by ק, a diacritical mark showing the new value: ק; the Latin *j*, Old French [dzh], was transcribed by ך with a diacritical mark until the 13th century; and the Latin *u*, becoming the French [ü], was written ך. The spelling testifies to dialectal differences in keeping with, and stemming from, knowledge of the Latin characters of Old French. The best-known Old French words in Jewish texts are the (glosses) in commentaries on the Bible and Talmud. Somewhat older are the glosses in the commentaries of *Menahem b. Helbo and the Pseudo-Gershom. From the 12th

century onward French glosses appeared in all the rabbinic writings of French and English Jewry: biblical and talmudic commentaries, responsa, halakhic treatises, prayer books, codes of law and custom, and financial records, as well as in the margins of innumerable manuscripts. Far more important, however, are the biblical glossaries, of which only six more or less complete 13th-century examples are still extant, although there are fragments of nine more. They contain tens of thousands of Old French words rendering the Scriptures into the vernacular. Together with two complete biblical dictionaries and the fragments of two more, these testify to a continuous translation of the Bible into French as taught in Jewish schools and houses of study. Because of their traditional character, they carried a certain number of ancient Old French words which had disappeared from gentile literary usage, pointing to Normandy as the likely home of the French version. Because of a misleading impression given by the Hebrew script and a false analogy with and – not to speak of a general ignorance of the Old French dialects – a mistaken idea of a distinctive Judeo-French dialect came into being. There are, however, few reasons to doubt that Jews in France spoke and even prayed in the Old French of their Gentile surroundings. Only a few liturgical poems, written according to French literary norms, have survived, and their quality suggests a wide use of this medium in religious services and ceremonies.

French seems to have been the vernacular in Rhineland Jewries in the early Middle Ages and some Old French words were thus carried over into Yiddish, for example *challant* (חַלְמִי, literally “being warm” – *tsholent*). This also accounts for the gallicized form of the official name of certain Jewish communities: *Aspire* (Speyer), *Germèse* (Worms), *Magenze* (Mainz); and in English Jewry, *Londres* (London) and *Nicol* (Lincoln).

[Menahem Banitt / Cyril Aslanov (2nd ed.)]

JUDEO-GREEK. The Judeo-Greek language is known from medieval times onward. It contains an element of Hebrew and Aramaic origin in its vocabulary and grammar and is written in Hebrew characters. Since the 15th century there has also been an element of Turkish origin. Three examples of the Hebrew element are *Yavan* (Javan, Gen. 10:1–2, used in Hebrew for Greece=Ionia), “a Greek”; *hamor* (donkey), “a dunce”; *akhlantzis* (Heb. *akhlan*), “glutton.” The earliest Judeo-Greek glosses are considered to be those in the *Arukh* (c. 1101), the

talmudic dictionary by Rabbi *Nathan ben Jehiel of Rome. Two other early documents are a fragment of Ecclesiastes translated into Greek and a translation of Jonah containing elements foreign to the language spoken in the 13th century. A fragment of a Greek mishnaic glossary of 124 Hebrew words with their Greek equivalents has been assigned to the 10th or 11th century because of the colloquial phenomena familiar from Byzantine epigraphy; and a Hebrew manuscript of 99 words (1408 – Bibliothèque Nationale, Paris) probably dates from about 1250. A beautiful parchment manuscript of the Book of Jonah found at Candia, Crete, in which the copy's sale in 1263 is recorded, is thought to be the earliest known relic in Judeo-Greek, because the language employed is nearer to ancient Greek than that of any other relic of Byzantine literature (Oxford, Bodleian Library, 1144). Another translation of Jonah (3574, University of Bologna) occurs in a *mahzor* written in the Corfu dialect dating from the 15th century. Another important document of this period is a fragment of a manuscript located in the National Library in Jerusalem. This includes a brief commentary on Psalms, Lamentations, and Ecclesiastes (see bibliography). The most extensive Judeo-Greek work intended for Greek-speaking Jews of the Balkan peninsula is the translation of the Constantinople Polyglot Pentateuch (1547). The total absence of Turkish words has led some scholars to conclude that the Judeo-Greek Pentateuch was written at least two centuries before the date of publication. There are some archaisms in this work, but they are exceptional. In most translations, as well as in many original works, vowels are indicated by vowel signs (in addition to the vowel letters). The sound “a” was indicated by *kamaz* or *pattaḥ* (often with a following *alef*); the sound “i” by *hirik* (followed by *yod*); “e” by *zeireh* (followed by *yod*); “o” by a full *holam*; and “u” by a *shuruk* or *kubbuz*. A Judeo-Greek translation of Job (Constantinople, 1576) was the work of Moses b. Eliezer Phobian (or Pobian), who states explicitly that his aim was to facilitate the teaching of the Hebrew language. Manuscript versions of these translations are to be found in the Bodleian Library, Oxford. There are several collections of Judeo-Greek hymns, one of which – *Yanniotika Evraika Traghoudhia* (1953) – contains 16 hymns, 13 of them previously unpublished. A hymn which begins “Εναὸς ὁ Κύριος ὁ θεός” (“The Lord, God, is One”) consists of eight stanzas, each of which has a two-word Hebrew refrain: “Israel Hallelujah.” A Jewish liturgical song dating from the Renaissance, *Pismon tou Purim*, occurs in two forms: the Chalcis version (ten stanzas) and the superior Oxford version (24 stanzas). The vowel points of the former can be judged only by the vocalization of the Hebrew refrain, the words of which are “Merciful living God, the true King.”

The Corfu linguist Papageorgios, editor of *O Israilitis Chronographos* (published in Corfu), first announced the discovery of Judeo-Greek poetry in 1881. In 1889 and in 1900, he reproduced eight stanzas of a hymn entitled “Song Sung Formerly in the Synagogue of Corfu on the Sabbath.” The same collection (no. 2, p. 3) contains fragments of 70 verses from an old manuscript, inspired by Isaiah and other biblical proph-

ets. The Karaite Elijah Afeda Beghi produced a Judeo-Greek version in 1627 of the Aramaic chapters of Daniel and Ezra still in manuscript in 1914, while for the rest of the Bible he compiled a glossary of difficult words. The Karaites continued to use Judeo-Greek even after the fall of Constantinople in 1453. Judeo-Greek continued to be spoken and written in Janina, Prevesa, Larissa, Arta, Trikkala, Volos, Chalcis, and especially in Corfu and Zante. During the Nazi occupation of Greece, some Jews communicated with each other in Judeo-Greek as a protective measure. Except for those still familiar with *Ladino, Greek Jews of the post-World War II era spoke standard Greek.

[Rachel Dalven / Cyril Aslanov (2nd ed.)]

JUDEO-ITALIAN. Among the Jews living in central and southern Italy, a special dialect took shape from the early Middle Ages onward, particularly in Rome, which scholars have termed Judeo-Italian or Judeo-Roman (*giudeo-romanesco*). One of the several Judeo-Romance dialects which developed alongside the Romance vulgars, Judeo-Italian contains many linguistic elements common to all these dialects. With the formation of a major Jewish cultural center in Rome during the 13th–14th centuries, Judeo-Italian became a type of *koine* spoken by Jews throughout Italy, who called it *Latino* or *Volgare*. Although Jews spread its use as far as Venice and Piedmont to the north and Corfu in the Aegean to the east, the dialect retained its old, archaic form only in Rome, although here, too, it underwent modification and development over the generations. Judeo-Italian belongs to the south-central group of Italian dialects. Both written evidence and the spoken language itself show that a considerable part of the ancient Roman substratum – identical with the dialect of Rome

and the surrounding areas spoken by non-Jews in the 13th century – is still recognizable in Judeo-Italian. However, together with this basic element, it is possible to detect the important influence of other central Italian dialects, such as those of the Marches, Campania, Umbria, and the Abruzzi. Judeo-Italian has also preserved still earlier elements, imported by Jews who immigrated from southern Italy and Sicily. A distinct development may be seen in the dialect's Judeo-Roman form during the 15th–16th centuries, although this became frozen after the Jews were isolated in the Roman ghetto from 1555 onward. The special linguistic peculiarities of Judeo-Italian are hard to determine because of the marked affinity of the various Italian dialects. The sole basis for its study lies in the classification and investigation of Judeo-Italian's archaic phonetic and morphological characteristics, as well as in its ancient vocabulary (which has been preserved as a result of Italian Jewry's historical mobility), such characteristics having long vanished in other Italian dialects. The various linguistic phenomena characteristic of the Jewish dialects in general are recognizable in Judeo-Italian. They include (a) the creation of words with a Hebrew root and an Italian suffix, and vice versa – *achannoso* (<*hen*, “charming,” “comely”), *dabberare* (<*dibber*, “to speak”), *achlone* (<*akhlan*, “glutton”); (b) the creation of mixed terms, half-Hebrew and half-Italian – *mal-mazzalle* (“bad luck,” cf. Yiddish *shlimazl*), *magna-torà* (“Torah eater,” applied to one who reads at an excessive speed), *perdi-zemàn* (“time loser,” i.e., one who wastes time); (c) the preservation of many Hebrew words, including those relating to prayer, study, and worship, which did not readily lend themselves to translation – *cavanà* (<*kavvanah*, “devotion”), *chinianne* (<*kinyan*, “betrothal contract”), *sirichoddi* (<*selihot*, “penitential prayers”), *banganodde* (>*be-avonoteinu*, “for our sins,” a nickname for an unfortunate, luckless person); (d) abstention from the use of Italian words relating to Christian ritual, or a deliberate distortion of such terms – *tonghevà* (<*to'evah*, “abomination,” signifying “crucifix”); (e) the coining of approved or secret terms similar to the language of the underworld – *jobbedde* (from *ג"י* “twelve” = “policeman,” a nickname given to the policemen because of the number “12” embroidered on their uniform); (f) the use of Hebrew words in a sense differing from the accepted meaning, or the rejection of one Hebrew word in favor of a synonym – *chavèr* (<*haver*, for “servant”), *beridde* (<*berit*, for “sex organ”), *ngarelle* (<*arel*, for “non-Jew”); (g) a tendency, especially in translations, to use homophones or Italian words reminiscent of identical or similar Hebrew terms.

Judeo-Italian Literature

Judeo-Italian literature may be said to include all the works intentionally written in the dialect, using Hebrew orthography and the set rules of transliteration. The outstanding original work is a Lamentation for the Ninth of Av written at the beginning of the 13th century and based on literary motifs borrowed from the Midrash. This Lamentation, one of the earliest poetic texts in Italian, possesses considerable literary value and the author was apparently influenced in his choice of style

by the Italian religious poetry of his time. Other documents which have survived include a “Hymn in honor of Queen Sabbath” by Mordecai b. Judah *Dato (published by Cecil Roth, see appended bibliography). In addition, it would appear that Judeo-Italian was the language in which R. Moses *Rieti wrote his ethically oriented, 15th-century philosophical treatise, now preserved in manuscript at Leiden (MS X, 1 or, Sca-liger). Because of their linguistic character, translations form the richest and most important part of Judeo-Italian literature. To facilitate study of the Bible, liturgy, grammar, philosophy, and medicine, and to assist children and women who could read Hebrew without actually knowing the language, Italian Jews translated the entire Bible, the prayer book, the Passover *Haggadah*, the Ethics of the Fathers, various hymns, and large portions of the liturgy. Other works translated were Moses b. Joseph Kimḥi's grammatical treatise *Mahalakh Shevilei ha-Da'at* (early 14th century), Maimonides' *Millot ha-Higgayon* (15th-century manuscript) and *Guide of the Perplexed* (translated by Jedidiah da Recanati, c. 1580), together with various pharmaceutical lists and selections from books on practical medicine. The Bible and the liturgical translations are notable for their conservative nature and for their establishment of a particular method of translation and unified tradition of translation, whose origins date from the era of the later Roman Empire and were crystallized during the 13th century. These Judeo-Italian translations are distinguished by their use of ancient terms long vanished from normative Italian, and by their preservation of the old Jewish exegetical tradition governing the comprehension of particular biblical nouns and expressions. However, despite the mechanical method of translation, the translators succeeded in preserving aesthetic values, both in poetic rhythm and in the lyrical power of the biblical source. Evidence of this is provided by a 13th-century Judeo-Italian version of the Song of Songs, which is the oldest Italian translation of the biblical work. Apart from isolated portions published in recent times, these translations of the Bible remain in manuscript. The liturgical translations were, however, published several times during the 16th century (Fano, 1505; Bologna, 1538; Venice, 1547; Mantua, 1561). A translation into Judeo-Italian was included in a series of Passover *Haggadot* published in Venice in the 17th–18th centuries. Pedantic adherence to the original Hebrew, shown both in the preservation of ancient vocabulary and in the Hebrew influence on the morphology and syntax of the sentence structure, is also characteristic of the translations of the philosophical and grammatical treatises. Several glossaries in Judeo-Italian have survived, composed especially for Bible study and to aid an understanding of any text written in Hebrew. Of the biblical glossaries which have been published – many remain in manuscript – the most important was the *Makrei Dardekei* of Perez Trabot (Naples, 1488), a biblical dictionary with Arabic and Judeo-Italian translations of the roots. One of the most ancient and important collections of glosses is that found in the first talmudic dictionary, the *Arukh* of Rabbi *Nathan ben Jehiel of Rome (late 11th century), which contains some 600

Judeo-Italian words. There is also a multitude of Judeo-Italian glosses in Judah b. Moses b. Daniel Romano's early 14th-century edition of Maimonides' *Mishneh Torah*.

As a spoken language, Judeo-Italian has disappeared in most parts of Italy, although it continues to retain a certain degree of vigor among the Jewish working classes of Rome.

[Joseph Baruch Sermoneta / Cyril Aslanov (2nd ed.)]

JUDEO-PERSIAN, a form of Persian used by Jews and written in Hebrew characters. The oldest Judeo-Persian texts are the earliest known records in the Persian language (see Judeo-Persian Literature below). These consist of the inscriptions of Tang-i Azaq (Central Afghanistan, 752–53 C.E. according to W.B. Henning, in: *Bulletin of the School of Oriental and African Studies*, 20 (1957), 335–42; E.L. Rapp, in: *East and West*, 17 (1967), 51–58, suggested, with insufficient arguments, a much later date) and a fragment from a private letter found at Dandan-Uiliq in the region of Khotan (Sinkiang), which can also be dated to the eighth century. Next to be found among the dated documents are a brief inscription on a ninth-century copper tablet discovered at Quilon in southern India; a Karaite legal deed from an unknown locality (presumably in Khuzistan), dated 951 C.E.; a law report written at Ahvaz, Iran, in 1021 C.E., and a collection of funerary inscriptions dating from the late 11th to the early 13th centuries and emanating from a community at Firuzkuh in central Afghanistan. In the exegetic literature as well as in fragments of commercial and personal correspondence, the Cairo *Genizah* and certain other Oriental manuscript depositories acquired by Abraham Firkovich for his collection (now in St. Petersburg), provide texts datable to the period before the early 13th century. Some of these texts will be enumerated and discussed below.

Many Judeo-Persian writings contain linguistic peculiarities which do not occur in Persian texts written in Arab-Persian script. These peculiarities have often been classified quite simply as "Judeo-Persian." Such a statement has little meaning, since it is evident to anybody examining Judeo-Persian literature as a whole that it has no linguistic unity. The term "Judeo-Persian" does not define a particular form of Persian

distinguished from the classical language by regular characteristics. There never was a unified Persian dialect which could be said to belong specifically to the Jews of Iran. Some of the linguistic peculiarities of Judeo-Persian are purely stylistic. Translations of the Scriptures have, throughout the centuries, presented certain specific traits: a literal method of translation, word for word or even morpheme for morpheme (this being also the method used by Muslim translators of the Koran), and a systematic use of certain rare or archaic forms such as active participles in *-ā* to translate Hebrew participles and the particle *azmar* to translate אָזַר. Such traits are restricted to the style peculiar to this kind of writing.

Most of the Judeo-Persian linguistic characteristics are, however, dialectal: they belong to local forms of Persian spoken in different regions of Iran. The fact that they appear practically only in Judeo-Persian texts may be explained in connection with the history of the Persian language and the conditions in which Judeo-Persian literature was produced. From the time when the Persian language extended from its original home in southwest Iran to the entire Iranian plateau, it was diversified into a large number of local variants. These dialects were restricted to colloquial usage and did not, as a rule, find their way into the literature in Arabic script, where the classical language (which became fixed and unified at an early stage) reigns, with few exceptions, supreme. On the contrary, Judeo-Persian writings, with the exception of the most literary texts, are foreign to the tradition of classical literature and escaped its normalizing influence. In particular, the old translators of and commentators on the Scriptures, who wrote merely to instruct their fellow-Jews and who did not care for aesthetic considerations, addressed them quite naturally in the current language of the locality, which may have been quite similar among Jews and non-Jews. For this reason, Judeo-Persian literature affords valuable evidence as to the history and dialectology of the Persian language. It would be helpful if we could identify the geographical origins of the different compositions in Early Judeo-Persian, but, apart from a well-defined group of documents coming from Khuzistan in South-West Iran, most fragments cannot be assigned to a definite place of origin.

Dialectal peculiarities are particularly frequent and interesting in the early texts. In the later period, from the 14th century on, the Jews generally used in writing a form of standard Persian which was practically the same as classical Persian. The differences are mainly those of script (the Hebrew alphabet being used for Judeo-Persian), orthography (Judeo-Persian tends to indicate the short vowels *u* and *i* by the letters *vav* and *yod*, contrary to the practice in Standard Persian, and they use different conventions for some of the consonants, e.g., *j* and *č*), and vocabulary (Judeo-Persian often uses Hebrew and Aramaic expressions). The writings which emerged in the 18th–19th century among the Bukharan community are however strongly marked by the local vernacular. Although the early Judeo-Persian texts have not yet been fully explored, a number of dialectal variants can be distinguished among them.

(1) Among the ancient documents, the somewhat laconic inscriptions are of limited instructive value. The Dandan-Uiliq letter, which is fragmentary and cannot be interpreted fully, is remarkable for certain archaisms, notably the use of the *ezāfe* particle (written ארי) as a relative; this usage, common in Middle Persian, does not appear in New Persian texts in Arabic script. Also noteworthy is the almost total absence of Arabic words, characteristic of a very early phase of the language.

(2) The two legal documents, one written in Khuzistan province in 951 (Mosseri Collection Ia.1), and the other, written in Hormshir in 1021 (Bodl. Ms.Heb. b.12.24), the fragment of a Karaite Book of Precepts in the British Library (Or. 8659), together with a number of still unpublished letters from the Cambridge *Genizah* collection, all display some typical features of the Khuzistan dialect: they use the *ezāfe* particle as a relative, and that particle is most often attached in writing to the following word; the word for “thing” is תיס, as in Manichaean Middle Persian, while classical New Persian has the form *čīz* for this word; they have a preposition written א or א (possibly pronounced *o*), which perpetuates the Middle Persian preposition *ō*, a preposition that no longer exists in Standard Persian; they have a passive present stem which ends with the morpheme *ih-*, spelled *-yh-* or *-h-*, before the personal endings, another Middle Persian feature; there is frequent attestation of *imāla* in Arabic words, viz. the change of long *ā* vowel to *ē* or *ī* in certain phonetic conditions, as in *klyp* for Arabic *khilāf* “difference, contrariness.” In addition, the vocabulary of these texts contains a whole range of rarely attested or hitherto unknown words, some of which are only familiar from Middle Persian.

(3) Among the ancient exegetic texts, several fragments of commentaries on biblical books are preserved which display the same type of Khuzistan dialect as is attested in the texts described in the previous paragraph. One of these is a Karaite commentary on the *Nevi'im* and the *Ketuvim*, of which a number of fragments are preserved in the *Genizah* Collection of Cambridge University Library. One of these fragments was published in *Irano-Judaica* (1982), 313–22. The same type of language is also attested in an extensive grammatical commentary on the *Ketuvim* of which several fragments survive; see *Irano-Judaica* (1982), 310–12; Khan, *Early Karaite Grammatical Texts* (2000), 250–331.

(4) An extensive Karaite commentary on the book of Genesis (Firkovich I 4605), discussed by S. Shaked in: *Persian Origins* (2003), 195–219, of which a substantial fragment is preserved, seems to belong, by its linguistic features, to North-Eastern Iran. The most conspicuous grammatical element which ties it to the Tajik language is the use of an indeclinable past tense form of the type of *būdagī* “was.” The same feature is also attested in Part I of the St. Petersburg commentary on Ezekiel, discussed in the following.

(5) The Ezekiel commentary (Firkovich Collection I 1682) is a curious instance of a single book written in two different dialects by several scribes. The manuscript, which represents

a very large but incomplete composition, is on the whole well preserved, and is datable to the 11th century. Part 1 of the manuscript displays a north-east-Iranian type of language, as in the commentary on Genesis mentioned earlier, while Part 2 belongs to the type of language identified with Khuzistan region. The text has been studied by T.E. Gindin, and is to be published in full.

(6) A small fragment of a Judeo-Persian version of the Psalms, acquired by A. Netzer in 1973 in Zefreh, 100 km. northeast of Isfahan, displays a distinct form of the language. It is close to the Khuzistan dialect in that it has the form *kyrd* for standard Persian *kard*, the ending of the abstract noun usually in *-yh*, and the plural ending *-yh'*; but it has some divergent features. The *ezāfe* is spelled *y* and written as an independent word; an optative ending *ē* is attached to verbs, of which the form *hysty* “that it may be” is noteworthy. There are also lexical peculiarities attested in this fragment; cf. A. Netzer, *Jerusalem Studies in Arabic and Islam* 27 (2002), 419–38; S. Shaked, in: *Irano-Judaica* 6 (2006, fc.).

(7) A fragment of a book of Aramaic proverbs with a Judeo-Persian translation was published by S. Shaked, in: *Acta Iranica* 30 (1990), 230–39, and several further fragments of biblical commentaries, some of which not yet studied in detail.

(8) Further books which belong to an early layer of Judeo-Persian compositions are: the Story of Daniel (Bibliothèque Nationale Ms. Hébr. 128) – not a translation of the book of Daniel, but a midrash on the Daniel theme; a translation of Isaiah, Jeremiah, and Ezekiel, also preserved in the Bibliothèque Nationale in Paris, and a translation of the Pentateuch in the Vatican. All of them exhibit the same variant of Persian. This may be illustrated by forms such as פריביר (“fat”; classical Persian *farbih*); זיה (“to live”; classical Persian *ziy-*); דושכזיה (“virgin”; classical Persian *dūšiza*); כומאנא (“indeed”; classical Persian *hamānā*); אניז (“also”; classical Persian *nīz*); תנג (“to drink”); and a large number of words unknown in classical Persian.

(9) A translation of the Pentateuch found in a manuscript of the British Museum copied in 1319 represents a dialectal variant distinct from the preceding one (אהנג, “to drink,” הנזי “also”): but it is not yet possible to determine the region to which it belongs.

(10) The later literary writings (14th–18th centuries) are generally free from dialectal traits. They emanate from a milieu of highly cultured Jews who knew and appreciated the masterpieces of classical Persian literature and imitated them. To commemorate the past or record the sad events of the time in a worthy style, they could choose no better medium than classical Persian. This is the language employed by *Shāhīn and 'Imrānī at Shiraz, by Bābāy at Kashan, and even by Yūsuf Yahūdī in Bukhara. Only in their works does one come across examples of local pronunciation, and these are probably attributable to the copyist. In works of a more popular nature, such as the elegy of Mollā Hizqiyā (17th century), some colloquialisms are to be found, which are also common in the vernacular of modern Iran.

(10) The literary or exegetic texts composed in Bukhara during the 17th–19th centuries in general bear marks of their origin, such marks being more numerous in texts of a lower stylistic level. The poem *Khudāydat* and the prose writings abound in dialectal peculiarities of the Persian of central Asia (Tajik), which naturally are completely different from those of the ancient texts of southwest Iran. Of particular importance linguistically is the book *Likkutei Dinim*, a collection of rabbinical precepts compiled in six parts by Abraham Aminof and published in Jerusalem between 1899 and 1904. For this book see in particular W. Bacher, in: *ZfHB*, 5 (1901), 147–54; *ZDMG*, 56 (1902), 729–59.

One of the characteristic traits is that of vocalization, always written in the manuscripts and printed books of Bukharan Jews in conformity with Tajik, as opposed to the Persian of Iran. Three examples are: בָּרַךְ (“who renounces,” Tajik *bezor*, Iranian Persian *bizâr*), רוֹז (“day” Tajik *rûz*, Iranian Persian *ruz*), and לוֹטֵף (“favor,” Tajik *lutf*, Iranian Persian *lotf*). The language of these texts, which may appropriately be termed “Judeo-Tajik,” is very close to the modern literary language of Tajikistan.

Judeo-Iranian Dialects

One medieval piece of evidence for a Judeo-Iranian dialect which is not Persian but cannot be identified more closely was discovered among the Cambridge *Genizah* fragments; cf. Shaked, in: *Acta Iranica*, 28 (1988), 219–35.

Along with Judeo-Persian proper, mention must be made of the Iranian dialects still in use today among certain communities in Kashan, Hamadan, Isfahan, Kerman, Yazd and Shiraz. These dialects, used exclusively in speech, are not variants of Persian but are related to the local dialects of these regions and belong to the “central” group of western Iranian dialects. A survey of Jewish dialects was undertaken by E. Yarshater, in: *Mémorial Jean de Menasce* (1974), 453–66.

The *Judeo-Tat of the Caucasus region (Daghestan and Soviet Azerbaijan), together with neighboring dialects spoken by Muslims, form a dialectal unit, possibly dating back to a time when Iranian colonies were established by the Sassanian dynasty along the frontier of the empire. All these dialects may be called “Judeo-Iranian.”

There is a group of speech-forms used by Jews as a secret language. They are known as *Loterai*, a word which denotes a secret language. They are essentially a jargon in which Hebrew words and some distorted forms take the place of the more familiar Persian words. This phenomenon was discussed by Yarshater, in: *Journal of the American Oriental Society*, 97 (1977), 1–7; Lazard, in: *Journal Asiatique* (1978), 251–55; A. Netzer, in: J. Dan (ed.), *Tarbut ve-Historiyah* (1987), 22–23. The language of the Jews of Herat mentioned by Zarubin, in: *Doklady Rossijskoj Akademii Nauk* (1924), 181–83, seems also to belong to this type of speech.

JUDEO-PERSIAN LITERATURE

The Jews of Iran developed a rich and varied literature in the Persian language. They also contributed to several branches

of Jewish literature in Hebrew, but this falls outside the scope of this entry. Its formal identification is based on the fact that this is a literature written by Jews, most often on themes of Jewish interest and related to the world of Jewish practice and thinking, and it is written in Hebrew characters and contains a varying number of expressions in Hebrew and Aramaic. This literature was as a rule inaccessible to non-Jews, which explains why there is no reference to the monuments of Jewish-Persian literature in the mainstream Persian literature created by Muslims. There are some towering figures of former Jews who converted to Islam and who contributed to the general literature of Islamic Iran, but what was written in Judeo-Persian remained until modern times entirely unknown and unacknowledged by Muslims.

The literature composed in Judeo-Persian should be treated under two distinct chronological periods: up to the Mongol invasion of Iran in the 1220s, and from that period up to our time. The Mongol invasions created havoc in the life of Iran in general and in particular as far as the Jewish communities of Iran are concerned. Very little of the pre-Mongol literature of Iran survived into the later period, and, on the other hand, a whole new post-Mongol literature was created from the 14th century onwards with characteristic features which did not exist before.

Judeo-Persian Literature in Its Earliest Period

We now have a substantial body of literature for the early period of Judeo-Persian, most of which derives from manuscripts which have come to light during the past decades and not all of which have yet been published. The origin of these manuscripts is the Cairo *Genizah*, scattered in various collections around the world, but most of it at the Cambridge University Library; and the Firkovich Collection acquired in various book depositories in the Middle East, presently housed in St. Petersburg. The use of Judeo-Persian was not confined to the mainland of Iran. A substantial colony of Persian-speaking Jews seems to have lived during the 10th–13th centuries in Palestine, mostly in Jerusalem, and there was a continuity of Jewish Persian presence in Cairo, where some of the Persian Jews held positions of influence. Some manuscripts which may belong to this layer of literature were acquired in Iran and are now kept in the Bibliothèque Nationale, Paris, and in private collections. The main classes of the extant remnants of this once evidently vast literature are the following:

1. Bible exegesis;
2. Hebrew grammar and lexicography;
3. *Halakhah*;
4. Midrash
5. Poetry;
6. Stories and proverbs;
7. Magic;
8. Letters and legal documents.

The literary pieces that have survived represent the creative activity of both major groups within the Jewish community of Persian-speaking Jews, Rabbanites, and Karaites. It is

significant that the Cairo *Genizah*, which did not function as a library but as a place for dumping discarded pieces of writing which have lost their relevance to the owners, has usually preserved small fragments of books and a relatively large number of ephemeral writings, such as letters and legal documents, while the collections of manuscripts which derive from other sources, presumably usually synagogue libraries, often comprise larger sections of literary compositions, but their holdings contain no writings of the non-literary type, like letters.

A short survey of the compositions that have survived in the different categories follows.

1. EXEGETICAL WORKS. It is possible that Persian translations of the Bible or of certain biblical books were current among Jews even before the Islamic period. A hint in that direction is found in the Talmud (Meg. 18a), where versions of the Book Esther are mentioned in what is called “Elamite” and “Median,” two languages of the Iranian region, although we do not know which precise languages are meant by these designations. Among the versions which have turned up the following, largely unpublished, may be mentioned:

1) A translation of the *Ketuvim*, of which 54 pages have survived, covering Ps. 9–40, Prov. 1–3 and Eccl. 2–5. This translation goes verse-by-verse and follows closely the Hebrew text. This is, by its language, probably a fairly late translation (14th century?)

2) Commentary of grammatical points in *Ketuvim*, written in the Khuzistani dialect of Persian. The surviving fragments make up 32 pages. The composition does not treat every verse, but only with selected themes which are always introduced by a question. The fragments deal with topics from Ruth 1–4, Song of Songs 1–5, Lamentations 2–3, Eccl. 1–2, Daniel 10–11, Nehemiah 8–9. The commentary reflects the grammatical school of the Karaites. (See S. Shaked, in: *Irano-Judaica* (1982), 310–12; Khan, *Early Karaite Grammatical Texts* (2000), 250–331).

3) An exegesis on the Book of Genesis, of which eight pages are extant;

4) A Karaite commentary on selected verses in *Nevi'im* and *Ketuvim*, Isa. 54–66, Dan. 11–12, Est. 1–5. Twenty-one pages are preserved of this composition. One section was published by S. Shaked, *Irano-Judaica* (1982), 313–22.

5) A commentary on selected questions in Ruth (chapters 1–4), each section starting with the words: *guftan-i šān* “(As to) what they said: ...”

6) An extensive translation and commentary on Ezekiel, comprising 226 large pages, and treating in detail Ezek. 1–39. To be published by T.E. Gindin (see in the meantime in: idem, *Persian Origins* (2003), 14–30).

7) A Karaite commentary on Genesis, containing an extensive introduction and the beginning of the detailed commentary; a study by S. Shaked is in: *Persian Origins* (2003), 195–219.

8) A small fragment of a translation of the Psalms, possibly from the 11th century, purchased in 1973 in Zefreh (*Jeru-*

salem Studies in Arabic and Islam, 27 (2002), 419–438; *Irano-Judaica*, 6 (2006), fc).

9) There are, besides, eight further fragments of exegetical compositions on various books of the Bible.

2. HEBREW GRAMMAR AND LEXICOGRAPHY. Besides the grammatical commentary on the Bible (number 2 above), there are two fragments of a systematic Hebrew grammar called by the Hebrew title *qarqa'ot ha-diqduq* “the principles of grammar.” This is a typically Karaite treatment of grammar, written in the Khuzistani dialect of Persian. A preliminary edition of one of the fragments of the text is in *E.Z. Melammed Festschrift (Hebrew)*, 291–311.

Several fragments of a dictionary of the Talmud are found among the Cambridge *Genizah* texts.

3. HALAKHAH. There are a number of fragments of books dealing with legal questions. One fairly large fragment comprising 36 pages, unfortunately in a bad state of preservation, is a Karaite treatise, which contains polemics against the Rabbanites. Another fragment contains part of the introduction to a Karaite *Sefer Mitzvot* or Book of Precepts, followed by the beginning of the book and dealing with the rules for circumcision (British Library Or. 8659). It was published by D.N. MacKenzie, in: *Bulletin of the School of Oriental and African Studies*, 31 (1968), 249–69; comments by S. Shaked, in: *Israel Oriental Studies*, 1 (1971), 178–82; English translation in V.B. Moreen, *In Queen Esther's Garden* (2000), 248–55.

Another fragment in this genre seems to be a Rabbanite treatise dealing with the rules of *eruv*, still unpublished.

4. MIDRASH. An extensive collection of midrashim in Hebrew by the order of the books of the Pentateuch is found in an incomplete manuscript dated 1328 C.E., written in Sambadagan, perhaps in North-East Iran, under the title *Pitron Torah*, “Exegesis on the Torah.” The underlying composition has a good chance of being older, and seems to have been composed in the late 9th or early 10th century. The manuscript contains an appendix in Judeo-Persian, based on midrashic material, and probably reflecting a pre-Mongol Khuzistan type of Persian (edited E.E. Urbach, 1978, Heb.).

5. POETRY. Poetry, which becomes the most distinctive creation of Judeo-Persian in the post-Mongol period, is not yet so prominent in this early period. Still, we have one piece of popular poetry, in a dialect which is hard to place; see S. Shaked, in: *Pe'amim*, 32 (1985), 22–37. Other fragments contain portions of the liturgy for the Day of Atonement. The Adler Collection in the Jewish Theological Seminary contains a number of poetic fragments, mostly translated from Hebrew, which seem to reflect late Judeo-Persian (i.e., 14–18 century C.E.).

6. STORIES AND PROVERBS. A section of the texts in the category of early Judeo-Persian falls within the domain of folk stories, and includes a fragment of a story about King David, and two fragments of early Islamic history (one concerning the Caliph 'Umar).

A separate section consists of a fragment of a collection of wisdom sayings in Aramaic with a translation into Judeo-Persian, published by S. Shaked, in: *Acta Iranica*, 16 (1990), 230–39.

7. MAGIC AND MEDICINE. One of the fragments in a Judeo-Iranian language (not Persian) contains magic recipes; edited by S. Shaked, in: *Acta Iranica* 28 (1988), 219–35.

Other, still unedited fragments, deal with medical questions.

8. LETTERS AND LEGAL DOCUMENTS. A large section of the Judeo-Persian find from the Cairo *Genizah* consists of private and commercial letters, written in Judeo-Persian, sometimes with phrases in Arabic expressed by the Arabic alphabet. Another group of documents belongs to the legal field, and contains court reports concerning financial and property disputes between people, usually within one family. These documents have a special value because they mostly belong to the Khuzistan dialect of Judeo-Persian, and make it possible to contrast other Judeo-Persian dialects. The oldest documents in Judeo-Persian, and in fact in Persian altogether, fall within this group: the first is a commercial letter found in Dandan Uiliq in Chinese Turkistan, which belongs to the eighth century C.E. The document is at the British Library, Or. 8212, first published by D.S. Margoliouth, in: *Journal of the Royal Asiatic Society* (1903), 737–60; Further studies and comments: C. Salemann, *Zapiski Vostochnago Otdelenja*, 16 (1904/5), 46–57; Henning in: *BSOAS*, 20 (1957), 341–42; idem, in: *Mitteliranisch (Handbuch der Orientalistik)* (1958), 79–80; B. Utas, in: *Orientalia Suecana*, 17 (1968), 123–36; idem, in: Moreen, *In Queen Esther's Garden* (2000), 22–25; G. Lazard, in: *Acta Iranica*, 28 (1988), 205–9 (Reprinted in: Lazard, *La formation de la langue persane* (1995), 157–61); S. Shaked, in: *Israel Oriental Studies*, 1 (1971), 182.

The second is a Karaite legal deed dated 951 C.E.; the original is in the Jacques Mosseri Collection Ia.1; it was published by S. Shaked, in: *Tarbiz*, 41 (1972), 49–58 (Heb.).

A further document is a JP law report from Ahvaz, dated 1021 C.E., first published by D.S. Margolious, in: *JQR*, (1899), 671–75. Further studies are J.P. Asmussen, in: *Acta Orientalia*, 19 (1965), 49–60; D.N. MacKenzie, in: *Journal of the Royal Asiatic Society* (1966), 69; S. Shaked, in: *Israel Oriental Studies*, 1 (1971), 180–82.

These fragments survived by chance, and they no doubt point to the existence of a much vaster and more varied literature, most of which has not survived.

Judeo-Persian Literature from the 14th Century to the Modern Period

From the 14th century, under the Il-Kahnids and later dynasties, a new phase of literary creativity starts for the Jews of Iran, and the works composed fall into a wide range of literary genres. There is a clear division between standard Judeo-Persian literature and the literature composed, especially in the more recent period, in Central Asia in Judeo-Tajik or

Bukharan, a variety of Persian. An offshoot of Judeo-Persian literature is found in the manuscripts of the Jewish community of Kai Feng in China.

1. TRANSLATIONS OF THE BIBLE IN THE POST-MONGOL PERIOD. Judeo-Persian translations of the Pentateuch did not become known in the West before the sixteenth century. The first one printed (1546), is the work of the Persian scholar, Jacob b. Joseph *Tavus. It was thought at the time to be the oldest, and perhaps the sole literary achievement of Persian Jewry, but the manuscripts collected by the Florentine scholar Giambattista Vecchietti early in the 17th century, and the manuscripts which came to light in the 20th century, establish that Tavus' work actually represents the culmination of many centuries of Jewish Persian Bible study.

The oldest dated Judeo-Persian Pentateuch translation is in a manuscript in the British Library (Or 5446), copied by Joseph ben Moses in 1319 C.E. No place of origin is given, but the version could well be from Khurasan in north-east Iran. The manuscript is written in a clear hand, but is incomplete. It begins with Genesis 3:9 and goes to the end of the Pentateuch, with some large sections missing, among them, for example, the whole of Exodus. The initial Hebrew word is given for each verse, and this is followed by a word-by-word Persian translation of the entire verse. Often the Hebrew word is vocalized, usually in the supralinear Babylonian system, occasionally in the Tiberian vowel-points (see *Pronunciations of Hebrew). A commentary in Judeo-Persian or Hebrew, or by a combination of both, sometimes follows the translation, usually on grammatical points, with parallels adduced from the whole Bible. There are several citations from the *Mishneh Torah* of Maimonides to illustrate moral teachings. At the end of the text are two pages that contain the Hebrew verb paradigms. The translation portion of the text is clearly older than that of the commentary. A certain Abi Sa'ïd, whose earlier commentary influenced the work of the present author, is mentioned. An edition is available by H.H. Paper, *A Judeo-Persian Pentateuch* (Heb.) (Jerusalem, 1972).

Another important translation of the Pentateuch into Judeo-Persian is preserved in a Vatican manuscript (Vat. Pers. 61). The manuscript lacks a colophon, and its date and place of origin cannot be established. Its main interest lies in the large number of unusual Persian words and expressions which it contains. It was published in romanized transliteration by Paper, in: *Acta Orientalia*, 28 (1965), 363–140; 29 (1965/6), 75–181, 254–10; 31 (1968), 55–113.

The earliest Pentateuch version in Judeo-Persian to come to the notice of scholars was printed, as mentioned above, in Constantinople in 1546. It is the work of Jacob ben Joseph Tavus, and his version was included in the polyglot Bible done by Eleazar son of Gershon Soncino. Thomas Hyde transcribed the version from the Hebrew alphabet to Persian (Arabic) characters and published it in Walton's Bible, London (1657).

There are a very large number of other Judeo-Persian versions of biblical books, especially of the Psalms, in the period

from the 14th century to the present. A brief survey of some of these versions is given in the following:

Of the Prophets, there is a lexical commentary on Samuel, called *'Amuqot Shemu'el*, in a British Library manuscript, Or. 10472(2), studied by W. Bacher in: *ZDMG*, 51 (1897), 392–425.

A Judeo-Persian version of Isaiah, Jeremiah, and Ezekiel exists in a manuscript of Paris. P. de Lagarde, *Persische Studien* (1884), published Isaiah and a portion of Jeremiah and Ezekiel. Two chapters from Isaiah are given by H.H. Paper, in: *Acta Iranica*, 5 (1975), 145–61.

Amos was published from a Paris manuscript by B. Hjerild, in: *Acta Iranica*, 23 (1984), 73–112.

Joel was published from a manuscript at the Ben-Zvi Institute by H.H. Paper, in: *Essays in honor of Bernard Lewis. The Islamic world: From classical to modern times* (1989), 259–67.

Hosea was partly published by J.P. Asmussen, in: *Acta Iranica*, 4 (1975), 15–18. Another version is in a manuscript at the Ben-Zvi Institute, edited by not yet published by Dan Shapira.

Obadiah was published by J.P. Asmussen, in: *Acta Antiqua*, 25 (1977), 255–63, from a Paris manuscript.

Jonah was published from a Paris manuscript by B. Carlsen in: *Acta Iranica* (1976), 13–26.

Numerous versions of the Psalms exist; for details see A. Netzer, *Ozar Kitvei ha-Yad* (1985), 17.

Proverbs was published by E. Mainz, in: *JA*, 268 (1980), 71–106, from a manuscript in Paris and by H.H. Paper, in: *Irano-Judaica* (1982), 122–47 from a manuscript of the Jewish Theological Seminary in New York.

Job was published from a manuscript in the Benayahu Collection in Jerusalem by H.H. Paper, in: *Proceedings of the Israel Academy of Sciences and Humanities*, 5 (1976), 313–65.

The Song of Songs exists in several versions. The version of the Paris Bibliothèque Nationale was edited by J.P. Asmussen and H.H. Paper, *The Song of Songs in Judeo-Persian* (1977); and by E. Mainz in: *Journal Asiatique* (1976), 9–34. Other versions have been printed in various non-scholarly publications in Jerusalem. Details are in A. Netzer, *Ozar Kitvei ha-Yad* (1985), 18–19.

Ruth was published by E. Mainz in the same article (1976) from a manuscript of Paris.

Lamentations was published from a Paris manuscript by E. Mainz, in: *Studia Iranica*, 2 (1973), 193–202.

Ecclesiastes was published by E. Mainz, in: *Studia Iranica*, 3 (1974), 211–28, from a Paris manuscript, and by H.H. Paper, in: *Orientalia*, 42 (1973), 328–37, from a manuscript at the Jewish Theological Seminary. Part of a commentary on Ecclesiastes by Judah ben Benjamin of Kashan, from New York and Jerusalem manuscripts is given in English translation by V.B. Moreen, *In Queen Esther's Garden* (2000), 198–200.

Esther was published from a Paris manuscript by E. Mainz, in: *Journal Asiatique*, 257 (1970), 95–106.

Daniel was published from a Paris manuscript by E. Mainz, in: *Irano-Judaica* (1982), 148–79. Reference was made above to an Early Judeo-Persian version.

Although the Judeo-Persian translations originated in different Jewish communities, they show a certain uniformity in style, suggesting that there may have been contacts between the different centers of learning, with perhaps more than one school of translators that flourished in the 14th and 15th centuries. Many of the authors of the Judeo-Persian Bible translations, treatises, and lexica show a measure of familiarity with the leading biblical and rabbinical authorities of the West. Following traditional Jewish methods of Bible interpretation, these Jewish authors utilized not only Targum Onkelos, Talmud, Midrash, *Saadia Gaon, and *Hai Gaon, but also western authorities such as *Rashi, David *Kimḥi, and Abraham *Ibn Ezra.

2. MIDRASHIM AND RELIGIOUS NARRATIVES. The Story of Daniel is a composition based on the theme of the book of Daniel, enriched with a narrative which presumably reflects a Jewish midrash not otherwise extant in the relevant literature. The language of this composition is rather old, and abounds in unusual words and expressions. It was first published by H. Zotenberg, in: *Archiv für die wissenschaftliche Erforschung des Alten Testaments*, 1 (1870), 385–427; J. Darmesteter, in: *Mélanges Renier* (1886), 405–20. The latest edition is by D. Shapira, in: *Sefunot*, NS 7 (1999), 337–66 (Heb).

Several small collections of midrashim are found in Judeo-Persian, among which mention can be made of a midrash recounting the death of Moses, and another one on the death of Aaron. A midrash on the ascension of Moses was edited by A. Netzer, in: *Irano-Judaica*, 2 (1990), 105–43; English translation in V.B. Moreen, *In Queen Esther's Garden* (2000), 189–96.

Many of these and other midrashim were translated from Hebrew or Aramaic. In a related genre, that of sermons, there are again several compilations, the most comprehensive of which is the 19th-century book called *Ma'ame Binyamin*, by Binyamin ben Eliyahu of Kashan, preserved in a Ben-Zvi Institute manuscript written by the author in 1823. The book *Zikhron Raḥamim* attributed to Raḥamim Melammed Hakohen, published in 1962, is largely the same compilation; cf. A. Netzer (1985), 23.

There are several Judeo-Persian versions of the Tractate *Avot*, for which examples are given by W. Bacher, in *ZfHB*, 6 (1902), 112–18, 156–57; H.H. Paper, in: *Michigan Oriental Studies... George G. Cameron* (1976), 81–95. There is also a large versified elaboration on the themes of *Avot* made by 'Imrani, on which see further below. Details can be found in A. Netzer, *Ozar Kitvei ha-Yad* (1985), 21.

There are also quite a few compilations of laws relating to everyday practices, such as the daily blessings, the laws of ritual slaughter, laws pertaining to marriage, etc.

3. PHILOSOPHY, SCIENCE, MEDICINE, MAGIC. One extensive book which belongs to this genre is *Ḥovot Yehudah*, by Judah ben Eleazar, written probably in 1686, possibly in Kashan. The book was published by Netzer, *Duties of Judah by Rabbi Yehudah ben Elazar* (Heb.) (1995). An excerpt in English

translation is in V.B. Moreen, *In Queen Esther's Garden* (2000), 255–59. The same author wrote other books, one of which is on astronomy under the title of *Taqwim Yehuda*; one deals with medicine and one is a versified moralistic treatise known as *Timthāl nāme*. A tractate against the drinking of wine is lost. Details about these books, which are still unpublished, can be found in A. Netzer, *op. cit.*, 18–21.

There is a whole range of medical books which were copied from Standard Persian to Hebrew characters, to facilitate their use by Jewish physicians or learners. A list is provided by A. Netzer, *Oẓar Kitvei ha-Yad* (1985), 48–49.

Among the other sciences, handbooks for calculating the Jewish calendar are quite numerous. The interest of the Jewish public in astronomy is indicated by the books which were copied from Standard Persian to Hebrew characters. See a list in A. Netzer, *Oẓar Kitvei ha-Yad* (1985), 49.

Several collections of amulet formulae and divinations are found among the Judeo-Persian manuscripts and scattered in the various libraries. A book of dream interpretation (*Pitron ḥalomot*) was printed in Judeo-Persian in Jerusalem in 1900/1 by Shim'on Ḥakham. The book contains also other treatises on divination, one by limb twitching (*pirkus avarim*) and another one by astronomical omens.

4. PRAYER BOOKS AND PIYUTIM. The earliest Persian synagogue ritual recorded was based on that of R. Saadia Gaon. The Persian Jews abandoned this ritual under the influence of a Moroccan-born visitor from the Land of Israel, Joseph ben Moses Maman, toward the end of the 18th century and adopted the Sephardi prayer-book, which they are still using today. A facsimile edition of an early Persian prayer book from the E.N. Adler Collection, one of the few remnants of the original Persian ritual, was published by S. Tal, *Nusah ha-Tefillah shel Yehudei Paras* (1981).

To the field of liturgy belong also the *piyyutim* or religious poetry sung in the synagogues, which was one of the major areas of artistic activity of the Jews of Iran. More details are given in the section on poetry.

5. LEXICAL WORKS. One of the earliest extant lexicographical compositions in Judeo-Persian is *'Amuqot Shemuel*, a lexicon explaining rare and difficult words in the Book of Samuel, arranged by the order of the verses. The work, preserved in a manuscript at the British Library, Or. 10482(2), is still unpublished. A study of it was made by W. Bacher, in: ZDMG, 51 (1897), 392–425.

A major lexicon of Hebrew and Aramaic words occurring in the Bible, Targum, Talmud and Midrashim is *Sefer Ha-Melizah* (Book of Rhetoric), also called *Egron*, written, according to a colophon, by Solomon ben Samuel in the town of Gurganj (Urganch, in today's Uzbekistan) in the year 1339 C.E. The Persian part of the lexicon reflects the vocabulary of north-east Iran, but also quotes Turkish and Arab forms. This composition has considerable importance for the study of the Jewish sources, especially the Talmud, and demonstrates a high level of learning and intellectual tradition. The

book is unedited, but an extensive monograph, with numerous extracts from the text, was written by W. Bacher, *Ein hebraeisch-persisches Woerterbuch aus dem vierzehnten Jahrhundert*, Strasbourg (1900). There are six known manuscripts of this important book, four of which are described in Bacher's study. A detailed enumeration of all can be found in A. Netzer, *Oẓar Kitvei ha-Yad* (1985), 45–46.

Another important lexicographical work is *Egron* by Moses ben Aaron of Shirvan, written in 1459. This is a biblical lexicon preserved in an incomplete manuscript in the British Library, Or. 10482(1). The book is discussed by W. Bacher, *Zeitschrift fuer die alttestamentliche Wissenschaft* 16 (1896), 201–47; 17 (1897), 199–200; P. Horm, in: *Zeitschrift fuer die alttestamentliche Wissenschaft*, 17 (1897), 201–3; T. Noeldeke, in: ZDMG, 51 (1897), 669–76.

Several other lexical works, often called *Mikhlal* or *Mikhlol* or *Perush ha-Millot*, exist in manuscripts scattered in various libraries. A list can be found in A. Netzer, *Oẓar Kitvei ha-Yad* (1985), 46–48.

6. POETRY. Persian Jews found their highest literary expression in original Judeo-Persian poetry. The first known poet was the 14th-century poet Mawlānā Shāhīn, possibly of Shiraz, but this is uncertain; it is also unclear whether Shāhīn is his name or merely an attribute. He is regarded as the foremost Judeo-Persian poet. Shāhīn was imbued with a profound Jewish consciousness and keenly desired to clothe Jewish traditions in the literary ornaments of Persian poetry. He devoted himself to writing verses on biblical topics, and his greatest work, *Sefer Sharḥ Shāhīn al ha-Torah*, is a poetic paraphrase and reinterpretation of the Pentateuch.

Three major works of Shāhīn are extant: (1) the *Mūsā-Nameh* ("Moses Book," concluded in 1327 C.E.), a commentary on Exodus, Leviticus, Numbers, and Deuteronomy. (2) *Ardashīr-Nameh*, consisting of the stories of Esther and Mordecai and of Shero and Mahzad, the latter a typical Iranian love story. There is also *Ezra-Nameh*, dealing mainly with the reign of Cyrus the Great and the building of the Temple of Jerusalem. A. Netzer, *Oẓar Kitvei ha-Yad* (1985), 28, has however argued that the two last books were meant to be a single composition, since they appear following each other in the manuscripts, the former without a conclusion, while the latter without an opening text. The colophon at the end of *Ezra Nameh* gives as the date of completion 1333 C.E. (3) a *Bereshit-Nameh* (concluded in 1359), which includes the story of Joseph and Potiphar's wife, known to Muslims as Zulaykhā. In all his poetic writings, Shāhīn adopted the typical features of Persian poetry and applied the patterns, forms, technique, meter, and language of Persian classical poetry to the presentation of Israel's religious heroes and the events recorded in the biblical narrative, while using both midrashic themes and stories and Muslim ones to fill in the narrative. To Persian-speaking Jews, Shāhīn is "Mawlānā Shāhīn Shīrāzī" (our master Shāhīn of Shiraz"), the founder of Judeo-Persian poetry. See on Shāhīn A. Netzer, in: *Israel Oriental Studies*, 4 (1974), 258–64; exten-

sive excerpts from Shāhīn's compositions in English translation are incorporated in V.B. Moreen, *In Queen Esther's Garden* (2000), 26–119.

The next great poet in Judeo-Persian is *Imrānī, who was probably born in Isfahan in 1454 and died in Kashan after 1536. Inspired by Shāhīn, Imrānī chose as his field the post-Mosaic era from Joshua to the period of David and Solomon. He composed altogether some 12 poetic works. His major work, *Fath-Nameh* ("The Book of the Conquest," begun in 1474), was the first composition that he wrote. He recounts in it in poetic form the events of the biblical books of Joshua, Ruth, and Samuel. He started composing it in 1474 C.E., when he was 20 years old, under the guidance of a teacher by the name of Amin al-Dawla wa-l-Din, and later under that of Judah ben Isaac. The work is unfinished. The last great work of Imrānī was *Ganj-Nameh* ("The Book of the Treasures"), a free poetic paraphrase of and commentary on the mishnaic treatise *Avot*. This composition was concluded in the year 1536, when the author was above 80. This work was edited and published by D. Yeroushalmi, *The Judeo-Persian Poet 'Emrānī and his "Book of Treasure"* (1995).

In between these two major works, Imrānī composed several other smaller poetic compositions, as well as at least two prose works. For further details about Imrānī see A. Netzer, in: *Israel Oriental Studies*, 4 (1974), 258–64; idem (1985), 31–33. On Imrānī and extracts from his works in English translation, see also V.B. Moreen, *In Queen Esther's Garden*, 119–43, 159–75.

Another early 16th-century author of this type of poetry was Yahuda b. David of Lar. *Makhzan al-Pand* ("The Treasure House of Exhortation") is one of his few extant works. Cf. W. Bacher, *Keleti Szemle* 12 (1911/2), 223–28. An extract in English translation is included in V.B. Moreen, *In Queen Esther's Garden*, 176–183.

In 1606, Khāja Bukhārāi composed a poetical work called *Dāniyāl nāma*, based on the Book of Daniel as well as the Apocrypha and midrashic literature, using the poetic conventions of the earlier Jewish poets, Shāhīn and Imrānī. A study of this poet by A. Netzer is in G.L. Tikku (ed.), *Islam and Its Cultural Divergence* (1971), 145–64; idem, in: *Israel Oriental Studies*, 2 (1972), 305–14; idem, *Ozār Kitvei ha-Yad* (1985), 33. Extracts in English translation are included in V.B. Moreen, *In Queen Esther's Garden* (2000), 146–58.

Aaron ben Mashiah is a 17th-century poet. He was born in Isfahan and moved later to Yazd. His composition *Shofetim Nāma* (The Book of Judges), a poetic elaboration of the biblical book of Judges up to chapter 19, was composed in 1692 and follows the pattern of Imrānī's *Fath Nāma*. The book contains an allusion to the bloody riots in Isfahan in which the Sabbatean emissary Mattitya Bloch was killed. Cf. A. Netzer, *Ozār Kitvei ha-Yad* (1985), 33–34. Extracts in English translation are in V.B. Moreen, *In Queen Esther's Garden* (2000), 143–46. The poetic work of Aaron ben Mashiah was continued by Mordecai ben David, who composed a narrative poem under the title of *Ma'ase Pillegesh ba-Giva*, which recounts

the events of Judges 19–21. Nothing is known of the biography of this poet.

Elisha ben Shemuel, with the poetic name Rāghib, was a poet who lived in Samarkand in the 17th century. One of his two poetical compositions are *Shāhzāda va šūfi*, based on Abraham ben Ḥisdai's Hebrew composition *Ben ha-Melekh ve ha-Nazir*, a re-working of a widespread Buddhist frame story. The other is *Ḥanukka Nāma*, recounting the events in the saga of the Maccabees, and influenced by Imrānī's poetic composition with the same title.

Binyamin ben Mishā'el, known under the name Amina, was born in Kashan probably in 1672 C.E. He is the author of some 40 poetic compositions, mostly rather short. One of the longer compositions is *Tafsir Akedat Yizḥak* (published in Jerusalem 1901/2), on the sacrifice of Isaac. Another one is *Tafsir Megillat Ester*, on the Book of Esther, and a third one is *Tafsir le-Azharot Rashbag*, on the *Azharot* liturgy. He also composed a eulogy to King Ashraf, the ruler of Afghanistan who invaded Iran and fought the Safavids in 1722. Some of Amina's poems were sung in the synagogues, including an alphabetical poem in Hebrew; cf. A. Netzer, in: *Pe'amim*, 2 (1979), 48–54. Translations of poems by Amina can be found in V.B. Moreen, *In Queen Esther's Garden* (2000).

Siman Tov Melammed, with the poetic name Tuvia, was a mystical poet born in Yazd, who lived for a time in Herat and later in Mashhad. He died in 1823 or 1828. He composed *Ḥayāt al-rūh*, a poem based on Bahya Ibn Paquda's *Ḥovot ha-Levavot* and on the *Guide of the Perplexed* by Maimonides (published Jerusalem 1906/7). Another poetic composition of his is *Azharot*, written in Hebrew and Persian, where the precepts are enumerated (published Jerusalem 1895/6). A discussion of this author is by A. Netzer, *Ozār Kitvei ha-Yad* (1985), 38; idem, in: *Pe'amim*, 79 (1999), 56–95; V.B. Moreen, *In Queen Esther's Garden* (2000), 260–67.

Two major poets composed narrative compositions dealing with the history of their time. One of them is Bābāi ben Luṭf of Kashan, who described the persecution of the Jews under the Safavids during the years 1613–1662. His book, *Kitāb-i anūsī* describes a sequence of decrees against the Jews, the killing of Jews and the confiscation of their property. A large part of his composition is devoted to the events of 1656–62, including the persecutions under Shāh 'Abbās II. The importance of this book is derived from the fact that it gives details not only concerning the harsh measures against the Jews but also concerning the internal communal organization of the Jewish communities, including the distribution of crafts and occupations among the Jews. A study and extracts in French translation by W. Bacher are in *REJ*, 47 (1903), 262–82; vol. 51 (1906), 121–36, 265–79; vol. 52 (1906), 77–97, 234–71; further studies are by E. Spicehandler, in: *HUCA* (1975), 46:331–56; A. Netzer, in: *Pe'amim*, 6 (1980), 33–56; idem, *Ozār Kitvei ha-Yad* (1985), 42–43. An English translation is by V.B. Moreen, *Iranian Jewry's Hour of Peril and Heroism* (1987). Further on Bābāi ben Luṭf cf. J.P. Asmussen, in: *Acta Orientalia*, 28 (1964), 243–61.

Bābāi ben Farhād, a descendant of Bābāi ben Luṭf, described the suffering of the Jews of Kashan during another difficult period in Iranian history, in which Sunni Afghan invaders got hold of large parts of Shi'ite Iran. The pressure on Jews to convert to Islam was enormous, and huge sums of money were extorted from the Jewish communities in order to finance the costly wars. Bābāi ben Farhād's composition, written in 1729/30, has the title *Kitāb-i sarguzašt-i Kāshān dar bāb-i 'ibrī va gūyīmī-ye thānī*, or "The Book of the Events of Kashan concerning the Second (Conversion) from Judaism to a Foreign Faith." The Jews of Kashan were forced converts to Islam for seven months, after which they were allowed, against payment of a high ransom, to revert to Judaism. Extracts in French translation are in W. Bacher, in: *REJ*, 53 (1907), 85–110. A facsimile edition is available in A. Netzer, *Sifrut Par-sit-Yehudit* (1978). A short presentation is in A. Netzer, *Ozār Kitvei ha-Yad* (1985), 43–44. An English translation is by V.B. Moreen, *Iranian Jewry during the Afghan invasion* (1990). Mashiah ben Refa'el added a supplement to Bābāi ben Farhād's poem, in which he praised the head of the Jewish community in Kashan, Abraham.

Several other minor poets who composed shorter poems in Judeo-Persian are known.

Besides the original compositions in Judeo-Persian, we have Hebrew poems which were translated into Judeo-Persian, mostly poems of a liturgical character.

7. POETRY TRANSCRIBED FROM STANDARD PERSIAN. The Jews of Iran had a taste for poetry, and they read not only the compositions of their own poets but also those of the Muslims. They deeply admired the classical Persian poetry of such writers as Firdawsī, 'Aṭṭār, Niẓāmī, 'umar Khayyām, Rūmī, Sa'dī, Ḥāfīz, and Jāmī. They transcribed a large number of Persian texts into Hebrew characters. Among the various types of Persian classical poetry – romantic, lyrical, and didactic – popularized in transliteration were *Khusrow o Shirin* and *Haft Paikar* ("Seven Images") by Niẓāmī (d. 1201); some poems of the *Mathnawī* by Jalāl al-Dīn Rūmī (d. 1273); some parts of the *Gulistān* by Sa'dī (d. 1291); the *Dīwān* of Ḥāfīz (d. 1390); *Yūsuf o Zulaykhā* by Jāmī (1414–92); portions of the *Dīwān* of Sa'ib of Isfahan (d. 1678); and others. The Jews often emulated these poets and composed works in the same style. A survey of some of the more popular Muslim compositions which circulated in Hebrew transliteration can be found in A. Netzer, *Ozār Kitvei ha-Yad* (1985), 39–41. A discussion of some phenomena connected to this topic is by J.P. Asmussen, in: *SBB*, 8 (1968), 44–53; and in the same author's *Studies in Judeo-Persian literature* (1973), 60–109.

8. POPULAR STORIES. A large number of popular stories are found in the Judeo-Persian manuscripts, often embedded in the midrash-type literature mentioned earlier. A succinct summary of these compositions is found in A. Netzer, *Ozār Kitvei ha-Yad* (1985), 49. In Israel, a concentrated effort has been made to collect orally transmitted stories by Persian Jews, and many of them have been written down in Hebrew and are

preserved in the Archive of the Israeli Folkstories. Examples of publications of folktales may be quoted: two small volumes of *Ma'asiyyot Nifla'im* ("Wonderful Tales"), which were printed by Israel Gul Shaulof and his son in Jerusalem (1911/2); a collection of Bukharan stories was published by J. Pinhasi, *Folktales from Bukhara*, ed. D. Noy, Jerusalem (1978, Heb.).

9. MINIATURES IN JUDEO-PERSIAN MANUSCRIPTS. Persian Jews took part in or sponsored the production of miniatures to illuminate manuscripts. In some of the Shāhīn and 'Imrānī manuscripts, and in those of the classical poetry in Hebrew transliteration, large colored miniatures of exceptional beauty were incorporated. It is not clear who the artists were who drew these pictures. It is quite possible that in some cases non-Jewish workshops were responsible for the execution of the illustrations in Judeo-Persian manuscripts. A study of the miniatures is by J. Gutmann, in: *SBB*, 8 (1968), 54–76. An illustrated catalogue of miniatures in Judeo-Persian manuscripts is provided by V.B. Moreen, *Miniature Painting in Judeo-Persian Manuscripts* (1985).

10. THE ACTIVITY OF THE BUKHARAN MEN OF LETTERS IN THE MODERN PERIOD. In Bukhara, where the Jews were not subjected to the persecution their brethren endured in Safavid Persia, there appeared Jewish poets and translators who began to create Jewish literature and poetry in their own Bukharan, or rather Judeo-Tajik, dialect. Outstanding among them was Yūsuf *al-Yahūdī (d. 1755), an exponent of the biblical narrative developed by Shāhīn and 'Imrānī. See on him W. Bacher, in: *Zeitschrift der Deutschen Morgenlaendischen Gesellschaft*, 53 (1899), 389–427. He wrote a *Mukhammas*, an ode in praise and glory of Moses; *Haft Barāderān* ("The Seven Brothers"), based on the Midrash story of the martyrdom of the seven brothers and their mother; and bilingual and trilingual hymns honoring biblical heroes. He also wrote a poetic version of *Megillat Antiochus* and his translations into the Bukharan dialect of many of the **zemirot* of Israel *Najara were incorporated into the Judeo-Persian song books still in use today. Under his inspiration there emerged a school of Bukharan Jewish poets. It included a Judeo-Persian translation and commentary, *Daniel-Nameh*, which was edited by Binyamin b. Mishael, known as Amina, who published a Judeo-Persian Book of Esther in metric form and translated some poems of Solomon ibn *Gabirol, such as *Azharot* and *Yigdal*, into Judeo-Persian.

In 1793 a significant cultural and religious change was inaugurated by the arrival in Bukhara of R. Joseph Maman al-Maghribī ("the messenger from Zion"). A native of Tetuan, Morocco, who had settled in Safed, he came as the official emissary (*shaliah*) of that community. During his 30-year stay, he became the spiritual leader of Bukharan Jewry and effected a radical transformation in its religious life. He established Jewish schools, introduced the Sephardi rite, and imported books from abroad, especially from Shklov, Russia. Under his leadership the Bukharan Jews reestablished contact with other Jewish communities, and integrated their religious life with that of the Jewish people as a whole.

A narrative poem recounts in Judeo-Bukharan the story of a certain cloth merchant, Khudāidāt, who refused the pressure to convert to Islam and was executed as a martyr. The poem was composed probably in the late 18th or early 19th century by an unknown author. It was first published by C. Salemann, in: *Mémoires de l'Académie Impériale des Sciences*, 7, 42, 14 (1897); and studied by W. Bacher, in: ZDMG, 52 (1898), 197–212; ZfHB, 3 (1899), 19–25. A shortened translation is in V.B. Moreen, *In Queen Esther's Garden* (2000), 238–42.

An outstanding Bukharan Jewish scholar can be credited with a major share in the promotion of Judeo-Persian literature in the modern period, Simon *Ḥakham (1843–1910). He moved in 1890 to Jerusalem, where he joined the rapidly increasing colony of Bukharan Jews. Ḥakham began his activities in Jerusalem as author, translator, editor, and publisher of Judeo-Persian works. Among his many impressive achievements was his Judeo-Tajik translation of the novel *Ahavat Ziyon* by Abraham *Mapu, which appeared in 1908. The crowning glory of Shim'on Ḥakham's literary activities was, however, his translation into Judeo-Bukharan of the Bible (Pentateuch, 5 vols., 1901–02). With this work, Ḥakham entered the ranks of the great Jewish Bible translators. He published an edition of Shāhīn's *Sharḥ al ha-Torah* (3 vols., 1902–08). An edition of Shim'on Ḥakham's *Mūsā nāma* was published by H.H. Paper in Cincinnati (1986). An excerpt is translated into English by V.B. Moreen, *In Queen Esther's Garden* (2000), 200–5.

Of great interest is the collection of *dinim* or religious laws under the title *Likkutei Dinim*, compiled by Abraham Aminof and published in Jerusalem between 1899 and 1904; a study of this book was made by W. Bacher, in: ZfHB, 5 (1901), 147–54; ZDMG, 56 (1902), 729–259.

Under Soviet rule Bukharan Jewry at first enjoyed a measure of cultural autonomy, which it lost by the end of World War II. During the 1960s Yakub Chaimov wrote novels and stories in the Tajik variant of Judeo-Persian, but these were published in Uzbek or Russian and presented as the work of a Muslim. In 1959 nearly 20,000 Bukharan Jews gave the Tajik dialect as their mother tongue.

11. THE JUDEO-PERSIAN LITERARY CENTER IN JERUSALEM. Judeo-Persian literature experienced an unforeseen development in the second half of the 19th century, not in Persia but in Jerusalem. This was precipitated by a wave of immigration into Erez Israel, paralleling the Ḥovevei Zion immigration from Russia, of Persian-speaking Jews from Bukhara, Turkestan, Afghanistan, and Persia itself. They settled in Tiberias and Safed, in Haifa and Jaffa, but most of them went to Jerusalem, where they established a colony. In Jerusalem they inaugurated a new and spectacular epoch in the history of Judeo-Persian literary activity. Their leaders were eager to help those who remained in their lands of origin and to cement stronger ties between Jerusalem and the “remnants of Israel” in the remote Persian-speaking Oriental Diaspora. They established in Jerusalem a publishing center to perpetuate the manuscripts which Persian

Jews had brought with them. This led to a decisive change in the history of Judeo-Persian literature.

Although some Judeo-Persian works had previously been published in Europe, particularly in Vienna and Vilna, Jerusalem now became the main center of Judeo-Persian printing activities. Almost every field in the religious, literary, historical, and philosophical spectrum was included in its program: Bible, Bible commentaries, prayer books for every occasion, rabbinical writings, Mishnah and Zohar, medieval Jewish poetry and philosophy, *piyyutim*, *seliḥot*, *pizmonim*, *midrashim*, historical narratives, and anthologies of songs and stories. Even translations of non-Jewish literature, such as portions of the *Arabian Nights* and selections from Shakespeare's *Comedy of Errors*, found their way to the printer. These literary activities represented a creative effort, a cooperative endeavor of all the groups of Persian-speaking Jews who had settled in the Holy Land. Among the promoters and initiators were the above-mentioned Shim'on Ḥakham of Bukhara and Solomon Babajan Pinchasoff of Samarkand; the leading rabbis of Herat in Afghanistan; the Garjis; Mullā Mordecai b. Raphael *Aklar (Mullā Murād), the secret rabbi of the *anusim* of *Mashhad; and many leading personalities from Shiraz, Hamadan, Isfahan, and other Jewish communities who settled in Jerusalem. They converted Zion into a cultural center for Persian-speaking Jews.

A collection of liturgical poems under the title *Ge'ulat Yisra'el* was printed in Jerusalem in 1969 in Judeo-Persian; it contains several thanksgiving poems composed at the end of the Six-Day War (1967) by Shulamit Tilayoff and others. These poems are given both in Judeo-Persian and in Hebrew, demonstrating the fact that knowledge of the Bukharan dialect was dwindling among the younger members of the community.

12. MODERN JUDEO-PERSIAN. The renaissance of Judeo-Persian literature in Persia found expression in the establishment of a “Society for the Promotion of the Hebrew Language” in 1917 and in the establishment of a Judeo-Persian and Hebrew printing press in Teheran. Teheran became the seat of a Hebrew press and the center of a modern Hebrew and Jewish-Persian literature. Motivated by the endeavor to halt the decline of Jewish life, to combat assimilation and ignorance, and to implant a knowledge of Hebrew, this society published a work titled *Sefer Hizzuk Sefat Ever* (1918), a textbook of modern Hebrew. The author, Solomon ben Kohen-Zedek of Teheran, was an inspiring leader and teacher of the Jewish community and a former Persian government official. This was the first attempt of its kind in Persia. It concludes with the Hebrew and Persian texts of the Zionist anthem, *Ha-Tikvah*. The society also published the first history of the Zionist movement in the Persian language printed in Hebrew characters (1920) by Aziz ben Jonah Naim, a survey of the Zionist movement, its organizations, and its colonies in Erez Israel. The numerous biblical quotations from Isaiah and the Psalms in this history indicate the strong religious and messianic character of Persian Jewry's conception of Zionism. This history

introduced in Persian Jewish literature leaders of the Zionist movement.

The same Jewish circle also published a Jewish newspaper in the Persian language, *Ha-Ge'ulah* (1920), and another, rather short-lived, periodical called *Ha-Hayyim*, which became the mouthpiece of the Jewish renaissance movement in Persia. These periodicals contained some poems by Bialik, first translated into Persian by Aziz ben Jonah Naim. The only other Judeo-Persian newspapers that are known were *Rushnai*, published in Samarkand, and *Rahamim*, published in Bukhara.

The awakening of Zionism was closely connected with the revival of Judaism. The leading figure in this group, who tried to revive Jewish consciousness among the Persian Jews, was Mulla Elijah Chayin More. The author of three important works on Jewish tradition, history, and philosophy in Judeo-Persian, *Sefer Derekh Hayyim* (1921), *Sefer Gedulat Mordekhai* (1924), and *Sefer Yedei Eliyahu* (1927), he exerted a great influence on his generation. Though deprived of his eyesight, blind from his early youth, this rabbi played a most important role in efforts to lead Persian Jewry toward a Jewish revival.

After the Islamic revolution of Iran (1979), the literary Jewish activity in Iran seems to have halted. A substantial Jewish-Iranian Diaspora was established in various cities in the United States, and with time a whole range of publications was established in standard Persian, in the Arab-Persian alphabet. The younger generation, while wishing to retain its double identity, Jewish and Iranian, is no longer familiar with the brand of Persian written in Hebrew characters. Among the efforts to inculcate Jewish-Iranian consciousness in the Jewish public, both in Iran and in the new Judeo-Iranian Diaspora, mention must be made of the publications of Amnon Netzer, professor of Persian at the Hebrew University in Jerusalem, who, besides writing a history of the Jews in Persian and an anthology of Judeo-Persian poetry in the Arab-Persian script, and besides contributing much to the academic study of Jewish Iranian history, also edited a few volumes of a high-level intellectual annual under the title of *Padyāvand*.

13. HISTORY OF RESEARCH INTO JUDEO-PERSIAN LANGUAGE AND LITERATURE. 1. *The major collections of Judeo-Persian manuscript.* One of the earliest manuscripts acquired for Western libraries was brought to Italy by Giambattista Vecchietti, who got in Lar in 1606 the Judeo-Persian Pentateuch version now kept at the Vatican Library.

Abraham Firkovich (1785–1874) was a Karaite scholar and collector of manuscripts, who traveled to Palestine, Syria and Egypt, and acquired valuable Judeo-Persian manuscripts, sold to the Imperial (now Public) Library of St. Petersburg.

Cambridge University Library acquired a large portion of the manuscripts in the Cairo *Genizah*, including a surprising number of manuscript fragments in Early Judeo-Persian through the efforts of S. Schechter (1847–1915).

One of the most important collectors was Elkan Nathan Adler (1861–1946), who acquired manuscripts during his travels in many lands. His collection is now housed in the library

of the Jewish Theological Seminary in New York. A catalogue of his collection was published in Cambridge (1921).

The Bibliothèque Nationale in Paris houses one of the important collections of Judeo-Persian manuscripts, chiefly Bible translations (catalogues by H. Zotenberg, 1866; E. Blochet, 1905). An equally important collection is kept by the British Library, some of it deriving from the Cairo *Genizah*; the catalogue descriptions are by E. Seligsohn, in: *JQR*, 15 (1903), 278–310; J. Rosenwasser (1966).

Among other significant acquisitions of Judeo-Persian manuscripts, that of Ezra Spicehandler, who bought manuscripts in Iran on behalf of the Hebrew Union College in the late 1950s, should be mentioned, as well as Amnon Netzer, who collected valuable Judeo-Persian manuscripts in Iran in the 1970s and handed them over to the Ben-Zvi Institute in Jerusalem. His catalogue of the Ben-Zvi Institute J-P collection, *Otsar kitve ha-yad* (1985), may serve as a survey of Judeo-Persian literature.

2. *A short history of research.* One of the earliest scholars to recognize the interest and importance of the field of Judeo-Persian was Paul de Lagarde (1827–1891), who studied the Judeo-Persian Bible versions in the Bibliothèque Nationale in Paris and published the translation of Isaiah and parts of Jeremiah and Ezekiel, see Lagarde, *Persische Studien* (1884). He made the oft-quoted comment that from now on it would be impossible to claim knowledge of Persian without having gone through the body of Judeo-Persian literature.

The most important contribution to the investigation of Judeo-Persian literature was made by Wilhelm *Bacher (1850–1913) who turned much of his considerable energy and scholarly output to this field, in which he became the undisputed authority.

In the 1960s the two most prominent scholars of Judeo-Persian literature and language were H.H. Paper, who edited the two oldest complete Pentateuch manuscripts, and J.P. Asmussen, who published a long list of books and articles on various Judeo-Persian themes. At the same time Ernst Mainz published a series of Bible versions from the Paris Collections. The most important contribution to the study of Judeo-Persian dialectology is Gilbert Lazard, who emphasized the importance of Judeo-Persian for the study of the development of the Persian language, showing as he did the intermediate position of Judeo-Persian between Middle Persian and Classical Persian, while demonstrating that the early Judeo-Persian texts derived from different local dialect, which explains their divergence from the Classical Persian texts. D.N. MacKenzie studied the Karaite Book of Precepts and the problems of the Tafsir of Ezekiel from St. Petersburg. E. Yarshater devoted some studies to the spoken dialects of Persian Jews. A. Netzer made immense contribution to the study of the history of Judeo-Persian literature of the classical period by identifying the authorship of works and discovering the precise dates and places of several of the authors. He also published a number of important J-P works.

[Gilbert Lazard, Walter Joseph Fischel, and Herbert H. Paper / Shaul Shaked (2nd ed.)]

JUDEO-PROVENÇAL, the name given to the various dialects spoken among the Jews of Provence. By the sixth Century C.E. Jews formed important communities in the southern area of France known as Provence. The oldest texts in Judeo-Provençal are the glosses found in the *Ittur* of *Isaac ben Abba Mari of Marseilles, written between 1170 and 1193; in the glosses found in the anonymous *Sefer ha-Shorashim* appended to the *Farḥi Bible* (Ms. Sassoon no. 368, p. 42–165); and in extracts from an anonymous 12th-century commentary on the First Prophets (Margoliouth, Cat. no. 249). Other commentaries of the 13th–14th centuries also provide examples of Provençal and Catalan glosses transcribed in Hebrew letters. The only medieval texts still preserved in Judeo-Provençal are a fragment of the Book of Esther by the 14th-century Crescas du Caylar (published by A. Neubauer and P. Mayer in *Romania*, 21 (1892), 194–227) and a translation of the daily prayers (*siddur*), also from the 14th–15th centuries (Ms. Roth 32). These texts were composed in the vernacular for the benefit of women who could not understand the Hebrew original. A literary text written in the common language of its time, the Judeo-Provençal Esther fragment, though transcribed in Hebrew characters, contains no words or phrases of Hebrew origin. The *siddur*, however, is interspersed with Hebraisms inherent to a translation of this kind. These consist mainly of terms which cannot be easily translated, such as צְבוּר for

קקהל, גויה, חטאת, פאה, פסח, בכורים, פרוכת, מזבח, מועדות for מיים טובים, צבאות, כהנים. The Hebrew transcription is based on a system more or less common to both texts, and provides no characteristics which would point to a specifically “Jewish” pronunciation, except for some examples of metathesis (*torp* for *trop*, *pormet* for *promet*, *plubic* for *public*) and transposition (*nembres* for *menbres*), which seem to be merely transcription errors. These texts do not warrant the identification of a Judeo-Provençal language distinct from the Provençal in use at this period. They nevertheless do not exclude the possibility of a specifically Jewish dialect or speech such as was later found in the *Comtat-Venaissin.

In later times (17th and 18th centuries) the Jews in the Comtat customarily spoke Provençal, Hebrew, and French. By its phonetic and morphological elements, Judeo-Provençal differed slightly from the Provençal Rhodanien of the Gentile surroundings. Traces of this language, commonly known as *Chuadit* (or *Shuadit*; perhaps from the Hebrew שפה יהודית *Safah Yehudit* or simply יהודית; the term appears for the first time in a satire of 1803), or sometimes as *ebraicum vulgare* or *jargon de l’escolo*, are to be found in the satires and comedies writ-

ten in Provençal by non-Jews who introduced Jewish characters using this type of speech. The oldest document of this kind dates only from the 17th century. The comedy *Harcanot et Barcanot* (published by Hirschler in 1896 and, in a second version by Pansier in 1925), entirely written in this language, is the most important specimen of the language of Provençal Jews at the end of the 18th century. Its author was probably the lawyer Bedarrides of Montpellier, who had only an indirect knowledge of the language of the Jews of Carpentras, but the principal phonetic characters were later distinguished in Carpentras by Hirschler in the second half of the 19th century. The most important phonetic changes can be seen in Table: Judeo-Provençal – Phonetics.

Together with this dialect, rich in Hebraisms and Gallicisms, there exists a language written in Hebrew characters which, for the most part, shares its linguistic and lexicological traits with the other Provençal dialects, thus constituting one of the literary dialects of Provence. This language is represented only in the *Obros*, Hebrew-Provençal songs in which verses in Hebrew and Provençal alternate; these were sung on Purim, on the evening before a circumcision, and at special events (critical edition by M. Lazar, 1963). The author of the major part of *Obros* was Mardochée Astruc (end of 17th cent.) who also composed a tragedy in Provençal on Queen Esther entitled *La Tragediou de la Reine Esther*. This was revived in the 18th century by *Jacob de Lunel, who edited it under this same title (The Hague, 1774; 2nd ed. by E. Sabatier, Nîmes, 1877). The language of the *Obros* is the pure Comtadin dialect of Provence transliterated into Hebrew. It is a literary form of speech coexisting with the less pure language of Judeo-Provençal. The language of the *Tragediou de la Reine Esther* is also a debased but purely Provençal dialect, such as was used in Provence in the 17th–18th centuries, and free from the characteristics peculiar to the Jewish dialects.

JUDEO-TAT (Zuhun Tati; Zuhun Juhuri), Iranian language derived from a spoken form of New Persian and heavily influenced by Azeri Turkic; traditionally spoken in Jewish communities of the eastern and northern Caucasus, known as the Mountain Jews (*dağ-çufut*; *gorskie jevrei*; *yehudim harariyim / qavqaziyim*). Judeo-Tat does form a dialectal unity with neighboring Tati dialects spoken in the past by a Muslim population; these “Tati” Muslim dialects of Azerbaijan and Dagestan, in turn, are to be distinguished from the so-called Southern

Tati dialects of northern* Iran. On the other hand, Judeo-Tat is close to a dialect of the New Persian type spoken, in the past, by a small Armeno-Grigorian community in northern-western Azerbaijan. During the 19th and 20th centuries, Judeo-Tat was adopted by smaller Jewish linguistic minorities of Transcaucasia and northern Caucasus (Neo-Aramaic, Kurdish, Azeri, Adyge-Circassian). The Mountain Jews migrated to Transcaucasia and the eastern and northern Caucasus from Iran during the post-Mongol and, especially, Safavid periods. There is no linguistic evidence to support the claim that they are presumably descended from Iranian military colonies established during the Sassanid period (226–641 C.E.) on the northern frontier of the empire. From the early 19th century, the Mountain Jews were established chiefly in the towns of Makhachkala / Mahaç-Qal'ah and Derbend (Darband, Dagestan), in villages situated in the Caucasian foothills of southern Dagestan and in the district of Qubba (northern Azerbaijan). In the early 21st century the Mountain Jews are to be found chiefly in well-organized communities in Israel, Qubba, Moscow, New York, and Derbend. Before 1917 only two books existed in Judeo-Tat, both translated from Hebrew ("What is Zionism?" and the Sephardi prayerbook, both printed in Vilna). During World War I a newspaper appeared, *Hed Harim*. In the Soviet period the Mountain Jews were recognized as one of the nationalities of the republic of Dagestan, and their language ("Tati") became one of the five official languages of the Dagestan Republic. In 1929, as a secularization measure, the Latin alphabet was imposed on this language in place of the Hebrew one; this was done as part of the general "Latinization politics" in the U.S.S.R.; however, by 1939 the language politics had changed and all the Latin scripts were replaced by the Cyrillic alphabet. In the Soviet period, especially in the 1920s–1960s, there were many Judeo-Tat schools, newspapers and other publications. In the 1960s, some community leaders in Soviet Dagestan (but not in Azerbaijan) promoted the politics of "Tatization," claiming non-Jewish origin of the Mountain Jews and encouraging them to register as "Tats." (There were, however, no other registered "Tats" except the Mountain Jews). Though withering, this language is now one of the nine literary and official languages of Dagestan; in the 1959 Soviet census about 30,000 Jews declared Judeo-Tat as their mother tongue. Judeo-Tat is an endangered language, and almost all Mountain Jews now speak Russian and/or Hebrew. There are publishing activities in Israel and Russia, but this is either in Russian or in Hebrew.

[Dan Shapira (2nd ed.)]

JUDGES (Heb. שׁוֹפְטִים), **BOOK OF**, the second book in the second section of the Bible, called Prophets (*Nevi'im*). (See Table: Book of Judges – Contents.) The Book of Judges is named for the series of charismatic leaders of the period between the death of Joshua and the institution of monarchy in ancient Israel. None of them has a name that includes the divine element Yahweh. These judges were not judges in the legal sense, but heroes upon whom "rested the spirit of God" and who led single tribes or groups of tribes in military campaigns to free Israel from periodic foreign oppression.

(The Akkadian cognate *šāpītu* has the meaning "district governor," "high administrative official"; see CAD Š/I, 459). Their rule was temporary, and in no case did these leaders receive the allegiance of all the tribes. Only in the case of Deborah (4:4), the only female judge, is there any hint of a judicial function among the activities of a judge-savior. It should be noted that other women play significant roles, active and passive, in the narratives of Judges. One woman, *Jael, assassinates a general; an anonymous woman kills Abimelech, ruler of Shechem (Judg. 9:5–54). Samson's unnamed mother receives an annunciation before his father (Judg. 13:2–3). Clever women get what they want from a father (Akhsah; Judg. 1:12–15); a husband (Samson's Philistine wife; Judg. 14:15–18); and a lover (Delilah; Judg. 16: 4–21). A father's vow leads to the (likely) sacrifice of his daughter (Judg. 11:30–40; but see

Book of Judges – Contents

1:1–2:5	Completion of the conquest.
2:6–3:6	Introduction to the careers of the judges.
3:7–11	Othniel.
3:12–30	Ehud.
3:31	Shamgar.
4:1–5:31	Deborah and Barak (and Jael).
6:1–8:35	Gideon (Jerubbaal).
9:1–57	Abimelech.
10:1–5	Tola and Jair.
10:6–16	Introduction to later judges.
10:17–12:7	Jephthah.
12:8–15	Ibzan, Elon and Abdon.
13:1–16:31	Samson.
17:1–21:25	Migration of Dan to the north and war against the Benjamites.

Marcus). The rape of a woman leads to civil war (Judges 19–21) and the abduction of many women leads to reconciliation (Judg. 21:10–25).

The exact nature of the early history of Israel in Palestine has long been a matter of controversy among scholars. (See *History.)

Completion of the Conquest (1:1–2:5)

Though the biblical account of a unified conquest is unhistorical, it was taken as factual by the compilers of Judges. The biblical text places the events of the first chapter of Judges after the death of Joshua. Israel had had a long series of impressive victories, but several areas of the land were yet to be conquered (David Kimḥi on Judg. 1:1). Whereas the initial stage of the conquest was carried out by all Israel in a single camp under one leader, Joshua, the mopping-up operations were left to the individual tribes. The text relates the capture of several cities that had escaped the unified onslaught of the tribes. Ending the account is a listing of the cities not destroyed by the tribal operations, which were placed under tribute by Israel. Similar city lists appear in the latter half of the Book of Joshua. Medieval Jewish commentators already pointed out that their mention in Joshua is not primary. Their place in the internal historical continuum is in Judges 1, after the death of Joshua (Rashi on Josh. 15:14). It is difficult to reconstruct a chronology within the Book of Judges, because judgeships that may have been contemporaneous or overlapping are presented as though they occurred sequentially. Joshua 1–11 and Judges 1 provide two distinct accounts of the Israelite conquest of Palestine. The unified conquest idea is the product of authors, who, accustomed to the campaign methods of the Assyrian and other empires, retrojected them into their own history. The account in Judges 1, which concentrates on individual tribes, is a pro-Judahite polemic contrasting how the southern Judahites with Simeonite aid fought the Canaanites and mostly wiped them out, whereas the northern tribes at best subjected them and lived among them, thereby setting the stage for the cycles of apostasy and return (Amit, 1999). Another polemic is directed at the sanctuary at Dan, which though Yahwist, is fully equipped with a carved image and other disapproved paraphernalia (Judg. 18:14–31). The polemics against Benjamin and Saul are apparent in chapters 19–21 which close the book.

Introduction to the Careers of the Judges (2:6–3:6)

Although the present Book of Judges contains much ancient material, the final compilers indicate their temporal and geographic distance from the events by phrases such as “in those days” (18:1; 19:1; 20:28; 21:25); “to this very day” (18:12); “until the land went into exile” (19:30); and “Shiloh, which is in the land of Canaan” (21:12). There is less evidence of the work of the Deuteronomists in Judges than in other parts of the Deuteronomistic History (1 Samuel–11 Kings). Nonetheless, modern scholars are generally in agreement that the central core of Judges (2:6–16:31) was put into its final form by Deuteronomic editors. These editors provided a framework which joined the

stories of individual judges around a common theme, the recurrent lapses into idolatry by the Israelites. The history of the period is understood as cyclical. Israel sins by chasing after false gods, and therefore God punishes the people by subjecting them to foreign oppressors. Realizing their misdeeds, the people repent of their idolatry and pray to the Lord for deliverance. The Lord sends a judge to rescue the people from the hands of the oppressors. A tranquil period follows. Some time after the death of the judge the people lapse into idolatry and the cycle begins again (3:7–9, 12, 14–15; 4:1–3; 6:1, 7). These principles, underlying the present structure of the Book of Judges, are stated and elaborated in the introduction to the careers of the judges (2:6–3:6).

Although it would be mistaken to consider the Book of Judges (and most of the rest of the Bible) as literature, the redaction is artful and there are some nice literary touches. Halpern and others detect scatological and sexual humor in the story of Ehud (Judges 3). The exchange over Samson’s riddles is riddled with double entendre (Judges 14), and Delilah’s henpecking of Samson (Judges 16) conforms to stereotypes modern and ancient (Prov. 19:13). The names *Cushan-Rishathaim, “Cushan-of Double Wickedness,” and Gaal Ben Ebed “Loathsome, son of Slave” (Boling) are likely mutilations. There is an ancient ethnic joke about anyone from Ephraim who, when asked to say *shibboleth*, (Judg. 11:6) “said ‘*sibboleth*,’ for he did not prepare (Heb. *yakin*) to pronounce it right,” even though his life depended on it. The activities of the judges are arranged geographically from south to north.

Othniel (3:7–11)

*Othniel, the first judge mentioned in Judges, is a transitional figure between the elders who had outlived Joshua (Judg. 2:7) and the judges. As a youth, he had participated in the Conquest, capturing the city of Debir (Judg. 1:13). In chapter 3 he appears as a fighter against foreign oppression, the first of a series of charismatic leaders. Since the story of Othniel is little more than the typical framework formula of Judges, some scholars maintain that the narrative is a fiction invented to place a Judahite hero among the ranks of the judges. Others have rejected the narrative as unhistorical because of the unreal name *Cushan-Rishathaim and the improbability of a northern Aramean ruler oppressing the southern tribe of Judah. Malamat (in Bibliography) made an effort to defend the authenticity of the Othniel narrative, citing Aramean inroads into Egypt around 1200 B.C.E. The Israelites, not particularly important in themselves, were subdued during the Aramean march toward Egypt. It is the Palestine-centered biblical narrative that obscures this fact. Oded sees this story as a hidden polemic against the Saulides, which nevertheless contains a vague reminiscence of an ancient battle (extensive bibliography on Cushan in Oded).

Ehud (3:12–30)

A hero of Benjamin, *Ehud rescues his tribe and others from a long oppression by the Moabites, led by *Eglon. The assassination of Eglon (3:21) was followed by *shofar* blasts (3:27),

probably a prearranged signal for Israelite troops to take the fords of the Jordan, thus preventing any Moabite retreat (Kaufmann, 1962, in bibl., 106). Some scholars have suggested that the story is compiled from two sources, citing, e.g., Ehud's "double" entrance in 3:19–20, while others have maintained that such repetitions are just a bit of sloppiness on the part of the storyteller, very common in folktales (Kraeling, in bibl.). There is much discussion about the location of Eglon's house, whether it was in Jericho, in Moab proper, or in some military camp west of the Jordan.

Shamgar (3:31)

The same *Shamgar is mentioned in the Song of Deborah as living in a time of great fear of the enemy, a fear so great that the Israelites kept off the roads lest the enemy find them (Judg. 5:6). Although it is stated that Shamgar succeeded Ehud, Ehud does not die until 4:1, which leads directly into the story of Deborah. Judges reports that "he also" saved Israel, but not how many years of peace there were under his leadership. The regular elements for the description of a judge, e.g., a theological motivation for the oppression of Israel and an indication of where he was located, are lacking. The Philistines are the enemy, despite other biblical evidence that the first real clashes with the Philistines took place later, in the period of Samuel and Eli. Finally, there is the question of Shamgar's very un-Israelite sounding name. Some scholars acknowledged the historical existence of Shamgar, because his name is mentioned in the Song of Deborah. One conjecture was to identify Shamgar as a Canaanite hero from Beth-Anath in Galilee (Albright, in bibl., 111). Another scholar explained that Shamgar was originally a Canaanite warrior so great that he was given the title "son of Anath," the goddess of war (van Selms, in bibl.). Shamgar is a foreign name, probably Hurrian, but this is not decisive, since many foreigners became part of Israel. His conquests resemble those of Samson, who did not use a regular weapon. Both Shamgar and Samson were active against the Philistines in the southwest in the period before Deborah, and the Septuagint traditions which pair them are probably correct (see chapter 13 below). In recent years arrowheads bearing the names *bin-anat* and Aramaic *bar anat*, dating from the 11th to 7th centuries, have been discovered. Following the lead of van Selms, we note that Anat was an archer. Presumably the patronymic ben-Anat was given to skilled archers but Shamgar is not so designated. But as Cross has noted, several arrowheads demonstrate that *bin-anat* was a proper name rather than a patronymic, so that Shamgar ben Anath is to be understood as Shamgar the son of Ben-Anath.

Deborah and Barak (4–5)

Israel sinned after the death of Ehud, and their punishment was enslavement to *Jabin, the king of Canaan. Because the Book of Joshua (chapter 11) attributes Jabin's defeat to Joshua, attempts at harmonization were made as early as the Middle Ages. According to Kimḥi, Jabin of Judges 4 was a descendant of the king of the same name defeated by Joshua. When Hāzor was destroyed, the survivors of the royal family

fled to Ḥarosheth-Goiim, which became the new seat of the kingship (David Kimḥi on Judg. 4:2). From this town Jabin and his general *Sisera oppressed the Israelites in the area. *Deborah sent a message to *Barak son of Abinoam of Kedesh-Naphtali, telling him to bring the men of Zebulun and Naphtali to seize Mount Tabor (Judg. 4:6; see Tur-Sinai). Barak refused to go without Deborah, and she agreed to accompany him, noting, however, that the death of Sisera would be at the hands of a woman. Sisera was leading his chariots toward the area when the Israelite forces swept down from Mount Tabor and inflicted a decisive defeat on his army at the Kishon River. Sisera sought refuge in the tent of Ḥeber the Kenite, who was allied with Jabin. *Jael, the wife of Ḥeber, took him in and killed him when he was asleep by hammering a tent peg through his temples. Barak was informed by Jael of Sisera's death.

From then on the Israelites grew stronger and stronger until they finally overwhelmed Jabin, the king of Canaan (Judg. 4:24). In the parallel poetic account of the battle with Sisera, Deborah sang her famous song (Judges 5). Most modern critics accept the Song of Deborah as one of the oldest biblical compositions, perhaps nearly contemporary with the events it describes. The prose narrative in chapter 4 is more problematic. At the root of all difficulties is the presence of Jabin, king of Canaan, who is identified with the Jabin mentioned in Joshua 11:1–9. Most explanations of the presence of Jabin revolve around the theory that two narratives were somehow fused into one. One account was of a war waged by Zebulun and Naphtali against Jabin, and the second was the war against Sisera, which is the subject of the song (Moore, in bibl., 109). The references to Jabin in Judges 4 are reminiscent of Joshua's victory in Joshua. In his attempt to make the conquest appear as a united effort, a later editor took a tale about a victory by Zebulun and Naphtali and changed it into a national battle during the days of Joshua (Burney, in bibl., 81). Any questions raised by the contradictions between Judges 4 and Judges 5 are answered by showing that these two accounts are not parallel at all, but a confusion of two distinct battles against two different enemies. Others advance the theory that Joshua 11 and the Song of Deborah do not speak of two distinct battles, but of two scenes in the same campaign. In later times, it was not known who was responsible for the great defeat, Jabin, the northern commander, or Sisera, commander of the plains forces (Batten, in bibl., 34). Given the current consensus that Joshua 11 is an unhistorical attempt to credit Joshua with victory over the northern kings, the theory is unlikely. Many scholars conceive of the prose narrative of Judges 4 as an independent formulation of the events surrounding the war with Sisera. Others see the prose account as derived from the poem. Although the two narratives are contradictory, they nonetheless complement one another, in a manner hardly unique in biblical redaction (see, e.g., the contradictory creation accounts in Genesis). One cannot avoid consulting the prose account for several important facts, including the identity of Shamgar, son of Anath, the reasons why Deborah

and Barak were involved in the battle, and the function and the title of Sisera.

Gideon (6–8)

The story of the fourth major judge, *Gideon, is probably a composite of two stories (7:1–8:3; 8:4–21). Midianite raids annually terrorized the Israelite populace, and an anonymous prophet tells the people that these raids are a punishment for Israel's turning away from God. Gideon's call to judgeship was validated first by the appearance of an angel of God and second by a miracle involving wet and dry fleece. (In divination it was not uncommon to inquire more than once in order to assure the reliability of the oracle.) With a force of only 300 men he routed the camp of the Midianites with a daring night attack. Pursuit of the fleeing Midianites resulted in the death of the Midianite princes Oreb and Zeeb, and later in the blood revenge killings of Midianite kings Zebaḥ and Zalmunna. Kingship was offered to Gideon because of his exploits, but he declined, saying that kingship belongs only to God. Some scholars have cast doubt on the historicity of the first half of the Gideon story with its dominant theme of a national holy war. They also regarded with great skepticism the possibility of 300 men overcoming a large enemy camp. In contrast, the second incident involving the blood feud against Zebaḥ and Zalmunna describes the 12th-century atmosphere. It has an air of simple realism missing in the first story (McKenzie, in bibl., 130–7). Other scholars regard this approach as an oversimplification. They regard as implausible that a personal blood feud could impress itself on the national consciousness as the “day of Midian” (Isaiah 9:3). Several contemporary Israeli scholars have defended the 300-man raid as making sense from the military point of view. Rather than a miraculous fantasy, they see it as a logical recourse to a well coordinated night attack to offset the enemy's advantage in numbers and arms.

Abimelech (9)

The story of *Abimelech is a supplement to the Gideon narratives. Son of Gideon and his concubine in Shechem (8:31), Abimelech used money given him from the temple of Baal-Berith to hire men to murder his 70 half brothers from the house of Gideon. Jotham, the one surviving brother, related an old parable of the trees' electing the bramble bush to rule over them and applied it to Abimelech. He predicted a break between Abimelech and his Shechemite supporters, and a short-lived rule for Abimelech. True to his prediction, a rebellion under *Gaal soon broke out; Abimelech put it down, but in a campaign against nearby Thebez, a woman threw a millstone at him from the city walls, mortally wounding him. Abimelech ordered his armor-bearer to kill him, lest it be said that a woman killed him. He reigned only three years, failing his kingly ambitions mainly because there was no outside threat for which the people might have needed a strong king (Oesterley and Robinson, in bibl., 153).

Tola and Jair (10:1–5)

These two minor judges are mentioned as having judged

Israel after the death of Abimelech and before Jephthah. Some scholars have concluded from these notices, lacking the usual framework of the Book of Judges (see above), that the minor judges were judges in the legal sense, filling a central office in an amphictyonic league of the 12 tribes. The major judges were charismatic leaders and not judges, and the only reason these two separate groups were combined was the presence of Jephthah in both groups (Noth, in bibl., 101). Noth's amphictyony hypothesis has generally been abandoned. Other scholars have suggested that the names of minor judges are clan names, which were inserted to bring the total number of judges to 12 (Burney, in bibl., 289–90). Conservative scholars have rejected these suggestions. In their view, the minor judges are also “saviors” and not mere adjudicators. Use of the term *wa-yaqom* (*va-yakom*, “and he arose”) implies that they came to power sporadically, as did the major judges (Kaufmann, 1962, in bibl., 46–48).

Introduction to Later Judges (10:6–16)

The characteristic framework of the Book of Judges is expanded into a recapitulation of recent history, recounting the Israelites' worship of foreign gods. God rebukes the people (evidently through a prophet not mentioned), telling them that He will punish them, and challenging them to rely on their false gods to protect them on the day of His wrath. The people confess their sins and remove the false gods from their midst. This forms an introduction to the story of Jephthah.

Jephthah (10:17–12:7)

*Jephthah's reputation as a warrior in the land of Tob reached the elders of Gilead, and they asked him to be their “chief” (*qazin*) in a war against Ammon, who had attacked Israel. They tried to convince him to forget the shame the elders caused him when they had condoned his expulsion because of his illegitimate birth. Jephthah accepted their offer of leadership in war on the condition that he would lead the people in peacetime as well. Before going to war Jephthah began a diplomatic correspondence with Ammon, arguing that Ammon had no cause for war with Israel, since Israel had conquered the Transjordan territory from the Amorites, not from Ammon (Levi b. Gershom on Judg. 11:12). Furthermore, God had given the land to Israel as an inheritance, and for more than 300 years no counterclaims had been made (Judg. 11:26). The arguments did not convince the Ammonites. Jephthah made a solemn vow that if God would grant him victory, whatever emerged from his house to greet him on his return would be sacrificed to God as a burnt offering (11:31). Jephthah was successful in his battle, and on his return home his daughter was the first to greet him. In fulfillment of his vow Jephthah offered his daughter as a sacrifice, after she had been given time to bewail her virginity (11:29–40). Medieval Jewish commentators stress the unbinding nature of Jephthah's vow according to Jewish law, and many suggest that his daughter was not really sacrificed, but instead was condemned to eternal virginity (Marcus). One legend acknowledges the sacrifice of Jephthah's daughter, but relates that as a punishment Jephthah was buried

“in the cities of Gilead” (12:7), that is, his body slowly rotted and each limb was buried in a different city (David Kimḥi on 12:7). The people of Ephraim complained to Jephthah that they were not called to join the battle. Unlike Gideon, Jephthah gathered an army to fight the Ephraimites. They captured the fords of the Jordan, and all people who attempted to cross the river and who were recognized as Ephraimites were immediately killed. The most extreme critics consider the whole story an etiological narrative designed to explain the yearly observance of the young women of Gilead (Moore, in bibl., 284). More conservative scholars see Jephthah as a historical figure, but believe some elements of the story are not original. In the diplomatic correspondence (11:12–28), Khemosh, god of Moab, rather than Milcom, god of Ammon, is mentioned, and therefore scholars have maintained that this section belongs to another story about Israelite-Moabite relations (Moore, in bibl., 283). Kaufmann suggested that out of diplomatic courtesy Jephthah did not mention Milcom. He used instead the name of the god Khemosh. The Ammonite king understood the hint: the failure of Khemosh to stop Sihon (Num. 21:26–30) was also the beginning of the failure of Ammon (Kaufmann, 1962, in bibl., 222). More likely, we have an original story of a territorial dispute with the Moabites. According to Jephthah, Israel had held the territory for 300 years, reminiscent of the statement on the stela of King Mesha of Moab (mid-ninth century) that “the men of Gad had dwelt in Ataroth forever” (COS II, 137). The Moabite stratum of the story dates from the ninth century (Taubler apud Amit 1999, 200). At a later date, perhaps as early as the eighth century (see Amos 1:13) or later (see Zephaniah 2:8) the reality of Ammonite and Judahite hostility was retrojected into pre-monarchic times.

Ibzan, Elon, and Abdon (12:8–15)

See above the discussion of Tola and Jair.

Samson (13–16)

*Samson did not go to war against the enemy as a judge-savior, nor did he lead tribes against a foreign oppressor or invader. He fought alone with his bare hands or with some improvised weapons. His weakness for Philistine women led him into several clashes with the Philistines and finally to his death in the temple of Dagon (16:23–31). Modern scholars have argued that the Samson stories were secular stories of a popular local hero but were given a religious cast by such details as a miraculous birth and the appearance of angels (Renan, in bibl., 282). Others have theorized that the Samson cycle was an Israelite reworking of a sun god myth. The name Samson (from the Hebrew *shemesh*, “sun”) and the fact that the events took place near Beth-Shemesh suggest that the people in the area, who worshipped the sun, may have pictured the sun and its rays as the head of a warrior whose strength lay in his locks. A group of stories then grew up around the conception (Renan, *ibid.*, 283–4). Others have rejected this explanation. The name Samson, even if Canaanite in origin, is no proof of his mythical origin. Unlike mythical figures, Samson was not of divine ancestry (but see Reinhartz). Samson was, rather, a

“war-Nazirite,” a common phenomenon in those days. People believed that the uncut hair of the *Nazirite protected him, and this served as the basis for the legend of a divinely elected hero with superhuman strength, whose strength lay in his hair (Kaufmann, 1962, in bibl., 242, 244). That his hair is the source of his sexual virility is nicely demonstrated (Judg. 16:19) when Delilah tries to initiate sex with him (the only case in the Bible of *innah* directed by a woman toward a man). Chronologically, the Samson stories would seem to fit best before Deborah. In the Samson narrative *Dan is still in the south, but in the Song of Deborah they had already moved north. The stories about Samson were removed from their proper chronological place, because they break up the flowing pattern of Judges 2–12, but the mention of Shamgar was left before Deborah as a reminder that the beginnings of the Philistine problem were at that time (Kaufmann, 1962, in bibl., 113). The presence of the word *hiddah*, “riddle” (Judg. 14:12 *passim*), a loan from Aramaic *ahidah* after the shift of Aramaic *dhal* to *dalet* in the Imperial Aramaic that arose in the sixth century precludes an early period for the date of composition of that chapter.

Migration of Dan to the North (17–18) and the War Against the Benjaminites (19–21)

These concluding sections have no immediate introductory statements to connect them with the rest of the book and are characterized by the recurring phrase “in those days there was no king in Israel, each man doing what was right in his own eyes” (17:6, 18:1, 19:1, 21:25). It would seem that these sections were intended to illustrate the dangers of irregular tribal rule. The potential anarchy could be prevented only by the crowning of a king. The Danites, unable to resist the pressures of the Philistines in their southern home, traveled to the north and settled there. They stole the cult objects from the personal sanctuary of a certain northerner named Micah and set them up in their new sanctuary at Laish (17–18). The war against the Benjaminites was the direct result of an abominable offense committed by the people of Gibeah. A levite traveler came to Gibeah to spend the night. The people of Gibeah, surrounding the house in which he lodged, demanded that the levite be sent out to them for homosexual acts (19:22). (One point of the story is to show that the Benjaminites of Gibeah shared the values of the ancient Sodomites. The many elements common to Judges 19 and Genesis 19 were already pointed out by Nahmanides to Gen. 19:8.) His concubine was sent out instead and she was abused until she died. The levite cut her body into 12 pieces, sending one to each of the tribes, demanding revenge for the foul deed. An intertribal war resulted, in which Benjamin was decisively defeated. Fearing that a tribe of Israel might be wiped out, yet not wanting to break their vow against marrying Benjaminites, the Israelites resorted to several subterfuges to repopulate the tribe (21). First they attacked the city of Jabesh-Gilead, which had not participated in the campaign against Benjamin. Only young virgins were spared and given to the men of Benjamin. To acquire women for the rest of the survivors, the Benjaminites were advised to

lie in wait in the vineyards of Shiloh and take for their wives the young girls who usually came there to dance in celebration for the harvest. Technically, this was no breach of the vow, since the women were taken by force. Both medieval and modern commentators have advanced several theories concerning the date of these events. The Danite migration would seem to follow directly on the Samson narratives and be dated some time before Deborah. Perhaps 18:30, in which the first priest of Dan is of the generation of Moses' grandchildren, further supports this thesis (Kaufmann, 1962, in bibl. 267). Various dates have been suggested for the concubine in the Gibeah story, including the period of Othniel, of Joshua, and before Eli, the priest, and Samuel. Some scholars cited the concerted action of the tribes against Gibeah and Benjamin as proof for the theory that, before the foundation of the monarchy, Israel was governed by an amphictyony, a tribal federation grouped around a sanctuary similar to Greek federations, but that view has been generally abandoned.

For all its theological tendentiousness, the picture presented by Judges of conditions in pre-monarchic Israel finds a good deal of archaeological support (Bloch-Smith and Nakhai, 118). In addition, despite the imposition of their own concerns by later writers, Judges has preserved literary fragments of great antiquity and affords insights into the social and religious conditions of the period between the conquest and the monarchy. The theological picture presented by the Book of Judges is that the overriding, uniting goal of conquest was no longer present. The strong loyalty to Yahweh that had characterized the generation of Joshua declined. Israelites turned to the gods of their neighbors. The present Book of Judges stresses the point that these phenomena were the prime cause of national disaster, and that only in true repentance would the nation be able to live a secure life on its land. The Christian author of Hebrews 11:32–33 cites Gideon, Barak, Samson, and Jephthah as examples of ancient worthies whose faith brought them triumph.

[Gershon Bacon / S. David Sperling (2nd ed.)]

JUDIN, SAMUEL (1730–1800), Russian medalist. Judin possessed extraordinary natural talent and was accepted at a very early age by the School of Engraving of the St. Petersburg (Leningrad) Mint. From 1757 to 1762 he was the principal mint engraver there. In his first year he struck the silver ruble for Peter III; the limited edition showed his Cyrillic initials (“S. Yu.”) on the sleeve and is a coveted numismatic item. Judin's best-known medal is the one commemorating the Russian victory over Charles XII of Sweden at Poltava in 1709. He also engraved a group of medals, following previous models, which dealt with the life of Peter the Great. Judin collaborated with Timothy Ivanov on large portrait medals, an excellent example being their joint medal of Elizabeth I of Russia.

[Daniel M. Friedenberg]

JUDITH (c. 200 C.E.), the wife of R. Hiyya. She was the mother of twin daughters, Pazi and Tavi, and twin sons, Judah and Hezekiah. Having suffered unusually in childbirth, she disguised herself and asked her husband whether a woman was commanded by the Torah to propagate the race. On being told that she was not, she drank a sterilizing potion – a form of birth control permitted to women (Shab. 111a). Hiyya, however, was greatly displeased (Yev. 65b). According to another account, she claimed unsuccessfully that her father had betrothed her to another man when she was still a child, so that she was forbidden to cohabit with Hiyya (Kid. 12b). Judith constantly tormented her husband – so much so that he once told his nephew Rav, “May God deliver you from that which is worse than death,” i.e., a bad wife (cf. Eccles. 7:26). He nevertheless used to buy her many gifts, explaining to his surprised nephew, “It is sufficient for us that they bring up our children and save us from sin” (Yev. 63a).

[Moses Aberbach]

JUDITH, BOOK OF, a historical narrative dating from Second Temple times, included by the Septuagint and the canon of the Catholic and Greek churches in the Bible and by the Protestants in the Apocrypha.

The story is as follows: Nebuchadnezzar, king of Assyria who reigned in Nineveh, after having defeated Arphaxad, king of Media, in the valley of Ragau, sent Holofernes, his commander in chief, on a campaign of conquest, in the course of which he overran all the countries from the border of Persia

to Sidon and Tyre. When he reached the valley of Esdraelon before the narrow pass leading to Judea and Jerusalem, he found that, by order of the high priest in Jerusalem, all the passes had been occupied by the Jews living in the fortified mountain-pass towns of Bethulia and Betomesthaim. At this Holofernes summoned a council, as a result of which he ordered that Achior, the Ammonite chief, who had spoken confidently of the victorious power of Israel so long as they remained faithful to God, be sent to the Jews of Bethulia. Holofernes then laid siege to the town. After a month, when there was no water left in Bethulia and its leaders had already decided to open the gates to the enemy, there suddenly appeared a widow named Judith the daughter of Merari. She was of the tribe of Simeon and a resident of Bethulia, young and beautiful, righteous and wealthy. With the permission of the leaders of the town she went down to the camp of Holofernes who, attracted by her wisdom and beauty, invited her to a feast. When Holofernes fell asleep, overcome by wine, Judith took his dagger, cut off his head, and handing it to her maid returned with her to Bethulia. Deprived of their commander in chief by Judith's courageous deed, the panic-stricken Assyrian soldiers fled.

There are many obscure elements in the story. Its date has been assigned to the period of the return to Zion after the Babylonian Exile. At that time the kingdoms of Assyria and Media no longer existed, and hence various other theories have been advanced by scholars. Some (following Luther) have maintained that it is merely an allegory. More probably it is a historical novel written in the days of the Hasmoneans to inspire courage, its historical kernel being found in the events which took place under Artaxerxes III, when in 352 B.C.E. a Cappadocian prince named Holofernes fought against the Egyptians (Diodorus Siculus xvii, 6, 1). However, even this theory presents some difficulty, since the story contains no Greek features (and its geographic and ethnic background even conflicts with such an interpretation). On the other hand it contains definitely Persian names (Holofernes, Bagoas) and elements (such as ἀκινακίη for "dagger"; presenting "earth and water" to the king as a sign of surrender; the appellation "the God of heaven" for God of Israel; and the royal designation, "the king of all the earth"). It has therefore been suggested that the entire book is a "Persian" production. While, according to this view, the background of the story is Darius I's war against Phraortes, the "king" of Media at the time of the return to Zion (which is mentioned in the book), it was written only at the end of the Persian period, in the wake of the great revolt of 362 B.C.E. (in the reign of Artaxerxes II) which also spread to Erez Israel. Nor, according to this theory, is the most important geographical detail in the book, namely the reference to a Jewish (Simeonite) settlement on the border of the valley of Dothan, a fabrication. For a combination of various sources (Meg. Ta'an. for 25 Marḥeshvan (chap. 8); Jos., Ant. 13:275f., 379f. Wars 1:93f.; and also apparently 1 Macc. 5:23) shows that at the time of the return in the region of Samaria, in the neighborhood of what was known as "the cities

of Nebhrakta," there was a Jewish-Simeonite settlement (which may in effect have existed as early as in the days of the First Temple and being of Semite origin: cf. II Chron. 34:6, 15:9; and also 1 Chron. 4:31). The supposition is that in the great revolt at the end of the reign of Artaxerxes II (404–359 B.C.E.) this region fulfilled some function.

From a literary standpoint, by virtue of its epic description, the book is one of the most finished productions of Second Temple times. A prose work, it embodies two poems, Judith's prayer before setting out for the camp of Holofernes (9) and the thanksgiving of Israel after the victory (16). Very close to the later biblical poetry, in its structure and poetic imagery, this song of thanksgiving antedates those found at Qumran. The book is also significant by reason of both the *halakhah* it contains and the religious faith it reflects. Yet it reveals no trace of sectarianism, as do the works written in the post-Hasmonean period.

As is clearly evident from its many Hebraisms, the book was originally written in Hebrew (cf., for example, the expressions: "the space of 30 days"; "all flesh," as a designation for human beings; "let not thine eye spare"; "the face of the earth"; and "smote with the edge of the sword," etc.). In the precise Greek translation there is also discernible the special Erez Israel spelling (the substitution of the ו"ו verb by ו"פ).

The book is extant in four principal Greek versions (A, B, Codex 58, and Codex 108), all of which derive from the Hebrew. In ancient times an abridged Aramaic translation was made, on the basis of which Jerome translated the work into Latin (this being the Vulgate version). At an early stage the Hebrew book was lost, but in one form or another (chiefly through translations and adaptations from the Latin), from the 10th–11th centuries, several abridged Hebrew versions of the work found their way back into midrashic literature.

In the Arts

Judith has attracted more writers, artists, and composers than any other figure in the Apocrypha. Two of the earliest literary works were *Judith*, a fragmentary Old English epic, and a Middle High German poem of the same title dating from the 13th century. One of the first recorded plays about Judith and Holofernes was that staged at Pesaro, Italy, in 1489 by the local Jewish community. By the beginning of the 16th century, the subject was arousing fresh attention – particularly among Protestant writers, who reinterpreted it in terms of the triumph of virtue over wickedness. Martin *Luther favored the use of Old Testament material as a basis for drama, especially recommending Judith as a tragic theme. Two pioneering works of the Renaissance era were *Juditha* (1521), a religious epic by the Croatian humanist Marko Marulić and the German playwright Sixtus Birck's *Judith* (1532). Another *Judith* (1551) was written by the German *Meistersinger* Hans Sachs. In Italy, where the subject was treated in an orthodox Catholic fashion, Luca (Ciarafello) de Calerio produced the drama *Giuditta e Oloferne* (Naples, 1540), and G. Francesco Alberti

the tragedy *Oloferne* (1594). The subject retained its popularity throughout the 17th–19th centuries and was the subject of plays in various countries. Thus in Spain, the Marrano dramatist and preacher Felipe *Godínez wrote *Judit y Holofernes* (1620); and *Iyudif* (1674), a seven-act Russian prose drama, was one of the first biblical works to be staged in Moscow. An anonymous work of 1761, *Sefer Yehudit ve-Sefer Yehudah ha-Makkabi*, appeared at Amsterdam. Two curiosities of the 19th century, both written in *Judeo-Italian and titled *La Betulia liberata*, were a poem by Luigi Duclou (1832) and an epic by Natale Falcini (1862). An outstanding tragedy on the theme was the German dramatist Friedrich Hebbel's *Judith* (1841). In the United States, the Quaker John Greenleaf Whittier included "Judith at the Tent of Holofernes" (1829) among his biblical poems, while Thomas Bailey Aldrich dramatized his *Judith and Holofernes* (1896), and Adah Isaacs *Menken wrote her sensual story, "Judith" (in *Infelicia*, 1888). An impressive number of works about Judith have been written by authors of the 20th century. The German expressionist Georg Kaiser adopted an original approach in his comedy *Die juedische Witwe* (1911). The urge to "modernize" the subject was particularly evident in England, where Thomas Sturge Moore's *Judith* (1911; staged 1916) suggested that the heroine became the tyrant's mistress before she killed him. The *Judith* of Lascelles Abercrombie (in *Emblems of Love*, 1912) contained strong undertones of suffragette thinking, while Arnold Bennett's heroine (1919) created a furor by appearing on the stage in a revealing costume. Among the plays that appeared between the world wars were Henry *Bernstein's drama *Judith* (1922), Bartholomaeus Ponholzer's *Judith, die Heldin von Israel* (1927), and Ricardo Moritz's *Giuditta* (1938). In his psychological tragedy, *Judith* (1931), the French writer Jean Giraudoux went even further than the British by treating the whole story as a myth, transforming the heroine into a courtesan and the villain into the more likeable character.

Judith has often been portrayed by artists. For medieval Christianity, the Jewish heroine's slaying of Holofernes represented the triumph of the Virgin over the devil. It also signified the victory of *sanctimonia* (chastity and humility) over lust and pride. Judith is usually shown either with the sword in her right hand and Holofernes' head in her left, or dropping the head into a receptacle held by her servant. A dog, the symbol of fidelity, often accompanied her. In Renaissance and later painting she was sometimes shown nude. The story was treated in narrative cycles and in isolated incidents. An early cycle exists in the Bible of San Paolo fuori le Mura (Rome, ninth century). The arches over the north portal of Chartres Cathedral (13th century) depict several episodes, as does a window of the same period in La Sainte-Chapelle, Paris. The subject was found suitable for tapestry, two examples being a Tournai cycle (15th century in Brussels' Musées royaux d'art et d'histoire), and a French version (c. 1515; now in the Cathedral of Sens). In the Loggia dei Lanzi, Florence, there is an ornate sculpture of the subject by Donatello. Among the Renaissance painters, Andrea Mantegna treated the subject several times

and Botticelli painted some episodes from the story of Judith that are not commonly illustrated: Judith and her maid arriving home with the head, and the discovery of the dead body of Holofernes (both in the Uffizi Gallery, Florence). There is a painting of Judith with the head by the same artist in the Rijks Museum, Amsterdam. Michelangelo included figures of Judith and her maid in his Sistine Chapel ceiling.

Several of the great Venetian artists painted Judith. There is an upright figure of the heroine delicately trampling on Holofernes' head by Giorgione (Hermitage, Leningrad). Paolo Veronese painted a very attractive Judith (Kunsthistorisches Museum, Vienna), and there is a study of her in the act of killing Holofernes by Tintoretto (Prado, Madrid). Of the later Italian artists, Caravaggio painted the same scene (Naples Museum) with a certain violence. The German Renaissance painter Lucas Cranach was particularly attracted by the subject of Judith and Holofernes and painted it several times. One version is in the Kunsthistorisches Museum, Vienna. Rubens used a dramatic chiaroscuro to portray Judith in the act of killing Holofernes (Brunswick Museum).

In Jewish musical tradition, the story of Judith is represented by the singing of the *piyyut*, *Mi Khamokha Addir Ayom ve-Nora* (Davidson, *Ozar*, 1143) on the Sabbath of Hanukkah, a custom retained in several communities. The "Canticle of Judith," *Hymnum cantemus Domino* (Judith 16: 15–21), is prescribed in the Catholic Church for the *Laudes* (dawn service) on Wednesdays, and intoned to a simple psalmodic melody. Polyphonic settings of the text appear only rarely: one instance is *O bone Deus, ne projicias* by Jacobus Gallus (Handl), the text being a combination of verses from chapters 8, 14, 16, and 19 of the Apocryphal book. With the rise of the oratorio, the subject – possessing a naturally dramatic plot – came into its own and it continues to maintain its popularity. Two factors contributed to the remarkably frequent appearance of *Judith* oratorios in the second and third quarters of the 18th century: first of all, the appeal of Metastasio's libretto, *Betulia liberata* (commissioned by the emperor Charles VI of Austria, and first performed in the Imperial Chapel, Vienna, with music by Georg Reutter, in 1734); and secondly, the reign of Maria Theresa (1740–80), who was symbolized as a latter-day Judith standing up to the new Holofernes – Frederick the Great of Prussia. The regular production of operas about Judith only began toward the middle of the 19th century, by which time biblical subjects were permitted on the stage and the early romantic "horror opera" had prepared audiences for the sight of Holofernes' severed head.

The following is a selective list of compositions about Judith; all are oratorios, if not designated otherwise: Caspar Foerster, *Dialogus de Holoferne* (1667); Antonio Draghi, *La Giuditta* (1668–69); Giovanni Paolo Colonna, *Bettuglia liberata* (1690); Alessandro Scarlatti, *La Giuditta vittoriosa* (1695); Marc-Antoine Charpentier, *Judith sive Bethulia liberata* (c. 1700); Antonio Vivaldi, *Judith triumphans devicta Holofernis barbarie* (1716); Giuseppe Porsile, *Il trionfo di Giuditta* (1923); Wilhelm de Fesch, *Judith* (English libretto: London,

1733); Georg Reutter, *Betulia liberata* (first setting of Metastasio's libretto; Vienna, 1734); Joseph Anton Sehling, *Firma in Deum fiducia... in Judith Israelis Amazone* (melodrama; Prague, 1741); Niccolò Jomelli, *Betulia liberata* (Metastasio's text; Venice, 1743; the composer's first oratorio); Antonio Bernasconi, *Betulia liberata* (Metastasio's text; 1754); Giovanni Battista Martini, *In cymbalis and Hymnum novum*, two puzzle canons in his *Storia della musica*, 1 (1757), 165, 334; Ignaz Holzbauer, *Betulia liberata* (Metastasio's text; 1760); John Christopher Smith, *Judith* (scenic oratorio; 1760, not performed); Thomas Augustine Arne, *Judith* (1761, restaged 1773; first use of female choristers on the English stage); Domenico Cimarosa, *Giuditta* ("opera sacra," 1770); Florian Gassmann, *Betulia liberata* (Metastasio's text; Vienna, 1771; inaugurating the concerts of the *Tonkuenstlersozietät*); Wolfgang Amadeus Mozart, *Betulia liberata* (Metastasio's text; 1771; see also below); Leopold Anton Koželuch, *La Giuditta* (c. 1780) and *Judith und Holofernes* (after Metastasio; as opera, c. 1779; as oratorio, 1799); Ludwig van Beethoven, three canons on "Te solo adoro" from Metastasio's libretto (1823); Samuele Levi, *Giuditta* (opera; Venice, 1844); Julius Rietz, *Judith* (ouverture and entr'actes to Hebbel's drama, 1851); Emil Naumann, *Judith* (opera, 1858); Alexander Serov, *Judith* (opera; text by the composer and three collaborators; St. Petersburg, 1863; his greatest success); Giacomo Meyerbeer, *Judith* (operatic fragment, 1864; unpublished); Albert Franz Doppler, *Judith* (opera, 1870); Paul Hillemecher, *Judith* ("scène lyrique," 1876); Charles Lefebvre, *Judith* (opera, 1879); Carl Goetze, *Judith* (opera, 1887); Sir Hubert Parry, *Judith* (1888); George W. Chadwick, *Judith* ("lyric drama," 1901); August Reuss, *Judith* (for orchestra; "after Hebbel," 1903); Carlo Ravasenga, *Giuditta e Oloferne* (for orchestra, 1920); Max Ettinger, *Judith* (opera, 1920); Emil von Resniček, *Holofernes* (opera; libretto by the composer, based on Hebbel, 1923; the overture, in the form of an arrangement of *Kol Nidre*, was also performed and published separately); Arthur Honegger, *Judith* (opera; text by René Morax, 1926); Eugene Goossens, *Judith* (opera; text by Arnold Bennett, 1928); Gabriel Grad, *Judith and Holofernes* (opera in Hebrew; only parts published, 1931 and 1939); Carl Nathanael Berg, *Judith* (opera, 1931–35); Mordechai Seter, *Judith* (ballet, 1963; reworked in 1967 as a "symphonic chaconne" for orchestra). Metastasio's *Betulia liberata* was translated into Hebrew by David Franco Mendes in 1790–91 as *Teshu'at Yisrael*. It is not certain whether the translation was made for a performance with Mozart's music, since the manuscript bears only the direction *Lahakat Meshorerim* ("group of singers," i.e., chorus), and does not indicate the solos. F. Clément, in his *Dictionnaire des Opéras* (1897², 624), reports the United Hebrew Opera Company's performance in Boston of an opera titled *Judith und Holofernes* (1861), which was "sung in German, with the program printed in Hebrew." Both the performance and the program were probably in Yiddish.

JUEDISCHE FREISCHULE (Ger.; "Jewish Free School"), private school for poor children, founded in Berlin in 1778 by Isaac Daniel *Itzig and David *Friedlaender, who were influenced by Moses Mendelssohn's ideas on education. Adjoining the school was a printing shop whose returns were to contribute to the maintenance of the school. The subjects taught comprised writing, arithmetic, accountancy, drawing, reading in German and French, and geography. Biblical Hebrew was taught only to a very limited extent, the greatest amount of time being given to commercial courses. In 1779 Friedlaender published a reader for his pupils – one of the first of its kind to be used in German Jewish schools – containing excerpts from German and Hebrew literature, the latter in German translations by Mendelssohn. Some Christians were included on the teaching staff. During the first few years there were about 80 pupils. After ten years, however, about 500 pupils had graduated from the school. Following the death of I.D. Itzig in 1806, Lazarus *Bendavid was appointed principal. He was prompted by ideological and practical considerations to accept Christian pupils, whose number increased, in the course of time, to one-third of the total. The Freischule thus became the first interdenominational school in Germany. Of the 80 pupils attending the school, in 1817, 40 were educated free of charge, and 16 were Christians. At the time of the reaction following the Napoleonic wars, the Prussian government forbade Christian children to attend Jewish schools; consequently, all non-Jewish pupils had to leave the school in 1819. In the same year the number of Jewish pupils decreased to 50 and by 1825 the school had to be closed.

In the 48 years of its existence the Freischule educated about 1,000 students, a majority of whom later took an active part in the Reform movement. The school, which had always advocated modern teaching methods, served as a model for similar schools such as the Samsonschule in *Wolfenbuettel and the Philanthropin in Frankfurt.

JUEDISCHE PRESSE, German weekly reflecting an Orthodox viewpoint, published in Berlin. The *Juedische Presse* was founded in 1870 on the initiative of Azriel *Hildesheimer, and edited from 1884 to 1910 by his son, Hirsch *Hildesheimer. From the first, it reflected Hildesheimer's view on the evils of **ḥalukkah* and on the need in Jerusalem for educational

reform and technical training. The paper also supported the *Hibbat Zion movement and colonization in Erez Israel, but was critical of *Herzl and of political Zionism. In communal politics, it stood against the dogmatic secessionism (*Austritt*) of some Orthodox from the community, with its center in Frankfurt, and defended the so-called “communal Orthodoxy” which worked within the framework of the state-established congregations. In 1919 the *Juedische Presse* became the official organ of the German *Mizrachi (with a Hebrew and Yiddish supplement) but ceased publication in 1923.

JUEDISCHER FRAUENBUND, organization of Jewish women founded in 1904 by Sidonie Werner and Bertha *Pappenheim originally in order to combat white slavery, especially of Jewish girls from Eastern Europe. Under Pappenheim's energetic leadership the organization expanded rapidly and after 30 years of existence boasted 30,000 members in about 450 branches. Politically the organization was neutral: the women's organizations of the *Central-Verein and *B'nai B'rith were affiliated with it, whereas Orthodox and Zionist women's organizations were not. Its charitable agencies were concerned with adoption, social work, and health, and especially the Isenburg home for wayward women. In the Jewish communities the Frauenbund strove for full female suffrage in communal elections, and it received nominal representation in national and international forums. Bertha Pappenheim was succeeded by Hannah Karminski (1887–1943), who was deported and killed by the Nazis after the forced shutdown of the Juedischer Frauenbund in 1938 (refounded by Jeanette Wolff and Ruth Galinski in 1953).

JUEDISCHER KULTURBUND (Ger. “Jewish Cultural Association”), German Jewish organization founded in Berlin in May 1933 when the National Socialist regime dismissed Jewish high school teachers, artists, and authors from their positions and excluded all Jews from German cultural life. The Juedischer Kulturbund was initiated by Kurt Baumann, a young theater director, and directed by Kurt Singer, who was a physician and a musician and a director of the Berlin Opera. Singer engaged some good Jewish artists to perform and also organized a series of lectures on scientific subjects. Their existence was accepted by the Gestapo only after the

words “German Jews” were eliminated from its title and their activities were under Nazi scrutiny. The Juedischer Kulturbund devoted itself to extensively spreading interest in Jewish art and culture in spite of the Nazi persecution and worked to secure continued cultural activity by providing funds from the resources of its members and through the communities themselves. Evidently the work of the Juedischer Kulturbund largely helped to maintain a closely knit Jewish population and awaken a love for the land of Israel by promoting Zionist ideas. This body also published the *Monatsblaetter des Kulturbundes deutscher Juden* from 1933 on, edited by Julius *Bab. The paper was forced to change its name to *Monatsblaetter des juedischen Kulturbundes* in 1938, after *Kristallnacht.

From its foundation until October 1938 it organized 8,457 programs, including lectures, concerts, plays, art exhibits, and operas. Julius Bab, Joseph Rosenstock (d. 1985; musical director), Kurt Singer, Kurt Baumann, and Werner Levie (secretary general) directed the Juedischer Kulturbund's affairs. In early 1938 there were 76 branches of the Kulturbund in 100 towns, with more than 50,000 members and 1,700 artists. Membership and the scale of activities were proportionately larger outside of Berlin. Yet, in Berlin alone the membership fluctuated between 12,000 and 18,000. The choice of the programs for lectures, plays, and concerts was often very difficult and was constantly controlled by the secret police (*Gestapo), the Chamber for Arts and Culture (Reichskulturkammer), and the leadership (Gauleitung) of the Nazi Party in Berlin. The Kulturbund was itself divided over whether to present general cultural programs or those of specific Jewish content as advocated by the Zionists. For every organized performance the material had to be submitted in writing for approval by the state commissioner, *Staatskommissar* Hinkel. Hinkel told the Juedischer Kulturbund which plays and lectures could be performed and which articles and literary works could be published. After the November 1938 *Kristallnacht pogroms, local activities were centralized and therefore better controlled by the national organization, which was disbanded in September 1941. A few of the leading organizers managed to emigrate, but the great majority of artists eventually perished in death camps. The Kulturbund provided spiritual support for Jews in Germany during a time of ever more intense persecution; and for individual artists it provided both employment and an opportunity to remain creative and productive amidst the great struggle for basic survival.

[B. Mordechai Ansbacher / Michael Berenbaum (2nd ed.)]

JUEDISCHE RUNDSCHAU, journal of the Zionist Federation in Germany. Founded in 1896 under the editorship of Heinrich *Loewe, it appeared twice weekly and was the chief rival of the anti-Zionist *Central-Vereins-Zeitung*. By 1937 the paper had a circulation of over 30,000, much of it outside

Germany. Its influence on the younger generation of Zionists was profound, especially during the Nazi period when it helped to strengthen Jewish morale. When Hitler made the wearing of the yellow patch compulsory, Robert *Weltsch's editorial article urged readers to "wear it with pride." Its last editors were Weltsch and Kurt Loewenstein. It was among the Jewish newspapers banned by the Nazis and ceased publication in 1938.

JUEDISCHER VERLAG, the first Jewish-Zionist publishing house in Western Europe. It was established in 1902 by M. *Buber; B. *Feiweil, E.M. *Lilien, L. *Motzkin, A. *Nossig, Ch. *Weizmann, and others, who constituted the core of the *Democratic Fraction. In line with the aims of the Fraction, the publishing house was to serve as an expression of the Jewish renaissance by publishing the spiritual, cultural, literary, and artistic treasures of the Jewish people over the ages as a basis for the spiritual-cultural rebirth of the Jewish people. The idea had received *Herzl's warm support at the Fifth Zionist Congress (1901). The aim of the plan was to supplement the political activities of the Zionist Organization and to serve as a bridge between Western and Eastern Jews. The first book, *Juedischer Almanach* (1902) edited by Feiweil and Lilien, included authors from both East and West and presented all types of literary works, some of them translated from Hebrew and Yiddish. The second book, *Eine juedische Hochschule* (1902), written by Buber, Feiweil, and Weizmann (translated into Hebrew in 1968 by S. Esh with a preface by S.H. Bergman), voiced for the first time the idea of establishing a Hebrew University in Jerusalem. In 1907, when the publishing house was transferred to the Zionist Organization, it was removed to Cologne; it returned to Berlin in 1911. Until 1920 it was directed by A. Eliasberg, and from 1920 on by S. *Kaznelson. The firm passed through periods of prosperity and times of crisis. It flourished especially under the direction of Kaznelson, when it became one of the greatest Jewish publishing firms in the world, maintained without external support. Among the hundreds of books published by it were the works of *Aḥad Ha-Am, Herzl, *Nordau, A.D. *Gordon, *Agnon (in Hebrew and in German), *Bialik, J.L. *Peretz, *Abramovitsh (Mendele Mokher Seforim), and *Bergelson, *Dubnow's *Weltgeschichte des Juedischen Volkes*, the five volume *Juedisches Lexikon*, L. *Goldschmidt's German translation of the Talmud in twelve volumes, Adolf *Boehm's *Die Zionistische Bewegung*, *Tur-Sinai's German translation of the Bible, the book "Yizkor" (dedicated to Ha-Shomer in Erez Israel), *Trumpeldor's diaries, *Jabotinsky's book on the Jewish Legion, the monthly *Der Jude*, edited by Buber, etc. The distribution of some books was extraordinarily large (Dubnow's works on Jewish history and history of Ḥasidism, 100,000 copies; the *Juedisches Lexikon*, 50,000 copies; the translation of the Talmud, 100,000 copies; Herzl's works and diaries, 30,000 copies). In 1938 the firm was closed by the Gestapo and its warehouse confiscated. S. Kaznelson, who had settled in Palestine, established in 1931 a daughter company, Hoza'ah Ivrit, in partial partnership with

the Dvir Publishing Company, Ltd. After the liquidation of the Juedischer Verlag Hoza'ah Ivrit continued its work in Palestine. In 1958 the Juedischer Verlag was newly established in Berlin. From 1990 it was part of the German publishing house Surkamp in Frankfurt am Main.

[Getzel Kressel]

JUEDISCHE VOLKSPARTEI, party organized in 1919 by M. Kollenscher, H. Loewe, G. Kareski, A. Klee, and others from Zionist-oriented groups in Berlin and other large cities of Germany. The Juedische Volkspartei originated in circles influenced by Herzl's call for Zionists to enter communal politics to contest the dominance of assimilationist and conservative factions. This program was successfully carried out only after World War I by a coalition of East European Jewish immigrants (who, in a few communities, were not entitled to a communal vote as foreign citizens) and the Zionist parties. This coalition successfully agitated for the democratization of the statutes of the Jewish communities. Communal elections, formerly peaceful affairs, aroused great interest and were hotly contested. The Juedische Volkspartei achieved resounding successes in Saxony and a few larger cities after the electoral regulations of the communities had been democratized and standardized. In a coalition with the Orthodox forces they succeeded in the 1926 communal elections to overthrow the long-time Liberal dominance in Berlin. Under their leadership, new Jewish schools were opened and the social welfare institutions were strengthened. In the 1930 Berlin communal elections they had to return power to a Liberal majority despite an increase in the number of votes.

JUEDISCH-LITERARISCHE GESELLSCHAFT, society for the advancement of the scientific study of Judaism, founded in Frankfurt on the Main by Orthodox Jews in 1902, the same year as the founding of the liberal Berlin *Gesellschaft zur Foerderung der Wissenschaft des Judentums. Its founding members were the rabbis Solomon Bamberger, Jonas Bondi, Isaac *Halevy, Heymann Kotteck, and Moses Marx, and educator Gerson Lange. This society endeavored to show that properly oriented Jewish scholarship need not be in conflict with the tenets of traditional Judaism. Thus, it rejected such "unproven hypotheses" as the documentary theory of biblical criticism while concentrating on post-biblical studies. In pursuit of its aims it published an annual titled *Jahrbuch der juedisch-literarischen Gesellschaft* (1903–32), of which 22 volumes appeared (until 1929 edited by Jonas Bondi). It contained articles on diverse aspects of Jewish history and thought, book reviews, and a few contributions in Hebrew. In addition to the

yearbook, the society published a number of scholarly and popular works, of which the following may be mentioned: I. Halevy, *Dorot ha-Rishonim* (6 vols., 1897–1939); H. Kotték, *Geschichte der Juden* (1915); and B. Lewin's critical edition of *Iggeret Rav Sherira Gaon* (1921). It also granted subventions toward the publication of other scholarly volumes. The founding members of the society were among the most active in its scholarly ventures.

JUEDISCH-THEOLOGISCHES SEMINAR, Breslau, first modern rabbinical seminary in Central Europe. Founded in 1854 with the funds which Jonas Fraenkel, a prominent Breslau businessman, had willed for the purpose, the seminary became the model for similar colleges set up in Europe and the U.S. Its first head was Z. *Frankel, to the disappointment of A. *Geiger, who had conceived the idea of the seminary and won Jonas Fraenkel's support for it. The seminary also trained teachers until 1887, and this training was resumed in the 1920s and 1930s. However, the seminary's basic aim was to teach "positive historical Judaism." The "positive" stood for a faithful adherence to the practical precepts of Judaism, while "historical" permitted free inquiry into the Jewish past, including even Bible criticism, though with some self-imposed limitations.

Thus the Breslau seminary, under Frankel's guidance, took a middle position between dogmatic Orthodoxy, as represented by S.R. *Hirsch and A. *Hildesheimer's Rabbinical Seminary, and Geiger's *Lehranstalt (Hochschule) fuer die Wissenschaft des Judentums, officially an academic institution without ideology, but in fact largely a training college for Reform rabbis. Many of its graduates became rabbis in Liberal or Reform congregations, some in Orthodox ones.

After his death in 1875, Frankel was succeeded by L. Lazarus. However, when the latter died in 1879, the administrative functions were henceforth exercised by the lecturers collectively. The one who taught Talmud and rabbinics held the post of "seminary rabbi" and was alone entitled to bestow rabbinical ordination. The seminary graduated about 250 rabbis between 1854 and 1938. Many students of the college made a name for themselves in Jewish scholarship and/or public life.

The seminary issued annual reports (until 1937) containing scholarly contributions by the staff. There was a close association between the college and the *Monatsschrift fuer die Wissenschaft des Judentums. The library, based on the Saraval Collection, grew to over 30,000 volumes and contained more than 400 valuable manuscripts (see D.S. Loewinger and B.D. Weinryb, *Catalogue of Hebrew Manuscripts in the Library of the Juedisch-Theologisches Seminar in Breslau*, 1965).

The years after World War I saw considerable expansion, with teachers' and youth leaders' training courses. Modern Hebrew, too, was given a place in the curriculum. In 1931 the Prussian government approved the addition to the seminary's original name of that of Hochschule fuer juedische Theolo-

gie. Nazi rule in Germany from 1933 led to a decrease in the number of regular students, and some of the lecturers sought refuge abroad. The pogrom of November 1938 led to the sack of the seminary and the destruction of the greater part of its library. By order of the police, all teaching activities had to cease and many students were sent to the Buchenwald concentration camp. Nonetheless, some more or less clandestine work continued until February 21, 1939, when the seminary ordained (for the last time) two students.

Brann, *Geschichte des juedisch-theologischen Seminars in Breslau (Festschrift zum 50-jaehrigen Jubilaem, 1904); Festschrift zum 75-jaehrigen Bestehen des juedisch-theologischen Seminars*, 2 vols. (1929).

JUELICH, former duchy and town in Germany. During the 13th century Jews lived in the county of Juelich (from 1356 the duchy of Juelich-Berg). In the course of the 16th century the Jews of Juelich-Berg were persecuted and finally expelled in 1595; however, they were readmitted around the first quarter of the 17th century. The first privilege, granted in 1689, was renewed and approved every 16 years up to the French occupation in 1792. In 1808 the duchy of Juelich-Berg was transformed into the grand duchy of *Berg and in 1815 it was incorporated into the Prussian kingdom.

Among other documentary evidence, reference to a Jewish martyr bears witness to the fact that Jews resided in the town of Juelich in the 13th century. The names of four Jews are known from documents dating from 1324, when a community possessing a synagogue was in existence. A R. Jacob of Juelich lived c. 1300. During the *Black Death persecutions (1348–49) the Jewish community was destroyed and its property and synagogue confiscated. Among the few survivors was "Jacob son of the martyr Joel of Gulkha" (Juelich). In 1356, Margrave William IV of Juelich-Berg relinquished his claims to the property of the defunct community to the archbishop of Cologne. Later the community was restored: at the end of the 16th century there was one Jewish family in Juelich; there were three families in 1673 and 13 in 1786. In the 18th century services were held in a private house. The community of Juelich was under the jurisdiction of the *Landesrabbiner of the duchy Juelich-Berg, with his seat in *Duesseldorf. In the 18th century he performed his rabbinic functions in both Juelich and Dueren. From 1706 to 1750 Samson Levi Froehlich served as rabbi, Judah Loeb Senever was rabbi in 1779–1821.

In 1806 there were 95 Jews in Juelich. The community reached its peak of 137 in 1910. When the Nazis seized power in 1933, there were 120 Jews in Juelich, owning a synagogue (erected 1860) and a cemetery. There were then two charitable societies and two cultural organizations. As a result of emigration the community had declined to 52 by May 17, 1939. On March 24, 1941, the last 24 Jews of Juelich were removed to Kirchberg and from there deported to the East. With those local Jews deported after reaching Holland and Belgium a total of 71 of the town's Jews perished in the Holocaust.

JUJUBE. Two species of jujube grow wild in Israel: the wild jujube (*Zizyphus spina-Christi*) and the lotus jujube (*Zizyphus lotus*). The former is a tall tropical tree with dense, prickly branches (from which, according to Christian tradition, Jesus' crown of thorns was made, hence its scientific name), growing in the hot regions of Israel. The latter is a prickly desert bush, bearing small floury fruit; it grows wild in North Africa where the people make bread from it. These are "the lotus eaters" mentioned by Herodotus (*Historiae*, 4:177). Also growing in Israel is the cultivated jujube (*Zizyphus vulgaris*) which produces a large fruit with an excellent flavor. This is the *sheizaf* of rabbinic literature which is commonly grafted on to the wild jujube, called *rimin*, the two species being counted as diverse kinds (*kilayim*) according to *halakhah* (Kil. 1:4). The fruits of the wild jujube are tasty but were not highly thought of (cf. Dem. 1.1). This tree, widespread in the wadis of the Arabah and the Jordan Valley, is identified with the *ze'elim* (lotus trees, AV "shady trees") of Job 40:21–22 under which the *behemoth* lies near the banks of the Jordan. Near Ein Hazevah in the Arabah grows a huge wild jujube which is counted among the oldest trees in Israel.

[Jehuda Feliks]

°JULIAN THE APOSTATE (Flavius Claudius Julianus; 331–363 C.E.), Roman emperor 361–363 C.E. As a child Julian escaped the slaughter of his immediate family during the struggles for the throne after the death of his uncle Constantine the Great. Although in his youth Julian received a Christian education under the supervision of Eusebius, the bishop of Nicomedeia, he later was greatly influenced by Greek philosophy and ideas. In 355 Emperor Constantius appointed Julian governor of Gaul, where he proved to be an outstanding soldier and administrator, defeating the invading German tribes, and strengthening the provincial administration. In 360 Julian's troops, ordered to join Constantius in the war against Persia in the East, mutinied and declared Julian emperor. When Constantius suddenly died the following year, Julian became the undisputed ruler over the entire Empire.

Julian saw Christianity – which within a generation had ceased to be a persecuted belief and had become the official religion persecuting others – as a sickness within the body politic, and felt deep revulsion toward it from an ethical-religious viewpoint. Although he issued an edict of universal religious toleration, he gave practical expression to his opposition to Christianity by founding a pagan cult in which he

served as pontifex maximus. He established regulations governing the behavior and way of life of the pagan priests, formulated important ethical values, and forbade certain books because they were inimical to pagan religious belief. His polemics against Christianity were reinforced by the use of imperial influence – though not force – on behalf of paganism. His writings reveal his knowledge of the Bible and the New Testament. Many of the themes in his polemic *Against the Galileans* (as the Christians were known) have some relevance to Judaism, but they must be judged less in terms of his friendship to the Jews than of his hatred of Christianity. He chides Christianity for having adopted the worst aspects of paganism and Judaism, and for having broken away from Judaism; he writes that the beliefs of the Jews are identical with or only slightly different from those of other nations, with the exception of belief in one God; and on various occasions he denies the allegorical interpretation of Christianity, deriving his arguments from the Bible.

Julian discussed Jewish monotheism from two viewpoints: first, he refuted the Christian claim that Jesus, the Logos, is God, since the Bible recognizes only one God (*Against the Galileans*, 253Aff.); second, he attempted to fit Judaism into the pagan pantheon and isolate Christianity. He therefore argued that the Jews are the chosen people of their god, who is their particular national and local deity (or daemon) and watches over them, just as do other city gods and national deities "who are a kind of regent for the king" (*ibid.* 99E, 115D, 141C–D, 176A–B). However, he was not pleased with Jewish zealotry against other gods, and with the Jews' observance of the Sabbath. He compared the myths of Genesis with the Homeric epic and the Platonic cosmogony, and argued that paganism's religious tradition and view of godhood is superior to Judaism's. He found supporting evidence in the Jewish history of bondage, and the fact that the Jewish people never spawned great military leaders, philosophers, lawmakers, natural scientists, physicians, musicians, logicians, etc. in proportion to their numbers – reflecting negatively upon their religion.

Julian's attitude toward the Jews was generally defined by the needs of his polemic against the Christians. Just before Julian embarked on his Persian campaign he promised to abolish the anti-Jewish laws and to rebuild the Temple where he would join the Jews in worship (*Letter to the Community of the Jews*, no. 51, 396–8). Shortly after this he wrote that "even now the temple is being raised again" (*Letter to a Priest*, 295c). Jewish sources contain only vague hints of these activities. R. Aḥa said that the five sacred objects present in the First Temple were missing in the Second (TJ, Ta'an. 65a; *ibid.* Hor. 47c; Yoma 21b), implying that the Third Temple would be built without any of these. He also said that it would be rebuilt before the Messiah (TJ, Ma'as. Sh. 56a). Jerome reports that some Jews interpreted *sublevabuntur auxilio parvulo* (Dan. 11:34) to refer to this episode (Commentary to Daniel 717). A fuller account is found in Ammianus Marcellinus where Julian is said to have wanted to found the Temple as a memorial to his rule. He arranged for money and building materials to be provided, appointing

Alypius of Antioch, but after several attempts to build on the site he was discouraged by a fire which broke out in the ruins there (Res Gestae 23:2–3). The Church Fathers embellished the story in various ways adding that the Jews received Julian's proposal enthusiastically, coming in thousands to the Temple Mount with stones in their hands, but when the first stones were laid the Jews were threatened by earthquakes and hurricanes, and finally driven off by a heavenly fire and specter of Christ (Gregory of Nazianz, *Contra Julianum, Oratio*, no. 4, 2:149–50; Socrates, *Historia Ecclesiastica*, 3:196; Sozomenus, *Historia Ecclesiastica*, 5:214–5). Two important facts may be gathered from these sources: (1) Julian wished to rebuild the Temple to strengthen paganism against Christianity (he saw Judaism and paganism as having sacrificial rites in common); (2) he wished to refute Jesus' prophecy concerning the Temple (Luke 21:6; Matt. 24:2). Later Christian writers claimed that at Julian's decree to rebuild the Temple the Jews massacred the Christians, burning churches at Ashkelon, Damascus, Gaza, and Alexandria (Ambrose, *Epistles*, 1, no. 40:14–15; Sozomenus, *loc. cit.* 5:22). Most scholars accept rather the opposite view of Bar Hebraeus that the Christians in anger at the decree killed the Jews of Edessa (*Chronography*, 63). A Hebrew inscription quoting part of Isaiah 66:14 found on the Western Wall in 1969 has been ascribed to this period of messianic revival. Julian's works were published with an English translation by W.C. Wright under the title *The Works of the Emperor Julian* (3 vols., 1913–23).

°**JULIUS III (Giovanni Maria Ciocchi del Monte; b.** 1487). pope, 1550–55. Julius III showed himself comparatively favorably disposed toward the Jews by employing many Jewish physicians, by imposing a fine of 1,000 ducats on anyone who forcibly baptized Jewish children, and by placing no limit on the residence permits of the Marranos at *Ancona. Naturally he was in favor of conversion: he himself acted as godfather to Andrea del Monte (Joseph *Sarfati) and set aside certain taxes levied from the Jews for the House of *Catechumens. On the other hand, he allowed the Franciscan Cornelio de Montalcino, a Jewish convert, to be condemned to the stake. In 1550, he con-

firmed the constitution of the Society of Jesus. Following the denunciations of two rival printers and a number of converted Jews, Julius set up in 1553 a new commission to examine the Talmud and, on the commission's recommendation, ordained that it be publicly burned. After a new inquiry, in 1554, passages deemed anti-Christian were censored and suppressed.

[Bernhard Blumenkranz]

JULIUS ARCHELAUS (first century C.E.), a member of one of the notable families of Judea who married into the Herodian dynasty. His name indicates that he was a Roman citizen. Josephus sold him a copy of his work, *The Jewish War*, and praises him highly, describing him as well acquainted with Hellenistic learning. Agrippa I promised him his daughter Mariamne in marriage, but since she was only ten years old when Agrippa died, the marriage was not celebrated until the reign of Agrippa II. Subsequently Mariamne abandoned him for *Demetrius, a noble and wealthy Alexandrian Jew, who held the position of the *alabarch of Alexandria.

[Edna Elazary]

°**JULIUS CAESAR** (c. 100–44 B.C.E.), Roman leader. During the civil war between him and Pompey (49 B.C.E.), Caesar freed *Aristobulus II, the deposed ruler of Judea, planning to send him to Syria, along with troops to aid him to recover his throne. Pompey's supporters, however, succeeded in poisoning Aristobulus before he could leave Rome (cf. Dio Cassius 41:18, 1). At the same time, Hyrcanus II and Antipater, in common with the other vassal rulers in the East, remained loyal to Pompey and even sent him troops for the battle of Pharsalus (48 B.C.E.); but after Caesar's victory and his conquest of the Orient, they went over to the side of the victor. When Caesar besieged Alexandria, Hyrcanus was one of the Oriental rulers who sent him reinforcements, and Hyrcanus's letter influenced the Jews living in the "territory of Onias" to grant the invading army free passage. Upon his return to Syria, Caesar ratified Hyrcanus' appointment as high priest and granted Antipater Roman citizenship and exemption from taxes. The efforts of Aristobulus' younger son Antigonos to turn Caesar against Hyrcanus and Antipater met with failure. At the same time, Caesar nullified Gabinius' Judean settlement and even attempted to correct some of Pompey's abuses against the Jews. In a series of decrees and through decisions made by the Senate at his instigation, Caesar instituted a new administration in Judea. He permitted the reconstruction of the walls of Jerusalem, restored to Judea the port of Jaffa, and confirmed Hyrcanus and his descendants after him as high priests and ethnarchs of Judea. Hyrcanus' realm now included Judea, Jaffa, and the Jewish settlements in Galilee and Transjordan. He also ratified Hyrcanus' ownership of the Hasmonean territory in the "Great Valley of Jezreel." The annual taxation of Judea was

set as 12.5% of the produce of the land, with total exemption during the sabbatical year. Extortion by the military was forbidden under any pretext. Caesar's settlement favored the continued rise of the House of Antipater. Caesar permitted Jewish organization in the Diaspora, and his tolerant attitude to Diaspora Jewry was emulated by the rulers of the provinces. Caesar's enmity toward Pompey, who had conquered Jerusalem and defiled the Holy of Holies, led to a positive attitude toward him among the Jews. His restoration of the unity of Judea, his deference toward the high priest, Hyrcanus II, and his tolerant attitude toward the Diaspora Jews increased the sympathy of the Jewish masses for him. When he was assassinated, he was mourned by the Jews more than by any other nation, and for a long time after they continued to weep over his tomb both by day and night (Suetonius, *Divus Iulius*, 84).

[Menahem Stern]

°**JULIUS FLORUS** (second century C.E.), author of an abridged Roman history. He mentions Pompey's capture of Jerusalem and his involvement in Jewish affairs in 63 B.C.E. He says that Pompey entered the Temple and (if the text is correct) saw there the image of an ass (*Epitomae*, 1:40, 30).

[Jacob Petroff]

°**JULIUS SEVERUS** (**Sextus Julius Severus**), Roman commander who suppressed the revolt of *Bar Kokhba. He was governor of Britain at the outbreak of the revolt and was called to Judea after *Tinneius Rufus, procurator of Judea, and Marcellus, governor of Syria, had failed to suppress it. Considered one of Hadrian's most able commanders, Julius Severus, according to Dio Cassius, avoided pitched battles and obliged the rebels to engage in a defensive war (*Historiae Romanae*, 69:13). He fought a war of attrition, attacking each fortress and citadel individually, until the whole country, with the exception of Bethar, had been conquered. Dio Cassius relates that dozens of fortresses as well as hundreds of villages were destroyed, and that over half a million people were killed, in addition to those who died of hunger and disease. Jewish sources also testify to the great carnage of the war, in which the Romans likewise suffered heavy losses. The fall of Bethar marked the end of the war. The Romans, regarding Severus' victory as one of special importance, conferred special honors on him.

[Lea Roth]

JUN-BRODA, INA (1902–1983), Yugoslav poet and transla-

tor. Born in Zagreb, Ina Jun-Broda wrote stories for Jewish children. She was a leader of the left-wing women's organization and after the Nazi invasion fled to Dalmatia, where she joined the partisans. In 1947 she settled in Vienna and thereafter published poems, essays, and German translations from Serbo-Croat and Italian. Much of her work reflects her experiences during World War II. *Der Dichter in der Barbarei* (1950) contains sensitive but powerful verse inspired by her life in the occupation period and after; *Die schwarze Erde* (1958), an anthology of Yugoslav partisan poetry; and the first Serbo-Croat selection of Bertolt Brecht's poems, *Pjesme* (1961). She also produced a German version of Krleža's "Balladen des Peter Kerempuch" and commented on Croatian poetry in her "Die aelteste kroatische Dichtung," Zagreb, 1972.

JUNG, LEO (1892–1987), U.S. Orthodox rabbi. Jung was born in Ungarisch-Brod (Uhersky-Brod), Moravia, son of Meir Jung who became rabbi of the London Federation of Synagogues in 1912. He pursued rabbinical studies at Hungarian yeshivot and received his rabbinical ordination first from Rabbi Mordecai Schwartz and Rabbi Avraham Kook; after World War I he returned to Berlin to receive his ordination from Rabbi David Hoffman at the Rabbinical Seminary of Berlin (1920). His secular education was at the University of London where he received his Ph.D. In 1920 he went as rabbi to Congregation Keneseth Israel, in Cleveland, Ohio, in place of his father, who had been offered the position first.

In 1922 he became rabbi of the Jewish Center in New York, one of the most prominent Orthodox congregations in the city, where Mordecai Kaplan had been rabbi before he left Orthodoxy. He shaped the congregation into a bastion of modern Orthodoxy based on the philosophy of Torah and Derekh Eretz. Jung emerged as one of the best-known spokesmen of neo-Orthodoxy in America. He helped organize the Rabbinical Council of the Union of Orthodox Congregations, which served English-speaking rabbis, and was its president from 1928 to 1935. Together with his cross-town colleague and rival, Rabbi Joseph *Lookstein, Jung was instrumental in Americanizing the Orthodox rabbinate and in making the Orthodox synagogue prestigious for affluent Jews. He became professor of ethics at Yeshiva University in 1931 and held a similar position at Stern College for Women from 1956. During World War II he personally collected 1,200 affidavits and helped rescue some 9,000 Jews. He worked closely with Mike Tress of Ze'irei Agudah and with the Va'ad ha-Hazzalah. Active in efforts to regularize *kashrut* supervision in New York, Jung was appointed chairman of the New York State Advisory Board for Kashrut Law Enforcement in 1935. He was associated with the *American Jewish Joint Distribution Committee as chairman of its cultural committee (from 1940) and was a trustee of the *National Jewish Welfare Board from 1928. Jung was at one time identified with the Agudat Israel

organization and was a member of its supreme council until 1929. He withdrew when the organization refused to cooperate in the Jewish Agency for Palestine, of whose first council he became a member.

A noted writer and editor, Jung started the Jewish Library in 1928 and edited eight volumes. His own writings numbered some 35 books. His *Harvest: Sermons, Addresses, Studies* appeared in 1956. Jung's 70th birthday was commemorated by the *Leo Jung Jubilee Volume* (edited by M.M. Kasher, 1962). His other writings included *The Path of a Pioneer: the Autobiography of Leo Jung* (1980) and *Business Ethics in Jewish Law* (1987).

Leo's brother MOSES (1891–1960) was a professor of religion. Born in Moravia, he went to the U.S. in 1922. A prolific writer, Moses Jung contributed to various Jewish publications and published several books on Jewish law, history, and education. He lectured at Columbia University from 1952. Another brother, JULIUS (1894–1975), was secretary (1925–54) and executive director (1954–59) of the Federation of Synagogues in London.

[Michael Berenbaum (2nd ed.)]

JUNGHOLZ, village in the Haut-Rhin department, E. France. There is evidence that there were Jews in Jungholz in the second half of the 15th century, but there is no further record of another settlement until the beginning of the 18th century. The community was at its height in 1784 with 215 members, but the number had fallen to 12 by 1880. At the end of the 17th century, the elders of the Jewish community of *Ribeauvillé acquired the right to bury their dead at Jungholz, in a site on the outskirts of the village. Around the end of the 18th century, this cemetery, successively and officially enlarged, served 35 communities in upper Alsace. From the 19th century, when numerous communities acquired local cemeteries, the Jungholz burial ground lost its importance. The six communities who used it erected there a memorial to their World War II dead.

JUNGREIS (Jungreis), ASHER ANSHEL (1806–1872), Hungarian rabbi. Jungreis studied under Meir Eisenstadter and Jacob Koppel Altenkundstadt (Kunstadt) of Verbo, For 40 years he served as rabbi of Csenger and gained a widespread reputation for his piety, to the extent that from all quarters people turned to him for amulets and cures from ailments. He supported widows, cared for the education and marriage of orphans, and also sent considerable sums to the Hungarian *kolel in Erez Israel. After his death his children published his *Menuḥat Asher* in two parts (1876–1908), consisting of talmudic exposition and responsa. Jungreis left three sons who served in the rabbinates of various Hungarian communities. ABRAHAM HA-LEVI (d. 1904) succeeded his father in Csenger. MOSES NATHAN NATA HA-LEVI (1832–1889) was rabbi of Fehergyarmat for 27 years, and of Tiszafüred for 21. He was

the author of *Torat Moshe Natan* in two parts (1896, 1923) and of *Menuḥat Moshe* (1905). SAMUEL ZE'EV HA-LEVI (d. 1909) was rabbi of Bojom for 30 years. His three sons-in-law were also rabbis: Joshua Baruch Reinitz (1823–1912), rabbi of Balkany and then Galszecs; Samuel David Segal Jungreis (1837–1894), rabbi and *rosh yeshivah* of Fehergyarmat from 1868; and Jacob Schick (d. 1915), rabbi of Miskolcz and then of Nadudvar.

JUNIPER. The juniper is the biblical *berosh* (Heb. בְּרוֹשׁ) or *berot* (Heb. בְּרוֹת; Song 1:17), wrongly used in modern Hebrew for the *cypress (the AV translation of *rotem* as juniper is not acceptable). *Beroshim* are frequently mentioned in the Bible, chiefly together with the cedar of Lebanon. It is a tall evergreen tree (Hos. 14:9), smaller than the cedar (Ezek. 31:8) but, like it, symbolizing strength and high stature (11 Kings 19:23). It grows in the Lebanon (*ibid.*; Isa. 14:8) and on Mt. Senir, which is Hermon (Ezek. 27:5). In ancient times its choice wood, like that of the cedar, was the most important source of timber for building in the Near East (cf. Isa. 14:8). Junipers were sent by Hiram, king of Tyre, for the building of the Temple (1 Kings 5:22), whose flooring, walls, and doors were faced with them (*ibid.* 6:15). From its wood the ships of Tyre were built (Ezek. 27:5). In his vision of the blossoming desert, Isaiah (41:19; 55:13) prophesied that the juniper would one day grow in the wilderness. The Semitic name *berosh* or *berot* occurs in Greek (βράθυ) and in Latin (*bratus*) as a species of lofty juniper. In the hills of Lebanon and of Hermon two species of juniper (*Juniperus drupacea* and *Juniperus excelsa*) grow wild and are called by the Arabs *berota*. Both are upright trees, up to 65 feet (20 m.) high, evergreens, whose tiny leaves are like splinters. The wood is hard and very fragrant (the "fragrance as Lebanon" (Hos. 14:7) refers to the juniper and the cypress). The Septuagint identified the biblical *berosh* with the cypress, and from there the usage passed into modern Hebrew. This identification is not acceptable, however, because the cypress does not grow wild in the hills of Lebanon and Hermon in the neighborhood of the cedar, as described in the Bible. The biblical name for the cypress is *te'ashur* or *gofer*. Nor can the juniper be identified with the *arar ba-aravah* (AV "the heath in the desert"; Jer. 17:6), since this cannot refer to the juniper growing in the Lebanon. The species *Juniperus oxycedros* grows in Upper Galilee and *Juniperus phoenicea* in the desert regions of Edom and Sinai, but it cannot be supposed that Jeremiah was referring to these distant trees. The *arar* is to be identified with the *tamarisk.

°**JUNOSZA, KLEMENS** (pseudonym of **Klemens Szaniawski**; 1849–1898), Polish author. Junosza, who was born in Lublin, translated from Yiddish *Mendele Mokher Seforim's *Masoes Binyomin Hashlishi*, published as *Don Kiszot żydowski* ("A Jewish Don Quixote," 1885), as well as *Shalom Aleichem's *Briv fun Menakhem-Mendl (Miljony)* and a few short stories by I.L. *Peretz. Several of Junosza's original writings describe Polish-Jewish life, notably "*Lłaciarz*" ("A Patcher," i.e., a tailor who only patches clothes, first published in *Z mazurskiej ziemi* ("From the Mazurian Land," 1884); *Pająki* ("Spiders," 1894); and *Żywota i spraw Imć Pana Symchy Borucha Kaltkugla ksiąg pięrcioro* ("Five Books on the Life and Affairs of His Highness Simḥah Baruch Kaltkugel," 1895). In *Lłaciarz*, Junosza showed sympathy for the Jewish poor, but in *Pająki*, he castigated Jews who exploited the Polish peasants. In many of his articles, and especially in his book *Nasi Żydzi w miasteczkach i na wsiach* ("Our Jews in Townlets and Villages," 1889), Junosza discussed the Jewish problem. He defended the Jews against antisemitic attacks but, at the same time, stressed that, because of their traditional education, the Jews were not prepared or fit for productive work. Driven by extreme poverty, they often turned to the exploitation of the peasants, to usury, smuggling, and other illegal activities. The remedy, in his view, was a change in the Jewish educational system, to hasten the productive employment and assimilation of Polish Jewry.

JURBARKAS (Ger. **Jurburg**), town in S.W. Lithuania; until the incorporation of Lithuania within Russia in 1795, the town belonged to the principality of Zamut (Zhmud; Samogitia); subsequently, until the 1917 Revolution, it was in the province of Kovno. Jews who visited Jurbarkas at the end of the 16th century are mentioned in the responsa of Meir b. Gedaliah of Lublin (Metz, 1769, 4a no. 7). Within the framework of the Lithuanian Council (see *Councils of the Lands) the community of Jurbarkas belonged to the province (*galil*) of Kaidany (Kedainiai). In 1766, 2,333 Jews were registered with the community. A wooden synagogue built in Jurbarkas during the second half of the 17th century was preserved until the Holocaust. There were 2,527 Jews registered with the community in 1847. The Jews numbered 2,350 (31% of the total population) in 1897, and 1,887 in 1923. In June–September 1941, after the occupation of the town by the Germans, some 1,000 Jews were murdered at the cemetery and outside the town.

[Yehuda Slutsky]

JURNET OF NORWICH (Hebrew name: **Eliab**; c.1130–1197), English financier. He had important dealings with the crown and with the monastery of Bury St. Edmunds. In 1184, a fine of

6,000 marks was imposed on him and he went abroad, but was permitted to return in 1186 after a payment of 2,000 marks. In the Hebrew sources he is referred to as *nadiv*, indicating that he was a patron of learning. The story that he married a Christian heiress has now been disproved. His son ISAAC OF NORWICH (c. 1170–1235/6), termed *nadiv* like his father, was an outstanding financier under Henry III and was able to survive a fine of 20,000 marks imposed on him for concealment of chattels in 1218, paid off at the rate of one mark daily. A remarkable caricature of him and his associates is preserved (see *Caricature). On his death, his son SAMUEL (before 1204–1273) succeeded to his position in the Norwich community. Substantial relics of the family mansion, which originally had a wharf attached, are still known as Isaac's Hall.

[Cecil Roth]

JUSTER, GEORGE (1902–1968), Romanian painter. Born in Jassy, he devoted himself to painting, soon developing a distinctive style of his own. During World War II, he fled to the Soviet Union and spent two years in Armenia. While there his works were acquired by museums and private collections. After the war he returned to Romania and became one of the most important masters of water color. In 1956 he was awarded the title of artist emeritus. His work aimed at authentic expression rather than external likeness. Juster endowed his portraits with vigor and his landscapes and static themes with a vibrating reality. His work included many illustrations of the Romanian classics such as Eminescu, Topîrceanu. These are filled with inventive spirit, poetry and humor.

JUSTER, JEAN (c. 1886–1916), lawyer and historian. Juster, born in Piatra-Neamț, Romania, studied in Germany and at the Sorbonne in Paris, where he was admitted to the bar in 1913. Later, he became an advocate at the Paris Court of Appeal. He died in military action. In 1913 Juster contributed a valuable study of the legal position of the Jews under the Visigothic kings to *Etudes d'histoire juridique offertes à Paul F. Girard* (2 (1912–13), 275–336). His doctoral dissertations, *Examen critique des sources relatives à la condition juridique des juifs dans l'empire romain* (1911) and *Les Droits politiques des juifs dans l'empire romain* (1912), marked the bent of his interests and became the basis of his major work, *Les juifs dans l'empire romain: leur condition juridique, économique et sociale* (2 vols., 1914). Juster's approach is a legal one, but his goal, as he explains in the preface to his work, is the study of the relations of the Jews, by way of conflict and resolution, to their environment. In this purview fall civic, communal, confessional, national, military, domestic, jurisdictional, economic, social, and sartorial relations. He does not treat "Jewish religion, Jewish morality or Jewish law" per se, but only their external effects on Jewish relations with the Roman world. The

investigation of these matters, he explains, involves the utilization of varied sources, and their classification and critical evaluation. The result is an essay “on the Jews in pagan and Christian literature, a tableau of their geographical dispersion and indications of their numerical importance.”

Within these limits his work has remained a model of comprehensiveness, clarity, and scholarly documentation. If he errs at all, it is in the sharpness of his judgment stemming from the juridical approach used, but even critics of his method or conclusions find his work an indispensable tool and source of suggestion. This is illustrated in his handling of the Jewish *privilegia* (“privileges”), in which he takes sharp issue with Theodor *Mommsen, who had argued that the Jewish War of 66–70 C.E. altered the status of all Jews in the empire by transforming their religion from a national cult into a *religio licita* (“licensed” or “licit religion”), and the individual synagogues into *collegia licita* (“legalized associations”). Juster denies both parts of the thesis: The *natio*, or national community, continues to be the basis of the Jewish privileges after, as before, the year 70; the synagogue never became a *collegium licitum*; it was and remained an institution *sui generis*.

[Simeon L. Guterman]

JUSTICE. Justice has widely been said to be the moral value which singularly characterizes Judaism both conceptually and historically. Historically, the Jewish search for justice begins with biblical statements like “Justice (Heb. *zedek*), justice shall ye pursue” (Deut. 16:20). On the conceptual side, justice holds a central place in the Jewish world view, and many other basic Jewish concepts revolve around the notion of justice.

God’s primary attribute of action (see Attributes of *God) is justice (Heb. *mishpat*; Gen. 18:25; Ps. 9:5). His commandments to men, and especially to Israel, are essentially for the purpose of the establishment of justice in the world (see Ps. 119:137–44). Men fulfill this purpose by acting in accordance with God’s laws and in other ways imitating the divine quality of justice (Deut. 13:5; Sot. 14a; Maimonides, *Guide*, 1:54, 3:54). This process of establishing justice in the world is to be completed in the messianic reign of universal justice (see Isa. 11:5ff.; Deut. R. 5:7). All history, therefore, like the Torah itself, which is its paradigm, begins and ends with justice (Ex. R. 30:19).

The two main biblical terms for justice are *zedek* and *zedakah*. They refer to both divine and human justice, as well as to “the works of justice” (Ex. 9:27; Prov. 10:25; Ps. 18:21–25). This justice is essentially synonymous with holiness (Isa. 5:16). In the Bible, furthermore, “justice” is so consistently paired with “mercy” or “grace” (*hesed*; Isa. 45:19; Ps. 103:17ff.), that by talmudic and later times the term *zedakah* has come to mean almost exclusively “charity” or “works of love” (BB 10b), and the notion of “justice” is rendered by the terms “truth” (*emet*),

“trust” (*emunah*), and “integrity” (*yosher*). Throughout the literature, finally, other values, particularly peace and redemption, are consistently associated with justice, as its components or products (Hos. 12:7; Ps. 15:1; Ta’an. 6:2). Ultimately, therefore, virtually the entire spectrum of ethical values is comprised in the notion of justice.

Jewish justice is different from the classic philosophic (Greek-Western) view of this concept. In the latter, justice is generally considered under the headings of “distributive” and “retributive.” These are, of course, also comprised in *zedakah*, but while “distributive” and “retributive” justice are essentially procedural principles (i.e., how to do things), Jewish justice is essentially substantive (i.e., what human life should be like). Substantive justice depends on an ultimate (i.e., messianic) value commitment. This is also made clear by modern thinkers, such as Hermann *Cohen, who regards the just society as the ideal society of universal human dignity and freedom (*Ethik des reinen Willens* (1904), ch. 15; *Religion der Vernunft aus den Quellen des Judentums* (1929), ch. 19), and Ch. Perelman, who in his analysis of justice writes: “...in the end one will always come up against a certain irreducible vision of the world expressing nonrational [though justifiable] values and aspirations” (Perelman, *Justice* (1967), 54). Although Perelman does not claim to be discussing a particularly Jewish concept of justice, he is aware of the Jewishness of this ethos (cf. W. Kaufmann, in: *Review of Metaphysics*, 23 (1969), 211, 224ff., 236). The substantive view of justice is concerned with the full enhancement of human and, above all, social life. Thus it suffuses all human relations and social institutions – the state (the commonplace dichotomy between individual and collective responsibility, often illustrated by the contrast between Ex. 20:5 and Ezek. 18, is transcended in the recognition of the dialectical interrelationship between the two, illustrated in Deut. 24:16 alongside Lev. 19:16 (see also Sanh. 73a), and in the contemporary involvement of the individual citizen in the collective actions of his nation), lawcourts (e.g., II Chron. 19:6; Maim. Yad, Sanhedrin, 23:8–10), economics (Lev. 19:36), and private affairs – and, indeed, the single positive ordinance incumbent also on all non-Jews is the establishment of judiciaries (Sanh. 56a).

Justice is not contrasted with love, but rather correlated with it. In rabbinic literature, Jewish philosophy, and Kabbalah, God is described as acting out of the two “attributes of lawfulness and compassion” (PR 5:11, 40:2; Maimonides, *Guide* 3:53).

The critical problem pertaining to justice is that of theodicy: if God is just and rules the world, how can the successes of evil be explained? The problem of theodicy, a recurrent theme in literature, is raised by the Psalmist and is the theme of Job. It is the subject of E. *Wiesel’s story, written in the wake of the Holocaust, in which three rabbis subpoena God to a trial and find Him guilty. In the history of Jewish thought many solutions to the problem have been suggested, among them the essentially neoplatonic notion that evil is privation, i.e., that it is not something positive in itself but merely the absence of good

(*Guide* 3:18–25); the view that evil and suffering constitute trials of the just, or, in rabbinic literature, “afflictions of love,” i.e., that God tests the righteous by causing them to suffer in this world; and the doctrine of reward and punishment in *Olam ha-Ba (Sanh. 90b–92a; Albo, *Sefer ha-Ikkarim*, 1:15).

The rabbis regard Moses as the ideal of strict unbending justice, in contrast to Aaron, who is the prototype of the ideal of peace, and they interpret the incident of the Golden Calf as exemplifying the problem arising from the clash of these two ideals (cf. Sanh. 6a–7b and parallels). In the same context they suggest that compromise in legal cases may constitute a denial of justice (*ibid.*).

A reply to, though not a resolution of, the problem of theodicy in our time may be attempted in two directions. (a) to protest against injustice in the tradition of Job, *Honi ha-Me’aggel, and the ḥasidic leader Levi Isaac of Berdichev, which is possible only before a responsible authority, i.e., a just God; (b) to regard justice as a normative, rather than a descriptive, concept, as does Cohen, who writes that “justice maintains the tension between reality and the eternal ideal” (*Religion der Vernunft*, p. 569). According to this view, justice can be striven for and looked for only in the future – whether the future of mankind as a whole (the days of the Messiah) or of the individual – i.e., in God, whose justice in judgment is affirmed in the blessing recited in the hour of death, “blessed be the just judge.”

Man is obliged to imitate God by acting on the principle of compassionate equity (Micah 6:8; Mak. 24b; BM 30b, 83a), and – at the final consummation of history – justice and mercy become identical.

°**JUSTIN (Marcus Junian(i)us Justinus;** third century C.E.), author of the *Epitoma Historiarum Philippicarum*, an abridgment of *Pompeius Trogus’ “Universal History” and the main source for that work. Justin gives a very brief, error-filled summary of Jewish history, from its biblical beginnings into the Hasmonean period.

[Jacob Petroff]

°**JUSTINIAN I**, emperor of the Eastern Roman Empire, 527–565, a virulent and consistent persecutor of all non-Orthodox Christians, heretics, pagans, and also of Jews and Judaism. Justinian’s famous *Corpus Juris Civilis* and his novellae (imperial instructions on specific subjects) included legislation on the Jews which confirmed or amended that of *Theodosius II (408–450) and virtually fixed the status of the Jew in Byzantine society for the next 700 years (see *Byzantine Empire). Adding to the restrictions and disabilities imposed by Theodosius, Justinian declared that Jews could not retain heretical and pagan slaves who converted to Orthodox Christianity, and that they could give evidence only for (not against) Orthodox Christians, while they could testify either

for or against heretics. Justinian’s novellae concerning the Jews are the following:

NOVELLA 37 (535 C.E.), forbidding Jews and heretics in the newly conquered province of North Africa to practice their religious rites. Synagogues and the meeting places of heretics were to be confiscated and, suitably consecrated, put to ecclesiastical use. Contrary to the prevailing Christian attitude, this novella attempted to view Judaism as a heresy and may have been motivated by suspicion of Jewish support for the Vandal regime overthrown by Justinian and the belief, prevalent in North Africa, in the alleged Jewish role in spreading heresy. Although it is known that the ancient synagogue in the city of Borion was transformed into a church and the local Jewish population was forced to accept Christianity, the novella was not put into effect. However, it was a dangerous precedent, symptomatic of the deterioration of the attitude toward the Jews under Justinian.

NOVELLA 45 (537 C.E.), prohibiting Jews, Samaritans, and heretics any exemption from service on local municipal bodies (the decurionate), a service which entailed heavy financial burdens. Previously, Jews as well as gentiles could claim exemption on the grounds of holding a religious office in their own community. The few privileges enjoyed by the decurions, such as immunity from corporal punishment or exile, would not apply to Jewish decurions. It was stated that “Jews must never enjoy the fruits of office but only suffer its pains and penalties.” If a Jew was found holding a higher office than a Christian, he had to pay a fine. This novella affected the western provinces for a short time.

NOVELLA 131 (545 C.E.), prohibiting sales of ecclesiastical property to Jews, Samaritans, pagans, and heretics, and declaring synagogues built on land subsequently shown to be ecclesiastical property subject to confiscation.

NOVELLA 146 (553 C.E.), supposedly in response to a Jewish request, forbids the insistence that the readings from the Pentateuch be exclusively in Hebrew from the Scrolls of the Law (Torah). They could be in Greek, Latin, or any other tongue, and the Greek could be either that of the Septuagint or the translation of *Aquila, which had rabbinic sanction. Secondly, the use of the *deuterosis*, the Mishnah, for exegesis was forbidden. Justinian argued that the *deuterosis* was not divinely inspired and could only mislead men. Rabbinic interpretations spread errors such as a denial of the existence of angels and the Last Judgment (probably a confusion with earlier *Samaritan beliefs). Just as the Byzantine emperor was the arbiter of Christian practice, Justinian also saw him as the arbiter of the only other legal religion in his dominions. The extent of Justinian’s interference in the service of the synagogue is open to question, but it attempted to impose a Christian interpretation of what Judaism and its holy texts should be.

Besides the novellae, Justinian allegedly prohibited the celebration of Passover if its date fell before the date of Easter. Erez Israel was the scene of several outbursts against the empire, mainly on the part of the Samaritans, whose efforts to form their own kingdom were brutally suppressed in 529. In

556 Jews joined Samaritans in an anti-Christian riot in Caesarea in which several churches were burned down. Imperial troops were eventually dispatched to subdue the rebels.

JUSTIN MARTYR (c. 100–c. 165 C.E.), early Church Father who waged an active polemic against Jews and Judaism. Justin Martyr was born to pagan parents in Neapolis, the modern Nablus. After his conversion to Christianity he became a staunch advocate of his new faith against its major then current adversaries, Greek philosophy and Judaism. He was martyred for his faith as a Christian by the Roman authorities sometime between 163 and 167.

Justin's principal polemic against Judaism was waged in his work, *Dialogue with Trypho*. The latter is presented as a Jew who during the Bar Kokhba war fled from Jerusalem to Ephesus, where he encountered Justin, and the two engaged in a dialogue on the merits of Judaism and Christianity. All the issues then current between the two faiths are marshaled in the dialogue. Justin is the aggressive protagonist; Trypho seeks to counter Justin's arguments, but he is clearly the weaker of the opponents. Justin's goal is to convert Trypho to Christianity, and while this is not accomplished by the end of the dialogue, the reader feels that Trypho has been seeded with the Christian truth, and conversion will follow.

Some Christian scholars, and also the Jewish historian Heinrich Graetz, have identified Trypho with the *tanna* Rabbi *Tarfon. This would make the dialogue the record of a historical event. However, certain historical facts show this to be impossible. Rabbi Tarfon served in the Temple as a priest before the destruction in 70 C.E. Since 30 was the minimum age for such service, he could no longer have been active in 135 C.E. Trypho cites interpretations paralleled in the Septuagint and the New Testament, which are at variance with interpretations current in the rabbinic academies. It is clear the Trypho is a fictional character, and the entire dialogue is merely a literary format for the exposition of Justin's views.

Justin's thesis is an extension of the kind of reasoning which pervades the New Testament. In essence it makes the

claim that Christianity is the authentic flowering of biblical Judaism, and that the Jews who cling to their faith in its old form are clinging to an obsolete doctrine. For doing so they are berated as blind and stubborn and insensitive, a fossil people clinging to a superseded faith. Justin expounds this position through a hermeneutical device parallel to the Midrash: a figurative interpretation of biblical texts investing them with Christian meanings. Some of these passages are direct citations from the New Testament. Thus the identification of the new covenant in Jeremiah 31:3–32 with the structure of Christian truth, in replacement of the earlier truth of Judaism (Dial. 11:3), appears in Hebrews 8:8–10, 10:16–17. But other interpretations seem to be Justin's own. Water and faith and wood (the ark) figure in the rescue of Noah, and the rescue of men from sin as mediated by Jesus is likewise effected by water (baptism) and faith and wood (the cross). The upraised hands of Moses which occasioned Israel's victory against the Amalekites (Ex. 17:8–14) are interpreted by Justin as having derived their efficacy because the sign thus formed foreshadowed the cross. The rod with which Moses performed the wonders of leading the Israelites out of Egypt, of parting the Red Sea for them, of drawing water from the rock – these and more were all made possible, according to Justin, because the rod was in truth a type of the cross (Dial. 138,9:1–2,86:1–6).

Justin does not content himself with the exposition of a Christian interpretation of the Bible. He often denounces the Jews for having crucified Jesus, and he accuses them of continuing to persecute Christians. He finds many indications that God had deemed the Jews as especially reprehensible. In repudiating the efficacy of the law as prescribed in the Bible, Justin makes the bold assertion that the law was initially given to the Jews because, as an especially unspiritual race, hard-hearted, rebellious, and ungodly, they needed a more elaborate law, with many more disciplines as a means of mitigating some of their offensive qualities. For the gentiles, however, it was enough to prescribe two commandments as Jesus did, the love of God and the love of man (Dial. 93:4). Justin also makes himself into a philosopher of history and offers the theory that the defeats of the Jews in the wars against Rome, both in the year 70, and again in 135, were God's visitation of a deserved punishment, because they had sinned so grievously by crucifying Christ and rejecting his new faith. Justin gloated as he contemplated the destruction of Jerusalem and the collapse of the Jewish struggle for freedom, and he taunted Trypho with this sweeping assertion: "All this has happened to you rightly and well, For ye slew the Just One and His prophets before Him, and now ye reject, and ... dishonor those who set their hopes on Him, and God Almighty and Maker of the universe who sent Him ..." (Dial. 16:3–4).

Justin's invective against Jews and Judaism entered the mainstream of Christian thought and became a sinister influence which contributed not a little toward the development of what is known as Christian antisemitism.

JUSTITZ, ALFRED (1879–1934), Czech painter and graphic artist. Justitz was born in Nová Cerekev and studied first architecture and then painting at the Academy in Prague and, from 1905, in Karlsruhe and Berlin. In 1910 he settled temporarily in Paris, where he was greatly influenced by impressionist theories of form, retaining at the same time, however, his decorative lyricism. After serving in the Austro-Hungarian army in World War I, he returned to Prague and became one of the founders of modern Czechoslovak art. In 1920 and 1921 he participated in the exhibitions of the most important avant-garde group of that time in Prague, which called itself “Tvrdošijni” (“The Stubborn Ones”). He was again in Berlin and Paris in 1922 and 1923, but in 1924 he returned to Prague, where he spent the rest of his life. His best paintings – *Men in Landscape* (1914), *Head of a Dancer* (1922), *Road between Barns* (1924), and *Three Men* (1926) – are in the Prague National Gallery.

[Avigdor Dagan]

JUSTMAN, JOSEPH (1909–), U.S. educator. Justman, who was born in Warsaw, taught at Brooklyn College from 1934, was appointed professor of education in 1950, and director of teacher education and chairman of the department in 1960. Upon his retirement, he became professor emeritus of education at Brooklyn College.

Justman spent 1956–57 in Italy, preparing *The Italian People and Their Schools* (1958). He subsequently returned several times to Rome, Florence, and Padua as visiting lecturer. His books include *Theories of Secondary Education in the United States* (1940), *College Teaching: Its Practice and Potential* (1956), *Evaluation in Modern Education* (1956), *Improving Instruction with Supervision* (with T. Briggs, 1960), and *The Effects of Ability Grouping* (with Miriam L. Goldberg, 1966). His work was mainly concerned with giving the college teacher a deeper understanding of his profession through an evaluation of educational principles, practices, and their effects on curriculum and organization.

[Ronald E. Ohl / Ruth Beloff (2nd ed.)]

JUSTMAN, MOSHE BUNEM (pseudonym: **B. Yeushzon**; 1889–1942), Yiddish journalist, humorist, and novelist. Born in Warsaw, he was educated in yeshivah and torn between admiration for ḥasidic life and the lure of modernism. He published in a broad spectrum of Yiddish periodicals, but from 1910 to 1925, his articles in the Warsaw Yiddish daily *Moment* under the pseudonym Itshela won him a large following among troubled ḥasidic youth. In 1925 he transferred his journalistic activities to the rival Warsaw daily, *Haynt*. His best novel *Inem Rebms Hoyf* (“At the Rabbi’s Court,” 1914) de-

icted the joyous fervor prevailing in Polish ḥasidic courts but also the infiltration of maskilic ideas even among the children of ḥasidic rabbis. While nostalgic for the old order, he recognized the inevitability of its decline. His other tales include *Oyf der Frisher Luft* (“Fresh Air,” 1912) and *Apikorsim* (“Heretics,” 1913). His articles on Jewish folklore, written over a number of years, were collected in eight volumes, *Fun Unser Alten Oytser* (“From Our Old Treasure,” 1932) and constitute his major work. Together with Menahem *Kipnis, he wrote a parody on S. *An-ski’s *The Dybbuk*, which was performed on the Warsaw stage in 1921. He escaped Warsaw at the last moment and then also Vilna, settling in Erez Israel in 1940. A posthumous collection of his feuilletons was published in 1988 (*Nekhtn: A Bukh Felyetonen*).

[Shlomo Bickel / Jerold C. Frakes (2nd ed.)]

JUSTUS OF TIBERIAS, historian; a contemporary of *Josephus and his rival in describing the Jewish War (66–70/73 C.E.). The main source of knowledge of Justus – the disparaging polemic directed against him by Josephus in his *Life* – is of doubtful value, since Josephus may have falsified facts. Nevertheless two things are clear: that Justus came from a respected Tiberian family, and that “he did not lack Greek culture,” as Josephus himself admits. Justus’ name and that of his father (Pistus) also attest Hellenistic influence, and he was, moreover, appointed private secretary to *Agrippa II, a post which obviously demanded a thorough command of Greek. Apart from this it is difficult to find in Josephus anything further in Justus’ favor. Josephus accuses him of personal turpitude, licentiousness, bribery, and theft. These accusations may be ignored. Of a more complex nature is the question of Justus’ loyalties during the war. Josephus charges that Justus was the sworn enemy of the Romans and an associate of the *Zealots, doing everything in his power to draw Tiberias and Galilee into the revolt against Roman rule. In addition, Josephus states that Justus organized an attack on the Greek cities of the Decapolis, whose inhabitants were faithful allies of the Romans, adding that this attack is also mentioned in the memoirs of Vespasian. According to Josephus, Justus, while in Berytus (Beirut), was accused of treason against the Romans and would certainly have been sentenced to death but for Vespasian’s friendliness to Agrippa. All this, however, does not necessarily prove that Justus was a Zealot. Possibly Agrippa explained the attack as a loyal Tiberian’s vengeance against the Greeks for their bloody attacks on the Jews at the outbreak of the war.

Nevertheless, Justus was obviously no lover of Roman rule. In view of his friendship with Agrippa, Justus probably shared the views expressed by the latter in his speech to the rebels in Jerusalem (the account of which in Josephus undoubtedly has an historical basis). The gist of this was that Roman might was so decisive that it could not be overcome, and that there was therefore no sense fighting it. Agrippa him-

self, then, was not an admirer of Roman rule in Judea, but only reconciled to it. Justus, a devoted Tiberian concerned for the welfare of his native city, did everything in his power to ensure Agrippa's continued rule in Tiberias. This brought him into conflict with Josephus, who arrived in Galilee on behalf of the revolutionary government in Jerusalem and strove to extend his influence over the whole province. In an attempt to crush the opposition against him, Josephus imprisoned many of the city notables, including Justus and his father. Justus, however, succeeded in escaping from his prison in Tarichaeae to Berytus, and henceforth had no further direct contact with the events of the war. It was after his escape that he was appointed Agrippa's private secretary, which gave him good opportunity of hearing at first hand about the conduct of the war in Galilee, and especially about the questionable role played by Josephus. He embodied this information in a book about the war, which was for the most part an extensive account of events in Galilee before the arrival of Vespasian, and dealt particularly with the misdeeds of Josephus in Tiberias. Since Josephus published his own history of the war after 75 C.E. and Justus suppressed his reply for some 20 years (Vita, 360), it may be concluded that Justus' work was published only after the death of Domitian (96 C.E.) when Nerva ascended the throne. From the fact that Josephus begins his *Life* with a detailed description of his distinguished descent from the Hasmoneans, it may be assumed that Justus tried to derogate not only him but also his family. Justus' main purpose in writing the book was apparently to wreak belated vengeance on his rival, which he could not exact under the Flavian emperors.

It is generally believed that Justus also wrote a second book, a chronicle of the kings of Israel. Although a list which was in the possession of Photius, patriarch of Constantinople, between 858 and 868, seemed to make the description of the war merely part of the chronicle, the detailed nature of the description of the events in Galilee (as evidenced in Josephus) presupposes a separate work.

[Abraham Schalit]

°**JUVENAL** (c. 50–c. 127 C.E.), the most famous Roman satirist, a rhetorician by profession. Juvenal is most bitter against those foreigners – Greeks, Syrians, and especially Jews – who have, in his opinion, brought about the decline and fall of the old Roman way of life.

In *Satire* 14:96–106, he derides those who sympathize with Judaism, reverencing the Sabbath, worshipping clouds and a heavenly divinity (cf. *Hecataeus, Varro, *Strabo, and *Petronius Arbiter), and avoiding pork. Their children, he says, go still further (so also *Tacitus, *Hist.* 5:5), undergoing circumcision. He also denounces these proselytes for despising Roman statutes while observing the law which Moses had handed down in a secret scroll (perhaps a reference to Judaism as a mystery, as seen by the Romans generally or as seen in *Philo, who may have been known to Juvenal through *pseudo-Longinus), hating anyone who is not one of them (so also Tacitus, *loc. cit.*), to the point of being unwilling to direct a non-Jew to the road that he seeks or a thirsty man to a fountain (perhaps an allusion to the baptism required of proselytes). Lewy has indicated that to show the way to wanderers and to give drink to the thirsty were basic to Juvenal's Stoic philosophy, for which reason he felt so strongly about them. He also condemns the Judaizers for showing laziness by abstaining from work on the Sabbath (so also *Seneca the Younger).

Juvenal mocks at the poverty among the Jews (3:12–16; 6:542–7), though perhaps this is a reflection merely of the Jewish tradition of charity. Synagogues in particular, he says, are the haunts of beggars (3:296). The Jews, for a very small fee, interpret dreams and tell fortunes for credulous Romans (6:542–7). Juvenal also mentions an incestuous relationship between *Agrippa II and his sister *Berenice and contemptuously speaks of the poverty and piety of the Jewish kings who observe the Sabbath with bare feet (6:156–60), perhaps referring to the belief that Jews fasted on the Sabbath (cf. Strabo, *Augustus, *Pompeius Trogus, and Petronius Arbiter), which may be an allusion to the Day of Atonement, as possibly in *Horace's "thirtieth Sabbath" (*Satires* 1:9, 69).

Initial letter "K" for Karolus (Charlemagne), from the opening of Book 25 of Vincent of Beauvais, *Speculum Historiale*, Metten, S. Germany, 1332. Munich, Bayerische Staatsbibliothek, Cod. lat. 8201c, fol. 9v.

KA-KAS

KAATZ, SAUL (1870–1942?), rabbi and scholar. Kaatz, who was born in Schwersenz (Swarzedz), Poznania, served as rabbi at Hindenburg, Upper Silesia, from 1895. When the validity of the Nazis' anti-Jewish legislation in Upper Silesia was contested before the League of Nations in 1933 (see *Bernheim Petition), Kaatz was among those who courageously resisted the German government's intimidation. He spurned the possibility of emigration and was deported to his death with his congregation in 1942. Kaatz was an individualist and often upheld unpopular ideas against his fellows in the Orthodox rabbinate, just as he opposed, in 1897, the anti-Zionist line of the *Allgemeiner Rabbinerverband*. His published writings include *Die Scholien des Gregorius Abulfaragius Bar Hebraeus zum Weisheitsbuch des Josua ben Sira...* (1892); *Das Wesen des juedischen Religionsunterrichts* (1904); *Wesen des prophetischen Judentums* (1907); *Abraham Geigers religioeser Charakter* (1911); *Die muendliche Lehre und ihr Dogma...* (2 vols., 1922–23); *Weltschoepfungsaera und Wissenschaft* (1928); and *Sendschreiben an den Vorstand... der Vereinigung traditionell-gesetzestreuen Rabbiner Deutschlands*, in which he opposed

the custom of abbreviating the name of God in non-Hebrew languages. Kaatz was a regular contributor to Wohlgemuth's *Jeschurun* and the weekly *Israelit*. He also wrote short stories (*Alter Vogel*, 1919) and a play, *Alexander der Grosse vor Jerusalem*.

KABACHNIK, MARTIN IZRAILOVICH (1908–1997), Russian organic chemist. Kabachnik was attached to the U.S.S.R. Academy of Sciences from 1939 and to the Institute of Organic Chemistry until 1954. Thereafter he was at the Institute of Elementary Organic Compounds. He was awarded the Stalin Prize in 1946, and became an academician in 1958. His field of research included tautomerism and phosphorus-containing organic insecticides.

KABAK, AARON (Aharon) ABRAHAM (1880–1944), Hebrew author. Born in Smorgon in the province of Vilna, Kabak lived in Turkey, Palestine, Germany, and France before studying in Switzerland at the universities of Geneva and Lausanne. He finally settled in Palestine in 1921. A teacher at the

Jerusalem Rehavyah Gymnasium, he played a central role in the literary, educational, and civic life of the city.

Kabak's first novel *Levaddah* ("By Herself," 1905) was hailed as the first Zionist novel in Hebrew literature. Sarah, a young girl of the 1890s, is drawn to Zionism although all her friends are socialists. She learns that she has chosen a lonely path, demanding self-sacrifice and unflinching determination. Similarly, the hero of *Daniel Shafranov* (1912) discovers that the way of redemption is through sacrifice. The action takes place before the Russian Revolution of 1905. Daniel fails in his efforts to unite the disparate segments of Jewish life, even in the face of a pogrom mob, and commits suicide. *Ahava* ("Love," 1914) depicts the life and loves of the emigrant Russian intelligentsia in Switzerland. *Nizzahon* ("Victory," 1923) is set in Germany, before World War I. Zinner, a Jewish sculptor in Berlin, practices "German" art, but is won back to Judaism by a young girl from Palestine. Kabak introduced the realistic historical novel into Hebrew literature with his trilogy *Shelomo Molkho* (1928–29; 1973), each book of which deals with a crucial phase in the life of the false messiah, Solomon *Molkho.

Bein Yam u-vein Midbar ("Between the Sea and the Desert," 1933) was Kabak's first novel with a Palestinian setting. *Ba-Mishol ha-Zar* (1937; *The Narrow Path*, 1968) was written after Kabak's return to Orthodox Judaism, in the early 1930s. It depicts Jesus of Nazareth as a Jew whose teaching centers around the idea that man must seek the Kingdom of God in himself. The book contains vivid descriptions of the Galilean landscape. *Toledot Mishpahah Ahat* ("History of One Family," 1943–45; 1998) is a series of loosely connected novels in which the author intended to trace the development of the national renaissance from its beginnings in Russia "to the heroic days of *Hanitah" through events that befell a single family. The three novels which he succeeded in completing before his death are set respectively in mid 19th-century Russia, Poland of the 1863 insurrection, and Odessa in the 1860s. They are *Be-Ḥalal ha-Reik* ("The Empty Space," 1943), *Be-Zel Ez ha-Teliyyah* ("In the Shadow of the Gallows," 1944), and *Sippur beli Gibborim* ("Story without Heroes," 1945, posthumous).

Of Kabak's many short stories the most noteworthy is "*Ha-Ma'pil*" ("The Trailblazer"), in which a boy sets out to force the coming of the Messiah and dies in an act of heroism (*Ha-Shilo'ah*, 14, 1904). Among his more important stories and novelettes are "*Ḥalom*" (*Ha-Shilo'ah*, 20, 1909), *Me-al ha-Migdal* (1910), *Nano* (1911), *Ha-Navi* (*Ha-Shilo'ah*, 38, 1921), *Kol ba-Afelah* (1927), *Ze'if ha-Mayyah* (in: *Sefer Klausner*, 1937). Kabak wrote two biblical dramas: *Be-Himmat Mamlakhah* (1929) and *Bat Sanballat* (in *Beitar*, 2, 1934). He was also the author of numerous critical essays, and translated works by Loti, Stendhal, Wassermann, and Merezhkovsky. He also edited several anthologies.

While critics condemned Kabak's early work as tendentious, didactic, catering to popular taste, and lacking psychological depth, their comments became more favorable after the publication of *Shelomo Molkho*. Kabak's major contribution to Hebrew literature was in the genre of the novel, which

he freed of stereotyped heroes, settings, and themes, giving it modern characters, plot, dialogue, and a sense of progression. One of the first Hebrew novelists to use the wide canvas approach, Kabak had strong impact on the Hebrew reading public in general, and most particularly on its younger members. By applying European methods and forms to Jewish content, he was a decisive force in bringing the Hebrew novel into line with world literature.

KABAKOFF, JACOB (1918–), U.S. educator and scholar. Born in New York, Kabakoff earned a diploma from the Teachers Institute of Yeshiva University in 1935 and a B.A. from the same institution in 1938. He was ordained a rabbi and awarded an M.H.L. from the Jewish Theological Seminary in 1944. He received a D.H.L. from the JTS in 1958. He served as a Conservative rabbi in Philadelphia (1944–48). From 1952 to 1968 he was dean of the Cleveland College of Jewish Studies, and then was appointed associate professor of Hebrew literature at Lehman College in New York City. A specialist in Hebrew literature in America, his *Ḥalutzei ha-Sifrut ha-Ivrit ba-Amerikah* ("Pioneers of Hebrew Literature in America," 1966) dealt with such writers as Jacob Zevi Sobel, Henry Gersoni, Ze'ev Schurr, Gershon Rosenzweig, and Isaac Rabinowitz. His contributions to the *Jewish Book Annual* were listed in *JBA*, 25 (1967/68), 418. Kabakoff served as editor of the *JBA* from 1977 to 1996. He also served as chairman of the editorial board of the Hebrew weekly newspaper *Hadoar* and was a member of the Rabbinical Assembly, the American Association of Jewish Studies, the World Congress of Jewish Studies, and the American Association of Professors of Hebrew. In 1988 he was acknowledged by the Habermann Institute for Literary Research with its publication of a Hebrew Festschrift entitled *Migvan: Studies in Honor of Jacob Kabakoff*. He wrote *Seekers and Stalwarts: Essays on American Hebrew Literature and Culture* (1978) and edited *Master of Hope: Selected Writings of Naphtali Herz Imber* (1985).

KA'Ḳ AL-AḤBĀR (Abū Ishāq Ka'Ḳ al-AḤbār or "Ka'Ḳ of the Jewish-doctors"; also **KA'Ḳ AL-ḤĀBR**, "Ka'Ḳ the former Jewish

doctor”; d. ca. 654), Jewish Yemenite convert to Islam from the tribe of Ḥimyar who lived in Ḥims (Homs). He was referred to as “the owner of the two books” (*dhūl-kitābayni*, i.e., the Koran and the Bible).

Some say that he converted to Islam in Muhammad’s lifetime at the hands of the latter’s cousin, ‘Ali ibn Abī Ṭālib, while others say that he converted at the hands of the caliph Abu Bakr. But the most widespread version has it that he converted during the caliphate of ‘Omar ibn al-Khattab at the hands of Muhammad’s uncle al-‘Abbas, thus becoming the latter’s *mawlā* or client. He is supposed to have been one of Omar ibn al-Khattab’s closest advisors. Under ‘Uthmān ibn ‘Affān Ka’b was a salaried preacher (*qāṣās*). He allegedly legitimized for ‘Uthmān the borrowing of money from the treasury, on which an opponent of this caliph commented by saying: “You son of two Jewish parents, will you teach us our religion?” A polemical account associates the recent convert Ka’b with Jewish scholars: in a meeting that took place in Jerusalem, Ka’b resorted to a book found in Daniel’s tomb in Susa in order to convince 42 Jews to embrace Islam; the then governor of Syria and Palestine, Mu‘āwiya ibn Abī Sufyān, later included them among those entitled to an annual pension from the treasury.

Ka’b’s reputation as an expert in “sacred books” was an asset for the rulers who employed him to convey messages in their favor and to combat opposition movements. Supposed quotations from the “Torah” or the “Tales about Prophets,” in addition to eschatological traditions, were used to indoctrinate the masses in general and the warriors in particular. Ka’b reportedly died on his way to an expedition against Byzantium; one assumes that he was a battlefield preacher rather than a warrior.

Widespread accounts describe Ka’b as providing Omar with the background necessary for Islamizing the Temple Mount. For example, he bribed a Jewish *ḥabr* or doctor to pinpoint the rock on which Solomon had stood upon the completion of the Temple (or “the mosque”). However, in several anecdotes Ka’b is accused of an attempted “Judaization” of nascent Islam by combining the directions of prayer of Moses and Muhammad. He argued that while praying in Jerusalem in the direction of Mecca, a Muslim had to direct himself at the same time to the Rock. Omar established the correct Muslim direction by praying toward Mecca with his back to the Rock. It was another famous Jewish convert, Abdallah ibn Salam, who confirmed that this had been the original direction before it was changed by the Jews. Omar in turn declared Abdallah more truthful than Ka’b.

[Michael Lecker (2nd ed.)]

KA’B AL-ASHRAF (d. 625), poet and chief opponent of Muhammad at *Medina. A member of the *Naḍīr tribe or of mixed Arab-Jewish descent (his mother was a Naḍīr), Ka’b espoused the cause of Judaism and composed verses against Muhammad and *Islam. He went to Mecca to incite the Quraysh tribe to fight against Muhammad and later lamented its defeat. His lament and other poetry are extant. On his return to Medina, he allegedly seduced Muslim women. Anxious for his death, Muhammad ibn Maslama led Muhammad’s followers into enticing Ka’b to leave his house one night on the pretext of plotting against the Prophet; they then assassinated Ka’b. The poet was mourned by the Naḍīr, who were expelled from Medina one year after his death. The story is recorded in the eighth-century Arab history by Muhammad ibn Ishāq, *Sīrat Rasūl Allah* (tr. by Guillaume, *The Life of Muhammad* (1955), 364–9); *EIS*² 4 (1978), 315 (incl. bibliography).

KABBALAH (Heb. קַבָּלָה; “received (doctrine),” “tradition”). Today the term Kabbalah is used for the mystic and esoteric doctrine of Judaism (see following entry). The mystical connotation is unknown in the Talmud. In the Talmud the word occurs, however, in two other and entirely different senses. The first refers to the prophets and the Hagiographa as distinct from, and in contrast to, the Pentateuch. The other, especially in its verbal form *mekubbelani* (“I have received a *kabbalah*”), is used to indicate oral traditions handed down either from teacher to disciple, or as part of a family tradition.

The Talmud points out that the proof that Nisan is the first month of the year in the civil calendar (see *New Year) is derived from “the words of *kabbalah*,” the reference being to Zechariah 1:7 (RH 7a), and that the Fast of Gedaliah was instituted in the *kabbalah* (*ibid.* 19a). Similarly, it points out that “the words of the Torah cannot be derived from words of *kabbalah*,” the “words of *kabbalah*” being respectively from the Books of Kings and Amos (BK 2b., Ḥag. 10b), and in a passage of the Midrash a man protests that he is being sentenced to flogging on the strength of a verse from the *kabbalah* (Ezra 10:3), which has not the same force as a law in the Pentateuch (Gen. R. 7:2). Mishnah *Ta’anit* 2:1, however, quotes a verse from the Book of Jonah (3:10) and continues “and in the words of *kabbalah* it says,” quoting Joel 2:13. It has been suggested that in this passage the word should here be read as “*kevalah*” (“protest”) instead of “*kabbalah*.”

In the sense of “oral tradition,” the verbal form of the word is frequently found for a tradition going back to the earliest times: “I have a *kabbalah* from R. Me’asha, who received it from his father, who received it from the *zugot, who received it from the prophets” (Pe’ah 2:6); “So I have a *kabbalah* from Rabban Johanan b. Zakkai, who heard it from his teacher, who

heard it from his teacher” (Ḥag. 3b). It is also used for traditions from the outstanding early authorities Shemaiah and Avtalyon (Pes. 66a) or from Shammai the Elder (Git. 57a). Family traditions are quoted as a *kabbalah* “from my father’s house” (Ber. 10a, 34b), “from my ancestors” (Shab. 119b), and to emphasize a continuous tradition “from the house of my father’s father” (BM 59b; BB 110a; Sanh. 89a). From the Middle Ages the word *kabbalah* has been used for the certificate of competence issued by a rabbi for a *shoḥet*.

INTRODUCTION

General Notes

Kabbalah is the traditional and most commonly used term for the esoteric teachings of Judaism and for Jewish mysticism, especially the forms which it assumed in the Middle Ages from the 12th century onward. In its wider sense it signifies all the successive esoteric movements in Judaism that evolved from the end of the period of the Second Temple and became active factors in the history of Israel.

Kabbalah is a unique phenomenon, and should not generally be equated with what is known in the history of religion as "mysticism." It is mysticism in fact; but at the same time it is both esotericism and theosophy. In what sense it may be called mysticism depends on the definition of the term, a matter of dispute among scholars. If the term is restricted to the profound yearning for direct human communion with God through annihilation of individuality (*bittul ha-yesh* in ḥasidic terminology), then only a few manifestations of Kabbalah can be designated as such, because few kabbalists sought this goal, let alone formulated it openly as their final aim. However, Kabbalah may be considered mysticism in so far as it seeks an apprehension of God and creation whose intrinsic elements are beyond the grasp of the intellect, although this is seldom explicitly belittled or rejected by the Kabbalah. Essentially, these elements were perceived through contemplation and illumination, which is often presented in the Kabbalah as the transmission of a primeval revelation concerning the nature of the Torah and other religious matters. In essence, the Kabbalah is far removed from the rational and intellectual approach to religion. This was the case even among those kabbalists who thought that basically religion was subject to rational enquiry, or that, at least, there was some accord between the path of intellectual perception and the development of the mystical approach to the subject of creation. For some kabbalists the intellect itself became a mystical phenomenon. So we find in Kabbalah a paradoxical emphasis on the congruence between intuition and tradition. It is this emphasis, together with the historical association already hinted at in the term "kabbalah" (something handed down by tradition), that points to the basic differences between the Kabbalah and other kinds of religious mysticism which are less closely identified with a people's history. Nevertheless, there are elements common to Kabbalah and both Greek and Christian mysticism, and even historical links between them.

Like other kinds of mysticism, Kabbalah too draws upon the mystic's awareness of both the transcendence of God and His immanence within the true religious life, every facet of which is a revelation of God, although God Himself is most clearly perceived through man's introspection. This dual and apparently contradictory experience of the self-concealing and self-revealing God determines the essential sphere of mysti-

cism, while at the same time it obstructs other religious conceptions. The second element in Kabbalah is that of theosophy, which seeks to reveal the mysteries of the hidden life of God and the relationships between the divine life on the one hand and the life of man and creation on the other. Speculations of this type occupy a large and conspicuous area in kabbalistic teaching. Sometimes their connection with the mystical plane becomes rather tenuous and is superseded by an interpretative and homiletical vein which occasionally even results in a kind of kabbalistic *pilpul*.

In its form the Kabbalah became to a large extent an esoteric doctrine. Mystical and esoteric elements coexist in Kabbalah in a highly confused fashion. By its very nature, mysticism is knowledge that cannot be communicated directly but may be expressed only through symbol and metaphor. Esoteric knowledge, however, in theory can be transmitted, but those who possess it are either forbidden to pass it on or do not wish to do so. The kabbalists stressed this esoteric aspect by imposing all kinds of limitations on the propagation of their teachings, either with regard to the age of the initiates, the ethical qualities required of them, or the number of students before whom these teachings could be expounded. Typical of this is the account of the conditions for initiates in Kabbalah found in Moses *Cordovero's *Or Ne'eraḥ*. Often these limitations were disregarded in practice, despite the protests of many kabbalists. The printing of kabbalistic books and the influence of Kabbalah on widening circles broke down such restrictions, especially as far as the teachings on God and man were concerned. Nevertheless, there remained areas where these limitations were still more or less adhered to; for example, in the meditations on the letter-combinations (*ḥokhmat ha-zeruf*) and practical Kabbalah.

Many kabbalists denied the existence of any kind of historical development in the Kabbalah. They saw it as a kind of primordial revelation that was accorded to Adam or the early generations and that endured, although new revelations were made from time to time, particularly when the tradition had been either forgotten or interrupted. This notion of the nature of esoteric wisdom was expressed in apocryphal works like the Book of Enoch, was again stressed in the *Zohar, and served as the basis for the dissemination of kabbalistic teaching in *Sefer ha-Emunot* by *Shem Tov b. Shem Tov (c. 1400) and in *Avodat ha-Kodesh* by *Meir b. Gabbai (1567). It became widely accepted that the Kabbalah was the esoteric part of the Oral Law given to Moses at Sinai. Several of the genealogies of the tradition appearing in kabbalistic literature, which were intended to support the idea of the continuity of the secret tradition, are themselves faulty and misconceived, lacking in any historical value. In actual fact, some kabbalists themselves give concrete instances of the historical development of their ideas, since they regard them either as having deteriorated to some extent from the original tradition, which found its expression in the increase of kabbalistic systems, or as part of a gradual progress toward the complete revelation of the secret wisdom. Kabbalists themselves rarely attempt to attain a his-

torical orientation, but some examples of such an approach may be found in *Emunat Ḥakhamim* by Solomon Avī'ad Sar-Shalom *Basilea (1730), and in *Divrei Soferim* by *Zadok ha-Kohen of Lublin (1913).

From the beginning of its development, the Kabbalah embraced an esotericism closely akin to the spirit of Gnosticism, one which was not restricted to instruction in the mystical path but also included ideas on cosmology, angelology, and magic. Only later, and as a result of the contact with medieval Jewish philosophy, the Kabbalah became a Jewish “mystical theology,” more or less systematically elaborated. This process brought about a separation of the mystical, speculative elements from the occult and especially the magical elements, a divergence that at times was quite distinct but was never total. It is expressed in the separate usage of the terms *Kabbalah iyyunit* (“speculative Kabbalah”) and *Kabbalah ma'asit* (“practical Kabbalah”), evident from the beginning of the 14th century – which was simply an imitation of *Maimonides’ division of philosophy into “speculative” and “practical” in chapter 14 of his *Millot ha-Higgayon*. There is no doubt that some kabbalistic circles (including those in Jerusalem up to modern times) preserved both elements in their secret doctrine, which could be acquired by means of revelation or by way of initiation rites.

Once rabbinic Judaism had crystallized in the *halakhah*, the majority of the creative forces aroused by new religious stimuli, which neither tended nor had the power to change the outward form of a firmly established halakhic Judaism, found expression in the kabbalistic movement. Generally speaking, these forces worked internally, attempting to make of the traditional Torah and of the life led according to its dictates a more profound inner experience. The general tendency is apparent from a very early date, its purpose being to broaden the dimensions of the Torah and to transform it from the law of the people of Israel into the inner secret law of the universe, at the same time transforming the Jewish *ḥasid* or *zaddik* into a man with a vital role in the world. The kabbalists were the main symbolists of rabbinic Judaism. For Kabbalah, Judaism in all its aspects was a system of mystical symbols reflecting the mystery of God and the universe, and the kabbalists’ aim was to discover and invent keys to the understanding of this symbolism. To this aim is due the enormous influence of the Kabbalah as a historical force, which determined the face of Judaism for many centuries, but it too can explain the perils, upheavals, and contradictions, both internal and external, which the realization of this aim brought in its wake.

Terms Used For Kabbalah

At first the word “kabbalah” did not especially denote a mystical or esoteric tradition. In the Talmud it is used for the extra-Pentateuchal parts of the Bible, and in post-talmudic literature the Oral Law is also called “kabbalah.” In the writings of *Eleazar of Worms (beginning of the 13th century) esoteric traditions (concerning the names of the angels and the magical Names of God) are referred to as “kabbalah,” e.g., in his

Hilkhot ha-Kisse (in *Merkabah Shelemah*, 1921), and *Sefer ha-Shem*. In his commentary to the *Sefer *Yezirah* (c. 1130), when he is discussing the creation of the Holy Spirit, i.e., the *Shekhinah*, *Judah b. Barzillai states that the sages “used to transmit statements of this kind to their students and to sages privately, in a whisper, through kabbalah.” All this demonstrates that the term “kabbalah” was not yet used for any one particular field. The new, precise usage originated in the circle of *Isaac the Blind (1200) and was adopted by all his disciples.

Kabbalah is only one of the many terms used, during a period of more than 1,500 years, to designate the mystical movement, its teaching, or its adherents. The Talmud speaks of *sitrei torah* and *razei torah* (“secrets of the Torah”), and parts of the secret tradition are called *ma'aseh bereshit* (literally, “the work of creation”) and *ma'aseh merkabah* (“the work of the chariot”). At least one of the mystical groups called itself *yoredei merkabah* (“those who descend to the chariot”), an extraordinary expression whose meaning eludes us (perhaps it means those who reach down into themselves in order to perceive the chariot?). In the mystical literature from the close of the talmudic period and afterward, the terms *ba'alei ha-sod* (“masters of the mystery”) and *anshei emunah* (“men of belief”) already occur, and the latter also appears as early as the Slavonic Book of Enoch. In the period of the Provençal and Spanish kabbalists the Kabbalah is also called *ḥokhmah penimit* (“inner wisdom”), perhaps a phrase borrowed from Arabic, and the kabbalists are often called *maskilim* (“the understanding ones”), with reference to Daniel 12:10, or *doreshei reshumot* (“those who interpret texts”), a talmudic expression for allegorists. In the same way as the word Kabbalah came to be restricted in meaning to the mystical or esoteric tradition, so, at the beginning of the 13th century, the words *emet* (“truth”), *emunah* (“faith”), and *ḥokhmah* (“wisdom”) were used to designate the mystical or inner truth. Hence the widespread use of *ḥokhmat ha-emet* (“the science of truth”) and *derekh ha-emet* (“the way of truth”). There is also found the expression *ḥakhmei lev* (“the wise-hearted”), after Exodus 28:3. The kabbalists are also called *ba'alei ha-yedi'ah* (“the masters of knowledge” – Gnostics) or *ha-yode'im* (“those who know”) beginning with *Naḥmanides. Naḥmanides also coined the phrase *yode'ei hen* (“those who know grace”), after Ecclesiastes 9:11, where *hen* is used as an abbreviation for *ḥokhmah nistarah* (“secret wisdom”). The author of the Zohar uses terms such as *benei meheimnuta* (“children of faith”), *benei heikhala de-malka* (“children of the king’s palace”), *yade'ei ḥokhmeta* (“those who know wisdom”), *yade'ei middin* (“those who know measures”), *meḥazzei ḥakla* (“those who reap the field”), and *inon de-allu u-nefaku* (“those who entered and left in peace”), after *Ḥagigah* 14b. Several authors call the kabbalists *ba'alei ha-avodah* (“masters of service”), i.e., those who know the true, inner way to the service of God. In the main part of the Zohar the term Kabbalah is not mentioned, but it is used in the later strata, in the *Ra'aya Meheimna* and the *Sefer ha-Tikkunim*. From the beginning of the 14th century the name Kabbalah almost completely superseded all other designations.

THE HISTORICAL DEVELOPMENT OF THE KABBALAH

The Early Beginnings of Mysticism and Esotericism

The development of the Kabbalah has its sources in the esoteric and theosophical currents existing among the Jews of Palestine and Egypt in the era which saw the birth of Christianity. These currents are linked with the history of Hellenistic and syncretistic religion at the close of antiquity. Scholars disagree on the measure of the influence exerted by such trends, and also by Persian religion, on the early forms of Jewish mysticism. Some stress the Iranian influence on the general development of Judaism during the period of the Second Temple, and particularly on certain movements such as the Jewish apocalyptic, a view supported by many experts on the different forms of Gnosticism, like R. Reitzenstein and G. Widengren. That there was an extensive degree of Greek influence on these currents is maintained by a number of scholars, and various theories have been adduced to explain this. Many specialists in the Gnosticism of the first three centuries of the common era see it as basically a Greek or Hellenistic phenomenon, certain aspects of which appeared in Jewish circles, particularly in those sects on the fringes of rabbinic Judaism – *ha-minim*. The position of *Philo of Alexandria and his relationship with Palestinian Judaism is of special weight in these controversies. In contrast to scholars like Harry Wolfson who see Philo as fundamentally a Greek philosopher in Jewish garb, others, like Hans Lewy and Erwin Goodenough, interpret him as a theosophist or even a mystic. Philo's work, they believe, should be seen as an attempt to explain the faith of Israel in terms of Hellenistic mysticism, whose crowning glory was ecstatic rapture. In his monumental book, *Jewish Symbols in the Greco-Roman Period* (13 vols. 1953–68), Goodenough maintains that, in contrast to Palestinian Judaism which found expression in *halakhah* and *aggadah* and in the esoteric ideas which were indigenous developments, Diaspora Judaism showed little evidence of Palestinian influence. Instead, he avers, it had a specific spirituality based on a symbolism which is not rooted solely in the *halakhah*, but which is endowed with an imaginative content of a more or less mystical significance. He believes that the literary evidence, such as the writings of Philo and Hellenistic Judaism, provides extremely useful keys to an understanding of the archaeological and pictorial documentation which he has assembled in such abundance. Although considerable doubt has been cast on Goodenough's basic theories there is sufficient material in his great work to stimulate investigation into previously neglected aspects of Judaism and into evidence which has been insufficiently examined. His argument on the basically mystical significance of the pictorial symbols cannot be accepted, but he did succeed in establishing a link between certain literary evidence extant in Greek, Coptic, Armenian, and esoteric teachings prevalent in Palestinian Judaism. A similar link between Philonic ideas and the viewpoint of the *aggadah*, including the *aggadah* of the mystics, was also suggested by Yitzhak Baer (*Zion*, 23–24 (1958/59), 33–34, 141–65). Philo's book *De Vita Contemplativa* (*About the Contemplative Life*, 1895) mentions the existence

of a sectarian community of “worshippers of God,” who had already formulated a definitely mystical understanding of the Torah as a living body, and this paved the way for a mystical exegesis of Scripture.

An important element common to both Alexandrian and Palestinian Judaism is the speculation on Divine Wisdom which has its scriptural roots in Proverbs 8 and Job 28. Here Wisdom is seen as an intermediary force by means of which God creates the world. This appears in the apocryphal Wisdom of Solomon (7:25) as “a breath of the power of God, and a clear effluence of the glory of the Almighty... For she is an effulgence from everlasting light, And an unspotted mirror of the working of God, And an image of His goodness” (Charles). In the Slavonic Book of Enoch God commands His Wisdom to create man. Wisdom is here the first attribute of God to be given concrete form as an emanation from the Divine Glory. In many circles this Wisdom soon became the Torah itself, the “word of God,” the form of expression of the Divine Power. Such views of the mystery of Wisdom demonstrate how parallel development could take place, on the one hand through rabbinic exegesis of the words of Scripture, and on the other through the influence of Greek philosophical speculations on the Logos. It should be noted that there is no definite proof that Philo's writings had an actual direct influence on rabbinic Judaism in the post-tannaitic period, and the attempt to prove that the *Midrash ha-Ne'lam* of the Zohar is nothing but a Hellenistic Midrash (S. Belkin, in: *Sura*, 3 (1958), 25–92) is a failure. However, the fact that the Karaite *Kirkisānī (tenth century) was familiar with certain quotations drawn from Philonic writings shows that some of his ideas found their way, perhaps through Christian-Arab channels, to members of Jewish sects in the Near East. But it should not be deduced from this that there was a continuous influence up to this time, let alone up to the time of the formulation of the Kabbalah in the Middle Ages. Specific parallels between Philonic and kabbalistic exegesis should be put down to the similarity of their exegetical method, which naturally produced identical results from time to time (see S. Poznański, in *REJ*, 50 (1905), 10–31).

The theories concerning Persian and Greek influences tend to overlook the inner dynamism of the development taking place within Palestinian Judaism, which was in itself capable of producing movements of a mystical and esoteric nature. This kind of development can also be seen in those circles whose historical influence was crucial and decisive for the future of Judaism, e.g., among the Pharisees, the *tannaim* and *amoraim*, that is to say, at the very heart of established rabbinic Judaism. In addition, there were similar tendencies in other spheres outside the mainstream, in the various currents whose influence on subsequent Judaism is a matter of controversy: the *Essenes, the *Qumran sect (if these two are not one and the same), and the different Gnostic sects on the periphery of Judaism whose existence is attested to by the writings of the *Church Fathers. Some have sought to demonstrate the existence of mystical trends even in biblical times (Hertz,

Horodezky, Lindblom, Montefiore), but it is almost certain that the phenomena which they connected with mysticism, like prophecy and the piety of certain psalms, belong to other strands in the history of religion. Historically speaking, organized closed societies of mystics have been proved to exist only since the end of the Second Temple era; this is clearly attested to by the struggle taking place in this period between different religious forces, and by the tendency then current to delve more deeply into original religious speculation.

Apocalyptic Esotericism and Merkabah Mysticism

Chronologically speaking, it is in apocalyptic literature that we find the first appearance of ideas of a specifically mystical character, reserved for the elect. Scholars do not agree on whether the origins of this literature are to be found among the Pharisees and their disciples or among the Essenes, and it is quite possible that apocalyptic tendencies appeared in both. It is known from Josephus that the Essenes possessed literature which was both magical and angelological in content. His silence concerning their apocalyptic ideas can be understood as his desire to conceal this aspect of contemporary Judaism from his gentile readers. The discovery of the literary remains of the Qumran sect shows that such ideas found a haven among them. They possessed the original Book of Enoch, both in Hebrew and Aramaic, although it is quite likely that it was composed in the period preceding the split between the Pharisees and the members of the Qumran sect. In fact, traditions resembling those embedded in the Book of Enoch found their way into rabbinic Judaism at the time of the *tannaim* and *amoraim*, and it is impossible to determine precisely the breeding ground of this type of tradition until the problems presented by the discovery of the Qumran writings have been solved. The Book of Enoch was followed by apocalyptic writing up to the time of the *tannaim*, and, in different ways, after this period also. Esoteric knowledge in these books touched not only upon the revelation of the end of time and its awesome terrors, but also upon the structure of the hidden world and its inhabitants: heaven, the Garden of Eden, and Gehinnom, angels and evil spirits, and the fate of the souls in this hidden world. Above this are revelations concerning the Throne of Glory and its Occupant, which should apparently be identified with "the wonderful secrets" of God mentioned by the *Dead Sea Scrolls. Here a link can be established between this literature and the much later traditions concerning the *ma'aseh bereshit* and the *ma'aseh merkabah*.

It is not just the content of these ideas which is considered esoteric; their authors too hid their own individuality and their names, concealing themselves behind biblical characters like Enoch, Noah, Abraham, Moses, Baruch, Daniel, Ezra, and others. This self-concealment, which was completely successful, has made it extremely difficult for us to determine the historical and social conditions of the authors. This pseudepigraphical pattern continued within the mystical tradition in the centuries that followed. The clear tendency toward asceticism as a way of preparing for the reception of

the mystical tradition, which is already attested to in the last chapter of the Book of Enoch, becomes a fundamental principle for the apocalyptics, the Essenes, and the circle of the Merkabah mystics who succeeded them. From the start, this pietist asceticism aroused active opposition entailing abuse and persecution, which later characterized practically the whole historical development of pietist tendencies (*hasidut*) in rabbinic Judaism.

The mysteries of the Throne constitute here a particularly exalted subject which to a large extent set the pattern for the early forms of Jewish mysticism. It did not aspire to an understanding of the true nature of God, but to a perception of the phenomenon of the Throne on its Chariot as it is described in the first chapter of Ezekiel, traditionally entitled *ma'aseh merkabah*. The mysteries of the world of the Throne, together with those of the Divine Glory which is revealed there, are the parallels in Jewish esoteric tradition to the revelations on the realm of the divine in Gnosticism. The 14th chapter of the Book of Enoch, which contains the earliest example of this kind of literary description, was the source of a long visionary tradition of describing the world of the Throne and the visionary ascent to it, which we find portrayed in the books of the Merkabah mystics. In addition to interpretations, visions, and speculations based on the *ma'aseh merkabah*, other esoteric traditions began to crystallize round the first chapter of Genesis, which was called *ma'aseh bereshit*. These two terms were subsequently used to describe those subjects dealing with these topics. Both Mishnah and Talmud (Ḥag. 2:1 and the corresponding *Gemara* in both the Babylonian and Jerusalem Talmud) show that, in the first century of the common era, esoteric traditions existed within these areas, and severe limitations were placed on public discussion of such subjects: "The story of creation should not be expounded before two persons, nor the chapter on the Chariot before one person, unless he is a sage and already has an independent understanding of the matter." Evidence concerning the involvement of *Johanan b. Zakkai and his disciples in this sort of exposition proves that this esotericism could grow in the very center of a developing rabbinic Judaism, and that consequently this Judaism had a particular esoteric aspect from its very beginning. On the other hand, it is possible that the rise of Gnostic speculations, which were not accepted by the rabbis, made many of them tread very warily and adopt a polemical attitude. Such an attitude is expressed in the continuation of the Mishnah quoted above: "Whoever ponders on four things, it were better for him if he had not come into the world: what is above, what is below, what was before time, and what will be hereafter." Here we have a prohibition against the very speculations which are characteristic of Gnosticism as it is defined in "Excerpts from the writings of [the Gnostic] Theodotus" (*Extraits de Théodote*, ed. F. Sagnard (1948), para. 78). In actual fact, this prohibition was largely ignored, as far as can be judged from the many statements of *tannaim* and *amoraim* dealing with these matters which are scattered throughout the Talmud and the Midrashim.

In an age of spiritual awakening and deep religious turmoil there arose in Judaism a number of sects with heterodox ideas resulting from a mixture of inner compulsion and outside influence. Whether Gnostic sects existed on the periphery of Judaism before the coming of Christianity is a matter of controversy (see below); but there is no doubt that *minim* (“heretics”) did exist in the tannaitic period and especially in the third and fourth centuries. In this period a Jewish Gnostic sect with definite antinomian tendencies was active in Sepphoris. There were also of course intermediate groups from which members of these sects gained an extended knowledge of theological material on *ma'aseh bereshit* and *ma'aseh merkabah*, and among these should be included the Ophites (snake worshippers) who were basically Jewish rather than Christian. From this source a considerable number of esoteric traditions were transmitted to Gnostics outside Judaism, whose books, many of which have been discovered in our own time, are full of such material – found not only in Greek and Coptic texts of the second and third centuries but also in the early strata of Mandaic literature, which is written in colloquial Aramaic. Notwithstanding all the deep differences in theological approach, the growth of Merkabah mysticism among the rabbis constitutes an inner Jewish concomitant to Gnosis, and it may be termed “Jewish and rabbinic Gnosticism.”

Within these circles theosophical ideas and revelations connected with them branched out in many directions, so that it is impossible to speak here of one single system. A particular mystical terminology was also established. Some of it is reflected in the sources of “normal” Midrashim, while part is confined to the literary sources of the mystics: the literature of the *heikhalot* and the *ma'aseh bereshit*. Verbs like *histakkel*, *zafah*, *iyyen*, and *higg'i'a* have specific meanings, as do nouns like *ha-kavod*, *ha-kavod ha-gadol*, *ha-kavod ha-nistar*, *mara di-revuta*, *yozer bereshit*, *heikhalot*, *hadrei merkabah*, and others. Particularly important is the established usage of the term *Kavod* (“glory”) as a name both for God when He is the object of profound mystical enquiry and also for the general area of theosophical research. This term acquires a specific meaning, distinct from its scriptural usage, as early as the Book of Tobit and the end of the Book of Enoch, and it continues to be used in this way in apocalyptic literature. In contrast, the use of the word *sod* (“mystery”) in this context was relatively rare, becoming general only in the Middle Ages, whereas *raz* (“secret”) is used more often in the earlier texts.

Merkabah terminology is found in a hymn-fragment in the Dead Sea Scrolls, where the angels praise “the image of the Throne of the Chariot” (Strugnell). Members of the sect combined ideas concerning the song of the angels, who stand before the Chariot, with other ideas about the names and duties of the angels, and all this is common to the sect of Qumran and to later traditions of the *ma'aseh merkabah*. From the very beginning these traditions were surrounded by an aura of particular sanctity. Talmudic *aggadah* connects exposition of the Merkabah with the descent of fire from above which surrounds the expositor. In the literature of the *heikhalot* other and more

daring expressions are used to describe the emotional and ecstatic character of these experiences. Distinct from the exposition of the Merkabah which the rabbis gave while on earth below was the ecstatic contemplation of the Merkabah experienced as an ascent to the heavens, namely descent to the Merkabah, through entering *pardes* (“paradise”). This was not a matter for exposition and interpretation but of vision and personal experience. This transition, which once again connects the revelations of the Merkabah with the apocalyptic tradition, is mentioned in the Talmud alongside the exegetic traditions (Ḥag. 14b). It concerns the four sages who “entered *pardes*.” Their fate demonstrates that here we are dealing with spiritual experiences which were achieved by contemplation and ecstasy. *Simeon b. Azzai “looked and died”; *Ben Zoma “looked and was smitten” (mentally); *Elisha b. Avuyah, called *a'her* (“other”), forsook rabbinic Judaism and “cut the shoots,” apparently becoming a dualistic Gnostic; R. *Akiva alone “entered in peace and left in peace,” or, in another reading, “ascended in peace and descended in peace.” So R. Akiva, a central figure in the world of Judaism, is also the legitimate representative of a mysticism within the boundaries of rabbinic Judaism. This is apparently why Akiva and *Ishmael, who was his companion and also his adversary in halakhic matters, served as the central pillars and chief mouthpieces in the later pseudepigraphic literature devoted to the mysteries of the Merkabah. In addition, the striking halakhic character of this literature shows that its authors were well rooted in the halakhic tradition and far from holding heterodox opinions.

In mystic circles particular conditions were laid down for the entry of those fit to be initiated into the doctrines and activities bound up with these fields. The basic teachings were communicated in a whisper (Ḥag. 13b; *Bereshit Rabbah*, Theodor-Albeck edition (1965), 19–20). The earliest conditions governing the choice of those suitable were of two types. In the *Gemara* (Ḥag. 13b) basically intellectual conditions were formulated, as well as age limits (“at life’s half-way stage”); and in the beginning of *Heikhalot Rabbati* certain ethical qualities required of the initiate are enumerated. In addition to this, from the third and fourth centuries, according to Sherira Gaon (*Ozar ha-Ge'onim to Hagigah* (1931), *Teshuvot*, no. 12, p. 8), they used external methods of appraisal based on physiognomy and chiromancy (*hakkarat panim ve-sidrei sirtutin*). *Seder Eliyahu Rabbah*, chapter 29, quotes an Aramaic *baraita* from the Merkabah mystics concerning physiognomy. A fragment of a similar *baraita*, written in Hebrew in the name of R. Ishmael, has been preserved, and there is no doubt that it was a part of Merkabah literature. Its style and content prove its early date (see G. Scholem in *Sefer Assaf* (1953), 459–95; the text itself is translated into German in *Liber Amicorum*, in honor of Professor C.J. Bleeker, 1969, 175–93).

Esoteric Literature: the *Heikhalot*, the *Ma'aseh Bereshit*, and the Literature of Magic

This literature occupies an extremely important place in the development of esotericism and mysticism. It is connected at

innumerable points with traditions outside its boundaries, in the Talmuds and Midrashim, and these traditions sometimes explain each other. In addition, esoteric literature contains a wealth of material that is found nowhere else. Many scholars, including Zunz, Graetz, and P. Bloch, have tried to show that a vast distance, both in time and subject matter, separates the early Merkabah ideas from those embedded in Talmud and Midrash, and they ascribed the composition of Merkabah literature to the geonic era. Even though it is quite possible that some of the texts were not edited until this period, there is no doubt that large sections originated in talmudic times, and that the central ideas, as well as many details, go back as far as the first and second centuries. Many of the texts are short, and in various manuscripts there is a considerable amount of basic material quite devoid of any literary embellishment. (For a list of the books belonging to this literature see *Merkabah Mysticism.) Of great importance are the texts entitled *Heikhalot Rabbati*, whose main speaker is R. Ishmael; *Heikhalot Zutrati*, whose main speaker is R. Akiva; and the *Sefer Heikhalot*, which has been published under the name of the Third Book of Enoch or the Hebrew Enoch. The traditions assembled here are not all of the same kind, and they indicate different tendencies among the mystics. We find here extremely detailed descriptions of the world of the Chariot, of the ecstatic ascent to that world, and of the technique used to accomplish this ascent. As in non-Jewish Gnostic literature, there is a magical and theurgic aspect to the technique of ascent, and there are very strong connections between Merkabah literature and Hebrew and Aramaic theurgic literature from both this and the geonic period. The earliest stratum of the *heikhalot* strongly emphasizes this magical side, which in the practical application of its teachings is linked to the attainment of the "contemplation of the Chariot." It is very similar to a number of important texts preserved among the Greek magic papyri and to Gnostic literature of the *Pistis Sophia* type which originated in the second or third century C.E.

The *heikhalot* books mentioned above refer to historical figures, whose connection with the mysteries of the Chariot is attested by Talmud and Midrash. On the other hand, there also existed early sources containing traditions attributed to various *tannaim* and *amoraim*; as some of them are almost or completely unknown, there would have been no point in appending their names to pseudepigraphical writings. In the Cairo *Genizah* a few fragments of a tannaitic Midrash on the Chariot were discovered (Ms. Sassoon 522), and the short fourth-century text *Re'iyot Yehezkel* belongs to the same category. It could be inferred from this that the mystics did not always try to conceal their identities, although in most cases they were inclined to do so. The ascent to the Chariot (which in the *Heikhalot Rabbati* is deliberately called "descent") comes after a number of preparatory exercises of an extremely ascetic nature. The aspirant placed his head between his knees, a physical position which facilitates changes in consciousness and self-hypnosis. At the same time, he recited hymns of an ecstatic character, the texts of which are ex-

tant in several sources, particularly in the *Heikhalot Rabbati*. These poems, some of the earliest *piyyutim* known to us, indicate that "Chariot hymns" like these were known in Palestine as early as the third century. Some of them purport to be the songs of the holy creatures (*hayyot*) who bear the Throne of Glory, and whose singing is already mentioned in apocalyptic literature. The poems have their own specific style which corresponds to the spirit of "celestial liturgy," and they have a linguistic affinity with similar liturgical fragments in the writings of the Qumran sect. Almost all of them conclude with the *kedushah* ("sanctification") of Isaiah 6:3, which is used as a fixed refrain. *Isaac Nappaḥa, a third-century Palestinian *amora*, puts a similar poem in the mouth of the kine who bore the Ark of the Covenant (1 Sam. 6:12), in his interpretation of "And the kine took the straight way" (*va-yisharnah*, interpreted as "they sang"; Av. Zar. 24b), for he sees a parallel between the kine who bear the ark singing and the holy creatures who bear the Throne of Glory with a glorious festive song. These hymns clearly show their authors' concept of God. He is the holy King, surrounded by "majesty, fear, and awe" in "the palaces of silence." Sovereignty, majesty, and holiness are His most striking attributes. He is not a God Who is near but a God Who is afar, far removed from the area of man's comprehension, even though His hidden glory may be revealed to man from the Throne. The Merkabah mystics occupy themselves with all the details of the upper world, which extends throughout the seven palaces in the firmament of *aravot* (the uppermost of the seven firmaments); with the angelic hosts which fill the palaces (*heikhalot*); the rivers of fire which flow down in front of the Chariot, and the bridges which cross them; the *ofan* and *hashmal*; and with all the other details of the Chariot. But the main purpose of the ascent is the vision of the One Who sits on the Throne, "a likeness as the appearance of a man upon it above" (Ezek. 1:26). This appearance of the Glory in the form of supernal man is the content of the most recondite part of this mysticism, called **Shi'ur Komah* ("measure of the body").

The teaching on the "measure of the body" of the Creator constitutes a great enigma. Fragments of it appear in several passages in the *ma'aseh merkabah* literature, and there is one particularly long section which has come down separately (an early *genizah* Ms. Oxford, Bodleian Library, Ms. Heb., c. 65). Such passages enumerate the fantastic measurements of parts of the head as well as some of the limbs. They also transmit "the secret names" of these limbs, all of them unintelligible letter combinations. Different versions of the numbers and the letter combinations have survived and so they cannot be relied upon, and, all in all, their purpose (whether literal or symbolic) is not clear to us. However, the verse which holds the key to the enumeration is Psalms 147:5: "Great is Our Lord, and mighty in power," which is taken to mean that the extent of the body or of the measurement of "Our Lord" is alluded to in the words *ve-rav ko'ah* ("and mighty in power") which in *gematria* amount to 236. This number ($236 \times 10,000$ leagues, and, moreover, not terrestrial but celestial leagues) is the basic

measurement on which all the calculations are based. It is not clear whether there is a relationship between speculations on “the greatness of the Lord of the world” and the title *marā dīrevuta* (“Lord of greatness”) which is one of the predications of God found in the Genesis Apocryphon (p. 2, line 4). The terms *gedullah* (“greatness”; e.g., in the phrase “*ofan* [wheel] of greatness”) and *gevurah* (“might”) occur as names for God in several texts of the Merkabah mystics. We should not dismiss the possibility of a continuous flow of specific ideas from the Qumran sect to the Merkabah mystics and rabbinic circles in the case of the *Shi’ur Komah* as well as in other fields. The paradox is that the vision of the *Shi’ur Komah* is actually hidden “from the sight of every creature, and concealed from the ministering angels,” but “it was revealed to R. Akiva in the *ma’aseh merkabah*” (*Heikhalot Zutradi*). The mystic, therefore, grasps a secret which even the angels cannot comprehend.

The provocative anthropomorphism of these passages perplexed many rabbis, and was the object of attacks by the Karaites – so much so that even Maimonides, who at first regarded the *Shi’ur Komah* as an authoritative work requiring interpretation (in his original Ms. of his commentary to the Mishnah, Sanh. 10), later repudiated it, believing it to be a late forgery (*Teshuvot ha-Rambam* (1934), no. 117). In fact, as G. *Scholem and S. *Lieberman have demonstrated, the *Shi’ur Komah* was an early and genuine part of mystic teaching in the days of the *tanna’im*. The theory does not imply that God in Himself possesses a physical form, but only that a form of this kind may be ascribed to “the Glory,” which in some passages is called *guf ha-Shekhinah* (“the body of the Divine Presence”). *Shi’ur Komah* is based on the descriptions of the beloved in Song of Songs (5:11–16), and it apparently became a part of the esoteric interpretation of this book. The early date of the *Shi’ur Komah* is attested by allusions to it in the Slavonic Book of Enoch, chapter 13 (ed. Vaillant (1952), p. 39), which still reflects the Hebrew terminology in its translation. Similarly, the Gnostic teaching of Markos (second century), on “the body of the truth” is a spiritualized Gnostic version of the *Shi’ur Komah*. Perhaps the idea of the “tunic” and garment of God also belonged to the *Shi’ur Komah*. This “tunic” is of great significance in the *ma’aseh bereshit* of the *Heikhalot Rabbati*, and echoes of this idea can be found in the rabbinic *aggadot* concerning the garment of light in which the Holy One, blessed be He, wrapped himself at the moment of creation.

The ascent and passage through the first six palaces are described at length in the *Heikhalot Rabbati*, with details of all the technical and magical means which assist the ascending spirit and save it from the dangers lying in wait for it. These dangers were given much emphasis in all Merkabah traditions. Empty visions meet the ascending soul and angels of destruction try to confound it. At the gates of all the palaces it must show the doorkeepers “the seals,” which are the secret Names of God, or pictures imbued with a magical power (some of which are extant in the Gnostic *Pistis Sophia*), which protect it from attack. The dangers especially increase in number at the entrance to the sixth palace where it appears to the Merkabah

mystic as if “one hundred million waves pour down, and yet there is not one drop of water there, only the splendor of the pure marble stones which pave the palace.” It is to this danger in the ecstatic ascent that the words of R. Akiva refer in the story of the four who entered *pardes*: “when you come to the place of the pure marble stones, do not say ‘water, water.’” The texts also mention a “fire which proceeds from his own body and consumes it.” Sometimes the fire is seen as a danger (*Merkabah Shelemah* (1921), 1b) and at other times as an ecstatic experience which accompanies the entry into the first palace: “My hands were burned, and I stood without hands or feet” (Ms. Neubauer, Oxford 1531, 45b). The *pardes* which R. Akiva and his companions entered is the world of the celestial Garden of Eden or the realm of the heavenly palaces and the ascent or “rapture” is common to several Jewish apocalypses, and is mentioned by Paul (11 Cor. 12:2–4) as something which needs no explanation for his readers of Jewish origin. In contrast to the dangers which attend those who, although unfit for them, indulge in these matters and in the magical science of theurgy, great emphasis is laid on the illumination which comes to the recipients of the revelations: “There was light in my heart like lightning,” or “the world changed into purity around me, and my heart felt as if I had entered a new world” (*Merkabah Shelemah* 1a, 4b).

An early passage enumerating the basic subjects of the mystery of the Chariot is to be found in the Midrash to Proverbs 10, and, in a different version, in R. *Azriel’s *Perush ha-Aggadot* (ed. Tishby (1945), 62). The subjects mentioned are the *hashmal*, the lightning, the cherub, the Throne of Glory, the bridges in the Merkabah, and the measurement of the limbs “from my toenails to the top of my head.” Other subjects which are of great importance in a number of sources are not mentioned. Among these are ideas concerning the *pargod* (“curtain” or “veil”) which separates the One Who sits on the Throne from the other parts of the Chariot, and upon which are embroidered the archetypes of everything that is created. There are different, highly colored traditions concerning the *pargod*. Some take it to be a curtain which prevents the ministering angels from seeing the Glory (Targ. of Job 26:9), while others hold that “the seven angels that were created first” continue their ministry inside the *pargod* (*Massekhet Heikhalot*, end of ch. 7). There was no fixed angelology, and different views, and indeed complete systems, have been preserved, ranging from those found in the Ethiopic Book of Enoch to the Hebrew Enoch found among the literature of the *heikhalot*. These ideas occupy a considerable place in the extant Merkabah literature, and, as would be expected, they reappear in various forms of a practical nature in incantations and theurgical literature. Knowledge of the names of the angels was already part of the mysticism of the Essenes, and it developed in both rabbinic and heterodox circles up to the end of the geonic period. Together with the concept of the four or seven key angels, there developed (about the end of the first or the beginning of the second century) a new doctrine concerning the angel *Metatron (*sar ha-panim*, “the prince of the Pres-

ence”) – who is none other than Enoch himself after his flesh had been transformed into “flaming torches” – and the place assigned to him above all the other angels. There are some sources which contain little or no reference to this subject or to other views associated with it (e.g., concerning the angel *Sandalfon), while others like the Hebrew Enoch (ed. H. Odeberg, 1928), dwell on it at length. At the beginning of the tannaitic period speculations are found concerning the angel who bore within him the name of God Himself, the angel Yahoel, who occupies a dominant position in the Apocalypse of Abraham. Everything said here of Yahoel was transferred in another circle to Metatron, to whom the mystics assigned many other secret names, most important of which were Yahoel and “the lesser YHWH.” While traditions concerning Yahoel and the lesser YHWH reappeared in different forms among the Gnostics, the subject of Metatron remained confined to Jewish circles for a long time. Metatron also took upon himself several of the duties of the angel *Michael, and from the amoraic period onward he was identified with the “prince of the world.” His title *ha-na'ar* (“the boy”) refers to his role as servant of God and is based on the linguistic usage of the Bible. Several extant passages of the *Shi'ur Komah* include references to Metatron and his role as servant of the Chariot.

In Merkabah literature the names of the angels easily intermingle with the secret Names of God, many of which are mentioned in the fragments of this literature still extant. Since many of these names have not been completely explained it has not yet been possible to ascertain whether they are meant to convey a specific theological idea – e.g., an emphasis on a particular aspect of God’s revelation or activity – or whether they have other purposes which we cannot fathom. Fragments of *heikhalot* literature mention names like Adiriron, Zohariel, Zavodiel, Ta’zash, Akhtriel (found also in a *baraita* emanating from this circle in Ber. 7a). The formula “the Lord, God of Israel” is very often added to the particular name, but many of the chief angels also have this added to their names (e.g., in the Hebrew Enoch) so it cannot be deduced from this whether the phrase refers to the name of an angel or to the name of God. Sometimes the same name serves to designate both God and an angel. An example of this is Azbogah (“an eightfold name”) in which each pair of letters adds up, through *gematria*, to the number eight. This “eightfold” name reflects the Gnostic concept of the *ogdoas*, the eighth firmament above the seven firmaments, where the Divine Wisdom dwells. In the *Heikhalot Zutreti* it is defined as “a name of power” (*gevurah*), i.e., one of the names of the Divine Glory, while in the Hebrew Enoch chapter 18 it becomes the name of one of the angelic princes; its numerical significance is forgotten and it is subject to the customary aggadic interpretation of names. The same is true of the term *ziva rabba*, which from one angle is no more than an Aramaic translation of *ha-kavod ha-gadol* (“the great glory”) found in the apocalypses and also in Samaritan sources as a description of the revealed God. But it also occurs in the lists of the mysterious names of the angel Metatron, and it is found with a similar meaning in Mandaic

literature. Just as non-Jewish Gnostics sometimes used Aramaic formulae in their Greek writings, so Greek elements and Greek formulae found their way into Merkabah literature. The dialogue between the mystic and the angel Dumiel at the gate of the sixth palace in the *Heikhalot Rabbati* is conducted in Greek (J. Levy, in *Tarbiz*, 12 (1941), 163–7). One of the names of God in this literature is Totrossiah, which signifies the *tetras* of the four letters of the name YHWH. The reverse parallel to this is the name Arbatiao which is found frequently in the magic papyri of this period.

The different tendencies of Merkabah mysticism established ways of contemplating ascent to the heavens – ways which were understood in their literal sense. Their basic conception did not depend on scriptural interpretation but took on its own particular literary form. The magical element was strong in the early stages of *heikhalot* literature only, becoming weaker in later redactions. From the third century onward interpretations appear which divest the subject of the Chariot of its literal significance and introduce an ethical element. Sometimes the different palaces correspond to the ladder of ascent through the virtues (e.g., in the *Ma'aseh Merkabah*, para. 9, ed. by Scholem in *Jewish Gnosticism...* (1965), 107); and sometimes the whole topic of the Chariot completely loses its literal meaning. This kind of interpretation is especially evident in the remarkable mystic utterance of the third-century amora *Simeon b. Lakish: “the patriarchs are the Chariot” (Gen. Rabba, 475, 793, 983, with regard to Abraham, Isaac, and Jacob). Statements like these opened the door to the type of symbolic interpretation which flourished afterward in kabbalistic literature.

The first center for this type of mysticism was in Palestine, where a large part of *heikhalot* literature was written. Mystical ideas found their way to Babylonia at least as early as the time of *Rav, and their influence is recognizable, among other places, in the magical incantations which were inscribed on bowls to afford “protection” from evil spirits and demons, and which reflect popular Babylonian Judaism from the end of the talmudic period to the time of the *geonim*. In Babylonia, apparently, a number of magical prayers were composed, as well as treatises on magic, like the *Harba de-Moshe* (ed. Gaster 1896), *Sefer ha-Malbush* (Sassoon Ms. 290, pp. 306–11), *Sefer ha-Yashar* (British Museum, Margoliouth Ms. 752, fol. 91ff.), *Sefer ha-Ma'ilot*, *Havdalah de-R. Akiva* (Vatican Ms. 228), *Pishra de R. *Hanina b. Dosa* (Vatican Ms. 216, fols. 4–6), and others, some of which were written in Babylonian Aramaic. In all these the influence of Merkabah ideas was very strong. In Palestine, perhaps at the end of the talmudic period, the *Sefer ha-*Razim* was composed, which contains descriptions of the firmaments greatly influenced by *heikhalot* literature, while the “practical” part, concerning incantations, has a different style, partly adopted verbatim from Greek sources. From circles such as these emanated the magical usage of the Torah and Psalms for practical purposes (see JE III, s.v. Bibliomancy). This practice was based on the theory that essentially these books were made up from the Sacred Names of God and His

angels, an idea that first appeared in the preface to the *Sefer Shimmushei Torah*; only the midrashic introduction, with the title *Ma'yan ha-Hokhmah*, has been printed (Jellinek, *Beit ha-Midrash*, part 1 (1938), 58–61), but the whole work is extant in manuscript. Of the same type is the *Sefer Shimmushei Tehillim*, which has been printed many times in Hebrew and also exists in manuscript in an Aramaic version.

The poetical content of the literature of the *ma'aseh merkabah* and the *ma'aseh bereshit* is striking; we have already noted the hymns sung by the *hayyot* and the ministering angels in praise of their Creator. Following the pattern of several of the Psalms, the view was developed that the whole of creation, according to its nature and order, was singing hymns of praise. A hymnology was established in the various versions of the **Perek Shirah*, which without any doubt derives from mystical circles in the talmudic period. Connected with this poetical element is the influence that the Merkabah mystics had on the development of specific portions of the order of prayer, particularly on the morning *kedushah* (Ph. Bloch, in *MGWJ*, 37, 1893), and later on the *piyyutim* which were written for these portions (*silluk*, *ofan*, *kedushah*).

Jewish Gnosis and the *Sefer Yezirah*

In these stages of Jewish mysticism, the descriptions of the Chariot and its world occupy a place which in non-Jewish Gnosticism is filled by the theory of the “aeons,” the powers and emanations of God which fill the *pleroma*, the divine “fullness.” The way in which certain *middot*, or qualities of God, like wisdom, understanding, knowledge, truth, faithfulness, righteousness, etc., became the “aeons” of the Gnostics is paralleled in the tradition of the *ma'aseh bereshit*, although it did not penetrate the basic stages of Merkabah mysticism. The ten sayings by which the world was created (Avot 5:1) became divine qualities according to Rav (Hag. 12a). There is also a tradition that *middot* such as these “serve before the Throne of Glory” (ARN 37), thus taking the place occupied by the *hayyot* and the presiding angels in the Merkabah system. The semi-mythological speculations of the Gnostics which regarded the qualities as “aeons” were not admitted into the rabbinic tradition of the Talmud or the Midrashim, but they did find a place in the more or less heterodox sects of the *minim* or *hizzonim*. To what extent the growth of Gnostic tendencies within Judaism itself preceded their development in early Christianity is still the subject of scholarly controversy. Peterson, Haenchen, and Quispel, in particular, along with several experts on the Dead Sea Scrolls, have tried to prove that Jewish forms of Gnosis, which retained a belief in the unity of God and rejected any dualistic notions, came into being before the formation of Christianity and were centered particularly around the idea of primordial man (following speculation on Gen. 1:26; see **Adam Kadmon*). The image of the Messiah, characteristic of the Christian Gnostics, was absent here. These scholars have interpreted several of the earliest documents of Gnostic literature as Gnostic Midrashim on cosmogony and Haenchen in particular has argued that their basic Jewish character is

clearly recognizable in an analysis of the teaching of Simon Magus, apparently the leader of Samaritan Gnosis, a first-century heterodox Judaism. Even before this, M. **Friedlaender* had surmised that antinomian Gnostic tendencies (which belittled the value of the Commandments) had also developed within Judaism before the rise of Christianity. Although a fair number of these ideas are based on questionable hypotheses, nevertheless there is a considerable measure of truth in them. They point to the lack of Iranian elements in the early sources of Gnosis, which have been exaggerated by most scholars of the last two generations, whose arguments rest on no less hypothetical assumptions. The theory of “two principles” could have been the result of an internal development, a mythological reaction within Judaism itself, just as easily as a reflection of Iranian influence. The apostasy of the *tanna* Elisha b. Avuyah to a Gnostic dualism of this kind is connected in the Merkabah tradition with the vision of Metatron seated on the Throne like God. Mandaic literature also contains strands of a Gnostic, monotheistic, non-Christian character, which many believe originated in a Transjordanian Jewish heterodox sect whose members emigrated to Babylonia in the first or second century. The earliest strata of the *Sefer ha-**Bahir**, which came from the East, prove the existence of definitely Gnostic views in a circle of believing Jews in Babylonia or Syria, who connected the theory of the Merkabah with that of the “aeons.” These early sources are partly linked with the book **Raza Rabba*, which was known as an early work at the end of the geonic period; fragments of it can be found in the writings of the **Hasidei Ashkenaz*. Concepts which did not originate exclusively in Jewish mysticism, like the idea of the *Shekhinah* and the hypostases of stern judgment and compassion, could easily have been interpreted according to the theory of the “aeons” and incorporated with Gnostic ideas. The “exile of the *Shekhinah*,” originally an aggadic idea, was assimilated in Jewish circles at a particular stage with the Gnostic idea of the divine spark that is in exile in the terrestrial world, and also with the mystic view of the Jewish concept of the *keneset Yisrael* (“the community of Israel”) as a heavenly entity that represents the historical community of Israel. In the elaboration of such motifs, Gnostic elements could be added to rabbinic theories of the Merkabah and to ideas of Jewish circles whose connection with rabbinism was weak.

THE *SEFER YEZIRAH*. Speculation on the *ma'aseh bereshit* was given a unique form in a book, small in size but enormous in influence, that was written between the second and sixth centuries, perhaps in the third century, in a Hebrew style reflecting that of the Merkabah mystics. In early manuscripts it is called *Hilkhot Yezirah* (“*Halakhot* on Creation”), and later *Sefer Yezirah* (“Book of Creation”; uncritical edition by L. Goldschmidt, 1894). We should not dismiss out of hand the possibility that the *hilkhot yezirah* mentioned in *Sanhedrin* 65b and 67b could be one early version of this text. There is here an independent adaptation of the concept of the *ma'aseh bereshit* conceived in the spirit of the Pythagoreans of the tal-

mudic period. On the one hand the book is closely connected with Jewish speculation on “Divine Wisdom,” *Hokhmah*, and with the traditions concerning cosmogony, and on the other hand it introduces new concepts and an original plan of cosmogony far removed, for example, from the *baraita* of the work of creation. The “32 secret paths of Wisdom,” by means of which God created His world, are nothing more than the “ten *Sefirot*” added to the 22 letters of the Hebrew alphabet. The *Sefirot*, a term which first appears in this text, are merely the primordial numbers of the later Pythagoreans. They are created powers, and not emanations from within the Divine. They also fulfill a decisive role in both the creation and the order of the world. When he describes their work the author uses expressions purposely taken from the description of the *hayyot* in the first chapter of Ezekiel. The first four *Sefirot* represent the four elements of the entire world: the spirit of God; ether – the spirit which is the world’s atmosphere; water; and fire. The following six *Sefirot* represent the six dimensions of space. The *Sefirot* are described in a style full of mysterious solemnity almost without parallel in Jewish tradition. This enigmatic style enabled both philosophers and kabbalists of a later age to base their ideas mainly on the first chapter of the book, interpreting it in their own individual ways.

In the rest of the book there is no further mention of these *Sefirot*, and there follows a description of the parts that the letters play in creation. The whole work of creation was enacted through the combinations of the Hebrew letters that were inscribed on the sphere of heaven and engraved into the spirit of God. Every process in the world is a linguistic one, and the existence of every single thing depends on the combination of letters that lies hidden within it. This idea is very close to the view mentioned in *Berakhot* 55a in the name of the *amora* Rav, that there are “letters through which heaven and earth were created,” and that Bezalel built the tabernacle (which, according to some, was a microcosmic symbol of the whole work of creation) through his knowledge of the combinations of these letters. Perhaps this view can be seen as the ultimate conclusion of the theory that the world was created through the Torah, which is made up of letters and which contains these combinations in some mysterious way. At this point an element common to the concepts of the *Sefer Yezirah* and to ideas concerning the practice of magic through the power of letters and names and their permutations clearly emerges. The author compares the division of the letters according to their phonetic origin with the division of creation into three areas: world (place), year (time), and soul (the structure of the human body). The relationship of the letters to the *Sefirot* is obscure. The whole of creation is “sealed” with combinations of the name Yaho (יָהוּ), and the emphasis on this name in the *Sefer Yezirah* recalls Gnostic and magical speculations on that same name, in its Greek form $\text{I}\acute{\alpha}\omega$. Through “contemplation” of the mysteries of the letters and the *Sefirot* Abraham attained a revelation of the Lord of All. Because of this conclusion the authorship of the book was attributed to Abraham, and in some manuscripts it is even entitled “The Letters of our Father Abra-

ham.” The Ḥasidim of Germany (see *Ḥasidei Ashkenaz) read the book as a manual of magic, and they connected it with traditions about the creation of the **golem* (see G. Scholem, *On the Kabbalah and its Symbolism* (1965), 165–73).

Mysticism in the Geonic Period

The mishnaic and the talmudic periods were times of irrepressible creativity in the field of mysticism and esoteric inquiry. In the geonic era (from the seventh to the 11th centuries) little that was essentially original emerged, and the various streams already mentioned continued to exist and to intermingle. The center of mystical activity shifted to Babylonia, although its continuing influence in Palestine is evident in several chapters of later midrashic literature and particularly in the *Pirkei de-R. *Eliezer*. The poems of Eleazar *Kallir, which are greatly influenced by *Merkabah* literature and also by the *Shi'ur Komah*, belong to the end of the earlier period or were composed between the two eras. The poet made no attempt to conceal ideas which had been transmitted through old esoteric theories. As mysticism developed in this period, in both Palestine and Babylonia, it followed the pattern of the earlier period. Apocalyptic writing continued with great momentum; examples are extant from the time of the *amoraim* almost to that of the Crusades, and they were collected in Judah Even-Shemuel’s great anthology, *Midreshei Ge’ullah* (1954²), most of them from the geonic period. They display a marked connection with the *Merkabah* tradition, and several have been preserved in manuscripts of works by mystics. Simeon b. *Yohai appears here for the first time, side by side with R. Ishmael, as a bearer of apocalyptic tradition (in the *Nistarot de-R. Shimon b. Yohai*). Apocalypses were also attributed to the prophet Elijah, Zerubbabel, and Daniel.

At the other extreme there grew and flourished in these circles an angelology and a theurgy which produced a very rich literature, much of it extant from this period. Instead of, or in addition to, the contemplation of the Chariot, this presents a many-sided practical magic associated with the prince or princes of the Torah, whose names vary. Many incantations addressed to the angel Yofiel and his companions, as princes of wisdom and of Torah, are found in a large number of manuscripts of magical manuals, which continue the tradition of the earlier magical papyri. There was also a custom of conjuring up these princes particularly on the day before the Day of Atonement or even on the night of the Day of Atonement itself (see G. Scholem, in *Tarbiz*, 16 (1945), 205–9). Formulae for more mundane purposes have also been preserved in many incantations written in Babylonian Aramaic by Jewish “masters of the Name,” and not always on behalf of Jewish customers. Concepts from the *Merkabah* mystics’ circle, as well as mythological and aggadic ideas – some unknown from other sources – filtered through to groups which were far removed indeed from mysticism and much closer to magic. A demonology, extremely rich in detail, also grew up side by side with the angelology. Many examples of these (published by Montgomery, C. Gordon, and others) were found on clay

bowls which were buried, according to custom, beneath the thresholds of houses. They have important parallels among the incantations transmitted through literary tradition in the fragments of the *Genizah* and in the material which found its way as far as the Ḥasidim of Germany (e.g., in the *Havdalah de-R. Akiva*). The theology and angelology of the incantations were not always explained correctly by their editors, who saw in them a heterodox theology (for an example of this see Scholem, *Jewish Gnosticism* (1965), 84–93). It was in Babylonia also, apparently, that the book *Raza Rabba* (“The Great Mystery”) was composed. Attacked by the Karaites as a work of sorcery, the book does indeed contain magical material but the extant fragments show that it also has some Merkabah content, in the form of a dialogue between R. Akiva and R. Ishmael. As the angelology in these fragments has no parallel in other sources, it would seem that the work is a crystallization of an early form of a theory of the “aeons” and of speculations of a Gnostic character. The style, quite different from that of the *heikhalot*, indicates a much later stage. These fragments were published by G. Scholem in *Reshit ha-Kabbalah* (1948), 220–38.

The beginnings of new trends in this period can be discerned in three areas:

(1) The utterances employed in the creation of the world were conceived either as forces within the Chariot or as “aeons,” *middot*, or hypostases. To what extent this speculation is associated with the view of the ten *Sefirot* in the *Sefer Yezirah* is not altogether clear. It is evident, however, that in Jewish Gnostic circles the concept of the *Shekhinah* occupied a completely new position. In the early sources “*Shekhinah*” is an expression used to denote the presence of God Himself in the world and is no more than a name for that presence; it later becomes a hypostasis distinguished from God, a distinction that first appears in the late Midrash to Proverbs (Mid. Prov. 47a: “the *Shekhinah* stood before the Holy One, blessed be He, and said to Him”). In contrast to this separation of God and His *Shekhinah*, there arose another original concept – the identification of the *Shekhinah* with *keneset Yisrael* (“the community of Israel”). In this obviously Gnostic typology, the allegories which the Midrash uses in order to describe the relationship of the Holy One, blessed be He, to the community of Israel are transmuted into this Gnostic concept of the *Shekhinah*, or “the daughter,” in the eastern sources which are embedded in *Sefer ha-Bahir* (G. Scholem, *Les Origines de la Kabbale* (1966), 175–94). Gnostic interpretations of other terms, like wisdom, and of various talmudic similes in the spirit of Gnostic symbolism, can be understood as going back to the early sources of the *Sefer ha-Bahir* (*ibid.*, 78–107). Several of the book’s similes can be understood only against an Oriental background, and Babylonia in particular, as, for example, the statements concerning the date palm and its symbolic significance. The ascent of repentance to reach the Throne of Glory is interpreted in a late Midrash (PR 185a) as an actual ascent of the repentant sinner through all the firmaments, and so the process of repentance is closely connected here with the process of ascent to the Chariot.

(2) In this period the idea of the transmigration of souls (**gilgul*) also became established in various eastern circles. Accepted by Anan b. *David and his followers (up to the tenth century) – although later rejected by the Karaites – it was also adopted by those circles whose literary remains were drawn upon by the redactors of the *Sefer ha-Bahir*. For Anan (who composed a book specifically on this subject) and his followers the idea, which apparently originated among Persian sects and Islamic Mutazilites, had no mystical aspects. It is apparent, however, that the mystics’ idea of transmigration drew upon other sources, for in the sources of the *Sefer ha-Bahir* it makes its appearance as a great mystery, alluded to only through allegory, and based on scriptural verses quite different from those quoted by the sect of Anan and repeated by Kirkisāni in his *Book of Lights* (pt. 3, chs. 27–28).

(3) A new element was added to the idea of the Sacred Names and angels which occupied such a prominent position in the theory of the Merkabah. This was an attempt to discover numerological links, through *gematria*, between the different types of names and scriptural verses, prayers, and other writings. The numerological “secrets,” *sodot*, served two purposes. They ensured, firstly, that the names would be spelled exactly as the composers of *gematriot* received them through written or oral sources – though this system did not entirely save them from mutilation and variation, as is clearly shown by the mystical writings of the Ḥasidei Ashkenaz. Secondly, by this means they were able to give mystical meanings and “intentions” (*kavvanot*) to these names, which served as an incentive to deeper meditation, especially since many of the names lacked any significance. This process seems to be connected with a decline in the practical use of this material during preparation for the soul’s ecstatic ascent to heaven. Names which originated through intense emotional excitement on the part of contemplatives and visionaries were stripped of their meaning as technical aids to ecstatic practice, and so required interpretations and meanings on a new level of *kavvanah*. All the names, of whatever kind, have therefore a contemplative content; not that ascent to the Merkabah completely disappeared at this time, for the various treatises in many manuscripts on the methods of preparation for it testify to the continuity of their practical application. However, it is clear that this element gradually became less significant. Another new factor must be added to this: the interpretation of the regular prayers in the search for *kavvanot* of this numerical type.

It is impossible to determine with any certainty from the evidence that remains where the secrets of the names and the mysteries of prayer according to this system of *gematria* first made their appearance. The new interpretations of prayer link the words of phrases of the liturgy generally with names from the Merkabah tradition and angelology. Perhaps this link was first formulated in Babylonia; but it is also possible that it grew up in Italy, where the mysteries of the Merkabah and all the associated material spread not later than the ninth century. Italian Jewish tradition, particularly in the popular forms it assumed in *Megillat *Aḥimaʿaz*, clearly shows that the rabbis

there were well versed in matters of the Merkabah. In addition it tells of the miraculous activity of one of the Merkabah mystics who emigrated from Baghdad, namely Abu Aharon (see Aaron of *Baghdad), who performed wonders through the power of the Sacred Names during the few years that he lived in Italy. The later tradition of the Ḥasidim of Germany (12th century) maintained that these new mysteries were transmitted about the year 870 to R. Moses b. *Kalonymus in Lucca by this same Abu Aharon, the son of R. Samuel ha-Nasi of Baghdad. Afterward, R. Moses went to Germany where he laid the foundations of the mystical tradition of the Ḥasidei Ashkenaz, which grew up around this new element. The personality of Abu Aharon remains obscure in all these traditions, and the recent attempts (in several papers by Israel Weinstock) to see him as a central figure in the whole development of the Kabbalah and as author and editor of many mystical works, including the *heikhalot* literature and the *Sefer ha-Bahir*, are founded on an extreme use of *gematriot* and on dubious hypotheses (see *Tarbiz*, 32 (1963), 153–9 and 252–65, the dispute between I. Weinstock and G. Scholem, and Weinstock's reply in *Sinai*, 54 (1964), 226–59). In any event, there is no doubt that at the end of the geonic period mysticism spread to Italy, in the form of Merkabah literature and perhaps also in the form of the above-mentioned theory of names, which served as an intermediate link between the orient and the later development in Germany and France. These ideas reached Italy through various channels. The magical theurgic elements in them came to the fore, while the speculative side became weaker. This latter was represented in the main by the commentary of the physician Shabbetai *Donnolo to the *Sefer Yezirah* which was indisputably influenced by the commentary of Saadiah b. Joseph *Gaon to the same work. It is impossible to say to what extent theosophic writings of a Gnostic character, in Hebrew or Aramaic, also passed through these channels, but this possibility should not be denied.

From the numerous remains of mystical literature extant from the talmudic and geonic periods it can be deduced that these types of ideas and attitudes were widespread in many circles, wholly or partially restricted to initiates. Only on very rare occasions is it possible to establish with certainty the personal and social identity of these circles. There is no doubt that, apart from the individual *tannaim* and *amoraim* whose attachment to mystical study is attested by reliable evidence, there were many whose names are unknown who devoted themselves to mysticism and even made it their chief preoccupation. In addition to the rabbis that have already been mentioned, R. *Meir, R. *Isaac, R. *Levi, R. Joshua b. *Levi, R. *Hoshaiah, and R. Inyani b. Sasson (or Sisi) were also involved with mystical ideas. The identity of those who studied theurgy (who were called, in Aramaic, “users of the Name,” and only from the geonic period onward “masters of the Name,” *ba'alei ha-Shem*) is completely unknown, and most of them, of course, did not come from rabbinic circles. Our knowledge of the exponents of mysticism and esotericism in the geonic period is even more limited. Geonic responsa re-

veal that esoteric traditions did spread to the leading academies, but there is no proof that the foremost *geonim* themselves were steeped in these teachings or that they actually practiced them. The material touching on Merkabah traditions in the responsa and in the commentaries of the *geonim* (the greater part of which were assembled by B.M. Levin in *Ozar ha-Geonim to Hagigah* (1931), 10–30, and in the section on commentaries 54–61) is notable for its extreme caution, and occasionally for its forbearance. The main attempt to link the theories of the *Sefer Yezirah* with contemporary philosophical and theological ideas was made by Saadiah Gaon, who wrote the first extensive commentary to the book. He refrained from dealing in detail with the subject matter of the Merkabah and the *Shi'ur Komah*, but at the same time he did not disown it despite the attacks of the Karaites. In several instances Sherira b. Ḥanina *Gaon and Hai *Gaon set out to discuss matters in this field, but without connecting their explanations with the philosophical ideas expressed elsewhere in their writings. Hai Gaon's opinion in his well known responsum concerning some of the Secret Names, such as the 42- and the 72-lettered Name, led others to attribute to him more detailed commentaries on these subjects, and some of these came into the possession of the Ḥasidei Ashkenaz (see J. Dan, *Torat ha-Sod shel Ḥasidut Ashkenaz*, 1968). The words that Hai Gaon addressed to the rabbis of Kairouan show that the esoteric teaching on names had an impact even on the more distant Diaspora, but they also demonstrate that there was no tradition and little textual distribution of the literature of the *heikhalot*, of which the *gaon* says “he who sees them is terrified by them.” In Italy this literature did spread, particularly among the rabbis and the poets (*paytanim*), and an important section of the work of Amittai b. Shephatiah (ninth century) consists of Merkabah poems. As these traditions passed into Europe, some circles of rabbinic scholars became once more the principal but not the only exponents of mystical teaching.

Aggadot and Midrashim with angelological and esoteric tendencies were also written in this period. The *Midrash Avkir*, which was still known in Germany up to the end of the Middle Ages, contained material rich in mythical elements concerning angels and names. The remains of it which appear in the *Likkutim mi-Midrash Avkir* were collected by S. Buber in 1883. Various parts of the *Pesikta Rabbati* also reflect the ideas of the mystics. The *Midrash Kohen* is made up of different elements (Jellinek, *Beit ha-Midrash*, pt. 2 (1938), 23–39, and, with a commentary, in *Sefer Nit'ei Na'amanim*, 1836); the first part contains a remarkable combination of ideas concerning the Divine Wisdom and its role in creation and the theory of the *Shekhinah*, while the rest of the work includes different versions of angelology and a version of *ma'aseh bereshit*. An element of *gematria* also appears. Judging from the Greek words in the first part, the extant text was edited in Palestine or in southern Italy. In the tradition of the Ḥasidei Ashkenaz (British Museum Ms. 752 fol. 132b) a fragment of a Midrash survives concerning the angels active during the Exodus from Egypt, which is also based to a large extent on the exegesis of

gematriot, and it would seem that there were other Midrashim of this type whose origin is not known.

While many ideas concerning God and His manifestation are expressed or implied in the Merkabah literature, no particular concentrated attention is paid in these early stages of mysticism to the teaching about man. The emphasis of the Merkabah mystics is on the ecstatic and contemplative side, and man interested them only insofar as he received the vision and revealed it to Israel. Their speculations contain no specific ethical theory nor any new concept of the nature of man.

Hasidic Movements in Europe and Egypt

Religious impulses which were mystical in the sense of involving man's powerful desire for a more intimate communion with God and for a religious life connected with this developed in the Judaism of the Middle Ages in different places and by various means; not all are associated exclusively with Kabbalah. Such tendencies resulted from a fusion of internal drives with the external influence of the religious movements present in the non-Jewish environment. Since their proponents did not find the answer to all their needs in the talmudic and midrashic material which purported to bind man closer to God – although they utilized it as far as they could and also at times based far-fetched interpretations on it – they drew extensively on the literature of the Sufis, the mystics of Islam, and on the devout Christian ascetic tradition. The intermingling of these traditions with that of Judaism resulted in tendencies which were regarded as a kind of continuation of the work of the *Ḥasideans of the tannaitic period, and they stressed the value of *ḥasidut* as a way of bringing man nearer to *devekut* ("communion" with God) although this term was not yet used to designate the culmination of *ḥasidut*. Extremism in ethical and religious behavior, which in the sayings and literature of the rabbis characterized the term "*ḥasid*" ("pious") as against "*zaddik*" ("righteous"), became the central norm of these new tendencies. They found their classical literary expression, first and foremost, in 11th-century Spain in *Hovot ha-Levavot* by *Bahya ibn Paquda which was originally written in Arabic. The material dealing with the life devoted to communion of the true "servant" – who is none other than the *ḥasid* yearning for the mystical life – is taken from Sufi sources and the author's intention was to produce an instructional manual of Jewish pietism which culminated in a mystical intent. A Hebrew translation of the *Hovot ha-Levavot* was made on the initiative of *Abraham b. David of Posquières and the early circle of kabbalists in Lunel. The book's great success, especially in Hebrew, shows how much it answered the religious needs of people even beyond the confines of the Kabbalah. The obvious connection with talmudic tradition, which served as the point of departure for explanations of a remarkable spiritual intent, was a distinguishing feature in works of this kind, which also clearly reveal neoplatonic philosophical elements. Such elements facilitated the creation of formulations of a mystical character, and this philosophy became one of its most powerful means of expression. Several of the poems of Solomon ibn

*Gabirol, Bahya's older contemporary, evidence this trend toward a mystical spirituality, and it is expressed particularly in the concepts of his great philosophical work, *Mekor Ḥayyim*, which is completely saturated with the spirit of neoplatonism. The extent to which his poems reflect individual mystical experiences is controversial (cf. the view of Abraham Parnes, *Mi-Bein la-Ma'arakhot* (1951), 138–61). In Spain, after a century or more, these tendencies intermingled with the emerging Kabbalah, where traces of Gabirol may be seen here and there, especially in the writings of Isaac b. *Latif.

Parallel with this was a growth of *ḥasidut* of a mystical bent in Egypt in the days of Maimonides and his son Abraham b. Moses b. *Maimon; this, however, found no echo in the Kabbalah, remaining an independent occurrence of a Jewish Sufi type which is recorded as late as the 14th or even the 15th century. No mere figure of speech, the epithet "Ḥasid" was a description of a man who followed a particular way of life, and it was appended to the names of several rabbis from the 11th century onward, in both the literary and the personal records that survived in the *Genizah*. The Egyptian trend of *ḥasidut* turned into "an ethically oriented mysticism" (S.D. Goitein), particularly in the literary productions of Abraham b. Moses b. Maimon (d. 1237). The mystical aspect of his book *Kifāyat al-ʿĀbidīn* (ed. S. Rosenblatt, 2 vols. (1927–38), with the title *The High Ways to Perfection*) is entirely based on Sufi sources and bears no evidence of any similar Jewish tradition known to the author. The circle of Ḥasidim which grew up around him stressed the esoteric aspect of their teaching (S.D. Goitein), and his son, R. Obadiah, also followed this path (G. Vajda, in *JJS*, 6 (1955), 213–25). A much later work of the same kind was discussed by F. Rosenthal (*HUCA*, 25 (1940), 433–84). What remains of this literature is all written in Arabic, which may explain why it found no place in the writings of the Spanish kabbalists, most of whom had no knowledge of the language.

An essentially similar religious movement grew up in France and Germany, beginning in the 11th century. It reached its peak in the second half of the 12th and in the 13th century, but it continued to have repercussions for a long time, particularly in the Judaism of the Ashkenazi world. This movement – known as the Ḥasidei Ashkenaz – has two aspects: the ethical and the esoteric-theosophical. On the ethical plane a new ideal developed of extreme *ḥasidut* linked to a suitable mode of life, as described particularly in the *Sefer Ḥasidim* of Judah b. Samuel *he-Ḥasid, extant in two versions, one short and the other long. Along with specific pietistic customs there grew up a particular method of repentance which, remarkable for its extremism, had a marked influence on Jewish ethical behavior. The common factor in all the ḥasidic movements of Spain, Egypt, and Germany was the violent opposition that they aroused, attested by the Ḥasidim themselves. A Ḥasidism which does not arouse opposition in the community cannot, according to their own definition, be considered a true one. Equanimity of spirit, indifference to persecution and ignominy; these are the distinguishing traits of the Ḥasid, to whichever particular circle he belongs. Although the Ḥasidei

Ashkenaz reflect to some extent the contemporary Christian asceticism, nevertheless they developed mainly within the framework of a clear talmudic tradition, and the basic principles were often identical with the principles of this tradition. All these movements had from the beginning a social significance intended “to revive the hearts.” The Ḥasidei Ashkenaz did not, relatively speaking, lay great stress on the mystical element associated with the ḥasidic ideal. Despite the paradox inherent in the situation, they tried as far as possible to integrate the Ḥasid, ostensibly an unnatural phenomenon, into the general Jewish community, and to make him responsible in practice to the community. The Ḥasid who renounced his natural impulses and always acted “beyond the limit of strict justice” was the true embodiment of the fear and love of God in their purest essence. Many of these Ḥasidim attained the highest spiritual levels, and were considered to be masters of the holy spirit, or even prophets, a term applied to several men who are known for their activity in tosafist circles, e.g., R. Ezra ha-Navi (“the prophet”) of Montcontour, and also to others who are otherwise completely unknown, e.g., R. Nehemiah ha-Navi and R. Troestlin ha-Navi from Erfurt. These men’s attainment of such spiritual heights was connected not only with their behavior on the ethical plane but also with the distinction they achieved in the realm of esoteric theosophy. The latter was assigned an important position; in it all earlier trends were maintained, joined and mingled with new forces. Remaining the main object of enquiry, and even a practical guide toward the “ascent to heaven,” the searching on the Merkabah became largely interwoven with number mysticism and the speculations based on it. In addition to the ecstatic or visionary ascent to heaven, there developed a tendency toward deep meditation, toward prayer and the mysteries of prayer, which were communicated orally. Medieval Jewish philosophy introduced a new element, mainly through Saadiah Gaon’s commentary to the *Sefer Yeẓirah* (which had been translated into Hebrew as early as the 11th century), and through the early translation of his *Sefer Emunot ve-De’ot* in a style reminiscent of the *piyyutim* of the Kallir school. This was the source of the theory of the *Kavod* (“Glory”), transmitted through ḥasidic literature, which saw the Divine Glory as the first created entity, although the mystics dared speak of it only with trembling awe. Despite their distinction between God and the *Kavod*, which is also called *Shekhinah*, they continued to refer to the *Shekhinah* in terms of the talmudic and midrashic conception of it as an attribute of God. An additional factor from the 12th century onward was the influence of rabbis of the neoplatonic school, especially Abraham ibn *Ezra, and Abraham b. *Ḥiyya. Perhaps Ibn Ezra’s travels to France and his personal contacts there contributed to this influence as well as his books. In all the literature they inherited from Saadiah and the Spanish rabbis, the Ḥasidim concentrated on that part that was closest to their thought, practically turning these authors into theosophists. Arriving at no unified systemization of these disparate and contradictory elements, in formulating their ideas they contented themselves with eclectic presentations. The ideas

of the Merkabah and the *Shi’ur Komah* were already known in France at the beginning of the ninth century, as witnessed by the attacks on them by *Agobard, bishop of Lyons. Here and there glimpses of these traditions appear in the writings of *Rashi and the tosafists of the 12th and 13th centuries. The study of the *Sefer Yeẓirah* was looked upon as an esoteric discipline, consisting both of revelations concerning creation and the mysteries of the world, and of a profound knowledge of the mysteries of language and the Sacred Names. Traditions of this type have come down from Jacob b. Meir *Tam, Isaac of Dampierre, Elhanan of Corbeil, and Ezra of Montcontour. The latter, claiming divine revelation, aroused messianic excitement in France and beyond in the second decade of the 13th century (Scholem, *Origines de la Kabbale*, 254–5). These traditions were given written form in France in the *Sefer ha-Hayyim* (Munich Ms. 107), written around 1200. However, following Ibn Ezra, its basic doctrine assimilated other theosophical elements concerning the divine attributes and their place in the *Kavod* and beneath the Throne whose similarity to the kabbalistic outlook is clear.

In all aspects, including the esoteric, the movement reached its peak in Germany, first within the widespread Kalonymus family from the 11th century on. In Worms, Speyer, and Mainz, and afterward in Regensburg, the main upholders of the tradition are known: *Samuel b. Kalonymus, *Judah b. Kalonymus of Mainz, and his son, *Eleazar of Worms; his teacher, Judah b. Samuel ha-Ḥasid (d. 1217); Judah b. Kalonymus of Speyer (author of *Sefer Yiḥusei Tanna’im ve-Amora’im*), and the descendants of Judah he-Ḥasid who were scattered throughout the German cities of the 13th century. They and their pupils gave a far-reaching popular expression to the movement, and several of them wrote books of a wide compass which embodied a major part of their traditions and ideas. In addition to the bulk of the *Sefer Ḥasidim*, Judah he-Ḥasid, the movement’s central figure in Germany, wrote other books known to us only through citation in other works, particularly the *Sefer ha-Kavod*. According to J. Dan he was also the author of a large work extant in Oxford manuscript 1567. His pupil, Eleazar of Worms, included in books large and small (most of which have been preserved in manuscript) the major part of the material he had received concerning the teachings of the *māaseh merkabah*, the *māaseh bereshit*, and the doctrine of Names. They are a mixture of mythology and theology, of Midrash and speculation on one side, and of theurgy on the other. All the tendencies already mentioned above find expression in his work, existing side by side, as in his *Sodei Razayya* (considerable parts of which were published in the *Sefer *Razi’el*, and all of which is extant in B.M. Margoliouth 737) or in texts which are arranged like *halakhot*: *Hilkhot ha-Malakhim*, *Hilkhot ha-Kisse*, *Hilkhot ha-Kavod*, *Hilkhot ha-Nevu’ah* (printed under the title of *Sodei Razayya*, 1936), and also in many others that remain unpublished. The scope of this literature is very wide (see J. Dan in: *Zion*, 29 (1964), 168–81), and it contains some fragments of traditions of an unusual type, Gnostic in character, which apparently traveled from the

east by way of Italy. The mysteries of prayer and the extensive interpretation of Scripture through number mysticism were further developed in Germany, partly through the chain of tradition of the Kalonymus family and partly through other developments which went so far that the emphasis on the search for associations by way of *gematriot* was considered by Jacob b. *Asher (Tur Oḥ 113) to be the most characteristic feature of the Ḥasidei Ashkenaz. In the 13th century a very rich literature grew up, grounded on the different aspects of ḥasidic tradition but still independent of the kabbalistic literature that developed in the same period. The names of many rabbis who trod the path of ḥasidic theosophy are recorded in these sources, most of which are in manuscript. Many of their sayings were incorporated in Eleazar Hirz Treves' commentary to the liturgy (in *Siddur ha-Tefillah*, 1560), and in the *Sefer Arugat ha-Bosem* of Abraham b. *Azriel, an early 13th-century commentary on the *piyyutim* of the *maḥzor* of the Ashkenazi rite (ed. E. Urbach, 1939–63; see the introduction (vol. 4) in the section on mysticism). In this circle the *Sefer Yeẓirah* was nearly always interpreted in the manner of Saadiah and Shabbetai Donnolo, with an added tendency to see the book as a guide for both mystics and adepts of magic. The study of the book was considered successful when the mystic attained the vision of the *golem*, which was connected with a specific ritual of a remarkably ecstatic character. Only in later times did this inner experience assume more tangible forms in popular legend (Scholem, *On the Kabbalah and its Symbolism*, 173–93).

The theological views of the Ḥasidim are summarized in the *Hilkhot ha-Kavod*, and in the *Sha'arei ha-Sod ve-ha-Yiḥud ve-ha-Emunah* (Kokhevei Yizḥak, 27, 1862), and in the various versions of the *Sod ha-Yiḥud* from Judah he-Ḥasid to Moses Azriel at the end of the 13th century (Scholem, *Reshit ha-Kabbalah*, 206–9). In addition to the ḥasidic version of the concept of the *Kavod*, another view developed in a particular circle in the 11th or 12th century which is not mentioned in the writings of Judah he-Ḥasid and his school. This is the idea of *keruv meyuḥad* (“the special cherub”) or *ha-keruv ha-kadosh* (“the holy cherub”). According to this view, it is not the *Kavod* pure and simple which sits upon the Throne but a specific manifestation in the shape of an angel or a cherub, to whom the mysteries of the *Shi'ur Komah* refer. In the writings of Judah he-Ḥasid and Eleazar of Worms, and in the *Sefer ha-Hayyim*, there are a number of variations on the theme of the *Kavod* and various ways of presenting the idea. Sometimes a distinction is made between the revealed and the hidden *Kavod*, and so on. The special cherub appears as an emanation from the great fire of the *Shekhinah* or from the hidden *Kavod*, which has no form. In this circle the two basic divine attributes are contrasted with one another: God's “holiness,” which denotes the presence of the *Shekhinah* in all things and the hidden *Kavod*, and God's “greatness” or “sovereignty,” which has both appearance and size. Such an idea is somewhat reminiscent of the speculations of members of sects, such as that of Benjamin b. Moses *Nahawendi, who believed that the world was created through an angelic intermediary (a concept

which also had precedents among early heterodox sects during the development of Gnosis). This idea becomes apparent among the Ḥasidim in the pseudepigraphical text called the *Baraita of Yosef b. Uzziel*, which appears, from its language, to have been written in Europe. Joseph b. *Uzziel is taken to be the grandson of Ben Sira. The *baraita* is found in several manuscripts and was published in part by A. *Epstein (in *Ha-Ḥoker*, 2 (1894), 41–47). This idea was accepted by several rabbis, including Avigdor ha-Zarefati (12th century?); the author of *Pesak ha-Yir'ah ve-ha-Emunah*, which was mistakenly combined by A. *Jellinek with the *Sha'arei ha-Sod ve-ha-Yiḥud*; the anonymous author of the commentary to the *Sefer Yeẓirah*, which was apparently composed in France in the 13th century and printed under the name of Saadiah Gaon in the editions of the *Sefer Yeẓirah*; and, finally, Elhanan b. *Yakar of London, in the first half of the 13th century (J. Dan, in *Tarbiz*, 35 (1966), 349–72). In the course of time such ideas, and particularly that of the special cherub, became combined and confused with Spanish Kabbalah, and in Germany in the 14th century several texts were composed which reflect this combination; some are still extant (British Museum Ms. 752; Adler Ms. 1161 in New York, and the commentary of Moses b. Eliezer ha-Darshan to the *Shi'ur Komah*; *Reshit ha-Kabbalah*, 204 ff.).

Ḥasidic ideology, particularly in its French manifestations and in the form given it by Elhanan of London, adopted the theory of the five worlds. Mentioned by Abraham b. Ḥiyya in his *Megillat ha-Megalleh* and originating among the Islamic neoplatonists in Spain, this theory enumerates in order the worlds of light, of the divine, of the intellect, of the soul, and of nature (Scholem, in *MGWJ*, 75 (1931), 172–90). Occasionally the writings of this circle incorporated material which originally came from Latin Christian literature, as G. Vajda demonstrated in connection with Elhanan of London (*Archives d'histoire doctrinale du moyen-âge*, 28 (1961), 15–34). The views of the Ḥasidim were reflected to a large extent in their own special prayers, composed either in the style associated with Saadiah's concept of the *Kavod* (e.g., in the *Shir ha-Yiḥud*, a hymn which was perhaps written by Judah he-Ḥasid or even earlier), or frequently based on the Secret Names, alluded to in the acronym. Many of these have survived in the writings of Eleazar of Worms, particularly in the manuscripts of his commentary to the *Sefer Yeẓirah*. There are also prayers and poems which their authors intended to represent the songs of heavenly beings, a kind of continuation of the *heikhalot* hymns, the songs of the sacred *ḥayyot*. Generally speaking, these prayers were not accorded a fixed place in the liturgy, and they were apparently the preserve of a chosen few. At a much later time they were included in liturgical anthologies in Italy and Germany, collected by kabbalists in the Safed period, and many of them were finally published in the *Sha'arei Ziyyon* by Nathan *Hannover (ch. 3). Several of them were attributed in manuscript to Spanish kabbalists, e.g., Jacob b. Jacob *ha-Kohen of Segovia, who was, in fact, personally connected with the German Ḥasidim, or Solomon *Alkabez (see Werblowsky, in *Sefunot* 6 (1962), 135–82).

Eleazar of Worms clearly recognized the esoteric character of those subjects that merited special study, and he enumerates with some variations the areas involved: “The mystery of the Chariot, the mystery of Creation, and the mystery of the Unity [*Sod ha-Yihud*, a new concept] are not to be communicated except in a fast” (*Hokhmat ha-Nefesh* (1876), 3c). He defines “the science of the soul,” to which he devotes one of his main works, as the means and gateway to the “mystery of the Unity,” which he apparently saw as the root of mystical theology. In the *Sodei Razayya* he enumerates “three kinds of mystery,” those of the Chariot, Creation, and the Commandments. The question of whether the Commandments also have an esoteric purpose is also discussed in the *Sefer Ḥasidim* (ed. Wistinetzki (1891), no. 1477). This book (no. 984) mentions “the profundity of piety [*ḥasidut*], the profundity of the laws of the Creator, and the profundity of His Glory [*Kavod*],” and initiation in these subjects depends on the fulfillment of the conditions laid down in the Talmud in connection with the *ma’aseh merkabah*. The mystics (*ḥakhmei ha-ḥidot*) are “nourished” in this world on the savor of some of the mysteries that originate in the heavenly academy, most of which are treasured up for the righteous in the world to come (no. 1056). Associated with the ḥasidic affinity for mysticism was their desire to synthesize the early material, including the anthropomorphic elements, with the spiritual interpretation that denies these elements. Aroused by this compromise, Moses *Taku (writing in the early 13th century), denied the Saadian principles and defended a corporeal point of view. His attack was included in the *Sefer Ketav Tammim*, of which two extensive fragments survive (*Ozar Neḥmad*, 3 (1860), 54–99, and *Arugat ha-Bosem*, vol. 1, 263–8). Seeing in the new tendencies “a new religion” which smacked of heresy, he also denounced the attention that the Ḥasidim paid to the mysteries of prayer, and particularly the dissemination of these mysteries in their books. By his attack he shows how widespread the ideas and literature of the Ḥasidim were in his time.

The Establishment of the Kabbalah in Provence

Contemporaneously with the growth of *ḥasidut* in France and Germany, the first historical stages of the Kabbalah emerged in southern France, although there is no doubt that there were earlier steps in its development which cannot now be discerned. These earlier stages were connected with the existence of a Jewish Gnostic tradition, associated in particular eastern circles with *Merkabah* mysticism. The main remnants were incorporated in the early parts of *Sefer *ha-Bahir* and also in a few records preserved in the writings of the Ḥasidei Ashkenaz. *Sefer ha-Bahir*, ostensibly an ancient Midrash, appeared in Provence some time between 1150 and 1200 but no earlier; it was apparently edited there from a number of treatises which came from Germany or directly from the East. An analysis of the work leaves no doubt that it was not originally written in Provence (Scholem, *Les Origines de la Kabbale*, 59–210), and to a large extent confirms the mid-13th-century kabbalistic tradition concerning the history of the book and

its sources before it reached the early Provençal mystics in a mutilated form. That the book reflects opinions which were not current in Provence and Spain is quite clearly shown by the commentary to the *Sefer Yeẓirah* by Judah b. Barzillai, written in the first third of the 12th century and containing all that the author knew of the traditions of the *ma’aseh bereshit* and especially the *ma’aseh merkabah*. In his interpretations of the ten *Sefirot* of the *Sefer Yeẓirah* there is no mention of them as “aeons” or divine attributes, or as powers within the *Merkabah*, as they appear in the *Bahir*. His commentary is impregnated throughout with the spirit of Saadiah Gaon, quite unlike the *Bahir*, which is completely unconcerned with philosophical ideas or with any attempt to reconcile philosophy with the concepts it advances. Cast in the form of interpretations of scriptural verses, particularly passages of mythological character, the *Bahir* transforms the *Merkabah* tradition into a Gnostic tradition concerning the powers of God that lie within the Divine Glory (*Kavod*), whose activity at the Creation is alluded to through symbolic interpretation of the Bible and the *aggadah*. Remnants of a clearly Gnostic terminology and symbolism are preserved, albeit through a Jewish redaction, which connects the symbols with motifs already well known from the *aggadah*. This is especially so with regard to anything that impinges on *keneset Yisrael*, which is identified with the *Shekhinah*, with the *Kavod*, and with the *bat* (“daughter”), who comprises all paths of wisdom. There are indications in the writings of Eleazar of Worms that he too knew this terminology, precisely in connection with the symbolism of the *Shekhinah*. The theory of the *Sefirot* was not finally formulated in the *Sefer ha-Bahir*, and many of the book’s statements were not understood, even by the early kabbalists of western Europe. The teaching of the *Bahir* is introduced as *ma’aseh merkabah*, the term “Kabbalah” not yet being used. The theory of transmigration is presented as a mystery, an idea which is self-explanatory and has no need for philosophical justification, despite the opposition of Jewish philosophers from the time of Saadiah onward.

The book *Raza Rabba* may be identified as one of the sources of the *Bahir*, but there is no doubt that there were other sources, now unknown. The earliest signs of the appearance of the Gnostic tradition, and of religious symbolism constructed upon it, are to be found in the mid-12th century and later, in the leading circle of the Provençal rabbis: Abraham b. Isaac of *Narbonne, the author of *Sefer ha-Eshkol*, his son-in-law Abraham b. David *(Rabad), the author of the “animadversions” to Maimonides’ *Mishneh Torah*, and Jacob *Nazir of Lunel. Their works did not deal specifically with the subject of mysticism, but fragments of their opinions scattered here and there prove their association with kabbalistic views and with kabbalistic symbolism (*Origines de la Kabbale*, 213–63). In addition to this, according to the reliable testimony of the Spanish kabbalists, they were considered as men inspired from above, who attained “a revelation of Elijah,” that is, a mystical experience of spiritual awakening, through which something novel was revealed. Since the theory of the *Sefirot* in its theo-

sophical formulation is already contained in the *Sefer ha-Bahir*, it cannot be regarded as the basic content of these revelations; these were apparently connected with a new idea of the mystical purpose of prayer, based not on *gematriot* and secret Names but on contemplation of the *Sefirot* as a means of concentrating on the *kavvanah* (“meditation”) in prayer. Within this circle Jacob Nazir belonged to a special group – called *perushim* in rabbinic parlance and “nazirites” in biblical terminology – whose members did not engage in commerce, but were supported by the communities so that they could devote all their time to the Torah. From its very nature, this group was akin to the Ḥasidim, and there is evidence that several of them led a ḥasidic life. Within this group a contemplative life could develop in which mystic aspirations could easily be aroused. The rabbis mentioned above did not share one consistent system of thought: there are several different and conflicting tendencies in their writings. The idea of the *Kavod*, in its plain Saadian meaning, was not regarded particularly as a mystery, but interpretations in the spirit of the theory of the *Sefirot* in the *Bahir* were considered to be “the great mystery.” In the school of Abraham b. David, traditions of this type were transmitted orally, and mysteries relating to the profundities of the Divine were added to the new theory concerning mystical *kavvanah* during prayer.

This circle of the early kabbalists in Provence worked in a highly charged religious and cultural environment. Rabbinic culture had reached a high stage of development there, and even Maimonides considered those proficient in the *halakhah* to be great exponents of the Torah. Their minds were open to the philosophical tendencies of their age. Judah ibn Ṭibbon, head of the renowned family of translators, worked in this circle, and translated for his colleagues many of the greatest philosophical books, among them works of a distinctly neoplatonic tendency. He also translated Judah Halevi’s *Kuzari* from Arabic, and its profound influence derived from this circle. The early kabbalists absorbed the *Kuzari*’s ideas concerning the nature of Israel, prophecy, the Tetragrammaton, the *Sefer Yeẓirah* and its meaning, in the same way as they assimilated the writings of Abraham ibn Ezra and Abraham b. Ḥiyya, with their tendency toward neoplatonism. Jewish versions of neoplatonic theories of the Logos and the Divine Will, of emanation and of the soul, acted as a powerful stimulus. But philosophical theories concerning the Active Intellect as a cosmic force, association with which could be attained by the prophets and the select few, also penetrated these circles. The close proximity of this theory to mysticism stands out clearly in the history of medieval Islamic and Christian mysticism, and not surprisingly it acts as an important link in the chain which connects many kabbalists with the ideas of Maimonides. The influence of the asceticism of *Ḥovot ha-Levavot* has already been mentioned, and it continued to play an active role in the ethics of the Kabbalah and in its theory of mystical communion. In the last 30 years of the 12th century the Kabbalah spread beyond the circle of Abraham b. David of Posquières. The encounter between the Gnostic tradition

contained in the *Bahir* and neoplatonic ideas concerning God, His emanation, and man’s place in the world, was extremely fruitful, leading to the deep penetration of these ideas into earlier mystical theories. The Kabbalah, in its historical significance, can be defined as the product of the interpenetration of Jewish Gnosticism and neoplatonism.

In addition, Provence in these years was the scene of a powerful religious upheaval in the Christian world, when the Catharist sect gained control of a large part of the Languedoc, where the first centers of Kabbalah were to be found (see *Albigenses). It is not yet clear to what extent if any there was a connection between the new upsurge in Judaism in the circles of the *perushim* and the Ḥasidim, and the profound upheaval in Christianity which found expression in the Catharist movement. In their ideology there is practically nothing in common between the ideas of the kabbalists and those of the Cathari, except for the theory of transmigration, which kabbalists in fact took from the eastern sources of the *Sefer ha-Bahir*. The dualistic theology of the Cathari was clearly opposed to the Jewish view; nevertheless, it remains a possibility that there were some contacts which can no longer be discerned between the different groups, united as they were by a deep and emotional religious awakening. There is some evidence that the Jews of Provence were well aware of the existence and the beliefs of the sect as early as the first decades of the 13th century (Scholem, *Origines*, 252).

Fragments of the kabbalist tradition that was familiar to Abraham b. David and Jacob Nazir are found in the writings of the kabbalists, and the clear contradictions between them and later ideas, whether on the teaching on God or on the question of *kavvanah*, testifies to their authenticity. Abraham b. David’s statement in his criticism of Maimonides (*Hilkhot Teshuvah*, 3, 7) defending those who believe in God’s corporeality becomes clarified when it is seen against the background of his kabbalistic views, which distinguish the “Cause of Causes” from the Creator, who is the subject of the *Shi’ur Komah* in the early *baraita*. His interpretation of the *aggadah* in *Eruvim* 18a, that Adam was at first created with two faces, also reflects kabbalistic speculation on the divine attributes – the *Sefirot*.

Abraham b. David’s son, Isaac the Blind (d. c. 1235), who lived in or near Narbonne, was the first kabbalist to devote his work entirely to mysticism. He had many disciples in Provence and Catalonia, who spread kabbalistic ideas in the form they had received them from him, and he was regarded as the central figure of the Kabbalah during his lifetime. His followers in Spain have left some record of his sayings and his habits, and a few letters and treatises written at his dictation are also extant: their style is quite different from that of any of his known disciples. Generally he couched his ideas elliptically and obscurely, and he used his own peculiar terminology. Something of his opinions can be learned from the common elements in the writings of his pupils. At all events, he is the first kabbalist whose historical personality and basic ideas clearly emerge. Entrusting his writings only to a few chosen individuals, he definitely opposed the public dissemination of the Kabbalah,

seeing in this a dangerous source of misunderstanding and distortion. At the close of his life he protested in a letter to Nahmanides and Jonah *Gerondi against popularization of this sort in Spain, in which several of his pupils were engaged (*Sefer Bialik* (1934), 143 ff.). When the Spanish kabbalists of the 13th century speak simply of “the Ḥasid” they refer to Isaac the Blind. He developed a contemplative mysticism leading to communion with God through meditation on the *Sefirot* and the heavenly essences (*havayot*). The earliest instructions on detailed meditations associated with basic prayers, according to the concept of the *Sefirot* as stages in the hidden life of God, came from him. There is no doubt that he inherited some of his main ideas from his father, on whom he sometimes relied, but he had also recognized the value of the *Sefer ha-Bahir* and he built on its symbolism. His commentary to the *Sefer Yeẓirah* (established as an appendix to G. Scholem, *Ha-Kabbalah be-Provence*, 1963) is the first work to explain the book in the light of a systematic *Sefirot* theory in the spirit of the Kabbalah. At the head of the world of divine qualities he puts the “thought” (*maḥashavah*), from which emerged the divine utterances, the “words” (λόγοι) by means of which the world was created. Above the “thought” is the Hidden God, who is called for the first time by the name **Ein-Sof* (“the Infinite”; see below). Man’s thought ascends through mystic meditation until it reaches, and is subsumed into, Divine “Thought.” Along with the theory of the *Sefirot* he developed the concept of the mysticism of language. The speech of men is connected with divine speech, and all language, whether heavenly or human, derives from one source – the Divine Name. Profound speculations on the nature of the Torah are found in a long fragment from Isaac’s commentary on the beginning of the *Midrash Konen*. The neoplatonic character of his ideas is immediately striking, and distinguishes them completely from the *Bahir*. (For an analysis of his thought, see Scholem, *Origines...*, 263–327.)

There were other circles in Provence who spread the kabbalistic tradition on the basis of material which seems partly to have reached them directly from anonymous eastern sources. On the one hand they continue the neoplatonic, speculative trend of Isaac the Blind, especially in his commentary to the *Sefer Yeẓirah*; and on the other hand they connect this trend with new ideas concerning the world of the Merkabah and the spiritual powers from which it is composed. There is a marked tendency to particularize and name these powers, and the theory of the *Sefirot* occupies only an incidental place among other attempts to delineate the world of emanation and the forces which constitute it. While Isaac the Blind and his disciples revealed their identities and refrained from writing pseudepigraphically, these circles concealed their identities as far as possible, both in Provence and in Spain, and produced a rich kabbalistic pseudepigrapha imitating the literary forms used in Merkabah literature and the *Sefer ha-Bahir*. One portion of this pseudepigraphic literature is neoplatonic and speculative in character, while another is angelological, demonological, and theurgic. This latter tendency in particu-

lar found a home in some Castilian communities, e.g., Burgos and Toledo. Among the early kabbalists of Toledo are mentioned the Ḥasid Judah ibn Ziza, Joseph ibn Mazah, and Meir b. Todros *Abulafia (Scholem, *Origines...*, 414). How, and in what circumstances, the Kabbalah arrived there around the year 1200 is not known, but there is evidence linking the Provençal kabbalists with the citizens of Toledo. A reliable document from Provence mentions as sources the traditions of the Provençal teachers, Abraham b. David and his father-in-law, Ḥasidim of Germany, and Judah ibn Ziza from Toledo (*ibid.*, 241). The pseudepigraphic literature used names from the time of Moses up to the later *geonim* and the Ḥasidim of Germany. Provence was undoubtedly the place of composition of the *Sefer ha-Iyyun* ascribed to Rav Ḥamai Gaon, the *Ma’ayan ha-Hokhmah*, which was communicated by an angel to Moses, the *Midrash Shimon ha-Zaddik*, and other texts, while the home of most of the writings attributable to the circle of the *Sefer ha-Iyyun* could have been either Provence or Castile. More than 30 texts of this kind are known, most of them very short (see the list of them in *Reshit ha-Kabbalah*, Heb. ed. pp. 255–62; *Origines...*, 283–91). New interpretations of the ten *Sefirot* are found side by side with notes and expositions of the “32 paths of wisdom,” the Tetragrammaton, and the 42-lettered Name of God, as well as various cosmogonic speculations. Platonic and Gnostic tendencies are interwoven in them. Knowledge of the “intellectual lights,” which fill the place previously occupied by the Chariot, competes with theories of the ten *Sefirot* and of the mystical names. The authors of these works had their own solemn, abstract terminology, but the terms are given differing interpretations as they recur in various places. The order of emanation varies from time to time, and it is clear that these speculations had not yet reached their final state. There were considerable differences of opinion within this circle, and each individual author seems to have been trying to define the content of the world of emanation as it was disclosed to his vision or contemplation. Even where the theory of the *Sefirot* was accepted it underwent remarkable changes. One group of texts interprets the 13 attributes of divine mercy as the sum of the powers which fill the world of emanation, some authors adding three powers to the end of the list of *Sefirot*; while in other texts the three powers are added to the top, or are considered to be intellectual lights shining within the first *Sefirah*. This view, which stimulated many speculations as the development of the Kabbalah continued, occurs in the responsa attributed to Hai Gaon on the relationship of the ten *Sefirot* to the 13 attributes.

There are clear connections leading from Saadia’s theory of the *Kavod* and his concept of “the ether which cannot be grasped,” stated in his commentary to the *Sefer Yeẓirah*, to this circle, which made use of his ideas through the early translation of the *Sefer Emunot ve-De’ot*. The circle seems to have had little use for the *Sefer ha-Bahir*. The stress on the mysticism of the lights of the intellect is near in spirit, although not in detail, with later neoplatonic literature, e.g., the “Book of the Five Substances of Pseudo-Empedocles” (from the school of

Ibn Masarra in Spain). For example, the supernal essences which are revealed, according to the *Sefer ha-Iyyun* and several other texts, from “the highest hidden mystery” or “the primeval darkness,” are: primeval wisdom, wonderful light, the *hashmal*, the mist (*arafel*), the throne of light, the wheel (*ofan*) of greatness, the cherub, the wheels of the Chariot, the surrounding ether, the curtain, the throne of glory, the place of souls, and the outer palace of holiness. This mixture of terms from widely different fields is characteristic of the blending of sources and of a hierarchical arrangement that does not depend on the theory of the *Sefirot*, although it too is incorporated in some of the writings of this circle. A theurgic tendency also appears along with a desire to indulge in philosophical speculations on the Sacred Names. In addition to the influence of Arab neoplatonism, there are indications of some links with the Christian Platonic tradition transmitted through the *De Divisione Naturae* of John Scotus Erigena, but this question needs further research.

The Kabbalist Center of Gerona

Under the influence of the first kabbalists, their ideas spread from Provence to Spain, where they found a particular response in the rabbinic circle of Gerona, in Catalonia, between the Pyrenees Mountains and Barcelona. Here, from the beginning of the 13th century, a center of great and far-ranging importance came into being which fulfilled an essential role in the establishment of the Kabbalah in Spain and in the development of kabbalistic literature. For the first time, books were written here which, despite their emphasis on the esoteric side of Kabbalah, sought to bring its major ideas to a wider public. Sometimes allusions to these ideas are found in works which are not basically kabbalistic – e.g., works of *halakhah*, exegesis, ethics, or homiletics – but there were a number of books which were completely or largely devoted to the Kabbalah. Several letters from members of this group have survived which contain important evidence of their feelings and their participation in contemporary disputes and discussions. The main figures in this group were a mysterious individual by the (pseudonymous?) name of Ben Belimah (Scholem, *Origines...*, 413); Judah b. Yakar, Naḥmanides’ teacher and for a certain time *dayyan* in Barcelona (1215), whose commentary to the liturgy (JQR, 4 (1892), 245–56) contains kabbalistic statements; *Ezra b. Solomon and *Azriel; Moses b. Naḥman (Naḥmanides); Abraham b. Isaac *Gerondi, the *hazzan* of the community; Jacob b. Sheshet *Gerondi; and the poet Meshulam b. Solomon *Da Piera (whose poems were collected in *Yedi’ot ha-Makhon le-Ḥeker ha-Shirah*, 4, 1938). In addition, their pupils should also be included, although many of them spread further afield to the Aragonese communities.

A personal and literary link between the kabbalists of Provence and those of Gerona may be seen in *Asher b. David, a nephew of Isaac the Blind. A number of his writings were very widely scattered in manuscript (collected by M. Ḥasidah in *Ha-Segullah* (fascicles 17–30, Jerusalem, 1933–34). In content, his writings are very similar to those of Ezra and Azriel,

who were apparently among the first to write works entirely devoted to Kabbalah, composed mainly in the first third of the 13th century. Ezra wrote a commentary to the Song of Songs (which was published under Naḥmanides’ name), interpreted the *aggadot* to several tractates of the Talmud wherever he was able to connect them with the Kabbalah, and summarized traditions, the greater part of which doubtless derived from the Provençal kabbalists. His younger companion, Azriel, made an independent rendering of his interpretation of the *aggadot* (ed. Tishby, 1943), wrote a commentary to the liturgy (extant in Ms.) according to the theory of the *kavvanot*, a commentary to the *Sefer Yeẓirah* published in editions of that work under the name of Naḥmanides, and two small books on the nature of God, *Be’ur Eser Sefirot* (also entitled *Sha’ar ha-Sho’el*), and *Derekh ha-Emunah ve-Derekh ha-Kefirah*. These two kabbalists also left separate “mysteries” on several subjects (e.g., “the mystery of sacrifices”), and letters on kabbalistic questions, including a long letter from Azriel to the kabbalists of Burgos (*Madda’ei ha-Yahadut*, 2 (1927), 233–40). Azriel stands out above other members of the group because of the systematic nature of his thought and the depth of his intellect. He is the only one of the group whose work is connected in style and content with the writings of the circle of the *Sefer ha-Iyyun* mentioned above. In his books, the interpenetration of neoplatonic and Gnostic elements reached their first apex. The neoplatonic element came largely from the writings of Isaac b. Solomon Israeli, some of which were undoubtedly known in Gerona (Altmann, in *JJS*, 7 (1956), 31–57). Jacob b. Sheshet, in his polemical work against Samuel ibn *Tibbon, *Meshiv Devarim Nekhoḥim* (ed. Vajda, 1968), combined philosophical enquiry with kabbalistic speculation. Two of his books were devoted to the latter: *Sefer ha-Emunah ve-ha-Bittahon*, which was later attributed to Naḥmanides and published under his name, and *Sha’ar ha-Shamayim*, a rhymed summary of kabbalistic ideas (*Ozar Neḥmad*, 3 (1860), 133–65).

It is doubtful if these kabbalists, who were known only to a small circle and who composed no works outside the field of Kabbalah, would have had the great influence that they did if it had not been for the stature of their colleague Naḥmanides (c. 1194–1270), the highest legal and religious authority of his time in Spain. The fact that he joined the ranks of the kabbalists as a young man prepared the way for the reception of the Kabbalah in Spain, just as the personality of Abraham b. David had prepared the way in Provence. The names of these two men were a guarantee to most of their contemporaries that, despite their novelty, kabbalistic ideas did not stray from the accepted faith and the rabbinic tradition. Their undisputed conservative character protected the kabbalists from accusations of deviation from strict monotheism or even of heresy. Charges of this kind were made, provoked mainly by the wider publicity given to the earlier works of Kabbalah and to their oral propagation in a number of communities. Isaac the Blind refers to polemics between the kabbalists and their opponents in Spain, and evidence of similar arguments in Provence (between 1235 and 1245) is extant in the accusations of *Meir b.

Simeon of Narbonne, a reply to which, in defense of the Kabbalah, is included in the works of Asher b. David (see *Sefer Bialik* (1934), 141–62).

From the very beginning two opposing tendencies appear among the kabbalists, the first seeking to limit the Kabbalah to closed circles as a definitely esoteric system, and the second wishing to spread its influence among the people at large. Throughout the history of the Kabbalah right down to recent times these two tendencies have been in conflict. Parallel with this, from the time of the appearance of the Kabbalah in Gerona, two attitudes developed concerning the relationship of the bearers of rabbinic culture to the Kabbalah. The kabbalists were accepted as proponents of a conservative ideology and as public defenders of tradition and custom, but at the same time they were suspected, by a substantial number of rabbis and sages, of having non-Jewish leanings and of being innovators whose activities must be curtailed wherever possible. Most of the kabbalists themselves saw their role in terms of the preservation of tradition, and in fact their first public appearance was associated with their taking the traditionalists' side in the controversy over Maimonides' writings and the study of philosophy in the 13th century (Scholem, *Origines...*, 416–54). In these disputes the Kabbalah of the Gerona scholars seemed to be a symbolic interpretation of the world of Judaism and its way of life, based on a theosophy which taught the inner secrets of the revealed Godhead and on a rejection of rationalist interpretations of the Torah and the Commandments. Nevertheless, it cannot be ignored that the system of thought elaborated by a man like Azriel did not invalidate the philosophic teachings of his time but rather added to it a new dimension, that of theosophy, as its crowning glory.

In several of his works Nahmanides gives room to the Kabbalah, particularly in his commentary to the Torah, where his many veiled and unexplained allusions to interpretations "according to the true way" were meant to arouse the curiosity of those readers who had never heard of that "way." He also used kabbalistic symbolism in some of his *piyyutim*. And his views on the fate of the soul after death and the nature of the world to come, expressed in *Sha'ar ha-Gemul* at the end of his halakhic work *Toledot Adam*, represent the ideas of his circle and are in contrast to Maimonides' views on this subject. His commentary to the Book of Job is based on the theory of transmigration (without mentioning the term *gilgul* itself) and on the views of his companion, Ezra, concerning the *Sefirah Hochmah* ("wisdom"). Nahmanides wrote no works specifically on the Kabbalah, apart from a commentary to the first chapter of the *Sefer Yezirah* (KS, 6 (1930), 385–410) and a sermon on the occasion of a wedding (*He-Halutz*, 12 (1887), 111–4). Since the 14th century, several books by other authors were attributed to him. In the writings of the Gerona kabbalists there is a definite, well-established symbolic framework which is related first and foremost to the theory of the *Sefirot* and to the way in which this theory interprets scriptural verses and homilies dealing with the acts of God. This symbolism served as the main basis for the development of the

Kabbalah in this group, and numerous anonymous kabbalists of this and later periods made out lists and tables, mostly brief, of the order of the *Sefirot*, and of the nomenclature in Scripture and *aggadah* which fitted them. In points of detail practically every kabbalist had his own system but there was a wide measure of agreement on fundamentals (a list of such tracts in KS, 10 (1934), 498–515).

Contacts were made between the Spanish kabbalists and the Ḥasidei Ashkenaz, either through individual Ḥasidim who visited Spain or through books which were brought there, e.g., the works of Eleazar of Worms. Abraham Axelrod of Cologne, who traveled through the Spanish communities between 1260 and 1275 approximately, wrote *Keter Shem Tov* dealing with the Tetragrammaton and the theory of the *Sefirot*. It exists in various versions, one of which was published in Jellinek's *Ginzei Hokhmat ha-Kabbalah* (1853), while another gives the author's name as Menahem, a pupil of Eleazar of Worms. This combination of the theory of the Sacred Names and speculations using the methods of *gematria* with the theory of the *Sefirot* of the Gerona kabbalists contains, at least in a third version of the book, a powerful renewal of ecstatic tendencies, which took on the new form of "prophetic Kabbalah" (*Kelal mi-Darkhei ha-Kabbalah ha-Nevu'it*; see G. Scholem, *Kitvei Yad be-Kabbalah* (1930), 57). Other kabbalists from Castile also established contacts with one of the pupils of Eleazar of Worms who lived in Narbonne in the middle of the 13th century.

It is almost certain that an anonymous kabbalist from the Gerona circle, or one of the Provençal kabbalists, was the author of the book **Temunah* (written before 1250), which was attributed several generations later to R. Ishmael, the high priest. The style of the book is very difficult, and its contents are obscure at many points. An interpretation of the "image of God" through the shapes of the Hebrew letters, it became the basis of several other texts, composed in a similar fashion and perhaps even by the same author; e.g., interpretations of the secret 72-lettered Name of God mentioned in the mystical literature of the geonic period. The importance of the book lies in its detailed though enigmatic explanation of the theory of *shemittot* (see below), to which the Gerona kabbalists alluded without a detailed explanation. The difficult style of the *Temunah* was elucidated to some extent by an old commentary, also anonymous (published with the book itself in 1892), which was written at the end of the 13th century. *Temunah* had a distinct influence on Kabbalah up to the 16th century.

Other Currents in 13th-Century Spanish Kabbalah

The combination of theosophic-Gnostic and neoplatonic-philosophical elements, which found expression in Provence and Gerona, led to the relative, or sometimes exaggerated, dominance of one element over the other in other currents from 1230 onward. On one side there was an extreme mystical tendency, expressed in philosophical terms and creating its own symbolism which was not based on the theory or nomenclature of the *Sefirot* found among the Gerona kabbalists. Refuting some of the suppositions of the latter (e.g., the theory of

transmigration), nevertheless it saw itself as the true “science of Kabbalah.” Its first and most important exponent was Isaac ibn *Latif, whose books were written (perhaps in Toledo) between 1230 and 1270. “He had one foot inside [in Kabbalah], and one foot outside [in philosophy]” as Judah *Ḥayyat said of him (preface to *Minḥat Yehudah* on *Ma’arekhet ha-Elohut*). Becoming a kind of independent mystic, he drew his philosophical inspiration from the writings in both Arabic and Hebrew of the neoplatonists, and especially from Ibn Gabirol’s *Mekor Ḥayyim* and the works of Abraham ibn Ezra, although at times he completely transformed their meaning. His main work, *Sha’ar ha-Shamayim* (written in 1238), was intended to be, in a speculative mystical vein, both a continuation of and a substitute for Maimonides’ *Guide of the Perplexed*. Together with most of the Gerona kabbalists he accorded the highest place to the Primeval Will, seeing in it the source of all emanation. The theory of the Divine Logos, which he took from the Arabic neoplatonic tradition, became divided into the Will – which remained completely within the Divine and was identified with the Divine Word (Logos) which brought forth all things – and into the “first created thing,” the Supreme Intellect that stands at the top of the hierarchy of all beings, and was presented in symbols which in other places belong to the Logos itself. But Ibn Latif is not consistent in his use of symbolism and often contradicts himself, even on important points. From the “first created thing” emanated all the other stages, called symbolically light, fire, ether, and water. Each of these is the province of one branch of wisdom: mysticism, metaphysics, astronomy, and physics. Ibn Latif created a complete and rich system of the universe, basing his views on a far-fetched allegorical interpretation of Scripture, although he was opposed to the extreme allegorists who regarded allegory as a substitute for the literal interpretation and not simply an addition to it. His ideas about prayer and true understanding have a distinctly mystical tinge, and in this respect exceed the theory of *kavvanah* and meditation prevalent among the kabbalists of Gerona. The influence of Ibn Gabirol is most noticeable in his *Zurat ha-Olam* (1860) which contains specific criticisms of kabbalistic theosophy. Nevertheless, Ibn Latif regards Kabbalah as superior to philosophy both in nature and efficacy, in particular because it takes hold of truth which is of a temporal nature, whereas philosophical truth is atemporal (*Rav Pe’alim* (1885), no. 39). Ibn Latif had personal ties with exponents of Kabbalah whose conceptions were completely opposed to his, and he dedicated *Zeror ha-Mor* to Todros *Abulafia of Toledo, one of the leaders of the Gnostic trend of Kabbalah. His books were read by kabbalists and philosophers alike, e.g., the philosopher Isaac *Albalag (Vatican Ms. 254, fol. 97b), who criticized his *Zurat ha-Olam*. According to Ibn Latif, the highest intellectual understanding reaches only the “back” of the Divine, whereas a picture of the “face” is disclosed only in supra-intellectual ecstasy, which involves experience superior even to that of prophecy (*Ginzei ha-Melekh*, chs. 37 and 41). This perception he calls “the beatitude of supreme communion.” True prayer brings the hu-

man intellect into communion with the Active Intellect “like a kiss,” but from there it ascends even to union with the “first created thing”; beyond this union, achieved through words, is the union through pure thought intended to reach the First Cause, i.e., the Primeval Will, and at length to stand before God Himself (*Zeror ha-Mor*, ch. 5).

The second exponent of philosophic-mystical tendencies distinct from the theosophical Kabbalah of the Gerona school and aspiring toward an ecstatic “prophetic Kabbalah” was Abraham *Abulafia (1240–after 1292). The striking image of this man derives from his outstanding personality. He came into contact with a group whose technique of letter combination and number mysticism stimulated his own ecstatic experiences. At least part of his inspiration was derived directly from the German Ḥasidei Ashkenaz and perhaps also through the influence of Sufi circles, whom he met with during his travels in the east in his early years. Abulafia’s teacher was the *ḥazzan* Barukh Togarmi (in Barcelona?), who, judging by his name, came from the east. From him he learned the fundamental teachings of prophetic Kabbalah to whose dissemination he devoted his life, after he had attained illumination in Barcelona in 1271. His prophetic and perhaps also his messianic claims aroused strong opposition both in Spain and in Italy, but his books were widely read from the end of the 13th century, especially those where he expounded his system of Kabbalah as a kind of guide to the upward journey from philosophical preoccupations of the Maimonidean type to prophecy and to those mystical experiences which he believed partook of the nature of prophecy. Abulafia was also a copious borrower of kabbalistic ideas whenever he found them relevant, but those aspects which were foreign to his nature he opposed even to the point of ridicule. A passionate admirer of Maimonides, he believed that his own system was merely a continuation and elaboration of the teaching of the *Guide of the Perplexed*. Unlike Maimonides, who dissociated himself from the possibility of prophecy in his time, Abulafia defended such a prospect, finding in “the way of the Names,” i.e., a specific mystical technique also called “the science of combination” (*hokhmat ha-zeruf*), a means of realizing and embodying human aspirations toward prophecy.

So inspired, he himself wrote 26 prophetic books of which only one, *Sefer ha-Ot*, has survived. *Derekh ha-Sefirot* (“the way of the *Sefirot*”), he believed, is useful for beginners but is of little value compared with *Derekh ha-Shemot* (“the way of the Names”), opening up only after deep study of the *Sefer Yezirah* and the techniques to which it alludes. Abulafia saw his Kabbalah, therefore, as another layer added to the earlier Kabbalah, which did not contradict such major works as the *Bahir*, the *Temunah*, and the writings of Nahmanides. His promise to expound a way which would lead to what he called “prophecy,” and his practical application of kabbalist principles, found a distinct echo in Kabbalah from the 14th century onward, first in Italy and later in other countries. His great manuals (*Sefer ha-Zeruf*, *Sefer Or ha-Sekhel*, *Sefer Ḥayyei ha-Olam ha-Ba*, and others), which have been copied right

down to recent times, are textbooks of meditation, the objects of which are the Sacred Names and the letters of the alphabet and their combinations, both comprehensible and incomprehensible. It was precisely this kind of manual which had been lacking in the usual type of kabbalistic literature, which had confined itself to symbolic descriptions, and refrained from advancing in writing techniques for mystic experience. The work of Abulafia filled this need, and the fierce criticism of him which was heard here and there did not prevent their absorption and influence. One of Abulafia's pupils wrote (perhaps in Hebron) at the end of 1294 a small book on prophetic Kabbalah, *Sha'arei Zedek*, which includes an important autobiographical description of his studies with his teacher, and of his mystical experiences (Scholem, *Mysticism*, 146–55).

On the other side of this twofold development of the Kabbalah was a school of kabbalists who were more attracted to Gnostic traditions, whether genuine or only apparently so, and who concentrated on the Gnostic and mythological element rather than on the philosophical. The exponents of this trend set out to find and assemble fragments of documents and oral traditions, and added to them just as much themselves, until their books became an astonishing mixture of pseudepigrapha with the authors' own commentaries. In contrast with the Kabbalah of Gerona, the pseudepigraphic element was very strong in this branch, although it is not absolutely certain that the authors of these books themselves invented the sources which they quoted. This school, which might properly be called "the Gnostic reaction," includes the brothers *Jacob and *Isaac, sons of Jacob ha-Kohen of Soria, who traveled in Spain and Provence and met their older kabbalist predecessors: Moses b. *Simeon, their pupil and successor, rabbi of Burgos; and Todros b. Joseph *Abulafia of Burgos and Toledo, one of the leaders of Castilian Jewry of his day. Their main work belongs to the second half of the 13th century. In Kabbalist circles Moses of Burgos was widely considered to be endowed with particular authority, and he was also the teacher of Isaac ibn Sahula, author of *Meshal ha-Kadmoni*. It is extraordinary that such a complete rationalist and devotee of philosophical enquiry as Isaac Albalag could see three members of this school as the true exponents of Kabbalah in his time, with Moses of Burgos at their head: "His name has spread throughout the country: Moses has received [*kibbel*] the [authentic] kabbalist tradition" (*Madda'ei ha-Yahadut*, 2 (1927), 168).

The speculative side is not altogether absent in this school, and some fragments of one of Isaac ha-Kohen's books (*ibid.*, 276–9) in particular show some relationship between him and Ibn Latif, but its true characteristics are quite different. He developed the details of the theory of the left, demonic, emanation, whose ten *Sefirot* are the exact counterparts of the Holy *Sefirot*. A similar demonic emanation is already mentioned in the writings of the *Sefer ha-Iyyun* group, and in the works of Nahmanides, and it is possible that its origins stemmed from the east. In the evidence extant, this theory appeared in pseudepigraphic texts and its roots were mainly in Provence

and Castile. From these traditions came the Zoharic theory of the *sitra ahra* (the "other side"). There is a strong tendency here to make long lists of beings in the world below the realm of the *Sefirot* – that are given specific names – and so establish a completely new angelology. These emanations of the second rank are presented partly as "curtains" (*pargodim*) in front of the emanations of the *Sefirot*, and as "bodies" and "garments" for the inner souls, which are the *Sefirot*. This multiplicity of personified emanations and the listing of them recall similar tendencies in the later development of several Gnostic systems, and in particular the book *Pistis Sophia*. To everything in the world below there is a corresponding force in the world above, and in this way a kind of strange mythology without precedent in other sources is created. This theme runs through all the writings of Isaac b. Jacob ha-Kohen, and through some of the work of his elder brother Jacob. The novelty of the names of these forces and their description is obvious, and some of the details of the *Sefirot* and their nomenclature occasionally assume a form different from that in the Kabbalah of Gerona. In the writings of Todros Abulafia the kabbalists who are exponents of the Gnostic trend are given the specific name of *ma'amikim* ("those who delve deeply"), in order to distinguish them from the others. The Spanish kabbalists of the 14th century made an additional distinction between the Kabbalah of the Castilian kabbalists, which belonged to the Gnostic school, and that of the Catalan kabbalists. In this circle we can observe quite clearly the growth of the magical element and the tendency to preserve theurgic traditions of which there is no trace in the Gerona school.

This new Gnostic bent did not stop the individual mystical or visionary experience. The two elements go hand in hand in the writings of Jacob ha-Kohen, who wrote the extensive *Sefer ha-Orah*, which has no link with earlier kabbalistic tradition but is based entirely on visions which "were accorded him" in heaven. The Kabbalah of these visions is completely different from the traditionalist portion of his other writings, and it is not taken up anywhere else in the history of the Kabbalah. It is based on a new form of the idea of the Logos which assumes here the image of Metatron. The theory of emanation also acquires another garb, and concern with the *Sefirot* makes way for speculations on "the holy spheres" (*ha-galgalim ha-kedoshim*) through which the power of the Emanator is invisibly dispersed until it reaches the sphere of Metatron, which is the central cosmic force. This very personal theosophy, nourished and inspired by vision, has no relationship with the theosophy of the Gerona kabbalists but it has some connection with the Ḥasidei Ashkenaz. Jacob ha-Kohen was the first Spanish kabbalist to build all his mystical teachings concerning the reasons for the Commandments and other matters on *gematriot*. Metatron, to be sure, was created, but came into being simultaneously with the emanation of the inner heavenly spheres, and the verse "Let there be light" alludes to the "formation of the light of the intellect" in the shape of Metatron. There is little doubt that Jacob ha-Kohen knew about the art of "combination" as a prerequisite for mystical perception, but had no

knowledge of those mysteries derived from it through rationalist interpretation characteristic of Abraham Abulafia. *Sefer ha-Orah* has not been preserved in its entirety, but large parts of it exist in various manuscripts (Milan 62, Vatican 428, etc.). It is the most striking example of how an entirely new Kabbalah could be created side by side with the earlier Kabbalah, and it is as if each one of them speaks on a different plane. In his *Ozar ha-Kavod* on the legends of the Talmud (1879), and in his *Sha'ar ha-Razim* on Psalm 19 (Munich Ms. 209) Todros Abulafia strove to combine the Kabbalah of Gerona with the Kabbalah of the Gnostics, but he never alluded to the revelations accorded to Jacob ha-Kohen.

THE ZOHAR. The mingling of the two trends emanating from the Gerona school and from the school of the Gnostics is to a certain extent paralleled in the main product of Spanish Kabbalah, the character of which is also determined by them. This is the *Sefer ha-Zohar*, written largely between 1280 and 1286 by Moses b. Shem Tov de *Leon, in Guadalajara, a small town northeast of Madrid. In this city there also lived two kabbalist brothers, Isaac and Meir b. Solomon ibn *Sahula, and it is in Isaac's books that the first quotations are found from the earliest stratum of the Zohar, dating from 1281 (G. Scholem, in *Tarbiz*, 3 (1932), 181–3; KS, 6 (1929), 109–18). Many kabbalists were working at this time in the small communities around Toledo, and there is evidence of mystical experience even among the unlearned. An example of this is the appearance as a prophet in Avila in 1295 of Nissim b. Abraham, an ignorant artisan, to whom an angel revealed a kabbalistic work, *Pil'ot ha-Hokhmah*, and who was opposed by Solomon b. Abraham *Adret (Responsa of Solomon b. Adret, no. 548). This was the community where Moses de Leon passed the last years of his life (d. 1305). The Zohar is the most important evidence for the stirring of a mythical spirit in medieval Judaism. The origin of the book, its literary and religious character, and the role that it has played in the history of Judaism, have been subjects of prolonged argument among scholars during the last 130 years, but most of it has not been based on historical and linguistic analysis. In an analysis of this kind we can establish a precise place for the Zohar in the development of Spanish Kabbalah, which has set its seal on the book. In so doing we must resist continually recurring apologetic attempts to antedate its composition by turning its late literary sources into evidence for the earlier existence of the book, or by proclaiming ancient strata in it – of whose presence there is no proof whatsoever (J.L. Zlotnik, Finkel, Reuben Margulies, Chavel, M. Kasher, and others).

The mingling of these two currents – the Kabbalah of Gerona and the Kabbalah of the “Gnostics” of Castile – became in the mind of Moses de Leon a creative encounter which determined the basic character of the Zohar. Instead of the brief allusions and interpretations of his predecessors he presents a broad canvas of interpretation and homiletics covering the whole world of Judaism as it appeared to him. He was far removed from systematic theology, and indeed there are fundamental problems of contemporary Jewish thought which

do not arise in his work at all, such as the meaning of prophecy and the questions of predestination and providence; however, he reflects the actual religious situation, and expounds it through kabbalistic interpretation. In a pseudepigraph attributed to Simeon b. Yoḥai and his friends, Moses de Leon clothed his interpretation of Judaism in an archaic garb – long and short Midrashim on the Torah and the three scrolls, the books Song of Songs, Ruth, and Lamentations. The explanations in the book revolve round two axes – one consisting of the mysteries of the world of the *Sefirot* that constitute the life of the Divine, which is also reflected in many symbols in the created world; and the other of the situation of the Jew and his fate both in this world and in the world of souls. The deepening and broadening of a symbolic view of Judaism was very daring in an age when the kabbalists still preserved in some measure the esoteric character of their ideas. The appearance of what purported to be an ancient Midrash which actually reflected the basic viewpoints of the Spanish kabbalists, and successfully expressed them in an impressive literary synthesis, sparked off a number of arguments among the kabbalists of the day. However, it also served to spread knowledge of the Kabbalah and ensure its acceptance. The author's viewpoint progressed from a tendency toward philosophy and allegoric interpretation to Kabbalah and its symbolic ideas. The steps in this progress can still be recognized in the differences between the *Midrash ha-Ne'lam*, the earliest part of the Zohar, and the main body of the book. There is little doubt that the aim of the book was to attack the literal conception of Judaism and the neglect of the performance of the *mitzvot*, and this was accomplished by emphasizing the supreme value and secret meaning of every word and Commandment of the Torah. As in most great mystical texts, inner perception and the way to “communion” are connected with the preservation of the traditional framework, whose value is increased sevenfold. The mystical viewpoint served to strengthen the tradition and indeed became a conscious conservative factor. On the other hand, the author of the Zohar concentrated frequently on speculations on the profundities of the Nature of the Divinity, which other kabbalists did not dare to dwell upon, and his boldness was an important contributory factor in the renewed development of Kabbalah several generations later. When the Zohar appeared few kabbalists turned their attention to this original aspect. Instead they used the Zohar as a distinguished aid to strengthening their conservative aims. In his Hebrew books written in the years after 1286, after he had finished his major work in the Zohar, Moses de Leon himself concealed many of his more daring speculations (which the obscure Aramaic garb had suited very well). On the other hand he stressed in them the principles of *Sefirot* symbolism, with its value for the comprehension of the Torah and of prayer, and also the homiletical and moral element of the Zohar. His Hebrew books expanded, here and there, themes which were first adumbrated with some variations in the Zohar. These works have largely been preserved, and some of them were copied many times, but only one has been published (*Sefer ha-Mishkal*, also called

Sefer ha-Nefesh ha-Hakhamah, 1608). It is hard to say to what extent Moses de Leon expected his work in the Zohar actually to be accepted as an ancient and authoritative Midrash, or how far he intended to create a compendium of Kabbalah in a suitable literary form which would be perfectly clear to the discerning eye. Many kabbalists in the succeeding generation used similar forms and wrote imitations of the Zohar, something which they would not have dared to do in the case of genuine Midrashim, thus showing that they did not take the framework of the book too seriously. This does not detract from (indeed it may add to) the value of the Zohar from a historical point of view, whether for its own sake or for the sake of the influence that it exerted.

Moses de Leon was certainly very closely associated with another kabbalist, who began as a disciple of Abraham Abulafia himself. This was Joseph *Gikatilla, who wrote *Ginnat Egoz* in 1274 and later a number of other works under the inspiration of his first master. However, while still young he also became associated with Gnostic circles and afterward he struck up a friendship with Moses de Leon; each came under the other's influence. Turning his attention from the mysteries of letters, vowels, and names, Gikatilla embarked on a profound study of the theosophy of the *Sefirot* system, and his books provide an independent and valuable parallel to the writings of Moses de Leon. *Sha'arei Orah*, written about 1290, already shows the influence of certain parts of the Zohar, although there is no mention of it. An important summary of, and renowned introduction to, the interpretation of *Sefirot* symbolism, this book became one of the major works of Spanish Kabbalah. It is worth noting that three different streams, the Kabbalah of Gerona, the Kabbalah of the Zohar, and the Kabbalah of Abulafia, were able to meet and be reconciled in Gikatilla's mind, a very rare occurrence in this period. His *Ginnat Egoz* is the latest source, insofar as we know, utilized by the author of the Zohar.

Two works written in the 1290s or in the earliest years of the 14th century, the *Ra'aya Meheimna* and the *Sefer ha-Tikkunim*, comprise the latest strands in the zoharic literature. They are the work of an unknown kabbalist who was familiar with the major part of the Zohar and wrote his books as a kind of continuation of it (albeit with some change in literary style and framework). The books contain a new interpretation of the first chapters of Genesis and a tabulated explanation of the reasons for the Commandments. Elevating the importance of the Zohar as the final revelation of the mysteries, these two works connected its appearance with the beginning of the redemption: "Through the merits of the Zohar they will go forth from exile in mercy," i.e., without the dread pains of the redemption (Zohar 3, 124b). The author exaggeratedly blends the image of the biblical Moses with Moses the revealer of the Zohar on the eve of the final redemption. It is possible that he was very close to the circle of Moses de Leon, and perhaps he was also called Moses. These books are the first of a whole line of kabbalistic works which were written in the pseudo-Aramaic style of the Zohar and as a continuation of it. Some authors

also wrote in Hebrew, adding interpretations in the name of zoharic characters but reflecting their own ideas. In this category mention should be made of *Mar'ot ha-Zove'ot* (Sassoon Ms. 978) by David b. Judah *he-Ḥasid, known from his other writings as a grandson of Naḥmanides (*Ohel Dawid*, 1001–06); and *Livnat ha-Sappir* (on Gen., 1914; on Lev. British Museum Ms. 767) by Joseph Angelino, written in 1325–27, and wrongly ascribed by several kabbalists to David b. Judah Ḥasid. This latter David was the first to write a quasi-commentary on and elaboration of the speculations in the *Idra Rabba* of the Zohar, called *Sefer ha-Gevul* (Jerusalem Ms., and see Scholem in KS, 4 (1928), 307–10). He also wrote a long commentary, *Or Zaru'a*, on the liturgy, and several other books (*ibid.*, 302–27).

An important pseudepigraph written at the time of the appearance of the Zohar was "The Mystery of the Names, Letters, and Vowels, and the Power of the [Magical] Operations, according to the Sages of Lunel," which is found in several manuscripts under different names (Vatican Ms. 441). Attributed to the circle of Abraham b. David, the book is actually based on the works of Gikatilla and Moses de Leon, and connects speculations on the letters, vowels, and the Sacred Names with the theory of practical Kabbalah. Its author, who gave the words of the late 13th-century kabbalists a new pseudepigraphic frame, also compiled the kabbalist anthology *Sefer ha-Ne'lam* (Paris Ms. ³), using similar source material. An obscure figure in zoharic imitation literature is Joseph "who came from the city of Shushan" (i.e., from Hamadan in Persia). Perhaps this is a completely fictitious name concealing a Spanish kabbalist who lived about 1300 or a little later and wrote a lengthy work on the Torah section of *Terumah* and the Song of Songs, which is largely written in the style of the Zohar and develops the ideas of the zoharic *Idras* concerning the *Shi'ur Komah*. According to A. Altmann he is to be identified with the anonymous author of the *Sefer Taamei ha-Mitzvot*, which was used as the source of a literary plagiarism by Isaac ibn Farḥi in the 16th century (KS, 40 (1965), 405–12). At any rate, his extensive work is preserved (British Museum Ms. 464) and was widely disseminated, even in comparatively late times (G. Scholem, in *Sefer Yovel le-Aron Freimann* (1935), 51–62). The book is full of astonishing ideas not to be found in other kabbalistic texts, and the author introduces opinions which are quite foreign to the Zohar, although couched in its style. The third book in this category is the *Sefer ha-She'arim* or *She'elot la-Zaken* (Oxford Ms. 2396) from the first quarter of the 14th century. The old man (*zaken*) who replies to the questions of his disciples in none other than Moses himself. The bulk of the book is written in Hebrew and only a minor section in the zoharic style. Also a completely independent work, it relies a great deal on allusion without fully explaining its ideas.

The Kabbalah in the 14th Century up to the Expulsion from Spain

The 14th century was a period of intellectual development which produced an extremely rich literature. The Kabbalah

spread through most of the communities of Spain and beyond, in particular to Italy and the East. Once the gates were opened wide through the books that revealed mystical ideas, all the preceding trends found their continuators and their interpreters; with this expansion all the different trends mingled with one another to a certain extent, and attempts were made to find a compromise between them.

The Kabbalah of Gerona was continued through the prolific literary activity of the disciples of Naḥmanides' pupils, who were taught by Solomon b. Abraham Adret (Rashba) and Isaac b. *Todros, author of a commentary to the *maḥzor* according to Kabbalah (Paris Ms. 839). Members of this school, who did not favor the prevailing pseudepigraphic style, produced many books attempting to clarify the kabbalistic passages of Naḥmanides' commentary to the Torah. An unknown author writing at the beginning of the 14th century composed *Ma'arekhet *ha-Elohut* (1558), a compendium which expounded the doctrine of Kabbalah in a terse and systematic fashion. This book was very widely read and its influence was felt as late as the 16th century. Although Solomon b. Abraham Adret was very cautious in his dealings with kabbalistic matters, he often alluded to them in his commentary to the *aggadot* (Vatican Ms. 295), and he also composed a long prayer in the kabbalistic way. His pupils, however, assigned a central place to the Kabbalah. To this school belong: Baḥya b. *Asher from Saragossa, whose commentary to the Torah contributed greatly to the dissemination of the Kabbalah and was the first kabbalist book to be printed in its entirety (1492); Joshua ibn *Shuaib from Tudela, author of the important *Derashot* (homilies) on the Torah (1523), the first book in this genre to assign a central place to the Kabbalah, and the real author of the *Be'ur Sodot ha-Ramban* ("Explanation of [the kabbalistic] secrets of Naḥmanides' Commentary"), which was printed (1875) under the name of his pupil, Meir b. Solomon Abi Sahula; Ḥayyim b. Samuel of Lerida, author of *Zeror ha-Ḥayyim*, which contains a kabbalistic exposition of halakhic matters (Musajoff Ms.); Shem Tov b. Abraham ibn *Gaon from Soria, who began a large-scale literary activity on the Kabbalah between 1315 and 1325, emigrated to Erez Israel with his friend Elhanan b. Abraham ibn Eskira, and settled in Safed. Elhanan's *Yesod Olam* (Guenzburg Ms. 607) merges the Gerona tradition with neoplatonic philosophical Kabbalah. In the school of Solomon Adret a large amount of raw material was assembled which has been preserved in *collectanea* of considerable value (Vatican Ms. 202, Parma Mss. 68 and 1221, and others). In the same way several anonymous texts have been preserved which interpret the hidden meanings in Naḥmanides. The main storehouse for all the traditions of this school is *Me'irat Einaim* by Isaac b. Samuel of *Acre, who also dealt at length in other books with completely different aspects of the Kabbalah, under the joint influence of the Zohar and the school of Abraham Abulafia. In contrast to the attempts to seek a compromise between Kabbalah and philosophy, he insisted on the independence and supreme worth of kabbalist theosophy. Parts of the

collection of revelations that were granted to him in various ways were assembled in *Ozar ha-Ḥayyim* (Guenzburg Ms. 775), parts of which have been frequently copied. He was associated with many contemporary kabbalists, and he was the first of this circle to write an autobiography, which, however, is now lost.

Another kabbalist who migrated to Spain and became acquainted with the Kabbalah there was Joseph b. Shalom *Ashkenazi, author of an extensive commentary to the *Sefer Yeẓirah* (which has been printed in editions of the book under the name of Abraham b. David). He also wrote a commentary to the *bereshit* section of the *Midrash Genesis Rabbah* (κs, 4 (1928), 236–302). The works of David b. Judah Ḥasid develop the theory of the *Sefirot* to the extreme, assigning to everything a precise place in the world of the *Sefirot*. Joseph b. Shalom engaged in a kabbalistic critique of philosophy, but he interpreted its principles kabbalistically in a very bold way. Like most of the kabbalists of his time he was taken with the idea of the *shemittot*, which gained much ground in this period. Among the most important versions of this theory is that of *Sod ilan ha-azilut* by Isaac b. Jacob ha-Kohen (*Kovez al Yad*, 5, 1951). Joseph b. Shalom expounded an extreme conception of the theory of transmigration of souls, turning it into a cosmic law involving a change of form which affected every part of creation from the *Sefirah* of *Ḥochmah* down to the lowest grade of inanimate objects.

Together with the influence of the Zohar and the school of Solomon Adret the Spanish Kabbalah began to spread into Italy, particularly through the writings of Menahem *Recanati who wrote, early in the 14th century, a commentary "according to the path of truth" on the Torah (1523) and a work on the mystical reasons for the commandments (complete ed. 1963). But there was little independence in Italian Kabbalah, and for a long time it consisted of no more than compilations and interpretations, following the Zohar and the *Ma'arekhet ha-Elohut*, and, to an even greater extent than in Spain itself, the writings of Abraham Abulafia. One exception is the *Iggeret Purim* (κs, 10 (1934), 504, no. 52), whose author gives an unusual symbolic interpretation of the theory of the *Sefirot*. In Germany also there was little independent creativity in the Kabbalah. German kabbalists contented themselves with mingling the Zohar and the *Ma'arekhet* with the tradition of Ḥasidei Ashkenaz. Avigdor *Kara (d. 1439), who achieved fame there as a kabbalist (see *Sinai*, 5 (1939), 122–48), wrote *Kodesh Hillulim* on Psalm 150 (Zurich Ms. 102). In the second half of the 14th century Menahem *Ziyyoni of Cologne wrote *Sefer Ziyyoni* on the Torah, and Yom Tov Lipmann *Muehlhausen devoted part of his literary activity to the Kabbalah, e.g., *Sefer ha-Eshkol* (ed. Judah Even-Shemuel (Kaufmann), 1927). From the beginning of the 14th century the Kabbalah also spread to the East. In Persia Isaiah b. Joseph of Tabriz wrote *Ḥayyei ha-Nefesh* (1324; Jerusalem Ms. 80 544; part of it was published in 1891); and in Constantinople Nathan b. Moses Kilkis, who says that he studied in Spain, wrote *Even Sappir* (1368–70; Paris Ms. 727–8).

These last two books belong to the strain which attempted to combine Kabbalah and philosophy in more or less radical ways. Originating mainly among the Spanish kabbalists of the period, these attempts became quite common, and their proponents attacked the opposite tendency to emphasize the two sides' basic differences of approach. The unequivocal neoplatonic line of Ibn Latif was continued (about 1300) by *David b. Abraham ha-Lavan in his *Masoret ha-Berit*. Joseph b. Shalom, mentioned above, linked Kabbalah with Aristotelian metaphysics and with natural philosophy, showing how even abstract philosophical concepts had a mystical content. Obviously, some tended toward a more philosophical view, while others concentrated on the specifically kabbalistic side. Two of the chief exponents of these tendencies wrote in Arabic, an extremely rare occurrence in kabbalistic literature. One was Judah b. Nissim ibn *Malka from Fez, who wrote in 1365; his works have been analyzed by G. Vajda (1954), who has done a great deal of research on the relationship between Kabbalah and philosophy in this period. The other, who lived a generation earlier, was Joseph b. Abraham ibn *Waqar of Toledo. In his lengthy work entitled *al-Maqāla al-Jamī'a bayna al-Falsafa wa-al-Shari'ā* ("A Synthesis of Philosophy and Kabbalah"), he set down the views of the philosophers, the kabbalists, and the astrologers, evaluated their ideas according to their relative merits, and tried to establish a basis common to them all (Vajda, *Récherches sur la philosophie et la kabbale* (1962), 115–297). His book also includes a lexicon of *Sefirot* symbolism, which was translated into Hebrew and circulated widely. The author was deeply indebted to Naḥmanides and Todros Abulafia, but he warns "that many errors have crept into" the Zohar. Ibn Waqar wrote poems on the Kabbalah (A.M. Habermann, *Shirei ha-Yihud ve-ha-Kavod* (1948), 99–122). His personal friend was Moses *Narboni, who was inclined basically toward philosophy; however, in the *Iggeret al Shi'ur Komah* and in other places in his writings, through a positive albeit somewhat reluctant approach to Kabbalah, Narboni tries to explain kabbalistic statements as if they were in agreement with philosophy (A. Altmann (ed.), *Jewish Medieval and Renaissance Studies*, 4 (1967), 225–88).

An attempt to weight the balance in favor of Kabbalah found expression in the criticism of the work of Judah ibn Malka attributed to Isaac of Acre (Vajda, in *REJ*, n.s. 15 (1956), 25–71). Samuel b. Saadia *Motot in Guadalajara (c. 1370) also followed Ibn Waqar in his commentary to the *Sefer Yeẓirah* called *Meshovev Netivot*, and his commentary to the Torah, *Megalleh Amukot* (to Ex., Oxford Ms. 286, and Lev. to Deut., Jerusalem, National Library, Ms. 8°552). But the Zohar had a very strong influence on him. In the discussions of the philosophical kabbalists a great deal of attention was paid to the question of the relationship between the theosophic theory of the *Sefirot*, the philosophers' theory of the separate intelligences, and the neoplatonic idea of the cosmic soul. Attempts were made to explain the *Guide of the Perplexed* in a kabbalistic manner, or at least to clarify certain problems in it from the standpoint of the Kabbalah, using methods different from

that of Abraham Abulafia; e.g., in the critique attributed to Joseph Gikatilla (1574; Vajda, in *Mélanges E. Gilson* (1959), 651–9), or in the *Tishah Perakim mi-Yihud* attributed to Maimonides (*Koveẓ al-Yad*, 5 (1950), 105–37). Following Abulafia, the urge to make a kabbalist of Maimonides was emphasized in the legend that he had a change of heart at the end of his life and turned to the Kabbalah (Scholem, in *Tarbiz*, 6 (1935), 90–98), a tale that was current from the year 1300 and appears in several versions. In this period the *Megillat Setarim* was also written, which was said to be a letter of Maimonides concerning the Kabbalah (in Z. Edelman's collection, *Ḥemdah Genuzah* (1855), 45–52).

Totally in contrast to these tendencies toward compromise were two important phenomena which were absolutely opposed to the world of philosophy. The first is connected with the growth of meditative movements leading to contemplation, whether of the inner world of the *Sefirot* and the innumerable hidden lights concealed therein, or of the inner world of the Sacred Names which themselves conceal mystic lights. As a rule this contemplation follows the methods of prophetic Kabbalah, but by changing it and bringing it into the realm of Gnostic theosophy. The 13th-century theory of the *Sefirot* is subordinated to the contemplation of the lights of the intellect, which originated in the writings of the *Sefer ha-Iyyun* school, and produced a voluminous literature, wavering between pure inner contemplation and magic. There is no doubt that Isaac of Acre was very much inclined to this trend. Practically the whole of this literature is still concealed in manuscript form, no doubt because of the self-censorship of the kabbalists, who regarded it as the truly esoteric part of the Kabbalah. One characteristic example, however, did find its way into print, namely *Berit Menuḥah* (1648), which dates from the second half of the 14th century and was wrongly attributed to Abraham b. Isaac of *Granada. It deals at length with meditations on the inner lights sparkling from the various vocalizations of the Tetragrammaton. This literature represents a continuation of Abulafia's science of letter combination with the addition of the theory of *kavvanah* of the theosophical Kabbalah. The book *Toledot Adam* (Jerusalem Ms., Scholem, Catalogue, 58–60) also belongs to this body of writing, and parts of it were printed under the name of *Sefer ha-Malkhut* (1930). The true *Sefer ha-Malkhut*, also a treatise on letter combinations, was written about 1400 by the kabbalist David ha-Levi from Seville (printed in the collection *Ma'or va-Shemesh*, 1839). Intended as practical manuals for initiates, these books are of little interest for kabbalistic theory or philosophy.

The second phenomenon is connected with the composition of two pseudepigraphic works: *Sefer ha-Peli'ah* (1784) on the first section of the Torah and *Sefer *ha-Kanah* (1786) on the (meaning of) the Commandments. The author, who wrote between 1350 and 1390, speaks in the guise of the grandson of R. Neḥunya b. *ha-Kanah, the supposed author of the *Sefer ha-Bahir*. Actually, a large part of the first book consists of an anthology of earlier kabbalistic literature. The author, a considerable talmudist, adapted these sources and added a

comparable amount to them. His main object was to prove, through the use of talmudic argument, that the *halakhah* has no literal meaning but mystical significance alone, and that the true literal meaning is mystical. With sweeping enthusiasm, these works go to greater lengths than the Zohar in their insistence that Judaism has no true meaning outside the world of the Kabbalah, thus representing the peak of kabbalistic extremism (S.A. Horodezky, *Ha-Mistorin be-Yisrael* vol. 2: *Ginzei Seter* (1952), 341–88; Baer, Spain, 1 (1961), 369–73). Clearly, in such a case there is no room for a philosophical approach. The anti-philosophical line was continued in the works of Shem Tov b. Shem Tov, who wrote two systematic books on the Kabbalah around 1400. His *Sefer ha-Emunot* (1556) demonstrates how completely the Zohar had become accepted, a century after its appearance, as the central work of Kabbalah. A large portion of the second book, whose title is unknown, is extant (British Museum Ms. 771). In this work the anti-philosophical tendency, which was perhaps influenced by contemporary events and by the persecution of 1391, is expressed quite clearly: there is no longer any room for compromise between mysticism and the demands of rationalistic thought. It cannot be affirmed, however, that this point of view dominated the Kabbalah in its entirety, for in the years that followed, up to the beginning of the 16th century, there were various moves toward reconciliation, especially noticeable among the Italian kabbalists.

In contrast with the clear direction followed by the pseudepigraphy of the *Sefer ha-Peli'ah*, there is no obvious goal in the voluminous pseudepigraphic activity of the Provençal kabbalist Moses *Botarel. He wrote a large number of books around 1400, including a long commentary to the *Sefer Yezirah*, filling them with fabricated quotations from the works of kabbalists and others, both historical and imaginary figures. However, his method was not at all like that of the Zohar and he also cultivated a conciliatory attitude toward philosophy, in complete contrast to Shem Tov b. Shem Tov. While the author of *Sefer ha-Peli'ah* and *Sefer ha-Kanah* put forward the Kabbalah as the only interpretation which could save Judaism from deteriorating and disintegrating, in other circles, imbued with a distinct talmudic and ethical spirit, it was regarded as a complementary element, through a stress on its moral and ascetic ideas. It is clear that the Kabbalah had already attained a firm status in the mind of the public, and quite obvious kabbalistic elements had begun to appear in the ethical literature of the 14th and 15th centuries. In this connection the *Sefer Menorat ha-Ma'or* by Israel *al-Nakawa of Toledo (d. 1391) is very important. It is a comprehensive work on Judaism with a clear halakhic standpoint. Wherever ethical questions are discussed in this book, which was intended for a wide public, statements are quoted from the Zohar (in Hebrew, under the name of *Midrash Yehi Or*) and from the other kabbalists, including specifically the *Hibbur ha-Adam im Ishto*, a treatise on marriage and sexuality written by an anonymous kabbalist at the end of the 13th century and later attributed to Nahmanides (KS, 21 (1945), 179–86).

The literature of the kabbalists themselves testifies to the continuous existence in various circles of a strong opposition to Kabbalah and its claims – among halakhists, literalists, and philosophers. Beginning with the polemic of Meir b. Simeon of Narbonne (1250) this opposition continued to be expressed, either *en passant*, as was the case with Isaac Polkar and Menahem *Meiri, or in specific works; e.g., in the *Alilot Devarim* of Joseph b. Meshullam (?), who wrote in Italy in 1468 (*Ozar Nehmad*, 4 (1863), 179–214), and in several writings of Moses b. Samuel Ashkenazi of Candia, 1460 (in Vatican Ms. 254). Even with the expansion of the Kabbalah's influence to much wider circles these voices were not silenced, particularly not in Italy.

In Spain kabbalistic creativity diminished considerably in the 15th century. The original stimulus of the Kabbalah had already reached its fullest expression. There were many kabbalists still to be found in Spain, and the numerous manuscripts written there testify to the large numbers who were engaged in Kabbalah, but their work shows very little originality. In 1482 Joseph *Alcastiel from Jativa wrote responsa to 18 questions on various kabbalistic subjects which had been addressed to him by Judah Ḥayyat, and in them he adopts a very independent approach (*Tarbiz*, 24 (1955), 167–206). Joshua b. Samuel ibn Nahmias in his book *Migdol Yeshu'ot* (Musajoff Ms.), Shalom b. Saadiah ibn Zaytun from Saragossa, and the pupils of Isaac *Canpanton, who occupied a central position in the Judaism of Castile in the middle of the 15th century, were among the chief exponents of Kabbalah. Many kabbalists had crossed to Italy even before the expulsion from Spain, e.g., Isaac Mar-Ḥayyim who wrote in 1491, en route for Erez Israel, two long letters on problems concerning the beginning of emanation (JQR, 21 (1931), 365–75; Yael Nadav, in *Tarbiz*, 26 (1956), 440–58). Joseph ibn *Shraga (d. 1508/09) who was called in his time “the kabbalist from Argenta,” and Judah Ḥayyat, the author of a long commentary, *Minḥat Yehudah*, on the *Ma'arekhet ha-Elohut* (1558), were also among the chief transmitters of Spanish Kabbalah to Italy. The book *Ohel Mo'ed* (Cambridge Ms.) was written by an unknown kabbalist before 1500 – in Italy or even still in Spain – in order to defend the Kabbalah against its detractors. Abraham b. Eliezer *ha-Levi and Joseph *Taitazak, too, began their kabbalistic activities while still in Spain. The migrants strengthened the Kabbalah, which acquired many adherents in Italy in the 15th century. Reuben Zarfati interpreted the theory of the *Sefirot*; Johanan Alemanno, who united Kabbalah with philosophy, wrote a commentary to the Torah in *Einei ha-Edah* (Paris Ms.), and to the Song of Songs in *Heshek Shelomo*, and he also compiled a large anthology of kabbalistic miscellanies. He also composed an unnamed work on the Kabbalah (Paris Ms. 849; KS, 5 (1929), 273–7). Only the introduction of his commentary to the Song of Songs has been published (1790). Judah b. *Jehiel Messer Leon of Mantua opposed the tendencies of the later kabbalists and defended the view that kabbalistic principles agreed with Platonic ideas (S. Assaf in *Jubilee Volume for D. Yellin* (1935), 227). This emphasis on kabbalistic Platonism undoubt-

edly suited the spiritual temperament of the humanists of the circle of Marsilio Ficino and Pico della *Mirandola. The poet Moses *Rieti devoted part of his long poem *Mikdash Me'at* to a rhymed discourse on kabbalistic ideas, and Elijah Ḥayyim of *Gennazano wrote an introduction to the Kabbalah entitled *Iggeret Ḥamudot* (1912).

The Kabbalah after the Expulsion from Spain and the New Center in Safed

The expulsion from Spain in 1492 produced a crucial change in the history of the Kabbalah. The profound upheaval in the Jewish consciousness caused by this catastrophe also made the Kabbalah public property. Despite the fact that the Kabbalah had spread in preceding generations, it still remained the preserve of relatively closed circles, who only occasionally emerged from their aristocratic seclusion. The aims of certain individuals like the author of the Zohar or the *Sefer ha-Peli'ah*, who intended quite consciously to create a work of historical and social importance, were not fully achieved until the 16th century. It was not until this period also that the eschatological mood prevalent among particular individuals in Spain was combined with the more basic stimuli of the Kabbalah. With the expulsion, messianism became part of the very core of Kabbalah. The earlier generations centered their thoughts on the return of man to the wellspring of his life, through the contemplation of the upper worlds, and on instruction in the method of his return through mystic communion to his original source. An ideal which could be realized in any place and at any time, this communion was not dependent on a messianic framework. Now it became combined with messianic and apocalyptic trends which laid greater stress on man's journey toward redemption than on his contemplated future return to the source of all existence in God. This combination of mysticism with messianic apocalyptic turned Kabbalah into a historic force of great dynamics. Its teachings still remained profound, abstruse, and difficult for the masses to assimilate, but its aims lent themselves easily to popularization, and many kabbalists sought to extend its influence throughout the general community. The Kabbalah penetrated many areas of popular faith and custom, overcoming the unceasing opposition of some individuals. It should be noted that the highly original development of the Kabbalah after the expulsion did not start in Italy, although that country was a center of a flourishing Jewish culture, and fruitful kabbalistic activity could be found there. The real creative force came from the new center which was established in Erez Israel about 40 years after the expulsion. The religious movement which originated in Safed, and which manifested a renewal of the Kabbalah in all its intensity, is particularly important because it was the last movement in Judaism to have such a wide scope and such a decisive and continuous influence on the Diaspora as a whole, in both Europe, Asia, and North Africa. This influence was maintained even after the break-up of the Shabbatean movement, which testifies to the degree to which it had become rooted in the national consciousness.

A connection between the appearance of new aspects of the Kabbalah and its rapid dissemination, and the imminent redemption of Israel, had already been established by a few of the Spanish kabbalists, like Abulafia, the author of the *Ra'aya Meheimna*, and the author of the *Sefer ha-Peli'ah*. But it was only after the expulsion that this became a dynamic and all-embracing force. A clear indication of this is the statement of an unknown kabbalist: "The decree from above that one should not discuss kabbalistic teaching in public was meant to last for only a limited time – until 1490. We then entered the period called 'the last generation,' and then the decree was rescinded, and permission given... And from 1540 onward the most important *mitzvah* will be for all to study it in public, both old and young, since this, and nothing else, will bring about the coming of the Messiah" (quoted in Abraham *Azulai's introduction to his *Or ha-Hammah* on the Zohar).

The exiles mostly studied the Kabbalah in its earlier forms, but they sought to respond to the interest in the Kabbalah aroused in Italy, North Africa, and Turkey by means of systematic and complete presentations, which at this time, however, did not contain any new points of view. The main exponents of the Kabbalah were Judah Ḥayyat, in his extensive commentary to *Ma'arekhet ha-Elohut*; Abraham Saba and Joseph *Alashkar, in their commentaries to Scripture and Mishnah; Abraham Adrutiel, in an anthology of earlier traditions entitled *Avnei Zikkaron* (κς, 6 (1930), 295ff.; 7 (1931), 457ff.); and particularly Meir ibn *Gabbai, in his exhaustive presentation in *Avodat ha-Kodesh* (1568), which was perhaps the finest account of kabbalistic speculation before the resurgence of the Kabbalah in Safed. There was intensive activity along traditional lines in Italy and Turkey in particular. Among those active in Italy were Elijah Menahem Ḥalfan of Venice, Berakhiel b. Meshullam Cafman of Mantua (*Lev Adam*, 1538, in Kaufmann Ms. 218), Jacob Israel Finzi of Recanati (commentary on the liturgy, Cambridge Ms.), Abraham b. Solomon Treves ha-Zarfati (b. 1470) who lived in Ferrara and had "a revelation of Elijah," and Mordecai b. Jacob Rossillo (*Sha'arei Ḥayyim*, Munich Ms. 49). A panentheistic view of the relationship between God and the world was quite clearly stated in *Iggeret ha-Ziyyurim* by an unknown kabbalist of the first half of the 16th century in Italy (JTS Ms.). An important center was formed in Salonika, then in Turkey. Among the leaders there were Joseph *Taitazak, apparently the author of a large book of revelations which he had composed in the last decade before the expulsion from Spain: *Sefer ha-Meshiv*, in which the speaker is God Himself (G. Scholem, in *Sefunot*, vol. 11); Ḥayyim b. Jacob Obadiah de *Busal (*Be'er Mayim Ḥayyim*, 1546); Isaac Shani (*Me'ah She'arim*, 1543); and Isaac b. Abraham Farḥi, who circulated in his own name the anonymous *Ta'amei ha-Mitzvot*, which had actually been written about 1300. The kabbalist philosopher David b. Judah Messer Leon left Italy to work in Salonika, but his book *Magen David* (London, Jews' College, Ms. 290) on the philosophical principles of the Kabbalah was apparently written in Mantua; this work influenced several later kabbalists, including Meir ibn Gabbai

and Moses Cordovero (Schechter, in REJ, 62 (1892), 118ff.; KS, 9 (1933), 258). Solomon *Alkabez also began working in this circle before he went to Safed.

We also know of considerable kabbalistic activity in Morocco. Joseph Alashkar wrote most of his books in Tlemçen (*Zofenat Pa'neah*, 1529, Jerusalem Ms. 2° 154; and several other books in the *Katalog der Handschriften ... E. Carmoly*, 1876), but the main center in this area was Dra (or Dar'a), whose kabbalists were renowned. There Mordecai *Buzaglo wrote the *Ma'yanot ha-Hokhmah*, which was hidden by the kabbalists (Goldschmidt Ms. Copenhagen), and a commentary on the liturgy (*Malkhei Rabbanan* (1931), 86–87). This was the environment where the *Ginmat Bitan* was written, an introduction to the theory of the *Sefirot* by Isaac b. Abraham Cohen (Gaster Ms. 720). This work should not be confused with the *Ginmat ha-Bitan* which has two commentaries attributed to the Spanish kabbalists Jacob b. Todros and Shem Tov ibn Gaon (Gaster Ms. 1398), and which is, from beginning to end (as shown by E. Gottlieb), a late 16th-century forgery based on *Ma'arekhet ha-Elohut* and Judah Hāyyat's commentary to it. The most important book produced by the Moroccan kabbalists in this period was *Ketem Paz* by Simeon ibn *Labi of Fez, the only commentary on the Zohar that was not written under the influence of the new Kabbalah of Safed. Consequently, it is frequently closer to the primary meaning of the text (the part on Genesis was printed in 1795). Several kabbalists were working in Jerusalem and Damascus. Some of them were emigrants from Spain, and some from the Must'arabim. Among the emigrants from Portugal was Judah b. Moses *Albotini (d. 1520), who wrote an introduction to prophetic Kabbalah (*Sullam ha-Aliyyah*, see Scholem, *Kitvei Yad be-Kabbalah*, 225–30; KS, 22 (1946), 161–71), and devoted many chapters of his book *Yesod Mishneh Torah* on Maimonides to the Kabbalah (M. Benayahu in *Kovez ha-Rambam* (1955), 240–74). In Damascus, in the middle of the century, Judah Hāleywa, a member of a Spanish family, wrote the *Sefer ha-Kavod* (Jerusalem Ms. 80 3731). In the main, however, this was the center of activity of Joseph b. Abraham ibn Zayyah, one of the rabbis of the Must'arabim who lived for several years in Jerusalem and in 1538 wrote there *Even ha-Shoham* (G. Scholem, *Kitvei Yad be-Kabbalah*, 89–91), in 1549 *She'orit Yosef* (Ms. of the pre-War Vienna community, Schwarz catalogue 260), and also several other kabbalistic works. Noteworthy for their theoretical speculations on details of the *Sefirot* system and for their profound meditation on the mysticism of the infinite number of luminaries which shine in the *Sefirot*, his books represent the culmination of a certain approach, and at the same time reveal a strong leaning toward practical Kabbalah and matters concerning the *sitra aḥra*.

Books written by the Ashkenazim after the expulsion from Spain were mainly of the anthology type: like the *Shoshan Sodot* of Moses b. Jacob of *Kiev (partially printed 1784, and extant in its entirety in Oxford Ms. 1656); *Sefer ha-Miknah* of Joseph (Josselmann) of Rosheim (1546, Oxford Ms. 2240); and the great commentary to the liturgy by Naphtali Hirz Treves

(1560). The writings of Eliezer b. Abraham Eilenburg on Kabbalah and philosophy show how different fields became intertwined in the mind of a German kabbalist who studied in Italy and traveled in several countries. Eilenburg edited the books of the original kabbalists together with additional material of his own, some of it autobiographical (Hirsch Ms. 109, Schwager and Fraenkel 39, 5–10, now in New York; A. Marx, in ZHB, 10 (1906), 175–8). The Kabbalah was established in Germany long before it found its way into Poland, where it penetrated only in the second half of the century through the work of Mattathias *Delacrut and Mordecai *Jaffe.

The printing of several classical works contributed a great deal to the dissemination of the Kabbalah, particularly in the middle of the 16th century. At first no opposition was roused – neither when Recanati's book was produced in Venice (1523) nor when several other books came out in Salonika and Constantinople – although these works did not receive the *haskamah* (“approval”) of the rabbinic authorities. However, when the printing of the Zohar itself and the *Ma'arekhet ha-Elohut* (1558) was contemplated, the plan gave rise to bitter arguments among the Italian rabbis; a few of the leading kabbalists violently opposed it, saying that they were afraid that these things would fall into the hands of men who were both ignorant and unprepared and so be liable to lead people into error. The burning of the Talmud in Italy on the order of Pope Julius III (1553) played a part in this controversy, for there were those who feared that the widespread publication of kabbalistic works would in itself tend to stimulate missionary activity. Some kabbalists who at first were opposed to the idea later became the chief protagonists of the printing of the Zohar, e.g., Isaac de *Lattes, the author of a decision in favor of the printing of the Zohar, which appears at the beginning of the Mantua edition. At length, the protagonists prevailed, and the publication of other works of Kabbalah in Italy, Germany, Poland, and Turkey met with no further opposition (I. Tishby, in *Perakim* 1 (1967), 131–82; S. Assaf, in *Sinai*, 5 (1940), 360–8).

In addition to the traditional Kabbalah, during the first 40 years after the expulsion from Spain there arose a remarkable apocalyptic movement, whose leading exponents among the émigrés were active in Palestine and Italy. Abraham b. Eliezer *ha-Levi, who traveled through many countries and settled in Jerusalem about 1515, devoted most of his energies to the propagation of a kabbalistic apocalyptic which was then causing a great stir. A few years after the expulsion a book appeared which affords striking evidence of this movement; called *Kaf ha-Ketoret* (Paris Ms. 845), it is an interpretation of the Psalms as battle-hymns for the war at the end of time, and was apparently written in Italy. At this time messianic movements also sprang up among the Marranos in Spain (Y. Baer, in *Me'assef Shenati Zion*, 5 (1933), 61–77), and emerged in Italy around the kabbalist Asher *Lemlein (1502). This too was the time of the first account of the attempt of the Spanish kabbalist Joseph della *Reina to bring about the final redemption by means of practical Kabbalah (G. Scholem, *ibid.*, 4 (1933),

124–30; J. Dan, in *Sefunot*, 6, 1962, 313–26). The story subsequently went through many adaptations and was very widely publicized. The commentator Isaac *Abrabanel also turned his attention to the propagation of apocalyptic views, whose adherents fixed the date of redemption variously at 1503, 1512, 1540, and 1541. The most serious repercussion was the agitation marking the appearance of David *Reuveni and his supporter Solomon *Molcho, whose kabbalistic expositions (*Sefer ha-Mefo'ar*, 1529) were favorably received by the Salonika kabbalists. Molcho's visions and discourses were a mixture of Kabbalah and incitement to political activity for messianic purposes among the Christians. With his martyrdom (1532) he was finally established in the Jewish community as one of the "saints" of the Kabbalah. For the apocalyptists the advent of Martin *Luther was another portent, a sign of the break-up of the Church and the approach of the end of days.

After its failure as a propagandist movement, the apocalyptic awakening penetrated to deeper spiritual levels. Both Christian and Jewish apocalyptists began to perceive that on the eve of redemption light would be revealed through the disclosure of mysteries that had previously been hidden. The most profound expression of this new movement was that Erez Israel became the center of Kabbalah. First Jerusalem and from 1530 onward Safed were for decades the meeting places of many kabbalists from all corners of the Diaspora; they became the leaders of the religious awakening which elevated Safed to the position of spiritual center of the nation for two generations. Here the old and the new were combined: the ancient traditions together with an aspiration to reach new heights of speculation which almost completely superseded the older forms of Kabbalah, and which in addition had a profound influence on the conduct of the kabbalistic life and on popular custom. Even such great halakhic authorities as Jacob *Berab and Joseph *Caro were deeply rooted in the Kabbalah, and there is no doubt that their messianic expectations set the scene for the great controversy over the reintroduction of ordination, which Jacob Berab wanted to organize in 1538 when Safed had already been established as a center. Sephardim, Ashkenazim, and Musta'rabim all contributed something to this movement, which attracted sympathizers from far afield and was also responsible for a great upsurge in the Diaspora, where communities far and wide accepted the supreme religious authority of the sages of Safed. The spread of a pietistic way of life was a practical expression of the movement and it prepared the ground for the colorful legends which quickly grew up around the major kabbalists of Safed. As with the beginning of Kabbalah in Provence, so here too profound rational speculations were combined with revelations which welled up from other sources, and they took the form (especially after the expulsion from Spain) of the revelations of *maggidim*: angels or sacred souls who spoke through the lips of the kabbalists or made them write down their revelations. Far from being merely a literary device, this was a specific spiritual experience, as indicated by *Sefer ha-Meshiv*, attributed to Joseph Taitazak, and Joseph Caro's *Maggid Mesharim* (R.J.Z.

Werblowsky, *Joseph Karo, Lawyer and Mystic*, 1962). Once more, like the beginning of Kabbalah in Provence and Spain, here too there were two opposing trends of a philosophic and theoretical nature on the one hand, and of a mythical and anthropomorphic kind on the other.

The earlier forms of the Kabbalah were represented by David b. Solomon ibn *Zimra (known as Radbaz, d. 1573), first in Egypt and later in Safed: in *Magen David* (1713) on the shape of the letters; *Migdal David* (883) on the Song of Songs; *Mezudat David* (1662) on the meaning of the Commandments; and also in his poem *Keter Malkhut*, which is a kabbalistic imitation of the famous poem of the same name by Solomon ibn Gabirol (in the collection *Or Kadmon*, 1703). In contrast, a new system was propounded by Solomon b. Moses Alkabez, who emigrated to Erez Israel from Salonika, and by his pupil and brother-in-law Moses b. Jacob Cordovero (known as Remak, 1522–70). In Cordovero Safed produced the chief exponent of Kabbalah and its most important thinker. Combining intensive religious thought with the power to expound and explain it, he was the main systematic theologian of the Kabbalah. His theoretical philosophy was based on that of Alkabez and was completely different from the earlier Kabbalah, especially with regard to the theory of the *Sefirot*. It also developed greatly between his first major work, *Pardes Rimmonim*, written in 1548, and the second, *Elimah Rabbati*, composed 19 years later; this later work followed his long commentary on the Zohar, *Or Yakar*, which interprets the book in the light of his own system. Cordovero interprets the theory of the *Sefirot* from the standpoint of an immanent dialectic acting upon the process of emanation, which he sees as a causative process. According to his view there is a formative principle subject to a specific dialectic, which determines all the stages in the revelation of the Divine (*Ein-Sof*) through emanation. The Divine, as it reveals itself when it emerges from the depths of its own being, acts like a living organism. These and other ideas give his system quite a different appearance from that adopted in Gabbai's *Avodat ha-Kodesh*, which was written (1531) shortly before the establishment of the center at Safed, although both are based on the Zohar. It would appear that Alkabez' systematic presentation was written only after the *Pardes Rimmonim* (*Likkutei Hakdamot le-Hokhmat ha-Kabbalah*, Oxford Ms. 1663). Cordovero was followed by his disciples, Abraham ha-Levi *Berukhim, Abraham *Galante, Samuel *Gallico, and Mordecai *Dato, who introduced his master's Kabbalah to Italy, his birthplace and the scene of his prolific kabbalistic activity. Eleazar *Azikri and Elijah de *Vidas, both students of Cordovero, wrote in Safed the two classical works on kabbalistic ethics which were destined to have a wide public among students of Torah: *Sefer Haredim* and *Sefer Reshit Hokhmah*. Not only did they have a great influence in their own right, these books also opened the way to a whole literary genre of works on ethics and conduct in the kabbalistic manner which appeared in the 17th and 18th centuries and were widely popular. This literature did more for the mass dissemination of Kabbalah than those books dealing

with Kabbalah in the narrower sense whose mystical content was comprehensible only to a few.

One book which is not dependent on Cordovero's Kabbalah, but which is saturated with the atmosphere of Safed, where the idea of transmigration held an important place, is the *Gallei Razayya* by an unknown author. Doubtfully attributed to Abraham ha-Levi Berukhim, this comprehensive book was written in 1552–53, and the most important section is devoted to the theory of the soul and its transmigrations. Especially striking is the attempt to explain the lives of the biblical heroes, in particular their more unscrupulous deeds and their relationships with foreign women, in terms of transmigration. The book is among the more original creations of the Kabbalah; only part of it has been printed (1812), although the whole work is extant (Oxford Ms. 1820). Its daring psychology became a precedent for the paradoxical approach of the Shabbateans in their interpretation of the sins of the biblical characters (G. Scholem, *Shabbetai Zevi*, (1967), 47–49). Curiously enough, it did not arouse any recorded opposition.

In the magnetism of his personality and the profound impression he made on all, Isaac *Luria Ashkenazi, the "Ari" (1534–72), was greater than Cordovero. The central figure of the new Kabbalah, he was the most important kabbalistic mystic after the expulsion. Although he worked in Safed during the last two or three years of his life only, he had a profound influence on the closed circle of students – some of them great scholars – who after his death propagated and interpreted various versions of his ideas and his way of life, mainly from the end of the 16th century onward. Immediately after his death a rich tapestry of legend was woven around him, in which historical fact was intermingled with fantasy (M. Benayahu, *Toledot ha-Ari*, 1967). Luria's powers as a thinker cannot be compared with those of Cordovero, with whom he studied for a short while in 1570; but his personal and historical influence went far deeper, and in the whole history of Kabbalah only the influence of the Zohar can measure up to his. Developed from speculations of a mythical character on the Zohar, in general his system depends more than was previously thought on Cordovero, although he effected a kind of remythicization of the latter's theoretical concepts. In particular Cordovero's interpretations of the ideas in the *Idra* of the Zohar, voiced in his *Elimah Rabbati*, had a marked influence on Luria, who based the details of his system to a large extent on the *Idrot*. With Luria these ideas are bound up with his preoccupation with letter combinations as a medium for meditation. A large area of his system does not lend itself to complete intellectual penetration, and in many instances it can only be reached through personal meditation. Even in his theory of creation (see below), which from its inception is associated with the extreme mysticism of language and the Holy Names in which the divine power is concentrated, we quickly arrive at the point – the details of the idea of the *tikkun ha-parzufim* ("the restoration of the faces [of God]") – which is beyond the scope of intellectual perception. Here we are dealing with an extreme case of Gnostic reaction in the Kabbalah, which finds its expres-

sion in the placing of innumerable stages among the degrees of emanation, and the lights which sparkle in them. This Gnostic reaction, and with it the mythical tendency in the Kabbalah, reached its highest point in Luria, while at the same time its relationship with the philosophical trends of Spanish Kabbalah and of Cordovero also was at its most tenuous.

Those passages which are comprehensible, and which are related to the origin of the process of creation, are quite dissimilar from the starting-points of the neoplatonists, but they are of great importance for the history of mysticism and their historical influence was astounding. It is precisely in these sections that we find important differences in the various versions of Lurianic Kabbalah. Some concealed particular parts of these speculations, as did Moses *Jonah with regard to the whole theory of *zimzum* ("contraction") in his *Kanfei Yonah*, and Ḥayyim *Vital with the problem of *berur ha-dinim*, the progressive removal of the powers of rigor and severity from the *Ein-Sof* in the process of contraction and emanation. Some added new ideas of their own, like Israel *Sarug, in his theory of the *malbush* ("garment") which is formed by the inner linguistic movement of the *Ein-Sof* and is the point of origin, preceding even the *zimzum*. The original aspects of Luria's work, both in general and in particular, were both profound and extreme, and despite the fact that they were rooted in earlier ideas, they gave the Kabbalah a completely new appearance. A new terminology and a new and more complex symbolism are the outstanding features of the literature of this school. There was much originality in the ideas concerning the *zimzum* which preceded the whole process of emanation and divine revelation; the dual nature of the evolution of the world through the *hitpashetut* ("egression") and *hislallekut* ("regression") of the divine forces, which introduced a fundamental dialectical element into the theory of emanation (already apparent in Cordovero); the five *parzufim* ("configurations") as the principal units of the inner world, which are simply configurations of the *Sefirot* in new arrangements, in the face of which the ten *Sefirot* lose their previous independence; the growth of the world out of the necessary catastrophe which overtook Adam; and the slow *tikkun* ("restoration") of the spiritual lights which have fallen under the domination of the *kelippot* ("shells, husks"; forces of evil). The Gnostic character of these ideas, which constitute a new mythology in Judaism, cannot be doubted. Parallel to the cosmogonic drama there exists a psychological drama, just as complex, concerning the nature of original sin and the restoration of the souls condemned to transmigration because of that sin. The theory of prayer and mystical *kavvanah* ("intent") once more becomes central to the Kabbalah, and the emphasis it receives far surpasses any previously accorded to the subject. This mysticism of prayer proved to be the most important factor in the new Kabbalah because of the steady stimulus it provided for contemplative activity. A fine balance existed in Lurianic Kabbalah between theoretical speculations and this practical activity. The messianic element is far more noticeable here than in other kabbalistic systems, for the theory of *tikkun*

confirmed the interpretation of the whole meaning of Judaism as an acute messianic tension. Such tension finally broke in the Shabbatean messianic movement, whose particular historical power may be explained through the combination of messianism with Kabbalah. A messianic explosion like this was unavoidable at a time when apocalyptic tendencies could easily be resuscitated in large sections of the people because of the dominance of Lurianic Kabbalah. Not that this form of Kabbalah was distinct from other streams in its tendency to practical application or its association with magic. These two elements also existed in other systems, even in that of Cordovero. The theory of *kavvanah* in prayer and in the performance of the *mitzvot* undoubtedly contained a strong magical element intended to influence the inner self. The *yihudim*, exercises in meditation based on mental concentration on the combinations of Sacred Names which Luria gave to his disciples, contained such an element of magic, as did other devices for attaining the holy spirit.

Luria's disciples saw him as the Messiah, son of Joseph, who was to prepare the way for later revelation of the Messiah, son of David (D. Tamar, in *Sefunot*, 7 (1963), 169–72), but for a whole generation after his death they kept themselves in esoteric groups and did little to spread their belief among the people (G. Scholem, in *Zion*, 5 (1940), 133–60). Only occasionally did written fragments and various anthologies or summaries of Luria's teachings penetrate beyond Erez Israel. In the meantime, in Erez Israel itself, a complete literature of "Lurianic writings" came into being, which originated in the circles of his disciples together with their own disciples. Only a very few of these works come from Luria's own writings (KS, 19 (1943), 184–99). In addition to the disciples mentioned above, Joseph ibn *Tabul, Judah Mishan, and others also took part in this activity, but not one of them became a propagandist or was active outside Erez Israel. This work began only at the end of the 16th century with the journeys of Israel Sarug to Italy and Poland (*Zion*, 5 (1940), 214–43; 9 (1954), 173), and then through a scholar who, despite his pretensions, was not one of Luria's pupils in Safed but only a disciple in the spiritual sense. Up to about 1620 the Kabbalah remained largely under the influence of the other Safed kabbalists, Cordovero in particular.

As the Kabbalah began to radiate from Safed to the Diaspora it was accompanied by great religious excitement, particularly in Turkey, Italy, and Poland. In Italy particular importance attaches to the work of Mordecai Dato, who also engaged in literary messianic propaganda around the year 1575, which many considered to be the actual year of redemption (D. Tamar, in *Sefunot*, 2 (1958), 61–88). Equally important was his pupil Menahem Azariah *Fano (d. 1623), who was regarded for many years as the most prominent kabbalist of Italy, and who produced a considerable number of works, following Cordovero first of all and then Lurianic Kabbalah in the version spread by Sarug. He and his disciples, particularly Aaron Berechiah b. Moses of *Modena (d. 1639) and Samuel b. Elisha Portaleone, made Italy into one of the most

important centers of Kabbalah. Preachers in Italy and Poland began to speak of kabbalistic matters in public, and kabbalistic phraseology became public property. Some attempts were also made to explain kabbalistic ideas without using technical language. This is seen particularly in the writings of Judah Loew b. *Bezalel (Maharal of Prague) and in the *Bet Mo'ed* of Menahem Rava of Padua (1608). The spread of the Kabbalah also brought with it a mingling of popular belief and mystic speculation, which had widespread results. The new customs of the kabbalists in Safed found their way to the wider public, especially after the appearance of *Seder ha-Yom* by Moses ibn Makhir from Safed (1599). Penitential manuals based on the practice of the Safed kabbalists and new prayers and customs became widespread. In Italy, and later in other lands too, special groups were established for their propagation. Small wonder that the movement resulted also in the revival of religious poetry, rooted in the world of the Kabbalah. Beginning in Safed too, where its main exponents were Eliezer Azikri, Israel *Najara, Abraham Maimin, and Menahem *Lonzano, this poetry spread to Italy and was exemplified in the works of Mordecai Dato, Aaron Berechiah Modena, and Joseph Jeddiah *Carmi; in the years that followed it was echoed extensively. Many poets owed a major stimulus of their creativity to Kabbalah, especially the great Yemenite poet Shalom (Salim) *Shabbazi, Moses *Zacuto, and Moses Ḥayyim *Luzzatto. In their works they revealed the imaginative and poetic value of kabbalistic symbols, and many of their poems found their way into prayer books, both of the community and of individuals (G. Scholem, *Lyrik der Kabbalah?* in *Der Jude*, 6, 1921, 55–69; A. Ben-Yisrael, *Shirat ha-Ḥen*, 1918).

As long as Ḥayyim Vital, Luria's chief disciple, refused to allow his writings to be publicized – a process which did not begin in earnest until after Vital's death (1620) – detailed knowledge of Luria's system reached the Diaspora at first only through the versions of Moses Jonah and Israel Sarug. Nearly all the works of Kabbalah which were devoted to the spread of these ideas through the press in the first half of the 17th century bear the imprint of Sarug. But in his book *Shefa Tal* Shabbetai Sheftel Horowitz of Prague based his attempt to reconcile the Lurianic theory of *zimzum* with the Kabbalah of Cordovero on the writings of Joseph ibn Tabul. Abraham *Herrera, a pupil of Sarug who connected the teaching of his master with neoplatonic philosophy, wrote *Puerto del Cielo*, the only kabbalistic work originally written in Spanish, which came to the knowledge of many European scholars through its translations into Hebrew (1655) and Latin (1684).

At first Lurianic ideas appeared in print in an abbreviated form only, as in the *Appiryon Shelomo* of Abraham Sasson (Venice, 1608); but in 1629–31 the two bulky volumes by Joseph Solomon *Delmedigo were published, *T'alamot Ḥokhmah* and *Novelot Ḥokhmah*, which also included source material from the writings of Sarug and his pupils. The latter volume also contains lengthy studies of these ideas and a number of attempts to explain them philosophically. During these years manuscripts of Vital's teachings were disseminated and in 1648

there appeared in Amsterdam the *Emek ha-Melekh* of Naph-tali *Bacharach, which contained an extremely detailed presentation of Lurianic doctrine based on a mixture of the two traditions of Vital and Sarug. It had an enormous influence although it also aroused protest and criticism. It was followed by the publication of other sources which sought to interpret the new teaching; e.g., *Hathalat ha-Hokhmah* from the Sarug school, published by a Polish kabbalist, Abraham Kalmanks of Lublin, who assumed authorship of the book under the title *Ma'ayan ha-Hokhmah* (Amsterdam, 1652). However, the books published in the field of Kabbalah, which continued to increase in number during the 17th century, only partially reflect the great tidal waves of Kabbalah which were sweeping both East and West. From Erez Israel and Egypt spread a great variety of different editions and redactions of all kinds of Lurianic teachings, which captivated those who were mystically inclined. A large amount of this output was the work of men at the center established in Jerusalem between 1630 and 1660 whose leaders, Jacob *Zemaḥ, Nathan b. Reuben Spiro, and Meir *Poppers, labored unstintingly both in editing Vital's writings and in composing their own works. Of these, only the books of Nathan Spiro, who spent some of his later years in Italy, were actually printed (*Tuv ha-Arez*, 1655, *Yayin ha-Meshummar*, 1660, and *Mazzat Shimmurim*, all in Venice). The way in which the Kabbalah penetrated every aspect of life can be seen not only in the long list of homiletic works of a completely kabbalistic nature and of ethical works written under its influence (especially the *Shenei Luḥot ha-Berit* of Isaiah *Horowitz), but also in the interpretations of legal and halakhic details based on kabbalistic principles. Ḥayyim b. Abraham *ha-Kohen of Aleppo was particularly distinguished in this field and his book *Mekor Ḥayyim*, with its various parts, paved the way for a new type of kabbalistic literature.

The rise of the Kabbalah and its complete dominance in many circles was accompanied by some hostile reaction. It is true, of course, that the support given to the Kabbalah by men of renowned rabbinic authority prevented vituperative attacks and, in particular, open charges of heresy, but many intellectuals of a more conservative nature were suspicious of the Kabbalah and some even expressed their hostility openly in their books. Among these should be mentioned Elijah *Delmedigo in his *Behinat ha-Dat*, and Mordecai Corcos in a special work now lost. A bitter attack on the Kabbalah was launched by Moses b. Samuel Ashkenazi of Candia (c. 1460) in a number of writings preserved in Vatican Ms. 254. An anonymous work, *Ohel Mo'ed* (of the Spanish expulsion period; Jerusalem Ms.), was written in answer to the rabbis who belittled and mocked the Kabbalah. As the Kabbalah spread more widely in the community Leone (Judah Aryeh) *Modena of Venice (about 1625) wrote the classical polemical work against it, *Ari Nohem*, but he did not dare to publish it in his lifetime (ed. N. Libowitz, 1929). However, his book became widely known in manuscript and provoked many reactions. Solomon Delmedigo also criticized the Kabbalah severely in his *Iggeret Ahuz*,

which was also circulated in manuscript only (published by Abraham *Geiger in *Melo Hofnajim*, Berlin, 1840).

In its continued advance, the Kabbalah reached Poland from the second half of the 16th century (see the mass of material in Dembitzer, *Kelilat Yofi*, 2 (1888), 5–10, 117–26). Public enthusiasm reached such proportions that “he who raises objections to the science of the Kabbalah” was considered “liable to excommunication” (R. Joel *Sirkes in a responsum). At first Cordovero's approach was in the forefront, but from the beginning of the 17th century Luria's Kabbalah began to dominate. Nevertheless, before 1648, the actual systematic ideas of the Kabbalah had little influence, as far as can be judged from the writings of Aryeh Loeb Priluk (commentaries to the Zohar), Abraham Kohen Rappaport of Ostrog (in his homilies at the end of the collection of responsa *Eitan ha-Ezraḥi*), Nathan b. Solomon Spira of Cracow (*Sefer Megalleh Amukot*, 1637), Abraham Chajes (in *Holekh Tamim*, Cracow, 1634), and others. Here also the writings of the Sarug school were the first to be circulated; apparently the visit of Sarug himself to Poland shortly after 1600, which is convincingly documented, also left its mark. Great stress was laid here on the war against the power of the *sitra aḥra* crystallized in the *kelippot*, which was divorced from its association with the Lurianic idea of *tikkun* and treated as a basic principle in its own right. The tendency to personify these powers in various demonological forms is featured particularly in the work of Samson b. Pesah *Ostropoler, who after his death (in the *Chmielnicki massacres of 1648) was considered one of the greatest Polish kabbalists. The attempt to create a complete demonological mythology gave this particular stream of Kabbalah a unique character. To some extent it was based on writings falsely ascribed to Isaac Luria, but really composed in Poland (see REJ, 143 (1953), 37–39).

The Kabbalah in Later Times

A generation after Lurianic Kabbalah had become widely established, the messianic tension embodied within it burst out into the Shabbatean movement. Although there were, of course, various local factors involved in the extent to which people's minds were open to the announcement of the Messiah's coming, nevertheless the growing dominance of the Kabbalah in the popular consciousness of the time, and particularly among the fervently religious, must be seen as the general background which made the movement possible and fixed its mode of expression. The profound upheaval which the messianic experience brought in its wake opened the way for great changes in the world of traditional Kabbalah – or in the Kabbalah that the generations preceding Shabbateanism considered to be traditional. When large groups of people continued to hold fast to their faith in the messianic claim of Shabbetai *Zevi even after his apostasy, two factors combined to create an abnormal and audacious Shabbatean Kabbalah which was regarded as heretical by the more conservative kabbalists: (1) the idea that the beginning of redemption made it already possible to see the changes that redemption would effect in the structure

of the worlds, and that the mystery of creation could be unravelled in terms of visionary revelations which had not been possible before; and (2) the need to fix the place of the Messiah in this process and to justify in this way the personal career of Shabbetai Zevi despite all its contradictions. Consequently it is clear that the whole Shabbatean Kabbalah was new, full of daring ideas which had great powers of attraction. Whatever essential originality later Kabbalah contains is derived mainly from the Kabbalah of the Shabbateans, whose principal ideas were the creation of Nathan of *Gaza (d. 1680), Shabbetai's prophet, and of Abraham Miguel *Cardozo (d. 1706). Although their books were not printed, they were frequently copied, and the influence of their ideas on those who were secret adherents of Shabbateanism is easily recognizable, even in several works that did in fact reach the press. The fact that some of the greatest rabbis were to be counted among the concealed Shabbatean faithful meant that there was a twilight area in their printed writings. This new Kabbalah showed its strength mainly in the period from 1670 to 1730.

By contrast, originality in the work of the kabbalists who remained outside the Shabbatean camp was limited. Continuators rather than original thinkers, they concentrated their efforts in two directions: (1) to continue the way that had emerged through the development of the Kabbalah from the Zohar to Isaac Luria; to examine and interpret the words of the earlier authorities; and generally to act as if nothing had happened and as if the Shabbatean explosion had never taken place; and (2) to limit the spread of the Kabbalah among the populace, because of the dangerous consequences they feared Shabbateanism had had for traditional Judaism; and to restore the Kabbalah to its former position, not as a social force but as an esoteric teaching restricted to a privileged few. Hence the predominantly conservative character of the Kabbalah from 1700 onward. Careful not to burn themselves on the hot coals of messianism, its adherents emphasized rather the aspects of meditation, of praying with *kavvanah*, of theosophy, and of moral teaching in the spirit of Kabbalah. New revelations were suspect. Differences of approach began to crystallize particularly around the question of how exactly the teachings of Isaac Luria should be understood as they had been formulated in the different schools of his disciples or of their disciples. Here there was room for quite striking differences of opinion. There were even some kabbalists who, secretly influenced by Shabbateanism, drew a clear boundary between the traditional Lurianic Kabbalah and the area of new revelations and researches which remained closed to outsiders. It was as if there were no point of contact between these two areas, and they were able to remain side by side within the same domain. This was the case, for example, with Jacob Koppel Lifschuetz (one of the secret Shabbateans) in his *Sha'arei Gan Eden* (Koretz, 1803) and, in a different way, with Moses Hayyim Luzzatto (d. 1747), who tried to make a distinction between his systematic studies of Lurianic Kabbalah (in *Pithei Hokhmah* and *Addir ba-Marom*, etc.) and the studies based on the revelations granted to him through his **maggid*.

Most of those who were considered the foremost kabbalists devoted themselves to cultivating the Lurianic tradition, sometimes attempting to combine it with Cordovero's system. The enormous literary output, of which only a fraction has been printed, reflects this state of affairs. In addition to this, selections or anthologies were made, most outstanding of which was the *Yalkut Reuveni* by Reuben *Hoeshke, arranged in two parts, the first according to subject matter (Prague, 1660) and the second following the order of the Torah (Wilmersdorf, 1681). This collection of the aggadic output of the kabbalists had a wide circulation. Anthologies of this type were composed mainly by the Sephardi rabbis up to recent times, mostly with the addition of their own interpretations; e.g., the valuable *Midrash Talpiyyot* of Elijah ha-Kohen ha-Itamari (Smyrna, 1736).

Apart from works of Kabbalah in the precise sense of involvement in, and presentation of, its ideas, a more popular Kabbalah began to spread from the end of the 17th century. Emphasizing mainly the basic ethical foundation and teaching concerning the soul, this popular Kabbalah chose a few isolated ideas from other kabbalistic teachings and embroidered them with general aggadic homilies. The influence of these books was no less than that of the works of technical Kabbalah. Literature of this kind was initiated by great preachers like Bezalel b. Solomon of Slutsk, Aaron Samuel Kaidanover (*Koidanover), and his son Zevi Hirsch, author of *Kav ha-Yashar*, and Berechiah Berakh Spira of Poland. Among the Sephardim were Hayyim ha-Kohen of Aleppo in his *Torat Hakham*, Elijah ha-Kohen ha-Itamari of Smyrna, Hayyim ibn *Attar of Morocco in *Or ha-Hayyim*, and Mordecai Moses Sasson of Baghdad. Commentaries in this vein on midrashic literature also circulated; e.g., *Nezer ha-Kodesh* by Jehiel Mikhal b. Uzziel (on Gen. R., 1719) and *Zikkukin de-Nura* by Samuel b. Moses Heida (on *Tanna de-Vei Elyahu*, Prague, 1676). Under the influence of the Kabbalah, the *Midrashei ha-Peli'ah* were composed in Poland in the 17th century. These extremely paradoxical and mystifying sayings, often couched in an early midrashic style, can be understood only through a mixture of kabbalistic allusion and ingenuity. According to Abraham, the son of the Gaon of Vilna (in *Rav Pe'alim*, 97), a collection of this type, *Midrash Peli'ah*, was printed in Venice in the 17th century. Other such collections are known from the 19th century.

In this period there were important kabbalistic centers in Morocco where a very rich literature was produced, although most of it remained in manuscript. The Kabbalah was dominant in other North African countries and the emphasis was mainly on Lurianic Kabbalah in all its ramifications. A mixture of all the systems is evident among the kabbalists of Yemen and Kurdistan, where the Kabbalah struck very deep roots, particularly from the 17th century onward. The most prominent Yemenite kabbalists, both from Sana, were the poet Shalom b. Joseph Shabbazi (17th century), to whom has been attributed the *Midrash Hemdat Yamin* on the Torah, and Joseph Zalah (d. 1806), author of the commentary *Ez Hayyim*

on the liturgy according to the Yemeni rite (*Tikhlah*, Jerusalem, 1894). The Hariri family of kabbalists was active in *Ruwandiz in Kurdistan in the 17th and 18th centuries, and most of their writings are extant in manuscript. Later centers were formed in Aleppo and Baghdad, whose kabbalists were renowned in their own lands. In all these countries, and also in Italy, religious poetry of a kabbalistic nature developed and spread widely. The main later poets were Moses Zacuto, Benjamin b. Eliezer ha-Kohen, and Moses Ḥayyim Luzzatto in Italy, Jacob b. Zur in Morocco (*Et le-Khol Ḥefez*, Alexandria, 1893), Solomon Molcho (the second) in Salonika and Jerusalem (d. 1788), and Mordecai Abadi in Aleppo.

In contrast to these regional centers, a special position was occupied by the new center established in Jerusalem in the middle of the 18th century, headed by the Yemenite kabbalist Shalom Mizraḥi *Sharabi (ha-Reshash; d. 1777), the most important kabbalist throughout the Orient and North Africa. He was thought to be inspired from on high and in this respect equalled only by Isaac Luria himself. In his personality and in the yeshivah Bet El which continued his tradition for nearly 200 years in the Old City of Jerusalem (it was destroyed in an earthquake in 1927), a twofold approach crystallized: (1) a definite, almost exclusive, concentration on Lurianic Kabbalah based on the writings of Vital, particularly his *Shemonah She'arim*, and the adoption of the doctrine of *kavvanot* and mystical contemplation during prayer as being central to Kabbalah in both its theoretical and practical aspects; (2) a complete break with activity on the social level and a shift toward the esotericism of a spiritual elite, who embody the exclusive, pietist life. There are obvious points of similarity between this later form of Kabbalah and the type of Muslim mysticism (Sufism) prevailing in those lands from which Bet El drew its adherents. Sharabi himself wrote a prayer book (printed in Jerusalem in 1911) with detailed elaborations of the *kavvanot*, outnumbering even those transmitted in the *Sha'ar ha-Kavvanot* in the name of Luria. The training of the members of this circle, popularly known as the *Mekhavvenim*, required them to spend many years on the spiritual mastering of these *kavvanot*, which every member was duty-bound to copy in their entirety. From the first two generations after Bet El was founded a number of *shetarei hitkasherut* ("bills of association") still exist, in which the signatories pledged themselves to a life of complete spiritual partnership both in this world and in the world to come. Apart from Sharabi, the leaders of the group in the first generation were Yom Tov *Algazi (1727–1802), Ḥayyim Joseph David *Azulai, and Ḥayyim della Rosa (d. 1786). As in the case of the writings of Isaac Luria, Sharabi's books also gave rise to an abundant exegetical and textual literature. (For a detailed list of the Bet El kabbalists see Frumkin, *Toledot Ḥakhmei Yerushalayim*, 3 (1930), 47–54, 107–21.) The supreme authority of this circle as the true center of Kabbalah was quickly established throughout all Islamic countries and its position was very strong. Many kabbalistic legends were woven around Sharabi. The last of the chief mainstays of Bet El were Ma'sud Kohen Alḥadad

(d. 1927), Ben-Zion Ḥazan (1877–1951), and Ovadiah Hadayah (1891–1969).

Only a few chosen individuals, naturally, went to the center at Bet El. Among those leaders of Kabbalah who remained in their own countries in the East, particular mention should be made of Abraham *Azulai of Marrakesh (d. 1741), Abraham Tobiana of Algiers (d. 1793), Shalom *Buzaglo of Marrakesh (d. 1780), Joseph Sadboon of Tunis (18th century), and Jacob Abi-Ḥasira (d. 1880); Sasson b. Mordecai Shandookh (1747–1830) and Joseph Ḥayyim b. *Elijah (d. 1909) were the main kabbalists of Baghdad. Several of the Turkish and Moroccan kabbalists of the 18th century were wavering with regard to Shabbateanism, like Gedaliah Ḥayon of Jerusalem, Meir *Bikayam of Smyrna, and David di Medina of Aleppo. The classic work to emerge from the kabbalists of these circles, who clung to all the minutiae of the tradition but at the same time did not sever their links with Shabbateanism, was **Hemdat Yamim*, by an anonymous author (Smyrna, 1731–32), which was enormously influential in the East.

The later development of the Kabbalah in Poland did not lead to the establishment of a center like Bet El, but a center of a slightly similar type existed between 1740 and the beginning of the 19th century in the *Klaus (*kloiyz*) at Brody. In this era the *Yoshevei ha-Klaus* ("the Sages of the Klaus") constituted an organized institution of kabbalists who worked together and were consulted as men of particular authority. At the head of this group were Ḥayyim b. Menahem Zanzer (d. 1783), and Moses b. Hillel Ostrer (from Ostrog; d. 1785). When the new ḥasidic movement developed in Podolia and became an additional and independent stage in the growth of Jewish mysticism and of the wider popularization of the kabbalistic message, the kabbalists of the Klaus remained outside it and indeed stood aloof from it. In this center, too, great emphasis was laid on profound study of Lurianic Kabbalah. The only link between the two centers was provided by Abraham Gershon of *Kutow (Kuty), the brother-in-law of Israel b. *Eliezer, the Ba'al Shem Tov, who was at first a member of the Klaus at Brody, and who went to Erez Israel and in his later years joined the kabbalists of Bet El, or at least was close to them in spirit. Many of the kabbalistic works published in Poland in the 18th century received the official approval of the Klaus group; but even before the establishment of this center the study of Kabbalah flourished in many places in Poland, as well as in Germany and other Hapsburg lands.

At this time many kabbalists came in particular from Lithuania, like Judah Leib Pohovitzer at the end of the 17th century, and Israel *Jaffe, the author of *Or Yisrael* (1701). In the 18th century the foremost Lithuanian kabbalists were Aryeh Leib *Epstein of Grodno (d. 1775) and R. Elijah, the Gaon of Vilna, whose approach set the pattern for most 19th-century Lithuanian kabbalists. Especially notable among the latter were Isaac Eisik (Ḥaver) *Wildmann, author of *Pithei She'arim*, and Solomon *Eliashov (1841–1924), who wrote *Leshem Shevo ve-Aḥlamah*; both works are systematic discourses on Lurianic Kabbalah. Many kabbalistic works appeared in Poland and

Germany from the end of the 17th century, and just as many ethical treatises based on kabbalistic principles. Attempts at systematization occur in *Va-Yakhel Moshe* by Moses b. Menahem *Graf of Prague (Dessau 1699) and several books by Eliezer Fischel b. Isaac of *Strzyżów. Literature which based its religious fervor on the power of “revelation from above” was generally suspected, not without reason, of Shabbatean tendencies, but books of this genre did exist within the more conservative Kabbalah, e.g., *Sefer Berit Olam* by Isaac b. Jacob Ashkenazi (vol. 1 Vilna, 1820, vol. 2 Jerusalem, 1937). The development in Poland in the 18th century was linked to a great extent with the influence of Italian kabbalists, and particularly with the *Shomer Emunim* of Joseph *Ergas and the *Mishnat Ḥasidim* and *Yosher Levav* of Immanuel Ḥai *Ricchi, which presented different approaches to an understanding of Lurianic teaching. The kabbalistic revelations of Moses David *Valle of Modena (d. 1777) remained a closed book, but copies of the writings of Moses Ḥayyim Luzzatto reached the Lithuanian kabbalists, and some of them were known to the early Ḥasidim, on whom they made a great impression. Ergas was followed by Baruch b. Abraham of *Kosov in his various introductions to the Kabbalah, which remained unpublished until some 100 years after his death. An orthodox systematic presentation was made by the kabbalist Jacob Meir Spielmann of Bucharest in *Tal Orot* (Lvov, 1876–83). Attempts were made once again to link Kabbalah with philosophic studies, as in the *Maʿamar Eḥsharit ha-Tiv’it* by Naphtali Hirsch *Goslar, the early writings of Solomon *Maimon (see A. Geiger, JZWL, 4, 1866, 192–6), which remained in manuscript, and particularly the *Sefer ha-Berit* of Phinehas Elijah Horowitz of Vilna (Brunn, 1897) and the *Imrei Binah* by Isaac *Satanow, one of the first *maskilim* in Berlin.

In contrast to these attempts at a deeper study of Kabbalah, the ḥasidic movement broadened the canvas and strove to make kabbalistic ideas more and more popular, often by means of a new and more literal interpretation of its principles (see *Ḥasidism). In this movement Jewish mysticism proved to be once again a living force and a social phenomenon. In the *Chabad branch of Ḥasidism an original form of Kabbalah was created, which had a clear psychological objective and produced a variegated literature; but in the ḥasidic camp too there were currents that went back to a study of Lurianic Kabbalah. This Kabbalah flourished anew for a century, particularly in the school of Zevi Hirsch of *Zhidachov (Zydzaczów; d. 1831) which produced a rich kabbalistic literature. The heads of this school were Isaac Eizik Jehiel of *Komarno (d. 1874), Isaac Eizik of Zhidachov (d. 1873), and Joseph Meir Weiss of *Spinka (1838–1909).

At the beginning of the nationalist ferment of the 19th century two kabbalists were active – Elijah *Guttmacher in Graetz (1796–1874) and Judah *Alkalai in Belgrade (1798–1878); the latter’s Zionist writings are suffused with the spirit of Kabbalah. In Central and Western Europe the influence of the Kabbalah swiftly declined, particularly after the conflict between Jacob *Emden and Jonathan *Eybeschutz concerning

the latter’s association with Shabbateanism. Nathan *Adler in Frankfurt gathered around himself a circle which had kabbalistic tendencies, and his pupil, Seckel Loeb *Wormser, “the Baal Shem of Michelstadt” (d. 1847), was for some time removed by the government from the rabbinate of his city, “because of his superstitious kabbalistic faith” – apparently as the result of intrigue by the *maskilim*. While Phinehas Katzenelenbogen, the rabbi of Boskovice in the middle of the 18th century, was cataloging the kabbalistic dreams and experiences of his family (Oxford Ms. 2315), and in the circle of Nathan Adler, as in the circles of the later Frankists in Offenbach, claims to prophetic dreams were made, the rabbis were withdrawing further and further from any manifestation of a mystical tendency or a leaning toward the Kabbalah. When Elhanan Hillel Wechsler (d. 1894) published his dreams concerning the holocaust which was about to befall German Jewry (1881), the leading Orthodox rabbis tried to prevent him from doing so, and his kabbalistic leanings led to his being persecuted. The last book by a German kabbalist to be printed was *Torei Zahav* by Hirz Abraham Scheyer of Mainz (d. 1822) published in Mainz in 1875. However, various kinds of kabbalistic literature continued to be written in Eastern Europe and the Near East up to the time of the Holocaust, and in Israel until the present. The transformation of kabbalistic ideas into the forms of modern thought may be seen in the writings of such 20th-century thinkers as R. Abraham Isaac *Kook (*Orot ha-Kodesh, Arpilei Tohar, Reish Millin*); in the Hebrew books of Hillel *Zeitlin; and in the German writings of Isaac Bernays (*Der Bibel’sche Orient*, 1821) and Oscar *Goldberg (*Die Wirklichkeit der Hebraeer*, Berlin, 1925).

The fervent assault on the Kabbalah by the Haskalah movement in the 19th century limited its deep influence in Eastern Europe to a marked degree; but it succeeded hardly at all in lessening the influence of the Kabbalah in Oriental countries, where the life of the Jewish community was deeply affected by it until recent times. An exception was the anti-kabbalistic movement in the Yemen known as *Dor De’ah* (“Do-erdt”). Headed by Yiḥya *Kafaḥ (Kafih) of Sana (d. 1931), it caused much strife among the Jews of Yemen. Apart from the accusatory and defamatory writings from 1914 onward, there appeared in connection with this controversy the *Milḥamat ha-Shem* of Kafaḥ and the reply of the Yemeni rabbis, *Emunat ha-Shem* (Jerusalem 1931 and 1938). This voluminous defense was actually written by an 18-year-old scholar, Joseph Jacob Zubiri.

THE BASIC IDEAS OF KABBALAH

As is apparent from the preceding account, the Kabbalah is not a single system with basic principles which can be explained in a simple and straightforward fashion, but consists rather of a multiplicity of different approaches, widely separated from one another and sometimes completely contradictory. Nevertheless, from the date of the appearance of the *Sefer ha-Bahir* the Kabbalah possessed a common range of symbols and ideas which its followers accepted as a mystical tradition, although

they differed from one another in their interpretation of the precise meaning of these symbols, of the philosophical implications inherent in them, and also of the speculative contexts through which it became possible to regard this common framework as a kind of mystical theology of Judaism. But even within this system two stages must be differentiated:

(1) the range of symbols of the early Kabbalah up to and including the Safed period, i.e., the theory of the *Sefirot* as it crystallized in Gerona, in the various parts of the Zohar, and in the works of kabbalists up to Cordovero; and

(2) the range of symbols created by Lurianic Kabbalah, which in the main dominated kabbalistic thinking since the 17th century until recent times. The Lurianic system goes beyond the doctrine of the *Sefirot*, although it makes a wide and emphatic use of its principles, and is based on the symbolism of the *parzufim*.

In addition to this, two basic tendencies can be discerned in kabbalistic teaching. One has a strongly mystical direction expressed in images and symbols whose inner proximity to the realm of myth is often very striking. The character of the other is speculative, an attempt to give a more or less defined ideational meaning to the symbols. To a large extent this outlook presents kabbalistic speculation as a continuation of philosophy, a kind of additional layer superimposed upon it through a combination of the powers of rational thought and meditative contemplation. The speculative expositions of kabbalistic teaching largely depended on the ideas of neoplatonic and Aristotelian philosophy, as they were known in the Middle Ages, and were couched in the terminology customary to these fields. Hence the cosmology of the Kabbalah is borrowed from them and is not at all original, being expressed in the common medieval doctrine of the separate intellects and the spheres. Its real originality lies in the problems that transcend this cosmology. Like Jewish philosophy, the speculative Kabbalah moved between two great heritages, the Bible and talmudic Judaism on the one hand, and Greek philosophy in its different forms on the other. The original and additional feature, however, was the new religious impulse which sought to integrate itself into these traditions and to illuminate them from within.

God and Creation

All kabbalistic systems have their origin in a fundamental distinction regarding the problem of the Divine. In the abstract, it is possible to think of God either as God Himself with reference to His own nature alone or as God in His relation to His creation. However, all kabbalists agree that no religious knowledge of God, even of the most exalted kind, can be gained except through contemplation of the relationship of God to creation. God in Himself, the absolute Essence, lies beyond any speculative or even ecstatic comprehension. The attitude of the Kabbalah toward God may be defined as a mystical agnosticism, formulated in a more or less extreme way and close to the standpoint of neoplatonism. In order to express this unknowable aspect of the Divine the early kab-

balists of Provence and Spain coined the term *Ein-Sof* ("Infinite"). This expression cannot be traced to a translation of a Latin or Arabic philosophical term. Rather it is a hypostatization which, in contexts dealing with the infinity of God or with His thought that "extends without end" (*le-ein sof* or *ad le-ein sof*), treats the adverbial relation as if it were a noun and uses this as a technical term. *Ein-Sof* first appears in this sense in the writings of Isaac the Blind and his disciples, particularly in the writings of Azriel of Gerona, and later in the Zohar, the *Ma'arekhet ha-Elohut*, and writings of that period. While the kabbalists were still aware of the origin of the term they did not use it with the definite article, but treated it as a proper noun; it was only from 1300 onward that they began to speak of *ha-Ein-Sof* as well, and generally identify it with other common epithets for the Divine. This later usage, which spread through all the literature, indicates a distinct personal and theistic concept in contrast to the vacillation between an idea of this type and a neutral impersonal concept of *Ein-Sof* found in some of the earlier sources. At first it was not clear whether the term *Ein-Sof* referred to "Him who has no end" or to "that which has no end." This latter, neutral aspect was emphasized by stressing that *Ein-Sof* should not be qualified by any of the attributes or personal epithets of God found in Scripture, nor should such eulogies as *Barukh Hu* or *Yitbarakh* (found only in the later literature) be added to it. In fact, however, there were various attitudes to the nature of *Ein-Sof* from the very beginning; Azriel, for example, tended toward an impersonal interpretation of the term, while Asher b. David employed it in a distinctly personal and theistic way.

Ein-Sof is the absolute perfection in which there are no distinctions and no differentiations, and according to some even no volition. It does not reveal itself in a way that makes knowledge of its nature possible, and it is not accessible even to the innermost thought (*hirhur ha-lev*) of the contemplative. Only through the finite nature of every existing thing, through the actual existence of creation itself, is it possible to deduce the existence of *Ein-Sof* as the first infinite cause. The author of the *Ma'arekhet ha-Elohut* put forward the extreme thesis (not without arousing the opposition of more cautious kabbalists) that the whole biblical revelation, and the Oral Law as well, contained no reference to *Ein-Sof*, and that only the mystics had received some hint of it. Hence the author of this treatise, followed by several other writers, was led to the daring conclusion that only the revealed God can in reality be called "God," and not the hidden "*deus absconditus*," who cannot be an object of religious thought. When ideas of this kind returned in a later period in Shabbatean and quasi-Shabbatean Kabbalah, between 1670 and 1740, they were considered heretical.

Other terms or images signifying the domain of the hidden God that lies beyond any impulse toward creation occur in the writings of the Gerona kabbalists and in the literature of the speculative school. Examples of these terms are *Mah she-ein ha-ma'hashavah masseget* ("that which thought cannot attain" – sometimes used also to describe the first emanation),

ha-or ha-mit'alleim ("the concealed light"), *seter ha-ta'alamah* ("the concealment of secrecy"), *yitron* ("superfluity" – apparently a translation of the neoplatonic term *hyperousia*), *ha-ahdut ha-shavah* ("indistinguishable unity," in the sense of a unity in which all opposites are equal and in which there is no differentiation), or even simply *ha-mahut* ("the essence"). The factor common to all these terms is that *Ein-Sof* and its synonyms are above or beyond thought. A certain wavering between the personal and the neutral approach to the concept of *Ein Sof* can also be seen in the main part of the Zohar, while in the later stratum, in the *Ra'aya Meheimna* and the *Tikkunim*, a personal concept is paramount. *Ein-Sof* is often identified with the Aristotelian "cause of all causes," and, through the kabbalistic use of neoplatonic idiom, with the "root of all roots." While all the definitions above have a common negative element, occasionally in the Zohar there is a remarkable positive designation which gives the name *Ein-Sof* to the nine lights of thought that shine from the Divine Thought, thus bringing *Ein-Sof* out of its concealment and down to the more humble level of emanation (the contrast between the two concepts emerges through comparison between various passages, e.g., 1, 21a, and 2, 239a with 2, 226a). In later development of Lurianic Kabbalah, however, in distinct opposition to the view of the earlier kabbalists, several differentiations were made even within *Ein-Sof*. In Kabbalah, therefore, *Ein-Sof* is absolute reality, and there was no question as to its spiritual and transcendental nature. This was so even though the lack of clarity in some of the expressions used by the kabbalists in speaking of the relationship of the revealed God to His creation gives the impression that the very substance of God Himself is also immanent within creation (see below on Kabbalah and pantheism). In all kabbalistic systems, light-symbolism is very commonly used with regard to *Ein-Sof*, although it is emphasized that this use is merely hyperbolic, and in later Kabbalah a clear distinction was sometimes made between *Ein-Sof* and "the light of *Ein-Sof*." In the popular Kabbalah which finds expression in ethical writings and hasidic literature, *Ein-Sof* is merely a synonym for the traditional God of religion, a linguistic usage far removed from that of the classical Kabbalah, where there is evidence of the sharp distinction between *Ein-Sof* and the revealed Divine Creator. This can be seen not only in the formulations of the early kabbalists (e.g., Isaac of Acre in his commentary to the *Sefer Yezirah*, in: KS 31 (1956), 391) but also among the later ones; Barukh Kosover (c. 1770) writes: "*Ein-Sof* is not His proper name, but a word which signifies his complete concealment, and our sacred tongue has no word like these two to signify his concealment. And it is not right to say '*Ein-Sof*, blessed be He' or 'may He be blessed' because He cannot be blessed by our lips" (*Ammud ha-Avodah*, 1863, 211d).

The whole problem of creation, even in its most recondite aspects, is bound up with the revelation of the hidden God and His outward movement – even though "there is nothing outside Him" (Azriel), for in the last resort "all comes from the One, and all returns to the One," according to the neopla-

tonic formula adopted by the early kabbalists. In kabbalistic teaching the transition of *Ein-Sof* to "manifestation," or to what might be called "God the Creator," is connected with the question of the first emanation and its definition. Although there were widely differing views on the nature of the first step from concealment to manifestation, all stressed that any account of this process was not an objective description of a process in *Ein-Sof*; it was no more than could be conjectured from the perspective of created beings and was expressed through their ideas, which in reality cannot be applied to God at all. Therefore, descriptions of these processes have only a symbolic or, at best, an approximate value. Nevertheless, side by side with this thesis, there is detailed speculation which frequently claims objective reality for the processes it describes. This is one of the paradoxes inherent in Kabbalah, as in other attempts to explain the world in a mystical fashion.

The decision to emerge from concealment into manifestation and creation is not in any sense a process which is a necessary consequence of the essence of *Ein-Sof*; it is a free decision which remains a constant and impenetrable mystery (Cordovero, at the beginning of *Elimah*). Therefore, in the view of most kabbalists, the question of the ultimate motivation of creation is not a legitimate one, and the assertion found in many books that God wished to reveal the measure of His goodness is there simply as an expedient that is never systematically developed. These first outward steps, as a result of which Divinity becomes accessible to the contemplative probings of the kabbalist, take place within God Himself and do not "leave the category of the Divine" (Cordovero). Here the Kabbalah departs from all rationalistic presentations of creation and assumes the character of a "theosophic" doctrine, that is, one concerned with the inner life and processes of God Himself. A distinction in the stages of such processes in the unity of the Godhead can be made only by human abstraction, but in reality they are bound together and unified in a manner beyond all human understanding. The basic differences in the various kabbalistic systems are already apparent with regard to the first step, and since such ideas were presented in obscure and figurative fashion in the classical literature, such as the *Bahir* and the Zohar, exponents of widely differing opinions were all able to look to them for authority. The first problem, which from the start elicited different answers, was whether the first step was one toward the outer world at all, or rather a step inward, a withdrawal of *Ein-Sof* into the depths of itself. Early kabbalists and Cordovero adopted the former view, which led them to a theory of emanation close to the neoplatonic although not absolutely identical with it. But Lurianic Kabbalah, which took the latter position, speaks not only of a return of created things to their source in God but also of a return (*regressus*) of God into the depths of Himself preceding creation, a process identifiable with that of emanation only by means of interpreting it as a mere figure of speech. Such an interpretation did, in fact, appear before long (see the section on Lurianic Kabbalah). The concepts which occur most frequently in the description of this first step mainly concern

will, thought, *Ayin* (“absolute Nothingness”), and the inner radiation of *Ein-Sof* in the supernal lights called “splendors” (*zahzahot*), which are higher than any other emanation.

WILL. If *Ein-Sof* is denied any attributes then it must be separated from the Divine Will, however exalted the latter is and however clearly connected with its possessor, which is *Ein-Sof*. The kabbalists of Gerona frequently speak of the hidden God working through the Primal Will, which is, as it were, encompassed by Him and united with Him. This, the highest of emanations, which is either emanated from His essence, or concealed within His power, constitutes the ultimate level to which thought can penetrate. Mention is made of “the infinite Will” (*ha-razon ad ein-sof*), “infinite exaltation” (*ha-rom ad ein-sof*) or “that which thought cannot ever attain,” and the reference is to that unity of action between *Ein-Sof* and its first emanation, which is bound to and returns constantly to its source. In some works, e.g., Azriel’s *Perush ha-Aggadot*, there is hardly any mention of *Ein-Sof* at all; instead, the Primal Will appears in expressions which are generally connected with *Ein-Sof* itself. Was this Will co-eternal with *Ein-Sof* itself, or did it originate only at the time of its emanation, so that it is possible to think of a situation in which *Ein-Sof* existed without Will, i.e., volition to create or be manifested? Several of the kabbalists of Gerona and their followers tended to believe that the Primal Will was eternal, and thus they fixed the beginning of the process of emanation at the second step or *Sefirah*, which was consequently called *reshit* (“beginning”), identified with the Divine Wisdom of God (see below). Most of the statements in the main part of the *Zohar* follow this view. What is called “the infinite Will,” in the sense of the unity of *Ein-Sof* with the Will and their joint manifestation in the first *Sefirah*, is given the figurative name *Attika Kaddisha* (“the Holy Ancient One”) in the *Zohar*. Also, in those passages which speak of *Ein-Sof* and the beginning of emanation, this beginning (*reshit*) is always related to the second *Sefirah*, there being no mention that what preceded it also came into being in time and had not been eternally emanated. Therefore in some cases the first emanation is seen as only an external aspect of *Ein-Sof*: “It is called *Ein-Sof* internally and *Keter Elyon* externally” (*Tikkunei Zohar*, end of *Tikkun 22*). However, this ordering occurs only in those passages which discuss the process in detail; in those dealing with the process of emanation in general there is no differentiation between the status of the first *Sefirah* and that of the other *Sefirot*. As the Kabbalah developed in Spain the tendency prevailed to make a clear distinction between *Ein-Sof* and the first emanation, which now began to be considered neither eternal nor pre-existent. Among the kabbalists of Safed, indeed, the contrary view was considered almost heretical, since it made possible the identification of *Ein-Sof* with the first *Sefirah*. In fact this identification is actually found in several early kabbalistic sources, and the anonymous author of *Sefer ha-Shem*, mistakenly attributed to Moses de Leon (c. 1325, printed in *Heikhal ha-Shem*, Venice, 1601, 4b), criticizes the *Zohar* because of it, saying it

is contrary to “the view of the greatest kabbalists” and an error made possible only by the false assumption that the *Ein-Sof* and first emanation are one.

The early kabbalists, particularly Azriel of Gerona and Asher b. David, considered the Divine Will as that aspect of the Divine Essence which alone was active in creation, and was implanted there by the power of *Ein-Sof*. Communion with the Supreme Will was the final aim of prayer, for it was “the source of all life,” including emanation itself. Does this specific concept of the Will as the supreme Divine Power, which, according to the Gerona kabbalists and the *Zohar*, takes precedence even over Divine Thought and pure intellect, contain traces of the indirect influence of Solomon ibn Gabirol’s central idea in *Mekor Hayyim*? A historical connection seems clearly apparent in the teachings of Isaac ibn Latif (fl. 1230–60), who apparently lived in Toledo and could have read Gabirol’s book in the Arabic original. His theory is a mixture of Gabirol’s ideas and those of the first generations of Spanish Kabbalah. His view of the Will can be found mainly in his *Ginzei ha-Melekh* and *Zurat ha-Olam*. “The primordial Will” (*ha-ḥefez ha-kadmon*) is not completely identical with God, but is a garment “clinging to the substance of the wearer on all sides.” It was “the first thing to be emanated from the true pre-existent Being” in a continuing process which had no real beginning. Above matter and form, this Will unites the two in their first union, thus bringing into being what Ibn Latif calls “the first created thing” (*ha-nivra ha-rishon*). His description of the details of the processes that take place below the level of the Will differs from that of the other kabbalists; it was not accepted nor did it have any influence on the theory of emanation as it was formulated in later Kabbalah. As the tendency to all but identify *Ein-Sof* with the first *Sefirah* became less and less pronounced, so the distinction between *Ein-Sof* and the Will was emphasized to a correspondingly greater degree, although the question as to whether the Will was created or eternal continued to be surrounded by controversy, or was consciously obscured.

THOUGHT. Another concept basic to the whole problem of the first manifestation of *Ein-Sof* is that of “Thought” (*maḥashavah*). In the *Sefer ha-Bahir* and the writings of Isaac the Blind no special status is accorded to the Will, whose place is taken by “the Thought which has no end or finality,” and which exists as the highest state, from which all else has emanated, without being designated as an emanation itself. Accordingly, the first source of all emanation is sometimes also called “pure Thought” – a domain impenetrable to merely human thought. According to this theory, the whole creative process depends on an intellectual rather than a volitional act, and the history of Kabbalah is marked by a struggle between these two views of creation. The essential identity of Will and Thought was insisted on by Ibn Latif alone. For most kabbalists, that Thought which thinks only itself and has no other content was demoted to a level below that of Will and became identified with the Divine Wisdom, which preceded

to contemplate not only itself but the whole plan of creation and the paradigm of all the universe. Therefore, the Gerona kabbalists and the author of the Zohar speak of “the Will of Thought,” i.e., the Will which activates Thought, and not vice versa. The highest aspect of *hokhmah* (“Wisdom”), which the Gerona kabbalists speak of a great deal, is called *haskel* (from Jer. 9:23), a term denoting divine understanding, the activity of the *sekhel* (“divine intellect”), whatever the content of this might be, and not, as with *hokhmah*, its crystallization into a system of thought. The concept of *haskel* took the place of Will among those who were disinclined to accept the theory or were perplexed by it, particularly in the school of Isaac the Blind.

NOTHINGNESS. More daring is the concept of the first step in the manifestation of *Ein-Sof* as *ayin* or *afisah* (“nothing,” “nothingness”). Essentially, this nothingness is the barrier confronting the human intellectual faculty when it reaches the limits of its capacity. In other words, it is a subjective statement affirming that here is a realm which no created being can intellectually comprehend, and which, therefore, can only be defined as “nothingness.” This idea is associated also with its opposite concept, namely, that since in reality there is no differentiation in God’s first step toward manifestation, this step cannot be defined in any qualitative manner and can thus only be described as “nothingness.” *Ein-Sof* which turns toward creation manifests itself, therefore, as *ayin ha-gamur* (“complete nothingness”), or, in another version: “God Who is called *Ein-Sof* in respect of Himself is called *Ayin* in respect of His first self-revelation.” This daring symbolism is associated with most mystical theories concerning an understanding of the Divine, and its particular importance is seen in the radical transformation of the doctrine of *creatio ex nihilo* into a mystical theory stating the precise opposite of what appears to be the literal meaning of the phrase. From this point of view it makes no difference whether *Ein-Sof* itself is the true *ayin* or whether this *ayin* is the first emanation of *Ein-Sof*. From either angle, the monotheistic theory of *creatio ex nihilo* loses its original meaning and is completely reversed by the esoteric content of the formula. Since the early kabbalists allowed no interruption in the stream of emanation from the first *Sefirah* to its consolidation in the worlds familiar to medieval cosmology, *creatio ex nihilo* may be interpreted as creation from within God Himself. This view, however, remained a secret belief and was concealed behind the use of the orthodox formula; even an authoritative kabbalist like Nahmanides was able to speak in his commentary to the Torah of *creatio ex nihilo* in its literal sense as the free creation of the primeval matter from which everything was made, while simultaneously implying, as shown by his use of the word *ayin* in his commentary to Job 28:12 and by kabbalistic allusions in his commentary to Genesis 1, that the true mystical meaning of the text is the emergence of all things from the absolute nothingness of God. Basing their speculations on the commentary to the *Sefer Yezirah* by Joseph Ashkenazi (attributed

in the printed editions to Abraham b. David), kabbalists who held an undoubted theistic view tried to rescue the original significance of the formula by defining the first *Sefirah* as the first effect, which is absolutely separated from its cause, as if the transition from cause to effect involved a great leap from *Ein-Sof* to *ayin*, a view which conformed with the traditional theological picture. However, in order to escape the inner logic of the early theory, a few later kabbalists, from the 16th century onward, tried to add a new act of *creatio ex nihilo* after the emanation of the *Sefirot* or at each stage of emanation and creation. Doubts of this kind did not exist in Spanish Kabbalah, nor in the works of Cordovero, although in the *Elimah Rabbati* he found it hard to decide between a symbolic and a literal interpretation of the formula. David b. Abraham hal-Lavan in *Masoret ha-Berit* (end of 13th century) defined the *ayin* (“nothingness”) as “having more being than any other being in the world, but since it is simple, and all other simple things are complex when compared with its simplicity, so in comparison it is called ‘nothing’” (*Kovez al-Yad*, new series, i, 1936, 31). We also find the figurative use of the term *imkei ha-ayin* (“the depths of nothingness”), and it is said (*ibid.*) that “if all the powers returned to nothingness, the Primeval One who is the cause of all would remain in equal oneness in the depths of nothingness.”

THE THREE LIGHTS. Another idea connected with the transition from the Emanator to the emanated originated in a responsum (early 13th century) attributed to Hai Gaon, and subsequently aroused a great deal of speculation (see *Origines...*, 367–75). There it is stated that, above all emanated powers, there exist in “the root of all roots” three hidden lights which have no beginning, “for they are the name and essence of the root of all roots and are beyond the grasp of thought.” As the “primeval inner light” spreads throughout the hidden root two other lights are kindled, called *or mezuzzah* and *or zah* (“sparkling light”). It is stressed that these three lights constitute one essence and one root which is “infinitely hidden” (*ne’lam ad le-ein sof*), forming a kind of kabbalistic trinity that precedes the emanation of the ten *Sefirot*. However, it is not sufficiently clear whether the reference is to three lights between the Emanator and the first emanation, or to three lights irradiating one another within the substance of the Emanator itself – both possibilities can be supported. In the terminology of the Kabbalah these three lights are called *zahzahot* (“splendors”), and they are thought of as the roots of the three upper *Sefirot* which emanate from them (see Cordovero, *Pardes Rimmonim*, ch. 11). The need to posit this strange trinity is explained by the urge to make the ten *Sefirot* conform with the 13 attributes predicated of God. It is hardly surprising that Christians later found an allusion to their own doctrine of the trinity in this theory, although it contains none of the personal hypostases characteristic of the Christian trinity. In any case, the hypothesis of the *zahzahot* led to further complication in the theory of emanation and to the predication of roots in the essence of *Ein-Sof* to everything that was emanated. In the generation

following the publication of the Zohar, David b. Judah Ḥasid, in his *Mare'ot ha-Zove'ot*, mentions ten *zahzahot* placed between *Ein-Sof* and the emanation of the *Sefirot*.

Emanation and the Concept of the *Sefirot*

Scholars have long been engaged in a controversy over whether or not the Kabbalah teaches emanation as the emergence of all things from within God Himself. In this controversy there is considerable conceptual confusion. Like several scholars before him, A. Frank interpreted the Kabbalah as a pure emanatist system, which he considered identical with a clearly pantheistic approach. He therefore thought of emanation as an actual going-forth of the substance of God and not simply of the power of the Emanator. He based his interpretation on the Zohar, and especially on later Lurianic teaching, although neither of these two sources contains any reference to a direct theory of substantive emanation. In contrast to Frank, D.H. Joel set out to prove that the Zohar and early Kabbalah in general contained nothing of the theory of emanation, which Joel believed first appeared in the writings of “the modern commentators” of the 16th century, where it was the result of faulty interpretation. In his opinion there is no significant difference between “the pure theology” of Jewish medieval thinkers, and “the true Kabbalah,” the very foundation of which is the idea of the free creation of primeval substance *ex nihilo* in the literal meaning of the term. There is no doubt that Joel and Frank were equally mistaken, and that both were at fault in interpreting the basic content of Lurianic Kabbalah in pantheistic terms. Inasmuch as early Kabbalah needed a theoretical foundation it was largely influenced by neoplatonism; and although it proposed a definite process of emanation – the theory of the emanation of *Sefirot* – this was a kind of activity which took place within the Divine itself. The God who manifests Himself in His *Sefirot* is the very same God of traditional religious belief, and consequently, despite all the complexities such an idea involves, the emanation of the *Sefirot* is a process within God Himself. The hidden God in the aspect of *Ein-Sof* and the God manifested in the emanation of *Sefirot* are one and the same, viewed from two different angles. There is therefore a clear distinction between the stages of emanation in the neoplatonic systems, which are not conceived as processes within the Godhead, and the kabbalistic approach. In Kabbalah, emanation as an intermediate stage between God and creation was reassigned to the Divine, and the problem of the continuation of this process outside the Godhead gave rise to various interpretations. At first there was no need to conclude that worlds below the level of the *Sefirot*, and the corporeal world itself, were also emanated from the *Sefirot*. Perhaps intentionally, the kabbalists dealt with this point in a highly obscure fashion, frequently leaving open the way to the most diverse interpretations. God’s actions outside the realm of the *Sefirot* of emanation led to the emergence of created beings separated from the *Sefirot* by an abyss, although few kabbalists maintained unambiguously that the process of emanation came to an absolute end with the final *Sefirah* and that what followed

constituted a completely new beginning. The early kabbalists agreed that all creatures below the *Sefirot* had an existence of their own outside the Divine, and were distinguished from it in their independent existence since their state was that of created beings, although they had their archetypes in the *Sefirot*. Even given the belief that from the point of view of God they have their root in His being, nevertheless they are in themselves separated from His essence and possess a nature of their own. Distinctions of this kind are common to the Kabbalah and to other mystical theologies, like those of medieval Islam and Christianity, but they were generally neglected in most kabbalistic discussions of emanation, with all the consequent unclarity that this entailed. Particularly in a number of important books which do not attempt to build their doctrines on a firm theoretical foundation, such as the *Bahir*, the Zohar, and the works of Isaac b. Jacob ha-Kohen, the authors often use highly ambiguous terms and speak of “creation” even when they mean “emanation.” This ambiguity can be explained in the light of the history of the Kabbalah, which was at first concerned with the description of a religious and contemplative experience and not with questions of purely theoretical systematization. In addition, the developing Kabbalah was heir to a strong, mythically inclined Gnostic heritage of speculation on the aeons (whose nature was also subject to many theoretical interpretations). Thus, when their figurative and symbolic language was put to a logical test, sources like the above were accorded many different theological and analytical interpretations.

As the Kabbalah developed in Provence and Spain and the Gnostic tradition was confronted with neoplatonism, a host of short tracts were written in which it was attempted to give an independent description of the processes of emanation. Most of these works belong to the circle of the *Sefer ha-Iyyun* (see above). They show quite clearly that, aside from the theory of the *Sefirot*, there were other approaches to a description of the spiritual world, such as in terms of a world of powers (*koḥot*), lights, or divine intellects, which were sometimes given identical names but which were ordered each time in quite different ways. Obviously these were the first gropings toward the establishment of a definitive order in the degrees and stages of emanation. However, as they did not correspond with the symbolism that had been constructed in a more or less unified fashion from the time of Isaac the Blind up to the Zohar, they were almost completely disregarded.

Unlike these first hesitant steps, the theory of the *Sefirot* ultimately became the backbone of Spanish kabbalistic teaching and of that basic system of mystical symbolism which had such important repercussions on the kabbalists’ view of the meaning of Judaism. Right from the beginning, ideas concerning emanation were closely bound up with a theory of language. On the one hand, much is written about the manifestation of the power of *Ein-Sof* through various stages of emanation which are called *Sefirot* and are no more than the various attributes of God or descriptions and epithets which can be applied to Him – that is, about a continuous process of ema-

nation. Yet at the same time this very process was described as a kind of revelation of the various Names peculiar to God in His capacity of Creator. The God who manifests Himself is the God who expresses Himself. The God who “called” His powers to reveal themselves named them, and, it could be said, called Himself also, by appropriate names. The process by which the power of emanation manifests itself from concealment into revelation is paralleled by the manifestation of divine speech from its inner essence in thought, through sound that as yet cannot be heard, into the articulation of speech. Through the influence of the *Sefer Yeẓirah*, which speaks of “the ten *Sefirot* of *belimah*,” the number of the stages of emanation was fixed at ten, although in this early work the term refers only to the ideal numbers which contain the forces of creation. In kabbalistic usage, on the other hand, it signifies the ten powers that constitute the manifestations and emanations of God. Since the *Sefirot* are intermediary states between the first Emanator and all things that exist apart from God, they also represent the roots of all existence in God the Creator.

That many themes are united, or sometimes simply commingled, in this concept is demonstrated by the profusion of terms used to describe it. The term *Sefirah* is not connected with the Greek σφαῖρα (“spheres”), but as early as the *Sefer ha-Bahir* it is related to the Hebrew *sappir* (“sapphire”), for it is the radiance of God which is like that of the sapphire. The term is not used at all in the main part of the Zohar, appearing only in the later stratum, but other kabbalists too employed a wealth of synonyms. The *Sefirot* are also called *maʿamarot* and *dibburim* (“sayings”), *shemot* (“names”), *orot* (“lights”), *koḥot* (“powers”), *ketarim* (“crowns”; since they are “the celestial crowns of the Holy King”), *middot* in the sense of qualities, *madregot* (“stages”), *levushim* (“garments”), *marot* (“mirrors”), *netiʿot* (“shoots”), *mekorot* (“sources”), *yamim elyonim* or *yemei kedem* (“supernal or primordial days”), *sitrin* (i.e., “aspects” found mainly in the Zohar), *ha-panim ha-penimiyyot* (“the inner faces of God”). (A long list of other designations for the *Sefirot* can be found in Herrera, *Shaʿar ha-Shamayim*, 7:4.) Terms like “the limbs of the King” or “the limbs of the *Shiʿur Komah*,” the mystical image of God, allude to the symbolism of the supernal man, also called *ha-adam ha-gadol*, or primordial man. Sometimes the term is used for one specific *Sefirah*, but often it denotes the whole world of emanation. The term *ha-adam ha-kadmon* (“primordial man”) occurs for the first time in *Sod Yediʿat ha-Meẓiʿut*, a treatise from the *Sefer ha-Iyyun* circle. These different motifs of the *Sefirot*, which express themselves in this proliferation of names, tend to vary both with the specific context and with the overall inclinations of the kabbalist making use of them.

No agreed canonical definition exists. The conceptual connection between the *maʿamarim* or the *ketarim*, as the *Sefirot* were called in the *Sefer ha-Bahir*, and the intermediate substances between the infinite and the finite, the one and the many, of neoplatonism, originated mainly in the work of Azriel, who was determined to divest the idea of the *Sefirot* of its Gnostic character. His definitions, which appear in *Pe-*

rush Eser Sefirot and *Derekh ha-Emunah ve-Derekh ha-Kefirah*, and those of his companion Asher b. David, were largely instrumental in fixing the concept of the *Sefirot* in Spanish Kabbalah, although the tendency to portray them as Gnostic aeons did not entirely disappear. According to Azriel, things were created in a specific order, since creation was intentional, not accidental. This order, which determines all the process of creation and of generation and decay, is known as *Sefirot*, “the active power of each existing thing numerically definable.” Since all created things come into being through the agency of the *Sefirot*, the latter contain the root of all change, although they all emanate from the one principle, *Ein-Sof*, “outside of which there is nothing.” In terms of their origin in *Ein-Sof* the *Sefirot* are not differentiated, but in respect of their activity within the finite realm of creation they are. Existing alongside these Platonic definitions is the theosophic conception of the *Sefirot* as forces of the divine essence or nature, through which absolute being reveals itself; they therefore constitute the inner foundation and the root of every created being in a way which is generally not specifically defined, but not necessarily as “intermediaries” in the philosophical sense. The contrast with the neoplatonic pattern is very definitely expressed in a doctrine, common to all kabbalists of every age (even to Azriel), concerning the dynamic of these powers. Although there is a specific hierarchy in the order of the *Sefirot*, it is not ontologically determined: all are equally close to their source in the Emanator (this is already so in the *Sefer ha-Bahir*). It is possible for them to join together in mystical unions, and some of them move up and down within the framework of the hidden life of God (both Gnostic motifs), which does not fit the Platonic point of view. In other words, within a conceptual Platonic system a theosophic understanding of God came to the fore.

The nature or essence of these *Sefirot*, that is the relationship of the manifested world of the Divine to the created world and to the hidden being of the Emanator, was a widely disputed subject. Were the *Sefirot* identical with God or not, and, if not, wherein lay the difference? At first this question did not arise, and the imagery used to describe the *Sefirot* and their activity was not aimed at a precise definition. The description of the *Sefirot* as vessels for the activity of God, the Emanator, which occurs, for example, as early as Asher b. David, does not contradict the idea that in essence they are equated with God. The term *koʾah* (“force,” “power,” “potency”), which is common in kabbalistic literature, does not always indicate a precise distinction between “force” and “essence” in the Aristotelian sense. It is also used to refer to the independent existence of “potencies,” hypostases which are emanated from their source, without any preceding indication of whether this emanation is an expansion of the latter’s essence or only of its radiation that was previously concealed in potentiality and now is activated. In purely figurative descriptions of the world of the *Sefirot* these philosophical distinctions did not come to the forefront, but once questions of this sort were raised it was impossible to evade them.

Most of the early kabbalists were more inclined to accept the view that the *Sefirot* were actually identical with God's substance or essence. This is stated in many documents from the 13th century, and stressed later in the school of R. Solomon b. Adret, and particularly in the *Ma'arekhet ha-Elohut*, which was followed in the 16th century by David Messer Leon, Meir ibn Gabbai, and Joseph Caro. According to this view, the *Sefirot* do not constitute "intermediary beings" but are God Himself. "The Emanation is the Divinity," while *Ein-Sof* cannot be subject to religious investigation, which can conceive of God only in His external aspect. The main part of the *Zohar* also tends largely toward this opinion, expressing it emphatically in the interchangeable identity of God with His Names or His Powers: "He is They, and They are He" (*Zohar*, 3, 11b, 70a). In the latter stratum, however, in the *Ra'aya Meheimna* and the *Tikkunim*, and subsequently in the *Ta'amei ha-Mitzvot* of Menahem Recanati, the *Sefirot* are seen not as the essence of God but only as vessels or tools: although they are indeed neither separated from Him nor situated outside Him like the tools of a human artisan, nevertheless they are no more than means and instruments which He uses in His work. Recanati states that most of the kabbalists of his time disagreed with this view. In the writings of Joseph Ashkenazi (Pseudo-Ravad) this theory is developed to the extreme where the *Sefirot*, being intermediaries, pray to God Himself and are actually unable to perceive the nature of their Emanator, a view which was first presented in the writings of Moses of Burgos and subsequently appeared in many kabbalistic works. Cordovero tried to reconcile these two opposing views and to accord a certain measure of truth to each one. Just as in all organic life the soul (the essence) cannot be distinguished from the body (the vessels) except *in abstracto* and in fact they cannot be separated at all when they are working together, so it may be said of God that He works, so to speak, as a living organism, and thus the *Sefirot* have two aspects, one as "essence," and the other as "vessels." Dominating this theosophic organism is a metabiological principle of measure and form called *kav ha-middah* (according to specific statements in the *Zohar* which use this term to express the nature of the activity of the first *Sefirah*). From this point of view the *Sefirot* are both identical with the essence of God and also separated from Him (see *Pardes Rimmonim*, ch. 4). In later Kabbalah this view became paramount.

The *Sefirot* emanate from *Ein-Sof* in succession – "as if one candle were lit from another without the Emanator being diminished in any way" – and in a specific order. Nevertheless, in contrast to the neoplatonic concept in which the intermediaries stand completely outside the domain of the "One," they do not thereby leave the divine domain. This influx is given the name *hamshakhah* ("drawing out"), that is to say, the entity which is emanated is drawn out from its source, like light from the sun or water from a well. According to Naḥmanides (in his commentary to Num. 11: 17) and his school, the second term, *azilut*, expresses the particular position of this emanation. The term is understood as deriving from *eziel*

("near by," or "with"), for even the things that are emanated remain "by Him," and act as potencies manifesting the unity of the Emanator. Naḥmanides' anti-emanatist interpretation of the term *azilut* was apparently intended only for the uninitiated, for in his esoteric writings he also uses the term *hamshakhah* (in his commentary to the *Sefer Yezi'rah*). Generally speaking, stress is laid on the fact that the God who expresses Himself in the emanation of the *Sefirot* is greater than the totality of the *Sefirot* through which He works and by means of which He passes from unity to plurality. The personality of God finds expression precisely through His manifestation in the *Sefirot*. It is therefore surprising that, in those circles close to Naḥmanides, the nature of the Emanator which remained concealed beyond all emanation was thought to be a closely guarded tradition. Naḥmanides himself refers to it as "the hidden matter at the top of the *Keter*," at the head of the first *Sefirah*, a designation which deprives it of any personal quality (commentary to the *Sefer Yezi'rah*). As noted above, however, some of his contemporary kabbalists, like Abraham of Cologne (1260–70) in *Keter Shem Tov*, completely rejected this idea by denying an impersonal aspect to God and by identifying *Ein-Sof* with the first *Sefirah*.

Deriving *azilut* from *eziel* does not necessarily imply that the process of emanation is eternal: it simply signifies the contrast between two domains – the *olam ha-yihud* ("the world of unification") and the *olam ha-perud* ("the world of separation"). Emanation is the world of unification, not of the static unity of *Ein-Sof* but of the process which occurs in God, who is Himself unified in the dynamic unity of His powers ("like the flame linked to a burning of coal"). In contrast to this, "the world of separation" refers to the domain which results from the act of creation, whose theosophic inner nature is expressed in the emanation of the *Sefirot*. But this process of emanation of the *Sefirot* is not a temporal one, nor does it necessitate any change in God Himself; it is simply the emergence from potentiality into actuality of that which was concealed within the power of the Creator.

However, opinion differed on the question of emanation and time. Azriel taught that the first *Sefirah* was always within the potentiality of *Ein-Sof*, but that other *Sefirot* were emanated only in the intellectual sense and had a beginning in time; there were also *Sefirot* that were emanated only "now, near to the creation of the world." Others maintained that the concept of time had no application to the process of emanation, while Cordovero held that this process occurred within "non-temporal time," a dimension of time which involved as yet no differentiation into past, present, and future. A dimension of this type was also important in the thinking of the later neoplatonists, who spoke of *sempiternitas*. This supermundane concept of time was defined "as the twinkling of an eye, without any interval" between the various acts which were part of emanation (so in *Emek ha-Melekh* and *Va-Yakhel Moshe* by Moses Graf). Joseph Solomon Delmedigo in *Navelot Hokhmah*, and Jonathan Eybeschutz in *Shem Olam*, also posited the coeternity of the *Sefirot*, but generally speak-

ing this idea aroused a great deal of opposition. As early as the 13th century the counter-doctrine was formulated that “the essences existed but emanation came into being” (*Origines...*, 295). If the essences preceded emanation then they must of necessity have existed in the will or thought of *Ein-Sof*, but they were made manifest by an act which had something of the nature of new creativity although not in the usual sense of creativity in time.

In the literature of the Kabbalah the unity of God in His *Sefirot* and the appearance of plurality within the One are expressed through a great number of images which continually recur. They are compared to a candle flickering in the midst of ten mirrors set one within the other, each of a different color. The light is reflected differently in each, although it is the same single light. The daring image of the *Sefirot* as garments is extremely common. According to the Midrash (*Pesikta de-Rav Kahana*), at the creation of the world God clothed Himself in ten garments, and these are identified in the Kabbalah with the *Sefirot*, although in the latter text no distinction is made between the garment and the body – “it is like the garment of the grasshopper whose clothing is part of itself,” an image taken from the Midrash *Genesis Rabbah*. The garments enable man to look at the light, which without them would be blinding. By first growing used to looking at one garment man can look progressively further to the next and the next, and in this way the *Sefirot* serve as rungs on the ladder of ascent toward the perception of God (Asher b. David, *Perush Shem ha-Meforash*).

The doctrine of the *Sefirot* was the main tenet clearly dividing Kabbalah from Jewish philosophy. The subject matter of philosophy – the doctrine of divine attributes and in particular “the attributes of action” as distinct from “the essential attributes” – was transformed in Kabbalah into the theosophical conception of a Godhead that was divided into realms or “planes” which, in the eyes of the beholder at least, existed as lights, potencies, and intelligences, each of unlimited richness and profundity, whose content man could study and seek to penetrate. Each one was like “a world unto itself,” although it was also reflected in the totality of all the others. As early as the beginning of the 13th century, after the appearance of the *Sefer ha-Bahir*, the view was propounded that there were dynamic processes not only between the *Sefirot* but also within each separate *Sefirah*. This tendency toward an increasingly more complex doctrine of the *Sefirot* was the most distinctive characteristic of the development of kabbalistic theory. The number ten provided the framework for the growth of a seemingly endless multiplicity of lights and processes. In the circle of the *Sefer ha-Iyyun*, where this development began, we find an enumeration of the names of the intellectual lights and powers, which only partially fit the traditional symbolism of the *Sefirot* (see below) and sometimes diverge widely from it. The writings of “the Gnostic circle” in Castile expanded the framework of emanation and added potencies bearing personal names which gave a unique coloring to the world of the *Sefirot* and to all that existed outside it. This tendency

was continued by the author of the *Zohar*, whose descriptions of the first acts of creation, and particularly those in the *Idra Rabba* and the *Idra Zuta* concerning the configurations of the forces of emanation (called *Attika Kaddisha*, *Arikkh Anpin* and *Zè'ir Anpin*), are very different from the original simple concept of the *Sefirot*. Here is the beginning of the anatomical and physiological symbolism of the *Shi'ur Komah* – a description of the image of God based on analogy with human structure – which shook the very foundations of the *Sefirot* doctrine and introduced into it new differentiations and combinations. An additional complexity resulted when the theory of the *Sefirot* was combined with prophetic Kabbalah and “the science of combination” of the school of Abraham Abulafia. Every different combination of letters and vowels could be seen in the radiance of that intellectual light which appears under certain circumstances in the meditations of the mystic. Whole books, like the *Berit Menuḥah* (second half of the 14th century), *Toledot Adam* (see *Kitvei Yad ba-Kabbalah*, 58–60; printed in part in Casablanca in 1930 in *Sefer ha-Malkhut*), and *Avnei Shoham* by Joseph ibn Sayyah (*ibid.*, 89–91), reflect this view. These complexities in the doctrine of the *Sefirot* reached their most extreme expression in Cordovero's *Elimah Rabbati* and, finally, in the Lurianic theory of the *parzufim* (see below).

The *Sefirot*, both individually and collectively, subsume the archetype of every created thing outside the world of emanation. Just as they are contained within the Godhead, so they impregnate every being outside it. Thus, the limitation of their number to ten necessarily involves the supposition that each one is composed of a large number of such archetypes.

Details of the Doctrine of the Sefirot and Their Symbolism

Both theosophical and theological approaches are equally evident in kabbalistic speculation about the *Sefirot* in general and their relationship to the Emanator in particular. When it comes to the sequential development of the *Sefirot*, on the other hand, and to the individual function of each, especially from the second *Sefirah* onward, a strong Gnostic and mythic element begins to predominate. The kabbalists continuously stressed the subjective nature of their descriptions: “everything is from the perspective of those who receive” (*Ma'arekhet ha-Elohut*); “all this is said only from our view, and it is all relative to our knowledge” (*Zohar* 2, 176a). However, this did not prevent them from indulging in the most detailed descriptions, as if they were speaking after all of an actual reality and objective occurrences. The progressive movement of the hidden life of God, which is expressed in a particular structural form, established the rhythm for the development of the created worlds outside the world of emanation, so that these first innermost structures recur in all the secondary domains. Hence there is basic justification for a single comprehensive symbolic system. An inner existence that defies characterization or description because it is beyond our perception can only be expressed symbolically. The words of both the Written and the Oral Law do not describe mundane matters and events alone,

situated in history and concerned with the relations between Israel and its God, but also, when interpreted mystically, they speak of the interaction between the Emanator and the emanated, between the different *Sefirot* themselves, and between the *Sefirot* and the activities of men through Torah and prayer. What in the literal sense is called the story of creation is really a mystical allusion to the process which occurs within the world of emanation itself and therefore can be expressed only symbolically. General speaking, such symbolism interested the kabbalists far more than all the theoretical speculation on the nature of the *Sefirot*, and the greater part of kabbalistic literature deals with this aspect and its detailed application. Most of the commentaries to the Torah, to Psalms, and to the *aggadot*, as well as the voluminous literature on the reasons for the Commandments (*ta'amei ha-mitzvot*), are based on this approach. As noted above, however, none of this symbolism has any bearing on *Ein-Sof*, although there were nevertheless kabbalists who did attribute to the latter specific expressions in Scripture or in the *Sefer Yezirah*.

The common order of the *Sefirot* and the names most generally used for them are (1) *Keter Elyon* ("supreme crown") or simply *Keter*; (2) *Hokhmah* ("wisdom"); (3) *Binah* ("intelligence"); (4) *Gedullah* ("greatness") or *Hesed* ("love"); (5) *Gevurah* ("power") or *Din* ("judgment"); (6) *Tiferet* ("beauty") or *Rahamim* ("compassion"); (7) *Nezah* ("lasting endurance"); (8) *Hod* ("majesty"); (9) *Zaddik* ("righteous one") or *Yesod Olam* ("foundation of the world"); (10) *Malkhut* ("kingdom") or *Atarah* ("diadem"). This terminology was greatly influenced by the verse in I Chronicles 29: 11, which was interpreted as applying to the order of the *Sefirot*. Although the *Sefirot* are emanated successively from above to below, each one revealing an additional stage in the divine process, they also have a formalized structure. Three such groupings are most commonly found. In their totality the *Sefirot* make up "the tree of emanation" or "the tree of the *Sefirot*," which from the 14th century onward is depicted by a detailed diagram which lists the basic symbols appropriate to each *Sefirah*. The cosmic tree grows from its root, the first *Sefirah*, and spreads out through those *Sefirot* which constitute its trunk to those which make up its main branches or crown. This image is first found in the *Sefer ha-Bahir*: "All the divine powers of the Holy One, blessed be He, rest one upon the other, and are like a tree." However, in the *Bahir* the tree starts to grow by being watered with the waters of Wisdom, and apparently it includes only those *Sefirot* from *Binah* downward. Alongside this picture we have the more common image of the *Sefirot* in the form of a man. While the tree grows with its top down, this human form has its head properly on top, and is occasionally referred to as the "reversed tree." The first *Sefirot* represent the head, and, in the *Zohar*, the three cavities of the brain; the fourth and the fifth, the arms; the sixth, the torso; the seventh and eighth, the legs; the ninth, the sexual organ; and the tenth refers either to the all-embracing totality of the image, or (as in the *Bahir*) to the female as companion to the male, since both together are needed to constitute a perfect man. In kabbalistic literature

this symbolism of primal Man in all its details is called *Shi'ur Komah*. The most common pattern is the following:

	<i>Keter</i>	
<i>Binah</i>		<i>Hokhmah</i>
<i>Gevurah</i>		<i>Gedullah</i>
	<i>Tiferet</i>	
<i>Hod</i>		<i>Nezah</i>
	<i>Yesod</i>	
	<i>Malkhut</i>	

Sometimes the three *Sefirot*, *Keter*, *Hokhmah*, and *Binah*, are not depicted in a triangle, but in a straight line, one below the other. On the whole, however, the overall structure is built out of triangles.

From the end of the 13th century onward a complementary *Sefirah*, called *Da'at* ("knowledge"), appears between *Hokhmah* and *Binah*, a kind of harmonizing of the two that was not considered a separate *Sefirah* but rather "the external aspect of *Keter*." This addition arose from the desire to see each group of three *Sefirot* as a unit comprising opposing attributes and as a synthesis which finally resolved them. This was not, however, the original motivation of the pattern. In the *Sefer ha-Bahir*, and in several early texts of the 13th century, the *Sefirah Yesod* was thought of as the seventh, preceding *Nezah* and *Hod*, and only in Gerona was it finally assigned to the ninth place. On the model of the neoplatonic hierarchy, according to which the transition from the one to the many was accomplished through the stages of intellect, universal soul, and nature, many kabbalists, Azriel in particular, thought of the *Sefirot* as also comprising these stages (although they still remained within the domain of deity). *Keter*, *Hokhmah*, and *Binah* were "the intellectual" (*ha-muskal*); *Gedullah*, *Gevurah*, and *Tiferet* were "the psychic" (*ha-murgash*); *Nezah*, *Hod*, and *Yesod* were "the natural" (*ha-mutba*). Apparently it was intended that these three stages should be understood as the sources of the independent realms of intellect, soul, and nature, which were fully activated and developed only at a lower level.

Since the *Sefirot* were conceived of as the progressive manifestation of the Names of God, a set of equivalences between the latter and the names of the *Sefirot* was established:

	<i>Ehyeh</i>	
YHWH (vocalized as <i>Elohim</i>)		<i>Yah</i>
<i>Elohim</i>		<i>El</i>
	YHWH	
<i>Elohim Zeva'ot</i>		YHWH <i>Zeva'ot</i>
	<i>El Hai</i> or <i>Shaddai</i>	
	<i>Adonai</i>	

According to the Kabbalah these are "the ten names which must not be erased" mentioned in the Talmud, and compared with them all other names are mere epithets. The *Zohar* distinguishes *Shaddai* as the name particularly related to the *Sefirah Yesod*, while Joseph Gikatilla associates this *Sefirah* with *El Hai*.

The division of the Sefirot was also determined by other criteria. Sometimes they were divided into five and five, i.e., the five upper *Sefirot* corresponding to the five lower, an equal balance between the hidden and the revealed being maintained. On the basis of the statement in the *Pirkei de-R. Eliezer* “with ten sayings was the world created, and they were summarized in three,” they were also divided into seven and three. In this case there was a differentiation between three hidden *Sefirot* and “the seven *Sefirot* of the building,” which are also the seven primordial days of creation. Six of these were also equated with the six sides of space in the *Sefer Yezirah*. How these six were complemented by a seventh was never decisively established. Some thought that the seventh was the sacred palace which stood in the center, as in the *Sefer Yezirah*. Others considered it to be represented by Divine Thought, while for others it was a symbolic Sabbath. The correlation of the “*Sefirot* of the building” with the days of creation became extremely complex. Many kabbalists, including the author of the main part of the Zohar, could not agree on the automatic association of each *Sefirah* with one particular day, and they regarded creation, which from the mystical viewpoint was the completion of “the building” of emanation, as having been already completed by the fourth day. They were particularly perplexed by the problem of the Sabbath, which many interpreted as a symbol of *Yesod*, since it paralleled the original seventh place of this *Sefirah*, while many others saw in it an allusion to the last *Sefirah*, especially since the powers came to an end there. Just as each day performed an act specific to it, apart from the seventh, so each *Sefirah* performed its own specific activities by which it was characterized, except for the last *Sefirah*, which had no such active force, but comprised the totality of all the *Sefirot* or the specific principle that received and united the active forces without adding anything particular of its own. On the contrary it is this absence of activity and the tenth *Sefirah's* function as an all-inclusive entity which constitute its uniqueness. The division of the *Sefirot* into three lines or columns was especially important: the right hand column includes *Hokhmah*, *Gedullah*, and *Nezah*; the left hand column includes *Binah*, *Gevurah*, and *Hod*; and the central column passes from *Keter* through *Tiferet* and *Yesod* to *Malkhut*.

All of these groupings testify to the kabbalists' belief that there was a definite structure to the *Sefirot*, no matter how great the possibilities may have been. In contrast to them all is yet another arrangement which presents the *Sefirot* either as adjoining arcs of a single circle surrounding the central Emanator, or as ten concentric spheres (called “circles”) with the power of emanation diminishing as it moves further away from the center. This latter concept is related to the medieval cosmological picture of a universe of ten spheres, which could be imagined in terms of the outward gyration of these spiritual circles. The circular concept appears especially from the 14th century onward (Pseudo – Ravad to the *Sefer Yezirah*, 1, 2). In Lurianic Kabbalah every one of these diagrammatic arrangements, circular or linear, is accorded a specific place in the plan of emanation.

When we come to deal with the symbolism of the *Sefirot* we must distinguish between the general symbolic systems appertaining to the processes of emanation as a whole and the symbolism related to each individual *Sefirah* or to a particular combination of *Sefirot*. The overall symbolic systems are based on both mathematical and organic imagery. In the system depending on mathematical concepts, which is sometimes linked with images of light and rivers, the first *Sefirah* is nothingness, zero, and the second is the manifestation of the primordial point, which at this stage has no size but contains within it the possibility of measurement and expansion. Since it is intermediate between nothingness and being, it is called *hathalat ha-yeshut* (“the beginning of being”). And since it is a central point it expands into a circle in the third *Sefirah*, or it builds around itself a “palace” which is the third *Sefirah*. When this point is represented as a source welling up from the depths of nothingness, the third *Sefirah* becomes the river that flows out from the source and divides into different streams following the structure of emanation until all its tributaries flow into “the great sea” of the last *Sefirah*. This first point is established by an act of the Divine Will, taking its first step toward creation. In the Zohar the appearance of the supernal point (which is called *reshit*, “beginning,” the first word of the Bible) is preceded by a number of acts that take place between *Ein-Sof* and the first *Sefirah* or within the first *Sefirah*. As well as being nothingness (*ayin*) and the will of God, this *Sefirah* is also the primordial ether (*avir kadmon*) which surrounds *Ein-Sof* like an eternal aura. From the mystery of *Ein-Sof* a flame is kindled, and inside the flame a hidden well comes into being. The primordial point shines forth in being when the well breaks through the ether (1, 15a). It is as if all the possible symbols were assembled together within this description.

The organic symbolism equates the primordial point with the seed sown in the womb of “the supernal mother,” who is *Binah*. “The palace” is the womb which is brought to fruition through the fertilization of the semen and gives birth to the children, who are the emanations. In another organic image *Binah* is compared to the roots of a tree which is watered by *Hokhmah* and branches out into seven *Sefirot*. In another symbolic pattern – very common in the 13th century and particularly in the Zohar – the first three *Sefirot* represent the progress from will to thought and thence to intellect, where the general content of wisdom or thought is more precisely individuated. The identification of the following *Sefirot* as love, justice, and mercy links this doctrine with the aggadic concept of the divine attributes. References to male and female appear not only in the symbolism of father and mother, son and daughter (*Hokhmah* and *Binah*, *Tiferet* and *Malkhut*) but also in the striking use of sexual imagery which is a particular characteristic of the Zohar and Lurianic Kabbalah. The use of such images is especially prominent in the description of the relationships between *Tiferet* and *Yesod* on the one hand and *Malkhut* on the other. Many kabbalists did their utmost to minimize the impact of this symbolism,

which afforded much scope for mythical images and daring interpretations.

A general symbolism of a different type is related to the stages in the manifestation of the personal, individual identity of God. The first *Sefirah* contains only “He”; sometimes this “He” is hidden and no mention is made of Him because of His extreme self-concealment, as, for example, within the verb *bara* (“He created”) at the beginning of the Bible. Thus *bereshit bara Elohim* (usually “in the beginning God created”) is interpreted mystically to refer to the first three *Sefirot*: through the medium of *Hokhmah* (called *reshit*), the first *Sefirah* – the force hidden within the third person singular of the word *bara* – produced by an act of emanation the third *Sefirah* (*Binah*), which is also called *Elohim*. *Elohim* (“God”) is thus not the subject but the object of the sentence. This daring interpretation is common to almost all 13th-century kabbalists. But as His manifestation continues, God becomes “Thou,” whom man is now able to address directly, and this “Thou” is related to *Tiferet* or to the totality of the *Sefirot* in *Malkhut*. However, God reaches His complete individuation through His manifestation in *Malkhut*, where He is called “I.” This conception is summed up in the common statement that through the process of emanation “Nothingness changes into I” (*Ayin le-Ani*). The three letters or elements which make up *Ayin* (“Nothingness”) – *alef*, *yod*, *nun* – are also contained in *Ani*, that is in both the beginning and the end of the process, but like the forces which they denote they are combined in a different way. In a similar fashion the name YHWH denotes just one *Sefirah* (*Tiferet*) but also contains within it all the fundamental stages of emanation: the spike at the top of the *yod* represents the source of all in *Ayin*, the *yod* itself is *Hokhmah*, the first *heh* is *Binah*, the *vav* is *Tiferet* or, because of the numerical value of the letter *vav*, the totality of the six *Sefirot* and the final *heh* is *Malkhut*. Since the latter comprises the other *Sefirot* and has no independent power, it cannot be assigned a letter of its own but only that *heh*, which has already appeared at the beginning of the emanation of the structure of the *Sefirot* and whose manifestation has reached its final development at the end of the process. The other names of God in the Bible are also interpreted in a similar fashion, their letters alluding to an inner progress in the process of emanation.

Emanation in its totality is the “Celestial Chariot” and individual components are “parts of the Chariot” which are interpreted in particular in the commentaries on the Chariot by Jacob Kohen of Soria, Moses de Leon, and Joseph Gikatilla. Biblical figures are also connected with this. “The patriarchs are the Chariot” (*Genesis Rabbah*), for Abraham represents the attribute of abundant love (*Hesed*), Isaac the attribute of strict justice (*Din*), and Jacob the attribute of mercy (*Rahamim*), which is a combination of the other two. These three, together with King David, the founder of the kingship (*Malkhut*) of Israel, constitute the “four legs of the Throne” in the Chariot. And when Moses and Aaron are added, as representing the sources of prophecy in *Nezah* and *Hod*, and then Joseph – according to the talmudic picture of him as Joseph the righteous,

keeper of the covenant, who resists the temptations of the sexual instinct – we have the seven *Sefirot* portraying the heroes of the Bible, who are called the “seven shepherds” or guests (*ushpizin*). This kind of symbolism conveys the moral content of the *Sefirot* as specific ethical attributes. The righteous, each of whom is inspired by a characteristic moral quality, embody the rule of the divine attributes in the world.

In addition to this ethical symbolism we find several cosmological systems. The four elements, the four winds, and even the four metals (gold, silver, copper, and lead) are indications of *Gedullah*, *Gevurah*, *Tiferet*, and *Malkhut*; the sun and the moon of *Tiferet* or *Yesod* and *Malkhut*. The moon, which receives its light from the sun and has no light of its own, and which waxes and wanes according to a fixed cycle, occupies an important place in the very rich symbolism of the last *Sefirah*. However, the most important of these symbols are the *Keneset Yisrael* (“the community of Israel”) and the *Shekhinah* (“the Divine Presence”). The Kingdom of Heaven, which is realized in time in the historical *Keneset Yisrael*, represents therefore the latter’s meta-historical aspect as well. The supernal *Keneset Yisrael* is the mother (*matrona*), the bride, and also the daughter of the “king,” and they appear in countless midrashic parables on the relationship between God and the Jewish people. In her capacity as bride (*kallah*) she is also, by a mystical etymology, “the consummation of all” (*kelulah mi ha-kol*). She is the receptive aspect of “the holy union” of “king” and “queen.” Other of her features are to be seen in the symbols of her as freedom, the Torah, and the trees in the Garden of Eden. The *Sefirah Binah* is the “supernal Jubilee,” in which everything emerges into freedom and returns to its source, and therefore *Binah* is also called *Teshuvah* (“return”). But the last *Sefirah* is the *shemittah*, the seventh year when the earth rests and is renewed. The Written Law is woven from the name YHWH , and alludes to an emanation which already has some manifestation but has yet to be fully articulated. The Oral Law, which gives a detailed interpretation of the ways of the Written Law and of its application to life, is embodied in *Keneset Yisrael*, both in heaven and on earth. And similarly with regard to the trees: the Tree of Life is the *Sefirah Yesod* (though later on it is mainly *Tiferet*), while the Tree of Knowledge is a symbol of *Malkhut*, or of the Oral Law. In the early *aggadah* the *Shekhinah* is a synonym for God, indicating His presence, His “dwelling” in the world, or in any specified place. In the Kabbalah, on the other hand, from the *Sefer ha-Bahir* onward, it becomes the last attribute through which the Creator acts in the lower world. It is “the end of thought,” whose progressive unfolding demonstrates God’s hidden life. From its source at “the beginning of thought” in *Hokhmah* (“wisdom”), the thought of creation pursues its task through all the worlds, following the laws of the process of the *Sefirot* themselves. The emphasis placed on the female principle in the symbolism of the last *Sefirah* heightens the mythical language of these descriptions. Appearing from above as “the end of thought,” the last *Sefirah* is for man the door or gate through which he can begin the ascent up the ladder of perception of the Divine Mystery.

The symbols mentioned so far form only part of a rich symbolism which drew on material from every sphere. Often there are differences in the details of its presentation, and there was a certain amount of freedom in the way given symbols were connected to a given *Sefirah*, but as far as basic motifs were concerned there was a great degree of agreement. Yet works explaining the attributes of the *Sefirot* were written from the time of the Gerona kabbalists onward, and the differences between them should not be minimized. Even in the Zohar itself there are many variations within a more or less firmly established framework. Such differences can also be seen between the symbolism of Moses de Leon and that of Joseph Gikatilla. The best sources for an understanding of this symbolism are: *Sha'arei Orah* and *Sha'arei Zedek* by Gikatilla; *Shekel ha-Kodesh* by Moses de Leon; *Sefer ha-Shem* written by another, unidentified Moses; *Sod Ilan ha-Azilit* by R. Isaac (*Kovez al-Yad*, 68, 5, 1951, 65–102); *Ma'arekhet ha-Elohut*, chs. 3–7; *Sefer ha-Shorashim* by Joseph ibn Wakkar (translation of the section on symbolism from his Arabic work; found separately in many Mss.); *Sha'ar Arkhei ha-Kinuyim* in *Pardes Rimmonim* by Cordovero, ch. 22; *Sefat Emet* by Menahem Azariah Fano (Lobatschov 1898); *Arkhei ha-Kinuyim* by Jehiel Heilprin (Dyhrenfurth 1806); *Kehillat Ya'akov* by Jacob Zevi Jolles (Lemberg 1870) and the second part entitled *Yashresh Ya'akov* (Brooklyn, about 1961). The attributes of the *Sefirot* according to Lurianic Kabbalah are described in detail in *Me'orat Natan* by Meir Poppers (text) and Nathan Nata Mannheim (notes) (Frankfurt 1709); *Regal Yesharah* by Zevi Elimelech Spira (Lemberg 1858); *Emet le-Ya'akov* by Jacob Shealtiel Niño (Leghorn 1843); and *Or Einayim* by Eliezer Zevi Safrin (Part 1 Premysl 1882, Part 2 Lemberg 1886).

From the 13th century onward we find the idea that each *Sefirah* comprises all others successively in an infinite reflection of the *Sefirot* within themselves. This formal method of describing the rich dynamic that exists within each *Sefirah* was also expressed in other ways. So, for example, we read of the 620 “pillars of light” in *Keter*, of the 32 “ways” in *Hokhmah*, of the 50 “gates” of *Binah*, of the 72 “bridges” in *Hesed*, and so on (in the *Tefillat ha-Yihud* ascribed to R. Nehunya b. ha-Kanah), and of forces which are called by magical names whose meaning cannot be communicated but which denote the various concentrations of power that can be differentiated in emanation. As early as Moses of Burgos and Joseph Gikatilla it is stressed that from each *Sefirah* are suspended worlds of its own that do not form part of the hierarchical order of the worlds that follow the world of emanation. In other words, the total power of each *Sefirah* cannot be expressed simply with reference to the known creation. There are aspects that have other purposes: hidden worlds of love, of justice, and so on. In the Zohar descriptions of this type occur only in relation to the world of *Keter* (*Arikh Anpin*, lit. “the long face,” properly “the long-suffering God”) and the world of *Tiferet* (*Z'eir Anpin*, lit. “the short face,” properly “the impatient One”) and take the form of a description of the anatomy of the “the white head,” written with an extreme tendency to
