Initial letter “J” of Jeremiah, at the beginning of a prologue to the Book of Haggai in a 13th-century Bible from France. Princeton University Library, Med. and Ren. Mss., Garrett no. 29, vol. II, fol. 151r.

JA-JU

JAAZANIAH, JAAZANIAHU (Jazaniah, Jazaniahu, Heb. יְהִיָּה, יְהִיָּה, יְהִיָּה, יְהִיָּה; “YHWH hears”), name of four biblical persons in the last generation of the kingdom of Judah.

(1) Jaazaniah son of the Maacathite, officer of the troops that went to Mizpah, to *Gedaliah son of Ahikam after the Babylonian occupation of Judah (11 Kings 25:23; Jer. 40:8). It is possible that he is Jezaniah son of Hoshaiah mentioned in Jeremiah 42:1. Others attribute to him the Hebrew seal inscribed “To Jaazaniah, servant of the king.” On the seal is an engraving of a rooster, the only such seal ever found in Erez Israel (reproduced Ahituv, 126; Hoffman, 720).

(2) Jaazaniah son of Jeremiah son of Habazziniah, a *Rechabite put to the test by the prophet Jeremiah (Jer. 35:3).

(3) Jaazaniah son of Shaphan, an elder of the house of Israel, is mentioned in Ezekiel’s vision of incense to the idols (Ezek. 8:11).

(4) Jaazaniah son of Azzur was a “prince of the people” and one of the twenty-five elders of Judah who appeared in a vision to the prophet Ezekiel (Ezek. 11:1). In a Lachish ostraccon there appears the name of “Jaazaniah son of Tob-Shallem” (Ahituv, 33). A certain Jaazaniahu son of Benaiyahu is found at Arad (Ahituv, 86). The name of Yedoniah, the head of the Jewish community at *Elephantine, is probably an Aramaization of the Hebrew Jaazaniah.

[Yehoshua M. Grintz]

JABAL (Heb. יָבָל), first son of Lamech by Adah; culture-hero, “father” of tent dwellers who keep livestock (Gen. 4:20)

in the seventh generation after Adam. He is descended from Cain and is brother to *Jubal. The name Jabal may possibly be derived from a Semitic word meaning “a ram,” or a root “to bring.”

JABBOK (Heb. **יַבְבֹּק**), tributary of the Jordan from the east, the first river south of the Yarmuk. The Hebrew name is derived either from the root meaning “to empty itself” or from a sound imitating the noise of water flowing over pebbles. The Jabbok is the confluent of three wadis: Wadi Amman, which rises near the city of Amman, Wadi Suwayliḥ, and Wadi al-Dhulayl. It flows at first in an easterly direction until the junction of the first two wadis, where it turns to the north. At the source of ‘Ayn al-Zarqā’, from which the Arabic name of the river, Nahr al-Zarqā’, was derived, it becomes a perennial river. After joining Wadi al-Dhulayl it turns west and then southwest, watering the fertile plain of Succoth near the Jordan. It falls from approximately 2,489 ft. (758 m.) near Amman to approximately 1,684 ft. (513 m.) at Wadi al-Dhulayl and to approximately 1,149 ft. (513 m.) below sea level at the Jordan, dropping approximately 3,611 ft. (1,100 m.) in all over a total length of 43¾ mi. (70 km.). The drainage area is 1,015 sq. mi. (2600 sq. km.) and the annual discharge is 16 billion gallons (60 million cu. m.).

By cutting the mountains of Gilead into two, creating the two regions of the territory of Gilead, the Jabbok forms a natural boundary which served as a political border throughout almost all historical periods. The first biblical reference to the river occurs in connection with Jacob, who forded it on his way to meet Esau, following his departure from Haran (Gen. 32:23). His struggle with the angel took place at Peniel on a ford of the Jabbok, a place which was considered consecrated by later generations. The river is described as the northern boundary of the kingdom of Sihon the Amorite in Numbers 21:24 and Joshua 12:2. These passages apparently refer only to the lower reaches of the river, for the upper reaches were within the border of the Ammonites and were excluded from the area of the Israelite conquest (Deut. 2:37). Reuben and Gad inherited the lands of Sihon and thus the Jabbok also served as their border with Ammon (Deut. 3:16). Border disputes continued and in the time of Jephthah, the Ammonite kings claimed that the Israelite tribes had infringed upon their border (Judg. 11:13, 22). In later times the river served as the boundary of the land of the Tobiads. Eusebius describes it as the boundary of the cities of Gerasa and Philadelphia (Onom. 102:19ff.). According to a milestone placed beyond the Roman bridge built over the river, the territory of Gerasa extended slightly south of the Jabbok. In Arab times it served as the boundary between the districts of al-Balqā’ and ‘Ajlūn.

[Michael Avi-Yonah]

JABÈS, EDMOND (1908–1991), French poet. Born in Egypt, Jabès settled in Paris when the Egyptians expelled him after the 1956 Sinai Campaign. Revived awareness of his Jewish identity led to the *Le livre des questions* (1963), an esoteric work mingling surrealism and Kabbalah, aphorisms and poems in the romance of two concentration camp survivors. For Jabès, writing is an act of creation, and God an enigmatic “circle of luminous lettres.” *Le livre des questions* became the first of a series of seven works which consist of persistent questioning, sometimes in the form of narratives or dialogues, sometimes in the form of apocryphal talmudic discussions between imaginary rabbis or kabbalistic letter games. The condition of the Jew is for Jabès identified with that of the poet: both the creative writer and the Jew can exist only in the state of exile. The term is of course taken in a spiritual sense and has no political meaning. The title of the first volume is also the title of the whole series; the others are *Le livre de Yukel* (1964), *Le retour au livre* (1965), *Yaël* (1967), *Elya* (1969), *Aely* (1972), and *El* (1973), which is the conclusion of a search for the unity of Judaism and literary creation, and at the same time a ceaseless questioning of the relevance of language. Jabès bemoans the loss of the Word (divine inspiration) and the wandering of the People of the Book.

Le livre des ressemblances (1976), *Le livre du partage* (1987), *Le livre de l’hospitalité* (1991), *Le livre du dialogue* (1994) continued the construction a major poetic oeuvre. *Un étranger avec, sous le bras, un livre de petit format* (1989) seeks to characterize the stranger and to describe his role. The book is also a self-portrait.

[Anny Dayan Rosenman (2nd ed.)]

JABESH-GILEAD (Heb. **יַבֶּשֶׁת גִּלְעָד**), Israelite city in Gilead in the period of the Judges and the monarchy. Its inhabitants appear to have had close ties with the tribe of Benjamin as is evidenced by two biblical traditions.

(1) The people of Jabesh-Gilead did not join the expedition of the Israelite tribes against Benjamin and in punishment their city was destroyed and their maidens seized and given to the Benjamites (Judg. 21).

(2) When Jabesh-Gilead was besieged by Nahash king of Ammon, it appealed for help to Saul the Benjamite who assembled the army of Israel at Bezek, reached Jabesh-Gilead after a day’s march, and routed the Ammonites (1 Sam. 11). Out of gratitude the men of Jabesh-Gilead went to Beth-Shean where the bodies of Saul and his sons had been hung on its wall after their defeat at Mount Gilboa, removed the bodies, and buried them under a tamarisk in their territory (1 Sam. 31:11–13; 1 Chron. 10:11–12). For this deed of valor and mercy they were highly praised by David (11 Sam. 2:4–6).

Some scholars suggest that Elijah’s surname should be read “the Jabeshite” (*ha-Yaveshi*) instead of “the Tishbite” (*ha-*

Tishbi). The name Jabesh-Gilead has been preserved in the name of Wadi Yābis, a tributary of the Jordan 3½ mi. (6 km.) south of Pella (Peḥel). Eusebius locates it 6 (Roman) miles south of Pella on the road to Gerasa (Onom. 110:11 ff.). Its accepted identification is with Tell al-Maqlūb; Glueck has proposed Tell Abu Kharaz as the site of Israelite Jabesh-Gilead and Tell al-Maḡbara farther down the Wadi as the Roman-Byzantine city; these identifications, however, disregard Eusebius' statement.

[Michael Avi-Yonah]

JABEZ, 16th-century family of scholars and Hebrew printers of Spanish origin. SOLOMON (d. before 1593) and JOSEPH JABEZ set up a Hebrew press in Salonika in 1546. They were the sons of ISAAC JABEZ (d. before 1555) and grandsons of Joseph *Jabez, called “the preacher.” In 1494 in Mantua, Joseph, the grandfather, wrote a homiletical work, *Ḥasdei ha-Shem*, which his son Isaac prepared for publication. An edition of Psalms with his commentary was published by his grandson Joseph in Salonika in 1571. From 1546 to 1551 Solomon and Joseph printed a number of Hebrew books there. After a short interval in Adrianople, where they printed two books (1554–55), Solomon went to Constantinople and Joseph returned to Salonika, where he was an active printer until about 1570.

A plan to print the Talmud, which had been burned and banned in Italy in 1553, was not fulfilled beyond a few tractates (1561–67). Meanwhile Solomon had begun printing in Constantinople in 1559, and his brother Joseph rejoined him there in 1570. Alone or together they printed about 40 important works, among them responsa by Elijah Mizraḥi (1559–61) and Joseph ibn Lev (3 parts, 1560?–73), the first editions of Saadiah's *Emunot ve-De'ot* (1562), and A. Zacuto's *Yuhasin* (1566). The brothers then made a new effort to reissue the Talmud; the larger part of it appeared 1583–93. Solomon's son ISAAC JABEZ was the author of *Ḥasdei Avot* (Constantinople, 1583), a commentary on *Avot*, *Yafik Razon* (Belvedere, 1593), a commentary on *haftarot*, and *Torat Ḥesed* (Belvedere, after 1593), on Hagiographa; he was not a printer. The Jabez press in Constantinople was financed by patrons such as Solomon Abenaes. Ḥayyim *Halicz worked at the press in about 1568.

BIBLIOGRAPHY: I. Rivkind, in: *KS*, 1 (1924), 294 ff.; A. Elmaleh, *Toledot ha-Yehudim be-Salonika* (1924), 2, 5–6, 9–10; Rosanes, *Togarmah*, 2 (1937–38²), 234 ff.; R.N. Rabinowitz, *Ma'amar al Had-pasat ha-Talmud* (1952), 67 ff.; A. Yaari, *Ha-Defus ha-Ivri be-Kushta* (1967), 26–30.

JABEZ, JOSEPH BEN ḤAYYIM (d. 1507), Hebrew homilist and exegete. From the prefaces to some of his works, it seems that after the expulsion from Spain in 1492, Jabez traveled to Lisbon, to Sicily, and then to northern Italy, after a brief stay in Naples, arriving in 1493 or 1494 in Mantua, one of the largest and most cultured Italian-Jewish communities. There he

remained and was honorably accepted as part of that community, apparently as its official preacher. Both in his travels and in Mantua, he preached about the meaning of the catastrophe that had befallen Spanish Jewry.

Among his published works, most of which were written after the expulsion, are four theological-homiletic compositions, which treat three main questions: *Ḥasdei ha-Shem* (Constantinople, 1533), on the Diaspora and messianic expectations; *Or ha-Ḥayyim* (appended to *Ma'amar ha-Aḥdut*, Ferrara, 1554; separately Shklov, 1796), on Jewish philosophy and its influence upon the fate of Spanish Jewry; and two short treatises (published with the first edition of *Or ha-Ḥayyim*), “*Ma'amar ha-Aḥdut*” (Ferrara, 1554) and “*Yesod ha-Emunah*” (appended to *Ma'amar ha-Aḥdut*), on the *ikkarim*, the “dogmas” of Judaism.

In asserting that philosophical rationalism was to blame for the choice by so many Spanish Jews of conversion rather than exile and suffering, he expressed the feeling of many of his contemporaries. Jabez – who hated philosophy – maintained that the philosophical intellectuals did not consider the observance of the commandments as the most important aspect of religious life, and therefore were not prepared to sacrifice themselves for that observance. He did not attack *Maimonides directly, but accused Maimonides' pupils and followers of distorting his views and thus of bringing the religious catastrophe upon Spanish Jewry.

Similarly, in his treatment of the question of the *ikkarim*, Jabez opposed all his predecessors who attempted to formulate a rational basis for the dogmas of Judaism, claiming that rational proof of a dogma leaves no room for religious belief. Accordingly, he did not include the existence and unity of God – which, he maintained, can be rationally proved – among the three main dogmas he proposed, namely, the creation of the world, divine providence, and the belief in redemption and the coming of the Messiah. Although polemics against many contemporaries comprise much of his writing, *Ḥasdei ha-Shem* contains elements of hope in its description of the exile as necessary for the expiation of the people's sins, and the great Jewish sufferings in his own day as indicative of the approaching redemption.

Besides these theological works, all printed in several later editions as well, Jabez' writings include a commentary on the tractate *Avot* (Constantinople, 1533), one on Psalms (Salonika, 1571), and many other works still in manuscript.

[Joseph Dan]

JABIN (Heb. יָבִין; “discerning”), king of the Canaanite city of *Hazor. Jabin headed the Canaanite alliance and is mentioned in connection with two Israelite wars at the time of the settlement – in the battle at Merom, which is attributed to Joshua (Josh. 11), and the war of *Deborah (Judg. 4–5). The king of Hazor is named in the list of defeated Canaanite kings (Josh. 12:19). There is a reference to the victory over Sisera com-

mander of the army of Hazor in Samuel's speech (1 Sam. 12:9), but the king is not mentioned; and to both Sisera and Jabin in Psalms (83:10). The Bible also refers to Jabin as the king of Canaan in the introduction and conclusion to the prose account of *Deborah's war (Judg. 4:2, 23–24). He is mentioned as allied to *Heber the Kenite (4:17) but plays no part in the body of the story. The account of Joshua 11 notes that "Hazor beforetime was the head of all those kingdoms" (Josh. 11:10). These words may be a reference to an old tradition. Excavations reveal that Hazor was the largest and most important of the cities of Israel in the days of the Hyksos (in the 18th and 16th centuries B.C.E.) and the *el-Amarna period (14th century B.C.E.). Abdi-Tirshi, king of Hazor, is unique in referring to himself as "king of" (*šar*) Hazor in a letter to Pharaoh (El Amarna Letters, no. 227). The other local Canaanite dynasts never call themselves "king" in writing to Pharaoh. According to the Bible, Jabin was killed following the battle of Merom in Joshua's day, and Hazor was totally destroyed (Josh. 11:10–13). The mention of Jabin in Deborah's battle has always puzzled biblical scholars, and several theories have been proposed:

(a) Jabin was king of Hazor and defeated by Joshua. Remnants of his family relocated to Harosheth-Goim and produced a descendant also named Jabin, whose general Sisera engaged the forces of Barak and Deborah (Radak to Judg. 4:2).

(b) Some modern scholars claim that Hazor was rebuilt and, with Radak, say that the second Jabin is another king, possibly a descendant of the first.

(c) *Sisera of Harosheth-Goim was in fact the chief of the Canaanite kings in Deborah's war, and that it was a later tradition which described him as Jabin's general (this theory is supported by the fact that Jabin is not mentioned in Deborah's Song).

(d) The two wars took place in the same era and that Deborah's war actually preceded the war at Merom. Thus, in Deborah's war the Israelites first succeeded in overcoming the Canaanite chariots and subsequently "the hand of the children of Israel prevailed more and more against Jabin the king of Canaan, until they had destroyed Jabin the king of Canaan" (Judg. 4:24). This last engagement is the battle at the waters of Merom, which is in the Upper Galilee not far from Hazor, and eventually came to be attributed to Joshua, as were several other battles.

None of these explanations is satisfying. The account in Joshua appears to be secondary to those in Judges and supplies far less detail. Because Joshua 10 described the hero Joshua as the conqueror of the southern kings, the late writer of Joshua 11 followed his narrative style to compose an account of Joshua's conquest of the northern kings (Ahituv). He had before him Joshua 12:19 listing Hazor as a conquest of Joshua's, as well as the verses Judges 4:2, 23–24 that Jabin was "King of Canaan." As such, he was the natural choice to head the northern coalition. The detail that Hazor alone was burned (Jos. 11:13) provides an etiology of Hazor's ruins in the days of the author.

[Yohanan Aharoni / S. David Sperling (2nd ed.)]

JABLONEC NAD NISOU (Ger. **Gablonz an der Neisse**), city in N. Bohemia, now in Czech Republic, center of the world-famous glass-jewelry industry. Jewish settlement in Jablonec, which began in 1847, was connected with the development of this industry. As the neighboring town of Smržovka (Ger. Morchenstern), where most of the plants were situated, caused difficulties for the Jews, Jablonec became the industry's commercial center. A congregation (*Kultusverein) was founded in Jablonec in 1872, a cemetery opened in 1882, and a Moorish-style synagogue dedicated in 1892; in 1893 a community was legally established, with a substantial number of foreign citizens, representatives of foreign firms. The community statute of 1928 granted them equal voting rights. Between the world wars, the majority of the population supported German nationalistic aims; in the same period the municipality prohibited *shehitah* in the slaughterhouse. During the Sudeten crisis and the annexation of the area by Germany (Oct. 1938), most of the Jews left Jablonec, some reestablishing their firms in the U.S. and England. The few who remained were deported to concentration camps. On Nov. 10, 1938, the synagogue was demolished. After World War II a small congregation was reestablished, most of its members from Subcarpathian Ruthenia; in 1969 it was affiliated to *Liberec. The Jewish population in Jablonec numbered 214 in 1869, 430 in 1880, 517 in 1895, and 799 in 1930 (2% of the total population). The municipality turned the cemetery into building plots in 1969.

[Meir Lamed]

JABLONNA, Polish military detention camp set up in the summer of 1920 during the Red Army counteroffensive on Warsaw. The facts that Jewish officers were serving in the Red Army and Jews were prominent in the Soviet leadership created an atmosphere of suspicion toward every Jew, particularly within the army, though civil authorities urged the Jews to make every sacrifice to save Poland. Young Jews, including former officers of the Austrian army, had joined up wishing to contribute their military experience to help in the defense. However, the military authorities, with the knowledge of the war minister K. Sosnkowski, gave instructions that all Jewish volunteers, and "in particular officers," be detained in a closed

camp, which had been set up in a remote village north of Lodz, on the pretext that the detainees were not yet ready for active service, although the real reason was distrust and unwillingness to appoint Jewish officers in positions commensurate with their rank and experience. Three thousand Jewish soldiers and officers, among them many with a university education, were removed from their units and subjected to physical and mental hardship in the Jablonna camp. After protests were voiced through the Jewish press and by Jewish leaders, as well as by Polish intellectuals, the authorities yielded, and on the initiative of the Socialist vice premier, J. Daszyński, the notorious camp was liquidated in September.

JABNEEL (Heb. יַבְנֵיִל, Yavne'el). (1) Town on the northern border of the tribe of Judah between Mount Baalah and the sea (Josh. 15:11). It is identical with the later *Jabneh-Iamnia, now Yavneh, between Jaffa and Ashdod.

(2) Town on the southern border of the tribe of Naphtali (Josh. 19:33). In the Talmud it is identified with Kefar Yamma (now Khirbat Yamma in the Jordan Valley; TJ, Meg. 1:1, 70a). The biblical town was situated at Tell al-Na'm, a small but prominent mound 1 mi. (1½ km.) to the northeast near a spring. The remains on the tell include Bronze Age and Iron Age I pottery.

[Michael Avi-Yonah]

Modern Times

(3) Village (moshavah) in Israel with municipal council status, in the Jabneel Valley of eastern Lower Galilee, 6 mi. (10 km.) east of Kinneret. Jabneel was founded in 1901 by pioneers from Russia, with the aid of the Jewish Colonization Association, on land bought by Baron Edmond de Rothschild for agriculture based on grain farming. Lack of water retarded Jabneel's growth, until rich groundwater reserves were tapped in the 1940s. Farming was then intensified and diversified. After the War of Independence (1948), a *ma'barah* was set up nearby, many of whose inhabitants (originating mainly from Yemen and North Africa) were later absorbed into Jabneel itself. Three neighboring villages were united with Jabneel in the 1950s: the moshavah Bet Gan (founded in 1904) and the moshavim Mishmar ha-Sheloshah (1937) and Semadar (1953). The moshavah's area extends over 12 sq. mi. (32 sq. km.). In 1968 Jabneel had 1,520 inhabitants. Its farming included field crops and orchards, and it had a number of small enterprises, mainly in the food and farm service branches. In 2002 the population of Jabneel was 2,580. In recent years, Braslav ḥasidim began settling in the moshavah, reaching around 400 in number.

JABNEH (Yavneh; Heb. יַבְנֵי; Ar. *Yibnā* يَبْنَى), biblical city located on the coastal plain, S. of Jaffa. Jabneh first appears in the Bible as Jabneel, on the northern border of the tribe of Judah (Josh. 15:11). It is counted as one of the Philistine cities, together with Gath and Ashdod, whose walls were breached by Uzziah king of Judah (11 Chron. 26:6). The site of the biblical city is located on the tell in the village of Jabneh, which contains Iron Age remains. Earlier remains can be found at various sites along the Sorek River (Wadi Rubin), especially at Tell al-Sultan, northwest of Jabneh. In the Middle Bronze Age, a settlement was also established on the seacoast at Jabneh-Yam, which later served as the harbor of inland Jabneh. This harbor formed a separate entity as the center of the district of Maḥoz, which is possibly mentioned as early as the time of Thutmose III in his list of conquered cities (no. 61) and in the *El-Amarna letters. The remains of the harbor city show evidence of settlement in the Early, Middle, and Late Bronze Ages down to the Byzantine period; it is surrounded by a rampart and a wall approximately ⅓ mile (1 km.) long.

In the Hellenistic period, Jabneh (called Iamnia or Jamnia; Gr. Ἰάμνια) was included in the eparchy of Idumea, but was later transferred to Paralia. During that period the traders of Jabneh-Yam dedicated inscriptions at Delos to the gods Hauran and Heracles-Melkart. A Greek inscription found in 1986 suggests that a Sidonian colony settled there by the end of the Persian period. The city was used as a base by the foreign armies for repeated attacks on Judean territory (1 Macc. 5:58). At the time of the Maccabean revolt, Jabneh had a Jewish community, which was threatened with extermination by the rest of the population. As a warning, Judah Maccabee attacked the harbor and burned the ships (11 Macc. 12:8–9). Jonathan the Hasmonean fought one of the decisive battles of the Maccabean revolt in the region (1 Macc. 10:69 ff.); another battle was fought near the city under Simeon (1 Macc. 15:40). According to Josephus, Simeon captured the city (Ant., 13:215), but since the Books of Maccabees do not mention such a conquest, it is preferable to attribute it to Hyrcanus. At the accession of Alexander Yannai, Jabneh was already a Hasmonean city (Jos., Ant., 13:324) and the entire population was Jewish. Pompey attempted to revive it as a gentile town in 63 B.C.E. (*ibid.*, 14:75; Wars, 1:157), leaving the actual work of reconstruction to his deputy Gabinius (Wars, 1:166); however, the new town was short-lived as an independent unit. It was probably given to Herod at the time of his accession. He willed it to his sister Salome (Ant., 17:321; Wars, 2:98); after her death it passed to the empress Livia, and then to her son Tiberius. It was the seat of an imperial procurator (Ant., 18:158). By then, the city was purely Jewish and was a toparchy of Judea (Wars, 3:55). In the first Jewish war, it was occupied by Vespasian; Titus passed through it on his way to Jerusalem. When R. Johanan b. Zakkai left besieged Jerusalem and ar-

rived at the Roman camp, he asked the emperor to “give him Jabneh and its scholars” (Git. 56b).

After the fall of Jerusalem, the Sanhedrin was reconstituted at Jabneh, first under R. Johanan and then under the patriarch Rabban Gamaliel II (Tosef., Ber. 2:6). The Sanhedrin met in the upper story of a house or in a vineyard near a pigeon house. In some respects, the city was now regarded as the equal of Jerusalem: there the year was intercalated and the *shofar* blown, and pilgrims from Asia visited the city three times a year (Tosef., Hul. 3:10; RH 29b; Shab. 11a). Among the most important decisions made at Jabneh was the arranging of the definitive canon of the Bible. Between 70 and 132 C.E., Jabneh was “the great city, the city of scholars and rabbis”; most of the *tannaim* of this period taught there and Rabban Gamaliel was buried there. The city is described as being situated near a stream of water; its wheat market was well known and cattle and poultry were raised in the vicinity.

With the outbreak of the Bar Kokhba Revolt, Jabneh ceased to be the center of Jewish life in Erez Israel and the Diaspora. After the war, unsuccessful attempts were made to transfer the Sanhedrin from Galilee back to Jabneh (RH 31a–b). A strong Jewish element remained in the city, but the Samaritans constituted the majority (Tosef., Dem. 1:13). A Samaritan inscription belonging to a synagogue was discovered there. By the fifth century, the city was predominantly Christian and the bishop took part in the church councils at Nicea (325 C.E.), Chalcedon (451 C.E.), and Jerusalem (518 and 536 C.E.). The Arabs conquered the city in 634 C.E. In Crusader times it was turned into a fortress called Ybellin, a fief of the noble family of Balian that served as a base for operations against Muslim Ashkelon.

[Michael Avi-Yonah]

In Rabbinic Literature

Even before the destruction of the Second Temple, the town was a center of Torah with a well-known *bet din*, consisting of 23 members, which tried capital cases (Sanh. 11:4; Sif. Deut. 154). During the Jewish War, even before the civil war in Jerusalem, the town made its peace with Vespasian (Jos., Wars, 4:130; cf. 4:663). *Johanan b. Zakkai quickly became the leader not only of the town itself, where he displaced the “sons of *Bathyra” (RH 29b), but also of a notable section of the Jewish population of Erez Israel and even of the Diaspora. He turned Jabneh into the center of halakhic study as well as the new seat of the self-governing administration of the population in place of destroyed Jerusalem (see RH 4:1–2). Jabneh’s position was further consolidated with the rise of Rabban *Gamaliel II (called “of Jabneh”). The academy of Jabneh was called “the vineyard at Jabneh” (Tosef., Eduy. 1:1; Yev. 6:6; Ket. 4:6; Ber. 63b; et al.). Rabbinic literature mentions many incidents that happened in Jabneh and its scholars (“our rabbis of Jabneh” – Ber. 17a; “our rabbis in Jabneh” – Ket. 50a; “the scholars of Jabneh” – Kid. 49b; “scholars in Jabneh” – Nid. 15a; “elders in Jabneh” – Tosef., Kelim BB 5:6) are mentioned with praise: “They who went to Jabneh, to a place where disciples

and scholars are numerous and love the Torah, their name became great in Torah” (ARN 14, 59). In Jabneh the new moon was proclaimed and the year intercalated, and there several important *takkanot* were made – among them formulations of the 18 blessings of the *Amidah* and the “blessing” against Christians and other heretics (see **Amidah*). At Jabneh the dispute between Bet Shammai and Bet Hillel was decided in favor of the latter (TJ, Ber. 1:7, 3b). The scholars of other academies and other localities also showed great interest in the learning at Jabneh (Tosef., Sot. 7:9; Yad. 2:16). Questions and questioners reached Jabneh from all parts of Erez Israel and the Diaspora (Par. 7:6; Tosef., *ibid.* 7 (6):4; Hul 3:10; Mik. 4:6; Nid. 4:3, Kil. 1:3 and 4). The decisions and customs of Jabneh had their influence in the *halakhah* not only during the period of its hegemony (Tosef., Nid. 6:9), but also after its decay and even in the time of the Babylonian *amoraim* (Nid. 50b). The foundations for the editing of the *Mishnah were laid at Jabneh, and the main part of tractate **Eduyyot* was arranged there. It is referred to as the “treasure house of Jabneh” (Tosef., Dem. 1:13–14).

The outlook of the scholars of Jabneh is testified to by their saying: “I am a creature and my fellow is a creature. My work is in the town and his work is in the country. I rise early for my work and he rises early for his work. Just as he does not presume to do my work, so I do not presume to do his work. Will you say, I do much and he does little? We have learnt: Both he who does much and he who does little [do well], provided he directs his heart to heaven” (Ber. 17a). Because of the great work accomplished in Jabneh, which served as a center for the revival of the people and the *halakhah* after the destruction of the Temple, the name came to be used in the 19th century – not altogether accurately – for the idea of a spiritual center.

JABOTINSKY, VLADIMIR (Zé'ev; 1880–1940), Zionist activist, soldier, orator, writer and poet; founder of the *Jewish Legion during World War I. Jabotinsky greatly influenced a large section of the Jewish people and as head of the *Be-

tar movement was the undisputed source of inspiration to masses of Jewish youth, particularly in Eastern Europe. His accomplished oratory – in Russian, Hebrew, Yiddish, English, French, Italian, and German – characterized by compelling logic and magnetic imagery, drew large audiences around the world and was often the climactic experience of Zionist congresses. Born in Odessa into a middle-class Jewish family, Jabotinsky was educated in Russian schools. Before his bar mitzvah he took Hebrew lessons from Y *Rawnitzki, but according to his autobiography, he had “no inner contact with Judaism,” and never “breathed the atmosphere of Jewish cultural tradition” during his youth. In 1898 Jabotinsky went to Berne and Rome, where he studied law and served as foreign correspondent of two Odessa dailies (often under the pen name “Alt-ena”). Under the influence of his professors in Rome, he became a disciple of the economic doctrine of socialism, though he rejected Marxism as a mechanistic philosophy that disregarded the individual. Later on, especially after the Bolshevik Revolution, he radically revised his attitude toward socialism as an economic conception as well. Throughout – individualism was a dominant feature of his thinking.

Jabotinsky returned to Odessa and in 1901 joined the editorial staff of *Odesskiya Novosti*, his brilliant daily feuilletons becoming widely popular. In the spring of 1903, when the danger of a pogrom in Odessa seemed imminent, he joined the initiators of a Jewish self-defense group. He then traveled the length and breadth of Russia urging self-defense on the Jewish communities. After the pogrom in Kishinev in the same year, he immersed himself in Zionist activities. As a delegate to the Sixth *Zionist Congress, he was fascinated by *Herzl’s personality, but he nonetheless voted against Herzl on the *Uganda project. He became the foremost Zionist lecturer and journalist in Russia in the period before 1914. As a member of the editorial board of the Zionist journal **Raszvet*, he played a leading role in the evolution of Zionist ideology in Russia and was an architect of the *Helsingfors Program of “synthetic” Zionism (1906), which advocated both settlement in Erez Israel and political and educational activities in the Diaspora. Jabotinsky also crusaded in Russia against antisemitism, Jewish assimilation, and the quasi-nationalism of the *Bund.

In 1909, after the revolution of the Young Turks, the World Zionist Organization appointed Jabotinsky editor of four publications in Constantinople (in French, Hebrew, and Ladino) and entrusted him with political work in Ottoman circles until a disagreement with David *Wolffsohn, the president of the World Zionist Organization, on questions of tactics led to his resignation. His stay in Turkey gave him a deep insight into the weaknesses of the regime.

At the outbreak of World War I, Jabotinsky was sent to Western Europe as a roving correspondent by the Moscow liberal daily *Ruskiya Vedomosti*. In Turkey’s declaration of war on the Allied Powers, he foresaw at once her defeat and the inevitable dismemberment of the Ottoman Empire. It was essential, he decided, that the Zionist movement should abandon its neutral stand in order to achieve its aims in Palestine

at the end of the war. While in Alexandria, where thousands of Jewish deportees from Erez Israel were concentrated, Jabotinsky, joined by Joseph *Trumpeldor, advanced the idea among them of raising a *Jewish Legion to join the Allies in liberating Erez Israel from Ottoman rule. The British military authorities in Egypt, however, rejected the idea, explaining that Britain did not intend opening a front in Palestine at all. But the approach to the British bore unexpected fruit: the Zion Mule Corps, which took part in the Gallipoli campaign. It was led by Col. John Henry Patterson and his deputy was Trumpeldor. Jabotinsky, however, went to Rome, Paris, and London to plead before the Allied statesmen the case for a full-fledged Jewish Legion to fight in Palestine, but met with opposition on all sides. The official Zionist leadership, which insisted on remaining neutral in the war, also condemned Jabotinsky’s “legionist” propaganda and actually forced him to leave the Zionist Organization. The only public figures who cooperated with him were Pinhas *Rutenberg, Meir *Grossman, and Joseph *Cowan, while Chaim *Weizmann gave him discreet support. By 1916 Jabotinsky’s lonely but energetic campaign had won him substantial support in Britain, but it was only after the death in June 1916 of War Minister Kitchener, who had determinedly opposed any “eastern front,” that the winds began to favor his efforts. In 1917 the British government consented to the formation of Jewish units. The first to be established was the “38th Battalion of Royal Fusiliers” under Patterson’s command in England, which was joined in 1918 by the 39th (American) and 40th (Palestinian) Battalions. These were later consolidated into the “First Judean Regiment” with the *menorah* as its insignia. At the time, the British considered this an adequate solution to the problem of Jewish immigrants in East London, who were Russian nationals who could not be drafted into the British Army and refused to return to antisemitic Russia and serve in the Czar’s army. Jabotinsky himself joined the 38th Battalion as a lieutenant and was decorated for heading the first company to cross the Jordan. His book *The Story of the Jewish Legion* (1945), first published in Russian (1928), is a monument to this chapter in Jewish history.

After the war, Jabotinsky insisted on the need to maintain the Jewish Legion in Palestine as a guarantee against the outbreak of Arab hostility, which was encouraged by the anti-Zionist policy of the British military administration. In spite of Patterson’s efforts and Jabotinsky’s unrelenting demands, Weizmann and the other official Zionist leaders ultimately accommodated themselves to the British policy, and the demobilization of the Jewish Legion took place without strong Jewish opposition. Anticipating anti-Jewish violence by Arab extremists, in the spring of 1920 Jabotinsky organized the *Haganah in Jerusalem, openly leading it to confront the incited Arab masses during the Passover riots of that year. He was immediately arrested by the British authorities, together with other members of the Haganah, and sentenced by a military court to 15 years hard labor. 19 of his young comrades were sentenced to three years each. A storm of indignation broke out in Palestine, England, and America among Jews and gentiles, and

the sentences were radically reduced. In July 1920 Sir Herbert Samuel, the newly appointed first High Commissioner for Palestine, granted amnesty to all those – Jews and Arabs alike – imprisoned in connection with the Jerusalem riots. Jabotinsky left Acre prison acclaimed a hero by all sections of the *yishuv*, including the Labor parties. Jabotinsky went to London in September 1920 and succeeded in having the whole case quashed, the sentences expunged, and a stinging rebuke handed to the Palestine judiciary by the Army's Advocate General. While in London he was urged by Weizmann to join the Board of Directors of the newly established Keren Hayesod and, afterwards, the Zionist Executive. Together with Weizmann, he constructed a program that included demands for the restoration of the Jewish Legion and for consultation between the British government and the Zionist Organization on the appointment of the High Commissioner for Palestine. At the Twelfth Zionist Congress (1921), Jabotinsky defended the incumbent leadership against the attacks of the opposition (consisting mainly of the Brandeis group) and was reelected to the Zionist Executive. He was a member of the first Keren Hayesod delegation to the U.S. Though he opposed Churchill's 1922 White Paper on Palestine which gave a restricted definition of the phrase "a Jewish National Home in Palestine," he did not then resign, and so formally shared with Weizmann the responsibility for the Executive's acquiescence in it.

During the 12th Zionist Congress, Jabotinsky, who was always a sympathizer of the Ukrainian national movement, met Maxim Slavinsky, the representative of Petlyura's Ukrainian government-in-exile, which was at the time preparing to march into the Bolshevik-held Ukraine. They concluded an agreement providing for a Jewish gendarmerie to follow in the rear of Petlyura's army and protect the Jewish population against pogroms. At this juncture the Ukrainians gave up the struggle, so the project came to naught.

In the second half of 1922, Jabotinsky became increasingly critical of Herbert Samuel's rule in Palestine and of what he considered to be Zionist accommodation with Great Britain's disregard of her obligations. His urging to make public Britain's breaches of her undertaking was rejected by Weizmann. In January 1923 the combination of his acute differences with Weizmann and his other colleagues led to his resignation from the Executive and his decision to leave the Zionist Organization. For a while thereafter his sole contributions to Zionist political life were articles in the Russian weekly *Razsvet*. Later in 1923, during a lecture tour to the Baltic States, however, he met a lively response from Jewish youth and decided to form a new activist movement to revise Zionist policies. In his lectures he demanded a return to Herzl's concept of the Jewish State, the restoration of the Jewish Legion, and a widespread political offensive for the achievement of a radical change in British policy, which should have as its avowed aim facilitating a Jewish majority in Palestine – including Transjordan – by means of rapid mass immigration. Transjordan had originally been included by Britain in the projected National Home.

In 1925 a convention of his followers in Paris proclaimed the formation of the World Union of Zionist Revisionists in which Vladimir Tiomkin was elected president. He lived in Paris and made it the headquarters of his movement until 1936, except for a brief period from 1928 through 1929 during which he lived in Jerusalem as director of the Judaea Insurance Company and editor of the daily *Do'ar ha-Yom*. In 1930, when he was on a lecture tour in South Africa, the British administration, impressed by his growing influence on the Jewish youth, prevented his return to Palestine by canceling his return visa. He resumed residence in Paris, but was constantly on the move throughout Europe, actively collaborating in dozens of publications in many languages and drawing attention to the shortcomings of Zionist political policies and economic methods in Palestine – all of which widened the chasm between him and the Zionist leadership. His relations with the Labor movement in Palestine and in the Zionist movement grew increasingly strained as they charged him with "enmity to labor," militarism, and even "fascism." The establishment of the "enlarged" Jewish Agency in 1929, with half of the seats allocated to unelected non-Zionist "notables," and the refusal of the Seventeenth Zionist Congress (1931) to accept his proposal to define the aim of Zionism as "the establishment of the Jewish State," induced Jabotinsky to press more and more for the secession of his movement from the Zionist Organization and the formation of an independent instrument of Zionist policy and economic activity.

After Hitler's rise to power in 1933, Jabotinsky espoused the total boycott of Nazi Germany by the Jewish people and opposed the Jewish Agency's *Haavara* agreement with the Berlin regime. In the same year, he vigorously defended the two young Revisionists in Palestine, Avraham Stavski and Zevi Rosenblatt, who were accused of assassinating the labor leader Chaim Arlosoroff. In 1934, through the mediation of Pinhas Rutenberg, Jabotinsky and David Ben-Gurion concluded a series of agreements intended to ease internal Zionist conflicts, to regularize the relationship between the Histadrut and the Revisionist workers, and to lead eventually to political understanding and cooperation between Labor Zionism and Revisionism. The scheme fell through, however, when the draft agreement on labor relations was rejected by the majority in a Histadrut plebiscite (1935), dominated by the far Left *Ha-Shomer ha-Za'ir*. These events increasingly alienated Jabotinsky from the Zionist Organization. In 1935, when the Zionist General Council introduced a "discipline clause" prohibiting further "independent political activities" by the Zionist parties, a Congress in Vienna, representing 713,000 voters, mostly from Eastern Europe, founded the New Zionist Organization (NZO), with Jabotinsky as president (*nasi*) and headquarters in London. Jabotinsky's 1937 testimony before the Royal Commission on Palestine was a dramatic "J'accuse" against British policy and a stirring description of the "frozen stampede" of Jewish masses in Central and Eastern Europe. He simultaneously inaugurated his "policy of alliances" with European governments interested in solving the problem of their Jewish

minorities through emigration. His scheme provided for an internationally sponsored ten-year plan for the “evacuation” of 1,500,000 East European Jews to Palestine. This policy was violently opposed by most sections of the Jewish public, who feared that it might be interpreted as Jewish recognition of the antisemitic contention that Jews are essentially aliens in the countries of their residence, and they refused to believe in his repeated warnings of the coming catastrophe. But Jabotinsky achieved a measure of understanding for his scheme in Polish government circles, who were prepared to exert pressure on Great Britain and defend the policy in the League of Nations. Intent on breaking the prohibitive British regulations on immigration to Palestine, Jabotinsky, starting in 1932, launched a campaign, and an organization named *Af-Al-Pi* (“in-spite-of”) for “illegal” immigration, which, between 1936 and 1942, became a major activity of his movement. Jabotinsky’s attitude toward Jewish defense in Palestine also underwent a transformation that paralleled his disenchantment with British rule. In the 1920s he still advanced the idea of a legion of official Jewish units serving as part of the British garrison of Palestine to prevent Arab opposition from deteriorating into anti-Jewish violence. By the end of the 1920s the hope of a resuscitation of the Legion had faded and the Zionist leadership had presided over the development of the Haganah. After the Arab riots of 1929, dissatisfaction with the political leadership of the Haganah led to a split and the creation of the Haganah “B” – which was subsequently renamed “Ha-Irgun ha-Zeva’i ha-Leummi” (the National Military Organization). Its members saw Jabotinsky as their inspirer and natural leader. After the Arab riots broke out in 1936, he accepted his position as the head of the Irgun, but due to his enforced absence from the country he could influence IZL’s activities only in very general terms. Differences of opinion between Jabotinsky and the IZL leadership were ironed out in 1939 at a clandestine conference in Paris, at which David *Raziel, the commander of IZL, unreservedly accepted Jabotinsky’s authority. But opposition to Jabotinsky and his policies inside IZL resulted in the organization’s second split immediately after his death (1940), when Avraham *Stern formed his own group, *Loḥamei Hēret Yisrael* (Fighters for the Freedom of Israel). With the outbreak of World War II, Jabotinsky demanded the creation of a Jewish army to fight the Nazis alongside the Allied armies, and a united Jewish representation at the future peace conference. In his book *The Jewish War Front*, published in London in 1940, he formulated what he believed should be the attitude of the Jewish people to the war and its probable aftermath. His proposal for a Jewish army was rejected by British Prime Minister Chamberlain. Jabotinsky did not abandon the idea, and in February 1940 he sailed for the U.S. to enlist Jewish and non-Jewish support for a Jewish army. At the same time he urged the U.S. to join in the war against the Nazis. His stirring addresses gave rise to considerable enthusiasm, and he enlisted the support of British Ambassador Lord Lothian, who saw the value, at this critical stage of the war, of Jabotinsky’s vigorous pro-British message. But on August 4, 1940, during a visit to

the Betar summer camp near New York City, he died suddenly of a heart attack. In his will, written in the late 1930s, Jabotinsky said: “My remains will be transferred [to Erez Israel] only on the instructions of a Jewish Government.” Twenty-four years after his death, his remains, together with those of his wife, Johanna, were taken to Israel by a government decision and buried in a State funeral on Mount Herzl.

The Hebraist, Writer, and Poet

Jabotinsky took the idea of the renaissance of Hebrew as the living language of the Jewish people very seriously. Intensive study quickly made him an outstanding Hebraist. In 1910 he translated *The Raven* by Edgar Allen Poe into Hebrew and delivered his first Hebrew address in public. Before World War I he toured the Jewish communities of Russia lecturing on “The Language of Our Culture” and advocating the establishment of Hebrew day schools with Hebrew as the language of instruction in all subjects. This idea met with opposition not only in assimilationist and Yiddishist circles, but also among some Zionists, who considered it utopian. Jabotinsky’s contribution to Hebrew language and literature was manifold. His translation of ten cantos of Dante’s *Inferno* is a masterpiece. In 1924 he published *Targumim*, a collection of translations of French, English, and Italian poetry based on Sephardi prosody. He was the first Hebrew poet to write in Sephardi prosody. The literary “Establishment” whose poetry was conceived in Ashkenazi pronunciation finally accepted the change. Jabotinsky moreover is credited with influencing the whole gamut of modern Hebrew poetry. He collaborated with S. Perlman to edit the first Hebrew geographical atlas (1925). *Ha-Mivta ha-Ivri*, an essay on the phonetics of Hebrew, appeared in Tel Aviv in 1930. An advocate of writing modern Hebrew in Latin characters, Jabotinsky prepared a textbook of “latinized” Hebrew (*Taryag Millim*), which was published in South Africa in 1949 and in Israel in 1950. He also wrote several patriotic songs that became an inspiration for Zionist youth, particularly of the Betar movement. “*Shir Asirei Akko*” (“The Song of the Prisoners of Acre”), “*Minni Dan*,” “*Kullah Shelli*,” “*Shir Betar*,” and “*Semol ha-Yarden*.” His fragmentary autobiography *Sippur Yamai* (“The Story of My Life”) is written in elegant Hebrew prose. But his main contributions to belles lettres were in Russian. Two verse plays, “*Krov*” (“Blood”) and “*Ladno*” (“All Right”), were staged in 1901 and 1902 in the Odessa Municipal Theater; “*Bednaya Charlotta*” (“Poor Charlotte”: a poem about Charlotte Corday) and a masterly Russian translation of Bialik’s “*Massa Nemirov*” appeared in 1904; a satirical play on Jewish life in Russia “*Chuzhbina*” (“On Foreign Soil”), written in 1908, was suppressed by Czarist censorship and published in Berlin only in 1922. Bialik’s “*Songs and Poems*” in Jabotinsky’s Russian translation (1910) was a best-seller (seven printings within two years), becoming a classic in its own right and making a deep impression not only on Jewish youth but on Russian intellectual circles as well. A collection of his short stories, translated from Russian into English (*A Pocket Edition of Several Stories Mostly Reactionary*) appeared in Paris in 1925.

Jabotinsky's major literary achievement, the biblical novel *Samson the Nazarite*, written and first published in Russian (1926) and later translated into Hebrew, English, and German, reflects much of his philosophy of Jewish history and life in general. Chaim Nachman Bialik described it as the only Jewish "national myth." In 1930, on his 50th birthday, his friends published a limited edition of three volumes of his poems, short stories, and essays in Russian. The novel "Pyatero" ("The Five"), which appeared in Russian in 1936, is a largely autobiographical picture of assimilating Jewish circles in Odessa. From the late 1920s until his death, he published articles in Yiddish almost weekly in the Warsaw Jewish press (first in *Haynt* and later in *Der Moment*) and in the New York *Jewish Morning Journal*. For years this was his only stable source of income and the chief vehicle for the propagation of his thoughts. Jabotinsky was an unusually gifted linguist, amassing a knowledge of some 20 languages. He had an intense interest in languages and a precious ability to grasp their spirit. A comprehensive, annotated collection of his writings, including speeches and letters, was published in 18 volumes in Hebrew (Tel Aviv, 1947–59) by his son Eri.

In the 1990s the Israeli Bureau of Statistics revealed that Jabotinsky was, after Herzl, the most frequently used name given to streets in Israel. The moshav Nahalat Jabotinsky, which merged with Binyaminah, and the *Ḥerut headquarters in Tel Aviv – Mezudat Ze'ev – were named after him. The Jabotinsky Institute, located there, contains his personal archives, a comprehensive collection of manuscripts and letters as well as a museum of photographs and personal effects. His only son Eri (1910–1969), engineer and mathematician, was born in Odessa and educated mainly in Paris. In the middle and late 1930s he headed the Betar movement in Palestine and was an initiator of its aeronautic section, being himself a trained glider pilot. He was also active in the organization of "illegal" immigration from Europe on a mass scale. He was arrested several times by the British authorities and learned of his father's death while imprisoned in a detention camp. During World War II he was in the U.S. where he became a member of the Hebrew National Liberation Committee headed by Peter Bergson (Hillel Kook). The newly founded *Ḥerut party in Israel included him in its faction in the First Knesset. In 1952 Eri Jabotinsky joined the faculty of the Technion where he became, in 1967, professor of mathematics. He published mathematical studies in scientific journals in Israel and abroad and contributed also to the Revisionist and general Israel press.

[Joseph B. Schechtman]

The first volume of a digest of, and index to, the letters of Jabotinsky between the years 1904 and 1924 was published in 1972, but the project was not continued. However, the Jabotinsky Institute in Tel Aviv, together with the Zionist Library, undertook the task of publishing in Hebrew all his letters written in their various languages. Under the editorship of Professor Daniel Carpi seven volumes were published through 2005 covering the period up to 1931.

The centenary of Jabotinsky's birth was celebrated in Israel and elsewhere. A new 100-shekel banknote, the largest denomination to that date in the new currency, bearing his portrait, was issued at the time. In 2000, commemorating his 120th birthday and 60th *Yahrzeit*, symposia and lectures were organized in all of Israel's universities and by many public organizations. In a special session of the Knesset, spokesmen from all sides of the House paid tribute to his memory.

JACA, city in Aragon, N.E. Spain. Jews were living in the citadel of Jaca from an early date. The community of Jaca is the oldest in Aragon. In the *fuero* (municipal charter), granted in 1062 shortly after the recapture of the city from the Muslims, they were obliged to grind their flour in the mill of the local ruler. The position of the community during the 13th century is shown by the taxes it paid, which amounted to 2,000 sólidos in 1271. For the collection of the annual tax, the community adopted the system of declaration. The poor and the invalids were exempted from paying taxes, after the example of the Barbastro community. The community of Jaca was annihilated during the *Pastoureaux massacres in 1320. Its recovery was slow and in 1350 it paid only 180 sólidos in Jaca coin to a special levy. A document from 1377 gives a list of all Jewish taxpayers in Jaca. On the basis of the list it is possible to trace the family relations of some of the local Jews. The list contains 115 Jews, usually heads of families. Compared to similar lists available, the community of Jaca seems to have been a large one. In Majorca, in 1391 there were 111 Jewish heads of family, in Barcelona 195 in 1383, in Valencia 93 in 1363. The total Jewish population in Jaca was about 450. The social division of the community is noteworthy: 10 belonged to the upper class, 24 to the middle class, and 81 to the lower class. Members of the upper class who constituted less than 9% of the taxpayers paid 70% of the total tax. The division is based totally on the amount of tax paid and had nothing to do with the family background. In 1382 Infanta Violante, the wife of Infante John, asked for the appointment of David Abembron to the position of *corredor* (financial agent) in the town. In 1383 she ordered the bailiff to uphold the laws of inheritance customary among the Jews. During the persecutions of 1391, the greater part of the Jewish quarter was burnt down and the Jews were left destitute. The impoverished condition continued until the expulsion of the Jews from Spain in 1492. On August 6, after the decree of expulsion had been issued, Infante Henry ordered the Catalonian officials to transfer to him the property of the Jews expelled from Jaca. The Jews lived in the area near the fortress, known as el Castellar. The Jewish quarter was in the streets known today as Cambras and Ferrenal, where the *Sinagoga Mayor* was. The location of another synagogue is unknown.

[Haim Beinart /Yom Tov Assis (2nd ed.)]

JACHIN AND BOAZ (Heb. יָכִיִן, בּוֹאֵז), two pillars which were set up in front of the Sanctuary in Solomon's Temple in Jerusalem (I Kings 7:15–22, 41–42; II Kings 25:13, 17; Jer. 52:17, 20 ff.; II Chron. 3:15–17; 4:12–13). The form and nature of these pillars are uncertain, and many proposals have been advanced by scholars.

Description

There is a detailed description of the pillars in II Kings 7:15–22, 41–42 and II Chronicles 3:15–17; 4:12–13. The pillars were composed of two major parts: the stem, 18 cubits (c. 30 ft.) in height, five cubits (c. 8 ft.) in circumference, and one cubit in diameter; and the capital of the pillar, five cubits in height. The size of the capital was apparently altered in one of the renovations of the Temple, undertaken after the time of Solomon. Thus, in II Kings 25 the height is given as only three cubits. During the renovation all the pillars were apparently recast, which probably explains the contradiction between the description of the construction of the pillars in Kings and that in Jeremiah. According to the former, the pillars and their capitals were cast from solid copper (I Kings 7:16, 46), while according to the latter, they were hollow (Jer. 52:21).

It is more difficult to discover the nature of the capitals, as the description of their construction is filled with unclear technical terms which do not appear elsewhere (cf. Kings 7:17–20, 41–42; Jer. 52:22–23). Without going into detail, it can be said that the capitals were decorated with three varieties of ornamentation – *shushan* (“lilywork”), *sevakhah* (“meshwork”) and *rimmonim* (“pomegranates”), crowned by an additional architectural design called *gullah* (גֻּלָּה). The last item is usually interpreted as a round bowl (on the basis of the parallel Akk. *gullatu* and the description of the Temple lamp in Zech. 4:2–3). The meaning of the other three terms is doubtful, and scholars usually resort to archaeological parallels for reconstructing them.

Rabbinic scholars and medieval Jewish exegetes held that the capital here is a double one (cf. I Kings 7:20). Indeed, double capitals are known from clay molds of cultic structures from Palestine and Cyprus dating to the period under consideration, i.e., the Iron Age. In these molds, as in the biblical descriptions, there is a capital of lily leaves, in the center of which is a semispherical bowl. Even more similar examples are found in ivory inlays from Palestine and Mesopotamia dating from the eighth to the sixth centuries B.C.E., which contain an additional element of a series of elongated mauve

objects shaped like pomegranates hanging below a capital decorated with lilywork. Some later scholars identified this capital with the square proto-Aeolian capitals (Yadin) characteristic of the architecture of the time of Solomon, which have been discovered in various locations in Palestine (in the royal palaces in Samaria, in the fortress of Ahab in Hazor, in the governor's house in Megiddo, Ramat Rahel, Gezer, etc.). Others attempted to reconstruct the appearance of the capitals by comparison with incense stands discovered in Megiddo, Taanach, and Gezer (Smith and, following him, Albright). The closest example is that from Megiddo, which like the biblical model contains three architectural designs – a bowl, rosette work (buds of flowers and lotuses), and pomegranates. In light of recent archaeological findings it has been suggested that *sevakhah* (I Kings 7:17) should be explained as apertures in the bowl, like those found in incense stands (cf. II Kings 1:2, where *sevakhah* refers to the “window bars”). This interpretation, however, is far from the literal meaning, and what is described here is a woven net which surrounded the capitals.

Function and Significance

According to the Masoretic Version (I Kings 7:21 and II Chronicles 3:17), it appears that the pillars stood in front of the Sanctuary, inside the entrance hall. Their size, however, gives rise to doubts concerning their structural function. Thus, few scholars maintain that the pillars fulfilled any function in supporting the roof of the portico (as in temples of the Canaanite and Israelite period in Arad, Megiddo, and Tell Teinat). Most scholars tend to the opinion that these were two freestanding pillars, one on each side of the entrance, like those found in the archaeological artistic tradition of the Ancient East and in references in classical literature (Yeivin, Mazar, Albright, Smith, Roth, Watzinger, Berns, Galling, Gressmann, etc.). Thus, in the three molds from the Iron Age mentioned above, the common element is the freestanding pillars in front of the entrance. A similar phenomenon was found in three temples from the eighth century in Khorsabad in Assyria. Graphic representations of pillars standing outside the structure of a temple have been found on coins from the first century C.E. in Cyprus, Sardis, Pergamum, and Sidon. Finally, there are literary references to this type of pillar in descriptions of the temples of Herakles (Herodotus, 2:44), of the Tyrian Baal (Menader, quoted in Jos., Ant. 8:145), and of the Syrian goddess Atratah (Lucian, *De Syria Dea*, 16–27); one or two such pillars were constructed in honor of Herakles in the Tyrian settlement of Gadez (modern Cadiz) in Spain (Strabo, 3:170).

Even those scholars who agreed that these pillars played no structural role in the Temple were divided in their opinions regarding their function. One suggestion was that they had a mythological significance, as “trees of life,” or cosmic pillars; or perhaps they fulfilled a ritual function as cressets or incense lamps, like those found in a drawing of a tomb in Mareshah (Smith, Albright). Another possibility is that they had only symbolic significance, symbolizing the dwelling place of God in the Temple, like the monuments found in the temple in

Shechem and the temple of Mekal in Beth-Shean (Yeivin); or perhaps they were imitations of Egyptian obelisks (Hollis).

Names

The Septuagint in one passage (1 Kings 7:21 [7]) reads the Masoretic Boaz as Baaz (also Boas), and in another (11 Chron. 3:17), as an adverbial phrase, ἰσχύς (*be-oz*, “with strength”). The Vulgate reads it as Booz. Opinion was divided regarding the names as well. Those who maintained (Sayce, Cook, Cheyne) that what was described here is an imitation of a foreign custom maintained that the Hebrew names were a translation of the names of Babylonian or Phoenician gods. In contrast, some scholars maintained that these were predicates of the God of Israel (Klousterman). Some scholars held that these names were derived from a longer text (Sellin, Gressman). Especially well known is the suggestion by Scott that these are the first words of a literary work, similar to the biblical dynastic prophecies and royal hymns, which was engraved on the pillars. More acceptable is the opinion that the names Jachin and Boaz are proper names, like those found in other places in the Bible, representing the names of the builders or contributors (Gesenius, Ewald); or perhaps they were actually names of members of the royal household, as S. Yeivin maintains (cf. Num. 26:12; Ruth 2:1; 1 Chron. 24:17). Thus the pillars play a double role: they emphasize, on the one hand, the personal relationship between the Temple and the royal family and, on the other, the presence of God within the Temple.

[Nili Shupak]

JACKAL (Heb. שׁוּאֵל, *Shu'āl*; AV, JPS “fox”). The jackal, *Canis aureus*, is the most prevalent beast of prey in Erez Israel. Being omnivorous, it is encountered most commonly near inhabited areas, where it feeds on fruit, vegetables, offal, and carrion, whence the phrase “to become a portion for jackals” (Ps. 63:11). It also preys on small animals. The howl of packs of jackals used to pierce the night air near settlements in Israel. The damage they caused to vineyards and vegetables and the danger of their infecting dogs with rabies resulted in efforts to exterminate them by means of poisoned bait. The biblical name for a jackal is a complex problem. Given that Akkadian *zību* means jackal, it is possible that Hebrew *ze'ev* has the same sense. Most of the passages that speak of *shu'āl* apparently refer to the jackal and only some of them to the *fox, which usually lives in isolated places far from human habitation. Given the oft-cited classical parallel in Ovid (*Fast*, 4:679 ff.) that Romans sent out foxes with torches burning in their tails at the festival of Ceres, the 300 animals that Samson caught (*Judg.* 15:4) were probably foxes. The jackal is a cowardly nocturnal animal that usually shuns humans, being only dangerous to human beings when rabid. Hence the reference to “the bite of the *shu'āl*,” which is attended with grave peril (*Avot* 2:10). It is

very closely related to the dog and sometimes the two mate. The Mishnah states that they are heterogeneous (*Kil.* 1:6), i.e., that it is forbidden to interbreed them. In modern Hebrew the jackal is called *tan*, but this word, mentioned several times in the Bible, refers there to an animal that inhabits deserts and ruins (*Isa.* 13:22; *Micah* 1:8); associated always with nocturnal birds, it designates a species of *owl.

JACKSON, BERNARD S. (1944–), British historian of Jewish law. Born in Liverpool, Bernard Jackson became professor of modern Jewish studies at Manchester University. He was trained as a barrister and legal historian and wrote or edited more than 20 books on the law, especially traditional Jewish law. Among his works are *Theft in Early Jewish Law* (1972), *Essays in Jewish Law and Comparative Legal History* (1975), and (as editor) *Modern Research in Jewish Law* (1980). From 1978 to 1997 he was editor of the *Jewish Law Annual*.

[William D. Rubinstein (2nd ed.)]

JACKSON, HARRY (Jacobson; 1836–1885), British actor and stage manager, born in London. Jackson spent his early years in Australia, acted there and in New Zealand, and went to San Francisco in 1856. In his later years he worked in England, where he appeared in variety and melodramas, and became known as a comedian in Jewish stock character roles. During the late 1870s he was the leading comedian at Drury Lane and later became stage manager there.

JACKSON, SOLOMON HENRY (d. 1847), first Jewish printer in New York City. His printing shop had both English and Hebrew type fonts, and he was thus able to print material in both languages, which he did for the various congregations of the city. His most important works were *The Form of Daily Prayers, According to the Custom of the Spanish and Portuguese Jews* (1826), a translation of the Sephardi prayer book into English, and his editorship and publication of *The Jew* (1823–25), a monthly, the first Jewish periodical in the United States. In 1827 he was active in the Hevrat Hinnukh Ne'arim, a society to promote Jewish education, and in 1837 he led a movement to settle Jews on the land.

[Hyman B. Grinstein]

JACKSONVILLE, city in northeast Florida, general population in 2005 about 800,000; Jewish population, about 13,000. Since the founding of Jacksonville in 1822, Jews have played a prominent role in the development of Florida's largest city (in land area). Jews came to Jacksonville as merchants before the Civil War and suffered the same fate as others at the hands of Union troops. Jews have served their city by defending it,

holding public offices, building the economy, and contributing to the cultural arts, education and philanthropies. From the period following the Civil War until the mid-1930s, Jacksonville was the center of Florida Jewish life. Attracted by the business opportunities offered by the port, Jews migrated here via the St. Johns River and the railroad. Tourism, a lumber industry, and military bases acted as magnets to draw new residents.

The head of Florida's longest continuing documented Jewish family is Philip Dzialynski, who arrived from Prussia by 1850. He sent for his father and eight brothers and sisters. In 1857 George Dzialynski was the first known Jewish boy born in Florida, son of Philip and his wife, Ida. In that same brutal year of 1857 for Jacksonville, a yellow fever epidemic killed six members of the Dzialynski family. A Hebrew cemetery, the first in the state of Florida, was established that year. In 1867 Jacob and Morris Cohen came from Ireland and established the Cohen Bros. Department Store, the most prominent in town for more than 100 years, and Austrian-born Herman, Max, and Leopold Furchgott opened Furchgott's. The Hebrew Benevolent Society was formed in 1874 and B'nai B'rith in 1877. By 1880 there were 130 Jews, well integrated into the life of the city. The earliest known public figure is Civil War veteran Morris Dzialynski, who was the first president of Congregation Ahavath Chesed at the same time he served as mayor (1882); he was also a judge. Ahavath Chesed was the second congregation in Florida. Rabbi Israel L. Kaplan was the religious leader from 1916 to 1946 and was succeeded by Sidney Lefkowitz (through 1973), who had conducted the first Jewish service on German soil following the years of Nazi persecution.

In 1901 40 Orthodox families established B'nai Israel. Reverend Benjamin Safer was hired as the community's first *shohet*. Many Jews who immigrated to the U.S. in the late 19th century from Pushalotes, Lithuania, settled in Jacksonville. In 1901 a devastating fire swept through 146 blocks of Jacksonville and architect Roy Benjamin figured prominently in the rebuilding of the city. Benjamin also designed many theaters throughout Florida. This fire destroyed Ahavath Chesed. Less than a year later it was the first house of worship to be rebuilt. The congregation formed a Boy Scout Troop in 1915 and continues without interruption as the second oldest troop in Jacksonville. Henrietta Szold came to start Hadassah in 1914. The YMHA formed in 1917. Families from surrounding small communities moved to Jacksonville where they could maintain Jewish traditions and participate in Jewish life. With increasing river traffic and World War I shipyard demands, the population grew.

Benjamin Setzer came from Pushalotes in 1918 and opened his first Setzer's grocery store, which later became Food Fair. By 1961, Benjamin had started another chain, Pic N Save super drug stores. Louis Mendelson moved to Jacksonville from Live Oak and founded, in 1912, Mendelson Printing. With Morris Gelehrter, in 1924, he started *The Florida Jewish News*, which became *The Southern Jewish Weekly* in 1938, with Isadore Moscovitz as the editor for more than fifty

years. Julius Hirschberg, with brother-in-law, Jacob R. Cohen, conducted the first statewide Palestine campaign just prior to World War I that raised \$10,000. Morton left a generous art collection to the Cummer Museum. In 1926 B'nai Israel began to introduce Conservative Judaism practices and the Jacksonville Jewish Center was founded.

In the 1940s there were 3,095 Jews, and a Naval Air Station was built in Jacksonville, which brought tens of thousands of new faces to the city. Many of them were Jewish, married Jacksonville Jews and started families and businesses. William Katz graduated from the U.S. Air Force Officer Training School as a lieutenant in 1942. He received many medals for World War II service, after which he immigrated to Israel and later became chief pilot for El Al Airlines. Admiral Ellis Zacharias was born in Jacksonville in 1890. Following his graduation from the U.S. Naval Academy, he became chief of Naval Intelligence in World War II and assisted in breaking the Japanese code, which led to the eventual defeat of the Japanese navy.

More Jewish institutions were organized to strengthen Jewish identity and meet increasing needs: Jewish Cultural League, Jewish Community Council, Esquire Club, Council of Jewish Women, Beauclerc Country Club (1953–1984), and River Garden Hebrew Home for the Aged (1945), which is one of the outstanding institutions of its kind in the country. In 1988, the \$8 million Jewish Community Alliance (JCA) opened on land that was formerly the Beauclerc Country Club.

Immigrant Morris Wolfson came in 1914, started a scrap business, and left a legacy of philanthropy to many institutions of health, education, and religion in the city through his children. In 1978 Florida had its first Triple Crown (Kentucky Derby, Preakness, Belmont Stakes) horse race winner, Affirmed, owned by Morris' son Louis E. and Patrice Wolfson. Samuel "Bud" Shorstein served Governor Bob Graham as chief of staff. When Graham was elected Florida's U.S. senator in 1987, Bud accompanied him to Washington, again as his chief of staff. Ray Ehrlich became chief justice of the Florida Supreme Court in 1988. In 1994 the National Football League awarded its 30th franchise to Jacksonville. The Jaguars, co-owned by Lawrence Dubow, began play in 1995, and Jacksonville hosted Super Bowl XXXIX in 2005.

In addition to the Jewish Federation, Jacksonville Jews also have a newspaper, seven congregations, a day school through 8th grade, a joint community Hebrew High evening program, and a full array of organizations that support a robust Jewish life. New growth is moving toward the beach areas.

[Marcia Jo Zerivitz (2nd ed.)]

JACOB (Heb. יַעֲקֹב, יַעֲקֹב), younger twin son of *Isaac and *Rebekah, third of the *Patriarchs of the people of Israel. His father was 60 years old at the time of Jacob's birth, which occurred after 20 years of childless marriage (Gen. 25:20, 26). During a difficult pregnancy, his mother consulted an oracle and was informed by the Lord that she would deliver twins,

each of whom was destined to become the founder of a great nation, and that the older would be subordinate to the younger (25:22–23). This oracle plays a vital role in the biography of Jacob, for it serves to remove completely from the realm of nature and to elevate to the level of divine will the issue of his destiny as the heir to the covenant with Abraham and Isaac. It thus disengages the fact of Jacob's election from the morality of his subsequent actions.

The Birthright

Nothing at all is recorded of Jacob's childhood, except that he emerged from the womb grasping the heel (*akev, laqev*), a play on the name Ya'akov (Ya'akov), of his brother Esau (25:26). It is said that he was "a mild man who stayed in camp" (25:27), and that he was the favorite of his mother, his father showing preference for his brother (25:28). The first incident reported is Jacob's exploitation of his brother's hunger to purchase the birthright from him in exchange for lentil stew (25:29–34); the second relates to the deception he practiced upon his father to obtain his final blessing (ch. 27). At the instigation of his mother, he took advantage of his father's blindness to masquerade successfully as Esau and so to mislead Isaac into believing that he was actually blessing his older son (27:1–29). For this he earned Esau's murderous enmity (27:41), and Rebekah decided that for his safety he must flee at once to the home of her brother Laban in Haran. Another biblical tradition gives as Jacob's motivation to leave for Haran Rebekah's insistence to Isaac that their son must find a wife within the family and not among the native Hittite women (27:42–46; 28:1–4).

In connection with these two incidents, it should be noted that the disregard of primogeniture and the transference of the birthright from one son to another is proscribed in pentateuchal legislation (Deut. 21:15–17). Inasmuch as biblical law prohibits existing practices, we should not be surprised to find evidence of such practice. A document from the second millennium B.C.E. from the town of Nuzi reads:

Concerning my son Zirteshup, I at first annulled his relationship, but now I have restored him to sonship. He is the elder son and shall receive a double portion (E.A. Speiser, in *AASOR*, 10 (1930), 39).

Another document records the purchase of the birthright by a younger brother for the price of three sheep (CH Gordon, in *BA*, 3 (1940), 5), while a tablet from Alalakh actually deals with the prenatal conferral of the birthright (I. Mendelsohn, in *BASOR*, 156 (1959), p. 38–40).

His Flight

Jacob's precipitate flight from Beer-Sheba found him at sunset at a place in which he dreamed that God had appeared to him. He saw angels going up and down a stairway which spanned heaven and earth. He then heard the Lord reiterate the promises of land and numerous progeny that He had made to Abraham and Isaac. His offspring would be a source of blessing to the whole earth; he would enjoy divine protection wherever

he would be, and would return one day to the land from which he was fleeing (Gen. 28:10–15). Jacob awoke from his sleep, startled to discover the presence of God in that place, which he thereupon dedicated as a sacred site, renaming it Beth-El. He vowed to turn it into a "house of God" on his safe return and to dedicate a tithe of all his possessions (28:16–22).

His Marriages

Jacob continued his journey to Haran. A chance meeting at a well brought him face to face with his cousin Rachel. Her father, his uncle Laban, welcomed him into his home (29:1–15). A month later, he arranged to work for Laban for seven years as the bride-price for Rachel (29:16–20). When, however, the day of the marriage arrived, he discovered that, under the cover of darkness, Laban had substituted his older, less attractive, daughter Leah for Rachel. Jacob was forced to agree to serve another seven years, after which period he married Rachel (29:21–30). Each of the brides received a maidservant from her father as a wedding gift, Leah's being named Zilpah, and Rachel's, Bilhah (29:24, 29). This practice, incidentally, is well attested in the Nuzi archives.

In relating these events at length, it may be supposed that the Scripture's intent was to indicate that the trickery practiced by Laban was the retributive counterpart, measure for measure, of the deception Jacob had perpetrated upon his father. At the same time, the unintended marriage to Leah is clearly to be understood as the determination of divine providence, for from this union issued the two great spiritual and temporal institutions of biblical Israel, the priesthood from Levi and the Davidic monarchy from Judah, both sons of Leah.

The Tribes

All in all, the 20 years that Jacob spent in the service of Laban (31:38, 41) really constituted the formative period in the development of the people of Israel, for all but one of the fathers of the twelve tribes were born during this period. The unloved Leah was blessed with four sons in succession, Reuben, Simeon, Levi, and Judah (29:31–35), whereas Rachel remained barren. Like Sarah before her, she resorted to concubinage (see Patriarchs) and gave to her husband her maid Bilhah, who bore Dan and Naphtali (30:1–8). Leah, who had had no children for some time, followed her sister's example, and Zilpah became Jacob's concubine, giving birth to Gad and Asher (30:9–13). Leah, herself, was delivered of Issachar, Zebulun, and a daughter, Dinah (30:14–21). Finally, after so many years of barrenness, Rachel gave birth to a son who was named Joseph (30:22–24).

The information concerning the ascription of the tribal fathers to the various wives and concubines is of considerable interest and doubtlessly reflects a very ancient layer of tribal history and interrelationships. First, all the Hebrew tribes must have originated in eastern Syria except for Benjamin, who apparently joined Joseph and the other tribes after the migration to Canaan. Secondly, the six Leah tribes must at one time have constituted a distinct fraternity, while the handmaid tribes must have had subordinate status. The primogeniture

of Reuben (as later of *Manasseh) must represent an early, but lost, supremacy in the tribal confederation.

Jacob and Laban

After the birth of Joseph, Jacob decided that the time had come to return home. He struck a bargain with Laban to enable him to build up his own resources for the purpose, but, by means of a stratagem that involved the influencing of the pigmentation of the flocks through visual stimulus (see *Biology) he managed to outwit his father-in-law, and he became the prosperous owner of large, sturdy flocks, camels and asses, as well as maidservants and manservants (30:25–43).

At this point, Jacob aroused the outspoken jealousy of Laban's sons and perceived the changed attitude of Laban toward himself (31:1–2). When a divine revelation ordered him to return to Canaan (31:3; cf. 31:13), he put his case before his wives who gave their consent, stating that their father had no longer any claim to them, since he had sold them and had been paid for them in full (31:4–16). Jacob thereupon assembled his family and his possessions and, taking advantage of Laban's absence on a sheep-shearing mission, stole away. Rachel, without her husband's knowledge, used the opportunity to appropriate her father's household idols (31:17–21).

Three days later, Laban learned of the flight and set off in hot pursuit, catching up with Jacob in the hill country of Gilead. At night in a dream God warned Laban not to harm Jacob. A heated exchange took place, and Laban conducted a fruitless search for his household gods. A treaty of mutual respect was enacted, which included a provision preventing Jacob from taking any more wives. A stone mound was erected to commemorate the occasion and to mark the boundary line separating the two parties (31:22–54).

The grievance of Rachel and Leah about their own positions (Gen. 31:14–16) fits in well with what is known of the inferior position of foreign slaves in the ancient Near East. The reference to the bride-price and its fate clearly accuses Laban either of improvident disposition or embezzlement of the monetary equivalent of Jacob's years of service, rendered in lieu of the payments usually settled by the groom on the bride. The significance of the possession of the household gods (Gen. 31:19, 30–35) is unclear (see *Genesis), but the fact that a Nuzi adoption contract makes specific provision for their consignment shows that it was an issue of great importance. Finally, the restrictive marriage clause imposed upon Jacob (31:50) finds its parallels in both adoption and marriage documents.

The Return

Jacob now continued his journey homeward, encountering angels at Mahanaim (32:2–3 (1–2)). It is possible that this incident was once part of a fuller story now so truncated as to defy reconstruction. It does serve, however, to round out the cycle of events that began with the flight from Canaan, which also involved the appearance of angels (cf. 28:12).

Uncertain of the reception he would get from Esau, Jacob then made extensive preparations to mollify his brother as

well as to prepare for the worst (32:4–24 (3–23)). After fording the Jabbok at Penuel, and sending his family and belongings ahead, he found himself wrestling with a mysterious stranger, a divine being, who, desperate to get away before dawn, changed Jacob's name to *Israel, but also left him with a dislocated thigh (32:25–33 (24–32)). The confrontation with Esau turned out to be cordial (33:1–16), and if Esau had any plans of luring Jacob to Seir, where he might have kept him in a somewhat inferior ("younger brother") status after all, Jacob foiled his plans by brilliant diplomatic evasion. Thus Jacob, instead of trekking southward to Seir was able to proceed southwestward to Succoth, not far from the Jordan. There he built a house and made stalls for his cattle. His next stop was well inside Canaan, at Shechem, where he purchased a plot of land and set up an altar (33:17–20).

The Rape of Dinah

Here at Shechem the rape of Jacob's daughter, *Dinah, by Shechem son of Hamor, the governor, took place. Strongly drawn to the maiden, the young man wished to enter into marriage with her. Jacob's sons, who conducted the negotiations, made the circumcision of all the male population a precondition of agreement. Shechem's fighting manhood being thereby temporarily incapacitated, Simeon and Levi avenged the outrage perpetrated on their sister by butchering the population and plundering the town; and when Jacob rebuked them for jeopardizing his relations with his neighbors, they defended their conduct on grounds of honor (Gen. 34).

This story, the only one in the Bible dealing with Dinah, contains several remarkable features: Jacob plays an unwontedly passive role; Simeon and Levi are depicted as fierce warriors acting in concert, thus reflecting a situation totally at variance with other accounts of tribal history, in which Simeon was the military partner of Judah and settled next to it in the south of Canaan, while Levi took no part in the wars of conquest, possessed no tribal territory, and no particular association with Simeon. Some scholars argue that the narrative of chapter 34 conceals a very ancient attempt on the part of some of the tribes to effect a forcible settlement in the Shechem area. At the other extreme it has been argued that the story is a late polemic directed against intermarriage or the Samaritans.

Beth-El

The next events recorded are connected with Beth-El, the site associated with a fateful moment in Jacob's life (cf. 28:10–22). At divine command, the patriarch and his retinue, after purging themselves of idolatrous emblems, made their way to the town. He built an altar there and received God's blessing renaming him Israel and promising numerous progeny, even royal descendants, as well as future possession of the land. Jacob dedicated the site of the revelation and named it Beth-El in place of Luz (35:1–15). He moved on in the direction of Ephrath, and on the way his beloved Rachel died while giving birth to Benjamin. Jacob set up a pillar over her grave (35:16–20). It is not clear whether the succeeding brief notice

of Reuben's incest with Rachel's maid Bilhah, his father's concubine (35:22), is connected with this or not. It is most likely part of an originally larger account explaining the lost preeminence of the tribe of Reuben (cf. 49:3–4; Deut. 33:6; 1 Chron. 5:1). Jacob finally arrived at Hebron to meet his father once again. He participated with Esau in Isaac's burial here (Gen. 35:27–29), being then 120 years of age (25:26; 35:28).

Jacob and Joseph

The subsequent biography of Jacob is wholly interwoven with the life of *Joseph, his favorite son (37:3–4). He seems to have taken seriously the latter's boyish dreams of greatness even as he berated him for them (37:10–11), and his grief at Joseph's disappearance was inconsolable (37:33–35). In view of the tendency of Abraham (12:20) and Isaac (26:1) to move to Egypt in time of famine, it is of interest that Jacob chose instead to send his sons with the exception of Benjamin, to buy food there (42:1–4). The Egyptian official with whom they had to deal was, unbeknown to them, no other than Joseph, who insisted that if they came again they must bring their remaining brother with them. Very reluctantly, Jacob, under the pressure of famine and the importuning of his sons, had to agree (43:1–15).

When Joseph finally revealed his true identity and sent for his father, a divine revelation at Beer-Sheba granted the patriarch permission to migrate to Egypt and also promised to make him there into a great nation which would eventually return to the land (chapter 45; 46:1–4). Jacob thereupon traveled to Egypt with his entire family and possessions (46:5–27) and had a tearful reunion with Joseph (46:29). In an audience with Pharaoh he gave his age at this time as 130 and described his years as having been “few and hard” (47:7–10). He settled in the region of Goshen (47:6), or Rameses (47:11), where he stayed for 17 years (47:28).

As Jacob's end approached, he made Joseph swear to bury him in the ancestral vault in Canaan (47:29–31; 49:29–33). He then blessed Joseph's two sons, *Manasseh and *Ephraim, and transferred the birthright from the older to the younger (48:1–20). In his closing words to Joseph he again predicted the ultimate return to Canaan, and he bestowed on him a parting gift mysteriously described as having been “wrested from the Amorites by my sword and bow” (48:21–22), a reference to some event in the life of the patriarch not otherwise recorded.

Jacob then blessed each of his sons individually, after which he died at the age of 147 (ch. 49). He was embalmed, given a state funeral, and buried by his sons in the cave of Machpelah (50:1–13).

The Other Biblical Traditions

Surprisingly, little about Jacob is recorded outside the Genesis traditions. In the rest of the Bible he is chiefly mentioned in combination with the other two Patriarchs, particularly in reference to the covenant (e.g., Ex. 2:24; 32:13; Lev. 26:42; Deut. 29:12; 11 Kings 13:23). The descent to Egypt is recorded in Joshua (24:4) and Psalms (105:23). The divine love of Jacob

and the rejection of Esau is stressed by Malachi (1:2–3), while Ezekiel singles out the connection between the Patriarch and the land, and refers to Jacob as God's servant (28:25; 37:25; cf. Isa. 41:8; 44:1).

The sole instance of a possible variant tradition independent of Genesis comes from *Hosea, who deprecates Jacob's attempt to supplant Esau in the womb, who places the struggle with the angel at Beth-El, before his servitude to Laban instead of at Penuel on the way home, and who has the angel weep and implore Jacob (12:4–5). He also refers to Jacob's flight and servitude (12:13). It is more likely, however, that Hosea is reinterpreting the Genesis traditions for his own didactic purposes. Similarly, it is doubtful that any independent traditions are behind such divine epithets as “the God of Jacob” (e.g., 11 Sam. 23:1; Isa. 2:3), “the Holy One of Jacob” (Isa. 29:23), “the King of Jacob” (Isa. 41:21), “the Mighty One of Jacob” (e.g., Gen. 49:24; Isa. 49:26), “the El of Jacob” (Ps. 146:5).

The Name

The biblical sources suggest two etymologies for the name. Genesis 25:26 treats it as a denominative verb derived from עָקַב ('*aqev*; “a heel”); Genesis 27:36 involves a root עָקַב ('*qb*; “to overreach,” “to supplant”; cf. Jer. 9:3; Hos. 12:4). Both clearly imply wordplays. The name, however, seems to have been widespread in the second millennium B.C.E., and it appears in one form or another in Akkadian, Old South Arabic, and Aramaic texts. A theophoric form, *Ya'qub-'al*, is transcribed as *Y'qbhr*, the name of a Hyksos prince, in a 17th-century Egyptian source, and as *Y'qb'r* in a 15th-century geographic list of Thutmose III. It is most likely that the Hebrew is a shortened theophoric name, perhaps meaning, originally, “may God protect.”

[Nahum M. Sarna]

In the Aggadah

Since Jacob was renamed Israel (Gen. 32:28) and was destined to be the ancestor of the twelve tribes, his eventful life inevitably became, in the *aggadah*, symbolic of the later history and tribulations of the Jewish people. Likewise, Jacob's principal antagonists: Esau (Edom; cf. Gen. 25:30; 36:1), Laban “the Aramean” (Gen. 31:20), and even the angel who wrestled with Jacob (Gen. 32:24ff.), became the prototypes of the Roman (later Christian) world. The role played by Herod the Edomite “slave” (BB 3b–4a) and his family in subjecting Judea to the Roman yoke, and the close similarity of “Aramean” and “Roman” (ארמני (Aram. רִמְאִי – אַרְמֹאִי although it is also equated with רִמְאִי, a “cheat”; Gen. R. 70:19), facilitated this identification, which must be regarded as basic for the proper evaluation of the Midrash and *aggadah* on the subject.

The biblical account, which treats Esau and Laban with a certain degree of understanding, is subjected to a thorough reinterpretation, with a view to discrediting the enemies of Israel, while glorifying Jacob – regarded as virtually identical with the Jewish people. The struggle between Israel and Rome was foreshadowed before Jacob and Esau were born. Even in their mother's womb they were locked in mortal combat, and

evinced different desires. Whenever Rebekah passed a synagogue or house of study, Jacob tried to break forth, but when she passed near a pagan house of worship, Esau was struggling to get out (Gen. R. 63:6; cf. Gen. 25:22). The religious contrast between Jew and gentile was thus clearly depicted as a permanent chasm between two irreconcilable civilizations. A similar contrast between Jacob and Esau was also noticeable at their birth, the former being clean, smooth, extraordinarily handsome, and born circumcised; while the latter was hairy and bearded, blood-red in color, and with all his teeth fully developed (Gen. R. 63:7–8; Targ. Ps.-Jon. on Gen. 25:25; arn 2:12; Tanh. Noah 5; Tanh. B, Gen. 32; Mid. Ps. 9:7). All this was meant to portray the contrast between the spiritual beauty of Israel and the ugliness of the pagan world – its wars and bloodshed, Rome’s perennial occupation. Esau’s “ruddy” color (Gen. 25:25) was indeed expressly interpreted as signifying that he (i.e., Rome) was “altogether a shedder of blood” (Gen. R. 63:8). While both brothers attended school up to the age of 13 (or, according to one version, 15) – Esau, too, thus being given the chance of studying the Torah – they parted completely once they had reached their religious majority. Jacob studied at the schools of Shem and Eber, and spent all his life in the pursuit of learning; while Esau became a dissipated idolator (Gen. R. 63:10; Yoma 28b; Tanh. B, Gen. 125). Here, too, the future conduct of good Jews and typical Romans was adumbrated.

Despite their explanation of how Isaac was deceived in Esau (Gen. R. 63:10), the rabbis felt that Isaac as well as Abraham who had fathered unworthy sons could not be considered equal in importance to Jacob (Pes. 56a; Gen. R. 68:11; Song. R. 3:6, no. 2) who was regarded as a model of virtue and righteousness (cf. e.g., Mak. 24a), and to whom even the mystery of the messianic redemption had been revealed (Mid. Ps. 31:7). He was, accordingly, the greatest of the patriarchs (Gen. R. 76:1), and even Abraham had been created and preserved from the fire of Nimrod’s furnace only for the sake of Jacob who was destined to descend from him (*ibid.*, 63:2; Lev. R. 36:4; Sanh. 19b). Even after his death, Jacob – but not the other patriarchs – was concerned with Israel’s fate, suffering with them when they were in trouble, and rejoicing with them when they were redeemed (Mid. Ps. 14:7; PR 41:5). Israel’s successes in this world were entirely due to Jacob’s merit (Song R. 3:6, no. 2). Hyperbolically, it was said that the entire universe had been created only for the sake of Jacob (Lev. R. 36:4) – here, as so often, a symbol of the entire people of Israel. God Himself had honored Jacob (Israel) by elevating him to a position little lower than that of the angels (Mid. Ps. 8:7), and engraving his image on the divine throne (Gen. R. 82:2).

For all that, the rabbis could not ignore the biblical account of Jacob’s career, which was bound to raise moral problems. For example, his employment of devious methods to gain the birthright and the blessing of Isaac were open to criticism (cf. Hos. 12:3–4). Rabbinic apologetics, accordingly, endeavored to clear Jacob’s good name, while blackening that of Esau. Accordingly, Esau had threatened to kill his mother if he

was not permitted to be born first, and it was to save Rebekah that Jacob had agreed to Esau’s primogeniture (Mid. Hag. to Gen. 25:22; cf. PR, 12:4). Although this is reported or hinted at only in late Midrashim, it may be an allusion to the notorious case of matricide committed by Nero, who contrived the murder of his mother Agrippina (Suetonius, Nero 34:5; Tacitus, Annals 14:1–13; Jos., Ant., 20:153; Wars, 2:250).

Jacob’s desire to have the birthright was not influenced by any selfish motives, but by his wish to be privileged to offer the sacrifices, at that time the prerogative of the firstborn (Gen. R. 63:13; Num. R. 4:8). Even so, it was only because of Esau’s manifest unsuitability for a spiritual office that Jacob was willing to sacrifice his life for the spiritual privileges of the birthright (*ibid.*). Hence, God Himself had assisted him to obtain blessings (Gen. R. 65:17–19; Tanh. B, Gen. 134f.). Moreover, when Jacob went in to his father, “the Garden of Eden entered with him”; but when Esau came in, “Gehenna went in with him” (Gen. R. 65:22; 67:1–3; Tanh. B, Gen. 141).

Isaac, too, had hesitated about conferring the blessing upon Esau, and had actually suspended the decision as to who was to be the recipient (Gen. R. 65:13). Even when he said, “Your brother came in with guile and took your blessing” (Gen. 27:35), what he really meant was that Jacob had come in with “wisdom” and “received” (i.e., was duly granted) what was due to him (Targ. Onk., and Targ. Yer., codex Neofiti I, ad loc.; Gen. R. 67:4; Tanh. B, Gen. 143). Any doubts Isaac may have had were dispelled when he learned that Esau had sold his birthright to Jacob (Gen. R. 67:2). Isaac thereupon confirmed Jacob’s blessing (Gen. R. 67:12; Tanh. B, Gen. 143; cf. Gen. 28:1). According to another view, however, Isaac had actually sought to curse Jacob, but had been restrained by God (Gen. R. 67:1–3). Isaac had also made it clear that Jacob’s supremacy was conditional on his merits (Gen. R. 67:7), and he was, therefore, sharply criticized in the Midrash (*ibid.*).

Only occasionally is Jacob criticized in rabbinic literature. Thus, Esau’s “exceedingly great and bitter cry” (Gen. 27:34) had been punished in the days of Mordecai who likewise wailed “with a great and bitter cry” (Esth. 4:1; Gen. R. 67:4). Again, when Jacob rebuked Leah for aiding and abetting Laban’s act of deception (cf. Gen. 29:23), she retorted, “Did not your father call you ‘Esau,’ and you answered him?!” (Gen. R. 70:19). Jacob is also criticized for having hidden his daughter Dinah from Esau’s eyes at the time of his meeting with his brother on his return to Canaan. Jacob’s fear that “this wicked man” might want to marry her is dismissed as unjustified prejudice; for he should have given her to his brother for a wife (Gen. R. 76:9). The purpose of this Midrash was apparently to encourage older brothers to give their daughters to younger brothers in marriage, thus retaining the family’s property undiminished and its purity of blood unsullied.

Jacob’s meeting with Esau after his return from Aram is embellished with numerous rabbinic comments, the burden of which is that Esau retained his undying hatred, so that Jacob had good reason to be afraid of him. The messengers sent by Jacob to Esau (Gen. 32:3) were in reality angels, and their huge

numbers terrified Esau (Gen. R. 74:17; 75:10). Esau's reconciliation with Jacob (Gen. 33:4) was unreal. On the contrary, Esau had tried to bite his brother whose neck, however, had become like marble (Gen. R. 78:9). According to another view, however, Esau kissed Jacob "with all his heart," being temporarily compassionate (*ibid.*) Jacob's appeasement of Esau by repeatedly addressing him as "my lord" is condemned in the Midrash as humiliating to Jacob's dignity (Gen. R. 75:2, 11). The purpose of this homily was no doubt to discourage excessive cringing before the Romans.

Laban, described as "the master of deceivers" (Gen. R. 75:5), is treated in rabbinic literature with even greater disdain than Esau. He is the personification of greed, and even when he kissed and embraced Jacob (Gen. 29:13), he did so only to find out if he had any gems hidden on his body or in his mouth (Gen. R. 70:13). Jacob was well aware that Laban was a swindler (cf. *ibid.*; Meg. 13b), and took the utmost precautions in stipulating conditions with him, but all to no avail (Gen. R. 70:17). Jacob's charge that Laban had changed his wages ten times (Gen. 31:7, 41) was homiletically multiplied by the rabbis to no less than 100 deceptions (Gen. R. 74:3). Yet, despite Jacob's anger with Laban (Gen. 31:36), it never came to blows and violence, and Jacob did his best to appease Laban (Gen. R. 74:10).

An apologetic tendency is also evident in the midrashic interpretation of Jacob's relations with *Rachel. Although kissing a strange girl was considered indecent, Jacob's kissing of Rachel (Gen. 29:11) was excused as having been a permissible act, since she was his kinswoman (Gen. R. 70:12). In fact, so far from being lascivious, Jacob had never experienced nocturnal discharge (Gen. R. 79:1) and was in fact not subject to the evil impulse (BB 17a). Jacob's demand that Rachel be given to him, "so that I may cohabit with her" (Gen. 29:21), though superficially shameful "even the most dissolute does not use such language" – was nevertheless defended on the ground that Jacob's real purpose was the laudable desire to beget the 12 tribal ancestors (Gen. R. 70:18; Mid. Ag. ad loc.). Only mild criticism is leveled at Jacob for his angry outburst against Rachel when she was begging him for children (Gen. 30:1ff.): "Is that the way to answer a woman in distress?" (Gen. R. 71:7). Some slight disapproval is also voiced in the Midrash against Jacob's dislike of Leah (Gen. 29:31), who was therefore deliberately blessed with a large progeny, "so that she might be more beloved than Rachel" (Tanḥ. B, Gen. 153; Ag. Ber. 48 (49):2). A serious flaw was also seen in Jacob's marriage to two sisters (Pes. 119b); for although the Torah had not yet been promulgated, the rabbis considered the patriarchs as having had to observe the entire Law.

Jacob's favorite treatment of Joseph is condemned as a perfect example of what a father must not do – prefer one son to the others – an act which, as in Joseph's case, could lead to disastrous consequences (Shab. 10b; Meg. 16b; Gen. R. 84:8). Jacob's prolonged absence from home – during which he failed to honor his parents – was a serious offense for which he was punished by Joseph's disappearance for an equally long pe-

riod (Meg. 16bff.). Conceivably, this criticism was directed primarily against young people who left their parents in Palestine and went abroad, especially to Syria and Babylonia, in search of better economic opportunities. Jacob's example was thus meant to discourage this exodus, which assumed alarming proportions during the second and third centuries C.E. More serious in the rabbinic view was Jacob's failure to intercede with God against the Egyptian enslavement of his descendants, and, worse still, his ready agreement that they should be wiped out because of their sins (Shab. 89b; cf. Isa. 63:16). Finally, before his death, Jacob had sought to reveal the time of the coming of the Messiah to his sons, but at this point the Divine Presence departed from him (Pes. 56a; Gen. R. 98:2) – no doubt because Jacob's intention was considered unlawful.

For the most part, however, Jacob is depicted as a great and holy man who, among other things, introduced the daily evening prayer (Ber. 26b), and even caused the Egyptian famine to cease as soon as he arrived in Egypt (Tos., Sot. 10:9). Jacob was among those who had tasted of the Garden of Eden in their lifetime and were not subject to the power of the angel of death (BB 17a), but had died through "the kiss of death" (Rashi ad loc.). Indeed, according to one view, Jacob had never died at all (Ta'an. 5b) – evidently an allusion to the immortality of Israel.

[Moses Aberbach]

In Islam

At first, it was not clear to *Muhammad whether Ya'qub (Isrā'īl) was the son of Ishāq or his brother; he therefore adopted an ambiguous expression, "and we gave her (Sarah) the glad tidings of Ishāq, and of Ya'qub after Ishāq" (Sura 11:74). Only after his sojourn in Medina did it become evident to him that Jacob's "fathers" were Abraham, Ishmael, and Isaac and that he was the father of the Tribes (Sura 2:126–7, 130, 134). Like his ancestors, Jacob also ranks among the prophets (Sura 19:50). Of the children of Isaac, one was upright (Jacob) and the second (Esau) brought misfortune upon himself (Sura 37:113). Jacob is mentioned particularly in connection with the story of *Joseph (Sura 12). Before his death, Jacob cautioned his sons to remain faithful to "the law of Ibrahim" (Sura 2:126). On one occasion, Muhammad mentions the second name of Jacob: Isrā'īl (Sura 3:87), when he points out that he forbade himself a certain food – probably an allusion to the sciatic nerve (Gen. 32:33). In the other places (in the *Koran) the name of Israel appears as that of the tribe, i.e., *Banū Isrā'īl* ("the people of Israel"; e.g., Sura 2:38; 5:74; et al.). In a fragment from the Cairo **Genizah* which is attributed to al-Samaw'āl, Israel is referred to as "the firstborn of the first" (cf. Ex. 4:22). According to the Arab commentators the origin of the name Isrā'īl is derived from the fact that he fled from Esau at night.

[Haïm Z'ew Hirschberg]

In the Arts

The life and career of the patriarch Jacob provide the basis for many literary works and treatments by artists and musicians.

The episodes most favored range from Jacob's impersonation of Esau and vision at Beth-El (Gen. 27) to his final journey to Egypt at the invitation of Joseph and Pharaoh (Gen. 45–50). In literature, one of the earliest versions of the story occurs in the 12th-century *Ordo de Ysaac et Rebecca et Filiis Eorum*, an allegorical drama in which Esau represents the "pharisaical Jews" and Jacob the "faithful Christians." Another work of the Middle Ages was the 13th-century English poem *Jacob and Iosep*. Interest in the subject revived in the 16th century, particularly in England and Germany, where it inspired numerous stage productions. These include the anonymous verse play *Ein lieblich und nuetzbarlich Spil von dem Patriarchen Jacob und seinen zwelff Soenen* (Magdeburg, c. 1534); the Meistersinger Hans Sachs's *Comedia: Jacob mit seinem bruder Esau* (1550); *Jacob und seine zwoelf Soehne* (1566), a Styrian church drama by Thomas Brunner; *A newe mery... Comedie or Entertude... treating upon the Historie of Jacob and Esau* (London, 1568); and the *Comedie von dem Patriarchen Jakob, Joseph und seinen Bruedern* (1592) by Adam Zacharias Puschmann, an associate of Hans Sachs. A work sharply contrasting with the medieval *Ordo de Ysaac* was *The Historie of Jacob and Esau* (London, 1568; written 1557–58), a lively comedy attributed to Nicholas Udall. Here Jacob was reconfirmed as the righteous Hebrew (i.e., the true Protestant), while Esau was represented as the graceless pagan (i.e., the Catholic Antichrist). Three 17th-century treatments of the theme were the German dramatist Christian Weise's *Jacobs doppelte Heyrath* (1683); the anonymous *Comedia famosa dos successos de Iahacob e Esau* (Delft, 699), a Spanish verse play; and the Sephardi writer Isaac Cohen de *Lara's Spanish ballad, "La Fuga de Jaacob de Barsheva," which appeared with his Purim play *Aman y Mordochay* (Leiden, 1699). In the 18th century, the only writer of note to deal with the subject was the Swiss-German poet and dramatist Johann Jacob Bodmer (1698–1783) in two epics, *Jacob und Joseph* (1751) and *Jacob und Rachel* (1752).

The first modern Jewish writer who turned to the theme was the Hebrew poet Feivel Schiffer (c. 1810–1866), whose *Shirei Tiferet* (1840) retold the Bible story down to Jacob's entry into Egypt. In the late 19th century, the German Protestant playwright Wilhelm Schaefer wrote the drama *Jakob und Esau* (1896). There has been a significant revival of interest in the subject during the 20th century. The eminent German poet and playwright Gerhart Hauptmann turned to the story of Jacob in his fragmentary drama *Das Hirtenlied* (1921), as did Waldemar Jollos in his verse play *Esau und Jakob* (1919). In the first part of his unfinished David trilogy, *Jaakobs Traum; ein Vorspiel* (1918; *Jacob's Dream*, 1947), Richard *Beer-Hofmann made a dramatic attempt to justify Israel's universal mission; the play was staged in New York, and in Erez Israel by Habimah in a Hebrew version. Some later works on the theme were *Jacob* (1925), a novel by the French writer Bernard *Lecache, and *Die Geschichten Jaakobs* (1933), the first part of Thomas *Mann's tetralogy *Joseph und seine Brueder* (1933–42). During World War II, Jacob Knoller published in the U.S. his four-part German drama *Verheissung, Schuld und Suehne* (1941); the U.S.

writer Irving *Fineman his novel *Jacob* (1941); and the Portuguese poet José Régio his modern mystery play *Jacob e o Anjo* (1941). Laurence Housman's *Jacob's Ladder*, one of his *Old Testament Plays* (1950), sought to denigrate the Hebrew patriarch. Other postwar works include *Saint Jacob* (1954; Eng. *Jacob*, 1957), a novel by the French author Jean Cabriès; *Een ladder tegen de maan* (1957), a drama by the Dutch writer W. Barnard (Guillaume van der Graft); and *Yaakov u-Vanav* (1958), a Hebrew novel by Ben-Zion Firer.

The life of the patriarch Jacob, packed with picturesque incident, has provided an equally rich storehouse of material for artists, who have mainly illustrated the episodes of Jacob's ladder (Gen. 28:10–22) and of Jacob and the angel (Gen. 32:24–32). There are several cycles of such episodes, the earliest being the fourth-century mosaic cycle at Santa Maria Maggiore, Rome. Scenes from the life of Jacob also figure in 12th-century mosaics at Palermo and Monreale in Sicily; and in manuscripts, including the sixth-century Vienna Genesis and the 14th-century *Sarajevo Haggadah*. The Renaissance painter Jacopo Bassano (1515–92) painted a pastoral landscape of Jacob and Esau (Vienna, Kunsthistorisches Museum). The birth of the twins (Gen. 25:24) was illustrated in 14th-century manuscripts such as the *Queen Mary Psalter* and the *Sarajevo Haggadah*, where, in an adjacent scene, Esau is shown hunting (Gen. 25:27). Their birth was also depicted by the Florentine painter Benozzo Gozzoli (1420–1497) in a fresco at the Campo Santo, Pisa. Esau selling his birthright to Jacob (Gen. 25:31–34) is illustrated in the *Vienna Genesis*, but was not popular in the Middle Ages. From the 17th century onward, there are paintings of the subject by the Spanish artist Murillo (1618–82; Harrach Gallery, Vienna), the Dutch master Hendrik Terbrugger (1587–1629; British Museum), and two ink drawings by *Rembrandt. Isaac blessing Jacob (Gen. 27:27) was also a comparatively rare subject in the Middle Ages, and commoner in the 17th century. However, it is found in fourth-century mosaics at Santa Maria Maggiore, in 13th-century frescoes at Assisi, and in medieval manuscripts, including the 12th-century *Hortus Deliciarum* and the 14th-century *Queen Mary Psalter* and *Sarajevo Haggadah*. The 17th-century Spanish painters Murillo (Hermitage, Leningrad) and Jusepe de Ribera (1588–1652; Prado) were among artists who treated the subject. Raphael (1483–1520) included a study of Isaac's half-hearted blessing of Esau (Gen. 27:39–40) in his frescoes for the Loggia in the Vatican, and there is a painting of the same subject by Rembrandt (Earl Brownlow, Grantham), which has also been thought to represent Isaac blessing Jacob.

Jacob's dream of the ladder was a favorite subject and has often been treated as a pendant to Jacob and the angel or to Moses and the burning bush. The subject first appears in the third-century frescoes of the synagogue at *Dura Europos in Mesopotamia. It is found in Byzantine and western medieval Christian manuscripts, including the *Hortus Deliciarum*, the 13th-century *St. Louis Psalter*, and the *Sarajevo Haggadah*, and also in sculpture and in the mosaics at Palermo and Monreale. In the painting by Raphael in the Loggia in the Vatican, Jacob

is shown asleep at the foot of a monumental staircase which, in the grand manner of the Renaissance, replaced the simple ladder of earlier representations. There are paintings of the subject by the Spanish baroque masters Ribera (Prado) and Murillo (Hermitage) and by Rembrandt (Dresden Gallery). The English poet-painter William *Blake depicted the angels ascending and descending on a corkscrew staircase. A modern treatment is that by Marc *Chagall. In the *St. Louis Psalter* and the 15th-century *Breviary of the Duke of Bedford* (Bibliothèque Nationale) there are illuminations of Jacob anointing the stone on which he slept (Gen. 28:18).

Jacob's sojourn with his uncle Laban is illustrated by Ribera in a painting of Jacob tending Laban's flocks. His dealings with his two wives have a special significance in medieval Christian iconography, where Leah and Rachel were associated with Martha and Mary, representing the active and the contemplative life. Claude Lorrain (1600–82) painted idyllic landscapes with Jacob and Rachel (Hermitage, Leningrad) and with Jacob and Laban (Dulwich Gallery). The scene in which Jacob, on leaving Laban, divides the flocks with him (Gen. 30:32ff.) is recorded in the fourth-century mosaics at Santa Maria Maggiore, Rome, and in the sixth-century *Vienna Genesis*. Jacob's appropriation of Laban's household idols, which were taken and hidden by Rachel (Gen. 31:17ff.), appeared in Raphael's frescoes in the Vatican Loggia and was also a popular subject in the 17th century. It was treated by Murillo (Duke of Westminster collection), the Dutch genre painter Jan Steen (1626–79), and by Rembrandt's teacher, Pieter Lastman (1583–1633).

Another favorite subject was Jacob's struggle with the angel which, in the Middle Ages, received a bewildering variety of symbolic interpretations. One of the commonest was that it represented each man's fight against the forces of evil. In early Christian art it is God Himself who is shown struggling with Jacob. The theme appears in the *Vienna Genesis*, in an eighth-century fresco in Santa Maria Antica, Rome, and in an 11th-century fresco in the cathedral of Hagia Sophia, Kiev. It is found in medieval sculpture and in manuscripts such as the *St. Louis Psalter*. In the Stanza d'Eliodoro in the Vatican there is a painting of the subject by Raphael and Baldassore Peruzzi. Rembrandt produced a remarkable painting of Jacob and the angel (Berlin Museum) and Claude Lorrain made it the occasion for a poetic night landscape (Hermitage, Leningrad). The French romantic artist Eugène Delacroix (1798–1863) depicted the struggle in a fresco in the church of Saint Sulpice, Paris, and intended it to represent the artist struggling with Nature in order to wrest her secrets. In the 20th century, the sculptor Sir Jacob *Epstein showed Jacob and the angel locked in a passionate embrace, the subject being also treated by Chagall (Louvre). The reconciliation of Jacob and Esau (Gen. 33:4ff.) was illustrated in a swirling baroque composition by Rubens (Alte Pinakothek, Munich), and there is a painting by Jacopo Bassano of Jacob's return to Canaan (Doges' Palace, Venice).

In music, a "dialogo" (quasi-oratorio), *Il vecchio Isaac*, by G. Fr. Anerio (publ. 1619), treats the story of Jacob, Esau, and

the birthright. The number and importance of works on the subjects of Jacob's Dream, Jacob and Rachel, and Jacob's lament over Joseph is, however, much greater. Some 16th-century motets set the text of the vision, such as *Vidit Jacob scalam* by Crecquillon (publ. 1556) or *O quam metuendus est locus iste* by Gallus (publ. 1603). One notable curiosity was the oratorio *La Vision de Jacob* which Marcel Dupré wrote in 1900 at the age of 14. For the Moscow performances of Richard Beer-Hofmann's *Jaakob's Traum* by the *Habimah Theater, music was written by M. *Milner; and the play was turned into an opera by the Israel composer Bernard Bergel. An orchestral work, *Jacob's Dream*, was written by Karol *Rathaus (1941); and in 1949 Darius *Milhaud composed a dance suite for five instruments, *Les Rêves de Jacob* (op. 294), for the Jacob's Pillow dance festival held in the Massachusetts village of that name. Arnold *Schoenberg's oratorio *Die Jakobsleiter*, with text by the composer, was begun in 1913 and remained unfinished. This is the first work in which the system of melodic manipulation, which he was to formalize soon afterwards as the "12-tone system," can be discerned. The text is a complex of philosophical ideas generated by, rather than reproducing, the vision of the ladder and Jacob's struggle with the angel (see D. Newlin, in *Yuval*, 1 (1968), 204–20). The première of the work took place in Vienna in 1961.

The story of Jacob and Rachel is treated in a motet, *Da Jakob Labans Tochter nahm*, by Joachim à Burck (1599); a "Singspiel" (comic opera), *Von Jacob doppelter Heyrath*, by Johann Philipp Krieger (1649–1725); and a duodrama, *Jakob und Rachel*, by J.E. Fuss (1800). It is also found, somewhat unexpectedly, in two Spanish polyphonic songs of the 17th century (*Siete años de pastor*, no. 18, and *Si por Rachel*, no. 62, in *Romances y letras a tres voces*, ed. by M. Querol Gavald, 1956). For the *Ohel Theater production of *Jacob and Rachel*, the music was written by Solomon *Rosowsky, and later reworked into an orchestral suite by Julius Chajes. Jacob's word to the angel in the struggle at the Jabbok is the title-text of Bach's Cantata no. 157, *Ich lasse dich nicht, du segnest mich denn* (but with "Mein Jesu" added). A motet on the same text, for double choir, was written by Johann Christoph Bach (1642–1703) and formerly attributed to Johann Sebastian Bach. It was published in English in the 19th century as *I Wrestle and Pray*. Jacob's mourning over Joseph was set as a motet by many of the chief composers of the 16th century. The works begin with *Videns Jacob vestimenta Joseph* (Ger., *Da Jakob nun das Kleid ansah*) or *Lamentabatur Jacob*, and the list of composers includes Clemens non Papa, Cristobal Morales, Jacob Regnart, and Cosmas Alder (for a "Joseph play" performed at Basle). The message to Jacob that Joseph is alive appears in Orlando di Lasso's *Dixit Joseph undecim fratribus*. Other works on the theme include J.H. Rolle's oratorio *Jacobs Anknunft in Aegypten* (1746); *Jacobs Heyrath* and *Jacobs Tod und Begräbnis*, nos. 3 and 6 of Johann Kuhnau's *Biblische Sonaten* for keyboard instrument (1700); and the setting of Jacob's blessing of Judah (Gen. 49:10–42) in Heinrich Schuetz's *Geistliche Chormusik* (1648).

In Jewish folksong, Jacob appears symbolically in the many settings of *Al Tira Avdi Ya'akov* ("Fear Not, My Servant Jacob"), often with textual additions in Yiddish, such as *Amar Adonai le-Ya'akov – yo, foterl, yo* (Idelsohn, *Melodien*, 9 (1932), no. 485). Mordekhai *Ze'ira was the composer of the well-known Israel *horah* tune *Al Tira Avdi Ya'akov*, to a poem by Emanuel Harussi.

JACOB (end of third–beginning of fourth century C.E.), Babylonian-born *amora*. Jacob was a pupil of *Judah b. Ezekiel, head of the academy of Pumbedita (Av. Zar. 28b, et al.). He transmitted teachings in the name of Ḥisda (Ber. 29b, et al.). He migrated to Ereẓ Israel where he studied under R. Johanan (Er. 80a; Suk. 12a, et al.). Jacob is frequently referred to as "a certain one of the rabbis" (see Er. 80a and Av. Zar. 28b). He was an associate of Jeremiah (Av. Zar. 13b), discussed problems with Jeremiah b. Taḥlifa and frequently explained obscure *halakhot* to him (BB 60b, et al.). It is related that the day Jacob died stars were seen at midday (MK 25b; but see Dik. Sof. ad loc.). Because there were several *amoraim* of the same name, at times it is difficult to decide to which one statements in the name of Jacob refer.

[Yitzhak Dov Gilat]

JACOB, BENNO (1862–1945), rabbi and Bible scholar. He studied at the rabbinical seminary and university of his native Breslau. From 1891 to 1906 he served as a rabbi in Goettingen and from 1906 to 1929 in Dortmund. In 1929 he retired from the rabbinate, settled in Hamburg, and devoted himself entirely to exegetical work. From 1939 he lived in England. His principal field of activity in biblical research was the Pentateuch. Although he was not a fundamentalist, his conclusions, as a result of his study of the text rather than on religious grounds, were a complete denial of modern Bible criticism – both textual criticism and Higher Criticism with its documentary hypothesis. He regarded the traditional text more reliable than the ancient translations. He considered the arbitrary textual emendations of Higher Criticism to be unscientific because their only purpose was to validate the latter's own assumptions. Moreover, he accused the school of Higher Criticism of antisemitic trends and of prejudices

against Judaism. His opinions were propounded in *Der Pentateuch, exegetisch-kritische Forschungen* (1905) and *Quellen-scheidung und Exegese im Pentateuch* (1916). He clarified biblical ideas and expressions which had not been properly understood in *Im Namen Gottes* (1903) and *Auge um Auge, eine Untersuchung zum Alten und Neuen Testament* (1929). He also developed a theory concerning the internal rhythm of the Bible, which is expressed by the repetition of key words in set numbers in the narratives of the Torah and its laws, in *Die Abzählungen in den Gesetzen der Bücher Leviticus und Numeri* (1909). His major exegetical work is *Das erste Buch der Torah: Genesis, uebersetzt und erklart* (1934). While Jacob did not accept the Mosaic authorship of the Pentateuch nor the dogma of literal inspiration, he found in its composition so much literary unity and spiritual harmony that all search for its "sources" appeared to him an exercise in futile hypothesis. His comprehensive commentaries on Exodus and a section of Leviticus are extant in manuscript. (An excerpt from the commentary on Exodus was published in *Judaism*, 13 (1964), 3–18.) His struggle against antisemitism began during his university years; in 1886 he founded the first Jewish students' society – Viadrana – which introduced fencing duels as a method of defending the honor of Judaism when it was degraded by antisemitic students. He was active as an orator and author in the fight waged by German Jews against antisemitism mainly in the years after World War I. He opposed Zionism not only because of his belief in a Jewish-German synthesis, but also because he saw in Zionism a complete secularization of Judaism and a basis for Jewish atheism.

[Jacob Rothschild]

JACOB, BERTHOLD (pen name of **Berthold Salomon**, 1898–1944), German-Jewish publicist between the world wars. Jacob, born in Berlin, was a volunteer in World War I. He returned a radical pacifist, and from then on unabatedly struggled against German militarism and secret rearmament. His involvement in various *causes célèbres* of the Weimar Republic led to his being summoned as a witness in various cases on a number of occasions. Together with Paul Maria Dreyfuss and Martin Sander he published *Zeit-Notizen*. An article of his in the pacifist weekly *Weltbuehne*, led to the demission of Hans von Seeckt, commander in chief of the German army. In 1932 Jacob left Germany and ran an "Independent Press Service." In 1935 he was abducted by a Nazi agent during a visit in Switzerland, but was released after six months on the intervention of the Swiss government. In 1939 he was interned by the French authorities but escaped in 1941 to Lisbon, where he was again abducted. Jacob died in 1944 in a Nazi prison. His main works are *Weltbuenger Ossietzky* (1937) and *Warum schweigt die Welt?* (1936).

[Yehuda Reshef]

JACOB, BLESSING OF, a collection of poetic sayings epitomizing the traits and fortunes of the Israelite tribes, written in the guise of deathbed pronouncements by Jacob to his 12 sons (Gen. 49). “Blessing” is a misnomer since three of the tribes are in effect cursed, and others are treated with jest or satire. The sayings are cast in pseudo-prophetic form as though the patriarch foresees the destinies of his sons. In fact, most of the separate sayings appear to describe past or present tribal fortunes. The events alluded to in the sayings are highly refracted by the terse and elusive language. The Reuben saying (49:4) refers to the elder son’s incest with his father’s concubine (35:22), but what the event signifies in tribal terms is unknown. The Simeon-Levi saying (49:5–7) recalls the murderous attack on the Shechemites (Gen. 34), but that event is not easily connected to the wider tribal histories. The ascendancy of Judah (49:8–12) corresponds with the sudden emergence of that tribe just before the united monarchy and its political hegemony under David is almost certainly referred to in the obscure “Shiloh” passage (49:10). It is possible that the Septuagint reading of II Samuel 20:18–19 shows the Dan of verses 16–18 to be already relocated in its northern home (cf. Judg. 17–18). The animal imagery of the sayings is varied and colorful. Judah is a rapacious lion (Gen. 49:9), Issachar a lazy or stoic ass (v. 14), Dan a cunning serpent (v. 17), Naphtali a lovely hind (v. 21), and Benjamin a ravenous wolf (v. 27). Joseph, as a fruitful bough (*porat*; v. 23), breaks the series of zoological metaphors. Many interpreters prefer to read “wild ass” (*pere*) or “bull” (*parah*). The metaphors are used to focus upon some single striking feature in the tribal manner of self-defense or conquest (Judah, Dan, Benjamin), or to describe the bounteous natural setting (Naphtali, Joseph), or to explain an abject socioeconomic position (Issachar). Three of the sayings employ puns on tribal names. Dan “shall judge” (*yadin*, v. 16), Gad “shall raid” (*yagud*, v. 19), and Issachar (“man of wages” or “hired laborer”) is said to have “bowed his shoulders to bear, and become a slave at forced labor” (v. 15). These literary features give the impression of being popular visualizations of tribal traits and experiences. The picturesque folkloristic motives of the sayings sharply circumscribe their direct historical value.

Critics have found it impossible to view the sayings within any single clearly delimited historical horizon. The preeminence of Reuben and the secular status of Levi suggest an early period before the rise of the monarchy. The ascendancy of Judah speaks for the late 11th century B.C.E. and verse ten strongly suggests the rule of David. The language is archaic and often obscure; it reflects ancient liturgical formulations with pronounced Canaanite influence in poetic forms, idioms, and concepts. The fullest understanding of Genesis 49 requires comparison with the similar Deuteron-

omy 33 and the related tribal sayings and blessings of Judges 5 and Numbers 23–24, as well as with the Ugaritic mythological texts and the Egyptian Story of Sinuhe (in: Pritchard, *Texts*, 18–22; *COS I*, 77–82). The broad milieu of the sayings is the struggle of the separate tribes to hold their own in the land against enemies and to adapt to the economies peculiar to the regions of settlement. Many realistic details of military and political combat show through the poetic embellishments. Judah has prevailed over nations and receives the homage of all the tribes (Gen. 49:8). Joseph has successfully turned back an attack or repeated attacks by archers, probably from the Canaanite cities of the plains (vs. 23–26). Dan and Gad have fought guerrilla-style actions as they harass their enemies’ “heels” (vs. 17, 19). Benjamin feeds on the spoils of war (v. 27; profiting by another tribe’s victory?). Distinctive features of tribal economies are noted. Judah is famed for its viticulture (vs. 11–12). Asher produces choice foods and delicacies fit for kings (v. 20). Naphtali’s land is highly productive (v. 21; does “hind” refer to wild game, domesticated animals, or general agricultural bounty?). Zebulun controls shipping north of Mt. Carmel or supplies the crews for Canaanite-Phoenician ships (v. 13). Joseph dwells in the richest region in the land, full of “blessings of heaven... of the deep ... of the breasts and of the womb” (v. 25). All the tribes act with commendable self-assertiveness, except that Issachar is chided for exchanging freedom for the security of a life of serfdom (v. 14; or is it being half-praised for its resourcefulness in making the most of a bad situation?). All in all, the sayings of Genesis 49 seem to have arisen separately and to have been collected secondarily in the present literary context. Their lively speech argues for oral recitation. But the purpose is uncertain. Only verses 25–26 contain a blessing proper which probably was recited at an agricultural festival. Most of the sayings have the character of scornful or admiring popular or mutual assessments of the tribes. The Judah saying has in part (v. 10) the character of a dynastic pronouncement.

Prior to the literary collection of the sayings, they probably had a cultic connection in the gathering of the tribal league to worship YHWH. This is suggested by the explicitly liturgical introduction and conclusion supplied to the similar collection of sayings in Deuteronomy 33:2–5, 26–29. It is further hinted at in the “my” of Genesis 49:6 and the “I” of 49:18 where a cultic spokesman is presupposed (in contrast to the “my” of 49:3–4 and the “I” of 49:7 which refer to the deity). Several of the sayings presuppose a feeling of belonging together among the tribes at an apparently preliterary stage (49:7b, 8, 16, 26). That the content and temper of the sayings are often secular, jocular, and satirical does not speak against an intertribal cultic context but shows rather the robustness and earthiness of early Yahwism. Whether precisely those sayings were ever cultically recited together at one time is unknown, since the literary editor may have artificially combined them from more than one source. It has been argued that at least two literary stages of collection were involved, corresponding to the early and late strands of the source J. The earliest literary version of

the sayings may have concentrated on explaining why the elder sons of Jacob were not the prominent tribes in the collector's time. An estimate of the relative age of the tribal sayings in the several extant collections suggests that on the average those of Judges 5 are earliest, followed by Genesis 49, Deuteronomy 33, and Numbers 23–24 in that order.

[Norman K. Gottwald]

In the Aggadah

After his sons had assembled around his bed, Jacob warned them against dissension, since union is a precondition for Israel's redemption. Jacob wanted to reveal the exact time of the advent of the Messiah to his sons, but at that moment the *Shekhinah* ("Divine Presence") departed from him and his knowledge of this great mystery vanished (Gen. R. 98:2). Jacob thereupon became apprehensive lest one of his children was unfit and this was the cause of the departure of the *Shekhinah*. His sons, sensing his fears, exclaimed, "Hear O Israel, the Lord our God the Lord is One: Just as there is only One in thy heart, so in our heart is there only One." Jacob immediately responded: "Blessed be the name of His glorious kingdom for ever and ever" (Pes. 56a).

When Jacob rebuked his eldest, Reuben, he told him that he should have had the double heritage of his primogeniture, the priestly dignity and the royal power. However, because of his sin, the birthright was conferred upon Joseph, kingship upon Judah, and the priesthood upon Levi (Gen. R. 98:4). Simeon and Levi were next reprimanded. God fulfilled Jacob's malediction that they be dispersed in Israel by causing the Levites to be on the move requesting tithes, and the Simeonites to be wandering mendicants (Gen. R. 99:7). After he had rebuked his first three sons, the remaining ones attempted to slip away since they feared that they too would be reproached. Jacob pacified them by approaching Judah with commendatory statements, and describing the noteworthy features of the Messiah who will descend from the House of Judah (Tanh. Va-Yehi, 10).

Zebulun was blessed before his elder brother, Issachar, because Zebulun enabled Issachar to devote himself to Torah study by providing him with sustenance (Gen. R. 99:9). The fruits in Issachar's territory grew to extraordinary size due to the merits of this tribe's devotion to Torah (Gen. R. 98:12). When blessing Dan, Jacob also envisioned his descendant, Samson, and thought him to be the Messiah. However, when Jacob saw him dead, he exclaimed, "He too is dead! Then 'I wait for thy salvation, O God'" (Gen. 49:18; Gen. R. 98:14). Jacob then declared that the redemption will not be achieved by Samson the Danite, but by Elijah the Gadite, who will appear at the end of days (Gen. R. 99:11). Asher's blessing was the beauty of his women, who would be sought in marriage by kings and high priests (Gen. R. 99:12; Tanh. Va-Yehi, 13). In Naphtali's land all fruits would ripen quickly, and they would be given as presents to kings to gain royal favor for the givers (Gen. R. 99:12). Joseph's blessing exceeded those of all his brethren. He was particularly praised for resisting the con-

stant attempts of the daughters of princes to entice him, and for trusting in God when slandered before Pharaoh by the magicians and wise men of Egypt (Gen. R. 8:18; Targ. Yer. to Gen. 49:22–26).

The blessing bestowed upon Benjamin contains the prophecy that this tribe would provide Israel with both its first and last biblical rulers, Saul and Esther. Likewise, Benjamin's heritage in the Holy Land contains two extremes: Jericho ripens its fruits earlier than any other region in Erez Israel while Beth-El ripens them latest. Jacob also referred to the Temple service in Benjamin's blessing because the sanctuary was to be situated in Benjamin's territory (Gen. R. 99:3).

JACOB, FRANÇOIS (1920–), French molecular biologist and Nobel laureate. Jacob was born in Nancy, attended the Lycée Carnot, and started his medical studies in Paris. With the German invasion of France in 1940 he joined the Free French Forces in exile and fought in North Africa and Normandy. He was seriously wounded and the damage to his hands destroyed his ambition to become a surgeon. He received the Croix de Guerre and the Croix de la Libération and was made a Compagnon de la Libération, one of France's highest honors. After the war he completed his medical studies (1947) and gained his D.Sc. from the Sorbonne (1954). In 1950 he joined the Pasteur Institute as assistant to Andre *Lwoff. He was appointed laboratory director (1956), head of the Department of Cell Genetics (1960), and professor of cell genetics at the College de France (1964). Jacob's research explored the relationship between bacteriophages (phage) and the bacteria these infect as a model for establishing the fundamental principles of genetic control of protein synthesis. He collaborated with many of the founding fathers of molecular biology, including Elie Wollman, Max Delbruck, Jacques Monod, and Sydney *Brenner. This work defined the operon as the control unit consisting of one or more genes encoding the messenger RNA, which dictates protein synthesis. The operon is controlled by regulatory feedback loops incorporating repressor genes which are in turn controlled by operator genes. The operon can collaborate with other operons on the chromosome and is influenced by signals coming from the cytoplasm or the environment. Thus the potential for cell function and division is determined by the nucleotide sequence in DNA which is responsive to a network of controlling signals. This framework and the supporting experimental principles have formed the

basis for subsequent scientific work on gene action and regulation. He received the Nobel Prize in physiology or medicine (1965) jointly with Andre Lwoff and Jacques Monod. His many honors include the Charles Leopold Mayer Prize of the Académie des Sciences (1962) and foreign membership of the U.S. Academy of Sciences. Jacob is also a distinguished writer on the philosophy and culture of science whose highly regarded books include *The Logic of Life* (1970) and *Of Flies, Mice and Men* (1980). His cultural contributions were recognized by the award of the Lewis Thomas Prize (1994). He married the pianist Lise Bloch in 1947.

[Michael Denman (2nd ed.)]

JACOB, HEINRICH EDUARD (1889–1967), German playwright, journalist, and biographer. Born in Berlin, he became the *Berliner Tageblatt*'s Vienna correspondent. Jacob spent almost 18 months in the concentration camps of Dachau and Buchenwald before escaping to the U.S. in 1940. A versatile author, writing in an expressive and colorful style, Jacob published more than 30 books, including poetry, plays, and novels. His best-known dramas are *Beaumarchais und Sonnenfels* (1919), in which a Jew is the central character, and *Der Tulpenfrevler* (1920).

While in exile in New York, Jacob achieved distinction for his biographies of Johann Strauss (1937), Haydn (1950), and Felix Mendelssohn (1959). He also published a history of coffee, *Sage und Siegeszug des Kaffees* (1934), and *Six Thousand Years of Bread* (1944). Jacob returned to Europe in 1953 and settled in Hamburg.

BIBLIOGRAPHY: *New York Times* (Nov. 10, 1967).

JACOB, JACK FREDERICK RAPHAEL (1923–), Indian army officer. Born in Calcutta to a family of Baghdad origin, Jacob was commissioned in the Indian army in 1942 while India was part of the British Empire and served in the Middle East during World War II. He rose rapidly after India gained its independence in 1948, commanding a field regiment in 1956–57 and an artillery brigade in 1964–65. After serving as commander of the School of Artillery from 1965 to 1966 he was given command of an infantry division (1967–69). At the outbreak of the war against Pakistan in 1971, which resulted in the creation of Bangladesh, he was chief of staff, Eastern Command, with the rank of major-general. For the prominent part which he played in the campaign he was awarded the Param Vishisht Seva medal.

JACOB, MAX (1876–1944), French poet and novelist. Born in Quimper, Brittany, Jacob was the son of a tailor and descended from German Jews who immigrated to France in 1816. After an unhappy childhood, he made the first of three suicide attempts at the age of 17. For several years, he worked in a variety of occupations, including carpentry, as a lawyer's clerk, commerce, and even astrology. A gifted linguist and draftsman, Jacob eventually became an art critic in Paris, where he joined the circle of Apollinaire, Picasso, and André

Salmon, centered in the Left Bank cabaret *Le Lapin agile*. At this time he evolved his basic aesthetic principles: the establishment of a “new harmony” to free men from everything which prevented them from seeing the true colors of reality (cf. his children's tales *Le Roi Kaboul et le Marmiton Gauvin* and *Le Géant du soleil*, 1904). Taking up arms against convention and prejudice, Jacob made irony his favorite device, thus providing himself with “distance” from the object and with the “patience and submission” indispensable to creativity. In 1909 he had his first vision of Jesus and wrote the *mystère* entitled *Saint Matorel* (1911) and *La Côte*, poems which later appeared in Breton. A melancholy anti-romantic, Jacob became known for his mordant humor and “surrealistic” speech: lake became suburb, valley changed to movie theater, Ibsen became Rimbaud, and Byron, Freud. The poet's yearning for love and his suffering and disillusionment combined with a second vision led to his conversion to Catholicism in 1915. The spiritual comfort which this brought him inspired a series of works characterized by a mingling of sarcasm and lyricism: *Les Oeuvres burlesques et mystiques du frère Matorel...* (1912); *Le Cornet à dés* (1917); *Le Phanérogame* (1918), a novel; *La Défense de Tartuffe*, subtitled *Extase, remords, visions, prières, poèmes et méditations d'un Juif converti* (1919); and *Le Laboratoire central* (1921). After 1921, Jacob retired to the monastery of Saint-Benoît-sur-Loire, where he wrote *Le Cabinet noir* (1922), a novel, *Le Terrain Bouchaballe* (1923), the mystical *Visions infernales* (1924), and *L'Homme de chair et l'homme reflet* (1925). During the years 1928–36, he achieved some standing as a painter in Paris, then retired once more to Saint-Benoît, where he wrote a book of prose poems, *Ballades* (1938). After the Nazi occupation in 1940, Jacob was arrested by the Gestapo and died in the Drancy concentration camp. Some books of verse and two volumes of correspondence appeared posthumously after World War II.

[Max Bilen]

JACOB, NAOMI ELLINGTON (Naomi Ellington Gray; 1889–1964), novelist of half-Jewish parentage whose varied career is reflected in a vast output of novels. She also wrote such autobiographical books as *Me – In War-Time* (1940). In her most ambitious work, *The Gollantz Saga* (1952), she portrayed the progressive assimilation of a Jewish family. Born in Ripon, Yorkshire, and originally a schoolteacher in Middlesbrough, she lost her job for wearing trousers; thereafter, she always wore men's clothes. In 1930 she moved to Italy, where she lived for the rest of her life.

JACOB, TESTAMENT OF, apocryphal work based on Genesis 49. Reference to an apocryphal book of Jacob is perhaps to be found in the Apostolical Constitutions 6:16 which speaks of “apocryphal books of... the three patriarchs.” A testament of Jacob is to be found together with the testaments of Abraham and Isaac in Arabic, Ethiopic, and Coptic. This work is a patchwork of biblical verses, based substantially on Genesis 47:29–49:1. It was doubtless composed as a supplement to the extant testaments of Abraham and Isaac, both of which, and especially the former, contain important original material. This apocryphal work appears in a Paris Greek manuscript of the 12th century as a separate work under the title “Testament of Jacob.” In Jerusalem, there is an Armenian manuscript 939, in which Gen. 47:27–50:26 precedes the Testaments of the 12 patriarchs, and under the same title as the preceding. The Testament was a common literary form in the period of the Second Temple, and doubtless the fact that Jacob is the one patriarch to whom the Bible assigns a last testament played a role in this development.

[Michael E. Stone]

JACOB, WALTER (1930–), U.S. Reform rabbi and university administrator. Jacob was born in Augsburg, Germany, and immigrated to the United States in 1940. He received his B.A. from Drury College (Springfield, Mo., 1950) and ordination and an M.H.L. from Hebrew Union College in 1955. He earned his D.H.L. in 1961 from HUC-JIR, which granted him an honorary D.D. in 1980. Immediately following ordination, Jacob was named assistant rabbi at Rodef Shalom Congregation in Pittsburgh, Penn., under Rabbi Solomon *Freehof, serving as well as a chaplain in the U.S. Air Force during the years 1955–57. In 1966, Jacob succeeded Freehof as senior rabbi, becoming emeritus in 1997. He was also adjunct professor at the Pittsburgh Theological Seminary (1968–74).

Jacob took an active role in helping to re-establish Reform Judaism in Germany, where he served as president of the Abraham Geiger College, the first rabbinic seminary in Central Europe since the Holocaust. Splitting his time between Berlin and Pittsburgh, he also served as president of the Solomon B. Freehof Institute for Progressive Halakhah, an international forum for Jewish law, and of the Associated American Jewish Museums, which organizes free art exhibits for synagogues and Jewish centers. Previously, Jacob served the Reform movement in the United States in several high-profile roles, including president of the *Central Conference of American Rabbis (CCAR) (1991–93). His interest and expertise in Jewish law led him to serve as chairman of the Responsa Committee of the CCAR and chairman of the International Responsa Committee of the *World Union for Progressive Judaism (WUPJ). As president of the Religious Education Association of the United States, he wrote on interfaith issues.

Jacob was also an overseer of HUC-JIR, a member of the Rabbinic Cabinet of the WUPJ and chairman of the Publications Committee of Hebrew Union College Press. As CCAR president, Jacob sought to integrate a broader reinterpretation of *halakah*, in accordance with Reform theology, into the deliberations and decisions of the Reform movement.

He was made a Knight Commander of the Federal Republic of Germany in 1999 and received the Commander of the Equestrian Order of St. Gregory the Great from Pope John Paul II in 2004.

In addition to compiling several volumes of responsa on a wide variety of issues, Jacob edited, wrote, or co-authored a number of books, including *Christianity Through Jewish Eyes*, (1974); *The Healing Past: Pharmaceuticals in the Biblical World* (with Irene Jacob), (1993); and *Not By Birth Alone: Conversion to Judaism* (1997).

[Bezalel Gordon (2nd ed.)]

JACOB BEN AARON OF KARLIN (d. 1844), Lithuanian rabbi and author. Jacob b. Aaron, a grandson of *Baruch b. Jacob of Shklov, was a pupil of *Ḥayyim of Volozhin. He was first rabbi of Gorodok and later of Karlin, where he served for 30 years, until his death. Jacob was the author of the responsa *Mishkenot Ya'akov* (Vilna, 1810), many of them with Ephraim Zalman Margulies of Brod, on all sections of the Shulḥan Arukh; *Kehillat Ya'akov* (1847), novellae on a number of tractates of the orders *Zera'im* and *Mo'ed*. His halakhic works were highly esteemed by yeshivah students, by whom they were much used. Jacob's brother ISAAC, after devoting himself to business, succeeded him in the rabbinate of Karlin. Isaac, who also achieved an outstanding rabbinical reputation, was the author of *Keren Orah* (2 parts, 1852–57), on a number of tractates of the Talmud. Both brothers were noted for their struggle against the kidnapping of children for impressment into the Russian army.

[Itzhak Alfassi]

JACOB BEN ABRAHAM SOLOMON (late 16th and early 17th century), Bohemian rabbi and preacher. Jacob was probably born in Poland but was active mainly in Prague. He was an acknowledged authority on the Talmud and was called *Shinena* (“the sharpminded”) by his contemporaries. He wrote: (1) *Ma'aneh Lashon*, a collection of prayers and petitions mainly for mourners (first published anonymously in Prague, c. 1615; 2nd ed. Cracow, 1668; 3rd ed. Prague, 1678). A shortened form of the work accompanied by a Judeo-German translation appeared in Frankfurt in 1688. The complete text with additions, together with full translations into Judeo-German and German by Eliezer Lieberman b. Judah Loeb, appeared in Amsterdam in 1677 and was frequently reprinted (cf. Friedberg, in bibl.); (2) *Derush Na'eh*, consisting of homiletical sermons on a number of the weekly portions, as well as halakhic novellae to *Mo'ed Katan* (Prague, 1603). In addition, his decisions on ques-

tions on the laws of mourning were quoted by Moses Jekuthiel b. Avigdor Kaufmann Kohen in his *Hukkei Da'at*, printed as an addendum to *Yismah Yisrael* (Berlin, 1699–1700) by Israel Samuel b. Solomon Rofe. Wolf and Zunz identify Jacob with the Prague *dayyan* Jacob b. Abraham who died there in 1562, while Steinschneider identifies him with Jacob b. Abraham, publisher of *Pirkei Eliyahu* (Prague, 1600). The latter appears to be more probable, as *Ma'aneh Lashon* is hardly likely to have been published anonymously around 1610 if its author had already died in 1562. Jacob's authorship of this work is acknowledged in the *Lehem ha-Panim* (cf. Zunz, in bibl.).

[Elias Katz]

JACOB BEN AḤA (end of the third and beginning of the fourth century C.E.), Palestinian *amora*. Jacob was mainly a halakhist, and his halakhic dicta are frequently mentioned in both Talmuds, but he is also known as an aggadist (Tanḥ. B., Ex. 51; PR, supplement, p. 202a; et al.). He studied under R. *Johanan (TJ, Shevu. 1:3, 33a) and frequently transmits sayings in his name (TJ, Ber. 7:2, 11b; et al.). He also frequently transmits sayings in the names of the scholars of preceding generations, such as R. *Hezekiah, the school of *Yannai, *Simeon b. Jehozadak (Shab. 1:1, 2d). He is mentioned as being in Sepphoris together with Hezekiah, a younger contemporary *amora* (TJ, Ber. 3:1, 6a). He was active in communal affairs, and many queries were addressed to him by leading contemporary *amoraim* (TJ, Shab. 6:2, 8a; et al.).

[Shmuel Safrai]

JACOB BEN ASHER (1270?–1340), halakhic authority. Jacob was the son of *Asher b. Jehiel (the Rosh), under whom he studied. In 1303 he accompanied his father from Germany to Toledo, where he lived in great poverty, shunning rabbinical office and devoting all his time to study. In his learning, he avoided verbosity and casuistry. Typical of his style is his first halakhic work, *Sefer ha-Remazim*, in which he gave the halakhic rulings deduced from his father's work, *Ha-Asheri* (under the title *Kizzur Piskei ha-Rosh*, Constantinople, 1515).

Jacob's enduring fame rests upon his major work, the *Arba'ah Turim*, as a result of which he is commonly referred to as "the Ba'al ha-Turim." Perceiving that "reasoning had become faulty, controversy had increased, opinions had multiplied, so that there is no halakhic ruling which is free from differences of opinion," he decided to compile a work to embrace all *halakhot* and customs incumbent upon the individual and the community. The work is divided into four sections (*Turim*, "rows"; first complete edition, Piove di Sacco, 1475): Part I, *Orah Hayyim*, contains 697 chapters and deals with blessings, prayers, the Sabbath, festivals, and fasts; Part II,

Yoreh De'ah, 403 chapters commencing with *Issur ve-Hetter*, the laws of Kashrut, such as *shehitah* and *terefot*, and ending with usury, idolatry, and mourning; Part III, *Even ha-Ezer*, 178 chapters on laws affecting women, particularly marriage, divorce, *halizah*, and *ketubbah*; Part IV, *Hoshen Mishpat*, 427 chapters on civil law and personal relations. The arrangement of the book, its simple style, and its wealth of content, made it a basic work in Hebrew law. It opened a new era in the realm of halakhic codification (see *Codification of Law; *Shulḥan Arukh). The style and target population of each section of the *Tur* are not the same. *Hoshen Mishpat* and *Even ha-Ezer* are meant more for *dayyanim* (judges) than for community rabbis or laymen. *Yoreh De'ah* was meant for community rabbis, while *Orah Hayyim* is a guidebook for both rabbis and laymen. Jacob invariably quotes the text of the Talmud and its commentaries as well as the opinions of authorities who preceded him, and then lays down the *halakhah*, mainly following *Maimonides and his own father. The *Tur* also served to apprise Spanish Jewry with the opinions of the French and German rabbinate. On questions of faith and belief, however, he does not hesitate expressly to oppose Maimonides. He was aware of the views of the Ḥasidei Ashkenaz, whose influence is discernible particularly in the *Orah Hayyim*. The excellence of the work soon led to its dissemination throughout the Diaspora. Its authority has been recognized and accepted by all Jewish scholars throughout the generations, many of whom (including Joseph *Caro, Moses *Isserles, Isaac *Aboab, Jacob ibn *Ḥabib, Joel *Sirkes, and Hayyim *Benveniste) wrote commentaries on it, and made précis of it. When Caro wrote his major work, the *Beit Yosef* (published with the *Turim* ed. of Wilmersdorf, 1720–27), he decided to "base it upon the *Turim*... because it contains most of the views of the *posekim*." In writing the *Tur*, Jacob broke with the German traditions of his father. The German rabbis did not compose comprehensive halakhic codes because they did not attach universal authority to their legal responsa, viewing them as answers to individuals, and because of the numerous *minhagim* (customs) associated with each and every German Jewish community, which were often contradictory. After moving to Spain, Jacob discovered that the communities there were less learned and more centralized. These factors made the writing of a comprehensive code both necessary and easier to accomplish. Jacob prepared himself for the writing of the *Tur* by first editing his father's responsa, thus giving them universal authority, and by creating a halakhic summary of his father's talmudic commentary, *Kizzur Piskei ha-Rosh*.

Jacob also wrote a comprehensive commentary on the Pentateuch (Zolkiew, 1806), containing the best expositions of the *peshat* ("literal meaning") by earlier Bible commentators, such as *Saadiah Gaon, *Rashi, Abraham *Ibn Ezra, David *Kimḥi, and others, in particular abstracting "the straightforward explanations" from the commentary of *Naḥmanides and disregarding the kabbalistic ones, since "my soul has not entered its secret" (cf. Gen. 49:6). When Jacob added his own opinions it was usually to explain the reason for a Torah law

or *mitzvah*. To the beginning of each section, he added “as a little appetizer, **gematriot* and explanations of the **masorah*, in order to attract the mind.” Ironically, it was just these “appetizers” that were published (under the title *Perush ha-Torah le-R. Ya'akov Ba'al ha-Turim* (Constantinople, 1500 and 1514)) some three centuries before the main part of the work, and it was this portion only which was widely known for many generations. The modern edition titled, *Perush ha-Tur ha-Arokh al ha-Torah*, was published in Jerusalem in 1981.

Jacob neither served in any rabbinical post nor received any remuneration from the community but was involved in communal activities. He appended his signature to a sentence of death upon an informer (Judah b. Asher, *Responsa Zikhron Yehudah* (1846), no. 75). His ethical will to his children (first published Pressburg, 1885) reflects his high spiritual and cultural level. A late tradition, mentioned by H.J.D. *Azulai, relates that Jacob set out for Erez Israel but died on the journey.

[Ephraim Kupfer / David Derovan (2nd ed.)]

JACOB BEN BENJAMIN ZE'EV (also **Zak**; 17th century), talmudist, father of Zevi Hirsch *Ashkenazi (the “*Hakham Zevi*”). By his first marriage he was a son-in-law of Ephraim b. Jacob ha-Kohen, and by a second, of Naphtali *Kohen. He studied under Jacob of Lublin. He taught in Vilna, but he fled at the time of the Cossack uprising of 1655. He was missing for a long time and was presumed dead, but finally he reached Trebitsch (Trebic), Moravia. He was appointed rabbi of Ungarisch-Brod (Uhersky Brod) and later succeeded his father-in-law, Ephraim b. Jacob, in Budapest, where he headed a yeshivah. His pupils included David *Oppenheim. According to an opinion which has, however, been disputed, Jacob was for a time an adherent of Shabbetai Zevi. When Budapest was taken by storm by the Austrians in 1686, Jacob and his wife were taken by the Brandenburg army to Berlin as prisoners of war and were ransomed there. After a short stay in Altona, where his son was rabbi, he moved to Erez Israel and died in Jerusalem at the age of 73.

[Samuel Abba Horodezky]

JACOB BEN DUNASH BEN AKIVA (tenth century), liturgical poet. Some support for the assumption that Jacob came from North Africa can be found in the name Dunash, which is borrowed from the Berbers. A few of his *piyyutim*, discovered in the Cairo *Genizah*, have been published by various scholars. These are: a *yozer* for Passover, based on the Song of Songs; two *piyyutim* for the Day of Atonement, one of which was incorporated into a *kerovah* of Eleazar *Kallir for the *Musaf* of that day and is structured entirely on an analogy between the “celestial King” (God) and the “earthly king” (man); and a *piyyut* for Hanukkah.

BIBLIOGRAPHY: I. Davidson, in: *Festschrift Armand Kaminka* (1937), 7–14 (Heb. pt.); M. Zulai, in: *Ginzei Kaufmann*, 1 (1949), 39f.; J. Schirmann, *Shirim Hadashim min ha-Genizah* (1965), 42–45.

JACOB BEN ELEAZAR (12th–13th centuries), poet, grammarian, and philosopher. It has been conjectured that Jacob, who lived in Toledo, was a member of the distinguished Aben-lazar family of Toledo. His Arabic work, *al-Kitāb-Kāmil* (“The Complete Book”) on Hebrew grammar, called in Hebrew *Sefer ha-Shalem*, is known only from citations by a number of grammarians, e.g., David *Kimḥi in his *Mikhlol*. More important, however, is his literary contribution. At the request of the cultured philanthropist, Benveniste b. Ḥiyya Aldian, he translated and adapted in Hebrew an Arabic version of the well-known ancient Indian story, **Kalila and Dimna*, in rhymed verse. A remnant of this translation was published by J. Derenbourg (see bibl.). Jacob also wrote *Sefer Pardes Rim-monei ha-Ḥokhmah va-Arugat Bosem ha-Mezimah* (Margoliouth, *Cat.*, no. 1100/1), a philosophical work of 23 chapters in rhymed verse and prose (chapters 13–23 published by Davidson; see bibl.); and *Gan Te'udot*, on ethical and philosophical topics (Margoliouth, *Cat.*, no. 1100/2). The most important and most interesting of his books is *Sefer ha-Meshalim* (written apparently in 1233), which comprises ten *maqāmāt* on various topics. Four of them (5, 6, 7, 9), love stories, unusual both in content and form, were published by J. Schirmann (see bibl.). This book reflects considerable Islamic and Christian influence. In addition, two *piyyutim* by him are also known.

[Abraham David]

JACOB BEN EPHRAIM NAPHTALI HIRSCH OF LUBLIN (d. 1644 or 1645), Polish rabbi. Jacob was rabbi of Brest-Litovsk (Brisk) from 1630 to 1635 and subsequently of Lublin, two of the most important Jewish communities in Poland. In

Lublin, together with his son *Joshua Hoeschel who succeeded him as rabbi there, he headed a large yeshivah and was considered the greatest teacher of Talmud study of his generation in Poland. His pupils included Ḥayyim Heika ha-Levi, rabbi of Hrubieszow, and Samuel *Koidanover. He was a member of the *Council of Four Lands. Several of Jacob's responsa have been published in the works of his contemporaries and in those of later scholars. His novellae to the Talmud and the Shulḥan Arukh have remained in manuscript. The greatest rabbis of his generation, Yom Tov Lipmann *Heller and Joel *Sirkes, quote him in their works.

[Itzhak Alfassi]

JACOB BEN ḤAYYIM BEN ISAAC IBN ADONIJAḤ

(c. 1470–c. 1538), kabbalist, talmudist, and masoretic scholar. Born in Tunis, which he left on account of persecutions early in the 16th century, Jacob went to Rome and Florence and eventually settled in Venice (c. 1520), where he worked as a proofreader and editor at the Hebrew press of Daniel *Bomberg. He converted to Christianity sometime after 1527, as had Felix Pratensis, his predecessor at the press. In the 1520s he edited books in the fields of Kabbalah, Talmud, Bible, and liturgy. He is best remembered as the editor of the second edition of the famous Rabbinic Bible *Shaar YHWH he-Ḥadash* (sic, not as often quoted: *hqḏš*), “The New Gate of the Lord,” based on Sephardi manuscripts. The title, taken from Jeremiah 26:10 alluded to the fact that this edition was a replacement (1524–25) for the earlier edition (1517) that had been produced by Pratensis after his conversion to Christianity, a fact that did not sit well with prospective Jewish buyers. Ben Ḥayyim provided a detailed introduction, and edited the apparatus of the masorah. These marginal notes led to Ben Ḥayyim's Bible becoming the standard “masoretic” text for centuries. The medieval rabbinic commentators chosen by Ben Ḥayyim to accompany the biblical text became “canonical” in all later editions. (In the 19th century the rabbinic Bibles based on the edition of Ben Ḥayyim acquired the name *Mikra'ot Gedolot*, “large scriptures.”) The introduction was translated into Latin by Claudius Capellus (*De Mari Rabbinico Infido*, 2 (1667), ch. 4) and into English by C.D. *Ginsburg (1865). Jacob stressed the reliability of talmudic tradition and criticized Bible commentators and grammarians such as David *Kimḥi, Profiat *Duran, and Isaac *Abrabanel for not giving sufficient attention to the masorah. His work in this field was acclaimed – with reservations – by Elijah *Levita and Azariah dei *Rossi. Jacob appended extracts of the masoretic work *Darkhei ha-Nikkud ve-ha-Neginah*, ascribed to Moses ha-Nakdan, to the *Masorah Gedolah* in the Rabbinic Bible. He also wrote a dissertation on the Targum, which is prefixed to the Pentateuch editions of 1527 and 1543–44. As proofreader and reviser for Bomberg, Jacob was responsible for the *editio princeps* of many

works including the Jerusalem Talmud (1523), and Maimonides' *Mishneh Torah* (1524), which he revised together with David Pizzighe-tone. More recently his work as a reviser has come under criticism, as his readings were not always based on manuscript evidence; his knowledge of *halakhah* and of Aramaic, particularly of the dialect used in the Palestinian Talmud, was limited, as is evident also from his dissertation on the Targum.

[S. David Sperling (2nd ed.)]

JACOB BEN ḤAYYIM TALMID (d. after 1594), leader of

Egyptian Jewry. Jacob was appointed to his position by the Ottoman authorities during the second half of the 16th century. Before him, this position was held by Tajir. Jacob was a member of the renowned Talmid family which had settled in Constantinople after the Spanish Expulsion. Joseph *Sambari refers to him by the title of **nagid*. It does not, however, appear that this title was intended as the equivalent of *Ra'is al-Yahūd*, the official title of the *nagid* during the *Mamluk period, but rather as a title of honor which was given to him by the Jewish community of Egypt. After his appointment to this position (apparently after 1560), he did not show the respect due to the most prominent of Egypt's rabbis, R. Bezalel *Ashkenazi, who, feeling insulted, issued a **herem* against him. This dispute was brought before the Ottoman governor of Egypt, who ordered the banishment of Jacob and the nullification of his title of *nagid*, probably in 1584–87. From then onward, the chiefs of the community in Egypt, who were sent by the authorities in Constantinople, were referred to as *chelebi* (“gentleman [of fashion],” in Turkish). In the days of Ibrāhīm Pasha (1583–84), Jacob, together with R. Eleazar Iskandari, took the initiative for the reopening of the synagogue of the **Mustarabim* in Cairo, which had been closed in 1545.

[Abraham David]

JACOB BEN IDI (end of the third century c.e.), Palestin-

ian *amora*. Jacob transmitted sayings of the *amoraim* of the first generation, such as Joshua b. Levi (TJ, Kil 6:1, 30b), R. Ḥanina (TJ, Ber. 6:1, 10b), and others, but chiefly in the name of R. *Johanan, who was his main teacher. In Johanan's old age, when he was vexed that his other disciples neglected him and did not transmit his halakhic sayings, Jacob appeased him (TJ, Ber. 2:1, 46; Yev. 96b). According to the Jerusalem

Talmud (Pe'ah, 8:9, 21b), he and Isaac b. Naḥman were lay leaders of the community, apparently Tiberias. Toward the end of his life, however, he lived in Tyre or its vicinity. Jacob was regarded as one of the great scholars of his generation, and while *Zeira was still in Babylonia, he requested scholars traveling between Erez Israel and Babylonia to take a circuitous route by way of Tyre in order to obtain Jacob's views on various problems (Hul. 98a; Er. 80a; BM 43b). R. Naḥman made a similar request to Ḥama b. Ada, "an emissary of Zion." However, when he arrived there Jacob was no longer alive (Bezah 25b).

[Shmuel Safrai]

JACOB BEN JACOB HA-KOHN (mid-13th century), Spanish kabbalist. Jacob was born in Soria and lived for some time in Segovia. He wandered among the Jewish communities in Spain and Provence, looking for remnants of earlier kabbalistic writings and traditions preserved by individual kabbalists. He made a prolonged stay in Provence with his younger brother *Isaac b. Jacob ha-Kohen and died in Béziers (c. 1270–80). Jacob adopted pietist ways and was strongly influenced by the mysticism of the *Ḥasidei Ashkenaz, accepting their methods in the application of numerology. He was also in contact with the last members of the kabbalist circle of the *Sefer ha-Iyyun* ("Book of Speculations"). Jacob claims to have been granted many revelations in the form of visions. These, he explains, were all associated with the function of *Metatron as the first creation and with details of the mysteries relating to this figure and its connection with the secrets of the Torah and *mitzvot*. Jacob draws a distinction between his revelation-inspired and other writings; to the latter belongs his collection of commentaries inspired by *Eleazar of Worms and material on Gnostic traditions. Jacob's principal pupil was *Moses b. Solomon b. Simeon of Burgos. Jacob was one of the main pillars of the renaissance Gnostic trend in kabbalah (*ha-ma'amikim*). Neither he nor his brother was an ordained rabbi.

Jacob's works are (1) a commentary on the forms of the letters of the alphabet written in Provence around 1270 (*Madda'ei ha-Yahadut*, 2 (1927), 201–12); (2) a commentary on *Sefer *Yeẓirah* now lost, though the first part may have been preserved in a Florence manuscript (Plut. II, Ms. 53, pp. 33–42). Abraham *Abulafia studied it and praised it as "kabbalistic"; (3) a commentary on *Merkevet Yehezkel* (Ezekiel's vision of the throne-chariot), incorporated anonymously in a number of manuscripts (e.g., Florence II, 412), parts of which were published by G. Scholem in *Kitvei Yad be-Kabbalah bi-Yrushalayim* (1930), 208–13. Jacob's authorship is attested by his pupil Moses of Burgos who cites a number of passages in his master's name. The commentary blends Spanish kabbalism and pietist traditions and is partly based on Eleazar of Worms' *Sodei Rezaya*; (4) *Sefer ha-Orah* ("Book of Illumination"), a large collection of all the secrets revealed to Jacob through his visions, including speculative passages – such as

the "*Perush Yedi'at ha-Bore*" ("Explanation of the Knowledge of the Creator"), explanations of the Divine Names and the alphabets in *Sefer Yeẓirah*, an explanation of certain *mitzvot* (*zizit*, *tefillin*, blowing the *shofar*, the red heifer) linking these precepts with the mysteries relating to Metatron, explanations of certain prayers and cosmological exegesis (*Sod ha-Levanah*, "Secret of the Moon"). The lengthy preface to *Sefer ha-Orah* is preserved in a Milan manuscript (Ambrosiana 62), which (together with Vat. 428, Vienna 258, and Schocken, Kab. 14) incorporates a large portion of this material. Three of these mysteries appearing in a Paris manuscript have been published in *Madda'ei ha-Yahadut* 2 (1927), 240–3. Collections of the traditions dealing with the powers of the *azilut* (*emanation) and their names and with *demonology are to be found in the writings of Jacob's brother and of his pupil Moses.

Jacob's visionary mysteries are most obscure since he veils the meaning of his words, using numerical (*gematriot*) and other combinations (*zerufim*). Their Kabbalah is entirely different from the theory of the *Sefirot* customarily followed by Jacob's contemporaries. The vision-inspired passages show that, long before Abraham *Abulafia, individual kabbalists had independently initiated a theosophical kabbalistic doctrine, in addition to providing a link with the Ḥasidei Ashkenaz, the kabbalists of Provence, and the exponents of later forms of "prophetic Kabbalah." *Sefer ha-Orah* was still known in the 14th century (by the name of *Sha'arei Orah*) to *Isaac b. Samuel of Acre whose *Sefer Ozar ha-Ḥayyim* (Ms. Guenzburg 775) names *Naḥmanides, Jacob ha-Kohen, Joseph Gikatilla of Segovia, and the author of the *Zohar as the four leading kabbalists in Spain. Joseph Gikatilla in his *Ginnat Egoz* incorporates mysteries from *Sefer ha-Orah* without mentioning their source.

[Gershom Scholem]

JACOB BEN JUDAH (13th century), Hebrew-French poet. Jacob came from Lorraine and lived, at least temporarily, in *Troyes, where he was an eyewitness of the auto-da-fé of April 24, 1288. He wrote two lamentations on the death of Isaac Châtelain and the other 12 martyrs burned as the result of a blood libel (Vatican Ms. 327). One, *Yuzza al Besari Sak va-Efer*, is composed in Hebrew (published by Bernfeld, see bibl.); the other is a free rendering of the Hebrew poem in Old French describing the *bele kedushah*, the "beautiful martyrdom" and aspiring for a wider audience. Since this gives the pronunciation of 13th-century French words in Hebrew transliteration, it has been repeatedly published with commentary and translation. Both poems have 17 strophes of four verses, but the differences are many and, in some cases, significant. Solomon Simḥah the Scribe and Meir ben Eliav also wrote laments on the same event. According to S. Einbinder, Jacob drew on sacred and secular motifs to create martyrological vignettes that bear the stamp of romance hagiographical conventions;

actually, he wrote under the constraints of two different sets of conventions. The Hebrew text contains a mosaic of biblical quotations and typologies that have particular connotations for a Jewish audience; the French text shares many traits with the hagiographical romance of the time.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

JACOB BEN JUDAH OF LONDON (13th century), English rabbinical scholar. Either he or, more probably, his father, Judah b. R. Jacob he-Arukh (perhaps corresponding to Le Long in secular records), was *hazzan* of the London community. Jacob of London was the author of *Ez Hayyim* (c. 1286), a comprehensive handbook to Jewish religious law and ritual, the most ambitious work now extant by a medieval English Jew. The author's object was to supplement the *Sefer Mitzvot Gadol* of *Moses of Coucy by including such practical guiding rules as were absent from the book. To a great extent the *Ez Hayyim* follows Maimonides' *Code*, and is of some importance for establishing the correct text of that work in many passages. The author cites conditions in France, where he had presumably studied, and speaks also of Spanish usages. He quotes several Anglo-Jewish writers, including Joseph of Lincoln, Moses of London and his father Yom Tov, Berechiah of Lincoln, Elijah Menahem of London, and Isaac b. Perez of Northampton, and his work sometimes throws light on Anglo-Jewish conditions in the Middle Ages. Excerpts from the work were published by D. Kaufmann and H. Adler. The full text was edited by Israel Brodie (3 vols., 1962–67).

BIBLIOGRAPHY: H. Adler, in: *Festschrift... M. Steinschneider* (1896), 241f. (Eng., Ger. section), 186–208 (Heb. section); Kaufmann, in: JQR, 4 (1891/92), 20–63, 550–61; 5 (1892/93), 353–74; 6 (1893/94), 754–6; Marmorstein, *ibid.*, 19 (1928/29), 32–36; C. Roth, *Intellectual Activities of Medieval English Jewry* (1948), 39–43.

[Cecil Roth]

JACOB BEN KORSHAI (second century), *tanna*. References in the Mishnah to “Jacob,” without a patronymic, are to be identified with Jacob b. Korshai (or Kodshai) as is shown by the same Mishnah being attributed to “Jacob” in *Avot* 4:16 and to Jacob b. Korshai in *Leviticus Rabbah* 3:1. He is mentioned in disputes with pupils of Akiva, but was a disciple of Meir, and transmits *halakhot* in his name only (Tosef., *Ma'as*. Sh. 2:10; Yev. 102a etc.). Apart from the statements in his name in *Avot*, Jacob is mentioned only once more by name in the Mishnah (in a Ms. of Neg. 14:10), although several well-known and fundamental laws in the Mishnah are in accordance with

his opinion (BK, 9:1; cf. TJ, *ibid.*, 6d; Ohol. 12:8; Tosef., *ibid.*, 13:10). He is frequently mentioned, however, in the Tosefta and in other *beraitot* in the two Talmuds. According to the Jerusalem Talmud, Judah ha-Nasi was his outstanding disciple (TJ, Shab. 10:5, 12c; TJ, Pes. 10:1, 37b), and it is assumed that the material from Meir's Mishnah, which Judah incorporated in his Mishnah, was transmitted by Jacob, since Judah apparently did not study directly under Meir (Er. 13b).

Among his few aggadic statements are “This world is like a vestibule to the world to come – prepare yourself in the vestibule in order to enter the reception room” (*Avot* 4:16) and “One hour of repentance and good deeds in this world is better than all of the next world, but better is one hour of tranquility in the next world than all of this world” (*Avot* 4:17). According to the *aggadah* of the Babylonian Talmud, Jacob was the “*tanna*” (i.e., the teacher of *mishnayot*) in the school of R. Simeon b. Gamaliel, and once, when Jacob learned that on the following day Meir and Nathan were planning to depose Simeon from the office of *nasi* by putting questions to him on the tractate *Ukzin* with which Simeon was not fully familiar, he proceeded immediately to teach the tractate (Hor. 13b) (but see: Goodblatt). Jacob is famous for the view that “there is no reward in this world for fulfilling *mitzvot*,” interpreting the mention of tangible reward for the fulfillment of the commandments in Deuteronomy 5:16 and 22:7 as referring to the world to come (Tosef., *Hul.* 10:16). As a result of his position in this matter, the *aggadot* of both the Jerusalem Talmud (*Hag.* 77b) and the Babylonian Talmud (*Hul.* 142a; *Kid.* 39b) connect him indirectly with the figure of *Elisha b. Avuyah, who according to some legends became disillusioned as a result of the apparent lack of reward and punishment in this world, and so lost his faith in the Torah. In a late twist on this *aggadah* Rav Joseph even names Jacob as Elisha's grandson (“his daughter's son”), but there is no evidence, and it almost certainly reflects no more than the Babylonian Talmud's general inclination to posit family ties between characters in its aggadic narratives.

[Shmuel Safrai / Stephen G. Wald (2nd ed.)]

JACOB BEN MORDECAI OF SCHWERIN (also known as **Jacob of Fulda**; 17th century), German author. Jacob lived in Fulda which he was compelled to leave, probably during the temporary expulsion of Jews from that town in 1671, and settled in Schwerin. He was the author of *Tikkun Shalosh Mishmarot* (Frankfurt, 1691), prayers for the three vigils, chiefly from the Zohar. It was translated into Yiddish the following year, with an introduction by the author's wife, Laza (Frankfurt on the Oder, 1692). He also wrote *Shoshannat Ya'akov* (Amsterdam, 1706) on palmistry, physiognomy, and astrology, which claimed to be based on the works of seven scholars, including Aristotle who, according to Jacob, had been converted to Judaism.

[Joseph Elijah Heller]

JACOB BEN MOSES OF BAGNOLS (second half of 14th century), Provençal theologian and halakhist. Jacob, who was the grandson of David b. Samuel *Kokhavi and a student of Sen Boniac Nasi, lived in several towns of Provence, primarily in Salon and Carpentras, where he probably held the positions of judge and schoolmaster. He was the author of an untitled halakhic and philosophical work, written between 1357 and 1361, of which, apparently, there is only one manuscript extant (British Museum, Ms. Or. 2705). This work may be divided into three sections, each of which bears its own title: (1) “*Pesakim*,” rules concerning that which is permitted and prohibited (*issur ve-hetter*); (2) “*Ezrat Nashim*,” rules concerning marriage, *ḥalīzah, and divorce; (3) “*Sod ha-Hashgahah*,” which deals with several philosophical and religious problems, and pays special attention to prayers and their order. This section of the work was composed in 1357. Though more of a moralist than a philosopher, he refers to *Averroes, *Levi b. Gershom, and certain philosophical doctrines drawn from contemporary authors, some of whom have not been identified. The presence in the work of several passages in which Jacob reproaches his contemporaries for abandoning the study of Talmud for that of philosophy would seem to indicate that he had a rather negative attitude to philosophy.

[Colette Sirat]

JACOB BEN NAPHTALI (17th century), Hebrew author. Born in Gnesen (Poland), Jacob was secretary (*sofer*) of the Jewish community of that city, which he left after the persecution of 1648. In 1652 he published in Amsterdam a collection of poems under the title *Naḥalat Yaʿakov Melizot* which, besides some of his own poems (among them an elegy on the martyrs of Nemirov), contains dirges by some of his contemporaries. In 1654, Jacob was sent to Rome as an emissary to Pope Innocent x in connection with a blood libel in Poland, and was highly recommended to the Italian communities by Moses *Zacuto.

[Jefim (Hayyim) Schirmann]

JACOB BEN NETHANEL BEN (AL-) FAYYŪMĪ (12th century), **naḡid* of Yemenite Jewry, when ʿAbd al-Nabī ibn al-Mahdī, the ruler of *Yemen, decreed a forced renunciation of Judaism in about 1160. Many Jews converted to Islam and the Messiah’s coming was widely awaited. R. Jacob turned for counsel to *Maimonides, who replied in the form of a letter known as *Iggeret Teiman* (“Epistle to Yemen,” c. 1172) in which he sought to strengthen the faith of the Jews of the country.

[Abraham David]

JACOB BEN NISSIM IBN SHAHIN (d. 1106/07), scholar of *Kairouan. Jacob was head of the *bet ha-midrash* in Kairouan. He is referred to under a variety of titles such as *ha-rav *alluf, rosh kallah, ha-rosh* (“chief rabbi”), etc. He had close ties with the Babylonian academies of *Sura and *Pumbedita and acted as their representative for the countries of North Africa, both with regard to the monies collected for yeshivot and transmitted through him, and in correspondence on halakhic matters. Questions from different communities in Africa were addressed to Jacob who forwarded them to the Babylonian academies, received the replies, and passed them on to the inquirers. The many responsa he received from the *geonim* of Babylon, and the praise which they bestowed on him (Mann, *Texts*, 1 (1931), 108) testify to his importance and status. The long historical responsum known as “The Letter of Sherira Gaon” was sent to him in 987 c.e. by *Sherira b. Ḥanina Gaon in response to Jacob’s question on behalf of “the holy community of Kairouan” as to “How was the Mishnah written down?” (He sent him another responsum quoted in the *Arukh* (s.v. *Abbaye*) on the subject of the names of the scholars of the Talmud, which is regarded by some as part of the same responsum.) Some scholars have attributed the commentary to the weekly biblical portion of *Va-Yeze* mentioned in an ancient list of books (Mann, *ibid.*, 644 n. 3) to Jacob. Similarly, a commentary to the *Sefer Yezirah* was thought to be his; it has been proved, however, that the basis of that commentary is by Isaac b. Solomon *Israeli, and that it was apparently written by *Dunash ibn Tamim of Kairouan. His son was Rav Nissim *Gaon, who continued his father’s activities and functions.

[Shlomoh Zalman Havlin]

JACOB BEN REUBEN (12th century), Karaite biblical exegete, probably a native of Constantinople. He traveled to a number of countries to spread Karaism and at the same time tried to collect commentaries, mainly in Arabic, written by his Karaite predecessors. His biblical commentary *Sefer ha-Osher* is essentially a collection of excerpts from earlier Karaite authors, hence the frequent glosses in Greek and Arabic; some of these writings are otherwise unknown. His knowledge of the *Khazars and Slavs, whom he mentions, probably derives

from the writings of his predecessors. Jacob mainly avails himself of the tenth-century Karaite exegete Japheth b. Ali, simply reproducing passages from his Arabic commentary. The polemics against *Saadiyah Gaon and Muslim scholars are also taken from the writings of the Karaite *Salmon (Solomon) b. Jeroham. Of the works by Rabbanite authors, Jacob used those of Jonah ibn *Janāḥ and *Dunash ibn Labrat. Only his commentary on the Later Prophets (excepting Isaiah) and Hagiographa (excepting Psalms) titled *Mivḥar Yesharim* has appeared in print (Eupatoria, 1836) together with *Sefer ha-Mivḥar* by *Aaron b. Joseph (the Elder).

Steinschneider, *Catalog... Leiden* (1958), 106–7, 391–2; S. Pinsker, *Likkutei Kadmoniyot* (1860), 2nd pag., 80–86; A. Harkavy, *Zikkaron la-Rishonim...*, pt. 1 book 8 (1903), 152–5.

[Isaak Dov Ber Markon]

JACOB BEN SAMSON (early 12th century), a pupil of *Rashi, whose customs he reported. Jacob was apparently one of the teachers of Jacob *Tam. According to the tosafists, Jacob was the author of a work entitled *Seder Olam*, a chronology of the *tannaim* and *amoraim* similar to that found in the anonymous commentary to *Pirkei Avot*, in the *Maḥzor *Vitry*. Until recently Jacob was regarded as the author of this commentary, but it has now been established that it is not his, though it contains extracts from his commentary on *Avot*, as well as a number of verses with the acrostic of his name.

[Israel Moses Ta-Shma]

JACOB BEN SIMEON (second half of 11th century), Karaite translator in Byzantine Greece. Jacob, who was a pupil of *Jeshua b. Judah, translated his teacher's classical Arabic treatise on the Karaite law of incest into Hebrew under the title *Sefer ha-Yashar*. His very poor Hebrew, heavily salted with Arabic and Greek constructions and loanwords, is almost unintelligible at times. Nevertheless, he and other Byzantine Karaite translators helped to make the classical Karaite literature accessible to the later European Karaites who knew no Arabic.

BIBLIOGRAPHY: Mann, *Texts*, 2 (1935), index; Z. Ankori, *Karaites in Byzantium* (1959), 188f., 199 n.446; L. Nemoy, *Karaite Anthology* (1952), 124.

[Leon Nemoy]

JACOB BEN SOSAS, one of the four commanders of the Idumean forces during the Jewish War (66–70/73 C.E.) who played a prominent role in the internecine struggle in Jerusalem. The other Idumean commanders were Jacob's brother John, Simeon b. Cathlas, and Phinehas b. Clusoth. Jacob may have been a member of one of the Jewish families living in Idumea, the "Jews of the south" (Klausner). He opened up Idumea

to Simeon Bar Giora when sent by his countrymen to reconnoiter the strength of the latter's forces, so that Simeon was able to march into the country without bloodshed. In the defense of Jerusalem Jacob was one of the ten chiefs of the 5,000 Idumean warriors who joined forces with Simeon Bar Giora. He distinguished himself in various battles during the siege of Jerusalem. When the Idumean defenders of Jerusalem deliberated surrender after the fall of the Temple, Jacob, together with the other Idumean chiefs, was arrested by Simeon Bar Giora. Nothing else is known about him.

BIBLIOGRAPHY: Jos., *Wars*, 4:235, 521ff.; 5:249; 6:92, 148, 380; Klausner, *Bayit Sheni*, 5 (1951²), 212, 231, 239.

[Edna Elazary]

JACOB BEN YAKAR (d. 1064), German rabbi. Jacob was the principal teacher of *Rashi, who refers to him as "ha-Zaken," and also of Solomon b. Samson. Another of his pupils was the "gaon" quoted in the *Shitah Mekubbezet* to *Bava Kamma*, from chapter 7 onward. From Worms, where he was one of the earliest scholars, Jacob went to study in the yeshivah of *Gershom b. Judah in Mainz, and apparently headed the yeshivah for some time together with *Eliezer b. Isaac of Worms after Gershom's death. Later he returned to Worms, but toward the end of his life he again dwelt in Mainz, and it is there that his tombstone was found. Some regard him as the head of the Worms yeshivah and the initiator there of a method of study that differed from that of the yeshivah of Mainz, but the matter is not sufficiently clear. Jacob was Rashi's teacher in both Talmud and Scripture, and Rashi says that he learned most of his Torah from him. However, he refers to him by name only on rare occasions, where the matter was not absolutely clear to him; otherwise he quotes him without mentioning his name. Rashi refers to him as "my teacher in Scripture," excluding thereby his other teacher, *Isaac b. Judah. Joseph too quotes the comments of Jacob on Scripture. Jacob's teachings – particularly his rulings and "deeds" – are cited by Rashi and in the various books of the "School of Rashi." It is of interest that no written responsa by Jacob are extant. The *Sefer Hasidim* (ed. by J. Wistinetzki (1924²), 245 no. 991) relates of him that, because of great humility, he was wont "to sweep before the Holy Ark with his beard" and Rashi too emphasizes the humility of his teacher (*Maḥzor Vitry*, ed. by S. Hurwitz (1923²), 358 no. 321).

[Israel Moses Ta-Shma]

JACOB BEN ZEMAH BEN NISSIM (d. 1847), one of the wealthiest men of his time in the East. Born in Baghdad, he moved in about 1775 to India where he succeeded in amassing great wealth. Returning to Baghdad in 1831, he spent large sums on charitable purposes in various countries. Many of the Jewish religious institutions established in Baghdad in the first

half of the 19th century were financed by his contributions. After his death his heirs struggled bitterly among themselves over the distribution of his estate. In 1855 a synagogue, *Midrash Ya'akov Zemaḥ*, was constructed in his memory in Baghdad.

JACOB DAVID BEN ISRAEL ISSAR (1808–1863), talmudist and kabbalist. Jacob was a pupil of the ḥasidic rabbi Judah Leib of Leszno and served as a rabbi in Kozienice and later in Wyszogrod. He was the author of glosses and novellae to the *Sifra*, published with the text, together with a commentary from manuscripts in Jacob's possession of Samson of Sens, under the title *Haggahot Maharid* (1866). Many of Jacob's other novellae remained unpublished.

[Samuel Abba Horodezky]

JACOB HA-KATAN (i.e., “Jacob the Small”; 13th century), Hebrew translator, better known as “The Anonymous” or “The Anonymous of the 13th Century.” This is due to the fact that until recently the name of this Hebrew translator of many Arabic and Latin medical works was unknown. However, the author of *Sefer ha-Yosher* (1270), a pupil of R. Nathan of Montpellier, mentions in his book a number of medical works. Among them is the *Antidotarium Nicolai* which had been translated by his brother Jacob. Furthermore, he describes Jacob as famous for his works. In the preface to the *Antidotarium*, the translator introduces himself as “Rabbi Jacob ha-Katan.” The same introduction appears in the preface to the translation of Averroes' *On Diarrhea* and there he also records that he – at the suggestion of *Nahmanides – translated other works of Averroes. It can, therefore, be assumed that Jacob ha-Katan translated other works without explicitly mentioning them by name.

[Suessmann Muntner]

JACOB HA-KOHEN BAR MORDECAL, *gaon* of Sura, 797–811. A student of *Yehudai Gaon and *Ḥanina Kahana b. Huna, Jacob was held in high esteem. He is credited by some with the authorship of *Seder Tanna'im* (ed. by Z. Kahana, 1935), one of the most important works on the history and methodology of mishnaic and talmudic literature, and the first of its kind. In his decisions Jacob tended to be as lenient as possible in the interpretation of the law. One of his most important decisions concerned the talmudic rule that, whenever R. *Judah ha-Nasi's opinion is cited in opposition to only one of the sages, Judah's opinion prevails. Jacob, however, decided – in accordance with another talmudic formula – that if Judah's opponent was his father and teacher Rabban *Simeon b. Gamaliel, the latter's opinion is accepted. His responsa are

written in Hebrew interspersed with Aramaic. His son Moses (Mesharsheya) was also *gaon* of Sura.

[Meir Havazelet]

JACOBI, ABRAHAM (1830–1919), pediatrician, founder of American pediatrics. He was born in Hartum, Germany, to parents of limited means. He registered as a student of Semitic languages, but later studied medicine, graduating from Bonn University. While he was studying, the 1848 Revolution broke out in Germany, and Jacobi became a revolutionary leader. He was imprisoned but escaped in 1853 to the United States. A year later, in New York, he invented a laryngoscope, but failed to obtain a patent for his invention (before Manuel Garcia's invention in 1855).

Jacobi was appointed to lecture on children's illnesses in 1857, and in 1860 the first chair in pediatrics in New York was founded for him; he lectured for almost 25 years. His activities included the organization of the children's ward at the Mount Sinai Hospital in New York. Jacobi was one of the first to insist on the boiling of milk, and one of the first to practice intubation of the throat instead of performing a tracheotomy. In 1859 he and E. Noeggerath wrote a textbook for midwives and on children's and women's diseases.

Jacobi wrote on a large number of pediatric problems: the throat (1859), diet for children (1872), diphtheria (1876), intestinal illness (1887), the thymus gland (1889), and infant and child care (1896–1902). Jacobi also contributed three monographs to Gerhard's *Handbuch*, manual on hygiene in childbirth (1876), diphtheria (1877), and dysentery (1877). He also published important works on the history of pediatrics. His writings were published in eight volumes under the title *Collectanea Jacobi* (1898; *Dr. Jacobi's Works*, 1909).

[Joshua O. Leibowitz]

JACOBI, ERWIN REUBEN (1909–1978), musicologist and harpsichord player. Jacobi was born in Strasbourg and graduated as an engineer in 1933. In 1934 he immigrated to Erez Israel where he worked in agriculture and land settlement, and later in industry. In the 1950s he turned his attention to music, studying cembalo under Frank *Pelleg (1951–52) and music theory under Paul *Ben-Haim (1952–53). In 1953 he proceeded to the United States, where he studied under Wanda *Landowska and Paul Hindemith, under whom he studied at Yale University (1952–53) and Zurich (1953–57), receiving his doctorate from him in 1957. In 1953 he moved to Zurich where he was appointed lecturer in musicology. He served as visiting professor at the School of Music of the Iowa University (1970–71) and Indiana University (1971–72). Jacobi's

research centers on the theory and practice of music in the 17th and 18th centuries. He produced a complete edition of Rameau's theoretical works (*Die Entwicklung der Musiktheorie in England nach der Zeit von Jean-Phillipe Rameau*, 1971). A longtime friend of Albert Schweitzer, he has also published many articles on him. His works include "Introduction" to *J.F. Agricola: Anleitung zur Singkunst (1757) zusammen mit dem italienischen Original von Pier Francesco Tosi* (1966); *Albert Schweitzer und die Musik* (1975); *Albert Schweitzer und Richard Wagner: eine Dokumentation, Schriften der Schweizerischen Richard-Wagner-Gesellschaft*, iii (1977). His editions include *J.B. de Boismortier: Quatres suites de pièces de clavecin. op. 59, Alte Musik für verschiedene Instrumente*, (1960, 1971); *Jean Philippe Rameau: Pièces de clavecin* (1961, 1972) and *Pièces de clavecin en concerts* (1961, 1970).

[Israella Stein (2nd ed.)]

JACOBI, FREDERICK (1891–1952), U.S. composer. Born in San Francisco, Jacobi studied with Rubin *Goldmark, Rafael Joseffy, Paul Juon, and Ernest *Bloch. From 1913 to 1917 he was assistant conductor at the Metropolitan Opera in New York and later taught at the Juilliard School of Music. Jacobi first attracted attention as a composer with a quartet on American Indian themes (1923). Many of his later works were on Jewish subjects or for synagogue use. *Sabbath Evening Service* (1930–31); *Six Pieces for Organ*, for use in the synagogue (1933); arrangements of Palestinian folk songs (1939–40); *Hymn* to words of Saadia Gaon, for male choir; *Two Pieces in Sabbath Mood*, for orchestra (1946); *Ashrei ha-Ish* – arrangements of the song by Mordechai *Zeira – for mixed chorus and string orchestra (1949); and *Three Preludes*, for organ (1949).

JACOBI, GEORG (1840–1906), violinist and conductor. Born in Berlin, Jacobi worked as a violinist and conductor in Paris. In 1871 he was appointed leader of the orchestra at the Alhambra Theatre, London, where he remained for 26 years. During this period he composed or arranged the music for over 100 ballets, among them *Yolande* (1877), *The Golden Wreath*, and *Beauty and the Beast* (1898).

JACOBI, HANOCH (Heinrich; 1909–1990), Israeli composer, conductor, and string player. Born in Germany, he studied the viola and composition with Paul Hindemith at the Berlin Hochschule für Musik (1927–30). From 1930 to 1933 he played in the Grosses Orchester des Südwestdeutsche Rundfunk. In 1934 he emigrated to Erez Israel and settled in Jerusalem where he joined the Jerusalem String Quartet (1934–9) and the Palestine Music Conservatory (1934–47), later the Jerusalem Academy of music, of which he became the director (1954–1958). In 1959, he moved to Tel Aviv, where he joined the Israel Philharmonic Orchestra as a violist until 1974. After leading the Herzliyah String Quartet, he founded his own quartet. Jacobi was a conservative composer although the influence of his new homeland may be felt in his works. Among

his popular compositions which were considered Israeli cultural symbols are the cantata *Od Yavo Yom* ("The Day Will Come," 1944), the Suite for Strings (1946); *Kinnor Hayah le-David* ("King David's Lyre") in honor of the birth of the state of Israel (1948); and *Judean Hill Dance: Hora Variations* (1952). During his later years, he wrote pedagogical compositions for string instruments based on Jewish tunes from Mediterranean and Middle Eastern countries. He also wrote three symphonies (1944, 1955, 1960) and other orchestral works such as *Partita concertanta* (1971), *Mutatio I* (1975), *Variations* (1976), and *Mutatio II* (1977).

[Yohanan Boehm and Uri (Erich) Toeplitz / Israella Stein and Gila Flam (2nd ed.)]

JACOBI, KARL GUSTAV JACOB (1804–1851), German mathematician, brother of Moritz Hermann *Jacobi. Born in Potsdam, he was a child prodigy. He studied philosophy, philology, and mathematics at the University of Berlin, and in 1825 became a lecturer in mathematics. He and his brother converted to Christianity in order to remove any possible bar to government posts. His career was also helped by the famous mathematician Friedrich Gauss. A brilliant teacher, Jacobi was invited to Königsberg, where he became a professor at the age of 23. Overwork, together with financial difficulties caused by his father's death, brought him to a state of near collapse requiring a long convalescence. Jacobi met Sir William Rowan Hamilton, the great Irish mathematician, and, as a result of this meeting, he continued Hamilton's work in the field of dynamics. After a short and unhappy involvement in politics which cost him his royal grant, he returned to his original work. On the recommendation of Baron Alexander von Humboldt, the German naturalist, the grant was again awarded him. By 1849 Jacobi was the leading mathematician in Europe after Gauss. He died in Berlin of smallpox. Jacobi's works on differential equations and the calculus of variations serve as the mathematical basis for modern physics. His collected works, *Gesammelte Werke*, were published by the University of Berlin in eight volumes (1881–91).

[Grete Leibowitz]

JACOBI, LOTTE (Johanna Alexandra; 1896–1990), U.S. photographer. Born in Thorn, West Prussia (now Torun, Poland), to a fourth-generation photographer family, Jacobi captured the heady spirit of the Weimar Republic, particularly the intellectual and artistic elite who lived in Berlin or passed through it, before she fled the Nazis in 1935. She began her photographic career at 14, documenting the world around her with a homemade pinhole camera. Her family had the most famous portrait-photography business in Germany, Atelier Jacobi, with studios in Thorn, Poznan, and Berlin. She was in her early thirties when she finished her studies and joined her

parents and sister in Berlin, where the family had moved. She was equipped for the job not only by talent but by temperament. An emancipated woman with a leftist political slant, she had an inquiring approach and a knack for bringing subjects to her lens. Her aim was to capture each sitter's individuality. "In making portraits, I refuse to photograph myself," she said. "My style is the style of the people I photograph."

One of her famous subjects was Peter *Lorre. She was allowed only one image, and it turned out to be a classic, with Lorre shot as close up as possible. She captured his villainous look, but softened the angle by shooting from above. Her interest in modern dance led her to make photos of dancers in action, aided by her own quickness and new camera technology. Her photographs of an unknown Lotte Lenya holding a cigarette, the actor Emil Jannings casually peeling an apple, and the dancer Claire Bauhoff captured the essence of Berlin theater life. In 1932 her leftist sympathies led her to do a series of Ernst Thalmann, the Communist candidate that year against Hitler. Then, a long trip to the Soviet Union resulted in rare and interesting shots of street scenes in Moscow and the republics of Tajikistan and Uzbekistan. But when she returned to Germany, the Nazis questioned her about her trip, her political sympathies, and her Jewish background. She finally left Germany after her father's death.

In New York, she opened a studio with her sister Ruth but struggled to find work. An important American contact was Albert *Einstein, whom she and her family had photographed in Germany. He agreed to work with her when, in 1938, *Life* magazine commissioned a photo essay on the scientist. She made several informal photographs at Einstein's home in Princeton, N.J., in conversations with his students, but *Life* felt they were too casual and decided not to publish them. However, in 1942, the magazine *U.S. Camera*, at the instigation of Edward Steichen, published a photo of a dreamy Einstein, in a rumpled leather jacket, hair askew, that became one of the most famous images of him. In the 1940s Jacobi explored the technique of photogenics, expressive abstract images made by drawing with a flashlight on photographic paper. The process had been extensively explored in the early 20th century by Man *Ray and Laszlo Moholy-Nagy.

In 1940, in New York, she married her second husband (she and her first husband had divorced), Erich Reiss, a German avant-garde publisher who was rescued from a Nazi death camp. He died in 1951. In New Hampshire, living with his son's family, she continued her interest in the forms of nature, taking pictures of snow, water, and other phenomena in the countryside. She remained active as a portrait photographer, developing a new set of subjects and friends, including the poets Robert Frost and May Sarton, the ecological activists Helen and Scott Nearing, and a fellow photographer, Paul Caponigro. She opened a gallery in Deering and served as a mentor to younger artists for 30 years. Among her other notable portraits – all in black and white – were those of the dramatist Kurt *Weill, Eleanor Roosevelt, Marc *Chagall, and the musician Pablo Casals. She bequeathed a collection

of 47,000 negatives to the University of New Hampshire. Her earlier work was lost to the Nazis.

[Stewart Kampel (2nd ed.)]

JACOBI, MORITZ (Moses) HERMANN (1801–1874), German physicist and architect. Born in Potsdam, he – like his brother the mathematician Karl Gustav Jacob *Jacobi – was converted to Christianity. Jacobi practiced architecture at Königsberg until appointed professor of architecture at the Russian University in Dorpat, Estonia. In 1837 he was invited to St. Petersburg, where he became a member of the Russian Academy of Sciences, later state advisor, and was ennobled. In 1838 Jacobi, who was particularly interested in electricity, invented the galvano-plastic process of electrotyping. In 1839 he managed to produce molds faced with graphite which could conduct electricity. He also studied the practical use of electromagnetism for driving machinery (electrically driven boat), and experimented with the electric arc.

[Grete Leibowitz]

JACOB ISAAC BEN SHALOM (d. 1675 or 1676), rabbi and author. Jacob served as a rabbi in Schrimm and in Lissa, Poland, where he died. Esteemed as a talmudic scholar, his opinion was frequently sought on halakhic matters. He gave his *haskamah to the *Magen Avraham* by Abraham Abele *Gombiner, his contemporary and relative. His collection of halakhic decisions, *Beit Levi*, with the subtitle *Shelom Bayit*, was never printed independently, but extracts from it were printed in *Magen Avraham* and in Jekuthiel Kaufman's *Hukkei Da'at*, printed as an addendum to *Yismah Yisrael* by Israel Samuel b. Solomon Rofe.

[Elias Katz]

JACOB ISAAC HA-ḤOZEH MI-LUBLIN (1745–1815), ḥasidic *zaddik* known by the epithet "Ha-Ḥozeḥ mi-Lublin" ("the Seer of Lublin"). Jacob Isaac was born in Lukow, the son of Abraham Eliezer ha-Levi, the rabbi of Jozefow, a descendent of Isaiah ben Abraham ha-Levi *Horowitz (Ha-Shelah). Jacob Isaac was one of the major founders of the ḥasidic movement in Poland and Galicia at the end of the 18th century and the beginning of the 19th. He was a pupil of Samuel-Shmelke *Horowitz of Nikolsburg, and *Dov Baer the Maggid of Mezhibezh, as well as *Levi Isaac of Berdichev. His principal mentor, however, was *Elimelech of Lyzhansk, (1717–1786), who formulated in his court and disseminated in other communities the doctrine of the *zaddik* as occupying the center of ḥasidic identity. This doctrine was further circulated posthumously through his book *No'am Elimelekh* (Lemberg 1788). Jacob Isaac left his teacher and began to lead his own ḥasidic group in Elimelech's lifetime, causing much tension, anguish,

and crisis in his master's court. At first active in Lancut and later in Rozwadow, during the 1790s he moved to Chekhov, a suburb of Lublin, and finally to Lublin itself. Jacob Isaac, a renowned *zaddik*, who was mainly responsible for making Congress Poland and Galicia into great ḥasidic centers, appears in his autobiographical writings as someone with a unique perception of himself as both a mystic and a prophet, who believed that he received divine revelations for the sake of the Jewish community. His books were written as a mixture of diaries and collections of teachings in the last two decades of the 18th century, and were published posthumously under the titles *Zot Zikaron* (1851) and *Zikaron Zot* (1869). He represented himself in his books and was represented by his contemporaries in their tales to be a miracle worker, a seer, and a prophet, beliefs responsible for the wide attraction of his court. His works reveal dialectical concepts which reflect a reappraisal of the significance of the traditional order ("awe") and the quality of the mystical religious undertaking ("love"). Significantly these concepts related to the tension between the commitment to traditional obligations and expansion of these limits through innovative mystical thought, mystical rapture, and new forms of contemplation on the meaning of religious praxis. These dialectical concepts expressed the dual meaning of the veneration of the *zaddik*, which included both the transcendence of existential borders ("love") and the preservation of the traditional order ("awe"). The Seer developed a new orientation of complete responsibility toward the corporeal and spiritual needs of his followers and formulated a clear distinction between the nature of divine worship insofar as it applied to the *zaddik* and his followers. The former was expected "to work with love," meaning to be a courageous religious innovator inspired by divine rapture, preconditioned by a high degree of self-abnegation. The *zaddik*, as he saw it, was someone who completely annihilates his personality and will in order to receive direct divine revelation for the benefit of his ḥasidim. Jacob Isaac engendered changes in the religious and social life of his followers as a result of these new divine revelations. These changes were much welcomed and needed because of the harsh socio-economical circumstances in Galicia and the urgent needs of the community. His followers, the ḥasidim, on the other hand, were expected by him to adhere to the normative tradition while attaching themselves to the *zaddik*, who took complete responsibility for all their spiritual and corporeal needs. Jacob Isaac left no direct dynastic line; however, the majority of Polish and Galician *zaddikim* who headed the ḥasidic movement during the first half of the 19th century were numbered among his disciples. He attracted followers from all social strata. Isaac Meir b. Israel Alter, founder of the Gur dynasty, regarded him as "everyone's rabbi" (*Me'ir Einei ha-Golah* (1928), 18).

Many of his distinguished disciples testified to his insight, his ability to discern whether a person "acted purely and honestly or conversely, God forbid," as well as to his power of predicting events. It was also reported that he could reveal the genealogy of a person's soul and discern its *tikkun* ("restitution")

in each stage of reincarnation; the epithet "*ḥozeh*" ("seer") was therefore applied to him, although posthumously.

Following Elimelech of Lizhansk, Jacob Isaac emphasized the centrality of the *zaddik* in the life of the ḥasidic community and the "practical" work of the *zaddik*, stressing his duty to care for the "progeny, life, and livelihood" of his "children," the ḥasidic congregation. Believing that material abundance preceded spiritual wealth, Jacob Isaac held that in order to help a person repent it was first necessary to help the person satisfy his material needs. The *zaddik* ought "to extend great abundance and a comfortable living so that the people will be free to worship God." He is reported as saying that "when the body enjoys plentitude the soul too enjoys spiritual richness" (*Or la-Shamayim*, 1850, *Parashat Va-Yishlah*, 15a). He particularly stressed the conduct between man and his fellow, considering social feeling to be of special significance in the secret order of the world. He perceived humility as a metaphysical element, obliging primarily the *zaddik* and preconditioning his mystical exaltation. He further stressed the virtue of the "love of Israel," which was one of the cherished principles of early Hasidism.

Toward the end of his life Jacob Isaac suffered a serious crisis over his conduct as a ḥasidic leader, which originated in the split in the Lublin ḥasidic center between those who emphasized the aspiration toward spiritual perfection and constant *devekut* to God and those who stressed the *zaddik's* need to care for the multitude of the Ḥasidim. The atmosphere of "practical" *zaddikism*, focused on the mundane needs of his followers as cultivated by Jacob Isaac, did not suit those who regarded the ḥasidic *zaddik* as a guide to divine worship and not as a miracle worker and social activist. Although he sensed the disappointment of his best pupils, Jacob Isaac did not change his method, believing that his exceptional spiritual capacities should be exploited first and foremost for the benefits of his followers, the ḥasidim. According to some authorities this was the background for his controversy with his most outstanding disciple, Jacob Isaac of *Przysucha, who was dissatisfied with the "practical" character of Lublin Ḥasidism. The rabbi of Przysucha attracted many disciples who regarded Ḥasidism as a spiritual-religious movement centered on piteistic measures, as well as intellectual and spiritual endeavors, while marginalizing social responsibility, aided by means of magical activity, for the improvement of material living conditions. It should be noted that academic studies concerning the socio-economic conditions of the Jews in Galicia in the last two decades of the 18th century and the first two decades of the 19th century, i.e., the period of activity of the Seer of Lublin, demonstrate the tragic urgency of the economic situation (see A. Brawer, *Galicia ve-Yehudeiha*) and explains his social and mystical position. The controversy on the ḥasidic mode of leadership divided Polish Ḥasidism for many years and through it the ḥasidic trend of *Przysucha-*Kotsk and Izbica evolved. While the followers of Przysucha and Kotsk resented the social, mystical total responsibility of the Seer, the Izbica ḥasidim adopted his position with enthusiasm.

Mordecai Leiner of Izbica (1800–1854) followed the teachings and practices of the Seer of Lublin and continued the mystical criticism of traditional conventions in relation to spiritual leaders, and embraced the social innovations inspired by mystical revelation. Jacob Isaac was frequently attacked by the *Mitnaggedim* both in Lublin and elsewhere, being the object of criticism of those writers of the late 18th and early 19th century among the *maskilim* and *mitnaggedim* who opposed “practical” *zaddikism* – and its consequences for the leadership in Lublin. He was also severely criticized by the rabbi of Lublin, Azriel Horowitz.

Jacob Isaac’s autobiographical works, *Zot Zikaron* and *Zikaron Zot*, offer a sound historical foundation for the many stories concerning his communal work and exceptional position. Ḥasidic tradition also relates that he regarded Napoleon’s march on Russia (1812), which evoked strong messianic dreams in various parts of Poland and Galicia, as the beginning of the messianic wars between *Gog and Magog and planned to join forces with other *zaddikim* in order to hasten redemption. However, no historical foundation is available for this contention since the Seer’s writings precede the Napoleonic wars by two decades. Martin Buber wrote his novel *Gog u-Magog* on this period in the Seer’s life, which, as previously noted, has no autobiographical documentation but rather left only a collection of legendary tales.

[Avraham Rubinstein / Rachel Elijor (2nd ed.)]

JACOB JOSEPH BEN ZEVI HA-KOHEN KATZ OF POLONNOYE (D.C. 1782), rabbi and preacher; the first theoretician of Ḥasidism. Jacob Joseph, whose birthplace is unknown, became rabbi of Shargorod, the second largest community of Podolia. In 1741 he came under the influence of *Israel b. Eliezer Ba’al Shem Tov (the BeShT). A controversy with his community ensued, as a result of which he was expelled from Shargorod in about 1748. He left for Raszkw, a very small community, where he remained until 1752. In 1750/51, he hoped to go to Erez Israel, but this project did not materialize. From Raszkw, he went to *Nemirov, where he remained until 1770 and openly propagated Ḥasidism. On the death of Aryeh Leib, the preacher of Polonnoye, Jacob Joseph was appointed to this position, which he held for the remainder of

his life. Jacob Joseph did not succeed the Ba’al Shem Tov in the leadership of the ḥasidic movement, and this left him embittered. His son, Abraham Samson, who settled in Tiberias and Safed, was childless. He published his father’s writings. His relative by marriage was Ḥayyim b. Menahem Zanzer, head of the kabbalists of the *klaus* of Brody.

Jacob Joseph’s first and main work was *Toledot Ya’akov Yosef* (Korets, 1780), containing homiletics of the author, as well as the “words which I heard from my teacher,” namely, the Ba’al Shem Tov. It is the first work to express the basic teachings of Ḥasidism, both in a positive formulation as well as in the bitter criticism it contains of the traditional Jewish leadership and its scale of values. The work played an important role as one of the factors which aroused opposition to Ḥasidism. Copies of it were apparently burned in Brody. Jacob Joseph’s other works are *Ben Porat Yosef* (Korets, 1781), homilies mainly on Genesis; at the end, the letter sent by the Ba’al Shem Tov to his brother-in-law in 1750/51 was published for the first time; *Zafenet Pa’ne’ah* (Korets, 1782), a commentary on Exodus; and *Ketonet Passim* (Lemberg, 1866), a commentary on Leviticus and Numbers. Because of the long delay in the publication of this last work and other reasons, S. Dubnow considered it to be a forgery, but it is now regarded as authentic (see J.G. Weiss, in *JJS*, 9 (1958), 81–83). From various allusions, it has been assumed that Jacob Joseph also left a large work in manuscript destined to be a commentary on Deuteronomy. Jacob Joseph’s homilies are traditional in structure. Their contents reveal him as leader of a community, as well as a penetrating and incisive theoretician and social critic. He viewed the preacher as the physician of the soul which he helps to cure by means of the ethical principles which he teaches. The preacher should pay due attention to the general form of the sermon, its content and method of delivery, and adapt it to the standard of his audience.

Jacob Joseph taught that the presence of God is manifest everywhere and in each and every human thought; even “when man is engaged in prayer and an alien and evil thought enters his mind, it has come to man so that he may improve and uplift it. If he does not believe in this, then his acceptance of the rule of the Kingdom of Heaven is incomplete because, Heaven forbid, he then restricts His presence” (*Ben Porat Yosef*). He proposes that man should resolve the ever-present tension created by matter which draws him to evil and by spiritual form which calls him to good through combining the joy of matter with that of form, thus achieving the perfect joy. Evil inclination will then be subdued of itself, becoming the tool of good. The ultimate purpose of man is “Thou shalt adhere to Him.” This adhesion is only possible through joy, while fasting and self-affliction bring sorrow, and sorrow is the root of all evils. Prayers should be recited with a purified and concentrated mind and with joy. It is within the power of the *zaddik* to change an evil decree to a favorable end through his prayer, also on behalf of those who are associated with him.

The same relationship within man also exists within society. There is the “multitude” and the “scholar.” The man of

merit and form is the *zaddik*, while the “multitude” is matter. The *zaddik* is likened to the head or the eyes of the body, and the multitude to the feet. The congregation is thus conceived as a living organism, the *zaddik* being its life and soul in his generation. This organismic premise precludes the concept that only a few are elect. It follows that the interrelationship in this corporate body causes any failure on the part of even the lowest member – whether in matter or in spirit – to be reflected far more damagingly in the state of “the head” – the *zaddik*. None of the members can adhere truly to God, so long as only one, even if an ignoramus, is not conscious of his need to be uplifted through the head (the *zaddik*). Hence it is the duty of the *zaddik* to exert his influence over him. Moreover, for the sake of this unification with the multitude, and so as to be able to uplift it, a *zaddik* may sometimes have to descend from his own level and to sin for the good of his task. This concept of the “descent of the *zaddik*” holds an important place in Jacob Joseph’s teachings. The Jew of the multitude is incapable “of studying the Torah, and as this is through no neglect of his own, God will not punish him” if he adheres to the *zaddik*. He is enjoined to believe in the *zaddik* with absolute faith, without any afterthoughts or doubts as to the *zaddik*’s way of life, because all his actions are performed for the sake of Heaven.

The “man of matter” must also support the *zaddik* financially to enable him to fulfill his duty successfully and devote himself to God through Torah study and prayer. Jacob Joseph taught the importance of the communal Sabbath “third meal” for the ḥasidic congregation, saying that he who does not participate in it with his brethren “makes his Sabbath profane” (*Toledot Yaakov Yosef*, beginning of the section on Noah). Jacob Joseph’s hostility to the ordinary type of rabbi is expressed in his denunciation of them as “Jewish demons, the equivalent of the Satan and the evil inclination itself, the whole of their Torah studies being for their personal aggrandizement.”

[Moshe Hallamish]

JACOB JOSEPH OF OSTROG (Yeivi; 1738–1791), pietist preacher (*maggid*). He was the son of a *maggid* and succeeded his father in 1766, after the latter’s death. Jacob Joseph’s son testified that he highly esteemed the teachings of the disciples of *Israel b. Eliezer Ba’al Shem Tov, the founder of modern Ḥasidism. Jacob, who lived in poverty and privation, had a deep sense of social morality. His sermons reflected the social upheaval troubling the Jews of Eastern Europe in the 18th century. Jacob Joseph attacked perversions of justice, informing, and bribery, and took to task community leaders and rabbis who gained their appointments through their relations with

the authorities instead of through Torah learning. He taught that the poor are closest to God and worthy of attaining the mystic knowledge of the Torah, but the rich are distant from Him. There exists a kind of social-spiritual division in the world in which the learned profess the unity of God above and ensure the provision of abundance below, although personally gaining only a scanty livelihood; in contrast, the ignorant collect the abundance that pours down from Heaven. Despite this distinction, Jacob insisted on the principle of internal Jewish unity, since all the Jewish people are linked with each other. The *zaddik*’s devotion to the Almighty draws all his brethren after him to holiness.

His books are *Mora Mikdash* (Korets, 1782), on order in synagogue; *Ein Mishpat* (Korets, 1782), on the prohibition on buying rabbinical office or arbitrary appointment; and *Rav Yeivi* (Slavuta, 1792), homilies.

[Avraham Rubinstein]

JACOB KOPPEL BEN AARON SASSLOWER (second half of 17th century), authority on the masoretic text and cantillation, and author of a work on the *masorah. Jacob Koppel came from Zaslavl near Ostrog (Volhynia). He was the author of *Naḥalat Yaakov* (1686), containing the masorah for the reading of the Ten Commandments in accordance with intonation and grammar, as well as various studies on the masorah and Hebrew grammar based upon the *Si’ah Yizhak* of Isaac b. Samuel ha-Levi of Posen and the *Iggeret ha-Te’amim* of Aaron Abraham b. Baruch. Jekuthiel Lazi b. Nahum Ashkenazi compiled an abridgment titled the *Kizzur Naḥalat Yaakov* (1718) with the addition of the *kunteres Or Torah* by Menahem *Lonzano for the benefit of “those living in the countryside and in villages, who have never seen or known” the original work.

[Josef Horovitz]

JACOB KOPPEL BEN MOSES OF MEZHIRECH (d. c. 1740), Polish kabbalist. Jacob was influenced by the Shabbatean movement in Poland, and he himself influenced Ḥasidism. His main published works are: *Shaarei Gan Eden* (Korets, 1803), a major kabbalistic treatise, dealing with all facets of kabbalistic theosophy, following the school of Isaac *Luria; and *Ha-Kol Kol Yaakov* (Slaviuta, 1804), a formulation of the Lurianic *kavvanot* (the mystical intentions and meditations during prayer). This work served as a basis for later ḥasidic prayer books. Besides these he apparently wrote *Naḥalot Yaakov*, an extensive commentary on the *Zohar, which has been lost. Jacob denounces the followers of *Shabbetai Zevi and messianic speculation in general in a few scattered remarks. However, it has been proved that he was the brother and pupil of a known Shabbatean, Ḥayyim of Ostraha (Ostrog), who influenced his writings.

A close study of the kabbalistic doctrine of Jacob proves conclusively that his works included at least one part of a

“credo” of *Nathan of Gaza, the prophet of Shabbetai Zevi, that substantial parts of his theosophical discussions were influenced by Nathan’s basic doctrines, and that his works contain many ideas and expressions similar to those of Jonathan *Eybeschuetz, another secret Shabbatean in Eastern Europe.

The Shabbatean elements in Jacob’s theology are revealed in three fields. First, his theosophic doctrine, which describes the processes that led toward the creation within the Godhead itself, does not follow the orthodox Lurianic myth but uses a whole group of terms and processes introduced into the Kabbalah by Nathan of Gaza. While creating his Shabbatean theology, the latter utilized elements in the teachings of Luria’s alleged pupil Israel *Sarug. Secondly, in his descriptions of development within the realm of the *Sefirot* (the divine emanations), Jacob uses a series of extremely radical sexual symbols found only in Shabbatean writings, mainly in those of Eybeschuetz. Finally, some scattered hints (which were fully developed in at least one of his works) allude to a heretical, antinomian concept of the Torah and the *mitzvot*, following the Shabbatean distinction between the laws governing the world before the coming of the messiah, Shabbetai Zevi, and the new laws following his appearance.

Jacob and his writings were highly praised by the early Ḥasidim, who published his works and used them extensively. A reliable ḥasidic tradition even quotes some words of praise attributed to *Israel b. Eliezer Ba’al Shem Tov. Thus Jacob’s Shabbatean writings form one of the links between late East European Shabbateanism and early Ḥasidism.

[Joseph Dan]

JACOB NAZIR (Jacob ben Saul of Lunel; second half of 12th century), scholar and kabbalist in Lunel, S. France. The brother of Asher b. Saul, author of *Sefer ha-Minhagot*, Jacob was a colleague of *Abraham b. David (RABaD). Solomon Schechter (JQR 5, 1893, pp. 22–23), on the basis of statements in letters of Samuel David *Luzzatto (*Iggerot Shadal* (1882), 669), established his identity, in opposition to Zunz, who had thought him identical with Jacob b. Meshullam of Lunel. Jacob Nazir belonged to a group of hermits in Provence who carried on the mystic tradition, devoting themselves wholly to a life of contemplation. Kabbalistic tradition attributes to Jacob and Abraham b. David revelations of the prophet Elijah. Through visions and meditations they arrived at innovations in kabbalistic thought. Some of their interpretations, in which they disagreed on the details of the mystical *kavvanot* (“meditations”) in certain prayers (i.e., to which *Sefirah* or quality of God should a man direct his thought in prayer?), have survived in several manuscripts (Ms. JTs New York 838 48a; British Museum 755 85b; Oxford 1646). The works that have survived contain kabbalistic terminology developed from *Sefer ha-Bahir*, the *Heikhalot* literature, and a mixture of different traditions. However, there is no proof that Jacob constructed a complete and ordered system.

Jacob Nazir was the first to use the term *Malkhut* (“kingdom”) to designate the last revelation of the *Sefirot*, and as a synonym for the concepts of *Kavod* (“glory”) and *Shekhinah* (“Divine Presence”). According to G. Scholem this usage was derived from ibn *Tibbon’s Hebrew translation of the *Kuzari*, composed in Lunel during that period (1167). One of the first kabbalists to serve as a direct link between Provence and the East, Jacob made a pilgrimage to Palestine, apparently after Saladin’s capture of Jerusalem (1187). His circle transmitted traditions which he learned from R. Nehorai of Jerusalem (R. Ezra’s commentary on the *aggadot*, Ms. Vatican 185; see Scholem, *Kitvei Yad be-Kabbalah* (1930), 202). Later legend of the Spanish kabbalists (c. 1300) linked his visit to the Middle East with *Maimonides’ imaginary turning to Kabbalah in his old age. There is no trace of mysticism in Jacob’s supplements to Rashi’s commentary on Job (Ms. Oxford 295) written in 1163 or 1183. A. Jellinek’s assumption that Jacob was the author of *Massekhet Aẓilut* is unfounded (*Toledot ha-Filosofyah be-Yisrael* (1921), 167).

BIBLIOGRAPHY: G. Scholem, in: *Tarbiz*, 6 (1935), 339–41; idem, *Reshit ha-Kabbalah* (1948), 70–98; idem, *Ursprung und Anfaenge der Kabbala* (1962), 201–6.

JACOB (Jakób) OF BELZYCE (16th century), scholar and physician in Poland. He took part in religious *disputations, mainly with the radical wing of Polish anti-trinitarians. Jacob’s views, and even his very existence and activity, are known through the work of Marcin Czechowic: *Odpis Jakóba Żyda z Belżyc na Dyalogi Marcina Czechowica: na ktory zas odpowiada Jakobowi Żydowi tenze Marcin Czechowic* (“The Reply of the Jew Jacob of Belzyce to the Dialogues of Marcin Czechowic: With the Reply of the Said Czechowic to the Jew Jacob”) completed at Lublin on Dec. 16, 1581. This sums up – though with a Christian anti-trinitarian bias – the work that Jacob published against the Christian “dialogues” of Czechowic. In the dedication to Andrzej Lasota, Czechowic states that “you are well acquainted with this Jew with whom this dispute is being held.” Czechowic also mentions that “about seven years ago” they had disputed on the nature of Jesus Christ (*ibid.*, 51) – hence about 1574 Jacob and Czechowic were already in contact. Elsewhere Czechowic mentions that “I talked to you not only through brother Marcin the tailor, but also through a Jew of Lublin, and I also informed you directly” (*ibid.*, 58). It is clear, therefore, that Jacob and his polemical work actually existed and are not a figment of Czechowic’s imagination, as some scholars have thought.

BIBLIOGRAPHY: L. Szczucki, *Marcin Czechowic* (1964), index and 274–5, note 122, includes bibliography; J. Rosenthal, *Marcin Czechowic and Jacob of Belzyce; Arian-Jewish Encounters in 16th Century Poland* (1966; repr. from PA AJR, 34 (1966), 77–98).

[Haim Hillel Ben-Sasson]

JACOB OF CORBEIL (d. 1192), tosafist, pupil of Jacob b. Meir *Tam. He and his brother Judah, who were among the earliest scholars of Corbeil, are frequently mentioned in the

tosafot. He composed *tosafot* to tractate *Pesahim*, and his name is mentioned in the printed *tosafot* as well as in the *Tosafot Yeshanim* to a number of other tractates. He met a martyr's death in 1192, apparently in his native town. The epithet *kadosh* ("holy"), added to his name in consequence of his martyrdom, has caused him to be confused with *Jacob of Marvège. Both Jacob of Corbeil and his brother are known to have had some connection with Kabbalah, but the only definite information on this topic is to the effect that Judah belonged to one of the circles of the *Ḥasidei Ashkenaz.

BIBLIOGRAPHY: Urbach, *Tosafot*, 129–30.

[Israel Moses Ta-Shma]

JACOB OF KEFAR SAKHNAYYA, Judeo-Christian disciple of *Jesus. It is related that Jacob once met *Eliezer b. Hyrcanus, to whom he reported that Jesus interpreted the verse "For of the hire of a harlot hath she gathered them and unto the hire of a harlot they shall return" (Micah 1:7), to mean that since the money originated in a place of filth, it could be applied to a place of filth; therefrom that, if the hire of a harlot had been consecrated, it could be applied to the erection of a privy for the high priest (Tosef., Ḥul. 2:24; Av. Zar. 17a; Eccles. R. 1:8, no. 3), despite the prohibition of Deuteronomy 23:19. There is no mention of such a view in Christian sources, but it is characteristic of the attitude of Jesus to fallen women (cf. Luke 7:36–50). In the family of Jesus and among his disciples there were several named Jacob, but it is not clear whether Jacob of Kefar Sakhnayya can be identified with any one of those mentioned in early Christian literature; in any case he is probably not to be identified with Jacob the brother of Jesus (as Klausner suggests). It is also unclear whether the same man is referred to in the following story (Tosef., Ḥul. 2:22–23; Av. Zar. 27b; TJ, Shab. 14:4, 14d; TJ, Av. Zar. 2:2, 40d): "It once happened that Eleazar b. Dama was bitten by a snake and Jacob of Kefar Sama (in טב, Sekhanya) came to cure him in the name of Jesus b. Pantirah, but R. Ishmael did not permit him to do so."

[Moshe David Herr]

JACOB OF MARVÈGE (late 12th–13th century), tosafist from Marvège, south central France. He is given the epithets *hasid* ("pious"), *kadosh* ("saintly"), and *mekubbal* ("the kabbalist"). He was the author of the remarkable work, *She'elot u-Teshuvot min ha-Shamayim* ("Responsa from Heaven"). He would seek answers from heaven about *halakhah*, and about what decision was to be accepted practice where the authorities differed "by means of seclusion, prayer, and uttering divine names and his questions were replied to in a dream" (Responsa Radbaz pt. 3, no. 532). In one responsum he writes: "O Supreme King, great, mighty, and revered God... command the holy angels charged with replying to questions in a dream to

give a true and correct reply to the question I ask before Thy throne of Glory" (see Bibliography: Margalioṭ, 52). The date, 1203, of responsum 69, serves as a basis for determining his period. The replies received were cited as halakhic rulings by the great deciders who came after him. His work was first published in David ibn Zimra's responsa (pt. 5, Leghorn 1818 and subsequently in various editions; the 1895 edition has the commentary *Keset ha-Sofer* by Aaron Marcus). The first edition by R. Margalioṭ was published in 1926, a second edition in 1929, and a third edition, containing 89 responsa with an enlarged introduction and a corrected text from the collation of different manuscripts, in 1957.

[Yehoshua Horowitz]

JACOB OF ORLEANS (d. 1189), tosafist; pupil of Jacob *Tam in Orleans. Like his fellow-student, *Yom Tov b. Isaac of Joigny, Jacob settled in England, and like him, met a martyr's death. While in England, where moneylending was the Jews' main source of livelihood, he drew up a formula for loans, whereby the prohibition against *usury could be circumvented (*Haggahot Mordekhai* to ב"מ, 454–5). This formula gave rise to considerable perplexity in later generations. According to Meir of Rothenburg, the practice of employing a non-Jew to heat houses on the Sabbath in winter was introduced in France on Jacob's authority (Responsa, Prague (1608), 92). Jacob composed *tosafot* on a number of tractates and his name frequently occurs in the printed *tosafot*. His influence is particularly noticeable in the *tosafot* to tractates *Pesahim*, *Zevahim*, and *Menaḥot*. His commentary on the Pentateuch is extant in manuscript, and extracts from it are to be found in various collections of commentaries by tosafists on the Pentateuch.

BIBLIOGRAPHY: Urbach, *Tosafot*, 122–4.

[Israel Moses Ta-Shma]

JACOB OF PONT-SAINTE-MAXENCE (14th century), one of the leaders of French Jewry. Jacob apparently came from Pont-Sainte-Maxence, a town in the Oise department, northern France, but his name is the only indication that a Jewish community existed there. Along with *Manessier of Vesoul, he controlled the affairs of the Jews in the north, perhaps from the time of their return to France in 1359. After Jacob had quarreled with Manessier and denounced him to the authorities, Manessier was compelled to pay a heavy fine both to Jacob and to the king.

JACOB OF VIENNA (end of 14th–beginning of 15th century), Austrian rabbi. Known also as Jekel of Eiger, he studied under

R. Moshel of Znaim, Moravia, and was rabbi at Eiger, Krems, and Vienna. Jacob *Moellin consulted him, and Israel *Isserlein held him in high esteem. No responsa of his are extant, although almost all the great contemporary rabbis quote him. In *halakhah* he adopted an independent view, did not hesitate to disagree with his teacher and sometimes even with statements contained in *Alexander Susslin ha-Kohen's *Ha-Aguddah*. He also judged cases of mayhem (*dinei ḥabbalot*), on one occasion imposing the highest fine known in Ashkenazi Jewry for such cases. He became renowned as editor of communal decrees (Breslau, in: ZGJD, 5 (1892), 115–25). Several of his pupils are known, among them Zalman Katz, author of *Ha-Yeri'ah*. Grossberg has published from a manuscript a commentary on the Pentateuch by a Jacob of Vienna who may be identical with this Jacob of Vienna (see bibliography).

The commentary shows the influence of the German pietists and cites many other exegetes.

[Yedidya A. Dinari]

JACOBOWSKI, LUDWIG (1868–1900), German poet and author. Born in Strelno, Posen, Jacobowski spent most of his short life in Berlin. He edited the newspaper *Die Gesellschaft* and wrote several volumes of poetry including *Funken* (1891), *Satan lachte* (1898), *Aus bewegten Stunden* (1899), *Ausklang* (1901), and *Leuchtende Tage* (1901). His novel *Werther, der Jude* (1892), which expressed his inner turmoil, provoked more interest than his verse. In a second novel, *Loki, Roman eines Gottes* (1899), the eponymous figure of the lonely dark god rejected by the blond Teutonic deities symbolized the isolation of the Jew in Germanic culture. Jacobowski was also an essayist and author of a comedy, *Diyab der Narr* (1895). A significant Jewish figure in the last decade of 19th-century German literature, he conducted an interesting correspondence with many of the leading writers of his time, including Karl *Kraus, Alfred *Kerr, and Jacob *Wassermann. He was an active defender of Jewish rights in the *Verein zur Abwehr des Anti-semitismus* and entered into a controversy with Hermann *Ahlwardt, whose anti-Jewish “racial” work *Der Verzweiflungskampf der arischen Voelker mit dem Judentum* provoked Jacobowski's spirited reply, *Offene Antwort eines Juden* (1891). He also published *Der Juden Anteil in Verbrechen* (1892) and *Der christliche Staat und seine Zukunft* (1894). The works of Jacobowski reflect both his attempt to find a synthesis between Judaism and German culture and his own personal tragedy. His collected works (*Gesammelte Werke in einem Band*, ed. Alexander Mueller) appeared in one volume in 2000.

JACOBS, ALETTA HENRIËTTE (1854–1929), Dutch suffragette and physician. Jacobs is primarily known for her advocacy of women's suffrage in the Netherlands. She was the daughter of Abraham Jacobs and Anna de Jongh. In 1892 she married Carel Victor Gerritsen, a businessman. Their only child died at a very young age. At the age of 16, Jacobs had corresponded with Minister J.R. Thorbecke and obtained his permission to be admitted to the University of Groningen, where she started studying medicine as the first Dutch female student in 1871. In 1879 she obtained her degree with a dissertation titled *On the Localization of Physiological and Pathological Phenomena in the Cerebrum*. Jacobs had her own medical practice and she was also involved in a number of social initiatives. She criticized the shocking housing conditions of the poor working class in the press and emphasized the difficult circumstances in which poor, illiterate, working-class women had to live. Her fight for equal rights for women led to her taking an active part in the women's movement. In 1889 she joined the recently founded Vrije Vrouwen Vereeniging (Free Women's Association), which started the separate Vereeniging voor Vrouwenkiesrecht (Association for Women's Suffrage) in 1894.

In 1903, Aletta Jacobs took over the leadership of the latter association and in this position decided to devote herself to the task of revising the Dutch constitution in order to give women the right to vote and to be elected. Thanks to the foundation of the Bond voor Vrouwenkiesrecht (League for Women's Suffrage) in 1907, this demand was brought to the international forefront. The Netherlands was neutral in World War I and therefore The Hague was chosen to hold an international women's congress on May 3, 1915. Women's rights were on the agenda as well as a potential contribution to peace. Jacobs' ardent struggle bore fruit only in September 1919, when Queen Wilhelmina finally signed the Jacobs Act, which gave Dutch women the full right to vote.

[Monika Saelemaekers (2nd ed.)]

JACOBS, ARTHUR (David) (1922–1996), British music critic, author, translator, editor, and lexicographer. Born in Manchester, Jacobs received his education there and at Oxford. He

was music critic of the London *Daily Express* (1947–52) and of the *Jewish Chronicle* (from 1963), as well as associate editor of the London monthly *Opera* (1961–71). He was appointed professor at the Royal Academy of Music, London, in 1964 and from 1979 to 1984 he was head of the music department at Huddersfield Polytechnic; he also taught in British Columbia (1968), Philadelphia (1970, 1971), Canada, and Australia. His many publications include *Gilbert and Sullivan* (1951), *A New Dictionary of Music* (1958, 1972 also Spanish and Swedish editions), *Choral Music* (editor, 1963), *The Pan Book of Opera/The Opera Guide* (with Stanley Sadie, 1964, 1969), *The Penguin Dictionary of Musical Performers* (1990), and *A Short History of Western Music* (1972). He translated more than 20 opera librettos from several languages, including works by Haendel, Rossini, Berlioz, Tchaikovsky, Strauss, and Berg (the complete *Lulu*), and wrote the original libretto for Nicholas Maw's *One-Man Show* (1964). Jacobs also contributed to many musical journals.

[Max Loppert / Israella Stein (2nd ed.)

JACOBS, BERNARD B. (1916–1996), U.S. theater executive. Born in Manhattan, Jacobs graduated from New York University and Columbia University Law School. After serving in the Army in the South Pacific in World War II, Jacobs practiced law with his brother, dealing mainly with jewelry companies. It was his brother's friend, Gerald Schoenfeld, who brought him into the theater in 1958 to help him at the mighty Shubert theatrical organization, where he was chief lawyer. After J.J. Shubert died in 1963, his will turned over the bulk of his estate, including the theaters, to the Shubert Foundation, then a little-known arm of the theater company. During a bitter power struggle among irreconcilable directors, Jacobs and Schoenfeld moved to the top of the integrated organization in 1972. Although they had little theater background, the two lawyers began investing money in plays and acting as producers. By 1974 Jacobs felt that the Shubert empire was back on track with the hits *Equus*, *Pippin*, *Grease*, and *Sherlock Holmes*. The next year, *A Chorus Line* put the operation on solid footing. The two men were universally credited with taking a faltering theater concern and transforming it into a modern and financially potent enterprise. As theater owners and producers, they had more to say than anyone else about what shows opened on Broadway. They also determined what shows closed in their theaters, and when. At the end of the 20th century, "the Shuberts," as the two lawyers became known, owned and operated 16 Broadway theaters in addition to theaters in Philadelphia, Washington, Boston, and Los Angeles and other real estate property.

For years Jacobs and Schoenfeld were embroiled in suits after the state attorney general said that, as executors of the J.J. Shubert estate, they had made "grossly excessive" claims. The charges were later withdrawn. The pair also benefited from a tax ruling in 1979 that gave the Shubert Foundation

an exemption to federal tax laws. This allowed Jacobs and Schoenfeld to continue as heads of both the foundation and the theater organization, the most important in the Broadway theater. By the end of the 20th century, the foundation had a value of more than \$150 million and provided support to nonprofit theaters and to dance companies. Jacobs was also credited with introducing computerized methods of ticket sales, linking his box offices to computerized outlets in other cities.

In 2005, Broadway theaters owned by the Shuberts were renamed for Jacobs and Schoenfeld.

[Stewart Kampel (2nd ed.)]

JACOBS, FRANCES WISEBART (1843–1892), known as Denver's "Mother of Charities." Frances Wisebart Jacobs was born in Harrodsburg, Kentucky, on March 23, 1843. Her parents, Leon, a tailor, and Rosetta Wisebart, emigrated from Bavaria and later moved to Cincinnati, where Frances and her six siblings attended public schools. In 1859, Frances's brother Benjamin Wisebart and his friend Abraham Jacobs journeyed to the west, settling in what was soon to become Denver. Abraham Jacobs returned to Cincinnati in 1863 to marry Frances Wisebart. He and his new bride, now Frances Jacobs, made their first home in the mining town of Central City, near Denver, where Abraham operated a general store. The family relocated to Denver in 1870, where Frances was to have a profound influence on the development of benevolent charity work within both the Jewish and larger community, while Abraham became a prominent merchant and active in local politics. In 1872, Frances Wisebart Jacobs helped organize, and soon served as president of, the Hebrew Ladies' Benevolent Society, and in 1874 she helped found the nonsectarian Denver Ladies' Relief Society, primarily to aid Denver's ill and impoverished, and served as the organization's first vice president. By 1885, largely through her efforts, the first free kindergarten was opened in Denver. Frances Jacobs was also one of the three primary founders of what would become the early United Way of America, which originated in Denver in 1887 as the Community Chest.

During the last years of her life, Jacobs had been particularly attuned to the plight of tuberculosis victims, who frequently came to Denver in search of better health, without funds or medical assistance once they arrived. By the 1880s, Denver had earned the nickname of the "World's Sanitorium," and hundreds of consumptives began to pour into Colorado. The Jewish community was the first to step forward with aid, and Jacobs served as the impetus behind the founding of National Jewish Hospital for Consumptives. At the dedication of the hospital in 1899, some years after Jacobs' death from pneumonia in 1892 at the age of forty-nine, Denver's mayor observed that "out of her efforts has grown an institution national in scope and dedicated to the humane and charitable work in which during her lifetime she so earnestly engaged." In 1900, when 16 portraits of pioneers were selected to be placed in the windows of the dome of the Colorado state capi-

tol building, Jacobs was chosen as one of the small elite group and the only woman.

Jacobs' unswerving commitment to the sick and indigent, and her amazing ability to work with men and women from a variety of ethnic and religious groups, earned her the epitaph of Denver's "Mother of Charities." Although she had no formal training, she was the prototype of the early social worker, frequently making personal visits to those who were ill and poor, freely dispensing advice, medication, and funds. The funeral of Frances Wisebart Jacobs was attended by nearly 2,000 people and served as a testimony to her impact on the development of philanthropy in early Denver.

[Jeanne Abrams (2nd ed.)]

JACOBS, GEORGE (1834–1894), rabbi. Born in Kingston, Jamaica, Jacobs came to the United States at the age of 20 and settled in Richmond, Virginia, where he studied for the rabbinate. He was ordained in 1857 and in 1869 he succeeded Isaac Lesser as rabbi of Congregation Beth Emet in Philadelphia. He was one of the founders of the Young Men's Hebrew Association (YMHA) in Philadelphia and of the Jewish Publication Society. He was a frequent contributor to the Jewish press. He revised the English version of the Szold-Jastrow Siddur. He is the author of *Catechism for Elementary Instruction in the Hebrew Faith* (1894).

[Michael Berenbaum (2nd ed.)]

JACOBS, HIRSCH (1904–1970), U.S. horseracing trainer and breeder who saddled more thoroughbred winners – 3,596 – than any other trainer in history; member of National Racing Museum and Hall of Fame. One of ten children born to an immigrant tailor in Manhattan, Jacobs began raising and racing pigeons at age eight after the family moved to Brooklyn, and by 12 could identify 100 pigeons by sight. At age 22 he bought his first thoroughbred, called Reveillon. Two years later Jacobs formed a partnership with Isadore Bieber, who served as financier and owner of horses while Jacobs did the training. Jacobs was an unusually keen observer with a phenomenal memory, especially for the ailments of other men's horses. His specialty was claiming inexpensive horses and developing them into big winners, the most famous being Stymie, which Jacobs claimed on June 2, 1943, for \$1,500 and turned into one of the all-time great thoroughbreds: in 128 races Stymie won 35, was second 32 times, and third 26 times, earning \$918,485, a record at the time. Stymie was also named handicap horse of the year in 1945 and was inducted into the Racing Hall of Fame in 1975.

Jacobs led all trainers in winners every year from 1933 through 1944 except 1940, when he finished second. With

some of the money earned by Stymie, Bieber and Jacobs set up their own breeding farm, Stymie Manor. As a trainer, Jacobs' horses led in earnings in 1946, 1960, and 1965, and Stymie Manor led all breeders in winnings from 1964 through 1967. After suffering a stroke in 1966, Jacobs became less active and his son, John, took over much of the responsibility for training Stymie Manor's best horses. Jacobs' wife, Ethel, brothers Eugene and Sidney, son John, and daughter and son-in-law Patrice and Louis Wolfson were also long-time trainers, owners, and breeders. Jacobs' 3,596 winners earned \$15,340,534, and among his best horses were Hail to Reason, the two-year-old champion in 1960; Regal Gleam, champion two-year-old filly in 1966; Straight Deal, the champion handicap mare in 1967; and Affectionately, champion sprinter in 1965. Jacobs trained six horses that raced in the Kentucky Derby, though none finished higher than third place. Pimlico Race Track in Baltimore memorialized him in 1975 with the Hirsch Jacobs Stakes. Jacobs was elected to the National Racing Hall of Fame as a trainer in 1958.

[Elli Wohlgeleinter (2nd ed.)]

JACOBS, IRWIN M. (1933–), U.S. computer and communications entrepreneur. Born in New Bedford, Mass., Jacobs received an engineering degree from Cornell University and master's and doctorate degrees in electrical engineering from the Massachusetts Institute of Technology. He began his career teaching at MIT and was on the staff of the Research Laboratory of Electronics there. While at MIT, Jacobs, together with Prof. J. Wozencraft, wrote *Principles of Communication Engineering*, developing a vision of ubiquitous communications worldwide made possible by digital wireless communications. This led to the founding of his first company, Linkabit, a wellspring for most of the telecommunications industry in San Diego, Calif. Jacobs guided the growth of Linkabit from a handful of employees in 1969 to over 1,700 by 1985. Linkabit merged with M/A-Com in 1980. During most of that time, Jacobs was chairman, president, and chief executive officer of Linkabit, and executive vice president and a director of M/A. While there, Jacobs led the team that developed the first microprocessor-based, spread-spectrum satellite communication modem for military anti-jam airborne applications. He also guided the development and manufacture of the first successful video scrambling system (Videocypher), currently operating to descramble premium television transmission to millions of satellite dishes.

In 1985 Jacobs became a founder and then chairman and chief executive of Qualcomm, which develops, manufactures, licenses, delivers, and operates digital wireless communication products and services based on code-division multiple access technology (CDMA). As a pioneer in wireless communications, Qualcomm develops and supplies integrated circuits and system software for wireless voice and data communications. Its standard is used by major carriers like Sprint and Verizon Wireless. Consumers may know it best for its Eudora e-mail software. The CDMA standard was adopted as one of two digi-

tal standards for the next generation of cellular telephones in North America. In 2005 it had 7,600 employees worldwide and had revenues topping \$5 billion, making Jacobs one of the wealthiest men in the United States. In 1994, Jacobs was awarded the National Medal of Technology, the highest award bestowed by the president of the United States for achievement in the commercialization of technology or the development of human resources that foster technology commercialization. Jacobs's philanthropies were diverse, with gifts to schools and museums. He and his wife gave an endowment gift to the University of California, San Diego, for an engineering college which was named the Irwin and Joan Jacobs School of Engineering. In 1992 Jacobs and his wife gave the financially troubled San Diego Symphony a \$100 million endowment, then the largest ever awarded to a symphony orchestra in the United States. They have been generous to the Jewish Community Center and other Jewish charities in San Diego, but like many philanthropists, they have given their megagifts to general, not specifically Jewish causes.

In 2005, PAUL E. JACOBS (1962–) succeeded his father as chief executive of Qualcomm. Jacobs had started in his father's first company, Linkabit, in 1985 and worked at different engineering jobs at Qualcomm during his college years at the University of California, Berkeley, from which he earned a doctorate. Paul Jacobs, who formally joined the company in 1990, was president of Qualcomm's Internet and wireless group, one of the company's most important divisions. In his early years at the company, he worked on the engineering for the antenna of Qualcomm's OmniTracs system, which is used to track the routes of freight trucks. He worked on the speech compression algorithm for CDMA, and holds a patent for part of the technology, one of more than 25 Qualcomm patents that he helped develop. Paul's brother Jeff is the leader of Qualcomm's global development division.

[Stewart Kampel (2nd ed.)]

JACOBS, JAMES LESLIE (Jimmy, Jim; 1930–1988), U.S. handball champion, considered along with Vic *Hershkowitz as the greatest handball players in history; boxing manager and film historian, member of United States Handball Association Hall of Fame, World Boxing Hall of Fame, and International Boxing Hall of Fame. Jacobs was born in St. Louis, but when he was five his family moved to Los Angeles, where as a teenager he excelled as a shortstop in baseball, half-back in football, and forward at basketball, but primarily in handball. He was a remarkable all-around athlete who once ran a 9.8 100-yard dash, and was offered a tryout for the U.S. Olympic basketball team. After serving with the U.S. army in Korea – he was awarded the Purple Heart in 1951 – Jacobs developed his handball skills and became ambidextrous. As a four-wall handball player, Jacobs was the best ever, winning every match he played between 1955 and 1969. He won the Three-Wall Men's Singles three times (1959, 1960, 1961), the Four-Wall Men's Singles six times (1955, 1956, 1957, 1960, 1964, 1965, and the Men's Doubles five times (1960, 1962, 1965, 1967,

1968). Jacobs was the first to coin the “sword and the shield” theory, relying on his left hand as a shield and his right hand as his sword, and is credited as the first handball player to use the ceiling shot as a defensive weapon. He also won three AAU national titles, four YMCA national titles, and countless regional championships. He was inducted into the United States Handball Association Hall of Fame in 1972.

Jacobs was also a boxing enthusiast, and while traveling around the world to give handball exhibitions for the armed services, he began to collect films of old boxing matches not available in the United States. Jacobs became one of the world's top boxing historians. In 1961, he merged his collection with that of Bill Cayton to form the largest collection in the world, and the two worked to restore and preserve old boxing films dating to the 1890s. Their corporation, The Big Fights, Inc., produced over 1,000 boxing features, and three of their productions – *Legendary Champions*, *The Heavyweight Champions*, and *Jack Johnson* – were nominated for Academy Awards. Jacobs himself directed the 1970 documentary *AKA Cassius Clay*.

Jacobs – a nephew of boxing promoter Mike *Jacobs, who managed Joe Louis – also managed fighters together with Cayton, including three world champions: Wilfred Benitez, Edwin Rosario, and Mike Tyson. The Boxing Writers' Association of America awarded Jacobs the Al Buck Award for Manager of the Year in 1986, and he was inducted into the International Boxing Hall of Fame in 1993.

Jacobs also loved comic books from when he was a child, and his collection of 500,000 issues was said to be the largest in the world. He died at 58 after a nine-year battle with chronic lymphocytic leukemia.

[Elli Wohlgeleinter (2nd ed.)]

JACOBS, JOE (Yosef, “Yussel the Muscle”; 1896–1940), U.S. boxing manager. Jacobs, the son of a tailor, was born on New York's Lower East Side to Hungarian immigrants. He was the quintessential boxing manager of the 1920s and 1930s, a cigar-chomping, fedora-wearing, streetwise, brash, combative, argumentative, and fast-talking schmoozer who “knew nothing about boxing, but he knew how to negotiate and get his man the best deal possible,” in the words of his most famous fighter, Max Schmeling. Jacobs became Schmeling's manager in 1928, when the German began fighting in the United States. In Schmeling's fight for the vacant heavyweight championship on June 12, 1930, at Yankee Stadium, he was knocked down in the fourth round by a low blow from Jack Sharkey. Jacobs jumped into the ring and continued to scream “foul” until the bewildered referee disqualified Sharkey. It was the only time the heavyweight championship was decided on a foul. When the two boxers met in a rematch for the title on June 21, 1932, Sharkey won a controversial 15-round decision, leading Jacobs to utter to a national radio audience what became a classic sports quote and an entry in *Bartlett's Familiar Quotations*: “We wuz robbed!” Another *Bartlett's* quote from Jacobs that became part of the American idiom occurred when he

attended the 1935 World Series in Detroit on a very cold and windy day. "I should of stood in bed," he remarked.

On March 10, 1935, Jacobs accompanied Schmeling to a fight in Hamburg, Germany, against Steve Hamas. After Schmeling knocked out Hamas, he and 25,000 fans spontaneously stood and sang the Nazi anthem with arms raised in the Sieg Heil. Jacobs – as naive about politics as he was shrewd about ring matters, and unsure what to do, according to Schmeling – then raised his right hand, with its omnipresent cigar, and joined the salute, smiling and winking at Schmeling. It bothered the Nazi brass that this Jew with cigar in hand was giving the Nazi salute, but it caused greater outrage in the United States, especially in the Jewish community, when photographs of the scene were published. "Up in the Bronx the good burghers agreed that the little man with the big cigar was no credit to their creed," wrote a *New York Daily News* reporter. Schmeling, nicknamed "The Black Uhlan of the Rhine" by Jacobs, was being touted by Germany as the paradigm of Aryan supremacy, and was under repeated pressure from the highest levels of the Nazi party to fire his Jewish manager, but he refused. Jacobs subsequently arranged for Schmeling to fight Joe Louis, whom he beat in their first fight on June 19, 1936, but he lost the rematch on June 22, 1938, in perhaps the most famous boxing bout in history.

Five months later, on November 10, 1938, *Kristallnacht*, Schmeling hid two Jewish teenage brothers, Henri and Werner Lewin, for two days in his suite at the Excelsior Hotel in Berlin, informing the front desk that he was ill and that no one be allowed to visit him. When the anti-Jewish rioting abated, the teenage brothers were transferred to another location in Berlin until they could leave Germany.

Jacobs also managed featherweight champion Andre Routis, light heavyweight champion Mike McTigue, and heavyweight contender "Two Ton" Tony Galento.

[Elli Wohlgernter (2nd ed.)]

JACOBS, JOSEPH (1854–1916), Jewish historian, folklorist, and scholar. He was born in Sydney, Australia, studied in England, and, after graduating in history in Cambridge, went to complete his studies in Berlin where he worked under Steinschneider. On his return to England he became an author and journalist. He was an extremely prolific writer and worker. In the general sphere, he had a reputation as a folklorist and student of comparative literature, publishing large numbers of books and articles on these subjects; and he was for some years editor of the periodical *Folk-Lore*. Even as his specialized interest in folklore made him a researcher into Jewish ethnology, his interest in statistics led him to another branch of anthropology, namely the study of the "racial" characteristics of Jews. Still another anthropological interest is evident in his application of the method of comparative institutional archaeology to the Bible in his *Studies in Biblical Archaeology* (1894). But his Jewish enthusiasms were uppermost. With Lucien *Wolf he organized the Anglo-Jewish Historical Exhibition of 1887 and edited its monumental catalog and bibliography. He

took the lead in organizing British public opinion at the time of the Russian Jewish pogroms in 1882 and was editor of the periodical *Darkest Russia*. He founded and edited (1896–99) the *Jewish Year Book*. His writings on medieval Anglo-Jewish history, culminating in his *Jews of Angevin England* (1893), set the study of that subject on a new basis. In 1888 he went to Spain to inquire into the Jewish historical material there, the result being his *An Enquiry into the Sources of the History of the Jews in Spain* (1894). In 1900, he was called to the U.S. as one of the editors of the *Jewish Encyclopaedia*. He not only edited, and largely wrote, the articles in the departments of anthropology and Anglo-Jewish history, but also gave direction to the whole work and wrote many articles on diverse subjects (e.g., bibliography) in emergency. At the same time, he lectured at the Jewish Theological Seminary of America, edited the *American Jewish Year Book* and the *American Hebrew*, etc. A work on *Jewish Contributions to Civilisation* was issued posthumously. He wrote a novel on the life of Jesus, *As Others Saw Him* (1895). His output was vast and generally well written, and on a very high level. It is sometimes, however, marred by carelessness and haste – a result of economic conditions – and (especially in his early work) by the inadequacy of his Hebrew knowledge.

[Cecil Roth]

JACOBS, LAZARUS (c. 1709–1796), English glass manufacturer, producing the fine Bristol glass now much sought after. He was born in Frankfurt, Germany, and became head of the *Bristol Jewish community. Jacobs was responsible for the construction of the new synagogue in 1786. He was succeeded in his business by his son ISAAC JACOBS (1757 or 1758–1835) whose work, unlike that of his father, is signed, and is, therefore, more readily identifiable. He was appointed glass manufacturer to George III but ultimately met with business misfortunes. In 1809, Isaac was made a freeman of Bristol.

[Cecil Roth]

JACOBS, LOUIS (1920–2006), English rabbi and theological writer. Born in Manchester, Jacobs received his training at the yeshivot of Manchester and Gateshead and at London University. After teaching for some time at the Golders Green Beth Hamidrash, London, he served as a rabbi of the Central Synagogue, Manchester, and at the fashionable New West End Synagogue, London, from 1954 to 1959. From 1959 to 1962 Jacobs was tutor at Jews' College, London, but he resigned when, at the retirement of I. *Epstein, Chief Rabbi I. *Brodie, as president of the college, vetoed his appointment as principal on account of his heterodox views. This led to

a violent controversy within British Jewry, with the *Jewish Chronicle as Jacobs' main protagonist. Jacobs' followers created for him the post of director of a specially founded Society for the Study of Jewish Theology, for which he lectured in London and provincial centers. When in 1963 the post of minister at the New West End Synagogue became vacant, Jacobs was elected to his former post; Brodie again blocked the appointment. Thereupon, a number of the synagogue's members seceded from the *United Synagogue and founded the New London Synagogue with Jacobs as rabbi (1964); services continued to be conducted along Orthodox lines.

The controversy had its origin in Jacobs' published work, beginning with *We Have Reason to Believe* (1957, 1962²); *Jewish Values* (1960); *Principles of the Jewish Faith* (1964), an analytical study of Maimonides' Creed; and *Faith* (1968). In these the author accepted some of the methods and results of biblical Higher Criticism, denied the literal inspiration of the Pentateuch, and asserted a human element in the composition of the Bible. Jacobs also devoted several studies to Kabbalah and Hasidism: he translated into English Moses *Cordovero's *Palmtree of Deborah* from Hebrew (1960), adding introduction and notes; and Dov Ber Schneersohn's (of Lubavitch) *Tract on Ecstasy* (1963), with introduction and notes; he also wrote *Seeker of Unity; the Life and Works of Aaron of Staroselje* (1966). Among his other published works are *Studies in Talmudic Logic and Methodology* (1961), *Jewish Prayer* (1962³), *A Guide to Yom Kippur* (1957, 1960²), and *A Guide to Rosh Hashanah* (1959, 1962²).

JACOBS, MICHAEL STRAUSS (“Uncle Mike”; 1880–1953), U.S. boxing promoter, member of the International Boxing Hall of Fame and World Boxing Hall of Fame. Strauss was one of 10 children born in New York's Greenwich Village to immigrants Isaac and Rachel (Strauss). His family was poor, forcing Jacobs to work as a boy selling newspapers and candy on Coney Island excursion boats. After noticing that ticket purchases for the boats were often confusing to prospective passengers, Jacobs began scalping boat tickets, bought concession rights on all the ferries docked at the Battery, and eventually ran his own ferryboats. Jacobs then became the premier ticket scalper in New York, buying and selling theater, opera, or sports events tickets, and began sponsoring events himself, including charity balls, bike races, and circuses. Jacobs opened a legitimate ticket agency across from the Metropolitan Opera House, becoming the “standout ticket agent of New York,” and also invested his money in several other successful enterprises, including real estate development, Enrico Caruso's concert tour, and a series of lectures by British suffragette Emily Pankhurst.

Jacobs began his career in boxing promotion in 1921 by working with Hall of Famer Tex Rickard, raising \$100,000 in cash in just eight hours to help Rickard promote the Jack

Dempsey-Georges Carpentier heavyweight championship bout. The result was the first \$1 million gate in boxing history. Jacobs also helped Rickard in financing the building of the Old Madison Square Garden in 1925. But four years after Rickard's death in 1929, Jacobs formed the Twentieth Century Sporting Club with three reporters, including Damon Runyan, to compete with the Garden for the biggest boxing promotions. From 1935 until 1949, Jacobs was arguably the most powerful man in boxing, controlling practically every world title bout between Featherweights and Heavyweights, and the stretch on Manhattan's 49th Street between Broadway and Eighth Avenue was known as “Jacobs Beach.” “Nobody else ever exerted such absolute dictatorship as his over any sport,” wrote columnist Red Smith.

Jacobs' main attraction was heavyweight Joe Louis, whom Jacobs promoted at a time when Madison Square Garden was reticent about staging fights with blacks. Jacobs persuaded heavyweight champion Jim Braddock to break a contract with the Garden in order to fight Louis in Chicago, and Louis won. When Louis fought Max Schmeling in 1936 and 1938, some Jewish groups opposed giving Schmeling a platform, and several of them applied pressure on Jacobs to cancel the fights. Jacobs offered to donate 10 per cent of the gate to groups helping Jewish refugees. A story in the *American Hebrew* in 1946 praised Jacobs for giving Joe Louis the opportunity to strike “a terrific blow to the theory of race supremacy.”

Jacobs solidified his position as a top promoter when he staged the Carnival of Champions on September 23, 1937, at the Polo Grounds in New York, featuring four world championship bouts in one night. Madison Square Garden subsequently leased the arena and the outdoor Madison Square Garden Bowl to the Twentieth Century Sporting Club. Jacobs' relationship with the Garden changed from tenant-landlord to a partnership, with Jacobs staging 320 shows there from 1937 to 1949. In 1944 he obtained the first commercial sponsorship of a television fight, featuring the Featherweight title bout between Willie Pep and Chalky Wright. Jacobs, who promoted 61 championship fights including three million-dollar bouts during his career, suffered a cerebral hemorrhage in 1946, and finally sold his empire to Madison Square Garden in 1949.

Jacobs was elected to the World Boxing Hall of Fame in 1982, and the International Boxing Hall of Fame in 1990. He was the subject of a biography by Daniel M Daniel, *The Mike Jacobs Story* (1950).

[Elli Wohlgeleinter (2nd ed.)]

JACOBS, ROSE GELL (1888–1975), U.S. teacher and activist. A founding member of the Hadassah Organization in 1912, Jacobs rose through the ranks to become a prominent Zionist speaker, organizer, and national leader. She was born in New York City in 1888, educated at Columbia University, and taught in local public schools (1908–14). After marrying Edward Jacobs, an Atlanta attorney, she left teaching and became more active in Jewish affairs. She founded several Hadassah chapters in the American south and edited Hadassah's newsletter

from 1920 to 1925. Jacobs held several senior posts in Hadassah and served two terms as Hadassah's national president (1930–32 and 1934–37).

With the rise of the Nazis, Jacobs pushed Hadassah to help European Jewry. It was on Jacobs' advice – and with her signature on the Jewish Agency contract in 1935 – that Hadassah officially adopted the Youth Aliyah program to rescue Jewish youth from Nazi Europe. In 1936, at great personal risk, Jacobs visited Germany to investigate the situation of the Jewish community and firm up Hadassah's role in Youth Aliyah. Over the following years, with vital support from Hadassah, Youth Aliyah rescued many thousands of youngsters from war-torn Europe.

In 1940, ignoring the dangers of wartime travel, Jacobs went to Palestine to set up the Hadassah Emergency Committee as an on-site administrative body for Hadassah's health and social welfare programs there.

Jacobs was an initiator of the building program of the Rothschild-Hadassah-University Hospital and Medical School on Mount Scopus. She also served on the executive of the Jewish Agency for Palestine from 1937 to 1946; chaired Hadassah's Committee for the Study of Arab-Jewish Relations from 1941 to 1943; and served on the board of governors of The Hebrew University. After the war, Jacobs worked with the ESCO Foundation to promote industrial development in Palestine (later Israel).

Jacobs died on August 14, 1975, in New York City.

[Erica Simmons (2nd ed.)]

JACOBS, SAMUEL WILLIAM (Wolf; 1871–1938), Canadian lawyer, politician, and Jewish community leader. Jacobs was born in Lancaster, Ontario. His family was among early East European Jewish immigrants to Canada. Educated at McGill and Laval Universities, Jacobs was called to the Quebec Bar in 1906. An expert on Canada's legal code and railway law, he was the author of *The Railway Law of Canada* (1909), co-editor, with Léon Garneau, of the *Quebec Code of Civil Procedure* (1903), and treasurer of the Montreal Bar Association, 1916–17.

Jacobs was also deeply committed to the Jewish community. In 1897, in response to the growing antisemitism in the wake of the *Dreyfus affair, Jacobs founded the *Jewish Times* with Lyon Cohen. The first continuing Canadian Jewish publication, the English-language weekly represented Montreal's middle-class Anglo-Jewish community for the next 17 years. In 1913, Jacobs and fellow lawyer Louis Fitch represented Quebec's Jewish community in the high-profile Plamondon libel case in which the accused leveled accusations of *blood libel and other outrageously calumnious accusations against Jews. Jacobs was also active in many Montreal Jewish associations serving as president of the Baron de Hirsch Institute of Montreal in 1912–14 and as life governor of Mount Sinai Sanatorium, the Young Men's Hebrew Association, and the Hebrew Free Loan Association.

Jacobs entered Liberal electoral politics in 1917 and was

elected member of Parliament for the heavily Jewish riding of Montreal-Cartier, a seat he held through six consecutive elections. When first elected in 1917, he was only the second Jewish member of Parliament and the first to hold a seat in the Commons for an extended period. Jacobs was outspoken with respect to issues of importance to the Jewish community. He was particularly vocal in battling against discrimination and for Jewish immigration in an interwar period of increasingly restrictive immigration policies. While a member of Parliament he was also one of the founders of the Jewish Immigrant Aid Society (JIAS) in 1920 and served as president of the Canadian Jewish Congress from 1934 until his death in 1938.

[Judith E. Szapor (2nd ed.)]

JACOBS, SIMEON (1832–1883), South African lawyer. Jacobs emigrated from England to South Africa in 1860 and became attorney general of British Kaffraria in the Eastern Cape Province. He was successively solicitor general and attorney general for the Eastern Districts and a judge of the Eastern Districts Supreme Court. In 1874 he was elected to the legislative assembly of Cape Colony. In 1872, as acting attorney-general, he was responsible for enacting a bill which abolished state aid to the Anglican Church.

JACOBS, SOLOMON (1777–1827), U.S. civic leader. Jacobs, who was born in Heidelberg, Pa., went to Richmond, Virginia, before 1800. He served as city recorder (1814) and acting mayor (1815), the highest public offices held by any Jew in Richmond's history. Jacobs was elected three times grand master of the Grand Lodge of Masonry in Virginia. He was a president of Beth Shalome Congregation.

[Saul Viener]

JACOBS, SOLOMON (1861–1920), rabbi. Jacobs was born in Sheffield, England. He studied at the People's College in his native town and then at Aria College in Portsmouth. He was ordained there in 1883 and received his rabbinical degree in 1886. While studying for his rabbinical degree, he served as master of the Manchester Jews School and as the minister of the congregation at Newcastle-on-Tyne. In 1886, on the recommendation of the chief rabbi, Jacobs was named minister of the United Congregation in Kingston, Jamaica. He remained there for 15 years. In addition to ministering to his congregation and supporting Jewish charities, Jacobs was also committed to non-sectarian philanthropic activities, and served as the director of the Kingston City Dispensary.

Jacobs continued to demonstrate his dual commitment to both the Jewish community and the general community when in 1901 he became minister of Holy Blossom congregation, the oldest Jewish congregation in Toronto. At Holy Blossom, Jacobs sought to maintain the traditions of Anglo-Orthodoxy even as congregational pressures mounted for Holy Blossom to join the Reform movement. In the end, Jacobs was able to

steer a middle course, and it was only after his passing in 1920 that Holy Blossom formally embraced Reform.

As a native English speaker at a time when Yiddish-speaking Jews were flocking to Canada, Jacobs was often called upon to represent the Jewish community in the larger civic society. Jacobs was often a vocal protector of Jewish interests, as when he was a member of a 1906 delegation that tried to secure exemptions for Jews from the Sunday business-closing provisions of the Lord's Day Act or in his fight against missionary activities (especially the Presbyterians) targeting Jews in Toronto's immigrant neighborhood. Jacobs often wrote to the newspaper to challenge a prejudiced remark about Jews or to attack institutional anti-Jewish prejudices at universities and social clubs. A truly public-spirited individual, Jacobs served as vice president of the Associated Charities of Toronto and in 1911 was appointed a member of Toronto's first charity commission, overseeing the operation of charity organizations in the city.

Jacobs was very much an Anglophile and appreciated Great Britain's acceptance of the Jews. On numerous occasions he defended Great Britain and its Empire, and led his congregation in celebration when a monarch reached an important milestone or in expressing grief at times of loss. He was also a member of a small but important group of Anglo-Jewish Orthodox ministers which included Abraham *de Sola of Montreal and his son Meldola, and Herbert Samuel of Winnipeg, who together ministered to the early Canadian Jewish establishment. Their influence in both the Jewish and non-Jewish communities extended well beyond their small numbers.

[Richard Menkis (2nd ed.)]

JACOB SAMSON OF SHEPETOVKA (d. 1801), rabbi and ḥasidic leader. A celebrated talmudist, he served as rabbi of Shepetovka, Slavuta, and Bar. He was a disciple of *Dov Baer of Mezhirech and Phinehas Shapiro of *Korets. His reputation for scholarship advanced the cause of Ḥasidism among rabbis and scholars. Semilegendary stories attest the impression he left on the greatest rabbis of his generation. He helped to spread Ḥasidism by selling the books of his teacher *Jacob Joseph of Polonnoye. In later years he apparently became a follower of *Baruch b. Jehiel of Medzibezh. He went to Erez Israel (1799?), settling in Tiberias where he died. Some of his halakhic works are referred to in books by contemporaries. A booklet entitled *Divrei No'am* (also other names), describing a (probably legendary) dialogue between him and R. Ezekiel *Landau of Prague, was popular among Ḥasidim.

[Adin Steinsaltz]

JACOBSEN, ARNE EMIL (1902–1971), Danish architect. Jacobsen was born and educated in Copenhagen. When he was a student, neoclassicism dominated Danish architecture, but Jacobsen's meetings with Le Corbusier and Mies van der Rohe at exhibitions in Paris and Germany had an enormous effect on his work. His first houses, inspired by Le Corbusier, caused a sensation, and in 1936 he designed and built a series of housing units with staggered perspectives giving all the apartments a good view and a share of sun and light. This established him as Denmark's leading architect. After World War II the Søholme housing scheme established him internationally. He refused to specialize, and designed a wide variety of buildings, including town halls, a stadium, office blocks, and private houses. In 1959, he began to build St. Catherine's College, Oxford. During the same period he completed the famous SAS block in Copenhagen for Scandinavian Air System (1960), using glass curtain walls. In this building and in others Jacobsen designed also the furnishings and appurtenances. From 1956 he was professor of architecture at the Copenhagen Academy of Arts. His works are generally unspectacular and human in scale, and are characterized by refinement in siting, proportion, and detail, and by a sensitive use of materials.

[Julius Margolinsky]

JACOBSON, SIEGFRIED (1881–1926), German critic and left-wing editor. Jacobsohn began his career as the drama critic of various Berlin dailies. In 1905 he founded the theater weekly *Schaubuehne*, and until 1919 published the theater annual, *Das Jahr der Buehne*. Later he altered the direction of his periodical to give it a political character and changed its name to *Weltbuehne* in 1918. During the Weimar Republic the *Weltbuehne* reflected the outlook of independent-minded left-wing intellectuals (called by the Nazis "juedischer Kulturbolschewismus") and was vigorously attacked by the Nazis and the Communists. The periodical was, however, widely read by the German-speaking Jewish intelligentsia throughout Europe. Jacobsohn wrote two books on the Berlin theater, *Das Theater der Reichshauptstadt* (1904), which dealt with the period from 1870, and a sequel, *Max Reinhardt* (1910, 1921⁵). Though not a Zionist, Jacobsohn fought assimilation and Jewish "camouflage", and attacked Jewish journalists who worked for right-wing, antisemitic papers. The last lines he published were an attack on the *Verband nationaldeutscher Juden. His closest collaborator was Kurt *Tucholsky, the letters to whom were published in 1989, 1997² (*Briefe an Kurt Tucholsky 1915–1926: "Der beste Brotherr dem schlechtesten Mitarbeiter,"* ed. Richard von Soldenhoff). His collected critical essays on theatre (*Jahre der Buehne*, ed. Walter Karsch and Gerhard Koehler) appeared in 1965. From 2001 the *Jacobsohn-Journal* appeared in cooperation with the *Tucholsky-Blaetter*.

JACOBSON, ANNA (1888–1972), U.S. professor of German literature. Born in Lueneberg, Germany, Jacobson received her doctorate in German literature from the University of Bonn in 1918. Two years after immigrating to the United States in 1922, she became an instructor of German at Hunter College. She was promoted to assistant professor in 1927, associate professor in 1934, and achieved the rank of full professor in 1950. When Hunter wanted to eliminate the German department during World War II, Jacobson, who served as its acting chair from 1941–42, successfully defended the importance of continuing to teach German literature and culture at American universities; she chaired this department from 1947 until her retirement in 1956.

Anna Jacobson published books and articles in both German and English on Hermann Hesse, Franz *Werfel, Heinrich *Heine, and Richard Wagner, as well as Charles Kingsley and Walt Whitman. She became best known for her work on Thomas *Mann. Actively involved in the Modern Language Association, she served as president of Hunter College's chapter of the American Association of University Professors (1936–38) and of the New York City chapter of the American Association of Teachers of German (1949–51). Jacobson helped organize fundraising events to aid refugees from Germany, and, after 1940, she became active in the National Conference of Christians and Jews. Upon her retirement from Hunter College, Jacobson lived in Switzerland.

[Harriet Pass Freidenreich (2nd ed.)]

JACOBSON, DAN (1929–), South African novelist. Jacobson was born in Kimberley. After graduating from the University of Witwatersrand, he went to London, where he taught in a Jewish school. He returned to South Africa, for a short time joining the family business in Kimberley, but finally settled in England in 1954 and held a chair at University College, London. Jacobson's writing first appeared in 1953 in the American Jewish monthly, *Commentary*, and he became a frequent contributor to many leading British and American periodicals. His fiction and much of his other writing is preoccupied by two major issues: the moral implications of apartheid in South Africa, and the problem of Jewish identity in the modern world. His first two novels, *The Trap* (1955) and *A Dance in the Sun* (1956), deal with the explosive aspects of apartheid, describing dispassionately the kind of incidents which characterize day-to-day relationships between whites and blacks in the

rural areas of the Republic. Both novels are dramatic and symbolic in design. *The Price of Diamonds* (1957), set in a fictional version of Kimberley, deals with the illicit diamond trade in South Africa and its impact on the life of a middle-aged Jewish wholesaler. Although it presents a brilliantly comic study in frustration, like its predecessors it is very much a moral fable. Two later works in this genre are *The Evidence of Love* (1960), the story of an interracial love affair set against a background of hatred and false liberalism, and his autobiographical novel, *The Beginners* (1966). Many of Jacobson's polished short stories also deal with Jewish or South African themes. They include the collections *A Long Way from London* (1958), *The Zulu and the Zeide* (1959), which was also the basis for a musical play, and *Beggar My Neighbor* (1964). His novel *The Rape of Tamar* (1970) was based on the biblical story of *Amnon and Tamar. Jacobson's *Evidence of Love* was published in a Russian translation, a unique achievement for an Anglo-Jewish writer. In 1973 there appeared *Inklings*, a collection of short stories, and the *Wonder-Worker*, followed in 1977 by *The Confessions of Josef Baisz* and in 1991 by *Hidden in the Heart*.

BIBLIOGRAPHY: R. Winegarten, in: *Midstream*, 12 (May 1966), 69–73.

[Michael Wade]

JACOBSON, EDWARD (Eddie; 1891–1955), U.S. businessman and longtime friend of President Harry S. Truman. Jacobson, together with Truman, operated a canteen at Fort Sill, Oklahoma, during World War I and in 1919 they opened a haberdashery in Kansas City, Missouri. While their business was initially successful, during the panic of 1921–22 the enterprise collapsed. After Truman became president, Jacobson, aware of the international plight of Jews, discussed with him the refugee and Palestine partition issues (1947). In March 1948, at a critical moment in the period preceding the establishment of the State of Israel, he persuaded the reluctant president to see Chaim *Weizmann, portraying the Zionist leader as his hero and comparing him with Truman's idol, Andrew Jackson. At Jacobson's death, Truman eulogized him for his trustworthiness, warmly recollecting their intimate association.

Jacobson's memoirs of his association with Truman were published in the *American Jewish Archives* (vol. 20 (1968), 3–15).

[Milton Plesur]

JACOBSON, HOWARD (1942–), English novelist and broadcaster. Born in Manchester, Jacobson was educated at Cambridge University, where he was strongly influenced by F.R. Leavis, the English literary critic. He then lectured in English literature at Sydney University, Australia, and, on his return to England, supervised students at Cambridge University. After a variety of jobs in publishing, teaching, and retailing, he was appointed a Lecturer in English at Wolverhampton Polytechnic. This experience was to provide the material for his first novel, *Coming from Behind*, published in 1983. Ja-

cobson, with Wilbur Sanders, also jointly published a critical study entitled *Shakespeare's Magnanimity* (1978).

Jacobson is widely regarded as one of the most original and brilliant comic voices to have emerged in post-war England. *Coming From Behind*, a campus novel, was widely reviewed in England and quickly established Jacobson as a comic writer. According to Jacobson, the novel was meant to be "the last word in academic novels," but, instead, he found himself "writing about gentleness; about what a foreign place England is to a Jew."

Peeping Tom (1984), Jacobson's second and far more substantial novel, examines the consequences of being a culturally dispossessed Jew in a "foreign" country. In this novel, Jacobson's Jewish persona is contrasted with "peeping" Thomas Hardy and the English literary rural tradition. Jacobson, with a considerable ironic punch, then goes on to transform his persona into Hardy's reincarnation. Hardy, that is, provides the "negative" Jew with his identity.

Jacobson's distances himself from what he calls the "super-Anglicization" of many Anglo-Jewish writers in the 1980s who, with a welcome self-assurance, examine and take risks with their Jewish identity in a literary context. Jacobson, for this reason, has been compared to American-Jewish comic writers Woody Allen and Philip Roth. He has also expanded his comic talent in a series of radio broadcasts.

Jacobson's descriptions of the Anglo-Jewish community in *Roots, Schmoots* (1993) were severely criticized by some for their relentless hostility to Orthodox Judaism. Jacobson was awarded the *Jewish Quarterly* / Wingate Prize for fiction in 2001, while his semi-autobiographical novel *The Mighty Walzer* (1999) won the Bollingen Prize for the best comic novel of the year.

BIBLIOGRAPHY: *The Jewish Quarterly*, 32 (1985), 117; *Times Literary Supplement*, (May 3, 1985).

[Bryan Cheyette]

JACOBSON, ISRAEL (1768–1828), German financier and pioneer of Reform Judaism. Born in Halberstadt, Jacobson received an Orthodox education and was destined for the rabbinate. Influenced by *Mendelssohn's writings, he was early attracted to the *Haskalah movement. He did not, however, acquire a methodical secular education and thus lacked fluency in the German language. In 1786 he married Mink, the daughter of Hertz Samson, court-agent of the duchy of Brunswick. With the death of his father-in-law in 1795, he succeeded to the latter's position and titles as *Kammeragent und Landrabbiner des Weserdistrikts*. Influenced by Moses *Mendelssohn and the enlightenment Jacobson saw the best prospects for attaining Jewish emancipation in emphasizing vocational training in the secular education of Jewish children. In 1801, at his own expense, he opened in the small town of Seesen an educational institution for the children of the poor, which became known as the Religions- und Industrieschule (today Jacobson-Gymnasium). By 1805 Christian citizens of Seesen were requesting that their children be admitted to the insti-

tution. In 1804 Jacobson was granted citizenship of Brunswick. Due to his influence, the degrading *Leibzoll* (the body tax imposed on Jews) was abolished in Brunswick (1803) and in Baden (1806). He was honored with the title *Mecklenburg-Schweriner Geheimer Finanzrat* in 1806. Hesse-Darmstadt and Baden also granted him titles, and in 1807 he was awarded a Ph.D., *honoris causa*, from the University of Helmstedt. Yet in Brunswick, where he lived, Jacobson still suffered from the intrigues of the officials. His son Meir was not accepted in Brunswick's merchants' guild and his school received little attention from the authorities.

Jacobson saw *Napoleon as the emancipator of the Jews. On the occasion of the *Assembly of Jewish Notables in Paris on May 30, 1806, he addressed an enthusiastic letter to Napoleon. During the same year he published a book entitled *Les premiers pas de la nation juive vers le bonheur sous les auspices du grand monarque Napoléon*, suggesting that the emperor should organize a supreme Jewish council, which would be headed by a patriarch and whose seat would be in Paris. It is possible that Napoleon's idea of the *Sanhedrin stemmed from Jacobson's suggestion. In August 1807 Brunswick became a part of the kingdom of Westphalia, which was ruled by Napoleon's brother, Jerome. After borrowing large sums from Jacobson, Jerome was obliged to sell him state property; he thereby acquired a number of estates. On Jan. 27, 1808, to honor the emancipation of the Jews of Westphalia, Jacobson ordered a commemorative medal from the Berlin artist Abramson. The reverse side of the medal featured two angels symbolizing Judaism and Christianity united in the kingdom of Westphalia. Jacobson was instrumental in convening, in Kassel on Feb. 8, 1808, a gathering of Jewish notables, similar to the one held in Paris, to introduce reform – religious, moral, and civic – among the Jews. The majority of Westphalia's Jews, who were Orthodox, regarded Jacobson's project with suspicion. On Dec. 19, 1808, the Koeniglich Westphaelisches Konsistorium der Israeliten held its first meeting under the leadership of Jacobson rather than that of a rabbi as was the case in France. The consistory discussed questions of religion, education, culture, and the personal status of Jews. Jacobson erected the first synagogues in which services were held according to this program of religious reform. The Consistorialschule was opened in Kassel in 1809 and included a synagogue where portions of prayers were sung in German, sermons were delivered in German, and confirmation ceremonies were performed. On July 17, 1810, the "Temple" in the school of Seesen was inaugurated with a ceremony which included the ringing of a bell and the singing of hymns in German with organ accompaniment. Jacobson conducted the festivities, dressed in the robes of a Protestant clergyman.

After the fall of Napoleon and the fragmentation of the kingdom of Westphalia, Jacobson moved to Berlin, where he continued to work for religious reform. On the occasion of his son's bar mitzvah, on Shavuot 1815, he opened a Reform synagogue in his house. For lack of space the synagogue was removed to the house of the banker Jacob Hertz Beer, where

L. *Zunz and E. *Kley preached. After some eight months the government prohibited the holding of prayers in private houses. On Rosh Ha-Shanah 1817, prayers were again held in a Reform synagogue, but its existence was finally forbidden in 1823, through the influence of the leaders of the Orthodox community. During his last years, Jacobson was broken in health and spirit, and even though he continued his philanthropic activities, he ended his life an embittered and disappointed man. The majority of his ten children, the offspring of two marriages, were baptized.

[Jacob Rothschild]

JACOBSON, KURT (1904–1991), Portuguese biochemist. Jacobson was born in Berlin, where he received his Ph.D. at the Kaiser Wilhelm Institut under the direction of Carl Neuberg. Jacobson went to Portugal in 1929, where he was allowed to stay because of Nazi persecution in Germany and his scientific contributions. He established the country’s first biochemical research unit in the Instituto Rocha Cabral in Lisbon before joining the University of Lisbon (1934), where he became professor of organic chemistry (1955) and later vice rector. His research concerned enzymology. He was president of the Centro Israelita de Portugal.

[Michael Denman (2nd ed.)]

JACOBSON, LUDVIG LEVIN (1783–1843), Danish physician, anatomist, and naturalist. He began his career as an assistant at the Academy of Surgery in Copenhagen and was a lecturer in chemistry at the Veterinary College. He began his studies in comparative anatomy and in 1809 published his discovery in mammals of an organ in the nasal cavity that is largely responsible for the sense of smell. This was known as “Jacobson’s organ.” Three other anatomical discoveries are associated with his name. He invented an instrument for the crushing of calculi in the bladder, “Jacobson’s lithoclast,” which was of great importance to surgery. For this invention, the French Academy awarded him a Prix Monthyon. Jacobson was an outstanding scientist and an excellent physician. He had been offered the post of professor of anatomy in the University of Copenhagen on condition that he convert to Christianity. However, he refused to convert. In 1816 Jacobson was appointed professor *honoris causa* by King Frederik VI of

Denmark. He also refused to participate in the Scandinavian Naturalists’ Congress in Christiania in 1822 because Jews were not admitted into Norway at this time.

[Julius Margolinsky]

JACOBSON, NATHAN (1916–), Australian lawyer and communal leader. Born in Kiev, he grew up in Warsaw and went to Australia in 1936. He was active in various aspects of communal and Zionist leadership, especially in promoting economic and political support for Israel. He was president of the Victorian Jewish Board of Deputies (1956–60), president of the Zionist Federation of Australia and New Zealand (1968–70), president of the United Israel Appeal of Australia (1966–69) and president of the Executive Council of Australian Jewry (1970–72 and 1974–76). He was also president of the Federation of Jewish Communities of Southeast Asia and the Far East. He was a founder of the Australian Wool Industries, Ltd., which operates a wool-processing plant in Ashdod.

BIBLIOGRAPHY: W.D. Rubinstein, *Australia II*, index.

JACOBSON, PAUL HENRICH (1859–1923), German organic chemist. Jacobson was born in Koenigsberg and became professor of chemistry at Heidelberg University in 1889. His considerable contribution to scientific literature dealt mainly with azocompounds. With Victor *Meyer, he wrote *Lehrbuch der organischen Chemie* (2 vols., 1893–1902), the standard textbook of its day. In 1897 he became the general secretary of the German Chemical Society and editor of its journal, *Berichte der Deutschen chemischen Gesellschaft*, considered at the time the major chemical periodical in the world. In 1911 Jacobson transferred to the society’s collective literature department, and edited the third edition of Beilstein’s *Handbuch der organischen Chemie*, with 5 volumes of supplements, and the first eight volumes of the fourth edition. This encyclopedia of all known chemical compounds is in continuous use in research organizations all over the world. He also edited the further editions of Richter’s *Lexikon der Kohlenstoffverbindungen* and the journal *Chemisches Centralblatt*.

[Samuel Aaron Miller]

JACOBSON, SYDNEY, BARON (1908–1988), British editor and editorial director. Jacobson, born in South Africa, started his career as a reporter for the London *Daily Sketch* in 1928. He held various editorial positions on the paper and joined the Daily Mirror Group in 1951. The following year he became political editor of *The Daily Mirror*, the mass-circulation tabloid closely allied to the Labour Party. Ten years later, when the *Mirror* bought Odhams Press, he was appointed editor of *The Daily Herald*, the organ of the Labour Party, and in 1964 he became editor of *The Sun*, which succeeded the *Herald*. He was

made editorial director in 1965 and in 1968 was named chairman of Odhams Newspapers. In June 1975 he was awarded a life peerage by the Labour government. Jacobson was a member of the British Press Council from 1968 to 1975.

[Stewart Kampel]

JACOBSON, VICTOR (**Avigdor**; 1869–1935), Zionist leader and diplomat. Born in Simferopol, Crimea, Jacobson joined **Hibbat Zion* in his early youth and later became a member of the Russisch-Juedischer Wissenschaftlicher Verein (Berlin) and in 1897 of the newly founded Zionist organization. From 1899 he was a member of the Zionist General Council. In 1903 Jacobson strongly opposed the *Uganda Scheme and was one of the organizers of the *Kharkov Conference in opposition to *Herzl. In 1906 he became head of the Beirut office of the Anglo-Palestine Company and in 1908 of its branch in Constantinople, which was registered there as the Anglo-Levantine Banking Company. He simultaneously became the unofficial diplomatic representative of the Zionist organization in Turkey. In 1913 Jacobson was elected a member of the Zionist Executive and moved to Berlin. In this capacity, he headed during World War I the Copenhagen office of the Zionist organization, from which he maintained contact with all the branches of the movement. He issued the “Copenhagen Manifesto” (Oct. 28, 1918), which outlined postwar Jewish demands with regard to Palestine and equal rights and cultural autonomy in the Diaspora. Jacobson moved to the new seat of the Zionist headquarters in London in 1918. At the 12th Zionist Congress (1921) he and Arthur *Ruppin headed a small group that demanded close Arab-Jewish cooperation and laid the ideological foundations for *Berit Shalom (which was founded in Jerusalem in 1926). Jacobson resigned from the Executive at the Congress, and from 1925 until his death he represented the Zionist organization and the *Jewish Agency in Paris and at the League of Nations in Geneva. He was the first Zionist “career diplomat.” From 1933 he again was a member of the Zionist Executive.

During his activities in Turkey (1908–13), Jacobson acquired for the Zionist Movement the French daily *Courrier d’Orient*, which was renamed *Jeune Turc* and edited by Vladimir *Jabotinsky. In 1927 he founded and coedited (with Albert *Cohen) *La Revue Juive* in Paris. In 1928 the Comité des Amis du Sionisme, which Jacobson had formed, began publication of *La Palestine Nouvelle*.

[Oskar K. Rabinowicz]

JACOBSTHAL, GUSTAV (1845–1912), German musicologist. Born in Pyritz, Pomerania, Jacobsthal studied music and history at the University of Berlin (1863–70) and wrote a

Ph.D. thesis on mensural notation in the 12th and 13th century. Jacobsthal was a professor of musicology at the University of Strasbourg from 1875 to 1905, the only person to hold such a post at a German university at the time. He was a pioneer in the application of historical and philological research in the study of early medieval music. Among his famous disciples were F. Genrich and P. Wagner. His writings are mainly on the music of the Middle Ages, comprising his books *Die Mensuralnotenschrift des 12. und 13. Jahrhunderts* (1871, rep. 1973) and *Die chromatische Alteration im liturgischen Gesange der abendlaendischen Kirche* (1897, rep. 1970).

[Amnon Shiloah (2nd ed.)]

JACOBUS APPELLA VICEDOMINUS (late 11th–mid-12th century), a baptized Jew of Prague who was chief administrator of Duke Vratislav of Bohemia (1110–40). His story was first told by the Bohemian chronicler Cosmas of Prague, but the historical basis of it is hard to determine. Apparently baptized in 1096, he made a dramatic return to Judaism in 1124, defiling an altar which had been erected in a synagogue and throwing Christian relics into a sink. Prague Jewry saved him from the death penalty by paying a high ransom.

JACOBY, JOHANN (1805–1877), Prussian politician. Born in Koenigsberg (East Prussia), Jacoby studied medicine but devoted his life to politics. As a young man, he represented the interests of his fellow Jews, publishing in 1833 a memorandum in defense of Jewish emancipation. He advocated religious reform and participated in a commission charged with revising the order of worship. Gradually his interests became concentrated on general Prussian and German matters and, without denying his Judaism, Jacoby took up the struggle for a liberal and democratic Germany. In 1848 he was elected to the Prussian Landtag, taking an active stand against the reactionary attitude of *Frederick William IV. As a member of a deputation to the king, Jacoby is alleged to have remarked that it was the former’s “misfortune” that he “would not hear the truth!” In 1849 he was elected, together with six other Jews, to the German Nationalversammlung in Frankfurt. Forced into the background during the years of reaction that followed, he came to the fore again in the 1860s, with the advent of a new liberal era. In 1863 he entered the Prussian House of Representatives, linking himself with the left wing of the Progressive Party and, after a split in the party, with the Social Democratic camp. Unlike most Jewish politicians, he remained in opposition even after Germany’s success in the war against France, and combated the military state and its annexationist policy. Jacoby was one of the ideologists of German democracy; his writings and speeches were published in 1872–77 and 1889.

[Reuven Michael]

JACOBY, OSWALD (1902–1984), U.S. bridge champion. Born in New York, Jacoby served in the U.S. Army in World War I and later worked as an actuary. He rapidly established himself as one of the leading U.S. bridge players and belonged to a group called “The Four Aces,” which developed a new system of bidding at bridge that attracted considerable attention.

During World War II Jacoby was an officer in the U.S. Navy. During the Korean War, he was a naval commander and helped to prepare the ground for the Panmunjom armistice talks of 1951.

In 1950, he became the daily bridge columnist for Newspaper Enterprise Association. His column, which was exceptionally popular, was published in several hundred newspapers. He established a record on April 22, 1982, when his 10,000th article was printed.

Jacoby won recognition as the United States’ leading bridge player and was awarded the McKenny trophy for the Bridge Player of the Year in 1959, 1961, and 1962. He pioneered many bidding concepts, such as Forcing 2 No Trump; Jacoby Transfer Bids; and Weak Jump Overcalls. An expert in backgammon as well, Jacoby captured the World Championship of Backgammon in 1973. In 1965 he was elected to the Bridge Hall of Fame, and in 1983 he was selected as Bridge Personality of the Year by the International Bridge Press Association.

Jacoby wrote many books on cards and other games, including *Oswald Jacoby on Poker* (1940, 1947²); *How to Figure the Odds* (1947); *Complete Canasta* (1950); *What’s New in Bridge* (1954); *How to Win at Gin Rummy* (1959); *The Backgammon Book* (1979); *Penny Ante and Up* (1979); and *Jacoby on Card Games* (with J. Jacoby, 1989).

[Ruth Beloff (2nd ed.)]

JADASSOHN, JOSEF (1863–1936), German dermatologist. Jadassohn, who was born at Liegnitz, studied at Breslau and was professor and director of the dermatological clinic at the University of Berne, Switzerland, from 1896. From 1917 until his retirement in 1931 he was professor of dermatology at the University of Breslau and became famous for his work on skin and venereal diseases. Jadassohn devoted much of his time to research. Maculopapular erythematosa, a scaling skin affection, is known as “Jadassohn’s disease” because he first identified it and his name is also associated with the Jadassohn-Bloch skin test for allergic conditions. He described the patch test and nevus sebaceus (1895). His publications include *Krankheiten der Haut und die venerischen Krankheiten* written in collaboration with Albert Neisser (1900–01) and *Allgemeine Aetologie, Pathologie, Diagnose und Therapie der Gonorrhoe* (1910). He edited *Handbuch der Haut- und Geschlechtskrankheiten* (1927–32) and coedited the *Archiv fuer Dermatologie und Syphilis*.

BIBLIOGRAPHY: S.R. Kagan, *Jewish Medicine* (1952), 423f.; *Biographisches Lexikon der hervorragenden Aerzte* (1932), 695.

[Suessmann Muntner]

JADASSOHN, SALOMON (1831–1902), composer, music theorist, and conductor. Born in Breslau, Jadassohn studied in Leipzig and then under Liszt in Weimar (1849–52). He came back to Leipzig, where he studied privately with Moritz Hauptmann and later developed and worked as a multifaceted musician. In the 1860s he conducted several groups, among them the Leipzig synagogue choir. Later he focused on composition and theory. He composed numerous works in the general style of Brahms, especially for piano, but also orchestral, vocal, and chamber music. Jadassohn is chiefly remembered as a theorist. He wrote textbooks for all major subjects of music theory, combined in the comprehensive project *Musikalische Kompositionslehre* (1883–89), including *Harmonielehre* (1883, 1903), *English Manual of Harmony* (1912), *Kontrapunkt* (1884), *Kanon und Fuge* (1884), and *Die Formen in den Werken der Tonkunst* (1889). Jadassohn’s vertical theoretical orientation, his inclination to discover many modulations in chromatic passages, and the lack of almost any examples make his books difficult for the modern reader. His students include Busoni, Chadwick, Delius, and Grieg.

[Yossi Goldenberg (2nd ed.)]

JADDUA, high priest in the Second Temple period. Jaddua was a great-grandson of *Eliashib and commenced to minister in the priesthood c. 400 B.C.E. According to Nehemiah 12:11, his father’s name was Jonathan, but many are of the opinion that the reading there should be *Johanah, as in Nehemiah 12:22. Josephus (*Ant.* 11:317–47) tells of a high priest called Jaddua who was a contemporary of Alexander the Great. When Alexander reached Syria, he sent envoys to the high priest requesting him to transfer his allegiance to him, but he refused because of his oath of loyalty to *Darius. This enraged Alexander, who marched against Jerusalem with his army. Jaddua prayed to God and in the night had a dream which gave him courage. He went out to welcome Alexander, clothed in his priestly garments, together with his fellow priests and all the people of Jerusalem, clad in white. When Alexander saw the high priest, he prostrated himself before him, explaining that he was bowing to the God to whom this priest ministered; that the priest had appeared to him in a dream and encouraged him to venture forth against the Persians, and assured him of victory. He subsequently acceded to Jaddua’s requests on behalf of the Jews. According to Josephus, Jaddua died a short time after the death of Alexander and transmitted his office to his son Onias. Josephus also states that Manasseh, the son-in-law of Sanballat and the first priest of the Samaritan temple on Mt. Gerizim, was the brother of Jaddua. It is difficult to reconcile Josephus’ statement that Jaddua lived in the

time of Alexander with the account in Nehemiah, and it appears that the story is a mere legend attached to the name of Jaddua. In the Talmud a similar story is ascribed to Simeon the Just (Meg. Ta'an. 339–40; Yoma 69a).

[Uriel Rappaport]

JADĪD AL-ISLĀM, a term meaning “new Muslims,” applied mainly in *Persia to Jews who were converted by force to *Islam but who, in many cases, adhered secretly to their former religion (see *Anusim). The term is associated especially with the crypto-Jewish community of *Meshed under the Kajar dynasty from 1839 onward but also with the victims of forced mass conversions in Persia in the 17th and 18th centuries, under *Abbas I and *Abbas II, and in Bukhara. Many Jadid al-Islām fled to *Afghanistan, others settled in Erez Israel in 1929–30. About 70 converted to the Bahai faith in the town of Torbat, but after a short while 67 of them returned to Judaism. A few members of the Hakimi family converted to Islam and deserted the community of Jadid al-Islām. At the end of the 19th century the Jadid al-Islām in Meshed lived as Jews, almost openly, and under the rule of Riza Shah (1925–41) they felt more protected, but still maintained the status of Muslims and were recognized as Jadid al-Islām. In 1936 about 550 Jadid al-Islām families lived in Meshed with 12 synagogues (in private buildings) and four schools. In 1954 *Ozar ha-Torah* set up in Meshed a Jewish school for the Jadid al-Islām. These Jews suffered from the mobs in 1946. The Sephardi chief rabbi, Ben-Zion Meir Hai *Ouziel, decided that the Jadid al-Islām did not have any problem of *mamzerut*. The Jadid al-Islām had many special *minhagim* in certain areas of life, especially child marriage. They had their own songs and their dead were buried in a cemetery bought by the Jadid al-Islām. From the end of the 19th century until the 1940s most members of this community returned to Judaism. In 1973 only three Jewish families lived in Meshed and in 1995, 12 families.

[Walter Joseph Fischel / Leah Bornstein-Makovetsky (2nd ed.)]

JADLOWKER, HERMANN (1878–1953), tenor. Born in Riga, Jadowker began his operatic career in Cologne in 1889. Invited to Berlin in 1901, he sang at the Berlin State Opera for five years and in 1910 made his U.S. debut at the Metropolitan Opera, New York. Among his important roles were the Prince in the world premiere of Engelbert Humperdinck's *Koenigskinder* (1910), and Florindo in Ermanno Wolf-Ferrari's

Le Donne curiose in its first U.S. performance in 1912. He returned to Berlin in 1913, was cantor in Riga from 1929 to 1938, and then settled in Tel Aviv as a voice teacher.

JAECKLIN, JUD (Judah b. Judah; 14th century), Ulm moneylender. Jaecklin was first mentioned in 1375 when the city of Ulm (Germany) borrowed 2,500 gulden from him. On Sept. 5, 1376, he was put under an imperial ban by *Charles IV, at the request of a feudal enemy of Ulm, for nonpayment of a debt of 4,000 gulden. When the city refused to hand him over, Charles set siege to it; however, he was forced to withdraw and to repeal the ban a year later. As revenge Charles released Duke Henry of Werdenberg, whose lands had suffered most during the siege, from his debts to Jaecklin. In 1379 Jaecklin's residence permit for Ulm was not renewed. He removed to *Constance and in 1380 requested the aid of the municipality in retrieving his property from Ulm. In 1393 Ulm complained that Jaecklin had settled in *Noerdlingen without permission and without relinquishing his citizenship, and that he was libeling the city of Ulm there. As Ulm had previously confiscated his property, it considered that it had a right to collect the debts due to him.

BIBLIOGRAPHY: E. Nuebling, *Die Judengemeinden des Mittelalters* (1896), 327–43; H. Dicker, *Die Geschichte der Juden in Ulm* (1937), 23–32; M. Stern, in *ZGJD*, 7 (1937), 244f.

JAEL (Heb. יַעֲלֵי), wife of Heber the Kenite. Jael slew *Sisera in the war of *Deborah and *Barak against the Canaanites (Judg. 4–5). His army routed by Israel, Sisera fled on foot to Jael's tent, where he was offered hospitality and security, only to be slain by her while he slept (4:17–22; the details of the deed differ somewhat in Judges 5: 24–27, and permit an interpretation first voiced in rabbinic literature (below) that Jael seduced Sisera). Deborah's prophecy to Barak that the Lord would “sell Sisera into the hand of a woman” (4:9) was thus fulfilled. Jael's deed received high praise from Deborah (5:24–27). The story has political significance as well as drama. Jael's husband, “Heber the Kenite” (4:11, 17), is described as a descendant of Jethro the father-in-law of Moses. His clan had apparently been allied to *Jabin, Israel's enemy (*ibid.*), and the slaying of Sisera indicated a switch of loyalties back to Israel. It should be noted that an earlier reference to Jael in the Song of Deborah (5:6) does not seem to be to the same person. The name Jael (“wild goat”) appears in Ugaritic texts as that of a man.

[Nahum M. Sarna / S. David Sperling (2nd ed.)]

In the Aggadah

Jael's action in killing Sisera teaches that a transgression performed with good intent is more meritorious than a commandment performed with no intent (Hor. 10b). But for her action, the children of the matriarchs would have been destroyed (Gen. R. 48:15). She slew Sisera with a hammer and tent pin, rather than a spear or sword, in accordance with the biblical commandment (Deut. 22:5) prohibiting the use of weapons by women (Targ. Yer., Judges 5:26). She was a descen-

dant of Jethro, but whereas he received a redeemer (Moses) who was fleeing from the enemy (Pharaoh), Jael received an enemy (Sisera) who was fleeing from the redeemer (Barak), and killed him (Ex. R. 4:2). She was so attractive, that even her voice roused desire (Meg. 15a). Although Sisera had seven sexual relations with her on the day he fled from battle, she derived no gratification from these acts (Yev. 103a; Naz. 23b). She gave Sisera to drink of the milk of her breasts (Nid. 55b). Deborah blessed Jael and she was considered even greater than Sarah, Rebekah, Rachel, and Leah (Naz. 23b).

JAÉN, city in Andalusia, southern Spain. A Jewish community existed there in the Muslim period. The Ibn Shaprut family originated in Jaén, whence Isaac b. Ezra, the father of *Hisdai ibn Shaprut, moved to Córdoba. The Jews in this period engaged in all branches of commerce, and especially in tanning. In the 11th century Jews from Jaén even emigrated to Erez Israel. After the murder of *Joseph ha-Nagid, the son of *Samuel ha-Nagid, when a rebellion broke out in Jaén, the Jews had to pay a heavy indemnity. At the end of the 11th century the community was headed by R. Isaac who corresponded with Isaac *Alfasi. The community was brought to an end during the *Almohad persecution.

In 1246 Jaén was conquered by Ferdinand III of Castile. It was not until 1290 that the Jews of Jaén were required to send a representative to the king to negotiate on the amount of annual tax for which the community was liable. The community became important by the middle of the 14th century when it consisted of about 300 families. The Jews in Jaén pursued the same occupations as the rest of Andalusian Jewry, cultivating vineyards and engaging in crafts and commerce. As customary in that period, many had business partnerships with Christians. The community suffered during the civil war between Pedro the Cruel and Henry of Trastámara in the 1360s. Pedro, who called the Muslims of Granada to his aid, permitted them to take the Jews of Jaén captive and sell them into slavery. The community then numbered 300 families.

No details are known about the fate of the Jews in Jaén during the persecutions of 1391, but the number of Jews who left the faith increased. In the second half of the 15th century the number of Jews in Jaén declined greatly. Throughout the area within the Kingdom of Jaén there was no *aljama* or organized community left. While the number of Jews declined, that of the Conversos rose. In 1473 riots against the *Conversos in Jaén broke out. The riots show the cruel and totalitarian policy pursued by the local authorities and the desire of the people to deprive the Conversos of their wealth. Ten years later an edict of expulsion was issued against the Jews in Jaén as in all the other Andalusian communities. In that year the Inquisition established a tribunal at Jaén, which was

the third to be established in the Iberian peninsula, after Seville and Córdoba. This was surely due to the large number of Conversos who resided in Andalusia. Sources found in local archives offer ample information on the Conversos, many of whom were crypto-Jews. These sources compensate for the loss of the files of the tribunal of Jaén. We now have the many names of Conversos or crypto-Jews who were tried and condemned by the Inquisition. Apparently the tribunal did not continue to sit in Jaén but returned there in 1509 and was reconstituted as a district court. In 1526 it was amalgamated with the tribunal in Córdoba. The autos-da-fé took place in Santa María square, in front of the Cathedral.

The Conversos continued to live in what used to be the Jewish quarter, renamed Santa Cruz. The synagogue was in the street called Santa Cruz.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

JAFFA (Joppa; יֹפּוֹ), ancient port city in the central sector of the Erez Israel coast. The meaning of the name Jaffa (Yaffo) is “lovely” or “pretty.” The ancient city was built on a hill jutting out slightly from the coastline on the west and overlooking the open sea. At the foot of the rise on the western side extends the port, which was protected by a chain of rocks jutting out above the water; on the northern side there is a small bay that is protected from the southwest winds but open to the stormy winds from the north. Storms were probably overcome by using the mouth of the Yarkon River (“Me-Jarkon,” Josh. 19:46) at a distance of 3.7 mi. (6 km.) from the northern corner, where boats took shelter in the winter. *Jonah the prophet, unwilling to fulfill his mission to Nineveh, boarded a ship at Jaffa bound for Tarshish (Jonah 1:3). Some scholars assume that the expression “the Jaffa sea,” mentioned in the Bible in connection with the transport of the cedars of Lebanon to the Temple (11 Chron. 2:15; Ezra 3: 7) and in Josephus in connection with the defense line built by Alexander *Yannai “from the mountainside above Antipatris to the coast at Jaffa sea” (Wars 1:99), is a reference to the jetties of the Yarkon at Tell Kadadi and Tell Qasile. Archaeological excavations were conducted at the Jaffa tell from 1955 by Y. Kaplan on behalf of the Tel Aviv-Jaffa Antiquities Museum.

Early History

The oldest remains found are pieces of wall of sun-dried clay bricks in the eastern part of the ancient Jaffa fortress and dated from the 16th century B.C.E. Remains were also found from the 15th to the 13th centuries B.C.E., which was the period of

Egyptian rule in Jaffa. The name Jaffa is mentioned among the Canaanite cities that were conquered by Thutmose III in 1469 B.C.E. a folktale that came into being about 200 years afterward describes the conquest of Jaffa by Thutmose's military chief by cunning, rather than by war, through introducing soldiers into the fort in baskets. In the *El-Amarna letters, Jaffa is mentioned as an Egyptian district in which the king's stores were located. In the Anastasi Papyrus I, from the time of Ramses II (13th century B.C.E.), the Egyptian fort is described as being located on the side of the Canaanite city and containing workshops and arms stores. Excavations uncovered three stones of the fortress gate from the 13th century with inscriptions of the five titles of Ramses II.

The remains of the fortress gate (fourth level in the excavations) belong to the period of Israelite settlement, in the second half of the 13th century, and near the threshold a bronze bar that supported the corner of the left gate was uncovered. There are no written documents from this period; the description of the border of the tribe of Dan, which ran "over against Jaffa" (Josh. 19:46) is now dated by most scholars to the Davidic period. The appearance of the Sea Peoples at the beginning of the 12th century B.C.E. left its mark in the signs of destruction at the fourth level of settlement and in the few Philistine remains. However, there is basis for the supposition that the connection between the Greek legend of Perseus and Andromeda and the rocks off Jaffa is rooted in this period. It appears that Jaffa remained outside the boundary of Israelite settlement. Excavations have uncovered a part of the fortifications from the ninth century comprising a glacis covered with slabs of stone, beneath which were alternate strata of pressed earth and sun-dried clay bricks whose general width in some place reached four to five meters.

In the last third of the eighth century B.C.E., the period of the Assyrian invasions of Erez Israel, Jaffa became, from what can be seen, part of the "province of Ashdod." At the end of the eighth century it was under the protection of Ashkelon, according to Sennacherib, king of Assyria, who conquered it together with Bene-Berak and Bet Dagon on his way to fight Hezekiah, king of Judah, and his Egyptian allies. In the fifth century B.C.E. the coastal cities were held by Tyre and Sidon with the support of the Persian rulers. Jaffa was under the control of Sidon according to the description of the coastal cities of Syria and Erez Israel of Pseudo-Scylax (fourth century B.C.E.) and the inscription of Eshmunazer, king of Sidon, which relates that the "lord of kings" (the king of Persia) gave Sidon two cities on the Erez Israel coast – Jaffa and Dor – as a sign of his gratitude. A Sidonian stone dedicatory inscription was discovered in 1892 in Jaffa and mentions the establishment of a Sidonian temple in the city. To these should be added the discovery of a part of the wall of the Sidonian fortress uncovered in excavations in Jaffa in 1955. The Hellenistic Period

After the Macedonian conquest and the death of Alexander the Great, Jaffa passed from one military commander to another until finally, in about 301 B.C.E., it fell, together with the rest of the country, to the Ptolemaic governors of Egypt.

Jaffa quickly became a Greek city and its name changed to Ioppe (Ἰόππη), which is a Greek-sounding name. From the period of the Ptolemaic dynasty, which lasted a few hundred years, it is known that coins were minted in Jaffa during the reign of Ptolemy II and III bearing the name Ioppe. Another source of information on Jaffa in this period is the *Zeno Papyri (mid-third century B.C.E.). In the excavations of Jaffa in 1961, a cave of tombs built of hewn-out stones and part of a dedicatory inscription in Greek that mentions the name of Ptolemy Philopater (the IV), from the end of the third century B.C.E., were found. At the beginning of the second century B.C.E. Erez Israel, and Jaffa together with it, was conquered by Antiochus III of the Seleucid dynasty.

The Roman Period

In the time of the Hasmonean revolt, Judah Maccabee attacked the city and burned the harbor in retaliation against its foreign inhabitants for drowning about 200 Jaffa Jews (1 Macc. 12:3–7). Afterward, his brother Jonathan conquered the city, and following his death, Simon finally annexed it to the Jewish state, after its military governor, Jonathan b. Absalom, drove the foreigners out of the city: "And he turned aside to Joppa, and took possession of it for he had heard that they were minded to deliver the stronghold unto the men of Demetrius; and he placed a garrison there to keep it" (1 Macc. 12:34). During the reign of Jonathan the Hasmonean, the Syrians again made repeated attempts to regain the income from Jaffa, but with the aid and political support of the Roman senate the city remained in Jewish hands (Jos., Ant., 13:261). Excavations have uncovered a portion of the fortress wall from the Hasmonean period that was built on the remains of an older fortress, which belongs to the end of the third century, or the beginning of the second century.

With Pompey's conquest of Erez Israel (66 B.C.E.), Jaffa was separated from the Jewish state and became, as did the other coastal cities, a free city in the district given over to the authority of the Syrian commissioner. Only in 47 did Julius Caesar return the city to Judea (Jos., Ant., 14:202, 205). In 38 Herod captured Jaffa on his way to Jerusalem to establish his reign there. Afterward he built the harbor of Caesarea, which was a strong competitor to Jaffa. During the reign of Antony in the east, Jaffa, together with the other coastal cities, was given to Cleopatra, the queen of Egypt; only in the year 30 was it returned to Herod by Augustus Caesar. A part of a house that was uncovered in the excavations belongs to the Augustan period. The structure included an entrance yard, a water hole, and a wall that was part of a room with an entrance. Jaffa is mentioned in the Christian chronicles in the context of the stories of Tabitha (Dorcas) and Simon the tanner. The New Testament contains the story of the miracle of Tabitha, who was resurrected by Peter (Acts 9:36–42). While in Jaffa, Peter stayed in the house of Simon the tanner and on his roof dreamed the dream that has been interpreted to allow Christians to eat the flesh of unclean animals. It was also there that he heard the voice calling him to convert pagans,

as well as Jews, to Christianity (Acts 10:9ff.). With the outbreak of war with the Romans, Cestius Gallus destroyed Jaffa, but the city was quickly rebuilt by the Jews. They stationed a fleet of ships in the sea that attacked the ships passing on the maritime route from Egypt to Syria. Prior to his arrival in Jerusalem, *Vespasian sent foot soldiers and cavalry to Jaffa, under cover of darkness, and they surprised the defenders of the city. The startled inhabitants quickly fled the city to take shelter in the boats, but, to add to the tragedy, a stormy wind broke early in the morning and dashed the boats and those in them against the rocks of the shore. The survivors were massacred by the Romans, who were waiting on the shore (Jos., Wars, 3:414–431). Vespasian then destroyed the city and built a fort on its ruins that contained a guard from the Tenth Legion. In the excavations, a piece of a tile was discovered with the seal of the Tenth Roman Legion on it.

Jaffa was rebuilt, it appears, still during the reign of Vespasian, who turned it into an autonomous city by the name of Flavia Ioppe. This is known from the coins that were minted during the reign of Heliogabalus (218–222), on which this name is mentioned. Three identical inscriptions engraved on a stone uncovered during the excavations tell of the Jewish community in Jaffa during the period between the destruction of the Second Temple and the Bar Kokhba revolt. The inscriptions contain the name “Yehudah,” who was the inspector of weights and measures in the Jaffa market during the reign of Trajan. Another discovery is the floor of a cellar that belongs to the period of Trajan; above it were found many clay jars and bronze and silver coins. The Mishnah and Talmud, as well as tombstones discovered in the cemetery of Jaffa Jews in Abu-Kabir, are sources of information on Jewish Jaffa during the second to fourth centuries C.E. Among the scholars of Jaffa mentioned in the Talmud are R. Ada (Meg. 16b; Ta’an. 16b), R. Naḥman (Lev. R. 6:5), R. Yudan (Lev. R. 20:10), and others. From the tombstones it is possible to learn of the occupations and origins of the dead. It becomes clear that the Jews of Jaffa during this period lived in neighborhoods according to their country of origin. Jews from Alexandria, Cyrenaica, Cappadocia, and other places are mentioned on the stones. Among the professions were trades in cloth, perfumes, rags, fishing, etc. Jerome, who visited Jaffa in 382, expressed his surprise at the sight of “the harbor of fleeing Jonah”; he also tells that he saw the rock on which Andromeda was bound.

From this period until the Arab conquest (see below), the information about Jaffa becomes more scarce. Cyril the Holy, from Alexandria, who wrote during the first half of the fifth century, described Jaffa as an important commercial center and a port of exit for all travelers from Judea to the countries of the Mediterranean. During this period, it seems that after its Christian population grew, Jaffa became the seat of the episcopate, and thus the name of the bishop of Jaffa, Phidus, is mentioned in the list of the church council that was convened in 431 in Ephesus. The name of another bishop, Elias, who participated in the council that convened in Jerusalem in 536, is also mentioned.

Arab Period (636–1099)

In 636 Jaffa fell to the Muslims. While Ramleh flourished as the capital of the Palestine region, the importance of the port of Jaffa increased; it took over trade from Caesarea. Jaffa served as a storage center for merchant shipping and as the port of entry for Christian and Jewish pilgrims. Ahmad ibn Ṭūlūn, the ruler of Egypt and Palestine, fortified Jaffa in 878. However, its security and trade were endangered from time to time by riots and anarchy. In 1050 Ibn Baṭlān, an Arab geographer, wrote of the town “[Jaffa is] a town of starvation. There is not even a teacher for small children in it.” In the early tenth century R. Joseph, the father of Saadia Gaon, died there. A Hebrew letter dated 1071, which was found in the Cairo **Genizah*, reports the confiscation of merchandise in the port of Jaffa. A bill of divorce (*get*) written in Jaffa in 1077 proves that it had a rabbinical court at the period.

Crusader Period (1099–1268)

Jaffa was conquered by the Crusaders in the summer of 1099, prior to their conquest of Jerusalem. Genoese ships, which anchored in Jaffa harbor, brought supplies to the besiegers of Jerusalem. Jaffa also served as a base and starting point for the Crusader conquest of other coastal towns as far north as Beirut. In 1102 twenty pilgrim ships carrying Crusaders sank in the harbor during a storm. Thus “to go to Jaffa” in German acquired the connotation of “to go to Hell.” In the 12th century during the first four Crusades, Jaffa was the main gateway to Jerusalem. It was the capital of the feudal kingdom of Jerusalem, which from 1157 on included Ashkelon and its surroundings. The county of Jaffa had the right to mint its own coinage. The inhabitants were a mixture of European and Oriental Christians, who mingled within a French-speaking “Palestinian nation.” In 1170 Benjamin of Tudela reported that he found only one Jew in the town. In 1196 the Ayyubid ruler al-Malik al-Adil, the brother of Saladin, conquered Jaffa and destroyed it.

In the 13th century – during the latter half of the Crusades period – Jaffa failed to retain the importance it had in the preceding period; trade and shipping moved to Acre. Nonetheless, its strategic importance remained, as is evident from the fact that both Frederick II, the Holy Roman Emperor, who led the Sixth Crusade (1228), and King Louis IX of France, who led the Seventh Crusade (1248), fortified the town. During this second period the Crusaders acted with tolerance toward the Jews. The small Jewish community in Jaffa was comprised of craftsmen, potters, and glaziers (many of whom went to Europe). Their influence is noticeable in the contemporary pottery of southern France. Jaffa passed into the hands of the Khuwarizm conquerors in 1244 and to the Mongols in 1260; in 1268 it was finally conquered by the Mamluk sultan Baybars, who razed it to the ground and massacred its population.

Mamluk Period (1268–1517)

At the beginning of the *Mamluk period Jaffa was rebuilt and its port resumed operations, but in the mid-14th century, when European crusaders renewed their plans and attempts at con-

quest, the Mamluks destroyed the port of Jaffa and the ports of other coastal towns in order to prevent invasion by Christian warships. Jaffa was abandoned, except for occasional visits by merchant ships and pilgrims. The guards who watched over the ruins of the town would light beacons in order to warn Ramleh of the approach of a ship, but until permission to disembark was given by the authorities in Ramleh, *Gaza, or even *Cairo, pilgrims had to wait for many days on board ship, and afterward in the dark and stinking cellars of the ruins, humiliated by blows and extortion. Many died on board ship, in Jaffa, and on the way to Jerusalem. For Jews immigration via Jaffa was even more dangerous, especially in the 15th century, as a result of the decrees issued by the pope and the Venetian Republic against carrying Jews to the Holy Land. Only when the decree was revoked in 1488 did Jews openly arrive in Erez Israel via Jaffa.

The Ottoman Period (1517–1831)

From the beginning of the 16th century until the mid-17th century, there was no change in the status of Jaffa. In the mid-17th century the Turks added a tower to the two existing towers, and increased the watch over the town. In 1641 the Franciscan friars, who looked after Catholic pilgrims, set up a small monastery with a church. Inhabitants and merchants of Ramleh began to gather in the town. At first, tents and booths were set up in Jaffa, but only at the end of the century were houses built there. The import and export trade gradually increased. In the early 18th century Jaffa was the manufacturing and export center of the “Jaffa soap” industry, and apparently, the first oranges in Palestine were grown in Jaffa. A quay was added to the port for the disembarkation of passengers, and hostleries and houses for trading agents and European consuls were built. Individual Jews were attracted to the town.

In 1769 Jaffa was destroyed by Uthman Pasha, the governor of *Damascus, because its inhabitants refused to be compelled into providing money for quelling the revolt of Zahir al-Amr the governor of Acre. In 1775 the town was besieged by Muhammad Bey Abu Dhahab of Egypt, who at first had assisted Zahir al-Amr but later fought for the sultan; he massacred many of Jaffa’s inhabitants, among them Jews. Abu Dhahab built a monument to his victory from decapitated heads, for which the site of the monument received the name Tell al-Ruus (“hill of the heads”). In 1799 Napoleon besieged the town and conquered it in a storm.

[Joseph Braslavi (Braslavski)]

Modern Period

Jaffa suffered severely under the siege, but after it had been conquered by Napoleon’s army, it recovered relatively quickly and was rebuilt by the local governor, Muhammad Abu Nabut. On his initiative, the well-planned markets of the town, as well as its central mosque (near the present-day Clocktower Square) and the water fountain on the road leading to Jerusalem (which bears his name), were built. The city wall, with its towers, and the inner citadel on top of Jaffa Hill by the sea were renewed. Hewn stones were shipped by sea from ru-

ined ancient cities on the coast, mainly from Caesarea, for these structures.

In November 1831 Jaffa was occupied by the army of Ibrahim Pasha, stepson of the Turkish governor of Egypt, Muḥammad ‘Alī, who rebelled against the central Turkish government. During Ibrahim Pasha’s eight-year rule, Jaffa progressed due to the better security situation, the improvement in the status of non-Muslim residents, and the removal of obstacles in the way of pilgrims reaching the town’s port on their way to Jerusalem. Immigrants from Egypt established agricultural settlements in the vicinity, where 50 years later citrus groves were planted and were later integrated in the boundaries of either Jaffa or Tel Aviv.

After the country returned to Ottoman rule, Jaffa’s growth continued slowly. Experiments in growing mulberry trees near the town to develop the silk industry were unsuccessful, but the port of Jaffa began to be visited by steamships and, beginning in the 1850s, was included in the regular shipping lines of companies from Marseilles, Trieste, and, later, Odessa. With the opening of the Suez Canal, it also came into the scope of oceangoing vessels. In about 1865 the pace of the town’s and port’s progress quickened: the city was connected to the telegraph network; the harbor jetty and other port installations were improved; and a lighthouse was built. The harbor entrance between the shore reefs was broadened, and a second gate was opened in the city wall. In the 1880s, these walls were entirely razed and new quarters were erected beyond Jaffa Hill. The construction of the road to Jerusalem and the wealth which came to the city with Jewish immigration and settlement; the expansion of Jerusalem; and the planting of citrus groves in the vicinity all enlivened the city’s maritime commerce and contributed to its progress. Another factor was the railroad from Jaffa to Jerusalem, built in 1892, which served pilgrims and tourists. Whereas irrigated orchards could hardly be expanded before, because animal-driven well pumps could not reach deeper groundwater reserves, this became possible from 1898 onward, when small kerosene pumps were introduced. Changes took place in Jaffa’s sea trade in the 50 years preceding World War I. Exports of grains and olive oil nearly ceased, but more sesame and sesame oil, watermelons, and particularly citrus fruit and soap were exported. Imports began to exceed exports in volume, as new products – petrol, building wood, cement, paints, caustic soda (as a raw material for soap production), European flour and machines – arrived. In 1885 (the first year for which reliable figures are available) goods valued at £132,579 were exported through Jaffa port, and imports amounted to £287,740. In 1913 exports came to £745,413, and imports to £1,312,695: citrus fruit (with 1,400,000 cases worth £297,000) and soap (6,250 tons worth £200,000) came first.

In 1852 a small group of Americans founded in Jaffa a small colony they called “Mount Hope,” which lasted until 1858. Another unsuccessful attempt at agricultural settlement was a “model farm,” which A. Isaacs, a Jewish convert to Christianity, sought to establish with the intention to do missionary

work. A second attempt by Americans to settle near the city in 1866 was equally unsuccessful. In their stead came members of the German Templar community, who took over the Americans' huts, later built their own quarter (Jaffa's "German Quarter"), and became an important factor in the city's progress. They also established the agricultural colony Saron (today the Tel Aviv "Kiryah" of government buildings) and another small urban quarter named Valhalla. All these colonies were abandoned when German males were detained by the British authorities at the beginning of World War II.

Arabs, both from Palestine and the neighboring countries, particularly Egypt, settled in Jaffa throughout the 19th and beginning of the 20th century, causing the city's population to grow from 2,500 (at most) in the early 19th century to 5,000 in the 1850s and to nearly 40,000 (with suburbs such as Tel Aviv included) in 1914. World War I brought numerous difficulties, as the port was closed, the railway to Lydda was dismantled, the town was kept under a blackout, and military objects underwent shelling. Economic life was paralyzed, and citizens were mobilized for the Turkish army. These events were followed by hunger, and a considerable part of the inhabitants abandoned the city. On Nov. 16, 1917, Jaffa was occupied by the British and for one month found itself in the front line, until the Allied armies crossed the Yarkon River and advanced north.

Under the British Mandate, Jaffa recovered, expanded, and developed. Excluding Tel Aviv, its population numbered 32,524 in 1922, 55,346 in 1931, and nearly 100,000 in the beginning of 1948. In the latter year, 70,000 were non-Jews, making Jaffa the largest Arab city in the country. Many workers were Arab immigrants coming from near and far who settled in villages of the vicinity, particularly in Salameh. Modern industry became an important foundation of Jaffa's economy, with many enterprises established by Jews and by the German Wagner, while traditional branches (olive-oil presses, soap factories) declined. Another important economic asset was the port, where modern installations, e.g., a boat anchorage protected by a breakwater dam, extended quays, and an area for wharfs and services were added in 1934–35. In 1935 608,000 tons of goods passed through Jaffa port. They amounted to LP 10,000,000, of which LP 2,300,000 were export goods. The construction of Haifa port at that time did not reduce the trade of Jaffa port, where export of citrus fruit was of great importance. The Arab riots that spread from Jaffa on April 19, 1936, and the general strike proclaimed by the Arab Higher Committee, however, paralyzed the port. When Tel Aviv's port was opened soon afterward, the port of Jaffa no longer maintained its former standing; it was closed for security reasons during World War II and could hardly recover in the years 1946–47.

The riots that broke out immediately after the UN decision to partition Palestine (Nov. 29, 1947) and soon developed into full-scale war brought large units of "volunteers" from other Arab countries to Jaffa. They established themselves as the rulers of the city and caused much suffering to its inhabitants. In the first stages of the war, the British au-

thorities protected the city and prevented Jewish forces from occupying parts of it. On May 13, 1948, the city fell to Jewish forces, and most of its inhabitants abandoned it by sea. Large numbers of Jewish immigrants were housed in considerable parts of Jaffa, and on Oct. 4, 1949, the government of Israel decided to amalgamate Tel Aviv with Jaffa, which one year later were given the name Tel Aviv-Jaffa. For its subsequent history, see *Tel Aviv.

JEWS IN JAFFA. After North African Jews had settled in the town, the Jewish community slowly grew to number about 400 members in 1856. The Jerusalem sages gave Rabbi Judah Levy from Dubrovnik (Ragusa) the task of receiving Jewish pilgrims in Jaffa port and of aiding them on their way to Jerusalem. First beginnings in agriculture were the citrus grove of Moses Montefiore and the agricultural school of Mikveh Israel, which entertained close ties with the Jaffa community. The size of the community increased considerably with these enterprises and during the period of the First and Second Aliyah Jaffa became the center of the "new *yishuv*." Together with the opening of industrial enterprises came the creation of the organizational framework of the community, which comprised both Ashkenazim and Sephardim. Health and cultural institutions were established: e.g., the Sha'arei Zion Hospital, schools of the Alliance Israélite Universelle, and of Hovevei Zion and the Herzlia Secondary School. In 1908 the Palestine office of the Zionist organization was opened in Jaffa under Arthur Ruppin. The wholly Jewish quarters that came into being, like Neveh Zedek, Neveh Shalom, etc., later became part of Tel Aviv. In 1905 there were 4,765 Jews in Jaffa, and in 1914 their number was estimated at 15,000. After World War I more Jewish suburbs were established within its municipal boundaries, with approximately 30,000 inhabitants in 1947. These quarters theoretically belonged to Jaffa and paid taxes to its municipality, but received all services (health, education, security) from Tel Aviv, where most of their breadwinners found employment. The inner parts of Jaffa, however, were gradually deserted by Jews, following the riots of 1921, 1929, and 1936–39, and were entirely abandoned at the end of 1947. Only after the State of Israel was founded did Jewish immigrants again settle in Jaffa.

JAFFA, German brothers who were early New Mexico settlers. HENRY N. JAFFA (1846–1901) went to the U.S. as a young man and moved out West after the Civil War, establishing stores in southern Colorado. In 1879 he opened a business in Las Vegas, New Mexico, which he extended to Albuquerque in 1882. When Albuquerque was incorporated in 1885, Jaffa became its first mayor. He organized New Mexico's first synagogue (1897) and participated in civic and fraternal affairs. NATHAN JAFFA (1863–1945) went to the U.S. from Germany in 1878, settling in Trinidad, Colorado. After brief periods in Las Vegas and Albuquerque, New Mexico (1899), Jaffa became cashier of the Bank of Roswell, NM, where he also led congregational life. From 1907 until New Mexico became a state in 1912 he was its territorial secretary by presidential appointment. Later, he served for 15 years as regent of the University of New Mexico, two years as mayor of Santa Fe, and four years as chief state tax commissioner. He became city clerk of Las Vegas, N.M. (1938) and was an active Mason.

[Edward L. Greenstein]

JAFFE, family of Hebrew printers in *Lublin in the 16th and 17th centuries. In 1557 KALONYMUS BEN MORDECAI JAFFE (d. c. 1603) was associated with *Eliezer b. Isaac and other printers in the production of a Pentateuch with *haftarot* and the Five Scrolls. Kalonymus was a second cousin of Mordecai *Jaffe, author of the *Levushim*, and married Hannah, the granddaughter of Ḥayyim *Schwartz, a well-known wandering printer. In 1559 she and her cousin Ḥayyim b. Isaac Schwarz obtained a printing privilege from Sigismund II, king of Poland. Kalonymus published two *maḥzor* editions, one in the German rite (1563), the other in the Polish (1568), and a Talmud edition (1559–77). When Eliezer b. Isaac and his son left Lublin for Constantinople in 1574, Kalonymus bought most of his type – Prague style borders and other decorations – and from then until his death he continued printing a great number and variety of works, apart from proceeding with the Talmud edition. He was soon assisted by his sons JOSEPH, ZEVI HIRSCH, and ḤAYYIM. In 1578 he obtained a new privilege from King Stephen Bathory; in 1590 he acquired new type borders and decorations. When the plague broke out in Lublin in 1592, the family and staff took refuge in nearby Bistrowitz, where they printed a Passover *Haggadah* in 1593. Kalonymus' son Zevi Hirsch took up the family trade in 1604. He too issued a Talmud edition (1611–39), Samuel Edels' novellae (1617–36), and a number of other important rabbinic and nonrabbinic works. A great fire, the Chmielnicki persecutions

(1648–49), and the Swedish War (1656) led to the suspension of printing activities, but in 1665 another Jaffe, SOLOMON ZALMAN (KALMANKES) of Turobin, a nephew of Kalonymus and husband of his daughter Sarah, who herself took an active part in the work, took over and continued printing, certainly until 1700, and possibly after that year. Solomon Zalman was in partnership with a certain Jacob b. Abraham and, after the latter's death, with his son Zevi.

BIBLIOGRAPHY: H.D. Friedberg, *Toledot ha-Defus ha-Ivri be-Polanyah* (1950), 45–60; A.M. Habermann, in: *KS*, 31 (1955/6), 483–500.

JAFFE, ABRAHAM B. (1924–), Hebrew literary critic and editor. Born in Beltsy, Bessarabia, he settled in Erez Israel in 1940 and from 1948 lived in Tel Aviv. His articles and literary studies appeared in the Hebrew press and in periodicals from 1943. Jaffe's major work is *Avraham Shlonsky ha-Meshorer u-Zemanno* (1966), a study of the life and work of the poet Abraham *Shlonsky. He also edited *Yalkut Eshel* (1967), an anthology of Shlonsky's literary essays. His other critical writings include *Shirah u-Mezi'ut* ("Poetry and Reality", 1951); *Charlie Chaplin* (1953, 1955); *Du-Si'ah Zarefati* ("French Dialogue", 1958), a work on modern French literature; *Sifrut ve-Ommanut* (1965), together with A. Ḥashavyah; and *Hemingway ve-"Ha-Zaken ve-ha-Yam"* ("Hemingway and "The Old Man and the Sea," 1966). He edited *Al Admat Besarabyah*, vol. 2 (1962), a collection of essays on Bessarabian Jewry, and a collection of essays on S. *Zemah (1966). From 1951, he was editor of the weekly literary supplement of the newspaper *Al ha-Mishmar*. He was also one of the editors of *Ommanut ha-Bamah be-Yisrael* ("Theater Arts in Israel," 1965). Among his other works are a memoir of Lea *Goldberg (*Pegishot im L. Goldberg*, 1984), a literary portrait of the poet Shlomo Tani (1994), essays on the modern story (*Makbilot ba-Sippur ha-Moderni*, 1973), and a book on literature and art in the early years of the city Tel Aviv (1980).

[Getzel Kressel]

JAFFE, BEZALEL (1868–1925), Zionist leader in Russia and in Erez Israel. The brother of Leib *Jaffe, he was a key figure in the Zionist movement in the area of his native Grodno. He was a member of *Benei Moshe, established a modernized *heder* in his home town, and was one of the organizers of the "Grodno Courses" for the training of Hebrew teachers (1907). Jaffe took part in the first Zionist Congresses, was active in the organization of the Zionist movement in Lithuania, and in the publication of Zionist literature in Hebrew, Yiddish, and Russian. In 1909 he went to Erez Israel and, upon the resignation of Meir *Dizengoff, was appointed director of the Geulah company for land purchase. Under his directorship (1910–25), this company was instrumental in extending the area of Tel Aviv and turning it into a city. He was one of the founders of Tel Aviv and a member of the town's first governing committee. Jaffe was also a member of the Va'ad Le'ummi during its early days

(1920–25). In 1912 Jaffe introduced the first modern irrigation into Petaḥ Tikvah, utilizing the waters of the Yarkon river. He was one of the few who fought to safeguard achievements of the *yishuv* during its harassment by the Turkish authorities in World War I. After 1918 he was among the organizers of the *yishuv*'s Provisional Committee and also served as president of the Jaffa-Tel Aviv Jewish community.

[Yehuda Slutsky]

JAFFE, ELI (1953–), Israeli conductor. Jaffe was born in Jerusalem and graduated from The Hebrew University and the Rubin Academy of Music, majoring in conducting, theory, and percussion. In 1977 he proceeded to the Royal Academy of Music in London, where he was awarded the Ernest Reed Prize for conducting in 1978. He conducted all of Israel's major orchestras as well as the London Royal Philharmonic, the Liege Philharmonic, the Baltimore Symphony, and the Prague Symphony Orchestra, which endowed him with the title, "Honorary Guest Conductor." He is artistic director of the Jerusalem School for Cantorial Art and of the Jerusalem Great Synagogue Choir, with which he has made numerous world tours. Jaffe published an encyclopedic instructional set for the entire annual cycle of Hebrew liturgy. He is also an accomplished composer. His first symphony was performed by the Israel Philharmonic, and his wind quintet was premiered by the orchestra's wind ensemble.

Jaffe conducts wearing a *kippah* (skullcap) and with his ritual fringes (*tzitzit*) protruding. His strict observance does not permit him to participate in competitions held on the Jewish Sabbath, and he does not conduct works with Christian liturgical connotations.

[Uri Toeplitz and Yohanan Boehm / Yulia Kreinin (2nd ed.)]

JAFFE, ISRAEL BEN AARON (c. 1640–after 1703), kabbalist. Born in Uman (Ukraine), he fled at the age of eight to Glusck (Belorussia) on the outbreak of the *Chmielnicki persecutions (1648). He studied with *Isaac b. Abraham at Posen (*Tiferet Yisrael*, Frankfurt on the Oder (1774), 40b) and afterward continued his studies together with his friends Aryeh Loeb Epstein and Jacob Ḥayyat (*ibid.*, 35a). Later he became rabbi at Shklov (Belorussia). Jaffe, who claimed to see heavenly visions, among which were revelations of the prophet Elijah, felt himself called upon to work for the messianic redemption. He appeared in numerous communities, in order to gain adherents for his kabbalistic theories and to scourge misdeeds. For the printing of his writings he went to Frankfurt on the Oder, where his work *Or Yisrael* (1702) was published (pt. 1: interpretations of the *Zohar; pt. 2: kabbalistic commentaries on *Orah Ḥayyim*; in 1702 with approbations by numerous contemporary authorities). The work roused angry feelings in rabbinic circles, since the author was suspected of Shabbatean leanings because of the repeated use of the word *zevi* (interpreted as referring to *Shabbetai Zevi) in his work.

In his apology, Jaffe attributes the incriminating passages to an alien insertion; by this he contradicts the testimony of his son Aaron, who had corrected the whole work. His grandson had this apology printed at the beginning of his excerpt from his grandfather's work *Tiferet Yisrael*, in order to clear him of the accusation of Shabbateanism. Although the rabbinic authorities had, in their approval to this work, confirmed the groundlessness of these accusations against Jaffe, the suspicion was nevertheless upheld by Jacob *Emden (cf. *Torat ha-Kena'ot* (Lemberg, 1870), 145, first printed Amsterdam, 1752, and *Shevirat Luḥot ha-Aven* (Zolkiew, 1756), 53b). On the other hand, *David of Makow, who was close to the circle of *Elijah Gaon of Vilna, took Jaffe's part in his anti-ḥasidic pamphlet *Zemir Arizim*.

The following works of Jaffe remain unpublished: *Beit Yisrael*, additions to the Talmud; commentary on the *haftarot* and the Five Scrolls; *Yefeh Einayim*; *Milhamot Adonai*; and *Tiferet Yisrael*. Excerpts from the last three works were published by his grandson and namesake (who had the appellation *Zuta* to differentiate him from his grandfather) under the title *Tiferet Yisrael* (Frankfurt on the Oder, 1774); together with them are printed *Kishut Tov* by Moses b. Menahem and an excerpt from the works of Israel Zuta himself.

[Samuel Abba Horodezky]

JAFFE, LEIB (1876–1948), Russian Zionist leader, writer, and poet. Born in Grodno, a grandson of R. Mordecai-Gimpel *Jaffe, he participated in the First Zionist Congress and in those following it and was one of the foremost Zionist propagandists in speeches, discussions, articles, and poems in both Russian and Yiddish. Jaffe was a member of the *Democratic Fraction of the Zionist movement and among the opponents of the *Uganda Scheme. At the *Helsingfors Conference, 1906, he was elected to the Zionist central committee in Russia. For a time he edited the Zionist periodicals in Russia, *Dos Yidishe Folk* and *Haolam*, in which he published articles on current and Zionist affairs. At the Eighth Zionist Congress (1907), Jaffe was elected to the Zionist General Council and he directed the regional Zionist committee for the five provinces of Lithuania. During World War I he was active on behalf of the Jewish Society for the Help of War Refugees (УЕКОРО).

In 1915 Jaffe was called to Moscow to edit the monthly of the Zionist Organization, *Yevreyskaya Zhizn*. During the brief period of the February Revolution in Russia, he was at the center of Zionist propagandist and administrative work. With the consolidation of the Soviet regime, Jaffe returned to Lithuania, where he was elected president of the Zionist Organization and edited its newspaper, *Letste Naves* (later *Di Yidishe Tsaytung*). In 1920 he went to Erez Israel, where he was elected to the Va'ad ha-Zirim (Zionist Commission). He was an editor of the newspaper *Haarets* (1920–21) and editor in chief 1921–22. In 1923 Jaffe joined the *Keren Hayesod and in

1926, together with A. *Hantke, became its co-director. Until his death he traveled widely in all countries of the Diaspora on public relations missions and established contacts with intellectual circles. He was killed on March 11, 1948, when a mine planted by an Arab terrorist exploded in the courtyard of the *Jewish Agency compound.

Jaffe's literary work was devoted to the renaissance of the Jewish people and to the love of Erez Israel. He published three collections of Jewish-Zionist literature in Russian and also two Russian anthologies of Hebrew poetry (together with the poet V. *Khodasevich, and with a foreword by M. *Gershenson), and a selection of world poetry on Jewish-national subjects. His own poetry found its best expression in Russian. In 1892 his first poem appeared in the Russian Jewish *Voskhod*. His first collection of poems, *Gryadushchee* ("The Future") appeared in Grodno in 1902 and also contains translations of Hebrew poetry. His second collection *Ogni na vyso-takh* ("Fires on the Heights," 1936), appeared in Riga. Jaffe also wrote poems in Yiddish (collected in *Heymats Klängen*, 1925)

and in Hebrew. A selection of his articles appeared in *Tekufot* (1948). His son Benjamin (d. 1986) edited *Ketavim, Iggerot ve-Yomanim* (1964), and *Bi-Sheliḥut Am* (1968; letters and documents 1892–1948). Jaffe edited *Sefer ha-Congress* (the book of the First Zionist Congress, 1923).

[Yehuda Slutsky and Melech Ravitch]

JAFFE, LEONARD (1926–), U.S. space program engineer. Born in Cleveland, Ohio, Jaffe served in the U.S. Navy (1944–46). He joined what later became the National Aeronautics and Space Administration as research engineer (1948), was the chief of the Data Systems Branch (1955), chief of communications satellites (1959), and director of the communication and navigation satellite programs of the Office of Space Science and Applications Satellites from 1963. When Jaffe was Deputy Associate Administrator for Space Applications, his office was responsible for all NASA Space Applications Satellite Projects.

In 1979 he headed the technical team of the President's Commission on the Accident at Three Mile Island. In 1981 he joined the Computer Sciences Corp. as vice president for product management and quality assurance and later became president of their Systems Division. From 1994 to 2001 he was president and chief operating officer of the Earth Sciences Corp. He was president of the International Astronautics Federation in 1975 and 1976 and a fellow of the Institute of Electrical and Electronic Engineers (IEEE), the American Institute of Aeronautics and Astronautics (AIAA), the American Astronautical Society (AAS), and the Society of Space Professionals International (SSPI). He received numerous awards from these organizations as well as from the U.S. government.

[Bracha Rager (2nd ed.)]

JAFFE, MAURICE ABRAHAM (1917–1985), Israeli communal worker. Jaffe was born in Manchester and studied at the local yeshivah and at Manchester University, where he graduated in law (LL.B.) with honors in Public International Law. After serving as rabbi of the North Manchester Synagogue, he served as chaplain in the British army during World War II, serving inter alia as Jewish chaplain to the Allied Land Forces in Southeast Asia (1944) and senior Jewish chaplain to the British Forces in Europe (1946).

Jaffe immigrated to Israel in 1948 where he was appointed director of overseas relations of the World Mizrahi in 1949.

In 1952 he was appointed honorary executive director of the Hechal Shlomo Building Committee and became at present its executive chairman. Jaffe was chairman of the Building Committee of the Jerusalem Great Synagogue. In July 1977 he became a member of the Board of Governors of the World Jewish Congress and of the Executive of the World Zionist Organization. He received his Ph.D. from the Midwestern University, Indianapolis in 1969.

JAFFE, MEIR OF ULM (15th century), German scribe and bookbinder. Little is known about his life except that his father was probably Israel b. Meir of Heidelberg, the scribe of the Darmstadt **Haggadah*. Meir Jaffe wrote the Cincinnati *Haggadah* toward the end of the 15th century. He was also a skilled bookbinder, as a decree of the Nuremberg Council in 1468 invited "*Meyerlein, Juden von Ulm*" to come to Nuremberg to bind a Pentateuch. Signed in Hebrew "Meir Jaffe, the designer," this hand-tooled binding is in the Bavarian State Library (Cod. Hebr. 212). No other works can be ascribed to him with certainty. The itinerant scribe and bookbinder Israel son of "Mohar" of Brandenburg, who was involved in the Trent Ritual Murder trial of 1475, may have been Meir Jaffe's son.

[Joseph Gutmann]

JAFFE, MORDECAI BEN ABRAHAM (c. 1535–1612), talmudist, kabbalist, and communal leader. Born in Prague, Jaffe was sent as a boy to Poland to study under Solomon *Luria

and Moses *Isserles. There he devoted himself also to the study of astronomy and philosophy (apparently at the instance of Isserles). At the same time he studied Kabbalah under Mattathias b. Solomon Delacrut. After a few years he returned to Prague, where in 1553 he was appointed head of the yeshivah. Very soon he discovered that the students were not interested in mere understanding of the Talmud but preferred "*pilpul*" and "were turning the word of the living God into false, corrupt, and evil words" (Preface to his *Levush Malkhut*). Jaffe chose therefore "to minimize the time spent with these students" and applied himself to writing constructive books.

At that time Joseph *Caro's *Beit Yosef* appeared "and it was a cause for rejoicing by all who pursue the study of Torah," but Jaffe found it overly long and so began to write his *Levush Malkhut*. In this he presented the laws in abbreviated form, taking as a basis the principle followed in the *Beit Yosef* of reliance on the three "pillars of authority" (*Alfasi, *Maimonides, and *Asher b. Jehiel). While he was engaged in this work, the Jews were expelled from Bohemia in 1561. Jaffe left Prague for Italy, settling in Venice, where he resumed his writing. The appearance of Caro's Shulhan Arukh, a digest of his *Beit Yosef*, led Jaffe to consider whether he should continue writing his own work. On reflection, he concluded that there was room for it since it would contain "those laws observed by the Ashkenazi Jews of Bohemia." But word reached him that Moses Isserles "had been spurred in the same direction," and consequently he put aside his work. "Alone in a strange land without any of the friends or pupils I had in my homeland," he decided to set down in writing interpretations that he had acquired in his youth of the *Guide of the Perplexed* and the "Treatise on the Laws of the Jewish Calendar" by Maimonides and the kabbalistic Bible commentary of Menahem *Recanati.

After a stay of over ten years, Jaffe left Italy for Poland – at that time the center of Jewish learning in the Diaspora. There he was appointed *av bet din* and head of the yeshivah of Grodno in Lithuania. Later he was appointed to a similar position in Lublin, and subsequently moved to Kremeniec. In Poland, Jaffe was very active in the Council of the Four Lands, being one of the chief signatories of some of its most important *takkanot*. It seems that his many activities were motivated by his high sense of responsibility. In 1592 he returned to his birthplace, Prague, and became *av bet din* in succession to *Judah Loew b. Bezalel (the Maharal) when the latter was appointed to Posen. In 1599 Jaffe switched posts with Loew, who returned to Prague. Jaffe then remained in Posen until his death.

When the critical and supplementary notes of Isserles to the Shulhan Arukh (called *Mappah*) appeared in Cracow in 1578, Jaffe felt that Isserles had been too brief as had Caro in the Shulhan Arukh, and decided to resume his original work, "that will be midway between the two extremes: the lengthy *Beit Yosef* of Caro on the one hand, and on the other Caro's Shulhan Arukh together with the *Mappah* of Isserles, which is too brief." In all, Jaffe worked on this book almost 50 years. It contains ten "attires" (*levushim*). The first five are devoted

to the laws expounded in the *Beit Yosef*; the sixth, *Ha-Orah* is an elucidation of Rashi's biblical commentary; the seventh, *Simḥah ve-Sason*, contains sermons for holidays and weddings; the eighth, *Pinnat Yikrat*, is a commentary on the *Guide of the Perplexed*; the ninth, *Eder Yakar*, is a commentary on the laws of the Jewish calendar according to Maimonides and an additional commentary on Abraham b. Ḥiyya's geographical-astronomical *Ẓurat ha-Areẓ*; the last, *Even Yikrat*, is on Menahem Recanati's commentary on the Pentateuch. The last three "attires" Jaffe also termed collectively "rabbinic robes," considering that these should be learned by "every student in that order – philosophy, astronomy, and Kabbalah." Coming from a leader of 16th-century Polish and Lithuanian Jewry, these words attest to the influence of the Renaissance on Jewish scholars of that time. Jaffe regarded Kabbalah as the "crowning jewel of spirituality"; he also introduced it into the halakhic parts of the "attires" (e.g., *Levush Hur.*, 651:11). He was at pains, however, to point out that such confirmation of the *halakhah* from Kabbalah was not authoritative (*ibid.*, 668:1).

The *Levushim* were published between 1590 and 1604 at various presses in Lublin, Prague, and Cracow. On their appearance, they drew criticism from almost every rabbinic authority. On the other hand, Elijah Shapiro, the author of *Eliyahu Zuta* (the commentary on the first *Levush*, Prague, end of 17th century, Preface), speaks of it in the most glowing terms and testifies to its widespread acceptance.

[Ephraim Kupfer]

JAFFE, MORDECAI-GIMPEL (1820–1891), rabbi, member of the *Ḥibbat Zion movement. Born in Utyana, Kovno district, Jaffe studied at the Volozhin yeshivah and became well known for his religious scholarship and his Hebrew and general education, the latter acquired by his own efforts. When Moses *Montefiore visited Russia in 1846, Jaffe headed a delegation to present him with a memorandum on the economic situation of the Jews of Derechin, where Jaffe served as rabbi. In the memorandum he proposed that Montefiore try to influence the Russian government to agree to the following suggestions: allotting land to Jews for farming, permitting Jews to acquire land and to settle in towns outside the *Pale of Settlement, rescinding the expulsion order to Jews settled in villages among Christian peasants, restoring the right of Jews to settle their disputes in Jewish courts, etc.

In 1855, Jaffe was appointed rabbi in the small town of Ruzhany in the Grodno district, and he remained at his post there for over 30 years. He opposed any ideas of religious reform, such as those of Moses Leib *Lilienblum. Jaffe supported the activities of the Ḥevrat Yishuv Erez Israel (Central Committee for Jewish Colonization in Palestine), founded by Zevi

Hirsch *Kalischer, and established a society of this kind in his community. He also joined the Ḥibbat Zion movement upon its establishment. When Baron Edmond de *Rothschild, urged by Samuel *Mohilewer, agreed to found an agricultural settlement in Erez Israel with farmers from Russia, Jaffe aided in the *aliyah* of Jewish farmers from a village near Ruzhany.

At the end of 1888, he went to Erez Israel, and after a few months in Jerusalem settled in *Yehud, near Petaḥ Tikvah, where he headed a yeshivah with eight students. During the *shemittah* controversy (1889), Jaffe demanded strict compliance with the laws of the Torah. Of his numerous writings, only his comments to the Midrash on Psalms appeared in his lifetime (1865). After his death, his son published some of his works, including the book *Zikhronot Mordekhai* (1923), in which his letters, memoranda, precepts to his sons, and his will were incorporated.

[Israel Klausner]

JAFFE, SIR OTTO (1846–1929), Irish industrialist and communal leader. Born in Hamburg, Germany, Otto Jaffe was a descendant of Mordecai b. Abraham *Jaffe. He was taken as a child to Belfast, where his father, Daniel Joseph Jaffe (1809–1871), founder of the Belfast Jewish community, established a linen business of considerable size. Otto Jaffe extended the firm, making it one of the chief industrial concerns in Northern Ireland and the largest linen exporter to the continent of Europe. In 1899 and 1904 he was lord mayor of Belfast and in 1901 was high sheriff of the city. He received a knighthood in 1900.

As president of the Belfast Hebrew congregation, Jaffe was instrumental in uniting the Russian immigrants and the German founder families into one community. He built a second synagogue for Belfast in 1904. Like his father before him, Jaffe made numerous benefactions to non-Jewish causes, notably to Belfast's Queen's University, and an elementary school was named after him. However, during World War I he was the object of considerable hostility because of his German origin, and he and his family left Ireland for England in 1916, never to return. His son, ARTHUR JAFFE (1880–1954), was an authority on international law and honorary secretary of the Grotius Society.

[Alexander Carlebach]

JAFFE, RONA (1932–2005), U.S. author. Born in Brooklyn and educated at Radcliffe College, Jaffe was 26 when her best-selling first novel, *The Best of Everything*, shocked many read-

ers with its sharp-edged portrayal of “girls brought up to fulfill the image of what boys wanted” and the “rat race” to get married. Jaffe was working as an associate editor at Fawcett Publishing in the 1950s when she chronicled the lives and tortured loves of five young working women in the typing pool at a large New York publishing house. Published in 1958 and made into a movie the following year starring Joan Crawford, Hope Lange, and Suzy Parker, the book and movie were popular successes. Notorious in its time for its candor about sex, the novel was widely regarded as a cultural marker, providing a template for a gossipy genre of confessional fiction about women.

The themes in the book, Jaffe said 50 years after its publication, continued to be relevant to women: trying to balance professional success and personal happiness; pursuing an often futile search for Mr. Right; making mistakes without looking back, and finding solace in friendships with other women. Jaffe wrote the tale of ambition and lust in five months and five days, basing it loosely on her experiences as a striving 25-year-old Brooklyn innocent bent on making her way in the New York publishing world. The title became a catch phrase. The book, though dated in the details, was reissued in 2005 at a time when the television series *Sex and the City* showed women in a different light, although some critics felt that the characters, who had a compulsion to have it all, had much in common.

Jaffe, who never married or had children, wrote 16 more novels and countless magazine articles about single working women. In 1995, she began the Rona Jaffe Foundation, which gave cash grants to young women writers. The awards were the only national literary prizes that supported female writers exclusively.

[Stewart Kampel (2nd ed.)]

JAFFEE, SAM (1891–1984), U.S. actor. Jaffe, born in New York, was originally a math teacher in the Bronx, New York. He began acting with the Washington Square players in 1915 and later played Jewish roles on Broadway in *The God of Vengeance* (1922), *The Main Line* (1924), *Izzy* (1925), *The Jazz Singer* (1925–28), and *The Gentle People* for the Group Theater (1939). Some of his other Broadway performances included *Mrs. Warren’s Profession* (1918), *Grand Hotel* (1930), *The Eternal Road* (1937), *A Doll’s House* (1937), *Café Crown* (1942), and *Mademoiselle Colombe* (1954).

He made his debut in Hollywood in the 1934 film *The Scarlet Empress*. Some of his other film work included *Lost Horizon* (1937), *Gunga Din* (1939), *Gentleman’s Agreement* (1947), *The Accused* (1949), *The Asphalt Jungle* (1950), *I Can Get It for You Wholesale* (1951), *The Day the Earth Stood Still* (1951), *Ben-Hur* (1959), *The Tell-Tale Heart* (1971), *Nothing Lasts Forever* (1984), and *On the Line* (1984).

Jaffe became widely known in the 1960s for his role as Dr. Zorba in the U.S. television series *Ben Casey* (1961–65). In fact, due perhaps to his unruly hair that made him look somewhat like Albert Einstein, Jaffe was often cast in the role of a doctor or professor on television and in the movies. Some of

his TV work included appearances on such shows as *The Defenders* (1962), *Tarzan* (1967), *Nanny and the Professor* (1970), *Enemies* (TV movie, 1971), *Alias Smith and Jones* (1972), *QB VII* (miniseries, 1974), *Medical Story* (1975), and *Gideon’s Trumpet* (TV movie, 1980).

In 1951, Jaffe was nominated for an Academy Award for Best Supporting Actor in *The Asphalt Jungle*, and in 1962 he was up for an Emmy for his performance in *Ben Casey*.

[Ruth Beloff (2nd ed.)]

JAFFEE, SAMUEL BEN ISAAC ASHKENAZI (d. late 16th century), commentator on the Midrash. Jaffe was rabbi of the Ashkenazi community of Constantinople. He studied under Joseph Leib. When Samuel reached an advanced age, his son Joseph was appointed to succeed him. Jaffe’s fame rests upon his comprehensive commentary to the whole of *Midrash Rabbah*, which reveals an extensive knowledge of the relevant literature.

His works are (1) *Yefeh Mareh* (Constantinople, 1587; Venice 1590), expositions of the *aggadot* of the Jerusalem Talmud. In the preface Jaffe explains that it was his aim to interpret the *aggadot* of the Jerusalem Talmud “because they are very similar to the *aggadot* of the *Midrash Rabbah* in style and in language”; (2) *Yefeh To’ar*, commentary to the *Midrash Rabbah*: Genesis (Venice, 1597–1606); Exodus (Venice, 1597); Leviticus (Constantinople, 1648; Wilmersdorf, 1714, with a preface by his grandson); (3) *Yefeh Einayim*, pt. 1 (Venice, 1631), homiletical discourses on the weekly portions of the law; (4) *Yefeh Anaf* (Frankfurt on the Oder, 1696), a commentary on *Ruth Rabbah*, *Esther Rabbah*, and *Lamentations Rabbah*; (5) *Yefeh Kol* (Smyrna, 1739), a commentary on the *Song of Songs Rabbah*; (6) *Tikkun Soferim* (Leghorn, 1789), glosses on the formulas of documents of Moses *Almosnino. His responsa, *Beit Din Yafeh*, are still in manuscript.

[Yehoshua Horowitz]

JAFFEE, IRVING W. (1906–1981), U.S. speed skater, winner of two official and one unofficial Olympic gold medals, and member of the United States Skating Hall of Fame and Speedskating Hall of Fame. Jaffee was born in New York City, the middle of three children, to an immigrant family that came to the U.S. from Russia in 1896. Jaffee’s father sold cotton goods from a pushcart, and Jaffee helped the modest family income by working as a newspaper delivery boy. He grew up in the Crotona Park section of the Bronx, the same neighborhood that spawned Hank *Greenberg, five years his junior, and Al *Schacht. Jaffee first became interested in speed skating at 14, cleaning the ice at the Gay Blades skating rink in midtown Manhattan because he could not afford the seventy-five cents admission. He entered the weekly speed races there and lost 22 in a row, as well as the Silver Skates competition in 1924 and

1925. Finally, in 1926 Jaffee won the Silver Skates two-mile senior championships, and the next year at Lake Placid he broke the world record for the five-mile event. He was at first denied certification for the Olympic competition in 1928, which he attributed to antisemitism. Jaffee placed fourth in the 5,000 m, the best finish ever recorded by an American at the distance. The following day, after placing seventh in the 1,500 m, Jaffee also entered the 10,000 m, beating Bernt Evensen, Norway's defending world champion. But after half a dozen races, the weather became warm melting the ice, and the remaining races were cancelled. The Norwegian referee ruled the competition no contest, a decision without precedent. His gold medal is not listed officially, but Jaffee is generally credited with winning it.

Four years later Jaffee was out of shape after taking off nine months to care for his gravely ill mother, but he qualified for the team on his final attempt. Some of his American teammates at Lake Placid made his life miserable, taunting him with antisemitic remarks, stealing his mattress and spilling water on it. When he tried to sleep at night, they shined a light in his eyes. Two days before the 5,000 m competition, a teammate goaded Jaffee into a fistfight, at the suggestion of Bill Taylor, the manager, who apparently thought he was going to take a beating. "But I had spent a lot of time around Lou Stillman's gym as a kid," Jaffee recalled, "and after two minutes I drew blood. Taylor stopped the fight immediately."

To make sure he got at least one solid night's sleep, Irving slept at the home of a friend the night before his first race. With the Winter Olympics being broadcast over radio for the first time, the U.S. audience heard Jaffee win the gold in the 5,000 m (9:40.8) and 10,000 m (19:13.6), the first American to sweep both events in one Olympics.

After a parade down Broadway, Jaffee retired from competitive skating, though he did break by five minutes a 30-year-old world record for a 25-mile marathon skate (1:26:01) on January 27, 1934, while working as the winter sports director at Grossinger's Resort in the Catskill Mountains. He also has helped train no fewer than 10 U.S. Olympic competitors.

Jaffee was elected to the U.S. Skating Hall of Fame in 1940, and the Speedskating Hall of Fame in 1967.

[Elli Wohlgernter (2nd ed.)]

JAFFE-MARGOLIOT, ISRAEL DAVID (c. 1802–1864), Hungarian rabbi. Born in Vagszered-Sered Nadvahom, Jaffe-Margoliot was a descendant of both Mordecai Jaffe, the author of *Levush*, and Judah Loew b. Bezalel (the Maharal) of Prague. His immediate ancestors, leading members of the community in Vienna, were wealthy and on several occasions advanced loans to the royal house. For many years he studied under Moses Sofer, and several of the latter's responsa are addressed to him. After his teacher's death, Jaffe-Margoliot corresponded on *halakhah* with S.B. *Sofer, author of the responsa work *Ketav Sofer*, as well as with Moses Schick and Judah Assad. While still young, he was appointed *dayyan* of the community of Senice-Szenc in Slovakia, and in 1832, rabbi and *av bet*

din of the Bazin-Pezinok community in the Bratislava (Pressburg) district. He took a prominent part in the opposition to the Reform movement which was beginning to spread at the time. At the disposal of those demanding Reform were several newspapers (*Ben-Chananja* of L. Loew, *Ha-Karmel* of Meiser) in which they propagated their views, while the Orthodox element was able to do so only from the synagogue pulpits. Jaffee's work *Meholat ha-Mahanayim* (1859) was the first attempt to explain the standpoint of the observant Jews in writing. It is written in an easy, clear style and made a great impression on the moderates in the Reform camp. The author argues that innovations like moving the reading desk from the center of the synagogue to the front of the ark, the prohibition of wearing the *kittel during the High Festival services, and introduction of the organ do not justify a schism in Judaism. Nevertheless, it was as a result of these arguments that he unwittingly originated the idea of the schism of Hungarian Jewry which took place a few years later. His other works, *Yappe'ah la-Kez* (2 vols. 1862–88) and *Har Tavor* (1861), are also on the subject of moving the reading desk. His first work, *Hazon la-Mo'ed* (1843), in which he discusses the *Hilkhot Kiddush ha-Hodesh* of Maimonides' *Mishneh Torah*, reveals his knowledge of astronomy and mathematics.

[Samuel Weingarten-Hakohen]

JAGEL, ABRAHAM (16th century), ethical writer. He was the author of *Gei Hizayon*, a narrative and ethical work written in 1587, the first part of which was printed in Alexandria in 1880. Copies of *Gei Hizayon*, either in manuscript or in printed form, are very rare; the complete work exists in manuscript form in the British Museum. The author has been identified with Abraham b. Hananiah *Jagel, but according to the data available this is not conclusive; from a passage at the beginning of *Gei Hizayon*, it seems that his father's name was Jacob and not Hananiah. Should this interpretation be correct, then this Abraham Jagel is not the same as the one who wrote *Lekah Tov*. The form and structure of *Gei Hizayon* was influenced by the tradition started by Dante and followed by a number of Italian Hebrew writers. The author describes a visit to the heavenly regions guided by the spirit of his dead father. The main theme of the work is ethical: Jagel uses various literary forms to try to guide his reader toward the right moral way of life. His philosophy, deeply influenced by Renaissance concepts including a belief in astrology and predestination, at the same time posits the premise that man's actions can be motivated by ethical and religious choice, and are not only determined by fate.

Besides its direct ethical teaching, the work is a composite of three distinct literary forms:

(1) It is an autobiography in the form of narration to his father in which he tells him of his life after the latter's death. Told in prison, where he was incarcerated because of financial troubles, Jagel describes the place in detail. *Gei Hizzayon* is the first autobiography in Hebrew literature of an ordinary man who relates his troubles without attaching any historical, literary, or religious importance to the events in his life. The story is told sporadically and in short spurts during the first half of the work.

(2) The author uses the novella form to relate the lives of the dead for moralistic purposes. During their sojourn in the heavenly regions, Jagel and his father meet many spirits, both good and evil, who tell them the story of their lives. These prose narratives clearly belong to the Italian novella genre of the time which Jagel adapted in the form of moralistic Jewish fables. He thus introduced some of the earliest Renaissance novellae into Hebrew literature.

(3) The vision as aesthetic vehicle forms an important part of the second half of the work. Jagel, not a kabbalist in the full sense of the word, was nevertheless familiar with kabbalistic ideas. The visions described are influenced by kabbalistic concepts, though the aesthetic aspect of the vision is stressed more than the kabbalistic theological element. The influence of Dante and his followers is most pronounced in this literary aspect of *Gei Hizzayon*.

BIBLIOGRAPHY: M. Steinschneider, in: *HB*, 4 (1861), 122 no. 74; C. Roth, *The Jews in the Renaissance* (1959); *Gei Hizzayon* (1887), preface by A.B. Mani.

[Joseph Dan]

JAGEL, ABRAHAM BEN ḤANANIAH DEI GALICCHI (16th–17th cent.), Italian philosopher and author. He lived in Ferrara, Venice, and Sassuolo, and apparently served as private tutor to wealthy Jewish families. He was well versed in secular studies and Christian literature. Of special importance was his work *Lekah Tov* (first published in Venice, 1595), which subsequently appeared in many editions and translations: Latin (London, 1679, Leipzig, 1687, Frankfurt on the Oder, 1691, Helmstedt, 1704); Yiddish (first published in Amsterdam, 1675, a freer translation in Vilna, 1884); and German (Leipzig, 1694, Brunswick, 1759). Written in the form of a dialogue between a rabbi and his disciple, and originally intended for young people, *Lekah Tov* is a book of religious guidance whose main subject is ways for attaining happiness in the hereafter. Jagel sets forth faith, hope, and love (charity) as the principal foundations of religious life: faith and hope are viewed by him (as in Christianity) as “a gift given by God to our souls”; love encompasses both love of God and love of man. Jagel discusses sin and repentance and enumerates seven “principal classes of sin” and, in contrast, seven major virtues. In its form and content, this work was influenced by the Christian catechisms of Jagel's time, and especially by the writings of the Jesuit scholar, Canisius. In his listing of principles of faith, Jagel followed *Maimonides, on whose works he leaned heavily. His views on the love of man are reported

in detail by his contemporary Isaiah Horowitz (1565, *Sha'ar ha-Otiyyot*, s.v. *Beri'ot*). Jagel also composed a kind of scientific encyclopedia, in four parts, entitled *Beit Ya'ar Levanon*, a few chapters of which have been published, but most of which is extant only in manuscript. Jagel's other writings deal with religious philosophy, astrology, religious tradition and law, and interpretations of astronomical works. Some modern scholars have identified Jagel with the apostate Camillo Jagel who, in 1611, was appointed by the heads of the Inquisition as book censor. This identification has been proved false since Abraham Jagel's writings, even after 1617, attest to his continuing adherence to Judaism.

JAGLOM, HENRY (1941–), U.S. director-actor. Born in London, England, Jaglom grew up in New York City. After graduating from the University of Pennsylvania in 1961, he studied acting, writing, and directing at the Actors' Studio and performed in off-Broadway theater. Jaglom moved to Hollywood in the late 1960s and made appearances on such television shows as *Gidget* and *The Flying Nun*. In 1967, he went to Israel to film a documentary on the Six-Day War, which never achieved wide release in the United States. Back in Hollywood, Jaglom secured his first feature-film role as a drug addict in *Psych-Out* (1968). Jaglom's work on his Six-Day War documentary earned him a spot as an editor for the Dennis Hopper film *Easy Rider* (1968), which then led to his directing *A Safe Place* (1971), a U.S. box-office disappointment that did well in Europe. In 1974, Jaglom was instrumental in bringing to the screen the Vietnam War documentary *Hearts and Minds*, which won an Oscar. With the money Jaglom earned from *Safe Place*, he was able to finance his next film, *Tracks* (1976), a tale of an Army sergeant haunted by Vietnam. In 1977, Jaglom married Patrice Townsend. Jaglom gradually began to adopt a cinema verité approach to filmmaking in which the actors under his direction were encouraged to improvise, and he increasingly drew from his own life for inspiration to make films. Following his divorce from Townsend in 1982, Jaglom directed *Always* (1985), which focused on the last days of their marriage. In *Someone to Love* (1987), the director interviews 60 friends to talk about why they are alone; the film features the final on-screen appearance of Orson Welles. Among later films, *Eating* (1991) explores women's issues with food; *Babyfever* (1994) looks at women and the biological clock; and *Going Shopping* (2005) examines women's consumerist urges.

[Adam Wills (2nd ed.)]

JAGLOM (née Horesh), RAYA (1919–), Zionist women's leader. Raya Jaglom was born in Bessarabia and in 1939 immi-

grated to Erez Israel, where she studied at The Hebrew University. After her marriage in the following year to Joseph Jaglom, an industrialist, she was joined by her parents and grandmother. She first became active in *WIZO in 1941, and apart from a period of 18 months in 1947–48 when she served in the *Haganah, she has devoted the whole of her activity to this organization, visiting almost every country in the world on its behalf, including the U.S.S.R. at the invitation of the Soviet Women's Committee in Moscow. In February 1971 she headed the WIZO delegation to the World Conference on Soviet Jewry held in Brussels. She was elected chairman of the World WIZO Executive in 1963 and president in 1970, and represented WIZO on the Executive of the *Jewish Agency from 1964. She served as WIZO president for 26 years, and subsequently as honorary president. During her presidency, WIZO lent its support to the weaker groups in society, such as children and the elderly. She and her husband established a fund for students at the Hebrew and Tel Aviv universities, a club for Israel Philharmonic musicians, and a synagogue at WIZO headquarters in Tel Aviv. In addition, Raya Jaglom held many other public offices, including membership on the Board of Governors of both the Hebrew and Tel Aviv universities, membership in the Executive of the Zionist Organization, and membership on the Board of Governors of the Jewish Agency. She was also a member of the international council of the *Israel Museum and the international board of Tel Aviv Museum.

JAHAZ, JAHAZA (Heb. יַהֲזָא, יַהֲזָה), city in Moab where Sihon the Amorite was decisively defeated by the Israelites (Num. 21:23; Deut. 2:32ff.; Judg. 11:20). Jahaz was included in the territory of the tribe of Reuben and was a levitical city of the family of Merar (Josh. 13:18; 1 Chron. 6:63). After being lost to Moab for a time, it was seized by Omri and later apparently by Ahab who fortified it. Mesha king of Moab recaptured the city and annexed it to Dibon (Mesha Stele, 18, 19, 20). From this time Jahaz remained a Moabite city and is mentioned as such in the Bible (Isa. 15:4; Jer. 48:34). It has been proposed to identify it with Khirbat Islandar (by Abel) or with several other sites in the vicinity of the Wadi al-Wāla, southeast of Heshbon.

[Michael Avi-Yonah]

JAHODA, MARIE (1907–2001), British social psychologist and activist. Jahoda was born in Vienna to Karl and Betty (Probst) Jahoda. Although the family could trace its Jewish roots to the 18th century, her parents, who were active social democrats, had assimilated into Austrian society and considered themselves to be without religious affiliation. Jahoda was briefly married to Paul Lazarsfeld, a young instructor at the Psychological Institute at the University of Vienna where she did her Ph.D. (they were divorced in 1934). Their only child, Lotte Lazarsfeld Bailyn, born in 1930, became a professor of management at the Massachusetts Institute of Technology.

Jahoda's first book, *Die Arbeitslosen von Marienthal* (*Marienthal: The Sociology of an Unemployed Community*, 1971), written with Hans Zeisel and Lazarsfeld, was published in German in 1933 without attribution, because the publishers feared that the authors' Jewish names would attract unwanted attention. Nevertheless, most of the copies of the first edition were burned. This book is considered a classic empirical study of the psychological consequences of prolonged unemployment in a town that had been a synonym for industrial development. Jahoda, who had been a leader in the Austrian socialist youth movement since her teens, served a prison term for her political opinions in 1936–37; she was released only through the intervention of the international community on condition that she leave the country.

In 1937, Jahoda emigrated to England, where she held a variety of positions and conducted research on unemployed miners, voluntary societies, and the transition from school to work. She also became a leading member of the Austrian Socialists in Great Britain and ran the secret radio station *Radio Rotes Wien*. Near the end of World War II, Jahoda came to the United States. She worked at Columbia University with the American Jewish Committee on efforts to reduce prejudice through persuasive communications and later became a professor of social psychology at New York University and a member of its Research Center for Human Relations, a group devoted to action research. During this period, she was the senior author of a widely used book, *Research Methods in Social Relations*, published in 1951 with the sponsorship of the Society for the Psychological Study of Social Issues (SPSSI).

Throughout her life, Jahoda remained deeply committed to the use of empirical research for bettering the human condition. During her relatively brief career in the United States, she was deeply involved in the two major issues that dominated the political climate of those years, the civil rights movement and McCarthyism. She investigated the psychological effects of the suppression of political opinion by loyalty oaths, blacklisting in the entertainment industry, and the impact of security measures on the climate of thought of civil servants. Jahoda was a board member of the American Civil Liberties Union and was elected the first woman president of SPSSI in 1951; a woman was not elected again until 1971.

In 1958, Jahoda returned to Great Britain to marry Austen Albu, a Labour Member of Parliament, and became a professor of psychology at Brunel University. In 1965, she moved to Sussex University as a professor of social psychology. In the years after her 1972 retirement, she wrote two books, co-edited three others, and published 23 articles and book chapters. Her last and most prized work, *Louise Labé: Vierundzwanzig Sonette in drei Sprachen* (1997), consisted of her translations into English of the sonnets of Louise Labé, a 16th century French proto-feminist poet.

Jahoda's many honors included the Award for Distinguished Contributions to the Public Interest from the American Psychological Association in 1979 and the Kurt Lewin Memorial Award from the SPSSI. Jahoda also received awards

from the British Psychological Society and the Commander of the British Empire medal, personally bestowed by Queen Elizabeth II. An academic chair in her name was established in Germany.

[Rhoda K. Unger (2nd ed.)]

JAIR (Heb. יָאִיר; “who gives light”).

(1) Family and head of an ancestral house in the tribe of Manasseh (Num. 32:41). According to I Chronicles (2:21–22), Jair was the son of Segub of the tribe of Judah – Segub being a son of Hezron who married a daughter of Machir – but was associated with his mother’s tribe and inherited with the sons of Manasseh. According to the Chronicler’s account the settlements called Havvoth-Jair resulted from peaceful expansion. According to the Pentateuch’s account, however, it was after the defeat of Og, king of Bashan, and the conquest of most of the Transjordanian territory, that the family of Jair took the towns (*havvot*) of the Amorites in Argob as far as the “border of the Geshurites and the Maacathites” (Deut. 3: 14), i.e., in the region north of the Yarmuk. The *havvot* were a fertile strip of “fortified cities, with high walls, gates, and bars” (Deut. 3:4–5; I Kings 4:13), up to 60 in all (*ibid.*). Some have connected Hebrew *havva* with Ugaritic and Arabic words for “stockade, circle of tents or houses.” According to I Chronicles 2:22, the number of the cities of Jair was 23 and the rest belonged to the other sons of Manasseh (*ibid.*, 23). Some of these cities are mentioned in the *el-Amarna letters (no. 256) and among the cities taken by Thutmose III. Archaeological investigation has revealed that this region was inhabited continuously throughout the Bronze Age. In King Solomon’s time this region was a part of the sixth vice-regal division (I Kings 4:13). These *Havvoth-Jair may not have been the same as the ones mentioned in Judges 10:4, which were merely small towns and not fortified cities (see below).

(2) Jair of Gilead judged Israel in the generation preceding Jephthah (Judg. 10:3–5) for 22 years. The text hyperbolizes his greatness and wealth (cf. Judg. 12:9–14), stating that he had “thirty sons that rode on thirty ass colts, and they had thirty cities...” There would seem to be some connection between these 30 cities in the land of Gilead and those in the Bashan (possibly it is to these that the text refers in I Kings 4:13). Jair was buried in Qamon, which is probably Qamm, 4 km. (c. 3 mi.) north of Tayyiba in northern Galilee.

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

Jair Son of Manasseh in the Aggadah

Jair was born during the lifetime of Jacob and did not die until the children of Israel entered their land (BB 121b). Other sources are more specific and state that Jair was killed during the first, abortive attack on *Ai. He was in fact the only victim,

the “36 men” referred to in Joshua 7:5 being a way of referring to Jair, who was “equal to the majority of the Sanhedrin [of 71]” (Lev. R. 11:7). Abraham had been told by God that all his descendants, with the single exception of Jair, would fall in the battle for the city. As a result of his prayer that this tragedy be averted (Gen. R. 39:16), the decree was reversed and Jair alone fell in the battle (Alphabet of Ben Sirā, 49).

JAKAB, DEZSÖ (1864–1932) and **KOMOR, MARCELL** (1868–1944), Hungarian architects, designers of synagogues, nursing homes, public buildings, and private villas. Their major projects, situated outside Hungary’s present borders, include the synagogue of Subotica (Szabadka), Yugoslavia, the municipality building of Tirgu Mures (Marosvásárhely), Romania, and a concert hall in Bratislava, Czechoslovakia. In partnership they built the Erkel theater in Budapest according to the plans of G. Markus (1872–1912), another Jewish architect of the Secessionist era. Komor was a victim of the Holocaust.

[Eva Kondor]

JAKOBOVITS, LORD IMMANUEL (1921–1999), rabbi. Jakobovits was born in Koenigsberg, the son of Julius Jakobovits, rabbi of the local Orthodox congregation and later *dayyan* in Berlin and London. He studied for the rabbinate at Jews’ College and at the Etz Hayyim Yeshivah, London. After serving as minister to a number of London synagogues, in 1949 he became chief rabbi of Dublin and the Jewish communities in the Irish Republic. Jakobovits was rabbi of the Fifth Avenue Synagogue, New York, from 1958 until 1966, when he was appointed chief rabbi of the United Hebrew Congregations of the British Commonwealth, serving until his retirement in 1991. Jakobovits was appointed honorary director of the Center for Jewish Medical Ethics at Ben-Gurion University, Israel, in 1977, and a fellow of University College, London, in 1984. Knighted in 1981, Jakobovits became a peer in 1988.

His *Jewish Medical Ethics*, published in 1959 with a fourth edition in 1977, is regarded as a standard work in the field. His other publications include *Jewish Law Faces Modern Problems* (1965), *Journal of a Rabbi* (1966), *The Timely and the Timeless* (1977), and *If Only My People... Zionism in My Life* (1984). In 1991 he was awarded the Templeton Prize for Progress in Religion.

[Rohan Saxena]

JAKOBOVITS, TOBIAS (1887–1944), Prague librarian and scholar. Born of a rabbinical family in Lackenbach (Burgenland) and pupil of the yeshivot of Deutschkreuz, Szombathely, and Bratislava, he came to Prague after World War I as a teacher of religion at secondary schools and the *talmud torah*.

There he attended the German university. He reorganized the community's library, publishing a pamphlet on its history in Czech and German (*Entstehungsgeschichte der Bibliothek der israelitischen Kultusgemeinde in Prag*, 1927). Devoting himself to research on the history of the Jews in Bohemia, he published the greater number of his articles in the yearbook of the society for the history of Czechoslovakian Jewry (JGGJČ) and in *Věstník*, the periodical of the Prague community. During the occupation of Bohemia (1939), he and Joseph Polak headed the scholarly staff of the Jewish museum, which was taken over by the Nazis in 1942 (see *Museums, Jewish). He organized a book exhibition in 1942 and wrote the major part of the museum guide. On Oct. 28, 1944, along with the rest of the museum staff, he was deported to his death in *Auschwitz.

[Meir Lamed]

JAKOBSON, MAX (1923–), Finnish journalist and diplomat. Born in Viborg, Jakobson worked in the Finnish News Agency and later in the Finnish department of the BBC. He was also the correspondent for *Helsingin Sanomat* and *Uusi Suomi*. He was press attaché at the Finnish embassy in Washington (1953–59) and chief of the press department of the Finnish Foreign Ministry (1962–65). In 1965 he was made permanent representative of Finland at the United Nations. He remained in the Foreign Ministry until 1974, also serving as Finland's ambassador to Sweden. He wrote *Finland in the New Europe* (1998).

JAKOBSON, ROMAN (1896–1982), philologist and literary historian. Born in Moscow, Jakobson studied and did research at Moscow University before settling in Czechoslovakia in 1921. In 1926 he was co-founder of the Cercle Linguistique de Prague, which pioneered major advances in modern linguistics. He was among the first to perceive that speech sounds are not atomic entities but complexes of a small number of universal phonetic properties (“distinctive features”). Jakobson left Czechoslovakia in 1939 and two years later reached the U.S., where he held professorships at the Ecole Libre des Hautes Etudes, NYC (1942–46), Columbia University (1946–49), Harvard (1949–67), and Massachusetts Institute of Technology (from 1960). In the 1940s Jakobson's central interest was the 12th-century Russian epic, *Slovo o polku Igoreve* (“Tale of the Host of Igor”), whose authenticity had been questioned. In a series of brilliant philological studies he fully established the medieval origin of the poem. The Igor studies renewed Jakobson's long-standing interest in the language, culture, and history of the Slavs in the Middle Ages, and the culture and language of the Jews living among the Slavs (Rus. and Eng. with commentary, in *Annuaire de l'Institut de Philologie et d'Histoire Orientale et Slave*, 8, 1948).

In general linguistics and in Slavic studies there are few areas to which Jakobson did not make fundamental contri-

butions. Outside these disciplines, he contributed to developments in anthropology, art history, literary criticism, philosophy, and communication science. His publications include *Kindersprache, Aphasie und allgemeine Lautgesetze* (1941), *Russian Epic Studies* (with E.J. Simmons, 1949), *Fundamentals of Language* (1956), and *Selected Writings* (2 vols., 1962–66).

BIBLIOGRAPHY: *For Roman Jakobson: Essays on the Occasion of his Sixtieth Birthday* (Eng., Fr., Ger., Rus., 1956), bibl. on pp. 1–12; *To Honor Roman Jakobson: Essays on the Occasion of his Seventieth Birthday*, 3 vols. (multilingual, 1967), bibl. on pp. xi–xxxiii.

[Morris Halle]

JAKUBOWSKI, JACKIE (1951–). Born in Szczecin, Poland, Jakubowski arrived in Sweden as a political refugee in 1970. A journalist with special interest in cultural affairs, he is editor of Sweden's national Jewish magazine, *Judisk Krönika* – one of the foremost publications of its kind in Sweden. In 1986, he published his first book, *Jewish Identity in Sweden: From Mosaic Citizen to Zionist Jew*. This was followed in 1992 by *Judiska prövningar och omprövningar ...* (“Jewish Problems and Considerations ...”) and in 2000 by *Ljudet av alef ...* (“The Sound of Aleph ...”). He has also coauthored works with such notable writers as Joanna Bankier and Per Ahlmark

BIBLIOGRAPHY: Megilla-Förlaget: *Svensk-judisk litteratur 1775–1994* (1995).

[Ilya Meyer (2nd ed.)]

JAMA, SAMUEL IBN (12th century), scholar of Gabès, North Africa. Samuel was the son of the *dayyan*, Jacob. Samuel himself used the Hebrew equivalent of the Arabic Jama, calling himself “Aguz” (“the store”). Jama is the author of two noteworthy works. The first is a supplement to the *Arukh*, the talmudic lexicon of *Nathan b. Jehiel. It was the first of its kind and was written about 50 years after the appearance of the original work. In it Jama supplemented the *Arukh* with words, some of which he took from the lexicon of the geonic period. He added them, together with a preface, to the copy of the *Arukh* which he himself had copied. They were first published by S. Buber in the Graetz *Jubelschrift* (1887). Jama's other book was *Hilkhot Shehitah* written in Arabic, which is quoted several times by *Isaac b. Abba Mari in his *Sefer ha-Ittur*. Jama appears to have lived for a time in Narbonne and in his books frequently quotes the scholars of Provence. He also frequently quotes from geonic literature, including material not known from any other source. He wrote a book on grammar that has been preserved in manuscript. Abraham *Ibn Ezra exchanged laudatory poems with him.

BIBLIOGRAPHY: S. Buber, in: *Jubelschrift... H. Graetz* (1887), 2–16 (Heb. part).

[Israel Moses Ta-Shma]

JAMAICA, an island in the Caribbean, an independent state. Christopher Columbus (Colon) visited Jamaica on his second voyage (1494) but landed there on his fourth (1503) and took it in the name of the Spanish crown. He was nominated gov-

ernor of the lands he had discovered. His son, Don Diego Colon, inherited his father's titles and was nominated viceroy and admiral of the lands his father found. Upon his death (1525) Carlos V bestowed the title Marquis of St. Iago de la Vega (a Jamaican city today called Spanish Town) to his son Don Louis Colon. The title was inherited by his sister Isabella Colon who was married to a Portuguese nobleman of the house of Braganza. Under her son, Portugallo Colon, crypto-Jews from Portugal were permitted to settle in Jamaica (1530). Under their tenure the Colon-Braganza family impeded the installation of the tribunal of the Inquisition in Jamaica.

Upon the occupation of Jamaica by the English general Veneable and Admiral William Penn (1654), they were welcomed by the "Portugals."

The "Portugals" were of Jewish origin and slowly began returning to Judaism. In the new capital founded by the English, Port Royal, the Jews were joined by their brethren from Amsterdam, Bordeaux, and Bayonne. In 1662 Jews came to Jamaica from Brazil, in 1663 from England, and in 1664 from British Guiana. Their numbers were strengthened in 1673 by Jews arriving from Surinam with the English evacuees forced out by the Dutch occupation.

Jews met with immediate success in the sugar cane and cocoa plantations they founded, and in Port Royal they developed an impressive commercial center, owing to their proficiency in the Spanish language, trading with Spanish America. They formed a community and allegedly built a synagogue. Josiau Hisquiam Pardo, from a prominent family of Salonikan *hahams*, arrived from Curaçao and was hired as chief *haham*.

From the mid-17th century until the earthquake of June 7, 1692, most Jews lived in Port Royal, and though no historian mentions a synagogue there in that period, one may well have existed and been destroyed. Bryan Edwards, in his *History Civil and Commercial, of the British Colonies on the West Indies* (3 vols., London, 1793–1801), wrote, "The Jews enjoyed almost every privilege possessed by the Christian whites except..." and here he enumerated the civil disabilities still in force against them. He continued, "They have the liberty of purchasing and holding lands as freely as other people and they are likewise allowed the public exercise of their religion; and I have not heard that Jamaica has any reason to repent of her liberality towards them."

The violent earthquake of June 1692 was followed by a tidal wave that completely destroyed the city of Port Royal, and Spanish Town then became the capital. The Jews moved to it as well as to newly built Kingston, to Montego Bay, and to spots all over the island. A Spanish-Portuguese congregation was founded in Spanish Town in 1692 and the synagogue Neve Shalom was established in 1704.

One of the most important *hahams* was Jeoshua Hisquiau de Cordova who served there from 1753 to 1797. A German-English synagogue, Mikveh Israel, existed from 1796 to 1860. Of 876 white inhabitants at the end of the seventeenth century, 350 were Jewish. In 1900 Neve Shalom was abandoned.

As more Jews settled in Kingston, communities formed. In 1744 the luxurious synagogue Sha'ar ha-Shomaim was erected and in 1787 the English-German congregation founded Shaare Yosher synagogue. The two buildings were destroyed by fire in 1882. The synagogues that replaced them were toppled in the great earthquake of 1907. In 1912 The United Congregation of Israelites rebuilt Shaare Shalom, which is in service to this day. One of the main conditions for the unification of all communities in Jamaica is that "the Sephardi ritual is to be maintained except for taking out the Scrolls of the Law which will be Ashkenazi." Some of the Torah Scrolls are more than 300 years old, the synagogue's floor is covered with sand, and the hymn "Bendigamos" is sung in Spanish on Sukkot. The service is partially Conservative, partially Reform and parts are sung in English. There are 23 Jewish cemeteries dispersed all over the island.

The local government levied special taxes on the Jews. These taxes were repealed by order of King George II in 1739. The Jewish question became highly controversial in Jamaica. Citing the British Parliament's Act of 1740, the Jews demanded full political enfranchisement. The community, however, was not unanimous in the matter, and all applications for votes on the part of the Jews were refused without exception. They did, however, receive full civil rights on July 13, 1831, owing to the persistent efforts of the leader Moses Delgado. As a result, in 1849 eight of the 47 members of the House of Assembly were Jewish and the House adjourned on Yom Kippur; in 1866 their number reached 13.

The number of Jews in Jamaica between 1700 and 1978 were as follows: 1700–400 Jews, out of a total of 7,000 whites; 1881–2535 out of 14,432; 1957–1,600 out of 13,000; 1978–350. In 2004 there were about 280 Jews in Jamaica.

The following are among the most prominent figures in the history of Jamaican Jewry: Daniel Lopez Laguna (1635–1730) who, after being arrested and tortured by the Inquisition, managed to escape to Jamaica where he translated the Psalms into Spanish in poetic form; Isaac Mendes Belisario (b. 1790), a brilliant artist who painted the customs of the black slave population, their culture, and folklore; the de Cordova family: grandsons of Haham de Cordova – Jacob and Joshua – founded the newspapers *The Daily Gleaner*, considered the best overseas English newspaper, and *The Texas Herald* and founded Waco, Texas; Jorge Ricardo Isaac (1837–1895), born in Colombia to a Jamaican Jewish father, wrote the novel *Maria*, Columbia's national novel, considered a masterpiece in all Latin America.

[Benjamin Schlesinger / Mordechai Arbell (2nd ed.)]

JAMAL SULAYMĀN (d. 1666), a distinguished kabbalist scholar of the Jewish community of San'a in the 1660s, but

not part of its formal leadership. Nothing is known about him except his central role in the *Shabbetean movement. Against the standpoint of the rabbinical court in San'a, he believed in *Shabbetai Zevi as the Messiah, and that he himself was assigned by Heaven to materialize the messianic vision. On the first day of Passover 1666, just after the night during which Shabbetai Zevi was supposed to be revealed as the Messiah, he went with his entourage of zealots to the Muslim governor of San'a and determinedly demanded from the latter to transfer to him the control of the city. The Muslim response was very harsh and, after the command of Imam Ismā'il (1644–1776) arrived, he was beheaded in the city market. The imam regarded the agitation among the Jews as a violation of the protection agreement (**dhimma*) of the Jews by the Muslim government and canceled all regulations protecting the Jews, which eventually entailed the expulsion to Mawza'. The Jews called that year "the year of the Headgear Edict" (*shenat ha-atarot*), prohibiting the Jews from continuing to wear their fancy head coverings. According to folklore, Jamal was offered life by conversion to Islam, but he rejected the idea. His martyrdom was kept alive in the memory of Yemenite Jews and is the subject of *Leket*, an idyll by David *Shimoni.

[Yosef Tobi (2nd ed.)]

JÁMBOR, FERENC-IOSEF (1899–1964), Hungarian journalist and editor. Jámbor was born in Transylvania and studied medicine at the universities of Budapest and Cluj. After serving in World War I, he settled in Cluj and turned to journalism. In 1923 he joined the staff of the Zionist daily **Uj Kelet* and was its editor from 1927 until it was closed by the Hungarian Fascist government in 1940. He was a leading member of the Hungarian Journalists' Association of Transylvania and was one of the most important Jewish publicists in Hungary between the two World Wars. Jámbor was a leader of Ha-Shomer ha-Za'ir in Transylvania and from 1940 to 1941 was vice chairman of the Zionist Federation of Hungary. In 1941 he immigrated to Erez Israel and joined the editorial staff of *Al ha-Mishmar*. In 1955 he was a member of the Tel Aviv municipality, representing Mapam.

Jámbor's library was transferred to kibbutz Evron near Nahariyyah after his death and housed in the cultural center named after him.

BIBLIOGRAPHY: Y. Jámbor, *Mivhar Ketavim* (1966).

JAMES, DAVID (Belasco; 1839–1893), British actor, born in Birmingham. James excelled in burlesque roles, such as Mercury in F.C. Burnand's extravaganza, *Ixion*, in 1863, *Royalty*, London. He went into management at the Vaudeville in 1870 and became famous as Perkyn Middlewick in H.J. Byron's comedy *Our Boys* which, opening in 1875, had a record run of 1,362 performances. It was revived for him in

1884, 1890, and 1892. He left much of his large fortune to Jewish charities.

ADD. BIBLIOGRAPHY: ODNB online.

JAMES, HARRY (1916–1983), trumpet player and band leader. Born in Albany, Georgia, James trained with his father, a circus band leader, and had his own orchestra at the age of 20. After two years with Benny *Goodman's band, he started his own group, concentrating on the brass section and featuring his brilliant trumpet solos. Outstanding among his popular swing arrangements and compositions in the 1940s were *Carnival of Venice*, *Chiribiribin*, *Flight of the Bumble-Bee*, *Two o'Clock Jump*, and *Trumpet Rhapsody*. He married the film star Betty Grable.

JAMES, SIDNEY (1913–1976), British actor. Born Sidney Joel Cohen in Johannesburg, the son of Jewish music hall entertainers, Sid James moved to London in 1946 and first acted on the London stage as a rough-hewn character in comedy roles. Subsequently, he appeared in more than 60 film productions. Among them were *The Small Back Room* (1949), *The Lavender Hill Mob* (1951), *A King in New York* (1957), *The Story of Esther Costello* (1957), and the *Carry On* series. James appeared in no fewer than 18 *Carry On* films, making him one of the most familiar character actors in the British cinema. He was also a popular figure in many radio and television programs, particularly with Tony Hancock.

[William D. Rubinstein (2nd ed.)]

JAMMER, MAX (1915–), Israeli physicist. He was born in Berlin where his elementary education at the Jewish community school and secondary education gave him a grounding in classics of lasting value in his career. He studied philosophy, mathematics, and physics in Vienna (1933–35) before immigrating to Palestine where he gained a Ph.D. in molecular spectroscopy from the Hebrew University of Jerusalem (1942) preparatory to specializing in the philosophy of science. After World War II service in the British Army, he was a member of Haganah's intelligence unit during the War of Independence and was wounded during the battle for Jerusalem. He became a post-doctoral fellow and then lecturer at Harvard University (1951–57) and professor at the University of Oklahoma. He returned to Israel to establish and build a highly successful physics department specializing in solid state physics at the newly founded Bar-Ilan University in Ramat Gan. He became rector (1962) and president of the university (1967–68). Jammer's research has concerned the history and philosophy of science in the classical world, the Middle Ages and the modern era. He is especially interested in the history and philosophy of quantum mechanics. In retirement he continued his studies of the conceptual foundations of quantum mechanics, the true nature of mass (inertia), and an analysis of Einstein's philosophy of religion. His

many honors include the Prize of the American Academy of Arts and Sciences (1961), the Israel Prize for the history of science (1984), and election as president of the Association for the Advancement of Science in Israel. He served as a member of many key advisory committees to the Israel government on science and higher education. He was a visiting professor at leading universities in the U.S. and New Zealand. His research and thinking are recorded in a series of very successful books, published by major universities, and translated into many languages. These include *The History of Science* (1950) and *Concepts of Space – the History of Theories of Space in Physics* (1954) which greatly interested Einstein and for which he wrote a preface. He wrote *Concepts of Force – a Study in the Foundations of Dynamics* (1957), *Concepts of Mass in Classical and Modern Physics* (1961) and *The Conceptual Development of Quantum Mechanics* (1966), the first systematic and historical account of this crucially important subject. *The Philosophy of Quantum Physics* (1968) describes the foundations of modern physics and *Concepts of Mass in Contemporary Physics and Philosophy* (2000) extends his earlier analysis of this subject. *Einstein and Religion – Physics and Theology* (2000) was named the outstanding book of the year in the field of theology and the natural sciences by the influential Center for Theology and the Natural Sciences in Berkeley, California.

[Michael Denman (2nd ed.)]

JAMMER, MOSHE (1915–), Israeli physicist. Born in Berlin, Jammer settled in Palestine in 1935. In the 1950s he began producing a series of studies on the philosophy of physics, published by the Harvard and Princeton university presses and subsequently translated into Russian, Chinese, Japanese, and Greek, among other languages. Among his other well-known books are *Development of Quantum Mechanics* and *Concept of Space* (with a foreword by Einstein). In 1959 he joined the staff of Bar-Ilan University as professor of science and head of the department of physics. In 1962 he was appointed rector of the university and acting president 1967–68. In 1984 he was awarded the Israel Prize for the history of science.

JAMPEL, SIGMUND (1874–1934), rabbi and Bible scholar. Jampel, who was born in Galicia, studied Semitics at Heidelberg University and subsequently became rabbi at Schwedt, Brandenburg in 1910. He was among the first Jewish Bible scholars who recognized the value of archaeological and epigraphical finds for establishing the antiquity of the historical accounts of the Bible and the questioning of Wellhausen's hypotheses. His work (most of which was first published in MGWJ but was also intended for the general reader) includes *Die Wiederherstellung Israels unter den Achaemeniden* (1904), dealing with the epigraphic material relative to Ezra-Nehe-miah; *Das Buch Esther auf seine Geschichtlichkeit kritisch untersucht* (1907), which takes into account the archaeological excavations of Susa which authenticated the description of the royal palace in the Book of Esther; *Vorgeschichte des israeli-*

tischen Volkes und seiner Religion; mit Beruecksichtigung der neuesten inschriftlichen Ergebnisse (1913, 1928²), a study of the importance of the western Semitic onomastic material, particularly from Mesopotamia in the Hammurapi period, for the understanding of the religion of the patriarchs; and *Die Hagada aus Aegypten* (1911, 1922²), in which he used Egyptian documents for the reconstruction of Israelite religious and social conditions in the Exodus period. He also wrote *Die neusten Papyrusfunde in Elephantine* (1911), and a number of studies on new developments in biblical research such as the two-volume *Vom Kriegsschauplatz der israelitischen Religionswissenschaft* (1909–12).

BIBLIOGRAPHY: T. Preschel, in: *Hokhmat Yisrael be-Ma'arav Eiropah*, 2 (1963), 146–55 incl. bibl. of Jampel's writings.

[Yehoshua M. Grintz]

JANCO, MARCEL (1895–1984), painter. Janco was born in Bucharest, Romania. In 1910–14 he exhibited at the salons in Bucharest and moved among modernist artists and poets. In 1916, while studying architecture, he was among the founders of Dada in Zurich. There he participated in the famous evenings at Café Voltaire where he was in charge of the stage and costume design. In the 1920s he was much involved in the Dada movement. He had ties with the Paris branch, participating there in an international exhibition of abstract art, and was one of the founders of the art and literature journal *Contemporanul*. In 1940, following the rise of fascism in Romania, he immigrated with his family to Erez Israel. In Israel, Janco participated in many important exhibitions including those of New Horizons and the Venice Biennale. In 1953 he established the Ein Hod Artists Village and founded the Department for Art Teachers at the Oranim College. In 1967 he was awarded the Israel Prize. In 1983 he was involved in the establishment of the Janco-Dada Museum in Ein Hod.

The art style of Janco moved between the figurative and the abstract. In Israel he had many subjects: soldiers and battle situations, transit camps and immigrant types, Arabs, landscapes, and the Holocaust.

The wounded soldier virtually became the symbol of his work (*Wounded Soldier*, 1949, Israel Museum, Jerusalem). These soldiers had complex meanings. In some of the paintings they looked as if crucified, or praying, or like the figures of Picasso's *Guernica*.

Janco dealt with the theme of immigration from every possible angle. He described the crowded ships, the refugees stealing into the country sheltered by the darkness of night, particular immigrant groups like the Yemenites, tents and figures in the transit camps. In all of these paintings the expressive style seemed to be a reflection of his own experience.

Janco's arrival in Israel after many years on the world stage represented a significant contribution to Israeli art. Within weeks of his arrival, a group of gifted Israeli painters gathered around him, seeing an opportunity through him of effecting a desired change in Israel's artistic life. Janco's activism helped fulfill their expectations.

[Ronit Steinberg (2nd ed.)]

JANKÉLÉVITCH, VLADIMIR (1903–1985), French philosopher. Born at Bourges, Jankélévitch taught at Prague, Toulouse, and Lille until he was dismissed by the Vichy government in 1940. In 1945 he became professor at Lille, and later at the Sorbonne. His first important work, *Henri Bergson* (1931), showed his sympathy for this philosopher. Jankélévitch's own views, influenced by Bergson, appeared in his dissertation, *L'Odyssee de la conscience dans la dernière philosophie de Schelling* (1933) and *La mauvaise conscience* (1966^a). His concern was with overcoming consciousness directed to the unchangeable past. Retrospective considerations halt life's course. Irony (*L'Ironie ou la bonne conscience*, 1950²) does not resolve the situation. Time alone leads man on. The *Traité des vertus* (1949) and *Philosophie première* (1954) explore the metaphysics of time and the creative virtues of the instant. Other works are *La Mort* (1966) and *Le Pardon* (1967). As a musicologist, he wrote on Debussy, Fauré, and Ravel.

[Richard H. Popkin]

JANNER, BARNETT, LORD (1892–1982), British politician and communal leader. Janner was born in Lithuania and moved with his family to Barry, South Wales, when he was six months old. He was educated at Cardiff University, became a solicitor, and was a Liberal member of Parliament for Whitechapel (1931–1935), and then a Labour member for Leicester (1945–1970). He was president of the Zionist Federation of Great Britain and Ireland (1950) and president of the Board of Deputies of British Jews (1955–1964). Janner was known in Parliament as the spokesman on Zionist matters and formed a pro-Zionist parliamentary group of which he was the secretary.

Janner was knighted in 1965 and in 1970, when he retired from the House of Commons, he was made a life peer. His son GREVILLE EWAN JANNER (1928–) became Labour member of Parliament for Leicester after his father's retirement, serving as an M.P. from 1970 to 1997. A barrister, Greville Janner also held a wide variety of communal leadership positions and was president of the Board of Deputies of British Jews from 1979 to 1985. Like his father, he was given a life peerage upon his retirement from the House of Commons, as Baron Janner of Braunstone.

[Getzel Kressel / William D. Rubinstein (2nd ed.)]

JANNES AND JAMBRES, two legendary Egyptian sorcerers whose names appear in various sources as the adversaries of *Moses. Jewish tradition seems to identify them with the sor-

cerers mentioned in Exodus 7:11 ff. (cf. Targ. Jon., *ibid.*). They are also mentioned as the sons of Balaam (Targ. Jon., Num. 22:22; Yal., Ex. 168, 176) and as having played a part in the incident of the *golden calf after joining the mixed multitude that accompanied Israel in the exodus from Egypt (Tanḥ., Ki Tissa, 19). The sources of the legends surrounding the activities of Jannes and Jambres go back at least to the time of the Second Temple. They are mentioned in the "Damascus Document" (Zadokite Fragments, line 17 ff.) as "Jannes and his brother" and in the New Testament (11 Tim. 3:8). Mention is also made by the Church Fathers of an apocryphal book dealing with Jannes and Jambres.

The names also appear in pagan Greek and Roman literature. Both Pliny (*Natural History*, 30:11) and Apuleius (*Apologia*, 90) mention the name of Jannes only, the former including him in a list of Jewish sorcerers the first of whom is Moses, while the latter names him immediately after Moses in a list of famous magicians. Both Jannes and Jambres, however, are mentioned and discussed in detail by Numenius, the neo-Pythagorean philosopher (quoted in Eusebius, *Praeparatio Evangelica*, 9:8; cf. Origines, *Contra Celsum*, 4:51). They are described as Egyptian priests who excelled in wizardry at the period of the "expulsion" of the Jews from Egypt and as having been considered by the Egyptians capable of rescuing their country from the disasters brought upon it by Musaeus (Moses). Jannes (Iannis), with slight variations, is the most common form in which the name appears in Greek sources, as well as in the Palestinian Targum and in the main midrashic references. The Babylonian Talmud, however, gives the name as Yoḥana (cf. Yal., Ex. 235 – Yoḥane). There appears therefore to be justification for retaining the reading Johannes as it appears in the best-preserved manuscript of Apuleius.

[Menahem Stern]

JANOAH, JANAH (Heb. יָנוּחַ).

(1) City on the northern border of Ephraim. It is mentioned in the Bible after Taanath-Shiloh near Shechem and before Ataroth and Naarah in the Jordan Valley (Josh. 16:6–7). According to Eusebius it was situated 12 miles east of Neapolis (Eusebius, *Onom.* 108:20–21). It is identified with Khirbat al-Yānūn, near the village of the same name, 7½ mi. (12 km.) southeast of Shechem.

(2) City in Galilee mentioned in the Bible together with Ijon, Abel-Beth-Maacah and Kedesh among the cities conquered by the Assyrian king Tiglath-Pileser III in 733/2 B.C.E. (11 Kings 15:29). Its location and identification are disputed: Vincent and Albright have proposed Tell al-Na'am in the Huleh Valley and Kaplan has suggested Khirbat Niḥā southwest of Kefar Giladi; others identify Janoah with the village of Yānūḥ 6 mi. (10 km.) east of Tyre; Klein and Aharoni prefer Yanoah

in Upper Galilee 2 mi. (3 km.) south of Maona-Tarshihā, on the supposition that part of the conquering Assyrian army advanced directly to Acre.

[Michael Avi-Yonah]

JANOVSKY, SAUL JOSEPH (1864–1939), Yiddish journalist, editor, and activist. Born in Pinsk, Janovsky early became interested in the *Haskalah. After arriving in New York in 1885 he became active in the labor movement. In London in 1890, he edited a radical Yiddish weekly, *Der Arbeter Fraynd*, before returning to New York (1895). When he joined the anarchist movement, he switched from writing Russian to Yiddish, helping to found the *Pionere der Frayhayt* (“Pioneers of Freedom”), and edited anarchist Yiddish periodicals – the weekly *Di Fraye Arbeter Shtime* (1899–1919), the daily *Di Ovnt Tsaytung* (1906), and the monthly *Di Fraye Gezelshaft* (1910–11); he edited the monthly *Gerechtigkayt*, organ of the International Ladies’ Garment Workers’ Union (1919–26) and also contributed to *Tsukunft* and *Forverts*. He wrote under many pseudonyms, including Y.Z., Anonymous, Bas-Kol, and Yoysef Ben Gershon. Janovsky wrote about political events and trade union problems, reviewed books and plays, and translated works by Tolstoy and others. His reviews and editorial correspondence were sharp but understanding, demonstrating a flair for recognizing talent; many Yiddish writers were discovered and first published by him.

[Elias Schulman / Marc Miller (2nd ed.)]

JANOWITZ, HENRY D. (1915–), U.S. gastroenterologist and a pioneer in establishing this field. He was chief of the gastrointestinal clinic at the Mount Sinai Hospital and Medical School, New York (1956–61) and professor of clinical medicine from 1967. He was assistant clinical professor of medicine at Columbia University College of Physicians and Surgeons (1960–67). He was emeritus professor of medicine at Mount Sinai Medical Center whose gastroenterology department was named in his honor. His research publications mainly concern the pathology and management of inflammatory bowel diseases. Janowitz was president of the American Gastroenterological Association and played a major role in founding the Crohn’s and Colitis Foundation of America. He was a distinguished teacher with a great interest in lay education and author of the popular book *Good Food for Bad Stomachs* (1997). He was an authority on medical allusions in Shakespeare.

[Michael Denman (2nd ed.)]

JANOWITZ, MORRIS (1919–1988), U.S. sociologist. Born in Paterson, New Jersey, Janowitz worked for the U.S. govern-

ment in various capacities and taught at the universities of Chicago and Michigan. He was especially interested in studies of prejudice, public opinion, and the military establishment. He published *Dynamics of Prejudice* (with Bruno Bettelheim, 1950); *The Community Press in an Urban Setting* (1952); *Reader in Public Opinion and Communication* (with Bernard R. Berelson, 1953²); *Comparative Study of Juvenile Correctional Institutions* (1961); *Community Political Systems* (1961); and *Social Change and Prejudice* (with Bruno Bettelheim, 1964). The prejudice studies have a bearing on the understanding of antisemitism as part of a general pattern of prejudicial attitudes. Janowitz’s reputation, however, rests chiefly with his pioneering works in the analysis of the organizational structure of the military establishment. His major publications in this field are *Sociology and the Military Establishment* (1959); *The Military in the Political Development of New Nations* (1964); and especially *The Professional Soldier* (1960), in which he describes the professional life, organizational setting, and leadership of the American armed forces as it developed in the 20th century. He attempts to show how technological changes have brought about changes in the military, and that the role of the military leader must change accordingly. He concludes that devices, once designed to wage war, must now be used to ensure and maintain peace.

Later books by Janowitz include *Community Press in an Urban Setting* (1967), *Institution Building in Urban Education* (1969), *Political Conflict* (1970), *On Military Intervention* (1971), *Military Institutions and Coercion in the Developing Nations* (1977), *The Last Half-Century: Societal Change and Politics in America* (1978), *Military Conflict* (1978), *Social Control of the Welfare State* (1980), and *The Reconstruction of Patriotism* (1983).

ADD. BIBLIOGRAPHY: G. Suttles and M. Zald, *The Challenge of Social Control: Citizenship and Institution Building in Modern Society. Essays in Honor of Morris Janowitz* (1986); M. Martin, *The Military, Militarism, and the Polity: Essays in Honor of Morris Janowitz* (1984).

JANOW LUBELSKI (Pol. *Janów Lubelski*; Rus. *Yanov Lyubelski*), town in E. Poland. In the 16th century Jacob b. Isaac Ashkenazi, author of the *Tsenah u-Re’ènah* (c. 1590), lived in Janow Lubelski. A traveler reported in 1678 that the Jews there owned especially well-built houses. In 1770 Jewish bakers and butchers were prohibited from selling bread or meat to non-Jews, and in general from trading outside the Jewish lane. There were 390 Jewish families in 1765, 1,520 persons (45.3% of the total population) in 1857, 1,447 (45.5%) in 1897, and 2,881 (44.8%) in 1921 with 13,407 (10.2%) in the whole district.

[Raphael Mahler]

Holocaust Period

In March 1941 a few hundred Jews from Vienna were deported to Janow Lubelski. A labor camp housing 1,000 Jews was set up there. In August 1942 the Jewish population was sent to the

nearby towns of Zaklikow and Krasnik and were afterward deported to the death camp in Belzec.

JANOWSKI, DAVID MARKELOVICH (1868–1927), French chess master. Born in Volkovysk, Russian Poland, Janowski settled in Paris in 1886. He attacked brilliantly but frequently failed to employ required defensive strategy. He defeated Winawer, Schowalter, and Marshall, and drew a match with Schlechter. Janowski lost twice (1901, 1910) to Emanuel *Lasker in world championship matches. For several years he was chess editor of *Le Monde Illustré*.

JANOWSKI, MAX (1912–1991), cantor, composer, conductor. A native of Berlin, Janowski was born into a musical family. His mother, Miriam, was an opera singer and his father, Chayim, led choirs and trained cantors. He studied at the Schwarenka Conservatory in Berlin. In 1933 he won a piano contest that led to his appointment in Tokyo as head of the Piano Department of the Mosashino Academy of Music – and his escape from Nazi Germany. He remained in Japan for four years before immigrating to the United States in 1937. He became the musical director of קאמ Isaiah Israel Congregation in Chicago in 1938. It was to remain his home for his entire career, except for a four-year sojourn in Navy intelligence from 1942 to 1946.

As a composer he is most famous for *Avinu Malkeinu* and *Sim Shalom*. They are among the 500 compositions, which include choir and orchestra pieces, cantatas, and oratorios, that he published during his prolific career. His works are popular and moving for both the congregation and the audience. He founded Friends of Jewish Music, which was responsible for the publication of his work.

Though well-rooted in a Reform Congregation, Janowski was honored by Hebrew Union College’s School of Sacred Music, the Cantor’s Assembly of the Conservative Movement, and the United Synagogue of America, now called the United Synagogue of Conservative Judaism.

[Michael Berenbaum (2nd ed.)]

JANOWSKY, OSCAR ISAAH (1900–1993), U.S. historian. Born in Poland, he was brought to the U.S. in 1910. He was appointed professor of history at New York City College in 1948. Janowsky’s principal scholarly interests were recent European history and Jewish studies. He taught courses and seminars in European national minorities and imperialism, as well as in Jewish history. Among his major works are *The Jews and Minority Rights (1898–1919)* (1933); *International Aspects of German Racial Policies* (with M. Fagan, 1937); *People at Bay* (1938); and *Nationalities and National Minorities* (1945), an elucidation

of “national federalism.” He also wrote the following important books on U.S. Jewry: *The American Jew: a Composite Portrait* (1942); *The American Jew: A Reappraisal* (1964); *The Education of American Jewish Teachers* (1967); and on Israel, *Foundations of Israel* (1959).

An adviser to J.G. *McDonald (1935), League of Nations High Commissioner for Refugees, he helped to prepare the documentation of McDonald’s *Letter of Resignation* (London, 1936). As director of the Jewish Welfare Board Survey (1946–47), he produced the *Jws Report* (1948) known also as the “Janowsky Report,” which affected the orientation of Jewish community centers. As chairman of the Commission for the Study of Jewish Education in the U.S. (1952–57) he organized and, with U.Z. Engelman, directed the study (1952–55).

Janowsky’s public service was extensive. He was a member of the Board of Governors of The Hebrew University of Jerusalem, and chairman of the American Friends of The Hebrew University’s Academic Council (1940s–1964); and he organized and chaired the American Student Program for Study at The Hebrew University (1954–66). He was on the editorial board of the *Menorah Journal*; *Middle Eastern Affairs*; and *Jewish Social Studies*. He was editor of the section on Jews in historiography in the *Encyclopaedia Judaica*. In 1975 Janowsky was awarded the Lee Max Friedman Award by the American Jewish Historical Society for distinguished service in the field of American Jewish history.

[Howard L. Adelson]

JANUARIUS, a legendary Roman general. According to a story cited by R. Johanan (TJ, Av. Zar. 1:2, 39c), “The kingdoms of Egypt and Rome were at war and they proclaimed: ‘How long shall we destroy one another in this war? Let us agree that the kingdom which commands its general “fall upon your sword” and he obeys – that kingdom shall rule.’ The Egyptians’ [general] refused, but among the Romans there was an old man by the name of Januarius [ינובריס] who had 12 sons. They said to him: ‘Obey us and we will make your sons dukes, prefects, and generals.’ He obeyed, and therefore they [the Romans] call it [the new year] *Calendae Ianuariae* [ינובריס ינובריס]. From the following day they mourn the ‘black day’ [מילני אימרא, μέλαινα ἡμέρα].” The legend thus explains why the first month is called January and also gives the alleged origins of the Roman *calendae*, and “black day” (*dies ater*) on the second of January. The story has its roots in the early Roman military practice of *devotio*, when a general would seek to sacrifice his life on the battlefield, with the understanding that the gods are thereby obliged to preserve the army. The source before Johanan claims that Janus, the king turned deity, performed this rite of *devotio*; a later Christian source (*De divisionibus temporum*, 15) describes a similar act of sacrifice attributed to Janus, and it appears that there are a number of versions to this legend.

[Isaiah Gafni]

JAPAN, Asian state. In early medieval times Jews from Europe and the Middle East may have been involved in trade with Japan through their connection with the silk route. Later, during Japan's so-called "Christian Century" (1542–1639), some Jews participated in the limited trade initiated by the Portuguese and the Dutch. But it was not until after 1853, when Commodore Perry of the United States Navy arrived in Japan and initiated the process which was to reopen Japan to outside influences, that Jews started to settle in the country. Alexander Marks, who arrived in Yokohama in 1861, was the first Jewish resident of modern Japan. Shortly thereafter he was joined by Raphael Schoyer, an American businessman, who served as president of the municipal council of the foreign settlement from 1865 to about 1867. He was also the publisher of the *Japan Express*, one of the first foreign-language newspapers to appear in Japan. By the end of the 1860s, the city had 50 Jewish families from Poland, the United States, and England. During the next few decades Jewish communities established themselves in Nagasaki, where they were primarily involved in the import-export trade, and subsequently in Kobe and Tokyo. The community in Nagasaki may well have decided to settle here because this city, in addition to being a flourishing entrepôt, was long used by the Russian Far Eastern fleet as a base for rest and recreation. Little is known about this community, which subsequently declined, but evidence that it maintained its own cemetery has been uncovered in the post-World War II era. Nagasaki's place as a center of Jewish life in Japan was gradually taken by the rising port of *Kobe.

Jewish emigration to Japan mounted during the decade before the close of World War I. The Russian Revolution of 1905 and particularly the Bolshevik Revolution of 1917 compelled many Russian Jews to flee from Russia. Many made their way to *Manchuria and *China, while others continued on to Japan, where they were assisted by their coreligionists. Volunteer organizations, notably HIAS, played a major role in evacuating these refugees to Japan. Though some settled down permanently in *Tokyo, Yokohama, and Kobe, many others sooner or later found haven in the United States and Latin America.

For some years after World War I the Jewish community in Japan did not number more than several thousand. Despite the concentration of Jews in a few cities, they did not overly impinge upon the consciousness of the Japanese people, who for the most part remained unaware of the Jews as a distinct people and as the upholders of a distinct faith. (Even most educated Japanese long believed that the Jews were a Christian sect!) One of the first public encounters between Japan and a Jew came about during the Russo-Japanese War when the American financier *Jacob Schiff arranged a loan for Japan which in part enabled them to win the war. The role played by Schiff was well known in Japan and unprecedentedly he was invited to the Imperial Palace for lunch. A link had been established between Jews, money and power. During the 1920s signs of antisemitism began to emerge. Its purveyors were mainly soldiers who had taken part in Japan's Siberian Ex-

pedition (1918–22) and who had been infected by the tales of hatred peddled by antisemitic White Russians. These were the people who introduced the infamous Protocols of the Learned *Elders of Zion into Japan; in the following 35 years additional editions continued to be published. Still, Japanese antisemitism was not widespread. Largely "intellectual" in character and in part reflecting the growing fear of Bolshevism, with which Jews were identified, it caused Jewish residents of Japan neither embarrassment nor inconvenience. When Japan embarked upon a program of military expansion in Manchuria in 1931, the fortunes of thousands of Jews were directly and indirectly affected. Though for a while the Jewish communities in Manchuria, especially in *Harbin, were subjected to no special discriminatory actions, in time many of the erstwhile refugees from Russia, finding Japanese rule unpalatable, decided to emigrate elsewhere. Many transferred their homes and business to *Tientsin, *Shanghai, and *Hong Kong, while a few settled down in Japan. At the same time the development of closer relations with Nazi Germany resulted in a tremendous expansion of antisemitic literature in Japan. After 1937 many more antisemitic works were translated into Japanese from the German and additional works were written de novo in Japanese. But, by and large, the Japanese government and people remained indifferent to this inflammatory literature which circulated in limited circles. The most dramatic consequence of Japan's pre-war fascination with Jews and understanding of antisemitism was the so-called Fugu Plan which was a Japanese scheme elaborated by Japan's so-called Jewish experts to provide a national home for the Jewish people, in Manchuria, in exchange for the help of international and particularly American Jewry in the establishment of the Japanese Empire – the Greater East Asia Co-Prosperity Sphere. The need for such a haven had become apparent to the Japanese. A stream of Jewish refugees from Nazism poured into the Far East during the early years of World War II. Many of them, coming by sea, found temporary homes in the International Settlement at Shanghai. Others, coming overland through Siberia from Eastern Europe, stayed a while in Japan. Perhaps the best known contingent of such refugees were the members of the *Mir yeshivah in Lithuania who arrived in Japan in 1941. Though they were not permitted to remain, the Japanese government did not press them to leave until arrangements had been made for their transit to Shanghai. When shortly thereafter the International Settlement was occupied by Japanese forces, about 50,000 Jews came under Japanese military rule. Many of the refugees were placed in an internment camp for the duration of the war. Strict as this military administration was, it was a far cry from the Nazi-occupied areas of Europe.

After World War II

During the American occupation of Japan (1945–52) the number of Jews in the islands reached its highest figure, some officials of General MacArthur's regime and many GIs being Jewish. When many of these servicemen returned home after the

termination of the occupation and the Korean War (1950–53), the number of Jews in Japan dwindled. Organized Jewish life in Japan during these years revolved mainly about the activities sponsored by the Jewish chaplains of the American armed forces. By 1970 the size of the Jewish community in Japan had stabilized at about 1,000, most of whom lived in Tokyo and Yokohama. Some of these local Jews had found homes for themselves in the cities of Japan before World War II; many others, however, were migrants from the United States and Europe who had settled in the islands in the postwar era. Engaging in the export-import trade, operating businesses, holding professional positions, and serving as consultants, most seemed prepared to live out their lives in Japan.

A keen general interest in Jews and Judaism began to be evident in Japan after World War II. At the time there was a growing proselytizing trend in Israel and the United States which led to “outreach” activity being initiated in Japan. Since the 1920s Jacques *Faitlovitch, the “Father” of the *Beta Israel of Ethiopia, had been interested in the possibilities presented for Jewish missionary endeavor in Japan. In 1954 Faitlovitch set off for Japan in order to set up a Jewish “outreach” center. Behind this move lurked the sense that the Japanese were thinking of converting to Judaism *en masse*. This came to nothing but speculation remained rife. The principal converts were Japanese women who married American-Jewish servicemen; ultimately many of them moved to the United States with their husbands. Among the few male converts to Judaism the best known was Setsuzo *Kotsuji, descended from a family of Shinto priests, whose quest for a faith had led him through Protestant Christianity to Judaism. With his conversion, consummated in Jerusalem in 1959, he took the name Abraham. The postwar disenchantment of the Japanese people with their traditional faiths had spurred a new interest in other religions and philosophies, including Judaism. The study of Jewish history and culture, which later drew the attention of Prince Mikasa of the imperial family, increased as never before. The Japanese Association of Jewish Studies, scholarly in orientation, undertook the publication of the journal *Yudaya-Isuraeru Kenkyu* (Studies on Jewish Life and Culture). A prime mover in the promotion of knowledge about Jewish matters was Masayuki Kobayashi, professor of history at Waseda University (Tokyo) and long a champion of Jewish studies in Japan.

The majority of Jews in Japan in the 1970s consisted of those who had come on contracts of 2 to 5 years, while the permanent Jewish population was less than 200. The Tokyo community maintained a synagogue and religious school, a Judaica and general library, a restaurant, a *mikveh*, and a *hevra kaddisha*. It also maintained a rich cultural, social, and recreational program. It was a member of the Federation of Jewish Communities of Southeast Asia and the Far East and had received an award from the Japanese Government for creating “mutual understanding and goodwill between the Japanese and Jewish peoples.” The Jewish community served as the home of the Japan-Israel Women’s Welfare Organization (JIWVO), the Ja-

pan-Israel Friendship Association (JIFA), and the Society for Old Testament Studies. The annual JIWVO Ḥanukkah bazaar, held at the community center and considered to be one of the most prestigious occasions in the Tokyo social calendar, was always attended by a member of the Japanese Imperial household. The only other active Jewish community in Japan was that of *Kobe (which consists of some 30 families), mostly of Sephardi origin. Its Ohel Shlomo synagogue was completed in 1969. The site of the synagogue built by the now defunct *Nagasaki Jewish community, confiscated as alien property during World War I and destroyed after World War II, was rediscovered, and some of the synagogue’s furnishings were presented to the Tokyo synagogue in 1973. Jews and Jewish studies began to attract great interest after the publication of *Nihonjin to Yudayajin* (“The Japanese and the Jews”), which became a bestseller in Japan. Rabbi Marvin Tokayer, who was appointed rabbi of the Tokyo Jewish community in 1968, retired in 1976. In 1980 Rabbi Jonathan Maltzman became rabbi of the community. Rabbi Tokayer published three books in Japanese, including an introduction to the Talmud, a Jewish view of the Torah, and a study of Jewish humor. Books by Japanese scholars on Jewish history, mysticism, and Yiddish studies also appeared. One such scholar prepared a doctoral thesis on the Chabad Ḥasidim, and increasing interest was shown in the writings of Prof. R. Sugita, who published more than eight books on Jewish history. The Sophia Church, known as the “Christian Friends of Israel,” continued to pray daily for the peace and welfare of the Jewish people. This sect built a “Beit Shalom” in both Kyoto and Tokyo where any Jew may stay and feel at home. The founder and leader of this sect is the Rev. T. Otsuke. The *Makuya sect, led by Prof. I. Teshima, believes in the possibility that the Japanese are one of the *Ten Lost Tribes. They continued to support and visit Israel. In April 1980 a statue of Anne Frank was unveiled in the compound of a church in Nichinomiya.

In 1992 approximately 1,000 Jews resided in Japan, most of them in the greater Tokyo area. The permanent Jewish population, however, was less than 200, the level at which it remained into the 21st century. About 60% came from the U.S., 25% from Israel, and the rest from all over the Jewish world. Within the community there were only a handful of Japanese converts. Most Jews residing in Japan are expatriates representing major businesses, banks, and financial institutions. There are also journalists and students. The Jewish Community Center of Japan, located in Tokyo, houses the city’s only synagogue, a religious school, a Judaica and general library, a *mikveh*, *hevra kaddisha*, social area, and administrative offices. Religious services are held every Sabbath and on holidays. Kosher food products are imported from abroad and other religious needs and requirements are met. There are also youth programs, adult education courses, and cultural and social activities. The community is a member of the World Jewish Congress, the Asia Pacific Jewish Association, and the B’nai B’rith, and also contributes to the United Israel Appeal. The only other organized Jewish community is located

in Kobe, which consists of about 35 Jewish families in Kobe itself and about 35 families in other parts of the Kansai region (Kyoto and Osaka). Jews in the American military stationed in Japan are usually serviced by two Jewish chaplains. One is stationed in Yokosuka Naval Base outside Tokyo and the other in Okinawa. There are about 100–200 Jews stationed in Japan. The Jewish Community Center continues to serve as the home for the Japan-Israel Women's Welfare Organization (JIWwo) and the Japan-Israel Friendship Association (JIFA). Especially since 1986, numerous books about Jews and Judaism have been published in Japan. Several of them have been antisemitic but have not led to any significant acts of antisemitism. The Japanese government's response has been vague and noncommittal. Jewish subjects are taught from time to time in Japanese universities. There is a Jewish Studies Section of the Institute of Social Sciences at the prestigious Waseda University. It was founded in 1976, has 16 academic members, and meets several times a year. The journal published by the Japan Society for Jewish Studies noted above, *Studies on Jewish Life and Culture*, has published several issues since 1961.

Relations with Israel

Relations between Israel and Japan have been consistently friendly. At the beginning of 1952, the governments of Japan and Israel opened negotiations on the establishment of diplomatic relations, and as the year progressed the exchange of legations was announced and the Israel legation, headed by a government minister, opened in Tokyo in December. In 1955 the Japanese minister in Ankara presented his credentials as a nonresident minister to Israel, and later the Japanese legation was headed by a resident minister. In 1963 the legations were raised to the level of embassies. In 1970 an agreement on mutual aid and the formulation of legal documents was signed.

In 1961 a delegation of Japanese anthropologists and geographers dug on the slopes of Mt. Carmel near Haifa. At the University of Tokyo, a number of Japanese students have studied biblical Hebrew and the archaeology of the Land of Israel; others have studied Hebrew in approximately a dozen other university-level institutions. Since 1965 Japanese studies have been part of the regular program of the Hebrew University, Jerusalem, and Tel Aviv University. Under the program of annual educational grants, a number of Japanese research students have studied Bible, Jewish musicology, and Jewish history in Israel and a number of Israeli students have studied in Japan. A Japanese art pavilion was opened in Haifa. The Kibbutz Society, founded in 1963 by Tezuka Nobuyoshi, numbers about 30,000 members and publishes the Kibbutz Monthly in Japanese. The moral and social values of the kibbutz serve as a source of inspiration for the members of the society, and every year three groups of Japanese youngsters (with 50–70 in each group) have spent time on kibbutzim in Israel (about 550 people participated in these visits in 1965–70). The society has even established a kibbutz in Akan, Eastern Hokkaido. The Japan-Israel Women's Welfare Society, which has a paral-

lel organization in Israel, finances the sending of students to Israel, among other activities.

The main relationship between Japan and Israel is a commercial one. Traditionally Japan has exported steel, automobiles, processing machinery and home electronics while Israel exported diamonds, phosphates, citrus, and fashion goods. Even before the Yom Kippur War a number of leading Japanese firms boycotted Israel, but immense Arab pressure and a threat to cut off the supply of oil to Japan (which obtains over 40% of its supply from the Arab states) forced Japan in November 1973 to depart from her previous neutrality and adopt a definite pro-Arab stand. For some years Israel was one of the very few nations in the world to run a trade surplus with Japan, primarily because of booming diamond imports by the Japanese. In 1987 an economic mission from Israel, led by representatives of the Israeli Manufacturers Association, visited Japan. A return delegation of businessmen from Japan, led by representatives of the Federation of Economic Organizations of Japan (Keidanren), followed to Israel. In 1988, a conference on the Japanese economy was held in Israel and an Israeli Economy Seminar was held in Tokyo. Throughout the 1990s there were some tentative movements toward increasing trade relations with Israel by small- and medium-sized Japanese firms, but most major Japanese companies continued to adhere to the Arab economic boycott of Israel. In 1992, however, the Japanese Foreign Ministry advised Japanese companies to cease cooperating with the boycott and Japan called on Arab countries to stop the boycott. Following this declaration bilateral trade continued to grow. Since the late 1990s Japan has played an active role in such areas as the environment, economic development, and water resource management.

[Hyman Kublin, Michael J. Schudrich, Shaul Tuval, and Marvin Tokayer / Tudor Parfitt (2nd ed.)]

The Japanese government also began to take a more active political role in the Middle East, consistent with a more engaged and wide-ranging foreign policy. Japan has strongly supported the post-Oslo "peace process" and has sought to use its influence to move the process forward. In 2005 Japan pledged \$100 million to the Palestinian Authority, with Prime Minister Koizumi Junichiro announcing the gift in May during a visit to Japan by PA leader Mahmoud Abbas. Japan has become one of the PA's most important sources of support, committing \$860 million since the signing of the Oslo Accords in 1993. Japan also extended an invitation to Israel's prime minister Ariel Sharon to visit Japan during 2005.

Moves towards closer relations between Israel and Japan can be traced to high-level ministerial visits during the 1980s. Israel's then foreign minister, Yitzhak Shamir, visited Japan in September 1985, with the first visit by a Japanese foreign minister occurring two years later. The first visit to Japan by an Israeli head of state was made by President Chaim Herzog in February 1989 on the occasion of the funeral of Emperor Hirohito. During the post-Oslo period, Prime Minister Yitzhak Rabin visited Japan in December 1994 and Japan's Prime Min-

ister Tomiichi Murayama traveled to Israel in September 1995. Prime Minister Binyamin Netanyahu made a visit to Japan in August 1997. There have also been visits from Israeli cabinet ministers and from other officials, including the then mayor of Jerusalem, Ehud Olmert, who visited the country in 1999.

Although knowledge in Japan about Jews and Judaism remains slight, links to the experience of the Jewish people have been strengthened through exposure to the Shoah, with the Diary of Anne Frank a part of the school curriculum and with films about the topic, such as *Life is Beautiful*, being shown on television and in cinemas. Affinities between Japan and the Jewish people have also been strengthened by the increased attention being given to the Japanese diplomat *Sugihara, who used his position in 1940 as Japan's vice consul in Lithuania to issue travel documents to Jews and thus saved many thousands of lives. The year 2000 marked the 100th anniversary of Sugihara's birth, at which time a plaque was unveiled at Japan's Ministry of Foreign Affairs at a ceremony hosted by the minister of foreign affairs in the presence of Sugihara's widow. A Sugihara Fellowship was established under the Japan Foundation for the purpose of supporting young Israeli researchers in Japanese studies. Sugihara's heroism and humanity have been further highlighted in Japan with the issue of a stamp in his honor and through his being given official recognition as one of the country's greatest figures of the 20th century.

In 1985 Sugihara became the first Japanese person to be honored by Yad Vashem as one of the *Righteous Among the Nations. Sugihara's birthplace, Yaotsu, a town in Gifu prefecture, has established memorials to him, including a museum whose exhibits and displays, including a video of his life, recreate for Japanese his courage and humanitarianism. Israel's Bar-Ilan University opened a Sugihara Center in 1994. In 2000-01 a centennial celebration in his honor, called Visas for Life, was held, with exhibits honoring Sugihara's contribution being displayed in Japan and internationally. An emissary from Israel has been based in Yaotsu to assist with the museum's educational program.

[Stephen Levine (2nd ed.)]

Jewish Discourse in Japan and the Common Origin Theory

Among the foreigners to be found in Japan in the 1870s was Norman McLeod, a Scot who started his career in the herring industry before he ended up in Japan as a missionary. In the preface to his *Epitome of the Ancient History of Japan*, which was first published in 1875, he noted that he had arrived in Japan in 1867 – the last year of the Tokugawa regime – and that he had intended to write a multi-volume work on Japan which among other things would furnish the reader with “a more detailed account of the origins of the Japanese with a description of their Jewish belongings.” His “researches in Japan have satisfied him,” a local newspaper reported in 1875, “that the people of this country are of Jewish family...” His notion that the Japanese people were descendants of the “Ten Lost Tribes of Israel” was set forth in several books; this contention

has been repeated regularly until the present day. McLeod's ideas reached a wide international audience, including a Jewish one, and no doubt had an impact on Japanese thinking. Within a couple of decades of their publication they formed part of a half-serious discourse which circulated throughout the Western Jewish press and elsewhere.

In Japan the ideas of McLeod fell on fertile ground perhaps because of some uncertainty as to where the Japanese originated and where they belonged in the world. No doubt the multitude of theories generated in Japan linking the Jews and Japan – the so-called common origin theories – were at least in part products of the western Christian tradition of speculation on the fate of the Ten Lost Tribes of Israel. However, alongside the speculation of early western visitors, and particularly McLeod, the local reading of the Christian Bible also played an important if perhaps secondary role in the spread of the fantasy of Israelite origin. In Japan one of the first Japanese to propose a common ancestry for the Jews and the Japanese was Saeki Yoshiro (1871–1965) who published his theory as an appendix to an academic work on Nestorian Christianity in 1908. Saeki was a serious scholar of Christianity in China. He arrived at the belief that the Hata clan – a continental group which is supposed to have arrived in Japan in the fifth century and which was to be found to the west of Kyoto in a village called Uzumasa – was Jewish. He adduced in favor of this proposition a range of philological arguments: “Uzu,” he reasoned, is a corrupt form of “*Ishu*” or Jesus and “*masa*” was the Hebrew form of Messiah. There are many other “proofs” of a similar sort. Notwithstanding the less than compelling nature of this evidence the “Uzumasa” connection was not only the linchpin of Saeki's argument but has become the basis of a great deal of subsequent common origin theorizing. In 1929 Oyabe Zen'ichiro (1867–1941), a Yale-educated Christian minister who had worked as a missionary in Hawaii, published his *Origin of Japan and the Japanese People* where he continued the arguments of Saeki. He elaborated on the contention that the Japanese emperors too were of Israelite descent. He observed: “It is well-known to Biblical scholars in the West and the world over that approximately three hundred years before the enthronement of the Emperor Jimmu (in 660 B.C.E.), two tribes of the Hebrews – Gad the most valiant and Menasseh, who were descended from the eldest son of the patriarch – fled eastward carrying the Hebrews' sacred treasures and to this day their whereabouts remain unknown. A close study of the ancient Hebrews as they are described in the Jewish scriptures reveals an extraordinary number of similarities between our two peoples. The Japanese and the Hebrews are virtually identical. These exact correspondences convince me that we are in fact one race.” Underlying Oyabe's thesis was his belief that Christianity and Shinto were much the same thing and that for Shinto better to serve the Japanese nation it would do well to adapt more explicitly Christian features, including the idea of a direct line of descent from Jewish thought. Another common origin theorist was Kawamorita Eiji (1891–1960). Kawamorita, a Presbyterian minister, spent most of his life in the United States

and produced a large two-volume work in Japanese – *Study of Japanese Hebrew Songs* – which argued that in Japanese folk songs were to be found traces of a Hebrew which had otherwise disappeared from Japan some thirteen hundred years before. This work continues to sustain Japanese Lost Tribes enthusiasts. Kawamorita's central idea was that Japan is a holy nation, that God is the source of all holiness and that therefore Japan's holiness must originate from God. Consequently Japan's divine emperor could only have descended from Israel – the chosen people of God. Kawamorita was led to the belief that “our Emperor is the undisputed successor to the eternal throne of the Great King David of Israel and that without the Emperor System Japan will lose its reason to exist.” Israelite theories have had a striking impact on Japanese society and no doubt have contributed to the egregious Jewish discourse in Japan. The general perspective on Jews is generally more or less antisemitic but rather vague. An example is the definition of the word “Jew” in Sanseido's *New Crown English-Japanese Dictionary* (revised edition, 1964): “Jew (dzu) n. Jew: Jews covet money – consequently there are many Jewish millionaires. The word can be used in lieu of the following: ‘avaricious,’ ‘miser,’ and ‘rich.’” Jewish conspiracy theories based largely on Western antisemitic ideas are rife and books peddling such ideas have achieved massive sales. Most Japanese bookstores have a “Jewish corner” where titles such as *The Jewish Plot to Control the World*, *The Secret of Jewish Power that Moves the World*, and so on are displayed. This interest in Jews has been present in Japan for years. In 1970 *Nihonjin to Yudayajin* (“The Japanese and the Jews”) won one of Japan's most coveted literary prizes and sold well over a million copies (by 1987 it had sold three million copies), and sales of a similar order have since been achieved by *If You Understand Judea You Understand Japan*, *The Jewish Way of Blowing a Millionaire's Bugle*, *If You Understand the Jews You Understand the World: 1990 Scenario for the Final Economic War*, *Miracles of the Torah which Controls the World*, and others besides. The mass media frequently carry sensational stories along the same lines. A more general Japanese interest in things Jewish or Israeli is quite apparent. From the amazing popularity of *The Diary of Anne Frank* to the unprecedented commercial success of the musical *Fiddler on the Roof* a Jewish seam appears to run through Japanese society. The fascination with Israel and Jews seems endless.

In contemporary Japan perhaps the most striking legacy of the strange ideas of McLeod is to be found in the Makuya and Beit Shalom sects. Although both of them are essentially Christian sects accepting the divinity of Christ, their “Jewishness” is very visible. The Makuya are intensely nationalistic and, in some ways, are looking to the redemption of the Japanese nation, which will be modeled upon the redemption of Israel. Makuya was founded at about the same time as the State of Israel. The founder of Makuya, Avraham Ikuro Teshima (1910–1973), is said to have met and to have been influenced by Martin *Buber on a number of occasions. Over the years thousands of Makuya and Beit Shalom disciples have gone to Israel where many of them have learned Hebrew. The

importance of a good knowledge of Hebrew for the Makuya can be judged by the fact that they have brought out a beautifully produced Japanese-Hebrew dictionary. Whenever the Makuya get together they sing secular and religious Hebrew songs, many of them the songs of modern Israel. They adopt Hebrew names, observe the Sabbath, and keep a form of *kashrut*: they light candles on Friday evening, break *hallah*, and read from the Jewish prayer book. Their view of the world is informed by a profound admiration for Israel and the Jewish people. Their love for Israel often finds practical expression: a Makuya volunteer was wounded in the 1967 Six-Day War and in the wake of the Israeli victory a Makuya “pilgrimage” marched through Jerusalem carrying a banner proclaiming “Congratulations on the Greater Jerusalem.” To some extent their admiration for Jews derives from the Christian part of their ideology. But, in addition, it springs from the national nature of Judaism – the idea that Judaism is the religion of the Jewish people – and from Zionism.

JAPHET, ISRAEL MEYER (1818–1892), German composer and teacher. Born in Kassel, Japhet taught at Gudensberg before being appointed choir leader and teacher of the Orthodox congregation in Frankfurt in 1853, where he remained until his death. He published *Metek Sefatayim; Hebraeische Sprachlehre* (1926³), a Hebrew grammar in two volumes; a book on the accents of the Bible entitled *Moreh ha-Kore; Die Accente der Heiligen Schrift* (1896), with the notation of the accents according to the German-Jewish tradition; and a Passover *Haggadah* (1884) with translation and commentary in German and including four traditional tunes set for two and four voices. Japhet's most influential work was *Schire Jeschurun* (“Songs of Yeshurun,” 1922⁴), a collection of 101 synagogue melodies for cantor and choir in three volumes: the first for the evening and the second for the morning services of Sabbath and festivals; the last for various occasions, such as Simhat Torah and the Sabbath. Their style shows a melodious simplicity and uncomplicated classical harmony which conforms to the general tendencies of the German synagogue of his time.

[Joshua Leib Neeman]

JAPHETH (Heb. יָפֶֿתֿ), son of Noah, brother of *Shem and *Ham. In all the lists of Noah's sons, Japheth invariably appears in the third place (Gen. 5:32; 6:10; 7:13; 9:18; 10:1; 1 Chron. 1:4). However, on one occasion Ham is called the "youngest son" of Noah (Gen. 9:24). If this is not to be explained as the result of a corruption in the text, it must reflect a variant tradition, unless some principle other than chronological governs the order of the listings. Japheth was married before the *flood (7:13), which he survived, together with his family, inside the ark. When his intoxicated father lay naked in the tent, Japheth, together with Shem, displayed great modesty and delicacy in covering him up (9:23). For this act he was blessed by Noah as follows: "May God enlarge Japheth, and let him dwell in the tents of Shem; And let Canaan be a slave to them" (9:27). The full meaning of this passage is obscure, and it has been variously interpreted as referring to either a Philistine-Israelite alliance against Canaanites (perhaps in Davidic times) or the future participation of the Japhethites – perhaps the Greeks – in the religion of Israel. In the Table of Nations (see The Seventy *Nations) Japheth is assigned seven sons and seven grandsons (Gen. 10:2–4; 1 Chron. 1:5–7). He is thus portrayed as the eponymous ancestor of various ethnic groups living to the west and north of Israel in the Aegean and Anatolian areas, largely composed of Indo-European stock. The origin of the name Japheth is unclear. The blessing referred to above implies a folk etymology grounded in a Hebrew root meaning "to enlarge," "make spacious." It has variously been connected with the Greek Titan, Ἰαπετός (cf. Javan = Ionia, Gen. 10:2), and with *Kafti*, the Egyptian name for the Eteo-Creteans.

[Nahum M. Sarna]

In the Aggadah

Although Japheth was the eldest of the three sons of Noah, he was the least endowed with wisdom, and for this reason his name is recorded last (e.g., Gen. 6:10; Sanh. 69b). In the act of covering Noah's nakedness (Gen. 9:23) the initiative was taken by Shem and Japheth merely helped him. Shem's reward was therefore greater than Japheth's in that the Temple built by his descendant (Solomon) was more holy than that built by Japheth's (Cyrus; PR 35, 160a). Nevertheless, on account of the respect he had thus shown to his father, Japheth was rewarded with a *pallium* (a cloak befitting that dignity of his Greek descendants), and by the fact that Gog, his descendant, would have the privilege of being buried in Erez Israel (cf. Ez. 39:11) and would therefore enjoy the messianic era (Gen. R. 36:6). The verse "God enlarge Japheth" (Gen. 9:26ff.) is interpreted to mean that the culture ("beauty") of Japheth, particularly the Greek language, would "dwell in the tents of Shem" (Meg. 9b). In the Midrash (Gen. R. 36.8) this is made to refer particularly to the Septuagint, and the same passage also interprets it to mean that Cyrus, a descendant of Japheth, would build the Second Temple. It also taught that God blessed Japheth by making his descendants entirely white, and by giving them the desert and its fields for an inheritance (PdRE 23).

[Leon Nemoj]

JAPHETH BEN DAVID IBN ṢAGHĪR (14th century), Karaite scholar and physician in Cairo. Japheth was a pupil of Israel ha-Ma'aravi, and followed his example in rejecting the use of objective analogy (*hekkesh*) in the rules applying to matrimony and incest. He was the author of *Sefer ha-Mitzvot*, of which parts 5 to 9 have been preserved in manuscript. In it Japheth quotes many earlier Karaite scholars, including *Daniel b. Moses al-Qūmisī, as well as works of some Rabbanite authors.

[Isaak Dov Ber Markon]

JAPHETH BEN ELI HA-LEVI (**Yefet ben Eli**; **Abū 'Alī al-Ḥasan ibn 'Alī al-Lāwī al-Baṣrī**; second half of tenth century), Karaite scholar in Jerusalem. Details of his life are not known. He was the only Karaite who wrote biblical commentaries in Arabic, accompanied by an Arabic translation (considered very literal by some modern scholars) of the Scriptures, on the entire biblical corpus (to date Lamentations is the only biblical book on which no trace of Japheth's commentary has been identified). His commentaries are unparalleled in size and diversity of the aspects discussed in relation to the biblical text: language, *halakhah*, history, theology and much polemics against Rabbinic Judaism and also against other religions, notably Islam and Christianity. Messianic aspects of the biblical text are adduced in certain contexts, sometimes extensively. Historical facts and circumstances are mentioned or alluded to occasionally.

Japheth relied mainly on earlier Karaite authorities, whom he quotes mostly anonymously. He sometimes utilized rabbinic sources and works of Rabbanite scholars. The latter are often quoted for polemical reasons. *Saadia Gaon is often quoted verbatim. He mastered a very wide array of sources, from which he selected in a rather sophisticated manner. Opposing interpretations are sometimes discussed at length (and ultimately rejected) when he thinks that they deserve it. His commentaries are thus a treasure house of old interpretations that often are not found in any other source.

In principle Japheth is committed to the literal mean-

ing of the text, which nevertheless always has to be judged by reason. The result can be defined as rationalistic exegesis. Although ostensibly attacking the Mu'tazila (see *Kalam), his exegetical terminology and theological concepts are typically Mu'tazilite. Accordingly he allows for metaphorical interpretation when required by ideological-exegetical considerations (e.g. unity and integrity of the biblical corpus) or theological ones. Some scholars recently suggested that he also took into account literary considerations, and that historic-philological considerations were paramount for him, but this needs further research. While strictly conservative, Japheth's opposition to the pursuit of secular studies was somewhat milder than that of his contemporaries. His commentaries won immediate recognition among contemporary Karaite scholars and were widely used by subsequent generations of Karaite scholars. Because of their large size, some commentaries were abridged, mainly by Egyptian Karaites. Parts of his commentaries were later translated into Hebrew and thus became available to Karaites in Byzantium who had no knowledge of Arabic. The original Arabic text apparently reached Spain, which may explain the fact that interpretations of his are referred to by Abraham *Ibn Ezra.

He also wrote *Sefer ha-Mitzvot* (Book of Precepts), parts of which survived in manuscript.

Japheth's commentaries survived in many hundreds of mss. The text seems to have developed over time in various ways and measures. Yet, only a relatively small part of Japheth's gigantic oeuvre (comprising dozens of volumes) has been published to date (mostly from the Prophets and the Writings). In recent times, however, there is an ever-increasing interest in Japheth's works, which is clearly reflected in the amount of publications (see bibl.).

[Haggai Ben-Shammai (2nd ed.)]

JAPHIA (Heb. יָפִיָּה), city in the territory of the tribe of Zebulun between Dobrath and Gath-Hepher (Josh. 19:12). Japhia is identified with Yafa, 2 mi. (3 km.) southwest of Nazareth. It appears as Iapu in the Tell el-Amarna letters. According to Josephus, who fortified it, it was the largest village in Galilee (Life, 230; Wars, 2:573). During the siege of Jotapata Japhia was attacked, captured, and sacked by the Romans (Wars, 3:289 ff.). It remained a Jewish town however; in 1921 a synagogue lintel was found there, and in 1950 part of a synagogue paved with mosaics was excavated near the Greek Orthodox church. Its ruins include a basilical hall, 46^a49 ft. (14^a15 m.), with two rows of five columns each. The east-west orientation of the hall is unusual. The pavement contains the representation of an eagle standing on a vase whose body is shaped like a human head, tigers and dolphins, and a circle of 12 figures, of which two have been preserved. Sukenik regarded the figures as symbols of the tribes, reading the extant fragmentary inscription יֵרָיִם [Eph]raim; Goodenough identified them with the Zodiac, reading יֵרָיִם [A]ries.

[Michael Avi-Yonah]

JARBLUM, MARC (1887–1972), Zionist leader. Born in Warsaw, Jarblum was one of the founders of Po'alei Zion in Poland and also engaged in underground activity, for which he was repeatedly jailed. He moved to Paris in 1907 and completed his law studies there. From the time of his arrival in Paris he gradually became one of the most prominent public figures in the Po'alei Zion movement, the Zionist movement, and in French Jewry. He was especially active in the period between the two world wars. Jarblum was responsible for winning over Léon *Blum and the leaders of the Second (Socialist) International – *Jaurès, Vandervelde, and others – to the Zionist cause. For years he filled public positions – as the representa-

tive of Socialist Zionism at the Second International, as representative of the *Jewish Agency in Paris, president of the Zionist Federation and chairman of the Federation of Jewish Organizations in France, as head of the Socialist Zionist movement and editor of its organs, etc. During World War II, Jarblum lived in the unoccupied zone of France and was engaged in underground activities there and, from 1943, in Switzerland. He returned to France after the war and continued his public activities. Jarblum played a special role in securing the French vote for the UN resolution on the partition of Palestine (November 1947). Jarblum lived in Tel Aviv from 1955 and worked in the political department of the *Histadrut there. He published numerous pamphlets on current affairs in Yiddish and in French. Among his works are *The Socialist International and Zionism* (1933, with introd. by E. Vandervelde); *Le Destin de la Palestine juive de la Déclaration Balfour 1917 au Livre Blanc 1939* (1939); *Ils habiteront en sécurité* (1947); and *La Lutte des Juifs contre les Nazis* (1945).

[Getzel Kressel]

JARÈ, Italian family. The name is a modern transcription of the Hebrew אֲרֵי, either implying אֲרֵי (“God-fearing”), or deriving from the initials of the phrase אֲרֵי רֵצוֹן אֲרֵי (“May he be desired of his brethren”). The transcription Jarè is known only from the 19th century. Obadiah of *Bertinoro was apparently a member of the family. Others included: ΠΕΤΡΑΗΙΑΗ of Spoleto, later of Recanati (16th century), a student of Arabic, who, with his son the physician MOSES, was one of the sources of Azariah de’Rossi’s knowledge of the Samaritan alphabet. BERECHIAH REUBEN (d. 1598), of Perugia and later Verona, became rabbi in Mantua, with which city the family was henceforth mainly associated. His son MORDECAI was rabbi in Mantua and edited the collection of liturgical poems *Ayyelet ha-Shahar* (Mantua, 1612), which also contained two of his own poems. Mordecai wrote an approbation for *Kenaf Renanim* by Joseph Jedidiah *Carmi (Venice, 1626). ISAAC was a printer in Mantua at the beginning of the 18th century. GIUSEPPE DI GRAZIADIO (1840–1915), one of the last pupils of Samuel David *Luzzatto at the rabbinical institute in Padua, was rabbi in Mantua and from 1880 in Ferrara. He published a number of studies on Italian Jewish history.

[Ariel Toaff]

JARMUTH (Heb. יַרְמוּת).

(1) Canaanite royal city mentioned in a 14th-century B.C.E. Akkadian letter found at Tell al-Ḥasī as Ia-ra-mu-ti. At the time of Joshua’s conquest, Piram king of Jarmuth joined the coalition led by Adoni-Zedek king of Jerusalem against Gibeon; he was defeated at Aijalon along with the others and was killed at Makkedah (Josh. 10:3, 5, 23). The king of Jarmuth

is also included in the list of defeated Canaanite kings (Josh. 12:11). Jarmuth became part of Judah and at the time of the Judahite monarchy it was included in the northern Shephelah district together with Adullam, Socoh, and Azekah (as preserved in Josh. 15:35). It was resettled by Judahites in the time of Nehemiah (Neh. 11:29). Eusebius locates it ten miles from Eleutheropolis, on the way to Jerusalem (Onom. 106:24–25). It has been identified with Khirbat al-Yarmūk (Eusebius calls it Iermochus), a large and prominent mound east of Kafr Zariyya where surveys have revealed a large city surrounded by a massive stone wall from the Early Bronze Age and a smaller but higher mound containing pottery ranging from the Late Bronze to Byzantine periods.

(2) The Jarmuth listed as a Levitical city of Issachar in Joshua 21:29 should be read Ramoth (1 Chron. 6:58) or Remeth (Josh. 19:21).

JAROSLAW (Pol. *Jaroslów*), town in Rzeszow province, S.E. Poland, on the San River. Jaroslaw’s development was based on the great fairs held in the 16th and 17th centuries three times yearly. The main one took place toward the fall, and Jewish traders took a prominent part. In business such as the sale of oxen, for which Jaroslaw was a market center, Jews were the main dealers. The fairs were the origin of Jaroslaw’s importance in the history of Polish Jewry. They were also, to a certain extent, the origin of the unique organizational character of its Jewish intercommunal institutions. Jewish communal leaders undertook to supervise the security of Jewish merchants visiting Jaroslaw. Jewish judges for the fair (*dayyanei ha-yarid*) were appointed as was customary among Christians; and a special procedure for them was introduced. A toll was levied on each trader or wagon to defray the expenses entailed. The *Council of the Lands of Poland frequently convened at the fall fair. A temporary congregation was formed by the Jewish visitors attending the fair. One scholar described the arrangements: “It happened that we were in the city of Jaroslaw at the fair of 1608, where it was a regular custom, as at every fair, that a place was set aside as a synagogue to pray there every day. And also on the Sabbath the scholars and heads of yeshivot and leaders of the lands and many people gathered to read in the Torah as is customary in the communities. And since the town is near the congregation of Przemysl ... they convey from there the Torah scroll belonging to the congregation of Przemysl” (Responsa of R. Meir of Lublin, no. 84). Few Jews were able to settle permanently in Jaroslaw after the middle of the 15th century because of the opposition of the burghers, but a settlement gradually developed during the 17th century, while the fair diminished in importance. The first local synagogue was established in the 1640s, and a synagogue of the (Four) Lands is mentioned as existing therein those years; in the synagogue of the (Four) Lands the Council’s decrees of excommunication and announcements were made public. The

cemetery was established in 1699. A *blood libel in 1737 led to the suicide of one of the victims subjected to torture; others were cruelly put to death. In 1738 there were approximately 100 Jewish families living in Jaroslaw. In 1813 the Jewish population numbered 2,355 (out of a total of 9,007), and in 1921, 6,577 (out of 19,973). A number of the rabbis of Jaroslaw won recognition for their learning.

[Israel Halperin]

Holocaust Period

The city was captured by the Germans on Sept. 10, 1939. Their first anti-Jewish act was to set the synagogue aflame. On Sept. 12, 1939, the Germans imposed a fine. To insure the execution of this order, some communal workers were arrested, including the prewar head of the community Mendel Reich, whose fate remains unknown. On Sept. 28, 1939, the Germans ordered the population to assemble in the Sokol sports field. Some 7,000 persons assembled and were deported across the San River to Soviet-occupied territory. At the time of deportation, the Jews had to hand over all items of value and all their belongings were stolen. On the Soviet side, their fate was that of other Jewish refugees from western Poland. They suffered from lack of proper housing conditions, difficulties in finding work, and administrative restrictions. In the summer of 1940 many were exiled into the Soviet interior. Several hundred of those exiled to Russia survived, while those in east Poland were killed by the Germans during the German-Soviet War, in the years 1941–44. The community was not reconstituted after World War II.

JASIEŃSKI (Zyskind), BRUNO (1901–1939), Polish poet, novelist, and playwright. Jasiński was born in Klimentów. Together with another prominent futurist writer, Anatol *Stern, he published a celebrated pamphlet, *Nuż w bżuchu* (“A Knife in the Belly,” 1921), and a collection of verse, *Ziemia na lewo* (“Land on the Left,” 1924). Two volumes of his own poetry were *But w butonierce* (“The Boot in the Buttonhole,” 1921) and *Pieśń o głodzie* (“Song of Hunger,” 1922). After emigrating to Paris in 1925, Jasiński published *Słowo o Jakubie Szeli* (“A Word about Jacob Szela,” 1926), a poem in which he tried to rehabilitate the leader of an anti-feudal peasant uprising in West Galicia in 1848. Jasiński’s famous novel *Pałę Paryż* (“I Burn Paris,” 1928), first printed in the French Communist daily *L’Humanité*, was a fantasy of the destruction of the citadel of capitalism by the international proletariat. The French government promptly expelled the author. From 1929 until his death Jasiński lived in the U.S.S.R., where he helped to organize the Union of Soviet Writers and contributed to Polish and Russian periodicals. His play *Bal manekinów* (“The Dum-

mies’ Ball,” 1931) appeared in both Polish and Russian, and he also wrote short stories in Russian, and the novel *Chelovek menyayet kozhu* (1934; *Man Changes his Skin*, 1935), of which the Polish, *Człowiek zmienia skórę*, was published in 1935–37 (2 vols.). This novel dealt with the conflicts arising from Socialist reconstruction in Tadzhikistan. In 1937 Jasiński was arrested. He was sentenced to five years’ imprisonment, but died later on the way to his place of exile near Vladivostok. He was officially rehabilitated by the Communists in 1956. A collected edition of his poems, edited by Anatol Stern, appeared in 1960.

JASINOWSKI, ISRAEL ISIDORE (1842–1917), Russian Zionist leader. Born in Kosov, Russia, he received a religious education and in 1874 completed his law studies at the University of Kazan, where he was awarded the degree of advocate for his thesis on “Sources of Jurisprudence in Holy Scripture and in its Oral Tradition.” He then became a renowned lawyer in Warsaw, where he headed the *Hibbat Zion movement soon after its establishment. He was among the organizers of the *Kattowitz Conference (1884) and was elected to the Central Committee of Hibbat Zion. Together with Leo *Levanda and P. Loewenson, Jasinowski drafted the regulations of the “Odessa Committee” of Hovevei Zion, called officially the Society for Supporting Jewish Agriculturists and Artisans in Syria and Palestine, and participated in the founding meeting of the society (1890). Jasinowski joined the Zionist movement at its inception and participated in its first seven congresses. He represented the Warsaw “constituency” and his office served as the center of Zionist activities in Russian Poland. He was among those who supported the *Uganda Scheme, and, after the Seventh Zionist Congress, he joined the Jewish Territorial Organization (see *Territorialism). He was a member of its International Council and participated as its representative at the Brussels Conference on questions of Jewish migration (1906). In his last years Jasinowski became alienated from the Jewish national movement and came closer to assimilationist circles.

[Yehuda Slutsky]

JASLO, town in S.E. Poland. A Jewish settlement existed there before 1463. In 1589 the town obtained the privilege *de non tollerandis Judaeis*, i.e., the right to exclude Jews, and in 1619 Jewish settlement and commerce in Jaslo were again prohibited. However, several Jewish families were living in Jaslo by 1765. In 1795, after the partition of Poland, Jaslo passed to Austria under which there were no restrictions on Jewish settlement. In 1805 six families were settled in Jaslo as farmers, and the Jewish community began to increase, in particular between 1848

and 1853. The Jewish population numbered 433 in 1880 (13.1% of the total), 934 in 1890 (20.6%), 1,524 in 1900 (23.2%), 2,262 in 1910 (22.3%), and 2,445 in 1921 (23.5%). The majority were Hasidim. Children generally received a traditional Jewish education. A number attended the local secondary school, where there were 30 Jewish pupils out of 556 in 1914. During the period between the two world wars the Jewish population was mainly occupied in light industry and crafts. In 1921, 96 Jews owned industrial enterprises employing 678 persons, of whom 76 were owners, 49 members of the family, 83 Jewish, and 470 non-Jewish workers. The only sizable enterprises owned by Jews were five chemical works, employing 35 Jewish and 420 non-Jewish workers; large or medium-sized workshops included 29 food processing, 28 clothing, eight timber, seven metallurgical, six building, three machinery, three leather, three textile, two printing, and two disinfecting.

[Nathan Michael Gelber]

Holocaust Period

In the summer of 1941, a ghetto was established in Jaslo. Refugees increased the population to around 2,300. In July and August 1942 around 650 Jews were executed in the surrounding forests. The ghetto was liquidated on August 19–20 and its inmates, with a few exceptions, were deported to Belzec and there murdered. A small number of Jews were transferred to the forced labor camp in Szebnia, which was liquidated in 1943. No Jews settled in Jaslo after World War II.

[Stefan Krakowski]

JASNY, NAUM (1883–1967), economist. Born in Kharkov, Ukraine, Jasny obtained a doctorate in law in St. Petersburg (Leningrad). Jasny practiced law for a short time, and then became director of a flour mill in Kharkov, an experience which aroused his interest in economics. After the Russian Revolution he worked on designing food policies for the Soviet government, for which he later undertook economic research in Germany. While there he joined the Business Cycle Research Institute and in 1933, with the coming of Hitler, he moved to the United States where he was appointed senior economist with the Department of Agriculture. From 1939 he was with the Food Research Institute of Stanford University where he prepared forecasts of food availability in allied and enemy countries. After World War II, he worked with the Stanford Soviet Economic Group. Jasny's main interests were agricultural statistics and economics. His estimates of grain harvests in the U.S.S.R. served for many years as the basis for the investigations into the Soviet military potential. Among Jasny's major works are *The Socialized Agriculture of the U.S.S.R.* (1949); *The Wheats of Classical Antiquity* (1944); *Soviet Industrialization 1928–52* (1961); *Soviet Planning* (1964), edited by J.T. Degras and A. Nove; and *Khrushchev's Crop Policy* (1965). His memoirs were being prepared for publication at the time of his death.

[Joachim O. Ronall]

JASON (second century B.C.E.), high priest. Jason, who adopted this Greek form of his Hebrew name Joshua, was the son of the high priest Simeon II and a brother of *Onias III. According to Josephus he was also the brother of *Menelaus, but it is almost certain, in the light of II Maccabees, that this is inaccurate. The events that occurred at the end of the high priesthood of Onias III undermined his standing in the Seleucid court. Jason exploited the ascent of Antiochus IV to the throne (176 B.C.E.) and his need of money to have his brother deposed and to obtain the high priesthood for himself (175), against the promise of large sums of money. Antiochus also granted him authority to establish in Jerusalem a Hellenist polis whose citizens were selected and registered by Jason himself. Armed with this authority, he established within Jerusalem a city-state called Antiochia, whose citizens he chose from the Hellenized aristocracy of Jerusalem, and erected a gymnasium in the capital. His actions led to a strengthening of Hellenistic culture in the city and to a weakening of the traditional way of life and of religious worship (II Macc. 4:7–15). This policy of Jason and his supporters was the chief cause of the Hasmonean revolt which broke out afterward, and which finally freed Judea from the rule of the Seleucids and gave birth to the Hasmonean dynasty. Jason sent envoys and gifts to Tyre in honor of the festivities to the Tyrean god Heracles. He also welcomed Antiochus when he visited Jerusalem in 174 B.C.E. However, three years later he was dismissed from the high priesthood by the king, and Menelaus, who offered Antiochus a larger sum of money for the office, was appointed in his stead. A few years later, in 168 B.C.E., when a false rumor spread that Antiochus was dead, he attempted to return and seize power in Jerusalem. He was unsuccessful, however, and was compelled to leave the city after instituting a slaughter of the inhabitants. For a while he was imprisoned by the Arabian king, Aretas. His last years were spent wandering from place to place, and he was not buried in the family sepulcher.

[Uriel Rappaport]

JASON OF CYRENE (c. middle of second century B.C.E.), Jewish historian who wrote a work in five books on the Maccabean revolt. The work is not extant and is known only from II Maccabees, which claims to be an epitome of it (II Macc. 2:23). It opened with events in the days of Onias III and may have concluded with Judah Maccabee's victory over Nicanor or continued to a later period. From the literary character of the work, Jason was presumably a hellenized though pious Jew, who was anxious to propagate moral values and to glorify his people and God. It is difficult to assume that he was a Pharisee, and his identification with Jason, Judah Maccabee's emissary to Rome (I Macc. 8:17), is doubtful.

For further details about the work and its relation to II Maccabees, as well as for bibliography, see *Maccabees, Books of.

[Uriel Rappaport]

JASSINOWSKY, PINCHAS (1886–1954), *hazzan* and composer. Born at Romanovka, near Kiev, Ukraine, Jassinowsky joined the choir of Pinchas *Minkowski in Kherson, as a boy. While he was studying music in St. Petersburg, he was assistant choirmaster in a synagogue there. In 1917 he emigrated to the United States. He had a smooth and plaintive tenor voice, and his singing in synagogues and at concerts made him a celebrity. He composed a considerable body of music, including *Ve-Hayah be-Aharit ha-Yamim* (Isa. 2:1–4) dedicated to the new Hebrew University of Jerusalem (1926), *Aseret ha-Dibberot* (“The Ten Commandments”), *Shirat ha-Be’er* (“The Song of the Well”), *Ba-Yom ha-Hu* (Isa. 26:1–4), and music for Yiddish poems folk songs, children’s songs, and songs of the High Holidays.

[Joshua Leib Ne’eman]

JASSY (Rom. *Iasi*), city in N.E. Romania, capital of the former principality of Moldavia from 1565. The community of Jassy was the oldest in Moldavia. Jews first settled there in the second half of the 15th century because of its position on the commercial route between Poland and Bessarabia and to the Danube port of Galati (Galatz). Their number increased when Polish Jews took refuge there during the *Chmielnicki massacres (1648/49). In 1650 and 1652 many Jews in Jassy were murdered by Cossacks. There were new disturbances in 1726 when the populace, incensed by a *blood libel, sacked the houses of the Jews in Jassy and desecrated a number of synagogues. The Jewish guild of Jassy obtained an order from the sultan to liberate the Jews who had been arrested in the blood libel case. In 1742 Prince Constantin Mavrocordat, wishing to attract Jews from Poland, exempted those who settled in the town from taxes.

At the end of the 18th century the Jews were concentrated in their own quarter. Several branches of commerce (cereals, livestock, wool, honey, cheese) were exclusively handled by Jews. By the middle of the 19th century they had taken the place of the Turks and Greeks as bankers and money changers. Many Jews were also occupied as goldsmiths, tailors, hatters, furriers, and shoemakers. A number of these crafts had their own unions, some possessing their own synagogues. When the Christian tradesmen and artisans tried to limit the activity of their Jewish counterparts, a decision was issued by the prince in favor of the Jews (1817). In 1831 Jewish merchants and artisans formed 43% of the total number of these occupations, and by 1860 their proportion had increased to 78%. The Jewish population numbered 4,396 families in 1820, 31,015 persons (47% of the total) in 1859, 39,441 (50.8%) in 1899, and 35,000 in 1910.

Persecutions

In 1835 and again in 1839 Prince Michael Sturdza initiated actions against the Jews, which were stopped only after the Jewish bankers had canceled his debts. In 1867 Jews hav-

ing no legal documents of residence were declared vagrants and expelled from the country. Diplomatic representatives of England and Austria presented their protests to the Romanian government; Emperor Napoleon III of France also intervened. However the persecution intensified during the last two decades of the 19th century, in particular after the Congress of *Berlin. Despite the recommendations of the Congress of Berlin, which threatened not to recognize Romania’s independence, the Romanian political class refused to grant citizenship to the Jews.

Headquarters of the Antisemitic Movement

Toward the end of the 19th century Jassy became the center of antisemitism in Romania. In 1882 and 1884 two economic congresses were held there with the aim of promoting a boycott on Jewish commerce and industry. Through the activities of a “commercial club” during this period, 196 Jewish shops were closed down in 1892, and many Jewish tradesmen were expelled from the town. A number of Jews committed suicide in consequence. The University of Jassy became the center of antisemitism in Romania, with A.C. *Cuza, who taught at the university, as its main proponent.

Internal Organization

From 1622 to 1832 the affairs of the Jewish community of Jassy were administered by the “guild of the Jews,” headed by the *hakham bashi*, who was the chief rabbi of Moldavia and Walachia, and three *parnasim*. From the taxes on kosher meat which it levied, the synagogues, *talmud torah* institutions, shelter for transients (*hekdesht*), and cemetery were maintained. After the guild was dissolved in 1834, associations were formed according to countries of origin (Russia, Austria, Prussia).

The first modern school for boys was founded in 1852 but remained open for only five years because of opposition from Orthodox circles. In 1858 the government began to press for the closing of the traditional Jewish schools and their replacement by modern schools in an assimilationist spirit. Some steps were taken in this direction from 1860 but the schools were unable to withstand the Orthodox opposition. Modern Jewish schools were again founded in 1893, after Jewish pupils had been expelled from public schools. There were 5,000 pupils (boys and girls) attending the community schools in 1910.

In 1834 the administrators of the hospital, which was founded in 1772, took over the management of the community affairs, receiving the principal income from the tax on kosher meat. The orphanage and an old age home were founded in 1890. In 1915 the Dr. L. Gelehrter Hospital for children was founded. The Caritas Humanitas association with a membership of 2,000 was active up to the eve of World War II, providing medical assistance and aid for widows.

Zionist Movement

There had been pre-Zionist groups at Jassy even before the *Hibbat Zion. In 1866 the Doreshet Zion association was

founded, with the aim of creating a Hebrew library. From 1878 to 1898 the Ohalei Shem association propagated the Hebrew language and Jewish culture. The Yishuv Erez Israel movement also had an important center in Jassy, headed by Karpel *Lippe, who had initiated the two above-mentioned associations. The poet Naphtali Herz *Imber, author of *Ha-Tikvah*, lived in Jassy at the end of the 1870s. Inspired by the ideas of Theodor Herzl, the Jewish community of Jassy founded nine Zionist organizations, which were amalgamated in 1919.

Spiritual and Cultural Activities

Jassy had long been the spiritual center for Jews living in both Romanian principalities (Moldavia and Walachia) through the influence of important rabbis who officiated there. The first of note, Solomon b. Aroyo, a kabbalist and physician to the prince of Moldavia, lived in Jassy at the end of the 16th and beginning of the 17th centuries. Nathan Nata *Hannover and Pethahiah b. David Lida served there in the 17th century. In the 18th century Hasidism began to spread to Jassy and brought a number of hasidic leaders there, including *Abraham Joshua Heschel of Apta, who lived in Jassy at the beginning of the 19th century. In the second half of the 19th century Jassy became a center of talmudic learning with scholars like Joseph Landau of Litin and Aaron Moses b. Jacob *Taubes. Among eminent hasidic scholars there the most important was Isaiah Schorr. In 1897 J.I. *Niemirover began his rabbinical activity and remained in Jassy until 1911.

Hebrew books were published in Jassy from 1842 onward, among them Eliezer b. Reuben Kahana's commentary on the Five Scrolls, *Si'ah Sefunim*; two editions (one with Yiddish translation) of Nathan Hannover's *Sha'arei Ziyyon* (1843); and the *Likkutei Amarim* of Shneur Zalman (of Lubavich; publ. 1843). Hebrew printing continued into the 1880s. Some Hebrew and Yiddish periodicals were also published in Jassy. A Yiddish biweekly *Korot ha-Ittim* was published from 1855 to 1871. For a year in 1872 the first Jewish all-Romanian newspaper *Vocea apărătorului* ("Voice of the Defender") was published. The weekly *Rasaritul* ("The East") was published from 1899 to 1901 by the Zionists, who also issued two annuals. In 1914 four numbers of a literary review, *Likht* ("Light"), were published in Yiddish, with the collaboration of Jacob *Groper, Abraham L. *Zissu, Motty Rabinovici, and Jacob *Botoshansky. The illustrations were the work of the painter Reuven *Rubin.

Jassy was the cradle of the Yiddish theater. In 1876 Abraham *Goldfaden first presented his operettas in Jassy. J. *Latteiner also had his own theater company, for which he wrote 75 plays. N. Horowitz from Galicia produced his operettas with a historical setting there.

Between the Two World Wars

In 1919 the community was reorganized. In the same year elections were held for the first communal administration. The community was recognized as a public body by the Ministry of Religions in 1927. In 1939 there existed in Jassy 112 synagogues,

one kindergarten, three elementary schools for boys and four for girls, four religious schools (*talmud torah*), one yeshivah, one secondary school, one general hospital, one children's hospital, two sanatoriums for invalids, an orphanage, and an old age home. A Zionist weekly *Tribuna Evreeasca* was published in Romanian at Jassy between the two world wars.

In this period also Jassy, and especially the university, continued to be the center of antisemitic activities. Under the leadership of A.C. Cuza, the "National and Christian Defense League" (LANC) was founded in 1923. The head of the youth organization, Corneliu Zelea Codreanu, founded the "Archangel Michael League" in 1927, which is also known as "All for the Fatherland" and the more familiar "Iron Guard," an extremist antisemitic organization. The continual troubles caused by the antisemitic organizations and economic persecution by the authorities led to progressive pauperization among the Jewish masses in Jassy. In consequence the Jewish population diminished from 43,500 in 1921 to 35,465 (34.4%) in 1930.

Holocaust Period and After

On Nov. 6, 1940, the Antonescu government had seized power. The persecution of the Jewish population began immediately, accompanied by arbitrary arrests, torture, extortion, confiscation of places of business, and attempts to stage trials on such charges as Communism. However, the Jewish community leaders soon managed to reach an agreement with the leaders of the Iron Guard, who promised to stop the persecution in exchange for the sum of six million lei to be paid in installments. Consequently, until the Iron Guard were forced out of the government (January 1941), there were few further antisemitic incidents in the city. The final installment of the "subsidy" was paid during the Bucharest pogrom, which occurred when the Iron Guard rebelled against Antonescu's government, and, as a result, the Jews of Jassy remained unharmed.

In the summer of 1941, on the eve of the outbreak of war against the Soviet Union, many German army units moved to Jassy. Before the first military operation in the area (on June 29, 1941) and the opening of the large-scale offensive on the southern front (July 2, 1941), antisemitic tension grew, as the result of rumors that Jews were signaling to the Russian planes bombarding the town, and had even dared to shoot at soldiers. On the eve of June 28, German and Romanian patrols, accompanied by local residents, murdered many Jews and rounded up thousands more in the courtyard of the police station, where they were shot the next day. Immediately afterward, 4,332 Jews were dispatched to internment camps, 2,205 of them suffocating en route from the terrible overcrowding in the death cars. The exact number then killed at Jassy is unknown; wartime Romanian secret police documents mention the number of 13,266 victims including 40 women and 180 children.

In 1969 there were about 2,000 Jewish families in Jassy, and 11 synagogues. Courses in Hebrew and Jewish history with about 80 participants were held. The population diminished steadily to a few hundred by the turn of the century owing to

immigration to Israel and elsewhere. Those who remained were cared for through government and Jewish funds.

[Theodor Lavi]

JASTROW, family of scholars originating in Prussian Poland, later in the U.S. MARCUS MORDECAI JASTROW (1829–1903) was a Polish-born rabbi and lexicographer and a leader of the historical school in the United States. Jastrow was born in Rogasen, Poznan. He was ordained by Rabbis Feilchenfeld of Rogasen and Wolf Landau of Dresden. He also studied at Berlin University and took his doctorate at Halle with a thesis on the philosophy of Abraham ibn Ezra (1855). With the aid of Heinrich *Graetz he was appointed preacher of the progressive German congregation in Warsaw. There he was caught up (with other Warsaw rabbis) in the Polish insurrectionary movement of 1861–63, preaching and writing for the revolutionary cause; he was imprisoned by the Russians for three months and, being a Prussian subject, expelled from Poland. For two years he was rabbi at Worms. In this period he published *Vier Jahrhunderte aus der Geschichte der Juden* (1865), covering the period from the Babylonian Exile to the Maccabees.

In 1866 he emigrated to the United States as rabbi to Rodeph Shalom, a congregation in Philadelphia largely composed of German immigrants; he served this congregation until his retirement in 1892. His work with the congregation encountered many difficulties. He strove to hold his synagogue within the confines of tradition but he was not able to stem the tide to Reform. He introduced some reforms, such as the use of an organ and Benjamin *Szold's prayer book *Avodat Israel* (Ger., 1863), which he helped to revise and which he translated into English as *A Prayer Book for the Services of the Year...* (1885). However, in polemics in the *Hebrew Leader* and the *Jewish Times* he opposed the movement for radical Reform as expressed by I.M. *Wise, D. *Einhorn, and Samuel *Hirsch. He did not favor formation of the *Union of American Hebrew Congregations or of *Hebrew Union College. In these polemics he emerged as one of the leaders of the historical school, which developed into *Conservative Judaism.

Jastrow taught Jewish philosophy, history, and Bible at Maimonides College from 1867 until it closed in 1875. He took a prominent part in the work of the *Jewish Publication Society, served from 1895 to 1903 as editor-in-chief of its projected Bible translation, and did the translation of Job. He also edited the Talmud section of the *Jewish Encyclopedia. Jastrow was a member of the executive of the *Alliance Israélite Universelle and of *Mekizei Nirdamim, and served as a vice president of the American Zionist Federation.

A severe illness in 1876 forced Jastrow to restrict his communal activities, and during a prolonged convalescence he began work on his major contribution to modern Jewish scholarship, the monumental *Dictionary of the Targumim, the Talmud Babli and Yerushalmi and the Midrashic Literature* (2 vols., 1886–1903; reprs. 1926, 1943, 1950; and as *Hebrew-Aramaic-English Dictionary...*, 2 vols., 1969). Using Jacob *Levy's dictionaries and S. Kraus' *Griechische und Lateinische Lehnwörter*, Jastrow produced an eminently serviceable dictionary for the student of rabbinics, particularly the English-speaking student. In comprehensiveness and in attention to comparative linguistics, the dictionary was a definite advance on its predecessors. Though talmudic lexicography has progressed considerably since the dictionary first appeared, Jastrow's work has retained its value as a tool for all who study rabbinic literature.

One of Marcus' sons, MORRIS JASTROW (1861–1922), was a distinguished Orientalist. He was born in Poland and was brought to the United States as a child. He took his doctorate at Leipzig in 1884 with a dissertation on Judah *Ḥayyuj (*Abu Zakariyya Jahjâ... und seine zwei grammatischen Schriften...*, 1885; *Weak and Geminative Verbs by Abu Zakariyya... Ḥayyuj*, 1897). Returning to Philadelphia, he assisted his father for a short time at Rodeph Shalom. In 1892 he began teaching Semitics at the University of Pennsylvania; he also served as librarian (from 1898) and as research professor of Assyriology there. For a time he acted as editor of the Bible department of the *Jewish Encyclopedia*, was on the board of the *International Encyclopedia*, and contributed to Hasting's *Dictionary of the Bible*, the *Encyclopedia Biblica*, and many other learned publications. His anti-Zionist attitude is evident in *Zionism and the Future of Palestine: Fallacies and Dangers of Political Zionism* (1919).

Jastrow's most important work was probably *Religion of Babylonia and Assyria* (1898; rev. ed. *Aspects of Religious Beliefs and Practice in Babylonia and Assyria*, 1969). His other works on the religious and cultural history of Assyria and Babylonia include *Fragment of the Babylonian Dībbarra Epic* (1891; now known as the 11 Tablet of the Era-epic); *Bildermappe... zur Religion Babyloniens und Assyriens...* (1912); an atlas of illustrations for the *Religion of Babylonia and Assyria; An Old Babylonian Version of the Gilgamesh Epic* (with A.T. Clay, 1923).

Of more immediate Jewish interest are his *Study of Religion* (1901); *Hebrew and Babylonian Tradition* (1914); *Gentle Cynic* (1919), on Ecclesiastes; *Book of Job* (1920); and *Song of Songs* (1921).

Marcus' younger son, JOSEPH JASTROW (1863–1944), was a noted psychologist. Jastrow was educated at Pennsylvania and Johns Hopkins universities. He taught psychology at Wisconsin (1888–1927), Columbia (1910), and the New School for Social Research (1927–33). In 1900 he served as president of the American Psychological Association. He made a considerable contribution to the psychology of perception and of abnormality and he popularized Freudian thought in such works as *Fact and Fable in Psychology* (1900); *Subconscious* (1906, repr. 1970); *Keeping Mentally Fit* (1928), a title Jastrow also used for a syndicated newspaper column (1928–32) and a radio series (1935–38); *The House that Freud Built* (1932); *Freud, His Dream and Sex Theories*, 1941; *Error and Eccentricity in Human Belief* (1935); *Betrayal of Intelligence* (1938); and *Story of Human Error* (ed., 1936).

[Jacob Rothschild / Jack Reimer]

JASTRUN (Agatstein), MIECZYSLAW (1903–1983), Polish poet, essayist, and translator. Born in Korolówka, Jastrun was one of the Skamander literary group. Philosophical reflection dominated such pre-World War II collections as *Spotkanie w czasie* (“Meeting in Time,” 1929), *Inna młodość* (“Another Youth,” 1933), and *Strumień i milczenie* (“Stream and Silence,” 1937). During the years 1945–49, he was coeditor of the literary weekly *Kuźnica*. From the end of World War II his verse reflected the period of the Holocaust, notably in *Godzina strzeżona* (“The Guarded Hour,” 1944), *Rzecz ludzka* (“Human Matter,” 1946), *Sezon w Alpach* (“Season in the Alps,” 1948), *Rok urodzaju* (“The Fertile Year,” 1950), and *Barwy ziemi* (“Colors of Earth,” 1951). Jastrun also wrote three biographical novels on great Polish poets: *Mickiewicz* (1949, 1967¹¹; Eng. tr. 1955; Heb. tr. 1956); *Spotkanie z Salomeą* (“Meeting with Salomea,” 1951), on the poet Juliusz Slowacki; and *Poeta i dworzanin* (“The Poet and the Courtier,” 1954), on the poet Jan Kochanowski. His volumes of essays include: *Dzienniki i wspomnienia* (“Diaries and Memoirs,” 1955); *Wizerunki: Szkice literackie* (“Images: Literary Essays,” 1956), on Polish and foreign writers; and *Mit śródziemnomorski* (“Mediterranean Myth,” 1962). Selections of his verse were published in 1966 and 1968. Jastrun also edited *Poezja Młodej Polski* (“The Poetry of Young Poland,” 1967), *Wolność Wyboru* (“Freedom of Choice,” essays, 1969) and *Godła pamięci* (“Memorials,” poetry, 1969). Among Jastrun’s outstanding translations are those from the works of Lorca, Pushkin, and Rilke. An independently minded Communist, Jastrun was one of the authors of the *Manifest trzydziestu czterech* (“Manifesto of the 34,” 1964) against the cultural policy of the Polish Communist Party and government.

[Stanisław Wygodzki]

JÁSZI, OSZKÁR (1875–1957), Hungarian political scientist. Born in Nagykároly (now Romania), Jászi was converted to Christianity as a child. He was editor of the radical periodical *Huszadik Század* (“Twentieth Century”) from 1906 to 1919.

Jászi was particularly concerned with the problem of national minorities. In his book, *A nemzeti államok kialakulása és a nemzetiségi kérdés* (“The Evolution of the Nation States and the Nationality Problem,” 1912), he argued that these minorities should be granted full cultural and social autonomy. But later he believed that the question of Russian Jewry could be resolved by the creation of a Jewish state in Palestine. He advocated that the Jews of Hungary should assimilate. In 1912 he became an assistant professor of political science at the University of Kolozsvár. In 1918, following the outbreak of revolution, he was made minister of national minorities. He recognized the right of the Jews to national self-determination and also attempted to negotiate a permanent settlement with the national minorities within the Hungarian Republic. When the Hungarian Soviet regime came to power in 1919, Jászi left Hungary for Vienna and then Munich. He published a history of the revolution in Hungary, *Magyar kálvaria – magyar föltámadás* (1920; *Revolution and Counter Revolution in Hungary*, 1924). In the following year he immigrated to the United States where he lectured at Oberon College, Ohio, and became professor of political science there in 1941. Jászi was the author of numerous works on politics and political science including *A történelmi materializmus állambölcselete* (“History of Historical Materialism,” 1904), *Művészet és erkölcs* (“Arts and Ethics,” 1904), and *The Dissolution of the Habsburg Monarchy* (1929).

[Baruch Yaron]

JÁTIVA (Xátiva), city in Valencia, E. Spain. Its community was probably second in size in the kingdom after that of the city of Valencia itself. After Játiva was captured from the Moors by James I in 1244, the quarter where Jews had lived under Muslim rule was restored to them, and the king’s interpreter, Baḥye Alfaquim, received estates in the city and its vicinity. In the 13th century there were about 200 Jews living in Játiva. In 1268 James I forbade the practice of stoning the Jews on Good Friday. In 1274, a new charter exempted the community from taxes for five years in order to encourage Jewish settlement in the city. The community was governed by a council of seven members who had criminal jurisdiction. In 1283 the town council prohibited the Jews from wearing bright clothes and jewelry. A center for study of the Hebrew and Arabic languages was established in Játiva by the Dominican Order in 1291: a Jew named Yom Tov, who taught here, was exempted from taxes. In 1363 Pedro IV imposed a

tax of 10,000 sólidos on the community as their contribution toward the war against Castile. John I forbade the municipal officials to prevent the Jews from setting up workshops and they were authorized to do so in any section of the town. R. Hayyim b. Bibas, a disciple of *Asher b. Jehiel and correspondent of *Isaac b. Sheshet (cf. resp. no. 297), was rabbi in Játiva. During the persecutions of 1391, some Jews in Játiva died as martyrs, whilst others became converted to Christianity. The Jewish settlement was renewed during the 15th century and was the only community that existed in the Kingdom of Valencia after 1391 that continued until the expulsion of the Jews from Spain in 1492. In 1482, the kabbalist Joseph *Alcastiel was living in Játiva. Other scholars who resided there were Jacob Elihahu, Amram Efrati, and Yehoshua Satabi. The paper mill at Játiva, the oldest in Christian Europe, is believed to have been a Jewish enterprise. The pioneer Spanish Hebrew printer, Solomon Zalmati (one of whose relatives was involved with the Inquisition), was a native of Játiva.

In 1941 a Hebrew inscription was discovered in the hermitage of las Santas which suggests that it was the site of the synagogue. The Jewish quarter was not far from there, in the Santas street and adjacent small streets.

[Haim Beinart]

JATTIR, JETHIRA (Heb. יַתִּיר), Judean city situated in the southernmost hill district and mentioned together with Shamir and Socoh (Josh. 15:48). It was a levitical city of the Kohathite family (Josh. 21:14; 1 Chron. 6:42). Jattir was one of the cities in southern Judah to which David distributed part of the spoils taken from the Amalekites (1 Sam. 30:27). Eusebius identifies it with Lether, a large village 20 Roman miles from Eleutheropolis (Bet Guvrin), inhabited only by Christians (Onom. 108:1ff.). The site of Jattir is now called Khirbat Attir; its extensive ruins date from the Roman and Byzantine periods. The *Madaba map shows Jattir in the wrong place, confusing it with Ether.

[Michael Avi-Yonah]

JAUNIJELGAVA (Ger. **Friedrichstadt**), city in Zemgale (Courland) district, Latvia., S.E. of Riga. In the period of czarist rule it was a district capital in *Courland. Jewish artisans from the villages started to settle in Jaunijelgava under Russian rule at the beginning of the 19th century. In 1850 the Jewish community numbered 1,483, increasing to 4,128 (70% of the total population) in 1881, and 3,256 (62.5%) in 1897. Apart from petty trade and artisanship, some wealthy Jews dealt in

the export of wood, hides, and bristles. During World War I, the Jews in Jaunijelgava were expelled in July 1915 into the Russian interior, but before that three prominent members of the community were arrested as hostages, to be executed if cases of treason were discovered among the Jews. The city was subsequently destroyed in the fighting between the Russian and German armies. The community did not recover after the war, and only 680 returned by 1925. The Jewish population had decreased to 561 (26% of the total population) by 1933. Despite the decline Jews dominated the town's trade, owning most of the business resources. A Yiddish school existed, and the local rabbi functioned also as deputy mayor of the town. After the Soviets took over in 1940, they nationalized businesses and liquidated Jewish public life. Germans occupied the town in the end of June 1941. The Latvian "Self-Defense" forces began killing Jews. They assembled them in the synagogue. In the beginning of August a group of young Jews was taken out to dig ditches and then was shot there. On August 7, 1941, all the Jews – 167 families – were taken there and murdered. After the war some Holocaust survivors reached the town, took care of the cemetery and the mass grave, and erected a monument to the Holocaust victims. Later they dispersed, most of them leaving for Israel. At the beginning of the 21st century no Jews lived in Jaunijelgava.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

°JAURÈS, JEAN LÉON (1859–1914), French Socialist politician. The *Dreyfus case brought him to the forefront of the political scene. At first Jaurès sided with the Socialists, who regarded the affair as a phase in the inner struggle of the ruling class. Later, however, brushing aside political expediency, he declared himself willing to "walk the darkened road which leads to justice." In association with Georges Clemenceau and Emile *Zola, Jaurès headed a national campaign for the rehabilitation of Dreyfus. He was shot in Paris by a fanatic on the eve of World War I (July 31, 1914). Jaurès had considerable influence on Léon *Blum, who regarded himself as his disciple, and on leaders of the Zionist labor movement, in particular Berl *Katzenelson.

JAVAL, French family (the origin of the name is unknown). The founder, JACQUES JAVAL (1786–1858) of Mulhouse, a banker in Paris, established one of the first printed-textile mills in Saint-Denis in 1819. He was president of the Paris *Consistoire from 1824 to 1829. His son LEOPOLD (1804–1872) participated in the July Revolution of 1830 and then joined the army, taking part in the Algerian campaign and becoming a cavalry officer. After returning to civilian life, he organized the railway network of Alsace, but he was especially interested in agricultural development. In 1857 he was elected deputy for Yonne. In the Chamber of Deputies and later at the National

Assembly, he supported a program of political and economic liberalism. From 1852 to 1871, he was the Haut-Rhin delegate to the Central Consistory. His elder son EMILE (1839–1907) was a renowned oculist and member of the Academy of Medicine. He invented an apparatus for diagnosing astigmatism and a method of teaching reading. Director of the ophthalmological laboratory of the Sorbonne from 1878 to 1900, he published a number of books and encyclopedia articles in his field. From 1885 to 1889, he too was elected deputy for Yonne. His brother ERNEST (1843–1897), an engineer, was prefect of Creuse and, from 1885, director of the National Institute for the Deaf and Dumb. Emile's elder son JEAN (1871–1915) was also elected to the Chamber of Deputies. Jean's widow, LILY JEAN-JAVAL (née Léon-Lévy; 1882–1958), wrote a number of novels; two of them, *Noémi* (1925) and *L'Inquiète* (1927), deal with Jewish subjects, and the first part of her travelogue, *Sous le charme du Portugal* (1931), is concerned with the "search for the Marranos." Emile's second son ADOLPHE (1873–1944) was a medical scholar mainly concerned with diseases of the blood, on which he published a number of works.

[Moshe Catane]

JAVAN (Heb. יָוָן), fourth of the seven sons of Japheth, son of Noah and father of Elishah, Tarshish, Kittim, and Dodanim (or Rodanim; Gen. 10:2, 4; 1 Chron. 1:5, 7). The name Javan reflects the Greek heroic name Ion, the legendary ancestor of the Ionians, a section of the Greek people. They are mentioned only once in Homer but became important later after colonizing the central part of the west coast of Asia Minor to which they gave their name, Ionia (Ἰωνία). The rise to power of the Ionians in the mid-eighth century has implications for dating the Genesis passages. Assyrian sources of the eighth century B.C.E. call the area Jawan and Jaman. Egyptian, and Persian sources also mention the Ionians.

Through the Near East Javan came to refer to all Greece. The biblical sources mention Javanites as merchants in trade with the Phoenicians of Tyre (Ezek. 27:13, cf. 19) and as slave traders who bought Judean captives from Phoenicians and Philistines (Joel 4:6). The Javanites are also mentioned among the far-off nations who are destined to witness God's glorious deeds (Isa. 66:19). Other biblical texts seem to reflect the tensions and hopes of the Hellenistic period in which Judah and Ephraim are to take revenge on the Javanites (Zech 9:13). The Book of Daniel, which certainly refers to this period, contains an odious reference to the king of Javan (Dan. 8:23) and alludes to the power struggles of the period of the Greco-Macedonian Empire (10:20, 11:2). Javan has continued to be the Hebrew for *Greece.

[Michael Fishbane / S. David Sperling (2nd ed.)]

JAVETZ, BARZILLAI BEN BARUCH (d. 1760), Turkish rabbi and talmudist. Barzillai served as the *av bet din* in Smyrna, where he gave rabbinic discourses in the Maḥazikei Torah Synagogue, taught in his private yeshivah, and preached in the Talmud Torah synagogue. He influenced the wealthy Joshua *Soncino to build a synagogue in his name in Smyrna and delivered a eulogy on the rabbis of Smyrna who lost their lives in the fire of 1730. Barzillai published *Leshon Limmudim* (Smyrna, 1755), on the *Turim* and *Leshon Arumim* (*ibid.*, 1749), containing homilies, annotations on Elijah Mizrahi's supercommentary to *Rashi, comments on Maimonides, and homilies by his father.

[Simon Marcus]

JAVID (Cavid) BEY, MEHMED (1875–1926), Ottoman economist and statesman. Born in *Salonica to a *Doenmeh family, he worked for the Agriculture Bank and Education Ministry after graduating from the Imperial Civil Servants School (Mülkiye) in *Istanbul in 1896, only returning to Salonica in 1902 to head the Fevziye School. There he became active in the Young Turk movement. After the 1908 Revolution, he was elected to the Ottoman parliament, where he served from 1908 to 1918. An excellent orator and able economist, he served as finance minister in five cabinets, where he was instrumental in reordering the empire's finances, securing vital foreign loans, and restoring investor confidence. The combination of his personality, ethno-religious origins, and politics made him the target of numerous accusations of corruption, espionage, even murder. His Francophile and pacifist tendencies led him to resign his post in 1914 in protest against the secret Ottoman-German alliance, although he remained a financial adviser, reassuming the ministerial post in 1917. After the war he went into hiding in Istanbul, fleeing to Switzerland after his offer to join the Nationalist Forces in Anatolia was rejected. There he lived for several years, marrying Aliye, an Ottoman princess, and returning to Istanbul in 1922. He was a member of the Ottoman delegation at Lausanne in 1921, but fell out with İsmet İnönü. After Turkey's independence, he briefly flirted with politics, but largely retired from public life. Arrested in 1926 in the wake of an attempt on Mustafa *Kemal's life, he was convicted of sedition by a military tribunal and executed, although his real offense appears to have been posing a political challenge to Mustafa Kemal. During his lifetime, he published several authoritative textbooks on economics (4 vols., 1899–1901) and statistics (1909). Along with Rıza Tevfik and Ahmet Şuayip, he wrote for and edited the influential social sciences journal *Ulum-i İktisadiye ve İçtimâiye Mecmuası* (1908–11). His voluminous memoirs, serialized in the daily *Tanin* (1943–46), are an important primary source for this period.

[Paul Bessemer (2nd ed.)]

JAVITS, JACOB KOPPEL (1904–1986), U.S. lawyer and politician. Javits was born in New York City to poor, immigrant parents. After attending Columbia University and New York University Law School, Javits formed a law partnership with his brother (1927) and for the next several years practiced as a trial lawyer, gaining fame for his work in the 1933 bankruptcy case of Kreuger and Toll. In 1932 he joined the Ivy Republican Club – the beginning of what was to be a long association for him with both politics and the Republican Party. During World War II he served with the U.S. Army in Europe and the Pacific, rising to the rank of lieutenant colonel.

Upon his return to civilian life in 1946, Javits ran for a seat in the House of Representatives from the 21st Congressional District in Manhattan and won. He remained in the House, where he became a member of the Foreign Affairs Committee, until 1954, when he was elected attorney general of New York State. In 1956 he won election to the U.S. Senate and was reelected in 1962. He was elected to the Senate again in 1968 by a margin of over a million votes. An abortive attempt to gain the 1968 Republican vice presidential nomination, however – the first time a Jew ever openly aspired to such office – never materialized. He served in the Senate until 1980, when he lost his seat and returned to his law practice. At the same time, he also served as an adjunct professor of public affairs at the School of International Affairs at Columbia University.

As a politician, Javits' strength lay in his special appeal for liberal and Jewish voters, whose sympathies in New York were more often with the Democrats, but who regarded his voting record as one of the best in Congress. He consistently supported greater public aid to education, health, urban housing, the arts, and small business, and backed civil rights and fair-labor legislation, foreign aid, tariff liberalization, and curtailment of nuclear testing.

As a senior member of the Senate, Javits served on the powerful Foreign Relations Committee from 1969. A particularly warm friend of Israel, he repeatedly argued on the Senate floor that purely American interests should dictate that the U.S. support Israel as unequivocally as the U.S.S.R. supported the Arab states. He was active in a number of Jewish organizations, including the Zionist Organization of America, B'nai B'rith, the American Jewish Committee, the Federation of Jewish Philanthropies, and the America-Israel Cultural Foundation.

He wrote *American Policy in the Near East* (1953), *Discrimination – U.S.A.* (1960), *Order of Battle: A Republican's Call to Reason* (1964), *The Defense Sector and the American Economy* (with C. Hitch and A. Burns, 1968), *Who Makes War: The President vs. Congress* (with D. Kellermann, 1973), and *Javits: The Autobiography of a Public Man* (with R. Steinberg, 1981).

Named in his honor, the Jacob K. Javits Convention Center is located in Manhattan. Built in the 1980s, it is a large exhibition venue, covering five city blocks, that hosts a variety of major trade shows and conventions.

[Harvard Sitkoff / Ruth Beloff (2nd ed.)]

JAWITZ, ZE'EV (1847–1924), writer and historian. Jawitz was born in Kolno to a wealthy family distinguished in lineage, scholarship, and piety. After an unsuccessful attempt at business, he devoted all his time to writing and scholarship. He contributed to Smolenskin's *Ha-Shahar* (in no. 11 (1882), 41–48).

Jawitz won public recognition with his article “*Migdal ha-me'ah*” (“Tower of the century,” in S.P. Rabinowitz (ed.), *Keneset Yisrael*, 1 (1887); repr. in his *Toledot Yisrael*, 13 (1937), 189–250), a survey of Jewish history from the death of Mendelssohn in 1786 to the death of Montefiore in 1886. The work's originality lay in the author's command of sources in Hebrew and other languages; in the inner integrity of his approach, which was a mixture of Eastern European Judaism, the romanticism of *Hibbat Zion*, and the Judaism of Frankfurt Orthodoxy (often characterized by the phrase *Torah im derekh erez*, in the sense of “Torah and secular learning”); and in his writing style, a combination of biblical and scholarly Hebrew.

Settling in Erez Israel in 1888, Jawitz taught in Zikhron Ya'akov. His writings were widely published in Erez Israel in such periodicals as *Haaretz*, *Peri ha-Arez* (1892), and *Ge'on ha-Arez* (2 vols., 1893–94). He also wrote several textbooks, including *Tal Yaldut* (1891), *Ha-Moriyyah* (1894), *Divrei ha-Yamim le-Am Benei-Yisrael* (1894), *Divrei Yemei ha-Ammim* (1893–94), and books in which he attempted to relate legends in biblical style, as in *Sihot minni Kedem* (1887, 1927²). His popular work *Neginot minni Kedem* (1892) appeared in several editions. In Erez Israel, Jawitz was active on the Va'ad ha-Lashon, the committee responsible for developing Hebrew as a modern language. He and his brother-in-law, J.M. *Pines, contributed to the development of modern Hebrew by introducing linguistic elements from the literature of the Mishnah, Talmud, and Midrash, e.g., *tarbut* (“culture”) and *kevish* (“road”). Jawitz left Palestine in 1894, moving to Vilna, to Germany, and later to London. For a short while he was active in the foundation of *Mizrachi in Russia and edited the monthly journal *Ha-Mizrah* (1903–04). Simultaneously, Jawitz continued his major work, *Toledot Yisrael...* (14 vols., 1895–1940; the first part appeared in Warsaw, and the last five parts were published by B.M. Lewin in Tel Aviv, 1932–40). The first six parts (comprising the first section) deal with the Jews in their land, from the Patriarchal Age to the end of the period of R. Judah ha-Nasi; the next eight parts deal with the Jews among the nations of the world, from the period of the *amoraim* to *Hibbat Zion*. Although Jawitz was not a modern historian, his contribution to Jewish historiography is distinctive and valuable in that he infused his historical account with commitment to Orthodoxy and love for Erez Israel.

JAY, ALLAN LOUIS NEVILLE (1931-), British fencer, 1960 Olympic Silver medalist in Individual and Team Epée. Born in London, Jay attended Oxford, where he was British épée champion in 1952. He was junior sabre champion in 1953 and was named captain of the school's fencing team in 1954. In 1959, he became world foil champion, and came in second in épée, the last person to obtain two medals in the same year. Jay was also British épée champion in 1959 and 1960. He competed in the Olympics in 1952, 1956, 1960, and 1964, winning the silver medal in Team and Individual Epée in 1960. Jay was British foil champion in 1963. He also won six gold medals in foil and épée events at the 1950 and 1953 Maccabiah Games. In addition, he won the gold medal at the 1966 Commonwealth Games in the individual and team foil events.

[Elli Wohlgerlinter (2nd ed.)]

JAZER (Heb. יַזְעָר), Amorite city E. of the Jordan. After the defeat of Sihon, king of the Amorites, Moses sent spies to explore Jazer and the Israelites later captured it (Num. 21:32). The Septuagint refers to Jazer on the border of Ammon (Num. 21:24). It belonged to the territory of the tribe of Gad (Num. 32:35; Josh. 13:25) within which it was a levitical city of the family of Merari (Josh., 21:39; 1 Chron. 6:66). Under David a governor from among the Hebronites was installed at Jazer (1 Chron. 26:31); the city's status as an administrative center is confirmed by its enumeration between Aroer and Gilead in David's census (11 Sam. 24:5). In later times it fell into the possession of the Moabites (Isa. 16:8-9; Jer. 48:32). Judah Maccabee captured the city during his campaigns east of the Jordan (1 Macc. 5:8). Eusebius located Jazer eight or ten Roman miles west of Philadelphia (Rabbath-Ammon; Onom. 12:3; 104:13-14). It is usually identified with Khirbat al-Šār, 6 mi. (10 km.) west of Amman; G.M. Landes has suggested Khirbat al-Sīra, 1¼ mi. (2 km.) northeast of Amman.

JAZIRAT IBN ʿUMAR, town located N. of *Mosul in northern *Iraq. During the reign of the *Abbāsīd Caliphs and the Crusades, Jazīrat ibn ʿUmar was an important town which maintained close commercial ties with *Armenia. From the earliest times, a large Jewish population existed in this region which was known as "Kardu." *Benjamin of Tudela, in the second half of the 12th century, stated that there were 4,000 Jews residing there. He added that the town was located near the Ararat Mountains, where Noah's ark rested, and that ʿUmar ibn al-Khaṭṭāb made a mosque out of the ark.

[Eliyahu Ashtor]

JEALOUSY. Appearing some 80 times in the Bible, the root *kna* (*qnʿ*; אַנְקָ) in its various derivatives is, in the standard translations of the Bible, most often related to the notion of "jealousy" (or "zeal"). More generally, it connotes any kind of emotional agitation resulting from a perceived threat to one's honor or sense of moral rectitude. Hence, it can be used in connection with God as well as with humans (Deut. 29:19; 11 Kings 19:31). It can be characterized as a grave human weakness (Prov. 14:30; Job 5:2) and also as a deep motivation for selfless acts of courage and devotion (Num. 11:29; 25:11; 1 Kings 19:10, 14).

Envious rivalry among men, the Bible records, is as old as the human race. Cain was distressed because the Lord paid more heed to his brother Abel's offering than to his own (Gen. 4:4), and Joseph's brothers were similarly distressed when Jacob, their father, favored Joseph (Gen. 37:4). Envy, too, was apparently behind Miriam and Aaron's speaking ill of Moses (Num. 12), as it was the motive of Korah's rebellion against Moses and Aaron (Num. 16). Interestingly enough, neither verbal forms of *qnʿ* nor its cognates are used in connection with any of these incidents, indicating that envy is not coterminous with "jealousy." Accordingly, F. Kuechler suggested that *qnʿ* primarily refers to the dark envy and suspicion arising from an erotic love relationship. In support of this view, he points to verses in the poetic books of the Bible (Prov. 6:34; 27:4; Song 8:6) and to the "ritual in cases of jealousy" described in the Book of Numbers (5:11-31). The latter is an ancient trial with some elements of the ordeal to test a wife suspected by her husband of an adulterous union (see *Ordeal of Jealousy). On the basis of these passages, Kuechler contends that the notion of God's *kinah* (*qin'ah*) is also derived from *Hosea's erotic metaphors. The relationship between God and Israel, then, is like that of a lover and his beloved. He is jealous of her affections and demands her exclusive loyalty. It is noteworthy though that the root *qnʿ* is not attested in Hosea. That divine "jealousy" is not restricted to Yahweh is shown by an Akkadian (Standard Babylonian dialect) text referring to the goddess Sarpanitum with the cognate verb *qenû*.

There is no reason to posit a late date for the epithet *el kanna* (*qannaʿ*; *kanno*, *qannoʿ*) which appears in early sources (Ex. 20:5; 34:14; Josh. 24:19). In fact, it seems to reflect one of the most characteristic features of the early Israelite conception of God whose presence never leaves man in repose, and who always supervenes either in moments of distress to save humans, or when humans behave as if there were no such presence. Just as the individual is jealous of his honor, so does God defend His against all who would ignore it. Since, moreover, it cannot be dissociated from His holiness, God's jealousy is manifested in a dual manner: loving concern for those who revere Him and consuming wrath toward those who set themselves against Him. It is possible for individuals, too, to be overcome by *qin'ah* in or on God's behalf, in their single-minded devotion to His covenant (Num. 25:11-13; 1 Kings 19:10, 14; 11 Kings 10:16; Ps. 119:139).

[David L. Lieber / S. David Sperling (2nd ed.)]

In Talmudic Literature

In the talmudic literature the word *kinah* is found in both the senses in which it occurs in the Bible, as jealousy and as zeal for God. Many passages speak against jealousy, such as “whoever stirs up jealousy and strife in his home is regarded by the Bible as stirring up jealousy and strife in Israel as a whole” (ARN¹ 28:85). Moses preferred to die a hundred deaths rather than to give way once to the feeling of jealousy (Deut. R. 9:9). Rabba b. Maḥasyah states in Rav’s name: “A man should never single out one son among his other sons, for on account of the extra weight of two *sela’im* of silk which Jacob gave to Joseph and not to his other sons, his brothers became jealous of him, resulting in our forefathers’ descent into Egypt” (Shab. 10b). R. Eleazar ha-Kappara said, “Jealousy... drives a man out of the world” (Avot 4:28), and those who do not envy are promised that their flesh will not become dust until before the resurrection (Shab. 152b). Jealousy is all-embracing, with one exception: “A person can feel jealousy and envy for everyone, except for his son and his disciple” (San. 105b). However, envy can have its positive side since it leads to emulation: “the envy of *soferim* [scholars] leads to the increase of wisdom” (BB 21a). In the same vein it is stated, “Were it not for jealousy no one would marry or build a house” (Mid. Ps. 37:1), and had not Rachel envied the good deeds of her sister, she would not have borne children (Gen. R. 71:6). Zeal for God is highly praised: “Were it not for Abraham’s zeal [*kinah*] for God, He would not have become the Possessor [*koneh*] of Heaven and Earth” (Mid. Ps. 37:1, based on Gen. 14:22). Phinehas and Elijah are singled out as exemplifying this zeal in the Bible, and Elijah is even regarded as the incarnation of Phinehas (PDR 29, 47). According to one opinion Phinehas became priest as a reward for his zeal in slaying *Zimri (Zev. 101b). The Maccabees are later used as symbols of religious zeal: “The Holy One clothed Himself with seven garments. One was for the Greeks, as it says [Isa. 59:17],... and He was clad in zeal [*kinah*] as a cloak” – referring to the Hasmoneans (Mid. Ps. 93:1). Mattathias on his deathbed urged his sons to emulate the zeal of Phinehas and Elijah, calling Phinehas “our father” (1 Macc. 2:54, 58), and Phinehas is thus regarded as the spiritual ancestor of the *Zealots (*kanna'im*). Nevertheless, Elijah is criticized for his excessive zeal, and the revelation to him at Horeb (1 Kings 19:10–14) is interpreted as a censure of him for accusing instead of defending Israel (Song R. 1:6, 1). Jonah is criticized for being more zealous for the honor of Israel than for that of God (see TJ, Sanh. 11:7, 30b), but Jeremiah was praised for achieving a fine balance between the two (ARN² 47, 129, Mekh. to 12:1).

JEBENHAUSEN, village in Wuerttemberg, Germany. In 1777 nine Jewish families received a charter to settle and build a separate colony near the farming village. There was no restriction to the number of Jewish families, and the community, which enjoyed far-reaching autonomy, grew from 31 members in 1778 to 233 in 1804. Most families were notoriously poor at that time, seeking a livelihood from peddling. By the mid-19th century many had established themselves as merchants and factory owners, developing a flourishing textile and corset industry. There were 550 Jews living in Jebenhausen in 1845, 534 in 1854, 392 in 1862, and 151 in 1869. Between 1798 and 1870, more than 300 members of the community immigrated to America, mostly for lack of civil rights and economic prospects. After the revolution of 1848, when the larger cities in Wuerttemberg no longer refused Jews the right of residence, many left the village to settle in near-by Goeppingen, *Esslingen, or *Stuttgart. Jebenhausen was the seat of a rabbin-ate from 1778 to 1874, when it was transferred to Goeppingen. Only nine Jews lived in the village in 1899. The synagogue, built in 1804, was closed in 1899 and sold for demolition, and the community was formally dissolved. The members of the only remaining Jewish family were deported to *Theresienstadt in 1942 but survived. A Jewish museum was opened in Jebenhausen in 1992.

[Stephan Rohrbacher (2nd ed.)]

JEBUS, JEBUSITE (Heb. יְבוּס, יְבוּסִי), one of the peoples of Canaan. The Jebusites are mentioned in the Bible in four different connections:

(1) In the “table of nations” (Gen. 10:15–19; cf. 1 Chron. 1:13–14) the Jebusite appears after Sidon and Heth as the third son of *Canaan. There may be an allusion to kinship or connection between Jebus and Heth in the Book of Ezekiel (16:3): “... Jerusalem ... the Amorite was your father, and your mother a *Hittite.” Some (unclear) ethnic reality is reflected by this combination.

(2) The Jebusites are mentioned in the lists of the peoples of Canaan driven out by the Israelites, lists appearing in the Bible more than a score of times (e.g., Gen. 15:21; Ex. 3:8, 17) and naming from six to ten nations. Invariably the Jebusites appear at the end of each list, and in most instances immediately after the *Hivites. The Jebusites’ proximity to the Hivites may be due to the fact that both groups were thought to be related to the *Hurrians. That the Jebusites are always placed last may indicate that they were the last people to appear in Canaan and, since they were only found in Jerusalem, that they may have been the smallest in number of all the ethnic groups.

(3) The Jebusites are specially mentioned as the inhabitants of *Jerusalem, e.g., “the Jebusites, the inhabitants of Jerusalem” (Josh. 15:63), “and the Jebusite – the same is Jerusalem”

(18:28). Judges 19:11, however, refers to the Jebusites without mentioning Jerusalem: “When they were by Jebus” and “this city of the Jebusites.” Although the name Jebus is widely attested in biblical stories set during part of the era of settlement, it is not attested in the documents of the *el-Amarna period (first half of 14th century B.C.E.), while Jerusalem is. It is possible that the Jebusites settled in Jerusalem in the 14th and 13th centuries B.C.E., not long before the settlement of the tribes of Israel in Canaan.

(4) The Israelite capture of Jerusalem and its conversion into the capital of David’s kingdom at the beginning of his reign put an end to the autonomy of the Jebusites. The capture of the city as related in II Samuel 5:6–10 is surprisingly poor with regard to details. Such as are provided, “the lame and the blind” (5:6, 8 (bis)); and the *zinnor* (5:8) are unclear. The parallel in I Chronicles 11:4–9 seems to be an attempt to make sense of the difficult passages in Samuel. According to Chronicles, *Joab entered Jerusalem of the Jebusites, according to one opinion, by way of the water system – if “gutter” is the sense of *zinnor*, which some identify with “Warren’s shaft” – that leads from the pool of Siloam. But the *zinnor* is absent from the Chronicler’s account, and Joab is absent from the Samuel account. Clearly all Jebusite inhabitants were not destroyed because David bought a threshing floor from Araunah the Jebusite in order to build an altar (II Sam. 24: 18–24), and also because David may have integrated Jebusite craftsmen and officials into his service.

The origin of the Jebusites is obscure and there are many opinions on the subject. Some scholars, on the basis of the names of the kings connected with Jerusalem, see the origin of the Jebusites in the Hurrians. The first recorded king of Jerusalem dates from the el-Amarna era and bears the name Abdi ḥeb/pa(t), “servant of ḥeb/pa(t),” a name compounded from West Semitic *ʾabdu*, “servant,” “slave,” and the Hurrian mother goddess ḥeb/pa(t). The second extant name, *Araunah (II Sam. 24:18–24; I Chron. 21:18–25), the Jebusite, is taken by some as a corruption of the Hurrian word for a king (*ewri*, “lord”). Another view is that the Jebusites are related to the Semitic peoples because the Jebusites are mentioned among the peoples of Canaan, and the clearly Semitic *Adoni-Zedek, king of Jerusalem, headed the Amorite alliance against Joshua (Josh. 10). Others claim that the Jebusites are Amorites because their name is similar to the name Iābu-sum, mentioned in sources dating from the beginning of the second millennium B.C.E. and found on the northwest border of Babylonia. Research has yet to determine clearly the origin of the Jebusites and the date of their settlement in Jerusalem.

[Abraham Lebanon / S. David Sperling (2nd ed.)]

JEDAIAH (Heb. יְדַיָּא; “YHWH has noted,” or “YHWH has favored”), the name of two priestly ancestral houses mentioned in the list of heads of ancestral houses during the term of office of Joiakim the high priest. One is in the 17th place on the list (Neh. 12: 19) and the other in the last place (*ibid.* 21). The former is mentioned after the house of Joiarib (Jehoiarib), and it is possible that he is the one associated with Joiarib in other texts (I Chron. 9:10; 24:7); in Nehemiah 12:6 Jedaiah is listed as Joiarib’s son. The other house of Jedaiah presumably includes (1) the sons of Jedaiah of the house of Jeshua, who total 973 (Ezra 2:36; Neh. 7:39), and head the list of four ancestral houses of priests that returned with Zerubbabel; and (2) Jedaiah who is last on the list of 23 heads of priestly houses that returned with Zerubbabel (Neh. 12:7); this list is, in fact, merely one of ancestral houses. However, the relationship between these two lists of priestly houses that returned with Zerubbabel is unclear.

[Samuel Ephraim Loewenstamm]

JEDAIAH BEN ABRAHAM BEDERSI (Ha-Penini; probably born in the 1280s and died about 1340), poet and philosopher. Possibly a native of Béziers, Jedaiah is known to have spent time in Perpignan and Montpellier. Little is known of his personal history. He may have been a physician. Jedaiah’s intellectual interests were literary and philosophic, although the two spheres were not clearly separated. In his youth, he composed a poetic prayer of 1,000 words titled “*Bakkashat ha-Memim*,” every word of which begins with the letter *mem* (in *Olelot ha-Bohen*, 1808). He is also credited with a similar composition, every word of which begins with *alef*, but many believe that this latter poem was written by Jedaiah’s father. In popular style he composed *Ohev Nashim* (“In Defense of Women,” ed. by A. Neubauer in *Jubelschrift... L. Zunz* (1884), pt. 1, 138–40; pt. 2, 1–19). His best-known literary work is *Sefer Behinat Olam* (“The Book of the Examination of the World”), a lyrical, ethical monograph on the theme of the futility and vanity of this world, and the inestimably greater benefits of intellectual and religious pursuits. *Behinat Olam*, written in florid prose and rich in imagery, combines philosophic doctrine and religious fervor with a good measure of asceticism and pessimism.

Published originally in Mantua between 1476 and 1480, the work has been reprinted numerous times. It has been translated into English (*Behinat Olam or An Investigation of... Organization of the World*, London, 1806), Latin, French, German, Polish, and Yiddish, and numerous commentaries have been written on it. Jedaiah also wrote *Sefer ha-Pardes* (Constantinople, 1516; reprinted by J. Luzzatto, in *Ozar ha-Sifrut*, 3 (1889–90), 1–18), which consists of reflections on isolation

from the world, divine worship, the behavior of judges, grammar, and astronomy. The last chapters deal with rhetoric and poetry. Jedaiah was the author of commentaries on various Midrashim (Paris, Bibliothèque Nationale, Ms. 738; De Rossi, 222), as well as a commentary on *Pirkei Avot* (Escorial, Ms. G. IV, 3). He may also have written a supercommentary on *Ibn Ezra's commentary on Genesis (see Steinschneider, Cat Bod., 1283).

Jedaiah wrote a number of works which are more strictly scientific and philosophical. He was the author of explanatory notes on Avicenna's *Canon* (Bodleian Library, Ms. Mich. Add. 14, and Mich. 135), and on Averroes' commentary on Aristotle's *Physics* (Steinschneider, Uebersetzungen, 109; HB, 12 (1872) 37). A number of Jedaiah's philosophical works are found in manuscript 984 of the Hebrew manuscript collection of the Bibliothèque Nationale in Paris (see S. Munk, in *Archives Israélites* (1847), 67–72): *Ha-De'ot ba-Sekhel ha-Homri* ("Theories Concerning the Material Intellect"), an epitome of Aristotle's *De Anima*; *Ketav ha-Da'at* ("Treatise on the Intellect"), a paraphrase of *Sefer ha-Sekhel ve-ha-Muskalot*, the Hebrew translation of al *Fārābī's *Kitāb al-'Aql wa al-Ma'āqulat* ("Treatise on the Intellect"); *Ma'amar be-Hafkhei ha-Mahalakh* ("Treatise on Opposite Motions"), in which Jedaiah criticizes the views of another scholar, whose name he never mentions, concerning *Averroes' commentary on Aristotle's *De Caelo* Bk. 1, ch. 4; and *Ketav ha-Hitazzemut* ("Book of Confutation"), a refutation of the scholar's reply to Jedaiah's *Ma'amar be-Hafkhei ha-Mahalakh*. It has recently been suggested that this scholar is Levi ben Gershom (see R. Glasner, *A Fourteenth-Century Scientific-Philosophical Controversy*). This same manuscript contains a treatise titled *Ma'amar ha-Dan ba-Zurot ha-Peratiyyot o Ishiyyot* ("A Treatise Upon Personal or Individual Forms"), which deals with the problem of whether individuals of the same species differing in accidents also differ in their essential forms. In this latter treatise there is reference made to another essay by Jedaiah, *Midbar Kedemot*, which is a commentary on the 25 propositions with which Maimonides opens the second part of the *Guide of the Perplexed*. This treatise is no longer extant.

It has recently been suggested that Jedaiah was influenced by Christian scholasticism (see S. Pines, *Scholasticism After Thomas Aquinas and the Teachings of Hasdai Crescas and His Predecessors* (1967), 1–5, 52–89). Jedaiah's contention in *Ma'amar ha-Dan ba-Zurot ha-Peratiyyot o Ishiyyot* that individuals of the same species differ in their essential forms reflects the position of Duns Scotus and his disciples on the question of personal forms. Even his arguments are similar to those employed by the Scotists (see also John *Duns Scotus). In *Ma'amar be-Hafkhei ha-Mahalakh* and *Ketav ha-Hitazzemut*, Jedaiah maintains that the mathematical concepts of number, of one, of the discrete, and the continuous, have no existence outside the soul or the intellect. This theory resembles that of the Nominalists, i.e., William of Ockham, his predecessors and disciples, more than the views of any Jewish or Arabic thinkers. While chronologically it is impossible

that Jedaiah was influenced by William of Ockham himself, it appears likely that he was influenced by some of his predecessors. As yet, however, no conclusive evidence has been advanced to demonstrate this influence.

Jedaiah is also known for his *Iggeret ha-Hitnazzelut* ("The Apologia," in *She'elot u-Teshuvot... Rabbenu Shelomo ben Adret* (Venice, 1545), 67a–75b; printed separately, Lemberg, 1809; reprinted Warsaw, 1882). In this epistle, addressed to Solomon b. Abraham *Adret, after the latter's pronouncement of the ban on philosophic study in Barcelona in 1305, Jedaiah attempted to exonerate the Jewish communities of Provence of the charges of heresy and disrespect to the Torah which had been leveled against them by Adret, as well as to argue the benefits of religious belief which result from the study of philosophy. Greek philosophy, Jedaiah points out, provided the scientific basis for belief in God's unity and incorporeality, and in man's free will. Adret's major accusation against the Jews of Provence was that they denied the historicity of the Torah by interpreting it entirely as an allegory. Jedaiah argued that in their allegorical interpretations these scholars were merely following the teachings of Maimonides. If they were guilty of anything it was of making these interpretations known to the masses.

JEDIDIAH (Amadio) BEN MOSES OF RECANATI (or **Rimini**; 16th century), scholar and translator. Jedidiah worked as a private tutor in various Italian towns. In 1566 he made a copy (and not a translation, as Neubauer assumes) of *Sefer Piskei Halakhot* by Moses ibn Danon (Bodleian Library, Ms. Bodl. Or. 620). The other parts of this manuscript may also be Jedidiah's work (see also Bodleian Library, Ms. Mich. 259). He translated Ibn *Tibbon's Hebrew translation of *Maimonides' *Guide of the Perplexed* into Italian, under the title "Erudizione de' confusi" (Parma, De Rossi, cod. Ital. 5, Richler 1259; Berlin, Or. 4°, 487), dedicated to Immanuel (Menahem Azarijah) mi-Fano. Both manuscripts, written between 1581 and 1583, are in Hebrew script; in the introduction, Jedidiah clarifies that he intended to help the Jewish students to understand difficult works and expressions. Excerpts from this translation were published by A. Guetta (see Bibl.). Jedidiah also translated the Book of Judith from the Latin into Hebrew, adding to it a Hebrew poem in which he summarizes the con-

tents (Schoenblum, *Catalogue de 135 manuscrits hébreux de la collection Schoenblum* (1885), 10; Ms. acquired by Kaufmann but not contained in Weiss's list). Other works by Jedidiah are: *Ketavim u-Melizot*, a collection of letters (Bodleian Library, Ms. Opp. Add. 8°, 38); *Turgeman*, a Hebrew-Italian glossary of the Bible (Bodleian Library, Ms. Reg. 15, dating from 1597; it is not known whether Ms. 642 of the Guenzburg collection contains the same glossary, or an Italian Bible translation); and an abridgment of Elijah Mizrahi's commentary on Rashi (Parma, De Rossi 288, Richler 669). An Oxford manuscript (Bodleian Library, Ms. Mich. Add. 67) contains a halakhic opinion by Jedidiah, and an opinion rendered by him is quoted by Shabbetai Be'er in *Be'er Esek* (Venice, 1674). A number of mathematical remarks found in the Schoenblum manuscript, mentioned above, bear Jedidiah's signature and the date 1573.

[Umberto (Moses David) Cassuto / Alessandro Guetta (2nd ed.)]

JEDRZEJOW (Pol. **Jędrzejów**; Rus. **Andreyev**), town in Kielce province, S. central Poland. Jewish settlement there was prohibited until 1862, when Jewish families from the surrounding townlets and villages arrived in Jedrzejow. With the impetus given to the town's economy by the opening of the railroad station in 1884, the Jewish population rapidly increased. It numbered approximately 2,050 (45% of the total population) in 1897. The majority engaged in small-scale trading and the traditional crafts, and some were occupied in the grain and timber trade. Jews with capital established timber and flour mills and mechanical workshops. The community was organized during the 1880s. The first rabbi to hold office in Jedrzejow was Moses Minberg. At the close of the 19th century, *Alexandrow Hasidism (Danziger dynasty) had the widest influence in the community. A Zionist committee was established in 1902, and the local *Po'alei Zion, organized in 1906. During the first weeks of Polish rule after the end of World War I there was a wave of anti-Jewish riots in the vicinity of Jedrzejow. According to the census of 1921, there were approximately 4,600 Jews living in Jedrzejow (about 40% of the total population). Between the two world wars all the Zionist organizations were active in the town, and several groups of youth immigrated to Erez Israel. During the 1930s, with the mounting antisemitism, the struggle of the Jews to retain their economic positions in Jedrzejow became increasingly severe. In 1936 five Jews were murdered in the village of Stawy, near Jedrzejow.

The Hebrew novelist Israel *Zarchi was born in Jedrzejow.

[Arthur Cygielman]

Holocaust Period

The German army entered on Sept. 4, 1939. In the spring of 1940 an "open" ghetto was established. In January 1941 about 600 Jews in the vicinity were concentrated in Jedrzejow. During the summer of 1942 another 2,000 Jews were transferred to the town from other towns nearby, increasing the Jewish population to about 6,000. The entire Jewish population was deported in an *Aktion* on Sept. 16, 1942, to *Treblinka death camp and only 200 men remained in a camp established inside the former ghetto. In February 1943 all 200 were deported or shot, and Jedrzejow was proclaimed "Judenrein." A number of Jews had succeeded in escaping from the ghetto before the *Aktion* took place but only a few survived in hiding; most of them were murdered by Polish gangs. After the war the Jewish community in Jedrzejow was not renewed. Organizations of former Jedrzejow residents exist in Israel, the U.S.A., Canada, and Argentina.

JEDUTHUN (יְדֻתָּן, יְדִיתָּן), head of a family of singers, whom David singled out from among the levites (1 Chron. 25:1). His song was considered the expression of prophetic inspiration: "Jeduthun with the harp, who prophesied in giving thanks and praising the Lord" (1 Chron. 25:3; cf. 6:41). He was also known as "the king's seer" (11 Chron. 35:15). 1 Chronicles 16:42 points out that part of the family was "at the gate" of the Temple and refers to the fact that levites acted both as singers and gatekeepers. The name Ethan replaces that of Jeduthun in 1 Chronicles 15:17; according to one view, Jeduthun and Ethan were one person. Japhet (442–43) attributes the change of name to the homiletic purposes of the Chronicler. The link and relation between Jeduthun and the term *Jeduthun* in Psalms 39:1; 62:1; 77:1 is obscure.

JEFFERSON, THOMAS (1743–1826), third president of the United States. The foremost advocate of religious freedom among the American founding fathers, Jefferson derived his political philosophy from the doctrine of natural law, viewing every man as endowed by nature with the same inalienable rights. As early as 1776 he sought the repeal of Virginia's law on disabilities for Dissenters and Jews. It was not until 1786, however, after having served as governor of the state, that he succeeded in passing his Bill for Establishing Religious Freedom, which served as a precedent for the freedom of religion clause passed by the Federal Constitutional Convention in 1787. A deist by conviction and strong advocate of the separation of church and state, Jefferson wrote to Jacob *De La Motta in 1820 that he was "happy in the restoration of the Jews to their social rights." In 1826, after having founded the Uni-

versity of Virginia, he wrote to Isaac *Harby to denounce the university for tending to exclude Jews by requiring “a course in theological reading which their consciences do not permit them to pursue.”

[Aaron Lichtenstein]

JEHIEL BEN JOSEPH OF PARIS (d.c. 1265), French talmudist and tosafist. Jehiel studied at the yeshivah of *Judah b. Isaac (Sir Leon), together with Isaac b. Moses of Vienna, and succeeded Judah b. Isaac upon his death. He was renowned both for his scholarship and his upright character, and was held in esteem by Jews and non-Jews alike. Jehiel was the leading Jewish protagonist in the famous *Disputation of Paris held at the court of Louis IX, arising from charges of the apostate, Nicholas Donin, that the Talmud reviled Christianity and contained references which were in conflict with the Bible. (The account of the disputation has been preserved in “*Vikku’ah Rabbenu Yehiel mi-Paris*” (Thorn, 1873. The text with a Latin translation is included in the *Tela Ignea Satanae* of C.R. *Wagenseil (1681)). As an outcome of the disputation, copies of the Talmud were publicly burned in Paris in 1242. Jehiel continued to head the Paris academy, where students were apparently taught from memory. In about 1260 he emigrated with a large number of his disciples to Erez Israel, settled in Acre, then under the rule of the Crusaders, and opened a yeshivah, which became known as the “*midrash ha-gadol*” of Paris. It was Jehiel’s intention, according to *Estori ha-Parhi, to offer in Jerusalem such sacrifices as were halakhically permissible after the destruction of the Temple (*Kaftor va-Ferah*, ed. A.M. Luncz (1899), 81–82). The only extant responsa of Jehiel are the few which appear in the works of his contemporaries. It is known that he compiled *tosafot* to various tractates, and there is also reference to his “*Sefer Dinim*,” an adaptation of which exists in manuscript. JOSEPH, Jehiel’s son, was imprisoned for some time, apparently in connection with the banning of the Talmud; he emigrated with his father to Palestine. Jehiel died in Acre.

[Israel Moses Ta-Shma]

JEHIEL MEIR (Lifschits) OF GOSTYNIN (1816–1888), rabbi and ḥasidic *zaddik*, known as the “Good Jew of Gostynin.” Jehiel Meir was a pupil of Menahem Mendel of *Kotsk and Jacob Aryeh Gutterman of *Radzymin. After unsuccessfully engaging in trade, on the advice of Menahem Mendel of Kotsk in 1878 he became rabbi of Gostynin. His reputation for goodness and holiness was such that even in his

youth he was called “one of the 36 *zaddikim*.” The hypercritical Kotsk Ḥasidim honored him for his unsophisticated simplicity. His modest way of life gained him the love of the simple folk. He took no rewards (*pidyonot*) and gave his own money to charity. Jehiel Meir devoted much of his teaching to the Psalms and advised repeating them as the most potent form of prayer, becoming known as the “Psalm Jew” (Yid. *Der Tilim Yid*). After the death of Jacob Aryeh of Radzymin he became ḥasidic leader in Gostynin. His teachings were collected in *Merom ha-Rim* (1892) and *Mei ha-Yam* (n.d.). His son ISRAEL MOSES succeeded him in Proskurov. The personality of Jehiel Meir and his way of life left a deep impression. Shalom *Asch’s historical novel *Salvation* is based upon his life.

JEHIEL MICHAEL (“Michel”) BEN ABRAHAM MEIR OF CIFER (d. 1844), Polish and Hungarian rabbi. After serving as rabbi in some communities of Poland, where he was born, Jehiel was appointed to Cifer near Bratislava. He was the author of *Ḥayyei Olam* (Vienna, 1830) on talmudic topics and the Shulḥan Arukh, *Yoreh De’ah*, and *Derekh Ḥayyim* (Pressburg, 1837) on the laws of Passover in the *Tur Oraḥ Ḥayyim*. The latter is in two parts – *Derekh ha-Kazar*, containing novellae from the responsa of the earlier authorities, and *Derekh ha-Arokh*, in which he ingeniously attempted to solve the difficulties raised by *David b. Samuel ha-Levi in his *Turei Zahav* and the *Magen Avraham* of Abraham Gombiner on the Shulḥan Arukh and *Maimonides’ *Mishneh Torah*. Jehiel Michael was accused of plagiarizing the *Magen ha-Elef* of Aryeh Leib Zunz (published in the *Sar ha-Elef* (Warsaw, 1817) of Jonathan *Eybeschuetz) in his *Derekh Ḥayyim*, but his defenders point to his original contributions. In the introduction to the *Ḥayyei Olam*, he mentions two other works that have not been published.

[Yehoshua Horowitz]

JEHIEL MICHAEL (“Michel”) BEN ELIEZER (d. 1648), rabbi and kabbalist, who lived in Nemirov (the Ukraine). Jehiel’s cousin Isaac praised his talmudic and kabbalistic knowledge as well as his mastery of secular sciences (introduction to *Shivrei Luhot*). Jehiel at first regarded the *Chmielnicki persecutions as a presage of the coming messianic era. As the Cossacks came nearer to his community he exhorted its members to stay firm in their faith. During the massacre at Nemirov he and his mother were dragged to the Jewish cemetery and murdered there on the 22nd (according to others the 20th) of Sivan (1648). Jehiel’s martyrdom is mentioned in the elegies composed by *Shabbetai b. Meir ha-Kohen and Yom

Tov Lipmann *Heller in memory of the 1648 persecutions. Jehiel was the author of a work on the *Al-Tikrei* interpretations of the Talmud. A large part of the manuscript has been lost; the remaining fragment was published by his nephew as *Shivrei Luḥot* (Lublin, 1680). Part of his commentary on the Pentateuch and *Al-Tikrei* interpretations were republished together with the commentary *Amarot Tehorot* by Ḥayyim Selig Goldschlag (Warsaw, 1911). Jehiel is also mentioned in *Korban Shabbat* (Dyhrenfuert, 1691, 10b–11a) by Bezalel b. Solomon of Kobrin.

[Samuel Abba Horodezky]

JEHIEL MICHAEL (“Michel”) BEN JUDAH LEIB HE-ḤASID (1680–1728), rabbi, known as R. Michel Ḥasid. Jehiel Michael served as rabbi of Zlotow and other Polish communities before being invited to become head of the Berlin yeshivah, and in 1714, with the approval of King Frederick William I, he was appointed to succeed his brother-in-law, Aaron b. Isaac Benjamin Wolf, as rabbi of Berlin. When Aaron died in 1721, Jehiel was also appointed to the rabbinate of Frankfurt on the Oder and its district, which had been separated from that of Berlin during Aaron’s lifetime. In 1718 Frederick William I was present at the consecration of the new synagogue in Berlin and Jehiel recited a special prayer in his honor. Jehiel was attracted to Kabbalah and copied kabbalistic manuscripts. At first he favored Nehemiah *Ḥayon, one of the adherents of Shabbetai Zevi, but when he became aware of Ḥayon’s chicanery, he became one of the strenuous opponents of Shabbateanism. At a conference of rabbis in Frankfurt on the Oder in 1726 over which he presided, he placed the Shabbateans and their suspect literature, which had made its appearance from 1666 onward, under a ban. Jehiel refrained from giving esoteric interpretations of the *aggadot* for “fear of heresy.”

He wrote novellae to the tractates *Megillah* (printed in the Talmud, ed. Berlin, 1714) and *Rosh Ha-Shanah* (in the Amsterdam Talmud, 1726); glosses in the *Kol Yehudah* (Amsterdam, 1729) of Judah of Glogau and in the *Asefat Ḥakhamim* (Offenbach, 1722) of Israel Isserl; and *Yofi Mikhal*, notes and comments to Samuel Jaffe’s commentary, *Yefeh Mareh* (Constantinople, 1587), on the *aggadot* of the Jerusalem Talmud (Berlin, 1725–26). These commentaries were also published in *Aggadot Yerushalmi*, part one (1863). These supplements by Jehiel to Jaffe’s work were merely an extract from a larger work on that subject, but when he saw that Jaffe’s commentary was very popular, he published that in full and abridged his own work.

[Yehoshua Horowitz]

JEHIEL MICHAEL (“Michel”) OF ZLOCZOW (c. 1731–1786), one of the early propagators of Ḥasidism in Galicia. He was born in Brody, the son of Isaac of Drogozycz. It is related that on Jehiel’s first visit to the Ba’al Shem Tov, the latter commanded that Jehiel be honored. After the death of the Ba’al Shem, Jehiel was one of the few disciples who accepted the leadership of *Dov Baer, the *maggid* of Mezhirech. He served as preacher in Brody where he was among the members of the celebrated *kloiz* (*klaus*). Later he became preacher in Zloczow, and toward the end of his life settled in Yampol, Podolia.

Jehiel was highly esteemed among the Ḥasidim and miraculous tales are related of his saintliness and asceticism, but he was strongly opposed by the *Mitnaggedim*. His distinctive spirituality is recalled by one of his disciples, who states that “it little mattered whether he had before him a *Gemara* or a kabbalistic text, for Jehiel saw in them only the means of serving God” (*Likkutei Yekarim*, 1872, 31b). In accordance with ḥasidic views, he considered the principle of **devekut* (“devotion” to God) to be of major importance and remarked that the way to attain this state was through the negation of reality (i.e., ecstasy). There are two roads to *devekut*. The positive way is to stand in fear and shame before the greatness of the Creator and hence through prayer, study, and good deeds to find the state of true love. Diligence in these practices will eventually lead to *devekut*. The negative way is through a denial of all physical desire. Jehiel Michael constantly preached on the need to uproot evil characteristics and destroy physical lusts. He knew that this way to *devekut* was difficult, for God had created man different from His own essence and therefore man could not maintain a constant state of *devekut*. Since the danger of his sinking into his physical nature was anticipated, God had imbued him with the will to achieve union with his source (i.e., God). Man’s task is to conquer the material world and to view it not as the purpose of life but as a means of discovering that divinity which is reflected in the material and enlivens it. In this teaching, Jehiel Michael follows Dov Baer of Mezhirech, but he saw that this way was the most perilous for the ordinary man. He did not believe that constant *devekut* was possible for every man while he was engaged in physical activity, therefore he advised that physical acts be preceded by meditation on the Divine Creator.

When preaching he would begin his sermons: “I do not only command and admonish you but myself as well...” (*Or ha-Meir*, on *Zav*). The true preacher, Jehiel believed, was the man who felt that he was merely a mouthpiece of the *Shekhinah* (“Divine Presence”) and not a man who spoke in his own voice. His disciple attests that he “spoke at length and explained his statements several times” (*Likkutei Yekarim*, 28b). Jehiel Michael did not leave any writings of his own. Selections from his sermons were published in the anthology *Likkutei Yekarim*, as the sermons of “the Maggid Meisharim” of Yampol. Tradition attributes many sayings to him and stories about his wondrous deeds appear in various collections. Jehiel Michael was the founder of a dynasty of *zaddikim* which spread throughout Galicia and the Ukraine. He had five sons:

Joseph of Yampol, Mordecai of Kremenets (teacher of *Meir of Przemyślany and father-in-law of Aaron II of *Karlin), Isaac of Radzivilov (author of *Or Yizhak*, 1961), Moses of Vladimir-Volynski, and Zeev Wolf of Zbarazh.

[Moshe Hallamish]

JEHOAHAZ (Heb. יְהוֹאָחָז, יְהוֹאָחָז; “YHWH has grasped”), son of *Jehu, king of Israel c. 814–800 B.C.E. According to II Kings 13:1, Jehoahaz reigned for 17 years, while according to the synchronism made between his reign and that of Joash king of Judah, it is evident that he only reigned 14 years. It might therefore be assumed that Jehoahaz reigned together with his father Jehu during his last three years. (Another possibility is a shift in the dating system (see *Chronology). Although the writer of II Kings 13:2 classifies him as a sinner in the mold of Jeroboam son of Nebat, he observes (13:4) that Jehoahaz implored YHWH, who brought (an unnamed) savior to deliver Israel in response to the prayer of the king. This is the only story in Kings of a northern king imploring YHWH. Nonetheless, it gains credibility because something quite similar is said of Zakkur of Hamath who successfully cried out to his god Baalhamayn during a siege (Cogan and Tadmor, 143–44). He reigned during a time of decline and degradation in the kingdom of Israel. By the end of Jehu’s reign, *Hazeal king of Aram had occupied Transjordan, and in 813 B.C.E. (the last year of Jehu’s reign and the first of Jehoahaz to reign alone) Hazeal launched a military campaign which brought him as far south as Aphek on the border of Philistia (according to the addition in the Lucian version of the LXX to II Kings 13:23). At that time, or a short while later, it seems that Jehoahaz became a vassal of Aram – during the reigns of Hazeal and his son *Ben-Hadad III, who exercised sovereignty over the whole of Syria and Palestine. The latter extended and imposed the authority of Aram up to the borders of Egypt. The Arameans left Jehoahaz with only “fifty horsemen, and ten chariots, and ten thousand footmen, for the king of Aram had destroyed them and made them like the dust at threshing” (II Kings 13:7). The prophecy of Amos 1:3, 13, concerning the cruelty of the Arameans and the Ammonites in the land of Gilead, probably refers to this period (cf. II Kings 8:12). The decline of Israel in the period is also evident from the series of prophetic stories concerning Elisha (II Kings 5–7), which describe the subordination of the “king of Israel” to the “king of Aram.” There is no doubt that the unnamed “king of Israel” was Jehoahaz (and not Jehoram son of Ahab) and that “Ben-Hadad” (6:24) was not Ben-Hadad II (the contemporary of Ahab and Jehoram), but Ben-Hadad III, son of Hazeal.

According to the prophetic story, Ben-Hadad besieged Samaria, and it was only saved after “the Lord had made the army of Aram hear the sound of chariots, and of horses, the

sound of a great army, so that they said to one another, ‘Behold, the king of Israel has hired against us the kings of the Hittites and the kings of Egypt to come against us.’ So they fled away in the twilight and forsook their tents, their horses...” (II Kings 7:6–7); i.e., the deliverance is in this instance explained by the fear of the Arameans of an attack from the north (the kings of the Hittites, led by Hamath) or from the south (the Egyptian Pharaohs). However, the deliverance of Israel is due to the campaigns of Assyria into northern Syria of Adad-Nirari III. These campaigns began in 805 B.C.E. and continued until 802 B.C.E., their principal objective being the weakening of the Aramean supremacy in northern (the region of Arpad) and central Syria. The permanent liberation of Israel from the Aramean oppressor only came with the defeat of Ben-Hadad III by Adad-Nirari III in 796 B.C.E. during the second campaign of Adad-Nirari III into southern Syria (against Menšuate), i.e., at the beginning of the reign of *Jehoash son of Jehoahaz. It is likely that the writer of II Kings 13:5 preferred not to name an Assyrian king as the deliverer of Israel and purposely left him anonymous. B. Mazar attributes the Samarian Ostraca to Jehoahaz’ reign; he sees in them the evidence of an expansion of the kingdom of Jehoahaz, from the time when he began to liberate himself from the yoke of Aram. (For other opinions on the date of the Samarian Ostraca, see: *Samaria.)

[Hayim Tadmor / S. David Sperling (2nd ed.)]

JEHOAHAZ (Heb. יְהוֹאָחָז, יְהוֹאָחָז; “YHWH has grasped”), son of *Josiah and Hamutal daughter of Jeremiah of Libnah (II Kings 23:31), king of Judah (609 B.C.E.). At first his name was Shallum (Jer. 22:11) but it was later changed to Jehoahaz, apparently when he was made king. The new name with the theophoric element referring to YHWH may be a reflection of the reforming spirit of Josiah. In the genealogical list of the descendants of David in I Chronicles 3:15, Shallum is entered as the fourth son of Josiah, whereas the first born was Johanan. It seems probable therefore that despite the Septuagint, which reads Jehoahaz instead of Johanan in I Chronicles 3:15, Jehoahaz was not the first born and that the *Am ha-Arez* (“People of the land”) deliberately gave him precedence (II Chron. 36:1). Jehoahaz was made king, at the age of 23, in the summer of 609 B.C.E., after Josiah his father had been killed in the battle against Pharaoh *Necoh at Megiddo. It has been suggested that he was the nominee of the circles which favored the alliance with the ascending Neo-Babylonian Kingdom – bitter enemies of Assyria – who were hostile to Egypt’s attempt to save Assyria from total destruction. Three months later, when Necoh returned from fighting the Babylonians and their allies – the Medes (from the district of Haran) – he deposed Jehoahaz and put his elder brother Eliakim, i.e., *Jehoiakim, in his place (II Kings 23:33–34; II Chron. 36:3–4). Accordingly,

Jehoahaz reigned from about Tammuz to Tishri of that year (609 B.C.E.). Possibly the notice that “he did evil in the eyes of YHWH” (II King 23:2) is inspired by the needs of theodicy to account for the shortness of his reign. It would seem that the tradition of II Kings 23:33, which says that Jehoahaz was deposed at Riblah in the land of Hamath, is to be preferred to that of II Chronicles 36:3, according to which he was deposed in Jerusalem. It is probable that Jehoahaz came before Neco II at Riblah, where his temporary headquarters were, in order to humble himself, but that Neco did not accept his submission. He imposed a monetary fine of “a hundred talents of silver and a talent of gold” upon Judah (II Kings 23:33). This fine was paid by Jehoiakim, who collected it from the *Am ha-Areẓ* (*ibid.* 23:33–35). The tragic fate of Jehoahaz son of Josiah, who was exiled to Egypt and died there, served as the subject of an elegy by Jeremiah (Jer. 22: 10–12) and later by Ezekiel (Ezek. 19:4). An (unprovenanced) seal with the image of a rooster, dated paleographically to the late seventh or early sixth century B.C.E., reads: *lyhwʿhz bn hmlk*, “belonging to Jehoahaz son of the king.”

[Hayim Tadmor]

JEHOASH (Heb. *יְהוֹאָשׁ*, *יְהוֹאָשׁ*; “The Lord has given”), son of Jehoahaz, king of Israel (reigned 801–785 B.C.E.). Jehoash shared the throne with his father for two years or more. When the resumption of King Adad-Nirari III of Assyria’s military campaigns in Syria toward the end of the eighth century B.C.E. weakened the power of *Aram, Jehoash determined to free Israel from Aramean control. The decisive stimulus for the liberation of Israel’s territories to the east of the Jordan came in 796 with Adad-Nirari’s campaign against Manṣuate in the Lebanon valley (*Massyas* according to Strabo 16:2, 18); at that time, the king of Assyria also attacked Damascus, defeated the Aramean armies, and exacted a heavy tribute from Ben-Hadad III, the king of Aram. The subsequent wars of Aphek (Alphikh, east of Lake Kinneret) appear to have completely broken the strength of Aram. Elisha’s prophecy to Jehoash (made just before the prophet’s death; II Kings 13:14–19) that the king would defeat Aram at Aphek should be interpreted against this background. It appears that Jehoash then recognized the sovereignty of Assyria, his natural ally in the war against Aram, a conjecture substantiated by an Assyrian inscription from Tel-el-Rimah in which Jehoash (written Ia’asu) of Samaria is mentioned among those paying tribute to Adad-Nirari (Cogan and Tadmor, 335). The countries subdued by the above campaign are also listed in Adad-Nirari’s inscription from Calah (Nimrud). They were: Tyre, Sidon, “the land of Omri” (i.e., Israel), Edom, and Philistia (A.K. Grayson, *RIMA* 3, 212–13).

The relationship between Jehoash and *Amaziah, king of Judah, is not clear. Israel and Judah may have formed an alli-

ance with the aim of conquering Edom – similar to the alliance between Jehoshaphat and Ahab – but then, for some unknown reason, the two kings quarreled. According to a late story in II Chronicles 25:6, before Amaziah went to war against Edom he hired 100,000 soldiers from Israel; but II Kings 14:8–10 relates that after the conquest of Edom, Amaziah challenged Jehoash: “Then Amaziah sent messengers to Jehoash... to say, come let us meet together.” In the battle between the armies of Judah and Israel near Beth-Shemesh, Amaziah was defeated and taken prisoner. Jehoash entered Jerusalem, looted the palace and Temple treasuries, and broke down the city wall for a distance of 400 cubits “from the gate of Ephraim unto the corner gate” as a symbol of its surrender (II Kings 14:13). Shortly after his victory Jehoash died, in the 15th year of Amaziah’s reign (785 B.C.E.). From the chronological data concerning the reign of his son *Jeroboam, it appears that father and son reigned jointly during Jehoash’s last years.

[Hayim Tadmor]

JEHOIACHIN (Heb. *יְהוֹיָכִן*; “YHWH will establish”; also: Joiachin, Jeconiah, Jechoniah, Coniah; in Babylonian Akkadian documents Ia-²-kin), king of Judah. He ascended the throne at the height of the rebellion against Babylon, when he was 18 years old (II Kings 24:8; the version in II Chron. 36:9, which states that he was only eight at the time is difficult), and reigned for three months (II Chron. 36:9 adds another ten days). In the winter of 597 B.C.E. Nebuchadnezzar exiled him, along with his mother, family, officers, slaves, and 10,000 captives – including craftsmen and smiths – to Babylon (II Kings 24:12ff.), setting up Zedekiah in his place. It seems that Jehoiachin’s mother Nehushta, daughter of Elnathan, was very influential in the palace, for she is mentioned in the Bible several times (II Kings 24:12, 15; Jer. 22:26; 29:2). The Babylonian chronicle published by D.J. Wiseman (see bibliography) describes the capture of Jerusalem and the exile of Jehoiachin in the seventh year of Nebuchadnezzar’s reign, relating that the Judean king surrendered with a large part of his army shortly after Nebuchadnezzar attacked Jerusalem. Jehoiachin’s surrender saved the land from destruction, but many of the people of Judah disapproved of his action; the resulting disputes between the party favoring peace and that counseling rebellion were specifically revealed in the antagonism which arose between Jeremiah and Hananiah son of Azur of Gibeon in the fourth year of Zedekiah’s reign (Jer. 28). Excavations into various Judahite tells (Beth-Shemesh, Tel Bet-Mirsim, Ramat Raḥel) have disclosed the imprint of a seal reading “to Elia-kim, the servant of Jochin,” which Klein suggested refers to

the servant of Jehoiachin, i.e., the man in charge of the property of Jehoiachin. W.F. Albright and other scholars held that these impressions belong to the reign of Zedekiah and indicate that Jehoiachin still held many estates in Judah after his exile and enjoyed the status of a king in Judah. However, subsequent study (Garfinkel) shows that the Jochin/Jochan seal impressions are from the eighth century, much earlier than previously thought, and are thus irrelevant to the biography of King Jehoiachin. Food-rationing lists belonging to the 10th to 35th years of Nebuchadnezzar's reign, found in one of the underground storerooms of his palace in Babylon, mention Jehoiachin's name four times; one such list is from 592 B.C.E. (the 13th year of Nebuchadnezzar's reign and sixth year of Jehoiachin's exile). In these lists the latter is called "king of Judah," and several documents mention distribution of food to the five sons of the king of Judah (ANET, 205; cf. 1 Chron. 3:17), which was given to "Hananiah." From the large quantity of oil distributed to Jehoiachin it would appear that he and his family were living together. The title given him in these documents indicates that he was considered a captive ruler, perhaps a hostage, or perhaps one who had surrendered freely and enjoyed the patronage of his captors. His family retained leadership of the Babylonian exiles (Ezek. 1:2), and his descendants were at the head of those who returned to Zion. According to the biblical account, Jehoiachin's status improved after Nebuchadnezzar's death (562 B.C.E.). His successor, Evil-Merodach, honored Jehoiachin, king of Judah (in the 37th year of his exile, on the 27th day of the 12th month), gave him new clothing and an honored seat at his own table (11 Kings 25:27–30; Jer. 52:31–34). It is uncertain if the pardoning of Jehoiachin was connected with a general change in the attitude of the king of Babylon toward the exiled Jews.

[Jacob Liver]

In the Aggadah

Nebuchadnezzar's sudden attack on Jehoiachin was the result of the advice of his countrymen who warned him, "Do not rear a gentle cub of a vicious dog; much less a vicious cub of a vicious dog." Nebuchadnezzar thereupon went to Daphne (Antiocha), where he asked a deputation of the Sanhedrin to hand over Jehoiachin, in return for which he would not destroy the Temple. When Jehoiachin was informed of the request, he ascended to the roof of the Temple, and, extending the keys of the sanctuary toward heaven, exclaimed: "Lord of the Universe, since we have hitherto not proved worthy custodians for Thee, from now on these keys are Thine." A fiery hand appeared and snatched the keys (or, according to other opinions, they remained suspended between heaven and earth). Jehoiachin was then taken captive (the gate by which he left the city was thereafter called the Gate of Jeconiah; Mid. 6:2), and placed in solitary confinement. Fearing, however, that since the king was childless, the House of David would thus cease, the Sanhedrin succeeded in obtaining permission for his wife to live with him. Jehoiachin kept the laws of marital purity during this time, and as a reward was forgiven his sins (Jer. 3:22; Lev. R. 19:6). Even the decree that none of his

descendants would ascend the throne (Jer. 22:30) was repealed when Zerubbabel was appointed leader of the returned exiles (cf. Sanh. 37b–38a). The exile of Zedekiah while Jehoiachin was still alive was a merciful act, since Jehoiachin could thus teach Zedekiah Torah (Git. 88a). Jehoiachin's life is illustrative of the maxim: "During prosperity a man must never forget the possibility of misfortune; nor in despair lose hope of prosperity's return." Within two days of Evil-Merodach's accession to the throne, Jehoiachin was released and accorded the highest honors (SOR. 28).

JEHOIADA (Heb. יהויאדָ; "YHWH has known," "YHWH has directed"), chief priest in the Temple in Jerusalem during the reigns of *Athaliah and *Joash of Judah. According to 11 Chron. 22:11, Jehoiada was married to Jehosheba (called Jehoshabath in Chronicles), the daughter of King *Jehoram and the sister of Jehoram's son *Ahaziah (11 Kings 11:2; 11 Chron. 22:11). Jehoiada had the most important role in the return of the throne to the house of David and the introduction of new administrative procedures in the Temple in Jerusalem. After Athaliah assumed the throne and killed all the royal family (11 Kings 11:1; 11 Chron. 22:10), it was feared that the entire house of David would be exterminated. Jehosheba succeeded in saving the year-old Joash, the youngest son of Ahaziah. She hid him and his nurse for six years in a chamber of the Temple (11 Kings 11:2–3; 11 Chron. 22:11–12), an undertaking to which Jehoiada, as "high priest" (11 Chron. 24: 6 calls him *ha-rosh*) was able to give much assistance.

As a result of the increased opposition to Athaliah and the Tyrian cult, which she had introduced in Jerusalem, Jehoiada led the resistance to the queen; the first account of a priest's involvement in the affairs of state in Judah (11 Kings 11:4–12; 11 Chron. 23:1–11). According to Kings, the major forces against Athaliah were the priesthood and the *am ha-arez ("the People of the Land"), whose exact composition is debated, and the leaders of the Temple and palace guards, "the Carites and the guards" (the Carites, being foreigners, are omitted from the account of the Chronicler because he excludes foreigners from the temple). According to Chroni-

cles, the entire people was involved in the revolt. The insurrection against Athaliah was preceded by the coronation ceremony of Joash in the temple. The young king was given the royal *nezer*, “diadem,” and the *edut*. Gersonides takes this last to refer to the Torah; others to some covenant document or to an engraved amulet comparable to the priestly diadem of Ex. 23:36. He was also anointed (II Kings 11:17–20; II Chron. 23:16–21). After the ceremony Athaliah was killed outside the Temple (II Kings 11:13–16; II Chron. 23:12–15). Jehoiada then made a covenant between “YHWH, the king, and the people,” and afterward, apparently between the people and the king (II Kings 11:17; II Chron. 23:16). Thus, the kingship of the Davidic dynasty was legally restored. It may be noted that an inscription carved in stone found in South Arabia, which served as a kind of constitution for the state of Qatabân, contains a similar covenant between God, the people, and the king (Pritchard, *Texts*, 511). The covenant of Jehoiada obligated the people to become “a people of YHWH”; i.e., to eliminate the Baal cult. Jehoiada remained the adviser teacher of the young king, but it seems that his influence was not limited to the religious sphere alone (II Chron. 24:3).

Jehoiada’s other functions were mainly related to the Temple. He instituted special directions concerning the sanctification of the altar and the purification of the Temple (*ibid.* 23:18–19), which were still in effect in the generation before the destruction of the Temple (Jer. 29:26). With the cooperation of the adolescent king, Jehoiada arranged for repairs of the Temple which had been neglected during the turmoil of the previous regime. After the priests refused to set aside money from that which was brought to the Temple for repairs, as they were supposed to have done (according to the version of the story in II Chronicles 24, the priests refused to collect money in provincial cities), Jehoiada and the king agreed to designate a special box or chest (called *shofar* in the Second Temple period) in which “all the money brought to the house of the Lord” would be put (except for the purchase of guilt and sin offerings, which was kept by the priesthood). Jehoiada and the king then paid for the repairs from the money thus collected. According to Chronicles, Jehoiada lived 130 years, but this figure must be an exaggeration, especially since he died while Joash was still king. That he was much respected is attested by his burial in the city of David together with the kings (II Chron. 24:16). According to II Chronicles 24:17–22, of his sons, *Zechariah, was killed after his father’s death because he rebuked Joash in harsh terms.

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

In the Aggadah

Jehoiada’s piety was such that the verse “Jehoiada was the leader of the Aaronites” (I Chron. 12:28) is explained to the effect that “Had Aaron lived in the same generation, Jehoiada would have been superior to him” (Eccl. R. 1:4, no. 4). Jehoiada and his wife, Jehosheba, preserved the young Joash by hiding him in the upper chambers of the Temple during the summer, and in the cellars during the winter (Mid. Ps. 18:23).

JEHOIAKIM (Heb. יהויקים, יהויכים; “YHWH raises up”), king of Judah (609–598 B.C.E.). Pharaoh Neco made Jehoiakim king of Judah after he captured *Jehoahaz, Jehoiakim’s younger brother, who was the choice of the *am ha-arez and who reigned for only three months. Jehoiakim, who was 25 when he ascended the throne (according to I Chron. 3:15 he was the second son of Josiah), was most likely selected because of his known support of a pro-Egyptian policy. Jehoiakim’s original name Eliakim was changed by the Pharaoh in order to indicate the Judahite king’s subservience to Egypt (II Kings 23:34; II Chron. 36:4). Egypt also imposed a heavy tax on Judah – 100 talents of silver and a talent of gold – which Jehoiakim exacted by levying a tax upon all people of the land (II Kings 23:33, 35).

During the first three years of Jehoiakim’s reign Judah was a vassal of Egypt, which controlled Syria and Palestine and clashed with the Babylonian forces in the area of the Euphrates River (according to the *Babylonian Chronicle*). In 605 B.C.E. Babylon defeated Egypt at *Carchemish (II Kings 24:7; Jer. 46:2) and Babylon seized Syria and Palestine. The Babylonian army reached the borders of Judah and apparently took prisoners of war from Judah (Jos., *Apion*, 1:19). The following year, in the month of Kislev, *Nebuchadnezzar captured Ashkelon and exiled its king. Simultaneously, in the ninth month of the fifth year of Jehoiakim’s reign, a fast day of the Lord was proclaimed in Jerusalem (Jer. 36:9). Jeremiah warned the people that the king of Babylon would destroy the land, and indeed after the fall of Ashkelon, Judah, too, came under the Babylonian yoke. According to the Bible, Jehoiakim was a vassal of Babylon for three years before he rebelled (II Kings 24:1). Although the *Babylonian Chronicle* cites neither the subjugation nor the rebellion of Judah, it does mention the campaign against Syria and Palestine, and a brief expedition against nomadic groups in the sixth year of Nebuchadnezzar’s reign. Thus, although Nebuchadnezzar sent troops from Moab, Ammon, and Aram (or, according to the Peshitta, Edom; II Kings 24:2) against the border regions of Judah (cf. Jer. 35:11), Judah was able to continue its rebellion during this period. Only in the seventh year of the reign of Nebuchadnezzar (the 11th of Jehoiakim or perhaps, after his death, during the brief reign of his son Jehoiachin) did the siege of Jerusalem begin. It ended on the second day of Adar, on March 15/16, 597 B.C.E., with the surrender and exile of the new king, Jehoiachin.

The internal political and economic conditions in Judah during this period were undermined both by large-scale military movements along its border and by the incursions of robber bands from the neighboring countries. The persecutions of the prophets, whose influence had increased dur-

ing the days of Josiah, also sharpened internal conflicts. The book of Jeremiah contrasts Jehoiakim with his pious forbear Hezekiah by telling how Hezekiah reacted piously to Micah's prophecy of doom. In contrast, Jehoiakim persecuted and killed the prophet Uriah the son of Shemaiah, and would have done the same to Jeremiah (Jer. 26). Similarly, Jeremiah 36 contrasts Jehoiakim's lack of contrition upon hearing Jeremiah's scroll with that of the pious *Josiah, who had torn his garments upon hearing the words of the scroll of Torah (cf. II Kings 22:11–14 with Jer. 36:23–24). According to the Book of Kings, Jehoiakim shed much innocent blood in Jerusalem (II Kings 24:4; cf. Jer. 22:17).

II Chronicles 36:6ff. relates that Nebuchadnezzar bound Jehoiakim in fetters in order to carry him to Babylon. A year later he also brought Jehoiachin to Babylon. This version not only contradicts the account given in Kings but also does not appear in the *Babylonian Chronicle*. Thus, the question remains if the Chronicles' account reflects an oral tradition that did not take into account that the king who surrendered and was exiled was not the same one who had rebelled. In II Kings 24:6 it is related that he "slept with his fathers," indicating that, at least according to this source, he died a peaceful death. Two oracles relating to Jehoiakim's death are found in Jeremiah (22:18–19; 36:30).

[Jacob Liver / S. David Sperling (2nd ed.)]

In the Aggadah

Jehoiakim is portrayed as the very incarnation of wickedness and defiant flouting of God. When he ascended the throne he said: "My predecessors did not know how to anger God." He claimed that his generation, which was in possession of the "gold of Parvaim," did not even need God to provide them with light. He therefore proceeded to flout God's word publicly by engraving the name of an idol (or according to others the name of God Himself) on his person and by the deliberate wearing of *sha'atnez*, by epistasis, and by incestuous relationships with his mother, daughter-in-law, and his father's wife. He violated women, murdered their husbands, and confiscated their wealth (Lev. R. 19:6; Sanh. 103a). He cut out from the Book of Lamentations all references to God and threw them into the fire (MK 26a). He had a dishonorable death and was even denied honorable burial. When he refused to accede to the Sanhedrin's request to surrender in order to save the Temple, he was seized and let down over the city wall to Nebuchadnezzar, according to one opinion, dying while descending. Nebuchadnezzar then either took him around the cities of Judah in a public triumph, placed him inside the carcass of an ass (cf. Jer. 22:19), or threw him piecemeal to the dogs (Lev. R., loc. cit.). His disgrace, however, did not end there. The grandfather of R. Perida found a skull at the gates of Jerusalem and recognized it as that of Jehoiakim, because the earth refused to cover it when he tried to bury it, and because it carried the inscription "This and yet another." He took it home and placed it in a cupboard. His wife found it, and thinking it to be the skull of her husband's first wife, she threw it into the fire; thus

was fulfilled "this" (desecration of his body at death) and "yet another" (Sanh. 82a). Jehoiakim is still undergoing punishment for his sins. Although the Babylonian Talmud does not include him among those who have no place in the world to come (cf. Sanh. 103b), the Palestinian Talmud cites him as an example of one who has forfeited his place in heaven by publicly transgressing the law.

Eissfeldt, *The Old Testament, an Introduction* (1965), 296–7, n. 60 (extensive bibl.); EM, s.v. (includes bibliography). IN THE AGGADAH: Ginzberg, *Legends*, 4 (1947), 284–5; 6 (1946), 379–80; I. Hasida, *Ishei ha-Tanakh* (1964), 168–9. **ADD. BIBLIOGRAPHY:** M. Cogan and H. Tadmor, *II Kings* (AB; 1988), 304–8; S. Japhet, *I & II Chronicles* (1993), 1064–67; J. Berdige, in: ABD, 5:664–66.

JEHOIARIB (Heb. יהוֹיָרִיב; "YHWH champions the cause," or "YHWH replaces"), the first of the 24 priestly divisions that served at the First Temple (I Chron. 24:7). They are not mentioned among the four major priestly families, who returned from exile and were divided into 24 divisions (as described in Ta'anit 27a–28b) for the purpose of serving at the Second Temple, the families Jedaiah, Immer, Pashhur, and Harim (Ezra 2:36–39; Neh. 7:39–42). In the Book of Nehemiah (12:1–7) 22 or 23 such divisions, including Jehoiarib, are listed (see *Jedaiah). But neither the Jehoiarib nor the Jedaiah-Jeshua houses are mentioned among the families who signed the covenant (*amannah*). Japhet (429–30) suggests that Jehoiarib is an alternative of Joiarib, who is named as the father of Jedaiah the priest in Nehemiah 11:10. The Hasmoneans descended from the Jehoiarib family, which lived at first in Jerusalem and later, possibly during the persecution of Antiochus Epiphanes, moved to Modi'in (I Macc. 2:1). A later descendant of the family was the historian *Josephus.

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

JEHORAM (Heb. יְהוֹרָם, יוֹרָם), the son of *Jehoshaphat, king of Judah (851–843 B.C.E.). Jehoram's wife was the Omrid princess *Athaliah. During his reign a close alliance existed between the kingdoms of Judah and Israel, ruled by his brother-in-law (or his wife's nephew) Jehoram the son of Ahab if, as may be inferred from II Chronicles 21:3, Jehoshaphat reigned jointly with Jehoram (II Chron. 21:4), – this may reflect a clash among the sons of Jehoshaphat over the succession (see: *Chronology).

At the beginning of Jehoram's reign, Edom, which had been subservient to Judah, rebelled, and Jehoram sought to subdue the rebellion. However, his war against Edom (II Kings 8:20–22) was unsuccessful, and the latter remained independent until the reign of *Amaziah. Following this military reverse, Judah, according to II Chronicles 21:16–17, was ravaged by the Philistines and others. The historicity of this account is questionable, but undoubtedly the Philistines did beset

Judah, for the statement in II Kings 8:22, "... then did Libnah revolt at the same time," can only mean that it was wrested from Judah by the Philistines. II Chronicles also says that Jehoram suffered an incurable illness, which Elijah had predicted (21:12–15, 18–19), and states that Jehoram was not buried in the tombs of the kings (*ibid.*, 21:19–20), and that the people "made no burning for him" on his death. However, II Kings 8:24 explicitly states that he was buried with his ancestors in the city of David, and it would seem that Chronicles, which dwells at length on Jehoram's wickedness and failures, drew on a folk legend about Elijah that exaggerated Jehoram's sins and represented him as one of the most evil kings of Judah because of his association with the house of Ahab. Nevertheless, it may well be that the temple of Baal mentioned in II Kings 11:18 was built (at Athaliah's instance) during the reign of Jehoram. If Israel was one of the 12 western countries (headed by Adad-Idri, i.e., Ben-Hadad, king of Damascus) which allied themselves against Shalmaneser III of Assyria in the years 849–845 B.C.E., the hypothesis (of B. Mazar) that the king of Judah also participated may be accepted. In any event, there is no doubt that in Jehoram's brief reign Judah declined rapidly from its period of glory during his father's reign. Edom's independence deprived Judah of control of the important commercial routes to Arabia and thus affected its economy negatively. The relations between the two kingdoms at this time were such that the political and economic crises that plagued Israel could not but spread to Judah (see also: *Jehoram the son of Ahab).

[Hayim Tadmor]

JEHORAM (Heb. יהורם, ירם; "YHWH is exalted"), the son of *Ahab, king of Israel from 850/1–842 B.C.E. or possibly from 853–842 B.C.E. According to II Kings 3:1, Jehoram reigned in the 18th year of the reign of *Jehoshaphat, king of Judah. However, according to II Kings 1:17 (in a prophetic story), Jehoram became king during the second year of the reign of *Jehoram the son of Jehoshaphat. The contradiction between these two synchronisms is eliminated by the assumption that Jehoram son of Jehoshaphat was co-regent with his father at the end of the latter's reign, or that the beginning of Jehoram's reign is calculated according to Jehoshaphat's years as sole ruler. Those who accept the first supposition hold that Jehoram ruled for only nine or ten years, not twelve, as recorded in II Kings 3:1. The first event related about Jehoram (II Kings 3:4–24), which should date from the beginning of his reign, is his war against King *Mesha of Moab. Aided by allies, he attempted to subdue Mesha after the latter had freed himself from Israel (II Kings 1:1) and had even raided areas of Israel north of Arnon. In this war, described in the story of the prophet *Elisha (ch. 3), the allies attacked Mesha from the south, perhaps because he had in the meantime succeeded in fortifying his northern cities.

The army of Jehoram and his allies reached Kir of Moab and surrounded Mesha, but they did not succeed in conquering the city. Apparently, the Moabites, excited by the sacrifice offered by their king, defeated the army of the allies (II Kings 3:27), freeing themselves permanently from Israelite rule. It is difficult to determine the exact relations between Jehoram and *Aram. It is possible that as long as *Ben-Hadad II was alive, the alliance between Israel and Aram, known from the last years of *Ahab, remained valid. According to Assyrian annals, a coalition of the twelve kings of Hatti and the seacoast fought against Shalmaneser III in 849, 848, and 845 B.C.E. However, the records that mention these wars do not give the exact names of the allies, except for Adad-Idri (Ben-Hadad II) of Damascus and Irhuleni of Hamath. It is a fair assumption that it was the same coalition as that of those who fought against Assyria in Qarqar in 853, mentioned in a more detailed record. King Ahab was one of the major participants in that battle. If this assumption is correct, barely two years passed during Jehoram's reign without war. With the death of Ben-Hadad in 843 and the reign of *Hazeal, who founded a new dynasty, the political balance was upset. The Syrian alliance of the twelve kings was broken and Jehoram exploited this opportunity to attack Aram; he attempted to capture Ramoth-Gilead, the source of dissension between Israel and Aram – for he who held this area dominated the north of Gilead and the Bashan. Jehoram himself was wounded in battle and returned to Jezreel (9:16). While he was recovering, *Jehu, his commander in chief, rebelled against him and killed him (9:23–24).

In contrast to the struggle between the prophets and Jezebel during Ahab's reign, Jehoram permitted Elisha and the other prophets to act freely. Possibly under the influence of the prophets, Jehoram removed the pillar of the Tyrian Baal, which his father Ahab had erected (3:2), thus de-emphasizing the foreign cult of his mother Jezebel and allaying the dissatisfaction of the people. The numerous unsuccessful wars of Jehoram and the severe famine in the country at that time (4:38) formed the background to Jehu's rebellion, in which he killed Jehoram and destroyed the *Omride dynasty. Several scholars believe that Jehoram of Israel is mentioned in the Aramaic inscription attributed to Hazeal that was found at Tel Dan.

[Hayim Tadmor]

In the Aggadah

Jehoshaphat's question, "Is there not here a prophet of the Lord?" (II Kings 3:11) was an allusion to Jehoram's doubt on this point (Num. R. 21:6). Nevertheless God gave victory to Jehoram in his war against Moab, because of his observance of the Sabbath (Mekh. SbY. p. 162). He was killed "between his arms" and "at his heart" (II Kings 9:24) in order to teach that he had sinned by hardening his heart and stretching out his hand to take interest from Obadiah (Ex. R. 31:4).

JEHOSEPH (Joseph) HA-NAGID (1035–1066), vizier of Granada, son of *Samuel ha-Nagid. In his youth he already displayed superior talents. His distinguished father supervised his education, and was particularly concerned that his son have a perfect knowledge of the Arabic language and literature. While still a little boy, Jehoseph copied and edited his father's poems. His father arranged his marriage to the daughter of his friend, the famous Rabbi Nissim from Kairouan, who came to Granada with his daughter for the wedding. His father thought that a wife from a deeply religious family would have strengthened his son religiously. Jehoseph was in his 21st year when his father died and, despite his youth, was appointed by Bādīs, king of Granada, as chief vizier of the kingdom. He did not disappoint the king's hopes. Because of his great talents he succeeded in fulfilling his assignments, of which the most important were the efficient collection of the taxes and the running of an orderly administration. Even his contemporary Muslim writers, who exhibit an attitude of hatred toward him, admit to this. He was also successful in conducting the foreign policy of the Berber kingdom of Granada in its struggle with the Arab kingdom of Seville. He established connections with other Muslim countries, also hostile to the Arab king of Seville, and gave them active support. At the same time he did not neglect his occupation with Torah, but gave instruction and composed Hebrew poems. In 1044 (according to his own testimony) he began collecting and arranging his father's poems. Fragments of Jehoseph's poems were published by A.M. Habermann (see bibl.). As in the case of his father, Jehoseph's poems record and reflect events from his stormy life. Jehoseph was arrogant and not liked. While his father's wisdom and the respect shown him sufficed to silence the dissatisfaction of the Arabic-speaking Andalusian population with the Berbers and their Jewish viziers, Jehoseph was openly censured. He surrounded himself with wealthy Jews, agents, and officers of the king, to their great benefit. He tried unsuccessfully to avert the consequences, but had the misfortune to become entangled in a harem intrigue. In 1064 the crown prince Bolougin died after having participated in a feast in the home of Jehoseph, who was then accused of poisoning him. Meanwhile, the struggle between the kings of Granada and Seville became more acute; the Berber Bādīs, fearing plots by his Arab subjects, planned to slaughter them, but Jehoseph warned the Arabs. This step harmed his relations with the king himself. Abu Ishāq al-Ilbībī a disgruntled and fanatic Muslim theologian, composed a provocative poem against Jehoseph, in which he protested about his great wealth and the enrichment of the other Jews. There were also Muslims who accused Jehoseph of killing Bādīs secretly, since the latter avoided making any public appearance. As a consequence of this provocation he was murdered, and a bloody slaughter befell the Jews of Granada.

[Eliyahu Ashtor]

JEHOSHAPHAT (Heb. יהושפט), king of Judah, son of *Asa and Azubah, daughter of Shilhi (1 Kings 22:42; 11 Chron. 20:31). Jehoshaphat ruled Judah for 25 years, during the second third of the ninth century B.C.E. He was a contemporary of Ahab, Ahaziah, and Jehoram, kings of Israel. A vigorous personality emerges from the biblical accounts (1 Kings 22; 11 Kings 3; 11 Chron. 17:1–21:3), a vigor manifested both in foreign policy and in the internal administration of the state.

Foreign Policy

Jehoshaphat's political system was characterized by his close alliance with the kingdom of Israel, a departure from the policy of his predecessors who were not reconciled to the division of the kingdom which had been united under David and Solomon. The turning point in Jehoshaphat's relations with Israel is 1 Kings 22:45: "Jehoshaphat also made peace with the king of Israel." This alliance between Judah and Israel was expressed in the former's participation on the side of *Ahab in the battle against Aram which took place at Ramoth-Gilead (1 Kings 22; 11 Chron. 18). Jehoshaphat also took part in the military operation of *Jehoram, king of Israel, against Moab (11 Kings 3:4–27). The alliance was reinforced by the marriage of Athaliah, in view of her formal title "Athaliah daughter of King *Omri of Israel" (11 Kings 8:26), a sister or a daughter of Ahab, to Jehoshaphat's son Jehoram (this marriage took place in Jehoshaphat's lifetime). Another aspect of the alliance was the joint venture of Jehoshaphat and Ahaziah king of Israel "in building ships to go to Tarshish, and they built the ships in Ezion-Geber" (11 Chron. 20:36; cf. 1 Kings 22:49–50). Jehoshaphat's reconciliation with the kings of Israel stemmed from his recognition that the balance of power had shifted in Israel's favor. The kingdom of Israel, under the rule of the house of Omri, achieved great stability and became an important political, military, and economic power in the area. Jehoshaphat understood that peace with the kingdom of Israel could bring political and economic benefit to his kingdom, whereas war with Israel would be disastrous for Judah. In addition, military and political cooperation between Judah and Israel was vital in view of the strengthened position of the eastern Transjordanian states, which threatened the borders of both Israel and Judah. Moab rebelled against Israel (11 Kings 1:1; 3:4–5), and Edom was waiting for an opportune time to rebel against Judah. The account in 11 Chronicles 20:10, 22 of an invasion of Judah by "the men of Ammon and Moab and Mount Seir" is historically improbable. Israel and Judah joined forces against Aram (1 Kings 22; 11 Chron. 18) and against Moab (11 Kings 3:4–27). Later, in an effort to repel an Assyrian invasion, Israel and Aram joined forces in the battle of Qarqar, but whether Jehoshaphat took part with his ally in this cam-

paing is impossible to establish from the inscription of Shalmaneser III, king of Assyria, which recounts the battle.

The alliance between Israel and Judah also had economic aspects. Clearly, while Judah dominated Edom (1 Kings 22:48; 11 Kings 3:9–27), Jehoshaphat could exploit the copper mines in the Arabah and renew maritime trade in the Red Sea utilizing the port of Ezion-Geber. In establishing a commercial fleet he needed the aid of the Phoenicians, who were expert shipbuilders and sailors. Since Tyre was allied with Israel (see *Ahab), Judah became a third partner with Tyre and Israel. The Bible indicates that the joint enterprise to establish a fleet and maritime trade was unsuccessful and that Jehoshaphat disliked Ahaziah's interference. Perhaps Ahaziah was unable to force his will on Jehoshaphat. In any event, the triple alliance of Judah-Israel-Tyre brought about great commercial and economic vitality because the three states were contiguous and extended from the Mediterranean Sea in the southwest to the desert and the Red Sea in the southeast. Jehoshaphat's domination over Edom and Ezion-Geber gave Judah the land trade routes which connected Edom and the Red Sea with the Philistine port towns. These routes were traveled by caravans which carried valuable commodities (perfumes and spices) from Arabia to the countries of eastern Asia. The tribute which the Philistines and the Arab tribes brought to Jehoshaphat (11 Chron. 17:11) can be understood only against this background of power and prosperity.

Internal Affairs

The Book of Chronicles provides an idealized description of the organization of the kingdom of Judah in the days of Jehoshaphat. He reorganized the army; 11 Chronicles 17:13–18 lists five senior unit commanders and the size of their units. The large numbers given indicate that the figures reflect both the standing army and the reserves which could be conscripted during crisis. The regular army, equipped with chariots, was garrisoned in the fortified cities and fortresses scattered throughout Judah, including the Judean Desert and the Negev (11 Chron. 17:2, 12, 19).

Some scholars believe that Jehoshaphat's administrative reorganization of the kingdom of Judah in "Ephraim" – meaning Benjamin as part of the "hill country of Ephraim" (see 11 Sam. 20:1, 21) – conquered by Asa (11 Chron. 17:2), is reflected in the list of towns allotted to Judah in Joshua 15. A unique measure taken by Jehoshaphat in the third year of his rule is described in 11 Chronicles 17:7–9. The king is said to have sent a delegation of ministers, levites, and priests to visit the towns of Judah and to teach the people the "book of the law of the Lord." Those who credit the chronicler's account in detail assume "the book of the law of the Lord" in question was the Book of *Deuteronomy, not in its final form, which was established only at the time of Josiah, but in a very early stage of its formulation. This assumption is based mainly on the great similarity between Deuteronomy 16:18–20; 17:8–13, which describes the appointment of judges in rural towns and the establishment of a high court in "the place which the Lord

your God will choose" (Deut. 17:8), and the description in 11 Chronicles 19:5–11, which tells of the appointment of judges in all the fortified cities of Judah and the establishment of a high court in Jerusalem. Amariah, the chief priest, who was in charge of "all matters of the Lord," i.e., religious law, and Zebadiah son of Ishmael, who was in charge of "all the king's matters," i.e., secular-royal law (11 Chron. 19:11), were members of the high court. Establishing teaching delegations in the towns and judges in all the fortified cities and Jerusalem indicates a tendency toward the consolidation of all authoritative institutions in Judah. Jehoshaphat's religious-legal reform is regarded as an attempt to institute a single legal system in order to centralize the ruling power. The entire account may be a midrash based on the name Jehoshaphat, "YHWH Judges."

Jehoshaphat's alliance with Phoenicia and Israel did not adversely affect Judah's religious-ritualistic practices. Although Jehoshaphat did not abolish the popular practice of sacrifice (to the Lord) at local cult places, he did abolish all rituals of which the Deuteronomist disapproved (see 1 Kings 22:44–47). He apparently perpetuated all that his father Asa had accomplished, and the Phoenician cult established by Ahab in Samaria under the influence of Jezebel only attained some importance in Jerusalem during the reign of Athaliah, after the death of Jehoshaphat (11 Kings 11:18).

[Jacob Liver / Bustenay Oded]

JEHOSHAPHAT, VALLEY OF (Heb. עֵמֶק יְהוֹשָׁפָט), place mentioned in Joel 4:2, 12 where in the fullness of time God will gather all the nations to judge them. According to 11 Chronicles 20:26, the army of King Jehoshaphat assembled, after the defeat of his enemies, in the valley of Beracah ("Blessing") somewhere near Tekoa. Popular legend identified the Valley of Jehoshaphat with the middle section of the Kidron Valley, Jerusalem, and called the tomb-cave behind "Absalom's Tomb" the "Tomb of Jehoshaphat"; as such it is already referred to by the Bordeaux pilgrim (333 C.E.). On the Day of Judgment, according to Arab tradition, a sword will be suspended between the Temple Mount and the Mount of Olives; the righteous will pass safely along the blade but the wicked will fall into the fire of Gehenna below. In Jewish tradition the place where "God will judge" (*Yeho-Shafat*) the nations has no geographical definition (Mid. Ps. to 8:10).

[Michael Avi-Yonah]

JÉHOUDA, JOSUÉ (1892–1966), Swiss author and journalist. Born in Russia, Jéhouda settled in Switzerland, where he

founded the *Revue juive de Genève*. He saw Israel's rebirth as an event of universal significance and viewed with alarm divisions between Orthodox and secular Jews, and between Israel and the Diaspora. His works include three novels, *Le royaume de Justice* (1933), *De père en fils* (1927), and *Miriam* (1928); and volumes of essays such as *La vocation d'Israël* (1947) and *Sionisme et messianisme* (1954).

JEHU (Heb. יהו), son of Hanani; a prophet during the time of Baasha, king of Israel (c. 906–883 B.C.E.), and Jehoshaphat, king of Judah (c. 867–846 B.C.E.; I Kings 16:1, 7, 12; II Chron. 19:2; 20:34). Jehu's father may have been the seer Hanani who is reported to have rebuked King Asa of Judah and been incarcerated by him (II Chron. 16:7–10; but perhaps it should read “[Jehu son of] Hanani”). Jehu foretold the destruction of the house of Baasha (I Kings 16:1ff.) and censured Jehoshaphat for joining King Ahab of Israel in the attack on Ramoth-Gilead (II Chron. 19:2–3). In accordance with his theory that the Books of Samuel and Kings were written successively by the prophets who witnessed the events (cf. e.g., I Chron. 29:29; II Chron. 9:29), the Chronicler attributes to Jehu son of Hanani the portion of the Book of Kings which deals with the age of King Jehoshaphat of Judah (II Chron. 20:34).⁷

BIBLIOGRAPHY: Noth, *Personennamen*, 143; O. Eissfeldt, *The Old Testament, an Introduction* (1965), 533. **ADD. BIBLIOGRAPHY:** M. Cogan, *I Kings* (AB; 2000), 401ff.

JEHU (Heb. יהו), son of Jehoshaphat son of Nimshi (II Kings 9–10); reigned over the Israelite kingdom at Samaria for 28 years (c. 842–814 B.C.E.). During *Ahab's reign Jehu already held a position which brought him into close contact with court circles (II Kings 9:25). During the reign of *Jehoram son of Ahab, Jehu served as commander of the garrison posted at Ramoth-Gilead, in North Transjordan. From Ramoth-Gilead he set out for Samaria and seized the throne. He established a line of kings, who ruled over Israel for nearly 100 years (II Kings 10:30; 15:12).

Internal Affairs

Most of the biblical sources on Jehu's reign concern his struggle for the throne. Jehu's way to the throne was paved with bloodshed, in the course of which the entire house of *Omri was exterminated. He killed Jehoram, king of Israel, at Jezreel, and he also put to death King *Ahaziah of Judah and his brothers (see also II Chron. 22:8–9). Then he proceeded to massacre the entire house of Ahab, including Jezebel and all members of the elite court circle that had been close to the king (II Kings 10:11). Perhaps he regarded both Judahite princes and Israelite courtiers as potential claimants to the throne as heirs to the House of Omri. The slaughter was, however, remembered with horror a long time after Jehu's death, according to the received text and traditional dating of Hosea 1:4 (but see *Hosea). Jehu was anointed king at Ramoth-Gilead by an emissary of the prophet Elisha (II Kings 9:1–10), who stood at the head of the prophetic movement that opposed

the House of Omri (see *Ahab), and strove both to avenge the blood of those prophets and God-fearing men who had been persecuted and killed by Jezebel (9:7–10), and to stop the Baal worship in Israel. Accordingly, Jehu, upon ascending the throne, acted with great zeal to destroy the Tyrian cult. He executed all the Baal prophets in the temple of Baal, destroyed the temple itself with all its pillars, and according to II Kings 10:28, “Thus Jehu exterminated Baal [worship] from Israel.” Jehu also had the support of the army, which was in need of a leader who might be more successful than Jehoram in the prolonged struggle for Ramoth-Gilead and the overthrow of Aramean supremacy. Along with the army and the prophetic movement, the poorer classes of the people also supported Jehu's coup; they had suffered great hardship as a result of the economic policy of the kings of the house of Omri, which had produced a large economic rift in the structure of the Israelite society. Among the poor there were those who warned against wanton luxury and stood for modest living. One such individual was Jehonadab, the son of Rechab (II Kings 10:15; see *Rechabites), who joined Jehu and helped exterminate Ahab's descendants (10:17) and eliminate the cult of the Tyrian Baal (10:22–27). Though he put an end to the cult of the Tyrian Baal that had been introduced by Ahab, Jehu did not abolish the golden calves which had been set up long before Ahab by Jeroboam son of Nebat at Dan and Beth-El, and for which there is no reason to suppose that it had been disapproved of by Elijah or Elisha. Indeed, the calves, whatever their significance, were not a foreign import. Besides, like Jeroboam son of Nebat, Jehu may have thought it politic to maintain the places of worship in Dan and Beth-El, since they served to deter the people from going up to Jerusalem (cf. I Kings 12:26), and frustrated the ambition of the kings of Judah, descendants of David's line in Jerusalem, to unite the two kingdoms once again under the throne of David.

Foreign Affairs

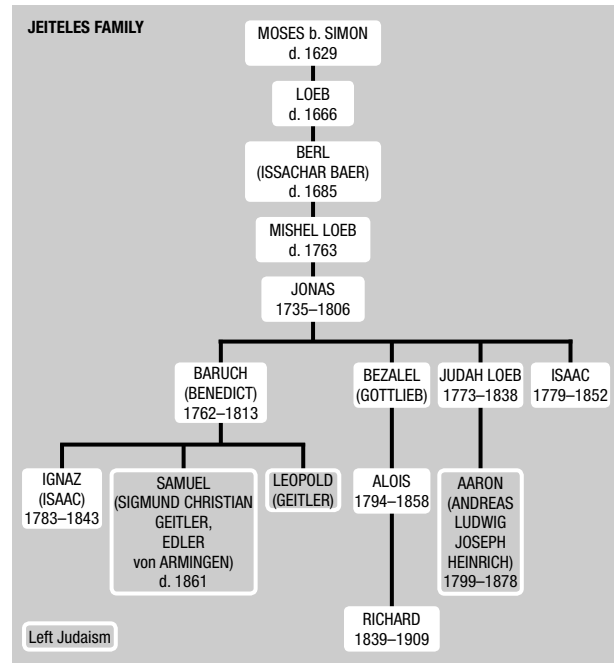

Jehu's coup greatly influenced the relations between the Israelite kingdom and her neighbors. The annihilation of the house of Omri, the killing of Jezebel, the murder of Ahaziah king of Judah, and the ban on the Tyrian influences all helped to loosen the ties binding the triple alliance between Tyre, Israel, and Judah and cast a shadow over Israel's relations with the other two, Judah and Tyre. Israel's resulting political isolation encouraged Aram of Damascus to increase the pressure on her northeastern border. On ascending the throne, Jehu immediately found himself surrounded by hostile states and sought to ensure his own position by expressing his loyalty to the king of Assyria. This is the background to what is related in the annals of Shalmaneser III concerning the tribute paid him by “Jehu son of Omri” (*la-u-a mār Ḥum-ri-i*) in 841 B.C.E. (COGAN AND TADMOR, 334–35). In that same year Shalmaneser III set out on a campaign against *Hazeal king of Aram-Damascus, placed Damascus under siege, and thence proceeded southward with his armies to Hauran, sowing destruction among Hazeal's cities. It becomes apparent

from the inscription that the regions of Hauran and Bashan, as far as the Yarmuk, were under the rule of Damascus. Later in the campaign, at a place called Baal-Rosh (Mt. Carmel or some other mountain on the Phoenician coast), he collected tribute from Jehu and from the king of Tyre. In another inscription known as the Black Obelisk, a relief has been found on which “Jehu son of Omri,” or his messenger, kneels before the king of Assyria while his retinue pays tribute to him. Assyria’s campaigns against Hazael between 841–838 B.C.E. were invaluable to Jehu inasmuch as they prevented the Arameans from exploiting the internal confusion which beset Samaria immediately after his coup. But shortly afterward the Arameans recovered, and Hazael succeeded in penetrating deep into Israelite territory and in conquering all of Israelite Transjordan as far as the Arnon (II Kings 10:32–33). In a second campaign, which seems to have taken place in 815 (or 814) B.C.E., Hazael penetrated deep into Israelite territory west of the Jordan, even reaching as far as Gath in the northern Shephelah where he collected tribute from *Joash king of Judah (II Kings 12:18). The period of Jehu and his son Jehoahaz is considered to have been the time of the strongest military pressure from the Arameans upon Israel.

[Bustanay Oded]

JEITELES (Jeitteles, Geidels), prominent family first appearing in Prague. The first known Jeiteles was MOSES BEN SIMON, on record as a house owner in 1615. His son LOEB (d. 1666) was *gabbai* of the *hevra kaddisha* for 30 years and also of the Altschul Synagogue. BERL (Issachar Baer; d. 1685), leader of the Prague community from 1666 until his death, was imprisoned in 1664, when the community elders refused to hand over to the authorities those Jews who had attacked the witnesses against the Prague chief rabbi Simon Spira-Wedeles. He was jailed again in 1667, on a charge of instigating the shooting of the renegade informer Wenzel Wimbersky but was released in the same year. AARON BEN BAER JEITELES (d. 1777) was known as a talmudic scholar and kabbalist. His allegorical commentary on the Pentateuch, *Zera Aharon*, was published in 1797. MOSES WOLF (d. 1848), secretary of the *hevra kaddisha* for many years, was apparently Aaron’s son. He published a compendium for the *hevra kaddisha* (1828) based on the *Ma’avar Yabbok* of *Aaron Berechiah b. Moses, which included a history of Prague Jewry and in which he made use of Marcus Fischer’s (see Moses Fischer) allegedly medieval *Ramshak Chronicle*. He was the first to recognize the importance of gravestone inscriptions for historical research, and his notes served his son-in-law Koppelman *Lieben in his *Gal Ed*. SIMON JEITELES was Jewish “Vorzensor” for the Jesuit censor, Haselbauer, in the second half of the 18th cen-

tury, and ISRAEL JEITELES owned a Hebrew printing press in the 1770s.

The main branch of the family were descendants of the apothecary MISHEL LOEB (d. 1763), who played a central role in spreading the Enlightenment in Prague and investing it with a characteristically Jewish national consciousness. Mishel’s son JONAS (1735–1806) originally prepared for a rabbinical career in Abraham Moses Zerah *Eidlitz’ yeshivah. However, he went on to study medicine at the universities of Leipzig and Halle, graduating in 1755. Settling in Prague, he later became chief physician of the Jewish community hospital (1763) and supervisor of the Jewish surgeons’ board (1777), declining the offer of the post of physician to the Polish king, Stanislas II Augustus. He published articles on medical subjects and parts of his book, *Observata Quaedam Medica* (1783), were translated in early 19th-century medical textbooks. His main medical achievement, however, which was largely instrumental in earning him the name of the father of the Prague Enlightenment, was his propagation of Edward Jenner’s smallpox vaccination in the face of Christian and Jewish prejudice: he inoculated his own daughter and more than 1,500 persons. In 1784 after an audience with *Joseph II, he was permitted to treat patients “without consideration of their religion.” A master of ancient and modern languages, Jonas was a friend of Ezekiel *Landau. Jonas’ eldest son, BARUCH (Benedict; 1762–1813), a scholar and Hebrew writer, strove for a synthesis of modern and traditional scholarship. In his youth he ran away from home to Berlin, but later returned and was reconciled with his teacher, Ezekiel Landau. He contributed poems to *Ha-Me’assef* (the journal of the *Me’assefim) dealing with the lonely and difficult position of the enlightened intellectual in traditional society. When he eulogized Landau in his *Emek*

ha-Bakha (1793) in a wholly Orthodox and traditional manner, the radical editor of *Ha-Me'assef* attacked him. A booklet, *Sefer ha-Orev*, published allegedly in Salonika in 1795 under the pen name Phinehas Hananiah Argosi de Silva, which attacks the disrespectful attitude of the Berlin radicals to rabbinical scholars, is generally considered to be Baruch's refutation of their attacks. So, too, the pamphlet, "A Discussion between the Years 5560 and 5561" (1800 and 1801) a polemic against the Frankists in Prague, is generally attributed to him. He published four editions of Moses Mendelssohn's commentary on Maimonides' *Millot ha-Higgayon*, three of them in German translation in Hebrew type, and *Ta'am ha-Melekh* (1801), glosses to Isaac Nuñez Belmonte's novellae on Maimonides' *Sha'ar ha-Melekh*. A sermon supporting his father's vaccination campaign was published in 1805. A man of independent means, Baruch founded a yeshivah in his house and encouraged rising Hebrew authors. In 1813 he induced leaders of the Prague community to open a hospital for wounded soldiers "of all nationalities" in the Jewish quarter. He himself died of hospital fever while caring for them.

His son IGNAZ (Isaac; 1783–1843) studied law at Prague University before moving to Vienna (1810) and establishing himself there as a merchant. A prolific writer, he contributed to general and Jewish periodicals, his articles on Jewish history in **Sulamith* being of particular interest. Along with his father, he supported his grandfather's efforts toward vaccination in a pamphlet (*Die Kuhpockenimpfung*, 1804) and published *Biographie des Dr. Jonas Jeiteles* (1806). His main literary achievement was *Aesthetisches Lexikon* (2 vols., 1835–38). Ignaz was eventually estranged from Judaism. One of Baruch's other sons, SAMUEL (d. 1861), who was baptized in 1828 as Sigmund Christian Geitler, Edler von Armingen, became an outstanding industrialist and philanthropist. Baruch's youngest son, LEOPOLD, was also baptized and adopted the name Geitler (1833). JUDAH LOEB (1773–1838), another of Jonas' sons, a Hebrew writer, contributed to the *Ha-Me'assef* and to the annuals *Bikkurei ha-Ittim* and *Kerem Hemed*, publishing poems and biblical and halakhic articles. He was also the author of an Aramaic grammar *Mevo ha-Lashon ha-Aramit* (1813) and a collection of poems *Benei ha-Ne'urim* (1821). One of the four chairmen of the Prague community, Judah supervised its German-language school. Unlike both the radical *maskilim* and the Orthodox, he favored a school in which secular and Jewish religious education would be united. It was mainly Judah who developed the peculiar blend of Hapsburg patriotism and awareness of the Jews as one of the nations in the empire which was characteristic of the Prague Haskalah. It found its outstanding expression in his opposition to Mordecai Manuel *Noah's program for his city of refuge, Ararat (*Bikkurei ha-Ittim*, 7 (1826/27), 45–49), claiming that nobody would answer Noah's call because "they are all now living under the rule of benign and merciful kings who deal mercifully and benevolently with us, as with all the other nations who live together with us in harmony and friendship." In 1835 he published a Hebrew and Aramaic translation of the Austrian anthem (*shir*

tehillah me-ammei ha-arazot). Judah was the first to use the expression *"Haskalah" for the Enlightenment movement. For Anton von *Schmidt's fourth edition of the Bible he translated and edited several volumes. In 1830 he settled in Vienna and edited the last two volumes of *Bikkurei ha-Ittim* (nos. 11 and 12) in 1831, making it of greater interest to Jewish scholarship.

Judah's son AARON (1799–1878) was baptized in 1828 and as Andreas Ludwig Joseph Heinrich Jeiteles became professor of anatomy at Vienna University and from 1836 at Olmuetz (Olomouc). He was active in politics and in 1848 was a member of the German National Assembly in Frankfurt on the moderate left. A prolific writer on medical subjects, he published in 1832 a call to physicians to pay more attention to psychology. Under the pen name of Justus Frey he also wrote poetry, some of which was set to music by Ludwig van Beethoven. His collected poems, *Gesammelte Dichtungen*, were published in 1899. In one of his later poems he warned Jewish youth not to become renegades. Two of his sons attained some importance, one as a German philologist and the other as a geographer.

Another of Jonas' sons, ISAAC (1779–1852), also became a physician, taking over Jonas' practice and becoming head physician of the Prague Jewish hospital. He published several medical papers: of importance are those dealing with the Bohemian mineral springs. Another of Jonas' four sons, BEZALEL (Gottlieb), moved to Bruenn (Brno) where he owned a Hebrew printing press. His son, ALOIS (1794–1858), studied medicine and philosophy in Prague and Vienna, and settled as a physician in 1821 in his native Bruenn. In Vienna he was a member of the circle of Beethoven and Franz Grillparzer. In 1819 he published jointly with Ignaz (see above) a short-lived Jewish periodical, *Siona*. His cycle of poems, *An die ferne Geliebte*, was set to music by Beethoven (1816). He translated Italian and Spanish dramas into German and his parody, "*Der Schicksalsstrumpf*" (1819), achieved success. His son RICHARD (1839–1909) was a railway expert. ISAAC JEITELES (1814–1857), a popular novelist in his day, published around 100 novels under the name of Julius Seydlitz. He was baptized a few days before his death.

The Jeiteles family continued to reside in Prague through the years. Its outstanding member was BERTHOLD (Issachar Baer; 1875–1958) who had originally studied chemistry. Strictly Orthodox, he preferred to open a glove factory so that he could observe the Sabbath. The publication of his works on talmudic subjects was prevented by the Nazi rise to power (1933). After the German occupation of Prague (1939) he was deported to *Theresienstadt, where he was able to continue his studies. He was put on a transport to *Auschwitz but was returned to Theresienstadt because there had been ten too many on the transport; officially, however, he was considered dead. In 1945 he returned to Prague and found all his hidden manuscripts intact. In 1948 he moved to New York. After his death, an Institute for Publishing the Talmudic Encyclopaedia of Dr. Berthold Jeiteles was established in Manchester (England) and the first book of *Konkordanzyah Talmudit* (1951/52)

on Rav was published. Still unpublished are 45 volumes on all personalities of both Talmuds, Tosefta, and Midrash and their opinions, as well as 18 volumes of *Ziyyunim*, an alphabetically arranged glossary of talmudic terms and names.

JEKABPILS (Ger. **Jakobstadt**), town in Zemgale (Courland) district, Latvia. The Jews who were present in the town despite a ban against them were expelled in 1739, and allowed to re-settle there after the Russian takeover in 1795. A community was organized in 1810, and in the 1830s a yeshivah was founded by R. Joseph Ashkenazi, a disciple of Ḥayyim of *Volozhin. There were 2,567 Jews living in the town in 1835. Jews traded in grain, wood, and flax, owned two match factories, and also were artisans. Seven families (60 persons) from Jekabpils settled in agricultural colonies in Kherson province, southern Russia, in 1840. Simeon Zarḥi, rabbi of Jekabpils from 1832 to 1856, and author of *Nahalat Shimon* (1897), settled in Erez Israel. The community declined at the end of the 19th century after many of its members had emigrated to America. It numbered 2,087 (36% of the population) in 1897. Jews were expelled by the Russian army to the interior of the country in July 1915, and Jekabpils suffered severely during World War I; many Jewish houses were destroyed. Only some of the Jews returned after the war, and by 1925 they numbered 806 (14% of the total) persons. In 1935 there were 793 Jews. Between the wars they dominated town trade, owning 106 establishments out of 178 (1935). There existed a Jewish school, and Zionist youth movements were very active. Soviet rule 1940–1941 brought the liquidation of private trade and Jewish public life. On June 29, 1941, the Germans entered Jekabpils and began the persecution and forced labor of the Jews. The Jews were concentrated in synagogues, and in September 1941 they were marched outside town into a forest and murdered beside prepared ditches. About ten families returned by the end of the 1950s; they moved the Holocaust victims to the Jewish cemetery and put up a monument with a *Magen David* and a Yiddish and Russian inscription. A few years later the authorities erased the Jewish symbol and inscription. Most of the survivors left for the West and Israel. The number of Jews living in Jekabpils in 1970 was estimated at about 30.

JEKELES, widespread family of businessmen known from the end of the 16th century in *Cracow-Kazimierz. Its name is derived from the sobriquet of its founder JACOB (= Jekele) BOGATY (“the rich”), son of Moses Eberls. Jekele, a mer-

chant and banker during the second half of the 16th and early 17th centuries, is first mentioned in 1573 in connection with a loan of 5,000 zlotys to King Sigismund II Augustus. He took part in drawing up the *takkanot* of Cracow (1595). Sebastian *Miczynski assessed his property at between 50,000 and 80,000 zlotys. His son, ISAAC BEN JACOB (Jakubovich; Reb Eisik Reb Jekeles; d. 1653), was one of the most prominent Jewish bankers and merchants of Poland in his day. He was related by marriage to the *Nachmanovich family, and owned houses and building sites in Kazimierz and shops in Cracow. He successfully represented the Jewish community of Cracow in a lawsuit in 1608 against the municipality. From then until 1647 (with the exception of 1638), he appears to have been the leading *parnas* of the community. Between 1638 and 1644, despite opposition from the Church, he erected a magnificent synagogue in Renaissance style on one of his building plots at his own expense which still exists, known as “Reb Eisik Reb Jekeles Shul.”

The second son, MOSES BEN JACOB (Jakubovich; Jekeles; d. c. 1650), was a wealthy merchant active in the community leadership. He was one of the signatories of the agreement between the community and the municipal council on Jewish commerce in Cracow in 1608–09. He built an old-age home at his own expense.

MOSES BEN ISAAC JEKELES (D. 1691), a banker and pawnbroker, succeeded his father as *parnas* of the community in 1647 for several decades. At the time of the Chmielnicki massacres (1648–49), and during and after the Swedish invasion, he represented the Jews of Cracow in negotiations with Stefan *Czarniecki, the king of Sweden Charles Gustav, the military commanders Wirtz, Wittenberg, and Georg Rákóczy, and King John II Casimir, from whom he attempted to obtain abrogation of decrees adverse to the community.

[Arthur Cygielman]

JEKUTHIEL BEN JUDAH HA-KOHEN (first half of the 13th century), Hebrew grammarian. He was known as **YAHBI** (Heb. **יָהֲבִי**; the acronym of his Hebrew name, Yekuthiel Ha-Kohen Ben Judah), by which he referred to himself. Elijah *Levita refers to him as the “Punctuator of Prague,” giving rise to the supposition that he lived in Prague; from his warnings against certain exactly described pronunciations of consonants in the reading of the Torah which he expressly addressed to his pupils, it would seem, however, that he lived in the Rhineland and not in “Canaan” (Prague). These instructions are an important source of information on the pronunciation of Hebrew in his time, in Germany, Bohemia, and France. His citations of the opinions of different grammarians, the last

of which is Abraham *Ibn Ezra, led to the hypothesis that he lived in about the first half of the 13th century. Little else is known about his life.

Ein ha-Kore, of which a critical edition of the first part, *The Grammar*, has been published by Rivka Yarkoni (1985), is probably his only work. According to Yarkoni, it is divided into two parts: (a) a grammatical study which also includes the above-mentioned instructions; and (b) notes on the vocalization and cantillation of the Pentateuch, the *haftarot*, and the Books of Lamentations and Esther.

The first part of *Ein ha-Kore* cannot be compared to the earlier works of grammarians of the Spanish school which attempted to present the reader with a methodical study of grammatical forms; its purpose was a practical one – to give instructions to those reading the Torah. He starts with the question: “When is a word *mille’eil* [penultimate accent; the stress being on the syllable before the last], and when *millera* [ultima accent; the stress being on the last syllable]?” This leads him to further questions on rhythm: the rule governing the *meteg*, called *gaya* in earlier literature (secondary accent; see *Masorah); and the rule of the *makkaf* (hyphen). Through his analysis of the *meteg* system, Jekuthiel became the first Hebrew grammarian in Europe to formulate the concepts of the open and closed syllables in Hebrew. He also discovered the law of the “heavy” *meteg*. His *meteg* system was published in *Mishpetei ha-Te’amim* (1801), by Wolf *Heidenheim. S. *Baer’s German rendition (1869) is an attempt at a more scientific treatment of Jekuthiel’s system (see bibliography). As a result of Baer’s misunderstanding his *meteg* system was attributed to Aaron *Ben-Asher in works on Hebrew grammar published in other languages. W. Heidenheim also published the notes of *Ein ha-Kore* in the *Me’or Einayim* edition of the Pentateuch (1818–21) and in his edition of the Book of Esther, *Seder Yemei ha-Purim* (1822). Gumpertz published “*Sha’ar ha-Metigot*” (which is the chapter on the *meteg*), with an introduction and notes in *Leshonenu* (see bibl.).

The Orientalist P. *Kahle rejected Baer’s editions of the books of the Bible which had been vocalized according to the “so-called Ben Asher system,” in reality the system of Jekuthiel.

A new light was shed on Yahbi’s *meteg*-rules by Aharon Dotan in his research and annotations to the newly-published authentic texts. At the end of his chapter on the *meteg*-rules, Yahbi writes expressly that, in his hundreds of examples, he decided on the use of the *meteg* neither in accordance with Ben Asher, nor with Ben Naphtali, but only on the basis of model Bible codices of Sephardi origin (of which six were in his possession), as far as their writing was in conformity with his “inspired” rules. On the basis of this statement by Jekuthiel himself all attempts to identify his punctuation with other systems are, of course, void. These rules are contained in Yahbi’s statement that the majority of *metagim* were placed in words accentuated by disjunctive accents (called *melekh*), whereas no *meteg* was used in words accentuated by a conjunctive accent (*mesharet*).

The earliest Hebrew grammarians of the Tiberian school gave instructions on the use of the diacritical marks over complete words and word-blocks, and also of the *gaya* (over one syllable), adding that the *gaya* does not belong to the family of the genuine *te’amim* (cantillation accents). Only Dotan’s study made it possible to fully understand the uniqueness of Jekuthiel’s system. The fact that in the oldest fragments of Bibles with complete Tiberian punctuation the scarcity of (written) *gayot* is striking corresponds to the cautiousness of the Masoretic grammarians. On the other hand, the synagogal practice of the cantillating recitation – i.e., according to the *te’amim* – provokes the *gaya*, which is but the counterstress to the accented syllable of a word or word-block. Theoretically, Jekuthiel attributed this provocative power only to disjunctive accents (*melekh*), not to the conjunctive (*mesharet*). The fact that he introduced the *gaya* also into a minority of words with conjunctive accents was due, in Dotan’s opinion, to his respect for the authoritative scribes from earlier generations.

A Palestinian punctuator of Ben Asher’s time could not elaborate a comprehensive system because of the traditions in reading Hebrew, which was then a spoken language – and a spoken language cannot implement speech and reading according to abstract rules. Jekuthiel did not have any past connection with spoken Hebrew and, therefore, had the right to accentuate words according to the rhythmic laws which he had discovered, even when he did not find any model patterns to this accentuation. He therefore decided for himself “to follow the general rule and the opinion which was in conflict,” that is to say, not only to punctuate according to the authority of Ben Asher, but also according to the opinion of an opponent such as Ben Naphtali, when the latter’s opinions were in accordance with his rules. Thus he punctuated לְיִשְׂרָאֵל בְּיַצְחָק, לְיִשְׂרָאֵל according to the punctuation rules of Ben Asher and not בְּיַצְחָק לְיִשְׂרָאֵל on the basis of the spoken language as Ben Naphtali. He also punctuated הַמַּעֲשֵׂה מִיַּעֲקֹב according to his own rules, while Ben Asher and Ben Naphtali canceled the second *meteg*, because they knew from their experience of the spoken language that it is impossible to accentuate two neighboring syllables in the flow of speech.

[Yehiel G. Gumpertz]

°JELENSKI, JAN (1845–1909), editor of an antisemitic Polish weekly. He was the principal opponent of Jewish assimilation to Polish society which developed in the spirit of positivism of

the 1860s, mainly aiming to erode the equal rights conferred on Jews by the Wielopolski legislation. In 1870 Jelenski published a rabidly anti-Jewish pamphlet entitled *Żydzi, Niemcy i my* ("Jews, Germans and Us").

After the pogroms in *Warsaw in 1881, the climate became more propitious for propagating his ideas. In 1883 he founded a weekly, entitled *Rola*, which for 26 years continued to spread virulent anti-Jewish propaganda. Jelenski inveighed against the dangers of Jewish domination of economic and cultural life. He received support from clerical circles because of his shafts directed against Jewish assimilationist intellectuals. These, he alleged, were introducing degeneracy into the national body, and, inimical to Catholic tradition in Poland, were spreading dangerous progressive ideas. He was assisted in producing *Rola* by his friend, the notorious antisemitic author Theodor Jeske Choinski (1854–1920).

[Moshe Landau]

JELGAVA (Ger. **Mitau**; Rus. (until 1917) **Mitava**), city in Zemgale district (Courland), Latvia; formerly capital of *Courland. Jews lived in Jelgava from the late 17th century, but their residence was endangered with expulsion orders (that were circumvented), and Jewish trade continued to expand. In 1710 they acquired land for a cemetery. A *hevra kaddisha* was founded there in 1729 and a *bikkur ḥolim* society in 1770. From 1778 to 1828 the community was led by the wealthy Kalman and Samson Borkum, whose endeavors enabled the first synagogue in the city to be erected in 1784. In 1799, under Russian rule, the local Jews made up 70% of all Courland Jews. There were 642 Jewish males in the town in 1797 and altogether 5,453 Jews (21% of the total population) in 1860. Half of them traded in horses and farm products, and a third were engaged in crafts. The first historian of Courland Jewry, Reuven Joseph *Wunderbar, was active there during this period. The departure of 115 families (863 persons) from Jelgava for agricultural settlement in southern Russia in 1840, and a severe cholera epidemic in the town in 1848, brought about a decline in the community. Many also were attracted to the developing cities of *Riga and Libava (*Liepaja). The world crisis in the grain markets and the direct linkage of the agricultural areas, as well as competition from Latvians, created a decline in the economic position of the Jelgava Jews and caused about 800 families to ask for relief. According to the census of 1897, there were 5,879 Jews (16.8% of the total population). Rabbis of the community included Samuel Teomim-Ashkenazi (18th century), and Zevi Hirsch Nurock and his son Mordechai *Nurock (20th century). In 1910 there existed three synagogues, a *talmud torah*, a Jewish state school for boys, and three Jewish private schools. In May 1915 the Jews of Jelgava, along with the rest of the Jews in Courland, were expelled to the interior of Russia. Some returned after World War I, to find most of the houses burned down and

to suffer a pogrom organized by local Germans. The community did not regain its former strength. It numbered 2,039 (6% of the population) in 1935. Levi *Ovchinski, historian of Latvian Jewry, was rabbi of Jelgava until the Holocaust. Jews maintained dominance in trade and owned, among other establishments, a large flax-processing factory. The community maintained welfare services, such as a hospital, an orphanage, and an old age home. It had a *talmud torah*, a Jewish public school, a Hebrew high school, and four synagogues. Zionist parties and youth movements were quite active. Under Soviet rule in 1940–1941 the economy was nationalized, and Jewish institutions and parties were closed. The Germans entered Jelgava on August 29, 1941. Many Jews fled with the retreating Red Army. In the first week of occupation five *Aktionen* were carried out by *Einsatzkommando 2* and Latvian police, and many hundreds of Jews were murdered, some burned alive in the synagogues. In the beginning of September 1941 a few hundred mental patients from the town and from Liepaja were killed. In fall the town was declared by the Germans to be "free of Jews" (*judenfrei*). There were some 20 Jews living there in 1970.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

JELINEK, ELFRIEDE (1946–), Austrian novelist and playwright. Jelinek grew up in Vienna in a working-class family. Although her father was of Czech-Jewish origin, Jelinek attended a Catholic kindergarten and then a convent school. During this time she studied organ and piano at the Vienna Conservatory and later theater and art at the University of Vienna. Jelinek started writing and publishing in the late 1960s with her first collection of poems, *Lisas Schatten* (1967). Her first works were influenced by the so-called *Wiener Gruppe* (Vienna Group) – a group that had been established by H.C. Artmann – and by Jelinek's political commitment to the *Grazer Gruppe* (Graz group). Her earliest works criticize capitalism and the consumer society. Her first novels *wir sind lockvoegel, baby!* (1970) and *Michael: Ein Jugendbuch fuer die Infantilgesellschaft* (1972) demonstrated this combination of avant-garde art and political engagement. These texts are dominated by experimental language: montage, grotesque images, simulation of nursery rhyme and imitation of pop songs. Both novels anticipate Jelinek's style of writing in her future texts. In her essay *Die endlose Schuldigkeit* (1970) Jelinek delineated the innocence and ignorance of society about cultural myths and images. Deconstructing existing myths became Jelinek's main issue in writing. In the 1980s she addressed the patriarchal society with biting criticism and aimed at deconstructing the myths of love, marriage, and family. *Die Liebhaberinnen* (1975; *Women as Lovers*, 1994) was considered Jelinek's first feminist piece of literature and applauded by the critics. Especially *Die Klavierspielerin* (1983; *The Piano Teacher*, 1988),

which contains autobiographical elements, is the story of a female protagonist making her stand against her extremely protective mother. The novel became a bestseller and served as basis for a movie.

In 1989 Jelinek wrote her second bestselling novel *Lust* (Eng. 1993). As was typical in this phase of her writing, Jelinek depicts marriage as legalized prostitution and portrays the town and its inhabitants as greedy and corrupt. The protagonists in this novel are incapable of liberation because they are driven by socioeconomic forces. Their consumer ideology leads to the degradation of human beings to the status of objects.

Jelinek also wrote for the theater. Her first plays *Was geschah, nachdem Nora ihren Mann verlassen hatte; oder Stuetzen der Gesellschaft* (1978) and *Clara S. musikalische Tragödie* (1984) show the futile attempt of her female protagonists to determine their lives independently. At the same time Jelinek wrote *Burgtheater: Posse mit Gesang* (1984), in which she used a language that illustrates and unmasks fascist ideas in daily life. Subsequent works also remained focused on the theme of lingering fascism in today's society. Her plays *Wolken Heim* (1990) and *Totenauberg* (1991), as well as the novel *Die Kinder der Toten* (1995), are thematically linked with fascism and its philosophical nationalistic roots. Especially the last-mentioned novel is a grotesque picture of zombies living their lives between suppression of history and oblivion of death.

In the 1980s her works were widely and ambivalently reviewed. Whereas some critics praised her aesthetic language, Jelinek always had to face harsh criticism in her home country of Austria. Here critics attacked Jelinek personally and limited their criticism to the explicit sexuality and abusiveness of her texts. Especially with the play *Burgtheater: Posse mit Gesang* Jelinek had to deal with personal assaults. This play is evocative of the Austrian participation in the Holocaust and the Third Reich. Jelinek was henceforth labeled a hater of Austria. Nonetheless Jelinek earned much praise from the international public and received among many others awards the Heinrich Böll Prize in 1986 and, in 1998, the prestigious Georg Büchner Prize. With this positive reception Jelinek's work was also praised in Austria. In the Burgtheater she celebrated the premiere of her play *Ein Sportstueck* (1998) which received standing ovations. Sport here is portrayed as another form of war, a mass phenomenon charged with violence. Various voices weave a texture of human behavior and contemporary social structures.

In the 1990s Jelinek's writing became more and more political. Jelinek had been a member of the Austrian Communist Party and had already criticized capitalism in her early works. Her later work concentrates mostly on the historical past of Austria and unmasks the myth of Austrian innocence during the Third Reich. Her political activism included sharp criticism of the election of Kurt Waldheim with his Nazi past, and later she protested against Joerg Haider and his right-wing party FPÖ. Haider's farewell speech, made when he stepped down from the national leadership of his nationalistic party,

was transposed into the play *Das Lebewohl* (2000). The monologue can be read as a statement of a seducer yearning for power ad infinitum.

Jelinek's subsequent works were short dramas consisting of dense monologues. *Der Tod und das Maedchen 1–v* (2003) depicts in five plays the death of the maiden in a male-dominated world. One of these plays, *Jackie*, was made into a radio play and received the highest recognition with the Blind War Veterans' Radio Theatre Prize.

Jelinek received the Nobel Prize for literature in 2004. In its official announcement the committee cites the "musical flow of voices and counter-voices" in her work, that "with extraordinary linguistic zeal reveals the absurdity of society's clichés and their subjugating power." Jelinek did not attend the official ceremony, as she did not feel capable of dealing with such an imposing public.

[Ann-Kristin Koch (2nd ed.)]

JELIN, ARYEH LOEB BEN SHALOM SHAKHNA (1820–1886), Polish talmudist and halakhist. Born in Yasinovka, Jellin became rabbi of Bielsk. He was the author of *Yefeh Einayim*, on the Talmud, whose major feature is that it lists sources, parallel passages, and variant readings in the midrashic literature and in the *aggadah* of the Talmud. He maintains that as a result new light is thrown upon the subject, many obscurities becoming clear. He also draws attention to differences between the Babylonian and Jerusalem Talmuds, both in language and in the method of approach in the discussion on the explanation of the Mishnah or *baraita*. The *Yefeh Einayim* was included in the Vilna (Romm) edition of the Talmud. Jellin's fame spread as an outstanding halakhic authority, particularly on the laws of *terefot. He was the author of *Mizpeh Aryeh*, short notes on the talmudic digest of Isaac *Alfasi, and of *Kol Aryeh*, sermons appended to it, published in Johannesburg, Prussia (n.d.). The *Penei Aryeh*, a comprehensive commentary on the Palestinian Talmud, aimed at justifying the accepted text without variant readings, has not been published.

[Abram Juda Goldrat]

JELLINEK, ADOLF (Aaron; 1820/21–1893), Vienna preacher and scholar. He was born in a village near Uhersky Brod (Un-garisch Brod), Moravia, into a family which he believed to be of *Hussite origin. After attending the yeshivah of Menahem *Katz (Wannfried) in Prostejov (Prossnitz), in 1838 he moved

to Prague where he was influenced by Solomon Judah *Rapoport, Michael Jehiel *Sachs, and Wolfgang *Wessely. Moving to Leipzig in 1842, he studied philosophy and Semitics at the university there, assisted Julius *Fuerst in editing the *Orient*, and in 1845 was appointed preacher in the new synagogue which was established under the guidance of Zacharias *Frankel. Although he opposed the radical views of his brother, Herman *Jellinek, he enthusiastically hailed the freedom resulting from the 1848 revolution. Together with Christian clergymen he then founded the Kirchlicher Verein fuer alle Religionsbekenntnisse, an association open to all religious denominations, and would have represented it at the Frankfurt German National Assembly (1848) but for the intervention of the Saxonian minister of religious affairs. He was also on the board of an association (Verein zur Wahrung der deutschen Interessen an den oestlichen Grenzen) formed to support Germans in the Slav countries. In 1857 he was appointed preacher at the new Leopoldstadt synagogue in Vienna, remaining there until he went to the Seitenstetten synagogue in 1865.

In 1862 Jellinek founded the Beit ha-Midrash Academy where public lectures were delivered by himself, Isaac Hirsch *Weiss, and Meir *Friedmann. A scholarly periodical, also called *Beit ha-Midrash*, was published under its auspices. His eldest son, GEORGE J. JELLINEK (1851–1911), a professor of public law at Basle and Heidelberg, was baptized after Jellinek's death.

Jellinek was considered the greatest preacher of his day and some 200 of his sermons were published, some were translated into Hebrew and into other languages. Their most striking characteristic was that, while related to actual problems of the day, they made brilliant and original use of *aggadah* and Midrash. Personally lenient in matters of ritual, he advocated a moderately liberal line, striving for unity in the community. Thus although he wanted to install an organ in the synagogue "to attract the indifferent," he took I.N. *Mannheimer's advice and abandoned the idea. He also opposed the omission from the prayer book of references to Zion and prayers for the restoration of sacrifices. Due to the conciliatory attitude of both Jellinek and the leader of the Orthodox group, Solomon Benjamin *Spitzer, a split in the community was avoided. Jellinek was an unsuccessful candidate for the Diet of Lower Austria in 1861. In a eulogy (1867) delivered after the execution of Emperor Maximilian of Mexico, in which he alluded to the execution of his own brother, he suggested the abolition of capital punishment for political offenses and advocated a reform of court procedures. He expressed his views on political matters regularly in the **Neuzeit*, which he edited from 1882. Jellinek was Baron Maurice de *Hirsch's trustee for his philanthropic activities in Galicia. With the rise of modern antisemitism, he turned his energies to apologetics, which he wanted to include as a subject in his Beit ha-Midrash, and he persuaded Joseph Samuel *Bloch to write his *Israel und die Voelker*. He was hostile to the emerging Jewish nationalist movement, and when Leo *Pinsker approached him he refused to back his ideas. Like many Reform rabbis of his day, he did not view Jews as

a nation. They were meant to be dedicated to their European fatherland while pursuing the fulfillment of Judaism's religious goals. Thus, "Zion" became a symbol for the ultimate redemption of all mankind.

Jellinek also produced a large number of scholarly works in numerous fields. He had taken an early interest in the study of Kabbalah (one of the very few who did in that golden age of modern Jewish scholarship) and translated A. Franck's *La Cabbale* into German (1844). Jellinek's original contributions in this field were *Moses b. Schemtob de Leon und sein Verhaeltnis zum Sohar* (1851); *Auswahl kabbalistischer Mystik* (1853); *Beitraege zur Geschichte der Kabbala* (1852); *Thomas von Aquino in der juedischen Literatur* (1853); and *Philosophie und Kabbala* (1854). He also edited Abraham Abulafia's *Sefer ha-Ot* (1887), in which he showed that *Moses b. Shem Tov de Leon and not Abulafia wrote the Zohar. In his Leipzig period Jellinek also edited Menahem de Lonzano's *Ma'arikh* (1853), a dictionary of foreign words in Talmud, Midrash, and Zohar; wrote "*Sefat Hakhhamim*" (1846–47) on talmudic idioms (in L. Benjacob, *Devarim Attikim*); and edited, with an introduction and commentary, Bahya b. Joseph ibn Paquda's *Hovot ha-Levavot* (1846). In Vienna Jellinek's main scholarly effort was directed toward the publication of 99 smaller, largely unknown Midrashim (*Beit ha-Midrash*, 6 vols., 1853–78, 1938), many of which were of prime importance for the study of early Kabbalah, such as the *Heikhalot Rabbati*, *Nistarot R. Shimon bar Yo'hai*, etc. In a number of smaller publications (1877–84), Jellinek dealt with a variety of historical, philosophical, talmudic, and bibliographical subjects such as the persecutions during the First Crusade, the disputation of Barcelona in 1263, the Talmud commentators, those of Maimonides' *Mishneh Torah*, and others. Other publications of this period include: Simeon b. Zemaḥ Duran's commentary on *Avot* (1855); Judah Messer Leon's *Nofet Zufim* (1863); Solomon Alami's *Iggeret Musar* (1872); *Worms-Wien* (1880); and *Der juedische Stamm in nichtjuedischen Sprichwoertern* (3 vols., 1882–86).

[Gershom Scholem and Meir Lamed]

JELLINEK, HERMANN (1822–1848), writer, journalist, and revolutionary; younger brother of Adolf *Jellinek. While living in Prostejov (Prossnitz) and Prague, he studied independently and was taught languages by his brother. He studied in Prague and Leipzig. Jellinek first attracted attention through his lecture opposing the philosophy of Leibniz, delivered at Leipzig University on the occasion of Leibniz's 200th anni-

versary. Although Jellinek received a doctorate, he was expelled from Leipzig for his political activity. In reaction, he published *Das Denunciation System des saechsischen Liberalismus und das kritisch-nihilistische System Hermann Jellineks* (1847). Moving to Berlin, where he was in close contact with Bruno *Bauer, he pursued his radical revolutionary course, thereby alienating his brother Adolf. A third brother, R. Haraszi-Jellinek, owned the trolley car company of Budapest, Hungary. Expelled from Berlin for political reasons, Jellinek went to Vienna in March 1848. As a means of supporting himself, Jellinek turned to journalism, writing fiercely radical articles against the Hapsburg regime in the *Allgemeine Oesterreichische Zeitung* and later in *Der Radikale*. With the failure of the 1848 Revolution in Vienna, and with the declaration of martial law, his friends advised him to escape, but he remained and was arrested. Field Marshal Windischgraetz blamed the press for the events of the revolution and accused Jellinek and his friend A. Becher. A military tribunal sentenced both to death by hanging, but only Jellinek was executed on November 23. Adolf *Fischhof has suggested that Jellinek was selected for execution because he was a Jew and Becher, a Protestant. Jellinek's works include *Uriel Acostas Leben und Lehre* (1847) and *Die Tauschung der aufgeklärten Juden und ihre Faehigkeit zur Emancipation* (1847). In the latter he mocks the aspirations of Jews who attempt to attain equal rights by presenting Judaism as an enlightened religion which suits the demands of the age of Enlightenment.

Helfert, *Die Wiener Journalistik im Jahre 1848* (1877), index; *Oesterreichisches Biographisches Lexikon*, 3 (1962), 102; A. Kober, in: JSOS, 10 (1948), 133–62 passim; S.W. Baron, *ibid.*, 195–218 passim.

[Jacob Rothschild]

JELLINEK, KARL (1882–1955), German physical chemist; born in Vienna. In 1908, Jellinek joined the Technische Hochschule at Danzig; he was appointed professor of physical chemistry and director of the Institute in 1922. In 1937 the Nazis forced him out and he spent the rest of his life in London. His field of research included nitric oxide, ammonia synthesis, electrochemistry, the Nernst heat theorem, and the vapor pressure of salts. He wrote many books, including *Versaendliche Elemente der Wellenmechanik* (2 vols., 1950–51).

JEMNICE (Ger. **Jamnitz**), town in S.W. Moravia, Czech Republic. The Jewish community in Jemnice is mentioned first in connection with its sufferings during the *Armleder massacres (1336). It is assumed that the community was one of the oldest of Moravia. A gravestone from 1362 has been preserved and in 1369 the sale of real estate by a Jew was recorded. In 1530 Jews are mentioned as house owners and throughout the 16th and 17th centuries transactions in real estate between Jews and gentiles are frequently documented. A synagogue, built in 1648, burned down in 1752. There were nine Jewish tailors in Jemnice in 1755. When the community could not meet its tax

obligations in 1775, the local lord renounced his share. In 1812 a German-language elementary school was founded, which existed as a governmental school until 1918. In a fire in 1832 all 28 houses of the Jewish quarter were burned to the ground. Riots occurred in 1866 when the Jews were accused of actively supporting the Prussians.

There were 24 families living in 11 houses in 1666. In 1754 the number of permitted families was increased from 30 to 45 (see *Familiants Law) and the community increased to 263 persons (nearly 20% of the total population) in 1781, and 325 persons in 1830. Then began a steady decline, from 305 in 1857 to 200 in 1869, 102 in 1910, 84 in 1921, and 52 in 1930 (1.5% of the total). In 1942 the community was deported to the Nazi extermination camps. The synagogue ritual objects were transferred to the Central Jewish Museum in Prague.

[Meir Lamed]

JENER, ABRAHAM NAPHTALI HIRSCH BEN MORDECAI (1805–1876), rabbi and author. Jener was appointed *dayyan* at Cracow in 1831 and in 1856, after the death of Alexander Landau, the head of the *bet din*. The extreme Orthodox element refused to elect him chief rabbi of Cracow on account of his moderation and his tolerant attitude toward the followers of the *Haskalah movement, between whom and the Orthodox he was the mediator also during the chief rabbinate of Simeon *Sofer. His approbations appear in many books, and his responsa and halakhic decisions in the works of contemporary rabbis. Several of his responsa and letters were published in *Zevi Hirsch *Chajes' Minhat Kenàot* and in Jacob Eichhorn's *Adat Yaakov*. The most distinguished of his pupils was Solomon Zalman Hyyim *Halberstam. Jener wrote *Birkat Avraham*, responsa (1870), and *Zeluta de-Avraham*, halakhic novellae, responsa, and homilies (1868).

[Itzhak Alfassi]

JENIN (Ar. **Janin**), Arab town in Samaria, situated in the southern corner of the Jezreel Valley, near the junction of roads running to *Haifa, Afulah, Nazareth, and Nablus. At the end of the 19th century, Jenin's population was below 1,000, but by 1943 had increased to 3,900. In the 1967 census conducted by Israel, the town proper had 8,346 inhabitants; 4,480 more lived in a refugee camp within the municipal confines. Only 90 were Christians, all the rest Muslims. Jenin's economy is based mainly on agriculture which utilizes the abundance of springwater and the fertile soil of the vicinity. Before 1948, and again from 1967, the town's position at an important crossroads contributed to its development. It also made it an important base for the Turko-German forces in World War I, until the British Army captured Jenin in September 1918. In

the 1936–39 Arab riots, Jenin lay at the apex of the aggressive Arab “triangle” (whose other two corners were Tul-Karm and Nablus) from which attacks against Jewish villages in the Jezreel Valley were launched. In the Israel *War of Independence, the Arab Liberation Army under Fawzī al-Qāwuqjī set out from Jenin to attack Mishmar ha-Emek in an effort to break through to Haifa, but was driven back. On June 2, 1948, Jewish units attacked from the north and took most of the town, but had to evacuate it again when overwhelming Iraqi forces arrived to relieve the Arab positions in the hills around. In the *Six-Day War (1967), Jenin constituted a forward Jordanian position. It fell after Israel columns entered the Dotan Valley to its rear and overcame a Jordanian counterattack (June 6, 1967). Jenin was transferred to the jurisdiction of the *Palestinian Authority following the 1995 Taba Agreement. During the so-called al-Aqsa Intifada (see *Israel, State of, under Historical Survey), Jenin was a hotbed of terrorist activity and often targeted by Israeli forces, most notably in Operation Defensive Shield in the spring of 2002. The controversial film *Jenin, Jenin* purported to document Israeli atrocities and was banned by the Israel Film Board for its distortions, a decision later overturned by Israel’s Supreme Court. In 1997 the population of Jenin numbered 26,650 inhabitants, among them 50% refugees. Jenin is sometimes identified with biblical *En-Gannim.

[Efraim Orni]

JENKINSON, SIR (Charles) HILARY (1882–1961), British archivist and scholar. He began his association with the Public Records Office in 1906 and became deputy keeper (director) in 1947. He built up the profession of archivist in Britain. Throughout his life he retained an early interest in medieval Anglo-Jewish history, stimulated by his discovery in the Record Office of some Jewish receipt rolls and tallies. This led, among other publications, to his editing the third volume of the Plea Rolls of the Jewish Exchequer, *Calendar of the Plea Rolls of the Exchequer of the Jews Preserved in the Records Office; Edward I 1275–1277* (1929). He modified his original view that the medieval Exchequer of the Jews was purely judicial. As president of the Jewish Historical Society of England (1953–55), he initiated the resumption of publication of medieval Anglo-Jewish records and the formation of the Anglo-Jewish Archives. Jenkinson was knighted in 1949.

[Vivian David Lipman]

JEPHTHAH (Heb. יֵפְתָח), judge of Israel for six years and victor over the Ammonites (Judg. 11:1–12:7). According to Judges, Jephthah was the son of a harlot, and his father’s name is given as Gilead. Jephthah is described as a Gileadite warrior. After the legitimate sons of his father had driven him from home, he went to live in the land of Tob, where he became the leader

of a band of adventurers. The elders of Gilead recalled him to repel an Ammonite invasion (see below), and Jephthah agreed on condition that he be appointed chief of the land after the victory (11:1–11). Jephthah then proceeded to negotiate with the Ammonites, seeking in vain to convince them that Israel possessed a right to its territory and that attempts to dislodge Israel from it would be futile (11:12–28). In the course of the negotiations Jephthah acknowledged that Chemosh had given land to the Ammonites. The unexpectedly brief account of the decisive defeat of the enemy highlights Jephthah’s vow to sacrifice to YHWH whatever would come out of his house to meet him on his victorious return. To Jephthah’s immense grief, it was his only daughter who came first to greet him, and he felt obliged to fulfill his solemn vow. The daughter resigned herself to her fate and begged only that it be postponed for two months so that she might mourn with her companions on the mountains. At the end of this period she met her tragic fate. This serves as an etiology for the observance by Israelite women of an annual four-day mourning period (11:29–40). Jephthah’s victory over the Ammonites led to a war with the Ephraimites, who resented not having been included in the call to arms. Forty-two thousand of them, caricatured as stupid in not preparing (*yakin*) to pronounce *shibboleth* correctly when their lives depended on it, are said to have been slaughtered as they attempted to cross the fords of the Jordan (12:1–6). The account exhibits clear evidence of a conflation of parallel traditional material, though the discussion among critics has not been significantly advanced since the commentaries of Moore and, especially, Burney. The latter isolated a “Moabite” narrative (10:17; 11:12–28, 30, 31, 33b, 34–40) now assimilated, albeit imperfectly, to the normative tradition in 11:1–11, 29, 32b–33a, and 12:1–6. Pivotal to any such analysis is the fact that Jephthah’s messengers to the Ammonite king (11:12–28) argue Israel’s case with examples from Moabite history and go so far as to suggest that Chemosh is the Ammonites’ god (not Milcom or Molech as to be expected from 1 Kings 11:5, 7). The Ammonite invasion was prompted by a territorial dispute having its roots in the Israelite conquest of Canaan, when Israel conquered some Amorite territory in Transjordan. The Ammonites in Jephthah’s time claimed that this territory had originally belonged to them and were demanding its return from Israel. The Pentateuch’s account of the Mosaic conquest of the Amorite territory says nothing explicit about any of it having previously belonged to the Ammonites. In the story of the conquest of the Amorite kingdom of Sihon and the Amorite city-state of Jazer, it is mentioned that Sihon expanded his territory at the expense of the Moabites. At first apparently confined to a limited territory around Heshbon, Sihon took from the Moabites everything down to the River Arnon. In this connection a snatch of an ancient battle or taunt song celebrating Sihon’s discomfiture of Moab is cited (Num. 21:23–32). The account adds that the city-state of Jazer (so read, with LXX, for “Az” in Num. 21:24) marked the border of the Ammonites and that the Israelites dispossessed its Amorite population (21:32). This, and perhaps

a strip of the former kingdom of Sihon, may indeed have been formerly Ammonite territory. It is possible that only such territory was claimed by Jephthah's Ammonite contemporaries, despite Judges 11:13. The name Jephthah is apparently a shortened form of Yftah-Yah or Yftah-El ("God opens/may open," i.e., the womb). Jephthah appears as a place-name in Joshua 15:43, and in its fuller form in Joshua 19:14, 27.

[Harold Louis Ginsberg and Nahum M. Sarna]

In the Aggadah

Jephthah, in common with Gideon and Samson, was one of the least worthy judges of Israel. From the mention of his name together with that of Samuel in one verse (1 Sam. 12:11) the rabbis deduce that "Jephthah in his generation is like Samuel in his generation, to teach that even an unworthy person, when appointed to a position of importance has to be regarded as one of the greatest" (RH 25b). He is condemned as one of the three (Ta'an. 4a) or four (Gen. R. 60:3) to take imprudent vows, but he was the only one who regretted his imprudence. His sinful act of immolating his daughter was due both to his ignorance and his false pride. He was unaware that he could have paid ransom to the Temple treasury in lieu of his vow, and that the high priest Phinehas could have absolved him from it. However, each refused to lower his dignity by visiting the other. Jephthah's punishment for this action was that his body was dismembered limb by limb (Gen. R. 60:3).

In the Arts

The moving and pathetic account of Jephthah and his votive sacrifice appealed to Christian writers, artists, and musicians from medieval times onward. Two of the earliest literary works based on the theme, though not written in English, were by British authors: *Jephtes si-Ve votum* (performed c. 1542), a neo-Latin drama by the Scots Protestant George Buchanan, and Ἰεφθαῖ (1544?; Eng. *Jephthah*, 1928), a Greek academic play by the English Catholic exile John Christopherson. The latter is a study of retributive justice with contemporary religious and political undertones and echoes of other scriptural episodes, such as the *Akedah* and the Crucifixion. At least as old is the English ballad "Jephthah Judge of Israel" quoted by Shakespeare (*Hamlet* II, ii), which Thomas Percy later included in his *Reliques of Ancient English Poetry* (1765). Among other works of the 16th century which dealt with the subject were the German *Meistersinger*, Hans Sachs's *Der Jephtha und seine Tochter* (1555), and *Jephté* (1567), a French drama based largely on Buchanan's, by Florent Chrétien, a prose parody attacking the Catholic League and other enemies of Henry of Navarre. During the 17th century, the English writers Thomas Dekker and Anthony Munday staged a *Jephthah* (1602) which has not survived; the Dutch playwright Joost van den Vondel wrote the verse tragedy *Jephtha* (1659); and the subject also appeared in the English *Stonyhurst Pageants*, and in *Cumplir a Dios la Palabra o la Hija de Jefe* (included in Diamante's *Comedias*, Madrid, 1670–74) by the Spanish dramatist Juan Bautista Diamante. The number of literary (largely dramatic) works about Jephthah multiplied during the 19th cen-

tury, particularly in England, where they clearly appealed to Victorian sentimentality. Those in English included Lord Byron's poem "Jephthah's Daughter" (in *Hebrew Melodies*, 1815), and William Alexander's dramatic poem *Ella, or the Prince of Gilead's Vow* (1847). Among the treatments in other languages were Karl Ludwig Kannegieser's German tragedy *Mirza, die Tochter Jephtas* (1818) and "La fille de Jephté" (in *Poèmes antiques et modernes*, 1826) by the French Romantic Alfred de Vigny; Ludwig Robert's drama *Die Tochter Jephthas* (1813) was the first German stage production by a Jew; other works by Jewish writers included Moses Samuel Neumann's Hebrew play *Bat Yiftah* (Vienna, 1805) and Leibush Lewinsohn's Hebrew novel *Neder Yiftah* (1870). Modern treatments by Jewish authors include *Yiftakhs Tokhter* (1914; *Jephthah's Daughter*, 1915), a Yiddish play by Sholem Asch; Ernst Lissauer's drama *Das Weib des Jephtha* (1928); Saul Saphire's Yiddish novel *Yiftakhs un Zayn Tokhter* (1937); *Far a Nayer Velt* (1939–40), a Yiddish drama by the U.S. writer David Ignatoff; and Lion Feuchtwanger's last novel, *Jefta und seine Tochter* (1957; Eng. 1958).

In art, the two main subjects treated are Jephthah's meeting with his daughter on his return from battle and his sacrifice of his daughter. These, together with his battle against the Ammonites, are illustrated in the 13th-century French *St. Louis Psalter* (Bibliothèque Nationale, Paris). In a 15th-century German manuscript in the Munich State Library there is a charming miniature of Jephthah coming home in armor and greeted by his daughter, who is playing on a string instrument. Jephthah's homecoming is also the subject of paintings by Lucas van Leyden (1494–1533; private collection) and Pierre Mignard (1610–1695; Hermitage, Leningrad). Jephthah's sacrifice of his daughter is illustrated in the 14th-century English *Queen Mary Psalter* (British Museum), as well as in the *St. Louis Psalter*. The subject was again painted by Lucas van Leyden. It was popular in France in the 17th century, and was treated by Pierre Mignard (Hermitage, Leningrad), Charles Lebrun (Uffizi, Florence), and Antoine Coypel (Laon Museum). There is a painting by the French 19th-century artist Edgar Degas in Smith College, Massachusetts, U.S. Enrico Glicenstein executed a sculpture of Jephthah's daughter. The story of Jephthah was much used for tapestries, the chief example being the series made in Tournai by Pasquier Grenier (c. 1470) for Philip the Good, duke of Burgundy.

The story also attracted the attention of oratorio composers during the formative period of the genre at the beginning of the 17th century. Some time before 1649, Giacomo Carissimi wrote his *Jephte*, which has retained a place in the musical repertory. The works which followed include G.B. Vitali's *Il Gefte overo Il zelo impudente* (1672; libretto only extant); A. Draghi's *Jefta* (1690); A. Lotti's *Il voto crudele (Jefta)* (1712); and *Il Sacrificio di Jephtha* by L. Vinci (1690–1730; date of composition unknown). Michel de Montclair's "tragédie lyrique" *Jephté*, to a libretto by the abbé S.J. Pellegrin, was the first opera on a biblical subject licensed for stage performance in France. It had its première at the Académie Royale de Mu-

sique in 1732 and was restaged in 1733 and 1734, but it was immediately afterward forbidden by Cardinal de Noailles. The subject, with a text by Thomas Morell after an Italian prototype, was destined to inspire Handel's last work. The annotations in his manuscript score, begun on Jan. 12, 1751, and the faltering notational image, bear witness to Handel's progressing blindness. The score was finished on Aug. 30, 1751, after a slight improvement had partially restored his sight, and the first performance took place in the Covent Garden Theater, London, on Feb. 26, 1752. A reworking by Ferdinand *Hiller has remained in manuscript. Until the end of the 18th century various other settings of the subject, all oratorios, were also written. Giacomo *Meyerbeer's oratorio *Jephtas Geluebde*, written in 1812 when he was 21, has remained in manuscript. During the 19th century, the operatic potential of the story could be realized, since religious restrictions were no longer a deterrent, and the gruesome ending with a human sacrifice attracted, rather than repelled, the Romantics. Two operas were even written and performed in Spain: *Jephté* (1845) by Luis Cepeda and *La Hija de Jefté* (1876) by Ruperto Chapí. Two Jephthah cantatas figure in the list of works which won their composers the Prix de Rome of the Paris Conservatory; one by Samuel *David (1858) and another by Alexandre-Samuel Rousseau (1878). Byron's *Jephthah's Daughter* was first set to music by Isaac *Nathan and subsequently, among others, by Karl Loewe (1826, in a German translation) and Robert Schumann (in his *Drei Gesaenge*, opus 95; written 1849). Among works of the 20th century are Lucien Haudebert's *La fille de Jephté* (1929; for orchestra); Lazare *Saminsky's *The Daughter of Jephthah*, "a cantata pantomime" for solo, choir, orchestra, and dancers (publ. 1937); and Ernst *Toch's "rhapsodic poem" for orchestra, *Jephtá* (1963). A.Z. *Idelsohn's *Yiftah*, written in Jerusalem and published in 1922, was the first opera composed in Palestine. Idelsohn wrote the (Hebrew) text himself; the music is a singular combination of the various Jewish traditions – both Western and Eastern – which he had by then collected for his ethnomusicological studies. Modern Israel works on the subject include Mordechai *Seter's orchestral work *Jephthah's Daughter* (publ. 1965) and several settings in the form of a pageant, created for the kibbutzim of the Gilboa region. Two dances by Amittai Ne'eman, one slow and one debkah-like and fast, both called *Bat Yiftah*, and danced in succession, are in the Israel folk-dance repertory.

JERAHMEEL BEN SOLOMON (c. 1150), chronicler, lived in Italy. He wrote *Megillat Yerahme'el* (or *Melizat Yerahme'el* or *Sefer ha-Yerahme'eli*), a compilation of writings on history and other subjects such as grammar, music, astronomy, liturgy and more. His anthology contained also the book of *Josippon*, translation of the Aramaic chapters in the book of Daniel, and a few historical Midrashim, and it is based on both Jewish and non-Jewish sources, including selections from Strabo, Nicholas of Damascus and Philo, as well as from a few historical Midrashim and apocryphal works. It contains numerous apocalyptic legends about biblical heroes taken from unknown sources, parallel to legends in the Midrashim, in *Sefer ha-Yashar*, in *Josippon*, and in Christian apocalyptic works. Portions of the work were incorporated by Eleazar b. Asher ha-Levi (c. 1325) in his book *Sefer ha-Zikhronot* (Ms. Oxford). Several excerpts were published by Neubauer (JQR, 11 (1899), 364ff.). M. Gaster translated the *Megillah* into English (*The Chronicle of Jerahmeel*, 1899) and added a detailed introduction; he titled it *The Chronicles of Jerahmeel on the Hebrew Bible Historiale*. The literary works of Jerahmeel consist mostly of poems, mathematical riddles, and questions in meteorology, as well as *piyyutim*, especially *Kedushot* (Ms. Paris 646) which describe the world of creation and the holiness of the angels. Numerous rhymes and stormy rhythms are used in these *piyyutim* to imitate the sound of the enthusiasm and tumult of the angels.

[Yonah David]

JEREMIAH (Heb. יְרֵמְיָהוּ, יְרֵמְיָה) second of the major prophets whose book is the second in the Latter Prophets section of the Bible.

This entry is arranged according to the following outline:

IN THE BIBLE

The Life and Message of Jeremiah

BEGINNINGS OF PROPHECY

AFTER THE DEATH OF JOSIAH

THE DESTRUCTION OF THE TEMPLE AND EXILE

The Composition of the Book

Oracles Against Foreign Nations

“The Book of Consolation”

The “Biography” of Jeremiah

Baruch's Scroll with Additions

Oracles Concerning the House of David and the Prophets

IN THE AGGADAH

IN ISLAM

IN THE ARTS

IN THE BIBLE

The Book of Jeremiah is the largest among the Latter Prophets and comprises the oracles of the prophet Jeremiah from the 13th year of the reign of Josiah until after the destruction of Judah by the Babylonians. It also contains biographical and autobiographical narrative concerning the prophet and his activities, as well as historical records of the destruction of Jerusalem and of subsequent events which took place in Judah and Egypt. In the prevalent masoretic editions it is placed after the Book of Isaiah. According to an old order suggested by *Bava Batra* 14b–15a, it was placed at the beginning of the Latter Prophets, before Ezekiel and Isaiah. This arrangement was followed by many Ashkenazi manuscripts. In the Septuagint it usually appears third, after the Minor Prophets and Isaiah and before Ezekiel (see *Bible, Canon). (See Table, Book of Jeremiah contents.)

BOOK OF JEREMIAH – CONTENTS

1:1–6:30	Baruch's scroll
1:1–19	The call of Jeremiah.
2:1–4:4	Indictment of the nation's sin.
4:5–6:30	The coming disaster "from the north."
7:1–10:25	First editorial addition to Baruch's scroll
7:1–8:3	Temple sermons and appended sayings.
8:4–9:21	An incorrigible people and their tragic ruin.
9:22–10:16	Miscellaneous sayings.
10:17–25	An incorrigible people and their tragic ruin.
11:1–20:18	Second editorial addition to Baruch's scroll
11:1–17	Preaching on the broken covenant.
11:18–12:6	Jeremiah's persecution by his relatives and fellow townsmen.
12:7–17	God expresses His sorrow for the dereliction of His people.
13:1–27	Parabolic vision of the linen waistcloth and attached sayings.
14:1–15:4	The time of drought and national emergency.
15:5–16:21	Oracles and confessions in poetry and prose.
17:1–27	Miscellany.
18:1–23	Jeremiah at the potter's house and attached sayings.
19:1–20:18	Prophetic symbolism and the persecutions; further confessions.
21:1–24:10	Oracles concerning the House of David and the prophets.
25:1–38	Oracles against foreign nations
26:1–29:32	The biography of Jeremiah
26:1–24	The "Temple sermon"; Jeremiah narrowly escapes death.
27:1–28:17	Events of 594 B.C.E.; the incident of the ox-yoke.
29:1–32	594 B.C.E.: Jeremiah and the exile in Babylon.
30:1–31:40	The "Book of Consolation."
32:1–44:30	The biography of Jeremiah.
32:1–33:26	Restoration of Judah and Jerusalem.

34:1–7	Words of Jeremiah as the Babylonian blockade tightens.
34:8–22	Incidents during lifting of siege.
35:1–19	Jeremiah and the Rechabites.
36:1–32	Incident of the scroll.
37:1–10	Incident during lifting of siege.
37:11–38:28	Jeremiah in prison.
39:1–40:6	Jeremiah's release from prison.
40:7–43:7	Assassination of Gedaliah and the flight to Egypt.
43:8–44:30	Jeremiah in Egypt.
45:1–5	Baruch
46:1–51:64	Oracles against foreign nations
52:1–34	The fall of Jerusalem

The Life and Message of Jeremiah

Despite the greater knowledge of Jeremiah's life than of any other prophet's, no biography of him can be written, for the available facts are too meager. Important background information is found in Scripture in 11 Kings, 11 Chronicles, Zephaniah, Nahum, Habakkuk, and Obadiah. Other important sources on Jeremiah's times are the Hebrew letters from Lachish, primary documents from Egypt and Mesopotamia, and the histories of Herodotus and Josephus. It is noteworthy that 11 Kings, which describes events contemporary with Jeremiah in great detail, does not mention the prophet. Inasmuch as there is no direct attestation of the prophet outside the book that bears his name, scholars differ widely in their estimations of the prophet's historicity. At one extreme Holaday believes that allowing for small exceptions, the narratives and poetic sections in Jeremiah are contemporary with the prophet. They were written by Jeremiah or Baruch, and one may outline the details of Jeremiah's personality and his life by drawing on these sources. At the other extreme Carroll believes that Jeremiah is merely a literary character and there is no way of knowing whether what is narrated of him is anchored at all in historical reality. Hoffman (27–9) demonstrates the flaws of both extremes and offers his own middle-of-the-road approach, which will be, in essentials, followed here. Later generations esteemed Jeremiah greatly. According to the Chronicler (11 Chr. 35:25) Jeremiah composed a lament over Josiah. His prophecies about the duration of the exile are cited in 11 Chronicles 36:15–21 by the author of the ninth chapter of Daniel, and probably underlie Haggai 1:2. Later writers interpolated their own compositions into his prophecies. The apocryphal Epistle of Jeremy (see *Jeremiah, Epistle of), a polemic against idolatry allegedly written by Jeremiah to the exiles in Babylonia is styled after Jeremiah 29. According to the second chapter of 11 Maccabees, Jeremiah secreted the ark, the tabernacle, and the altar of incense. In the New Testament, Jeremiah 31:14 (15) is quoted directly in Matthew 2:17, and his vision of the New Covenant/Testament (Jer. 31:31–34; cf. Jer. 32:38–40) is quoted in Hebrews 8:8–12 and 10:16–17. Jewish tradition identifies Jeremiah as the author of his book, of Kings, and of Lamentations (this last probably on the basis of 11 Chronicles 35:25).

It is known that Jeremiah's birthplace was *Anathoth (Jer. 1:1; 11:21, 23; 29:27; 32:7–9), a Benjaminite village some 4 mi. (c. 7 km.) northeast of Jerusalem. Among its inhabitants were men of priestly lineage, as shown by the reference in Jeremiah 1:1 to "the priests in Anathoth," and the appearance of Anathoth in an old list of levitical towns (Josh. 21:18). Jeremiah himself was of a priestly family of means and could spend 17 shekels on a symbolic action (cf. Jer. 32:9). He could afford to hire Baruch, son of Neriah, as a personal secretary. Jeremiah's father was a certain Hilkiah (Jer. 1:1), not to be confused with the contemporary high priest bearing the same name (11 Kings 22:4 ff.). It is generally assumed that Jeremiah's family was descended from David's priest *Abiathar, whom Solomon later banished to Anathoth (1 Kings 2:26–27). There is much to recommend this opinion, since it is unlikely that so small a village could contain several unrelated priestly families. Jeremiah is never called a priest. He must have been born around 645 B.C.E., since he began his prophetic career in the 13th year of Josiah's reign (Jer. 1:2; 25:3), i.e., in 627 B.C.E., when he was still a very young man (1:6). He received a name whose antecedents go back to the early second millennium and, apparently quite common in biblical times, meaning "May the Lord lift up" (Heb. *yerim-yahu*), as reflected in the Greek transcription *Ieremias* as compared with the Hebrew יֵרֵמְיָהוּ or יֵרֵמְיָה. Nothing is known of Jeremiah's childhood and youth, except that he did not marry (16:1–4), which he attributed to a divine command. According to chapter 16 the divine command was due to the fact that in the coming disaster parents and their children would all perish. Jeremiah lived to see the dramatic events from the dissolution of the Assyrian Empire to the fall of the Judahite kingdom in 587 B.C.E., when the Neo-Babylonian Empire, after an interval of Judahite national independence and a few years of Egyptian supremacy, put an end to the kingdom of Judah. Jeremiah was deeply concerned with the march of events in his time, and every act of that tragic drama is reflected in his book. His words and deeds can often therefore be related to known events to a degree unparalleled by other prophets. Jeremiah's deeply personal poems, the so-called "confessions," express his reactions toward his fate and reveal his temptations and his wrestling with God. The divine compulsion was laid upon him, overruling his objections (Jer. 20:7), and Jeremiah exercised his ministry unremittently as long as he lived.

BEGINNINGS OF PROPHECY. (See Table: Book of Jeremiah.) He began to preach in 627 with the chastening conviction that his country was under judgment. Even if Josiah's efforts for a cultic reform were already in motion, the evil legacy of Manasseh's reign in Judah and of the Assyrian occupation in the Northern provinces still encumbered the land. As a member of a monolatrous or monotheistic minority, Jeremiah could not tolerate the worship of other gods alongside of Yahweh. He thundered against it, and warned of its dire consequences, as did *Zephaniah, who was also active at the time. His precise attitude toward the reform, which reached its cli-

max in 622 (cf. 11 Kings 22–23), five years after he had begun his ministry, is disputed. The most plausible supposition is that Jeremiah, though taking no direct part in its implementation, was in favor of its essential aim of reviving the ancient Mosaic covenant in which he had presumably been nurtured. Some of his oracles addressed to the Northern Kingdom even seem to indicate that he was favorable to the centralization of the cult in Jerusalem (cf. Jer. 3:14–15; 31:10–14; though some doubt these to be genuinely from Jeremiah), while others indicate a critical stance (Jer. 7:4). Jeremiah belonged by sympathy as well as by descent to the Northern Kingdom. Many of his first oracles are concerned with, and even addressed to, the remaining Israelites at Samaria. Accordingly, he is saturated with the thought and teaching of *Hosea, the finest representative of northern Israelite prophetism. The resemblance between the two prophets appears not only in the use of language and figures: it extends itself to fundamental ideas on God and His relation to Israel. Hosea seems to have been the first prophet to describe the relation of Yahweh to Israel metaphorically in terms of ancient Israelite marriage, whereby a man might be polygynous, while a woman was required to limit herself to one husband. Thus Yahweh might have two wives, Israel and Judah (cf. Ezek. 23), but neither of these could have another husband, i.e., serve another god. Using Hosea's marital image (Jer. 2:2b–3; 3:1–5, 19–25; 4:1–2), Jeremiah urges submission to the Yahweh on His own terms, expressed in the covenantal law. The Covenant required Israel to acknowledge no other god than Yahweh. Its leading principle was that Israel owed everything to the divine love which had brought it into being and without which it could not continue. The only worthy response to this free grace was a love involving submission and loyalty.

However, Israel was unfaithful to its God. Instead of repaying Him with due love, the people betrayed Him as an unfaithful wife betrays her husband for a lover (Jer. 3:20). Jeremiah therefore bids them to worship the Lord with repentance.

AFTER THE DEATH OF JOSIAH. It is a widely held view that Jeremiah was silent for a long time after the reform had been completed. The point is difficult to settle, since there is no evidence save Jeremiah's undated sayings and since almost nothing is known of Judah's internal affairs during Josiah's later years. In any case, his famous "Temple sermon" (7:2–15) is precisely dated (26:1) in Jehoiaquim's accession year, i.e., the autumn of 609 or the winter of 609/8. From this address, uttered a few months after Josiah's death at Megiddo, it is clear that Jeremiah was disappointed by the results which followed the Josianic reform. Judah, by this reform, made the Temple with its sacrifices and its ritual essential to a correct relation to God. To maintain the true religion and the people's access to God, the people must only come to the one sanctuary and worship through a legitimate priesthood. Jeremiah violently rejected that vision because it not only neglected the moral principles of the Covenant, but facilitated trust in the notion

that the temple cult absolved all sins, even worship of Baal (Jer. 7: 9–11; cf. Lev. 16: 30–34). This developed into a religious controversy in which the parties were sharply divided, their differences concerning the question of what does or does not constitute the essential element of the religion. The “Temple sermon” was intended to be a solemn indictment, an appeal to the national conscience. By taking this public action Jeremiah ran counter both to popular belief and official doctrine; he boldly challenged the policy of the nation’s leaders, and in particular of the priests. He was also in strong antagonism with several of his fellow prophets, although he was not alone in his attitude of opposition. Another prophet, Uriah of Kiriath-Jearim, also appeared at the time, prophesying in the same terms as Jeremiah (Jer. 26:20–24). Efforts were made to silence Jeremiah and, indeed, his “Temple sermon” nearly cost him his life (Jer. 26). Authorities forbade his entrance to the Temple (36:5), and even inhabitants of his own village of Anathoth resolved to kill him if he persisted (11:18–23); members of his own family were implicated in this plot (12:6). Jeremiah’s life thus entered an extremely difficult phase at the end of 609, although this did not last until his death. Nevertheless, Jeremiah continued his denunciations, without sparing the king (21:11–22:9). His message increasingly became one of stern warning of impending disaster. It was natural that he should insist that his word was the ancient word which formed the basis of Judah’s religion, and that acceptance of it was essential to a correct relationship to God and, consequently, to the salvation of the nation from the impending calamity.

THE DESTRUCTION OF THE TEMPLE AND EXILE. When the Babylonian danger appeared on the horizon after the battle of Carchemish in 605 B.C.E., the prophet realized that his early prophecy of the awful “Foe from the North” (Jer. 1:13–16) was being fulfilled in the person of Nebuchadnezzar and his army; God’s appointed agent of the judgment that would shortly fall upon the unrepentant people of Judah. He saw the task of announcing the imminent arrival of that danger as a leading feature of his mission to his nation and to the surrounding world. He then made a last effort to bring his country to its senses. As the priests had forbidden him to enter the Temple, he dictated to his friend and secretary *Baruch a selection of his preachings, and directed him to read the scroll in the Temple (Jer. 36). A favorable opportunity presented itself in 604 (36:9). Some high officials heard Baruch and brought the fact to the king’s attention, as it also had a political bearing, the vision of the “Foe from the North” running like a red thread through the whole of Jeremiah’s message. (In the ancient Near Eastern world administrators were responsible for reporting prophecies to the king. See *Mari.) Jehoiakim demanded to hear the scroll, but then snatched it from the reader’s hands and threw it into the fire. He sent three men including his son to seize Jeremiah and Baruch, “but the Lord hid them” (Jer. 36:26–27). Jeremiah subsequently dictated the scroll again, with additions (36:32). The surrender of Jerusalem to the Babylonians in 597, and the deportation of King Jehoiachin and of

the leading citizens seemed to confirm Jeremiah’s warnings. The prophet told of the sad fate of the young king, a victim of his father’s folly (Jer. 22:24–30; Cf. II Kings 23:36–24:16). At the same time, he saw in the exile of the national leaders the expression of the divine verdict. The messages he sent to the exiles reveal not only that fundamental conviction, but also his belief that the God worshiped in the Temple of Jerusalem was too great to be localized. The exiles were able to reach Him even in their new condition, far away from the soil of Israel and Judah (29:7). As well, Jeremiah told them to disregard the optimistic promises of their prophets (29:8–9). Such interventions of course brought Jeremiah into collision with the prophets who had been saying just the opposite (23:9–40; 28; 29:24–32), and with the contemporary national leaders who were making sacrifice at one shrine essential to the Judahite religion, thus tending dangerously to localize God and His grace in the sanctuary “which He chose out of all the tribes to set His name there.” The contrary conviction of Jeremiah does not mean, however, that the prophet attached no specific content to the national religion. He admitted a particular relationship between Israel and God: Israel was set apart for Him as His property, His bride. This idea is already expressed in the early utterances of Jeremiah, addressed to the Northern Kingdom. Jeremiah believed that God had revealed Himself to Israel and chosen it to be His servant. Therefore he affirmed to the men of his generation the unique character of the God in whom he and they alike believed, together with the resultant uniqueness of His demands and the consequent reality of His guidance, which was not at the mercy of outward conditions or circumstances (18:3–10). The worship of the God of Israel thus could not disappear, even if His shrine and the sacrificial system disappeared, for it needed no more than prayer and obedience to His word. According to Jeremiah, everything else was an accessory. It is understandable, therefore, that after the Babylonians had destroyed the Temple and carried away the sacred vessels, Jeremiah was vindicated as the true prophet and the defender of the right religion. Jeremiah himself did not need to see these events to understand that resistance to Babylon was resistance to the Divine Will. He regarded the Babylonian army as an instrument in the Divine hands for carrying out a well-merited punishment on the guilty nation and its leaders. This conviction had arisen after the Babylonian victory at Carchemish in 605 B.C.E., but it became still stronger after the deportation of 597 B.C.E. From these historical events Jeremiah fully recognized that the power of Babylonia was irresistible and that the petty kingdom of Judah could not hope to oppose it. He concluded, therefore, that submission to Nebuchadnezzar was the will of God, who so punished the unfaithfulness of His people. The king of Babylon was the divine servant (27:6) whom the Lord was to employ for His purposes. When various vassals of Nebuchadnezzar in the West began to toy with the idea of rebellion and sent ambassadors to Jerusalem to discuss plans with King Zedekiah, Jeremiah flatly opposed such talk, appearing before the conspirators with an ox yoke on his neck and exhorting them to wear the

yoke of Nebuchadnezzar (ch. 27). In the autumn of 589, when the Babylonians moved to attack Jerusalem, and later during the blockade of the city, Zedekiah sent more than once to Jeremiah asking for a word from the Lord. Yet Jeremiah gave the king no encouragement. On the contrary, he assured him that God Himself was fighting for the Babylonians (27:8). No wonder, therefore, that to Judah's leaders Jeremiah was an enemy. He was arrested, probably in the summer of 588, and remained in custody as long as the city held out. The biographical chapters 37–38 provide a circumstantial account of Jeremiah's fortunes during these tragic months. After the fall of Jerusalem in 587 B.C.E., the Babylonians allowed Jeremiah to remain with the new governor *Gedaliah at Mizpah. When Gedaliah was murdered after only a few weeks of governorship (41:1–2), his followers, fearing Babylonian reprisals, fled to Egypt, taking the prophet with them against his will (Jer. 40–43). Jeremiah was reluctant to leave the country, since he attributed the value of a sign or symbol of hope perhaps to his presence in the land. He was indeed convinced that God's purpose could not be exhausted in punishment. After 70 years of a human lifespan (Ps. 90:10; Isa. 23:15), nearly the entire sinful generation would be dead, and God, he believed, would then contract a new covenant with the new people (29:10–11; cf. 31:31–34). The refugees who had taken Jeremiah with them found asylum at Tahpanhes (Daphne), the present-day Tell Defneh, just within the Egyptian border, east of the Delta. There the last words recorded from Jeremiah were uttered (43:8–13; 44). After this, no more is heard of him. Presumably, he did not survive for long and died in his sixties. According to a later tradition recorded by Tertullian (*Adversus Gnosticos*, ch. 8, in *Patrologia Latina*, vol. 2, col. 137) and Jerome (*Adversus Jovinianum*, 2:37, *ibid.*, 23, col. 335), he was stoned. Pseudo-Epiphanius (*De vitis Prophetarum*, in *Patrologia Graeca*, vol. 43, col. 400) and Isidorus Hispalensis (*De Ortu et Obitu Patrorum*, ch. 38, in *Patrologia Latina*, vol. 83, col. 142) even affirm that this happened in Tahpanhes. The unreliability of this tradition is evident from a passage of Jerome's commentary on Isaiah, where he records another tradition according to which Jeremiah died in Egypt of a natural death.

The Composition of the Book

The Book of Jeremiah exists in two versions, one in the masoretic text, and another in the Septuagint. The latter does not place the prophecies against foreign nations at the end of the book, but after Jeremiah 23:13a. Moreover, they are not arranged there in the same order as in the masoretic text. The Septuagint version is much shorter: about one-eighth of the masoretic text is missing, mostly single verses or parts of verses, but also entire sections such as 33:14–26; 39:4–13; 51:44b–49a; and 52:27b–30. In some cases the omissions may have been made intentionally, as, for instance, where the translators omitted doublets in their second occurrence or shortened a difficult text. Other lacunae may be explained by textual criticism, as in cases of homoioteleuton, when the scribe's eye leaped over material between two sentences with similar

endings (Jer. 39:4–13; 51:44b–49a). However, most of the omissions imply the existence of a shorter form of the Hebrew text. This is now clear from discoveries made at Qumran, where manuscript fragments representing both the longer and the shorter form of the text have been found (see Dead Sea *Scrolls). Thus the masoretic text and the Greek translation are based on different versions of the Hebrew text of Jeremiah. In the last pre-Christian centuries there were at least two versions of the book of Jeremiah in circulation. Both versions seem to have a relatively long history of scribal transmission behind them. However, since the Septuagint does not reveal a tendency to abbreviate plain passages, while the masoretic text seems to be an expanded one, the Hebrew archetype of the Septuagint has been considered as representing a more nearly original form to the text, superior to the late masoretic text. Some changes, however, were made in the Septuagint in the same direction as in the accepted Hebrew text. The different arrangement of some parts of the Book of Jeremiah in the masoretic text and in the Septuagint, as well as the existence of doublets, show that the book is a collection of shorter "books" plus miscellaneous material. Such "books" are explicitly mentioned in chapter 36, which gives a valuable account of Jeremiah's dictation of many of his oracles to his scribe Baruch, as well as in 25:13a; 30:2; 45:1; and 51:60. Tradition attributes the authorship of all of them to the prophet Jeremiah, but it is clear that not all the material can be derived from him. This is manifest in the case of chapter 52, which could only have been composed after 561 B.C.E. In other sections of the book, too, everything cannot come from the prophet himself (see tables in Hoffman, 62–66). This is certainly true for the narratives which use the third person in speaking of Jeremiah. In his commentary (1901), B. Duhm laid down the principle that only poetic passages can genuinely be attributed to the prophet. He held that the book consists of three types of material: Jeremiah's own words, almost exclusively poetry in *kinah* meter, comprising 280 masoretic verses; Baruch's life of Jeremiah, 220 verses; and later additions, 850 verses, which have much in common either with Deutero- and Trito- *Isaiah, or with the Deuteronomistic parts of the Former Prophets. A monograph published by S. Mowinckel in 1914 distinguished four principal sources in the Book of Jeremiah, designated as A, B, C, and D. A was Baruch's scroll, dictated by Jeremiah, with additions made by someone living in Egypt between 580 and 480 B.C.E. This collection is now contained within chapters 1–24, and is the most authentic part of the book. B was a biography of Jeremiah, based upon oral tradition written down by someone in Egypt in the same period as A; it is contained within chapters 19:1–20:6 and 26–45. C is the Deuteronomistic source, composed in the fourth century B.C.E. and consisting mainly of 3:6–13; 7:1–8:3; 11:1–5, 9–14; 18:1–12; 21:1–10; 22:1–5; 25:1–11a; 29:1–23; 32:1–2, 6–16, 24–44; 34:1–22; 35:1–19; 39:15–18; 44:1–14; and ch. 45. D is the famous "Book of Comfort" or "Book of Consolation" in 30:1–31:40, dating from post-Exilic times. From the same period dates the complex of oracles concerning foreign nations (chs. 46–51), with some

genuine Jeremianic elements. This collection was only later joined to Jeremiah 1–45. Mowinckel upholds the main lines of this view in his treatment of Jeremiah in the Norwegian translation issued in 1944, and, briefly, in *Prophecy and Tradition* (1946, pp. 61–65, 105–6). However, instead of sources he speaks of “traditionary circles,” obviously sharing the opinion of H. Birkeland, who in 1938 introduced the views of H.S. Nyberg into criticism of the prophets and stressed the influence of the oral tradition, even when a written tradition was already in existence. According to Birkeland, the poetic sections of Jeremiah were written down earlier than the prose sermons composed in the style of Deuteronomic preaching; he thus admitted the possibility a Jeremianic nucleus in those sermons. In contrast, R.H. Pfeiffer (*Introduction to the Old Testament* (1941), 504–5) considers that Baruch combined words dictated or written by the prophet himself with his own biography of Jeremiah, revising and rewriting many of his master’s sayings in his own Deuteronomistic style. Without admitting that Baruch was the author of the Deuteronomic sections (c), Mowinckel also shared this view, inasmuch as he considered Baruch to be responsible for the combination of the elements A and B. He held that around 580 B.C.E., Baruch concluded that large editorial unit with the words the prophet had addressed to him personally; this conclusion is found in Jeremiah 45, which therefore does not belong to c. Also according to Mowinckel, c was later incorporated into the “Book of Baruch” (A and B), probably when the Deuteronomistic tradition of Jeremiah was already fixed in writing. In regard to this tradition the opinion is widely held that these prose discourses represent the work of exilic authors who reconstructed the teachings of Jeremiah in terms of Deuteronomic theology, which provided an explanation of Judah’s tragedy in 587 B.C.E. A stylistic approach of those “Deuteronomistic” speeches, attempted mainly by J. Bright and W.L. Holladay, led to their conclusion that the style of c is characteristic of the rhetorical prose of the late seventh and early sixth century in Judah, and that many of its typical phrases are a reshaping in prose of expressions which either are original to the genuine poetry of Jeremiah or, though not specifically Jeremianic, were employed by the prophet in his poetic oracles in an original fashion. These conclusions, if correct, suggest that the nucleus and basic content of c were authentically Jeremianic. It has also appeared in recent years that the principal literary types A, B, and c do not by themselves furnish an effective key for the study of the composition of Jeremiah. The latter is indeed not arranged according to the style of its various parts. C. Rietzschel therefore presented a new thesis regarding its composition (1966). He accepts the basic principles of classification of the literary material on the grounds of form and style, as developed mainly by S. Mowinckel, but denies that this can provide a sufficient indication of the way in which the book was composed. In particular, he holds that it cannot be assumed that poetic and prose material was handed down separately, although he links the c material with the homiletical speeches in Deuteronomistic parts of the Former Prophets.

He proposes to reconstruct the process of the book’s composition by an agglomeration of tradition complexes. He distinguishes in the Book of Jeremiah four main tradition blocks: (1) oracles of doom against Judah and Jerusalem (Jer. 1–24); (2) oracles of doom against foreign nations (Jer. 25; 46–51); (3) oracles of salvation for Israel and Judah (Jer. 26–35); and (4) cycle of narratives about the prophet (Jer. 36–44). He divides the first block into six complexes, namely Jeremiah 1–6, 7–10, 11–13, 14–17, 18–20, and 21–24, four of which are introduced by a Deuteronomic speech beginning with the words “the word that came to Jeremiah from the Lord” (Jer. 7:1; 11:1; 18:1; 21:1). The oracle to Baruch in Jeremiah 45 originally stood just after 20:18, so that 21–24 is an appendix to the first tradition block. Rietzschel concludes that Baruch’s scroll is to be found in 1–6, and that 7–20 represents the “other words added,” which are referred to in 36:32. The approach of Rietzschel has earned its place alongside earlier attempts to solve the problems of the composition of the Book of Jeremiah. The recent Hebrew commentary of Y. Hoffman argues that a stylistic study shows that most of the poetic material comes from a single source. As such, claims that the same individual could not have written both laments and hymns and prophecies of destruction and restoration is purely arbitrary. Indeed, the similarities between the poetic rebukes and the oracles to the nations show that most of the oracles to the nations can be attributed to Jeremiah, although their present form shows substantial additions. As far as the prose contents are concerned, the biographical material on the prophet and the sermons are stylistically close enough to originate in a single stream of tradition, though not in the work of a single author. With most scholars, Hoffman identifies characteristic Deuteronomic language in these sections, but argues that they often employ terminology that diverges from that of the Deuteronomic school; an indication that these sections originated in circles of disciples of Jeremiah who were influenced by the Deuteronomists but distinct from them. Hoffman identifies five stages in the book’s composition: (1) the prophecies of Jeremiah before 604; (2) the prophecies both of rebuke and hope between 604 and 586; (3) post-586 psalms, narratives, and sermons with a Jeremianic core but mostly the work of transmitters of tradition who made use of the language of the Deuteronomists; (4) a second set of later additions; (5) the latest additions, which are found in the masoretic Jeremiah, but missing from the Hebrew text utilized by the Greek translators.

Whatever conclusions one reaches about the history of composition, it is plain that there were in existence oral and written sources previous to the actual blocks of material within the Book of Jeremiah. The following exposition deals first with the oracles against foreign nations (25; 46–51) and the so-called “Book of Consolation” (30–31). Then the narratives, both in the biographical and autobiographical styles, are examined. Finally Baruch’s scroll (1–6) with its additions (7–20), and the oracles concerning the House of David and the prophets (21–24) are reviewed.

Oracles Against Foreign Nations

The introduction to this passage block is to be sought in 25:1–13a. This is more apparent in the Septuagint, which inserts the whole of chapters 46–51 between verses 13a and 13b, but in a different order (49:34–39; 46; 50–51; 47; 49:7–22; 49:1–6; 49:28–33; 49:23–27; 48). Jeremiah 25:13b–38 is the conclusion of that “book.” It corresponds to chapters 25–32 of the Septuagint and forms a collection of prophecies concerning foreign nations, grouped together as the similar prophecies in the Books of Isaiah (Isa. 13–23) and Ezekiel (Ezek. 25–32). The Jeremianic nucleus of that block included at least chapters 46–47, which seem to date from the years 605–604; the oracle on Kedar (49:28–33), probably to be connected with the Babylonian campaign against the Arabs in the winter of 599–598; and the oracle on Elam (49:34–39), which goes back to the year 596/5, when an Elamite king, on the eve of engaging in battle against Nebuchadnezzar on the bank of the Tigris, decided to return to his land. The authentically Jeremianic collection was later expanded by the addition of the complex of oracles against Moab (48), Ammon (49:1–6), and Edom (49:7–22), the three Transjordanian kingdoms which had been entirely taken over by Arab tribes toward the end of the sixth century B.C.E. The oracles may reflect an early phase of these events, unless they allude to a campaign of Nebuchadnezzar against Moab and Ammon, dated by Josephus (*Ant.*, 10:180–181) in the fifth year after the fall of Jerusalem, i.e., in 582 B.C.E. The prophecies concerning Moab and Edom contain numerous prose comments and enlargements, and much of their material is to be found in a substantially identical form elsewhere in the Bible, above all in Isaiah 15–16 and Obadiah 1–10. It must be assumed, therefore, that Jeremiah 48:1–49:22 consists basically of anonymous passages, commented and expanded, probably with references to historical events in 582 or later in the sixth century. Another anonymous passage, concerning Damascus and dating probably from the eighth century, was subsequently added to this collection (49:23–27). The book was most likely finished at the beginning of the fifth century. Some glosses were later added to the archetype of the masoretic text. The disposition of the material in the Septuagint reflects, on the other hand, a secondary rearrangement of the oracles. Elam, probably identified with Persia, is mentioned first; then follow the two other empires, Egypt and Babylonia. After this, the small neighboring countries are mentioned: first Philistia and Edom in southern Palestine, then Ammon, Kedar, and Damascus in the east. The long oracle against Moab closes the series.

“The Book of Consolation”

The introduction to this section appears in Jeremiah 30:1–3. It consists of the whole of chapters 30–31, which contain Jeremiah’s prophecies addressed to the Northern Kingdom during Josiah’s reign. These two chapters consist of a collection of originally separated passages, mostly poetic. Because they develop the theme of Israel’s comfort and restoration, some scholars dated them from the Exilic period and argued that relatively few of these passages can be genuinely attributed

to Jeremiah. However, they overlooked the reference to the oppressed people as “Ephraim” (31:5[6], 8[9], 17[18], 19[20]), and the mention of Samaria in 31:4[5]. The names Israel and Jacob must therefore be understood as denoting the tribes of the former kingdom of Samaria, whose territories had been liberated by Josiah and united again to Judah (cf. 11 Kings 23:15–20; 11 Chron. 34:6–7). Stylistic similarities to Deutero-Isaiah in Jeremiah 30:10 or 31:6–8 can be explained on the supposition that both prophets made use of the same conventional forms of priestly oracles. The prose passages in 30:8–9 and 31:22–33, 38–40 were probably added to the collection, but at least 31:30–33 may contain a nucleus of Jeremianic words originally addressed to the Northern Kingdom. The entire “Book of Consolation” (30–31) stands as a separate block of material in the midst of a series of chapters, mostly biographical in character (Jer. 26–29; 32–44). It was inserted after 29:32, which quotes the Lord’s word alluding to “the good things that I am going to do for you.” Thus the place was well suited for the insertion of the “Book of Consolation.”

The “Biography” of Jeremiah

Chapters 26–29 and 32–44 are mostly biographical in character. The actual sequence of narratives reflects not only a secondary redistribution of the various episodes, but also points to a series of editors who successively handled materials from different sources. For instance, chapters 27–29 are sometimes considered as belonging to one source. The reason for deriving them from a common author is that they call the Babylonian king Nebuchadnezzar, departing from the correct spelling Nebuchadrezzar of the rest of the Book of Jeremiah, and that they speak of “Jeremiah the prophet.” Yet it is noteworthy that chapters 27 and 28 differ in one cardinal point. Chapter 27 introduces Jeremiah in the first person. Chapter 28 begins in verse 1 with the first person, and then suddenly and unaccountably breaks off to speak of “Jeremiah the prophet” (verses 5 ff.). This points to a combination of the chapters by a redactor, who imperfectly joined the first and third person narratives. The slight change involved in the spelling of Nebuchadnezzar’s name throughout may be due to him. The problem of the composition of the “biographical” chapters is thus rather complicated. The heterogeneous complex of chapters 27–35 has been inserted in the continuous narrative of Jeremiah 26; 36:1–37:10; 38; 39:3, with, as a conclusion, the oracle to Ebed-Melech in 39:15–18. The latter’s content and position at the end of the book can be compared with those of the oracles to Baruch in Jeremiah 45, which originally ended the block of Jeremiah 1–20. This whole narrative covers the period from 609 to the liberation of Jeremiah by the Babylonians in July 587, and might have been written at the request of Ebed-Melech by Baruch, known to have been an intimate of Jeremiah from 605 (36:4, 5) until after 587 (32:12, 43:3, 6). In any case, Baruch is the most likely candidate for the authorship of these sections, which seem to come from an eyewitness. The end of 39:14 suggests that this literary unit was completed between the fall of Jerusalem and the murder of Gedaliah, i.e., in 587.

Another, shorter report of Jeremiah's imprisonment and liberation in 37:11–21; 39:11; and 40:2a, 4–6, states that Jeremiah was chained in the court of the guard (37:21). This brief account must also have been composed prior to the assassination of Gedaliah. A third narrative in 39:1–2, 4–10; 40:7–41:18; and 43:5–6b, 7a concerns Jerusalem's capture and Gedaliah's murder, in which Jeremiah played no role. This composition, too, can safely be dated in the year 587. It was used somewhat later as an historical framework by another author, who intended to expand the narrative of 37:11–21; 39:11; and 40:2a, 4–6 by telling the end of Jeremiah's career in Egypt. He composed at least all the sections of chapters 42–43, where the expression "Jeremiah the prophet" appears (42:2, 4; 43:6). The largest part of 42:1–4, 7–9a, 19; 43:2–4, and the additions in 40:2b–3 and 43:6, 7 are to be ascribed to him. This editorial unit thus included in Jeremiah 37:11–21; 39:12, 4–11; 40:2–41:18; 42:1–4, 7–9a, 19; 43:2–7a. The remaining parts of chapters 42–43 seem to reflect the same hand as chapter 44. Since the author already knew that Hophra, the king of Egypt (usually called Apries), had been given over to his enemies (44:30) and since it is known that he was overthrown and killed by Amasis in about 568 B.C.E., it can safely be concluded that this part of Jeremiah's biography was completed, probably in Egypt, a short time after this event. This is confirmed by the allusion made in 42:8–13 to the invasion of Egypt by Nebuchadnezzar in the year 568/7 (cf. Pritchard, *Texts*, 308). The author of that section could therefore be a somewhat younger contemporary of Jeremiah. It is uncertain whether he is also responsible for the assemblage of a larger part of the biographical chapters, and the consequent insertion of transitional verses, such as 39:13 or 40:1. These verses reveal a misunderstanding of the historical situation, since from 39:14 and 40:4 it is known that Jeremiah was not chained in order to be deported to Babylon. Several biographical passages in the tradition block inserted in Jeremiah 27–35 were originally redacted as first person narratives. To this group belong the incident of the ox yoke (27:2–22), Jeremiah's purchase of land (32:6–44), and the example of the Rechabites (35:2–19). These episodes have as common features not only the autobiographical style but also a typical content consisting of a symbolic action, explained by the prophet. Similar narratives in autobiographical style are found in other parts of the book: the wine jars (13:12–14), the potter at his work (18:2–12), the breaking of the bottle (19:1–2, 10–11a, 12a). These three passages seem to constitute an editorial unit on the common theme of pottery. The last two episodes are even connected by the catchword *yozer* ("potter"). They were inserted by a redactor in their actual place, probably as comments to 16:18 and 18:23. The exhortation on the observance of the Sabbath in 17:19–27 is most likely a still later insertion. All narratives of that type may have belonged to a single collection written or dictated by Jeremiah himself and reused later, with some additions, by the editors of the complexes of 11–20 and 27–35. The acted parables referred to above can be compared with the symbolic visions, also composed in autobiographical style: the almond rod (1:11–12), the bubbling

pot (1:13–16), the linen waistcloth (13:1–11), the two baskets of figs (24:1–10), and the cup of wine (25:15, 17, 27–28).

Baruch's Scroll with Additions

From chapter 36 it is known that Jeremiah's utterances were first committed to writing in the fourth year of Jehoiakim's reign, i.e., in 605, when the prophet dictated them to his friend Baruch. After the scroll had been destroyed by the king, Jeremiah was directed to rewrite its contents in a second scroll, in which Baruch "wrote ... under Jeremiah's dictation everything that was in the book that Jehoiakim, king of Judah, had thrown into the fire. And, in addition to this, many further words of the same sort were added" (36:32). The conclusion of that scroll is to be found in Jeremiah 45, as shown by C. Rietzschel; "these sayings" in verse 1 refer directly to the content of the scroll. As verse 3 echoes 20:18, the catchword being *yagon* ("sorrow"), and since verse 4 alludes to Jeremiah 1:10, it can be concluded that Jeremiah 1–20 roughly corresponds to the final form of Baruch's scroll. It can be safely assumed, following C. Rietzschel, that chapters 1–6 represent the original scroll rewritten by Baruch under the prophet's dictation, while chapters 7–20 contain the successive additions to it. The scroll is introduced by the description of the prophet's call (ch. 1), which follows the usual pattern of the "call" narratives, as established by N. Habel. The literary form for the call of a divine representative was taken over from the practice reflected in Genesis 24:34–38, according to which messengers entrusted with a special mission presented their "credentials" in a specific order and manner. In so doing they not only explained the reason for their coming, but also repeated their master's commission ceremony, in which the precise words of the command were preserved, their own objections registered, and the assurance of the protective angel's presence given. In addition to this, the agent of the overlord could adduce any further evidence, such as an omen or sign, which would give added weight to his claim. By utilizing this ancient pattern, later authors and prophets emphasized the primary function of the individual who was called. The genre concerns the commissioning of messengers to God's service. Therefore, in employing its form, a prophet announces publicly that God commissioned him as His spokesman and representative. The "call" narrative of Jeremiah 1 thus provides the authentication of Jeremiah's right to speak in God's name. Since it does so in a form appropriate for public affirmation of the divine origin of his message, it was almost certainly the introduction to the scroll which Jeremiah dictated to Baruch in 605, and which he intended to be read publicly before the people in the Temple area. The "Foe from the North" constitutes a feature in which Jeremiah 4:5–6:30 advances beyond Jeremiah 2:1–4:4, so that it is reasonable to assume that 4:5–6:30 contains mostly oracles composed in 605, while 2:1–4:4 belongs to an earlier date. The Babylonian invader is mentioned, or alluded to, in 4:6–7, 13, 15–17, 21, 29; 5:6, 15–17; 6:1–6, 12, 22–25. He approached from the North to inflict on the people the judgment announced in the previous part of the scroll. The general

theme of 2:1–4:4 is the nation's sin. Chapter 2 is a series of passages dealing with a single theme, the bulk of which comes from an early period of Jeremiah's ministry and was first addressed to the Northern Kingdom, but was most likely given its present form by the prophet himself in connection with the scroll of 605. The poetic material in chapters 3:1–5, 19–25; 4:1–2 forms a continuous unit which is a sample of Jeremiah's preaching prior to 622, certainly before he was launched on the stormy currents of the political and religious life of Jerusalem. This is supported by the extent to which these oracles are saturated with the fundamental ideas of Hosea. These similarities to Hosea, characteristic of the young Jeremiah, are striking not only in the dominant theme of the adulterous wife, but even in particular expressions. The poem was initially an appeal to conversion directed to the Northern Kingdom, but the piece actually concludes with a formally separate oracle of solemn warning addressed to the people of Judah and Jerusalem (Jer. 4:3–4). It prepares the theme of the "Foe from the North," developed in the following chapters, and most likely dates to the year 605. The material in 3:6–18 has a somewhat more complicated history. This section begins with a prose monologue addressed to Jeremiah by the Lord (verses 6–12a), in which the two adulterous, i.e., apostate, sisters – Israel and Judah – are compared to each other, to the immense disadvantage of the latter. The allusion in verse 8 to verses 1–5 shows that this monologue was composed in relation to the poem of 3:1–5, 19–25; 4:1–2, in order to emphasize that Judah's sin was bigger than that of Israel's. The passage probably goes back to the reign of Josiah, as verse 6 explicitly states, but dates after 622, as verse 10 brands Josiah's reform as a failure. The monologue leads to a short lyric in which the prophet summons the Northern Kingdom to return to the Lord, to worship Him on Mount Zion, and to accept the guidance of his new rulers (verses 12b–15). These verses most likely allude to Josiah's reform and to his expansionist activity in the territory of the defunct northern state; they probably date before 622. Verses 16–18, on the other hand, seem in their present form to presuppose the exile of Judah, and were in all likelihood written, or rewritten, after 587. Chapters 4:5–6:30 constitute a long editorial unit composed from a series of originally separate passages, all of which deal with the terrible disaster from the north that is about to overtake the nation (4:6; 6:1, 22; cf. 1:13–15; 10:22; 13:20; 25:9; 46:6, 24; 47:2). The entire section thus develops the theme sounded in 4:3–4. The poems are so graphic and vivid that it may be assumed, as noted above, that most of them were composed during the actual approach of Nebuchadnezzar's army in 605/4. Chapters 7–10 constitute the first editorial addition to Baruch's original scroll. The material is rather miscellaneous in character, but is dominated by two major themes: the stubborn sinfulness of the people, and the tragic fate that is about to overtake them. The section opens with the famous "Temple sermon" (7:2–15), delivered in Jehoiakim's accession year, i.e., in the autumn of 609 or in the winter of 609/8. The text is in prose and preserves the gist of what he said. Also in prose are 7:16–20, 21–28, 29–34 and 8:1–3,

which, in the main, may reflect Jeremiah's preaching during Jehoiakim's reign (609–598 B.C.E.). The complexes of poems in 8:4–17 and 9:1–8 probably date to the same period. Between these passages is Jeremiah's lament over a national disaster (8:18–23), which can either refer to the defeat at Megiddo in 609 or the raids prior to the Babylonian attack in 598/7 (cf. 11 Kings 24:2). An oracle (Jer. 9:9–10, 16–21; 10:17–22) with dirges over the ruin of Jerusalem (9:18, 20–21; 10:19–20) follows; it was perhaps uttered on the eve of the siege and deportation of 598/7. Probably non-Jeremianic passages were later inserted, namely in 9:11–15 and 9:22–10:16. This first addition to Baruch's scroll (chapters 7–10) ends with a prayer for mercy (10:23–25). The second added complex is perhaps to be found in chapters 11–20. This unit consists basically of a series of prose passages in autobiographical style and of several series of poems. The complex begins with Jeremiah's preaching on the Covenant (11:1–17), for which he was persecuted by his own relatives and fellow townsmen (11:18–12:6). This piece is followed by a poem (12:7–13), in which God expresses His sorrow for the dereliction of His people, perhaps caused by the raids just prior to the Babylonian invasion of 598/7 (cf. 11 Kings 24:2). A brief prose passage seems to be a comment on that poem (Jer. 12:14–17). Chapter 13 begins with the parabolic vision of the linen waistcloth, followed by an oracle explaining its meaning (13:1–11). Connected with this, probably because it too involves a parable, is a brief passage inspired by a popular witticism concerning wine jars (13:12–14). Several short poems, apparently composed not long before the first deportation in 597, continue that section in 13:15–27; 14:5–9. One of them, addressed to Jehoiachin and the queen mother (13:18–19), was clearly uttered just prior to Jerusalem's surrender in that year. This series of poems is interrupted by a national psalm of lamentation in time of drought (14:2–9, 19–22), which is divided in two by an oracle of doom (Jer. 14:10; cf. Hos. 8:13; 9:9) and by a prose commentary in autobiographical style (Jer. 14:11–16), that ends in 15:1–4. While the psalm may be an authentic liturgical text, the prose passage of 14:11–16; 15:1–4 may be Jeremiah's genuine utterances. After one of Jeremiah's "confessions" (15:10–11, 15–18) and a "private oracle" addressed to him (15:19–21) there is another passage in autobiographical style (16:1–13), in which Jeremiah relates how he had been forbidden to marry, or even to participate in the normal joys and sorrows of his people. Attached to this composition are eight brief heterogeneous passages (16:14–15, 16–18, 19–21; 17:1–4, 5–8, 9–10, 11, 12–13) and another "confession" (17:14–18). None of these pieces can be dated, but several may confidently be ascribed to him. A Jeremianic nucleus can also be found in the prose discourse of 17:19–27, which urges the keeping of the Sabbath and is redacted in autobiographical style. There follows the autobiographical narrative of Jeremiah's visit to the potter's house (18:1–12). Since the disaster announced by the prophet is described as still avoidable (18:11), the incident is probably not later than the first years of Jehoiakim's reign. Four poetic pieces are attached to this narrative: an oracle (18:13–17) and three more "confessions" (18:18–23; 20:7–13,

14–18), separated by the complex episode of the broken bottle (19:1–2, 10–11a, 12a) and of Jeremiah's arrest by Pashhur son of Immer (19:2, 3–9, 11b, 12b–15; 20:1–6). It is noteworthy that the so-called "confessions" are redacted in the style of the psalms of lamentation. It is doubtful whether they were ever publicly proclaimed by Jeremiah. The last "confession" is immediately followed by the conclusion of chapter 45.

Oracles Concerning the House of David and the Prophets

Chapters 21–24 constitute a complex of two series of oracles, one concerning the royal house (21:11–23:8) and the other the cultic prophets (23:9–40). The actual unit is introduced by two prose passages (21:1–7, 8–10), whose Jeremianic nucleus goes back to the year 589/8. Its actual form, however, dates to after the fall of Jerusalem in 587. The reason for the choice of this passage as an introduction to the oracles concerning the royal house is given by the fact that it contains an oracle of doom directed to the king Zedekiah. Chapter 24, which closes the "book," is also a prose passage from Zedekiah's time, with another oracle of doom concerning that king (verses 8–10). This pattern of inclusion shows that chapters 21–24 constitute an editorial unit. The superscriptions in 21:11 and 23:9 prove that this unit groups two older passage complexes. The first one is an important collection of prophecies containing Jeremiah's judgments on the successive rulers in his day who occupied the throne of David. The opening passage of the section (21:11–22:9), almost equally divided between poetry and prose, sets forth the principle that the Davidic monarchy is under obligation to God to establish justice in the kingdom. The sayings regarding Jehoahaz-Shallum (22:10–12) and Jehoiakim (22:13–19) follow in chronological order, and after a poem lamenting the fate of Jerusalem (22:20–23) there are two oracles concerning the young king Jehoiachin (22:24–27, 28–30). The original conclusion of the section is to be found in 23:1–2. It is followed by three brief oracles, of which the first (23:3–4) and the third (23:7–8) are in prose and presuppose the Exile. The second oracle (23:5–6) is an extract from 33:14–16, originally a solemn announcement of the enthronement of Zedekiah, here called Yozedek, according to the Septuagint. The second collection deals mainly with cultic prophets (23:9–40). The poem in verses 9–12, which consists of a soliloquy of Jeremiah, concerns them only insofar as they, like the priests, share in the general corruption (verse 11). However, the two poems in verses 13–15 and 16–22, and the piece in verses 23–32, basically in prose, deal directly with the prophets who lull the people with fallacious promises. The final passage (verses 33–40), also in prose, mentions the prophets only in passing. Since the tension between Jeremiah and the cultic prophets reached its pitch in the days of Zedekiah, most of these passages probably date to that king's reign.

[Edward Lipinski / S. David Sperling (2nd ed.)]

IN THE AGGADAH

Jeremiah was descended from Joshua and Rahab (Meg. 14b). He was born circumcised (ARN¹ 2, 12), and already showed

signs of his future calling when as a newborn infant he spoke in the voice of a youth and rebuked his mother for her unfaithfulness. He explained to his astonished mother that he was really rebuking the inhabitants of Zion and Jerusalem (PR 26:129). He was related to the prophetess *Huldah. She preached to the women while Zephaniah, another contemporary prophet, was active in the synagogue and Jeremiah preached to the men in the street (PR 26:129). When the pious King *Josiah restored the worship of God, Jeremiah brought back the ten exiled tribes (Ar. 33a). Although Josiah later warred with Egypt against the prophet's advice, Jeremiah knew that the king acted out of error since he was misinformed about the piety of his generation. The fourth chapter of *Lamentations, traditionally ascribed to Jeremiah, begins with a dirge for Josiah (Lam. R. 1:18, no. 53; 4:1, no. 1). The prophet suffered under Jehoiakim and even more during the reign of Zedekiah when both the populace and the monarch opposed him. The people mocked his rebukes claiming that as a descendant of the proselyte Rahab he had no right to reprimand them (PDRK 115), and maliciously accused him of illicit relations (BK 16b). His purpose in leaving Jerusalem for Anathoth was so that he could partake of his priestly portion. The watchman who arrested him on that occasion was a grandson of the false prophet *Hananiah b. Azur. In prison, his jailer, a friend of Hananiah b. Azur called Jonathan, constantly mocked him (PR 26:130).

Jeremiah was commanded by God to go to Anathoth because his merits were so great that God could not destroy Jerusalem as long as Jeremiah was in the city. In the prophet's absence the city was conquered and the Temple set on fire. When, on his return, Jeremiah saw smoke rising from the Temple, he rejoiced, thinking that the Jews had repented and that the smoke was that of the sacrifice which they were offering. He wept bitterly when he realized his error, grieving that he had left Jerusalem to be destroyed. Jeremiah accompanied the captives as far as the Euphrates, and only then returned to comfort those who had been left behind (Jer. 40:6; PR 26:131). On the way back, he tenderly gathered together limbs of the bodies of massacred Jews, lamenting that his warnings had not been heeded by the unfortunate victims (Lam. R., Proem 34). As he approached the ruins of Jerusalem, he had a vision of a woman, clad in black, sitting on top of a mountain, weeping and exclaiming, "Who will comfort me?" After explaining that she was mother Zion, Jeremiah comforted her with the promise that God would rebuild and restore Zion (PR 26:131–132). Jeremiah remained in Egypt until Nebuchadnezzar conquered that country. He was then taken to Babylon where he rejoined his exiled brethren (SOR 26).

[Aaron Rothkoff]

IN ISLAM

Jeremiah (Ar. Irmiyā; also Armiyā and Ūrmiyā) is not mentioned in the *Koran. Some of the commentators on the Koran, however, attribute to Jeremiah, son of Hilkiah the priest, the words of *Muhammad concerning the man who passed by a

city in ruins and wondered how Allah would rebuild it. Allah then put this man to death and resuscitated him one hundred years later. To the man's astonishment, it became apparent to him that he had been dead for one hundred years, but that the food and drink which were with him were nevertheless unspoiled, while the bones of his ass had been covered with skin and veins and it had been revived. He was then convinced that Allah was omnipotent (Sura 2:261). The legendary tale of *Honi ha-Me'aggel (TB, Ta'an. 23a) has been interpreted by Wahb ibn Munabbih, the celebrated traditionalist, who feels that Honi was Jeremiah. Some scholars identify Jeremiah with al-Khaḍīr, but other commentators believe that he was 'Uzayr (Ezra). The town which Jeremiah passed by was *Jerusalem (Beit al-Maqdis (i.e., Beit ha-Mikdash), known as Aelia Capitolina in the Byzantine period); he was comforted that it would be rebuilt.

IN THE ARTS

Apart from an early appearance in the medieval *Ordo Prophetarum*, where he is made to foretell the coming of the Messiah, Jeremiah was a rare figure in literary works until the 19th century. Even then, the Hungarian Protestant writer and patriot Ferenc Kölcsey was inspired more by the Book of Jeremiah than by the prophet, basing his *Hymnus* (1823), which later became the Hungarian national anthem, on the text of Jeremiah 32:21–29. The first modern author to turn to Jeremiah was Ludwig *Philippson, who wrote the tragedies *Jochin* (1858) and *Die Entthronten* (1868), in the latter of which Gedaliah makes a rare literary appearance. Jeremiah was later also the subject of *Il profeta o La passione di un popolo* (1866–84), an Italian allegorical drama by Graziadio David *Levi. The theme has attracted much more attention in the 20th century, with works headed by Stefan *Zweig's remarkable pacifist drama *Jeremias* (1917; Eng., 1922), first staged in Zurich during World War I. Another *Jeremias*, a play by the Danish writer Knud Gjørup, appeared in 1916. These were followed by Waclaw Niezabitowski's Polish tragedy *Jeremiasz* (1926), Ajzyk Ruskolekier's Yiddish drama *Yirmiyohu Hanovi* (1936), and Joseph *Kas-tein's biographical *Jeremias; der Bericht vom Schicksal einer Idee* (1937). The subject also attracted another leading German Jewish writer, Franz *Werfel, whose novel *Hoeret die Stimme* (1937; *Hearken unto the Voice*, 1938) was republished years later as *Jeremias* (1956). During World War II the Czech writer Jiří *Orten published a collection of poems under the title *Jeremiášův pláč* ("Jeremiah's Lament," 1941).

In premedieval Christian art, Jeremiah was regarded as a prophet of the Passion, and was thus sometimes shown holding a cross. The biblical episode in which he is cast into a pit on account of his demoralizing prophecies (Jer. 38) led to his being sometimes given the symbol of the mantichore – a legendary animal living in the depths of the earth which was depicted in the bestiaries. Jeremiah is represented in ninth-century manuscripts, including the *Kosmas Indikopleustes* (Vatican Library), and in early medieval frescoes, mosaics, and

sculpture. Various episodes of his life are illustrated. There is a 12th-century illumination of the calling of Jeremiah (Jer. 1:9) in the Winchester Bible (Winchester Cathedral).

Thirteenth-century sculptures of the prophet are found in the cathedrals of Amiens and Chartres. At Chartres he is shown holding a circular disc enclosing a cross. A more naturalistic representation is the sculpture by Claus Sluter (Chartreuse de Champmol, Dijon), made at the beginning of the 15th century, where the nose was originally surmounted by a pair of spectacles in gilded leather. Some outstanding works of the Renaissance were a striking sculpture by Donatello (1386–1466; Campanile, Florence); a round painting by Perugino (Nantes Museum), as well as one of *Isaiah; and Michelangelo's brooding, seated figure surmounted by nude youths (Sistine Chapel, Rome). *Rembrandt painted a picture of Jeremiah mourning over Jerusalem (painting formerly in the Stroganov collection, St. Petersburg). The same subject was treated by the German academician Eduard *Bendemann in a crowded composition (National Gallery, Berlin), while another German painter, Lesser *Ury, showed Jeremiah brooding under the night sky. There is also a sculpture of Jeremiah by Enrico *Glicenstein.

The original stage music for Stefan Zweig's *Jeremias* was written by Arno *Nadel. For the Ohel Theater's performance of the play in Palestine, the music was composed by Yedidiah *Admon. Oratorios on the theme include G.M. Schiassi's *Gere-mia in Egitto* (1727) and Ernst Hess's *Jeremia* (1953). Verses and sections have been set for choir, such as Heinrich Isaac's *Oratio Hieremiae* (1538), and Samuel Scheidt's *Ist nicht Ephraim mein teurer Sohn*. The lament *Quis dabit oculis meis* (Jer. 8:23), which is included in the Good Friday liturgy, also occurs in settings by many composers of the 16th century. In the Jewish musical tradition, *Ha-Ben Yakir Li Efrayim* has become a showpiece of the "artistic" *ḥazzanut* of Eastern Europe; it also appears as the text of several folk songs and ḥasidic *niggunim*. For Rachel's lament (the "voice heard in Ramah ..."), see *Rachel, In the Arts. Among modern works is Leonard *Bernstein's *Jeremiah Symphony* (1944).

JEREMIAH, EPISTLE OF (known in the English version as the Epistle of Jeremy), an apocryphal work, written in the form of a copy of a letter by the prophet Jeremiah “unto them which were to be led captive into Babylon by the king of the Babylonians.” It was apparently composed on the basis of Jeremiah 29:1ff. (for a similar but seemingly independent tradition, cf. II Macc. 2:2, and Targ. Jon., Jer. 10:11). The work consists of a vehement polemic against idolatry, the futility of which is scorned and derided (verses 8–72). The author follows no coherent line of thought. His discourse is characterized by abrupt transitions from one idea to another, repetitions, and especially by warnings to the exiles against idolatry. Each section describing heathen gods and their worship concludes with variations on the refrain: “they are no gods: therefore fear them not,” or “how should a man then think or say that they are gods?” In depicting the heathen deities the author often uses expressions which echo those in the Bible (cf. Jer. 10:9; Isa. 44:9–19; 46:1–2; Ps. 115:4–8; 135: 15–18). The author was apparently an eyewitness to certain aspects of Babylonian idolatry (see verse 31, which tells of the priests having their clothes rent, their heads and beards shaven and nothing on their heads: the ancient Sumerian priests officiated naked and shaven; see also verse 43, which apparently describes temple harlots in Babylonia). Undoubtedly he was a Babylonian Jew who wrote under the name of Jeremiah. His period may be fixed by verse 3, which probably hints at his own time, and which prophesies the return of the exiles after seven generations, that is, approximately 200 years. Reckoning from the destruction of the First Temple in 586 B.C.E. this would refer to the beginning of the fourth century B.C.E., i.e., the days of Ar-

taxerxes II Mnemon (405–359). Scholars formerly maintained that the Epistle was written in Greek, the language in which it has been preserved, but a number of factors indicate that the original language was Hebrew, as has been conclusively shown by Ball (e.g., in verse 17, “a vessel that a man uses” (*kelei adam*) is a mistranslation of “an earthen vessel” (*kelei adamah*)). In the Vulgate the Epistle is appended to Baruch as chapter 6. A passage from the Epistle of Jeremiah (verse 5) was used by the Marranos as a theological justification of Marranism.

[Abraham Schalit]

JEREMIAH BEN ABBA (first half of the fourth century C.E.), Babylonian *amora*; usually referred to without his patronymic. Jeremiah, who was born in Babylonia, immigrated to Erez Israel at the outset of his career. No discussions are extant between him and the Babylonian sages, and only in isolated instances does he quote the earliest ones. There is no reference to his emigration to Erez Israel as there is to that of Babylonian sages such as Zē'ira, Abba, and others, who emigrated when they were already well-known scholars. When Abbaye and Rava, two leading Babylonian *amoraim* who were contemporaries of Jeremiah, discussed the relative worth of the sages of Babylonia and Erez Israel, the former said: “One of them [in Erez Israel] is worth two of us [in Babylonia],” to which Rava replied: “But when one of us immigrates there [to Erez Israel], he is worth two of them. There is, for example, Jeremiah who, when he was here, did not comprehend what the sages were saying, but since immigrating there he refers to us as ‘the stupid Babylonians’” (Ket. 75a). And indeed Jeremiah occupied a notable place in Erez Israel, having apparently been for some time, after the death of Ammi and Assi, the head of the *bet midrash* at Tiberias. In Erez Israel he studied under his Babylonian countrymen Ḥiyya b. Abba (Meg. 4a, et al.) and Zē'ira (MK 4a, et al.), as well as under Abbahu at Caesarea (TJ, Git. 9:10, 50d; et al.). With all his great devotion to study, prayer and spiritual tension in the worship of God were conspicuous factors in his outlook. Thus, when he was sitting in study before Zē'ira and the time for prayer arrived, he pressed the latter to interrupt the lesson in order to recite his prayers (Shab. 10a). When on one occasion he greatly prolonged the word “*eḥad*” in the Shema, Zē'ira checked him (Ber. 13b; TJ, Ber. 2:1, 4a.). Against the *baraita* which holds that one must not bow down “too much” in prayer, he said: “Provided one shall not do merely as a lizard does that moves its head, but pray in such a way that he fulfills (Ps. 35: 10) ‘all my bones shall say: Lord, who is like unto Thee’” (TJ, Ber. 1:8, 3d). With this teaching of his there is apparently to be connected his dictum: “Great is the fear of God, for two books written by Solomon [Proverbs and Ecclesiastes] conclude with a reference to the fear of God” (Eccles. R. 3:14).

Conspicuous in his mode of study is the effort to arrive at a precise and definitive elucidation of the *halakhah*. At times, the halakhic problems that he posed are merely academic, without any application to practical life. Some of his questions and subtleties raise a smile, and most of the problems propounded by him are left unsolved in the Talmud (Shab. 38b; Suk. 33a, et al.). On the Mishnah (BB 2:6) which states that if a young pigeon is found within 50 cubits of the cote, it belongs to the owner of the cote, but if found beyond 50 cubits, it belongs to the finder, Jeremiah asked: "If its one foot is within and its other foot beyond 50 cubits, what is the *halakhah*?" For this question he was temporarily excluded from the *bet midrash* (BB 23b). (For a profound study of this characteristic of Jeremiah, see M. Silberg, in *Sinai*, 56 (1965), 13–19.)

Jeremiah came to occupy a distinguished position in both the spheres of academic and of communal service in Erez Israel. He had halakhic discussions with most contemporary sages, and nearly all the leading *amoraim* of the following generation quote his statements. The Babylonian Talmud several times mentions his harsh comments on the learning of the Babylonian scholars and the Babylonian Talmud. "He hath made me to dwell in dark places..." (Lam. 3:6) – refers, according to Jeremiah, to the Babylonian Talmud (Sanh. 24a), but this did not prevent his statements from being frequently cited in it. To a question asked of him by the sages he modestly answered: "I am not worthy of having this question addressed to me, but your disciple inclines to the opinion..." (BB 165; cf. Dik. Sof., ad loc.). Avin and Dimi, who regularly went from Erez Israel to Babylonia and there transmitted the teachings of Johanan and the other leading Erez Israel *amoraim* of the preceding generation, included Jeremiah's statements (Pes. 60b; and see Tem. 14a, et al.). Tradition has it that anonymous opinions introduced by "They in the west say," quoted in the Babylonian Talmud, refer to Jeremiah (Sanh. 17b).

The vast majority of his statements are in the realm of *halakhah*, but a considerable number of his aggadic comments interpreting biblical passages and of his homilies have been preserved. He was the author of proems to homiletical expositions (Lev. R. 13: 1; 29: 5, et al.). Several practical decisions required in the "hall of study" (*Sidra Rabba*) were given by him (TJ, Shab. 3:7, 16c; 19:1, 16d, et al.). Like leading sages in all generations, he too traveled around to minister to and guide the inhabitants of various places, visiting the Dead Sea in the company of Ravin (Shab. 108b) and Golan on a mission for Ammi (TJ, Meg. 3:1, 73d). When the authorities imposed a heavy tax on Tiberias, he demanded, contrary to the prevailing *halakhah* exempting sages from taxation, that Jacob b. Bun, a sage, contribute his share. On the *halakhah* that one is not to pray immediately after a conversation or after being occupied in inanities, he taught: "Whoever engages in communal affairs is as one who engages in the study of the Torah" (TJ, Ber. 5:1, 8d). His fervent belief in the advent of the Messiah can be inferred from his last testament: "Clothe me in a white garment, put stockings and shoes on my feet and a staff

in my hand, and lay me on my side. When the Messiah comes, I shall be ready" (TJ, Kil. 9:4, 32b).

[Shmuel Safrai]

JEREMIAH BEN ISAAC (d. 1805), Hungarian rabbi. Jeremiah studied under Meir b. Isaac *Eisenstadt. He was rabbi of Mattersdorf (Burgenland) from 1770, and of Abaújszántó (Hungary), from about 1797. He lived for some time in Aszód (Hungary) but is not known to have held office there. He took a prominent part in 1798 in the dispute over whether the sturgeon, from which caviar is obtained, is permitted according to the dietary laws, a dispute which in its time engaged the rabbinic world. He declared it to belong to the "unclean" fish, in opposition to the view of Aaron *Chorin, his disciple, who declared it permitted. His *Moda'ah Rabbah*, supplements and comments on the *Moda'ah ve-Ones* of Ḥayyim Shabbetai, was published together with his son Joab's *Moda'ah Zuta (Moda'ah ve-Ones)*, Zolkiew, 1795?, Lemberg, 1798).

[Nathaniel Katzburg]

°JEREMIAS, ALFRED (1864–1935), German Bible critic. He became deacon in 1890 and pastor in 1891 at the Luther-Kirche, Leipzig. From 1905 he taught at the University of Leipzig. A student of Franz Delitzsch, a Biblicist, and his son Friedrich, an Assyriologist, Jeremias was a staunch member of the Pan-Babylonian school, which maintained that the interrelationships between the cultural areas of the ancient Near East, dominated by the Babylonian civilization, decisively influenced Israel's religious development. Jeremias was the first to translate the Gilgamesh epic into German. His *Das Alte Testament im Lichte des alten Orients* (1904, 19163; Eng. tr. and enlargement from the 2nd ed. as *The Old Testament in Light of the Ancient East* (2 vols., 1911, 1916³)) posited that the Hebrews' highly advanced cultural expression was derived from the Babylonians at the beginning of biblical history. In his *Monotheistische Strömungen innerhalb der babylonischen Religion* (1904) he argued for the existence of monotheistic faith among the Babylonians as early as the third millennium B.C.E. He wrote important works on the Sumerian-Babylonian pantheon, including his important *Handbuch der altorientalischen Geisteskultur* (1913, 1929²), but his comparative studies on biblical parallels are often whimsical and lacking in evidence. He is the author of *Izdubar Nimrod, eine altbabylonische Helden-sage* (1891); *Im Kampfe um Babel und Bibel* (1903); *Die Panbabylonisten* (1907); *Das Alter der babylonischen Astronomie* (1909); *Allgemeine Religionsgeschichte* (1918, 1924²); *Die ausserbiblische Erlösererwartung* (1927).

[Zev Garber]

JEREZ DE LA FRONTERA, city in Andalusia, southwest Spain. No information is available on Jews under Muslim rule. Under Christian domination, it had an important Jewish community. Jerez was captured from the Muslims by Alfonso X of Castile in 1255. His register of the apportionment of property (*repartimiento*) there shows that in 1266 Jews owned 90 buildings given to them by the king. Among those who received properties, there were Jewish inhabitants of Toledo and other towns in northern Castile who had already received similar grants in *Seville. They included Todros *Abulafia, his son Joseph, and Judah b. Moses ha-Kohen. Several of the beneficiaries are described as *balletero* (“archer,” “guard,” “constable”). The Jewish quarter was situated near the Calle de San Cristóbal and ran parallel to the city wall. There were two synagogues, almshouses, and a house for the rabbi. The principal occupations of the Jews were commerce and viticulture, as well as the crafts customarily pursued by Jews. In 1290, the community paid an annual tax of 5,000 gold coins, a small sum in proportion to its means. The Jews of Jerez were exempted from various customs duties and enjoyed additional privileges, which were confirmed by Ferdinand IV and Alfonso XI (1332).

The community of Jerez, which then numbered 90 families, was attacked during the persecutions of 1391. Those who survived as Jews sold part of their cemetery to the Dominican monastery. The names of 49 Jews who abandoned Judaism (see *Conversos) during that period are known. The community was, however, to regain its strength. In 1438 it paid an annual tax of 10,700 maravedis in old coin. About 1460, an accusation was brought against the Jews by the monks that they had interred a Converso within the cemetery precincts. Solomon *Ibn Verga gives a description of his relative Judah ibn *Verga, one of the last Jewish tax collectors, who saved the Jews of the town by enlisting the help of the duke of Medina Sidonia. The community still paid 1,500 maravedis in 1474 and 1482. In 1481, the Inquisition in Seville sent emissaries to confiscate the property of Conversos who had fled the town. Information that the Jews were to be expelled from Andalusia reached Jerez as early as January 1483. The *corregidor* and council requested a postponement since they considered that the decree would bring about the economic ruin of the town. The Jews began to sell their property, but the municipal authorities prohibited people from buying it. The expulsion was postponed for six months. In 1484, some Jews are still mentioned as inhabitants of the town, but by 1485 the community had ceased to exist.

Several *autos-da-fé, each lasting some days, were held in Jerez in 1491 and 1492. Some *sanbenitos* (“penitential garments”) of repentant Conversos were still hanging in the parochial church of San Dionisio in the 18th century. After the Edict of Expulsion of 1492 Jews passed through Jerez on their way to exile in North Africa. In 1494, after an outbreak of plague, Christians were ordered to refuse shelter or admittance to their homes to any stranger in the town who had formerly been a Jew.

Nowadays, there is still a street called “Judería.” It is near the city wall and next to where “Puerta de Sevilla” had been. The *judería* included more streets, including San Cristóbal and Alvar López.

[Haim Beinart]

JERICHO (Heb. יְרִיחוֹ), said to be one of the oldest fortified cities in the ancient Near East. It is identified with Tell al-Sultā, near the 'Ayn al-Sultān spring (Spring of Elisha), about 1 mi. (1½ km.) N.W. of modern Jericho (Ar. Ariḥā) and 4½ mi. (7 km.) W. of the Jordan on the road leading to Jerusalem. The tel, covering an area of about 8½ acres (34 dunams) is 65 ft. (20 m.) high and 820 ft. (250 m.) below sea level. Its warm climate and abundant waters made Jericho an oasis attracting settlers from prehistoric times. In 1868 Charles Warren excavated at the site but had a negative opinion of its archaeological potential. The first systematic examination of Jericho was conducted by E. Sellin and C. Watzinger in 1901–09. Extensive excavations were subsequently carried out by J. Garstang in 1930–36 and K. Kenyon in 1952–61. Jericho was first settled sometime during the eighth millennium B.C.E. and the material remains are of the Natufian culture. One structure has been identified as a possible cult place. The dwellings were probably huts or tents of semi-nomads. Two Neolithic sub-periods are distinguished at Jericho; their main difference is the absence of pottery in the first and its appearance in the second. The pre-pottery Neolithic period (seventh millennium) is characterized by irrigation farming and the development of major communal activities represented by the building of features said to be fortifications – though whether these actually served as fortifications has recently been contested by Bar-Yosef – and curvilinear houses built of plano-convex bricks (flat with curved tops). The “fortifications” of the town consist of a stone wall, 6½ ft. (2 m.) thick, to which a stone tower was attached, 30 ft. (9 m.) high and 28 ft. (8½ m.) in diameter with an inner staircase leading to the top of the wall. For this phase radiocarbon (¹⁴C) tests of organic material established a date of 6850±210 B.C.E., i.e., between 7060 and 6640 B.C.E. Following the destruction of this town, a new one was built on its ruins and also enclosed by a stone wall erected on new foundations. Rectangular-shaped houses, of elongated mud-bricks, contained plastered floors colored red or yellow and burnished to a high polish. On several were found impressions of rush mats once spread on them. Several structures from this level may have served as public buildings or perhaps temples. Eleven building phases and 22 superimposed plastered floors were distinguished in this city. Throughout its long history, the settlers had no knowledge of the art of manufac-

turing pottery, but they possessed a highly developed standard of sculpture making. An outstanding example of their artistic skill is a flat head modeled from clay with shells inset for eyes in a unique style. Beneath the floor of one of the houses were discovered plastered human skulls with features molded into realistic human portraits. These skulls were probably connected with some cultic practice, perhaps ancestor worship. Finds such as flint sickle blades, querns, mortars and pestles, and various types of grain indicate that the occupants of this city were agriculturists. Radiocarbon (^{14}C) tests from various levels gave dates of 6520 ± 200 (6720–6320) and 5820 ± 160 (5980 – 5660 B.C.E.). In the fifth millennium, newcomers seem to have arrived at Jericho. No building remains date to this time but they brought with them a new culture – the art of manufacturing pottery. The vessels of this Neolithic period pottery are handmade and coarse, but some are finer and decorated with a red, well-burnished zigzag design. The latest pottery from this period, decorated with incised herringbone patterns, parallels the Yarmukian culture of northern Erez Israel. Judging from the many changes in the fortifications and the appearance of the remains, the Early Bronze Age (third millennium) was one of great upheaval for Jericho, and it was the scene of frequent wars and earthquakes. The walls were destroyed, repaired and rebuilt 17 times during this time. The thick walls, of unbaked bricks, built almost exactly over the Neolithic ones, had a semicircular tower. Round structures, whose purpose is unknown, were found, as well as a large rectangular tower, rectangular-shaped houses and tombs. Jericho flourished in this period and was destroyed by nomadic tribes which penetrated into Canaan in the Middle Bronze Age I (2100–1900 B.C.E.). The city was not rebuilt and the remains from this time are mainly a great number of tombs with weapons and pottery. In the Middle Bronze Age II (19th–17th centuries B.C.E.) the city again became prosperous, and it was defended by an imposing system of fortifications consisting of a huge glacis of beaten earth on the slopes of the tell and supported at its foot by a massive stone retaining wall 20 ft. (6 m.) high. Many tombs were found outside the city with rich offerings in alabaster and bronze, scarabs and jewelry, as well as wooden objects and reed mats and baskets which are rarely preserved in Israel. The city was probably destroyed by the Egyptians; from the period of the latter's rule of Canaan (15th–13th centuries) little remained at Jericho, but it is clear that the city was inhabited to a certain degree in the 13th century. This was the city that was said to have been encountered by the Israelites when they entered the Promised Land and whose conquest was essential for their advance into the interior of the country. Joshua sent two spies to investigate the city which the Bible describes as walled (Josh. 2:1). It was not captured in battle but by divine command: the Israelites were to encircle the city once a day for six days and seven times on the seventh day and then to the blare of trumpets, and at the sound of a great shout the wall of the city fell and it was burnt. The city and all that was in it were consecrated to the Lord and only Rahab, the harlot, who had hidden the messengers,

and her household were saved (Josh. 6). However, in the excavations at Jericho, no fortification was found which could be attributed to the Canaanite city captured by Joshua (see the debate between Bienkowski and Wood for different opinions). To resolve this discrepancy, some scholars suggest that the mud-brick wall was washed away by rain and erosion during the long period that it stood in ruins. Others maintain that the Canaanite city did not possess its own wall but reused the wall of the earlier city, and still others consider the biblical tradition to be an etiological story invented to explain the destruction of the earlier city. At all events, the archaeological evidence does not help establish an exact date for the Israelite conquest of Jericho. The Bible contains many references to Jericho in the Israelite period (12th–6th centuries). The city was included in the territory of Benjamin (Josh. 18:21) and, after Joshua's conquest of the city and his curse against anyone rebuilding it (Josh. 6:26), it apparently remained uninhabited as no remains from the 12th century were found. The Bible records the capture of "the city of palm-trees" by Eglon, king of Moab (Judg. 3:13). Evidence was found of a small settlement dating to the end of the period of the Judges and the beginning of the monarchy. A large public building of four rooms which was probably a royal storehouse is attributed to the tenth century B.C.E., i.e., the time of David. On their return from the Ammonite king, David's messengers remained at Jericho until their beards grew again (11 Sam. 10:5). The city was rebuilt by Hiel, the Bethelite, in the days of Ahab, and for this act he was revenged by the fulfillment of Joshua's curse (1 Kings 16:34). Some building remains from this time were found. The prophets Elijah and Elisha lived there (11 Kings 2:4, 18–22) and the Judahite prisoners captured by the Israelites in the time of Pekah were returned to the "city of palm-trees" (11 Chron. 28:15). The city expanded considerably at the end of the Israelite period (seventh, sixth centuries) but it remained unfortified and unimportant up to its destruction by the Babylonians in 587 B.C.E. The city was resettled by 345 Babylonian exiles (Neh. 7:36) and they participated in rebuilding the wall of Jerusalem (3:2). A small settlement existed there in the post-Exilic period. Jar handles inscribed "Yehud," the Aramaic name of the province of Judea under Persian rule, indicate that Jericho was included in the Judean state. On one handle, after the name "Yehud" appears "Urio"; he was apparently the official in charge of the fiscal affairs of the state. Gabinius made it the seat of one of his councils (*synhedria*) when he reorganized Judea into five districts. Archaeological remains of the Hellenistic and Roman town of Jericho have not yet been identified, but Hasmonean and Herodian palaces have been uncovered further west at Tulū'ī Abu al-'Alāyīq where Wadi al-Qilt enters the Jordan Valley. Remains of imposing structures constructed by Herod were found during excavations conducted at the site by E. Netzer between 1973 and 1983. Jericho possessed vast groves of dates and persimmons. Jericho itself was destroyed during the Jewish War (66–70 C.E.) and military installations were again built there at the time of Hadrian. Jericho continued to be occupied at

the time of the Bordeaux pilgrim (333 C.E.). In the Byzantine period Jericho moved about 1 m. (1½ km.) east to its present location. Near the city were remains of a seventh-century basilical-shaped synagogue. It was oriented toward Jerusalem and had a mosaic pavement decorated with a *menorah*, the inscription “peace on Israel,” and a memorial inscription in Aramaic.

Jericho is mentioned in the *Onomasticon* of Eusebius (fourth century) and was depicted as a flourishing city on the Madaba Map (sixth century) where the well, which supplied the ancient city with water, is shown as a church and called the “Spring of Elisha” (τὸ τ[οῦ] ἁγ[ι]οῦ Ἐλισαίου). This according to tradition was the site of the story of Elisha in the Bible (11 Kings 2:19–22) who was called upon to deal with the purification of the contaminated spring by casting a vessel with salt into the waters. According to Josephus, Elisha “went out to this spring and cast into the stream an earthen ware full of salt, and then, raising his righteous right hand to heaven and pouring propitious libations upon the ground, he besought the earth to mollify the stream and to open sweeter channels...” (Wars, 4:460–65). The spring is known today as Ayn al-Sulṭān. It seems that by the seventh century Jericho was again in ruins but Jewish refugees from the tribe of Banu *Nadir fled there from before Muhammad. A new synagogue arose on the site of the Byzantine one and the Masoretes mention a “Jericho Codex” existing there. With the Islamic conquest, a palace was built in 724 C.E. at Khirbat Mafjar nearby (“Hisham’s Palace”). Excavations in 1935 by R.W. Hamilton brought to light beautiful mosaics and carvings there. By 891 Jericho was the district capital of the Ghauer (cleft of the lower Jordan; Ya’kūbī, 113) and by the early Middle Ages was important for the production of indigo and sugarcane (Yākūt, 3:823, 913). It was captured by the Crusaders in 1099 and used by Raymond IV, count of Toulouse, as an encampment when his rival Godfrey de Bouillon gained Jerusalem. Queen Melisande endowed the whole of Jericho and its surrounding lands to her newly established convent of St. Lazarus (at Bethany) in 1147 and fortified Jericho with a tower. It was recaptured by Saladin without a struggle in 1187. The present Jericho is on the site of the Crusader town. Close by is the site of ancient *Dok, on the summit of which is the Byzantine Monastery of the Temptation (Qarantal) where Jesus was said to have fasted for forty days and nights (cf. Math. 4:1–5; hence its medieval name, Mons Quarantana). The Knights Templar built a fortress on the summit, called Castellum Dok, and the monastery was granted the tithes of Jericho city and the rights of the sugar mills in 1136. At the foot of the hill are the remains of three Crusader sugar mills (one nearly intact) which were referred to as early as 1116. They were driven by water systems originally built by Herod and repaired by the Crusaders. Nearby a Crusader building for boiling the sugar is in a good state of preservation. The town itself was practically uninhabited from then until the 19th century.

[Nachman Avigad / Shimon Gibson (2nd ed.)]

Modern Jericho

In the last two centuries, Jericho’s population figures greatly fluctuated. In 1840 the troops of the Egyptian Governor Ibrahim Pasha razed the town before leaving the country. Jericho was again destroyed in a conflagration (1871). In 1918 Allenby secured the eastern front of the allies by the capture of Jericho from the Turks. From the beginning of the 20th century, the town expanded and in the 1940s had about 3,000 inhabitants. Included in Jordanian territory after the Israel *War of Independence (1948) the town suddenly grew when camps of Arab refugees from Israel were set up there and in the vicinity. The occupation of Jericho and the nearby Jordan banks and bridges on June 7, 1967, by Israel troops practically concluded the *Six-Day War fighting on the West Bank. Along with tropical, irrigated oasis-type farming (with date palms and pomegranates prominent, to which bananas, citrus, fodder crops, and certain tropical species, were later added), winter tourism and recreation developed, particularly from the 1950s, as an additional source of income. While shortly before the Six-Day War the Jordanian authorities estimated the population of Jericho and its surroundings at a total of 80,000, the 1967 Israel census indicated 6,837 persons in the town proper, of whom over 90% were Muslims, and less than 10% (539) Christians; within the municipal confines, 1,619 lived in a refugee camp. The surrounding area contained 2,000 inhabitants. Most refugee camps were abandoned during the fighting of June 1967 and their inhabitants crossed the Jordan River. By the end of 1967, the number of inhabitants had further decreased. In 1994 it became the first West Bank town to be handed over to the *Palestinian Authority by Israel in the framework of the Declaration of Principles (see *Israel, State of, under Historical Survey), and subsequently served as a detention area for the Palestinian prisoners released to the Authority by Israel. In 1997 the population of Jericho included 14,674 residents, among them 43.6% refugees.

Two and a half mi. (4 km.) east of Jericho a 2,000-acre farm school for refugee boys and orphans was established in 1951 and directed by the Palestinian Arab leader Mūsā al-‘Alami. Its maintenance was aided by the Ford Foundation and other international bodies. The school utilized a method, developed before 1948 by the kibbutz *Bet ha-Aravah, of reducing the high salt content of the soil by flushing it with sweet water.

JEROBOAM (Heb. יֵרוֹבָאָם), first king of post-Solomonic Israel; son of Nebat and Zeruah, from the town of Zeredah in Ephraim (1 Kings 11:26). Jeroboam reigned for 22 years (14:20), approximately from 928 to 907 B.C.E. Two explanations have been offered for the meaning of his name: “[That God] will increase the number of the people”; and “he who fights the battles of the people,” a name appropriate to the fact that he led the rebellion against Rehoboam. Jeroboam, a “mighty man of valor,” whom King Solomon placed in charge of the corvée of Ephraim and Manasseh to fortify Jerusalem, “lifted up his hand against the king” (1 Kings 11:26–28). *Ahijah the Shilonite supported Jeroboam’s rebellion and promised him rule over ten tribes, as well as over people who favored political dissociation from the House of David. Details of Jeroboam’s rebellion are not reported in the Books of Kings, but it appears that it took place in the second half of Solomon’s reign. The Septuagint states that Jeroboam succeeded in conscripting 300 chariots and had his stronghold in the town of Zeredah (or Zererah). The rebellion failed and Jeroboam was forced to flee to Egypt, where he was sheltered by Pharaoh *Shishak (an account which also appears in 1 Kings 11:40 of the MT). According to the Septuagint, Shishak also gave his sister-in-law to Jeroboam in marriage and it was this union which produced a son, Abijah.

When Solomon died, Jeroboam returned from Egypt, and according to some sources he even participated in a popular meeting at Shechem and conducted, together with the elders of Israel, the negotiations with Rehoboam about the reduction of taxes (but cf. 1 Kings 12:20). When Rehoboam turned down their request, the leaders of the people – excluding those of Judah and Benjamin – proclaimed their political independence from the House of David, and appointed Jeroboam as their king. Immediately on ascending the throne, Jeroboam embarked on a series of moves aimed not only at countering the attempts by the king of Judah to reconquer the central and northern tribal territories but also at widening the breach between the two kingdoms. There is no record of Jeroboam’s activities in the administrative and military organization of his new kingdom. It is known only that he first fortified Shechem, apparently his capital, but for unknown reasons he left Shechem and built Penuel in eastern Transjordan (1 Kings 12:25), and later he possibly went to Tirzah (14:17; cf. 15:21). Jeroboam’s activities in matters of ritual are described negatively in 1 Kings 12:25–33. He made two golden calves, placing one at Dan in the north and the other at Beth-El in the south. Calf worship was not something completely new in the ritual of Israel, but rather a reintroduction of an

earlier ritualistic tradition. Dan and Beth-El were cultic holy places before the establishment of the kingdom. The *golden calf, which either served as a pedestal on which YHWH stood, or actually represented YHWH, was opposed by the writer of Exodus 32. That author composed the story of the golden calf in the wilderness (cf. 1 Kings 12:28 with Ex. 32:4) as a polemic against Jeroboam’s cultic restoration by claiming that its origins were in ancient rebellion against YHWH (Aberbach and Smolar 1967; Sperling). It must further be observed that Ahijah, who supported the rebellion, was a prophet of YHWH. Perhaps the Shiloh tradition had no problem with the use of calves in the worship of YHWH.

In the fifth year of Jeroboam’s reign, Shishak, the king of Egypt, invaded Israel. The biblical versions of Shishak’s campaign (1 Kings 14:25–28; 11 Chron. 12:2–12) recount mainly what occurred in the kingdom of Judah, but the wall engravings of the Temple of Karnak in Egypt list towns conquered by Shishak and indicate that Jeroboam’s Israel suffered most in this war. Shishak invaded the southern territory of the kingdom of Israel by way of Gezer and Gibeon, penetrated the fruitful valley of Succoth, from there he turned to the Beth-Shean and Jezreel valleys, and then returned to Egypt by way of the coastal plain. Possibly Shishak intended to demonstrate Egypt’s might and to reinstate its authority over Israel, but the adventure resulted not in Egyptian domination over the kingdoms in Palestine but merely in plunder. Archaeologists have discovered that many towns in the kingdom of Israel, such as Gezer, Beth-Shean, Taanach, and Megiddo, were destroyed during this campaign. *Abijah’s success in conquering Jeroboam’s territories in the southern part of the mountains of Ephraim (11 Chron. 13:3–19) must be understood not only against the background of Jeroboam’s weakness as a result of Shishak’s campaign, but also in light of the increasing pressure upon Israel at Aram-Damascus in the northeast and by the Philistines in the southwest. Perhaps even by Jeroboam’s time the eastern Transjordanian states had succeeded in regaining their independence by exploiting both the internal conflict between Israel and Judah and the external pressure of the Arameans and Philistines on the kingdom of Israel.

[Bustanay Oded / S. David Sperling (2nd ed.)]

In the Aggadah

Jeroboam was rewarded with royal dignity for rebuking Solomon, who closed the breaches in the walls of Jerusalem (which David had made to allow all Israel to make pilgrimages to Jerusalem on festivals.). Solomon had done this so that he could exact a toll for the benefit of Pharaoh’s daughter (Sanh. 101b). When Jeroboam himself was confronted with the temptations of power (Lev. R. 12:5), his pride and his craving for predominance unbalanced him. Realizing that continued pilgrimage to Jerusalem would place Rehoboam, king of Judah, foremost in the minds of the people, he, who had once fought for free pilgrimage to Jerusalem, now erected an “iron curtain” between the people and the Temple (TJ, Av. Zar. 1:1, 39a; Sanh. 101b.). Assisted by evil men, he succeeded in setting up the

golden calves in Dan and Beth-El, making use of his good reputation to obtain extra privileges from the Sanhedrin and full authority for all his actions, including idol worship. Jeroboam and his lackeys conducted a powerful propaganda campaign filled with distortions and historical misrepresentations, exalting the tolerance and forgiveness, the goodness and lovingkindness implicit in the religion of the calves, as opposed to the restrictions and severity of the Law of Moses (TJ, Av. Zar. and Sanh., loc. cit.). This propaganda did not deceive most of the people, however, so that when Jeroboam took his calves to all the tribes, none would accept them except that of Dan which had worshiped Micah's graven image in tribal times (Num. R. 2:10). No one would be appointed priest in the new shrines and Jeroboam was compelled to choose his priests from the dregs of the population (TJ, Av. Zar. loc. cit.). Since the decree prohibiting pilgrimages to Jerusalem was ignored by the people, Jeroboam posted guards on the borders and ordered all transgressors to be put to death (Tosef., Ta'an. 4:7; Sanh. 102a). Even these measures failed to put a stop to the pilgrimages and the king's son himself publicly disobeyed the order (MK 28b).

JEROBOAM II, son of *Joash, king of Israel (789–748 B.C.E.; see *Chronology). He was the greatest ruler of the dynasty of Jehu. It seems that his father associated him in the kingship in the last two years of his reign and that these years are included in the 41 regnal years ascribed to Jeroboam. During those two years, his father probably entrusted him with the command of the Israelite armies in their wars against *Aram-Damascus. Aram-Damascus's decline in power after the campaigns of kings Adad-Nirari III and Shalmaneser IV, the kings of Assyria, into northern and central Syria enabled Joash and his son Jeroboam not only to capture for Israel those territories which had been conquered from her near the end of the reign of Jehu and during the reign of Jehoahaz, but also to gain supremacy over non-Israelite territories which had probably come under the rule of Aram close to the time of Solomon's death. The biblical tradition relates about his war against Aram-Damascus that Jeroboam "restored the border of Israel from Lebo-Hamath unto the sea of the Arabah [i.e., the Dead Sea] in accordance with the word of the YHWH, the god of Israel ... YHWH ... delivered [Israel] through Jeroboam the son of Joash" (11 Kings 14:25–27). Jeroboam's expansion as far as Hamath in central Syria would have required Assyrian

acquiescence (Cogan and Tadmor, 163.) His victories reestablished the territorial limits attributed to *Solomon. (It is not impossible that Jeroboam's victories inspired the exaggerated claims made for Solomon). These expansionist wars probably took place in the early and middle years of Jeroboam's reign (Cogan and Tadmor, 164).

According to one opinion, the relations between Jeroboam and his other neighbors were not orderly. There is no evidence that the strained relations with Tyre, following Jehu's liquidation of the revolt of the Omri dynasty, which was allied to the kings of Tyre by marriage, ever improved. Moreover, there was no economic incentive for the renewal of relations between Tyre and Israel (see *Ahab, *Jehoshaphat, *Solomon). In addition, the relations between Israel and Judah had been complicated ever since Joash's victory over King *Amaziah of Judah on the battlefield and the destruction of a section of Jerusalem's fortifications after his victory. In the meantime Judah had gained in strength during the reign of *Uzziah, especially during the period of *Jotham's regency. It also seems that Judah conquered Rabbath Ammon and even gained control over the southern part of the King's Highway in Transjordan by which commerce was led from southern Arabia to Syria and Mesopotamia. *Pekah son of Remaliah, who was a Gileadite and governor of Transjordan under Jeroboam, had gained control of Transjordan as early as in the reign of Jeroboam. This division of Israel was desired by Aram and Judah, and they probably incited Pekah in this direction. According to other opinions, there were peaceful relations between Israel and Judah – hence the prosperity of Judah and the beginning of its political and military importance. Some argue that extensive cooperation between the two kingdoms can also be proved from the combined census carried out on the territory east of the Jordan (1 Chron. 5:17). But while not chronologically impossible, the Chronicles passage is historically dubious (Japhet, 137–38). It would seem that the signs of prosperity increased with the influence over these widespread territories. The king distributed the lands among his loyal friends and favorites, and this probably spawned a wealthy class of landowners in Transjordan and other places against whom the prophet *Amos protested. According to the testimony of Amaziah the priest in Amos 7:11 (cf. Amos 7:9), the prophet prophesied (inaccurately, it turns out) that Jeroboam would die by the sword. The Book of Amos gives us an insight into the social and economic conditions during the reign of Jeroboam.

From the limited information given in the Bible, it seems that Jeroboam II was a gifted commander and an able organizer who succeeded in elevating the kingdom of Israel to a last climax before its fall. In the tradition of the Judahite redactors of the northern sources preserved in the Bible, Jeroboam is adjudged a king who "departed not from all the sins that Jeroboam, the son of Nebat, made Israel to sin" (11 Kings 14:24). However, his loyalty to YHWH can be deduced not only from the name of his son Zechariah (Heb. "Remembered by YHWH") but also from the prophecies of "the prophet Jonah

son of Amittai of Gath-Hepher" (*ibid.*, 14:25), who encouraged Jeroboam in his wars and prophesied his victory. It is unfortunate that these prophecies are not preserved. A stamp seal depicting a lion and reading *lšm' 'bd yrb'm*, "Property of Shema, servant of Jeroboam," was found at Megiddo (Cogan and Tadmor, pl. 12a).

JEROHAM BEN MESHULLAM (c. 1290–1350), Spanish talmudist. Born in Provence, he was a victim of the expulsion of the Jews from France in 1306, and wandered in various countries until he arrived in Toledo, Spain, where, living in utter poverty, he continued his studies under *Asher b. Jehiel (the *Rosh*), and Abraham b. Moses Ismail, a pupil of Solomon b. Abraham *Adret. In his first known work, the *Sefer Mesharim*, on civil law, Jeroham arranged the relevant laws according to their subjects, noted their sources and origins in the Talmud, and collected the decisions of many scholars. He was meticulous in arranging his work in such a way that "any man, whether a great scholar or a minor student, might easily find any law that he wished." Jeroham states, "After my friends saw its usefulness, they pressed me to compose a similar work relating to the positive and negative commandments, and I yielded to their entreaties." He then composed his second book, *Toledot Adam ve-Havvah*, which he arranged according to the cycle of human life, from birth to death. The section on Adam runs from birth until marriage; the section on Eve from marriage until death. Jeroham quotes the opinions of leading scholars of France, Spain, and Provence, and transmits the customs of various communities and countries. Jeroham's works enjoyed only brief popularity, being superseded by the *Arba'ah Turim*, the superior work of his friend and contemporary, *Jacob b. Asher. Jeroham's two works were printed for the first time in Constantinople in 1516, and thereafter there was a certain revival of interest in them. The foremost legal authorities of the 16th century, Joseph *Caro, Samuel de *Medina, and others, quoted him extensively. The few editions of the book are all based upon the *editio princeps* which was printed from a very corrupt manuscript, and therefore was not much used by students. Very few commentaries were composed to it; for those that were, legend had it that either the commentator died prematurely or the commentary was lost. The *Maggid (heavenly mentor) who spoke to Joseph Caro called him Jeroham Temiri ("Jeroham the Secret"). The work entitled *Issur ve-Hetter*, published in 1882 by Jacob Abukara, was erroneously ascribed to Jeroham.

[Israel Moses Ta-Shma]

***JEROME (Eusebius Sophronius Hieronymus; 342–420)**, Latin Church Father, born to Christian parents in Stridon, Dalmatia, and sent by them to study in Rome. In Gaul, where he lived a life of pleasure after completing his studies, he was overcome by thoughts of repentance; he decided to pursue an ascetic life and joined a group of ascetics in Aquileia. In 374 he decided to go to Jerusalem, but on his way he became ill in Antioch and stayed there. For three years (375–378) he lived the life of a hermit in the desert of Chalcis. There he met an apostate Jew and with his help began to learn Hebrew. He then returned to Antioch where he was ordained priest. He proceeded from there to Constantinople where he met Gregory of Nazianzus (c. 325–389) and heard his discourses on the exegesis of the Bible. From 382 to 385 he lived in Rome and served as secretary to Pope Damasus I.

During his stay in Constantinople he was engaged in translating the *Chronicon* of *Eusebius into Latin, as well as supplementing it and lengthening it to cover the period from the 20th year of Constantine to the death of Valens in 378. The adaptation is frequently slipshod and inexact. His translation of this work, which included dates of events from Abraham onward, served as the basis for all the chronography of the Middle Ages in the West and also had a direct or indirect influence upon medieval Hebrew authors. In 386 he settled in *Bethlehem, where he directed a monastery and devoted his time to study. He obtained money to found the monastery from one of his female followers in Rome, Paula, who traveled with several friends to Bethlehem, where she founded three nunneries. In Bethlehem Jerome continued his study of the Hebrew language, which he had previously studied in Syria. He had several Jewish teachers: one came from Lydda, and the second, named Bar-Ḥanina, came from Tiberias. Out of fear of the Jews, the latter was sometimes compelled, according to Jerome, to visit him at night, and at times he even sent another Jew, named Nicodemus, to take his place. At that time the Jews derided gentiles who could not pronounce the pharyngeals properly. Jerome, however, attained such a degree of proficiency in his pronunciation of Hebrew that the transcriptions of Hebrew words in his writings are important for knowledge of Hebrew pronunciation at that time.

The study of Hebrew prepared Jerome for his important work – a Latin translation of the Bible from the original (see *Bible, Latin Translations). This translation, together with his translation of the New Testament from Greek to Latin, was accepted as the official version of the Scriptures in the Catholic Church, and is known as the Vulgate from its Latin name, *Vulgata*. He translated the Book of Psalms three times. The first time, he translated it from the Greek, and this translation was taken into the Catholic liturgy. His second translation was included in the conventional version of the Vulgate, based on the work of Origen (c. 182–251), who had collated the Septuagint with the Hebrew version. Finally, when he translated the Bible from Hebrew, he once more translated the Book of Psalms, a translation which did not gain admission either into the official Christian text of the Scriptures or into Christian

worship. Jerome also made various translations of the Books of Judith and Tobit from an Aramaic version that has since disappeared and of the additions in the Greek translation of Daniel. He did not regard as canonical works the Books of Ben Sira and Baruch, the Epistle of Jeremy, the first two Books of the Maccabees, the third and fourth Books of Ezra, and the additions to the Book of Esther in the Septuagint. The Latin translations of these works in present-day editions of the Vulgate are not from his pen.

The translation of the Bible met with complaints from conservative circles of the Catholic Church. His opponents labeled him a falsifier and a profaner of God, claiming that through his translations he had abrogated the sacred traditions of the Church and followed the Jews: among other things, they invoked the story that the Septuagint had been translated in a miraculous manner. Jerome, however, rejected the story as legend. Despite the opposition which the new translation aroused in the ancient period (an opposition also supported by Augustine), on the one hand, and the unfavorable criticism directed against it by many humanists and participants in the Reformation, on the other, the Council of Trent (16th century) declared the Vulgate to be an authentic version. This today means only that the Vulgate is authentic from the judicial, but not from the critical point of view. In addition to translating the Bible, Jerome composed commentaries on it. His commentaries were the basis of medieval Christian biblical exegesis, and even Jewish exegetes occasionally quote him. The commentaries contain much exegetic material that Jerome received from his Jewish teachers, including several Midrashim that have been lost. He makes use of both the plain meaning and homiletical exegesis in his commentaries. In his commentary to the Book of Daniel (c. 407) he rejects the claim of Porphyry (347–420) that it is not prophetic but reflects the historical situation that existed at the time of the decrees of *Antiochus. The first of Jerome's Hebrew studies appears in *Quaestiones hebraicae in Genesim* in which he collates Christian exegesis with the Hebrew text. His *Liber interpretationis nominum hebraicorum* is apparently based upon the *Onomasticon* of Origen, which has since disappeared. This dictionary of personal names occurring in the Bible and the New Testament is arranged in the order of the Holy Scriptures, and in each book the names are cited in alphabetical order. The translations of the names, however, are not always correct.

During his visits to Palestine in about 373 and in the winter of 385 and after he settled there permanently in 386, Jerome familiarized himself with the country and also learned much about it from his Jewish teachers. His major work on the topography of Palestine is *De situ et nominibus locorum hebraicorum* (c. 390), an adapted Latin translation of the *Onomasticon* of Eusebius. The translation supplements the source with much material that appeared in the fifth century, mainly in connection with the erection of churches in numerous holy places, such as Beth-El and Shiloh. Jerome also corrected what he viewed as inaccurate, e.g., the location of Bet Annava. Topographical material also appears in his various letters, es-

pecially in letter no. 108, a eulogy on the death of his friend Paula. In it, Jerome describes her travels in Palestine and takes advantage of the opportunity to mention many biblical sites, describing their condition at the time. The letter that he wrote after the death of Eustochium, the daughter of Paula, serves as a supplement to this description. In his comprehensive commentaries on the books of the Bible, Jerome cites many Jewish traditions concerning the location of sites mentioned in the Bible. Some of his views are erroneous, however (such as his explanation of the word *appadno* (אֲפַדְנוֹ), in Dan. 11:45, which he thought was a place-name).

Jerome was regularly in contact with Jews, but his attitude toward them and the law of Israel was the one that was prevalent among the members of the Church in his generation. He had a completely negative attitude toward the observances of both the early Christians and the Jews who converted to Christianity. This attitude was in contrast to that of Augustine, who was more tolerant in this matter, since in the eyes of Christians, the Torah preceded Christianity. The correspondence between Augustine and Jerome testifies that Augustine, as a theologian, was incapable of understanding the importance of Jerome's translations. On the other hand, Jerome was apparently incapable of original thought in the sphere of theology. One letter attributed to him (no. 19) that deals with circumcision and another (no. 149) that discusses the Jewish festivals were not compiled by him. One of Jerome's works that had a great influence on medieval Christian literature was *De viris illustribus*, which was compiled in Bethlehem in 392. Suetonius had published a book of the same name in about 113, dealing with the great Latin writers. Jerome's work dealt with 135 Christian literary personalities: he commences with Peter and ends with his own literary activity. He also discusses Philo, Josephus, and Justus of Tiberias, who were writers with both sectarian and Jewish backgrounds. The book contains errors and inaccuracies, but important information has also been preserved in it.

HISTORY

Name

The first mention of the city of Jerusalem is in the Egyptian Execration Texts of the 19th–18th centuries B.C.E. The name is spelled *wš mm* and was probably pronounced “*rushalimum*.” In the Tell el-Amarna letters of the 14th century B.C.E., it is written *Urusalim*, and in Assyrian *Ursalimmu* (Sennacherib inscription). In the Bible it is usually spelled *yrushlm* and sometimes *yrushlym* (pronounced “Yerushalayim”). The city of Salem (Gen. 14:18; Ps. 76:3) is evidently Jerusalem. The Greek *Hierosolyma* reflects the “holiness” (*hieros*, “holy”) of the city. It seems that the original name was *Irusalem*, and the meaning of the two words composing it is “to found” (“*jarah*”) and the name of the West Semitic god Shulmanu, or Shalim. The god may have been considered the patron of the city, which had contained a sanctuary in his honor. The popular later midrashic explanation of the name Jerusalem as “foundation of peace (*shalom*)” is associated with the poetic appellations given to the city.

The name *Jebus is that of the Jebusite people living in Jerusalem at the time of the conquest of Canaan by the Israelites, and the city was so designated until its occupation by King *David. The name Zion, whose meaning is not known,

at first signified a part of the Jebusite city, probably the king’s fortress – the “Stronghold of Zion” (II Sam. 5:7; I Chron. 11:5). King David called this part “David’s City” (“*Ir David*”), which at first indicated the fortress (II Sam. 5:9; I Chron. 11:7). With the passage of time, both names became synonyms for the entire city. Jerusalem has many names of admiration and reverence given by the Prophets and later Hebrew poets: “The City,” “God’s City,” the “Holy City,” the “City of Justice,” the “Faithful City,” the “City of Peace,” the “Beautiful City,” etc.

Following the suppression of the Bar Kokhba revolt in 135 C.E., a new town was founded and it was renamed Aelia Capitolina after the family of Hadrian (Publius Aelius Hadrianus) and the patron gods of the city – the Capitoline triad of Jupiter, Juno, and Minerva. With the Muslim conquest in 638 C.E. the city continued to be known by its Roman-Byzantine name “Aelia,” but later, from the Fatimid period onwards, the city was referred to as Bayt al-Maqdis (the “holy house,” or the “temple”), and from the 10th century as al-Quds (the “holy”).

[Samuel Abramsky / Shimon Gibson (2nd ed.)]

Protohistory

The earliest evidence of the existence of man in the area of Jerusalem is from the prehistoric periods. Scatters of Upper Acheulean flint implements of Lower Palaeolithic age have been found in the area of Baqa’ and the Rephaim Valley (mainly handaxes and flakes) to the southwest of the city, and in Sheikh Jarrah and on Mount Scopus to the north of the city. Epi-Palaeolithic implements have also been identified in the area of the “City of David.” Neolithic sites are also known from the vicinity of Jerusalem, notably at Abu Ghosh and Motza to the west. Chalcolithic pottery was discovered during excavations in the area of the “City of David” attesting to the importance of its spring of water from very early times. Chalcolithic sites are known in the vicinity of Jerusalem (e.g., Khirbet es-Saumaa which was investigated by Nasrallah in 1936), as well as in the Judean Desert to the east and close to Bethlehem to the south, but the first proper excavation of a Chalcolithic site was made at Sataf, west of Jerusalem, in 1989.

The Bronze Age

Jerusalem emerged into the full light of history together with many other ancient cities of Canaan in the Early Bronze Age. It was one in a series of towns settled on the north-south watershed road in the central highland region. Its natural advantages were restricted; its territory probably extended over only a limited area of land. The small Early Bronze Age II settlement (a hamlet or village) was situated on the lower southwestern hill of Jerusalem, close to the spring of Gihon. Excavations have brought to light fragmentary rectangular houses and pottery. Jerusalem is mentioned as a Canaanite city-state in the Execration Texts of the 20th–19th centuries B.C.E. In the earlier group of these texts, two kings, spelled *Yqr’im* and *Šš’n*, are mentioned; one more ruler appears in the later group, but his name (*Ba...*) is largely illegible. More information about this period, the age of the Patriarchs, is ob-

tained from the Bible. In Genesis 14:18, *Melchizedek, king of Salem [= Jerusalem], appears as priest of the “Most High” – in Hebrew *El Elyon*, a well-known Canaanite deity. Early Jerusalem, in common with many other cities in the Orient, was regarded as the property of a god whose vice regent on earth was its priest-king. This theocratic dynasty, the members of which bore an individual name combined with *zedek*, reappears in the time of Joshua, when *Adoni-Zedek was king of Jerusalem (Josh. 10: 1).

More information about Jerusalem in the Late Bronze Age is available in the El-Amarna letters of the 14th century B.C.E. Its ruler at the time was ARAD *Heb/pa*; the latter (*Heb/pa*) is the name of a Horite goddess and the ruler’s name was pronounced either *Abdi Heb/pa* or *Puti Hip/ba*. In one of his letters to Pharaoh, the king complains bitterly of the Egyptian garrison of Kaši (Cushite?) soldiers in the city and of the growing dangers from the *Ḥabiru (Hebrew?) invaders, with whom he and other kings loyal to Pharaoh were struggling. In the book of Joshua (10:1ff.), the king of Jerusalem was the head of the coalition of Amorite kings which fought against Joshua at Gibeon. He was defeated and killed, but his city was not conquered; although the tribe of Judah seems to have taken it temporarily (Judg. 1:8), they could not hold it. The division of Canaan into tribal lots assigned Jerusalem to Benjamin (Josh. 15:8; 18: 16) but it remained a Jebusite (not an Amorite) city until the time of David (Judg. 19:11–12), thus cutting the Israelite territory in two and separating the central tribes from the southern ones.

The topography and appearance of the Early and Late Bronze Age cities have still not been clarified, even though archaeological research has been going on in and around Jerusalem for more than a century. Scholars agree that the earliest city was situated on the eastern slope of the southeastern hill. The only spring in this area, the Gihon, was obviously the deciding factor in the location of the early city. New excavations have brought to light important fortifications from the Middle Bronze II on the eastern slope and around the Gihon Spring, including walls and towers. It appears that the hewing of tunnels to channel water had already been undertaken at this early stage. The narrow ridge in the southern part of the hill must have given Canaanite Jerusalem a good defensive position; the only weak spot was the narrow northern saddle, and it was here that the city wall was probably made strongest. In addition to walls, foundations, and water-supply installations, a series of tomb-caves, dated by their finds (mainly pottery) to the period from the Early Bronze to the Middle Bronze Age, have also been found. To the north of the city the presence of a fragment of an Egyptian stele and a libation slab may attest to the presence of Egyptians in the vicinity of Jerusalem. The appearance and size of the Late Bronze Age settlement (town or hamlet) has been much debated amongst scholars, and very few finds have been attributed to this pre-Davidic stage. One important discovery in the area of the “City of David” was that of architectural terracing (in Area G).

David and First Temple Period

CONQUEST BY DAVID. The story of David’s conquest of Jerusalem is told in II Samuel 5:6ff. and I Chronicles 11:4ff. Having unified the tribes under his rule, David wanted to eliminate the foreign enclave of Jebusites that divided his own tribe of Judah from the rest of Israel. At the same time, he hoped that by taking Jerusalem – which was practically outside the various tribal areas – he would create a national capital and thus avoid inter-tribal jealousies. The capture itself was effected with surprising ease through a stratagem involving only “the king and his men,” i.e., the standing forces and not the general levy of the Israelites; therefore, no one could dispute the royal possession of the conquered city. Opinions differ about both the recorded story of the Jebusites’ parading their blind and lame on the walls and the stratagem that led to the conquest. It seems that the parade of the deformed may have been a magic rite, intended to arouse fear in the enemy. On the other hand, the new excavations show that a water system with tunnels was already in existence since the Middle Bronze Age, so it is not unlikely that it may have been the *zinnor*, or “gutter” (II Sam. 5:8), by which Joab and his men were able to scale and take the Jebusite settlement by surprise, penetrating behind its wall. David did not exterminate the vanquished locals; on the contrary, they seem to have been assigned certain administrative functions. *Araunah, who sold David the threshing floor outside the north wall of Jerusalem, where the Temple was to stand, may have been the last king of Jebusite Jerusalem (II Sam. 24:18–25). Having captured the city and defended it successfully against the Philistine assaults, David could establish it as “David’s city” and the capital of the United Monarchy. By transferring the Ark of God there from its temporary abode at Kiriath-Jearim, he transformed Jerusalem from a Canaanite hamlet into a town sacred to God, the religious, as well as the political, center of Israel, the successor to Shiloh. It was due to this act that Jerusalem became the chief city of the Land of Israel (a position which neither its geographical nor its economic advantages seemed to warrant) and was frequently so throughout the ages.

According to the Bible, David’s building work in Jerusalem was mainly of a utilitarian nature. He fortified the town and rebuilt the Jebusite citadel called “Zion.” He may also have prepared for the extension of the city northwards by widening the saddle to the north by a massive “filling” (Millo) operation. The position of the Citadel is disputed: it may have stood at the northern and most threatened end of the City of David – some scholars believe that the stepped-stone structure uncovered in this area was connected to this citadel – or at its safest, southern end. David also built a house for his “mighty men” (his guards), probably with an armory adjoining, and prepared a dynastic tomb within the city according to royal custom (all other inhabitants were buried outside the walls). It has been claimed that rock-hewn chambers discovered on the eastern ridge in 1914 by R. Weill may have had something to do with this tomb. David inherited from the Canaanite rulers the “king’s vale,” a tract of fertile land close to the junction

of the Kidron and Ben Hinnom Valleys, which was irrigated from the surplus water of the Gihon Spring.

UNDER SOLOMON. Under Solomon the economic advantages of Jerusalem as the center of the Israelite empire became evident. Caravans from the Euphrates to Egypt could be directed through the royal capital, while for the Phoenician trade with Elath, the Red Sea, and Ophir a passage through Jerusalem was actually the shortest route possible. Additional factors in the rapid development of the city were the establishment of the royal stores, fed by contributions from the 12 districts into which Israel was divided, as well as of the headquarters of the royal merchants. Moreover, the presence of a chariot force, foreign guards, and a sumptuous court, including a harem, also contributed to its growth. The cosmopolitan character of the city at that period was emphasized by the construction, on a hill outside the city, of sanctuaries to foreign gods, which was later accounted as one of Solomon's sins.

The construction of the First Temple and the adjoining royal palace by Solomon gave Jerusalem a unique character, a combination of a holy city with a royal city. The Temple (erected on the summit of the eastern hill just north of the royal palace), although small in dimensions, was famous for its costly materials and technical perfection. It was included in the circuit of the city walls by an extension northward, which brought Jerusalem on the eastern hill to another saddle. It is possible that at that time the saddle was already fortified by towers, later known as the Tower of Hammeah and the Tower of Hananel (Neh. 12:39). The royal palace, the largest building in the city, occupied the entire span between the two valleys, north of David's city. Besides the throne room and the House of the Forest of Lebanon (guard and chariotry quarters), it had an inner court of women; attached to it was the special palace on the Millo, which housed the princess of Egypt, politically Solomon's most important spouse. No archaeological remains have survived that could be interpreted as representing the First Temple or royal palace from the time of Solomon.

UNDER THE KINGS OF JUDAH. When the United Monarchy split in about 930 B.C.E., after Solomon's death, Jerusalem remained the seat of the Davidic dynasty and the capital of the smaller Kingdom of Judah. This territorial decline was accompanied by a corresponding one in economic life. Shishak (Sheshonq), king of Egypt, did not take Jerusalem during his invasion of Judah (c. 925 B.C.E.), but the ransom paid to avoid capture further impoverished the city. Jerusalem derived one advantage from the split between Israel and Judah: many priests and levites, expelled from the Northern Kingdom by Jeroboam, returned to Judah and Jerusalem and "strengthened the Kingdom of Judah" (II Chron. 11:13–17). The situation remained unchanged until the reign of Omri, king of Israel (ninth century B.C.E.), when peace was made with the Northern Kingdom and the trade routes opened. Foreign influence followed in the wake of the alliance with Israel; in the days of Queen Athaliah, Jerusalem was the center of a revived Baalism. The coup d'état carried out by the high priest

Jehoiada (II Kings 11) put an end to such backslidings. In the reign of Amaziah (798–785 B.C.E.), Jerusalem was captured by King Jehoash of Israel, who broke down 400 cubits of its northern wall. Uzziah, who remained true to the alliance with Israel, repaired the breach and strengthened the walls: "And he made in Jerusalem engines, invented by skillful men, to be on the towers and upon the corners wherewith to shoot arrows and great stones" (II Chron. 26:15). It was in the time of Uzziah that the voice of the prophet Isaiah was heard in the city, making it the center not only of Temple worship but also of moral and social regeneration (Isa. 1:1).

Uzziah's successor, Ahaz, attempted to curry favor with Assyria by building an altar in the Assyrian fashion and encouraging Babylonian astral cults in Jerusalem. His son Hezekiah, counseled by Isaiah, prevailed against Assyrian influences. During his reign the Temple was purified and repaired (a prior repair was made under Joash). In anticipation of an Assyrian assault, Hezekiah reinforced the walls of Jerusalem and included in the city part of the Western Hill, the *Mishneh* (II Kings 22:14), or "second" Jerusalem, which was already settled in his time. Remains of fortifications have been uncovered on the Western Hill of Jerusalem, and some of these may represent the "other wall" built by Hezekiah (II Chron. 32:5). He also cut the famous tunnel under David's city, through which the waters of the Gihon flowed to the Pool of Solomon. The Assyrian army under Sennacherib did indeed besiege Jerusalem in 701 B.C.E., but some kind of disaster in the Assyrian camp forced Sennacherib to agree to a treaty with Hezekiah, which left Jerusalem safe. Hezekiah was the last king buried in the Davidic tomb, in its upper passage. His son Manasseh built, according to II Kings, altars to the "host of Heaven" and the Baalim (21: 3–5, 7). The Chronicler adds the story of Manasseh's captivity and repentance, after which he removed all the pagan altars and idols he had set up and "restored the altar of the Lord" (II Chron. 33:15–16). He was then able to add to the walls of Jerusalem and to strengthen them in many directions (II Chron. 33:14). Of the brief reign of Amon, who followed Manasseh, nothing of note for the history of Jerusalem was recorded.

Under King Josiah, Jerusalem returned to its historical religious function. After the fall of both the Northern Kingdom of Israel and Assyria, it again became the spiritual focus of the entire remnant of the nation. After Josiah's death in the battle of Megiddo (609 B.C.E.), his weak successors vacillated between Egypt and Babylon. After the brief reign of Jehoahaz, Jehoiakim came to the throne as a tool of Egypt; compelled to submit to the Babylonians, he soon rebelled but did not live to see the subsequent events leading to the surrender of Jerusalem. As early as 597 B.C.E., when Nebuchadnezzar, king of Babylon, approached Jerusalem, King Jehoiachin, together with his queen, ministers, and servants, came out and surrendered; Nebuchadnezzar crowned Zedekiah king, who was the last king of Judah. Ten years later the Babylonian army laid siege to the city and captured it after several months. The Babylonian captain Nebuzaradan exiled most of the inhabitants:

“And he burnt the house of the Lord, and the king’s house, and all the houses of Jerusalem, and every great man’s house burnt he with fire” (11 Kings 25:9). This disaster, of which the prophets Jeremiah and Ezekiel had given ample warning, left Jerusalem desolate for over 50 years.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Second Temple Period

RETURN TO ZION. The destruction of Jerusalem by the Babylonians (587/586 B.C.E.) decimated its population, and it remained desolate for five decades. Its ruins represented the decline of Judah. Nevertheless, the Jewish people remained firm in their faith in Jerusalem, which was identified with their common history and their hope for national redemption. Psalms 137:5–6, uttered in Babylonian exile, “If I forget thee, O Jerusalem, Let my right hand forget her cunning...” is a moving expression of this hope.

In 536 B.C.E., after the fall of Babylon, Cyrus, king of Persia, who became the overlord of Judah, issued his famous declaration, which allowed those desiring to return to Zion to do so and to rebuild the Temple (see *Exile, Babylonian). The resettlement of the city and the rebuilding of the Temple were effected very gradually, as the surrounding nations were hostile to this activity. Only under Darius I in 515 B.C.E. did *Zerubbabel, the governor, and Joshua, son of the high priest Jehozadak, succeed in completing the Second Temple. The city remained almost empty, however; its walls were breached and its gates were burned down. In 445 B.C.E. *Nehemiah, son of Hacaliah, an important official at the court of King *Artaxerxes, moved by reports of the miserable conditions in the Holy City, decided to leave the court and go to Jerusalem. He was appointed governor of Judah and was mainly responsible for the rebuilding of the city. He organized the inhabitants of Judah and took security precautions necessitated by the bitter opposition of its neighbors, especially the Samaritans. First he repaired the wall, following its restricted course in the period of the monarchy around David’s City: “They that builded the wall and they that bore burdens laded themselves, every one with one of his hands wrought in the work, and with the other held his weapon” (Neh. 4:11). He then took steps to populate the city by commanding the nobles and one tenth of the rural population of Judah to settle there. He decreed an annual tax of a third of a shekel for the maintenance of the Temple. He suppressed the Tyrian trading market set up outside the city on the Sabbath, erected a strong fortress (the *birah*) north of the Temple, posted guards on the gates, and provided for the security of the city.

It was *Ezra the Scribe who was responsible for the restoration of the authority of the Mosaic Law and for making Jerusalem the undisputed religious center of Judaism. The rest of the Persian period is wrapped in obscurity. The many jar-handle inscriptions reading “Jerusalem” or “the city” show that it was an important administrative and fiscal center.

HELLENISTIC PERIOD. Jerusalem submitted peacefully, with the rest of Judah, to Alexander the Great (332 B.C.E.), who

confirmed the privileges of the city. The visit of the king as reported by Josephus, however, seems legendary. After the death of Alexander (323 B.C.E.), the city suffered as a result of a series of wars for succession. *Ptolemy I, king of Egypt, seized it and deported a part of its population (according to a Greek historian, the conquest was made possible because the Jews would not go out to fight on the Sabbath). With the stabilization of Ptolemaic rule (301 B.C.E.), however, the relationship between Judah and Egypt improved, and a period of prosperity ensued. Judah had broad autonomy in domestic affairs and Jerusalem continued to be its administrative center. At the head of the administration were the high priests, descendants of Joshua, son of Jehozadak, and the Council of Elders, which bore the Greek name of *Gerousia*. The high priest was not only the religious head of Jerusalem and Judah but also its political and administrative leader. The *Gerousia*, despite its Greek name, was a direct continuation of the Council of Elders of the Persian times. It was composed not only of Jerusalemites, but also of heads of clans from provincial towns. The Temple was the center of the religious and social life of Jerusalem. Due to its presence, many priests (*kohanim*) lived there and formed a very important social class. A new class, that of the scribes (interpreters of the law), began to develop. In addition to the priestly families and the scribes, a number of noble families came into prominence. Among them was the House of Tobiah, which had extensive land holdings in Transjordan and grew rich from tax farming. These aristocratic families developed close ties with the royal court and the gentile noble families in the empire and thus came under the sway of the Hellenistic way of life.

The Seleucid conquest in 198 B.C.E. was welcomed by the Jews. They helped besiege the Egyptian garrison in the Citadel and were consequently compensated by Antiochus III. A new charter was granted confirming the right of the Jews to live by the “laws of their fathers.” The population was exempted from taxes for three years, and the priests and scribes were exempted in perpetuity. In addition, the king forbade the bringing of unclean animals and even the skins thereof into the city. On the surface the situation in Jerusalem seemed to remain as it had been under the Ptolemies as far as its administration, the character of its institutions, and social conditions were concerned. In reality, however, the Hellenization of the upper strata of the society was intensified. The priests and the secular leaders came closer in their thinking and way of life to the corresponding classes among the non-Jews, and the Hellenistic influence seeped down to the lower classes. The leaders of the pro-Hellenistic movement who wanted radical changes were the houses of Tobiah and Bilgah. The traditionalists were headed by the high priest, Onias III, but even in his family there was a rift: his brother, *Jason, leaned towards the Hellenizers. The struggle became more and more polarized due to the general political situation and the financial crisis that resulted from the defeat of the Seleucid empire by Rome. The king strove to regain his power by aggrandizement of the cities in accordance with the Hellenistic tradition of the polis.

The official in charge of the Temple, Simeon of the house of Bilgah, made an effort to limit the powers of the high priest *Onias in the administration of the Temple, as well as in the economic life of the city. When his attempt failed, he turned to the Syrian governor and asked for his intervention. He pointed out that sums of money far beyond that required for ritual sacrifices were known to be in the Temple, and should, by right, be given over to the king's government. Thereupon, the king sent Heliodorus, his chief minister, to investigate. Onias opposed this move vigorously, pointing out that the monies did not belong to the Temple but were sums deposited there for safekeeping, and Heliodorus failed in his mission. Although there is no reason to believe that the king intended to harm the Temple or to intervene in religious affairs, the episode left a sediment of mistrust toward his government. Simeon continued in his attempts. There were riots in the streets of Jerusalem and Onias was compelled to ask the help of the government to maintain order.

In 175 B.C.E., with the ascent to the throne of *Antiochus IV Epiphanes, significant changes began to take place. His reign was marked by most energetic steps to Hellenize the empire. Antiochus indicated interest in the affairs of Jerusalem, and Jason seized the opportunity to convince the king to put him in the place of his brother, Onias III, as the high priest. Jason promised the king a considerable increase in taxes, as well as a large tribute, in return for his permission to make changes in the governing of the city. The two major reforms made by Jason, with the full support of the king, were the building of a gymnasium in Jerusalem and the change of the Jewish city into a Hellenistic polis (one of the many in the empire) to be known as Antioch.

The establishment under the Temple fortress of the gymnasium changed the whole spiritual and social atmosphere. It began to rival the Temple as the social center, especially among the young priests and laymen. This was a grievous blow to the traditionalists, particularly as, according to Greek tradition, the gymnasium was under the patronage of the gods Hermes and Hercules. The author of II Maccabees describes with great bitterness how, on a given signal, the priests left the Temple in order to view the games. The conversion of Jerusalem into a polis required a new census, which gave Jason and his supporters the opportunity to make changes in the register of citizens. Jason did not do away with the existing system of administration, and the traditional *Gerousia* continued to function together with the high priest. As the head of Jerusalem and Judah, he followed the line of the house of Tobiah, endeavoring to integrate the city into the general cultural and social life of the empire. Delegates from Antioch-Jerusalem were sent to Tyre to represent the city at the games in honor of Hercules.

Jason did not remain high priest for long; it seems that the king did not consider him sufficiently loyal. *Menelaus, an ardent Hellenizer of the house of Bilgah, was appointed in his place. He purchased his position for a high price, and a new chapter began in the relations between the Seleucid em-

pire and Judah. The high priest, who had heretofore represented the interests of the Jews in the king's court, was now made an official of the administration. Menelaus was unable to fulfill his financial obligations to the king and was called to appear before him. His brother Lysimachus was left in charge and immediately availed himself of the opportunity to rob the Temple's treasury. Consequently, a revolt broke out against the rule of Menelaus in which Lysimachus was killed. The three members of the *Gerousia* who were sent to complain to the king against Menelaus were put to death, and the latter continued to enjoy the support of Antiochus.

Upon the return of the king from his first war in Egypt in 169 B.C.E., he visited the city and took away with him the golden altar, the candelabra, and other gold and silver objects found in the Temple. In the following year, when the king was again at war in Egypt, the rumor spread that Antiochus had died. At this point, the deposed Jason, at the head of a force of 1,000 men, broke into the city and gained control of all but the fortress in which Menelaus and his supporters and the permanent garrison defended themselves. On his way back from Egypt, the king seized Jerusalem, constructed a fortress, the *Acra, in a dominant position opposite the Temple, and stationed a garrison there. In 167 B.C.E. Antiochus issued decrees against the Jewish religion that were carried out with special severity in Jerusalem. The Temple was desecrated; its treasures were confiscated. Antiochus converted it into a shrine dedicated to the god Dionysus and ordered the erection of a huge temple of his favorite god, Zeus Olympius. Opponents of Antiochus' policy fled the city, while a Seleucid garrison and the Hellenizers remained in Jerusalem. All around, the countryside rebelled.

HASMONEAN PERIOD. The revolt led by *Judah Maccabee aimed at the purification of Jerusalem and the attainment of autonomy. The city was out of reach of the Jewish insurgents; however, they set up a successful blockade around the city and were able to beat back four successive attempts to relieve the Seleucid garrison. After the fourth victory of Judah in battle near Beth-Zur, they were able to reoccupy the Temple Mount, cleanse the Temple of pagan objects, rebuild the altar, and resume the sacrifices in December 164 B.C.E. Since that time Jews have observed the Feast of Dedication, or *Hanukkah, in memory of this occasion. After the death of Antiochus IV, his successor granted the Jews religious freedom and appointed a new high priest, Eliakim (Alkimos). The Temple walls were breached with the help of traitors, and Judah was forced to leave Jerusalem. After the death of Judah in battle (160 B.C.E.), his brothers, Jonathan and Simeon, had to operate from outside Jerusalem.

Due to the continuous conflicts and intrigues in the Seleucid empire, it became possible for the Hasmonians to return to Jerusalem several years later. In 152 B.C.E. Jonathan was made high priest and governor of the Jews. He was allowed to reoccupy the city, with the exception of the Acra, which continued to be held by the king's garrison, and all his attempts

to gain control of it failed. He therefore built a wall to cut the Acra off from the city and strengthened the wall of Jerusalem. Simeon, Jonathan's brother and successor, finally expelled the garrison and eradicated the Acra of its pagan cults. A triumphal entry into the fallen fortress was made on the 23rd of Iyyar 141 B.C.E., the date which henceforward was celebrated as the day of the final deliverance of Jerusalem. It would appear that the construction of the ("first") wall around the Western Hill was initiated by Jonathan and continued by Simeon, and that this was done for ideological reasons to renew the visible ruins of fortifications that had originally surrounded the larger city in the time of Hezekiah and to celebrate the banishment of the Seleucid Greeks.

Early in the reign of John *Hyrcanus, Jerusalem was placed by Antiochus Sidetes VII under a heavy siege, which ended in a treaty under which the city wall was breached. Evidence of this battle was unearthed during the Citadel excavations near the Jaffa Gate, consisting of scatters of ballista balls and arrowheads. For the next six decades (until 63 B.C.E.) no enemy approached the city. Jerusalem became the capital city of the Hasmonean kingdom, which included large parts of western Palestine as well as areas of Transjordan. It was the center of ever-growing political, economic, and religious activity. The Temple became the ritual and religious center of a large number of people in the Land of Israel who had not previously come under the influence of Judaism. Jews in the Diaspora, converts to Judaism, and sympathizers with Judaism contributed to the wealth of the city by paying half a *shekel, and making other contributions. The sages of Jerusalem became renowned throughout Jewry, and their influence was felt wherever Jews resided. Trades and crafts developed in the city.

The "Letter of *Aristeas" contains a description of Hasmonean Jerusalem, with its triple wall, its markets, replete with all kinds of wares, its supply of drinking water, and so forth. It was a large and prosperous city. The Hasmonean palace was built on the Western Hill, dwellings were constructed in all parts of the city, and a new rectangular esplanade was built for the Temple. Segments of the "first" wall built during Hasmonean times have been uncovered in the Jewish Quarter, the Citadel, along the western Old City wall, and around traditional Mount Zion. Hasmonean pottery, coins, and arrowheads have also been recovered during excavations. To the end of this period belong some of the splendid monuments in the Kidron Valley, such as the Tomb of the Sons of Hezir (erroneously called the Tomb of St. James), the so-called Tomb of Zechariah, and the Tomb of Jason (in the Rehavia neighborhood), which contains one of the earliest drawings of a *menorah* and a picture of a sea fight (this Jason was apparently a retired sea captain).

No external enemy menaced Jerusalem, but it was the scene of violent civil strife in the days of Alexander *Yannai (Jannaeus). His widow, *Salome Alexandra, succeeded in restoring peace to the city, but after her death conflict broke out anew. *Hyrcanus II besieged his brother *Aristobulus II in the

Temple with the aid of the Nabateans, but was forced to retreat. In the end this fratricidal war profited only the Romans. In 64 B.C.E., when Pompey decided in favor of Hyrcanus, the partisans of Aristobulus shut themselves up in the Temple and defied the decision of the Roman general. Pompey was forced to undertake a siege, since the Temple was now defended by a deep rock-cut fosse on the north. In 63 B.C.E., the Temple wall was breached and the Romans broke into the Temple itself. Pompey entered the Holy of Holies, but did not touch the Temple treasures. He left the government to Hyrcanus and his adviser *Antipater the Idumean, the father of *Herod. In 40 B.C.E. Jerusalem was seized by the Parthians, who had invaded Judea as allies of Mattathias Antigonus. Three years later (37 B.C.E.), after a prolonged siege, Herod's troops and those of his Roman allies breached the walls of Jerusalem and penetrated the city. There followed great slaughter and looting, until Herod was forced to intervene in order to save the city.

HERODIAN PERIOD. King Herod, who reigned over Judea for 33 years (37–4 B.C.E.), completely transformed the external aspect of Jerusalem. His aim was to make his hold on the city secure, knowing full well how much he was hated by its population; to satisfy his liking for ostentation and splendor; and to placate the populace by providing work. His successful financial ventures and high taxation provided the means. Herod transferred the seat of civil power from the old Hasmonean palace to a new site in the northwestern corner of the city, within the "first" wall. His palace was protected on the north by three towers: Phasael, Hippicus, and Mariamne; the base of one of these towers (probably Hippicus, though the matter is still debated), was inserted into the Hasmonean "first" wall, and this is clear from excavations inside the Citadel. The location of the other two towers is uncertain, although Josephus says that they too were built on the line of the "old" wall. Behind the three towers, to the south, extended Herod's palace, built on a podium, and protected to the west by a wall with towers through which one entered via a gate (the "gate of the Essenes"). Apparently the palace adjoined on one side the Agora or upper market. Within the wall were extensive gardens and the place which was divided into two separate blocks of buildings, called Caesareum and Agrippaeum in honor of Augustus and his general Vipsanius Agrippa, respectively. The palace gardens were most likely supplied with water derived from the Mamila Pool (see Water Supply, below). A large sewer, referred to by Josephus as "Bethso," extended out of the base of the palace to the west and into the Hinnom Valley.

Herod's other projects in Jerusalem were on the eastern side of the city. He transformed the old Baris fortress into a more cohesive fortified tower-like structure dominating the Temple area, and called it Antonia, in honor of the triumvir Mark Antony. In the Temple area itself, the esplanade was enlarged, especially on its southern side, and it was given the trapezoid shape which is still preserved. The Temple Mount was surrounded by a wall built of large stone ashlar of which

the *Western (“Wailing”) Wall is but a section. Beneath the Temple Mount were numerous water cisterns, passages, and conduits. The Temple Mount was surrounded by a portico with columns 50 ft. (15 m.) high. The entire southern side was taken up by a two-story triple hall, the “royal basilica.” Herod also entirely rebuilt the Temple itself, doubling its height and richly adorning its exterior. Various gates led into the Temple Mount.

Extant remains of Herod’s building activities in Jerusalem include towers in the Citadel; fortification walls around Mount Zion; the Bethso sewage tunnel; the podium of his palace on the Western Hill with a gate to the west; the Temple Mount walls; a flight of steps built on arches (Robinson’s Arch) descending from the Temple esplanade at the southwestern corner to a paved street running from north to south; the passageways of the Double and Triple gates in the southern Temple Mount walls; the rock-cut portions of Antonia with its adjacent pool, the Struthion; and the Siloam and Bethesda Pools to the south and north of the Temple Mount, respectively. Besides these, the monument of Herod’s family (mentioned by Josephus) has been identified with a round structure to the north of the city. The so-called Tomb of Absalom in the Kidron Valley is also assigned to his reign; it gives an idea of the rich eclectic ornamentation of Herodian architecture current at that time.

UNDER THE ROMAN PROCURATORS. After Herod’s death and the banishment of his son *Archelaus, Judea was made a province of the Roman Empire (6 c.e.). Jerusalem was ruled by Roman procurators who resided in Caesarea and thus ceased to be the capital of Judea. The procurators, however, would come to Jerusalem from time to time with their troops, especially during the three pilgrim festivals, when it was crowded with pilgrims from all over the country and from abroad. The governors would stay in Herod’s old palace, which was used as a praetorium. In deference to Jewish religious sensitivity, the troops came to Jerusalem without their standards, which bore idolatrous images. The city government was in the hands of the high priest and the Sanhedrin, which fulfilled the functions of the *Gerousia* in the Hellenistic period, i.e., the municipal council. The last Jewish ruler over Jerusalem was Herod Agrippa (41–44), who began to build a new wall on the north side of the city (the “third” wall) but was stopped by order of the Romans. Under the procurators who succeeded him, sporadic riots broke out in the city, usually resulting in clashes with the Roman troops. One of the procurators, *Pontius Pilate (26–36), under whose rule the execution of *Jesus of Nazareth took place, constructed the first aqueduct which brought water to Jerusalem from the vicinity of Hebron. The small Christian community remained in Jerusalem until 66, when it retired to Pella.

Jerusalem’s significance was more than that of the administrative center of a diminished Judea; it was the capital of the Jewish nation. The Temple, the Sanhedrin, and the great houses of study of the Pharisees turned it into a symbol

for Jews everywhere. As Philo expressed it in his *Legatio ad Gaium*, Jerusalem was the metropolis not only of Judea, but of many lands because of its colonies. It was renowned even among non-Jews: the elder Pliny wrote that Jerusalem was the most famous among the great cities of the East. A legendary halo surrounded the city. It was the focal point of Jewish unity and attracted Jewish pilgrims and converts (e.g., Queen *Helene of Adiabene). Because of the Temple, the main priestly families resided there, as did many important aristocratic families that wished to be close to the center of affairs. Even scions of the House of Herod lived there from time to time, though their kingdoms were some distance away. Jerusalem was the center of spiritual activity. The heads of *Bet Hillel – Rabban *Gamaliel I and Rabban *Simeon son of Gamaliel – resided in Jerusalem. Houses of learning in the city attracted students from all over the country and from abroad. The city’s status helped it to become an important economic center. Its area increased to one square mile and its population grew quite considerably.

One of the phenomena of Jerusalem during this period was the presence of many Jews from numerous countries, from Media and Elam in the east to Italy in the west, many of whom settled in the city. These immigrants preserved their different ways of life for long periods and congregated in distinct communities according to their lands of origin. Especially noticeable was the difference between Jews who spoke Hebrew and Aramaic and the Hellenized Jews who came from Egypt (especially from Alexandria), Cyrenaica, and Asia Minor, the latter groups having special synagogues of their own. In the last years before the destruction, social tension grew to such an extent that it affected the order and security of the city. In addition to the general enmity toward Roman rule, there were conflicts among the Jews themselves, notably friction among different groups in the priestly oligarchy and tension brought about by the activities of the extremist fighters for freedom from the Romans (the Sicarii), who used violence and were not averse to killing their opponents. There was also an increase in the activities of visionaries and prophets who spread messianic expectations among the people and the pilgrims.

JERUSALEM AT THE END OF THE SECOND TEMPLE PERIOD. The traveler’s first glimpse of Jerusalem would have been from Mount Scopus (Har ha-*Zofim). Crossing the Kidron Valley, he traversed the “Tombs of the Kings” (of *Helena of Adiabene), and reached the “third” wall, which stretched from the direction of the Kidron Valley to the Psephinus Tower in the northwest. Entrance to the wall was from an area of gardens and vegetable fields through the Women’s Gate. Behind it was the then sparsely populated New City or Bezetha. Approaching the “second” wall, which enclosed the area known as the “Mahtesh,” the commercial quarter in the upper Tyropoeon Valley, one would see (beyond this wall) the wood and sheep markets, the Pool of Bethesda (or Sheep Pool), and the Pool of the Towers (today called the Pool of Hezekiah). The Pool of Bethesda was used as a place of purification by the many

Jews who attended the festivities in the Temple. The “second” wall, which ran in a broken line from the vicinity of Herod’s Palace in the Upper City to the Antonia fortress, protected the city proper. Outside it were the tombs of Alexander and John Hyrcanus; within it were the various bazaars of the city. From this residential and commercial area one could proceed through the Water Gate or the Garden Gate into the Upper City. The latter, which was the aristocratic quarter, was extensively built up and covered the whole of the Western Hill of Jerusalem. Within it stood the palaces of the high priests and of the Hasmoneans. At its northwestern extremity rose the three towers protecting Herod’s palace, respectively about 135, 120, and 70 ft. high. A bridge (the remnants of which are now called Wilson’s Arch in honor of the 19th-century explorer of Jerusalem) joined the Upper City to the Temple Mount.

The Upper City was protected on the east by a rocky scarp facing the Tyropoeon Valley. This valley was a popular quarter with closely set houses and was called the Lower City; it extended to the southeastern hill (the so-called Ophel), which was originally the City of David. At its southern extremity was the large, rectangular, stepped Pool of Siloam (called by Josephus the “Pool of Solomon”), which was fed with fresh water derived from the spring of Gihon. Like the Bethesda Pool, the Siloam Pool was also used for the purification of travelers who reached Jerusalem for the Jewish holidays. Stairs descended from the Upper to the Lower City and also rose from the latter to the Temple area (via Robinson’s Arch).

The esplanade of the sanctuary was protected by a high, massive wall, built of typical Herodian masonry with double margins. It was surrounded by open colonnaded porticoes, of which the southern one, the “royal basilica,” was the most splendid. The Temple itself stood within yet another enclosure with steps; it was very high (about 150 feet) and glittered with gold and white marble “like a snow-covered mountain.” The tower of Antonia (with a height reaching about 180 feet) overlooked the esplanade from the northwest. Outside the walls, and especially to the east and the south and the west, along the Kidron and Hinnom valleys, stretched the necropolis. Among the great and imposing tombs erected in the first century C.E. were the Tombs of the Judges or of the Sanhedrin in the Upper Kidron Valley and the so-called Tomb of Absalom and Tomb of Jehoshaphat in the central Kidron Valley.

As a fortified city, Jerusalem was rendered all the stronger by its topographical position. Situated on the southern slope of a ridge issuing from the watershed line, it was protected on the west, south, and east by the Hinnom and Kidron valleys, while on the north it had three strongly reinforced walls.

The Siege of Titus. In the autumn of 66 the misrule of the procurators finally provoked the outbreak of a revolt, which soon became a full-scale war. The Roman governor of Syria, Cestius Gallus, advanced with his army to the gates of the Temple in an attempt to quell the uprising, but retreated after a disastrous defeat. For over three years, Jerusalem was free; the silver shekels (see *Coins and Currency) bearing the leg-

end “Jerusalem the Holy” commemorate this period. However, internecine strife among the insurgents wasted the resources of the city, and only when the enemy approached in the spring of 70 did they join forces.

The Temple and the Lower City were defended by *John of Giscala, the Upper City by Simeon b. Giora. The attack was led by Titus, the son and heir of the emperor Vespasian, with an army of four legions at his disposal.

After reconnaissance and the establishment of camps in two places around the city, the Romans attacked the “third” wall near Herod’s palace, hoping to penetrate the Upper City and thus end the siege in one stroke. They failed in their plan and had to content themselves with the breaching of the “third” wall and the occupation of Bezetha. Moving his camp to a place called the “Assyrian Camp” (now the Russian Compound), Titus attacked the “second” wall and scaled it after some bitter fighting in the narrow, winding bazaars. Now the siege began in earnest; attempts were made to attack by the usual methods (siege mounds with movable towers equipped with battering rams). But the besieged defenders fought with great determination, setting fire to the Roman machines of war and undermining the siege mounds reared against the Towers’ Pool and the Antonia. Titus thereupon ordered the construction of a siege wall to blockade the city tightly in an attempt to weaken the population through hunger (the quantity of water in the cisterns was apparently sufficient to carry the city through the summer). After this process the attack was renewed. At the beginning of Av (August) the wall of the Antonia was finally stormed, and after a few days the Temple was set aflame (9th of Av). The Romans then spread over the Lower City and the Tyropoeon Valley, but they had to renew their siege operations against the Upper City, which only fell a month later. Most of the people in the city had either been killed or had perished from hunger; the survivors were sold into slavery or executed. The city was destroyed, except for the three towers of Herod and a portion of the western wall, which were spared to protect the camp of the Tenth Legion situated in the area of the old palace of Herod.

The Roman Period

Although Jerusalem remained in ruins for 61 years, part of the inhabitants (including some members of the Christian community that left for Pella during the siege) returned and settled around the legionary camp on the Western Hill. An inscription of an officer of the Tenth Legion, Fatalis, records that he lived there with his freedwoman Ionice, and there were many others like him. Numerous rooftiles stamped with the names and symbols of the Tenth Legion have been found. Later sources state that the returning Jews had as many as seven synagogues in that area. In 130 C.E. Emperor Hadrian visited Jerusalem and decided to establish a Roman colony on the ruins of the Jewish city. The governor, Tineius Rufus, performed the ceremony of plowing along the line of the projected walls in the name of the emperor and founder.

This ceremony is represented on coins of the colony, which received the name of *Aelia Capitolina in honor of the family name of the emperor and the Capitoline triad (Jupiter, Juno, and Minerva). There is no evidence, however, that the city was captured by Bar Kokhba during the second revolt against the Romans, and Aelia Capitolina was physically only properly founded in 135 C.E. Hadrian decreed that no circumcised person should be allowed into Jerusalem and its territory under pain of death; even the Christian community was forced to change its bishop of Jewish origin for a gentile.

Aelia Capitolina was apparently built in the northern and central parts of the Old City of today, with the Roman camp of the Tenth Legion to the southwest, and with an additional quarter situated in the former Lower City, around the foot of the southwestern part of the Temple Mount. Many of the streets in the northern part of the city were originally established at this time. A forum existed at the junction of the *decumanus* (running from the Jaffa Gate area to the east) and *cardo* streets (the latter running from the Damascus Gate area to the south), with various buildings and a temple or shrine to Venus in the area of the present-day Church of the Holy Sepulcher. The other forum was situated to the northwest of the city, immediately north of the Temple Mount, with a triumphal arch (now known as the Ecce Homo arch), a shrine dedicated to Serapis and other cults, and purification pools. The location of the Capitoline Temple is debated, with some placing it in the western forum and others believing it was built on top of the ruined Antonia Fortress, overlooking the northwest forum. The Temple area (called the Quadra or "Square") was left outside the colony plan; various pagan statues were placed upon it with an equestrian statue of Hadrian in front. A large monumental inscription in Latin mentioning a "gate" has been found in the southern Temple area. Other known monuments of Aelia were a tetrapylon (four-arched gate), public baths, and steps leading to the nymphaeum (public fountain) outside the city, with twelve arches (the Dodekapylon), near the Pool of Siloam. The city was divided into seven wards, which for centuries bore the names of the first headmen, or amphodarchs. It did not have the rights of an Italian colony (*jus italicum*) and thus had to pay taxes on its lands. City coins were issued from the time of Hadrian to that of Valerianus (260) but are especially plentiful from the times of Antoninus Pius, Marcus Aurelius, Eleagabalus, and Trajan Decius. The 206 coin types evidence the gods worshiped in Aelia: Serapis, Tyche, the Dioscuri, Roma, Ares, Nemesis, and others are found in addition to the Capitoline triad. The worship of Serapis is confirmed by a dedicatory inscription; that of the goddess Hygieia is connected with the healing baths near the Bethesda pool.

Aelia was a quiet provincial city. The great events were imperial visits, such as that of Septimius Severus in 201, which was commemorated by an inscription discovered near the Western Wall. On this occasion the colony received the honorary title "Commodiana." Toward the end of the third century the Legio x Fretensis (still in Aelia at about 250) was transferred to Elath and replaced by a troop of Moors. In

the second and third centuries, the Christian community in Jerusalem developed peacefully; one of its bishops, Narcissus, died a centenarian, after sharing the office with Alexander from Cappadocia. The latter established a famous library at Aelia. In his time Christian pilgrimages to the city began. The Jews also profited from a de facto relaxation of the prohibition against visiting Jerusalem as pilgrims.

Byzantine Jerusalem

The status of Aelia was completely revolutionized when the Christian emperor Constantine became master of Palestine in 324. At the Council of Nicaea, Macarius, the bishop of Aelia, reported to the emperor on the state of the Christian holy sites and persuaded the emperor's mother, *Helena, to visit Jerusalem (325). During her visit, the shrine or temple of Venus was destroyed and beneath it emerged a tomb identified as the Tomb of Jesus. According to slightly later Christian tradition the "True Cross" was also found at this time in a cave nearby. Constantine decided to erect a basilical martyrium at *Golgotha to mark the finding of the Tomb of Jesus. The church consisted of a forecourt leading to a basilica, a baptisterium, another court which may have contained part of the rock of Golgotha, and the Tomb of Jesus itself, which had been cut down to a cube, and which was then covered by a small building (edicule) surmounted by a dome supported on columns with silver capitals. The church was built by the architects Zenobius and Eusthatius of Constantinople, and was dedicated in 335. Another church, the Eleona, was built on the slopes of the Mount of Olives. The city then assumed a predominantly Christian character; the prohibition against the entrance of Jews into the city was renewed, with the exception of the 9th of Av, when they were allowed to lament the destruction of the Temple.

The growing importance of Jerusalem as a Christian center was temporarily interrupted by the emperor Julian the "apostate", who reverted back to old pagan practices and favored Judaism. In 363 he ordered the reconstruction of the Temple and entrusted the task to his friend Alypius. Work went on until May 27, when an earthquake caused conflagration in the building stores. As the emperor had just started on his Persian Campaign, those responsible for the work suspended it. The death of Julian in Persia and the enthronement of the Christian emperor Jovian put an end to this project. During that time the bishop of Jerusalem was the eminent preacher Cyril, who was often exiled but always succeeded in returning (350–86). In his time Christian pilgrims of all countries, from Britain and Gaul in the west to Ethiopia, India, and Persia on the south and east, could be seen in the city.

Cyril's outstanding successor was John (396–417). During his episcopate numerous aristocratic families, led by St. *Jerome, fled from Rome to Jerusalem (385–419). Among them were noble and rich women, such as Melania and Poemenia, who erected churches and monasteries (Church of Ascension, 378, Church of Gethsemane, 390). The first hermits established themselves in the vicinity of Jerusalem at that time. The city

also served as a place of refuge for fallen grandees, such as the family of the minister Rufinus. In 428 the energetic Juvenal became bishop of Jerusalem. In 438 the empress Eudocia visited Jerusalem for the first time; due to her intervention, Jews were again allowed to live in the city. After her separation from her husband, Theodosius II, she settled permanently in the Holy City (444–60), spending lavishly on churches (including the basilica of St. Stephen north of the city). She also had a new city wall constructed around Mount Zion (parts of this wall were excavated in 1895–97). Both Eudocia and Juvenal became involved in the Monophysite controversy. By successful maneuvering, the bishop succeeded in obtaining the status of patriarch and authority over the churches of Palestine and Arabia in 451. He was opposed by the Monophysite monks, however, and had to be reinstated in his see by the Byzantine army.

During the reign of *Justinian (527–65), a Samaritan revolt (529) devastated the vicinity of Jerusalem. The churches outside the town were destroyed and had to be rebuilt, and the emperor added a magnificent basilica, the “Nea” (new one), within the city in the area of the present-day Jewish Quarter. Parts of this magnificent building have been uncovered by archaeologists. The overall features of the Byzantine city at the time of Justinian are well represented in the Madaba mosaic map. Inside the north gate (Damascus Gate) was a semicircular paved plaza with a column at its center, still commemorated in the Arabic name of this gate, Bāb al-ʿAmūd. Two colonnaded streets issued from the plaza leading south. The western one passed the Church of the Holy Sepulcher and continued to the Zion Gate by way of a tetrapylon, passing the church of St. Sophia and extending as far as the Nea. On the other side of the Church of the Holy Sepulcher, the forum, the palace of the patriarchs, and the towers and monasteries near Jaffa Gate were visible. The other road (which had an offshoot to the east gate) passed a public bath and ended at another inner gate. The Western Wall was visible east of this street. The Temple area was apparently a wasteland, with one east gate (the Golden Gate) and the Church of St. James at its southeastern corner. In the southern part of the city was the Church of Mount Zion, with its Diakonikon (deacon’s church) and the baths at the Siloam Pool. The Probatika pool (Sheep Pool) and large basilical church existed in the northeastern corner of the city. At the time of Justinian, two Church councils were held in Jerusalem (536 and 553), mainly in connection with the Origenist disputes. The patriarch Eustachius, like his predecessor Juvenal, had to be installed by the army.

In the course of the last Byzantine–Persian war, the Persian army of Chosroes II approached Jerusalem in 614 and besieged it with the help of its Jewish allies. The city wall was breached, many inhabitants were slain, and the patriarch Zacharias and relics of the “True Cross” were taken into exile. The Persians handed the city over to the Jews, who ruled it under a leader known only by his symbolic name, Nehemiah. The Persian conquest led to the destruction of most of the churches in Jerusalem. After some time, however, the Persians

handed the city back to the Christians, who began to rebuild their holy sites under Modestus. The victories of the emperor *Heraclius led to a return of the Byzantines; on March 21, 629, he made a triumphal entry into Jerusalem, bringing back the “True Cross” relic, and the Jews were again banished from there. When the Muslim forces invaded Palestine, Jerusalem was besieged from 637 onward. As there seemed to be little hope of rescue following the decisive battle of Yarmuk (636), the patriarch Sophronius, successor to Modestus, surrendered the city to the Muslim caliph *Omar in March/April 638.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Arab Period

From the time Jerusalem was conquered by the Muslims Arabs (638), it remained a provincial town and never became the seat of rich princes who had chroniclers at their court. Consequently, Arabic historiography on Jerusalem consists of only one work, *al-Uns al-Jalīl fī Tārīkh al-Quds wa al-Khalīl* (“The honorable company on the history of Jerusalem and Hebron”), which was written by Mujīr al-Dīn al-ʿUlaimī at the end of the 15th century. The modern historian must therefore combine accounts gathered from manifold sources.

After the Arabs had invaded Erez Israel in 634 (see *Israel, Land of), four years elapsed until they took Jerusalem. In those years the city, somehow isolated from its hinterland, suffered greatly, as is demonstrated by the sermons delivered by the patriarch Sophronius. The accounts of the conquest of Jerusalem differ considerably; according to the most probable version, the caliph *Omar, then at the headquarters at al-Jābiya in the Hauran, sent ʿAmr ibn al-ʿAs, a subaltern officer, to occupy the town. Some historians relate that the town surrendered under certain conditions, among which was the continued non-admission of Jews, who had not been allowed to live there under Byzantine rule. Goitein showed that this condition was probably imposed by the Umayyad Caliph Omar [the second] Ibn ʿAbd al-ʿAziz (reigned 717–720), not by “the right guided” caliph Omar b. al-Khattab. The inhabitants probably submitted under the usual conditions – that their persons, churches, and buildings would be safe as long as they paid the poll tax (*jizya*).

Omar’s visit to Jerusalem shortly after the surrender has been the subject of divergent and clearly tendentious accounts. The Christian Arabic historian Eutychius, who wrote in Egypt at the beginning of the tenth century, says that Omar refused to pray in the Church of the Holy Sepulcher, whereupon Sophronius showed him the site of the Holy Rock identified with the talmudic Even ha-Sheṭiyah, the site of the Temple Holy of Holies, on which the world was believed to be founded. Muslim writers, on the other hand, relate how the Christians attempted to deceive the caliph, when he asked about the site of the Rock, by bringing him to the Church of the Holy Sepulcher and to Mount Zion instead. Other sources relate that the Jewish convert *Kaʿb al-Aḥbār proposed to Omar that the Muslims should build their mosque in the north of the Rock, so they will turn towards the Rock when they turn to-

wards the *qibla* (direction of prayer) in Mecca, but that his proposal was turned down by the caliph. It is clear from the nature of the tales that the account transmitted by Eutychius was meant to safeguard the Church of the Holy Sepulcher, whereas the story about Ka'ba's failure discloses an anti-Jewish tendency. Apparently the attempt in this instance was to show that Omar refused to turn when praying to the Holy of Holies (see *Holy Places) of the Jews and to the Ka'ba at the same time. From these tales it may be assumed that Omar ordered the Temple area to be cleaned and a place for Muslim worship established there. Herbert Busse, who devoted more than three decades to research different aspects of Jerusalem in Islam, thinks that the real conqueror of the holy city is 'Amr ibn al-'Āṣ, one of the generals of caliph Omar. The rise of the city's place in Islam at the end of the seventh century caused the attribution of its conquest to a prominent person like caliph Omar instead of 'Amr.

Various accounts confirm that Omar had Jews in his retinue who were his advisers, and that he entrusted them with keeping the area in good order. Although Omar did not accept Ka'ba's suggestion, quite rightly seeing in it a Judaizing tendency, Jewish traditions and beliefs influenced early Islam's attitude toward the holiness of the Temple Mount and its surroundings. These influences can therefore be seen as explaining why Omar did not pay attention to Sophronius' misleading information. Jewish tradition can also be recognized as the major factor in the ascription to Jerusalem of all events connected in Islam with the last judgment (see *Eschatology). In turn Muslim descriptions influenced later Jewish Midrashim (e.g., *The Book of Zerubbabel*, *Pirkei Mashi'ah*, *Revelations of R. Simeon bar Yoḥai*), which show an intimate knowledge of the area of the Temple Mount, the Gates of the Ḥaram (the walled area of the Muslim sanctuaries), the *Mount of Olives (see below), Mount Zion, and their surroundings. All these descriptions show that Jews lived in Jerusalem in the early Arab period. The prevailing opinion, which is based on Christian sources, that the Jews were not allowed to live in the Holy City or its surroundings during the whole Byzantine period is not confirmed by any non-Christian source. One suspects that these reports are biased in order to glorify the victory of the Church, as there is extant literary and archaeological evidence that there was a synagogue on the so-called Mt. Zion where the Cenaculum now stands. There are also extant *piyyutim* from the same time. In any event there is no doubt that during the Persian conquest (614–28) Jews lived in Jerusalem. It seems that even after the recapture of the city by Heraclius many of them remained in its vicinity. This may have caused Sophronius' request that no Jews be allowed to stay in Jerusalem. H. Busse says in this context: "The History of the Ḥaram cannot be properly understood without taking into account the Jewish activities in Jerusalem."

A document (in Judeo-Arabic) found in the Cairo **Genizah* reveals that the Jews asked Omar for permission for 200 families to settle in the town. As the patriarch opposed the action strongly, Omar fixed the number of the Jewish settlers at

70 families. The Jews were assigned the quarter southwest of the Temple area, where they lived from that time (Assaf, *BJPES* VII, p. 22ff.). As various texts show, they could also pray in the neighborhood of the Temple area. A late source, R. *Abraham b. Ḥiyya (12th century), mentions that they had even been allowed to build a synagogue and a *midrash* (college) on that area (Dinaburg, *Zion* III, 1929, p. 54ff.).

Although many Arabs came to live in Jerusalem, the great majority of the inhabitants was still Christian. The information culled from *Genizah* fragments and other Rabbanite and Karaite sources concerning the earliest Jewish inhabitants of Jerusalem during the *Umayyad period is insufficient for even a general description of historical events and the daily life of the Jewish community during Umayyad rule and the first hundred years of the *Abbasid dynasty. Even the date of such a major event as the transfer to Jerusalem of the talmudic academy from its seat in Tiberias during the late Byzantine and earliest Muslim periods is unknown.

UMAYYAD RULE. The Umayyad caliphs, who resided in *Damasus and in other towns and townlets of *Syria and Erez Israel, showed a keen interest in Jerusalem, the holy city which was so near to their residence. Mu'āwīya, the founder of the dynasty, was proclaimed caliph in Jerusalem (660). He was the first who made great efforts in order to emphasize the status of Jerusalem as a holy place in Islam, collecting Jewish and Christian traditions glorifying the city and its vicinity and giving them an Islamic seal. It seems that he proceeded so as to repel the attacks of the Medinan leaders for leaving the holy cities of Hijaz, Mecca, and Medina. He probably erected the first primitive building on the place where the mosque known as al-Aqṣā (the further mosque, i.e., the furthest place reached by *Muhammad on his Night Journey) was built. The Frankish bishop Arculf, who visited Jerusalem in 670, describes this mosque as a rather ugly building whose walls consisted of simple planks, but which was able to hold 3,000 men. Above the Holy Rock the great Umayyad caliph 'Abd al-Malik built a splendid cupola, Qubbat al-Ṣakhra (the Dome of the Rock). Its construction was finished in 72 A.H. (691), as can be seen from the inscription on it. Some Muslims believe that Muhammad placed his feet on the Rock on his Night Journey and therefore consider it holy. Both medieval Arabic writers and modern scholars, foremost I. *Goldziher, have expressed the view that 'Abd al-Malik's purpose was to divert the pilgrimage from Mecca, where the counter-caliph *Abdallah ibn al-Zubayr resided. S.D. *Goitein has convincingly shown that the Umayyad caliph's intention was to build a magnificent Muslim house of worship in Jerusalem which would surpass the numerous churches there. A well-informed Arabic geographer explicitly said that the Dome of the Rock should be seen as a counterpart to the Church of the Holy Sepulcher (Goitein, *JAOS* 70, p. 104ff.). A. Elad convincingly has determined that both Goldziher and Goitein were right: the first stressed the political motives, the second, the religious side. A number of scholars saw the construction of the Dome of the Rock as a

sign of 'Abd al-Malik's desire to rebuild the Jewish Temple. The interest of the Umayyads in Jerusalem was also evinced in the many structures which they built in the vicinity of the Temple Mount. These have been uncovered by the excavations of B. Mazar and M. Ben-Dov.

A fact characteristic both of the tolerance of the Umayyads and of the role of the Jews then played in Jerusalem is that 'Abd al-Malik appointed some Jewish families as guardians and servants of the Ḥaram and decreed that they should be exempt from the poll tax (J. Raby and J. Johns (eds.), *Bayt al-Maqdis: 'Abd al-Malik's Jerusalem* (1992)). 'Abd al-Malik also had a government palace built in Jerusalem and the town's walls repaired. Sulaymān, one of his sons and successors, planned to make Jerusalem his residence but changed his mind and resided in Ramleh, which he had founded. From that time, Ramleh was the capital of southern Erez Israel, and Jerusalem, which began to decline in importance, was neither the seat of a provincial administration nor the residence of a strong garrison which could provide work for craftsmen. The trade routes did not reach it, and the only product which could be exported from the surrounding area was olive oil. The last years of Umayyad rule were unhappy ones for the town for other reasons as well: after a revolt against the last Umayyad caliph, Marwān II, he had the town walls razed, and shortly thereafter an earthquake wrought havoc on the Dome of the Rock.

ABBASID RULE. The reign of the Abbasid caliphs, who came to power in 750, brought a long period of slow but progressive decay to Jerusalem. Erez Israel was no longer at the center of the Muslim empire, and the caliphs residing in *Baghdad did not show much interest in the town. The first Abbasids continued to visit Jerusalem – al-Manṣūr in 758 and 771 and al-Mahdī in 780. Al-Mansur refused to allocate funds in order to finance the reparations. He ordered the removal of golden ornaments from al-Aqsa doors in order to coin them to pay the expenses. Al-Ma'mūn (813–33) never came to Jerusalem, although he spent some time in Syria and *Egypt, but he allotted certain sums for repairing the buildings in the Temple area. The later Abbasids showed no interest at all in the holy town. During the reign of al-Mu'taṣim (833–42) a great disaster befell the city, when the peasants all over Erez Israel rose under the leadership of a certain Abu Ḥarb, besieged Jerusalem, and sacked all its quarters, mosques, and churches; again many inhabitants fled. On the other hand, it seems that during this period the non-Muslims still enjoyed tolerance, especially the Christians, on behalf of whom Charlemagne successfully intervened with the caliph.

A new period in the history of Jerusalem began in 878, when it was annexed, with the rest of Erez Israel, to the Egyptian kingdom of Aḥmad ibn Ṭūlūn. From that date the town remained under the dominion of the rulers of *Cairo, with interruptions during the Crusades (see below), until the Ottoman conquest (1516). After the downfall of the Ṭūlūnids in 905, governors appointed by the Abbasids again took over;

in 941 Erez Israel fell to an Egyptian dynasty, the Ikhshidids. Jerusalem itself was rarely mentioned in the chronicles of this period, because it did not play a role in the political life of the Near East. Arabic historians did not mention the town, aside from relating that the rulers of Cairo were brought to Jerusalem after their death to be buried there, a new custom which became current in this period. Christian authors, on the other hand, dwelled on the harassment and persecution of their coreligionists by the Muslims: it seems that fanaticism grew greatly in the course of the tenth century. The hatred between the various religious communities increased, as is borne out by a letter of complaint against the Jews which was sent in 932 by the Christians of Jerusalem to the Holy Roman emperor Henry I. In 938 and once more in 966 the Muslims attacked the Christians and sacked and burnt the Church of the Holy Sepulcher and other churches. On the latter occasion, when the Muslims were joined by the Jews, the patriarch was murdered and his corpse burnt.

According to *Genizah* sources, living conditions, for the most part, were difficult for Jews in Jerusalem. Aside from the tension and strife between Muslims, Christians, and Jews, the burden of various taxes and duties imposed upon the poor Jewish inhabitants was very heavy. A North African Jew describes the economic situation of the population in a letter (mid-11th century) as follows: "Meat is scarce and their cotton garments are worn out." *Solomon b. Judah served for a time as *ḥazzan* of the community, which persuaded him to accept its offer because he was a man capable of being satisfied with a small livelihood: "I accepted it and spent my time sometimes for better and sometimes for worse until this day;... but the Jerusalemites did not give me anything worth a *perutah*, because they do not have anything" (Mann, Texts, I (1935), 318). The majority of the community had to draw its livelihood from gifts sent from the Diaspora or offered during the pilgrimages to Jerusalem. The Karaite *Daniel b. Moses al-Qūmisi (see below) proposed a practical scheme to maintain a strong Karaite community in Jerusalem: each town (in the Diaspora) should delegate five people to dwell in the Holy City and should provide for their maintenance. Clearly, some inhabitants were also busy as merchants and in trades and handicrafts, and it seems that copying of manuscripts for the Diaspora was one of the main sources of income.

Religious Life. As mentioned, the exact date when the talmudic academy was moved from Tiberias to Jerusalem is not known. It seems that arrangements were made for the academy's head and most of its important members to divide their time between Ramleh, the Arab seat of government, and Jerusalem. A part of the western slopes of the Mount of Olives served as the main gathering place for Jewish pilgrims, and the celebrations on the festivals were held there. Among the *Genizah* fragments at Cambridge, J. Braslavi found a guide to Jerusalem written in Arabic by a contemporary Jew. The extant portion gives Hebrew and Arabic topographical names, describes sites, Jewish, Christian, and Muslim alike, and supplies

a religious-historical background by references to the Bible and the Talmud. As the Jewish prayers inside the town, in the neighborhood of the Temple area, and at the Gates were gradually restricted, a place on the Mount of Olives was bought by the community for that purpose. On Hoshana Rabba, the seventh day of Sukkot, the gathering on the Mount of Olives was especially large, as the head of the academy, his deputy, or special messenger was accustomed to pronounce the fixing of the festival calendar for the following year and also to interdict the *Karaites adversaries (see below). That interdiction sometimes caused incidents and even brawls between the two parts of the community. The Karaites used their influence to get the authorities to intervene on their behalf and to make the head of the academy responsible for peaceful celebrations. Many pilgrims were accustomed to offer large sums of money for the maintenance of the academy and the payment of the many onerous taxes and duties imposed on the poor Jerusalem community.

The Karaites probably began to settle in Jerusalem during the second third of the ninth century. The report, related by a later Karaite source, that *Anan, the founder of this sect, emigrated with many followers to Jerusalem deserves no credence. *Genizah* sources confirm the information given by the Karaite *Salmon b. Jeroham (first half of the tenth century) that in the preceding century the Karaites began to build up a center in Jerusalem. They occupied a special quarter which was known as “the quarter of the Easterns,” since most of its inhabitants were from *Iraq and *Persia. They called themselves *Avelei Zion (“the mourners for Zion”), as well as Shoshannim (lilies). The Karaite missionary propaganda and especially the appeals of Daniel al-Qūmisī succeeded in moving many of his fellow Karaites to spend their life in the Holy City. Sahl b. Mazli’ah (a younger contemporary and colleague of Salmon) gives interesting information about life in Jerusalem. Rabbanite disciples followed many of the doctrines of Karaism, and an important Karaite center began to develop in Jerusalem.

This missionary propaganda inevitably caused friction between the two parts of the Jewish population, and it has been assumed that Karaite activities influenced the old Rabbanite community to strengthen its position in Jerusalem. The Rabbanites also moved their academy (or a part of it) to Jerusalem in an effort to diminish the power of the Karaite *nasi* (“prince,” descendant of David’s stock) and the head of the Karaite academy in Jerusalem (*rosh yeshivat* Ge’on Yāakov). *Aaron Ben Meir (first half of the tenth century), the famous opponent of Saadiah Gaon and head of the Rabbanite academy, describes the clashes between the two opposite parties and mentions that one of his ancestors was killed on the Temple Mount area by the Karaites and an attempt was made to kill others. By personal intervention at the caliph’s court in Baghdad and with the help of influential coreligionists in Iraq, he was successful in his endeavor to diminish the power of the Karaites, who for thirty years presided over the Jewish community in Jerusalem and represented it before the Muslim authorities. Nevertheless, even after Ben Meir’s successful

intervention, the spiritual power of the Karaites in Jerusalem did not decline, and they could muster an array of authors, scholars, and religious leaders like Salmon b. Jeroham, Sahl b. Mazli’ah, Japheth b. Ali, Ibn Zuta, Joseph ibn Nūh, Ali b. Suleiman, and many others. They did important research into the Hebrew language and wrote commentaries on the Bible and the precepts, which influenced all the Karaite communities in the Diaspora. During the leadership of *Solomon b. Judah, and especially his successor Daniel b. Azariah (1051–62), both of whom resided in Jerusalem and Ramleh alternately, the relations between the Rabbanites and Karaites improved. Indeed, the general situation in Erez Israel was so bad that there was no place for internal strife.

General Description. The descriptions of the Arabic geographers and other writers make it possible to conceive of what Jerusalem was like in that period. It appears that the town – called at first by the Roman name Aelia, later Bayt al-Maqqdis (the “holy house,” or the “temple”), and from the tenth century al-Quds (the “holy”) – was larger in the first four centuries of Muslim rule than at a later time. In addition to the strong town walls, which had eight gates, it also had a moat on some sides, especially to the north and south. The Persian traveler Nasir-i-Khusrau, who visited the city in 1047, says that it had high, well-built, and clean bazaars and that all the streets were paved with stone slabs. Most Arabic authors dwell on the descriptions of the Aqṣā mosque and the Dome of the Rock. Besides these buildings and the Citadel, there was the so-called mosque of Omar, built within the southern precincts of the Church of the Holy Sepulcher in 936. The town was still predominantly non-Muslim and had a great number of splendid churches. The Jews had two quarters, one southwest of the Temple area and one west of it, near the gate of the “cave” (perhaps Warren’s Gate). A letter written in the late 11th century mentions Ḥārat al-Yahūd (the Jewish Quarter) near a church (Gottheil-Worrell, *Fragments* p. 120 1. 30). At the end of the tenth century the Christians apparently were still the strongest element in the town. The Arabic geographer al-Maqqdisī (end of the tenth century), who was a Jerusalemite, complained that there were no Muslim theologians in the town and that nobody was interested in Islamic sciences, whereas the Christians and the Jews were numerous. He also said that it was difficult to make a living. In addition, he emphasized that there were always many strangers in the city, most of whom were surely pilgrims – Christians, Jews, and Muslims – but others also came to live in it permanently, such as members of dissident Islamic sects or adepts of Muslim mysticism. The Karrāmiyya, a Muslim sect from Persia, was strongly represented, as were various currents of Sufism. Some of the founders and leaders of the Sufis came to Jerusalem, among them Bāyazīd al-Biṣṭāmī, Ibrāhīm ibn Adham, Bishr al-Ḥāfi, and in the 11th century al-Ḡhazālī. The information about the political situation of the Jews in Jerusalem in the tenth century is varied. According to Salmon b. Jeroham the Muslims and the Christians persecuted the Jews and

tried to diminish their rights. Al-Maḡdisī's assertion seems to be an exaggeration, at least in relation to the Jews.

FATIMID RULE. The *Fatimid conquest, following that of Egypt in 969, at first brought some relief to the Jewish population but ushered in a period of troubles. Whereas Egypt under the first Fatimids enjoyed security and economic prosperity, Erez Israel suffered greatly from the wars between the Fatimids and their enemies, first the Qarmatians, who were accused of intending to change the *qibla* (Muslim direction of prayer) from Mecca to Jerusalem, and later the Banū Jarrāḥ, chieftains of the great Bedouin tribe of Ṭayy' who for 70 years tried to overthrow Fatimid rule. The coastal towns of Erez Israel probably took a commensurate part in the revival of international trade in the eastern Mediterranean, but Jerusalem remained far from the trade routes. The plight of the Christians and the Jews in Jerusalem in the 11th century was especially precarious. The deranged Fatimid caliph al-Ḥākim persecuted the non-Muslims and in 1009 had the churches destroyed, among them the Church of the Holy Sepulcher. The latter was rebuilt, but once more was destroyed by an earthquake in 1034 and remained in ruins until the Byzantine emperor paid for its restoration in 1048. Only the Church of the Resurrection was rebuilt, however, and the basilica of Constantine was never restored.

The town apparently changed a great deal in those days. The decline of the old settled population – Jews, Christians, and Muslims – was only one of the changes. In 1033 the town walls were repaired, but the area within them was diminished, the entire area of Mount Zion remaining outside the walls. The decline of Ramleh in the middle of the 11th century and the increase of Christian pilgrims from European countries gave sorely afflicted Jerusalem another chance, but then, in the last third of the century it became a bone of contention between various political powers. In 1071 Jerusalem was taken by the Seljuk general Atsiz and annexed to the great empire of the sultans of Iraq and Persia. Five years later the inhabitants revolted against Atsiz, who had left to fight a war against the Fatimids, and when he returned and took the town once more, it was severely punished. Some years afterward the Seljuks appointed the Turkoman officer Urtuq prince of Jerusalem. In 1091 Urtuq left the town to his sons Suqmān and İlghāzi, whose rule lasted no more than five years. In 1098 Jerusalem fell for a second time to the Fatimids, who held it against an attempt of the Seljuk prince Riḏwān. In 1099 Jerusalem was conquered by the crusaders.

Shimon Gibson (2nd ed.)]

Crusader Period

The European Christian crusaders besieged Jerusalem from June 6 to July 15, 1099. When several attempts to seize the city by direct attack failed, they constructed siege towers and concentrated their forces on two weak spots: the first between the Damascus Gate and the tower in the eastern section of the northern wall and the second in the area of Mount Zion. The

attack began on the night of Thursday, July 14, and was concluded the next morning. The troops of Flanders and northern France, led by Godfrey de Bouillon, scaled the walls in the northeastern sector, which was defended by both Muslims and Jews, the latter fighting to protect their own quarter nearby. At the same time, the Provençal force, led by Raymond of St. Gilles, surmounted the wall adjoining Mount Zion, while the Normans from Sicily, headed by Tancred, entered the north-west corner of the city in the vicinity of the tower (subsequently called the Tancred Tower).

The population, Muslims and Jews alike, was massacred. Many Jews perished in the synagogues that were set on fire by the conquerors; others were taken prisoner and sold into slavery in Europe, where the Jewish communities later redeemed them. Some Jewish prisoners were taken to Ashkelon (still in Muslim hands) along with the Egyptian commander of the city's fortress, who had surrendered; they were ransomed by the Jewish communities of Egypt and brought there. As a result of the massacre, the city was largely depopulated and the first period of crusader rule was a period of insecurity and economic difficulties. During the second decade of their rule, in order to repopulate the city, the crusaders transferred Christian Arab tribes from Transjordan and settled them in the former Jewish quarter, between the Damascus and Lions' Gates. In order to encourage people to settle there, the duty on food was reduced. As a matter of course, Jerusalem became the capital of the crusaders' kingdom, which was called the Kingdom of Jerusalem (*Regnum Hierusalem*), or Jerusalemite Kingdom (*Regnum Hierosolymitanorum*), or even Kingdom of David (*Regnum David*). Jerusalem was chosen to be the capital despite economic, administrative, and security problems due to its location in the crusaders' southernmost territories.

Jerusalem developed and flourished in the middle of the 12th century because of the concentration of all the government and church bodies there. The king's court, his administration, and the centers of the ecclesiastical institutions, as well as of the various monastic and military orders, were located there, providing a livelihood for a considerable number of permanent inhabitants. The most important factor in the development of Jerusalem at that period, however, was the stream of pilgrims from all countries of Christian Europe (there are records of pilgrims coming from as far as Russia, Scandinavia, and Portugal). Tens of thousands of pilgrims visited Jerusalem every year. These *pilgrimages were not only an important source of income but also added to the city's population, since a number of pilgrims remained there. Owing to its geographical position, however, it remained a consumer city, as in earlier and later periods.

THE CITY AND ITS INSTITUTIONS. Jerusalem during the crusader period was located within the walls of the previous Arab city. The basic pattern of the city remained the same, although there seems to have been an increase in the number of inhabitants. A period of construction began, the likes of which had not been seen since the time of Herod. Many

of the buildings that had remained intact were used for their former purposes. First and foremost was the citadel by the western gate (Jaffa Gate), which the crusaders called *Turris David* (David's Tower). It housed the king's garrison, the food warehouses for the army and probably for the entire city, and the customs administration for imports, which were directed through this gate. Adjoining the citadel was the king's palace, on the site of Herod's palace and the administrative center during the Roman Byzantine periods.

At first the king and his court had their residence in the al-Aqṣā Mosque and vicinity, but when this area was given to the Templars, the king moved to the vicinity of the citadel, which was traditionally associated with the rule over the city. Just as the citadel and the palace signified the secular power, the Holy Sepulcher and its environs signified the rule of the Church and its religious ritual. Near the Holy Sepulcher, rebuilt by the crusaders and reopened in 1140, stood the palace of the patriarch of Jerusalem, and opposite its southern entrance were the monasteries of the Benedictines and the area of the Order of St. John, the Hospitalers (now the New Market). The Templars were situated in the al-Aqṣā Mosque, which the crusaders called the Temple of Solomon (*Templum Solomonis*) and which is known in Jewish tradition as *Midrash Shelomo* (Solomon's House of Study). The German-speaking order of knights, a branch of the Hospitalers, was located near the Temple Mount (in what is now the Jewish quarter); the Order of St. Lazarus, the Leper Knights, was outside the city wall, near the present New Gate.

The establishment of the crusaders' rule invigorated Christian religious life. Throughout the 12th century many Christian traditions associated with Jerusalem and its vicinity were established, particularly those pertaining to the life of Jesus. Thus the tradition of Via Dolorosa was defined. The crystallization of these traditions stimulated an unusual amount of building in the city. Many Muslim shrines were turned into churches; for example, the Dome of the Rock ("Mosque of Omar") was called the Lord's Temple (*Templum Domini*) by the crusaders. New churches were also built, among them the new Church of the Holy Sepulcher, the most important architectural endeavor of the crusaders in Jerusalem, which was dedicated in 1149, 50 years after the conquest. The crusaders concentrated a number of churches under one roof. Some were built in the Byzantine period, including the Anastasis (Church of the Resurrection), which is the traditional site of the tomb of Jesus, the Martyrion, and the chapel of Queen Helena (Church of the Holy Cross). The ancient buildings did not blend well with the new structure, and there was a lack of symmetry among the component parts: a Byzantine church in the west, a Romanesque church in the middle. The southern gates (there was only a small gate in the west) are the best examples of crusader art in architecture and sculpture of that period. Among the outstanding churches built were the Church of St. Anne, in fine Romanesque style; the renovated "Tomb of Mary" church in the Valley of Jehoshaphat; and the churches of Mount Zion.

POPULATION OF THE CITY. Most of the inhabitants of 12th century Jerusalem were of European origin, except for the Eastern Christians – the Syrians (Suriani), the Jacobites, and the Copts, who lived in the northeastern corner of the city near the church of Santa Maria Magdalena. The Armenians, who had special relations with the crusaders, having two independent Christian monarchies in the northeast Middle East, were settled in the southwestern part of Jerusalem, around the Church of St. James. There were also Georgians from Caucasia (Georgiani), whose center was the Monastery of the Cross outside the walls of the city. The majority of the population was of French descent. French was the main language (official documents were written in Latin in the 12th century and in French in the 13th). The others congregated in ethnic or linguistic communities, such as the German knights mentioned above; the Spaniards, who settled near the Damascus Gate; the Provençals, near the Zion Gate; and the Hungarians near the New Gate. These communities had their own churches and later often hostels for pilgrims from their countries of origin. Muslims and Jews were not permitted to reside in the city; however, the Muslims came into the city for business purposes and some Jews settled near the Citadel. *Benjamin of Tudela tells of a few Jewish dyers whom he met while visiting Jerusalem.

THE FALL OF CRUSADER JERUSALEM. After the battle of Hattin (July 1187) the army of *Saladin besieged Jerusalem. The patriarch of Jerusalem and the secular commanders soon agreed to surrender, on condition that they would be allowed to ransom themselves from captivity and take their possessions with them. The city surrendered in November 1187 and remained in Muslim hands until 1229. All Christians, except for the Easterners, were forbidden to reside in Jerusalem. The Easterners were allowed to take care of the Holy Sepulcher and some of the other churches. Most of the churches were either restored as Muslim shrines and mosques, like the Dome of the Rock and the al-Aqṣā Mosque, or converted into Muslim charitable or religious institutions. The Church of St. Anne became a madrasa (religious college). The Jewish community was renewed as a result of the initiative of Saladin. Jews came into the city from other towns in the country, for example, Ashkelon, which was destroyed on Saladin's orders. Prominent among these was a group of Yemenites. Others came as immigrants from the Maghreb (North Africa) and Europe. A particularly important group of immigrants were those rabbis who came from France and England (1209–11). In 1218 *Al-Harizi reported that Saladin invited the Jews to settle in Jerusalem (*Tahkemoni*, Kaminke (ed.), 214–5, 353). It seems that the Jews lived in separate communities according to their country or town of origin.

In the third decade of the 13th century, Jerusalem suffered from a systematic destruction of its fortifications by the Muslims, as in other cities which seemed likely to serve as strong points for a renewed effort of settlement by the crusaders. The attempts by the Third Crusade to capture Jerusalem failed, even though the army got very close to the city. The walls of

Jerusalem were destroyed by the Arabs in 1219. Thus Jerusalem had no wall for more than 300 years, until the Ottoman sultan Suleiman the Magnificent rebuilt it in 1537–41. What the Christians did not achieve by military action, however, they succeeded in obtaining by diplomatic negotiations. According to an agreement between al-Malik Al-Kāmil, the ruler of Egypt, and Frederick II, Holy Roman Emperor and the king of Germany, a corridor to Jaffa through Ramleh was agreed upon, and Jerusalem was divided between Christians and Muslims (Tell 'Ajjūl 1229). The Muslims received the area of the Temple Mount and freedom of worship therein; the Christians received the rest of the city, and Frederick had himself crowned King of Jerusalem in the Church of the Holy Sepulcher. During this second period of occupancy (1229–44), the crusaders tried to resettle the city, but the results were in no way comparable with their achievements during the 12th century, either in population or in economic life. In 1240 the rulers of Egypt, who were competing with Damascus for ascendancy in the area, asked for help from the hordes of the Khwarizm Turks, who attacked Jerusalem in 1244, sacked the city, massacred the Christians, and devastated the Church of the Holy Sepulcher. Only a few Christian inhabitants of the city succeeded in escaping to Jaffa. *Naḥmanides mentions in his letter (written 1267) that he found only two Jewish dyers in Jerusalem, because during the Tartar (= Khwarizim) conquest some Jews had been killed but others escaped from the city. It seems that these found shelter in Nablus, because Naḥmanides remarks that the Torah scroll which they took with them was brought back to Jerusalem, when he succeeded in establishing a synagogue (Yaari, *Iggerot*, p. 85). The city suffered greatly and did not recover until the overthrow of the Ayyubids in Egypt by the Mamluks in 1250. Jerusalem became part of the Mamluk kingdom and remained so for over 260 years.

[*Encyclopaedia Hebraica*]

Mamluk Period

After the death of al-Malik al-Ṣāliḥ Ayyūb, the sultan of Egypt, in 1249, Jerusalem was incorporated into the kingdom of al-Malik al-Nāṣir Yūsuf, ruler of *Aleppo and Damascus. While this Syrian *Ayyubid was waging war with the *Mamluks – who had taken over in Egypt – the *Mongols invaded the Near East and penetrated into Erez Israel at the beginning of 1260. The inhabitants of Jerusalem fled panic-stricken when the Mongol hordes swept over the country sacking the townlets and villages. When the Mamluks succeeded in September 1260 in defeating the Mongols at 'Ayn Jālūt ('Ein-Ḥarod), Jerusalem, with all Erez Israel, was annexed to their kingdom and remained under their rule until the Ottomans conquered Syria and Egypt in 1516/17. The situation of Jerusalem in the years after the retreat of the Mongols was very depressed. *Naḥmanides reported in 1267 that only a part of the inhabitants had returned to the city and there were no more than 2,000 living there, among them 300 Christians. He persuaded some Jews who had found shelter in the villages to return and reconstitute the Jewish community.

The Mamluks did not care to fortify Jerusalem and repopulate it. Under their long rule Jerusalem became a town of theologians whose life focused on the mosques and madrasas (Muslim theological colleges). Until the last quarter of the 14th century it belonged to the province of Damascus and was administered by a low-ranking Mamluk appointed by the *nā'ib* (deputy of the Sultan) of Damascus. In 1376 al-Malik al-Ashraf Shaḥbān made Jerusalem a separate province and henceforth its head was appointed by the sultan himself. The new administrative entity was a small one, comprising the Judean hill country with Hebron, although at times Ramleh and Nablus (Shechem) were annexed to it. The promotion of its head to a higher rank, however, did not signify a great change in its status. The post was often sold to the highest bidder, who later did his best to extort from the townspeople what he had paid. The complaints of the inhabitants sometimes brought about the dismissal of the *nā'ib*, but for the most part they had to submit to his tyranny. Another very important post in the administration of Jerusalem was that of the “superintendent of the two Holy Places” (*nāzir al-ḥaramayn*), who was in charge of the sanctuaries of Jerusalem and *Hebron. He administered the endowments and supervised the activities of the staff. Sometimes this post was also held by the deputy of the sultan himself. It seems that the administration was not very efficient, even in the field in which the Mamluks were really interested, i.e., security. Letters of Italian Jews who settled in Jerusalem during the 15th century (see below) contain reports about the lack of security in the town's surroundings, where Bedouin were roaming.

In this period Jerusalem produced soap, manufactured from the olive oil which was supplied by the villages of central Erez Israel, but the Mamluk authorities encroached upon this industrial activity, e.g., by the establishment of monopolies and the forced purchase of large quantities of the raw material at high prices. The Arabic historian Mujir al-Dīn (d. 1521) dwelled on the catastrophic consequences of these measures, and one reads in the reports of Jews who settled in the town in the 15th century about the great difficulty of making a living. Even the frequent visits by groups of pilgrims could not change the economic situation. The pilgrims only made short visits and did their utmost to escape the extortions of the authorities as soon as possible. Consequently, Jerusalem remained a very poor town. The population did not increase considerably and Western pilgrims reported that many houses were empty or had fallen into ruin. At the end of the 15th century Jerusalem probably had no more than 10,000 inhabitants. The Dominican Felix Fabri, who was in Jerusalem in 1483, says that there were 1,000 Christians. The Jewish community numbered 100–150 families.

Whereas the Mamluks did nothing for the development of Jerusalem's economy, they continued the policy and trends of the Muslims since the Crusades in underlining the religious importance of Jerusalem for Islam. Religious propaganda had found expression in the building of madrasas and *zawiyas* (convents – Ar. *zāwiya*, pl. *zawāyā*) for Sufis and the pro-

duction of guidebooks for visits to the Holy Places, especially in Jerusalem and in Hebron. The Mamluk rulers generously endowed religious establishments, such as mosques and colleges. These activities corresponded well with the efforts they made to appear as the champions of orthodox Islam. The sultan Baybars had the Dome of the Rock repaired in 1261 and in 1263 he founded a hospice for pilgrims not far from the western gate of the town. Qalā'ūn (1279–90) repaired the roof of the al-Aqṣā mosque and founded another hospice. The sultans Katbughā (1294–96) and al-Malik al-Nāṣir Muhammad (d. 1341) restored the wall of the Ḥaram, and the latter also repaired the gilding of the roofs of the al-Aqṣā Mosque and the Dome of the Rock. Barsbāy (1422–38) made endowments for the upkeep of al-Aqṣā, and Jaqmaq (1438–53) repaired the roof of the Dome of the Rock once more. Tengiz, viceroy of Syria under the reign of al-Malik al-Nāṣir Muhammad, built a great madrasa in Jerusalem. Other colleges were founded in the 14th century by the emirs Ṭuṣhtumur and Arghūn and in 1482 by the sultan Qā'itbāy. The Mamluks also spent large sums on the restoration of the water conduits which supplied the town (or more correctly the Ḥaram), among them Tengiz in 1338 and the sultans Khushqadam and Qā'itbāy in the second half of the century. Princes from Persia and Turkey also founded madrasas and hospices for pilgrims in Jerusalem in that period. Thus, these numerous endowments resulted in the building of a great number of religious buildings, which became the striking feature of Jerusalem. (The travelogues of Western pilgrims and other sources give one a clear picture of Jerusalem in the later Middle Ages.)

Contradictory statements as to the existence of town walls point to the fact that Jerusalem was only partly enclosed by walls. Apparently the walls were not completely razed in 1219 and parts were rebuilt in 1229. The walled-in area probably included Mount Zion in the 14th century, whereas in 15th-century descriptions it appears as being outside of the walls, thus indicating changes in the area of the city. On the other hand, there were no suburbs outside the walls. Mujir al-Dīn mentions some small groups of houses west and northwest of the town; north and east of it there were some *zawiyas* and churches. On the southern outskirts there were also *zawiyas* and a group of houses named after the sheikh Abu Thawr, who participated in the siege of Jerusalem in 1187. The ancient Byzantine town plan had disappeared, although "David Street" (Ṭarīq Dā'ud) – the street connecting Jaffa Gate and Bāb al-Silsila, the main entrance of the Ḥaram – remained the main artery of the town. The area north and west of the al-Aqṣā Mosque was occupied by many colleges and convents of Sufi mystics: Mujir al-Dīn mentions 44 madrasas and about 20 *zawiyas*. The palace of the *nā'ib* was also located northwest of the Ḥaram. The area which the Christians held in the town was reduced, and Saladin had established a convent of Sufis in the former palace of the patriarch, north of the Church of the Holy Sepulcher. The church of the Hospitalers had become a Muslim hospital, a part of the hospital itself was also handed over to Sufis, and south of the Church of the Holy Sepulcher

a mosque was built. Since the number of the madrasas had increased so markedly, Jerusalem became a center of Islamic studies in the later Middle Ages. The most important schools were al-Ṣalāhiyya al-Tengiziyya, al-Mu'azzamiyya, and al-'Uthmāniyya, but other madrasas had students from other towns in Erez Israel, and even from other countries. The theologians who taught at the madrasas were the most distinguished group in the town's population. Among them there were families which for a number of generations had held certain prominent posts in the clerical hierarchy, such as the Ibn Jamā'a, Ibn Ghānim, al-Qarqashandī, and al-Dayrī. Some of the teachers at the madrasas of Jerusalem were well known in the Muslim world, e.g., Ibn al-Ḥā'im (d. 1412) and Kamāl al-Dīn ibn Abī Sharīf (d. 1500), both of whom were prolific writers in various branches of Islamic theology.

In view of the fact that the Muslim theologians played so great a role in the town, one can easily understand that persecutions of the non-Muslims were frequent. The atmosphere was charged with fanaticism, and the interventions of Christian princes who tried to protect their coreligionists were not always successful. For the most part, the outbreaks of Muslim fanaticism were directed against the Latin Friars (Franciscans) who had established a monastery on Mount Zion in 1334. Several times the Friars were imprisoned and sent to Damascus or Cairo. The possession of some sites on Mount Zion, which were coveted by Christians and Muslims, and sometimes even by Jews, became a point of contention. Time and again the chapel above the grave of David's supposed tomb passed from the Christians to the Muslims and vice versa. When the Christians built a church on Mount Zion in 1452 on the site where Mary is believed to have lived for a long time, it was immediately pulled down by Muslim fanatics. At times the Muslims penetrated into the Church of the Holy Sepulcher and other churches, devastated them, and destroyed some parts completely. In 1489 the Franciscans obtained permission once again to build a church on the site where Mary had lived, but in 1490 it was pulled down.

The role of the Jews in Jerusalem was very modest. Until the end of the 15th century their number was apparently quite small. In about the middle of the 14th century there was a yeshivah in the town whose head was a rabbi named Isaac ha-Levi Asir ha-Tikvah. At the beginning of the 15th century immigration of Jews from European countries began, but the attempt of German Jews to acquire the room above the supposed tomb of David almost brought it to a halt. The Christians applied to the pope, who asked the Italian merchant republics to stop taking Jews on board their ships sailing for Erez Israel; this happened in 1428. The Mamluk government also harassed the Jews, and in about 1440 it imposed a heavy tax on them to be paid yearly. Most Jews were craftsmen or petty merchants who could not afford to pay the tax and many left the town. Details on the economic situation of the Jews are given in a letter of R. Elijah of Ferrara, who settled in Jerusalem in 1438 and became rabbi of the community. R. Isaac b. Meir Latif (c. 1470) states that there were 150 Jewish families in

town, whereas *Meshullam of Volterra, who visited Jerusalem in 1481, spoke of about 250, but this was probably an exaggerated figure. Even in that period the Jews suffered greatly from heavy taxation and Muslim intolerance. In 1474 the Muslims destroyed an old synagogue, but the sultan intervened and after a long lawsuit had it returned and rebuilt. R. Obadiah of *Bertinoro, who went to Jerusalem in 1488 and became the spiritual head of the community, complained about its poverty and oppression, which caused Nathan *Sholal to move from Jerusalem to Cairo, where he became **nagid* (leader) of Egyptian Jewry. Obadiah found no more than 70 Jewish families and many widows in Jerusalem, but shortly afterward a change took place. On the one hand, the government abolished the heavy tax and the Italian republics once more allowed Jews to travel on their ships to Erez Israel, and on the other hand, the immigration of the Spanish exiles began. A pupil of R. Obadiah related in a letter written in 1495 that about 200 Jewish families were living in Jerusalem.

In the beginning of the 16th century there were scholars in Jerusalem who took part in the controversy which arose over the fixing of the dates of the sabbatical (*shemittah*) years. Scholars in Safed also took part in the dispute, not missing the opportunity to underline their reverence for the Jerusalemites (see *Israel, Land of, History). R. Isaac *Sholal, who was the *nagid* of Jewry in Mamluk lands and resided in Cairo, moved to Jerusalem at the end of Mamluk rule and published ordinances (*takkanot*) for the welfare and good order of the community; they are quoted in R. Moses *Basola's travel book.

[Eliyahu Ashtor / Haim Z'ew Hirschberg]

Under Ottoman Rule (1517–1917)

SULEIMAN THE MAGNIFICENT AND HIS WORK. The present-day wall around the Old City of Jerusalem was the work of the sultan Suleiman I (1520–66), who was called al-Qānūnī (“the Lawgiver”), and in the West, the Magnificent. According to contemporary evidence, most of the wall was in ruins at the end of the Mamluk period and Suleiman, known for his widespread activities in the building of numerous mosques and public buildings in the empire, ordered that Jerusalem be surrounded by a wall in order to protect its inhabitants against marauding Bedouins. Some believe that the activities of Charles V in *Tunisia aimed against the Ottomans prompted the rebuilding of Jerusalem's wall, as a defensive measure.

The following statement was made by an anonymous contemporary “Jewish” inhabitant of Jerusalem or Hebron: “Jerusalem the Holy City has been destroyed through our sins. Nothing is left of the old structure except for a little of the foundation of the walls. Now, in 1537, they have begun to build the walls around the city by order of the king, Sultan Suleiman. They have also put a great fountain in the Temple...” (*Ha-Me'ammer*, 3, p. 211). The building of the wall made a great impression on the Jewish world, and Joseph ha-Kohen recorded it in his chronicle: “In that year 1540 [an insignificant error], God aroused the spirit of Suleiman king of

Greece (= Rumelia) and Persia and he set out to build the walls of Jerusalem the holy city in the land of Judah. And he sent officials who built its walls and set up its gates as in former times and its towers as in bygone days. And his fame spread throughout the land for he wrought a great deed. And they did also extend the tunnel into the town lest the people thirst for water. May God remember him favorably” (*Sefer Divrei ha-Yamim le-Malkhei Zarefat u-Malkhei Beit Ottoman*, Sabionetta, 1554, 261b–262a). As is stated in the former source, the wall was rebuilt on top of its former remains, some of which dated to Second Temple times. In certain places the planner-engineer deviated from the ancient pattern, e.g., by leaving part of present-day Mount Zion outside the wall. According to tradition he was executed for this.

The construction of the wall lasted from 1537 to 1541, as is recounted in the 11 original inscriptions inserted in various parts of the wall, especially near the gates. Thus, for instance, the inscription near the Jaffa Gate (Bāb al-Khalīl, the Gate of Hebron) contains the date 945 A.H. (1538–39). The southern wall contains the Zion Gate (Bāb al-Nabī Da'ūd, i.e., Gate of the “Prophet” David, since it is near “David's Tomb,” which is on Mount Zion). Next is the Dung Gate (Bāb al-Maghārība, or Moor Gate, because of its proximity to the quarter of the Maghreb Muslims). On a tablet nearby is the date 947 A.H. (1540–41). Further east along the southern wall are three gates which are closed off, dating to pre-Ottoman times: the Double Gate, the Triple Gate, and the Single Gate. Northward along the eastern wall is the Mercy Gate (which the Muslims call by the same name, Bāb al-Rahma, or al-Dahriyya, i.e., Eternal, and the Christians call the Golden Gate). There are several legendary reasons for its being closed. Inside the area of the Temple Mount this gate has been divided into two since the early Middle Ages, one being called the Gate of Repentance (Bāb al-Tawba). In the east is the Lions' Gate (Bāb Sittna Maryam, the Gate of our Lady Mary, because of its proximity to the traditional birthplace of Mary, Jesus' mother; the Christians call it St. Stephen's Gate). On the northern side is Herod's (or the Flower) Gate (Bāb al-Zahra, a corruption of Sāhira since it leads to the plain of Sāhira (Sura 79:14) on which, as the Muslims believe, all creatures will congregate on the day of the resurrection of the dead (see *Eschatology)). The most magnificent of the gates is the Damascus Gate (Bāb al-'Amūd, Gate of the Pillar or Column). The seventh gate is the New Gate in the wall near the Christian Quarter (opposite the Hospice of Notre Dame), which was opened at the time of the sultan Abdul Hamid II (1876–1908) and for this reason was first called the Sultan's Gate; it was to facilitate the connection between the Christian Quarter and New Jerusalem.

Suleiman also introduced changes in the buildings on the Temple Mount. He ordered that the mosaics covering the walls of the Dome of the Rock be removed and replaced by beautiful marble tablets and facings, which adorned the building until the 1950s and were in part replaced during the repairs conducted by the Jordanian government. During Suleiman's reign four *sabils* (public fountains) were set up in the city and

one outside it near the Sultan's Pool, in order to provide water for passersby. The most beautiful of these is opposite the Chain Gate (Bāb al-Silsila) in the wall surrounding the Temple Mount. The two Jewish sources mentioned above emphasize the special attention devoted to one of the age-old problems of Jerusalem, the city's water supply, especially for the Temple Mount area. The conduits bringing water from the vicinity of Solomon's Pools (near Bethlehem) were repaired and widened by order of Suleiman and his wife Roxelana, and in 1536 the Sultan's Pool was constructed on the foundations of an ancient pool. Its water was collected by means of the dam in the Hinnom Valley (on what is the present-day road to Mt. Zion) and on it is also the fifth *sabil*.

In order to maintain the madrasas (Muslim theological colleges) and shelters for the Sufis (*zāwiya*, *khanqa*, *tekke*) which were established in former times, many properties (*waqf*) such as lands, shops, and flour mills were dedicated, bringing a flow of money to Muslim Jerusalem. Roxelana also established a khan (inn), and especially an *ʿimāret* (a soup kitchen providing free meals for students of the madrasas, dervishes, and other poor Muslims). These institutions were supported by taxes levied on numerous villages throughout the country. Repairs, which were ordered by the sultan, were made on the fortress near David's Tower (Turk. *Qishla*, winter barracks for the soldiers). A Turkish aga encamped at this fortress together with an escort of a troop of janissaries.

THE DECLINE OF JERUSALEM. After this period of construction, however, the development of Jerusalem was halted. The authorities did nothing to preserve the show pieces of Muslim architecture and prevent their destruction through the agency of time and of man. Administratively, Jerusalem was the seat of the governor of the district, or *sanjak* (Ar. *liwāʿ*; Turk. *sanjak*, both meaning "standard"). However, the *mīr liwāʿ* or *sanjak bey* (i.e., the governor) was usually of a lower status than the other local regional rulers (Safed, Nablus, Gaza), since the central authorities regarded Jerusalem as no more than a town bordering on the land of the Bedouin (*Arabistan*). Jerusalem's governor was subordinate to the general governor (Turkish *wali*) of the province (*eyālet*), usually that of Damascus, but sometimes to the *wali* of Sidon (and Acre), and had no direct contact with the central authorities in Constantinople. In 1756/1169 A.H., however, Jerusalem was raised for a short time to the status of an independent provincial unit (*eyālet*), ruled by a governor (*mutaşarrif*) bearing the standard of two *tughs* ("horsetails") – though only in the second half of the 19th century did it become an independent *mutaşarriflik* ruled by a "two-tail" pasha – directly subordinate to the Sublime Porte in Constantinople (see below). In the city of Jerusalem the immediate control of all municipal matters was in the hands of the *qadi*. He was also the authority over all non-Muslims.

The Ottomans introduced no changes in the composition of the Muslim population of Jerusalem. During their 400-year reign only a few Turks settled in the country. The Turkish language did not take the place of Arabic, although a number of

Turkish words were incorporated into the spoken Arabic. This absence of a permanently settled Turkish class facilitated the establishment of a kind of local nobility in Jerusalem, composed of the distinguished Arab families which derived their power and influence from farming taxes and duties (*iltizām*) and from their control of hereditary religious functions and, at the end of the Ottoman period, exercised administrative functions. These were the *aʿyān* (the notables, "eyes" of the community), the *effendi* (masters), e.g., the families of Khatīb, Dajjānī, Anşārī, Khālīdī, ʿAlamī, and later Nashāshībī and Ḥusaynī. Several of Jerusalem's Christian families were also well-known: Salāmeḥ, Tannūs, ʿAṭallah, and Katan.

One reason for the Ottoman rulers' disparaging attitude toward Jerusalem may have been its insignificance from a strategic and political point of view when there was no longer a danger of renewed Crusades. At the Ottoman conquest of Erez Israel (1516) even the exact date of Jerusalem's capture was not noted. Because of its insignificance the rebels and invaders did not attempt to conquer it. The same situation existed at the time of Zāhir al-Omar, who in 1773 controlled the whole country except for Jerusalem. Similarly, Napoleon did not consider it necessary to conquer Jerusalem and was satisfied with the towns of the coastal strip and the plain. Another reason was the city's economic insignificance. According to the Ottoman records of land registration from the 16th century, the inhabitants of the district of Jerusalem were far fewer in number than those of Gaza, Nablus, and Safed. Accordingly, the income of Jerusalem's governor was smaller than that of the other governors. Apart from soap and Christian religious objects, almost nothing was manufactured in Jerusalem which could be exported to other districts or abroad. Nor did local trade play an important role in the city, since industry and craft did not develop in Jerusalem, which had no fertile rural areas surrounding it. Jewish, Muslim, and Christian sources were therefore justified in repeatedly emphasizing that most of the city's inhabitants were extremely impoverished. During the Ottoman Empire's period of abundance, the sultans regarded it as a duty to exempt the city's inhabitants from various taxes and even sent yearly contributions for distribution among the poor.

JEWISH JERUSALEM. Even before the Ottoman conquest there were many indications that Jewish Jerusalem was awakening from its lethargy. At the beginning of the 16th century it attracted the kabbalists who were awaiting the imminent redemption, such as Abraham b. Eliezer ha-Levi. Isaac Sholah, the *nagid* of Egypt, also settled in the city. After the conquest, and especially in light of the sympathetic attitude of Sultan Suleiman, which aroused such a positive response on the part of the Jews, it appears as if there existed, in effect, those political and social conditions which could enable Jerusalem to reassert its function as the spiritual and religious center of Judaism. David *Reuveni, a man of imagination and political courage, approached the Jews of Jerusalem. *Levi b. Ḥabīb, who settled in the city and was one of the greatest scholars

of his time, attacked Jacob *Berab for wanting to reestablish ordination (*semikhah*) in Safed and succeeded in foiling that plan. *David ibn Abi Zimra and, later, Bezalel *Ashkenazi taught in Jerusalem. However, the overwhelming poverty of the scholars and all the Jewish inhabitants placed the city at a disadvantage, and Safed, which attracted in the 16th century the greatest scholars and most of the immigrants, superseded Jerusalem for a time in importance as a center.

However, the communities of Egypt and Syria (especially Damascus) aided the Jerusalem community, as is attested by Moses *Trani (De Trani): “All the holy communities which send contributions to Jerusalem know that, in addition to what is distributed among the scholars and the poor, they are also used for all the fines and penalties levied on the community, for the inhabitants of Jerusalem can pay only the *kharāj* (poll tax)... and the remaining burdens... have to be met from outside contributions; for if they did not do thus, no one would want to settle in the city” (Responso, vol. 3, no. 228). The situation of the scholars and yeshivot was especially difficult, and there are recurring and repeated complaints about this in the literature of the period.

Apparently the local rulers hindered the consolidation of the city’s Jewish population. According to official censuses in 1525, 1533–39, and 1553, the number of Jews in the town ranged between approximately 1,000 and 1,500. They lived in three quarters, Sharaf, al-Maslakh (“Slaughterhouse”), and Risha, which are coextensive with the present-day Jewish Quarter. David ibn Abi Zimra conveys in his responsa the interesting information that the Jewish Quarter is called the “City of Zion” by the Jews and *Ṣahyūn* by the Arabs. He explains that in the laws pertaining to the holiness of Jerusalem a distinction is to be made between that part to which these laws pertain, called by the Arabs *Quds* (= Jerusalem), and the other part (“Zion”), which is considered outside of Jerusalem. In 1586 the authorities deprived the community of the synagogue named after Naḥmanides (restored only after the Six-Day War).

After Safed’s decline at the end of the 16th century Jerusalem was built up. Bezalel Ashkenazi, who had come from Egypt, played a major role in this rebuilding. He was not content merely to act as *dayyan* but also lent his help in the organization of material assistance and even went on a mission to organize aid and save the synagogue which had been confiscated. He died in the early 1590s, however – shortly after his immigration – and was unable to carry out his activities. His initiative persisted after his death and Jewish Jerusalem continued to recover. The stream of immigrants from Turkey, North Africa, Italy, and Western Europe soon turned to Jerusalem. One of the most distinguished and famous among them was R. Isaiah *Horowitz (immigrated in 1622), author of *Shenei Luḥot ha-Berit*, whose influence was of great spiritual importance for the community. He found a population in Jerusalem composed of Sephardim, Ashkenazim, and Italians (who were considered one community), Maghrebis, and Musta’ribs (Moriscos). There was also a small Karaite com-

munity. Shortly after his arrival the community suffered severely from the persecution of the governor Muhammad ibn Farrukh (1625), which is described in the pamphlet *Ḥorvot Yerushalayim* (published anonymously in Venice, 1636). This governor, however, was removed from his post a short while later and the community recovered.

In general, the situation improved in Jerusalem, but the tax burden and other impositions were not eased. There are various extant sources from this period, including several interesting travel descriptions (see *Travels) – among them that of R. Moses Poryat of Prague (1650) – which make it possible to achieve a faithful reconstruction of the situation. There are also descriptions from the end of the 17th century which render an exact description of the situation in Jerusalem. There were then about 300 Jewish families, with nearly 1,200 persons. This number exceeded the quota established by the Ottoman authorities for the Jews in the city, and they therefore had to be bribed so that they would not expel the “extra” ones. The extortion of monies resulting from the increased numbers of Jews caused some of the people within the community to seek to limit the number of new settlers and make them go elsewhere.

The only possibility for the economic consolidation of the community was to send emissaries abroad to seek aid. Among the Jerusalem emissaries was *Shabbetai Zevi, who only arrived in the city in 1662 but made such a strong personal impression that shortly thereafter he was entrusted with the task of collecting contributions in Egypt. He did, in fact, succeed in raising considerable sums but he used them for disseminating propaganda for his movement. The sages of Jerusalem, who were not convinced by his messianic claims, excommunicated him and compelled him to leave Jerusalem. This, however, led to conflict and some of the Jerusalem emissaries who went abroad engaged in Shabbatean propaganda, caused friction within the Jerusalem community, and even undermined it economically and caused its breakdown, since they hindered an effective organization of aid to the community. Spiritually, in contrast, Jerusalem flourished during the 17th century. The city inherited Safed’s place in the study of the Kabbalah. R. Jacob *Zemaḥ settled there in the late 1630s and edited the writings of R. Ḥayyim Vital with the help of the latter’s son Samuel. He himself wrote a series of books and commentaries explaining the teachings of R. Isaac Luria and Vital. Other mystics also settled in the city and, from then on, Jerusalem became the center of the kabbalists.

An important contribution to the development of the city’s spiritual life was made by Jacob *Ḥagiz, who came from the Maghreb (Fez) by way of Italy, as did most of the North African immigrants of that time. With the financial assistance of an Italian family of philanthropists he established the *bet midrash* Beit Ya’akov (1658), in which leading contemporary scholars taught talented disciples. These scholars included: R. Moses *Galante, R. Samuel *Garmison, R. Solomon *Al-gazi, and the important *posek* R. *Hezekiah da Silva, author of *Peri Hadash*.

At the end of the 17th century the Jewish community numbered approximately 1,000 persons. According to the record of poll taxes, there were around 180 payers of the **kharāj*. A quarter of them were scholars and rabbis; the remainder were craftsmen and small businessmen. Neither group belonged to the wealthy classes who paid the highest tax (*a'lā*), only a quarter paid the intermediate (*awsaṭ*), and the great majority the lower tax (*adnā*).

Although the Shabbatean movement failed and seemed to abate at the end of the 17th century, the ferment it had aroused did not cease. A group, 500 strong, headed by Judah b. Samuel he-Ḥasid and Ḥayyim *Malakh, which contained extreme and moderate Shabbatean trends, came to Jerusalem from Poland in 1700 and settled in the courtyard which was later the site of the Ḥurvah synagogue. Before their arrival the population was around 1,200, about a sixth of whom were Ashkenazim. The group broke up quickly, however, since their behavior led to quarrels within the community, until the veteran inhabitants had to turn to Poland and Western Europe and request assistance in their battle against the newcomers. In addition, the burden of debts owed by the Ashkenazim to the Muslims became so heavy that they no longer could bear them or maneuver with the creditors. Due to disruptions on the roads in Europe, financial help did not arrive from there. On Nov. 8, 1720, the Arabs broke into the Ashkenazi synagogue and burned the Scrolls of the Law. They also seized the plot and held it until the migration of *Perushim* to Jerusalem approximately 100 years later (1816). For some time no Ashkenazi Jew could show himself in the streets of Jerusalem unless he disguised himself in Eastern dress. One of the first Ashkenazim who decided to return to Jerusalem was R. *Abraham Gershon of Kutow, brother-in-law of the Baal Shem Tov (c. 1750).

During that period of depression, the community of Constantinople had to take the Jews of Jerusalem under its wing. A "council of officials" was established in the capital of the Ottoman Empire which undertook the responsibility for clearing up the community's debts and arranging its financial affairs. The officials from Constantinople also instituted ordinances and special arrangements in order to prevent a recurrence of those events which had brought about the community's economic downfall. A special *parnas* was sent from Constantinople to supervise public affairs. Knowledge about the economic improvements resulting from these efforts became widespread and numerous immigrants again began to settle in Jerusalem, especially scholars. A special impression was made by the immigration of R. Ḥayyim b. Moses *Attar of Salé, who went with disciples from Italy and established a prominent yeshivah (1742) in a building which is still standing. According to the rule "competition among scholars increases wisdom," more yeshivot were established in Jerusalem and the sounds of study echoed in its alleys. Wealthy Jews from all parts of the Diaspora contributed to the establishment and maintenance of these yeshivot. This activity also led to the increase in written works, especially of responsa,

which were published in Constantinople, Izmir, Salonika, and the towns of Italy.

At the end of the 18th century, however, there was another decline in Jerusalem's Jewish population. According to a possibly somewhat exaggerated estimate, approximately 10,000 Jews lived there in the middle of the century, but as a result of the insecurity in the southern part of the country, the decline in influence of the central authority in Constantinople, and also epidemics and natural disasters, the population at the end of the century was estimated at half that number or even less.

CHRISTIAN JERUSALEM. According to the Ottoman *defter*s (lists of taxpayers) in Jerusalem, the number of Christian households increased from 119 to 303 between 1525 and 1533; if monks, clergymen, and bachelors are added, the increase was from 600 to 1,800 persons. In the villages surrounding Jerusalem – Bethlehem, Beit Jālla, Beit Ṣāḥūr – there were also Christian families. Most of them were permanent resident Syrian Christians, but all spoke Arabic. They were called "*Christiani dela centura*," i.e., the girdled Christians, referring to the *zunnār* which was their special mark of difference from the Muslims. In the course of time the sign was forgotten but the name remained. In their way of life the Christians were not different from the Muslims; their women covered their faces in the streets like the Muslim women and would not go among men. Several travelers point out that drunkenness and prostitution were widespread among the Christians: in particular, the last night of the Easter celebrations, when permission was granted to all the Christian inhabitants to congregate in the Church of the Holy Sepulcher, was believed to have been occasion for wanton immorality.

The Muslims despised the Christians and in official documents sometimes called them "infidels." They were usually subject to all the restrictions applying to the "People of the Book" in relation to the erection and maintenance of churches and other religious institutions. The authorities delayed permission for repairs, and when any attempt was made to introduce something which had not existed previously, they were forced to remove the addition. In the words of R. *Gedaliah of Siemiatycze (beginning of the 18th century): "The idol-worshippers are also in exile here – like the Jews" (Yaari, *Massa'ot*, 341). According to him (loc. cit.) their number in Jerusalem was great and exceeded the number of the Ishmaelites (Turks and Arabs). They were not allowed to marry without obtaining permission from the governor, for which they had to pay the *rusūm* tax, and the appointment of their religious leaders had to be approved by the governor or the qadi of Jerusalem.

From a religious point of view the "*Christiani dela centura*" were not a single entity but were divided into the various Eastern sects and churches, the Latins, i.e., the Catholics, being a negligible minority. Christian visitors usually counted seven to nine religious communities with an established claim to the Church of the Holy Sepulcher: Franciscans, i.e., Latin Friars of the order of St. Francis, called the "Little Brothers";

Greeks, the Orthodox Melchites, members of the Byzantine Church; Georgians; Armenians; Abyssinians, also called “Indish”; Jacobites; Syrians; Nestorians; and Copts. Each community held a certain part of the Church, to which, as well as to various honorific ceremonial functions, it claimed a prescriptive right. There were frequent conflicts among the clergy, therefore, over real or imagined encroachments, and the Muslim authorities often had to mediate and decide between the combatants (during the Ottoman period, the British Mandate; later, the keys of the Holy Sepulcher were in the hands of a Jerusalem Muslim family). The Franciscan Friars, “Custodia Terrae Sanctae,” were responsible for the Christian pilgrims who came to worship at the *holy places. They would transfer to the authorities the taxes levied on the pilgrims at the gates of the city near the Church of the Holy Sepulcher, which the Muslims deprecatingly called *al-Qumāma* (“a heap of rubbish”) instead of *al-Qiyāma* (“the Church of the Resurrection”). Probably only a few of the pilgrims knew that the tax collected from them was for the Muslims in the city. Conflicts periodically broke out among the Franciscans and clergymen of the other communities.

ATTITUDE OF THE EUROPEAN POWERS. No less surprising than the coolness of the Ottoman authorities toward Jerusalem (see *Decline of Jerusalem*, above) was the attitude of the countries of Christian Europe – first and foremost among them France, the first European power to enter into a *capitulations agreement with the Ottoman Empire. Francis I, king of France and “the most Christian of Christians,” saw himself as the defender of the Christian holy places and in 1528 complained about the confiscation of the church in Jerusalem, which was made into a mosque by the Muslims. This probably referred to the Cenaculum, the Church of the Last Supper on Mount Zion. The sultan made no response to the complaint but promised that the other places in the vicinity of the mosque would remain under Christian control and would not be harmed by the Muslims.

In 1535 a capitulations agreement was reached between Francis and Suleiman the Magnificent. It contained a clause, which stated explicitly that the pope could join the agreement and enjoy all its benefits. From that time on the Christian states, especially the pope, began to appeal to the French kings to protect the interests of the Christians and Christianity in Palestine. The capitulations were intended to regulate the activities of France in key places in Palestine, especially in Jerusalem. It was reasonable to expect that a permanent French representative in Jerusalem would also be responsible for the maintenance of Christian and pilgrim holy places. However, it was only about 100 years after the first capitulation agreement and about 80 after the appointment of a French consul in Tripoli, Syria (1544), that the first French consul in Jerusalem was appointed.

The following are excerpts from the writings of the Frenchman E. Roger, who visited Palestine in 1631, as he recorded in *La Terre Sainte* (1664; 461–4):

The third consulate is that of Jerusalem which our king, the most Christian of Christians, St. Louis [the 13th, 1610–43], blessed be his memory, established in 1621 for the protection of our monks that by means of its influence they might establish and consolidate themselves in those places and overcome the insults and injustices inflicted on them by that barbaric people.

After describing the consul’s duties toward the merchants, he continued:

The fourth and fifth clauses [of the capitulations] deal only with the holy places and the monks inhabiting them, the pilgrims who also come to visit them, and other Christian passersby who are under the protection of that consul. They need him on every occasion in order to receive assistance and support in all their dealings with the Turks; he uses his influence to convince the Turks to maintain the capitulations and to practice according to the agreements. Nevertheless, the Turks do not refrain from perpetrating their tyrannical deeds both on the monks and the Catholic Christians who are not monks. These deeds would have been a thousandfold more difficult to bear were they not curtailed by that French consul whom the king has appointed for this purpose. A constant cause for praising and blessing our king is that in all the towns in which there is a consul or vice-consul a chapel is permitted in which he usually maintains two or three of our monks from the Jerusalem community, who celebrate a holy mass daily for our king in the presence of the consul and the merchants, both those living in the towns and those at anchorage or from the ports... The reason that the attitude of the Turkish authorities to the monks and the Christian Catholics in Jerusalem is worse than in any other part of the sultan’s kingdom is that there is no consul there. For the Turks, seeing that M. Jean Lempereur, whom the king sent as consul, prevents their carrying out their usual tyrannies toward the monks, made false accusations against him to the pasha in Damascus and he was taken there by a troop of Turks. However, he proved his innocence and went to Constantinople. The pashas and qadis, who have since been in Jerusalem, do everything in their power to prevent his return, since he would hinder them from filling their pockets as they do in the absence of a consul. They daily invent new means, under the pretext of administrative action, of gradually destroying us. And when we have just escaped from one matter, they raise up another, a worse one in its stead. They do this not only during our lifetime but also after our death. For it is forbidden to bring a monk or a Catholic Christian for burial unless the guardian priest has first obtained the permission of the qadi who demands 12 dinars for it, although the contents of the permit, which I wish to include here in order to show the contempt in which they hold us, reads as follows: “I Abu Suleiman, qadi of Jerusalem, permit the guardian of the Franjis to bury the cursed monk, so-and-so...”

The attempts to appoint a consul to succeed Lempereur were futile, but in 1699 a French consul was again appointed in Jerusalem. However, he fled to Bethlehem several months later because of the pasha’s oppression. Another consul, the third in line, went to Jerusalem in 1713, but he too was only able to hold out for a short while. From then until 1843 no French consul was appointed in Jerusalem; the consul in Sidon would come during Easter to the Holy Sepulcher in order to maintain the splendor of the Latin ceremonies.

The most important topic which interested the European public – or at least those broad sections of the public having no direct connection with commercial dealings – in connection with the Holy Land was without doubt the assurance of the rights of the Christian faith and the protection of its holy places, especially in Jerusalem, and of its faithful who came to worship at these places. Nevertheless, no other country besides France attempted to establish a consulate or at least a consular agency in Jerusalem. All their efforts were directed toward the maintenance of representatives in the commercial centers. The Franciscan order retained the function of looking after West European pilgrims, without regard for differences in religious ritual, i.e., including Protestants, Calvinists, etc. The problem of Orthodox pilgrims coming from outside the borders of the Ottoman Empire arose only during the 19th century; until that time pilgrims from Russia were not a significant component of the general stream. The faithful of the other Eastern Churches were subjects of the Ottoman sultan.

One characteristic feature in the lives of the Christian communities of Palestine should be pointed out: their spiritual rulers and religious institutions were outside the borders of Palestine. The Latin Church had an historical and dogmatic justification for this attitude, since Rome was its cradle and focus, but this was not the case with the Eastern Churches in general and the Orthodox Church in particular. Nevertheless, the Orthodox patriarch of Jerusalem, whose church claimed priority in Christianity and thus greater rights to the Church of the Holy Sepulcher, the Church of the Nativity (in Bethlehem), and other holy places, had his seat in Constantinople. Moreover, no church concerned itself with the establishment in Palestine of an institution of higher learning and education for its priests and monks. All the Christian travelers and tourists in Palestine reported the ignorance of all the lower clergy, both those included in the monastic orders and the “secular,” i.e., those outside the orders who were scattered among the smaller communities and villages. The few clergymen on a higher level sent from Rome, Athos (the important center of Greek clergy), or Constantinople were involved in controversies over prestige, real or imagined, and in intercommunal conflicts and had no time free for study or teaching.

THE CHANGE IN THE 19TH CENTURY. Beginning with the end of the 18th century there was an increase in the interest of the European powers, primarily France and England, in the Middle East, especially from an economic point of view (see *Israel). The Christian powers began to display great interest in the Christian holy places, to be concerned for their protection and welfare, and to support their traditional administrators: the Eastern and Western Christian Churches, the Orthodox and Latin orders, and the new monasteries which had sprung up. This necessitated the prolongation of the capitulations agreements and the effective protection of European citizens and stateless persons under the protection of the foreign consuls, and even the sultan’s non-Muslim subjects. It is clear, however, that the international powers, which now made an

appearance in Jerusalem – France, Russia, England, Austria, and Prussia – did not regard religious matters as the major and principal motive for their activities. The true intentions of the European powers became manifest when they intervened in 1840 to put an end to Muhammad Ali’s revolt against Ottoman rule (see *Israel, History, Ottoman Period).

In 1835 Ibrahim Pasha, who ruled Erez Israel and Syria on behalf of his father Muhammad Ali, gave the Jewish community of Jerusalem permission to “repair” its four ancient synagogues, which were in a state of disrepair, after all previous requests to the Ottoman authorities had been rejected. They now began some basic projects which were tantamount to reconstruction. It was necessary to break down weak parts of the foundations, to replace the wooden ceiling in one of the synagogues, which had been covered with mats, by a stone dome, etc. There was a danger, when these demolition works were begun, that the permission could be cancelled under pressure from Muslim circles – since this actually was new construction, which was not permitted by Muslim religious law. Furthermore, there were not sufficient funds to complete the “repairs” quickly so that they could be pointed to as a *fait accompli*. A special emissary was sent in order to collect contributions for these urgent needs to the “towns of the inner west” (i.e., Morocco). Nevertheless, the community incurred numerous debts. A.M. *Luncz states in *Jerusalem* (1894; p. 211 n. 3), “The community’s debts increased as a result of the repairs and expansion of the R. Johanan b. Zakkai and Istambuli synagogues undertaken by the sages and rabbis of the community during the rule of Ibrahim Pasha. The former had been very small and they expanded and improved it. The latter had been covered with mats for a long time and only then did they cover it with a stone ceiling.”

In the emissary’s letter to Morocco five synagogues were mentioned which were suffering the ravages of time and were in need of repair, including the synagogue of R. Judah he-Ḥasid, which had become a *hurvah* (ruin) since the “Shiknāz,” i.e., immigrants from Eastern Europe, had been forbidden to settle in Jerusalem. Great efforts were made to have this harsh decree by the Ottoman rulers abolished. In 1836 Muhammad Ali published a firman which laid down the conditions for a legal arrangement for the resumption of immigration to Jerusalem from Eastern Europe. The firman was decreed with the active support of the European powers which aimed at increasing their influence among the Jewish population of East European immigrants. The few *Perushim*, the disciples of R. Elijah the Gaon of Vilna, who were tolerated in Jerusalem, immediately seized the opportunity and started to clean out the “Ḥurvah” and erect a synagogue, called *Menaḥem Ziyyon*, which was dedicated several days after the earthquake in Safed (24th of Tevet, 1837). During the tribulations which befell Safed several times in the fourth decade, many people began to leave the town and move to Jerusalem where conditions for settlement had improved; Jerusalem became the center of the *Perushim*, who influenced the Ashkenazi community.

ESTABLISHMENT OF CONSULATES IN JERUSALEM AND INCREASED CHRISTIAN ACTIVITY. As the policy of supporting the Ottoman Empire against the rule of Muhammad Ali and his son Ibrahim Pasha came to be adopted by most of the European states, they began to pay attention to strengthening their position in the country. Thus, already in 1838 Britain made overtures toward opening a consulate in Jerusalem, the first in the city after the abolition of the French consulate more than 100 years previously. It was headed by a vice consul (1838) and later (1841) a consul (initially W.T. Young). Even before this the British consul general (whose headquarters was in Beirut) was represented in Safed and Acre by a consular agent, Moses Abraham Finzi, member of a distinguished Italian Jewish family, who was officially appointed to his position in May 1837. Since the Anglicans did not yet have their own churches in Jerusalem and no English Christians lived there, it was the British vice consul's declared function to protect the Jews – as was the function of the agent in Safed. Thus it was stated explicitly in the instructions of the Foreign Secretary Palmerston to Young on Jan. 31, 1839: "Viscount Palmerston has instructed me to signify that part of your function as British vice consul in Jerusalem will be to offer protection to the Jews in general..." He also had to take care of pilgrims and tourists from England.

Russia opened its own consulate in Jaffa in 1812 in order to assist Orthodox pilgrims who were beginning to come from Russia. It is learned from the reports made by Young during his first year in office that there was a Jewish agent in Jerusalem who represented the Russian consul and whose duty it was to take care of 40 Russian-Jewish immigrant families in Jerusalem. He maintained that the Russian consul removed one agent and appointed another in his stead, who was an Austrian subject, not a Russian.

Young also obtained possession of a letter from C.M. Basily to R. Isaiah *Bardaki. Basily had been appointed a short while previously (1839) as Russian consul for Syria and Palestine. His permanent seat was in Beirut, but in the course of time he moved to Jerusalem. Basily found it necessary to explain that Bardaki's appointment as consul of Russia had been made by his predecessor, Graf Alexander Medem. The style of the letter reflects an energetic man who already at the beginning of his career in the Middle East could control the situation. He was appointed consul general in 1844 and held important functions in guiding his country's policies in the Middle East. He had a broad range of knowledge and wrote an important work on contemporary events in Palestine and Syria.

Isaiah Bardaki, son-in-law of *Israel b. Samuel of Shklov, author of *Pe'at ha-Shulhan*, played an important role in Jewish Jerusalem. After two or three years he became the consul of Russia and Austria and bravely combated missionary activities. Of special significance was his widespread activity in the internal matters of the *kolel* of the *Perushim*. Young expressed the fear that Isaiah Bardaki would attempt to represent all the European Jews. As a reaction to this report, he was immedi-

ately instructed by the Foreign Office in London to appoint a *wakil* (officer-in-charge) for the English Jews in the same way that the Russian agent had been appointed. Young offered this position to David Herschell, son of Solomon *Herschell, Ashkenazi chief rabbi of England, but he refused to accept the post, as he wanted to keep out of the controversies among his brethren in Jerusalem. Another reason for his refusals, it appears, was the suspicion that the British intended to use him for purposes of intelligence.

Perhaps Herschell was also apprised of the intentions of religious circles in England to initiate missionary activities in Palestine; in fact, in 1840 an agreement was signed between Queen Victoria and Frederick William, king of Prussia, establishing an Anglican episcopacy in Jerusalem which would also supervise missionary activity in Palestine. The bishop would always be a member of the Anglican church and would be appointed alternately by the archbishop of Canterbury and the king of Prussia, while both countries would cover the costs. The first bishop who arrived in Jerusalem in 1841 was the apostate Michael Solomon *Alexander. Four years later permission was received from Istanbul for the establishment of a Protestant church in Jerusalem. Alexander immediately began his missionary activities, which were not in fact viewed with favor in the British Foreign Service since they raised many difficulties. James *Finn (1845–62), the British consul in Jerusalem who succeeded Young, was also accused of missionary intentions and was finally compelled to leave his post.

Cyril II, the Greek Orthodox patriarch for Jerusalem from 1845 to 1872, was a distinguished and, in many ways, a progressive person. He moved his abode from Istanbul, which had been used by his predecessors as the center for their activities, to Jerusalem, the official seat of the patriarchate. In 1849 he established a printing press near the Holy Sepulcher for his community's needs.

In 1843 France reopened its consulate in Jerusalem after a lapse of 130 years. This did not please the Franciscans, and they were especially disturbed by the fact that Pope Pius IX established a Latin patriarchate in Jerusalem (1847), one of whose functions was to check the increasing influence of the Orthodox and the Protestants. The Protestant clergy – Anglican, Prussian, and American – did in fact develop widespread missionary activities among the local population. Since activity among the Muslims was prohibited by the law of the land and could arouse the anger of the authorities, the missions conducted their activities among the Eastern Christian and Jewish communities. This led to the establishment of Protestant communities among the Christian Arabs of Palestine and Syria. A few Jews also converted for financial gain. There were also cases of Christians who converted to Judaism, well-known among them being the U.S. consul, Warder *Cresson, and David Classen, owners of an estate near Jaffa.

APPOINTMENT OF HAKHAM BASHI FOR JERUSALEM. In view of the rivalry for the support of the "alien" Jews of Palestine, the sultan was finally compelled to do something for his

Jewish subjects, particularly in Palestine. The firman of the beginning of Ramadan 1256 A.H. (end of October 1840), achieved by Montefiore, Crémieux, and Munk – after the blood libels in Damascus and Rhodes – for the protection of the Jews, was considered a kind of bill of rights for them, since it stated explicitly that the rights granted to all the subjects of the sultan in the Khaṭṭi sherif decree of Ḡhane (1839 – see *Turkey) applied to the Jews as well. The Jews of Jerusalem particularly relied on the firman in defending themselves before Muhammad Pasha, the governor of the pashalik, against the blood libel, which was propagated at the beginning of March 1847 by the Greeks in Jerusalem, with the support of their patriarch.

One direct result of the changes in the status of Jerusalem was the appointment of a *ḥakham bashi* (chief rabbi) of Palestine, whose seat was in Jerusalem. In his *Jerusalem* (1892), Luncz points out the reasons for this appointment: “In the year 1840 [!] the government saw fit to elevate the holy city Jerusalem to the status of a district town and to place in it a pasha who in the course of his duties would govern its inhabitants and the inhabitants of the towns surrounding it, and by means of this elevation in its political status the Jews gained the right to appoint a chief rabbi authorized by the government as a *ḥakham bashi*... The leaders and elders of the community then realized that for the welfare and peace of their community, which had begun to spread and increase, it was necessary that the rabbi heading it should be authorized by the exalted government, so that he might be capable of standing in the breach and legally defending the rights of his community. And through the efforts of the minister Abraham di *Camondo of blessed memory, who knew the aforementioned rabbi [Abraham Hayyim Gagin] and esteemed him greatly, this aim was realized, and shortly after his appointment he received the statement (firman) of the king confirming him for the position, and he was the first *ḥakham bashi* of Palestine” (p. 210).

The imperial authorization of appointment (*berāt humāyūn*, at the beginning and in the body of the document), which was issued in Istanbul in 1841, was of vital significance for the Jewish community of Jerusalem and Palestine. Of special significance were the rights indirectly guaranteed the community, since they indicated a legal breakthrough in the restrictions concerning the synagogues and *battei midrash*. In all versions of the *berāts* it was established that the reading of the law – i.e., reading from the *Sefer Torah* – in the house of the *ḥakham* or in other Jewish houses was in accordance with the Jewish religion, and that it was permitted to hang up curtains over the arks of the law and lamps, i.e., to set up permanent places of worship. In these *berāts* there is a certain shrewdness which permits the Covenant of *Omar – which prohibits the establishment of new synagogues and *battei midrash* – to be overlooked, and permission is given to hold public worship everywhere without running the risk of disturbances and oppression. The synagogues and their properties are protected – they may not be harmed or seized in collection of debts, which formerly occurred frequently. Each *berāt* delineated the rights

and obligations of the *ḥakham bashi* and the community, and it was renewed with each new appointment to the position by the imperial authorities.

CAPITULATIONS IN THE 19TH CENTURY. The European states probably did not rely on the written promise of the *Khaṭṭi humāyūn* (i.e., the order whose beginning was written by the sultan’s own hand), which was given (1856) to the sultan’s subjects but not their own, and they took care to safeguard the physical and property rights of those under their protection, as well as caring for the holy places. Britain and France also sought to ease restrictions on economic expansion, to gain a liberal law that would enable their subjects to buy land, etc. Opposing them, the sultan maintained that he could not both recognize the special status of alien subjects on the basis of the capitulations and grant them complete equality with his own. If Britain and France wished to obtain economic rights for their subjects, they would have to give up their protection according to the capitulations.

Jerusalem, however, did not remain only an attraction for pilgrims. The scope of the activity of the foreign consuls widened because of the intrigues between them and the agencies and institutions for special functions, which were connected with them. Jerusalem became the residence of the various delegations, religious and secular, which were devoted to a wide range of activities in education, missionary work, medicine, and charity. The Jews were the first of the city’s inhabitants to foresee this development, which involved a transformation in the status and importance of Jerusalem. The founders of the Naḥalat Shivah quarter, who left the Old City, were the pioneers and builders not only of the new Jewish Jerusalem, but of Greater Jerusalem with all its communities and nationalities.

[Haïm Zew Hirschberg]

THE DEVELOPMENT OF JERUSALEM, 1840–1917. Muhammad Ali’s successful uprising against the central authorities in Istanbul, which had only been terminated under pressure from the European powers, had demonstrated the weakness of Ottoman rule. The growing interference of foreign powers in Ottoman affairs was particularly perceptible in Jerusalem, which was no longer off the beaten track. Improved communications with Europe, as the result of the use of steamships on regular sea routes, facilitated an increased flow of visitors and pilgrims. The Ottomans tried to improve their administration and the relative security that ensued encouraged an increase in immigration, which brought about a revolution in the composition of the population of Jerusalem within less than 40 years.

The opening of the British consulate in Jerusalem was followed within a few years by the inauguration of Russian, Prussian, Austria-Hungarian, Sardinian, Spanish, and United States consulates. In 1848 the first “bank” was opened by the *Valero family. In the absence of Ottoman postal services, the Austrians opened a post office in the same year, followed by

France, Prussia, and Italy. The press of the (Latin) Custodian-ship of the Holy Land was opened in 1847, followed in 1848 by the Armenian press and five years later by that of the Greek Orthodox patriarchate. The status of the Holy Places determined in an Ottoman decree of 1757 was confirmed in 1852 (the “Status quo”; see *Holy Places).

These were preceded, however, by the Hebrew press of Israel *Bak, which had been transferred from Safed after the 1837 earthquake and, in about 1841, published the first book printed in Jerusalem, H.J.D. *Azulai’s *Avodat ha-Kodesh*. Apart from religious works, polemical tracts, and, later, newspapers were also printed by this press. Despite the fact that in the unanimous opinion of the visitors the Jews were the most abject and lowly of the population, changes were introduced in their lives as well. In order to free them from dependence on the missionaries, Montefiore established a clinic in Jerusalem in the early 1840s, to which he sent medications periodically and which functioned for 20 years. He also subsidized the services of a physician, Dr. Frankel, who came in 1843. The number of Jerusalem’s inhabitants in 1845 has been estimated at 15,000, including 6,000 Jews.

The Crimean War, which was partly caused by struggle for control over the Holy Places, again demonstrated the weakness of the Ottoman empire vis-à-vis the European powers, whose representatives in Jerusalem became increasingly more influential – even defeated Russia increased its influence in the city. The great prestige of France was attested by the fact that in 1856 the sultan Abdul-Mejid gave the Şallāhiyya building (the ancient church of St. Anne) as a gift to Napoleon III. It was renovated by its new owners and became the most impressive remnant of Crusader architecture in Palestine. Bells were installed for the first time in the Monastery of the Cross in the same year and in 1867 in the Holy Sepulcher; church bells became an integral part of the sounds of the city. In 1858–59 the Austrian hospice (now the Government Hospital on Via Dolorosa) and the hospice of the German Johanniter Order were built. Crowds gathered to gaze at the two-wheeled vehicles – surplus from the Crimean War – used in the building, for they were the first vehicles seen in the city. The filth in the city was still so great, however, that a “cleanliness society” was established under the auspices of the pasha, but to no avail. As late as the 1860s tourists were complaining about animal carcasses lying in the city’s gates and streets. These carcasses, often of animals which had died during the frequent droughts, were devoured by the stray dogs depicted in many pictures of the period.

The 18-bed Rothschild Hospital was opened in 1854 and a small “rival” institution, which later became the Bikkur Ḥolim Hospital, was opened at about the same time by the *Perushim*. In 1856 a school named after the Austrian Jewish nobleman *Laemel was opened due to the efforts of L.A. *Frankl; it was the first modern school for boys in Jerusalem.

In the summer of 1859, through the initiative of the Ashkenazi community and with the aid of the “Hod” (= Holland Deutschland) *kolel*, a plot of land was bought near Mt. Zion,

and by 1861 the first of the “*battei mahaseh*” (shelter houses) were built on it. Sir Moses Montefiore, who again visited Jerusalem in 1855 and 1857, contributed more than any other single man of his generation to changing the city’s face in general. In 1855 he used funds from the legacy of the American philanthropist Judah Touro to acquire a plot of land west of the walls, despite many legal difficulties, to house Jews who were living in the dark cellars of the Old City. On the plot which he had bought, he also built a windmill, which became one of the landmarks of the city and was its first “industrial” structure. Building this quarter raised difficulties, since it was supposedly too close to the Citadel, and Montefiore was only permitted to continue building after the Russians had begun building outside the city. Montefiore got the authorities to move the municipal slaughterhouse (*maslakh*) from the end of the street of the Jews, near the Zion Gate – where it had been since the Mamluk period – outside the walls. He also planned a railroad from Jaffa, the paving of interurban roads, and even afforestation, but without any practical outcome. The city’s population in 1856 was estimated at 18,000.

The year 1860 marked the beginning of the growth of the “new” city and the relative decline of the Old City. Jerusalem began to emerge from behind the walls and construction started on an impressive series of buildings (inns, a cathedral, and hospitals) in the present-day Russian Compound. The buildings were erected in the Maydan area, which until then had served as a parade ground for the Turkish army and an encampment for tourists. At the same time, the building of Mishkenot Sha’ananim, the first Jewish quarter outside the walls, was completed by Montefiore (the Yemin Moshe quarter was added to it in 1894). At the same time, further northwest, the German Protestant priest Ludwig Schneller built the Syrian orphanage for orphans from the massacres of Christians in Syria. This institution expanded and became the pride of the German residents of Palestine. It burnt down in 1910 but was rebuilt. More Jewish quarters were founded: Maḥaneh Yisrael, built by Oriental Jews in 1868, and Naḥalat Shivah (1869) on the main road to Jaffa. The establishment of these quarters resulted several years later in the opening of the city gates (which had been closed at night and during the Muslim midday prayers on Fridays) 24 hours a day, and this greatly contributed to the security outside the city. Communication between the new quarters and the Old City was by paths through stony fields, which soon became roads and some of them (starting with Jaffa Road) even paved streets, although in 1917 there were still no tarred streets in the city. In the 1870s cabs and carts began to make their appearance in the streets of new Jerusalem, and on his last visit in 1875 Montefiore drove from Jaffa in a carriage. False rumors regarding a visit by the sultan in 1864 resulted in practical attempts to level the alleys of the Old City. The water supply was very poor, despite several attempts by the administration and the waqf (in 1812, in the 1850s, and 1860s) to repair the ancient conduit from ‘Ayn ‘Arrūb and Solomon’s Pools; the stone pipes were regularly sabotaged by the fellahin.

During the frequent drought years, water was brought by animals and carriers in filthy animal-skin bags from En Rogel (Bīr Ayyūb) and the Gihon Spring (Umm al-Daraj), through the Dung Gate and sold at high prices. However, the water supply mainly depended on the cisterns near the houses in which rainwater collected; in the 1860s there were almost a thousand of them. This water was only fit for drinking as long as it was not contaminated by sewage water (there was no sewage system), and the pollution of the drinking water brought about a severe plague in 1864, which claimed hundreds of victims and led to the city being placed in quarantine for four months. Sir Moses Montefiore came again in 1866 to help the inhabitants, Jews and non-Jews, and contributed money for improving the water supply. By 1863 two newspapers, *Ha-Levanon*, published by the *Perushim*, who set up a new press for the purpose, and *Havazzelet*, published by Israel Bak and the Ḥasidim, appeared in the city, competing against each other until they were closed down by the authorities. *Havazzelet* reappeared in 1870, followed by numerous short-lived journals. In 1868 a Jew opened the first modern bakery – a small but notable improvement in a city where many of the inhabitants had to bake their own bread. By 1865 the city was linked to the Coastal Plain by the Turkish telegraph, which contributed to security, trade, and convenience. In 1866 negotiations began for the paving of a “carriage route” to Jaffa, which was completed in 1868; it had to be repaired in preparation for a visit by the Austrian emperor Franz Josef, who was returning from the opening ceremony of the Suez Canal. Another visitor of that year was the heir to the Prussian throne (later Emperor Frederick III), who received the eastern Muristan area as a gift from the sultan in order to build a church. In the 1850s and 1860s Jerusalem attracted noted archaeologists and students of the Bible and the Ancient East, including C. Warren, W.R. Wilson, C. Schick, M. de Vog, F. de Saulcy, and other well-known scholars (see below: Archaeology).

In 1867 the German hospital was built for lepers, who until that time used to dwell near the city wall at the end of the street of the Jews. In 1868 the Germans built on a prominent site outside the city (now King George Avenue) the Talita Kumi school for Arab girls; there was already a school for Jewish girls. In the same year the magnificent building in the Latin patriarchate was built within the walls northwest of the Jaffa Gate. The French Soeurs de Sion convent was built on the Via Dolorosa. The Jewish community too was not inactive. In 1864 the first Jewish school for girls, named after Evelina de *Rothschild, opened despite the vociferous protests of the religious zealots. In the same year the magnificent Beit Ya'akov Ashkenazi synagogue was completed in the courtyard of the Ḥurvah of R. Judah he-Ḥasid. It had taken seven years to build, and shortly after its dedication, construction began on the Tiferet Yisrael (Nisan Bak) synagogue, which was completed in 1872.

In the 1860s the Jewish population in the holy city steadily grew, because of increased immigration and the reduced death rate. In the middle years of the decade the Jews became a ma-

jority in the city for the first time in 1800 years. The British consul reported in 1865 that there were approximately 18,000 residents in the city (as in 1856), of whom 8–9,000 were Jews. From that time the Jewish community continually gained in strength.

The development of Jerusalem continued in the 1870s, as testified by the establishment of a “municipal council” (*majlis baladiyya*) in 1877. The German Quarter was founded by the *Templers in 1873 and a road was built to reach it, which also served the Mishkenot Sha'ananim quarter and the eye hospital built by the Order of St. John in 1876. From this road developed the paved road to Bethlehem and Hebron. There were already two hotels in the city: one near the Damascus Gate and the other in the Christian quarter near the Pool of Hezekiah. However, the pilgrims preferred the inns of their communities and wealthy tourists still set up encampments outside the walls.

Near the road to Bethlehem the Arab Abu Tor (Ṭūr) quarter began to develop, apparently in the 1870s. Unlike the Jewish quarters, which were built as uniform blocks, usually as closed courtyards (for security reasons), the Arab and Christian quarters grew organically and slowly. Among them was Katamon which gradually grew near Saint Simon, the summer residence of the Greek patriarch. In north Jerusalem there were also signs of settlement, and Arab houses were built in Karm al-Sheikh (near the present-day Rockefeller Museum), west of it (near the present-day Herod's Gate, or Bāb al-Zahra), and to the north in Wadi Joz (Jawz). Due to this expansion, Herod's Gate was opened in 1875. Near the Damascus Gate, apparently at that time the Musrarah quarter was built. A first scientific demographic survey at that time counted 20,500 inhabitants in Jerusalem, including 10,500 Jews.

In 1871 the mosque of the Mughrabis was built in the Old City. In the Via Dolorosa the rebuilding of the church of St. John was completed (1874), followed two years later by the monastery of the White Fathers (Pères Blancs). In the course of the work many archaeological remains were discovered. Other excavations resulted in the discovery of Bethesda. Outside the city French Jewish apostates built the Ratisbonne monastery (1874). The city's expansion toward the northwest and the north was entirely due to the activities of the Jews. The Me'ah She'arim quarter was established in 1874; Even Yisrael in 1875; and shortly thereafter (1877) the Beit Ya'akov quarter, which was later assimilated into the neighboring Mahaneh Yehudah (1887). In 1876 the traditional tomb of *Simeon the Just near the road to Nablus was bought, one of the few holy sites to come into the possession of the Jews. The Tombs of the Kings located nearby were acquired in 1878 by French Jews, who transferred them to the French government several years later (1885). The Ḥabad synagogue (Keneset Eliyahu) was dedicated in 1879.

In the 1880s Jerusalem gradually began to acquire the character of a “Western” city. Road links were established with Nablus to the north and Jericho to the east. A regular carriage service was established with Jaffa (the carriages usually left

in the afternoon and, after spending the night at Sha'ar ha-Gai (Bab al-Wād), arrived in Jaffa at noontime the following day). The first modern shops were opened, as well as banking agencies. To cater to the increase in tourism, workshops were opened for woodwork, mother-of-pearl, and embroidery. Jerusalem's cosmopolitan character was recognized by the Turks, and from 1887 it became the capital of an independent sanjak, ruled by a governor holding the title of *mutaşarrıf*, who was directly responsible to Constantinople. He was advised by a *majlis idāra* (district council), as distinct from the *majlis baladiyya* headed by the mayor. Latin Orthodox, Armenians, Protestants, and Jews participated in both bodies. The Turkish garrison consisted of an entire battalion.

In 1881 the American Colony was built north of the Old City and many Swedes settled in it. On the way from the Damascus Gate to the American Quarter the British general Charles Gordon claimed to identify, in 1883, the tomb of Jesus. The place, which was named the "Garden Tomb," was bought by Protestants in 1895.

Considerable construction was carried on by the foreign powers, especially the French. In 1880 they built the convent of the Soeurs du Sainte Rosaire on Mamilla (now Agron) Street, in 1884 the convent of St. Claire (in the southern part of the city), in 1886 the monastery St. Vincent de Paul (on Mamilla Street), in 1888 the convent of the Soeurs de Reparatrice (near the New Gate), and in 1889 the St. Louis hospital. In 1881, with the aid of the French, the Armenian Catholics built the church of Our Lady of the Spasm in the Via Dolorosa. In 1886 the Germans built (on present-day Hillel Street) the Catholic Hospice and Schmidt College. In 1887 they dedicated the Leper Hospital (in Talbiyyeh). In the same year they separated themselves from their Anglican partners (since 1841) and established a separate Lutheran community, headed by an independent clergyman who built his house on the present-day Shivtei Yisrael Street. In 1888 the Russian royal court built the church of Gethsemane, with five onion-shaped towers, on the slopes of the Mt. of Olives.

In 1883 the Ohel Moshe and Mazkeret Moshe quarters (in present-day Agrippas Street) were built. At about that time the Battei Ungarn (Hungarian Houses) were constructed opposite Me'ah She'arim. In 1884 the Diskin orphanage was established. In the 1880s (apparently in 1889) Yemenite Jews settled in the village of Silwān (Kefar ha-Shilo'ah) – an unusual area in the history of Jewish settlement in Jerusalem (the place was abandoned by Jews in the disturbances of 1936–39). In 1887 the Maḥaneh Yehudah quarter was established with its large market, and two years later the Sha'arei Zedek quarter (Abu Baḥal) was built west of it. The number of Jerusalem's residents at the end of the decade was 43,000, including 28,000 Jews, 7,000 Muslims, 2,000 Latins (Catholics), 150 Greek Catholics, 50 Armenian Catholics, 4,000 Greek Orthodox, 510 Armenians, 100 Copts, 75 Abyssinians, 15 Syrians (Jacobites and Malkites), and 300 Protestants.

From the early 1890s and for many years thereafter, the French hostel of Notre-Dame de France was prominent north-

west of the Old City. Its construction, claimed to be on the biblical Garev hill, began in 1887. Two other French institutions were established north of the Damascus Gate after 1892: the school of the "Frères" and the Church of St. Etienne of the well-known biblical institute (École Biblique; established 1890). The same year was marked by another important event, the completion of the railroad from Jaffa to Jerusalem, also a French enterprise. The French company bought the construction rights that had previously been granted by the sultan to a Jerusalem resident, Joseph *Navon. The width of the rails was one meter and its equipment was bought from surpluses of the Panama Canal company, which had gone bankrupt. The scheduled travel time (seldom attained) on the train, which left once a day, was two and one-half hours from Jerusalem to Jaffa and three hours from Jaffa to Jerusalem. The company had to struggle against numerous financial difficulties in the absence of extensive freight traffic.

In the fall of 1898 Jerusalem was placed in a turmoil by the impending visit of the German kaiser William II and his wife. In order to enable the visitors to enter the Old City by vehicle, the Turks filled up the moat of the Citadel and made a gap in the wall near the Jaffa Gate. The emperor's purpose was to dedicate the Erloeser Kirche (Redeemer Church) in the Muristan (on lands given to his father in 1869). The Turks gave the visitor another gift: a plot of land on Mt. Zion on which the Dormition Abbey was built. While in Jerusalem, the emperor granted an interview to Theodor *Herzl.

In the meantime the building of Jewish quarters continued: in the north the Simeon ha-Zaddik quarter (1891), the Bukharan quarter (also called Reḥovot; 1892), and Bet Yisrael (1894).

At the turn of the 20th century the population was estimated at 45,600, including 28,200 Jews (15,200 Ashkenazim), 8,760 Christians, and 8,600 Muslims. Evidently the number of inhabitants did not increase greatly, perhaps because of the difficulties raised for Jewish immigration. Despite this, the city continued to develop in every direction except (for geographical reasons) eastward, though the crest of the Mt. of Olives began to be covered with buildings, mainly churches and religious institutions, and a few private homes such as in the al-Ṭūr village. In 1900 the city comprised about 60 separate Jewish quarters, the spaces between which gradually became filled by new buildings and quarters. Paths became roads and later streets. Jaffa Road, near the city wall, acquired a distinctly urban character. Most of the changes in the city from now on occurred outside the Old City walls. Ha-Nevi'im (Prophets) Street became a main artery. Along it were the English Hospital, the German Hospital, the French St. Joseph monastery, the Rothschild Hospital, and the Italian Hospital (built in a medieval Florentine style). North of it the Ethiopians built their church. The German Catholic Hospice of St. Paul was completed opposite the Damascus Gate. On the road northward the Anglican Church of St. George was built. Within the walls, the Muristan market was completed (1905). Near the southern wall the Dormition Abbey was built in 1906.

The round building was constructed on the model of German castles. The Augusta Victoria convalescent home and hostel on Mt. Scopus was dedicated in grand style in 1910. In 1900 the American School of Oriental Research was established in Jerusalem.

Before the outbreak of World War I the Jewish quarters of Zikhron Moshe (1905), Sha'arei Hessed, Aḥavah, Even Yehoshu'a, Battei Varsha (Warsaw Houses), and Ruḥamah (all c. 1908) were built and Givat Sha'ul began to grow in the extreme west (1910). In 1906 Boris *Schatz established the *Bezalel Art School. The number of inhabitants in 1912 was estimated at more than 70,000, including 10,000 Muslims, 25,000 Christians (half of them Greek Orthodox), and 45,000 Jews. The number of Jews had increased by some 17,000 in the course of a dozen years, most of them settling in the New City, to which the center of gravity shifted. The area of the city reached about 5 sq. mi. (13 sq. km.) and the map of Jerusalem in 1914 already foreshadowed the development of the city (at least the western part) during the subsequent 50–60 years.

There are no authoritative statistics about the city's population at the beginning of World War I, but it was estimated at 80,000, including temporary residents. The development of the city came to a halt after Turkey's entry into the war at the end of 1914, and the only large building to be completed was, apparently, Zion Hall, presenting movie shows and theatrical performances from 1916.

The consuls of the Entente countries left Jerusalem during World War I, the U.S. and Spanish consuls remaining as neutral representatives to observe the action of the Turks. Epidemics, famine, arrests, and expulsions wreaked havoc among the inhabitants, whose number at the end of the war was estimated at only 55,000. Toward the end of 1917, as the British approached, the Turks had to abandon the city, and it was surrendered to the British. On Dec. 11, 1917, General *Allenby, commander in chief of the British forces, entered it, accompanied by French and Italian representatives.

[Walter Pinhas Pick]

SOCIO-INTELLECTUAL DEVELOPMENTS IN THE 19TH CENTURY. Although the Ashkenazi population of Jerusalem ceased to exist as a distinct community in 1721, the Ashkenazim continued to appear in the city either as residents or as tourists. In 1812 an epidemic broke out in Safed and some of its Jews, including the leaders of the community, R. *Israel of Shklov and R. *Menahem Mendel of Shklov, fled to Jerusalem. The latter decided to settle permanently in the Holy City and revive its Ashkenazi community. In 1816 he established his home in the city, and around him was formed a small nucleus of about a dozen disciples of Elijah of Vilna, who quickly set up a center for learning and prayer in the yeshivah of Ḥayyim b. Moshe Attar, which was placed at their disposal by the Sephardi community. The latter, which was well established, took the handful of Ashkenazim under its protection since officially its leaders served as the legitimate representatives of the Jews vis-à-vis the ruling authorities. The Ashkenazim were

still persecuted by the Muslim residents, who regarded them as the inheritors of the debts from 100 years previously. Even now the Ashkenazim were compelled to don Sephardi dress so that their origin would not be recognized. Contemporary evidence shows that the Ashkenazim, and their head Menahem Mendel, prayed in the Sephardi synagogue and even had to use a Sephardi to complete their own *minyān*. This situation continued until the 1830s, when the numerous calamities suffered by Safed – epidemics, robberies, and above all the earthquake of 1837 – forced its Jews to flee to Jerusalem, and the spiritual leadership and the major center of the Ashkenazi community in Erez Israel was transferred from Galilee to the Holy City.

From this period on the social, spiritual, and economic life of the Jerusalem Jewish community began to be more firmly based. The dominant figure of the Ashkenazi community of the 1860s was R. Isaiah Bardaki (see above). On the other hand the rabbi of the Sephardi community secured official recognition from the authorities in 1840, in the form of the title *hakham bashi* (see above). The situation of the Ashkenazi community was also eased. Its efforts and diligence bore fruit, and Muhammad Ali announced that the debts of its ancestors to the Arab creditors were void. The homogeneity of the first settlers was thus destroyed and a meaningful pluralism began. While the first nucleus was composed mainly of *Perushim*, disciples of the Vilna Gaon, the immigration to Palestine now brought additional elements, such as the members of "Hod" (Holland-Deutschland) and "Ohavei Zion" (lovers of Zion), some of whom adhered to the spirit of European culture. This immigration brought scholars, entrepreneurs, and educators such as R. Yehosef *Schwarz, Eliezer Bergman, and Isaac Prag. From 1840 the ḥasidic community began to consolidate itself in the city. Its leaders were Israel *Bak and his son Nisan, who were opposed to the leadership of the *Perushim*. This pluralism led to the emergence of separate social groups, which originated from a particular district or town and maintained independent **kolelim* that competed for independent **halukkah*.

With the increasing strength of the Ashkenazim, there was growing friction between them and the Sephardim. Apart from linguistic, historical, cultural, and halakhic differences between the communities, economic and political bases of contention were added, and a fierce struggle for positions of strength within the community developed. With the aid of the foreign consuls who were interested in strengthening the position of the Ashkenazim and had them under their protection, and with the assistance of European Jewry, the Ashkenazim were released from Sephardi suzerainty. The custom of transferring heirless legacies to the treasury of the Sephardi community was abolished; the Ashkenazim set up a separate cemetery and even established independent *sheḥitah*; and they reached regular agreements with the Sephardim regarding arrangements for collecting *halukkah* funds. Thus the Sephardi community lost a considerable income, although they incurred many debts as representatives of the Jewish commu-

nity vis-à-vis the authorities, being responsible for handing over various taxes and other unofficial expenditures connected with the right of passage to the Western Wall, maintenance of Rachel's Tomb, etc.

However, in day-to-day life social and cultural relationships were formed between the various communities. It cannot be said that there were breakthroughs in the communal boundaries, but personal contact made its impact. This was especially the case among the younger generation, to whom the world of the East was not as strange and foreign as it was to their fathers, and some of them even tried to mingle. In the course of time mixed marriages between Ashkenazim and Sephardim began to occur. There were also reciprocal influences in language, customs, and folklore. Ashkenazim would pray in Sephardi synagogues and even wore Oriental clothing when there was no longer any need for this. Though these manifestations were not very common, they were significant in light of the deep differences between the communities.

It would be incorrect to assume, however, that the Sephardi community was entirely homogeneous. There were bitter struggles within it against attempts to break off and create separate communities. Especially well known is the struggle of the Mughrebis. Among the other communities the Georgians, and later the Bukharans, should be mentioned. In general, the power of the *hakham bashi* was decisive, and the authorities granted legal validity to his judgments. The *bet din* was composed of nine *hakhamim*. Even judgments of corporal punishment are known to have been handed down. The Ashkenazim had a separate *bet din*, which is first mentioned after the arrival of R. Samuel *Salant in Jerusalem in 1841. From that time and for many decades onward he led the community, R. Meir *Auerbach serving together with him as *av bet din* and rabbi of the community.

One of the major problems concerning the population of Jerusalem was that of education. The children and youth received their education at the *heder* and the *talmud torah*, which were modeled on Eastern European institutions, or in the *kuttāb* (Ar. boys' schools), the Oriental counterpart. The older members of the community studied regularly in the *batei midrash* of their *kolelim*. The purpose of those who came to settle in the holy city was "to worship God on His holy mountain," to be free of all material concerns, and to devote themselves to purely spiritual matters. However, with the increase in the number of Jews and the growth of a young generation which had been born in Jerusalem, it was difficult for large numbers to maintain this ideal. A number of institutions and individuals – mainly outside the *yishuv* – took up the question of productivization. Efforts were made to teach young people handicrafts and even a modicum of general secular knowledge. For this purpose Montefiore, Frankl, the *Alliance Israélite Universelle, and others tried to establish boys' and girls' schools in Jerusalem, but their attempts were received with violent hostility and fierce opposition. Those who opposed these plans feared that their religious aims would be

frustrated, basing their opposition on the experiences of the Haskalah in Europe.

The old *yishuv*, however, did not stagnate. With the increase in immigration and the maturing of the second generation of settlers, a new type of leader arose, public workers, scholars, and publicists such as Yosef *Rivlin, Israel Dov *Frumkin, and Abraham Moses Luncz, who were more responsive to contemporary problems. A local press was established, including *Havazzelet*, *Ha-Levanon*, *Yehudah vi-Yrushalayim*, and *Sha'arei Ziyyon*, which was considered the organ of the Sephardi community. The establishment of new neighborhoods outside the walls prepared the ground for new initiatives. Attention was given to the solution of economic problems. Mutual aid programs, which were highly developed among Jerusalem's inhabitants in the form of dozens of charitable institutions, began in certain instances to assume a character other than that of mere material assistance. Attempts were made to engage in social and cultural activities. A typical example was the Tiferet Yerushalayim company founded by *hasidim*.

The Jewish population of Jerusalem toward the end of the 19th century could be divided into three principal groups: one promoting extreme adherence to the old way of life without changing anything; the second, the moderates, practical people, tradesmen, and the like, who were devoted to religious tradition but willing to absorb new ideas; and the third, a more limited group of *maskilim* who had been educated in Palestine or abroad or new settlers such as Eliezer *Ben-Yehuda, who advocated revolutionary ideas.

[Joshua Kaniel (Mershine)]

Under British Rule (1917–1948)

In the second week of December 1917, the Turkish troops and officials began to evacuate the city. On December 9, the mayor, a member of the Husseini family, walked with a white flag to the hill overlooking Liftā (Mei-Neftoah) to surrender it to the British, but found only two privates who were looking for water. The surrender of the city was formally effected only on December 11, after a last battle with the retreating Turks near Sheikh Jarrāḥ, when General Allenby, commander in chief of the Egyptian Expeditionary Force, made his official entry. He entered the Old City on foot through the Jaffa Gate, and his proclamation, which made no mention of the *Balfour Declaration, was read from the steps of the Citadel in English, French, Italian, Arabic, and Hebrew.

In the conditions of war, especially with the normal wheat supplies from Transjordan and overseas cut off, Jerusalem was plagued by starvation, which the British military authorities tried to ameliorate by food rationing. The first military governor of Jerusalem was Ronald Storrs, until then Oriental secretary to the British residency in Cairo. No sanitary arrangements whatsoever existed in the Old City and hardly any in the newer quarters outside the walls. A British architect was brought in to report on the condition of the buildings in the Temple area, which the Turks and Muslim au-

thorities had allowed to fall into neglect. On July 1, 1920, the military administration, officially called the Occupied Enemy Territory Administration, was replaced by a civil administration under a high commissioner who resided in Jerusalem. The first to hold office was Sir Herbert Samuel, whose term lasted until 1925.

Jerusalem was a conglomerate of districts and neighborhoods, each with its own character. The Old City, within the walls, contained the holy places – the Temple area with the Dome of the Rock and al-Aqṣā Mosque, the Church of the Holy Sepulcher and the Via Dolorosa, and the Western Wall. To the west new quarters had developed in the later Ottoman period along Jaffa Road to Maḥaneh Yehudah, spreading north to religious quarters around Me'ah She'arim and south to the railway station and the German (Templer) Colony. To the east were various Christian establishments and the site of the Hebrew University on Mount Scopus; and, dotted around, various newer quarters – some Jewish, some Christian, some Muslim, and some mixed, such as Bak'a, the Greek Colony, and the Armenian Colony. The city was slowly recovering from the setback caused by World War I. The 1922 census showed a population of only 62,578, of whom 33,971 were Jews, 14,699 were Christians, 13,413 Muslims, and 495 others. The Jewish population of Jerusalem, estimated in 1910 at about 45,000 (over one-half of the Jews in Erez Israel), had been reduced by the end of the war, through expulsions, disease, and maladministration, to 26,600.

The civil government soon set up administrative institutions in Jerusalem, including a Supreme Court (composed of a British chief justice, one other British judge, and four Palestinian judges). Storrs founded the Pro-Jerusalem Society (later dissolved) for the preservation and embellishment of the city and a school of music (later presented to the Jewish community). In 1922 a British-French arbitration tribunal fixed the sum payable by the Palestine government for the Jaffa-Jerusalem Railway, owned by a French concessionary, at 565,000 Egyptian pounds. In the same year houses and buildings that had been taken over by the government were restored to their previous owners. The Hebrew University on Mt. Scopus was formally opened by Lord Balfour in 1925. In 1928 the concession for the supply of electricity (within a radius of 12 mi. (20 km.) of the city) was taken over by the Jerusalem Electric and Public Services Corporation Ltd. (with British and Jewish capital).

One of the first acts of the British administration was to appoint a new municipal council consisting of two Moslems, one of whom acted as mayor, two Christians, and two Jews, one of whom, Yizḥak Eliachar, was deputy mayor. In 1924 a new council, with three members from each community, was appointed. In 1924 the municipal council was elected for the first time – with four members from each community. In 1934, under the Municipal Councils Ordinance of that year, the city was divided into twelve constituencies, each electing one councillor. Six of the constituencies were Arab and six Jewish, although 75% of the taxpayers were Jews. The govern-

ment always appointed a Muslim as mayor, despite the Jewish majority, on grounds of precedent, with one Christian Arab and one Jewish deputy. There was also a community council, *Va'ad ha-Kehillah*, representing both Ashkenazim and Sephardim, to look after specifically Jewish affairs, especially in the religious sphere. It was first elected in 1918 on the initiative of the Zionist Organization's Palestine Office. From 1932 it was elected under regulations issued by Knesset Israel, the representative body of the *yishuv*.

The progress of the country, due partly to the ordered administration and mainly to Jewish immigration and development, was shared by Jerusalem. This was reflected in the 1931 census figures, which showed a population of 90,503, including 51,222 Jews, 19,894 Muslims, 19,335 Christians, and 52 others. The economy of Jerusalem, however, remained based on the city's being an administrative, religious, political, and educational center, industry continuing only on a small scale. Jerusalem was the seat of the Zionist Executive (later the Executive of the Jewish Agency), the Keren Hayesod and the Jewish National Fund, the *Va'ad Le'ummi* (national council of the *yishuv*), the Chief Rabbinate, the Muslim Supreme Council (established in 1921), and the Higher Arab Committee (1936). The residence of the high commissioner for Palestine (which included Transjordan) was in the Augusta Victoria hospital building on Mt. Scopus until it was severely damaged by the 1927 earthquake. The Russian Compound in the center of the city became an important administrative area, its buildings being taken over for police headquarters, the central prison, the law courts, and the government hospital.

Water supply to Jerusalem was a constant problem during this period. It was dependent mainly on the storage of rainwater runoff from the rooftops into cisterns dug out in the foundation rock. This system led to serious shortages in years of drought, and there were years when water had to be brought up from the coast by train (as in 1928). Matters were improved somewhat in 1918, when the army repaired the pipeline from Solomon's Pools, a short distance outside the city, to a reservoir in what is now the Romemah quarter. In 1920 this line was extended, and pumping machinery was installed at Solomon's Pools to increase the supply. Water was added from the 'Ayn Fāra springs in 1928, from the 'Ayn Fawwār springs in 1931, and from the more distant Wadi Qilt (on the way to Jericho) in 1935. It was only in that year, however, that Jerusalem's perennial dependence on the vagaries of rainfall was finally solved by the construction of a pipeline from Ra's al-'Ayn on the Coastal Plain, replacing the old supply from five different sources and halving the cost of water.

THE DEVELOPMENT OF THE CITY. As the Jewish population increased – with a fillip due to the move from the Old City, as a result of the 1929 and 1936–39 attacks on them – new suburbs were built, some adjoining existing built-up areas and others less continuous (depending on where land could be bought). In the course of the years they formed one conurbation, including Romemah (1921); Talpiyyot (1922); Beit ha-Kerem

(1923); Mekor Ḥayyim, Mekor Barukh, Reḥavyah, Kiryat Moshe, Naḥalat Aḥim (1924); Bayit va-Gan, Maḥanayim, Sanhedriyyah (1925); Kiryat Shemu'el (1928); Ge'ullah and Kerem Avraham (1929); and Arnonah and Tel Arzah (1931). The character of these quarters was determined by the groups by or for whom they were established. Some were inhabited by Orthodox Jews, who could thus maintain undisturbed their religious practices and the quiet of the Sabbath. Others were established by professional groups or teachers, such as Beit ha-Kerem. Small workshops were concentrated in the commercial center (the center of the town) facing the Old City walls. Reḥavyah was designed for white-collar workers and people in the professions. By and large the character of each section was maintained, though, as they grew into one another, the social divisions were blurred. At the same time, the outward appearance of Jerusalem gradually changed in response to economic pressures, the increasing population, and the rising land value. Sir Ronald Storrs insisted on all buildings, private as well as public, being built of or faced with Jerusalem stone, which gives the city so much of its character. In the 1930s and 1940s, some relaxation was permitted, owing to the high cost of stone, so that in Reḥavyah, for example, some houses were built in concrete. Further afield, several kilometers from the center of Jerusalem, were Atarot (1920), Neveh Ya'akov (1924), and Ramat Raḥel (1925/26). At Atarot (Qalandiya) a small airport was built. The kibbutz of Ramat Raḥel, between Jerusalem and Bethlehem, was of special interest in its being the first attempt at combining agriculture with urban services (fruit growing with a laundry and bakery for the Jerusalem population). It also provided workmen for the city and ultimately became an extension of Talpiyyot and Arnonah.

Jerusalem was transformed from the neglected, poverty-stricken provincial town of Turkish times to a capital city. Among the public buildings erected in the years of British administration are the Pontifical (Jesuit) Biblical Institute (1927); the nearby French Consulate; the Catholic Church of All the Nations at the Garden of Gethsemane (1924); St. Andrew's Church (Scottish; 1927); the Nathan Straus Health Center (1928); the Jewish National and University Library on Mt. Scopus (1930); the Government House, later the headquarters of the UN Truce Supervision Organization, municipal offices, St. Peter in Gallicantu Church (1931); the Jewish Agency Compound (1932), the YMCA, with Jerusalem's first swimming pool (1933), the King David Hotel, the first of international standard in the city (1930); the Central Post Office; the Hadassah Hospital on Mt. Scopus; and the Rockefeller Archaeological Museum facing the northeast corner of the Old City wall (1938). Between 1938 and 1942 the al-Aqṣā Mosque on the Temple Mount was embellished with pillars of carrara marble, a gift from Mussolini. The earthquake in 1927 did considerable damage to the Augusta Victoria hospital on Mt. Scopus and to the Basilica of the Holy Sepulcher.

In 1936 the Palestine Broadcasting Service began operations, with offices and buildings in the city and the transmitting station in Ramallah. The Hebrew daily newspaper *Haaretz*

appeared at first in Jerusalem but later moved to Tel Aviv. An older, established Jerusalem daily, *Do'ar ha-Yom*, had already closed down. On the other hand, the *Palestine Post* (later the *Jerusalem Post*), founded in 1931, remained in Jerusalem.

ARAB-JEWISH CLASHES. The development of the city was accompanied by disturbances that developed into violence against the Jews and the National Home provisions of the Mandate. The first outbreak occurred during Passover 1920. Despite the presence of a considerable number of British troops in the country, heavy attacks accompanied by looting were directed against Jews in Jerusalem. Before order was restored, five Jews had been killed and 211 wounded, including several women and children; four Arabs were killed and 21 wounded. The Arab mobs had been incited by rumors that the Jews intended to take hold of the Muslim holy places. The 1921 riots in Jaffa and some of the Jewish settlements did not reach Jerusalem, but the creation of the Supreme Muslim Council by government order in that year and the election of Hajj Amin al Husseini as its president promised trouble. He had earlier been appointed mufti of Jerusalem, over more moderate candidates, by the high commissioner in the vain hope that the responsibility and experience of office would moderate his violent anti-Zionist and anti-Jewish feeling. He controlled the Muslim religious endowments, the waqf, and enjoyed the right to appoint and dismiss judges and other officers of the Shari'a courts and the patronage that went with these powers, though the salaries of the Shari'a judges were paid by the government. A more moderate Arab group, the National Defense Party, controlled by the influential Nashashibi family, was also formed in Jerusalem.

Signs of trouble, however, were not wanting. In 1925 a general strike of Arabs, which extended to Jerusalem, was organized in sympathy with the Arab revolt in Syria against French rule; again in 1926 there was a strike in protest against the official visit to Jerusalem of the French high commissioner in Syria, de Jouvenel. Quiet, nevertheless, was maintained until 1928. On Sept. 23, 1928, on the eve of the Day of Atonement, Jews introduced a screen to divide the men from the women during the service held at the Western Wall, but, to preserve the "status quo," the police forcibly removed it during the following day's services. In the name of the Supreme Muslim Council, the mufti declared that "the Jews' aim is to take possession of the Mosque of al-Aqṣā gradually." A General Muslim Conference met, presided over by the mufti. In the next few months building operations were carried out near the city wall, which the Jews saw as intentional interference with their praying. The heightened tension, with demonstration and counter-demonstration at the wall, burst into flame on August 23, 1929. Attacks by Arabs on Jews throughout the country, including Jerusalem (though more seriously in Hebron and Safed), lasted until August 29, when they were put down with the aid of troops rushed in from Egypt after 133 Jews and 116 Arabs had been killed and 339 Jews and 323 Arabs wounded in Palestine (most of the Arabs by troops or police). Jewish

merchants abandoned the Old City and established the new commercial center outside the walls. After a British Commission of Inquiry, chaired by Sir Walter Shaw, reported on the political background of the outburst, an international commission followed (in 1930), but no agreement regarding the Western Wall could be reached. At the end of 1931 a Muslim Conference, attended by 145 delegates from all over the Muslim world, met in Jerusalem. Its public proceedings were not political and did not lead, as had been feared, to disturbances, but they further strengthened the mufti's position.

Tension remained high. On Oct. 13, 1933, the Arabs declared a general strike. A demonstration was staged at the government offices in Jerusalem, though prohibited by the government, and was dispersed by troops. Trouble spread to other parts of the country, and on October 28 and 29 there was renewed rioting in Jerusalem, but with one profound change: whereas the 1920–1921, and 1929 riots had been directed only against the Jews, they were now aimed against the government as well.

In 1936 troubles broke out again in Jerusalem, as well as in other parts of the country. A Supreme Arab Committee (later known as the Arab Higher Committee) was established, with the mufti as president. It resolved on a general strike and the nonpayment of taxes until Jewish immigration was stopped. Arab shops were closed in Jerusalem, as elsewhere, with those Arabs who refused to join being intimidated. The strike and more active disturbances continued until the arrival in Jerusalem of the Royal Commission, with Lord Peel as chairman, on Nov. 11, 1936. An atmosphere of tension nonetheless remained. At this time the population of Jerusalem was 125,000, of whom 76,000 were Jews.

In its report the Royal Commission recommended the partition of Palestine into two separate states – Arab and Jewish – with a new Mandate covering Jerusalem and Bethlehem (over an enclave “extending from a point north of Jerusalem to a point south of Bethlehem”) with access to the sea “provided by a corridor extending to the north of the main road and to the south of the railway, including the towns of Lydda and Ramleh, and terminating at Jaffa.” The policy of the Balfour Declaration was not to apply to this enclave, and “the only ‘official language’ should be that of the Mandatory Administration.” Its revenues were to be provided by customs, duties, and direct taxation, and any deficit was to be made good by the British Parliament. Arabs and Jews in Jerusalem could opt for citizenship in the Arab or the Jewish state.

The Arab campaign of sabotage, intimidation, and murder, increasingly directed against moderately inclined Arabs, continued throughout 1937, with occasional Jewish reprisals. Jewish buses were bombed, and the potash convoy from the Dead Sea to Jerusalem was attacked. For several days in October, a curfew was imposed in the municipal area of Jerusalem. There were also attacks on Jewish transport on the main road connecting Jerusalem with the coast. Jewish reprisals culminated in November in large-scale attacks on Arabs and an Arab bus in Jerusalem by the *Irgun Zeva'i Le'ummi

(IZL). To ensure the safety of worshipers at the Western Wall, a new road was opened through the Old City, avoiding the mainly non-Jewish quarters. Following an assassination attempt on the British inspector-general of the Palestine police force and the murder by Arab extremists of Jews and moderate Arabs, the Arab Higher Committee was declared unlawful and Hajj Amin al-Husseini was deprived of his office as president of the Supreme Muslim Council and his membership on the waqf committee. He fled to Lebanon; the Arab mayor of Jerusalem was deported to the Seychelles Islands together with other members of the Arab High Committee; and Daniel *Auster, the Jewish deputy mayor, was appointed by the government to act as mayor – the first Jew to head the Jerusalem municipality. (In the following year a new Muslim mayor was appointed.)

Conditions worsened in 1938 with an intensified campaign of murder, intimidation, and sabotage. The Arab gang warfare now gradually developed on organized and, to some extent, coordinated lines, with still only isolated Jewish reprisals. Constant attacks were made on Jewish traffic to Jerusalem from the coast and armed robberies multiplied in the surrounding Arab villages by marauding parties seeking food, money, and lodging. Uncooperative Arabs and members of the Nashashibi family and party were murdered, the party having withdrawn from the Arab Higher Committee. In October, as the Government Report for 1938 states, “the Old City, which had become the rallying point of bandits and from which acts of violence, murder and intimidation were being organized and perpetuated with impunity, was fully reoccupied by troops” in an “operation of considerable magnitude.” In the same year the British government sent out the Palestine Partition Commission (known, after its chairman, as the Woodhead Commission). It produced three plans, all providing for the Jerusalem area to remain under Mandate and outside the proposed Arab and Jewish states. Jewish proposals for the inclusion of “parts of Jerusalem” (reference being to the parts of the new town outside the Old City) were rejected, and in the end none of the proposals was adopted.

WORLD WAR II AND AFTER. After the outbreak of World War II, Jerusalem became a military headquarters. The German inhabitants of the quarter known as the German Colony were interned or expelled, and their houses were taken over by civilian and military personnel, while other public buildings in the city belonging to German institutions were taken over by the government or army. Before Britain's entry into World War II, its new anti-Zionist policy, announced in the White Paper of May 1939, which severely restricted Jewish immigration and land purchase (see *White Papers), led to mass protests and to violent actions by the dissident Jewish IZL which, in May 1939, set fire to the Department of Migration. These actions of violence continued until the outbreak of the war. In 1944 difficulties developed over the Jerusalem mayoralty, when the mayor (a Muslim) died, and the Jewish deputy mayor, who was appointed in his place, claimed full

mayoralty, the population in the municipal area being estimated at 32,039 Muslims (21%), 27,849 Christians, and 92,143 Jews (61%). In the absence of agreement, the government finally appointed a Municipal Commission, all of whose members were British officials.

After 1944, when IZL and *Loḥamei Ḥerut Israel (Leḥi) renewed their anti-government violence, Jerusalem was particularly involved. Many government buildings were blown up, culminating in July 1946 in an explosion that destroyed a wing of the King David Hotel housing government and military departments, with heavy loss of life.

In November 1947, when the United Nations decided on the partition of Palestine into a Jewish and an Arab state, it also called for the internationalization of Jerusalem as a “corpus separatum.” The Jewish authorities reluctantly accepted this, as well as other parts of the UN decision, but the Arabs rejected it. The Trusteeship Council of the UN appointed representatives of Australia, China, France, Mexico, the United States, and Britain to work out plans for the administration of the area, but the UN General Assembly failed to reach a decision. In the meantime, the city, nominally still under British rule, was lapsing into anarchy. The Old City, including its Jewish population, was cut off from the new, while the areas outside the walls were divided between the Jews and the Arabs in warring camps. The British forces enclosed themselves against attacks by IZL and Leḥi in barbed wire areas in the New City cleared of Jewish inhabitants (these areas were known by the Jews as “Bevingrad,” after the unpopular British foreign secretary). Jewish Jerusalem was put under virtual siege by Arab attacks on supply convoys on the one road from the coast, while the British troops did little or nothing to prevent the assaults. To cope with the emergency, the Jewish Agency and the Va’ad Le’ummi established the Committee of the National Institutions for Matters Pertaining to Jerusalem (shortened to the Jerusalem Emergency Committee), headed by Dov *Joseph. In April the six Jewish members of the municipal council issued a proclamation to the Jewish citizens announcing that they had assumed the functions of a municipality for the area under Jewish control.

Arab Jerusalem did not suffer similarly as it was open to the Arab-populated parts of the country to the north, south, and east. Part of the Jewish Agency building in the center of the city was blown up by Arabs, with loss of lives, and the offices of the *Palestine Post* and a large residential and shopping block in Ben Yehudah St. were blown up, the last two almost certainly by anti-Jewish terrorists in the British Police. The nearby Jewish settlements of Atarot and Neveh Ya’akov to the north of Jerusalem, surrounded by an Arab population, were abandoned. Deir Yāsīn, an Arab village near the western outskirts of Jerusalem, from which attacks were launched on the adjoining Jewish areas, was attacked by IZL and Leḥi, with 254 of its inhabitants reported killed. A few days later a Jewish convoy taking staff to the Hadassah Hospital on Mt. Scopus was attacked and destroyed, with 78 doctors, nurses, and others killed. This occurred only some 200 yards from

the British military post that was responsible for safety on the road. The water pipeline from the coastal plain at Ra’s al-‘Ayn was cut. This presented the most serious threat to the Jews of Jerusalem, while it did not affect the Arabs, since a very large proportion of the Jews lived in houses built after construction of the pipeline and therefore lacked cisterns to catch the winter rains. Fortunately, a farsighted water engineer had earlier advised the Jewish authorities to make a survey of all Jewish-inhabited houses with cisterns and fill and seal them. When the pipeline was cut this supply, rationed and distributed by water trucks throughout the siege – even under continuous Arab shelling – saved Jewish Jerusalem.

Mt. Scopus with the Hebrew University and Hadassah Hospital and the adjoining Arab village, ‘Isawiyya, became a Jewish-held enclave cut off from the New City, as did the Jewish quarter of the Old City and areas to the south. Contact with these areas was occasionally possible only by troop-protected convoys. The streets dividing the Jewish and Arab areas became front lines, barbed-wired positions, with posts on the Jewish side manned by members of the Haganah, IZL, and Leḥi. Control of the Arab side passed to armed Arab groups and then to the Transjordan army, the British-officered Arab Legion, which had not been withdrawn in spite of British promises. At midnight May 14/15, 1948, when the last of the British forces and government withdrew from Jerusalem, thus ending the mandatory rule that had lasted since 1917, the Jews took control of the government buildings in the center of the town, including the general post office, the police headquarters and the broadcasting studios.

The Arab siege, however, continued for another two months, until it was broken by the construction of an alternate route through the hills from the coast (popularly called the “Burma Road”) and the laying of a new water pipeline. The whole of western Jerusalem and the Mt. Scopus enclave were in Jewish hands, but Arab guns shelled the Jewish areas, killing 170 civilians and injuring a thousand. Food and water were still strictly rationed and the population was without electricity and fuel. To keep the bakeries going, oil was removed from all houses possessing central heating systems. As the Jews were cut off from the ancient cemetery on the Mt. of Olives, a temporary Jewish burial place was prepared near the Valley of the Cross, where a tiny landing strip was also set up for the occasional Piper Cub planes that flew Jewish leaders in and out.

When the Arab countries invaded Palestine, Egyptian and Iraqi troops approached the outskirts of Jerusalem, joining the Transjordanian Arab Legion units. Ramat Raḥel changed hands several times in fierce fighting before the Arab forces were finally repelled. Meanwhile the Arab Legion closed in on the Jewish quarter of the Old City. On May 19, 1948, the Palmah breached the wall at the Zion Gate but had to withdraw. After intense fighting, with Jews and Arabs confronting one another at a distance of only a few yards and Jewish supplies of food and ammunition almost exhausted, the Jewish quarter of the Old City surrendered on May 27. Some 1,300

elderly men, women, and children, and wounded men were evacuated to the New City and others were taken prisoner. A general cease-fire for the Jerusalem area was proclaimed on June 11, 1948, leaving East Jerusalem, including the Old City, to the Arabs in Transjordanian hands and West Jerusalem in Israel hands. Jerusalem being still under siege, the Israeli Provisional Government remained for the time being in Tel Aviv.

[Semah Cecil Hyman]

The Divided City (1948–1967)

For some time the position of Jerusalem remained uncertain. The city was divided in two by a cease-fire line running roughly north-south tangentially to the western wall of the Old City, the relations between the two sides being regulated by agreement between the local commanders of the Arab Legion and the Israel Defense Forces. A resolution dealing with the temporary administration of the city had been adopted by a special subcommittee of the UN General Assembly but was not carried by the assembly itself. Egyptian troops still threatened the city from their positions in the Bethlehem area. Despite the establishment of the IDF as the new state's only armed force, IZL and Lehi units continued to exist in Jerusalem. On July 7 a special agreement for the demilitarization of the Scopus area was concluded between Israel and Transjordan.

During the ten days of fighting that followed the expiry of the first truce on July 7, 1948, the Israel forces broke the Egyptian lines and took Ein Karem (Ein Kerem) on the western outskirts of the city. On the night of July 16/17 the IDF nearly broke into the Old City from Mount Zion, while IZL and Lehi forces breached the New Gate, but they were forced to withdraw a few hours before the second truce went into effect.

Count *Bernadotte, the UN mediator, had proposed on June 27 from his headquarters in Rhodes that Jerusalem be handed over to Transjordan. The Provisional Government of Israel had categorically rejected the proposal. On July 26, two days after his arrival in the country, he proposed the demilitarization of the city, but this was also unacceptable to Israel, as it would have left the Jewish population defenseless. On August 1, to regularize the position, the Provisional Government declared Jerusalem to be under martial law and appointed Dov Joseph as military governor. Bernadotte set up the UN Truce Supervision Organization, with its seat in the former Government House. The assassination of Bernadotte on Sept. 17 impelled the government to order the disbandment of the IZL and Lehi units, putting all armed forces in Jerusalem under IDF command. In operation Yo'av (Oct. 15–22) the Egyptian forces in the south were isolated and withdrew, being replaced by the Arab Legion. On Dec. 13, 1948, the Transjordanian parliament confirmed the annexation of the Arab-controlled areas of Palestine and a week later the Transjordanian government appointed a new mufti of Jerusalem.

The population of the Israel-held area of Jerusalem took part in the elections to the Constituent Assembly (later called the First *Knesset) in January 1949, and at the beginning of

February the provisional government announced that Jerusalem was no longer to be considered occupied territory. The Knesset held its first sessions (Feb. 14–17) in the hall at Jewish Agency headquarters, where the members took the oath, Chaim *Weizmann was elected president of the state, and the Transition Law (the "Minor Constitution") was adopted. According to article 8 of the armistice agreement with Jordan (April 3, 1949), a joint committee was to be set up to make arrangements for, inter alia, the renewal of the operations of The Hebrew University and the Hadassah Hospital on Mount Scopus and free access to the Jewish holy places in the Old City, the ancient Jewish cemetery on the Mount of Olives, and the institutions on Jordanian-held Mount Scopus. However, although these matters had been agreed upon in principle by both sides, the article remained a dead letter, as Jordan refused to cooperate.

When the Jerusalem issue was again discussed by the UN General Assembly in November 1949, the Israel government opposed the idea of internationalization but offered to sign an agreement with the United Nations guaranteeing the security of all holy places under its jurisdiction. On Dec. 10, however, the Assembly approved a resolution calling for international control over the whole city of Jerusalem and its environs and charged the Trusteeship Council to draft a statute for an international regime for the city. The Israel government reacted vigorously. On Dec. 13 it announced in the Knesset its decision to speed up the transfer of its offices to Jerusalem, proposed that the Knesset go back there, and proclaimed that Jerusalem was and would remain Israel's eternal capital. On Dec. 26 the Knesset resumed its sittings in the capital, meeting in a modest building (the Froumine building) in the center of town that had been erected for use by a bank. Both Jordan and Israel continued to oppose internationalization and the proposal was ultimately, in effect, dropped.

For a period of 19 years, Jerusalem was a divided city. In early 1948 its population was estimated at 165,000: 100,000 Jews, 40,000 Muslims, and 25,000 Christians. The city's area was about 10 sq. mi. (28 sq. km.). The battles waged in and around Jerusalem for three-quarters of a year; the UN decision to internationalize the city, the transfer of the Arab center of gravity to Amman, and the establishment of the de facto seat of the government and the legislature in Tel Aviv were the causes of a precipitous decline in population on both sides of the front. The population of the Israel side (West Jerusalem) was estimated at only about 69,000 (including 931 Christians and 28 Muslims) in 1949, and that of the Jordanian side at about 46,000 as late as 1956.

EAST JERUSALEM. In May 1948, East Jerusalem was occupied by the Arab Legion. Its first act was the destruction of the Jewish Quarter, including almost all the synagogues (Ḥurvah, Nisan Bak, etc.) and Jewish institutions (*Battei Maḥaseh*, Yeshivat Porat Yosef, etc.). The ancient cemetery on the slope of the Mount of Olives was desecrated. Jerusalem was proclaimed the "second capital" of the Hashemite Kingdom of

Jordan; it also became a district capital. East Jerusalem was entirely cut off from an approach to the Mediterranean coast, and the conversion of the former British military airfield of Qalandiya into a civil airport for the town alleviated its isolation only slightly.

East Jerusalem now turned to the east bank of the Jordan, through which all its relations with the world at large were conducted. In the 1960s a direct road to Amman, via Abdullah Bridge, was added to the old Jericho-Salt road. Traffic to the north via the Sheikh Jarrāḥ quarter was dominated by Israel forces. This situation was slightly improved by the construction of a new road that connected the Mt. Scopus area to the vicinity of the Rockefeller Museum through the upper Kidron Valley, thus diverting the daily traffic from the border region. In 1948 East Jerusalem had been completely cut off from the Bethlehem-Hebron region and a very steep and tortuous road was built through Abu-Dīs, the lower Kidron Valley, and Beit-Sāḥūr. It was only after a few years that an improved, though also steep and tortuous road, was constructed from Jerusalem to Bethlehem, via Ra's-Maqābir and Šūr-Bāhir. It was 10 mi. (17 km.) long, in comparison with the old 3 mi.- (5 km.-) long road through Talpiyyot, which was dominated by Israel.

The Jordanian-held part of Jerusalem had no electricity for several years until a new power station was built in Sha'fāt to replace the original one near the German Colony, which was in Israeli hands. Water supply remained very poor after the line from Ra's al-ʿAyn (Rosh ha-Ayin) was cut off, but a limited quantity was supplied by springs in the northeast of the city, and a narrow water pipe was later laid from Solomon's Pools. The economy of East Jerusalem was based almost entirely on tourism, pilgrimages, and religious and research institutions. The only large factory was the cigarette works at al-ʿAzariyya. The Jordanian government was located in Amman, and Arab Jerusalem did not wield much political influence. Due to geographical conditions (the barrier of the Kidron Valley and its extensions), the city hardly developed to the south and only a little toward the east (Silwān, Ra's-al-ʿAmūd, al-ʿAzariyya, Abu-Dīs) and on the slopes of the Mount of Olives. On the other hand, there was much construction on the northern side, and the area between the Old City's northern wall and Wadi Joz (Jawz) became partly a shopping district (Saladin Street, Jericho Road, and their extensions) and largely a crowded residential district. The residential area of East Jerusalem, the greater part of which was not within the boundaries of the city itself, extended over a length of 7 mi. (15 km.) through Sha'fāt, Beit Ḥanūn, and Qalandiya, almost reaching the outskirts of al-Bīra. The number of inhabitants, however, never surpassed 65,000, of whom about 25,000 lived within the walls of the Old City.

The relatively small number of luxury buildings erected in the eastern part of the city under the Jordanian administration included several large hotels, the largest of which – the Intercontinental – was built at the southern extremity of the Mount of Olives. In 1963, the “eastern” YMCA was erected on the Nablus Road. Government House was situated on Sala-

din Street; the St. John Hospital for eye diseases and, next to it, the French Hospital and the British consulate-general were erected in Sheikh Jarrāḥ. The Dominus Flevit Church was built on the slope of the Mount of Olives (1953). Arab refugees were rarely seen in the city itself, except for the area of the improvised buildings in the destroyed Jewish Quarter and the remains of the German Compound. Their camps were situated in the south near Bethlehem (Dahisha) and in the north (Kafr ʿAqab) and northeast (ʿAnatā). Because of the Israel enclave on Mt. Scopus, which dominated all principal roads to the town, and the proximity of the frontier to all the important parts of the city, a sense of uneasiness hovered over East Jerusalem throughout the period. The presence of the Jordanian army was felt everywhere and there were occasional clashes between sections of the local population and the Arab Legion soldiers. The outstanding events in the city during the period included the assassination of King Abdullah (1951), the fire in the Church of the Holy Sepulcher (1953), and the visit of Pope Paul VI (1964).

WEST JERUSALEM. The cessation of hostilities and the conclusion of the armistice agreement with Jordan left the Israel sector of Jerusalem situated at the eastern extremity of a “corridor” that was almost devoid of Jewish settlements. To the north, east, and south, hostile Arab territory surrounded the city. At first the city's population was diminishing and its political future was obscure. The Jewish city began to recover quickly, however, when it was proclaimed as the seat of the Knesset and the capital of the State of Israel at the end of 1949. Water supply was resumed, at first through an emergency pipe and later through pipelines of considerable capacity, whose sources were in the corridor and the coastal plain, and an immense water reservoir was built in the southwest of the city. The electricity network was connected to the national grid. On May 1, 1949, the first train since the war arrived in the city, after Israel had gained control of the entire railway track as a result of territorial arrangements with Jordan. A landing strip for light planes was constructed in the western part of the town.

The direct highway to Tel Aviv through Arab-held Latrun remained closed, but traffic to Jerusalem was renewed along the “Road of Valor,” which was constructed from Ramleh through Nahshon to the Hartuv junction, south of the War of Independence “Burma Road.” Additional approach roads were constructed from Zorah through Ramat Razi'el to Ein Kerem and Castel (Me'oz Zion). Another road ascended through the Elah Valley to Zur-Hadassah and Ein Kerem, while an emergency track was laid out along the railway line from Hartuv to the Bar-Giora junction. Hadassah's hospital and other services were housed in rented premises in the center of the city, as its buildings remained isolated in the Israel enclave on Mt. Scopus and could only be reached every fortnight by a convoy under the protection of the UN. Later on, a new Hadassah Medical Center was built on a slope overlooking Ein Kerem. In addition to the hospital, the center grew to include a medi-

cal school, a training school for nurses, a school of dentistry, and a large range of clinics. The Hebrew University and its library, which had also been compelled to leave their buildings on Mt. Scopus, resumed their activities in the city, with provisional headquarters in the Italian Terra Sancta school. In the early 1950s the construction of a new campus on Givat Ram, a hill between Rehavyah and Beit ha-Kerem, was initiated. Campus buildings included a stadium, a synagogue, a planetarium, and the new National Library, inaugurated in 1961. On the western outskirts of the city, the Convention Center, Binyanei ha-Ummah ("National Buildings"), used for concerts, dramatic performances, exhibitions, and congresses, was built. In 1951, the 23rd Zionist Congress, the first to be held in Israel, took place there.

Immediately after the cessation of hostilities, the only border-crossing point between Israel and Jordan was opened to the United Nations in Jerusalem off the historic road leading from Damascus Gate to Nabī Samwīl (and the Coastal Plain). In time the "Mandelbaum Gate" (named after the Jewish owner of the destroyed building that had stood on the spot) became the official crossing point for tourists, with passport-control and customs offices. A second but unofficial crossing point existed for several years in the demilitarized zone around the former Government House, which had become the UN headquarters, in Ra's Maqābi.

In the late 1950s a start was made on the construction of the new government center, Ha-Kiryah, opposite the new university campus, housing the Prime Minister's Office and ministries of Finance, the Interior, and later, Labor. A compound of one-story buildings was put up for the Foreign Ministry south of Romemah. On a hill to the southeast of and above Ha-Kiryah, the large Knesset building, which was built with the contributions of the Rothschild family, was completed in 1966. To the south of the Knesset are situated the Shrine of the Book and the Israel Museum (completed 1966–67). This ensemble of impressive buildings, which links the center of the city to the western districts (Kiryat Moshe, Bet ha-Kerem, and their extensions) added to the beauty of Jerusalem and visibly symbolized its position as the capital of Israel.

Although the UN General Assembly resolution of 1949 calling for the internationalization of Jerusalem was a dead letter, it was still on the record, and most countries, including the major powers, refused to recognize Jerusalem as Israel's capital, setting up their embassies and legations in Tel Aviv or its environs. President Weizmann continued to reside in Rehovot, but after his death in 1952, diplomats went up to Jerusalem to present their credentials to his successor, President Ben-Zvi, and visit the Foreign Ministry and the Prime Minister's Office. Gradually, too, the boycott weakened and a number of embassies moved to or were established in the capital. In 1970, out of 46 foreign missions in Israel, 22 were in Jerusalem – those of two European countries: the Netherlands and Greece; 10 African: Central African Republic, Congo Brazzaville, Congo Kinshasa, Dahomey, Gabon, Ivory Coast, Liberia, Malagasy, Niger, and Upper Volta; and 10 Latin-American: Bolivia,

Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, Guatemala, Panama, Venezuela, and Uruguay. In addition, 11 other countries maintained consulates or consulates-general in the city.

Besides numerous office buildings, the large Histadrut headquarters, and Heikhal Shlomo, the center of the Chief Rabbinate, were erected in the center of town. A branch of the Hebrew Union College was built near the King David Hotel, overlooking the Old City walls, and the buildings of the Academy of Sciences and Humanities were built, overlooking the south of the city from Talbiyah hill. Next to it sites of the presidential residence and the Jerusalem theater were chosen, both in advanced stages of construction at the beginning of 1971. To the southwest, the town is dominated by Mt. Herzl, renamed when Herzl's remains were reentered there in 1949. Since then, the summit of this hill has become a national cemetery where V. *Jabotinsky, J. *Sprinzak, L. *Eshkol, and others were buried. On the northern slope of Mt. Herzl is a military cemetery, and toward the west is Yad Vashem, a memorial to the victims of the Holocaust, including a research center. On the western side, the bow-shaped Jerusalem Forest encloses the town.

Many religious institutions have been established in Jerusalem since 1948. These include the Porat Yosef yeshivah, which was forced out of the Old City; the yeshivot of Belz, Netiv Meir, and Merom Zion; Yad ha-Rav Maimon and its religious college; etc. In the religious quarters an abundance of synagogues were built. New religious concentrations, resembling a second-generation Me'ah She'arim and its surroundings, were formed in the north of the city (Kiryat Mattersdorf) and in the west, at the entrance to Givat Sha'ul.

Extensive housing projects for new immigrants were erected along the armistice line in northern Jerusalem and in the northwest (Shemu'el ha-Navi St., Romemah Illit), as well as in Musrara (Morashah). The main development of the city, however, took place in the south and southwest. The southern districts, Abu-Ṭūr (Givat Hananyah), Bak'a (Ge'ulim), the German Colony (Refa'im), and Katamon (Gonen), which were inhabited by Christians and Arabs until 1948, became completely Jewish, while among them and next to them large new housing projects were erected (Talpiyyot, Bak'a, Katamonim, the Rassco Quarter, Givat Mordekhai, etc.). On a height overlooking the city from the southwest, Bayit va-Gan expanded, and to the south of it Kiryat ha-Yovel, Kiryat Menahem, and Ir Gannim were established and filled with a population of tens of thousands. The former Arab villages of Māliḥa (Manahat), Deir Yāsīn (Kefar Sha'ul), and Liftā (Mei Nefto'ah) were expanded and repopulated; Ein Kerem was incorporated into Jerusalem, as was part of Beit Šāfāfā. On Mt. Zion, the Ministry of Religious Affairs established a new religious center around the reputed tomb of David, containing the Holocaust Vault and the Temple Observation Point, as a substitute for the lost Old City. To make up for the loss of the Mount of Olives, new cemeteries were consecrated in Sanhedriyyah and on Har ha-Menuhot.

In order to diversify the sources of livelihood in the capital, considerable efforts were made by the Israel government to develop industry. Several small and medium-sized factories for electrical and metal products, pencils, pharmaceuticals, etc. were opened and a large flour mill and silo were built. Publishing houses and printing shops became important contributors to the economy. Industrial estates were built in Romemah, Mekor Barukh, Givat Sha'ul, and Talpiyyot by the Jerusalem Economic Corporation, in which about 90% of the shares were held by the government and the rest by various public bodies. Considerable impetus was also given to the tourism industry, and several large hotels were built (Kings, President, Holyland, Diplomat, etc.). After the solution of the water problem, several swimming pools were built. The University Stadium, a large sports field in the German colony, and indoor facilities in the Histadrut building, provided opportunities for sports. Beit ha-Am (where the Eichmann Trial was held in 1961) contained a hall for lectures and theatrical performances and a large municipal library. More public parks and gardens were laid out and a Biblical Zoo was opened.

A number of factors contributed to give Jerusalem a distinctive character among Israel's cities: the larger proportion of families going back several generations, newcomers from Asia and North Africa, students and university personnel, and government and other public officials among its population; the dignified public buildings and picturesque, old-established neighborhoods; the almost universal use of stone or stone facing (except in some outlying districts) in both residential and public construction; and its position as the home of the foremost university and the seat of the President, the Knesset, and the government. It was an important center for exhibitions and conventions – national, world Jewish (notably the Zionist Congresses), and international, which, even if they transacted most of their business in Tel Aviv, usually held at least their ceremonial opening sessions in the capital.

The general tone of public and cultural activity was quiet and restrained: there were no sidewalk cafes and little night life. The city was visited from time to time by the Philharmonic Orchestra and the Tel Aviv-based theater companies, which performed at Binyanei ha-Ummah, Bet ha-Am, the Histadrut's Mitchell Hall, or the distinctive Khan Theater, which had once been an Arab inn. Indigenous musical activities were provided mainly by the Broadcasting Services Orchestra and the Rubin Academy of Music. Art exhibitions were held at the Israel Museum, the Jerusalem Artists' House (which took over the premises of the *Bezalel Museum), and private galleries.

Jerusalem also became an economic and administrative center for the villages in the "Jerusalem Corridor," which connected Jerusalem with the rest of Israel (Bet Zayit, Mevasseret Yerushalayim, Me'oz Zion, Orah, Amminadav, Even Sappir, Bar Giora, Nes Harim, Mevo Betar, Ramat Razi'el, etc.), and the city was no longer threatened by isolation in a period of emergency. According to the census of 1961, its population was 166,300, including, it is estimated, several hundred Muslims

and over 1,000 Christians. In 1967, the number of inhabitants was estimated at about 185,000.

SECURITY. As the border between Israel and Jordan ran through the middle of Jerusalem, there was constant vigilance on both sides. The Old City walls were hidden from view by high barriers across Jaffa Road and other streets, but from time to time Arab Legion sentries on the ramparts sniped at people in the streets of West Jerusalem and exchanges of fire developed. In April 1953, for example, the shooting went on for over 24 hours. In July 1954 it lasted for three days before a cease-fire was arranged through the UN observers. Occasionally, too, Arab infiltrators killed civilians in outlying areas. In September 1956 members of an archaeological convention examining antiquities near Ramat Raḥel were fired at from a Jordanian army post and four people were killed. There was a spate of incidents in June and July 1962, four Israelis being killed and five wounded. On the whole, however, the Jordanian authorities were not interested in making trouble and efforts were sometimes made, by informal contacts between local commanders on both sides, to reduce tension.

A constant focus of friction was the demilitarized zone on Mount Scopus. Every now and then the Jordanians would hold up the fortnightly convoy carrying replacements for the Israel police garrison that looked after the University and Hadassah buildings on the Mount, and there was tension between the garrison and the inhabitants of the Arab village of Issawiya in the Israeli part of the demilitarized zone. In January 1958 Francis Urrutia, representing the UN Secretary-General, made an unsuccessful attempt to get agreement on the implementation of Article 8 of the Israel-Jordan Armistice Agreement (see above). In May 1958, after Jordanian soldiers had opened fire on Israel patrols on the Mount, a UN officer, Col. George Flint, and four Israeli policemen were killed by Jordanian fire. This time Ralph Bunche, assistant to UN Secretary-General Dag Hammarskjöld, and then Hammarskjöld himself, visited Jerusalem and Amman in efforts to solve the problem, but without success.

MUNICIPAL AFFAIRS. After the departure of the British, an enlarged municipal committee was formed, consisting of the six Jewish councillors and representatives of the Va'ad ha-Kehillah and the Jewish quarters. In January 1949 the Ministry of the Interior nominated Daniel Auster as the head of a municipal council of similar composition and Reuven Shreibman (Shari) as deputy. In November 1950 the first municipal elections took place on the party list proportional representation system. The results reflected the fragmentation of the population on social, religious, and communal, as well as political and ideological, lines. The largest party in the new council, Mapai (Israel Labor Party), won only 25% of the votes and was closely followed by the United Religious Front (16%), General Zionists (16%), and Herut (11%). The Progressives won 8% and a number of district and communal lists had 18% between them. Shlomo Zalman *Shragai (Mizrachi) was elected mayor, with the support of a coalition consisting mainly of his own party,

the General Zionists, and Ḥerut. (For an account of the parties, see *Israel, State of: Political Life and Parties.) The city had difficult administrative, financial, and social problems with which to contend. The staff had been accustomed to the Oriental atmosphere of the Muslim mayoralty, and the organization of finance and services was primitive. The citizens had not been in the habit of regularly paying rates, especially in the extensive slum areas. Orthodox districts, like Me'ah She'arim, were to a large extent a law unto themselves. The new mayor was hampered in dealing with these problems by dissension inside the coalition and obstruction by the opposition. In August 1953 an inquiry commission appointed by the Ministry of the Interior produced an unfavorable report. Shragai resigned, being succeeded by Yiḏḥak Kariv, of his own party. The difficulties persisted, however; in April 1955 the Ministry dissolved the municipal council and appointed a committee of officials to run the municipality until the elections. In 1955 the head of the Mapai list, Gershon *Agron, was elected mayor with the support of Agudat Israel, the Progressives, and Aḥdut ha-Avodah. When Agudat Israel withdrew from the coalition, he retained his position with the aid of a defecting member of the National Religious Party. Agron died a few days before the 1959 elections and was succeeded by Mordekhai Ish-Shalom, who held the post until 1965. In that year Teddy *Kollek, running a personal campaign on the *Rafi ticket, won 20% of the votes and formed a coalition with Gaḥal (Ḥerut-Liberal bloc) and the religious parties. During the emergency preceding the Six-Day War in 1967, the opposition was invited to share in responsibility and an all-party administration was formed. After the 1969 elections, in which Kollek headed the united Labor-Mapam Alignment list, he was reelected at the head of an all-party coalition.

The Six-Day War and After

For Jerusalem, the *Six-Day War was only a three-day war, from Monday morning (June 5, 1967) to Wednesday afternoon. The battles began with the Jordanian seizure of UN headquarters and their attempt to break through from there to the south of the city, to the accompaniment of indiscriminate shelling of the Jewish areas. The breakthrough was halted in time, and in a counterattack the Israel forces retook the UN headquarters, barred the Jerusalem-Bethlehem road, and occupied the village of Ṣur-Bāhir. At a later stage there were hard-fought battles for the occupation of the Arab Abu-Tūr quarter. The most difficult struggle, however, took place in northern Jerusalem, where Israel forces broke through to the Police School and Ammunition Hill slightly to the north of it. There was another breakthrough into Sheikh Jarrāh and the American Colony, and on Tuesday all of East Jerusalem north of the walls of the Old City (Bāb al-Sāhira (Zahra), Wadi Joz) was seized. Contact was also made with the Israel enclave on Mount Scopus. On Wednesday, June 1967, Israel forces broke through the Lions' Gate and took the Old City. United Jerusalem again became the capital of the nation. In the battles for the city and its surroundings about 180 Israel soldiers lost

their lives, in addition to the civilians who were hit by shells, etc. As on many occasions in its history, the city was again attacked from the west and the north, although the final breakthrough came from the east.

The damage caused by the three days of fighting, which was not severe, was repaired, mines were cleared away, military positions and protective walls were destroyed, barbed-wire fences were removed, the roads between the two parts of the town were joined, and all the gates of the Old City were once more opened. The two parts of the city were officially reunited on June 28, 1967, and inhabitants from either side could visit the other for the first time in almost 20 years. East Jerusalem was connected to the Israel water supply network and the water shortage was overcome. The electricity network, however, was not united to that of Israel and continued to be operated by a Jordanian company.

The holy places of Christendom came under Israel rule. The university buildings on Mount Scopus were restored, and studies were resumed in them from the fall of 1969. A bungalow quarter was erected to accommodate students. To the west of this area, on Givat ha-Mivtar, a residential neighborhood was built, and the large Ramot Eskhol Quarter was erected between it and the Sanhedria Quarter, encompassing northern Jerusalem. A start was made on the reconstruction of the Jewish Quarter of the Old City.

One of the most important consequences of the unification of Jerusalem was the resumption of archaeological research within the Old City (in the Citadel, the Upper City, and near the western and southern walls of the Temple Mount), which, in addition to the scientific results, brought about a change in the landscape of the city. The ancient Jewish cemetery, which covers the slopes of the Mount of Olives, was restored. Efforts were made by the government of Israel and Israel public institutions to transfer their offices to Jerusalem, particularly the eastern section. Police headquarters were moved from Tel Aviv to a previously uncompleted Jordanian government building in Sheikh Jarrāh. Jerusalem is now distinguished by the duplication of many of its institutions, one of the last signs of the division of the town for 19 years. There are two Hadassah hospitals, two large museums, two YMCA buildings, two university campuses, many double consulates, and even two central bus stations.

Following the Six-Day War, united Jerusalem became the central attraction for tourists and many new immigrants. Thousands of Jewish students from the Diaspora, particularly from the United States, Canada, and Western Europe, enrolled at The Hebrew University, and many remained. Tourism to Jerusalem reached the peak figures of about 400,000 visitors a year (in 1968, 970,000 "nights" were registered at the hotels in the city). New immigrant centers, i.e., hostels for individuals and families were established in Katamon Tet (1968) and Mevasseret Zion on a hill west of Jerusalem (1970). The mayor of Jerusalem, Teddy Kollek, and the government encouraged the settlement of new immigrants in Jerusalem, and Israeli architects drew up a master plan for the Jerusalem of the future

(in the 21st century). It did not apply, however, to the ancient parts of the city, including the Old City and a belt surrounding its walls and Mt. Scopus, the Mount of Olives, etc., which have been preserved in their traditional form.

[Walter Pinhas Pick]

REUNIFICATION: PROGRESS AND PROBLEMS. With its reunification on June 28, 1967, Jerusalem restored its traditional character as a multi-national and multi-ethnic city. The population totaled about 265,000: 199,000 Jews and 66,000 Arabs. The non-Jewish population was composed of two religious sectors: the larger Muslim community of 54,000 (83%) and the various Christian factions numbering 11,000 (including 4,000 members of the Greek Orthodox Church, 3,600 of the Latin Church, and 1,200 Greek Catholics). The Jewish community thus comprised three-quarters of the population. The fact that it was the decisive majority was not novel, as a Jewish majority had existed in the city since the last third of the 19th century.

The municipal unification of Jerusalem brought into the city's boundaries areas that had been under Jordanian municipal jurisdiction before the Six-Day War (mainly within the boundaries defined during the Mandate period), as well as a broad area that had been organized under village councils or had not enjoyed municipal status. Consequently, population groups that had never been urban were included in the city's area and in the jurisdiction of the municipality and Israel government authority. The resulting population was mostly heterogeneous, from slum dwellers and semi-nomadic Bedouin to members of the upper middle class, who had moved beyond the limits of the Jordanian city and set up magnificent suburbs to the north. The Arab population was concentrated in these areas. About 33% of it (23,000) lived inside the Old City walls; about 38% (25,000) in the northern suburbs, most of them modern; and about 26% (17,000) in the southern parts, including the villages of Silwān, Abu Ṭūr, and Şur Bāhir.

The rate of natural increase among the Arab population, which is slightly less than double that of the Jewish, could increase the proportion of Arabs in the city from a quarter to a third within 20 years. The Israel government, realizing the potential difficulties of this situation, expended great efforts to provide more accommodation for Jews in the city and to eradicate distinctions between the western and eastern parts. In 1967–69 there were only a handful of Jews living east of the former dividing line, but from the end of 1969, when the construction of new quarters began to be completed (e.g., Ramat Eshkol), the settlement of Jews in the eastern part of the city accelerated. In 1970 the government decided to add impetus to the establishment of Jewish quarters in the southern, northern, and northwestern parts of the Old City. As a result of these efforts, the number of Jews moving to Jerusalem reached 5,000 per year, twice as much as in the years immediately before the Six-Day War. In this way the numerical balance between Jews and non-Jews was maintained in the unified city.

During the period of the city's division, the existence of two municipalities governed by states with such differing policies, rates of development, and character resulted in the development of two different cities. So different were their economic systems and social structures that it was sometimes difficult to believe that they were both parts of the same city. West Jerusalem quickly recovered from the damage it had suffered during the War of Independence, but from 1948 to 1967 its population decreased in proportion to that of the rest of the country; whereas in 1948 it had 9.6% of the total population of the State of Israel, at the end of 1960 this ratio had decreased to 7.7%. The economy of West Jerusalem was based mainly on a constellation of public services (government, university, Jewish Agency, and Hadassah) that employed about 30% of its labor force; about 17% was employed in industry, and 14% in business and banking. Tourism, in which Jerusalem had a relative advantage, did not play a central role. Only 13% of the hotels in Israel were located there, while 32% were in Tel Aviv. One of the major obstacles to the development of the city's economy was the fact that West Jerusalem had almost no economic hinterland, while in Haifa and Tel Aviv a great part of the economic activity extended to nearby townships and settlements, and their scope of influence extended far beyond their municipal boundaries. The scope of Jerusalem's influence on the narrow underpopulated corridor that connects it with the coast was necessarily very limited.

In contrast to West Jerusalem, East Jerusalem under Jordanian rule retained its position as the largest city of the West Bank and it continued to serve as the center of a very broad economic and demographic hinterland. The city was the center of most of the financial institutions of the West Bank, as well as 85% of the tourist companies, and it also had the greatest concentration of the wholesale trade, the independent professions, and the trade in durable goods. Production per employee in East Jerusalem was 50% higher than the average in the West Bank as whole, and the average income per person was also proportionally higher. Nevertheless, the economy of East Jerusalem was based mainly on one activity: tourism. The influence of every decrease in the number of tourists would extend to the various branches of the economy and result in crisis. On the contrary, their policies of economic incentives and government aid were aimed basically at the capital, Amman, and the East Bank, as opposed to the West Bank, including Jerusalem. East Jerusalemites who wished to establish economic enterprises in their city had either to abandon their projects or implement them in Amman. Amman also received a distinct preference with regard to financial and cultural institutions. This policy led to a slowdown in the economic development of East Jerusalem and in acceleration in the development of the capital of the kingdom across the Jordan River which was implemented mainly by entrepreneurs from the West Bank, primarily from Jerusalem.

Although the economic status of East Jerusalem was more stable than that of the western half of the city, a comparison of the two reveals a formidable gap in favor of the Jewish

sector of the city. On the eve of the Six-Day War, the average yearly income per person in West Jerusalem was fourfold that of the eastern part. In West Jerusalem the income per person was estimated in 1965 as IL3,400 while in the eastern part it was only IL 900. East Jerusalem contributed only 6–7% of the buying power of the unified city, in contrast to its 25% of the population. Under such circumstances it was extremely difficult to effect the economic integration of the two parts of the city and annul the effects of the war in a relatively short time. The Six-Day War resulted in a number of economic difficulties in East Jerusalem: the temporary cessation of tourism, on which the city's economy had been based; the loss of the Jordanian authorities and army as a source of economic demand; disruptions in trade between the various parts of the West Bank; the closing of the banks; the lack of liquidity; and the absence of economic stability. These brought about a serious economic crisis, which found immediate expression in mass unemployment. Four months after the war, unemployment in the eastern part covered one-third of the labor force, in contrast to 7–8% on the eve of the war. Especially affected were the building trades, transportation, and hotels. Services, such as restaurants, cafés, bakeries, and garages, which were also affected, recovered quickly due to rising demands from Israel tourists.

Within a few months, the process of economic disintegration ceased, and speedy action on the part of the authorities brought about a distinct improvement in the economic situation. The process of rehabilitation was accelerated by the huge public investments made in the city following the war, especially in construction. At the end of 1969 employment returned to its prewar level. About half of the businesses in East Jerusalem were better off than they had been on the eve of the war. The most outstanding improvement was in the situation of salaried workers. More than 5,000 workers and employees out of a labor force of about 18,000 were employed in West Jerusalem, earning salaries that were 150% higher than those they had received on the eve of the war. The recovery process had some negative manifestations, however. Price levels increased by 40–50%. About half of the businesses in East Jerusalem, especially those which could not compete with similar business in the western part of the city, were affected to varying degrees of severity.

The integration of the economic systems, and especially the implementation of the principles of a modern welfare state, brought about far-reaching changes in Arab society in East Jerusalem. The distribution of income and property became more equalized. Israel wages were paid to thousands of Arab workers, and a slow increase in the wages of Arabs employed in the Arab sector brought a general improvement in the standard of living. National Insurance, especially birth benefits and benefits to families with many children, aided in the improvement of the status of women. Nevertheless, the damage to the relative economic position of the upper middle class brought complaints of “discrimination” and “Jewish control” of certain branches, especially the import of durable

goods and tourism. Because of the atmosphere of long-range political insecurity that continued to exist among the Arabs of East Jerusalem, no plan for capital investments was implemented. The closing of Arab banks continued to influence the lack of liquidity and the scarcity of sources of credit. In view of developments in 1968–70, a warning had been voiced that the integration of East Jerusalem's Arabs into the city's united economy might lead to their concentration in low-income employment requiring manual labor and might have undesirable social and inter-ethnic results.

Another unsolved problem was that of the employment of white-collar workers. With the unification of the city, many Jordanian government officials, travel agents, lawyers, etc. became unemployed. Only the Arab employees of the Jerusalem municipality and a small number of government employees (formerly Jordanian) were integrated into the institutions of the unified municipality and Israel government offices. Out of 500 people who worked in all levels of the Jordanian government on the eve of the war, only about 150 were absorbed, some of them in the military government. This problem was more of a political nature than an economic one. Some of the white-collar workers could not find employment in their professions for economic reasons; lawyers were not employed because they boycotted Israel courts. Most of them, however, especially civil servants on intermediate or senior levels, were unemployed because the functions they had fulfilled were transferred, with the change in authorities, to Israel government offices. The degree of integration of white-collar workers in the economic and administrative system became an important indicator for the reconciliation of Jerusalem's population to the new situation created by the unification of the city.

The unification of Jerusalem opened a new chapter in the complex relations between the Jewish majority and the Arab minority in the State of Israel. For the first time in its history, Israel had to absorb a developed Arab urban unit with advanced social stratification, considerable economic power, a high level of education, and a tradition of participation in the highest levels of government. Jerusalem, after its unification, became the greatest concentration of urban Arab population in the country. The percentage of high school graduates in East Jerusalem rose steadily under Jordanian rule, and in 1967, 38% of the males had completed high school and 9% had had higher education. The educational level of the Arab residents of the city was higher than that of the inhabitants of Judea and Samaria and even higher than the average of all the non-Jews in Israel, among whom the urban population was a small minority.

In contrast to the Arabs in Israel, who initially lacked an educated, stable urban class, the inhabitants of East Jerusalem lived for 20 years under independent Arab rule, during which it was the center of authority for the entire West Bank. The leadership of East Jerusalem was the major exponent of Arab-Palestinian nationalism and was integrated into the Jordanian establishment. Periodic disagreements with Amman aside, it was one of the outstanding elite groups in the Hashemite

kingdom. When the city was unified, there were a considerable number of former ministers, ambassadors, members of parliament and Senate, and senior officials in East Jerusalem, in addition to an efficient and capable municipal administration. In its attitude to Israel the East Jerusalem population was one of the most extreme elements in Jordan. The Palestine Liberation Organization (see *Israel, State of: Arab Population – Arab National Movement) had great influence there, and many members of extremist parties, both right and left wing, resided in the city. As was customary in the Jordanian educational system, pupils were educated toward extreme pan-Arabism and revanche; even excerpts from the *Protocols of the Elders of Zion* were found among the teaching materials. The chauvinistic extremism stemmed, inter alia, from the fact that about 11,000 inhabitants of the city were formally refugees, i.e., the head of the family was born in an area that had been included in the State of Israel in 1948.

The Jewish population was agreeable in some respects and not agreeable in others to the improvement of relations with the Arab minority. The large number of Oriental Jews and their Israel-born children – more than 50% of the Jewish population of the city – was significant in this matter, as this group was familiar with the Arabic language and the Arab way of life and culture and could theoretically serve as a bridge between the two segments of the population. However, the immigrants from Muslim countries who had come to Israel after the War of Independence (about a quarter of the total Jewish population) were, paradoxically, a potential cause of tension. Partly because they had suffered oppression and persecution in their countries of origin, they were sometimes influenced by latent urges to revenge in their attitude to the Arab population of East Jerusalem. Other sections of the Jewish population, mainly native Israelis and immigrants from Europe and English-speaking countries, lacked familiarity with Arabs and their way of life and often misunderstood them – either regarding them in an unrealistic romantic way or suspecting them as a hostile, alien element.

The two populations, which suddenly found themselves living in one city, bore the acute psychological influences of the Six-Day War, apart from the past legacy of the Jewish-Arab conflict. The Jewish population felt a sharp sense of release from the burden of fear that existed during the pre-war period and euphoria over the unification of the city and the liberation of the Western Wall and the other holy places. The Arab population was astonished by the swift conquest of their city and suffered from a deep sense of shame after their decisive defeat. On the other hand, the factor that caused the greatest surprise among the Arab population was the humane and fair treatment accorded to them by the soldiers of the Israel Defense Forces. Influenced by Arab propaganda describing Jews as murderers of women and children, the Arabs awaited the worst. Fear gave way to astonishment and feelings of gratitude.

There was an initial atmosphere of goodwill and good-neighborliness that found dramatic expression on the “day

of reunification” (June 28, 1967). When the barriers were removed and free movement between the two parts of the city was allowed, the Jewish and Arab masses mingled without incident. The atmosphere of peace and harmony in the city appeared unreal to those who witnessed it. Indeed, it lasted only a few short weeks, during which these feelings slowly abated. The two sides began to adjust themselves to the new reality. Repeated incidents and the loss of lives recreated the tension within the Jewish population. The Arab population found itself subject to a rule that, although tolerant and understanding, was nonetheless foreign, with which they could not and did not wish to identify, and to whose continued existence they could not reconcile themselves. The Israel authorities quickly learned the complex problems of the Arab sector and also found ways to solve them effectively. Nevertheless, several points of friction were created by a lack of understanding and knowledge of the mentality of the Arab population. This lack of understanding stemmed mainly from an approach to the population of East Jerusalem similar to that employed to the Arab population of the State of Israel before the war, disregarding the differences between the two communities. Likewise, attempts were made immediately to put into effect the procedures of Israel administration, without allowing the inhabitants of East Jerusalem sufficient time to adapt to the ways and means unfamiliar to them.

In the course of time, the inhabitants of East Jerusalem became accustomed to these procedures, and at the same time the Israel authorities became familiar with the feelings of the inhabitants on certain matters. This mutual adaptation erased most of the points of friction, the major one being the problem of taxes. The East Jerusalemites, accustomed to the Jordanian fiscal system, which levied low taxes and in return rendered a low level of services, did not, at first, understand the principles of the Israel welfare state, demanding high taxation and providing a high level of services. Taxes connected with war and security caused additional complaints, since the inhabitants of East Jerusalem regarded their payment as “treason against the Jordanian kingdom,” which was in a state of war with Israel.

In terms of their civil status, the inhabitants of East Jerusalem were Israel residents with Jordanian citizenship. (They could apply for Israel citizenship, but practically none of them did so.) This status allowed them to vote for and be elected to the Jerusalem municipality but not to the Knesset. As Jordanian citizens, they could cross the cease-fire line and visit in Jordan, while they also had the right to move freely throughout Israel, like other residents. Despite the distinct improvement in many areas of relations with the authorities and the adjustment of the inhabitants of East Jerusalem to the way of life that developed in the unified city, relations were clouded by the fact that the population of East Jerusalem avoided all political cooperation that could be interpreted as voluntary acknowledgement of the unification of Jerusalem. Members of the Arab municipal council, who were invited to join the unified city council, refused to do so; lawyers refused to appear

in Israeli courts; companies refused to be registered as Israeli companies; and the Shari'a courts refused to become part of the Muslim judicial system of Israel, despite a far-reaching compromise suggested by Israel. Nevertheless, the boundaries between political cooperation, which was regarded as "treason," and the minimal reconciliation necessary for coexistence were very elastic. Thus, for example, the mass voting by inhabitants of East Jerusalem in the municipal elections of October 1969 was not viewed as collaboration.

Political tension remained mostly latent, but it broke out a number of times and was expressed mainly in business strikes and demonstrations. Feelings of political frustration and tension were also nourished by a number of actions taken by the Israel authorities to insure the Jewish character of the city and enforce Israeli control of the eastern part. In broad areas of the eastern part Jewish dwellings began to be erected. The acts of Arab terrorists aggravated the inter-ethnic tension. After one act of terror, which claimed a number of civilian casualties in West Jerusalem (the "Night of the Grenades," August 18, 1968) young Jews attacked Arab civilians and damage was inflicted on Arab shops. Strong and unequivocal measures on the part of the Israeli government and its major leaders put an end to the hooliganism, and later acts of Arab terror (such as the explosions which in 1968–69 killed and wounded many people in a marketplace, a supermarket, the students' cafeteria in The Hebrew University, etc.) did not elicit revenge on innocent Arabs. Nevertheless, the security forces increased their supervision over the Arab residents. Membership in terrorist cells and possession of arms caches were punished, inter alia, by the destruction of several houses and the confiscation of others. All these measures resulted in alternately rising and falling tension. A major event influencing the atmosphere between the communities was the short-lived shock of the fire in the al-Aqṣā Mosque on August 21, 1969, which quickly abated when the culprit proved to be an insane Christian tourist from Australia, although the incident was blown up to major international proportions by all the Arab States.

In Jewish public opinion there were two different approaches to dealing with the Arab population. All Jews were ready to grant the Arabs full citizenship rights as individuals, but some would deny them the right of national political expression or separate representation, whereas others held that the Arabs should not only be granted individual rights but should be recognized as a national minority with legitimate aspirations of their own, entitling them to separate representation. This argument never came to a head, as the Arabs themselves refused to cooperate in any attempt at an interim arrangement and were not ready to accept any suggestion of separate representation or any kind of political organization.

By 1970 distinct progress had been made in the process of integrating the Arabs of East Jerusalem into the life of the city, and inter-ethnic relations developed and improved, despite negative forces that operated throughout the period. Nevertheless, there were still basic political differences of ap-

proach between the Jewish majority and the Arab minority with regard to the future of the city. The integration of the communities and nationalities in Jerusalem was progressively implemented, mainly in the economic sphere and in areas necessary for municipal survival. There was little social contact between the two groups, but the fact that thousands of Arab workers were employed in West Jerusalem led to significant contacts and new understanding. The deepening of reciprocal harmonious relations, however, ultimately depended upon the general solution to the Israel-Arab conflict.

[Meron Benvenisti]

The decade following 1967 was marked by the most intensive development in Jerusalem since King Herod 2,000 years before. The city tripled in size by the incorporation of East Jerusalem, under Jordanian rule from 1948 to 1967, and within seven years had the largest population of any city in Israel. Almost a third of the area of East Jerusalem – the bulk of it, rocky, non-arable hills – was expropriated for the construction of nine housing developments on clear strategic lines. Four of them – Gilo, East Talpiot, Neveh Ya'akov, and Ramot, each larger than most development towns – were cast in a wide arc around the outermost edge of the city. Five others – Ramot Eshkol, French Hill, Ma'alot Dafna, Sanhedria ha-Murḥevet, and Givat ha-Mivtar – were built across the battlefields of the Six-Day War to establish a link with Mount Scopus.

Eleven thousand apartments were built across the former border and by 1977 there were close to 40,000 Jews living in these new development areas, constituting some 15% of the city's Jewish population.

The government had succeeded in creating a physical ring around Jerusalem that would make it impossible to divide the city again. It was less successful, however, in the other major objective – reinforcing the Jewish presence demographically. The September 1967 census recorded 197,000 Jews and 71,000 non-Jews (including 3–5,000 non-Arabs, such as Armenians and other non-Arab Christians). However, in spite of the influx of immigrants and the transfer of some government offices from Tel Aviv to Jerusalem the percentage of Jews declined from 73.4 to 72.5. Ten years after the Six-Day War, Jerusalem's population had increased by more than a third, numbering 370,000, of whom 268,500 were Jews and 102,000 non-Jews, and by 1981 it was 412,000, with 295,000 Jews and 117,000 non-Jews. While the average Jewish annual increase was 3.3% – considerably higher than the national average – the non-Jewish rate was 3.8%; the Arab figure due to a higher birthrate, a substantial decrease in the mortality rate, and a halt in emigration from East Jerusalem which had prevailed throughout the Jordanian regime.

The economic boom even attracted immigration from across the Jordan River under the family reunion scheme. In addition, thousands of West Bank Arabs took up residence illegally in East Jerusalem, whose numbers are not included in the official population figures.

JEWISH-ARAB RELATIONS. The relations which developed between Arab and Jewish people in Jerusalem during the decade were shifting and ambiguous. They added up, however, to coexistence – a less satisfactory condition, perhaps, than friendship, but still infinitely superior to easily imaginable alternatives. Tranquility was achieved by a policy of liberality towards the Arabs, including open bridges and de facto control of the Temple Mount by Muslim authorities.

The West Jerusalem economy and the Arab work force grew to depend on each other. Arabs from East Jerusalem and the West Bank constituted about 15% of the 110,000-strong labor force in the Jewish economic sector, mainly in construction. More Arabs worked in the Jewish sector of Jerusalem than in the Arab sector and drew 60% higher wages than they had formerly received.

Nine thousand Arabs from East Jerusalem, including wives of 2,000 workers, joined the Histadrut, Israel's labor confederation, which assured them the same pay and benefits as Jewish workers. Arab and Jewish workers sat together on labor committees in West Jerusalem factories, and in some places Arabs were chairmen, and they participated together in social and cultural activities.

The David Yellin Teachers' College in Beit Hakerem, which had been training Jewish teachers since 1914, began accepting East Jerusalem girls in 1974. The first group of 25 graduated two years later, after completing a special course taught in Arabic. Every summer thousands of youths from both sides of the city participated in the municipality's Youth Capital day camp and periodic sports contests were held between Arab and Jewish youth clubs.

There was Arab-Jewish integration on the underworld margin of both societies. Here, Arabic-speaking Jews and East Jerusalem Arabs, sharing a common subculture, "trusted" each other enough to commit armed robberies together. The police quickly broke up these gangs, but fringe society contacts continued. West Jerusalem streetgang workers noted that their Jewish charges and their Arab counterparts were at ease in one another's company. The police were likewise integrated, engaging in joint patrols, but most of the police on the streets of East Jerusalem were local Arabs.

Nevertheless, East Jerusalem Arabs were still not reconciled to Israeli rule. The Arabs felt that Israel was altering the Arab character of East Jerusalem and endangering the Arab way of life by exposing it to an alien culture. Israeli authorities though aware that the allegiance of Jerusalem's Arabs could not be bought by higher salaries or improved services, nevertheless provided them.

The thousands of substantial houses – villas by Israeli standards – built on the hills of East Jerusalem attested to the unprecedented prosperity achieved by Jerusalem's Arabs, particularly laborers, since they came under Israeli rule. Before 1967, 41% of East Jerusalem homes had no running water and 60% had no electricity, whereas by the end of the 1970s only those living in isolated rural areas were without running water and virtually every house had electricity. The abundance

of water supplied to the Old City after 1967 proved too much for the old Turkish sewer-drainage pipes which burst under the pressure, causing the inundation of building foundations and the collapse of several structures. In a massive operation expected to last decades, the municipality began gutting the alleys of the Old City in order to build a modern infrastructure. Among the utility lines being laid underground was cable television, to permit the removal of the antennas, cluttering the Old City skyline. The approaches to Damascus Gate, both from inside and outside the city walls, were completely remodeled.

The Arab Sector. Where no park or playground existed in Jerusalem under Jordanian rule, there were six a decade later. Where no kindergartens existed, there were 50. Where no lending library for adults existed, there were four, plus a mobile library serving outlying villages. Where only 73 families received welfare payments under the Jordanians, 900 families were receiving them in 1977 and 4,500 families received pension payments from Israel's National Insurance. In addition, 9,000 East Jerusalem families with three or more children received the same monthly National Insurance payments for each child as did Israeli families. These benefits were given in spite of the fact that the East Jerusalemites chose to remain Jordanian citizens and that Israel had no vested interest in promoting the Arab birth rate. A special government fund also provided more than 4,000 mortgage and business loans to East Jerusalemites whose own banks closed in 1967.

More was done to promote Arab culture in East Jerusalem after the city's unification than had ever been done under Jordanian rule. This included subsidizing their first professional theater group, expanding community centers, arranging for schoolchildren to attend an Arab play and an Arab musical performance every year, and even providing a Jewish dance teacher to launch an Arab dance troupe when no Arab teacher could be found.

Unlike the Arabs living in Israel since 1948, East Jerusalem Arabs did not sever ties with the Arab world. Besides being free to cross the Jordan River bridges in either direction, they could maintain their Jordanian citizenship while remaining official residents of Israel and citizens of an Israeli city with full voting rights in municipal elections. East Jerusalem students were originally required to study a curriculum similar to that of Israeli Arabs, but they were later granted the right to study a Jordanian curriculum (plus six hours of Hebrew and civics) and even to take examinations certified by the Jordanian Ministry of Education, so that they could proceed to universities in the Arab world.

According to Israeli experts, an increasing number of Arabs preferred an open city. This would have meant Arabs and Jews exercising sovereignty over their respective areas, with free passage from one side to the other. Although this might have seemed an ideal solution to many, Mayor Teddy Kollek strongly opposed it, warning that it would allow terrorists to turn Jerusalem into a Belfast overnight.

BUILDINGS. The texture of the city was altered physically, socially, and culturally through the 1970s. High-rise buildings, some of them exceeding 20 stories, punctured the Jerusalem skyline for the first time. Architect Moshe Safdie pointed out that these high-rises had been approved while the city was still divided. "They could only have been conceived when you weren't thinking about what the skyline would look like from the other side."

Sixty km. of roads and 182 km. of sewage lines were built. The government channeled more than twice as much money into Jerusalem in the first five years after reunification than it had during the previous 12. In addition to the new housing developments, enormous resources were invested in the reconstruction of the Jewish Quarter of the Old City and the Hadassah Hospital and Hebrew University facilities on Mount Scopus.

Little was done, however, to strengthen the outmoded city center, groaning under the weight of the additional population it now had to serve. The plan for a Ben Yehuda street mall remained stalled, except for a small, block-long strip. The number of private offices doubled during the decade, and the government increased its floor space by a third but, with little new construction to accommodate them, the offices spilled over into Rehavia and other residential neighborhoods. The population in neighborhoods near the center declined substantially, while the western garden suburbs of the 1930s – Beit Hakerem and Bayit Vegan – increased their population by two-thirds in the five years after the Six-Day War. A plan for the massive redevelopment of the Mamilla district outside Jaffa Gate, which called for razing of the entire district and its replacement with modern commercial, residential, and hotel structures as well as a large underground parking lot at the entrance to the Old City, was approved in principle, but implementation was held up by shortage of funds and concern over its ambitious nature.

A proposal to build a 25,000-seat sports stadium at Shuafat in northern Jerusalem likewise encountered strong opposition, particularly from religious residents in the approaches to the stadium, who objected on account of the traffic and noise and the consequent desecration of the Sabbath. Nevertheless, earthwork began in 1979 but was subsequently halted. Sha'arei Zedek Hospital, one of the city's oldest, built a large new facility at the edge of Bayit Vegan to replace its antiquated building on Jaffa Road. The original Hadassah Hospital on Mount Scopus was restored at great expense by the Hadassah Organization to serve as a regional hospital for Jews and Arabs in northern Jerusalem.

In spite of a few blots on the landscape created by inadvisable building, the city grew more beautiful during the 10 years. The ugly antisniper walls and the ruins of Norman's land were removed. Some of the best views in Jerusalem were opened up by the demolition of the ruined buildings outside the city wall between the Jaffa and New Gates, and by renewed access to Government House Ridge and Mount Scopus.

RESTORATION. Sensitive to the city's physical heritage, the authorities attempted to restore many of its old buildings and quarters rather than subject them to urban renewal. The most notable instance was the Jewish Quarter of the Old City, where painstaking restoration was undertaken. An attempt was made to save all old buildings still structurally sound, while new construction was kept in scale. Archaeologists were given priority over the builders, even though this often meant expensive delays while excavations were carried out. Building plans were often changed to incorporate ancient remains in basement museums or leave them exposed.

There were also extensive restoration efforts outside the Old City walls. The old Turkish khan, or inn, opposite the railway station was converted into a handsome theater, while the Yemin Moshe Quarter was converted from a slum to a luxury neighborhood. The century-old structure known as Mishkenot Sha'ananim, the first building to be built outside the ancient walls, was reconstructed as a guest house for visiting artists, scholars, and writers. Preservation plans were also drawn up for neighborhoods with special character like the German Colony and Sheikh Jarrah.

PARKS AND OPEN SPACES. An elaborate open-space system was developed, including a 600-acre national park around the Old City. Apart from the creation of the new ring of housing developments, this open-space system could be the distinguishing mark made on the city during the decade. One of its most interesting sections was an Archaeological Garden incorporating ancient remains uncovered along the southern and western fringes of the Old City.

The municipality's gardening department itself almost transformed the city by creating a green matrix that softened the stony character of the desert-fringed city. On the eve of the Six-Day War, there were 23 parks in the city covering 25 acres. Ten years later there were 170 parks covering 425 acres. The six children's playgrounds that existed then grew to 78, and three "vest-pocket" parks became 150. Traffic islands were now lush with flowers. Around the fringes of the city the Jewish National Fund planted some 700 acres of forest.

A score of sculptures were installed in public places, including the last monumental work of Alexander Calder, a 12-meter high stabile installed in Holland Square at Mount Herzl.

HOUSING. Slum areas such as the Katamons were upgraded by adding rooms to cramped apartments and planting numerous gardens in the area. Housing conditions in the city improved considerably during the decade. The 30,000 apartments built or started in the Jewish sector in the ten years were almost half as many as existed in 1967 and were generally larger and better built. Four-room apartments, which constituted only 8% of the total built in 1961, constituted 40% of the units built in 1970. High-rise living, unknown in Jerusalem before 1967, became commonplace. To answer the greater demand for privacy, hundreds of terrace apartments with separate entrances were built.

In spite of vigorous efforts to expand Jerusalem's modest industrial base (non-smokestack industries) to offer a greater variety of employment opportunities, the percentage of the Jewish population employed in industry declined from 14.5 to 11.4, while employment in public services rose from 43% to 49%. The government, with 14,000 employees, remained the largest employer.

An area for heavy industry was opened in 1976 at Mishor Adumim on the Jericho Road, 15 km east of Jerusalem. The united city saw new commercial patterns developing. Tourists flooding the city preferred to sleep in West Jerusalem, where the number of hotel rooms tripled, and to shop in East Jerusalem, where the number of souvenir shops tripled. The number of bars and nightclubs increased from 12 to 28 by 1975, while the number of small kiosks selling candy and newspapers declined from 153 to 144. There was only a modest increase in personal services since 1967 – the number of doctors increased by 25% and barbers by 7% – but the number of engineers, insurance agents, and building contractors increased by 150%.

JEWISH SECTOR UNDER THE MAYORALTY OF TEDDY KOLLEK. Strenuous efforts were made to close the gap, at least the visible one, between underprivileged Jews – mostly from Arab countries – and the relatively privileged.

Nearly 1,000 indigent families were provided with apartments in the new outlying neighborhoods, Thousands of others were given subsidies to rent apartments in town or to improve their own apartments. Where physically possible, extra rooms were added onto existing apartments to enable residents to remain in the neighborhoods where they had established roots.

The municipality invested heavily in upgrading the neighborhoods into which immigrants had hastily settled during the 1950s and early 1960s. It was from these neighborhoods that the so-called Black Panthers, disaffected youths demanding a better way of life, had emerged after the Six-Day War. Parks were built to provide outdoor play areas for children of large families confined in small apartments. Schools were built, sometimes at the rate of 350 classrooms a year, roads were paved, and street lights installed.

Flowers and trees planted by the municipality and regularly uprooted overnight by local youths were, at last allowed to take root as alienation gave way to a feeling of pride in the neighborhood.

The network of youth clubs and 10 community centers, created during the decade, contributed much to social stability. Disadvantaged youths, whose older brothers had drifted into antisocial and even criminal activity, found outlet for their energies and interests in these facilities.

Neighborhood schools were eliminated in an effort to reduce social tensions through integration between children from middle-and lower-class neighborhoods. Most of the city's schools ultimately contained students from such neighborhoods at a ratio of roughly 60–40. Some educators

maintained that mixing does not constitute true integration, which requires intensive efforts with disadvantaged children and their parents to close the educational gap. They have acknowledged, however, that it reduces social tension.

The most difficult social problem towards the end of the decade lay not in the slums, but in the newly built neighborhoods. Entire blocks of houses were filled with slum evacuees or with new immigrants from Georgia and Bukhara, whose cultural assimilation presented difficulties. This concentration created cores of social problems from the very start. The authorities finally came to the conclusion that it was best to disperse the slum evacuees and the immigrant families – one or two to a building – so as to promote their assimilation. In order to overcome the negative image acquired by the Neveh Ya'akov neighborhood because of settlement difficulties, the Housing Ministry offered mortgage terms so attractive that it managed to sell the apartments to young Israeli couples and other socially strong elements. Neveh Ya'akov became the first of the new neighborhoods to be filled.

A violent dispute between ultra-Orthodox and secular Jews broke out at the end of 1978 when a new road was opened to the neighborhood of Ramot. Ultra-Orthodox elements, maintaining that the road violated the sanctity of the Sabbath in religious neighborhoods it skirted, demonstrated alongside the road virtually every Sabbath and frequently threw stones at cars. Despite availability of an alternate route, the dispute has continued.

CULTURAL ACHIEVEMENTS. One of the most notable changes in the city during the past decade was in the cultural climate. The Jerusalem Symphony Orchestra, which drew about 200 persons to its weekly concerts in 1970, filled the 900-seat Jerusalem Theater almost every week seven years later. Good plays brought to Jerusalem by Tel Aviv theater groups in 1970 would perform only three or four times and then to half-empty halls. By 1977, a hit show could fill as many as 16 houses. The Jerusalem Theater's subscriptions quadrupled in four years. Two lively pocket theaters opened in the city, and the renovated khan became an active center for theater and chamber music.

Part of the reason for the new climate was a changing population. The percentage of adult Jews in Jerusalem with at least one year's post-secondary education rose from 18.7 in 1961 to 25.2 in 1972. (In East Jerusalem it rose from 5.2 to 5.5% between 1967 and 1972.) Of the 72,000 increase in the Jewish population in the decade, 20,000 were new immigrants, mostly from the Soviet Union and Western countries, with a tradition of concert and theater going.

The other major factor was Mayor Kollek, who was the prime mover in creating much of the city's cultural infrastructure – the Israel Museum, the Jerusalem Theater, and the Khan. He also initiated the Mishkenot Sha'ananim guest house. His administration began building a cultural audience for the future by arranging that every schoolchild in Jerusalem attend at least one theatrical and one musical performance a

year. Violinist Isaac Stern was the initiator of the Jerusalem Music Center, just behind Mishkenot, richly endowed with videotape facilities, where some of the world's greatest musicians meet with Israeli music teachers and students in order to permit them to partake directly of the musical idiom beyond Israel's borders.

The cultural life of the city was augmented by several important new facilities. These included a museum of Islamic art dedicated to the late Hebrew University scholar L.A. Mayer and a museum portraying past life in the Jewish Quarter. A new youth wing for Arab and Jewish youth was opened by the Israel Museum in East Jerusalem to accommodate spillover from the youth wing in its main building.

Freedom of Religion. Never in history had there been such religious freedom in Jerusalem as prevailed after the reunification of the city. The Muslims were unrestricted in their religious practice and the Supreme Muslim Council had de facto control of the Temple Mount. Access by non-Muslims was permitted to general visitors through the Moghrabi Gate, except during Muslim hours for prayer. For Christians, unification meant easy access between holy places on both sides of the city and the lifting of land purchase restrictions imposed by Jordan on their side of the city.

The world still did not recognize Israeli rule over the Old City and East Jerusalem. Visiting national leaders had their national flags removed from their cars when they crossed the line which formerly divided Jerusalem in two. At Independence Day receptions, the diplomatic corps still imbibed its soft drinks just outside the walls of the Old City rather than joining the main party inside the Citadel, because that would have implied their recognition of Israeli sovereignty over the Old City. The adoption of the Jerusalem Law in 1980, officially declaring the whole of Jerusalem as Israeli territory and under Israeli rule, was condemned by the United Nations Security Council – the United States abstaining – and all the countries which had embassies in Jerusalem moved them to Tel Aviv.

The Perfection of Beauty. In spite of all the changes which had taken place in Jerusalem during the 1970s, the essential character of the city remained unchanged. Its beauty remained in the stone facing on all buildings, which gave a unifying texture to all parts of the city – in the picturesque alleys and courtyards of the older neighborhoods, in the quiet and lushly planted streets of middle-class neighborhoods, and in the sculpted hills surrounding the city.

The anniversary of the reunification of the city, the 28th day of Iyyar, was proclaimed as Yom Yerushalayim, Jerusalem Day, and was celebrated with increasing enthusiasm from year to year.

In the following decade, despite the optimistic spirit of the post-Six-Day War period, Jerusalem continued to be a city of tensions, primarily between Arabs and Jews. The initial post-1967 goal of an integrated population foundered, largely as a result of a long series of attacks (often stabbing) carried out by Arabs, sometimes evoking reprisals by Jews. In 1990,

in an incident on the Temple Mount, 21 Arabs were killed and over 100 injured by Israeli forces. Tensions were also exacerbated, especially during the Shamir regime, when Jews moved into Muslim neighborhoods, including the Muslim Quarter of the Old City and the village of Silwan. In many respects the city was divided almost as much as before 1967, with little social intercourse between Jews and Arabs.

The Palestinian *intifada* brought many instances of stone-throwing by Arabs at Jewish buses and cars in East Jerusalem. There was a prolonged protest shutdown of Arab stores and a sharp fall-off in the number of Jews visiting the Arab parts of the city, including the formerly crowded marketplaces of the Old City. The Palestinians reiterated that in some form Jerusalem, or part of it, must be included in any Palestinian entity. The issue was not faced squarely in the first rounds of the peace process, but Israel refused to have Jerusalemites included in the Palestinian delegation.

The population of Jerusalem at the end of 1992 was 558,000, of whom 401,000 were Jews and 157,000 Arabs (whose percentage in the total population had risen from 25 to 28 since 1967). The growth in the Jewish population was largely due to the Russian immigration, and the new suburbs of Gilo, Neveh Ya'akov, Har Nof, Pisgat Ze'ev, and Ramot mushroomed. There was also, however, an outflow of the Jewish population as many were attracted by the favorable terms offered by settlements in the West Bank within easy commuting distance of Jerusalem.

The ultra-Orthodox (*haredi*) population continued to thrive and hundreds of new yeshivot and synagogues have been built in the city since 1967. There were frequent tensions with the ultra-Orthodox, who often held demonstrations to protest Sabbath desecrations and alleged desecrations of graves by archeologists or construction workers. Their projections in the population grew constantly due to immigration and a very high fertility rate, and they ultimately constituted over 20% of the Jewish population. Jerusalem's Sabbath character took a surprising turn in the late 1980s when for the first time pubs, discotheques, and some cinemas began to open on Friday nights. In the past, ultra-Orthodox protests had managed to snuff out attempts to open entertainment facilities on Sabbath eve and young Jerusalemites who sought such outlets had to travel to Tel Aviv. In time, the Friday night life in Jerusalem became so lively that it even occasionally drew Tel Aviv youth.

A quarter-century after its unification in the 1967 Six-Day War, Jerusalem continued its dynamic transformation into a modern urban center. With the completion of most of the new housing developments launched in the wake of the 1967 war, efforts focused on providing facilities to serve the vastly increased population. In the south of the city, a 15,000-seat soccer stadium was opened in 1991, providing Jerusalem with its first major sports facility. At the insistence of its foreign donor, it was named Teddy stadium, honoring Mayor Teddy Kollek. Nearby, a 100,000-square-meter enclosed shopping mall, said to be the largest in the Middle East, was opened in 1993. Op-

posite Jaffa Gate, development of the new Mamilla quarter as a commercial-residential link between the Old City and West Jerusalem finally began with the construction of luxury housing, more than a decade after the previous inhabitants of the area had been evacuated. An ambitious new City Hall complex was dedicated alongside the building that had filled that role for half a century.

A major new road, Road Number One, was built to bring traffic from north Jerusalem to the city center, passing near Damascus Gate. The road's three kilometer alignment followed the line that had served as no-man's-land between Israeli and Jordanian Jerusalem before the Six-Day War. A new museum complex began to take shape alongside the Israel Museum with the dedication of the Bible Lands Museum and a science museum. The Israel Supreme Court moved in 1992 from its old quarters in the center of the city to a striking new building in the Government Center. The biblical zoo also shifted to more elaborate new quarters in the south of the city. A major expansion of the Binyanei ha-Ummah Convention Center was launched to help meet the growing demand of international congresses seeking to hold their meetings in Jerusalem. In northern Jerusalem, the last and largest of the massive post-Six-Day War housing developments, Pisgat Ze'ev, with 12,000 units, was nearing completion.

On the Temple Mount in the Old City, the gold-colored anodized aluminum dome covering the Islamic shrine, the Dome of the Rock, was replaced by a dome gilded with real gold.

Teddy Kollek, first elected mayor in 1965, served in that capacity until replaced in the 1993 elections by Ehud Olmert.

[Abraham Rabinovich]

Since the mid-1990s the city of Jerusalem has undergone many changes – demographic, economic, social, physical, and geopolitical. The main changes took place as a result of the deterioration in relations between Israel and the Palestinian Authority. The city has been affected by relentless terrorist attacks, as a result of which there has been serious economic decline; the lack of trust between Jews and Arabs living in the city has increased; the Jewish population in its part of the city has severed its link with the Arab population; and the jewel in the crown of the fight against Palestinian terrorism has been the erection of a security fence around Jerusalem, which has had considerable economic and social consequences and implications for the city's residents, Arabs and Jews. However, despite the serious security situation, there has been no let-up in the development of new neighborhoods in the city, the upgrading of infrastructure, and the addition of many new roads.

AREA AND POPULATION. Since 1993 the municipal area of Jerusalem has not changed from around 50 sq. mi. (125 sq. km.). In this respect, Jerusalem is the largest of Israel's cities (Tel Aviv covers 20 sq. mi. (50 sq. km.) and Haifa 23 sq. mi. (60 sq km). In terms of population, too, Jerusalem is Israel's

largest city. As estimated by Israel's Central Bureau of Statistics, at the end of September 2005 Jerusalem had some 716,000 residents, by comparison with 591,400 living in the city in 1995. In other words, the city's population has grown by 21% in one decade.

Jerusalem's population is made up of three main groups – the Jewish secular and traditional population, the Jewish ultra-Orthodox population, and the Arab population. The following table shows the changes that have taken place in the city over the past decade in the ratio between the two main groups.

Table 1: The population of Jerusalem by population groups 1995–2004

Year	Total	%	Jews	%	Non-Jews	%
1995	591,400	100	417,000	70.5	174,400	29.5
2004	706,400	100	469,300	66.4	237,100	33.6

Source: *Jerusalem Statistical Yearbook*, Israel Research Institute, Jerusalem 1997. For 2004 data, Israel Research Institute, Jerusalem, 2005.

A comparison of the population data of the past decade shows a continuation of the trend of decline in the relative share of the Jewish population of Jerusalem in comparison with the Arab population, from 70% in 1995 to 66% at the end of 2004. If these demographic processes continue and there is no change in the municipal boundaries of Jerusalem, by 2020 the Arab population will be 42% of the total population of the city.

The distribution of the city's population in 2004 shows that slightly more than 400,000 residents live in what is usually called East Jerusalem, that is, the area annexed to the city in 1967 when Jerusalem was reunited. Of these, around 45% (some 180,000) are Jews living in Jewish neighborhoods built since 1967. These neighborhoods include Ramat Eshkol, Givat Shapira, Givat Hamivtar, Neveh Ya'acov, Gilo, Ramot Alon, East Talpiot, Pisgat Ze'ev, the Jewish Quarter, Har Homah, Ramat Shelomo, and others. In other words, almost half of all the residents living in "East Jerusalem" in 2004 were Jews.

Since 1967, when the city was reunited, the population has increased by 160%. The Jewish population has increased by 135%, while the Arab population has increased by 233%. The rapid increase of the Arab population is a result of the natural reproduction rate of this group, on the one hand, and negative migration on the part of the Jewish population, on the other. The Jewish population of the city has increased by an average of 1.1% a year, whereas the Arab population has increased by an average 3.6% a year.

Since 1995, some 163,600 people have left the city and 97,100 have moved in. Over the past decade, therefore, the city has lost 66,500 residents, or an average of approximately 6,000 people a year. Around half of those leaving moved to metropolitan Jerusalem – to the towns and communities around the city (Mevasseret Zion, Zur Hadassah, and Ma'aleh Adumim), but the other half moved farther away to other parts of the country. Surveys have shown that most of those who

left are young people with a higher education. In recent years, the young ultra-Orthodox population is also leaving the city for Jerusalem's satellite towns such as Betar Ilit and Beit Shmesh, or the more remote communities of Kiryat Sefer and Modi'in Ilit.

CHANGES IN THE CITY'S ECONOMY. Jerusalem is the poorest of Israel's large cities. The reasons for this situation are connected to the makeup of its population, part of which does not play an active role in the work force and in the city's economy. The rate of participation in the work force in Jerusalem is low by comparison with the other large cities. In 2004 it stood at only 45%, compared with 61% in Tel Aviv and 55% in Israel as a whole. The low rate of participation in the work force is due to the social-cultural structure of the city's population. Ultra-Orthodox men, for the most part, prefer to study in yeshivah and not go out to work, and Arab women also do not play a significant part in the civil workforce. If we add to this the size of the Arab and ultra-Orthodox families in the city, and the large number of dependents per wage earner, the inevitable result is a large number of families below the poverty line.

Further evidence of the economic weakness of the city is the low per-capita income in Jerusalem by comparison with other parts of the country. In 2001, per capita income in the city was only NIS 1,961, compared with NIS 4,458 in Tel Aviv or NIS 3,485 in Haifa. Both the average monthly income and the average wage for salaried and self-employed families in the city are low by comparison with Tel Aviv, Haifa, and the country as a whole. A combination of the population characteristics and the city's employment structure contribute to the low average income in Jerusalem. The low rate of participation in the work force characteristic of the Arab population and the Jewish ultra-Orthodox population has a considerable effect on the average wage of the city's residents. In addition, the city is the national capital and the center of government, with many government offices and other national institutions in which salaries are average, by comparison with a relatively small number of people employed in the higher-paying professions such as finance, insurance, and the high-tech industries. Almost 50% of employed people in Jerusalem work in public service (public administration, education, health and welfare services, etc.), by comparison with 28% in Tel Aviv. In 2004 only 14% of all employed people in Jerusalem worked in business and financial services, as compared with 31% in Tel Aviv. The percentage of those employed in industry is also low in the city, 7% as against 10% in Tel Aviv and 17% in Israel as a whole. The relatively low level of salaries in the city affects the scope and scale of consumption by the residents, and the commercial life of the city.

In addition to the fundamental factors accompanying the economy of the city for many years, over the past decade Jerusalem has been forced to contend with serious terrorist attacks, more than any other place in the country, as Palestinian terrorism saw the city as a central target for its activities. Around

60% of all terrorist activity in the second Intifada took place in Jerusalem, exacting the heavy cost of more than 500 dead and thousands wounded. The main branches of the city's economy that were affected were commerce and tourism. Jerusalem is a tourist city of the first order. Not a tourist comes to Israel without spending a few days in Jerusalem. As a result of the terrorist attacks, tourism was seriously affected. There was a drastic reduction in the number of overnight stays in hotels in the city, from 3.4 million nights in 2000 to 1.2 million in 2002. Overnight stays by tourists from overseas dropped even more sharply, from 2.9 million in 2000 to 639,000 in 2002. Tourism, which, as mentioned, is one of the most important economic branches in the city, recovered to a certain degree in the course of 2005, with the number of overnight hotel stays in the city increasing to 1.9 million. The drop in the tourist branch hit the entire network of tourist services, including tour guides, restaurants, jewelry and souvenir shops and many other services. Many businesses closed, and others faced bankruptcy. According to the data of the municipal Chamber of Commerce, more than 1,400 businesses closed during the worst years. Hardest hit were the merchants of East Jerusalem and the Old City. Tourist traffic, especially domestic Israeli tourism, stopped coming to East Jerusalem. Even at the beginning of 2006, commerce in the city had not completely recovered, despite the fact that the relative calm of 2005 brought more and more tourists and Israelis back to Jerusalem.

An analysis of the municipal *arnona* tax data since 1995 shows that despite the bad years, there has been an increase in the number of offices and businesses in the city. In 1995 Jerusalem had 15,445 businesses and offices paying rates to the municipality, and by 2004 these had been joined by more than 3,100 new businesses. There has also been an increase in the number of factories and workshops (more than 700) during the past decade.

One of the industries that has succeeded in establishing a foothold in the city is the biotechnology industry, basing itself on Jerusalem's unique advantage: its proximity to academic institutions, research bodies, and leading medical centers. In 2005 there were some 60 biotechnology companies in the city, employing 1,500 people. Jerusalem is home to almost 25% of Israel's biotechnology industry. The city hosts important factories in this field, such as Teva, AVX, and others. Jerusalem also has the largest concentration of technology incubators, intended to support high-tech ventures. In the past decade one such incubator (the Van Leer Jerusalem Technology Incubator) accompanied the establishment of more than 50 successful start-up companies. Another incubator (JVP) dealt with more than 30 projects in the past decade, from which a number of successful companies developed.

The city has a number of successful industrial areas, including Har Hotzvim, which has around a quarter of a million square meters of knowledge-intensive industries such as Intel, Teva, Sigma, Phasecom, AVX, NDS, and others. Over the past decade the area has developed considerably, and houses companies such as Amdocs, Mango, Foxcom, and others.

Another technology park was established in the course of the last decade in the Malkhah neighborhood (Malkhah Technological Park), on an area of around 60,000 square meters, employing 1,400 people. Other technological parks are located at the Givat Ram campus of the university and in Pisgat Zé'ev.

In addition to the high-tech industry, which is very important to Jerusalem, the city also has other areas of employment that have developed considerably in the past decade, such as the Givat Shaul industrial zone, with a built-up area today of 350,000 square meters. Other parts of the city that have developed are the industrial zones of Talpiot and Atarot. The latter has suffered severely in the past five years as a result of its location on the northern border of Jerusalem, and many factories have abandoned it and moved out of the city.

DEVELOPMENT OF THE EDUCATION SYSTEM. The education system in Jerusalem is the largest and most complex municipal system in Israel. There are three main frameworks in the city's education system: state education, ultra-Orthodox education, and Arab education. Each of these frameworks contains secondary streams. State education includes the state and the state-religious streams; ultra-Orthodox education is divided between independent education and the *talmud torah* schools; and Arab education includes the municipal system, a private system, a church system, and the Muslim Waqf system.

The main change that has taken place in recent years is the constant increase in the number of students in the ultra-Orthodox and Arab sectors, and the gradual decrease in numbers in the state and state-religious education system. The table below shows the changes:

Table 2: Students in Jerusalem's education systems 1995 to 2005

Education system	1994/1995	2004/2005
State and state religious education	72,308 (50.1)	62,339 (33.2)
Ultra-Orthodox education	51,250 (35.5)	83,223 (44.4)
Arab education*	20,748 (14.4)	42,063 (22.4)
Total / percentage	144,306 (100)	187,625 (100)

* Not including students in private, church, and Waqf education, representing at all times half the total number of Arab students in the city.

The great decrease over the past decade in the state and state-religious education sector, from 50% of all students in the city to only 33%, can clearly be seen. The ultra-Orthodox sector has increased by 9%, and the Arab sector by 8%.

Higher education. University education in Jerusalem has also undergone changes in the past decade. The number of students at the Hebrew University continues to decline as a percentage of all students in the country. In 1995, 20,300 students studied for all levels at the Hebrew University, at the time representing 21% of all students in Israel. In the 2003 academic year,

120,555 students studied at universities around the country, and 21,598 of these studied in Jerusalem, representing 18% of all university students in Israel.

Technological education in Jerusalem received a boost with the opening of the College of Technology. Technological education in Jerusalem includes a number of other colleges such as Hadassah College, the Lev Institute of Technology, and other institutions.

CHANGES IN HOUSING. In 1995 the Jerusalem Municipality collected residential rates from 149,400 apartments. At the end of 2004, it collected residential rates from 180,500 apartments, 144,300 of them (80%) in the Jewish sector and 36,200 (20%) in the Arab sector. Since 1995 some 31,000 apartments have been added in the city. 19,000 of these are in the Jewish sector (61%) and 12,000 in the Arab sector (39%).

New neighborhoods have been added, which has considerably increased the area used for housing. In the south of the city, between Bethlehem and Kibbutz Ramat Raḥel, the Har Ḥomah neighborhood was under construction, housing 2,000 families and slated to have a total of 6,500 housing units. Between Beit Hakerem and Bayit Vegan the new neighborhood of Ramat Beit Hakerem has been built, with 2,200 housing units. Another new neighborhood in the south of Jerusalem was being built on the land of Kibbutz Ramat Raḥel. Another was under construction on the site of the former Allenby Camp, on the road to Bethlehem and Hebron. At the southwestern edge of Jerusalem two new neighborhoods have been established: Manaḥat, close to the stadium named after Teddy Kollek, Jerusalem's legendary mayor, and Givat Masu'ah, near Moshav Orah on the fringes of Jerusalem's municipal boundaries. These two neighborhoods have around 4,200 housing units. To the north of Jerusalem (on the Shu'afat ridge) a religious ultra-Orthodox neighborhood called Ramat Shelomo was being built with 1,800 housing units. In the northeastern part of the city the Pisgat Zé'ev neighborhood, the largest of the Jewish neighborhoods built after the unification of the city in June 1967, continued to be developed. The main construction since 1995 was in the eastern and southern parts of the neighborhood, including a large commercial center at its heart. The neighborhood has also expanded northwards, joining up with Neveh Ya'acov, the northernmost Jewish neighborhood in the city.

Residential construction has naturally not passed over the older neighborhoods in the heart of Jerusalem. Many houses have been built on vacant lots in older neighborhoods such as Mekor Ḥayyim and Talpiot, additional stories have been added to existing buildings in the center of town, and in historic neighborhoods such as Rehavia, Talbieh, the German Colony, Baka, Beit Hakerem, and the ultra-Orthodox neighborhoods of Geula, Kerem Avraham, Reḥovot ha-Bukharim, Tel Arza, and Mekor Barukh, which have gradually become areas occupied by ultra-Orthodox Jewish residents.

Large-scale construction has also taken place in the Arab sector of Jerusalem, as shown by the statistics above. The form

of construction in the Arab sector is different from that in the Jewish sector; there is almost no construction by public companies, most of it being private, family construction. The main concentrations of building have been in the northern Arab neighborhoods of Beit Hanina and Shu'afat, but also in the neighborhoods encircling the Old City, such as Ras el-Amud, Wadi Kadum, and A-Sheikh. In the residential areas of the Bedouin in the southeast of the city (Sawahara al-Arabia) there has also been considerable construction, as well as in A-Tur, Abu Tor, and the southern villages of Zur Baher, Umm Tuba, and Beit Safafa. The main change in the form of Arab construction in the past decade has been one of scale; from single and two-story houses to multistory buildings. In addition to Arab construction within the Jerusalem municipal area, many houses have also been constructed outside the municipal boundaries, mainly in the area of A-Ram, north of Neveh Ya'acov, where, in practice, a new town has grown up. Between Ma'aleh Adumim and Jerusalem the town of A-Zayim, established by residents of A-Tur, has also expanded considerably and considerable construction has taken place in recent years.

It can therefore be seen that the competition between the two people, Israelis and Palestinians, over Jerusalem continues unabated and each side tries to create facts on the ground to the best of its ability, capturing land by means of residential construction. This is based on the assumption that it is the spatial distribution of buildings that will determine the future borders of the state.

THE CONSTRUCTION OF INSTITUTIONS. In addition to new residential neighborhoods and increasing the density of older neighborhoods, over the past decade there has been considerable construction of public, government, and administrative institutions in the city. The Safra Municipal Complex was completed and serves all the city's residents; the Supreme Court was inaugurated at Givat Ram; and new government offices were added to the Government Campus: the Ministry of Foreign Affairs, the Ministry of Tourism, the Ministry of Trade and Industry, the Ministry of Labor, and the Israel Land Administration. The Knesset and the Israel Convention Center both have new wings. The old Sha'arei Zedek Hospital in Jaffa Road has been renovated and taken over by the management of the Israel Broadcasting Authority, and not far off, at the Western entrance to the city, a new central bus station has been built. On Mt. Herzl the Yad Vashem Museum has been built and the Herzl Museum has been renovated. Beit Shmuel in the former Mamilla neighborhood has been enlarged, and near the Yemin Moshe neighborhood the Begin Center has been constructed. New buildings have also been constructed on the Mt. Scopus University campus: the Yitzhak Rabin Jewish Sciences building, the sports center, and student hostels. Kiryat Moriah in Talpote has been expanded, and, on the borders of the German Colony, the Hartmann Education Center has been constructed.

A number of new hotels were built during the period, completing the city's accommodation network. Three of these

were built along the "seam line" of Route 1, close to the former Mandelbaum Gate; two in Herzl Blvd.; and one in King David St. as part of the Mamilla renovation. Many religious institutions and yeshivot were built, the largest being the Belz Yeshivah in Romema. The two large promenades built along the Armon Hanatziv ridge (Hass and Sherover) have been joined by the Goldman Promenade, continuing eastward to Armon Hanatziv and the new neighborhood of Nofei Zion. The Biblical zoo has also been expanded and has a new sculpture garden.

INFRASTRUCTURES AND ROADS. The past decade has seen considerable expansion of roads and infrastructures in the city. In terms of the water supply, the fourth pipeline from the coastal plain has been completed, and a big reservoir underneath the sports field of Ziv School in Beit Hakerem has been built. The effluent treatment system has been completed and a waste water purification plant has been built for the entire western and southern drainage basin in Naḥal Sorek. The supply of electricity to the city has been considerably increased, and the power substation in Emek Refaim has been renovated.

The new roads have really revolutionized the city. First and foremost, the main north-south traffic artery, Begin Blvd., was completed and a new access road to the city was developed, joining up with the Ma'aleh Beit Horon-Modi'in road (Route 443). The tunnels road southward to the Ezyon bloc has been completed, as well as a new east-west road linking Hebron Road to the neighborhood of East Talpote. The past decade has been characterized by the construction of new road tunnels. Five new tunnels have been constructed: the tunnels on Route 60 to the Ezyon bloc; the Mt. Scopus tunnel toward Ma'aleh Adumim, creating a new entrance to Jerusalem from the east; the tunnel at the foot of the Old City walls under Ha-Zanḥanim Road, linking the Jaffa Gate to Route 1; and the Begin Blvd. tunnel under the entrance to the city. Another new road making use of bridges joins Pisgat Ze'ev and Neveh Ya'acov to the French Hill junction, encompassing the historic Ramallah Road. Another road under construction in 2006 in Emek ha-Arazim is Route 9, creating an additional entrance to the city from the west and linking the Motza junction with the Ramot junction and Begin Blvd. at the foot of Har Ḥotzvim.

In preparation for the construction of a light railway in Jerusalem, new public transport lanes have been laid along Jaffa Road, Hebron Road, Keren Hayesod St., and Herzl Blvd. Near Mt. Herzl, work started on the big parking lot which is part of the planned mass transport system.

CULTURE, ART AND ENTERTAINMENT. Jerusalem is a city with many cultural and art institutes. The city has more than 30 museums, hundreds of galleries, and other cultural institutions. Over the past decade the appearance and content of Morasha's Museum on the Seam, also known as Turgeman Post, has changed; the Underground Prisoners Museum in

the Russian Compound has been renovated; and a new wing has been added to the Bernard Bloomfield Science Museum. The Menachem Begin Heritage Center, housing exhibitions and lecture halls, has been built in the area overlooking the Old City and Mt. Zion. A number of theaters have also been established in the city in the past decade, including the Laboratory Theater in the old train station, the Noah's Ark Theater, the Cylinder Theater, the Comma Theater, and the Yellow Submarine. The Ma'aleh Association for Television and Cinema Studies has also been established. A number of new bands and ensembles have been formed, including Musica Aeterna, the Ankor Choir, Arabesque, A-Capella, and others.

New entertainment districts have developed in the city, in the neighborhood of the old railway station in Emek Refaim, along with many bars and restaurants in the area of Shlomo Hamalka St., Nahalat Shiva, and Monbaz St. in the center of town.

POLITICAL, MUNICIPAL AND GEOPOLITICAL CHANGES. Since Teddy Kollek lost the mayoral elections in 1993 there has been a gradual revolution in Jerusalem in terms of municipal politics. The ultra-Orthodox public had a decisive weight in the upset in the 1993 election, and the weight of the ultra-Orthodox voter in the city has been gradually increasing. This may be set against the low turnout by the city's Arab population, which has never been above a few percent. In the 1998 election the Shas movement increased its hold considerably and the high rate of voting among the city's ultra-Orthodox population made United Torah Judaism the largest faction in the municipality. In January 2003 the city's mayor, Ehud Olmert, decided to take up Prime Minister Ariel Sharon's offer and join the government. As a result, elections in the city were brought forward and the candidate of the religious United Torah Judaism party, Uri *Lupoliansky, was elected with a majority of 52%. For the first time in the electoral history of Jerusalem, the religious parties achieved a majority in the City Council. In many respects this was an internal political revolution affecting the city's image, since despite the democratic elections, a situation had arisen in which representatives of one-third of the Jewish population of the city held the reins of municipal government, a situation that was not viewed with satisfaction by the secular majority, whose voter turnout at the municipal elections was lower than its numerical weight in the city.

The changes in the national geopolitical sphere are taking place against the background of an increased awakening of Palestinian nationalism, the failure of the Oslo accords, and the loss of trust between the two population groups, Jewish and Arab, in the city. The events of the first and second Intifada years and increasing Palestinian terrorism created serious tension between Jews and Arabs in Israel in general and in Jerusalem in particular. The two populations have taken a mutual step back from each other, and an ethnically polarized system has emerged in Jerusalem. The Arabs have withdrawn into their neighborhoods, and so have the Jews. Visits

by Jews to the Old City and by Arabs to the Israeli city center in West Jerusalem have ceased. The security incidents and the curtailment of Palestinian movement in and around the city have deepened the economic gap between the two population groups, and exacerbated the state of public services in the eastern part of the city.

The terrorist attacks led the government of Israel, under pressure of Israeli public opinion, to take the dramatic decision to erect a physical barrier between the Palestinian and Israeli populations. Implementation of this decision in the Jerusalem area has led to a far-reaching change in the city's status, its economy, the welfare of its Arab residents, and its appearance.

THE SECURITY FENCE. Construction of the security envelope around the city is perhaps the most dramatic change to have taken place in Jerusalem since its reunification in June 1967. The route of the fence around Jerusalem was drawn up largely on the basis of security considerations, and this is also its purpose. However, it creates a new and difficult situation for a large part of the Arab population. The longer-term influence of the fence will affect the entire city, including its Jewish population. The security fence has been under construction in the Jerusalem area since 2003 and was due to be completed in 2006. In all other parts of the country, along Israel's border, the fence separates the Palestinian population from the Israeli population. In Jerusalem the situation is different. In practice, the fence separates Palestinians who are resident in the city and hold Israeli identity cards from other Palestinians resident in the West Bank and other Arab residents of Jerusalem who have moved out to live in suburbs outside the city. The fence is being erected, for the most part, along the municipal boundary and includes 230,000 Arab residents within the city. In certain areas it also deviates from the path of the municipal boundary and excludes a number of Arab Jerusalem neighborhoods. As a result of the fact that the fence cuts neighborhoods off from the city, tens of thousands of Arabs holding Israeli identity cards remain outside the fence. These people need to come into Jerusalem every morning for studies, work, medical services, to visit relatives, for prayers etc. As residents of the city, they are entitled to do so by law. Thousands of others, who also carry Israeli identity cards, have moved, over the years, to suburbs outside the city and today they find themselves outside the fence. The immediate demographic result of the situation that has arisen has been the migration of thousands of families back into the city. Their return to Jerusalem has created a serious housing problem, an increase in the cost of real estate in East Jerusalem, and a considerable worsening of residential density. All these do not enhance the socio-economic situation in Jerusalem. Furthermore, the extra Palestinian population upsets the delicate demographic balance between Jews and Arabs in Jerusalem. The economic situation of many of the city's Arabs and the residents of the surrounding villages is very poor, due to the loss of work places, the loss of consumers, and difficulties of

access. The health service and education system in East Jerusalem have also been adversely affected, and many people have been cut off from their relatives.

It is still difficult to assess the full impact of the fence on the social and economic status of Jerusalem and on future relations between Arabs and Jews in the city. It is even harder to anticipate the reactions and behavior of the city's Arab residents. A large number of them have been caused personal hardship and a considerable degree of frustration and anger. In such a situation this frustration and suffering is likely to be channeled by extremists toward hostile actions.

Many questions remained unanswered, such as: What will be the future status of the security fence when peace talks with the Palestinians are renewed? To what degree will the fence affect reciprocal relations between Jerusalem and its hinterland? Does the fence not return the city to its position as a border town, similar to its situation between 1949 and 1967? Other questions relate to the future civil status of Arab residents holding Israeli identity cards who have been excluded by the fence; to the efficient functioning of passages through the fence; and to the effect that the fence will have on tourism and pilgrimage between Jerusalem and Bethlehem.

THE JERUSALEM METROPOLITAN AREA. In the past decade the Jerusalem metropolitan area, spreading from Hebron in the south to the Shilo Valley in the north and from Jericho in the east to Beit Shemesh in the west has undergone considerable change. Until the end of the 1990s, greater Jerusalem functioned as a single economic unit with economic, social, and cultural ties between the main city – Jerusalem – and the Palestinian and Israeli communities around it. Gradually, as a result of the security incidents and the government of Israel's response to them, the communities of the Palestinian area are cutting themselves off from Jerusalem. The city continues to maintain economic and cultural ties with the Israeli communities in the area, both those within the Jerusalem district to the west and the Israeli communities in Judea and Samaria; Betar Ilit, Efrat, and the Ezyon bloc to the south of Jerusalem; Ma'aleh Adumim, Kefar Adumim, Adam, and other small communities to the east; Pesagot, Beit El, Ofra, Mikhmarsh, Givat Ze'ev, new Givon and Bet Horon to the north and north-west of the city.

In 1990, the entire metropolitan population (not including the city of Jerusalem) numbered 600,000 residents. Only around 17% of them (100,000) were Jews. 48% of the Jewish residents lived in the Jerusalem district within the Green Line, and 52% in the communities of Judea and Samaria. Fifteen years later, at the end of 2004, the population of this same area was estimated at 1,597,000 residents. The Jewish population was 22,000, 45% of them living in the communities of Judea and Samaria and 55% in the Jerusalem district within the Green Line. The Jewish population in the metropolitan area increased during this period by 115%, as against an increase of 27% in the Jewish population within Jerusalem. The population of the Jewish communities of Judea and Samaria

increased by 90%, whereas within the Green Line the population grew at a higher rate of 145% during the same period.

The large Jewish communities in metropolitan Jerusalem today are Beit Shemesh (65,000), Ma'aleh Adumim (30,000), Betar Ilit (27,000), Mevaseret Zion (22,000), and Givat Ze'ev (11,000).

The Arab population of the same area numbered some 500,000 residents in 1990 and 1,132,000 residents in 2004, an increase of 126%. The relative weight of the Jewish population in the metropolitan area within Judea and Samaria increased slightly and stood at the end of 2004 at 20% as against 17% 15 years ago.

Metropolitan Jerusalem only partially operates as a single functional area. The majority of the metropolitan area is populated by Palestinians, who are cut off in practice from Jerusalem, a situation that will be exacerbated when the security fence around the city is completed. This fact damages the economy and the centrality of Jerusalem as a metropolitan city for all the residents of the region. It serves as a metropolitan city for only 20% of the region's population – the Jewish population.

[Israel Kimhi (2nd ed.)]

GEOGRAPHY AND ARCHAEOLOGY

Geography

Jerusalem is located on the ridge of the Judean Mountains between the mountains of Beth-El in the north and of Hebron in the south. To the west of the city are slopes of the Judean Mountains, and to the east lies the Judean desert, which descends to the Dead Sea. The geographical position of Jerusalem is linked to the morphological structure of the Judean Mountains, which appear as one solid mass unbreached by valleys, although vales and ravines are found on their western and eastern descents. This unbroken length of mountains turns the city into a fortress dominating a considerable area. Its position at the crossroads leading from north to south and from west to east enhances its importance: only by ascending to its plateau is it possible to cross the mountain. The road through the length of the mountains follows the plateau, and any deviation to east or west meets with steep ravines on one side and deep canyons on the other. This road, connecting Hebron, Bethlehem, Jerusalem, Ramallah, and Nablus (Shechem), is of the utmost consequence, and Jerusalem is located on its axis, at the very point where it crosses the road from the coast to the Jordan Valley. Jerusalem is about 9 to 10 mi. (15 to 17 km.) from the western boundary of the Judean Mountains and only about a mile (2 km.) from their eastern boundary.

THE CLIMATE. Jerusalem's climate is Mediterranean, with a rainy, temperate winter and a hot, completely dry summer; there is a high percentage of solar radiation throughout the year, especially in the summer.

The annual rainfall in Jerusalem is about 20 in. (500 mm.). The rainy season continues from September to May, and ap-

proximately 30% of the annual rain falls by December, with 40% in February and March. There are about 47 rainy days annually on the average. On most of these days there is about 0.2 in. (5 mm.) of rainfall; 1.2 in. (30 mm.) of daily rainfall occurs about five or six times during a season; and once or twice there is as much as 2 in. (50 mm.). Particularly heavy rainfalls were recorded between Nov. 5 and Nov. 9, 1938, amounting to 8 in. (200 mm.) or 30% of the precipitation of that year. In the period from Dec. 13 to Dec. 23, 1951, over 14 in. (358 mm.) fell (57% of the annual rainfall). In the 100 years during which records of rainfall were kept (1840–1950), there were two years with less than 12 in. (300 mm.) of rainfall in the entire wet season, six years with less than 16 in. (400 mm.), and three years with more than 40 in. (1000 mm.). Snow in Jerusalem is infrequent. When it does fall, it occurs mainly in January and February and can last about four or five days.

The average annual temperature in Jerusalem is 66° F (19° C). The average temperature in August, the hottest month, is 75° F (24° C) and in the coldest month, January, is 50° F (10° C). The average daily temperature from December to February is usually under 52° F (11° C). From the middle of February until the beginning of April, the temperature rises to an average of about 59° F (15° C). At the end of April it rises to about 68° F (20° C) and remains at that level until the end of July. In August it reaches 77° F (25° C), and from then until the end of October the daily average is about 68° F (20° C). The minimum temperature in the month of January goes down to 41° F (5° C). The maximum temperature during the *sharav* (heat wave) reaches 95° F (35° C). The regular wind in Jerusalem is a western one, but occasionally it is northwesterly or southwesterly. Winds do not originate in Jerusalem and its vicinity. Jerusalem is subject to heat waves during the months of May and June, as well as September and October. These periods are characterized by intensive heat and low humidity and usually last a few days. The humidity drops 30–40% below the average and the heat increases by about 27° F (15° C). The average daily humidity in Jerusalem is about 62%. The humidity drops until noon and rises toward evening. The amount of dew in Jerusalem reaches 0.8–1 in. (20–25 mm.) as an average during the 100 to 150 annual nights of dew.

FLORA. In Jerusalem, remnants of ancient trees are to be found, including the Jerusalem pine (*Pinus halepensis*, the tallest forest tree in Israel), the gall oak (*Quercus infectoria*), the common oak (*Quercus calliprinos*), the Tabor oak (*Quercus ithaburensis*), the Palestine terebinth (*Pistacia palaestina*), the mastic terebinth (*Pistacia tenticus*), the arbutus, and the wild olive. Traces of ancient vegetation were found in Tel Arzah, on Mount Scopus, on the French Hill, in the Valley of the Cross, the German Colony, Ein Kerem, Bet ha-Kerem, Talpiyyot, and Agron Street.

BOUNDARIES. The only boundary of Jerusalem that remained unchanged after the Six-Day War (1967) was its western boundary. It descends southwest from Har Ḥozevim to the

village of Mei-Nefto'ah (Liftā) and west to Har ha-Menuḥot and from there to Kefar Sha'ul, Bet Zayit, Ein Kerem, the Hadassah medical center, Kefar Shalma, and Ir Gannim. The new boundaries of the city were extended north, east, and south. North of Mount Ḥozevim, the boundary includes the villages of Sha'fat, New Beit Ḥaninā, and Qalandiya to the airport at Atarot, and then returns eastward to the Jerusalem-Ramallah highway, encompassing within the boundaries of the city the hilly area between Jerusalem and Atarot. The eastern boundary includes the natural mountainous framework of Jerusalem: Mount Scopus, the Mount of Olives, the village of Al-Tūr, the Old City, and the village of Silwān. The new boundary on the south includes the villages of Šūr Bāhir and Beit Šafāfā and continues the length of the Valley of Rephaim to the juncture with the western border. Greater Jerusalem within these borders has an area of 26,250 acres (105,000 dunams) and forms one organic unit.

TOPOGRAPHY. The watershed of the region passes through the city in a north-south direction via Mount Scopus, the Sanhedriyyah Quarter, Romemah, Maḥaneh Yehudah, Terra Sancta, the YMCA, Givat Ḥananyah, the Mandatory Government House (later the headquarters of the UN observers), Talpiyyot, and Ramat Raḥel. There are some mountain ridges branching off the watershed to the east and west. On the low eastern ridge, which descends to the river bed of Kidron, the ancient city was built. A western ridge divides the Christian and Armenian quarters of the Old City and ends on Mount Zion. It was here that the Upper City was built. A number of ridges penetrate to the west and south of Jerusalem: the ridge of Beit Yisrael, the ridge on which the Mandatory Government House stands, the ridge of Ha-Kiryah (Israel government center), the Kiryat ha-Yovel ridge, the Gonen ridge, and the ridge of Ir Gannim. The ridges and the branches of the mountains form valleys that greatly influence the structure of the city. These are divided into two groups: those facing Naḥal Kidron in the east, and those facing Naḥal Sorek in the west. Naḥal Ben Hinnom, which demarcates the southwestern boundary of historical Jerusalem, flows into Naḥal Kidron. Another tributary of the Kidron is Naḥal Egozim, which divides the Bet Yisrael Quarter from Mount Scopus. Naḥal Sorek borders Jerusalem on the north and the west. In the south the Valley of Refa'im is a tributary of Naḥal Sorek.

The topography of Jerusalem forms five main natural basins. The eastern basin includes the Old City and the drainage basin of Kidron and Ben Hinnom. The northern basin includes the Romemah, Tel Arzah, and Sanhedriyyah quarters. The southern basin includes the German and Greek colonies, Ge'ulim, Talbieh, Mekor Ḥayyim, Bet ha-Kerem, Bayit va-Gan, Kiryat ha-Yovel, Ein Kerem, and Ir Gannim. The central basin includes the government center (Ha-Kiryah), The Hebrew University, and the Israel Museum. As most of the ridges and the valleys extend in a north to south direction, only a few extending from east to west, the city has developed lengthwise. Mount Scopus is 2,700 ft. (827 m.) and the Mount of

Olives is 2,640 ft. (805 m.) high, whereas the Old City is some 200–260 ft. (60–80 m.) lower. Mount Herzl and Bayit va-Gan are 2,340 ft. (835 m.) high, whereas nearby Ein Kerem is only 2,230–2,300 ft. (650–700 m.) high.

[Elisha Efrat]

THE OLD CITY. The present-day walls of the Old City, built from 1536 under the Turkish sultan Suleiman the Magnificent, enclose a smaller area than that of the Second Temple period. The location of its seven gates (Herod's, Damascus, and New Gates in the north, Jaffa Gate in the west, Zion and Dung Gates in the south, and St. Stephen's (Lions') Gate in the east) is thought to be identical to that of the gates of antiquity.

Inside the walls of the Old City, where all the inhabitants lived until the middle of the 19th century, four quarters are distinguished: in the northwest corner, the Christian Quarter, grouped around the Church of the Holy Sepulcher; in the southwest, the Armenian Quarter; in the center and northeast, the Muslim Quarter; and, in the south, the Jewish Quarter. From St. Stephen's Gate westward to the Holy Sepulcher runs the Via Dolorosa, which passes through the Muslim Quarter and is flanked by several churches, monasteries, and Christian charitable institutions. The artificially flattened ground on Mt. Moriah, where the Jewish Temple stood, later became the site of two of the holiest shrines of Islam: the Dome of the Rock (Omar Mosque) and the Aqṣā Mosque. The Temple Area is surrounded by the colossal Herodian enclosure wall, preserved in the east, south, and west; a larger section of the Western ("Wailing") Wall, the most venerated site in Jewish tradition, was bared to view after 1967, and archaeological excavations around the southern edges of the Temple Mount have added to the knowledge of the city's structure in the Second Temple period and later. Between the Western Wall and the Armenian Quarter lies the Jewish Quarter, which had to surrender in the 1948 fighting. Under Jordanian rule, this quarter deteriorated, and all its synagogues were systematically destroyed. Following the Six-Day War (1967) reconstruction was started there.

THE NEW CITY. As a result of the gradual population rise, space between the walls of the Old City became ever more crowded, particularly in the narrow Jewish Quarter. Jews were therefore the first to found new quarters outside the walls; in 1858 Mishkenot Sha'ananim was built west of the Old City, soon followed by Yemin Moshe and by Naḥalat Shivah in the northwest. At about the same time, churches began to establish hostels and other institutions outside the walls for the benefit of the growing flow of Christian pilgrims: the buildings of the Russian Compound are notable among these.

The New City spread mainly toward the northwest along the road leading to the port of Jaffa. From this direction most goods were brought, and pilgrims, both Jewish and Christian, arrived from overseas and enlivened trade in the city. In the first Jewish quarters the houses were crowded together, primarily for security reasons; the Yemin Moshe quarter was even surrounded by a wall and its gates closed every evening.

Those first quarters which the inhabitants built exclusively with their own means (e.g., Naḥalat Shivah) were shabby in appearance and lacked uniformity in style and layout. Others, where construction was partly or wholly financed by philanthropists (like Yemin Moshe, which was aided by Sir Moses Montefiore and bears his name), were better planned, generally with rows of houses of one or two stories. The Me'ah She'arim quarter took on particular importance. Founded in 1874 by pious Jews from the Old City, it has remained a stronghold of Jewish Orthodoxy.

At the end of the 19th century, the first garden suburbs made their appearance; those of non-Jews (e.g., German Colony and Greek Colony, Katamon, etc.) preceded modern Jewish quarters (Reḥavyah, Beit ha-Kerem, Talpiyyot, etc.). In all these, attempts were made to lend beauty to the individual house and surrounding garden and to plan streets, water, sewage and electricity networks along rational lines, while details were kept within the framework of the urban outline scheme.

The British Mandatory authorities aimed to preserve Jerusalem's beauty and historical treasures. All outer house walls had to be built of the fine local stone, which is both durable and in harmony with the landscape. Rules limiting the height of structures and floor space percentage covering the ground were issued, and care was taken to retain open spaces and preserve the skyline, particularly of sites of natural beauty and historical interest. An effort was made to fit the main roads to traffic densities, and a ring road was planned to connect the outer suburbs with each other. On the other hand, the authorities rejected industrialization as not befitting Jerusalem's character, and they did not encourage a rapid population growth.

CITY PLANNING (1948–1967). In the first years of the State of Israel, the most pressing tasks were repair of the damage caused in the War of Independence, absorption of new immigrants, and preparation of a new outline scheme fitting in with the border which then divided the city between Israel and Jordan; at a later stage came zoning into residential, commercial, administrative, cultural, and industrial units.

With The Hebrew University campus, the Knesset, and the Israel Museum as pivotal points, a large center of legislative, administrative, cultural, and commercial institutions was laid out. The whole area was well integrated in the general plan of the capital. Care was taken to preserve and restore sites of archaeological and historical interest, to maintain open spaces, and to develop green belts.

Jerusalem's hilly topography was taken into account: the ridges and upper slopes, which are well drained in winter and cool and agreeable in summer, were reserved for building, while valleys were earmarked for parks, gardens, and fruit orchards.

The de facto borders that surrounded Israel left the west as the only direction for Jerusalem's expansion. It was therefore decided to let the outline scheme hinge on the Binyenei

ha-Ummah (Convention Center) at Romemah, the dominant height of the Jerusalem urban area which lies astride the main western entrance of the city. Accordingly, the existing commercial center was planned to expand northwestward to Romemah. The buildings of the Government ministries (Ha-Kiryah) and the new Knesset edifice, surrounded by lawns and gardens, adjoin this area to the south. Still further south lie the impressive campus of the university and the National Library, the Israel Museum, and related institutions. This whole complex is thus situated between older quarters in the east and the expansion belt of residential suburbs (Kiryat Moshe, Bet ha-Kerem, Bayit va-Gan, Kiryat ha-Yovel, etc.) in the west and southwest. The Hadassah Medical Center is the extreme point of westward expansion.

Contrary to the British view, industry is now regarded as an element indispensable to Jerusalem's economy. Owing to the city's geographical position, light industries are easiest to develop here. In addition to the enlarged existing industrial area at Tel Arza in the northwest, a second, at Givat Sha'ul in the west, was developed.

Owing to economic and security considerations, the planning authorities regarded the road system linking the capital to the rest of the State as particularly important. After the War of Independence, a single highway to Tel Aviv in the northwest was open; the railway line became usable again after border corrections in the Israel-Jordan armistice of 1949. Since then, additional roads, which converge on the city from the west and southwest, were constructed.

As elsewhere in the country, the large new suburbs in the west and southwest (Katamon, Kiryat ha-Yovel, etc.) were laid out as self-contained neighborhood units. Prior to 1967, they had to absorb many newcomers settling in Jerusalem and to aid in thinning out the overpopulated older quarters further east, some of which had been earmarked for replanning and reconstruction. In an outer circle around these suburbs spread a green belt of parks, forests, and playgrounds. Landscaping and planting of parks and lawns accentuated sites of historical interest all over the city. Although the law prescribing the facing of buildings with natural stone was relaxed in part of the city to prevent unnecessary rises in the cost of popular housing, it was retained for all representative sections of the city.

Growth And Planning After Reunification (1967). Immediately after the Six-Day War, all military installations, fences, and shell-proof concrete walls which had separated the two parts of the city were removed, and the connecting streets and roads paved and opened. Next, unseemly structures obstructing the view of the Old City wall were torn down, the wall itself and its gates painstakingly repaired, and the first gardens of a planned green peripheral belt planted in front of it. Inside the Old City, hovels were demolished close to the Western Wall. Two additional rows of its ashlar, hidden in the rubble, were uncovered and a wide square in front cleared, paved, and rendered suitable for prayer. The reconstruction of the Jew-

ish Quarter and its historic synagogues was started and institutions of religious study moved in, their pupils forming the nucleus of the Old City's renewed Jewish community. South of the Temple Mount, archaeological excavations were started early in 1968. The slight damage caused to Christian churches and institutions during the fighting was speedily repaired and church building and renovation work (e.g., on the Holy Sepulcher), which had been in progress prior to June 1967, were resumed. Jerusalem's boundaries were redrawn, giving the capital a municipal area exceeding 100 sq. km., the largest in the country (see Boundaries, above).

One of the main problems of the Jerusalem master plan lay in reconciling the desire for a continuous built-up area with the necessity to preserve and enhance numerous historical sites, sacred to three world religions, such as the entire Old City, the Kidron and Ben Hinnom Gorges, the "City of David" to the south, Mount Scopus and the Mount of Olives, and many more. Both inside and outside the Old City walls, gardens were laid out or were planned, while other areas to the east and south were earmarked as public open spaces or sites for preservation and reconstruction.

Another difficult task, which after June 1967 assumed great urgency, lay in securing efficient traffic arteries leading through and around Jerusalem. The existent main thoroughfares had become totally inadequate, particularly Jaffa Road, which carried the bulk of both urban and interurban traffic. A network of new broad roads was blueprinted in order to provide alternative approach routes from all directions, enabling vehicular traffic to cross the municipal area to destinations beyond it (e.g., from Bethlehem directly to Ramallah) without clogging Jerusalem's main arteries. Adequate parking facilities had also to be provided throughout the city. The numerous protected historical sites and edifices and, primarily, Jerusalem's hilly terrain rendered this program highly expensive, as entire complexes of nonessential buildings would have to be demolished. In addition, earth-moving work, on a very large scale, would have to be carried out and long road tunnels excavated in the ridges.

In order to arrive at an acceptable joint solution to the traffic, social, and economic problems, planners preferred not to concentrate industry, commerce, administration, tourism, etc., each in a separate area, but rather to distribute them evenly throughout the city, thus shortening the distances between residential quarters and sites of employment and more evenly spreading traffic flow during rush hours. As more and more Government ministries and other central offices moved to the capital, an increasing need was felt to depart from the original plan of concentrating all government buildings in Ha-Kiryah but to distribute them over other sections, including East Jerusalem.

The Hebrew University saw the return of its original campus atop Mount Scopus, where, beginning with the Harry S. Truman Research Center, an intensive restoration and building program was launched in 1968, comprising lecture halls and dormitories for thousands of students. Other institutes of

learning, e.g., yeshivot, Christian theological seminaries, etc., were constructed in various parts of the city.

In view of the growing need for tourist accommodation and services in Jerusalem, large sums of public and private capital were invested in hotel building, and suitable sites were earmarked for these purposes throughout the city, with an area in the south, on a ridge northwest of the former Government House, planned as the principal hotel center. The capital attracted increasing numbers of industrial enterprises, particularly in the electronics and other science-centered industries, for which new areas were set aside in the south, north, and northeast.

New housing developments called for the largest share of both space and investments. While the southwest (Kiryat ha-Yovel, etc.) continued to serve as the sector of intensive apartment building, and vacant lots elsewhere were increasingly being used for new constructions, a concentrated effort was being directed toward the favorable terrain in the north, beyond the former armistice line. New residential quarters, under construction since 1968, promised to provide accommodation for tens of thousands of citizens, both Jews and non-Jews, and to link western Jerusalem with Mount Scopus in the east and Shaḥāṭ in the north.

[Efraim Orni]

Archaeological Research

Ever since the 19th century, when Jerusalem first became the focus of antiquarians and explorers, the complexity of studying so many superimposed ancient periods under the city, combined with the fact that so many of its important sites are inconveniently situated beneath buildings that are the focus of the three principal religions (Judaism, Christianity, and Islam), have made methodical archaeological research there a particularly difficult and challenging task. Investigation and recording of the visible ancient remains of ancient Jerusalem took place during the 19th century by many explorers: E. Robinson C. Mauss, E. Pierotti, T. Tobler, C.J.M. de-Vogüé, among others. Their work is invaluable because subsequent building activities in the city have destroyed or covered up many of the ancient remains that they recorded. Since the first proper mapping of Jerusalem in 1864 by C. Wilson during the Ordnance Survey of Jerusalem, the city has been almost continuously studied by explorers and archaeologists, with much work being undertaken in the area of the Haram al-Sharif (Temple Mount), the Southeastern Hill (the "City of David"), and the Western Hill (traditional "Mount Zion"). Important work was undertaken by C. Warren (from 1867), especially around the Temple Mount, on behalf of the British Palestine Exploration Fund. During the latter part of the 19th century and the beginning of the 20th century much work was done on the ancient topography of the city and its monuments by C.R. Conder, C. Schick, H. Vincent, and others. Important excavations were conducted by F.J. Bliss and A.C. Dickie (1894–97) on the Western Hill, by R. Weill (1913–14, 1923–24), by R.A.S. Macalister and J.G. Duncan (1923–25), by G.M. FitzGerald and

J.W. Crowfoot (1927–28) on the Southeastern Hill, and by K.M. *Kenyon (1961–68) in various parts of the city.

During the 1970s and early 1980s large-scale excavations were conducted in Jerusalem by B. Mazar (1968–78) at the southern and southwestern foot of the Temple Mount, by N. Avigad (1969–83) in the Jewish Quarter, and by Y. Shiloh (1978–85) in the "City of David."

Excavations were also conducted in various areas on Mount Zion by M. Broshi (1971–78) and further remains have been uncovered in the area of the Citadel near the Jaffa Gate by H. Geva, G. Solar, and R. Sivan and others. Excavations have also been conducted by D. Bahat in the tunnels along the western Temple Mount wall.

New excavations have been undertaken in various parts of the city during the 1980s and 1990s, particularly by V. Tzafiris, S. Wulff, D. Amit, and others in the area of the Third Wall to the north of the Old City; by R. Reich, A. Meir, and others in the Mamila area to the west of Jaffa Gate; by R. Reich and E. Shukrun in the area of the Gihon Spring, along the east slope of the City of David, and in the area of the Pool of Siloam; by R. Reich and Y. Bilig in the area of Robinson's Arch; by G. Avni and Y. Baruch in the area close to Herod's Gate; and by G. Avni and J. Seligman in the Church of the Holy Sepulcher. Much work has also been conducted in the surroundings of Jerusalem with many small excavations conducted by the Israel Antiquities Authority.

BIBLICAL PERIOD. *The City and Its Fortifications.* Charles *Warren (1867–70) was the first to try to ascertain the line of the ancient fortification wall of the biblical city by the excavation of a number of pits and tunnels, especially to the southeast of the Temple Mount, with the discovery of what he identified as the wall of Ophel. Warren's work focused subsequent archaeological attention on the significance of the Southeast Hill, now known as the "City of David," as the place where the oldest parts of Jerusalem might indeed be unearthed.

Clermont-Ganneau and H. Guthe (1881) found additional wall segments that extended the line of the "Ophel wall" along the eastern slope of the City of David. At the southern end of the City of David, next to the Siloam Pool, F.J. Bliss and A.C. Dickie (1894–97) discovered a massive barrier wall that served to dam the southern end of the Tyropoeon Valley. They also discovered the continuation of this fortification wall on the slopes of the Western Hill above the Hinnom Valley. They identified in this fortification line two phases of construction and attributed the earliest phase to the time of the First Temple. Modern research cannot sustain this general attribution, with the latest phase now dated to the Byzantine period and the earliest to the Second Temple period, but it is still possible that small wall segments incorporated into the earlier phase of that wall do indeed date back to the Iron Age. M. Parker's expedition (1909–11) concentrated on digging in the area of the Gihon Spring and on the slope above it, where an additional segment of a fortification wall was discovered. (The results of Parker's expedition were eventually published

by L.H. Vincent.) The southern end of the City of David was investigated by the Weill expeditions (1913–14, 1923–24), which revealed an additional build-up of fortifications.

R.A.S. Macalister and J.G. Duncan (1923–25) excavated a considerable area in the north of the City of David in the area above the Gihon Spring. They discovered segments of fortification walls, towers, and revetments whose earlier use they attributed to the biblical city. Inside the line of fortifications they uncovered a number of strata, the lowest of which they attributed to the Canaanite and Israelite cities. The J.W. Crowfoot and G.M. Fitzgerald expedition (1927–28) dug close to the area mentioned above. The results of their excavation, however, showed that most of the remnants discovered there could not be dated earlier than the Roman and Byzantine periods. They also investigated a gate (the “Gate of the Valley”), above the Tyropoeon Valley on the west side of the city (the width of the wall is approximately 28 ft. (8.5 m.), which is probably Hellenistic in date.

Various scholars subsequently published research based on these archaeological finds, namely K. Galling, G. *Dalman, J. Simons, L.H. Vincent, M. *Avi-Yonah, N. *Avigad, B. *Mazar, and others.

A difference of opinion immediately arose among these scholars regarding the topography and size of biblical Jerusalem, from the time of David and Solomon and to the destruction of the First Temple.

The excavations that were conducted by (later Dame) Kathleen Kenyon, between 1961 and 1967, opened a new page in the history of archaeological research of the city. Kenyon excavated at many locations on the Southeastern Hill, with a few areas on the Western Hill and inside the Old City (notably in the Armenian Garden). The fact that Kenyon’s excavation areas were generally limited in size was eventually seen to be detrimental to the veracity of some of the important conclusions she published. However, in Kenyon’s “great cut A,” which was made on the slope between the line of the upper wall discovered by Macalister and Duncan in 1925 and the Gihon Spring below, the key to understanding the topography and the boundaries of the city in its earlier periods first became clear. The system of fortifications discovered by Macalister and Duncan was found to have been built on the remnants of walls and structures dating back to the beginning of the Iron Age. Hence, the line of fortifications uncovered by Macalister and Duncan had to date from the Second Temple period or later. Lower down the slope in Kenyon’s “cut A,” which was deepened in some places to bedrock, some 82 ft. (25 m.) above the Gihon Spring, a thick fortification wall was found built of large fieldstones which could be dated to the Middle Bronze Age. Kenyon showed that these fortifications survived until the eighth century B.C.E. and that during the reign of Hezekiah a new wall, whose width was approximately 18 ft. (5.5 m.), was built at the same place.

On the basis of a few trial excavations areas conducted on the eastern slope of the Western Hill, which did not bring to light remains from the Iron Age, Kenyon was confirmed

in her opinion that there was no continuation of the Israelite city west of the Tyropoeon Valley. Her view regarding the restricted size of the Iron Age city was later contested and proven to be wrong as a result of Avigad’s discovery of a fortification wall in the Jewish Quarter (see below), but Kenyon adamantly continued to insist that this enlarged city did not include the southern part of the Western Hill. Kenyon found that the narrowness of the city area on the Southeastern Hill was overcome by the construction of a series of graduated terraces filled in with stones and supported by stone walls that rose from the base of the city – the eastern wall – upslope. According to Kenyon, this system was used in Jerusalem from the 14th century B.C.E. and throughout the Iron Age period. It was identified with the “Millo,” mentioned in 1 Kings 9:15. Kenyon demonstrated that the Canaanite city existed solely on the Southeastern Hill, and that its area approximated 15 acres (60 dunams). Ceramic evidence was adduced from the 10th century B.C.E. for the extension of the city northwards to the area of the modern-day Temple Mount. Some have speculated that this may have been where Solomon’s administrative and palace buildings were situated. The total area of the Solomonic town was thought to have been approximately 120 dunams. Remnants of ashlar buildings, and the discovery of a proto-Aeolic capital by Kenyon, provided hints about splendid buildings that existed there in First Temple period Jerusalem, perhaps similar to those in Samaria and Megiddo.

While Kenyon produced important archaeological evidence concerning the early development of Jerusalem in the area of the Southeastern Hill, her results and interpretations in regard to the area of the Western Hill and in the Old City have largely been superseded by excavations carried out there by Avigad and others since 1967 (see below). Kenyon was of the opinion that there was no Iron Age settlement on the Western Hill. However, already during the excavations in the area of the Citadel by C.N. Jones (1934–40) Iron Age pottery was found, and this was confirmed during the later excavations by R. Amiran and A. Eitan (1968–69) at the same spot, with the discovery of floors and pottery. Although Iron Age pottery and walls were found by Kenyon’s colleague A.D. Tushingham in the area of the Armenian Garden, these were interpreted as representing remains of activities that took place outside the city.

During N. Avigad’s excavations (1969–83) in the Jewish Quarter of the Old City, fragmentary houses were found dating from the Iron Age, in addition to pottery, stamped handles, and figurines. His main find was that of a length of city wall (about 8 meters thick) running in a northeast-southwest direction across the Western Hill. Additional segments of Iron Age fortifications were discovered during subsequent excavations, all of which confirmed that the Iron Age city was very large and incorporated a large part of the Western Hill, contrary to Kenyon and others.

Archaeological excavations conducted by B. Mazar (1968–78) to the south of the Temple Mount brought to light additional remains which could be dated to the Iron Age, and

some of these remains were later examined in greater detail by E. Mazar, who suggested identifying part of them as a gateway complex leading down to the Gihon Spring. Excavations by Y. Shiloh (1978–85) in the area of the City of David brought to light further remains from the Iron Age and clarified some of Kenyon's original work in regard to the terrace/stepped stone-structure (in Area G), the fortification line, and the water system associated with the Gihon Spring. Very clear signs of the Babylonian conquest of the year 586/587 B.C.E. are known from Shiloh's excavations and, together with evidence uncovered by Avigad on the Western Hill, they serve to confirm the destruction of Jerusalem at the end of the First Temple period. Later excavations by R. Reich and E. Shukrun have revealed that the first fortifications in and around the Gihon Spring were from the Middle Bronze Age, and that the Iron Age fortification system on the east slope of the City of David may very well have included a lower fortification wall close to the bottom of the slope.

Necropolises. The tombs discovered by Parker (1909–11) on the slope above the Gihon were dated by Vincent to the beginning of the Early Bronze Age. Kenyon discovered a series of tombs from the Middle Bronze Age on the Mount of Olives, in the same area where Warren had also found early tombs in the 1860s. Tombs that were rich in finds from the Middle Bronze and Late Bronze Ages were found near the Dominus Flevit Church and excavated by S. Saller (1954). Tombs with many important objects from the Late Bronze Age were also found in the Naḥalat Aḥim neighborhood (Amiran, 1961) and in the area of the UN headquarters. A series of rock-hewn tombs of the First Temple period are known east of the City of David in the area of the Silwan village, and these were studied in some detail in modern times by D. Ussishkin. Some of these tombs in Silwan were already investigated by explorers in the 19th century, notably by F. de Saulcy in 1865, who investigated the monolithic "Tomb of the Daughter of Pharaoh," and C. Clermont-Ganneau, who examined a number of tombs – among them one with the inscription "[]yahu who is over the house." At the southern end of the City of David, Weill (1913–14) found monumental rock-cut chambers that he identified as the tombs of the House of David, but this identification still requires proper verification. Rock-cut tombs from the Iron Age were also investigated by Israeli scholars from the 1970s, notably by G. Barkay, A. Mazar, and others, in and around the city, notably to the north of the Old City (in the area of St. Etienne), in the Hinnom Valley, and elsewhere.

SECOND TEMPLE PERIOD. *The City and Its Fortifications.* Remains from the period of the Second Temple, and particularly from the time of King Herod (37–4 B.C.E.), served as a starting point for archaeological investigations from the 19th century. Terms and names connected with this period were obtained from the descriptions of the city as presented in the writings of the Jewish historian *Josephus. In 1867–70, C. Warren was engaged in an investigation of the Herodian enclosure walls of the Temple Mount, following on from the Ordnance Sur-

vey mapping of the Temple Mount made by C. Wilson in 1864 (published in 1865). Warren's descriptions and precise sketches of the topography of Jerusalem, particularly of the structure of Temple Mount walls, are still used by scholars. Many of the underground passages and gates of the Temple Mount studied by Wilson and Warren are now largely inaccessible to scholars. Among the structures they investigated were "Robinson's Arch" and "Wilson's Arch." Warren also uncovered a part of the foundation of the first arch of "Robinson's Arch" (later revealed in its entirety by Mazar in the 1970s) and was the first to suggest that it might have served as the base for a flight of steps leading to the valley below – a view he later abandoned but which was confirmed during Mazar's excavations. Warren also examined the vaulted areas on the southwest side of the Temple Mount, popularly known as "Solomon's Stables." He also correctly identified the site of the Antonia fortress, adjoining the northwest corner of the Temple Mount. The area was subsequently investigated by Clermont-Ganneau (1871) and Vincent and Marie-Aline de Sion (1955), but the walls and pavements which they thought belonged to the Herodian Antonia turned out to be of later Roman date (i.e., the remains shown in the convent of the Soeurs de Sion). C.N. Johns (1934–40) uncovered important remains of the northwestern corner of the "first" wall fortification system in the courtyard of the Citadel near the Jaffa Gate, dating from Hasmonean and Herodian times. This fortification line was associated with the large tower (identified as Phasaël or Hippicus) which is commonly called David's Tower. (It has a preserved height of 66 ft. or 20 m.) Remnants of the "first" wall have been uncovered to the south of the Citadel, around Mt. Zion, along the edges of the Valley of Hinnom and as far as the City of David and the Kidron Valley. Fragments of this fortification line were studied by C. Schick and H. Maudsley (1871–75) in the area of the "Bishop Gobat School" on the southwest slope of traditional Mount Zion. Later, F.J. Bliss and A.C. Dickie (1895–98) uncovered substantial parts of this fortification wall around Mount Zion and as far as the Kidron Valley; Bliss and Dickie uncovered a two-phased fortification system, of which the earlier dated to the Second Temple period and the later to the Byzantine period. New evidence regarding the "first" wall was brought to light as a result of N. Avigad's excavations along the northern stretch, uncovering part of a gate (the Gennath Gate?), and M. Broshi's excavations along the western stretch, between the Citadel and the south-west angle of the Old City of today, bringing to light Hasmonean and Herodian fortifications and a gate (the Essene Gate?) that led into the city.

The line of the "second" wall has been reconstructed by scholars largely on the basis of written sources, rather than on archaeological findings. The opinions of many scholars regarding the whereabouts of this wall were heavily influenced by the study of the location of Golgotha and the Tomb of Jesus, which were supposed to have been situated outside the city walls. Established facts, however, are few. The line of the wall began at the "first" wall near the Citadel, passing to the south of the area of the Church of the Holy Sepulcher, and eventu-

ally reaching the Antonia Fortress. Conrad Schick originally found a collapsed fortification line on a rocky scarp to the southwest of the Church of the Holy Sepulcher – partly confirmed by Kenyon who dug near the Muristan Bazaar – and a fosse that may have been associated with the “second” wall, thus placing the area of Golgotha and the Tomb of Jesus outside the city. Some scholars have dated the construction of the “second” wall to the Hasmonean period, though others have attributed it to the time of the establishment of the Bezetha Quarter at the time of Herod the Great.

The course of the “third” wall, the construction of which took place at the time of Agrippa I (40–44 C.E.), has been disputed by scholars. Vincent, Simons, Kenyon, and Henessy fixed the course parallel to the line of the Ottoman wall in the northern part of the Old City of today. The opinion of E.L. Sukenik and Mayer (1925–27), however, seemed better founded when they identified the “third” wall with the line of the wall they uncovered – seen already by Pococke in the late 18th century and by Robinson in 1838/1852 – along a distance of approximately 1,600 ft. (500 m.) extending from the Italian Hospital to the Albright Institute of Archaeological Research. The line of wall includes towers facing north.

Excavations of this line in the 1970s by E. Netzer and S. Ben-Arieh confirmed the date of this wall and supported its identifications as the “third” wall. The wall was built carelessly and is far simpler than the other Second Temple fortification walls known in Jerusalem. The general consensus of opinion has been that this wall was first begun at the time of Agrippa I and was only completed at the time of the outbreak of the revolt in 66 C.E. in order to protect the “New City” from the Roman legions.

Significant information regarding the layout and appearance of the city during the late first century B.C.E. to 70 C.E. emerged from the excavations conducted by Mazar in the area of the southern edges of the Temple Mount, by Avigad in the Jewish Quarter excavations, and by Broshi on Mount Zion. Houses found there were first established in Hasmonean times (early first century C.E.) and were later replaced by new structures – many palatial in appearance – at the time of Herod the Great and in the first century C.E. The Herodian buildings that have been unearthed had cellars and ritual baths (*mikva'ot*) in their basements, with sumptuous rooms, many of which were adorned with wall paintings or with stucco decorations. Many artifacts from the Second Temple were uncovered: pottery, stone vessels, coins, and others.

A seven-branched **menorah* – one of the oldest known examples – engraved into a plaster wall – was found in one of the houses overlooking the Temple Mount to the east. One inscription indicated that the house belonged to the priestly Bar Kathros family. The houses were violently destroyed in 70 C.E. with the capture of the city by the Romans.

The layout of the area around the southwestern corner of the Temple Mount has become clear as a result of the extensive excavations by B. Mazar and more recently by more limited work by R. Reich and Y. Bilig. Alongside the south-

ern wall of the Temple Mount a wide street, paved with stone slabs, leading to Hulda's Gates, was discovered. A large flight of steps extended up to this gate. Nearby were ritual purification pools (*mikva'ot*). The base of “Robinson's Arch” was uncovered, which in all likelihood supported a flight of steps descending from a gate in the Temple Mount to the Lower City.

In the Second Temple period, based on the present state of archaeological research, Jerusalem expanded in the Hasmonean period (late second century B.C.E.) from the area of the small Hellenistic town on the Southeast Hill to the Western Hill, and it subsequently incorporated a very large area indeed. From the time of Herod the Great (37–4 B.C.E.) the city was substantially modified with major building operations at the sites of the Temple and palace in the Upper City, with work on improving the city fortifications as well. New fortification walls (the “second” and “third” walls) were subsequently added, and the Jerusalem that was destroyed by Titus and the Roman legions was a very large city indeed, extending over some 450 acres (1,800 dunams).

Necropolises. The cemeteries of Jerusalem during the Second Temple period extended like a belt around the city from present-day Sanhedriyyah in the northwest, through Givat ha-Mivtar, Mt. Scopus, the Mt. of Olives, and the hill of the UN headquarters, to Talpiyyot and Ramat Raḥel in the south. Almost one thousand tombs have been investigated and a catalogue of their locations and finds has been prepared by A. Kloner and B. Zissu. The internal plan of the tombs is simple, as was the custom then. On the sides of the central chambers are tunnel-like burial recesses (Heb. *kokhim*), occasionally within arched recesses (*arcosolia*). The dead were laid out on the benches of the central chambers or within the *kokhim*, and once the bodies had decomposed the bones were gathered into limestone ossuaries. A shrouded body of a leper (who suffered from Hansen's Disease) was discovered in a tomb in the lower Hinnom Valley. Some of the larger tombs have carved exteriors or monuments (e.g., the so-called Tomb of Absalom in the Kidron Valley) or sometimes carved interiors (e.g., a few tombs in the Akeldama area). As early as 1863 de Saulcy cleaned out the Tombs of the Kings and discovered there the decorated sarcophagi that may possibly have belonged to the family of Queen Helena of Adiabene. Clermont-Ganneau completed the excavation of those tombs. He also partially cleaned the tomb known as Absalom's Tomb (1891). In 1891 Schick published the discovery of the so-called Tomb of the Family of Herod, found near the site on which the King David Hotel was subsequently built. In 1924 N. Slouschz cleared Absalom's Tomb. From 1926 to 1940 E.L. Sukenik studied approximately 40 Jewish funerary complexes in the city (such as the tomb of the Nicanor family discovered on Mt. Scopus). Avigad investigated the various burial sites of Jerusalem, especially in the Kidron Valley (1945–47). Jason's Tomb from the Hasmonean period was excavated in Rehavyah by L. Raḥmani (1954), who also investigated the burial sites of Sanhedriyyah (1961). In 1968 V. Tsiferis excavated several tombs at Givat ha-

Mivtar, northeast of the city. One of them contained 35 burials, including one of a young man called Yoḥanan, who had died by crucifixion. Hundreds of limestone ossuaries and simple graves were investigated on the western slope of the Mt. of Olives, near the Church of Dominus Flevit by P.B. Bagatti and J.T. Milik (1953–55). The major findings in this cemetery are from the Herodian period; however, it was used from the Hasmonean period to the Byzantine period. The subject of tombs in the vicinity of Jerusalem was investigated by A. Kloner in 1980. Numerous tombs continued to be excavated during the 1980s to 1990s, with fewer excavated since the year 2000 due to the Israeli government's agreement with the Ultra-Orthodox Jewish community in Jerusalem to disallow the excavation of human bones.

THE LATE ROMAN PERIOD. Following the destruction of the Second Temple in 70 C.E. and the suppression of the Bar Kokhba revolt (135 C.E.), a Roman city was built in its stead named Aelia Capitolina in the second century C.E. The camp of the Tenth Roman Legion (Fretensis) was situated in the area of the Citadel and Armenian Garden and is represented by the discovery of numerous roof tiles bearing the mark of the legion and with symbols of a galley and wild boar. The size and the position of the camp have been debated, and new suggestions have unsuccessfully attempted to place the camp at other locations. Kilns and other remains of the Tenth Legion have been found in the area of Givat Ram and Binyanei Ha'uma to the west of the city. Aelia was largely built up with temples, buildings, and with a western forum, and with streets and triumphal arches on the north side of the present Old City. The north gate of Aelia Capitolina was found beneath the Damascus Gate, and an inscription referring to the Roman name of the city was found chiseled upon the gate. At the beginning of the Via Dolorosa is a Roman triumphal arch, now called Ecce Homo, in the area of the Bethesda Pool which had a temple of Serapis. Clermont-Ganneau investigated the area of the Via Dolorosa in 1873–74, discovering a large pagan Roman vase with stamped decorations of gods and altars. Excavations by Kenyon (1961–67) and others in the Muristan area and around the Church of the Holy Sepulcher have shown that the area was included within the boundaries of the Roman city and that the area had been substantially filled in with the construction of numerous substructures for the superimposed buildings and temples that were built in this area (the western forum). Close to the southwest corner of the Temple Mount, Mazar uncovered a kiln, latrines, and other structures dating from this period. An inscription inscribed on stone and dating to the days of Septimius Severus (beginning of the third century C.E.) was also found. Another Latin inscription came to light in the southern area of the Temple Mount, which referred to a monumental gate that existed somewhere in the area. The southern aqueduct was duplicated in Roman times by a high-level line from Ein Etam.

THE BYZANTINE PERIOD. The city flourished during this period and it became the focal point for Christian pilgrim-

ages. The main building changes occurred in the areas that were strongly associated with Christian tradition (for example the area of Golgotha and the Tomb of Jesus). At these places, churches, monasteries, and hospices were built. The city again spread across the Eastern and Western Hills and to the south of the Temple Mount. The excavations of Matalister and Duncan, Crowfoot and Fitzgerald, Weill, Hamilton, Kenyon, and more recently by Mazar, Shiloh, Reich, and Shukrun have brought to light remnants of streets, dwellings, and public buildings covering the south of the city. Traditional Mount Zion was also encircled by a wall. Remnants of this wall had been discovered by Warren near the Ophel (later partly excavated by Mazar), above the Hinnom Valley by Bliss and Dickie, and along the western side by Broshi. The construction of this wall is usually dated to the middle of the fifth century C.E. and is connected with the building activities of Empress Eudocia in Jerusalem. Avigad's excavations in the Jewish Quarter (1970) revealed substantial portions of the Nea Church, built by Justinian in the mid-sixth century C.E. The Church of the Holy Sepulcher has a long history of investigations spanning the work of mapping by Wilson and Schick in the 19th century, the architectural appreciation by M. Harvey in the 1930s, and the archaeological work by V. Corbo and C. Couasnon from the 1960s to the 1980s (see the summary of all the discoveries by Gibson and Taylor). The original church was founded in 325 C.E., following the destruction of pagan buildings in the area and the discovery of the Tomb of Jesus, which was undertaken by Bishop Macarius at the behest of Constantine the Great. The main portal to the basilical martyrrium, contrary to the accepted form, was in the east, with the apse facing the Tomb of Jesus, which was surrounded by a circular structure (the rotunda). Excavations conducted by White Fathers (1864–67) to the northeast of the city, brought to light various remains, including remnants of a large church built above the Pool of Bethesda. Nearby were found remnants of a second Byzantine church that had been incorporated into the crusader church of St. Anne. Bliss and Dickie (1894–97) dug above the Siloam Pool and uncovered the remains of a church which they dated to the time of Eudocia. J. Germer-Durand, who dug in the eastern slope of Mt. Zion at the end of the 19th century, revealed dwellings and a church. P.G. Orfali (1909, 1919–20) excavated the remains of the Gethsemane Church in the Kidron Valley. Vincent (1959) and Corbo (1959) discovered the remains of the Church of the Ascension on the top of the Mt. of Olives. Avi-Yonah (1949) discovered remains of a church and a monastery in the area of Givat Ram. Bagatti and Milik (1953–55) uncovered a cemetery of the Byzantine period in Dominus Flevit on the Mt. of Olives. New excavations in different parts of the city during the 1980s and 1990s revealed many more architectural and artifactual remains from the Byzantine period.

The Byzantine city was destroyed at the time of the Persian conquest in 614, but there is no evidence that the Muslim conquest in 638 was destructive. Numerous structures were erected in the area of the southwest corner of the Temple

Mount at the time of the Umayyads at the beginning of the eighth century. On one of the stones in the Herodian Wall of the Temple Mount an inscription was engraved by a Jewish pilgrim (though the date of this inscription is disputed) who arrived in the city during early Islamic times. The text of the inscription was taken from Isaiah 66:14: "And when you see this your heart shall rejoice and your bones shall flourish like young grass."

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Water Supply

FIRST AND SECOND TEMPLE PERIODS. The location of Canaanite Jerusalem on the eastern ridge near the Kidron riverbed was related to the discovery of the only water source in the entire area on the eastern slope of the ridge. This was the Gihon Spring, which supplied 7,000–40,000 cu. ft. (200–1,100 cu. m.) daily during periods of 30–40 minutes, with interruptions of four to ten hours (according to the season). As early as the Middle Bronze Age, the inhabitants of Jerusalem dug a tunnel to assure the water supply in the event of a siege. At first they attempted to sink a shaft straight down to the water level, but did not succeed because of the hardness of the rock. They then dug an angular tunnel with stairs; at its end was a shaft ("Warren's shaft") 43 ft. (13 m.) high, which descended to the level of the spring and through which water could be drawn without the enemy's knowledge. It is possible that this system was the "gutter" (*zinnor*) mentioned in the account of the conquest of Jerusalem by David and his warriors (11 Sam. 5:8). In addition to the tunnel, near the spring were several open canals extending southward that carried the excess spring water to the fields and gardens along the Kidron riverbed. At the end of the eighth century B.C.E., Hezekiah, king of Judah, initiated the excavation of a new 1,765 ft. (535 m.) tunnel which extended from a level of 2,086 ft. (636 m.) to 2,080 ft. (634 m.), passing in the form of two arches under the hill of the City of David. This tunnel conducted the waters of the Gihon to the Siloam (Shiloah) Pool in the valley between the two hills. The well-known *Siloam inscription recounts the excavation of the tunnel and the "day of the tunnel" in which "the stone cutters made their way toward one another ax-blow by ax-blow." The excavation of this tunnel was a considerable engineering feat, and since then the waters of the Gihon have flowed to the Siloam Pool. The pool was initially covered and hidden from enemies, as discovered in excavations.

In earliest times the inhabitants of Jerusalem had already increased the meager supply of the Gihon Spring by digging cisterns and pools. Of the two types of reservoirs, the cisterns were more difficult to make, but they were better for preserving water against evaporation. After the discovery of waterproof lime mortar, the number of cisterns in the ancient city grew equal to (if not greater than) the number of houses. Interestingly, very few cisterns have been found from the time of the First Temple. Most of those that are known date from Second Temple times. The most famous is a double cistern known as Struthion (Gr. *strouthos* – "ostrich"), located under the court

of the Antonia Fortress southwest of the Temple; its maximum dimensions were 160 ft. (49m.) in length, 23 ft. (7 m.) in width, and 56 ft. (17 m.) in depth. A great number of cisterns were dug in the area of the Temple Mount (45 according to the last count), the largest among them being the Bahr el-Kabir (Ar. for the "Sea"), whose capacity was 140,000 cu. ft. (12,000 cu. m.). There were two other cisterns of 94,000 cu. ft. (8,000 cu. m.) and 60,000 cu. ft. (5,000 cu. m.) capacity.

The major pools in the area of Jerusalem are the Siloam Pool at the southern end of the central valley; the Serpents Pool (probably north of the city); the Pool of Towers (Hezekiah's Pool) north of the Fortress; and Mamilla Pool (first mentioned in the Byzantine period), located between the Jaffa Gate and the watershed line. Three of the ancient pools are not open today: the Ḥammām al-Shifā' Pool in the upper central valley, which may be the biblical "Upper Pool"; the Pool of Israel, which served as a ditch for the northern boundary of the Temple Mount; and the Sheep Pool, also north of the Temple Mount at some distance from it. The latter is mentioned in the New Testament (John 5:2–4), where it is called Bethesda (Beit Ḥisda), and apparently also in the Copper Scroll from the Dead Sea caves. It is a double pool and has two levels. The New Testament states that healing powers were attributed to it, and excavations of the site have revealed that a health rite took place there during the Roman period. The lower of the two pools was probably used for washing sheep, which were then sold for sacrifices at the nearby Temple.

At the end of the Second Temple period, it was clear that the growing city could not be supplied from the waters collected in the cisterns and pools, especially during mass gatherings of the three pilgrimage festivals. Pontius Pilate therefore decided to build an aqueduct from the springs of the 'Arrūb River near Hebron. It was an open canal which passed through four tunnels near Bethlehem. In order to preserve the gradient of the water level, which assured a steady flow from the springs to the Temple Mount, the aqueduct wound along the 2,574 ft. (766 m.) contour line so that, although the direct distance from the 'Arrūb River to Jerusalem is no more than 13 mi. (21 km.), the aqueduct was 42 mi. (68 km.) long. On its way southward, it also collected the water of Ein Etam (Solomon's Pools), south of Bethlehem. During the rule of Septimius Severus, a second aqueduct on a higher level was added, extending from Solomon's Pools to Jerusalem. The latter crossed the valley near Rachel's Tomb via a line of pipes operated by syphon pressure, which in many cases split the stone links.

FROM THE ROMAN PERIOD. From the Roman period to the end of the Ottoman period, Jerusalem's water supply was based mainly on rainwater collected in the city's cisterns and pools. The original Spring of Gihon had long been blocked; its location was unknown, and its waters flowed through Hezekiah's tunnel to the Siloam Pool. According to Christian tradition, these waters were used by Jesus to heal the blind man (John 9:7), and the site thus became sacred to Christians. As early as

the fourth century C.E., the pilgrim of Bordeaux mentions a pool surrounded by colonnades used for bathing for healing purposes. The empress Eudocia built a church and a hospital above the pool. In the early Muslim period as well, the waters of the Siloam were regarded as having special powers, but in the course of generations the pool was neglected, and the tunnel of Hezekiah became partially blocked. The waters of the Gihon, which had ceased to flow through the tunnel, broke out to the Kidron River. Thus the Gihon Spring was rediscovered in the 14th century, and its name reappeared for the first time in a Jewish source from the 16th century. With the rediscovery of the Gihon, the site of the spring was consecrated. Christians established it as the spot where Mary had washed Jesus' swaddling clothes and therefore called it the "Virgin's Fountain." The waters of the Gihon Spring today flow again through Hezekiah's tunnel to the new Siloam Pool built in the 19th century.

During the Ottoman period the waters of the Gihon were drawn and sold in the streets of Jerusalem, but in the 19th century they became polluted from sewage water reaching the spring, and eventually they were used only for watering the flower beds of Kefar ha-Shilo'ah (Silwān). The Rogel Spring served Jerusalem throughout the generations as a secondary source of water. During the Ottoman period its waters, like those of the Gihon, were drawn and sold in Jerusalem, but it too primarily became a source of the water for Kefar ha-Shilo'ah.

A number of changes occurred in later times in the system of public pools known from the Roman period. With the concentration of Jerusalem on the western hill, the pools at the lower part of the central valley were neglected. The ancient Siloam Pool was apparently reconstructed during the Byzantine period, but was later neglected, filled with silt, and called by the Arabs the Birkat al-Ḥamrā' (Pool of the Red Earth). The pool of Ḥammām al-Shifā', near Bāb al-Silsila (the Chain Gate) of the Temple Mount, was known from medieval times but was later blocked to enable the collection of subterranean waters, which were drawn from the pool via a shaft. The pool of Beit Ḥisda (Bethesda) continued to be in use in the Byzantine period and was called the Probatike pool but was later blocked. Likewise, the Struthion pool fell into disuse.

Crusader sources mention three pools in Jerusalem: Lacus Legerii, northwest of the Damascus Gate, outside the city walls (today, Arḍ al-Birka); Lacus Germani, the ancient Snake Pool rebuilt by Germanus in 1176 (today known as Birkat al-Sultan in the Hinnom Valley); and Lacus Balneorum, the "Pool of Baths" (the ancient Pool of Towers) called Birkat Ḥammām al-Biṭriq and Hezekiah's Pool by Christian travelers. This pool is joined by an aqueduct to the Mamilla Pool, which is at the head of the Hinnom Valley. The Mamilla Pool itself continues to be mentioned in the Umayyad period. The three latter pools were reconstructed and renovated during the Mamluk and Ottoman periods. The Arabic name Birkat al-Sultan was given because of the expansion and renovation carried out on it by Sultan Suleiman the Magnificent in

1537. Other pools in Jerusalem, the dates of whose construction are not clear, are St. Mary's pool near the eastern wall of Jerusalem and the al-Hajj pool north of the city wall, opposite the present-day location of the Rockefeller Museum. Plastered cisterns in the courtyards of houses served as a major source of water throughout all the periods. In mid-19th century, 950 cisterns were counted in the Old City, while at the end of the Ottoman period the cisterns of the entire city, including the suburbs outside the walls, numbered 6,600, with a total capacity of over 17,000,000 cu. ft. (500,000 cu. m.). In 1919 the British determined that the total capacity of the cisterns and pools of Jerusalem, including those on the Temple Mount, was approximately 53,000,000 cu. ft. (1,500,000 cu. m.).

The local sources, however, were not sufficient to meet the needs of the city, and throughout most of the periods water continued to be conducted to Jerusalem from the area of the 'Arrūb springs and Solomon's Pools. The use of the aqueduct during the Byzantine period is known from a Greek inscription that prohibits the cultivation of land at a distance of 15 cubits from the aqueduct. The reference is apparently to the aqueduct on the lower level, which was built at the time of the Second Temple and continued to be used during this period. It is reasonable to assume that this aqueduct was also in use during the Muslim and Crusader periods, and it is known that it was rebuilt during the Mamluk period, when the third pool was also built at Solomon's Pools, south of Bethlehem. Waters collected there were conducted to Jerusalem via the aqueduct. At the beginning of the Ottoman period, the lower aqueduct continued to function, and Suleiman the Magnificent even built a number of *sabils* (public fountains) that received their waters from the aqueduct. At the beginning of the 18th century, however, a clay pipe was built into the aqueduct, and its operation entailed difficult engineering problems. The pipe was blocked and often went out of use. Various attempts to improve the aqueduct in the 19th century were unsuccessful, but at the beginning of the 20th century the clay pipe was rebuilt as far as Bethlehem, and from it a narrow iron pipe conducted a limited amount of water – about 180 cu. m. daily – to Jerusalem.

The problem of water supply was very grave at the end of the Ottoman period, to the extent that Jerusalem's inhabitants were compelled to buy water brought by train or on the backs of animals from a considerable distance. With the British conquest (1917) the need for an immediate solution to the water problem arose. The cisterns in the city were purified, and the first water project built by the British army was based on the water sources in 'Ayn 'Arrūb. The old well there was renovated, a pump was built, and an iron pipeline 15 mi. (24 km.) long was laid down to the reservoir in the Romema quarter. In 1921 Solomon's Pools were renovated, as was an ancient water project in Wadi al-Biyār which lies south of pools for collecting rainwater. Waters from this wadi and from the area of al-Khaḍr, as well as spring water in the vicinity, were collected in Solomon's Pools and pumped from there to the iron pipelines from 'Ayn 'Arrūb. In 1924 the water was conveyed from 'Ayn

Fāra in the bed of Wadi Qilt, north of Jerusalem. This project considerably increased the amount of water supplied to Jerusalem. At the same time, around 1,400 cubic meters were supplied daily from the outside, but there was still considerable use of private cisterns. With the fast growth of West Jerusalem, the water problem again became grave and the need arose for an additional abundant source of water. In 1934 the pipeline from the abundant springs at Rosh ha-Ayin (Ra's al-'Ayn) near the coast was built, finally solving the problem of the water supply for the city until 1948. During the Israel War of Independence (1948), West Jerusalem suffered from lack of water because several pumping stations of the Rosh ha-Ayin pipeline were captured and damaged by Arab forces. Later the government of Israel built a new pipeline from the same source which supplied West Jerusalem with water. The reunified city, after the Six-Day War (1967), was supplied from the western as well as the southern and northern sources which served East Jerusalem during the Jordanian rule.

Cartography

Since the beginning of mapmaking, the geographical position of Jerusalem was shown on most of the manuscript maps of the world, such as the maps at the cathedral of Herford and of the Ebstorf monastery. It appeared on the "Tabula Peutingeriana" and on all the maps of the Near East and the Holy Land. The cartographical symbols employed on these maps are of the conventional semi-pictorial design and therefore do not provide any information on particular features of the city.

PICTORIAL MAPS. The earliest topographical description of Jerusalem is the bird's-eye view of the "Holy City of Jerusalem," the central piece of a map of the Holy Land preserved on the mosaic floor of a ruined basilica at *Madaba, in Transjordan. The mosaic, dated between 560 and 565 C.E., depicts an oval-shaped city surrounded by walls, with six gates and 21 towers. It shows the "Cardo maxima," the colonnaded main thoroughfare, together with four smaller streets and 36 other features of the city – such as public squares and buildings, churches, and monasteries – and contains the oldest presentation of the Western Wall. This "map" shows Jerusalem as viewed from the west, whereas during the following centuries the city was predominantly portrayed from the east, since the view from the Mount of Olives encompassed the most important sections of the medieval town (i.e., all the parts of the Temple Mount and most of the stations of the Via Dolorosa). Typical examples of this mode of presentation are: the large map engraved by Erhard Reuwich, a Mainz woodcutter and printer, after drawings made by him on the spot in 1483; the woodcut made by Jacob Clauser for Sebastian Muenster's cosmography (published 1544 in Basle); and the copper engraving reproducing a drawing made in 1682 by Cornelis de Bruin. These productions were often copied by the many artists who were unable to paint pictures based on personal observation.

HISTORICAL MAPS. Another approach is represented in the work of the biblical scholars who, for religious reasons, intended to clarify the state of the city during different periods of biblical history, concentrating mostly on New Testament times. These mapmakers were often unfamiliar with the topography of the city and derived their knowledge from the literary sources at their disposal, i.e., the Bible, the works of Josephus and classical Greek and Latin writers, and certain passages of the Talmud. Best known among these maps are the works of the Dutch astronomer Pieter Laiksteen (dated 1544 and republished in 1573 by Benito Arias-Montano), Christian van Adrichem (Cologne, 1584), and the Rev. Thomas Fuller (London, 1650). Other maps, mostly engraved by Dutch craftsmen, appeared in many editions of the Bible and became very popular as an aid to understanding the text.

COMPARATIVE MAPS. Laiksteen opened a new chapter of cartographic development with his twin set of town maps, the first attempt to present a comparative topography of New Testament Jerusalem and the walls and buildings in the city of his own time by graphic means. The prime motive for the creation of such maps was the desire to defend the authenticity of the holy places. The correctness of their location was piously accepted by countless generations of pilgrims, but with the spread of the Reformation in 16th-century Europe, an ever growing number of pilgrims – mostly from Britain and Germany – disputed the ecclesiastical tradition promulgated by the Franciscan friars in their capacity as the officially appointed "Custodians of the Holy Land." In view of the fact that Empress Helena's Church of the Holy Sepulcher was not outside the present walls of the city, as suggested by the Gospels and Jewish tradition, an endless discussion arose, culminating in 1883 with Charles C. Gordon's identification of Jeremiah's Grotto with Mount Calvary. In order to decide this dispute, the actual course of the city walls during Roman times had to be ascertained, as the position of the Third Wall would automatically establish the location of the "True Calvary." The first map designed to solve this problem was made by the Franciscan friar Antonio degli Angelis, who lived in Jerusalem and Bethlehem from 1569 to 1577. Friar Antonio constructed a town plan based on fairly exact observations and/or actual measurements and the delineation of the course of the Third Wall. This map, published in 1578 by a monastery in Rome, was lost and is known only from a 1584 bibliographical note by Christian van Adrichem. The map was later republished and appeared in 1609 as a plate in Bernardino Amico's *Plans of the Sacred Edifices of the Holy Land*. This engraving was the work of Antonio Tempesta, but the artwork for a further edition, published in 1620, was entrusted to Jacques Callot. These two important artists added many "improvements" and embellishments, while Natale Bonifaci made a modest engraving for Johann Zuallart's travelogue (Rome, 1587). Bonifaci's version has often been copied, mainly for pilgrims interested in pictures suitable as illustrations for their reports, and has

been reproduced in many 17th-century travel books of the Holy Land.

SURVEY MAPS. In 1818 an Austrian physician, Franz Wilhelm Sieber, traveled through the Near East, spending 42 days in Jerusalem. He decided to produce an exact map based on reliable measurements, because he was aware of the “mistakes and curious differences existing between all the plans published up to now” and was interested in furthering the “very important study of biblical history.” He walked in and around the city and, in the disguise of a botanist or as a doctor dispensing medical advice to the population, acquainted himself with the terrain and determined the geographical position of the places he chose as points of observation. He took “approximately two hundred geometrically correct bearings, ascertained the course of the Kidron Valley, the circumference of the walls, and the position of the Temple and the mosques.” His many excursions helped him fill in many smaller details, corrections and additions. His nicely engraved map appeared as an appendix to the report on his travels (Prague and Leipzig, 1823; Prague, 1826).

Until that time the Muslims placed formidable difficulties in the way of an accurate survey. In 1818 Sieber had to camouflage his work of mapmaking as Cornelis de Bruin, the Dutch landscape painter was obliged to do in 1682. During the 19th century, however, the change of political climate in the Near East provided foreign scholars with much more liberty to execute their research. The decisive point in the development of Jerusalem cartography was reached after the bombardment of Acre, when the presence of the British fleet afforded the Corps of Royal Engineers the opportunity to conduct surveys in the country. One party was dispatched to Jerusalem and, in 1841, worked openly for six weeks in and around the city without encountering any opposition. The official completion of the survey was marked by the officer in charge, Col. R.A. Alderson, personally taking the measurements of the Citadel. This was the first time that Jerusalem was mapped for nonreligious (i.e., military) considerations. Another survey, made by the Royal Engineers in 1864–65, was also conducted for purely secular reasons: it was sponsored by a benefactress eager to improve Jerusalem’s water supply. This work, the Ordnance Survey, became the basis for all reliable maps of the city. Besides these British efforts, other nations (France, Germany, Italy, Netherlands, and the United States) have contributed to the mapping of the city and the topographic recording of its surrounding. These maps, while rarely offering new intelligence about fundamental facts, often serve as documentary evidence on the progress of settlement, the construction of new buildings, etc. The same information can be derived from the maps accompanying various guide books. All these maps were made by foreigners acting without any assistance from the Turkish government. No official survey of the territory was made until the British Mandatory administration established its own survey department, which prepared and printed many useful maps. After 1948 its work was taken over

by the Survey of Israel, which enlarged the scope of publications considerably.

[Herrmann M.Z. Meyer]

IN JUDAISM

In the Bible

In the Pentateuch, Jerusalem is mentioned only once, incidentally, by the name of Salem (Gen. 14:18), in connection with *Melchizedek. The injunctions to worship God “in the site that He will choose” (e.g., Deut. 12:4) do not specifically refer to Jerusalem. The obscure verse “On the mount of the Lord there is vision” (*yerāʾeh*; Gen. 22:14), referring to the mountain in the “land of Moriah” on which Isaac was nearly sacrificed (Gen. 22), may signify an identification of the mountain with the site of the Temple; however, definite evidence for the designation of the Temple Mount by the name “Mt. Moriah” is found only in a source from the Second Temple period (II Chron. 3:1).

The uniqueness of Jerusalem as the royal city and the center of the worship of the Lord dates from the period of David (II Sam. 6–7; 24:18–25; I Chron. 21:18–22:1). During the First Temple period, when the Temple Mount was referred to as “Mt. Zion,” the name “Zion” also occasionally embraced the whole of Jerusalem (cf. e.g., I Kings 8:1; Isa. 1:27). The promise of an eternal dynasty (II Sam. 7), delivered by Nathan to David in conjunction with the question of the erection of a Temple in Jerusalem, also implied eternity for Jerusalem as the royal city and the city of the Temple, although its name is not explicitly mentioned. The conception of the eternity of Jerusalem in the Bible is related to the monarchy of the House of David and must be understood as part and parcel of it.

During the reign of Solomon, the unique status of Jerusalem as the royal city was established by the erection of the Temple, which invested the monarchy, as well as the site, with an aura of holiness. In the prayer of Solomon (I Kings 8), in which the Temple is considered a house of worship, “the city” (“which Thou hast chosen”) is linked with the “house.” The Temple is perceived as the eternal seat of the Lord (“a place for Thee to dwell in forever”), and there is no doubt that this conception of a double eternity – that of the dynasty of David and that of the symbolic residence of the Lord – imparted sanctity to the whole city.

In Psalm 78:68 the choice of Mt. Zion symbolizes the choice of Judah after the abandonment of Ephraim and Shiloh, and the Temple on Mt. Zion is conceived as a continuation of the Tabernacle of Shiloh. In Psalm 132, which describes the bringing of the ark to the city of David, Zion is conceived not only as a city chosen by the Lord for the monarchy but also as the place and seat of the Lord – His resting place and His abode; in other verses, it is explicitly stated that the Lord has attached, or will attach, His name to Jerusalem (e.g., II Kings 21:4). Psalm 122 is a hymn of admiration and love for Jerusalem (cf. Ps. 87). Royal justice (“there thrones for judgment were set, the thrones of the House of David”; Ps. 122: 5) is particularly emphasized as the virtue of Jeru-

salem – possibly in the wake of the reforms of Jehoshaphat (II Chron. 17:4–11).

It is perhaps in contrast to this that Jeremiah foresees (3:17) that in the days to come “Jerusalem shall be called the throne of the Lord” – the symbol of divine righteousness and justice (cf. Ps. 89:15), a quality that is attributed to the throne of David. In the prophecy of Jeremiah (33:16), the ideal Jerusalem is also called “The Lord is our righteousness,” with reference to the justice and mercy which will be dispensed in days to come by the king, upon whom this title is also conferred (23:5–6; 33:15). The expression “habitation of righteousness and holy hill” (Jer. 31:22 (23)) is also to be explained as referring to Jerusalem, even though it is seemingly applied to “the land of Judah and its cities” in general. Isaiah’s “city of righteousness” (Isa. 1:26; cf. 1:21, 27) – an epithet for Jerusalem – is to be understood not as a poetic expression but as a reference to its mission to dispense justice and righteousness and to be the seat of the judges. It is not impossible that in all these appellations, there is also an echo of the name Zedek which was borne by the pre-Israelite kings of Jerusalem – Melchizedek and Adoni-Zedek (Josh. 10:1) – and which was possibly derived from an ancient name of the town.

The greatness and the splendor of Jerusalem are described in the Bible in hyperbolic poetic imagery: in Psalms – “beautiful in elevation, the joy of all the earth” (48:3 (2)), “the perfection of beauty” (50:2), and so on; in Lamentations, expressing yearning for the past – “full of people... great among the nations, princess among the cities” (1:1), “the perfection of beauty, the joy of all the earth” (2:15). In the Song of Songs (6:4), the beloved is compared to Jerusalem (and to Tirzah), the symbol of beauty and loveliness. In the “Song of Ascents” (Ps. 122, 125, and 132), the pilgrims praise Jerusalem in hyperbole; in Psalm 137, “Zion” and “Jerusalem” are symbols of the whole country, and their destruction (“the day of Jerusalem”) is a symbol of the Exile.

In the Prophets and in Lamentations, the name and the concept of Jerusalem are frequently employed to represent the whole of Judah; Jerusalem embodies the conduct and the deeds of Judah and is occasionally identified with Judah, as well as with the whole of Israel, for good or ill. Sometimes, however, the parallel between “Jerusalem” or “Zion,” on the one hand, and “Judah,” the “cities of Judah,” or “Israel,” on the other, emphasizes – in praise or in disparagement – not that which is common to them but the central, independent status and the special features of the elected city. The “daughter of Jerusalem” and the “daughter of Zion” also signify both the city and the kingdom, either as an expression of affection or as a designation of the sinful city and nation. Prophetic literature reflects different trends in the historical-religious conception of Jerusalem, according to the conditions and circumstances in which the prophet waged his struggle against idolatry, and in support of the belief in the Lord. In opposition to the heathen notion that the power of the Lord of Israel over Jerusalem is not different from that of the gods of Damascus, Arpad, Hamath, and others over their respective cities, Isaiah, dur-

ing the reigns of Ahaz and Hezekiah, emphasized the idea of the uniqueness of Jerusalem: as the city of the Lord of Israel, the true God, its status and fate differ from that of all other cities whose gods are no more than idols (10; 29; 30; 31; 33; 37; 38); even the mighty Assyrian conqueror shall not vanquish Jerusalem, which is assured of divine protection for the sake of the honor of His name and the name of David, His servant. It appears that, as a result of the miraculous salvation of Jerusalem from the hands of Sennacherib, in accordance with the prophecy of Isaiah, the sense of the uniqueness and the might of the city became implanted within the nation; those Psalms that stress Jerusalem’s title “city of God” and God’s intervention as its protector (e.g., 46; 48; 76; 87) apparently belong to this period.

Isaiah’s conception was, however, given to distortion, and it turned into a belief in a quasi-magic immunity which the city, and the “Temple of the Lord” which was in it, bestowed upon its inhabitants. Jeremiah rose against this new idolatrous conception; he rejected – seemingly in contrast to Isaiah – any distinctiveness attributed to Jerusalem. He maintained that the divine protection of the city was contingent upon the people’s following the ways of God; if they forsook God, Jerusalem would be abandoned to the historic fate of all the other cities which fell before the Babylonian conqueror and were destroyed (7; 17; 19; 21; 25; 27; 34, et al.). The gap between the mission of Jerusalem – to be “the faithful city... full of justice” (Isa. 1:21) – and its actual state as “... rebellious and defiled, the oppressing city” (Zeph. 3:1) preoccupies all the prophets, who react to this discrepancy in pain or in anger. For Ezekiel, this gap between the vision and the reality becomes the cornerstone of his prophecy concerning Jerusalem before its destruction. All the faults and the sins of Israel, from the time they left Egypt until the days of the prophets, are attributed to Jerusalem, which is described as having surpassed Samaria and Sodom in its corruption and wickedness. In a cruel itemization, Ezekiel enumerates the “abominations of Jerusalem” (16; 22; 23 etc.); he is the only one of the prophets from whose words it is inferred that the anticipated destruction is to be regarded as an irreversible decree.

All the prophets share the expectation of an exalted future for Jerusalem – a loftiness which includes both physical splendor and a sublime religious-spiritual significance; this anticipation refers at times to the near future and at times to the end of days. Jeremiah’s vision of the rebuilt Jerusalem (30: 18–19; 31:37–39) is a realistic one, and it includes a detailed demarcation of its enlarged area, the whole of which will be “sacred to the Lord.” Zechariah (8:3–5) also anticipates that Jerusalem will be called “the faithful city, and the mountain of the Lord of Hosts, the holy mountain”; its streets will be filled with “old men and old women” and “boys and girls” will play there. Ezekiel raises the Holy City of the days to come above actual and historic reality; it is only indirectly implied that he is referring to Jerusalem – whose name is not mentioned at all and whose site is not indicated: “a city on the south... up on a very high mountain” (Ezek. 40:2). Its description (45:1–8; 48:8–22,

30–35) does not evoke the image of an ordinary city or even of a royal city or capital but that of a background for the Temple, a city entirely sanctified to God, the abode of the Divine Presence, whose name will be “the Lord is there.” The image of Jerusalem at the close of the Book of Zechariah (14:16–21) is similar, but – unlike in Ezekiel – the sanctity of the city of the Temple is of a universal nature, which will be recognized by all the nations. The description of “the mountain of the House of the Lord” and “the House of the God of Jacob” as the place from which learning, justice, and peace will emanate to all the nations (Isa. 2:2–4; Micah 4:1–3) identifies the mountain and the house with Zion and Jerusalem. The chapters of consolation in the Book of Isaiah (40–66) contain an abundance of expression of fervent love for Zion and Jerusalem, on the one hand, and descriptions of its future greatness and splendor in a hyperbolic poetic style, on the other. When the universal character of the center of divine worship is emphasized (56:7; 66:18–21, et al.), there is no clear distinction between the Temple and the city. In the prophetic descriptions of the visionary Jerusalem and its history, there are numerous miraculous eschatological elements (Isa. 24:23; 27:13; 54: 11–12; Ezek. 47:1–12; Joel 4:2, 12–21; Zech. 12, 14).

[Samuel Abramsky and Jacob Liver]

In Halakhah

Because of its special holiness, Jerusalem is treated in the *halakhah* differently from other cities. “Jerusalem was not divided among the tribes” (i.e., there could be no permanent ownership of it), and thus even outside the field of the sacrifices and Temple services, there are several laws which do not apply to the city. In other walled cities a house which was not redeemed by the seller within one year of the sale remained in the permanent possession of the purchaser and did not revert to the seller in the Jubilee year; this law did not apply to Jerusalem (BK 82b; and see Ar. 9:6 and 32b; Z.M. Pineles, *Darkah shel Torah* (1861), p. 165). In Jerusalem it was also forbidden to rent houses to pilgrims; they were to be given lodgings gratis, and, according to Eleazar b. Simeon, it was even forbidden to rent beds (Tosef. Ma’as. Sh. 1:12; see S. Lieberman *Tosefta ki-Feshutah*, 2 (1955), 722ff.). Indeed, it was customary for the residents to vacate their homes (ARN¹ 35, 104, cf. Tosef. Suk. 2:3) for which service they received the skins of the sacrificial animals (Tosef. Ma’as. Sh. 1:13). These special laws clarify the Mishnah: “No one ever said ‘The place is too confined for me to lodge in Jerusalem’” (Avot. 5:5; Yoma 21a).

The laws of the **eglah arufah* (“broken-necked heifer”), the *ir ha-niddahat* (“town to be destroyed for idolatry”), and “plagues in buildings” did not apply to Jerusalem (BK 82b; cf. Tosef. Neg. 6:1). The first law requires the elders of the city nearest to a murder victim to decapitate a heifer in a ceremony whose purpose is twofold: to disclaim responsibility for the crime and to expiate the defilement of their land incurred by the blood spilt (Zev. 70b). But this law does not apply to Jerusalem because its citizens do not own the city’s land, and they do not belong to one tribe. A city which had

gone over completely to idolatry had to be totally destroyed because the sins of the people were conceived of as being visited in their property, as was also the understanding of the phenomenon of “leprosy in buildings.” Thus these laws did not apply to Jerusalem, which could not be punished for the sins of its inhabitants.

A whole series of *halakhot* were intended to remove from Jerusalem anything which would increase ritual impurity. Therefore no trash heaps were allowed which could produce insects, nor was it permissible to raise chickens which peck at trash heaps (BK 82b; but see Eduy. 6:1). Places of burial were allowed only outside the walls of Jerusalem; in addition no existing graves were maintained in Jerusalem “except for the graves of the House of David and the grave of Huldah the prophetess which have been there from the times of the early prophets” (Tosef. Neg. 6:2). When there was a funeral procession (Sem. 10), the remains of the deceased were not taken through the city (Tosef. Neg. loc. cit., and see S. Lieberman, *Tosefet Rishonim*, 3 (1939) 190). In particular, the prohibition against leaving a corpse in Jerusalem overnight was strictly enforced, except for the honor of the deceased (BK 82b; Sifra, Be-Ḥukkotai, 6:1).

During the pilgrim festivals the laws of impurity were relaxed in Jerusalem; food and drink of the *am ha-arez* were then considered ritually clean, and an *am ha-arez* was believed if he said that he had not touched an earthen vessel, for during the festivals everyone was considered a *haver* (Ḥag. 26a; Yad, Metamei Mishkav u-Moshav 11:9). It seems, however, that at the end of the Second Temple period the opposition to excessive restrictions also increased: “On one occasion they found (human) bones in the wood chamber, and they desired to declare Jerusalem unclean. Whereupon R. Joshua rose to his feet and exclaimed: Is it not a shame and a disgrace that we declare the city of our fathers unclean!” (Zev. 113a; Tosef. Eduy. 3:3).

A regulation intended to enlarge the building area within Jerusalem can be seen in the *halakhah* which says of Jerusalem that “It may neither be planted nor sown nor plowed... and trees are not put in it, except for the rose garden which existed from the time of the early prophets” (Tosef. Neg. 6:2; BK 82b). The rose garden – like the graves of the House of David and Huldah the prophetess – is a remnant of a period when these *halakhot* were not in force. Possibly the same reason explains both, namely, the desire to prevent the reduction of available land for expanded housing facilities necessary to accommodate a growing population in the city and lodging places for pilgrims. According to the *halakhah* the area of the city itself may be enlarged only under special conditions: “Additions are not made to the city [of Jerusalem], or to the Temple compartments except by king, prophet, *Urim and Thummim [Oracle], a Sanhedrin of 71, two [loaves of] thanksgiving, and song; and the *bet din* walking in procession, the two loaves of thanksgiving [being borne], after them, and all Israel following behind them.” (Shevu. 14a; and see Sanh. 1:5). During the Second Temple period there was no Urim and Thummim. Abba Saul relates that the area of Jerusalem was enlarged only twice

(Tosef. Sanh. 3:4; TJ, Sanh. 1:5, 19b, TB, Shevu. 16a). It is perhaps possible to explain the *halakhah* that a foreign resident is not allowed to live in Jerusalem in terms of demographic policy (Tosef. Neg., 6:2). Even if security is posited as the reason for this law, it is not, however, necessary to date it to the period of the war with Rome.

That Jerusalem, as a meeting place for pilgrims, was also a place of business, is likewise reflected in the *halakhah*. The rabbis decreed that in Jerusalem the hour must be recorded on legal documents insofar as many documents were written by one person on the same day for people who did not know each other. Thus it was important to know whose document was written first (Ket. 10:4). A location known as “*even ha-to’an*” (“depository stone,” BM 28b; see Yad, Gezeleh va-Avedah 13:1) was especially set aside in Jerusalem for announcing and claiming lost articles.

Jerusalem was also noted for its customs, some of which were related to its special nature as a city of pilgrims. R. Simeon b. Gamaliel said: “There was a great custom in Jerusalem: A cloth was spread over the doorway. As long as the cloth was spread the guests could enter; when the cloth was removed from the doorway the guests were not permitted to enter.” According to R. Samuel b. Meir (Rashbam), this refers apparently to uninvited guests who happened to be in the city for the festival and “who knew that they could eat there and they would go there to eat” (BB 93b; see Tosef. Ber. 4:9; S. Lieberman, *Tosefta ki-Feshutah*, 1 (1955) 62f.). It is related of the dignitaries of Jerusalem themselves that “not one of them would go to a meal until he was invited, and not one of them goes to a meal until he knows who dines with him” (Lam. R. 4:4, Sanh. 23a). The different types of food were illustrated on the tablecloth “because of the fastidious people, so that none of them should eat something harmful” (Lam. R., loc. cit.).

People of integrity in Jerusalem would not sign documents unless they knew who the joint signatories were. They did not sit in judgment unless they knew who sat with them (Sanh. 23a; see *ibid.*, 30a). When the Torah Scroll was removed from the ark or returned to it they would walk behind it in respect (Sof. 14:14). There was a custom in Jerusalem to educate the boys and girls to fast on fast days. When a boy was over 12 years old “they used to bring him before every priest and elder in order to bless him, to strengthen him, and to pray for him” (*ibid.*, 18:5).

R. Eleazar b. Zadok testified that in Jerusalem there were groups of people who volunteered to carry out specifically those commandments between man and his neighbor. Some attended engagement festivities, others marriage feasts, others festivities surrounding the birth of a child or circumcisions, while still others gathered bones (of the dead). “Some went to the house of celebration, others to the house of the mourner” (Tosef. Meg. 4:15). The laws concerning the festivals were prominently and elaborately observed in Jerusalem. Wherever they went on Sukkot, the people of Jerusalem did not leave their *lulavim* behind (Tosef. Suk. 2:10, Suk. 41b). They used to bind the *lulav* with chains of gold (Suk. 3:8). There was

no courtyard in Jerusalem which was not lit up by the light of the water-drawing festival (*ibid.* 5:3).

Even after its destruction, Jerusalem retained its holiness, and special *halakhot* continued to be observed. The second tithe is not separated in Jerusalem since it is now forbidden to redeem it (Yad., Ma’aser Sheni 2: 1–4). When praying, one is obligated to face Jerusalem, and if he “stands in Jerusalem he should turn his heart toward the Temple” (Ber. 30a). Entrance to the Temple Mount itself is forbidden because of ritual impurity; one who comes to pray may approach only as far as the Temple Mount. The obligation of making pilgrimage to Jerusalem remained in force, but in addition one is obliged to mourn the destruction of the city. Besides the fasts and the established days of mourning, and especially the Ninth of Av, one is forbidden to eat meat or drink wine on any day in which he sees Jerusalem in its destruction (Tosef. Ned. 1:4). One who does see Jerusalem in its destruction says: “Zion has become a wilderness, Jerusalem a desolation” (Isa. 64:9) and rends his garment. One who rends his garment for Jerusalem should not rend it further for the other cities of Judah (MK 26a). One should really mourn the destruction of Jerusalem every day and in every place; it is, however, impossible to mourn too much. “The sages have therefore ordained thus. A man may whitewash his house, but he should leave a small area unfinished in remembrance of Jerusalem. A man may prepare a full-course meal, but he should leave out an item of the menu in remembrance of Jerusalem. A woman may put on all her ornaments except one or two, in remembrance of Jerusalem” (Tosef. Sot. 15: 12–14; BB 60b).

[*Encyclopaedia Hebraica*]

In the Aggadah

The many aggadic statements about Jerusalem may be divided into three classes: those dealing with the Jerusalem of historical reality from its capture by David until the destruction of the Second Temple, statements and homilies about the Jerusalem that preceded and followed this historical city, and those dealing with the “ideal” Jerusalem of the Messianic age.

THE HISTORIC CITY. L lavish are the praises of Jerusalem in the *aggadah*, which invest it with all desirable qualities and virtues. There is no beauty like that of Jerusalem (ARN¹ 28, 85). Of the ten measures of beauty that came down to the world, Jerusalem took nine (Kid. 49b). A man who has not seen Jerusalem in its splendor has never seen a beautiful city in his life (Suk. 51 b). Even Jerusalem’s lack of delicious fruit and hot springs was turned into grounds for praise: “R. Isaac said: Why are there no fruits of Ginnosar in Jerusalem? So that the festival pilgrims should not say: ‘Had we merely made the pilgrimage to eat the fruits of Ginnosar in Jerusalem, it would have sufficed for us,’ with the result that the pilgrimage would not have been made for its own sake. Similarly R. Dostai b. Yannai said: Why are the hot springs of Tiberias not in Jerusalem? So that the festival pilgrims should not say: ‘Had we merely made the pilgrimage to bathe in the hot springs of Tiberias, it would have sufficed for us,’ with the result that the

pilgrimage would not have been made for its own sake” (Pes. 8b; and see Sif. Num. 89).

Extravagant accounts were given of the size of Jerusalem, and the numbers of its inhabitants were magnified in order to glorify it (Lam. R. 1: 1 no.2). According to R. Hoshaiiah, there were 480 synagogues in Jerusalem, each including a school for the study of the Bible and another for the study of the Mishnah (TJ, Meg. 3: 1, 73d), and in addition there were 394 *battei din* (Ket. 105a). Jerusalem was known by 70 names, all expressions of affection and esteem (Ag. Song 1:1, line 125ff.), as well as by the Name of the Holy One blessed be He (BB 75b). Among the ten miracles wrought in Jerusalem are: “No person was stricken in Jerusalem, no person ever stumbled in Jerusalem, no fire ever broke out in Jerusalem, no building ever collapsed in Jerusalem” (ARN¹ 35, 103).

The people of Jerusalem were renowned for their wisdom: “R. Yose said: Wherever a Jerusalemite went, they would spread out for him a soft seat and place him on it in order to hear his wisdom”; the Midrash tells a number of stories about Athenians who came to Jerusalem and were impressed by the wisdom of the people and about Jerusalemites who went to Athens and surprised its inhabitants by their wisdom (Lam. R. 1:1 nos. 4–14). The people of Jerusalem were of distinguished birth and those of other places sought to marry them. “A provincial who married a woman from Jerusalem gave her her weight in gold, and a Jerusalemite who married a woman from the province was given his weight in gold” (Lam. R. 1–2, no. 2). The Jerusalemites were distinguished for their beauty (BM 84a: “R. Johanan said, I am the only one remaining of Jerusalem’s men of outstanding beauty”). There are many references to the pleasant customs of “the nobility of Jerusalem and of the gentle-minded in Jerusalem” (Lam. R., *loc. cit.*). The inhabitants of Jerusalem were granted atonement for their sins daily (PDRK, ed. Buber, 55b).

These statements reflect the views of the sages about Jerusalem and its people during the period of the Second Temple, and in their light they considered the reason for its destruction. Some sages declared: “We find that the First Temple was destroyed because they were guilty of practicing idolatry and incest, and of shedding blood, which applied to the Second Temple too” – and this despite all the qualities for which the Jerusalemites were praised. On the other hand, Johanan b. Torta maintained “... but in the Second Temple period we know that they studied the Torah, were strictly observant of the *mitzvot* and of the tithes, and every kind of good manners was found among them, but they loved money and hated one another without cause” (TJ, Yoma 1:1, 38c; TB, Yoma 9b). As an illustration of causeless hatred there is the story of *Kamza and Bar Kamza given by R. Johanan as the cause of the destruction of Jerusalem (Git. 55b), which was also blamed explicitly on a deterioration in relations between men (BM 30b: “Jerusalem was only destroyed... because they based their judgments [strictly] on the letter of the law and did not go beyond its requirements.”). This line was followed by other *amoraim* (Shab. 119b: “Jerusalem was destroyed only because the small and the

great were made equal... because they did not rebuke one another... because scholars were despised in it...”), while others laid the blame at the door of man’s transgressions toward God (“because the Sabbath was desecrated in it... because the reading of the *Shema* morning and evening was neglected”; *ibid.*). Although here proofs are deduced from biblical verses, the reference is to the destruction of Jerusalem in general and not specifically to that of the First Temple.

THE EXTRA-HISTORICAL CITY. The history of Jerusalem begins with an *aggadah* on the creation. “At the beginning of the creation of the world the Holy One blessed be He made as it were a tabernacle in Jerusalem in which He prayed: May My children do My will that I shall not destroy My house and My sanctuary” (Mid. Ps. to 76:3). Eliezer b. Jacob held that Adam offered a sacrifice “on the great altar in Jerusalem” (Gen. R. 34:9). According to one view Adam was created from a pure and holy place, the site of the Temple (PDRK 12; Gen. R. 14:8; TJ, Naz. 7:2, 56b: “he was created from the site of his atonement”), while another maintained that all the world was created from Zion (Yoma 54b).

In an extension of the vision of Isaiah (2:2) “that the mountain of the Lord’s house shall be established as the top of the mountains, and shall be exalted above the hills,” Jerusalem is pictured by a Diaspora Jew of the second century B.C.E. as “situated in the center of the land of Judah on a high and exalted mountain” (*Letter of Aristeeas*, 83). In a *baraita*, the view of the Temple as the highest place is connected with the verse (Deut. 17:8): “Then shalt thou arise, and get thee up unto the place which the Lord thy God shall choose,” which shows that the Temple is higher than the rest of Erez Israel, and Erez Israel than all other countries (Kid. 69a). Associated with this description of the Temple and Jerusalem is the idea that the place is also the center of the world and the *tabbur ha-arez* (“the navel of the earth”), a well-known Greek concept. Philo also described Jerusalem “as situated in the center of the world” (*Legatio ad Gaium*, 294), and Josephus states that Judea “stretches from the River Jordan to Jaffa. The city of Jerusalem lies at its very center, and for this reason it has sometimes, not inaptly, been called the ‘navel’ of the country” (Wars, 3:51–52). This idea is also found in the Midrash: “As the navel is set in the middle of a person, so is Erez Israel the navel of the world, as it is said: ‘That dwell in the navel of the earth’ [Ezek. 38: 12]. Erez Israel is located in the center of the world, Jerusalem in the center of Erez Israel, the Temple in the center of Jerusalem, the *heikhal* in the center of the Temple, the ark in the center of the *heikhal*, and in front of the *heikhal* is the even *shetiyyah* [‘foundation stone’] from which the world was started” (Tanḥ. B., Lev. 78; and see Sanh. 37a; Song R. 7:5 no. 3). The antiquity of this *aggadah* is attested by a parallel in the Second Book of Enoch (23:45; Cahan’s edition) in which the metaphor “the navel of the earth” is connected with the site of Adam’s creation (“And that Melchizedek will be priest and king in the place of Araunah saying, In the navel of the earth where Adam was created...”). These *aggadot* and oth-

ers like them make Jerusalem the place where the decisive events in man's history, as recounted in the book of Genesis, occurred (see Gen. R. 22:7; *PdRE* 23, 31). The identification of Mount *Moriah, on which Solomon built "the house of the Lord" (II Chron. 3:1), with "one of the mountains" in the land of Moriah, on which Abraham bound Isaac on the altar, pre-dates the special holiness of Jerusalem and its choice as the site of the Temple to before David's capture of the city, and connects this with the promise given to the patriarch Abraham. To the name by which it is first mentioned, Salem ("peace" or "perfection," Gen. 14: 18) was added *yirah* ("reverence," in Gen. 22: 14) after the *Akedah*, both combining to form the name Jerusalem (Gen. R. 56:10).

The designation, "daughter of Zion," which is often used in the Bible to refer to the people of Israel, presumes the metaphor of Jerusalem as the mother, and this is also found in the apocryphal and apocalyptic literature (IV Ezra 10:7; I Bar. 4:9; II Bar. 3:1), as well as in Midrashim (*PR* 26:131b; *Yal. Mak.* on Ps. 147:2, no. 4 in the name of the Tanh.). The term "mother" had a special significance for Hellenistic Jewry: in referring to Jerusalem as the "metropolis," they expressed the idea that the Diaspora communities were settlements founded on the initiative of the mother city, Jerusalem (Philo, *In Flaccum*, 45–46; *Legatio ad Gaium*, 281). But in the *aggadah* the term metropolis had a different connotation. Of Jerusalem, the "navel" of the earth and the light of the world (Gen. R. 59: 5), R. Johanan said that "it is destined to become the metropolis of all countries" (Ex. R. 23:10), and in the future all nations would be "daughters of Jerusalem" (Tanh. B. Deut. 4).

THE IDEAL JERUSALEM. The statements of the sages on the Jerusalem of the future are for the most part connected with and based on prophetic visions on this subject. Through close scrutiny of every detail of these visions and by accepting every metaphor and parable as factual, they wove fanciful and extravagant legends. Some, however, not content with inferences from biblical passages, added their own ideas. It is an aggadic tradition, said Samuel b. Nahmani, that "Jerusalem will not be rebuilt until the exiles are gathered in, and if anyone tells you that the exiles have gathered together but Jerusalem is not rebuilt, do not believe it" (Tanh. No'ah 11). In time to come God will rebuild Jerusalem and never destroy it (*ibid.*), and it will be rebuilt with fire (TJ, Ber. 4:3, 8a). In the future, said R. Johanan, the Holy One, blessed be He, will raise Jerusalem by three *parasangs* (BB 75b); "Jerusalem will be extended on all sides and the exiles will come and rest under it," and it will reach the gates of Damascus (Song R. 7:5 no. 3). Simeon b. Lakish said, "The Holy One, blessed be He, will in days to come add to Jerusalem more than a thousand gardens and a thousand towers" (BB 75b; Mid. Ps. to 48:13; and see Kohut, *Arukh*, 4 (1926), 24). In the future the Holy One, blessed be He, will bring forth living waters from Jerusalem and with them heal everyone who is sick (Ex. R. 15:21). The borders of Jerusalem in time to come will be full of precious stones and pearls, and Israel will come and take their jewels from them

(*PdRK* 137a). The Holy One, blessed be He, will build Jerusalem of sapphire stone "and these stones will shine like the sun, and the nations will come and look upon the glory of Israel" (Ex. R. 15:21). Simeon b. Gamaliel declared that "all nations and all kingdoms will in time to come gather together in the midst of Jerusalem" (*ARN*¹ 35, 106).

Jerusalem of the future is connected with the heavenly Jerusalem. The widespread concept of the heavenly Temple, which owes its origin to Isaiah's vision (Isa. 6), is the source of the aggadic idea of a heavenly Jerusalem (*Yerushalayim shel Ma'lah*). In an homiletical interpretation of the verse: "The Holy One is in the midst of thee, and I will not enter into the city" (Hos. 11:9), R. Johanan said, "The Holy One, blessed be He, declared, 'I shall not enter the heavenly Jerusalem until I can enter the earthly Jerusalem.' Is there, then, a heavenly Jerusalem? Yes, for it is written [Ps. 122:3]: 'Jerusalem, that art builded as a city that is compact together'" (Ta'an. 5a). Another homiletical interpretation stating that the heavenly Jerusalem is located directly opposite the earthly Jerusalem is derived from the verse (Isa. 49:16): "Behold, I have graven thee upon the palms of My hands; thy walls are continually before Me" (Tanh., Pekudei, 1), and this Jerusalem is in the heaven known as *zevul* (Hag. 12b). While the heavenly Temple was fully prepared before the world was created (Tanh. B., Num. p. 34), the heavenly Jerusalem "was fashioned out of great love for the earthly Jerusalem" (Tanh., Pekudei, 1). This distinction is unknown in apocalyptic literature. In the Syriac Apocalypse of Baruch (4:3) God says that the heavenly Jerusalem is "prepared beforehand here from the time when I took counsel to make paradise."

While apocalyptic literature (IV Ezra 10) and Paul (Gal. 4:26) stress the contrast between the heavenly and the earthly Jerusalem, the *aggadah* emphasizes their affinity. Thus, in time to come, it is stated in apocalyptic literature (I Enoch 90:28–29; IV Ezra 7:26, 10:54), the heavenly Temple and the heavenly Jerusalem will descend and be established in the place of the earthly Temple and earthly Jerusalem. "For in a place where the city of the Most High was about to be revealed no building work of man could endure." This view – adopted by the Christians, who repudiated the belief in a restoration of the earthly Jerusalem – was rejected by the *aggadah*, which states that the earthly Jerusalem will extend and rise upward until it reaches the throne of Divine Majesty (*PdRK* 143b; and see Tanh., Zav, 12; *PR* 41: 173a). It is only in later apocalyptic literature written in Muslim countries in the Geonic period that the idea reappears of the heavenly Jerusalem coming down to earth wholly built and entire (*Nistarot de-Rabbi Shimon bar Yoḥai* in *Beit ha-Midrash*, 3 (1938), 74f., 80; *Sefer Eliyahu*, *ibid.*, 67; see also Gen. Rabbati, ed. by H. Albeck, 131).

[*Encyclopaedia Hebraica*]

In the Liturgy

STATUTORY PRAYER. In the liturgy the Jew gave full expression to the vow taken "by the rivers of Babylon" – "If I forget thee, O Jerusalem, let my right hand forget her cunning" (Ps.

137: 5). The mention of Jerusalem was obligatory in all the statutory prayers, and it is largely used (together with Zion) as a synonym for Erez Israel as a whole (in point of fact, references to Erez Israel are rare). The most important of the many references is the 14th blessing of the daily **Amidah*, which is entirely devoted to Jerusalem. It begins, “And to Jerusalem thy city return in mercy... rebuild it soon in our days” and concludes, “Blessed art thou, O Lord, who buildest Jerusalem.” On the Ninth of Av a moving prayer of comfort to “the mourners of Zion and the mourners of Jerusalem” and for the rebuilding of the city (called *Nahem* after its opening word) is added to this blessing in the *Amidah* of *Minḥah*, and the concluding blessing is changed to “who comfortest Zion and rebuilddest Jerusalem.” The first of the last three blessings (common to all the *Amidot*), an invocation for the restoration of the sacrificial system, concludes with the words “and may our eyes behold thy return in mercy to Zion. Blessed art thou, O Lord, who restorest thy Divine Presence unto Zion.” The same combination of prayer for Jerusalem with the hope for the restoration of the Divine Service in the Temple is the theme of the fourth blessing of the *Musaf* on the New Moon and festivals (the Sabbath *Musaf* refers to the return to “our land”), while the **Ya’aleh ve-Yavo* prayer includes one for “the remembrance of Jerusalem thy holy city.” The third benediction of the Grace after **Meals*, largely devoted to Jerusalem, includes a prayer for Jerusalem, Zion, the restoration of the Davidic dynasty, and the rebuilding of the Temple. It concludes with the same benediction as the 14th blessing of the *Amidah*, with, however, the addition of the word meaning “in thy mercy.”

The *Lekhah Dodi* hymn is an impressive example of the longing for Jerusalem as it found its expression in the liturgy. Designed as a hymn of welcome to “Princess Sabbath,” no less than 6 of its 9 stanzas are devoted, explicitly or implicitly, to the yearning for Jerusalem.

IN PIYYUT. The theme of Jerusalem figures prominently in **piyyut*, but its implications and frame of reference are greatly extended. Whereas in the statutory prayers the theme is confined to the actual Jerusalem, in the *piyyut* Jerusalem is also the embodiment of an idea: it is a symbol of Israel’s glorious past and her hopes for the future, an image of the heavenly Jerusalem whose gates directly correspond to those of the temporal Jerusalem. The various biblical names for Jerusalem are found in the *piyyut*, as well as new names suggested by the context in which Jerusalem appears in the Bible. There are hundreds of relevant *piyyutim* and many were adopted in the *maḥzorim*, *kinot*, and *seliḥot* of the various rites. If Jerusalem was the “chiefest joy” of Israel when it dwelt in its own land, after the Exile, the deprivation from it became the “chiefest mourning.” It is thus the theme of *piyyutim* on occasions of joy, such as weddings; of sadness, as in the *kinot* of the Ninth of Av; and of solemnity, such as the *seliḥot*. One of the earliest of such *piyyutim* for marriages is the *silluk* of Eleazar **Kallir*, *Ahavat Ne’urim me-Olam* (M. Zulai, in: *Sinai*, 32 (1942/43), 52–54), which contains the following stanza:

שמחו את ירושלים בשמחה
וגילו בה בהצלחה ורוחה
כי לעד לא יזניחנה
ולא לעולם לנצח יאניחנה

Gladden Jerusalem with gladness
And rejoice in her with deliverance and well-being,
For He shall not neglect her forever,
Nor shall He eternally abandon her to sighing.

The theme (of joy) is common to all such *piyyutim* in honor of the bridegroom. One of the best constructed *piyyutim* on Jerusalem is included in the *seliḥot* for the third day of the Ten Days of Penitence according to the Lithuanian custom. It is a 22-stanza abecedarius, beginning with the verse:

ירושלים את ה' הלל דגול מרבבות

Jerusalem, praise the Lord, distinguished among myriads

Each strophe starts with the word Jerusalem, followed by the alphabetical acrostic word, and concludes with a biblical quotation in which the last word is Jerusalem. The *piyyutim* of **Ne'ilah* for the Day of Atonement include both the stanza from the *Avadnu me-Erez Hemdah* of R. **Gershom b. Judah* of Mainz (Davidson, *Ozar*, 1 (1924), no. 86):

העיר הקודש והמחוזות
היו לחרפה ולביזות
וכל מקמדיה טבועות וגנוזות

The Holy City and its environs
Have been shamed and disgraced
And all her glories engulfed and plunged into oblivion.

and the acrostic poem of **Amittai b. Shephatiah* of the tenth century in Italy (*ibid*, no. 2275) beginning:

אזכרה אלהים ואהמיה
בראותי כל עיר על תלה בנויה
ועיר האלהים מושפלת עד שאול תחתיה

I remember, O God, and lament
When I see every city built on its foundation
And the City of God degraded to the nethermost pit.

Almost every *paytan*, whether of Erez Israel (e.g., Yannai, Kallir, **Yose b. Yose*) or of the Diaspora (e.g., **Saadia b. Joseph Gaon*, Abraham **Ibn Ezra*, Joseph b. Abraham **Gikatilla*) composed a *piyyut* on this theme. Each expressed his praise and longing for Jerusalem. Kallir calls it “the city of strength”; Saadia sees “the streets of the city full of rejoicing”; Ibn Ezra sings of the “beloved Zion”; a *paytan* called Isaac refers to it as “Jerusalem the Crown of Glory”; Abraham b. Menahem as “the joyous city”; while for Israel b. Moses **Najara*, in his well-known Aramaic table hymn, *Yah Ribbon*, it is “the best of all cities.”

In his love songs which express passionate yearning for Jerusalem, **Judah Halevi* excels over all others and earned the title “the Singer of Zion.” His famous *Ziyyon Ha-Lo Tishali*, included in the *kinot* for the Ninth of Av, gave the lead to the *kinot* which are called “Zionides” because they commence with the word Zion. In the Ashkenazi *kinot* alone there are seven such *piyyutim*, but Davidson lists some 60 (3 (1930),

nos. 277–322). Jerusalem to Judah Halevi is “beautiful of elevation, the joy of the world, the capital of the great king” (*ibid.*, 2 (1929), no. 3354; all references below are to Davidson). It is “the site of the throne of the Messiah” and “the footstool of God” (*ibid.*, no. 998); the “city of the universal God” (*ibid.*, no. 3860). Ezekiel’s mention of the two sisters “Oholah the elder, and Oholibah her sister” – personifications of Samaria and Jerusalem (23:4) – became a fruitful theme for the *paytanim*, often in the form of a dialogue between them (cf. Kallir, *ibid.*, 1 (1924), no. 1721 and 2 (1929), no. 789). The *piyyut* on this theme by Solomon ibn *Gabirol, *Shomeron Kol Titten* (3 (1930), no. 686) is included in the *kinot* of the eve of the Ninth of Av in the Ashkenazi rite. Jerusalem and Samaria engage in a dialogue; the former maintains that the destruction of the Temple is the cruelest possible blow; Samaria retorts that at least the descendants of Judea still exist, while hers are lost. Oholibah answers that the repeated persecutions and exiles have been worse than death. The *piyyut* ends with the prayer, “Renew our days of old, as thou didst say, ‘The Lord will rebuild Jerusalem.’”

Another recurring motif is the contrast between “my departure from Egypt” (from bondage to freedom) and “my departure from Jerusalem” (from freedom to bondage). There are *piyyutim* with this refrain by, among others, David b. Samuel ha-Levi (1 (1924), no. 5634), *Ephraim b. Jacob (*ibid.*, no. 2487), and David b. Aleksandri (*ibid.*, no. 2298), and an example can be seen in the *Esh Tukad be-Kirbi* included in the *kinot* of the Ninth of Av in the Ashkenazi rite.

The poems and *piyyutim* on Jerusalem, although individual compositions, express the longings and love of the whole Jewish people. Their inclusion in the various rites clearly testifies that throughout the ages Jerusalem continued to be at the very center of the Jews’ emotions and cultural heritage.

After the establishment of the State of Israel, and especially after the 1967 Six-Day War, there was a growing feeling that the *piyyutim* on Jerusalem which emphasize its utter destruction and desolation should no longer be recited. Similarly a revised version of the *Naḥem* prayer, based on variants, particularly the Palestinian version which begins *Raḥem*, composed by E.E. Urbach, is recited in some synagogues.

[Abraham Meir Habermann]

In Kabbalah

According to *Baḥya b. Asher, the dual ending of the Hebrew word for Jerusalem (*Yerushalayim*) indicates that there is a heavenly Jerusalem corresponding to the earthly Jerusalem (see Aggadah: above). It contains a “holy palace and the prince of the Presence is the high priest” (commentary on *Sefer ha-Komah*). Following the *aggadah*, the Holy Land is the center of the world and in its center is Jerusalem, whose focal point is the Holy of Holies. All the good in the world flows from heaven to Jerusalem, and all are nourished from there (Zohar, 2:157a; Joseph Gikatila, *Sha’arei Orach*, ch. 1; *Emunah u-Vittahon*; Naḥmanides, commentary on Gen. 14: 18, 28; 17, etc.). Jerusalem therefore symbolizes the lowest *Sefirah*, *Mal-*

khut (“kingdom”), which mainly rules over the world. The mystical drama behind the history of Jerusalem is expressed in various essays: Ḥayyim *Vital, for example, interpreted the war between Tyre and Jerusalem as a battle between impurity and holiness. Jerusalem is surrounded by mountains so that the forces of the *sitra aḥra* (“the left side,” the demonic powers) cannot penetrate it (*Sefer ha-‘Temunah*), and the angels of the *Shekhinah* are the guardians of the walls (Zohar, 2:89b, 240b). According to Naḥmanides and Baḥya, Jerusalem is therefore especially suitable for prophecy and its inhabitants have a “superior advantage,” for “no curtain separates it [Jerusalem] from God” (*Reshit Hokhmah*) and He wishes to be worshiped there. The prayers of all Israel rise to heaven via Jerusalem, which is the gateway to the heavens (Isaiah *Horowitz, *She-nei Luḥot ha-Berit*). The walls of Jerusalem will eventually approach the Throne of Glory (Zohar, 3:56a) and then there will be complete harmony in the realm of the *Sefirot*.

As the messianic belief did not occupy a special position in Spanish Kabbalah, Jerusalem did not attain a particular status beyond the customary mystical-symbolic homiletic interpretations. After the expulsion from Spain (1492), there is evidence of a preference for Safed over Jerusalem (*Ḥesed le-Avraham* (Vilna, 1877), 25b). For a change in a later period see *Emek ha-Melekh* (Amsterdam, 1648, 116c). The Messiah will first reveal himself in Galilee and then will go up to Jerusalem. Jerusalem also appears in the following apocalyptic works: *Sefer Eliyahu*, *Pirkei Mashi’ah*, *Nistarot de-Rabbi Shimon bar Yoḥai* (Jellinek, *Beit ha-Midrash*, 3), and *Ma’aseh Dani’el* (*ibid.*, 5).

Until the 16th century, only a few kabbalists lived in Jerusalem. They included *Jacob Nazir of Lunel, Naḥmanides, Judah *Albotini, *Abraham b. Eliezer ha-Levi, Joseph ibn Ṣayyaḥ, Ḥayyim Vital, and scholars who bore such pseudonyms as R. Nahorai, R. Ḥanuniah, Mazli’ah b. Pelatiah, and others. However, from the 17th century on, many kabbalists were attracted to Jerusalem, including entire groups, like those around Jacob *Zemaḥ, Meir *Poppers, and Gedaliah Ḥayon. Shabbateans especially, such as *Rovigo, *Judah he-Ḥasid, Ḥayyim *Malakh, and others tended to look toward Jerusalem. Even the author of **Ḥemdat Yamim* wrote as if he lived in Jerusalem. Of special note is the *bet midrash*, Bet El, founded by Shalom *Sharabi, which served as a center of Kabbalah in the East for 150 years. Its students excelled in asceticism and in prayer according to Lurianic meditations (*kavvanot*).

[Moshe Hallamish]

In Modern Hebrew Literature

HASKALAH. The historical perspective with which most of the *Haskalah literature invested Jerusalem gave the city a sense of reality if not immediacy. The *maskil*, though he wanted to assimilate into European culture, also tried to preserve his historical identity; he thus not only recalled his ancient past but vivified it. The yearning for the past glory of Israel was, however, a nostalgia for the almost irretrievable. Thus one of the major trends in the Haskalah, not unlike Euro-

pean literature in this respect, was a harking back to a "Golden Age." This, however, was not born out of a desire to return to the Land of Israel, which was only to grow strong much later in the wake of disappointment with the Enlightenment.

Haskalah literature not only celebrated the glory of ancient Jerusalem but also lamented the Jerusalem laid waste, the bondage, and the Exile. Two of the earliest Hebrew Haskalah writers, Ephraim and Isaac *Luzzatto, celebrated the glories of Israel's past; their panegyrics were interwoven with a strain of infinite longing to be echoed later by Micah Joseph *Lebensohn (Mikhal). Jerusalem also figured prominently in the rational allegorical strain in Haskalah writings, e.g., *Emet ve-Emunah* ("Truth and Faith"; in *Kol Kitvei Adam u-Mikhal*, 3 (1895)) by A.B. *Lebensohn, where the city is the seat of wisdom. Against the symbolic landscape of Jerusalem, Micah Joseph Lebensohn wrote a number of semi-epical poems: *Shelomo ve-Kohelet*, *Moshe al-Har Avarim*, and *Yehudah Halevi*. In *Moshe al-Har Avarim* Moses stands on Mount Avarim and "his eye is turned toward Jerusalem." Judah Halevi is depicted as journeying to the Land of Israel, where he meets with desolation and ruin. Standing before the gates of Jerusalem the medieval poet falls into a trance and sees the host of the dead of Zion pass before his eyes. The modern poet thereby gives a kaleidoscopic view of the woeful legions of the Jews who died for Jerusalem and Zion.

Ahavat Ziyyon ("Love of Zion," 1853) is a colorful pageant of the ancient past. Sensitively imitating the speech of biblical Hebrew, the author captured the rhythm of life of the ancient Hebrews. Divested of any mythical analogies, symbols, or nostalgia, his graphic rendering of life in Judah, where Jews were free in their own homeland, stirred the hearts of a ghetto generation. While Jerusalem in the novel is the backdrop of the action, it is also the symbol of the Haskalah, a harmonious reconciliation between beauty and morality. Mapu also mourned the ruin of Jerusalem, which is the leitmotif of *Ayit Zavua* ("The Painted Vulture," 1857), a savage attack on Jewish obscurantism, whose butt is Lithuanian Jewry. Jerusalem, seen through the eyes of one of the characters who sits on Mount Zion contemplating its desolation, is described with an immediacy seldom found among Haskalah writers.

Judah Leib *Gordon, a later Haskalah writer, expressed his love of Zion more directly than other maskilim and in this sense is as much a writer of the renaissance period as of the Haskalah. Though he never joined Hibbat Zion and had misgivings about the return of the Jews to their ancient homeland, 20 years before the movement's inception Gordon wrote *Al Har Ziyyon she-Shamam* (1862; in *Kitvei Yehudah Leib Gordon* (1953)) urging the people to rebuild Zion. Among his poems on Jerusalem are *Ahavat David u-Mikhal* ("The Love of David and Michal") and *Bein Shinmei Arayot* ("Between the Teeth of the Lions"), an epic poem on the war between Judea and Rome. The theme of the latter, a people fighting for its liberty against overwhelming odds, is exemplified through the tragic story of a Jewish warrior who fought at the gates of Jerusalem, only to be taken captive to Rome and pitted against a lion in

the arena. The poet's anguish over a nation whose ancient glory is no more suffuses the poem.

RENAISSANCE PERIOD (1880–1947). In late Haskalah literature there is no clear distinction between belles lettres and writings of a social and publicistic nature. This division was effected in the renaissance period when issues vital to the Jewish community were in literary writing either subsumed to the aesthetic element or were so well integrated that their militancy was muted. The great poets of the time, such as H.N. Bialik and S. Tchernichowsky, excluded the Zionist issue from most of their works. Thus the Zionist poets of the renaissance movement are not the literary giants of modern Hebrew literature but minor bards such as M.M. *Dolitzki, who wrote reams of poetry on Jerusalem, most of which is sentimental and trite. A minor poet, N.H. *Imber, is remembered by virtue of his poem "*Ha-Tikvah*" (about 1876).

Jerusalem features prominently in the historical dramas of the period, some of which were a continuation of the allegorical-biblical literature of the Haskalah. In J.L. *Landau's *Aharit Yerushalayim* ("The Last Days of Jerusalem," 1886) the protagonists expound ideas about freedom and the glory of Israel.

Major writers of the later renaissance period (1920–47) returned to the theme of Jerusalem. Although some used it merely as an image, symbol, or backdrop for the development of their plot, they invested the city with a flesh and blood reality. J.H. *Brenner wrote a number of works against the background of Jerusalem, such as *Shekhol ve-Khishalon* ("Bereavement and Failure," 1920), in which he decries the Jerusalem of the *kolel* and *halukkah*, and *Mi-Kan u-mi-Kan* ("From Here and There," 1911). Some of Yaakov *Cahan's historical plays, *David Melekh Yisrael* (1921), the King Solomon trilogy, and others, are set in biblical Jerusalem. In *Aggadot Elohim* ("Legends of God," 1945), a saga of the Jewish people from the time of creation to the resurrection, Cahan strikingly describes the desolation of Jerusalem which at the same time he sees as a symbol of redemption. He also edited the anthology *Yerushalayim be-Shir ve-Ḥazon*.

Dramatists of the caliber of Mattityahu *Shoham also made Jerusalem the pervading motif of some of their works. The theme of *Zor vi-Yrushalayim* (1933) is a culture conflict expressed through the characters: Jezebel, Elijah, and Elisha. Jezebel is associated with Zor (Tyre), the center of Phoenician culture, the seat of idolatry identified with the flesh. Elisha, at first attracted to Jezebel, dissociates himself from her. Jerusalem symbolizes the ideal society, the rule of the spirit. Elisha's self-denial and resistance to the temptations of Jezebel is in contrast to an earlier tragic emphasis in Shoham where the Jewish protagonist is overpowered. While it is a play of high dramatic quality, it is not theatrical. The characters never become flesh and blood but remain symbolic or allegorical figures. *Ha-Ḥomah* ("The Wall," 1938), a drama by Aharon Ashman, is set in the time of Ezra and Nehemiah. Jerusalem merely serves as a background for the dramatic action. Na-

than (Bistriski) *Agnon's *Be-Leil Zeh* (1934), renamed *Leil Yerushalayim* ("Jerusalem Night," 1953), an impressionistic play in which the dialogue is fragmentary and the characters symbolic, dramatizes the crisis in modern Jewish history as manifested in the conflict between the conservative Jew who acquiesces in exile and the demand for redemption. While Jerusalem is the physical setting in many of these works, the city also functions as a symbolic landscape which forms the warp and woof of the play.

During this period of national revival much drama, prose, and poetry was written in which the theme of the return to Zion did not focus on Jerusalem, but rather on pioneering and the pioneer. Although the naturalistic and realistic schools did not take up Jerusalem as a motif, there were exceptions, among them Yehoshua *Bar-Yosef's *Be-Simtaot Yerushalayim* ("In Jerusalem Alleys," 1941), a dramatization of the tragic disintegration of a family. A conflict of generations and values, whose tragic "dissolution" is in madness, unfolds against the background of the timelessness of Jerusalem.

Yehuda *Karni in his Palestine period infused the individualistic motifs of his earlier poetry with a nationalistic theme in which Jerusalem is the eternal symbol of the Jewish people and the embodiment of its destiny. He thus deviated from the realistic trend prevalent in Palestine wherein Jerusalem was a backdrop to contemporary social problems. In his book of poems, *Shirei Yerushalayim* ("Songs of Jerusalem," 1944), the hopeless stagnation and decay of 20th-century Jerusalem against the canvas of its historical continuity is portrayed as ephemeral and transient.

A lyrical and personal note runs through Ya'akov *Fichmann's poems on Jerusalem, whose wistful mood expresses an undefined longing. The poet, like a prowler, stealthily surprises the city in its most intimate moments. Onto these he projects his own moods. In the sonnet "Jerusalem," Fichmann captures Jerusalem in a moment in which all of time is gathered and in which "Dead splendor rests on furrows of new life."

Jerusalem is central to a number of Shmuel Yosef *Agnon's works, especially to his major novels: *Ore'ah Natah Lalun* (1940; *A Guest for the Night*, 1968), *Temol Shilshom* ("The Days Before," 1946), and *Shirah* (1971), each of which treats the Jerusalem motif differently. The action in *Ore'ah Natah Lalun* is set in a small Galician town to which a traveler from Jerusalem, drawn by childhood nostalgia, has come to spend the night. The two main symbols in the work, the town's *bet ha-midrash* and Jerusalem, interact on a level beyond the immediate realistic scene. They are also interwoven into the surrealistic images, often producing a sense of eeriness and unreality. On every level of the story Jerusalem functions both as a real place in time and space and as a symbol. The surrealistic atmosphere of the town and the town itself have reality by virtue of the fact that Jerusalem in *Ore'ah Natah Lalun* has real existence. In *Temol Shilshom* Jerusalem also functions on several different levels; most of the action takes place in the city during the period of the Second *Aliyah. *Shirah* is set in the Jerusalem of the 1930s and describes, often satirically,

the life of German-Jewish and other intellectuals at The Hebrew University. Other works of Agnon in which Jerusalem is either the setting or the theme or functions as a symbol are: "*Tehillah*," *Sefer ha-Ma'asim* ("The Book of Deeds"), "*Ha-Mikhtav*" ("The Letter"), "*Iddo ve-Inam*," "*Ad Olam*" ("Forevermore"), and *Sefer ha-Medinah* ("The Book of the State"). The particular Yemenite milieu of Jerusalem has been dealt with by H. *Hazaz.

ISRAEL PERIOD. Uri Zvi *Greenberg's Jerusalem poetry belongs as much to the Mandatory period as to the period of statehood. The prophetic thunder and woeful liturgical laments are a consistent theme in his poetry. The poet, however, not only exhorts – he also dreams; and in *Mi-Sifrei Tur Malka* ("From the Books of Tur Malka") he sees the *Shekhinah* which has returned to Jerusalem and the celestial Jerusalem which comes down to the earthly city. In *Kelev Bayit* ("House Dog," 1928) Greenberg sees at the gates of Jerusalem a "miraculous horse" waiting for its rider. "Jerusalem the Dismembered," a dirge from the greater work *Yerushalayim shel Mattah*, bemoans the shame and desecration of the holy city. Despite its despair and sense of infinite loss and infinite horror, his Holocaust poetry is characterized by a leap of faith rather than a loss of faith in God. Out of the ashes he sees salvation and imagines the host of the martyred dead gathered in Jerusalem.

The theme of Jerusalem recurs less frequently in the literature of the 1950s which is concerned with the more immediate problems of the decade. At most it is a realistic landscape. Amos Elon's *Yerushalayim Lo Nafelah* ("Jerusalem Did Not Fall," 1948) is about the siege of Jerusalem in 1948 written by an eyewitness. Yet in the late 1950s a change occurred and the canvas of the dramatist as well as of the poet and prose writer extended.

Among the younger poets Yehuda *Amichai is probably the most representative. He used the Jerusalem motif in different time settings, contexts, and even mythical landscapes. The city seems to have a strong hold on him, a hold which he wants to break but cannot. In "*Ha-Kerav ba-Givah*" ("Battle for the Hill") he says he is going to fight that battle and then "I shall never return to Jerusalem" – but he does in "Jerusalem 1967." The "sea" of Jerusalem, a symbol found already in very early Hebrew poetry, is a recurring image in "Battle for the Hill" – "the sea of Jerusalem is the most terrible sea of all." Amichai's tendency to fuse historical and mythical landscapes with the present can perhaps best be seen in "If I forget thee Jerusalem" where he uses ancient themes to create new myths. His novel *Lo mi-Kan ve-Lo me-Akhshav* ("Not of This Time, Not of This Place," 1963) contains vivid descriptions of Jerusalem.

A.B. Yehoshua's Jerusalem in "*Sheloshah Yamim ve-Yeled*" ("Three Days and a Child"; in *Tishah Sippurim*, 1970) is an impressionistic yet realistic portrait of the city marked by a note of hostility which endows it with a personality as well as a landscape. The play *Laylah be-Mai* ("A Night in May," 1969) dramatizes the effect of the tension of May 1967 on a Jeru-

salem family; Jerusalem, however, is only incidental to the play. Another writer who has made Jerusalem the setting of many of his works is David Shaḥar: *Moto shel ha-Elohim ha-Katan* ("Death of the Little God," 1970), *Al ha-Ḥalomot* ("On Dreams," 1955), *Heikhal ha-Kelim ha-Shevurim* (1962), and *Maggid ha-Atidot* ("Fortune-teller," 1966), each of the four collections of short stories. Several authors have written historical novels in which Jerusalem is a central feature, such as Moshe Shamir's *Melekh Basar va-Dam* (1954; *King of Flesh and Blood*, 1958) and Aaron A. Kabak's *Ba-Mishol ha-Zar* (1937; *The Narrow Path*, 1968).

Other authors who have written on Jerusalem or used it as a setting include: Dov Kimḥi, *Emesh* ("Last Night," 1927) and *Beit Ḥefeẓ* (1951), novels; *Ezra Ha-Menaḥem, bein ha-Homot* ("Between the Walls," 1941); Y.D. Kamson, *Yerushalayim* (1950); Aaron Reuveni, *Ad Yerushalayim* (1954) and *Leylot Yerushalayim* (1957); Efraim and Menahem Talmi, *Sefer Yerushalayim* (1956), a miscellany; H. Brandwein, *Ba-Ḥazerot Yerushalayim* (1958); Pinḥas *Sadeh, *Ha-Ḥayyim ke-Mashal* (1968; "Life as a Parable") and *Al Mazzavo shel ha-Adam* ("On the Condition of Man," 1967), novels. *Mikha'el Shelli* ("My Michael," 1968), a novel by Amos Oz, is set in the Jerusalem of the period following the establishment of the State of Israel. Yizḥak Navon's play *Bustan Sefaradi* (1970), a dramatization of the author's childhood reminiscences, vividly portrays the Sephardi community in Jerusalem 40 years earlier. Yoram *Kaniuk tells the story of an Israeli soldier who is severely wounded during the War of Independence in his novel *Ḥimmo Melekh Yerushalayim* (*Himmo King of Jerusalem*, 1965), setting it in an old monastery transformed temporarily into a hospital. For Shulamith *Hareven, in her much-acclaimed novel *Ir Yamim Rabim* (*City of Many Days*, 1972), pre-State Jerusalem is a poetic and conceptual space in which people with different religious and cultural convictions try to shape life together. In her novel *Korot Hava Gottlieb* ("The Adventures of Hava Gottlieb," 1968), Miriam Schwarz sheds light on the tempestuous fate of a young woman from the Orthodox neighborhood of Me'ah She'arim who hopes to escape the fetters of strict religious life. Haim *Be'ér tells of a childhood among deeply religious Jerusalemites in his novels *Nozzot* (1979) and *Ḥavalim* (1998). Indeed, the dichotomy between a rigid religious life and the yearning for an emancipated, liberal way of living becomes an important theme in Hebrew novels written in the 1990s, many of which portray the hermetic world of religious people in Jerusalem (e.g., in novels by Yehudit Rotem, Mira Magen, Yisrael Segal).

Jerusalem is the setting of quite a number of contemporary novels, although Tel Aviv has become a popular backdrop for many novels (e.g., by Yaakov *Shabtai, Yoram Kaniuk, Etgar Keret), and Haifa has come to play an increasingly greater role in current Hebrew literature (e.g., in prose works by Abraham B. Yehoshua, Yehudit Katzir, Zeruya Lahav). Ariella Deem wrote *Yerushalayim mesaḥeket Maḥbo'im* (1977), Reuven Bar-Yosef *Zohorayim bi-Yerushalaim* ("Noon in Jerusalem," 1978), and Efrat Roman-Asher tells, in *Irushalem* (2003), the story of

the first baby born in the city after the Six-Day War, combining autobiographical elements with mystical undertones. Daniel Dothan tells the story of artists and dreamers in Jerusalem during the first half of the 20th century: Based upon historical and literary documents, his novel *Al Meshulash Hafukh bein Kan la-Yare'ah* (1993) brings together the German-Jewish poetess Else Lasker-Schüler, the sculptor Avraham Melnikov, the Hebrew poet Uri Zvi Greenberg, and others. Jerusalem is the city in which the German immigrant Bernhart tries to reorganize his life after the death of his wife, Paula, in Yoel Hoffmann's *Bernhart* (1989). The fact that Descartes' book was lost when the couple moved from the German colony to Strauss Street is no mere accident: it suggests the loss of "European" logic in a place in which the newcomers feel disoriented and forlorn. For dramatist Yehoshua *Sobol, in his controversial play *Sindrom Yerushalayim* (*The Jerusalem Syndrome*, 1987), Jerusalem becomes the quintessence of erroneous political decisions, a paradigm of Zionist ideology gone astray. More recently, Jerusalem is the backdrop for Zeruya Shalev's international bestseller *Ḥayei Ahavah* (*Love Life*, 1997). Amos Oz tells of a childhood in Jerusalem, of intellectuals and artists such as Agnon, Joseph Klausner, and Zelda, in his autobiographical novel *Sippur'al Ahavah ve-Ḥoshekh* (2002). Jerusalem as the arena of brutal terror attacks and, at the same time, a place of reconciliation and redemption, not least so in the Christian sense, is the setting for Abraham B. Yehoshua's modern Passion, his recent novel *Sheliḥuto shel ha-Memuneh al Meshabei Enosh* ("The Mission of the Human Resource Man," 2004).

IN OTHER RELIGIONS

In Christianity

Christian concern with Jerusalem involves the ancient concept of the city as a shrine of preeminent holiness, marking the physical and spiritual center of the cosmos, the spot at which history began and at which it will reach its apocalyptic consummation. The idea of an *umbilicus mundi*, a scale model, as it were, of the universe itself, at which a nation or tribe would gather periodically to renew its corporate life by the observance of the now familiar year-rites, was known to many ancient peoples, and the nations converted to Christianity had no difficulty accepting the supreme eschatological significance of Jerusalem and its Temple. The city's unique status, however, raised certain questions that have never ceased to puzzle and divide Christian theologians, namely: Just how literally are Jerusalem's claims and promises to be taken? How can the prized continuity (back to Adam) of the city's long history be maintained if Christianity is a completely new, spiritualized, beginning? How can Jerusalem be the Holy City par excellence without also being the headquarters of the Church? How can the city's prestige be exploited in the interests of a particular church or nation? These issues have all come to the fore in each of the main periods of Christian preoccupation with Jerusalem, namely: the "Golden Age" of the second and third centuries, the Imperial age from Constantine to Justin-

ian, the Carolingian revival, the Crusades, the period of intrigues and grand designs, the time of patronage by the great powers, and the rise of Israel.

IN THE SECOND AND THIRD CENTURIES. The question of literalism was paramount in the second and third centuries; the early Christians had been Jews of the apocalyptic-chiliastic persuasion with lively visions of a literal New Jerusalem, while an educated and growing minority (also among the Jews) favored a more spiritual interpretation of the biblical promises and accused the old-school Christians of superstition and “Judaizing.” The banning of Jews from the city by Hadrian gave an advantage to the gentile party, and the “Doctors of the Church” made the Hellenized or “spiritualized” image of Jerusalem the official one (e.g., St. Jerome). Still, the millennialist teachings survived beneath the surface, occasionally bursting out in sectarian enthusiasm or becoming general in times of crisis, while the “Doctors” themselves repeatedly succumbed to the enticements of a real and earthly Holy City. Hence the ambiguities of literalism versus allegory might have been minimized, were it not that the continued presence and preachings of the Jews forced the Christians in self-defense to appeal to the doctrine of a purely spiritual Jerusalem.

From Origen’s time, churchmen of all sects have been one in insisting that the New Jerusalem is for Christians only, since the Jewish city can never rise again. In the absence of scriptural support for this claim, various stock arguments are used, namely, Josephus’ description of the destruction of 70 C.E. with its atmosphere of gloom and finality (BJ IV, v, 3), the argument of silence in that the New Testament says nothing about a restitution of the city after Vespasian, the ominously lengthening period of time since the expulsion of the Jews, various tortured allegorical and numerological demonstrations, and the appeal to history with the ringing rhetorical challenge: “Where is your city now...?”

A favorite argument (akin to a Jewish teaching about the Diaspora) was that Jerusalem had to be destroyed so that Jews and Christians alike might be scattered throughout the world as witnesses to the fulfillment of prophecy in the new religion. Against these were arguments that never ceased to annoy: Why did the city and Temple continue to flourish for 42 years after the final pronouncement of doom, and why during that time did the Christians show every mark of reverence and respect for both? Why did Jesus weep for the destruction if it was in every sense necessary and desirable? Why do the Doctors insist that the destruction of Jerusalem by the Romans was a great crime, and yet hail it as a blessed event, saluting its perpetrators as the builders of the New Jerusalem, even though they were the chief persecutors of the Christians? If expulsion from Jerusalem is proof of divine rejection of the Jews, does the principle not also hold good for their Christian successors? How can the antichrist sit in the Temple unless the city and Temple are built again by the Jews? The standard argument, that only a total and final dissolution would be fit punishment for the supreme crime of deicide, was frustrated

by the time schedule, which suggested to many that the city was destroyed to avenge the death not of Jesus but of James the Just.

But if Jerusalem was to be permanently obliterated, the Christians could only inherit it in a spiritual sense. The Church was the New Jerusalem in which all prophecy was fulfilled, the Millennium attained, and all things became new. This raised a serious question of continuity, however: Has God chosen another people? Can one preserve the meaning of the eschatological drama while changing all the characters? Can a people (the Christians) be gathered that was never scattered? And what of the Heavenly Jerusalem? The approved school solution with its inevitable rhetorical antithesis was to depict the Heavenly and the Earthly Jerusalems as opposites in all things, the one spiritual, the other carnal. Yet none of the fathers is able to rid himself of “corporeal” complications in the picture, and the two Jerusalems remain hopelessly confused, for in the end the two are actually to meet and fuse into one. Palestine was the scene of busy theological controversy on these and related mysteries when the “Golden Age” of Christian Jerusalem came to an end with the persecutions of 250.

THE IMPERIAL AGE. After the storm had passed, Constantine the Great at Rome, Nicaea, Constantinople, and elsewhere celebrated his victories over the temporal and spiritual enemies of mankind with brilliant festivals and imposing monuments. But his greatest victory trophy was “the New Jerusalem,” a sacral complex of buildings presenting the old hierocentric concepts in the Imperial pagan form, with the Holy Sepulcher as the center and chief shrine of the world. Jerusalem was treated as the legitimate spoils of Christian-Roman victory over the Jews, whose entire heritage – including the Temple – accordingly passed intact into the hands of the Christians. Henceforth, there remained no objections to giving Jerusalem its full measure of honor. Continuity back to Adam was established with suspicious ease by the rapid and miraculous discovery of every relic and artifact mentioned in the Bible, and a flood of pilgrims came to rehearse, Bible in hand (the earliest pilgrims, Silvia (383) and the Bordeaux Pilgrim (333), are markedly partial to Old Testament remains), the events of each holy place and undertake weary walks and vigils in a cult strangely preoccupied with caves and rites of the dead. The patriarch Macarius, who may have contrived the convenient discoveries of holy objects with an eye to restoring Jerusalem to its former preeminence, promoted a building boom that reached a peak of great activity in the sixth and seventh centuries.

Financed at first by Imperial bounty, the building program was later supported by wealthy individuals, and especially by a line of illustrious matrons whose concern for the holy city goes back to Queen *Helena of Adiabene and whose number includes *Helena, the mother of Constantine; his mother-in-law, Eutropia; Eudocia, the wife of Theodosius II; Verina, the wife of Leo II; Sophia, the mother of St. Sabas; Paula; and Flavia, Domitilla, and Melania, rich Roman ladies

and friends of St. Jerome. By the end of the fourth century, Jerusalem had more than 300 religious foundations sustained by generous infusions of outside capital, until the economic decline of the fifth century forced the government to take the initiative, culminating in Justinian's ambitious but fruitless building program. The period was one of specious brilliance in which, as J. Hubert notes, everything had to be *splendens, rutilans, nitens, micans, radians, coruscans* – i.e., brilliantly surfaced, while the actual remains of the buildings show slipshod and superficial workmanship.

Spared the barbarian depredations suffered by most of the world in the fifth and sixth centuries, Jerusalem was an island of security and easy money, where the population of all ranks was free to indulge in those factional feuds that were the blight of the Late Empire. Points of doctrine furnished stimulation and pretext for violent contests involving ambitious churchmen and their congregations, hordes of desert monks, government and military officials and their forces local and national, the ever-meddling great ladies, members of the Imperial family and their followings, and the riotous and ubiquitous factions of the games in confused and shifting combinations. The Jews of Alexandria became associated with one of these factions, which in that notoriously fickle city found itself opposed to the faction of the Emperor Phocas, who ordered his general, Bonossus, to suppress the corresponding faction in Jerusalem by converting all Jews by force. While pitched battles raged in the streets, a Persian army appeared at the gates, sent by Chosroes, the pro-Christian monarch seeking vengeance on the treacherous Phocas for the murder of his friend Mauritius. The Jews regarded this as a timely deliverance by a nation that had succored them before and sided with the Persians – an act not of treachery (as Christian writers would have it) but of war, since Phocas had already called for their extermination as a people. The Christian world was stunned when Chosroes took the cross from Jerusalem in 614 and elated when the victorious Heraclius brought it back in 628. Under the vehement urging of the monk Modestus, whom he had made patriarch and who aspired to rebuild Jerusalem as a new Macarius, Heraclius, against his better judgment, took savage reprisals on the Jews. But within ten years the city fell to Omar, who allowed the pilgrimages to continue, while making Jerusalem a great Muslim shrine by the revival of the Temple complex, which the Christians, after long and studied neglect, also now claimed as their own.

Though Christians, originally as Jews and later on church business, had always made pilgrimages to Jerusalem, the great surge of popular interest beginning in the fourth century alarmed some churchmen, who denounced the pilgrimage as wasteful of time and means, dangerous to life and morals, and a disruptive influence in the Church. Along with monasticism, with which it was closely associated, the pilgrimage to Jerusalem was an attempt to get back to the first order of the Church and retrieve the lost world of visions, martyrs, prophets, and miracles, and this implied dissatisfaction with the present order. The writings of the Church Fathers furnish

abundant evidence for the basic motivation of the pilgrims, which was the desire to reassure oneself of the truth of Christianity by seeing and touching the very things the Bible told of, and experiencing contact with the other world by some overt demonstration of supernatural power (healing was the most popular). Only at Jerusalem could one receive this historical and miraculous reassurance in its fullness; only there did one have a right to expect a miracle.

The earliest holy place visited was not, as might have been supposed, the Holy Sepulcher, but the footprint of Jesus on the Mount of Olives, the spot where he was last seen by men as he passed to heaven and would first be seen on his return (Cabrol and Leclercq, Dic. 7, 231). Contact was the basic idea – contact with the biblical past and with heaven itself, of which Jerusalem was believed to be a physical fragment. Tangible pieces of the Holy City, carried to distant parts of the world, gave rise to other holy centers, which in turn sent out their tangible relics like sparks from a central fire. The Christian world was soon covered by a net of holy shrines, built in imitation of the Church of the Holy Sepulcher or the Temple and often designated by the names of Jerusalem, the Temple or the Sepulcher. Each became a pilgrimage center in its own right, and there was a graded system of holiness measured on a scale of distance in time from Jesus and in space from Jerusalem, which remained “as far above all the other cities in the world in renown and holiness as the sun is above the stars.”

THE CAROLINGIAN REVIVAL. In 800, after being fought over for two centuries by Muslim dynasties, Jerusalem was placed under the protection of Charlemagne, who was doing Hārūn al-Rashīd the service of annoying his Umayyad enemies in Spain. Although Rome had come under his protection five years earlier in the same way – by the presentation of holy keys and a banner from the bishop – it was the prestige of ruling Jerusalem that warranted the change in Charlemagne's title from king to emperor. Like Constantine, Charlemagne stimulated a revival of large-scale pilgrimage to Jerusalem and a tradition of royal generosity, endowing a church, school, monastery, and library. The Jerusalem hospitals for pilgrims were a tradition going back to pre-Christian times. From Darius to Augustus and the Emperors of the West, great rulers had courted the favor of heaven by pious donations to the holy city, and this tradition of royal bounty was continued through the Middle Ages, when kings imposed Jerusalem-taxes on their subjects and monks from Jerusalem made regular fund-raising trips to Europe.

During the years of the “quasi-protectorate of the Western Emperors” over Jerusalem and the revived Byzantine control (made possible by Muslim disunity), a steadily mounting stream of pilgrims even from the remotest regions of northwestern and Slavic Europe came to bathe in the Jordan, pray at the Holy Sepulcher, and endow pious foundations. Stimulated by the end-of-the-world excitement of the year 1000, this stream “multiplied tenfold” in the 11th century, culminating in great mass pilgrimages of thousands led by eminent

lords and churchmen. When the Seljuks, having defeated the Byzantine army in 1071 and occupied Jerusalem in 1075, became oppressive in their fees and controls of the holy places, Christian leadership felt obliged to “take up again the part of Charlemagne,” and the armed pilgrimage led by Robert le Frison (1085–90) was hailed enthusiastically throughout Europe and viewed by pope and Byzantine emperor alike as advance reconnaissance for a crusade.

THE CRUSADES. The Crusades were the expression of a popular religious revival in which Jerusalem, restored to its full apocalyptic status (the Crusading literature has a strongly Old Testament flavor), offered a welcome door of escape to all classes from economic and social conditions that had become intolerable in Europe. The Crusades have also been described as the complete feudalization of Christianity by an ancient chivalric tradition, with Jesus as a liege lord whose injuries must be avenged and whose stronghold must be liberated. The language of the Crusading literature bears this out, as does its conscious affinity with older epic literature (reflected later in Tasso), the significant exchange of embassies, and the close resemblance of Asiatic to European arms and accoutrements, suggesting an older common “Epic Milieu” and the nature of the Crusades as a *Voelkerwanderung*.

From the fourth century the Western Church had accepted, with the Roman victory cult, the concept of world polarity, dividing the human race into the blessed (Jerusalem, Church, *ager pacatus*) and the damned (Babylon, unbelievers, *ager hosticus*), reflected in the **jihad* concept of the Muslim counter-crusade. Such a concept assumed papal leadership of all crusades, giving rise to baffling questions of imperial, papal, and royal prerogative. These came to a head in the Latin Kingdom of Jerusalem, whose assizes, though the most perfect expression of a model feudal society, remained but an ideal, “a lawyers’ paradise,” where royalty, exploiting the city’s propinquity to heaven, dramatized its own claims to divine authority with pageantry of unsurpassed splendor. This motif was developed by the military religious orders of the Hospitalers (founded by the Amalfi merchants in 1048 and open only to the nobility) and the Templars, each claiming a monopoly of the unique traditional power and glory of Jerusalem and the Temple and, hence, displaying an independence of action that in the end was its undoing.

INTRIGUES AND GRAND DESIGNS. The Crusades challenged the infidel to a formal trial-of-arms at Jerusalem to prove which side was chosen of God. The great scandal of the Crusades is accordingly not the cynical self-interest, betrayal, and compromise with the enemy that blights them from the beginning, but simply their clear-cut and humiliating failure, which dealt a mortal blow to medieval ideas of feudal and ecclesiastical dominion. With the loss of all the East, “Operation Jerusalem” adopted a new strategy of indirection, approaching its goal variously and deviously by wars against European heretics, preaching missions (through which the Franciscans held a permanent Roman bridgehead in Jerusalem), and lo-

cal crusades against Jews and Muslims as steps in grand designs of global strategy. The grandiose plans of Charles VIII, Alfonso of Castile, João II, Albuquerque, and Don Sebastian all had as their ultimate objective the liberation of the Holy Sepulcher, as indeed did all of Columbus’ projects (S. Madariaga, *Christopher Columbus*). A marked kabbalistic influence has been detected in these plans, and indeed the ever-living hopes of the Jews, fired by new prophecies and new messiahs, were not without effect in Catholic and Protestant circles, as appears in the career of the humanist Guillaume *Postel, who, acclaimed at the court of France for his philological researches in Jerusalem, urged the transfer of the papacy to that city and finally declared himself to be the *Shekhinah*.

Christians in the post-Crusader period continued their dream of Jerusalem, but those who did manage to obtain a foothold there were largely engaged in unseemly squabbles over minute rights in the Holy Places. The great reformers, while mildly condemning pilgrimages, placed strong emphasis on the purely spiritual nature of the New Jerusalem and the utter impossibility of the Jews ever returning to build an earthly city. This was necessary to counteract the tendency to apocalyptic excitement and renewed deference to the Jews attendant upon the Reformation’s intensive preoccupation with the Bible, as various groups of enthusiasts took to building their own local New Jerusalems or preparing to migrate to Palestine for the task. Such groups flourished down through the 19th century. Protestant pilgrims to Jerusalem from the 16th to the 20th centuries have consistently condemned the “mummery” of the older pilgrimages, while indulging in their own brand of ecstatic dramatizations. Whereas the Catholic practice has been to identify archaeological remains as the very objects mentioned in the Bible, the Protestants have been no less zealous in detecting proof for the Scriptures in every type of object observed in the Holy Land. Chateaubriand’s much publicized visit to Jerusalem in 1806 combined religious, literary, and intellectual interest and established a romantic appeal of the Holy Land that lasted through the century.

When Jerusalem was thrown open to the West in the 1830s by Muhammad Ali, European and American missionaries hastened to the spot with ambitious projects of converting the Jews, with an eye to the fulfillment of prophecy in the ultimate restoration of the Holy City. Even the ill-starred Anglo-Lutheran bishopric of 1841 had that in view, and Newman’s denunciation of the plan as a base concession to the Jews and Protestants indicated the stand of the Roman Catholic Church, which in 1847 appointed a resident patriarch for Jerusalem. In the mounting rivalry of missions and foundations that followed, France used her offices as protector of Roman Catholics and holy places in the East (under Capitulations of Francis I, 1535, renewed in 1740) to advance her interests in the Orient, e.g., in the Damascus blood libel of 1840. When Louis Napoleon was obliged by his Catholic constituents to reactivate French claims to holy places that France had long neglected and the Russians long cherished, “the foolish affair of the Holy

Places” (as he called it) led to the Crimean War and its portentous chain of consequences.

PATRONAGE BY THE POWERS. In the second half of the 19th century, the major powers and churches were stimulated by mutual rivalry to seek commanding positions in Jerusalem through the founding of eleemosynary institutions over which they retained control. Beyond the hard facts of geography and economics, the religious significance of the city continued to exert steady pressure on the policies of all Great Powers, as when the German kaiser gratified his Catholic subjects with the gift of the “Dormition,” proclaimed Protestant unity by the dedication of the great Jerusalem Church, and sought personal fulfillment in a state pilgrimage to Jerusalem and the patronage of Zionism (thwarted by his advisers). The taking of Jerusalem by Allenby in 1917 was hailed through the Christian world as the fulfillment of prophecy and deplored by the Muslims as a typical Crusade against their holy city. World War II was followed by increasing interest in Jerusalem as a center of ecumenical Christianity, though old religious and national rivalries of long standing and great variety continued to flourish. The 20th-century pilgrimages acquired a touristic air in keeping with the times, interest in Jerusalem having a more sophisticated and intellectual tone. Even the old and vexing problem of the priority of Jerusalem, “mother of Churches,” over other Christian bishoprics has been approached in a spirit of mutual concession and with respect for the autonomy of the various bishoprics of Jerusalem. This liberalized attitude may be a response to what is regarded in some Christian circles as the Jewish challenge to the basic Christian thesis that only Christians can possess a New Jerusalem. While the Great Powers for over a century cautiously sought to exploit the energies of Zionism and its sympathizers, it has been openly conceded that the Jews might indeed rebuild their city – though only as potential Christians. Though some Christians are even willing to waive that proviso, the fundamental thesis is so firmly rooted that the progress of Israel is commonly viewed not as a refutation of it but as a baffling and disturbing paradox.

A NEW IMAGE OF ISRAEL. With the Israel military victories of 1948, 1956, and 1967, the Christian world was confronted by a new image of a heroic Israel. The picture was agreeable or disturbing to Christians depending on which of two main positions one chose to take, and the years of tension following the Six-Day War of June 1967 were marked by an increasing tendency among Christians everywhere to choose sides. On the one hand, the tradition of the Church Fathers and Reformers, emphasized anew by Arnold Toynbee, looked upon a Jewish Jerusalem as a hopeless anachronism and deplored any inclination to identify ancient with modern Israel. This attitude rested on the theory, developed by generations of theologians, that only Christians could be rightful heirs to the true Covenant and the Holy City. Roman Catholics continued to hold the position, propounded by Pope Pius X to Herzl in 1904, that the return of the Jews to Jerusalem was a demonstration of messianic expectations which that church considered

discredited and outmoded. Those suspicious of the progress of Israel naturally chose to minimize the moral and world-historical significance of Jerusalem and to treat the problems of modern Israel as purely political. On the other hand were Bible-oriented Christians of all denominations in whom the successes of the Israelis inspired to a greater or lesser extent renewed hope and interest in the literal fulfillment of biblical prophecy. To such persons, in varying degrees, the Jewish military achievements appeared as steps toward the fulfillment of the eschatological promise to Abraham (Gen. 15:18). As interest in Jerusalem shifted from the antiquarian appeal of the 1950s to heightened eschatological allure, something of the old Christian vision of Jerusalem seemed to stir the Christian conscience.

[Hugh Nibley]

In Muslim Thought

According to orthodox Islam there are three temples in the world to which special holiness is attached: the Ka’ba in Mecca, the Mosque of Muhammad in Medina, and the Temple Mount in Jerusalem, in order of their holiness to Muslims. While researchers of past generations viewed the traditions favoring Jerusalem as originating in the period of the Umayyad caliphs who lived in Syria and had to fight against the rebels who ruled Mecca and Medina, modern researchers deny this and maintain that the adoration of Jerusalem is found in early Islam. According to Ezekiel 5:5 and 38:12, the Temple Mount and especially the **even shetiyyah* – the rock on which the Ark stood – is the hub of the universe. Muslim scientists even found corroboration for this view in their calculations that the Temple Mount is located in the center of the fourth climatic zone, the central region north of the Equator in which man can develop civilized life.

The adoration of Jerusalem in Islam, however, is primarily based on the first verse of *Sura 17* of the Koran, which describes Muhammad’s Night Journey (*isrā’*). Tradition states that when the “Servant” (Muhammad) was sleeping near the Ka’ba, the angel Gabriel brought him to a winged creature (*Burāq*) and they went out to the “Outer Mosque” (*al-Masjid al-Aqṣā*). From there they rose to heaven (*mi’rāj*). On their way through the heavens they met good and evil powers; on reaching their destination they saw Abraham, Moses, and Jesus. The “Servant” prayed among the prophets as a leader, i.e., he was recognized as the foremost among them. There are differences of opinion regarding the nature of the journey and its purpose. Some view it as a description of a dream, but the official opinion of Muslim theologians is that Muhammad made this journey while awake and actually traversed the ground. Some hold that the “furthest Mosque” is in the seventh heaven, paralleling the Ka’ba (like *Yerushalayim shel ma’lah* = Celestial Jerusalem), but the accepted opinion, at least from the second century of the *hijra*, is that this is the Temple Mount in Jerusalem (not the mosque which was built later and called *al-Masjid al-Aqṣā*). This story was probably told to Muhammad by Jews, since he was familiar with the midrashic works popular in his time, e.g., *The Book of Jubi-*

les, *The Book of Enoch*, and *Toledot Moshe* (extant in an Arabic version), which describe Moses' journey to heaven and his visits to paradise and hell. This story and its usual interpretation greatly elevated the holiness of Jerusalem in Islam. In addition to the Temple Mount, other places in Jerusalem were also regarded as holy, e.g., the tomb of Mary where the first Umayyad caliph Mu'awiya is known to have prayed at the time of his coronation in 661.

Upon his arrival to Medina in 622, Muhammad recited the prayers facing towards Jerusalem, in order to convince the Jews of that city to adopt the new religion. He continued with this *qibla* (direction of prayer) for 16 or 18 months (Rajab or Sha'bān of 2 A.H., i.e., January or February 624). However, failing in his attempts to attract the Jews, he changed the direction to Mecca (see Sura 2:136 ff.; Tabari, *Jāmi' al-bayān 'an ta'wīl āy al-Qur'ān*, III, 138 sūra 3:142).

It is noteworthy that in the Koran there is no explicit mention of Jerusalem, not by any of the names by which it was known before Islam or immediately after the appearance of the new religion. Exegesis of the Koran, which was just beginning towards the end of the first century of the *hijra*, began to ascribe to Jerusalem names and bynames which appear in the Koran. Among the rest, they mentioned *al-Masjid al-Aqsa*, the furthest mosque or the extreme one. It appears that Muhammad's Nocturnal Journey, which became one of the most important elements determining the holiness of Jerusalem for Muslims, took shape and was linked to Jerusalem no earlier than when construction began on the al-Aqṣā Mosque near the Dome of the Rock. When caliph 'Abd al-Malik built the Dome, the identification of Jerusalem or the Temple Mount with the site of the Nocturnal Journey was neither known nor accepted, for if this were not so, the caliph would undoubtedly have utilized it to add to the holiness of the magnificent structure and the area around it. This should have found expression in the many inscriptions carved on the walls of the building. The single reference to the verse of the Nocturnal Journey is found in later additions dating from the Ottoman period.

For most Muslims the status of Jerusalem was fixed for generations: Its mosque is the third most important in Islam. However, it is not a holy site in the Muslim sense of holiness (*ḥurma*) but rather in the general sense (*qudusiyya*), for every mosque is considered a holy place. In later days, the difference between these two concepts became clouded as Muslims used the more specific (*ḥurma-ḥaram*) for Jerusalem, even though this contrasts with Islamic law, which gives the title *ḥaram* only to Mecca and Medina (I. Hasson, in J. Prawer and H. Ben-Shammai (eds.), *The History of Jerusalem, the early Muslim period* (1996), 349–85; Ibn Taymiyya, *Qā'ida fī ziyārat Bayt al-Maqdis*, in his *al-Rasā'il al-kubra*).

Despite this change, Jerusalem retained its special holiness among the Muslims, and Muslim tradition added numerous layers to it. There are also *hadiths* (sayings attributed to Muhammad which are the basic oral law of Islam) regarding the great value of prayer said in Jerusalem. Muslim tradition relates, among other things, that the Holy Rock (*al-ṣakhra*, i.e.,

even ha-shetiyyah) is located exactly beneath Allah's throne and above a cave which is the "well of spirits," where all the souls of the dead congregate twice weekly. Due to the rock's holiness, the angels visited it 2,000 times before the creation of the first man and Noah's ark came to rest on it. It is part of paradise and all the sweet waters on earth emanate from it. These stories, mostly taken from rabbinic *aggadah*, reached the Muslims mainly from Jews converted to Islam, as indicated by the names of the narrators recorded in the tradition itself.

Muslim legend closely connects Jerusalem with the day of judgment. According to the Muslim faith, at the end of days (see *Eschatology), the angel of death, Isrāfīl, will blow the ram's horn three times while standing on the rock, which will be done after the Ka'ba comes to visit the Temple Mount. Arabic works such as *Kitāb Aḥwāl al-Qiyāma* ("Book of the Phases of Resurrection") contain detailed descriptions of the day of judgment which will then commence. All the dead will congregate on the Mount of Olives, and the angel Gabriel will move paradise to the right of Allah's Throne and hell to its left. All mankind will cross a long bridge suspended from the Mount of Olives to the Temple Mount, which will be narrower than a hair, sharper than a sword, and darker than night. Along the bridge there will be seven arches and at each arch man will be asked to account for his actions. The faithful who are found innocent will receive from Āsiya, Pharaoh's wife, and Miriam, the sister of Moses, sweet water from the rivers of paradise in the shade of a palm tree which will also be beneath the rock. Most of these stories came from midrashic literature, such as *Pirkei Moshe*, and some of them from Christian works (see "Last Judgment," in *The Encyclopaedia of the Qur'ān*; O. Liven-Kafri, in *Cathedra* 86 (1998), 23–56).

In the third *hijri* century/ninth C.E., there appeared collections of Traditions called *Faḍā'il Bayt al-Maqdis* (the Praises of Jerusalem). The most important are *Faḍā'il al-Bayt al-Muqaddas* of al-Wāsiṭī, *Faḍā'il Bayt al-Maqdis wa-l-Khalīl wa-Faḍā'il al-Sham* of Abū al-Ma'ālī al-Musharraf ibn al-Murajjā, and *Ithāf al-akhiṣṣā bi-faḍā'il al-masjid al-aqṣā* of Mu'ammad ibn Shams al-Dīn al-Suyūṭī al-Minhājī.

Jerusalem also has a special place in Muslim mysticism. There is a Muslim tradition that Jerusalem is the pit of the ascetics and servants of God and that 40 righteous men live in it, thanks to whose virtues the rains fall, plagues are averted, and the world in general exists. These righteous men are called *abdāl* ("those who are replaced"), because when one dies another replaces him. Actually this tradition is apparently not an early one but reflects the importance attributed to Jerusalem by the mystics from the beginnings of the mystical trend in Islam and the growing emphasis on its sanctity from generation to generation. Even the first Muslim mystics held that living in Jerusalem or elsewhere in Erez Israel purifies the soul and that eating its fruits is permitted and legal (*ḥalāl*). For this reason many of them came to Jerusalem to be close to its holiness. Apparently the adoration of Jerusalem on the part of the Muslim mystics was mainly influenced by the example of Christian asceticism, which flourished in Erez Israel, and

especially in the vicinity of Jerusalem, during the centuries preceding its conquest by the Muslims.

Affection for Jerusalem and its sanctuaries grew as a result of its temporary loss during the Crusades. Indeed, the reaction to the wars with the Crusaders in the 12th and 13th centuries was an important factor in the development of Arabic literature and travelogues (see *Travelers, Christian and Muslim) on Jerusalem, Hebron (al-Khalil), and Palestine as a whole and their importance for Islam. Descriptions of the Muslim holy *places have been preserved from that time on. Some are of great historical importance, being the principal stimulus for Muslim pilgrimages to the holy places in Jerusalem.

[Eliyahu Ashtor / Isaac Hasson (2nd ed.)]

IN THE ARTS

In Literature

An immensely rich and varied treasury of literature, art, and music has been devoted to Jerusalem by both Jews and non-Jews from early medieval times onward. Many of these treatments deal with specific events, such as the return from the Babylonian captivity and the Roman siege and destruction of Jerusalem (see *Titus in the Arts). During the Middle Ages, Jewish *paytanim* composed hundreds of poems on the subject (see above; Liturgy) and parallel Christian devotional works include “Jerusalem the Golden” (from *De contemptu mundi*) by Bernard of Cluny and several other hymns of the same title. Pre-fabricated stage settings of medieval English mystery and miracle plays often represented the Holy City, and innumerable “descriptions” were written by Crusader chroniclers, Arab historians, and travelers of various periods (see *Itineraries of Erez Israel; *Pilgrimages, Christian and Muslim). The major Renaissance treatment of the subject was the Italian poet Torquato Tasso’s epic *Gerusalemme liberata* (1581; translated 1594 and again by Edward Fairfax as *Godfrey of Bulloigne*, 1600), an account of the Crusaders’ siege and capture of Jerusalem combining the traditions of classical and medieval romance writing. Following the Reformation, many Protestant writers evoked the image of the Holy City in verse and prose, but few works were specifically devoted to the theme.

Probably as a result of the social, political, and religious ferment of the 19th century, particularly in Britain, the “New Jerusalem” became the symbol of man’s yearning for a better life and a nobler form of society. This tendency had a remarkable development in the works of the English poet William *Blake (e.g., in *Jerusalem, The Emanation of the Giant Albion*, 1804), whose “Jerusalem,” a poem prefacing *Milton* (1804) which was later to become a British Labour Party anthem, ends:

I will not cease from mental fight,
Nor shall my sword sleep in my hand,
Till we have built Jerusalem,
In England’s green and pleasant land.

This type of idealization also characterizes John Mason Neale’s “Jerusalem the Golden,” one of the best-known hymns of the

Victorian era. In 19th-century works ranging in tone from pious devotion to cynicism and humor, the modern city of Jerusalem was described by writers such as the Catholic Chateaubriand and the Protestant Pierre Loti in France, the Austrian Ludwig August *Frankl, and the U.S. authors Mark Twain and Herman Melville.

From the beginning of the 20th century, there was an even more pronounced literary interest in Jerusalem’s present and future, especially as a result of Zionist settlement and the development of the city’s new Jewish section. An outstanding Scandinavian work on the theme was Selma Lagerlöf’s two-volume *Jerusalem* (1901–02; Eng. 1915), a novel about Swedish settlers in Palestine. Her fellow-countryman, Sven Anders Hedin (who was of partly Jewish descent), described his tour of the Holy Land from Damascus to Sinai in *Jerusalem* (c. 1916; *To Jerusalem*, 1917), a travel book markedly pro-German and anti-British in tone. Hedin, who was later sympathetic to the Nazis, here made many references to Jewish biblical and later history, treating Zionism in an objective manner and illustrating his text with many of his own sketches of Jewish types. A similar approach was adopted by the English Catholic G.K. Chesterton (*The New Jerusalem*, 1920) and by the French writers Jean and Jérôme Tharaud (*L’an prochain à Jérusalem!*, 1924). In most travel literature dealing with Erez Israel the main stress has been on Jerusalem.

Much popular English and U.S. fiction dealt with the city and its daily life and development during the period of the British Mandate and, later, during Jerusalem’s political division between Israel and Jordan (1948–67). Two books of this kind were John Brophy’s novel *Julian’s Way* (1949) and Muriel Spark’s *The Mandelbaum Gate* (1966). However, most of the important 20th-century treatments have been the work of Jewish authors. Mainly poems, novels, and short stories, these range from evocations of bygone days in the Old City to the reunification of Jerusalem after the Six-Day War. A rare Slavonic handling of the subject was *Pesni za Erusalim* (“Songs for Jerusalem,” 1924) by the Bulgarian Jewish poet Oram ben Ner (Saul Mezan, 1893–1944). Personal reflections are contained in *Das Hebraeerland* (1937), a prose work by the German poet and refugee Else *Lasker-Schueler. The Jewish people’s historic return to the Western Wall forms the climax of Elie *Wiesel’s novel, *Le mendiant de Jérusalem* (1968; *A Beggar in Jerusalem*, 1970). A modern collection of literature about the city is Dennis Silk’s *Retrievements: A Jerusalem Anthology* (1968), and Philip Roth places the protagonist of *Operation Shylock* (1993) in Jerusalem.

In Art

Representations of Jerusalem in plastic arts combine features of the real city and signs of its symbolic meanings in the main monotheistic religions, or are purely imaginary and symbolic.

Depictions of the *Temple’s implements are the earliest surviving images relating to Jerusalem. The seven-branched *menorah* was engraved on stone in the tomb of Jason (second

century B.C.E.). The *menorah*, together with the showbread table, was minted on a coin of Mattathias Antigonus (ruled 40–37 B.C.E.). The Temple's menorah, table, and an altar were scratched on the plaster of a dwelling house from the Herodian period (37–4 B.C.E.). These pictures conveyed the Jewish attitude to Jerusalem as the terrestrial abode of God's Sanctuary and the foremost place of divine worship. After the destruction of the Second Temple in 70 C.E., the Temple's façade and implements of the worship and rituals became symbols of the messianic reestablishment of the Temple that would be followed by restoration of the Jewish political sovereignty in Jerusalem and Israel. An early example of this is the façade of the Temple, rendered as a classical tetrastyle, a schematic drawing of the *Ark of the Covenant in the midst of it, the *lulav* and *etrog*, and inscription "Jerusalem" on *Bar Kokhba's silver tetradrachm (133 C.E.). The *lulav* and *etrog* near the inscription "second year for freedom of Israel" on the reverse of this coin reinforce the liturgical and messianic allusions of the Temple's image: these species are used on Sukkot – the feast that marked the consecration of Solomon's Temple (1 Kings 8), was celebrated by pilgrimage to the Temple (Deut. 16:16), and is the time when, at the end of days, all the peoples will assemble in Jerusalem (Zech. 14:16 ff.). Creators of ancient and early medieval Jewish paintings, mosaics, and reliefs conventionally featured the Temple as a columned façade, portal, or aedicula (see *Temple: in Art), whereas the cityscape of Jerusalem did not occupy their mind.

A symbol of the whole city of Jerusalem was found in ancient Jewish jewelry: after the "war of Quietus" (early second century) some rabbis forbade brides to wear the crowns called "Jerusalem of gold" or "a city of gold," for it was a "Greek," i.e., enemy, custom (Sot. 49a–b; TJ Sot. 9:24, 3; Shab. 59a; cf. Ned. 50a). These descriptions are reminiscent of "mural crowns" designed like the walls and towers of a city and sometimes made of gold. Such a mural crown was an attribute of the goddess Tyche, whose images were widespread in the Hellenized Middle East. Purportedly, it was an act of remembrance of the destruction of Jerusalem by "putting it *al rosh simḥati*" literally "on the head of joy" (Ps. 137:6) that inspired the association of a golden mural crown on the head of a Jewish bride with an eschatological "Jerusalem of gold."

Similar symbolic modes were implemented in early images of Jerusalem in Early Christian art. An ordinary, generalized architectural setting, comprising roofed colonnades or a row of arched and crenellated city-gates behind the figures of Christ and his disciples in fourth-century Roman sarcophagi, stood for eternal, heavenly Jerusalem (e.g., sarcophagus from 380–390 in S. Ambrogio, Milan). An aedicula appeared as a *pars-pro-toto* representation of the Temple in Jerusalem in the floor mosaics from the fifth or the sixth century in Byzantine churches on Mount Nebo in Jordan and in the Latin Ashburnham Pentateuch (seventh century, Paris, BN, Lat. nouv. acq. 2334, fol. 2).

The establishment of the Sepulchrum Domini church ("Holy Sepulcher," 326–327) by Constantine the Great, along

with the proliferation of churches up to the mid-sixth century, created a new Christian topography of Jerusalem. The rotunda of the Holy Sepulcher was often depicted on pilgrim's *ampullae* (vessels for consecrated liquid) that reached Christian communities in the West and East, and its round plan served as a model for many Italian churches of the second half of the fourth century. In the background of the mosaic of the Church of St. Pudenziana in Rome (384–389, 401–417), a picture of the real Constantinian complex of the Holy Sepulcher appears above the wall with 12 gates of celestial Jerusalem (two of them were later erased). This number reinforces the relation of the picture to the eschatological Jerusalem described in Revelation 21:12.

Christian religious and ideological concepts of Jerusalem were imposed on the real topography of the city. The pictorial map of Jerusalem (560–565) on the floor mosaic in the Church in Madaba (Jordan) depicts the Holy Sepulcher in the midst of the *cardo maximus* in the very center of the city, though the real church is found northwest of that point. The dominating position of the Holy Sepulcher represents the vision of mundane Jerusalem as the place of Christ's resurrection and a preview of the ideal, heavenly Jerusalem.

Since at least the ninth century, the apocalyptic vision of heavenly Jerusalem in Revelation 21:10–22:5 related patristic exegesis, and the teaching on the *Civitate Dei* by *Augustine of Hippo (354–430) inspired conventional depictions of Jerusalem in ecclesiastic art and manuscripts. The Apocalypse of Trier (North France, first quarter of the ninth century; Trier, Stadtsbibliothek, cod. 31, fols. 69–71), the earliest-known illuminated manuscript of the Book of Revelation, gives a combination of a frontal view of the fortified city wall from outside and a bird's-eye view of objects inside, with the inner side of the wall behind them. The painting creates an image of a stronghold with 12 towers (Rev. 21:12–13) enclosing in its midst churches or a lamb, a symbol of Christ, who substitutes for the Temple in the apocalyptic Jerusalem (Rev. 21:22), and the Tree of Life. Many medieval manuscripts of the Apocalypse and the commentary on it by Beatus of Liébana (d. 798) represent a geometrical scheme of heavenly Jerusalem consisting of a section of the city wall with three gates on each side of a square containing Christ and/or the lamb as an illustration of the city with the gates for the 12 *tribes of Israel (Rev. 21:12). Jerusalem in the middle of nations with its gates facing the four winds, a counterpart of the Temple in Ezekiel's vision (40:1–43:12), marks the center of the world and the prevalence of Christ's power in the cosmos. The Apocalypse of Valenciennes (Liège (?), first quarter of the ninth century; Valenciennes, Bibl. Municipale, ms. 99 fol. 38) exemplifies the circular images of heavenly Jerusalem with triple gates on the four cardinal points of the perimeter. In Romanesque cathedrals (e.g., in Aachen and Hildesheim), the monumental lamps made as a gilt hoop looking like a city wall with 12 or 24 towered gates represented heavenly Jerusalem as a luminous circular city hovering above the worshippers.

Although deviating from the definition of Jerusalem as "*civitas in quadro posita*" in Revelation 21:16, these images em-

phasize the idea of the city as the *umbilicus mundi* (“the navel of the world”), the concept adopted from classical thought (Philo, *Legation ad Gaium*, 294). Like the round Holy Sepulcher, a circular Jerusalem symbolized Christ’s resurrection and the new life of the world. Crusader pictorial maps (e.g., Brussels, Bibl. Royale, ms. 9823–9824, fol. 157) involve frontal depictions of Christian landmarks of the mundane Jerusalem into the abstract circular scheme and stress the cruciform of the *cardo* and *decumanus* in order to give the real topography a christologic meaning. A medallion enclosing a picture of Jerusalem is the center of the map of the world, shaped as a trefoil, a symbol of the Trinity, in Heinrich Buenting’s *Itinerarium Sacrae Scripturae* (Wittenberg 1587).

The symbolic approach to real Jerusalem had an effect on the Christian comprehension of the Muslim *Qubbat as-Sakhrah* (Dome of the Rock) built on the spot of the Temple in Jerusalem in 691–692. The Crusaders, who in 1141 dedicated this octagonal domed structure as the *Templum Domini* (God’s Temple) church, imparted it with associations with the Temple. The *Templum Domini* and the *Sepulchrum Domini*, similarly rendered as domed towers rising behind a fortified city gate, stand for Jerusalem in the lead seal of John of Brienne, a ruler of the Crusader Kingdom of Jerusalem (1210–1225). The juxtaposition of the two edifices restates the idea that Christianity stems from both the Old and New Testaments. Ecclesiastic vessels, mainly monstrances and chalice-like ciboria containing the sacrament; reliquaries; and censers, designed as a round or equilateral domed structure, usually symbolized the *Templum Domini*, Solomon’s Temple, and Jerusalem. The Dome of the Rock dominates in landscapes of biblical and real Jerusalem in European art. Erhard Reeuwich’s illustration to Bernhard von Breydenbach’s *Peregrination in terram sanctam* (Mainz, 1486) transforms the pilgrims’ impressions of Jerusalem into a bird’s-eye view of buildings around the disproportionately great Dome of the Rock. In a view of the biblical Jerusalem in Hartmann Schedel’s *Liber Chronicarum* (Nuremberg, 1494), three rings of city walls enclose a great structure resembling the Dome that is explicitly labeled as the *Templum Salomonis*. Italian Renaissance painters and architects accepted the octagonal Dome in the center of Jerusalem, in the light of Vitruvius’s theory locating the ideal centrally planned temple in the midst of an ideal centrally planned city. Idealized Renaissance copies of the Dome of the Rock appear in church architecture (Donato Bramante, the *Tempietto* at San Pietro in Montorio, 1502–1511, Rome) and represent the Temple in Jerusalem in paintings by Pietro Perugino (1450–1523), Raphael (1483–1520), and Vittore Carpaccio (1472–1526).

European scenery in Christian pictures of Jerusalem also stems from the Christian perception of the sacred history as ever contemporary. In Jean Fouquet’s illustrations to *Jewish Antiquities* by Josephus Flavius (1470–1475; Paris, Bibl. Nat., Ms. Fr. 247), the Temple in Jerusalem looks like a Gothic cathedral in a French city. Following the same achronical concept, the Jerusalem cityscape is painted as typically Italian in Duccio’s *Entry into Jerusalem* (Maestà, verso, 1308–1311; Si-

ena, Museo dell’Opera del Duomo), Netherlandish in Hieronymus Bosch’s “*Ecce Homo*” (ca. 1485; Frankfurt am Main, Städtisches Kunstinstitut), and German in the *Stories of the Passion* by an anonymous painter from Westfalen (ca. 1480; Torun, St. Jacob Church).

The view of celestial Jerusalem as the model for the proper arrangement of Christian sacral and secular life was reflected in architecture. In religious building complexes of the Catholic West, cloisters (enclosed courtyards for religious retirement) composed of a rectangular, often square-shaped garth and surrounding arcaded passages, were paralleled to the apocalyptic square Jerusalem. In a medieval city, the same symbolism was given to the city square enclosed by arcades (e.g., the central place in Monpazier, South France, founded in 1284). Cities built on a concentric plan were related to Jerusalem as well: the verse from Isa. 51:9 inscribed above the map of concentrically planned Moscow on the title page of the printed Russian Bible from 1663 represents that city as a revived Jerusalem.

Christian architects transposed the real Jerusalem by creating local counterparts for the Golgotha, Way of the Cross (“*via Dolorosa*”), Temple Mount, Mount of Olives, Mount Zion, Jerusalem churches, etc. Within the church, cloister, or nearby, a series of sculptures, pictures, or mere inscriptions marked the “stations” of Christ on the “*via Dolorosa*” in Jerusalem. A group of connected chapels, dated to the fifth century, in the Bolognese monastery of San Stefano, also known as “*Hierusalem*,” represented important Christian sanctuaries of Jerusalem. The urban or landscape copies, commonly called New Jerusalem, Calvary, or a *sacro monte*, were intended to be faithful replicas of the holy places. In practice, some of them, e.g., Kalwaria Zebzydowska (1602) in Poland, retained the mutual location and distances between original monuments in the Holy Land. The other, for instance, the *Scala Coeli* convent (ca. 1405) in Cordoba, the *sacri monti* in Varallo Sesia (1486), San Vivaldo (1499) in Italy, and the whole old city of Suzdal in Russia, established a more schematic and partial resemblance to pilgrim’s topography of Jerusalem.

Paintings in Hebrew illuminated manuscripts and early printed books focus on the future Jerusalem. The *Mount of Olives, depicted as an olive tree on a hill, is the only landmark of Jerusalem beyond the Temple Mount that appears among the Temple’s implements in paintings from Hebrew Bibles of the 13th to 15th centuries. The citation from Zechariah 14:4 framing the full-page painting of the Mount of Olives in the 14th-century Hebrew Bible from Saragossa (Paris, Bibl. Nat., Ms. Hebr. 31, fol. 4v) determines the symbolism of this place as the stage of God’s advent in the messianic future. The vision of the city of Jerusalem is a subject of illuminated manuscripts and books of the Passover **Haggadah*. The picture of Jews lifting their hands in adoration to the Messiah waiting at the gate of heavenly Jerusalem illustrates the culminating passage: “Next year in Jerusalem” in the Birds’ Head *Haggadah* of ca. 1300 from Southern Germany (Jerusalem, Israel Museum, Ms. 180/57, fol. 47r). The hovering Jerusalem is drawn as a Gothic

city-gate with a section of an arcaded wall. The Messiah who rides on a donkey, preceded by Elijah the prophet, towards Jerusalem relates to the verse “Pour out Thy wrath upon the heathen.” In these pictures Jerusalem looks like a fortified city with a tall tower (the Hamburg Miscellany, ca. 1427–1428, Germany; Hamburg, Staats- und Universitätsbibliothek, Cod. Hebr. 37, fol. 35v), a fortified wall with an open gate (Haggadah, 1470–1480, Italy; Munich, Bayerische Staatsbibl., Cod. Hebr. 200, fol. 24v), or a domed tower in the printed Mantua *Haggadah* (1560). A hand holding a sword above a city that is tightly embraced by a fortified wall, illustrating 1 Chronicles 21:16, shows divine protection over Jerusalem in the Cretan Haggadah Candia, 1583 (Paris. Bibl. Nat., 1388, fol. 11r).

Notwithstanding the fact that a polygonal domed building is at odds with the biblical and rabbinical accounts of the Temple, Jews adopted the Dome of the Rock as an image of the sanctuary in Jerusalem (Frankfurt *Mishneh Torah*, 15th century, North Italy; New York, private coll., fol. 1r). Since the mid-16th century, printers of Hebrew books in Venice and Prague used the Dome evidently labeled *Bet ha-Mikdash* (“the Temple”) as their sign, and a century later, the brothers Ashkenazi used a naïve version of this building in the midst of three city walls in their books printed in Constantinople. The inscription: “The glory of this latter house shall be greater than of the former ...” (Hag. 2:9) accompanying the Dome in the “printers’ marks” asserts that this is a vision of the messianic Temple in the future Jerusalem, and not a picture of the historic past. In a similar way, the messianic Jerusalem has taken the Renaissance form of an octalateral city centering on the octagonal domed Temple in the Venice *Haggadah* of 1609. An image of a domed structure near lesser buildings, sometimes within a polygonal city wall, was used as a sign for remembrance of Jerusalem on 17th-century Italian Torah Ark curtains and as an eschatological symbol and a sign for the “chief joy” for Jerusalem (Ps. 137:6) at the top of the *ketubbot*, whose design followed the complex decorative program that was developed in Venice in the 1660s.

Matthaeus Merian the Elder’s engraving of the biblical Jerusalem in the *Icones Biblicae* (Amsterdam, 1659) exemplifies a direct influence of Christian art on Jewish images of Jerusalem. In the 1695 Venice *Haggadah* and its numerous manuscript and printed remakes, Merian’s splendid Temple of Solomon in the midst of cloister-like walled courtyards, surrounded by the city buildings and lighted up by the shining sun, was reworked for a vision of the messianic Jerusalem. Jewish artisan Eliezer Sussmann, of Brody in the Ukraine, copied later folk replicas of this picture from *Haggadot* and Grace After Meals manuscripts (also containing the plea for rebuilding of Jerusalem) into his rich wall paintings in South German synagogues in 1732–42. In these and other synagogue murals produced by East European Jewish painters of the 18th and 19th centuries, Jerusalem is represented as a conglomeration of domed and roofed buildings of different lengths, gradually increasing towards the highest domed tower or roofed palace, all rendered in the local architectural styles. In

some synagogues Jerusalem as a symbol of the redemption is juxtaposed against a view of a city symbolizing the Exile: Worms in the ceiling painting (1740) by Ḥayyim ben Isaac Segal in the synagogue in Mogilev in Belarus, or Babylon in the picture of the “Rivers of Babylon” (Ps. 137) in synagogues of Predbórz (mid-18th century) and Grojec (first half of the 19th century) in Poland. In the synagogue in Kamenka-Bugskaya in the Ukraine, the picture of a burning city with wild beasts approaching its walls remind the worshippers of the fall of Jerusalem. The sorrow and remembrance for Jerusalem were expressed in a more abstract way in a Hebrew acronym *זל שחור*: *זל שחור על לבן זכר להרבן* (שחור על לבן זכר להרבן), “black on white, a remembrance of the Destruction [of Jerusalem]”) that was painted in black paint on a white background, and in some cases located beneath a picture of Jerusalem.

Jewish pilgrims’ topography of Jerusalem was cast into a pictorial form in the mid-16th century, following the spread of illustrated Hebrew descriptions of the holy places and the graves of the righteous itineraries of the Holy Land such as the *Yiḥus ha-Avot* (“Genealogy of the Patriarchs”). The local scribes traditionally alternated textual descriptions with schematic drawings of landmarks of Jerusalem but gave no general view or plan of the city. The development of this imagery in the Land of Israel led to the 18th- and 19th-century schematic “maps” depicting the holy places as almost decorative rows of flattened geometric, ornamental, or simplified architectural images, whereas the Italian and German copies of the *Yiḥus ha-Avot* rendered these patterns as classical buildings. Jewish scribes in 18th-century Italy amalgamated the landmarks from the pictorial itineraries, a cityscape of houses and towers, and a geometric plan of the ideal city into the view of the holy places in Jerusalem. Thus in the view of Jerusalem that occupies most of his scheme of holy places in the Land of Israel (first half of the 18th century; Cambridge University Library), Samuel ben Yishai of Senigallia marked the different Jewish communities in the Jewish Old City, the Tower of David within the city walls, and the so-called Tombs of Absalom and Zechariah in the Valley of Kidron. The Hebrew inscriptions identify the Dome of the Rock and the *al-Aqsa* Mosque depicted on the opposite sides of the Temple Mount as the Temple and Solomon’s *bet midrash* (“house of study”), respectively. Between them, a group of cypresses rises above the western section of the wall supporting the Temple Mount. The Wailing (Western) Wall was thought to coincide with the place which, according to midrashic sources (Ex. R. 2:2; Num. R. 11:2, etc.), the Divine Presence never left, and which was the closest spot to the Holy of Holies accessible to the Jews where they mourned the destruction of the Temple. The cypresses which are seen from afar on the Temple Mount were supposedly identified with the cedars “planted in the house of the Lord” (Ps. 92:131; cf. 1 Kings 50:20 ff.) evoking the messianic restoration of the Temple. This new composition became the most frequent pictorial sign of Jerusalem on a vast range of Jewish ritual and household objects that were sent from the Land of Israel to Jews elsewhere and on the copies of

these objects made in the Diaspora. In contrast to the undying messianic hope in Jewish folk art, professional European artists of Jewish origin who converted to Christianity (e.g., Eduard Bendemann in his *Jeremiah on the Ruins of Jerusalem*, ca. 1834–1835) expressed in images of Jerusalem their despair and lack of belief in the redemption of the Jews.

In Muslim art, Jerusalem is generally symbolized by the *Qubbat as-Sakhrah* or the *Haram al-Sharif* (the Temple Mount). Admittedly, some scholars hypothetically interpret the polygonal walled city which is presented on a tray to Muhammad in a painting from a *Mirāj Nāmeḥ* manuscript (Tarbiz, ca. 1360–1370; Istanbul, Topkapi Sarayı, H. 2154, fol. 107r) as the city of Jerusalem, discerning the Dome of the Rock and *al-Aqsa* mosque among its buildings. Concurrently with the early illustrated Jewish itineraries of the Holy Land, schematic maps of the Temple Mount, like maps of Mecca and Medina, appeared in manuscript scroll guides for Muslim pilgrims (e.g., the guide from 1544–1545; Istanbul, Topkapi Sarayı, H. 1812). The site is commonly depicted as a rectangle containing the *Qubbat as-Sakhrah*, in some pictures with the rock shown inside, in the lower center; the *al-Aqsa* above; minarets; other Muslim sacred places; and also cypresses, palm trees, and mountains – all seen in profile or from above. Such maps were also depicted on the *gibla* wall in Ottoman mosques (e.g., the painting from ca. 1660–63 in the Haznedar Mosque at Sivrihisar near Ankara).

Napoleon's Egyptian campaign (1798–99) and increasing political interests of France, England, and Germany in the Holy Land prompted modern European painters to discover the real Jerusalem. With the benefit of realistic drawings from nature, Luigi Mayer (1755–1803), Henry Warren (1794–1879), David Roberts (1796–1864), and William Henry Bartlett (1809–1854) looked at Jerusalem through the traditional concept of the sacred city, giving in their pictures a distant view of the Dome of the Rock on the Temple Mount under the high sky. In due course, many artists became attracted by a closer illusionistic view of the holy places, ancient monuments, and archaeological sites as if conveying a look of an eyewitness (cf. works by Carl Friedrich Werner, 1808–1894; William Simpson, 1823–1899; Vasily Vereshchagin, 1842–1904; John Fulleylove, 1845–1908; Gustav Bauernfeind, 1848–1904; Stanley Inchbold, 1856–1921). One such subject relating to the Jewish aspect of Jerusalem was the Jews praying at the Western Wall shown at a sharp angle from the narrow court near it.

Similarly, presentations of the prayer at the Western Wall and a visionary city became subjects of pictures of Jerusalem by modern Jewish artists. Inspired by the Zionist ideas, Ephraim *Lilien in Berlin depicted Jerusalem as a promised city seen from afar, against the shining sun that stretches its rays towards a Jew suffering in the Exile (an illustration to Morris Rosenfeld's "*Der Juedische Mai*," *Lieder des Ghetto*, 1902). But even when the Israeli artists Reuven *Rubin (1893–1974) and Nahum *Gutman (1898–1980) observed the actual cityscape, they postulated a distance from the Temple Mount. From the 1920s, artists focused their attention on the Jewish quarters

of Jerusalem, often showing them looking like a downtrodden provincial *shtetl* (e.g., Jacob *Steinhardt, 1887–1968, and Hayim Glikberg, 1904–1970) or alleys of a European city (e.g., Ludwig *Blum, 1891–1974). The authentic sense of crude hills, poor vegetation, and rocky houses of Jerusalem feature works by Anna *Ticho (1894–1980) and Leopold *Krakauer (1890–1954). Contemporary Israeli artists take the imagery of Jerusalem in the direction of political and ideological controversies. As examples, restating the idea of the Jewish national home, Jan Rauchwerger (1942–) paints the Israeli flag streaming in fresh air over landscapes of the Judean hills near Jerusalem; David Reeb's (1952–) views of the holy places in Jerusalem supplied with a barcode evoke irony or protest against commercialism of faith and ideals; and Menashe Kadishman's (1932–) paintings of the Wailing Wall, whose stones are touched by multicolored patches of paint, question the very respect for national values.

Since 1967, the political and ideological competition over Jerusalem provoked the revival of the image of *Qubbat as-Sakhrah* in the art and visual propaganda of artists of Arab origin as a symbol of the claim for the whole of Jerusalem and Palestine. Nabil Anani (1943–), Sliman Mansour (1947–), Taleb Dweik (1952–), and others adopted the images of the ideal circular city and ethereal Jerusalem centering on the Dome of the Rock in the context of longing and struggle for the lost land. The real Jerusalem is referred to symbolically and conceptually as a place of humiliation: for instance, Kna'an Ahmed's sculpture *New Walls of Jerusalem* (ca. 2004) alludes to administrative barriers between the Eastern and Western parts of the city.

[Ilia Rodov (2nd ed.)]

In Music

In music, as in literature, there is a vast and varied body of material inspired by the theme of Jerusalem. Theoretically, the "songs of Jerusalem" include the innumerable settings of the countless biblical verses, prayers, hymns, and poems in which Jerusalem or Zion are mentioned – in art and folk music and in Jewish and Christian culture. Such a list would also have to include the Passion compositions (since their scene is Jerusalem) and works about the Crusades (including the many compositions based on Tasso's *Jerusalem Delivered*). Until the end of the 19th century, many oratorios, operas, choral works, art songs, and symphonic works dealt with the two destructions of Jerusalem by Nebuchadnezzar and Titus (the correlation with historical events is difficult to establish in most cases). However, several English and U.S. composers have turned to the "Heavenly City" subject, stimulated by the enormous success of Ewing's hymn, "Jerusalem the Golden" (see below), and also perhaps by the medieval revival. Among notable works are Ralph Vaughan Williams' oratorio, *Sancta Civitas* (1892), based on the Apocalypse, and Horatio W. Parker's *Hora novissima* (1892), based on the Latin prototype of the hymn. Works by modern Jewish composers include Lazare *Saminsky's *City of Solomon and Christ* (1932), for mixed chorus and orchestra, and Darius *Milhaud's *Les*

deux Cités (1937), a cantata for augmented children's chorus with text by Paul Claudel (comprising "Babylone," "Élégie," and "Jérusalem").

Israel works written before 1967 dealt with certain aspects of Jerusalem, but after the Six-Day War, there was an intense preoccupation with the subject, both spontaneously and by commission. Recha *Freier organized the *Testimonium Jerusalem*, which commissioned composers in Israel and overseas to write works on the history of Jerusalem, which were played at special performances in Jerusalem. Other works composed between 1967 and 1970 include *Jerusalem Eternal*, a cantata by Haim *Alexander; *Tyre and Jerusalem*, a ballet (based on the play by Mattityahu *Shoham) by Ben-Zion *Orgad; and *Jerusalem*, a symphony for mixed chorus, brass, and strings by Mordechai *Seter.

Among the few Protestant chorales which apostrophize Jerusalem directly, the most famous is Melchior Franck's *Jerusalem, du hochgebaute Stadt* (first published 1663), of which there have been many English translations (e.g., *Jerusalem, thou city built on high*). The vision of the Apocalypse appears in a number of Latin hymns paraphrased again and again in the 19th century (J. Julian, *A Dictionary of Hymnology* (1892), S.V. *Coelestis O Jerusalem, Coelestis urbs Jerusalem, Urbs beata Jerusalem*). Outstanding among these is Alexander Ewing's music to John Mason Neale's text, "Jerusalem the Golden," which "conquered the world" after its publication in *Hymns Ancient and Modern* (1861). It draws from the section of Bernard of Cluny's *De contemptu mundi* (*Hora novissima*) beginning *Urbs Sion aurea/patria lactea/cive decora* (see Julian, op. cit., s.v. Neale) and the melody is in typical 19th-century hymn style; but the beautiful opening phrase C/D C F E / D - C goes back to the German Protestant chorale setting of *Nun ruhen alle Waelder*.

IN JEWISH FOLK SONG TRADITION. The following are some of the best-known Jewish folk songs on Jerusalem:

(a) Sephardi: "*De frutas sabrosas*" (M. Athias, *Romancero Sephardi* (1961², nos. 132, 133); "*Ir me quiero, madre, a Jerusalem*" (*ibid.*, no. 131), the latter often sung by families when saying farewell to a relative bound on a journey to the Holy Land.

(b) Kurdistan Jews: "*Ha-Shem vi-Yrushalayim*," for Shabbat *Nahamu*; Aramaic, in the form of a dialogue between God and Jerusalem (Y.Y. Rivlin, *Shirat Yehudei ha-Targum*, 1959).

(c) Eastern Ashkenazi: "*In der Shtot Yerusholayim*" and *Zingt-zhe alle Yidelach* (Idelsohn, *Melodien*, 9 (1932), nos. 219, 225); "*Yerusholayim slavno gorod*," with Russian words (*ibid.*, no. 438; the prototype for the later Hebrew "*Yerushalayim Ir ha-Kodesh*," see below).

(d) Yemenite: "*Kiryah Yefehfiyyah*," poem by Shalom *Shabbazi. The melody, already notated by A.Z. Idelsohn in his *Sefer ha-Shirim* (1911), became a Hebrew folk song and was made famous in the interpretation of Berachah *Zefirah.

Most of the Jerusalem songs in the Diaspora are lyrical and yearning in their texts and melodies, though some of the

Eastern Ashkenazi tunes are more vigorous. Not all the Hebrew songs which mention Jerusalem are "Jerusalem songs." Even in "*Ha-Tikvah*," the city symbolizes the whole of Erez Israel – the refrain ends, in the old version: *lashuv le-erez avoteinu/ Ir bah David hanah* ("to return to the land of our fathers/ the city where David abode") and in the new version: *lihyot am hofshi be-arzenu/erez Ziyyon vi-Yrushalayim* ("to be a free people in our land/the land of Zion and Jerusalem").

Of the songs directly connected with the city, the following are the most important:

(1) J. *Engel and A. *Hameiri, *Hoi, hoi, hoi, Na'alayim*, the climax of which is: *Halutz, beneh, beneh Yerushalayim* ("O pioneer, build Jerusalem!"); poem written by Hameiri in 1922 when the *Gedud ha-Avodah was working on the road to Jerusalem; setting by Engel for the *Ohel choir (1926).

(2) Adapted tune of *Yerushalayim slavno gorod* (see above); Emanuel ha-Russi *Yerushalayim Ir ha-Kodesh* (1925).

(3) M. Rapoport and A. Hameiri, "*Me-al pisgat Har ha-Zofim*" ("From the Summit of Mount Scopus," 1930), melody based on an Eastern Ashkenazi prototype. Rapoport later wrote another setting, but this not as popular as the first.

(4) S. Ferszko and *H. Gouri, "*Bab-el-Wad*" (1949), mourning the Jewish fighters who died during Israel's War of Independence at the "Gate of the Valley" (*Sha'ar ha-Gai*, Arabic Bab el-Wad; where the road to Jerusalem enters the mountains).

(5) E. *Amiran and R. Saporta, "*Mi va-rekhev, mi va-regel*" ("Some come by car and on foot")... *Na'aleh-na li-Yrushalayim* (1950); children's song for Independence Day, which was still in popular use for the Three-Day March to Jerusalem.

(6) Y. Ne'eman's setting of Judah Halevi, "*Yefeh Nof Me-sos Tevel*" an Orientalizing melody, written for the Israel Song Festival.

(7) N. *Shemer (words and music), "*Yerushalayim shel Zahav*," written for the 1967 Israel Song Festival, which achieved wide popularity partly because it appeared on the eve of the Six-Day War. Other Jerusalem songs written during and after the Six-Day War did not achieve the same impact.

Some Israel "Bible-verse" songs may also be considered "Jerusalem songs," e.g., *Amiran's "*Al Homotayikh Yerushalayim*" (Isa. 62:6), written during the 1948 siege, "*Ki mi-Ziyyon Teze Torah*" (Isa. 2:3; c. 1942), and "*Halleluyah Kumu ve-Na'aleh Ziyyon*" and "*Uru Aḥim ve-Na'aleh Har Ziyyon*" based on Psalms (1933–36; for the Offering of the First Fruits); Y. Zari's "*Va-Yiven Uzziyyahu*" (II Chron. 26:9; c. 1956); N.C. Melamed's "*Ve-Teḥezenah Einenu*" (c. 1950); M. *Ze'ira's "*Ashrei ha-Ish Yissa et Alumav/ Be-Ma'aleh Harei Ziyyon*" (c. 1942) and "*Lekhu ve-Nivneh et Homot Yerushalayim*" (Neh. 2:17/4:15); and M. *Wilensky's "*Uri Ziyyon, hoi Uri, Livshi Uzzekeh*" (Isa. 52:1–2).

JERUSALEM, KARL WILHELM (1747–1772), German philosopher. Jerusalem was the son of a well-known court

preacher in Brunswick, Germany, who was probably of Dutch Jewish origin. Jerusalem studied law at Leipzig and Goettingen, and became a functionary of the legation at Wetzlar. He knew *Goethe and was a friend of G.E. *Lessing. Unhappy about his life and about a love affair, Jerusalem shot himself. Goethe was shocked by Jerusalem's suicide and immortalized him in *Die Leiden des jungen Werthers* (1774) and for a while Jerusalem's grave became a place of pilgrimage. Lessing, concerned about Goethe's picture of Jerusalem, published Jerusalem's writings under the title *Philosophische Aufsätze* (1776; ed. by P. Beer, 1900) to show Jerusalem's intellectual side. Jerusalem was a minor Enlightenment thinker. His brief writings deal with the origins of language, the nature and origin of general and abstract concepts, freedom, Mendelssohn's views, and the nature of experience. Jerusalem was a determinist, and Lessing's preface to the *Aufsätze* is one of the important statements of his own determinism. Jerusalem's *Aufsätze und Briefe* were published in 1925 by H. Schneider.

[Richard H. Popkin]

JERUSALEM, LEGAL ASPECTS.

Introduction

At least in three respects Jerusalem differs from most other places: the city is holy to adherents of three religions, it is the subject of conflicting national claims by two peoples, and its population is heterogeneous to a considerable degree. These characteristics require some elaboration.

In the city one finds Holy Places of Christianity, since according to Christian tradition Jesus lived and was active in various locations in Jerusalem. Under the Islamic tradition, the al-Aksa Mosque and the Dome of the Rock as well as the Temple Mount on which they are situated are Holy Places, due to Muhammad's nocturnal visit, and for the Jewish people the whole city is holy, in particular the Temple Mount, because of the divine presence (the *Shekhinah*).

It has been argued that some of the events which are associated by the various religions with Jerusalem could not, from a historical point of view, have actually occurred. However, religious faith deserves respect and historical accuracy is not relevant. Religious belief in the sanctity of certain sites in Jerusalem has been exploited by various individuals, states, and institutions in order to achieve political goals.

As for the national aspect, according to Israeli law united Jerusalem is the capital of the State of Israel, but the Palestinians also have claims on the city, at least on the eastern part thereof, and seek to make it their capital.

Turning to the heterogeneous nature of the population, it is sufficient to stroll through the streets of the city to realize that it indeed consists of a mosaic of many and various communities. Thus, for example, adherents of some 40 different religions or ethnic communities live in Jerusalem.

These features may explain why there are so many different opinions concerning the legal status of the city, and why it is such a thorny problem in the peace process.

Opinions on the Legal Status of Jerusalem

Many statesmen as well as experts in international law have expressed their opinion on the status of Jerusalem.¹ In the framework of this article only the most representative ones can be reviewed, and the opinions will be stated without analyzing the controversies they have engendered. As the western parts of the city have not undergone a considerable change since 1949, opinions on their status can be analyzed without a temporal division. However, the eastern sectors changed hands in 1967, and therefore it may be useful to divide the discussion accordingly.

With regard to west Jerusalem, there are four basic opinions. According to the first, mainly developed by Sir Elihu Lauterpacht, Israel lawfully acquired sovereignty in 1948. When Britain left the area, a vacuum of sovereignty ensued. This vacuum could validly be filled only by a lawful action. Since Israel acquired control of west Jerusalem in 1948 by a lawful act of self-defense, she was entitled to fill that vacuum and thus became the lawful sovereign.²

Prince Hassan bin Talal of Jordan has expressed the opinion that sovereignty over Jerusalem is suspended until a comprehensive settlement is agreed upon.³

According to Henry Cattan, the Palestinian Arab people has had and still has “legal sovereignty” over the whole of Palestine including Jerusalem since the mandatory period.⁴

Others maintain that the status of Jerusalem is subject to the UN General Assembly resolution of 1947 which recommended the establishment of a *corpus separatum* under a special international regime and administered by the United Nations.⁵

Most foreign states have not adopted a clear-cut stand on the status of west Jerusalem.⁶ Although there are differences among various states, one can discern certain similarities with regard to the basic questions. Apparently foreign states were not prepared to recognize the legality of Jordanian or Israeli rule over the respective zones of the city under their control. Thus, for example, the foreign consuls stationed in the city refused and still refuse (in 2005) to apply to Jordan (in the past) or Israel (as the case may be) for the granting of *exequatur*, i.e., permission to carry out their functions in the city. The refusal to recognize Israeli rule over the western sector was apparent, for example, in the 1952 case of the *Heirs of Shababo v. Roger Heilen, the Consulate General of Belgium and the Consul General of Belgium in Jerusalem*: the driver of the Belgian Consulate had been involved in a fatal road accident that caused the death of Mr. Shababo. The family members of the deceased sued the driver, the Consulate and the Consul General, and claimed damages. The incident was the subject of several judgments of the Jerusalem District Court.⁷ Of particular interest for the present discussion is the first deliberation, where the driver and his principals denied the jurisdiction of the Israeli

courts over the accident since it had taken place in Jerusalem. That argument was dismissed by the court.

It seems, however, that despite this non-recognition of Israeli sovereignty, most states have nevertheless accepted the *de facto* applicability of Israeli law,⁸ and none has so far demanded that the laws of occupation including the 1949 Fourth Geneva Convention Relative to the Protection of Civilian Persons in Time of War be applied to west Jerusalem.⁹

East Jerusalem during the period 1949–67 was under Jordanian rule. According to Sir Elihu Lauterpacht, during that time the area was under a vacuum of sovereignty: Britain had abandoned sovereignty, but Jordan could not fill this gap because it had occupied east Jerusalem by an illegal act of aggression.¹⁰

Under Henry Cattan’s theory – similar to the parallel one concerning west Jerusalem – the Palestinian Arab people has had and still has title to “legal sovereignty” over the whole of Palestine, including east and west Jerusalem.¹¹

A third opinion, represented by Yoram Dinstein, recognized Jordanian sovereignty over east Jerusalem, derived from the exercise of the right of self-determination by the inhabitants, i.e., the resolution adopted by the notables in Jericho in 1949, requesting the annexation of the West Bank to Jordan.¹²

Lastly, with regard to east Jerusalem, like the western parts, certain writers claim that the *corpus separatum* solution is still valid.¹³

How were these opinions influenced by the changes that occurred in 1967? According to Sir Elihu Lauterpacht, the vacuum of sovereignty existed until Israel occupied east Jerusalem by a lawful act of self-defense and thus was entitled to fill the gap.¹⁴ A similar conclusion was reached by other writers who based Israel’s sovereignty on the idea that Israel has the strongest relative title to the area in the absence of a lawful “sovereign reverser” due to Jordan’s lack of a valid claim to sovereignty.¹⁵

The opinion held by Henry Cattan under which the Palestinian Arab people has “legal sovereignty” over the whole of Palestine irrespective of the factual situation, did not have to change as a result of the Six-Day War.¹⁶

Yoram Dinstein who recognized Jordanian sovereignty in east Jerusalem expressed the opinion that this sovereignty survived the 1967 war, but that Israel is a lawful occupant of those areas since she occupied them in a war of self-defense.¹⁷

The *corpus separatum* theory was not affected by the war.¹⁸

As to the practical attitude of the international community: as mentioned, neither before nor after 1967 did the foreign consuls request an *exequatur* from Jordan or from Israel, which means that neither the sovereignty of the one nor of the other was recognized. Moreover, since 1967 the UN organs, including the Security Council, have repeatedly stated that east Jerusalem is occupied territory subject to the Fourth Geneva Convention.¹⁹

The attitude of the United States has been expressed *inter alia* in a letter sent by President Carter to Egypt and Israel in the context of the 1978 Camp David accords.²⁰ The president wrote that the position of the U.S. remained as stated by Ambassador Goldberg at the UN General Assembly in 1967 and subsequently by Ambassador Yost in the Security Council in 1969. There is, however, a difference between the speeches of the two ambassadors. While they both stressed that the actions of Israel in the city were merely provisional and that the problem of Jerusalem's future should be settled by negotiations, Ambassador Yost added that east Jerusalem was occupied territory to which the Fourth 1949 Geneva Convention Relative to the Protection of Civilian Persons in Time of War applied.²¹ This attitude, however, did not prevent the U.S. administration from requesting Israel to extradite to the U.S. a person who lived in the eastern sector of the city.²² However, in 1995 the U.S. Congress passed a bill that calls for the recognition of united Jerusalem as the capital of Israel. The bill also required that the U.S. Embassy be moved from Tel Aviv to Jerusalem by 1999. As of 2006 this move has not yet taken place, due to a provision in the bill that authorizes the president to postpone its implementation if the security of the United States requires it.

As to the European Community, it adopted in 1980 a declaration (the Venice Declaration) on the Middle East which included a paragraph on Jerusalem:

The Nine recognize the special importance of the role played by the question of Jerusalem for all the parties concerned. The Nine stress that they will not accept any unilateral initiative designed to change the status of Jerusalem and that any agreement on the city's status should guarantee freedom of access for everyone to the Holy Places.²³

In 1993, the ambassador of Germany in Israel sent a diplomatic note to Israel in the name of the European Union. According to the communication he "reaffirmed" the position of the EU, stating that the status of Jerusalem is still the *corpus separatum* one.

The International Court of Justice, in its Advisory Opinion on the "Legal Consequences of the Construction of a Wall in the Occupied Palestine Territory" (2004), spoke of East Jerusalem as occupied Palestinian territory.

Two internationally relevant developments concerning Jerusalem occurred in the 1980s. In 1981 the Old City and its walls were registered by Jordan in the World Heritage List established under the 1972 UNESCO Convention for the Protection of the World Cultural and Natural Heritage, and in 1982 it was included in the list of sites in danger.

The second event to be mentioned is the declaration of King Hussein of Jordan in 1988 that Jordan was detaching itself from the West Bank.

Thus far, we have reviewed the opinions on the legal status of Jerusalem under international law. But what is its status under Israeli law? Jerusalem was not mentioned in the Declaration of the Establishment of the State of May 14, 1948.²⁴

The application of Israeli law to the western sector of Jerusalem was ensured by a proclamation made by the minister of defense in 1948,²⁵ and by the Area of Jurisdiction and Powers Ordinance of 1948.²⁶ That ordinance provided that the law in force in the State of Israel should also apply to any part of Palestine which the minister of defense would designate by proclamation to be under occupation of the Israel Defense Forces.

At the end of 1949, following the renewed debate on Jerusalem in the UN General Assembly, Israel's Prime Minister David Ben-Gurion announced in the Knesset (Israel's parliament) that Jerusalem was an inseparable part of the State of Israel and its eternal capital²⁷; this position was approved by the Knesset.²⁸

After the Six-Day War (1967), various measures were taken in order to include areas east of Jerusalem in Israel's jurisdiction: the Knesset passed the Law and Administration Ordinance (Amendment No. 11) Law of 1967,²⁹ authorizing the Government to apply the law, jurisdiction and administration of Israel to any area which was formerly part of Mandatory Palestine. Likewise the Municipalities Ordinance was amended so as to allow for the extension of the bounds of a municipality where a decision has been made as to the application of Israel's jurisdiction to a certain area, as referred to above.³⁰ And indeed, the Government issued an appropriate order as a result of which Israeli law was made to apply to the eastern sector of Jerusalem,³¹ which was also included within the jurisdiction of the Jerusalem municipality.

In several respects Israeli law granted east Jerusalemites certain facilities, by laying down special arrangements for them, as embodied in the Legal and Administrative Matters (Regulation) Law [Consolidated Version] of 1970.³² This law dealt, for example, with the registration of companies and with the citizenship of policemen. The most conspicuous examples of the differences between the law as applied to Israel on the one hand and to east Jerusalem on the other hand not mentioned in that law, are the system of education, and rules on foreign currency: in the eastern neighborhoods the Jordanian and later the Palestinian school curriculum has been taught, and the Jordanian dinar is used in parallel with the Israeli shekel.

As to the status of Palestinian inhabitants of East Jerusalem, they have been recognized as permanent residents of Israel, holding an Israeli identity card and having Israeli social rights, i.e., social security and medical insurance. They may also vote in municipal elections.

Israel has not imposed its citizenship on the East Jerusalemites, but they may of course apply for naturalization. So far not many have applied for Israeli citizenship.

Israel has increased the municipal boundaries of Jerusalem, and they were fixed as extending from Atarot in the north almost to Rachel's Tomb in the south, and from Ein Kerem in the west to the eastern slopes of Mount Scopus. (A further extension to the west, i.e., into Israel proper, was effected in 1993.)

The application of Israeli law to East Jerusalem was met with fierce criticism from various UN bodies.³³

The question arose at the time as to whether these acts constituted annexation of the eastern parts of Jerusalem. The then minister of foreign affairs, Abba Eban, informed the UN Secretary General in writing in July 1967³⁴ that they did not constitute annexation, but administrative and municipal integration. On the other hand, from the point of view of Israeli law, it was held in a number of decisions of the Supreme Court that the eastern sectors of Jerusalem had become a part of the State of Israel.

One of the earlier cases on this question is *Ruidi and Maches v. Military Court of Hebron*.³⁵ This case involved an antiquities dealer from Hebron who transferred antiquities from Hebron to East Jerusalem, without first obtaining an export license as required by the Jordanian antiquities law which applies on the West Bank. The dealer pleaded in his defense that at the critical time East Jerusalem was not foreign territory in relation to the West Bank, so that he could not be charged with exporting without a license. However, the Supreme Court did not accept this argument since it considered that the eastern sectors of Jerusalem had already become part of Israel.

In 1980 the Knesset adopted a new law concerning Jerusalem – the Basic Law: Jerusalem Capital of Israel.³⁶ This law states that “Jerusalem, complete and united, is the capital of Israel,” that it is “the seat of the President of the State, the Knesset, the Government, and the Supreme Court,” that the Holy Places shall be protected, and that the Government has to provide for the development and prosperity of Jerusalem. Its adoption aroused resentment in the international community and was considered by the Security Council to be “a violation of international law.”³⁷ The Council called upon member States with embassies situated in Jerusalem to withdraw them from the city, and, indeed, the embassies, 13 in number, left the city following the resolution. In 1982 the Embassy of Costa Rica returned to West Jerusalem, and was followed by that of El Salvador. In 2000 Basic Law: Jerusalem Capital of Israel was amended. Two new provisions were added. The transfer of any powers, whether permanently or provisionally, concerning Jerusalem in its 1967 boundaries requires the consent of the majority of the Knesset (namely 61 votes). This provision relates to any powers vested by Israeli law in the government or in the municipality of Jerusalem.

Perhaps the most comprehensive discussion of the status of Jerusalem under Israel law as well as under Jewish law is included in Justice M. Elon’s judgment in the case of *The Temple Mount Faithful Association et al. v. The Attorney General et al.*, decided in 1993.³⁸ In this case the petitioners requested the High Court of Justice to order the Attorney-General and various other Israeli authorities to prosecute the Muslim Waqf for having undertaken on the Temple Mount certain works without the necessary permit. The High Court decided not to interfere in the discretion of the relevant authorities. In reaching its conclusion, the Court emphasized

that the Temple Mount is part of the territory of the State of Israel and that the sovereignty of the State extends over unified Jerusalem in general and over the Temple Mount in particular. Hence all the laws of Israel, including the laws which guarantee freedom of worship at, the right of access to, and the protection of the Holy Places against desecration apply also to the Temple Mount. However, in several cases the Supreme Court has not applied the law to its full extent in matters relating to the Temple Mount.

The attitude of the Palestinians was expressed inter alia in 1988 and 2002. When the Palestine Liberation Organization proclaimed in 1988 the establishment of a Palestinian state, it asserted that Jerusalem was its capital. In 2002 the Palestinian Legislative Council adopted the Law of the Capital, which stipulated that Jerusalem was the capital of the Palestinian State, the main seat of its three branches of government. The State of Palestine is the sovereign of Jerusalem and of its holy places. Any statutes or agreement that diminishes the rights of the Palestinian State in Jerusalem is invalid. This statute can be changed only with the consent of two-thirds of the members of the Legislative Council.

Jerusalem and the Peace Process

One could argue over the question as to when the present peace process began. For practical purposes, the adoption of Security Council Resolution 242 of November 1967 can be chosen as the starting point, since this text is referred to in many of the agreements which have so far been reached. Resolution 242 does not include any express reference to Jerusalem. This Resolution, adopted in the wake of the Six-Day War, laid down the basic principles upon which peace should be founded.³⁹ Similarly, Security Council Resolution 338 adopted after the 1973 October War does not deal with Jerusalem. Neither do the Camp David accords of 1978⁴⁰ include provisions on Jerusalem, but the parties expressed their differing opinions on the subject in accompanying letters: Israeli Prime Minister Menachem Begin stated that in accordance with legislation of 1967, “Jerusalem is one city, indivisible, the Capital of the State of Israel,” whereas Egypt’s President, Anwar el-Sadat, stated that “Arab Jerusalem is an integral part of the West Bank,” and “should be under Arab sovereignty.” At the same time he determined that “essential functions in the City should be undivided,” and that “a joint municipal council composed of an equal number of Arab and Israeli members can supervise the carrying out of those functions.” He added that “in this way, the city shall be undivided.”⁴¹

There was no reference to Jerusalem in the Peace Treaty concluded in 1979 by Egypt and Israel.⁴²

In October 1991 the Madrid Conference for Peace in the Middle East was convened by the United States and the Soviet Union.⁴³ After the Conference, bilateral negotiations took place. The question of Jerusalem was especially relevant to the negotiations between Israel and the Palestinians who attended the Conference as part of a joint Jordanian-Palestinian delegation.

According to the invitation from the U.S. and the Soviet Union, the negotiations with the Palestinians were to deal at the first stage with the establishment of interim self-government arrangements in the West Bank and Gaza for a period of five years, while in the third year after the setting up of that regime, negotiations on the permanent status of these areas would start. Although the text of the invitation to the Conference does not refer to Jerusalem, the city played an important role in the negotiations that preceded the Conference and in the letters of assurances from the United States to the Palestinians.

The U.S. promised that the composition of the delegation would not affect the claims of the Palestinians to Jerusalem. It expressed the view that the city should never again be divided, and that its final status should be determined by negotiations. The U.S. also stated that it did not recognize the annexation of east Jerusalem by Israel nor the extension of the municipal boundaries. It was the view of the U.S. that "Palestinians of east Jerusalem should be able to participate by voting in the elections for an interim self-governing authority," and that the Palestinians have the right "to bring any issue, including east Jerusalem, to the table." The U.S. did not specify whether Jerusalem could be brought "to the table" of the negotiations on the interim arrangements, or of the later permanent status negotiations.⁴⁴ The letters of assurances were issued by the United States in order to prod the parties to participate in the Conference.

While the post-Madrid bilateral meetings took place between Israel and a Palestinian delegation which, upon Israel's demand, formally did not include representatives of the PLO, the latter and Israel conducted secret negotiations in Oslo with the good offices of Norway's Minister of Foreign Affairs. As a result, three letters were exchanged and a Declaration of Principles was initialed in Oslo and signed in Washington, D.C., on September 13, 1993.⁴⁵ This text was a turning point in the attitude of the two parties on the question of Jerusalem: it was agreed that Jerusalem would not be included in the interim self-government arrangements to be agreed upon – a concession by the Palestinians, and, on the other hand, Israel conceded that Jerusalem would be one of the subjects to be dealt with in the framework of the negotiations on the "permanent status" to start in 1996.⁴⁶ In addition, it was agreed that "Palestinians of Jerusalem who live there will have the right to participate in the election process" for the Interim Self-Government Authority for the West Bank and Gaza.⁴⁷ The parties disagreed on the question whether the Palestinians of Jerusalem have only the active right to vote, or also the right to be elected.

Israel's insistence on denying the right to be elected stemmed from the fear that the granting of such a right would be incompatible with Israeli sovereignty over the entire city. In addition, there was disagreement on the question, where the Jerusalemites should vote.

These matters were solved, at least partly, in the Israeli-Palestinian Interim Agreement on the West Bank and the

Gaza Strip, of September 28, 1995.⁴⁸ As to the passive right to be elected, it was agreed that only a Jerusalemite who has an additional address in the West Bank or Gaza may be elected, and he is to represent the other area, namely, not the city of Jerusalem (Article III (1)(b) of Annex II to the Interim Agreement). With regard to the physical location where Jerusalemites were actually to vote, it was agreed that most of the residents of Jerusalem would cast their vote in the Palestinian Jerusalem constituency beyond the municipal boundaries of the city. This solution was possible since the Jerusalem constituency according to the Palestinians is much larger than the city. In fact, on election day (January 20, 1996) most of the residents voted in Abu Dees – an Arab village just beyond the confines of the city. Only a small number of Palestinians – about 4,500 persons – were permitted to vote in post offices within the boundaries of the municipality proper (Article VI (2)(a) of Annex II). Voting at the post offices was procedurally somewhat different from voting at a regular polling station, to emphasize that Jerusalem is not part of the areas under the jurisdiction of the Palestinian Council.

About a month after the signing of the Declaration of Principles, in October 1993, Israeli Foreign Minister Shimon Peres sent a letter concerning Palestinian institutions in East Jerusalem to the foreign minister of Norway, Johan Jurgen Holst.⁴⁹ The letter was kept secret for some time, and its discovery aroused much criticism in Israel. According to this letter, "all the Palestinian institutions of East Jerusalem, including the economic, social, educational, cultural, and the holy Christian and Moslem places, are performing an essential task for the Palestinian population ..." and "will be preserved...." The meaning of this text and its effect raise difficult questions of interpretation.⁵⁰

Once the ice was broken between Israel and the Palestinians, the road was open for progress in the negotiations between Israel and Jordan. First a "Common Agenda" was agreed upon (September 14, 1993), then a joint declaration was adopted (July 25, 1994) and on October 26, 1994, a Peace Treaty was concluded.⁵¹ This Treaty includes, inter alia, a promise by Israel "to respect the present special role of Jordan in Muslim Holy Shrines in Jerusalem," and, "when negotiations on the permanent status will take place, Israel will give high priority to the Jordanian historic role in these shrines."⁵²

According to some press reports, in 1996 Jordan promised to transfer the custody of the Holy Places to the Palestinians once the latter acquire control of the city in the framework of the permanent status to be negotiated later.⁵³ However, the status of the Muslim Holy Shrines in Jerusalem is of interest and concern not only to Jordan, the Palestinians, and Israeli Muslims.

In the wake of the improved relations with the Palestinians and with Jordan, several other countries have established or re-established diplomatic relations with Israel. Of particular interest in this regard is the normalization of relations between Israel and the Holy See, foreseen by the Fundamental Agreement of December 30, 1993.⁵⁴ This document does not

deal expressly with Jerusalem, but some of its provisions are relevant to the city, e.g., the commitment to favor Christian pilgrimages to the Holy Land, and the right of the Catholic Church to establish schools and to carry out its charitable functions. The parties affirmed their “continuing commitment to maintain and respect the ‘status quo’ in the Christian Holy Places to which it applies ...” – a reference to the *status quo* established in the 18th and 19th centuries by the Ottoman Empire in order to regulate the rights of various competing Christian churches at certain Holy Places in Jerusalem and in Bethlehem.⁵⁵

The negotiations on the permanent status started in May 1996, but were suspended after a few hours. They were resumed in 1999 and led to the July 2000 Camp David Summit. These intensive negotiations failed, to a large extent because of disagreement over the future of Jerusalem, in particular over the Old City and the Temple Mount. Some of the Palestinian leaders, including Arafat, even claimed that there had never been a Jewish Temple on the Temple Mount. Neither did the January 2001 meeting in Taba lead to a breakthrough.

Since then, several proposals have been drafted concerning the search for a resolution to the Israel-Palestinian dispute including Jerusalem (e.g., President Clinton, 2000; Ayalon-Nusseibeh, 2002; the Arab States Peace Initiative, 2002; Beilin-Abd Rabbo Geneva Initiative, 2003), but so far (2006) none has been adopted by the parties. On the other hand, the 2003 Road Map, sponsored by the U.S., Russia, the UN, and the EU (the Quartet), has been accepted by the parties. According to this text, the conflict should be resolved in stages. With regard to Jerusalem, it states that in the third stage, the parties should negotiate and reach an agreement that includes a resolution of the status of Jerusalem that takes into account the political and religious concerns of both sides, and protects the religious interests of Jews, Christians, and Muslims worldwide

Conclusion

The status of West and East Jerusalem has been the subject of very differing opinions of various writers. So far foreign states have not recognized any sovereignty over Jerusalem, but have acquiesced in Israeli *de facto* control over western Jerusalem, while claiming that East Jerusalem is occupied territory. For the Israeli authorities, the whole of Jerusalem is part of the State of Israel.

In some of the agreements so far reached there are timid references to Jerusalem and the Holy Places: in the 1993 Declaration of Principles it was agreed that Jerusalem (without definition of its contours) would not be discussed in the negotiations on the interim self-government arrangements (a concession by the PLO), but that it would be included in the negotiations on the permanent status (a concession by Israel). The Declaration of Principles also foresees the participation of East Jerusalemites in the elections for the self-government authority.

In the 1994 Israel-Jordan Treaty of Peace Israel promised to respect Jordan’s present role in Muslim Holy Shrines

in Jerusalem, and also undertook to give high priority to Jordan’s historic role at those shrines when negotiating on the “permanent status.”

The difficulties concerning these early provisions were but a foretaste of the diplomatic battle over Jerusalem in the negotiations on the permanent status. Disagreement has encompassed many thorny questions, e.g., matters related to sovereignty; jurisdiction and powers, in particular in the sphere of security, transportation and access roads, town planning; Holy Places (foremost those that are holy to two or more denominations) such as the Temple Mount; and municipal matters. There is hardly any subject which could not lead to conflict, but where there is a will there is a way and if both parties are sincerely looking for a compromise, it may be hoped that they will find one.

Notes

[Ruth Lapidoth (2nd ed.)]

JERUSALEM, WILHELM (1854–1923), Austrian philosopher and psychologist. Jerusalem, who was born in Drenic, Bohemia, was a schoolteacher for several years after completing his university studies in philology. During this time he became interested in the psychology of speech and the education of blind deaf-mutes, and in 1890 wrote a book on the American blind deaf-mute, Laura Bridgman. In 1891 he began lecturing in philosophy at the University of Vienna, and in 1903 in pedagogics, but it was not until 1920 that he received a professorship in these two subjects. Between 1894 and 1902 he also taught at the Juedisch-Theologische Lehranstalt in Vienna. Jerusalem's general philosophical view was empirical, employing the genetic method, and biological and social ways of interpreting the mind. He was influenced by H. Spencer, E. Mach, and W. James, whose *Pragmatism* he translated into German. Jerusalem opposed neo-Kantianism and E. *Husserl's pure logic as merely intellectual and unrelated to life. He saw no need for a conflict between religion and philosophy, as long as the fundamental principles of science are utilized to erect structures of faith, in-

terpreting the spiritual nature of man and developing a world view that can "inspire human life with incentive, purpose and direction." He wrote on the sociological in *Der Krieg im Lichte de Gesellschaftslehre* (1915) and *Moralische Richtlinien nach dem Kriege* (1918). Among Jerusalem's major works were *Einleitung in die Philosophie* (1899; *Introduction to Philosophy*, 1910), *Gedanken und Denker* (1905), *Der Kritische Idealismus und die reine Logik* (1905), and *Einfuehrung in die Soziologie* (1926).

[Richard H. Popkin]

JERUSALEM INSTITUTE FOR ISRAEL STUDIES (JIIS), an Israeli policy research center, established in 1978 as an independent, non-profit organization. Its mission is to provide policy makers and the public with accurate, relevant data, in-depth background materials, and up-to-date analyses of critical trends and strategic options on subjects of national importance. JIIS research and analysis is designed to consider key issues facing Israel, to place them on the agenda of public debate, and to promote long-term planning and public involvement in the civic process. Materials are prepared by leading scholars as well as experienced practitioners in relevant fields. JIIS has particular expertise in issues related to the capital city of Jerusalem, the management of the Israeli-Palestinian conflict, and the status of the environment in Israel. Its work in these areas is organized in four study areas: The Center for Jerusalem – The Teddy Kollek Center, The Center for Joint Israeli-Palestinian Studies, The Environmental Policy Center, and the Center for Industrial Technological Policy. JIIS background papers and perspectives on the future of Jerusalem were central to the 1999–2000 peace negotiations led by Prime Minister Ehud Barak.

The institute was founded by Teddy Kollek, mayor of Jerusalem from 1965 to 1993, and chaired successively by scholars David Amiran (1978–1985), Amiram Gonen (1985–1989), and Abraham Friedman (1989–2002). Since 2002, it has been chaired by Yaacov Bar Siman Tov. From 1981, JIIS worked in close partnership with the Charles H. Revson Foundation in New York, which supports its initiatives and major projects. JIIS published approximately 20 books and reports a year; presented about 60 annual conferences and seminars; held press conferences to promote public awareness of key issues; and posted its data and selected policy research on its web site. Publications include *The Statistical Yearbook of Jerusalem* (edited by Maya Choshen), *Jerusalem and the Peace Process* (a series edited by Ruth Lapidoth and colleagues), *The Jerusalem Lexicon* (edited by Amnon Ramon), *Jerusalem's Architecture* (a series by David Kroyanker), and *The War Over the Holy Places* (by Shmuel Berkowitz).

[Ora Ahimeir (2nd ed.)]

JERUSALEM POST (until 1950 *The Palestine Post*), independent English-language daily newspaper published in Jerusalem. It was founded in December 1932 (after having purchased and incorporated the *Palestine Bulletin*, which had appeared since 1925) by Gershon Agronsky (*Agron), with the assistance of Ted R. *Lurie, who became editor when Agron was elected mayor of Jerusalem in 1955. The paper covers local news of both Jewish and Arab interest as well as world affairs, with special attention to developments in the Middle East. During the British Mandate, the *Post's* defense of Jewish interests and criticism of the Mandatory government, such as over the White Paper and its consequences, led to frequent disagreements with the British administration, especially the political censorship resulting from this policy. In February 1948, its offices and press were blown up by a bomb planted in a British-Arab conspiracy, as a reprisal against Jewish terrorism. Lurie died in 1974. In 1975 Ari Rath and Erwin Frenkel were appointed joint editors. The *Post* gave general support to the Labor movement, and, after 1948, to the government of Israel, while criticizing them on points of detail, particularly on economic and social policy. Following the election of the *Likud in 1977, the paper criticized or supported government policy on an issue-by-issue basis. The paper was owned by the *Histadrut. Unable to cover the paper's expenses, it sold the paper to the Canadian newspaper chain Hollinger. With the appointment by Hollinger of Yehudah Levy as the local publisher, the paper took a right-wing turn. Twenty-eight journalists initiated a labor dispute and were subsequently fired; Rath retired, and Frenkel resigned. The period since 1990 was characterized by organizational and financial instability, including seven editors-in-chief and a rapid turnover of editorial and printing personnel. On the issue of defense, the paper moved editorially in the post-1990 years between a centrist position under David Macovsky (1999–2000) and David Horowitz (2004–) as editors, and a right-wing position under David *Bar-Illan (1990–96) and Brett Stephens (2002–4). A neo-liberal capitalist outlook on economic and financial affairs replaced the socialist outlook of earlier years. Organizational and financial instability intensified after Tom Rose was appointed publisher in 1998. Despite its financial success, the newspaper's commercial printing press was closed down. By 2005 the *Jerusalem Post's* circulation had dropped to 12,000 daily and 28,000 on weekends, a decline from a high of 33,000 and 50,000, respectively, in 1967. Its readers comprised mostly immigrants from Anglo-Saxon countries, foreign diplomats, foreign correspondents, and to a limited extent the Palestinian population. The *Post's* monopoly as Israel's English-language daily was challenged with the appearance in 1997 of an English daily edition of *Haaretz*. In 2004 the paper was bought by an Israeli company, the Mirka'ei Tikshoret group, and the Canadian media group CanWest Global Communications.

In 1959 the paper founded an international weekly edition, based entirely upon copy from the local daily edition; though highly remunerative, its circulation fell from 70,000 in

its early years to 28,000. Circulation of a weekly French-language version of the paper begun in 1991 – and sold in France, Canada, and Israel – remained low at 4,000 copies weekly. In 1995 the newspaper launched a successful Internet edition, www.jpost.com, drawing upon the daily newspaper's reporting. In 2004, the site had 14 million page views per month, one million general users monthly, and 385,000 registered users, according to the newspaper, and its yearly profits from advertising were over \$1 million.

[Yoel Cohen (2nd ed.)]

JERUSALEM PUBLISHING HOUSE, THE, Israeli publisher. Founded in 1966 by Shlomo S. (Yosh) Gafni, the company has as its aim the publication of books in foreign languages on Jewish and general subjects. Over the years the publishing house has specialized in producing encyclopedias. The first editor in chief of The Jerusalem Publishing House was Geoffrey *Wigoder. Its bestselling title, *The Illustrated Dictionary and Concordance of the Bible*, sold over one million copies. Other works dealing with the Bible include *Almanac of the Bible*, *The Glory of the Old Testament*, *The Glory of the New Testament*, *Archaeological Encyclopedia of the Holy Land*, and *The History of Israel and the Holy Land*.

The prize-winning *Encyclopedia of Judaism*, published in a second edition in 2002 as *The New Encyclopedia of Judaism* and in a youth edition as *The Student's Encyclopedia of Judaism* (2004), is a standard reference work in several languages. The *Political Encyclopedia of the Middle East* is an objective survey of the conflicts in the region. Series of richly illustrated encyclopedias covering the most important cultural events in Western civilization are *Peoples of the World* with an edition for young adults (10 vols.), *Encyclopedia of the Classical World*, *Renaissance*, *Medieval Civilization*, *Encyclopedia of International Boundaries*, etc.

From the late 1990s The Jerusalem Publishing House has co-published with *Yad Vashem encyclopedias on the subject of the Holocaust for general and educational purposes. These include such seminal works as *The Encyclopedia of Jewish Life Before and During the Holocaust* (3 vols.) and the ongoing *Encyclopedia of the Righteous Among the Nations* (6 vols. through 2005).

The biggest project of The Jerusalem Publishing House is the publication of the 21-volume second edition of the *Encyclopaedia Judaica* in cooperation with the *Keter Publishing House in Jerusalem and Thomson Gale (Macmillan) in the U.S. Fred Skolnik, editor-in-chief of The Jerusalem Publishing House, is also editor-in-chief of the *Encyclopaedia*, while Michael *Berenbaum of the U.S. is executive editor.

Founder Gafni remains president of the company and Rachel E. Gilon is the general manager.

JERUSALEM REPORT, international Jewish magazine published in Jerusalem. Founded in 1990 and appearing first as a weekly and later fortnightly, the news magazine covers political, social, economic, and cultural developments and trends in Israel, the Jewish world, and the Middle East. Its founding editor, Hirsh Goodman, formerly the *Jerusalem Post's* military correspondent, conceived of the magazine as providing a mutual mirror for Diaspora Jews and Israelis to learn about one another. In 1998 David Horovitz became editor and in 2004 Sharon Ashley. The focus of its coverage is Israel. It drew together a circle of skilled journalists including Leslie Susser, Ehud Ya'ari, Stuart Schoffman, Netty Gross, Isabel Kirshner, and Zeev Chafetz. Its coverage of the Arab world is eclectic, and not limited to Arab developments relating to Israel. It maintains correspondents in Arab capitals as well as in different centers of the Jewish world. While its Jewish world coverage improved over the years, it mainly describes developments within individual Jewish communities rather than dealing with trends in the Jewish world at large. It has a large following in the Jewish world, with many Jewish communal and other decision makers among its readers, but has made less impact inside Israel. Its circulation is 50,000, four-fifths of which is in North America. The magazine sells 3,000 copies inside Israel and the remainder mostly in Britain and other English-speaking countries. Funded initially by five Jewish philanthropists, the magazine was sold in 1998 to the Hollinger newspaper chain, which included the *Jerusalem Post*. It was subsequently acquired by CanWest Global Communications and Mirka'ei Tikshoret in 2004. Apart from a brief period, it has been unprofitable. In 2004 it won the American Joint Distribution Committee's Boris Smolar award for coverage of the Jewish World. *The Report's* staff published a biography of Yitzhak Rabin, *Shalom, Friend* (1996).

[Yoel Cohen (2nd ed.)]

JERUSALIMSKI, MOSES NAḤUM BEN BENJAMIN (1855–1914), rabbi and author. Jerusalimski served as rabbi of Kamenka in 1880, of Ostroleka in 1901, and in 1902 was appointed rabbi of Kielce. While still a young man, he corresponded with S.Z.H. *Halberstam of Sandec and J.S. *Nathanson of Lemberg. Although he never openly joined the Zionism movement, he was among the first Polish rabbis to support the Ḥovevei Zion. He also occupied himself with ramified communal activity and participated in the St. Petersburg conference of rabbis of 1909. He was the author of *Minchat Moshe* (1882) responsa, published together with *Hukkei ha-Shem* on the writing of names in bills of divorce; *Be'er Moshe* (1901), responsa and eulogies; *Leshad ha-Shemen* (1881), on Maimonides' *Mishneh Torah*; *Birkat Moshe* (1886), responsa, novellae, and the laws of *shehitah. Extracts from his diary during World War I were published in the *Sefer Kilz [Kielce]* (1957, pp. 273–93).

[Itzhak Alfassi]

JESCHURUN, name of several Hebrew and German or German-Hebrew periodicals. The best known were:

(1) An Orthodox monthly published in German by Samson Raphael *Hirsch at Frankfurt (16 vols., 1854–70), and later issued as a weekly by his son Isaac Hirsch at Hanover (1883–88). Hirsch's famous polemics against Z. *Frankel and H. *Graetz first appeared in this *Jeschurun*.

(2) A less polemical and more scholarly periodical of moderate Conservative tendencies published by Joseph I. Kobak. This appeared with interruptions between 1856 and 1878 (nine volumes) at Lemberg, Breslau, Fuerth, and Bamberg. The first volume was in Hebrew only, the remainder in Hebrew and German. The contributors included L. *Dukes, S.D. *Luzzatto, S.J. *Rapoport, J. *Reifmann, M. *Steinschneider, and D. *Cassel.

(3) An Orthodox German-language monthly published by J. *Wohlgemuth during the years 1914–30 (17 volumes). It represented the ideology of the Berlin Rabbinical Seminary and published scholarly contributions written mainly by its teachers and pupils. Volumes 7–13 also contained a Hebrew section.

JESHUA (Heb. יֵשׁוּעַ, יְהוֹשֻׁעַ), high priest, son of Jehozadak (Jozadak; Ezra 3:2; 10:18) and a grandson of Seraiah the last high priest in the First Temple (1 Chron. 5:40). Together with *Zerubbabel, Jeshua organized the return to Zion (Ezra 2:2; Neh. 7:7) and was active in the rebuilding of the Temple and the state. He headed the priestly family of Jedaiah which returned to Judah, and it was thereafter known by his name (Ezra 2:36; 10:18). He and Zerubbabel established the order of sacrifices and planned the reconstruction of the Temple. They rejected the offer of the Samaritans to help in the labor, and when, after an interval of years, at the beginning of the reign of Darius I, *Haggai and *Zechariah aroused the people to renewed labor, they again headed the project. Jeshua's importance in this "condominium," or "diarchy," is a change from the pre-exilic situation in which the priesthood was subservient to royalty, and is approved by the contemporary prophets. Haggai almost always joins Jeshua's name to that of Zerubbabel (1:1, 14; 2:2, 4), and he is the central figure in Zechariah's earlier visions (Zech. 3–6). These visions, most of which, despite various interpretations, are obscure, in the main defy interpretation; Jeshua and his men are considered "men who are a token" (Zech. 3:8). In one vision, Satan stands at Jeshua's right, and the angel of the Lord rebukes him: "May the Lord who chose Jerusalem rebuke you! Why, this is a brand plucked out of the fire." (Jeshua's grandfather Seraiah was killed by Nebuchadnezzar and his children barely escaped; Zech. 3:2) The angel then commands those in attendance to dress Jeshua in robes and to place a pure miter on his head, symbolic of cleansing from sin – evidently the "iniquity of the

land” (Zech. 3:9) – in line with the concept of the righteous being prosecuted for the sins of the generation. (The Talmud (Sanh. 93a) says this refers to the sin of intermarriage – Ezra 10:18 – but this was in a later generation.) Jeshua and Zerubabel are called “the two sons of pure oil (*yizhar*) who wait upon the Lord of all the land” (Zech. 4:14). In Zechariah the prophet takes silver and gold brought by the exiles and has it made into crowns, one of them for Jeshua (Zech. 6:9ff.). These crowns were later kept in the Temple (Mid. 3:5). The form Jeshua, as opposed to the earlier Joshua, underlies the Greek that produced English “Jesus.”

[Menahem Stern]

JESHUA BEN JOSEPH HA-LEVI (15th century), talmudist. Following the persecutions of Jews in *Algiers in 1467, he fled from his native town Tlemcen and went to Castile, settling in Toledo, where he was supported by Don Vidal b. Lavi. At the latter’s insistent request he wrote his talmudic methodology, *Halikhot Olam* (printed c. 1490). The work is divided into five sections dealing with the composition of the Mishnah and the *Gemara*, the methodology of the *Gemara*, and the manner in which the *halakhah* is determined. As the basis of his work, Jeshua made use of *Sefer Keritot* by *Samson b. Isaac of Chinon. The work appeared in several editions and served as the basis for Joseph *Caro’s *Kelalei ha-Gemara*, which contains notes and supplements to the *Halikhot Olam* and for Solomon *Algazi’s *Yavin Shemu’ah*. Both commentaries were published together with *Halikhot Olam* (Venice edition, 1639). David b. Raphael *Meldola’s pamphlets *Limmud ha-Talmidim* and *Hanhagat ha-Talmidim* (appended to the Amsterdam edition, 1754) are also based on Jeshua’s work. A Latin translation by D.C. l’Empereur was appended to the Leiden 1634 and Hanau 1714 editions; the latter contained notes by H.J. *Bashuysen. Jeshua also compiled *shitot* on the Talmud. It has been shown that he was the author of a *shitah* on *Bava Kamma* which is frequently mentioned in the *Shitah Mekubbezet*, although Bezalel *Ashkenazi was not aware of the identity of its author.

[Yehoshua Horowitz]

JESHUA BEN JUDAH (sometimes erroneously called **Joshua ben Judah**; his Arabic name was **Abū al-Faraj Furqān ibn Asad**; second half of the 11th century), Karaite scholar who lived in Jerusalem. A worthy pupil of his distinguished teacher Yūsuf al-*Baṣīr* (Joseph ha-Ro’eh), he was regarded by the Karaites as one of the outstanding savants of his century, although in later times his philosophical and exegetical works tended to be neglected. Jeshua’s greatest contribution, however, was his decisive opposition to the so-called catenary theory (in Hebrew *rikkuv*, literally “compounding”) of incest,

which had the support of the majority of earlier Karaite jurists, from *Anan downward, which severely limited the circle of women whom a Karaite man could lawfully marry. Jeshua was not the first to oppose this theory – his teacher Yūsuf al-*Baṣīr* is said also to have been an opponent of it, as was an earlier authority, *David b. Boaz (second half of the tenth century). However, Jeshua’s tract on the law of incest dealt with it incisively and in great detail, and since it was subsequently translated from its original Arabic into Hebrew (*Sefer ha-Yashar* (1908); extracts in Leon Nemoj’s *Karaite Anthology* (1952), 127–32; cf. Steinschneider, *Arab Lit.*, 91–94), it remained accessible to later Karaite scholars who knew no Arabic and thus retained its influence upon them. In order to loosen the ever tightening noose fastened by the catenary theory upon the physical survival of the Karaite group, Jeshua established the following principles:

(1) The biblical dictum that man and wife become “one flesh” (Gen. 2:24) does not mean that all close relatives of the wife automatically become equally close to the husband, but merely refers to the couple’s mutual affection and intimacy;

(2) The biblical identification of the wife’s “nakedness” with the husband’s “nakedness” similarly has nothing to do with incest, but merely refers to the husband’s duty to guard his wife’s chastity, the violation of which is as much an injury to him as to her;

(3) The biblical use of terms like “sister” or “aunt” with reference to distant or adopted relatives is merely figurative;

(4) The forbidden degrees of relationship are those listed in Scripture, their blood relatives, and those derived from them by analogy used only once – piling analogy upon analogy (as was done by the adherents of the catenary theory) is both unlawful and absurd, since it has no definable limit. Jeshua’s definition of incest became the rule in later codes of Karaite law, down to and including Elijah *Bashyazi’s authoritative code.

Although Karaite limitations on permissible marriages remain more stringent than the Rabbanite ones, Jeshua is responsible for one of the very few radical reforms ever introduced in Karaite jurisprudence. Jeshua’s other works comprise an Arabic translation of the Pentateuch with a longer and shorter philosophical commentary, and comments on Genesis and on the Decalogue, extant mostly in fragments. A short Hebrew tract on the law of incest (*Iggeret ha-Teshuvah* or *Teshuvat ha-Ikkar*, Eupatoria, 1834) was printed under his name, but his authorship of it seems uncertain. Two philosophical tracts are also ascribed to him. Like his teacher, Jeshua follows in the footsteps of the Mu’tazilite (see *Kalam) school of Arab philosophers. He agrees with al-*Baṣīr* that certain knowledge of the creation of the world and the existence of God cannot be derived from the Bible alone but must come originally from rational speculation. Like al-*Baṣīr* he regards as the cornerstone of his religious philosophy the proof that the world was created in time. He also maintains that the Creator is not a “cause,” i.e., an impersonal entity which by necessity produces other things from itself, but an “agent,” i.e.,

one acting with will and choice. Jeshua offers several proofs for God's incorporeality. He likewise agrees with al-Baṣīr in regarding the nature of good and evil as absolute, not relative, and as binding upon God as well. God can do evil as well as good, but prefers to do good. Besides, all evil-doing is the result of some need, but God has no needs, being self-sufficient; hence He does not do evil. God's purpose in creating the world cannot have been selfish, since God is without need, and must therefore have been the well-being of His creatures. Among Jeshua's pupils were the Byzantine scholars *Tobiah b. Moses and *Jacob b. Simeon, both translators of important Karaite works from the Arabic into Hebrew, and Ibn *al-Tarās, a Karaite who engaged in vigorous missionary activity among Rabbanites in his native Spain.

[Leon Nemoy]

JESHURUN (Heb. יֵשׁוּרֻן), poetic name of Israel, which occurs four times in the Bible (Deut. 32:15; 33:5, 26; Isa. 44:2; cf. Eccles. 37:29, Heb. version). Its form and meaning are not clear. The Septuagint takes it as an adjective meaning “beloved,” as does the Vulgate, in Deuteronomy 32:15. Elsewhere, however, the Vulgate translated it as *rectissimus*, “the most righteous.” Aquila, Theodotion, and Symmachus render it as *euthús*, “straight, direct,” suggesting the root ישר, “straight, righteous.”

Many early and modern scholars follow this etymology. According to W. Bacher, the name Jeshurun is formed on the pattern of Zebulun and is intended to express the uprightness of Israel, in contrast to the appellation Jacob, which hints at his deceitfulness. The analogy to Zebulun has been abandoned, because the appearance of Jeshurun in Deuteronomy 32–33 means that it cannot be considered as a late artificial form of Israel.

The theophorus element *išar* is common in Akkadian names, and occurs also with *s* in Amorite names (*isar*). Jeshurun can then be compared to names such as *I-šar-be-li*, *I-šar-li-im*, *I-ša-rum*, and *Ya-sa-rum* (cf. Gadd, and Huffmon in bibl.).

JESI, SAMUEL (1788–1853), Italian copper engraver and lithographer. Born at Corregio, he was trained to engrave copies of paintings, much in demand as a means of reproduction. Jesi specialized in translating the works of the Renaissance painters into the black and white medium of the copper engraving and achieved high recognition for his prints. In 1821 Jesi received the prize of the Milan Academy for his engraving

Abraham Dismissing Hagar after Guercino. In 1842 Jesi became a correspondent of the French Academy. The Academies of Florence, Genoa, and St. Petersburg made him an honorary member. He died in Florence.

[Elisheva Cohen]

JESSE (Heb. יֵשׁוּ, יֵשׁוּ), father of King *David. According to the Book of Ruth (4:17–22), Jesse was the grandson of Boaz and Ruth and was listed among the descendants of Perez, son of Judah, who lived in Beth-Lehem. When *Samuel anointed David, he invited Jesse and his sons to a feast in their honor, which was a natural thing to do, in order to avoid arousing Saul's suspicions (I Sam. 16:1–5). It is possible that it is his social position that is indicated in the Hebrew text of I Samuel 17:12, which says of Jesse that he “was an old man... who entered among men (of standing)” (Heb. *ba-anashim*). The word “men” in this context has been compared with its semantic parallel, Akkadian *awēlu*, which in Mesopotamian society refers to men of the upper stratum, namely the elders and chiefs of the community. The stories concerning David mention Jesse's flocks, but his standing and his descent from Boaz suggest that he was also a landowner. It must be noted that both the Greek Septuagint and the Syriac Peshitta (see *Bible: Translations) presuppose a Hebrew: *ba ba-shanim*, “entered into years,” i.e. “old.”

[Samuel Ephraim Loewenstamm / S. David Sperling (2nd ed.)]

In the Aggadah

Jesse merited to be the ancestor of the royal house by virtue of his own good deeds. He expounded Torah to a multitude of 60 myriads (Yev. 76b). His father-in-law Ithra, an Ishmaelite, converted to Judaism and gave Jesse his daughter in marriage, when he heard him recite Isaiah 45:22 “Look unto Me and be saved, all the ends of the earth” (TJ, Yev. 8:3, 9b). After the birth of his sixth son, Jesse separated from his wife for three years but on one occasion attempted to seduce one of his female slaves. His wife, however, disguised herself as the slave girl (on the latter's advice), and it was thus that David was conceived (Yal. Mak. to Ps. 118:28). It was Jesse who encouraged David to slay Goliath and thus protect King Saul, seeing in it a continuation of the protection which Judah (David's ancestor) had afforded to Benjamin (Saul's ancestor) in Egypt (Tanḥ. B., Gen. 104). David's cruelty toward the Moabites (II Sam. 8:2) is justified by the fact that it was they who had treacherously killed Jesse after David had entrusted him to their care while he fled from Saul (cf. I Sam. 22:3; Num. R. 14:1). It is also stated, however, that Jesse was one of the four persons who were untainted by sin and died merely because death was decreed upon all mankind, as a result of the serpent's seduction of Eve. It is for this reason that Abigail, who was really Jesse's daughter, is referred to by Scripture (II Sam. 17:25) as “the daughter of Nahash” (“serpent”; BB 17a). Jesse is one of the eight “messianic princes among men” referred to in Micah 5:4 (Suk. 52b).

JESSE BEN HEZEKIAH (13th century), “exilarch of all the Diasporas of Israel” in *Damascus. Jesse is known for his participation in the controversy over the writings of *Maimonides, which broke out during the 1290s as a result of the activities of Solomon Petit, the leader of the kabbalists in *Acre. He signed the ban against the opponents of Maimonides in 1286. He was possibly a descendant of Josiah (Hassan), the brother of the exilarch *David ben Zakkai, a contemporary of Saadia Gaon.

[Eliyahu Ashtor]

JESSEL, SIR GEORGE (1824–1883), English jurist, one of the country’s great lawmaking judges. Born in London, the son of a diamond merchant, Jessel was called to the bar in 1847, and became a Queen’s Counsel in 1865. He entered Parliament as Liberal member for Dover in 1868 and was appointed solicitor general in 1871, being the first Jew to hold ministerial office in England. In 1873 he became master of the rolls. Jessel’s tenure of the office was marked by a succession of judgments which became notable precedents, and his contribution to the evolution of law and the development of the principles of equity was considerable. His judgments were short and clear and were hardly ever reversed on appeal. Jessel was the organizer of the Court of Chancery in its modern form. A member of the council of Jews’ College from its inception in 1855 until 1863, Jessel helped to draft its original constitution. He was also vice president of the Anglo-Jewish Association. After Jessel’s death, a baronetcy was conferred on his son SIR CHARLES JAMES JESSEL (1860–1928) in recognition of his father’s services. The second son, HERBERT MERTON JESSEL (1866–1950), was active in Conservative politics and was raised to the peerage as Lord Jessel in 1924. FREDERICK HENRY JESSEL (1859–1934), nephew of Sir George Jessel, compiled the standard English bibliography on playing cards (1905) and left his comprehensive collection on the subject to the Bodleian Library, Oxford. RICHARD FREDERICK JESSEL (1902–1988), a great-nephew of Sir George Jessel, was among the British naval heroes of World War II. Frederick’s son Toby Jessel (1934–) was a Conservative member of Parliament from 1970 to 1997. The connection of the family with the Jewish community became very slight.

JESSEL, GEORGE ALBERT (1898–1981), U.S. entertainer. Born in New York, Jessel began his career as a boy singer in

vaudeville, and at the age of ten was teamed with Eddie *Cantor. He went to London as a comedian in 1914, appeared at the Victoria Palace theater and, returning to New York in 1919, acted in revue. He developed a one-man act, and then turned to more serious work. He had his greatest success in 1925 on Broadway in *The Jazz Singer*, a play by Samson Raphaelson based on a short story “The Day of Atonement.” Jessel played the role more than a thousand times. He participated in the writing of several plays in which he appeared, such as *The War Song* (1928) and *High Kickers* (1942). Some of his other Broadway performances included *Helen of Troy, New York* (1923); *Joseph* (1930); *Sweet and Low* (1930); and *Show Time* (1942).

Jessel was New York’s official toastmaster from 1925 and appeared at banquets, army entertainments, and was particularly active at fundraising events for Jewish charities and on behalf of Israel. Because of his frequent role as master of ceremonies at so many entertainment and political gatherings, he was nicknamed “Toastmaster General of the United States.”

Having starred in several silent films for Warner Brothers during the 1920s, Jessel was offered the lead in their history-making first talkie, *The Jazz Singer*. Jessel and the studio could not agree on Jessel’s salary, and the role ultimately went to Al Jolson. Jessel often lamented that it was the biggest professional mistake he ever made. In addition to producing more than a dozen movies (*When My Baby Smiles at Me*, *Dancing in the Dark*, *Bloodhounds of Broadway*, *Tonight We Sing*) between 1945 and 1953, Jessel appeared in such films as *Private Izzy Murphy* (1926), *Ginsberg the Great* (1927), *Sailor Izzy Murphy* (1927), *George Washington Cohen* (1928), *Lucky Boy* (1929), *Love, Live, and Laugh* (1929), *It Might Be Worse* (1931), and had small roles in *The Busy Body* (1967), *Valley of the Dolls* (1967), and *Reds* (1981).

In 1970 Jessel received the Jean Hersholt Humanitarian Award at the Academy Awards.

No stranger to television audiences, Jessel appeared on many variety shows, as well as hosting a few of his own, namely *Four-Star Revue* (1952–53), *The Comeback Show* (1953), and *The George Jessel Show* (1953–54).

Jessel wrote several books, including an autobiography *So Help Me* (1944); a sequel, *This Way, Miss*; (1955); an instructive *You Too Can Make a Speech* (1956); a toastmaster’s handbook, *Jessel, Anyone?* (1960); a book of poems, *Elegy in Manhattan* (1961); a whimsical *Halo over Hollywood* (1963); another autobiographical work, *The World I Lived In* (with J. Austin, 1975); and *The Toastmaster General’s Favorite Jokes: Openings and Closings for Speechmakers* (1978).

JESSELSON, LUDWIG (1910–1993), U.S. businessman and philanthropist. Jesselson was born in Neckarbischoffsheim, Germany, where he began a career in business at a young age. In 1934 he left Germany, and after three years in Holland he

arrived in New York (1937), joining the firm of Philipp Brothers, which specializes in oil, metal, and chemicals, eventually becoming president and chairman. Jesselson collected Judaica and Hebraica and was highly active in Jewish life, concentrating on Orthodox and educational institutions. He was a trustee of Yeshiva University, was a founder of the Albert Einstein College of Medicine, and was a director of the American Committee for the Weizmann Institute. In 1973 he and his wife, Erica, founded the Yeshiva University Museum. In Israel he was a member of the boards of Bar-Ilan University, the Haifa Technion, and the Shaare Zedek Hospital. He was also involved with the Jewish National Library of The Hebrew University and the Israel Museum and Bezalel School of Art.

To encourage originality and excellence in Judaica design, Jesselson and his wife established the Jesselson Prize for Contemporary Judaica Design, awarded by the Israel Museum to an outstanding Judaica artist. They also purchased the Steiglitz Collection. The largest private collection of high-quality Judaica, it constitutes almost the entire Judaica section of the Israel Museum in Jerusalem.

The Ludwig and Erica Jesselson Institute for Advanced Torah Studies at Bar-Ilan University is dedicated to advancing a synthesis of Torah and academic study. Made up of the Institute for Men and the Midrasha for Women, it provides students the opportunity to engage in traditional talmudic and Judaic studies, combined with full university degree programs.

[Ruth Beloff (2nd ed.)]

JESSEY (Jacie), HENRY (1601–1663), English philo-Semite and Baptist divine. Jessey was inclined to literal observance of biblical precepts (including the seventh-day Sabbath, i.e., on Saturday). He corresponded with *Manasseh Ben Israel in Amsterdam about the Lost Ten Tribes and dedicated to him his *Glory of Jehudah and Israel* (London, 1653). Jessey was among those who participated in 1655 in the Whitehall Conference (see *England), and later published an account of its proceedings. He subsequently collected £300 from English Christians to send to R. Nathan *Spira in Amsterdam for distressed Jews in Jerusalem, whose suffering he described in the anonymous *An Information, Concerning the Present State of the Jewish Nation in Europe and Judea* (London, 1658).

[Cecil Roth]

JESSNER, LEOPOLD (1878–1945), German theatrical director and manager. Starting as an actor, Jessner was director at the Thalia Theater in Hamburg (1904–15). He later directed the Neues Schauspielhaus in his birthplace Koenigsberg (1915–19). From 1919 to 1930 he was director and manager (*Intendant*) of the Staatstheater Berlin. In this period he was the most in-

fluential theatrical director in the German-speaking world. His theatrical style, often called “expressionist,” came to the fore in the plays of classical authors such as Schiller (*Wilhelm Tell*, *Wallenstein*) and Shakespeare (*Richard III*, *Othello*, *Hamlet*), and also modern writers such as Wedekind (*Marquis von Keith*). His aim was to develop the central ideas of each play with a point of view focused on actual political and social developments. His leading actor was Fritz *Kortner. As a Social Democrat and a professing Jew (he was an executive member of the *Central-Verein), he was a target of political and anti-semitic attacks from the beginning of his work in Berlin. As a result he was forced to resign as early as 1930. Before settling in Los Angeles, he served as a guest director of Habimah in Erez Israel (1936–37).

JESUITS (or **Society of Jesus**), Roman Catholic religious order established in 1534. Its founder, the Spaniard Ignatius of Loyola, in his youth had been on pilgrimage to Jerusalem and was mainly responsible for the establishment of the House of *Catechumens, a home for converted Jews, in Rome in 1543. However, the object of the new order was not propaganda among the Jews but counter-propaganda in the Christian world to confront the growing danger from Protestantism. A problem with which the order had to deal from its earliest days was whether persons of Jewish origin should be admitted – in particular *Conversos or *New Christians in Spain, where the order was soon strongly entrenched. In the face of considerable opposition from his colleagues, Loyola himself insisted on disregarding the racial principle. Giovanni Battista *Eliano (Solomon Romano), the converted grandson of Elijah *Levita, became a member of the order as early as 1552. Loyola’s secretary Juan Alfonso de Polanco and his principal coadjutor, Diego (Jaime) Lainez notoriously belonged to New Christian stock; the latter was elected in 1558 as Loyola’s successor, serving as general of the order from 1558 to 1565. The more narrow view nevertheless gathered weight. In 1573, Polanco was not elected as general mainly because of his New Christian origin. In 1593, all descendants of Jews and Moors were debarred from membership of the order, and in 1608 this provision was confirmed in less explicit terms by the sixth general congregation. In its zeal for the propagation of the Catholic faith the Jesuits not infrequently spearheaded the onslaught on the Jews and Judaism, as was the case especially in *Poland in the 18th century. On the other hand, the attempt to curb the excesses of the Portuguese Inquisition in the second half of the 17th century was led by the Jesuit scholar Antonio Vieira, who was strenuously supported by his order. Jesuits, such as Augustine, Cardinal *Bea, have played an important role in the evolution of the post-World War II Catholic attitude to the Jews.

JESURUN (Jessurun, Yeshurun), descendants of a Marrano family who fled the Spanish Inquisition and settled mainly in Amsterdam and Hamburg. The Hamburg branch is best known for Isaac b. Abraham Ḥayyim *Jesurun (d. 1655), rabbi of Hamburg's Portuguese community. He was succeeded by ISAAC JESURUN, formerly of Venice, who was installed as *hakham* in the fall of 1656. During the same period JOSEPH JESURUN (d. 1660) headed Hamburg's Talmud Torah congregation. Joseph was the brother of ISAAC JESURUN of Ragusa (see *Dubrovnik), who was sentenced in the *blood libel of 1622 and freed when several of the judges who had condemned him died suddenly. SARAH (b. c. 1602), daughter of Amsterdam's renowned Reuel *Jesurun, married Moses Gideon Abudiente of Lisbon and lived in Hamburg. The name DAVID JESURUN appears on a list of Judaizers residing in Hamburg, which a spy for the Lisbon Inquisition drew up in 1644.

JESURUN, REUEL (formerly **Paulo de Pina**; c. 1575–1634), Portuguese Marrano. Born in Lisbon of a *New Christian family, Paulo set out for Rome in 1599, intending to join a Christian order there. En route he called on the Marrano physician Elijah Montalto, a friend of his family residing at Leghorn, Italy. After Montalto had persuaded him to return to Judaism, Paulo went back to Lisbon, embarking for Brazil in 1601 in the company of the confirmed Judaizer Diego Gomez (Abraham Cohen) *Lobato. Moving to *Amsterdam in 1604, he openly espoused Judaism, taking the biblical name Reuel Jesurun. Devoting himself to the Beth Jacob congregation, he served as administrator of the Talmud Torah rabbinical school during 1616. A man of considerable literary talent, he composed *Diálogo dos montes* (published in 1767), a dramatic poem in praise of Judaism which was first read in the Beth Jacob synagogue on Shavuot 5384 (1624). The poem was translated from Portuguese to English by Philip Polack and appeared in *The American Sephardi*, vol. 4, nos. 1–2 (Autumn, 1970), 48–88. The Beth Jacob archive contains Jesurun's initial account of Amsterdam's historic Jewish cemetery, which he helped to establish. There he interred his benefactor Elijah Montalto, who

had died in 1616 in France and been embalmed by his royal patrons. Jesurun himself died in Altona.

JESUS (d. 30 C.E.), whom Christianity sees as its founder and object of faith, was a Jew who lived toward the end of the Second Commonwealth period. The martyrdom of his brother James is narrated by Josephus (Ant. 20:200–3), but the passage in the same work (18:63–64) speaking about the life and death of Jesus was either rewritten by a Christian or represents a Christian interpolation. The first Roman authors to mention Jesus are Tacitus and Suetonius. The historicity of Jesus is proved by the very nature of the records in the New Testament, especially the four Gospels: Matthew, Mark, Luke, and John. The Gospels are records about the life of Jesus. John's Gospel is more a treatise reflecting the theology of its author than a biography of Jesus, but Matthew, Mark, and Luke present a reasonably faithful picture of Jesus as a Jew of his time. The picture of Jesus contained in them is not so much of a redeemer of mankind as of a Jewish miracle maker and preacher. The Jesus portrayed in these three Gospels is, therefore, the historical Jesus.

The Gospels

The precise date of the composition of the Gospels is not known, but all four were written before 100 C.E. and it is certain that Matthew, Mark, and Luke are interdependent. Scholars call these three the Synoptic Gospels because they can be written in parallel columns, such form being called synopsis. It is generally accepted that the main substance of the Synoptic Gospels comes from two sources: an old account of the life of Jesus which is reproduced by Mark, and a collection of Jesus' sayings used in conjunction with the old account by Matthew and Luke. Most scholars today identify the old account that lies behind Mark with the known Gospel of Mark, but a serious analysis, based especially upon the supposed Hebrew original, shows that Mark had entirely rewritten the material. It may be assumed, therefore, that the old account, and not the revision, was known to both Luke and Matthew. According to R. Lindsey (see bibliography), Matthew and Luke, besides drawing upon the sayings, also drew directly upon the old account; the editor of Mark used Luke for his version, and Matthew, besides using the old account, often drew also upon Mark. Lindsey's conclusions are also supported by other arguments.

Both of the chief sources of the Synoptic Gospels, the old account, and the collection of Jesus' sayings, were produced in the primitive Christian congregation in Jerusalem, and were translated into Greek from Aramaic or Hebrew. They contained the picture of Jesus as seen by the disciples who knew him. The present Gospels are redactions of these two sources, which were often changed as a result of ecclesiastical tendencies. This becomes especially clear in the description of

Jesus' trial and crucifixion in which all Gospel writers to some degree exaggerate Jewish "guilt" and minimize Pilate's involvement. As the tension between the *Church and the Synagogue grew, Christians were not interested in stressing the fact that the founder of their faith was executed by a Roman magistrate. But even in the case of Jesus' trial, as in other instances, advance toward historical reality can be made by comparing the sources according to principles of literary criticism and in conjunction with the study of the Judaism of the time.

The Name, Birth, and Death Date of Jesus

Jesus is the common Greek form of the Hebrew name Joshua. Jesus' father, Joseph, his mother, Mary (in Heb. Miriam), and his brothers, James (in Heb., Jacob), Joses (Joseph), Judah, and Simon (Mark. 6:3) likewise bore very popular Hebrew names. Jesus also had sisters, but their number and names are unknown. Jesus Christ means "Jesus the Messiah" and according to Jewish belief, the Messiah was to be a descendant of David. Both Matthew (1:2–16) and Luke (3:23–38) provide a genealogy leading back to David, but the two genealogies agree only from Abraham down to David. Thus, it is evident that both genealogies were constructed to show Jesus' Davidic descent, because the early Christian community believed that he was the Messiah. Matthew and Luke set Jesus' birth in *Bethlehem, the city of David's birth. This motif is made comprehensible if it is assumed that many believed the Messiah would also be born in Bethlehem, an assumption clearly seen in John 7:41–42, which, telling of some who denied that Jesus is the Messiah, says: "Is the Christ (Messiah) to come from Galilee? Has not the Scripture said that the Christ is descended from David, and comes from Bethlehem, the village where David was?" John therefore knew neither that Jesus had been born in Bethlehem nor that he was descended from David. The home of Jesus and his family was *Nazareth in Galilee and it is possible that he was born there.

The story of Jesus' birth from the Virgin Mary and the Holy Spirit without an earthly father exists in the two independent literary versions of Matthew and Luke. It is not to be found in Mark or John, who both begin their Gospel with Jesus' baptism by *John the Baptist. Jesus' virgin birth is not presupposed in other parts of the *New Testament. Apart from Matthew and Luke, the first to mention the virgin birth is Ignatius of Antiochia (d. 107). According to Luke's data, Jesus was baptized by John the Baptist either in 27/28 or 28/29 C.E., when he was about the age of 30. On the evidence in the first three Gospels, the period between his baptism and crucifixion comprised no more than one year; although according to John it ran to two or even three years. It seems that on the point of the duration of Jesus' public ministry the Synoptic Gospels are to be trusted. Most probably, then, Jesus was baptized in 28/29 and died in the year 30 C.E.

Jesus' Family and Circle

Jesus's father, Joseph, was a carpenter in Nazareth and it is almost certain that he died before Jesus was baptized. All the

Gospels state that there was a tension between Jesus and his family, although after Jesus' death his family overcame their disbelief and took an honorable place in the young Jewish-Christian community. Jesus' brother, James, became the head of the Christian congregation in Jerusalem and when he was murdered by a Sadducean high priest (62 C.E.) for the faith in his brother, he was succeeded by Simon, a cousin of Jesus. Grandsons of Jesus' brother, Judah, lived until the reign of Trajan and were leaders of Christian churches apparently in Galilee.

John the Baptist, who baptized Jesus in the river Jordan, was an important religious Jewish personality; he is recorded in Josephus (Ant. 18:116–9) as well as the New Testament. From Josephus it is seen that John's baptismal theology was identical with that of the *Essenes. According to the Gospels, in the moment of Jesus' baptism, the Holy Spirit descended upon him and a voice from heaven proclaimed his election. When he left John the Baptist, Jesus did not return to Nazareth, but preached in the area northwest of the Sea of Galilee. Later, after his unsuccessful visit to his native Nazareth, he returned again to the district around *Capernaum, performed miraculous healings, and proclaimed the Kingdom of Heaven. From his closest disciples he appointed 12 *apostles to be, at the Last Judgment, judges of the 12 tribes of Israel. After the death of Jesus the 12 apostles provided the leadership for the Jerusalem Church.

The Arrest of Jesus

Meanwhile, Herod Antipas, who had beheaded John the Baptist, also wanted to kill Jesus, whom he saw as the heir of the Baptist, but Jesus wanted to die in Jerusalem, which was reputed for "killing the prophets" (Luke 13:34). With Passover drawing near, Jesus decided to make a pilgrimage to the Temple at Jerusalem. There he openly predicted the future destruction of the Temple and the overthrow of the Temple hierarchy. According to the sources, he even tried to drive out the traders from the precincts of the Temple, saying, "It is written, 'My house shall be called a house of prayer,' but you have made it a den of robbers" (Luke 19:45–6). These actions precipitated the catastrophe. The Sadducean priesthood, despised by everyone, found its one support in the Temple, and Jesus not only attacked them but even publicly predicted the destruction of their Temple. The first three Gospels indicate that Jesus' last supper was the paschal meal. When night had fallen he reclined at the table with the 12 apostles and said: "With all my heart I have longed to eat this paschal lamb with you before I die, for I tell you: I will never eat it again until I eat it anew in the Kingdom of God." He took a cup of wine, recited the benediction over it and said: "take it and share it among you; for I tell you, I will not again drink of the fruit of the vine until I drink it new in the Kingdom of God." He took bread, recited the blessing over it and said: "This is my body" (cf. Luke 22:15–19). Thus Jesus' Passover meal under the shadow of death became the origin of the Christian sacrament of the Eucharist.

After the festive meal, Jesus left the city together with his disciples and went to the nearby Mount of Olives, to the garden of Gethsemane. There, although he had foreseen the danger of his death, he prayed for his life (Luke 22:39–46). One of the 12 apostles, Judas Iscariot, had already betrayed him from unknown motives. Judas had gone to the high priests and told them he would deliver Jesus to them and they had promised to give him money (Mark 14:10–11). The Temple guard, accompanied by Judas Iscariot, arrested Jesus and took him to the high priest.

The “Trial” and Crucifixion

The Gospels in their present form contain descriptions of the so-called “trial” of Jesus rewritten in a way making them improbable from the historical point of view. Nevertheless, a literary analysis of the sources is capable of revealing a closer approximation of the reality. In the first three Gospels, the Pharisees are not mentioned in connection with the trial, and in John, only once (18:3). Luke (22:66) and Matthew (26:59) explicitly mention the Sanhedrin once, and Mark mentions it twice (14:55; 15:1). In the whole of Luke – not just in his description of the Passion – there is no mention of the Sanhedrin’s verdict against Jesus, and John records nothing about an assembly of the Sanhedrin before which Jesus appeared. Thus it seems very probable that no session of the Sanhedrin took place in the house of the high priest where Jesus was in custody and that the “chief priests and elders and scribes” who assembled there were members of the Temple committee (see also Luke 20:1): the elders were apparently the elders of the Temple and the scribes were the Temple secretaries. The deliverance of Jesus into the hands of the Romans was, it seems, the work of the Sadducean “high priests,” who are often mentioned alone in the story. A man suspected of being a messianic pretender could be delivered to the Romans without a verdict of the Jewish high court. In addition, the high priests were interested in getting rid of Jesus, who had spoken against them and had predicted the destruction of the Temple. The Roman governor *Pontius Pilate ultimately had Jesus executed in the Roman way, by crucifixion. All the Gospels indicate that on the third day after the crucifixion Jesus’ tomb was found empty. According to Mark an angel announced that Jesus had risen, and the other Gospels state that Jesus appeared before his believers after his death.

Jesus and the Jewish Background

The tension between the Church and the Synagogue often caused the Gospels, by means of new interpretations and later emendations, to evoke the impression that there was a necessary rift between Jesus and the Jewish way of life under the law. The first three Gospels, however, portray Jesus as a Jew who was faithful to the current practice of the law. On the matter of washing hands (Mark 7:5) and plucking ears of corn on the Sabbath (Mark 2:23 ff.), it was the disciples, not the master, who were less strict in their observance of the law. According to the Synoptic Gospels, Jesus did not heal by physical means on the

Sabbath but only by words, healing through speech having always been permitted on the Sabbath, even when the illness was not dangerous. The Gospels provide sufficient evidence to the effect that Jesus did not oppose any prescription of the Written or Oral Mosaic Law, and that he even performed Jewish religious commandments. On all of the foregoing points the less historical John differs from the first three Gospels.

The wording of the Gospels exaggerates the clashes between Jesus and the *Pharisees. This becomes evident after an analysis of Jesus’ sayings which are a more faithful preservation than are the tendentious descriptions of the situation in which the sayings were uttered. Jesus’ major polemical sayings against the Pharisees describe them as hypocrites, an accusation occurring not only in the Essene Dead Sea Scrolls and, indirectly, in a saying of the Sadducean king, Alexander Yannai, but also in rabbinic literature, which is an expression of true Pharisaism. In general, Jesus’ polemical sayings against the Pharisees were far meeker than the Essene attacks and not sharper than similar utterances in the talmudic sources. Jesus was sufficiently Pharisaic in general outlook to consider the Pharisees as true heirs and successors of Moses. Although Jesus would probably not have defined himself as a Pharisee, his beliefs, especially his moral beliefs, are similar to the Pharisaic school of Hillel which stresses the love of God and neighbor. Jesus, however, pushed this precept much further than did the Jews of his time and taught that a man must love even his enemies. Others preached mutual love and blessing one’s persecutors, but the command to love one’s enemies is uniquely characteristic of Jesus and he is in fact the only one to utter this commandment in the whole of the New Testament.

The liberal Pharisaic school of Hillel was not unhappy to see gentiles become Jews. In contrast, the school of Shammai made conversion as difficult as possible because it had grave reservations about proselytism, most of which Jesus shared (Matt. 23:15). As a rule he even did not heal non-Jews. It should be noted that none of the rabbinical documents says that one should not heal a non-Jew.

In beliefs and way of life, Jesus was closer to the Pharisees than to the *Essenes. He accepted, however, a part of the Essene social outlook. Although Jesus was not a social revolutionary, the social implications of his message are stronger than that of the rabbis. Like the Essenes, Jesus also regarded all possessions as a threat to true piety and held poverty, humility, purity of heart, and simplicity to be the essential religious virtues. Jesus, as did the Essenes, had an awareness of and affection for the social outcast and the oppressed. The Essene author of the *Thanksgiving Scroll (18:14–15) promises salvation to the humble, to the oppressed in spirit, and to those who mourn, while Jesus in the first three beatitudes of the Sermon on the Mount promises the Kingdom of Heaven to “the poor in spirit” to “those who mourn,” and to “the meek” (Matt. 5:3–5). Moreover, Jesus’ rule “Do not resist one who is evil” (Matt. 5:39) has clear parallels in the Essene Dead Sea Scrolls.

Jesus as the Messiah

The early Christian Church believed Jesus to be the expected *Messiah of Israel, and he is described as such in the New Testament; but whether Jesus thought himself to be the Messiah is by no means clear. Throughout the New Testament there are indications that Jesus had seen himself as a prophet. The Ebionites and Nazarenes, *Jewish Christian sects, both ranked Jesus among the prophets and stressed his prophetic role. Jesus himself apparently never used the word "Messiah," and always spoke of the "Son of Man" in the third person, as though he himself were not identical with that person. The "Son of Man" originally appears in the Book of Daniel (7:9–14) as the man-like judge of the Last Days. Jesus based his account of the "Son of Man" on the original biblical description of a superhuman, heavenly sublimity, who, seated upon the throne of God, will judge the whole human race. In Jewish literature of the Second Commonwealth, the "Son of Man" is frequently identified with the Messiah and it is probable that Jesus used the phrase in this way too. In his own lifetime, it is certain that Jesus became accepted by many as the Messiah. The substance of many sayings make it obvious that Jesus did not always refer to the coming "Son of Man" in the third person simply to conceal his identity, but because Jesus actually did not believe himself to be the Messiah. Yet other apparently authentic sayings of Jesus can be understood only if it is assumed that Jesus thought himself to be the "Son of Man." Thus Jesus' understanding of himself as the Messiah was probably inconsistent, or at first he was waiting for the Messiah, but at the end, he held the conviction that he himself was the Messiah.

In the faith of the Church, Jesus, the Jewish prophet from Galilee, became the object of a drama which could bring salvation to pious spectators. This drama developed from two roots: Jesus' conception of himself as being uniquely near to his Heavenly Father, his message about the coming of the "Son of Man," and other Jewish mythical and messianic doctrines; the other root was Jesus' tragic death, interpreted in terms of Jewish concepts about the expiatory power of martyrdom. If, as Christians believe, the martyr was at the same time the Messiah, then his death has a cosmic importance. Through the teachings of Jesus, as well as through other channels, the Jewish moral message entered Christianity. Thus the historical Jesus has served as a bridge between Judaism and Christianity, as well as one of the causes for their separation.

[David Flusser]

In Talmud and Midrash

Statements in rabbinic literature that explicitly mention Jesus by name or that allude to him and to his actions are few. Nothing has been transmitted in the names of the rabbis from the early half of the first century. Even those statements dating from the second century are to be regarded as reflecting the knowledge and views of Jews of that time about Christians and Jesus, which derived in part from contemporary Christian sources. They were partly a reaction to the image of Jesus

as it had crystallized in the Christian tradition. Apparently, the beginnings of Christianity attracted no greater attention than did the many other sects that sprang up toward the close of the Temple period, and it is certain that the incidents connected with its founder were not at the center of events of the time, as the Gospels would lead one to believe.

Beginning with the Basle edition of the Talmud (1578–80), those passages in which Jesus was mentioned, as well as other statements alluding to Christianity, were deleted from most editions of the Babylonian Talmud by the Christian censors or even by internal Jewish censorship. These deletions were later collected in special compilations and in manuscripts (cf. R.N.N. Rabbinowicz, *Maamar al Hadpasat ha-Talmud* (1952), 28n.26). From the stories about Jesus in the Babylonian Talmud, it is evident that he was regarded as a rabbinical student who had strayed into evil ways: "May we produce no son or pupil who disgraces himself like Jesus the Nazarene" (Ber. 17b; Sanh. 103a; cf. Dik. Sof. ad loc.). The rabbis were not certain of his time or his activities. Thus he is described as a pupil of *Joshua b. Peraḥyah (Sanh. 107b; see Dik. Sof. ad loc.).

In the Middle Ages, *Jehiel of Paris claimed that there was no connection between Jesus, the pupil of Joshua b. Peraḥyah and Jesus the Nazarene (*Vikku'ah*, ed. by R. Margalio (1928), 16f.). In one *baraita* Jesus appears as a sorcerer and enticer who led people astray. "They hanged Jesus on the eve of Passover. Forty days earlier a proclamation was issued that he was to be stoned for practicing sorcery and for enticing and leading Israel astray." "Let anyone who can speak in his favor come forward." "Nothing in his favor was discovered and they hanged him on the eve of Passover." The date given for the hanging, the 14th of Nisan, agrees with the date given in John 19:14. (In the Gospels the date given is the first day of the festival which is the 15th day of Nisan.) In conformity with the *halakhah* (Sanh. 7:4) he was sentenced to stoning, the penalty for enticing, leading astray, or practicing sorcery. After the stoning he was hanged, since all who are put to death by stoning are subsequently hanged, according to R. Eliezer who often transmits ancient *halakhah* (Sanh. 6:4). Jesus was crucified, i.e., hanged alive, "as is done by the non-Jewish government" (Sif. Deut. 221). In the talmudic account, however, his death conforms with the death penalty of the *bet din* as prescribed by the *halakhah* (see *Crucifixion).

Later conditions are reflected in the story of *Onkelos the proselyte who raised Titus, Balaam, and Jesus from the dead to ask their advice whether he should become a proselyte. Whereas Balaam said, "Thou shalt not seek their peace nor their prosperity all their days forever" (Deut. 23:7), Jesus answered, "Seek their peace, seek not their evil, whoever hurts them is as if hurting the pupil of his eye." The Talmud itself emphasizes the difference between Jesus and Balaam by adding, "Come and see the difference between infidel Israelites and the idol-worshiping gentile prophets" (Git. 57a, in uncensored editions). The purpose of the story is to show that

Jesus warned against persecuting Jews and forbade their oppression. It can only be understood in the context of an era in which such a warning was already important, namely the fourth century.

These are all the stories about Jesus in the Talmud. Whenever his name is mentioned elsewhere, it is in connection with his disciples. It speaks about "Jesus the Nazarene having had five disciples, Matthew, Nakai, Nazar, Boneh, and Thodah," all of whom were put to death. For each of them a verse is cited in which his name is mentioned and his execution hinted at (Sanh. 43a; Dik. Sof. ad loc.; Yal. Mak. to Isa. 11:1). Only two of them, Matthew and Tadi (Thaddaeus) can be identified with certainty as the apostles. Besides these there is mention of Jacob of Kefar Sama who came in the name of Jesus b. Pantira to cure *Eleazar b. Dama of a snake bite but was prevented by Ishmael (Tosef., Hul. 2:22; TJ, Shab. 14:4, 14d; TJ, Av. Zar. 2:2, 40d). Since this Jacob was a contemporary of Ishmael, he could not be a disciple of Jesus but at the most a disciple of his disciple. It is also very doubtful whether he can be identified with Jacob of Kefar Sakhnayya of whom Eliezer told Akiva that he had transmitted to him a sectarian teaching in the name of Jesus (Tosef., Hul. 2:24; Av. Zar. 17a; Eccles. R. 1:8, no. 3). This Jacob, too, merely transmitted a teaching he had heard in the name of Jesus and one cannot assume that he knew him. He certainly cannot be identified with Jacob, the brother of Jesus.

In both accounts the father of Jesus is called Pantira. Epiphanius reports that Pantira was another name of Jacob, the father of Joseph, father of Jesus (*Adversus Haereses* 3:78, 7). It is possible that this statement should be regarded as an answer to the assertion of the Jews which is also mentioned by Origen. He mentions that Celsus heard from a Jew that Miriam had been divorced by her husband who suspected her of adultery, and that Jesus was born as the result of her secret affair with a Roman soldier, Panthera (Πανθηρα; *Contra Celsum* 1:28, 32). In the Tosefta there is no suggestion of anything disparaging in the name Pantira, but it is found in the statement of a third-century Babylonian *amora*, a young contemporary of Celsus, where it is connected with the name *Ben Stada. Ben Stada is mentioned in the Tosefta (Shab. 11:15) and in the Babylonian Talmud (Sanh. 67a; Dik. Sof. ad loc.). The reading is "And thus they did to Ben Stada in Lydda and hanged him on the eve of Passover." This reading has been taken to refer to Jesus, but there is no basis in tannaitic literature for this identification. When Eliezer referred to Jesus he called him by name.

Since the time of Geiger (JZWL, 6 (1868), 31–37) various scholars have tried to view the name Balaam, occurring in many *aggadot*, as a pseudonym for Jesus. They find their proof in the passage: "A certain sectarian said to Ḥanina 'Have you heard how old Balaam was?' He replied 'It is not actually stated, but since it is written 'Bloody and deceitful men shall not live out half their days' [Ps. 55:24] he must have been 33 or 34'. He rejoined 'You have spoken correctly; I personally have seen Balaam's Chronicle, in which it is stated, 'Balaam

the lame was 33 years of age when Phinehas the robber killed him' [Sanh. 106b].'" On the basis that Jesus lived about 33 years and is called a sectarian, it was maintained that Balaam's Chronicle is none other than the Gospels and "Phinehas the robber" Pontius Pilate. However, it is impossible to imagine that a Christian would ask a Jew how old Jesus was, and call the Gospel Balaam's Chronicle or that Pontius Pilate, who is not mentioned even once in the whole of rabbinic literature, should be referred to as Phinehas the robber. The sectarian referred to was merely a member of a Gnostic sect who was testing whether Ḥanina could answer a question which is not answered in the Torah. Balaam's Chronicle was an apocryphal book on Balaam. These books often adopted an unfavorable attitude to the patriarchs and the prophets and it was possible that Phinehas of the Bible was called in them Phinehas the robber. Efforts to find allusions to Jesus and his disciples in the Mishnah (Sanh. 10:2; Avot 5:19) have no basis at all in the sources. Nor can one justify the conjecture that the word "Such a one" (Heb. *peloni*) used by Ben Azzai (Yev. 4:13) refers to Jesus. The *tannaim* did not ascribe an illegitimate birth to Jesus and had they done so they had no reason to conceal it, any more than the *amoraim* later did. Similarly one cannot say that the pupils of Eliezer had Jesus in mind when they asked their master the cryptic questions, "Has such a one a portion in the world to come? Has a bastard a portion in the world to come?" (Yoma 86b).

Polemics directed against the Christian dogmas that Jesus was the Messiah, the son of God, and God, are found in homilies and sayings of *amoraim* in the third and fourth centuries. Some of these homilies are merely a reply to the Christological interpretations of the *Church Fathers, who sought to find proof and supports for their teachings in the Scriptures. The words of Ḥiyya b. Abba, "If the son of the harlot says to you there are two gods, say to him 'I am He of the Red Sea; I am He of Sinai'" (PR 21:100), are directed against Christian dualism (the doctrine of the Trinity not yet having been accepted in the third century). The expression "son of a harlot" has a dual meaning, referring to Jesus in person, and to his heretical teaching, i.e., "son of heresy." Simeon b. Lakish, a contemporary of Origen, explained the verse "Alas who shall live after God hath appointed him" (Num. 24:23) to mean "Woe for him who resurrects himself with the title god" (Sanh. 106a). *Abbahu, who lived in Caesarea and had many disputes with heretics, explained Balaam's words, "God is not a man that He should lie; Neither the son of man that He should repent" (Num. 23:19) in a way that left no doubt about whom it was directed against, "If a man says to you, I am god, he lies; [if he says] I am the son of man, he shall regret it; [if he says] I shall rise to heaven, he says but he shall not fulfill it" (TJ, Ta'an. 2:1, 65b; Sanh. 106a; Dik. Sof. ad loc.). In this interpretation, Abbahu represents Balaam as rebuking and warning the gentiles not to be ensnared by the new religion, in the same way as his fellow citizen, the Church Father Origen, puts Christological teachings into Balaam's mouth (see his commentary on Num. 15:4). These teachings are also

contradicted by Balaam in a homily to Eleazar ha-Kappar (Yal. Num., ed. Salonika, 765, from where it was published in Jellinek's *Beit ha-Midrash*, 5 (1967³), 208). Most of it, however, is by a fourth-century preacher who had already witnessed the spread of Christianity in Caesarea.

A polemic of the amoraic era is also found in the story of Rabban Gamaliel and his sister *Imma Shalom (Shab. 116aff.), but it cannot be regarded as authentic. It contains no quotation from any early version of "the words of Jesus," but parodies the words of Matthew. The *tanna* and his wife ridicule their neighbor, the "philosopher" – who is simply a Christian teacher – criticizing the contradictions in the teaching of Jesus, which on the one hand appears as a different law, while on the other Jesus himself says, "I have come neither to diminish the law of Moses, nor to add to it" (cf. Matt. 5:17, "think not that I am come to destroy but to fulfill"). As an example of "another Torah," a quotation is brought from the *Avon Gilyon* ("sinful margin," a disparaging name for *Evangelion*, Gospel in Greek): "Son and daughter inherit alike." No such statement occurs in the Gospels. It is possible that the statement of the philosopher that a daughter does not inherit was intended to cast doubt on the messianic status of Jesus, whose claim to be the Messiah was dependent on his Davidic descent. If he was of virgin birth, that descent could only have been on his mother's side.

JETHRO (Heb. יִתְרוֹ, יִתֵּר), Midianite priest and father-in-law of *Moses. Jethro had seven daughters who served as his shepherdesses. When Moses fled from Egypt he came to the well

in Midian where he witnessed local shepherds mistreating the girls. He saved them and watered their flocks for them. In return, Jethro welcomed Moses into his home and gave him one of his daughters, *Zipporah, as a wife. He also appointed Moses as shepherd of his flocks (Ex. 2:16–21; 3:1). Jethro is next mentioned after the incident of the burning bush when Moses, having decided to return to Egypt, asked and received his father-in-law's permission to do so (4:18).

After the Exodus from Egypt, when the Israelites had arrived in the vicinity of Sinai, Jethro brought Zipporah, whom Moses had divorced, along with her two sons to Moses. Although no mention is made of Moses' reconciliation with his wife, we learn that Jethro received a most honorable welcome. He expressed his delight at the deliverance of Israel, blessed YHWH and praised Him as "greater than all gods," and brought sacrifices to Him, afterward partaking of a meal with Aaron and all the elders of Israel (18:1–12). The following day, Jethro advised Moses on the reorganization of the judicial system and returned to his own land (18:13–23, 27). The narratives about Jethro have raised many problems. He is given this name in Exodus 3:1; 4:18; 18:1–2, 5–6, 12. However, he is called Reuel in Exodus 2:18 and in Numbers 10:29 as well, while Judges 4:11 refers to Hobab as the father-in-law of Moses. In the former passage, Moses asked Hobab to act as a guide for the Israelites through the wilderness. His final reply is not given there, but from Judges 4:11 it would seem that he allowed himself to be persuaded. Another difficulty lies in the fact that the Pentateuch describes Moses' father-in-law as a Midianite, whereas he is elsewhere termed a Kenite (Judg. 1:16; 4:11).

Varying solutions have been suggested to account for the conflicting data (for traditional account see below). Some modern scholars assign Hobab to the J source and Jethro to the E document. "Reuel their father" in Exodus 2:18 would then either be a misunderstanding of Numbers 10:29 or refer to the grandfather of the shepherdesses. Others take Jethro and Reuel to be one and the same person and regard Hobab as the son, a solution that requires the emendation of Judges 4:11. In the opinion of W.F. Albright, the Jethro-Reuel-Hobab traditions are quite homogeneous. The roles of Jethro and Hobab are so different as to preclude identity. The former is an old man who already had seven grown daughters when Moses arrived in Midian and who gave Moses in the wilderness the kind of advice that could only be the product of mature wisdom. Hobab is a young, vigorous man who could withstand the rigors of acting as a guide in the wilderness wanderings. He is, therefore, not the father-in-law, but the son-in-law of Moses, and *hoten* in Numbers 10:29 and Judges 4:11 should be read *hatan*. Reuel is the name of the clan to which both Jethro and Hobab belonged (cf. Gen. 36:10, 13; 1 Chron. 1:35, 37), and Exodus 2:18 should read, "they returned to Jethro, son of Reuel (i.e., the Reuelite), their father." Finally, the epithet "Kenite" is not in contradiction to Midianite, since it is an occupational, not an ethnic, term meaning a "metalworker, smith," as in Aramaic and Arabic (cf. Gen. 4:22). But the solution appears

contrived, and it is probably wisest to assume a conflation of different traditions.

Beginning with the hint that Jethro was a priest, some scholars have credited the Midianites with introducing the god ΥHWH to the Hebrews, a theory known as the Midianite or Kenite hypothesis (see van der Toorn). These scholars note Jethro's blessing of ΥHWH in Exodus 18:10 and his provision of sacrifices and his participation in the cultic meal "before God" (Ex. 18:12). While this is intriguing, the exact role of Jethro in the development of Israelite religion cannot be determined, in the absence of any data about the nature of the religion of Midian. The attribution of the organization of the judicial system in Israel to the advice of a Midianite priest is itself, however, eloquent testimony to the antiquity and reliability of the Exodus tradition. Significantly, the account in Deuteronomy 1:9–17 completely obscures the role of Jethro.

In like manner, 11:11–12, 16–18, 24–30 omits mention of Jethro in the judicial reform, attributing it to ΥHWH 's response to a complaint by Moses. The name Jethro itself (shortened to Jether in Exodus 4:18) may be abbreviated from a theophoric form. The basic element, which probably means "excellence" or "abundance" (cf. Gen. 49:3), appears as a component of many west Semitic names. Cf. Akkadian Atra-ḥasīs, "Exceeding-Wise," the name of an Old Babylonian flood hero of the Noah type.

[Nahum M. Sarna / S. David Sperling (2nd ed.)]

In the Aggadah

Jethro was one of Pharaoh's counselors. According to one account, he – together with Amalek – "gave the evil counsel" (to throw the male Israelite children into the river) to Pharaoh, but later repented (Ex. R. 27:6). According to another tradition, his fellow counselors were Balaam and Job. Balaam advocated the destruction of the children, Job remained silent, and Jethro fled to Midian (Sanh. 106a). He became a genuine convert to Judaism. His title as the "priest of Midian" (Ex. 18:1) means either that he was its pagan priest or its prince (Mekh., Yitro, 1). The sages had an ambivalent attitude toward Jethro. Some regarded him as an arch-idolator, and as such he was able to testify to the supremacy of God, nonetheless still holding that the idols possessed some divine powers (Yal., Ex. 269; cf. Ex. 18:11). Jethro early realized the worthlessness of idol worship and repented even before Moses fled to Midian. Jethro's neighbors excommunicated him for renouncing their idolatrous beliefs, and it was because of this ban that his daughters had to tend the sheep (Ex. R. 1:32). A competing tradition claims that Jethro was still so steeped in idolatry at this time that he only permitted Zipporah to marry Moses on condition that their first son be raised to worship idols (Mekh., Yitro, 1).

Jethro's reaction to the miracles performed by God for Israel is likewise interpreted in two contrasting fashions. "And Jethro rejoiced" (וַיִּשְׂמַח , *va-yihadd Yitro*; Ex. 18:9) either means that he now accepted monotheism (*Yihed shemo shel ha-Kadosh Barukh Hu*; Tanh. B., Ex. 71) or that his skin devel-

oped gooseflesh (*na'asah kol besaro hidudin hidudin*) in sympathy for the tribulations of the Egyptians (Sanh. 94a). Jethro was the first to utter a benediction to God for the wonders performed for the Israelites. It was a reproach to Moses and the 600,000 Israelites that they did not bless the Lord until Jethro came and did so (*ibid.*). When Jethro arrived at the camp of Israel, he wrote a letter and with an arrow shot it into the camp (Tanh. B., Ex. 73). Moses immediately went out to meet his father-in-law, accompanied by Aaron, Nadab, Abihu, and the 70 elders of Israel. It is even stated that the *Shekhinah* also greeted Jethro (Mekh., Yitro, 1). Moses finally sent Jethro away (Ex. 18:27), since he did not want a stranger present at the revelation on Mount Sinai (Tanh. B., Ex. 75). According to another tradition, Jethro left to spread the knowledge of the true God among his brethren in Midian (Tanh. B., Ex. 73).

Jethro had seven different names which reflect his virtues. He was called Jether (Ex. 4:18) because he was responsible for the "addition" of a passage to the Pentateuch; Jethro (Ex. 3:1), because he "overflowed" with good deeds; Hobab (Num. 10:29), the "beloved" son of God; Reuel (Ex. 2:18), the "friend of God"; Heber (Judg. 4:11), the "associate" of God; Putiel (Ex. 6:25), because he had renounced idolatry (*niftar*; another interpretation, however, is that "he fattened calves" (*pittem*) for idolatrous sacrifice: BB 109b); and Keni (Judg. 1:16) in that he was "zealous" for God and "acquired" the Torah (Mekh. Yitro, 1).

[Aaron Rothkoff]

In Islam

The commentators of the Koran identify Shu'ayb with the father-in-law of Moses (Jethro), whom Muhammad mentions as living in Midian (Sura 28:21–27). In another sura (26:176–89) it is related that Shu'ayb was sent as a prophet and that he rebuked the inhabitants of al-Ayka ("the people of the thicket"), while in other suras he rebuked his fellow Midianites (7:83–91; 11:85–98). Their attitude toward him was a negative one, just as that of other tribes toward the prophets who were sent to them (Sura 11:93). The legends of the prophets relate many more details about the sojourn of Moses in the house of his father-in-law, his marriage with Zipporah, etc.

The Druze, the most extreme of the Ismā'īliyya sects, hold Shu'ayb in the highest esteem. He is one of the early incarnations of the *hudūd*, the emanations from the light of the Creator (*al-bārī*). These incarnations, the Imāms, were the leaders of their respective generations. Shu'ayb was considered one of these incarnations during the days of Moses. His traditional grave at Kefar Hittin (near Tiberias) is the site of the Druze pilgrimage (*ziyāra*) between April 23 and 25.

JEVICKO (Czech **Jevičko**; Ger. **Gewitsch**), town in W. Moravia, Czech Republic. It is thought that the Jewish community was founded in the 14th century, but the first documentary mention dates from 1566. In 1657 there were 16 Jewish households in the town. A prayer room was opened in 1620, but a synagogue was not built until 1784. A fire in 1869, which destroyed the main part of the Jewish quarter, made many Jews leave the town. The Jevicko community was one of the political communities (see *politische Gemeinden). Between 1798 and 1848 there were 138 permitted families in Jevicko (see *Familiants Laws). The Jewish population fluctuated from 776 persons in 1830 to 989 in 1848, 462 in 1869, and 286 in 1890. On the territory of the political community there were 184 Jews and 33 Christians living in 1880 and 93 Jews and 75 Christians in 1900. In 1930 there were 86 Jews in Jevicko (3.1% of the total population). The community was deported to Nazi extermination camps in 1942 and the synagogue equipment sent to the Central Jewish Museum in Prague. The building is used by the Hussite church and the Czech Brethren Protestant church.

[Meir Lamed]

JEW (Heb. יהודי, *Yehudi*).

Semantics

The word “Jew” passed into the English language from the Greek (*Ioudaios*) by way of the Latin (*Judaeus*), and is found in early English (from about the year 1000) in a variety of forms: *Iudea*, *Gyu*, *Giu*, *Iuu*, *Iuw*, *Jew* which developed into “Jew.” The word “Jew,” therefore, is ultimately traced to the Hebrew *Yehudi*, a term which originally applied to members of the tribe of Judah, the fourth son of the patriarch, Jacob. The term was also utilized for those who dwelt in the area of the tribe of Judah and thus later, during the seven years that David reigned in Hebron, his territory was called the Kingdom of Judah (11 Sam. 5:5). Later still, with the split of the kingdom during the reign of Rehoboam, the Northern Kingdom was called Israel and the Southern was called Judah, although it also encompassed the territory of the tribe of Benjamin (1 Kings 12:16–21). From that time on the term “*Yehudi*” applied to all residents of the Southern Kingdom, irrespective of their tribal status. After the destruction of Israel only Judah remained, and the term “*Yehudi*,” or “Jew,” then lost its specific connection with the Southern Kingdom. This is strikingly illustrated in Esther 2:5, 5:13, where Mordecai, although belonging to the tribe of Benjamin, is called a *Yehudi*. This term

was also utilized at that time for the Jewish religion since it is related that, after Haman’s downfall, many from among the people of the land converted to Judaism (*mityahadim*, Esth. 8:17). The term “Jew” connoted by this time a religious, political, and national entity, without differentiation between these categories. “Jew,” however, was mainly used outside the Land of Israel by Jews and non-Jews and in languages other than Hebrew. Thus Nehemiah, who was an official at the Persian court, refers to “Jews” in his personal “diary,” and the Book of Esther (see above) was almost certainly written by someone close to court circles. From the Persian and Aramaic, the word passed into Greek and from there into Latin. However, while the name “Jew” became common usage outside the Land of Israel, the Hebrew-speaking Jews within the land were particular to call themselves “Israel” (*Yisrael*: “Israelites”). It seems that this was a deliberate reaction parallel to the general intensification of ancient religious and literary values and aimed at strengthening the identification with the nation’s early history. Thus Ezra, as opposed to Nehemiah, uses the name Israel throughout, and even in the Aramaic letter given to him by the Persian king. From that period on the name “Israel” is used in all Hebrew literature: in the Hebrew books of the Apocrypha (*Judith*, *Tobit*, *I Maccabees*, etc.); in the Judean Desert Scrolls; in the Mishnah and the Hebrew parts of the Talmud; and on the coins of the 70 C.E. revolt and of that of Bar Kokhba (“the redemption of Israel”; “the freedom of Israel”). Exceptions such as “Prince of the Jews” on the copper column erected on Mt. Zion in honor of Simeon the Maccabee (1 Macc. 14:47, also 37 and 40) and “Group of the Jews” on the coins of his son, Johanan, are to be explained by the political designation, Judea, by which the gentile world knew the limited territory of the Jewish State. When, indeed, that territory was enlarged, the name “Land of Israel” came once more into use. This difference in usage is strikingly illustrated in the Gospels: the Jews are recorded as having referred (mockingly) to Jesus as “king of Israel,” whereas the Roman, Pilate, and his soldiers refer to him – both verbally and in writing – as “king of the Jews” (Mark 15:32, 2, 9, 18, 26). For Christians, the word “*Judaeus*” was early conflated with the name of the villain of the gospel story, Judas Iscariot, who was considered the typical Jew. Judas was linked with the devil (Luke 22:3), and the result was an evil triangle of devil-Jew-Judas. This relationship helped to establish the pejorative meaning of the word “Jew” in popular usage. The noun could mean “extortionate usurer, driver of hard bargains,” while the verb was defined as “to cheat by sharp business practices, to overreach.” Many attempts to root out these derogatory meanings by having the dictionary definitions revised have been made in the United States, England, and Europe; they have, however, met with little success, since the problem is not one of ill-will on the part of the lexicographers, but rather of semantics and popular usage. In order to avoid the unwelcome associations and connotations of the word, Jews began in the 19th century to call themselves “Hebrews” and “Israelites” (e.g., Alliance Israélite *Universelle, founded 1860). Nevertheless, these new names quickly

took on the same pejorative associations as “Jew,” as scores of 19th century novels testify. Recently, there has been a gradual change in the usage of the word. The brutal murder of a great part of the Jewish people during the *Holocaust has limited subsequent degrading usage of the term. Since the conclusion of the war, antisemitism is under legal scrutiny in many countries, and this covers the use of “Jew” in the pejorative sense, along with “Yid,” “Sheeny,” “Ikey” and the like.

[Yehoshua M. Grintz]

Halakhic Definition

Both a child born of Jewish parents and a convert to Judaism are considered Jews, possessing both the sanctity of the Jewish people (Ex. 19:6) and the obligation to observe the commandments. The status of children from intermarriage is designated by the Mishnah and Talmud as following that of the mother (Kid. 3:12; Yad, Issurei Bi'ah 15:3–4). “Thy son by an Israelite woman is called thy son, but thy son by a heathen woman is not called thy son” (Kid. 68b). A child born of a non-Jewish mother must therefore undergo ritual conversion, even though his father is Jewish (see *Proselytes). This halakhic definition was accepted for centuries. However, in modern times and particularly since the establishment of the State of Israel, the definition has been more and more questioned. The act of conversion is of course a religious act, and thus any candidate for conversion is required to subscribe to the principles of Judaism (or dogma; see Articles of *Faith) and to practice all the *mitzvot, something which the majority of born Jews do not do. Thus it is felt in wide circles that identification with the Jewish people and its fate should constitute sufficient grounds for being considered a Jew, particularly since during the Holocaust tens – even hundreds – of thousands of Jews, who were not halakhically so considered, perished because the Nazis had considered them Jews. This problem has been especially grave in the State of Israel where the children of mixed marriages (in which the wife is not Jewish), who speak Hebrew, are educated in the spirit of Jewish history, subscribe to Israeli nationalism and serve in the army to defend it, feel discriminated against in that they are not considered Jews and are not registered as Jews in the identity cards which they are, by law, required to carry at all times. In fact, what they are campaigning for is a secular definition of Jew (see *Judaism) which is, understandably, vigorously opposed by the Rabbinat of Israel and the religious political parties. In 1958 a cabinet crisis came about over the problem of the registration of *le'om* in the identity card. This word means “nationality” or “nationhood” but its exact definition is a matter of debate. The secular Israeli political parties contended that an affirmation of national identification with the Jewish people should suffice for such registration, whereas the religious parties demanded that the halakhic guidelines be retained. David Ben-Gurion, then prime minister, elicited responsa to this question from rabbinical leaders and Jewish scholars in Israel and throughout the Diaspora; the overwhelming majority of the respondents indicated that

the State of Israel should follow the *halakhah* in this issue, and the final directives issued to the registering officers required that there must be a bona fide conversion before the applicant could be registered as Jewish. The situation reached a kind of climax in 1968 when a lieutenant commander in the Israel navy, Benjamin Shalit, requested that his two children born of a non-Jewish mother be registered on their identity cards as Jews. When the Ministry of the Interior refused to accede to this request, Shalit petitioned the Supreme Court to order the ministry to show cause why they should not so register the children. The Supreme Court, sitting for the first time in its history in a complement of nine judges, suspended the hearing in order to make a recommendation to the government to change the law requiring the entry *le'om* and thus solve the problem. The government refused to accept the recommendation and subsequently the court decided (on Jan. 23, 1970; case no. HC 58/68) by a majority of five to four that the registrar had no right to question a statement made in good faith by the applicant but was duty bound to register what he was told. Each of the judges wrote his own opinion and some stated that, to their mind, the term *le'om* admitted a secular definition. It was pointed out that the decision was only with regard to registration and had no implications as far as personal status was concerned, which would continue to be governed by the courts in whose jurisdiction it lay. Thus for matters of marriage and divorce, which are in the jurisdiction of the rabbinical courts, the Shalit children would be considered non-Jews. The decision raised a strong public protest and the law was subsequently changed to accept only those born of Jewish mothers or converted. However, it was not specified that the conversions have to be by Orthodox rabbis and thus non-Orthodox conversions performed outside the State of Israel would be admitted as sufficient for registration as a Jew. It was also legislated at that time that non-Jewish spouses or children and grandchildren of Jews arriving in Israel with their Jewish spouse or parent would be granted all the privileges of the Law of Return, including the right to automatic Israel citizenship. In a previous decision the Supreme Court decided in the case of Oswald Rufeisen, a born Jew who converted to Catholicism and joined the Carmelite order (for a full treatment of that case see *Apostasy) that, although in the opinion of the court the appellant might be a Jew halakhically, for the purpose of the Law of Return he could not be so considered. Throughout the ages the rabbinical authorities have been concerned with the problem of a person who is technically a Jew but subscribes to another religion. When a Jew merely does not subscribe to Judaism, the problem is of a lesser degree since such a person can be considered a “relapsed” Jew to whom all the laws apply. However, when that person has no connection whatsoever with Judaism and indeed considers himself to be a member of another religion, the problem is most severe. In the Middle Ages the question arose as to whether a Jew is allowed to lend money to such a person on interest or borrow from him on interest (see *Usury), something which is forbidden between two Jews. In the discussion

of this problem there were opinions that it is permitted since such a person cannot be considered a Jew at all (*Shibbolei ha-Leket*, Ha-Segullah ed., ch. 46). However, the majority of the decisors have always felt that such a person must halakhically be considered a Jew.

With regard to conversion, the strict law has been that converts should be accepted only when they come out of altruistic reasons, i.e., because they have realized the superiority of the Jewish religion. However, when they wish to convert in order to marry a Jew or for some other reason, they should not be accepted in the first instance; but if they were accepted and have undergone the full ceremony of conversion, they are, post facto, considered to be valid converts. The full ceremony of conversion as pointed out above involves the acceptance of the *mitzvot*, and the general opinion has been that without such acceptance and performance the conversion is invalid even post facto. Since the majority of conversions are not for altruistic reasons, this matter has been very problematic. Moses Feinstein in his *Iggerot Moshe* (YD (1959), no. 160) has suggested that such conversions might be valid since the lack of knowledge of the *mitzvot* does not invalidate a conversion; what would invalidate it is the nonacceptance or lack of observance of the *mitzvot* which are known to the convert. Rather ingeniously he has pointed out that, although the religious court performing the conversion told the convert the more important of the *mitzvot*, and although the convert at least verbally accepts what he or she is told, in fact the convert knows that the overwhelming majority of Jews do not observe these *mitzvot* and believes that the court's standards of observance are in fact unrealistic and not absolutely essential; for otherwise why do the Jews themselves not adhere to these standards. Thus Feinstein sees the lack of observance as a sort of lack of knowledge and, post facto, tends to accept such converts. This, of course, is quite a revolutionary step in that it is accepting – albeit post facto – the standards of Judaism as practiced in preference to the standards of Judaism as codified. It must be pointed out, however, that Feinstein's position is not one which is accepted by the majority of rabbinical authorities. With the immigration from Eastern European countries, the problem of mixed marriages has become a most serious one in the State of Israel, and efforts are being made to facilitate the speedy conversion of the non-Jewish partner and children in order to avoid problems of personal status later on. It can be said that the rabbinical courts are being more permissive in this matter than hitherto, perhaps because of the enormous social and human pressures being brought to bear and the fact that the converts will grow up in a Jewish milieu.

“JEW BILL” CONTROVERSY, ENGLAND, term used to refer to the agitation which arose in England in 1753 after the passage of the Jewish Naturalisation Act. Foreign-

born persons desiring naturalization as British subjects had, as part of the process, to receive the sacrament at Anglican Holy Communion. Jews wishing to be naturalized, mainly wealthy Sephardi merchants in London, could be exempted from this requirement, although in so doing they would be granted only what was termed “endenization” rather than full citizenship, which carried with it fewer rights. In 1753 the Whig government, which was close to the Jewish commercial community, passed a bill through Parliament allowing Jews to be naturalized without participating in an Anglican service. It had no other effect on the status of British Jews and had no effect on any other group. This Act easily passed through both Houses of Parliament in May 1753. Immediately, however, great antisemitic agitation blew up which forced the government to repeal the Act in December 1753. Propaganda appeared accusing the Jews of ritual murder, of planning to turn St. Paul's Cathedral into a synagogue, and of wanting to force all British males to be circumcised, together with large numbers of broadsides and ballads aimed at the Jews. Although no violence against Jews or Jewish property occurred, several prominent Jews were hissed by crowds when they appeared in public.

The “Jew Bill” agitation had no real precedent and, significantly, no continuation, and no subsequent antisemitic agitation of any kind can be seen in Britain for many decades. It has been linked by historians with popular demagoguery by the Tory opposition just before a general election, as well as with economic fears by poorly paid Anglican clergymen, but remains a genuine puzzle to those historians who have examined it. It seems clear, however, that traditional Christian antisemitic stereotypes had little lasting resonance in Britain by the mid-18th century.

[William D. Rubinstein (2nd ed.)]

JEWESS OF TOLEDO, the central figure in a legendary love affair of King Alfonso VIII of Castile (1155–1214), which has furnished material for innumerable plays, poems, and novels in Spanish and other languages. The essential story is that Alfonso falls in love with Fermosa (Span. *hermosa*), a beautiful Jewish girl of Toledo, and as a result of his infatuation is accused of neglecting his royal duties. To remove this “nefarious” influence, Alfonso's nobles (in some versions, urged on by the queen) conspire together and murder the unfortunate Jewess. The story must be considered legendary, since the earliest references to it (in reworkings of Alfonso X's *Crónica general* and of the *Castigos é documentos para bien vivir* attributed to Sancho IV) are several generations removed from Alfonso VIII.

The earliest purely literary work dealing with the theme is a ballad by Lorenzo de Sepúlveda (1551). Lope de Vega, whose treatment of the Jews was almost invariably hostile, first mentions the Jewess in his long poem *Jerusalén Conquistada* (Madrid, 1609). He later developed the theme in his play *Las paces de los reyes y judía de Toledo* (1617; ed. by J.A. Castañeda, 1962 Madrid). This work is loosely constructed and the characters are shallow. Though a woman of lax morals, Raquel, as the Jewess is now called, sincerely loves the king and, in her dying words, confesses her belief in Christianity – undoubtedly an attempt by the author to gain more sympathy for her. The nobles who kill her are presented as vicious murderers. The next dramatic treatments are Antonio Mira de Amescua's *La desdichada Raquel* (1635; published Amsterdam, 1726); and *La Judía de Toledo* (Madrid, 1667), a reworking of Amescua's play by Juan Bautista Diamante. In the former, Raquel is presented as an ambitious woman and the character Rubén, her mentor, is a scheming rabbi. Diamante, on the other hand, makes Raquel almost a second Esther and he also presents her father in a favorable light. Other treatments in the 17th century were poems by Paravicino and Luis de Ulloa.

The verse tragedy *La Raquel* (1778, published 1814), by Vicente García de la Huerta (1734–1787) was the only really successful and popular theatrical work of 18th-century Spanish neoclassicism. Raquel is here a more complex character, astute and proud, but in love with the king. The villain is Rubén; perfidious and cowardly, he kills Raquel in an attempt to save his own life. Various works in the 19th century indicate that the theme was still popular, but the treatment betrays a decadence in artistic technique.

From Spain the legend passed to other countries. A French version was Jacques Cazotte's short story *Rachel ou la belle juive* (in *Oeuvres badines et moules*, 1776–88), which radically modified the traditional elements of the story. The tale was more popular in Germany. The earliest German version was the three-act drama, *Rahel, die schoene Juedin* (1789), by Johann Christian Brandes (1735–1799) who imitated Huerta's work. Gottlieb Konrad Pfeffel treated the theme poetically in *Alphons und Rahel* (1799). The most famous version of the legend in German is that by the Austrian playwright Franz Grillparzer, *Die Juedin von Toledo* (1873). Here Raquel is impetuous and flighty and her father unscrupulously seeks advancement through his daughter's beauty. The main character is the king, and the real interest of the play lies in his inner conflict between love and duty – always the dramatic situation in Grillparzer's works – but the most sympathetic and noble character is Raquel's sister, Esther. That the theme has retained vitality is clear from its reappearance in Lion Feuchtwanger's historical novel *Spanische Ballade* (1955; *Raquel, the Jewess of Toledo*, 1956). This is the most sympathetic treatment of Raquel and the Jews. She is portrayed as a devoted and loving woman and her father is presented as a man of heroism and integrity. The Spanish composer Tomás Bretón used Grillparzer's drama as the basis for his opera *Raquel*, first performed in Madrid in 1900.

[Kenneth R. Scholberg]

JEWISH AGENCY (Heb. הסוכנות היהודית לארץ ישראל, *Ha-Sokhenut ha-Yehudit le-Erez Israel*), international, nongovernment body, centered in Jerusalem, which is the executive and representative of the *World Zionist Organization, whose aims are to assist and encourage Jews throughout the world to help in the development and settlement of Erez Israel. The term "Jewish Agency" first appeared in Article Four of the League of Nations Mandate for Palestine, which stipulated that "an appropriate Jewish agency shall be recognized as a public body for the purpose of advising and cooperating with the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish National Home and the interests of the Jewish population in Palestine." The article went on to recognize the Zionist Organization as such an agency "so long as its organization and constitution are in the opinion of the Mandatory appropriate." Indeed the two were coterminous from the time that the Mandate was ratified by the League Council in July 1922 until the enlarged Jewish Agency came into being in August 1929. From that date until the establishment of the State of Israel, this body played the principal role in the relations between the National Home and world Jewry on the one hand and the Mandatory and other powers on the other. In May 1948 the Jewish Agency relinquished many of its functions to the newly created government of Israel, but continued to be responsible for immigration, land settlement, youth work, and other activities financed by voluntary Jewish contributions from abroad.

Early History

Even before the Mandate became effective, discussions had begun in a joint committee of the Zionist Organization and the *Board of Deputies of British Jews with a view to broadening the base of the Jewish Agency by forming a new body representing both Zionists and non-Zionists. It had become clear that the Zionist Organization alone could not command the resources required for building the National Home. As a symbol of Jewish nationalism, it was unacceptable to the non-Zionists whose support was being sought. The appeals to them by the Foundation Fund, established in 1921 as its fund-raising organization, had proved ineffectual. There was also the hope that a more representative body would have greater authority in its dealings with the British government and the Palestine administration, neither of which had sought the advice and cooperation of the Zionist Organization to any large extent.

In 1923, Chaim *Weizmann, the president of the Zionist Organization, was authorized by its general council to set up such a representative body. Weizmann found in Louis *Marshall, long-time president of the *American Jewish Committee, a willing counterpart, but it took six years of intermit-

tent negotiation before the new body came into being. While both the principals strove single-mindedly toward their goal, others were not easily convinced that the two parties could work together. The Zionists resented the tendency of the other side to see in the National Home merely a philanthropic enterprise. The non-Zionists were skeptical of the Zionists' capacity to subordinate their organization and its nationalist aims to a new body more representative of world Jewish opinion. Marshall had pointedly announced the American Jewish Committee's intention to "cooperate for certain specific purposes which do not include the establishment of an independent Jewish state or commonwealth." At one time, the negotiations nearly foundered over the American *Joint Distribution Committee's sponsorship of the project for the resettlement in the Crimea of Russian Jews displaced by the Revolution. The project was bitterly opposed by the Zionists, both for ideological reasons and because it threatened to divert funds from Palestine.

After this controversy died down, much of the residual anti-Agency feeling in Zionist ranks was overcome by economic necessity: the National Home was sorely in need of greater financial support. The 15th Zionist Congress meeting in 1927 set up a Joint Survey Commission, under Sir Alfred Mond (later Lord *Melchett), to formulate a concrete program for cooperation. After a survey in Palestine, its report was submitted in October 1928. The 16th Congress, meeting in Zurich in August 1929, endorsed the proposals by a vote of 230 to 30. There followed the constituent meeting of the council of the enlarged Jewish Agency: a body described by Marshall as "coextensive with the Jewish people everywhere." Among the non-Zionist delegates (40% of whom were Americans) were such figures as Albert *Einstein, Sholem *Asch, Leon *Blum, Sir Herbert (later the first Viscount) *Samuel, and Lord Melchett.

The Agency's constitution provided for parity between Zionists and non-Zionists on its three governing bodies: the 224-member council, the administrative committee, and the executive. The president of the World Zionist Organization was to serve as president of the Jewish Agency unless three-quarters of the council voted otherwise. Officers elected at the first council meeting were Chaim Weizmann, president, Louis Marshall, chairman of the executive, Lord Melchett, associate chairman, Baron Edmond de *Rothschild, honorary chairman, and Felix *Warburg, chairman of the administrative committee.

Subsequent Developments

Notwithstanding its founders' hopes, the Jewish Agency never succeeded in functioning independently of the World Zionist Organization. The parity principle proved unrealistic. Non-Zionists in the Diaspora, without organizational backing (the American Jewish Committee was determined to stay out of the Agency structure even though its officers filled the most important posts), had difficulty in recruiting their quota for council meetings. The "non-Zionists" in Palestine were really

Zionist in all but formal affiliation. The Zionists later sought to have the parity provision abolished, and this led to some ill feeling. The deaths of Louis Marshall and Lord Melchett shortly after the founding meeting removed much of the motive power behind the Jewish Agency idea in their respective communities, and the worldwide depression impeded the raising of additional money for Palestine.

At the same time, Arab apprehensions were aroused by the apparent reinforcement of Zionist power, and the 1929 riots in Palestine accelerated the Mandatory disinclination to foster the Jewish National Home. Following the inquiry by the Shaw Commission into the causes of the 1929 disturbances, the British government, through its secretary of state for the colonies, Lord Passfield, issued a *White Paper which called for severe limitations on Jewish immigration and settlement in Palestine. Pressure by the Jewish Agency, including the resignations of Weizmann and Warburg, led Prime Minister Ramsay MacDonald to provide assurances which virtually nullified the White Paper.

Functions

The Jewish Agency maintained an executive in Jerusalem and another in London (a New York branch superseded the latter when the center of diplomatic and Jewish activity shifted to the U.S. after World War II). The Jerusalem executive organized the movement and absorption of immigrants, fostered settlement on the land, took part in the development of the Jewish economy, and promoted educational and social services in cooperation with the *Va'ad Le'ummi (National Council of the Jews of Palestine). The Agency's political department in Jerusalem negotiated with the Palestine administration, while the London executive maintained contact with the colonial and foreign offices. The Agency was represented at the sessions of the Permanent Mandates Commission of the League of Nations when Palestine was being discussed. Together with the Va'ad Le'ummi, the Agency supervised the *Haganah, the clandestine Jewish defense force.

The major political effort of the Jewish Agency was concentrated on inducing the Palestine administration to interpret liberally the "economic absorptive capacity" by which Jewish immigration was regulated. With the rise of Hitler, its exertions resulted in the legal immigration of 62,000 persons in a single year, 1935. Under the *Haavara ("transfer") agreement with the German government, some \$25 million in German Jewish assets were transferred to Palestine. During the same period, the Agency assumed responsibility for the *Youth Aliyah program designed to bring children to Palestine from Nazi Germany.

These developments kept the Jewish Agency structure together for nearly a decade in spite of internal stresses. But the arrangement barely withstood the strains generated by the recommendations of the Peel Commission (sent in 1936 to investigate the causes of the disturbances) to partition Palestine into Jewish and Arab states. While the 20th Zionist Congress, meeting in Lausanne in August 1937, endorsed the principle

of partition by a narrow margin, the non-Zionist section of the Jewish Agency council, which subsequently convened in the same city, strongly opposed it. But the partition proposal was carried by the Zionists instructed to vote en bloc, and Felix Warburg, who had succeeded Marshall as the senior American member of the executive, died while negotiating a compromise.

The Arabs also opposed partition, and Britain reversed its position in the wake of still another committee of inquiry (the Woodhead Commission). Following the failure of a round-table conference called by the British government as a last attempt to reconcile Jewish and Arab views, the MacDonald White Paper was issued in May 1939. This temporarily restored unity of action in the Agency. The American non-Zionists now submitted a plan to Weizmann for its reorganization, but the crisis leading to World War II prevented the convening of its council in Europe, and no further joint meetings were held.

World War II and the Struggle for the State

With the adoption by the Zionists in May 1942 of the *Biltmore Program calling for a Jewish commonwealth in Palestine, effective non-Zionist participation in the Jewish Agency came to an end, and it once more became identified with the World Zionist Organization. As such it fought the White Paper restrictions on land purchase and immigration, mainly by organizing "illegal" immigration of survivors from Europe in the face of determined British opposition, throughout the war and until the eve of statehood. At the same time, the Agency took the lead in mobilizing the resources of the *yishuv* on behalf of the Allied war effort. David *Ben-Gurion, chairman of the executive from 1935, called on the *yishuv* "to fight the White Paper as though there were no war and to fight the war as though there were no White Paper."

The defeat of the Axis and the disclosure of the Nazi Holocaust in Europe brought the Agency to the forefront of the struggle for statehood. Its defiance of the British authorities led to the arrest of members of the executive, along with other leading figures in the *yishuv*, on June 29, 1946. On the diplomatic front, the arena shifted from Palestine (where the executive stated the Jewish case first to the Anglo-American Commission of Inquiry of 1946 and later to the United Nations Special Committee on Palestine) to London, and to New York where Moshe *Sharett and Rabbi Abba Hillel *Silver were the chief Jewish Agency spokesmen in the deliberations leading to the UN General Assembly's partition resolution of November 29, 1947. In the interim period until the declaration of independence, the Agency and the Va'ad Le'ummi set up a National Council of 37 and a National Administration of 13, which, on the declaration of independence, became the State of Israel's provisional legislature and government. With the creation of the state, the Jewish Agency transferred its political functions to the provisional government and leading members of the Jerusalem executive, led by Ben-Gurion and Sharett, moved over to the Cabinet.

The Jewish Agency after 1948

The Zionist General Council decided in August 1948 that the Agency should continue to deal with immigration to Israel, absorption of immigrants, land settlement, and the channeling of world Jewry's support to the state. This decision was approved by the Zionist Congress in Jerusalem in 1951, which adopted the "Jerusalem Program" and was incorporated in the World Zionist Organization-Jewish Agency (Status) Law adopted by the Knesset on November 24, 1952. (The law considered the World Zionist Organization and the Jewish Agency to be identical.) On July 26, 1954 a formal covenant was signed between the Israel government and the World Zionist Organization-Jewish Agency, recognizing the latter as the representative of world Jewry in relation to the functions cited above. These were carried out through the following departments: immigration, absorption, agricultural settlement, Youth Aliyah, economic, organization, information, external relations, youth and He-Ḥalutz, education and culture in the Diaspora, and later Torah education and culture in the Diaspora. The members of the executive, elected by the Zionist Congress along party lines, headed the departments.

The first five of these departments played key roles in the settlement of the immigrants. The immigration department operated a network of facilities in Europe and elsewhere for processing the migrants at points of origin and in transit. It arranged for medical examinations and other formalities and supplied transport, at times chartering ships and aircraft. The department of absorption received the newcomer on arrival, provided initial grants of cash and household goods, sent him to a camp, village or town, and allotted him housing accommodation. It also provided Hebrew instruction in its **ulpanim*, offered vocational training courses and, with the economic department, made loans to artisans and small businessmen. It provided health insurance and welfare services during the first few months in the country, operated hostels for professionals, and planned the rehabilitation of hard-core social cases. For some years, the Agency shared with the government the cost of housing construction in immigrant areas.

The Youth Aliyah program, originally conceived to care for orphaned or unaccompanied youngsters from Nazi-dominated Europe and elsewhere, adapted itself to the new conditions by also providing for children of immigrant families unable to give them a decent home and education. Where previously the great majority of the children had come from Europe, in later years about 80% of the 12,000 youngsters under Youth Aliyah care at any one time were of non-European origin. As in the past, most were placed in kibbutzim or in children's villages where they divided their time between schooling and agricultural training. Foster care and occupational training in trades other than agriculture were also provided.

In 1949, the Department for Education and Culture in the Diaspora was established to help replace the loss of centers of Jewish learning destroyed in the Holocaust. At its Ḥayyim Greenberg Teachers' Seminary in Jerusalem, Diaspora Jewish youth, mainly from Latin America, were trained as He-

brew teachers, while Israelis were sent abroad to supplement local personnel in schools, camps, and youth organizations. This activity was stepped up considerably after the events of 1967 called for development of greater Jewish consciousness as well as Hebrew study in the Diaspora. Furthermore, advice and literature were sent to Hebrew-teaching schools, and seminars were organized in Israel for high-school age students of Hebrew.

A parallel Department of Torah Education and Culture in the Diaspora was established in 1951 which promoted similar activities along Orthodox lines, and also provided for the training of *shoḥatim*, *mohalim*, and *hazzanim* from the Diaspora. Its principal educational center in Israel is the Rabbi Gold Teachers Seminary in Jerusalem. Israeli teachers were trained for work abroad at Bar-Ilan University. The department also sent emissaries and textbooks abroad.

The Youth and He-Ḥalutz Department was established in 1940 and in 1946 the Institute for Youth Instructors from Abroad was founded in Jerusalem. Many kibbutzim cooperated in its schemes in providing work and instruction as part of the course. Between 1946 and 1967 more than 3,500 instructors studied there. The department was thoroughly reorganized in 1968 to meet the influx of youth from the West after the Six-Day War. Four sections were established for the training of youth in North America, Latin America, Europe, and "English-speaking" countries by means of emissaries. As part of this project the Arad and Emissaries Institutes were established in Israel. A students' division was also added to the department to cope with the 1967 volunteers who remained in Israel to study at the institutes of higher learning. The department developed a wide range of summer programs in Israel for youngsters from abroad.

Foremost in annual budget and personnel was the Department of Agricultural Settlement, with a staff of some 1,500 at the peak period and expenditure of as much as \$50 million in a single year. It established 480 new villages after 1948, comprising some 32,000 farm units, furnishing them with equipment, livestock, and irrigation installations, as well as expert instruction. Their aggregate production in the late 1960s constituted 70% of the country's total agricultural output.

During the first years of the state, the Agency performed the tasks connected with mass immigration creditably, at times brilliantly. It succeeded in accommodating the record number of 239,000 immigrants who came in 1949, so that none remained without a roof over his head for a single night. In 1950, some 169,000 newcomers arrived and 174,000 in 1951. Among the earlier waves were the inmates of the European DP camps and those forcibly detained in Cyprus, Yemenite Jews ferried to Israel in "Operation Magic Carpet," and hundreds of thousands from Eastern Europe and North Africa. In 1951, Iraqi Jews were evacuated in "Operation Ezra and Nehemiah." Nearly the whole of Bulgarian Jewry, more than half the Jews of Yugoslavia, as well as 40,000 from Turkey and 18,000 from Iran, went to Israel during those first three years. The Agency accommodated the mass influx first by utilizing abandoned

Arab housing, then setting up tented camps in various parts of the country, later superseded by *ma'barot* ("transit camps") consisting of one-room shacks. While the tent dwellers were wholly supported by the Jewish Agency, the *ma'barot* were located near towns where the newcomers eventually found jobs and could thus dispense with direct Jewish Agency support. In 1951, the 123 *ma'barot* had a population of 227,000.

By the time the World Zionist Organization-Jewish Agency Status Law was enacted, however, immigration had dwindled, and the Jewish Agency's future was being widely questioned. The expectation that the World Zionist Organization would become the principal link between Israel and the Diaspora proved unrealistic. Non-Zionist groups maintained their primacy there, especially in the United States. Israel, moreover, was also anxious for immigration from the free lands of the West, and the Agency did not succeed in creating such a movement on an appreciable scale. Prime Minister David Ben-Gurion took the Zionist movement to task on these and other counts, and his sallies damaged its prestige. Differences of opinion over foreign policy with the Jewish Agency chairman and World Zionist Organization president, Nahum *Goldmann, widened the rift between Israel's political leaders and the Zionist movement. However, the Agency successfully coped with the resumption of immigration from Eastern Europe and North Africa in 1955–57 and 1961–64. It evolved the ship-to-settlement plan bringing immigrants directly to permanent homes in villages or development towns. The rural settlement area of Lachish, with its cluster of villages built around an urban industrial and administrative center, won renown as a model of integrated planning.

The election of Moshe *Sharett to the chairmanship of the Jewish Agency Executive in 1960 marked the beginning of an effort to instill new vigor into the Jewish Agency by broadening its base. Both he and Goldmann, who continued as president, wished to see non-Zionists co-opted to the executive and to break the exclusive hold of the Zionist parties. In 1960, a new constitution was adopted which opened membership to territorial or interterritorial Zionist organizations, as well as to national and international Jewish bodies accepting the Jerusalem Program. Although associated groups from seven countries were represented at the 25th Congress in 1960, the constitutional reform had little practical effect. The 26th Congress in 1965 went further by resolving to co-opt several prominent non-Zionists as members of the executive without portfolio. Thus the executive reverted toward its former composition, but without the underpinning of non-Zionist representation in the constituent bodies. The question of non-Zionist participation meanwhile had come up on another level. In 1960, an American body was created to supervise disbursement in Israel of funds raised by the *United Jewish Appeal, in compliance with U.S. government regulations on tax-deductible gifts to charitable organizations. The new body was named the Jewish Agency for Israel, Inc. (changed to United Israel Appeal, Inc. in 1966). Its board of directors was composed in

equal parts of organized Zionists, non-Zionists, and persons drawn from both camps who were active in fundraising. The Jerusalem executive of the Agency was appointed by this body as its official agent for implementing the programs for which American funds were allocated. To monitor these expenditures, it maintained an office in Israel.

Department in U.S.

The Jerusalem Executive, in turn, was represented in America by a body known as The Jewish Agency – American Section, Inc., which consisted of those members of the Executive who resided in the United States. These included Zionist leaders elected to the Executive along party lines as well as nonparty members co-opted in accordance with the decision of the 26th Zionist Congress. Unlike their colleagues in Jerusalem, the American members of the Executive did not head Agency departments, but some of them were responsible for the activities of certain departments in the Western Hemisphere. As an agent of the Jewish Agency, Jerusalem, The Jewish Agency – American Section, Inc. was required to register with the U.S. Department of Justice under the Foreign Agents Registration Act of 1938.

Finances

The following is a summary of income of the Jewish Agency for the period from Oct. 1, 1948 to Mar. 31, 1963: Gift funds, \$653.6 million (54.1%), German Reparations, \$173.1 million (14.3%), income from assets, + sundries, \$53.9 million (4.5%), allocations from public bodies, \$32.1 million (2.7%), Israel Government participation \$169.6 million (14.0%) and earmarked contributions, \$124.9 million (10.4%).

Of the gift funds, about 80% came from the United States. Assets on March 31, 1963 (registered in the name of *Keren Hayesod) were put at \$307 million, liabilities at \$201 million. The Agency's income from donations by world Jewry increased dramatically after the Six-Day War, enabling it to finance costs of welfare and other services on behalf of immigrants, hitherto borne by the Israel government.

New Directions

In the second half of the 1960s, proposals were heard from within the movement to separate the Jewish Agency once more from the World Zionist Organization structure. The reason this time was not related to non-Zionist participation. The proponents of separation felt that the mixture of practical tasks with ideology was detrimental to both; that by leaving the concrete tasks of immigration resettlement to the Agency the Zionist Organization could concentrate on winning the Diaspora to its ideology. However, the 27th Congress (June 1968) did not adopt these proposals. Instead, it approved reforms proposed by Louis *Pincus (who had become chairman upon Moshe Sharett's death in 1965), which consolidated the various departments in the interests of efficiency and reduced the membership of the executive. Nahum Goldmann was not reelected as WZO president, and the office remained vacant. The Congress also adopted a new, more outspokenly

Zionist, Jerusalem Program, and decided to set up a nonparty *aliyah* movement.

While the 27th Congress was in session, the Israel government announced the creation of a new Ministry of Immigrant Absorption thus assuming direct responsibility in this sphere. The Jewish Agency's department of immigration and absorption continued to register and bring over the immigrants, look after *ulpanim* and reception centers, and care for needy newcomers. A joint government-Jewish Agency authority was charged with delineating the respective areas of competence, and the *modus vivendi* agreed upon provided for continued Jewish Agency responsibility primarily for immigration abroad, with the ministry dealing with most areas of absorption in Israel itself. The government, however, stopped short of a complete takeover in this area with the knowledge that the financial contributions of world Jewry, and of American Jews in particular, must be disbursed by nongovernmental bodies in order to be entitled to exemption from income taxes. At the same time, a renewed effort was made to give the Jewish Agency fresh vigor and legitimacy by broadening its base and by giving, in the words of its chairman, Louis Pincus, "world Jewry, which raises the funds for Israel, a direct say in the way the funds are spent." Under a plan approved by the Zionist General Council in July 1969, the structure and functions of the Jewish Agency and World Zionist Organization were to be separated in much the same manner as provided for by the 1929 agreement to set up the enlarged Jewish Agency: the Jewish Agency was to deal with "practical" work in Israel and the World Zionist Organization with Zionist, educational, and organizational tasks in the Diaspora. Like its predecessor, the reconstituted Jewish Agency was to consist of three parts – an assembly, a board of governors, and an executive – and once again 50% of the members of the assembly were to be designated by the World Zionist Organization. A vexing problem that had plagued the original Jewish Agency, namely the designation of non-Zionist members, was to be obviated by having the second 50% of the membership designated by the principal fund-raising organizations functioning in the Diaspora on behalf of Israel. This plan was finalized in 1970 and thus after 40 years of activity, the Jewish Agency in effect reverted, in its organizational form, to the ideas that first created it.

Into the 1990s and Beyond

Since the mid-1980s, the Jewish Agency (JA) and World Zionist Organization (WZO) have sought ways to redefine many of their traditional programs and modes of operation as well as to effect a new division between them. This process emerged in response to changes in Israel-Diaspora relations, but it was also shaped by ongoing tensions and differences in the relative strength of the constituent groups of these bodies. As a result, major transformations occurred.

Far-reaching programmatic and operational modifications have been made in an effort to streamline bureaucracy and bring about cost efficiency. In 1988 alone, 559 budgeted

personnel positions were terminated in the JA. By 1990, one third of all JA employees had been made redundant. Traditional Agency departments: Aliyah, Youth Aliyah, Rural Settlement, and Project Renewal were restructured. Another three departments, Torah Education & Culture, General Education & Culture, and Youth & He-Ḥalutz, formerly solely in the domain of the wzo, have come under the budgetary and programmatic aegis of a newly created JA/wzo Authority for Jewish Zionist Education. Initially it was envisaged that the budget of the Authority would be about \$50 million a year approximating the aggregate of the separate departments, but the 1993 budget allocated only \$33.9 million.

In 1993, the departments of Rural Settlement and Renewal & Development were merged into a combined Department for Rural and Urban Development. This culminated a process which began at the June 1991 Assembly. The new department was mandated to operate on a time and resource limited project base.

Budgetary constraints also forced a gradual reduction in the total number of youngsters in the care of the Youth Aliyah Department from 19,000 in the fiscal year 1986/87 to 14,000 in 1992/93. This cutback was made despite the massive inflow of immigrants and the deteriorating economic state of broad sections of Israeli society. Here, as in the case of rural settlement and urban renewal, the economies of scale followed on studies conducted by consultants appointed by the JA Board of Governors.

Several catalysts together generated the changes. Among these were an extended world business slump, demands that funds raised in the Diaspora be used domestically, and the unforeseen enormous costs of financing *aliyah* from the former Soviet Union and Ethiopia. The personalities of the leaders of the wzo and the JA, and the divergent political, public, and business cultures from which they hailed also contributed to the shifts. Overriding all these components was the difficult structural and philosophic interface between two systems – the political wzo and the philanthropic/com-munal JA.

Almost all the leadership elites of the JA reside overseas and are appointed to their positions, whereas the majority of wzo officials live in Israel and are elected through political parties.

Jewish communal life in the Diaspora revolves around the maintenance of educational systems, welfare institutions, synagogues and other functions, all of which require funding; this calls for a highly complex fundraising capacity. Lacking the means to levy taxes, the compelling issue facing those structures is the mobilization of funds. Since fundraising is not a democratic activity, cost efficiency is arguably at the top of campaign considerations. The role of major contributors is thus perpetuated, which in turn coalesces into an oligarchy.

In the wzo, leadership is by demonstrated electability. While Zionists are critical of what they term dominance by people of wealth, community leaders in the Diaspora are equally critical about what they term the exaggerated politi-

cizing of Israeli-Zionist leadership and the attendant political coloration of policy.

In 1971, the Reconstituted Jewish Agency was composed of representatives of institutional Jewish life in the Diaspora, e.g., the communal federation system and the fund-raising community, who joined the existing structure – which had been made up exclusively of Zionists – in a fifty-fifty partnership. Subsequently, the creation of JA governing bodies – an Executive, a Board of Governors, and an Assembly – separated the JA from the wzo's governing bodies – an Executive, the Zionist General Council, and Zionist Congress. (By statute, however, certain positions, particularly those of the chairman and the treasurer of the Executive, remained common to both.) The result was that the JA became an autonomous organization in which the leadership of Diaspora communities initially acquired equal responsibility, and later supremacy in determining policy and budget.

Until February 1988, the Jewish Agency Executive, like that of the wzo, worked both ideologically and operationally as a collective. This meant that the chairman functioned as the “first among equals,” with decisions taken as a group. In response to the demand by Diaspora members of the Board of Governors, particularly the Americans, to institute a corporate managerial style, each head of department within the JA tacitly agreed in 1992 that the chairman of the Executive may operate, when necessary, with decision-making authority. In addition, prior to February 1988, the director-general of the JA merely had a coordinating role. Subsequently, all department directors-general, and the secretary-general of the JA, are professionally responsible to the director-general.

Certain checks-and-balances were incorporated into the JA system. Fifty percent of the representatives in the 398-member Assembly of the JA (convened annually) are elected for a four-year term by the Zionist General Council. The remaining members are appointed by the United Jewish Appeal (30%) for a one-year term, while Keren ha-Yesod (20%) appoints representatives for a four-year period. The chairman of the wzo Executive also serves as chairman of the Assembly which determines basic policy and goals, reviews and acts upon budgets, determines priorities and directions of future budgets, adopts resolutions and elects the Board of Governors. The 75-member Board of Governors, which meets in between Assemblies to determine policy, manage, supervise, control, and direct operations and activities, is composed according to the same key as the JA Assembly.

The challenges met during the 1980s and 1990s by the JA have been its greatest since the early days of the State of Israel. The twin chapters of immigration from the former Soviet Union and from Ethiopia appear to have had an exhilarating effect on Jews around the world, effecting a great increase in fundraising and wrenching it out of the doldrums of eroding incomes. In the first years of the 21st century it was operating in nearly 80 countries through over 450 emissaries with a budget of around \$400 million. Avraham *Burg served as

chairman of the Executive from 1995 to 1999, succeeded by Sallai Meridor (1999) and Zeev Bielski (2005).

JEWISH AGRICULTURAL (and Industrial Aid) SOCIETY, organization chartered in New York in 1900 to provide East European immigrants with training “as free farmers on their own soil...” A subsidiary of the *Baron de Hirsch Fund, the society emphasized self-supporting agricultural activities, with rural industry to supplement farm incomes. Its *Industrial Removal Office, autonomous after 1907, relocated thousands of immigrant workers from the cities. Among the society's continued functions was the extension of loans on generous terms to farm cooperatives as well as individuals. It offered placement services and advice to potential agriculturists. A Yiddish and English-language monthly, *The Jewish Farmer*, was a vital channel of communication. While its extension specialists fostered agrarian innovations, the Bureau of Educational Activities stimulated cultural life, especially in the established rural communities of southern New Jersey and Connecticut. The society's officers included Eugene S. Benjamin, Cyrus L. Sulzberger, Jacob G. Lipman, Henry Morgenthau, Jr., and Lewis L. Strauss. An early shift from group colonization to assisting individual enterprise became the basis of most of the society's operations. Its diversified programs for self-help, whether in New Jersey, New York, New England, or California, were extended to thousands of displaced persons in the post-World War II era.

JEWISH AND ISLAMIC LAW, A COMPARATIVE REVIEW.

The Relationship between Jewish and Islamic Law

Comparative studies in the field of Jewish and Islamic Law began more than 150 years ago with the publication of Abraham Geiger's *Was hat Mohammed aus dem Judenthum aufgenommen* (1833, rev. 1902). That study, and those that followed,

concentrated primarily on the attempt to pinpoint cases in which Jewish law influenced Islamic law in the latter's early stages, against the background of the close physical and geographical proximity of Jews, Arabs, and Muslims – sometimes as actual neighbors – around the time of Islam's birth and later, creating what scholars have called “a state of symbiosis.” Scholars were also mindful of the overall similarity of the two legal systems, both being casuistic, formal, personal, relevant to all areas of human behavior, developed mainly by the efforts of legal scholars rather than by judicial precedent; both do not distinguish between state and religion, since both give religious law precedence over the state; both distinguish between areas associated with religious ritual (*issur ve-hetter* in Judaism, *ibādāt*) and those relating to private law (*dinei mamonot, mu'āmalāt*), between matters concerning man and God (*bein adam la-makom, haqq Allāh*) and matters concerning interpersonal relations (*bein adam la-havero, haqq adamī*). In both systems, a system of punishment evolved alongside that prescribed by the Bible (rabbinically ordained flogging) or by the Qur'an (Koran; *ta'zīr* punishments based on the late principle of *siyāsa shar'iyya* – administrative justice within the limits of the *Shari'a*).

Despite the similarities in the main characteristics of the two legal systems, the differences are clearly visible. Thus, although both were developed by legal scholars, the Muslim magistrate, the *qādī*, generally appointed by the ruler, is not necessarily well versed in the law but must consult with legal scholars, his main task being the administration of the law in practice; neither can his judgment be appealed in a higher court. In Jewish law, however, the court generally comprises several judges (3, 23, or 71) who must be learned in the law; litigants often having the option of appealing to a higher court.

Quite naturally, early comparative studies of Jewish and Islamic law focused mainly on the influence of Jewish law in ritual matters (*ibādāt*), such as prayer, fasting, charity, ritual fitness of foods, etc., and less on other areas of law. In time, particularly in recent years, attention has also focused on the influence of Islamic law on Jewish law. Any discussion of the relationship between the two systems must therefore concern itself with two phases: (1) the early history of Islam, characterized mainly by Jewish influence on Islamic law; and (2) greater influence of Islamic on Jewish law as Islam consolidated its political power and evolved its own legal principles, from the 8th to the 12th centuries. Muslim influence, however, never actually reached the proportions of “legal transplants,” but was rather limited, primarily affecting a few topics of legal theory, private law (*mu'āmalāt*), and, to a certain degree, genres of legal literature.

The comparative study of Jewish and Islamic law is meaningful not only in areas of mutual influence, but also as regards differences and parallels owing to social and economic factors (representing the human age in their background), to the possible influence on both of a third legal system, or to early traditions in the environment in which each evolved (the so-called “juristic *koiné*”). A major object of study is thus the charac-

terization of each system and its particular trends of development. In the following discussion, the specific characteristics of each system and the relationship between the two systems in both phases will be reviewed, as well as parallels that were not necessarily the result of mutual influence.

FIRST PHASE. The earliest evidence in the first phase is of local Jewish customs that influenced the Arabs in pre-Islamic times, as attested by various Arab traditions, such as ablution before prayer: "For we have Jewish neighbors and they are accustomed to wash their lower parts of excreta, and we washed as they did" (Kister, "On the Jews of Arabia," p. 231). These traditions persisted after the birth of Islam: "'We washed with water during the *jāhiliyya* and did not abandon [the practice] when Islam appeared,' he [Muḥammad] said, 'do not abandon it'" (Kister, *ibid.*). Such influence finds expression in the Qurʾān, which in several cases notes that it is sometimes guided by earlier books or laws (as in IV, 31; V, 52; etc.). Some *sūras* in the Qurʾān clearly echo biblical or mishnaic texts. For example, V, 45 reads: "And therein [= in the Torah] We prescribed for them: 'A life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and for wounds retaliation'; but whosoever forgoes it as a freewill offering, that shall be for him an expiation." This is a close parallel of the biblical verses Ex. 21, 23–24 and Deut. 19, 21. Another example (*ibid.*, 32) is: "Therefore We prescribed for the Children of Israel that whoso slays a soul not to retaliate for a soul slain, nor for corruption done in the land, shall be as if he had slain mankind altogether; and whoso gives life to a soul, shall be as if he had given life to mankind altogether," echoing the well-known mishnaic adage "Whosoever destroys a single soul of Israel, Scripture imputes [guilt] to him as though he had destroyed a complete world; and whosoever preserves a single soul of Israel, Scripture ascribes [merit] to him as though he had preserved a complete world" (San. 4, 5). The verse prescribing the beginning of the fast of Ramadan (II, 187), "Eat and drink, until the white thread shows clearly to you from the black thread at the dawn..." recalls the definition of the earliest time for reciting the *Shema* in the Mishnah (Berakhot 1.2): "From what time may one recite the *Shema* in the morning? From the time that one can distinguish between blue and white. R. Eliezer says: Between blue and green." There is also evidence in the Qurʾān, albeit not explicit, for a link between the Muslim fast of Ramadan and the Jewish Day of Atonement: "O believers, prescribed for you is the Fast, even as it was prescribed for those that were before you" (II, 183). Muslim tradition refers to an indirect link between the Muslim Friday (LXII, 9) and the Jewish Sabbath; it was this link that inspired the people of Medina to request Friday as a day of prayer, when they complained: "The Jews have a day on which, once in seven days, they gather together, and the Christians similarly. Let us establish a day in which we will congregate, speak of Allah, pray, and thank Him" (Kister, *ibid.*, p. 245). It has been argued that some of the Ten Commandments are represented in the Qurʾān, though in Muslim guise. The list

of marriages that are prohibited because of a blood relationship (IV, 22) is largely parallel to the list in Lev. 18: 6–20. Some scholars believe that the prohibition of usury in the Qurʾān (II, 287–288; IV, 33) was also influenced by the Jewish prohibition (Lev. 25:36; Deut. 23:20–21).

It is evident from these examples that the early Muslims were acquainted with Jewish sources not only by observation of their Jewish neighbors, but also, and perhaps primarily, thanks to Jews who had converted to Islam and brought their Jewish traditions with them. This was at first an oral process, with such converts presumably reading the Torah and translating it; the earliest documented Arabic translations of the Torah, however, date to a later period. An early collection of Muslim *ḥadīths* (al-Bukhari's *Ṣaḥīḥ*) reports that the Jews used to read the Torah in Hebrew and translate or interpret it for Muslims in their own language. Another tradition relates that Muḥammad permitted his followers to read the Torah and tell stories of the Children of Israel from Jewish sources, provided that they did not obey its commandments (Kister, *Ḥaddīthū*, p. 234). According to one tradition, Muḥammad actually judged Jews who had been accused of adultery, sentencing them to be stoned after he had consulted the Torah itself to determine their punishment; Muslim tradition has it that as a result a verse prescribing stoning, not originally in the Qurʾān, was revealed (J. Burton, *The Sources of Islamic Law*, 1990, pp. 129–132).

Because of the eclectic nature of the Qurʾān, some Qurʾānic verses, among other things (see below), actually contradict biblical or talmudic law. One example is the prohibition on marriage with one's niece (IV, 22), which talmudic law permits and in fact considers a meritorious act (Tosefta, Kid. 1. 5; Yev. 62b). Similarly, divorce as prescribed in the Qurʾān deviates in two respects from biblical law. First, divorce is effected, according to the Bible, by means of a document handed to the woman (Deut. 24:1–4), whereas a Muslim may divorce his wife by a unilateral announcement; second, the Qurʾān permits a divorced woman who has remarried to return to her first husband (II, 230), while biblical law forbids such a marriage (Deut. *ibid.*). There are also differences in inheritance laws: The Qurʾān allows female relatives to bequeath property or inherit it (II, 7–12), whereas biblical law gives preferential treatment to men in the context of inheritance (Num. 36:1–4). In addition, there are differences pertaining to marriage, dowry, and procedure.

Besides the aforesaid eclectic nature of the Qurʾān, some of the differences between Jewish and Islamic law may also be attributed to the early Muslims' contact with sectarian Jews, who rejected rabbinic *halakhah*, such as the prohibition of marriage with one's niece. Other differences stem from the particular social and economic structure of Jewish society, which was largely agricultural, as against Muslim society, which was primarily mercantile. These differences might explain the nature of Jewish inheritance law, which tended to preserve the integrity of large properties, whereas Islamic law permitted the distribution of small shares to several heirs.

Similarly, Jewish law, characteristically for an agricultural society, impeded the transfer of property by requiring an act of acquisition, whereas the largely mercantile Muslim society was content with oral agreements, which imposed fewer restrictions on commercial life. Some of the differences may be attributed to Muḥammad's tendency to distance himself from the more rigorous aspects of Jewish law, as implied in the Qurʾān (II, 286): "Our Lord, do Thou not burden us beyond what we have the strength to bear." This tendency was implicit in a later interpretive principle of Islamic law known as *rikkhṣa* (permission, alleviation), as against Jewish law, which, as Goitein pointed out in a well-known article, is referred to as *azīma* (stern, rigid).

Muslim jurists differed as to the status of provisions of Jewish law incorporated in the Qurʾān and in the *Sunna*. In one view, pre-Islamic law was an integral part of the Islamic system unless explicitly abrogated. This was the case with respect to various laws derived from Qurʾānic verses that had originated in the Bible, such as the verse concerning suretyship (XII, 71–78), of which the Ḥanafi jurist Sarakhsī (d. 1099) wrote: "The law that preceded us is our law as long as it has not been abrogated." Muslim jurists also applied the principle in the areas of dowry and hiring. Other Muslim scholars, however, preferring to distance themselves from Jewish influence, entirely rejected the possibility of Islamic law assimilating laws from the Jewish system.

SECOND PHASE. The second phase, comprising the period of the *geonim* (8th to 11th centuries), was marked by a change in the patterns of influence, in that it was primarily Islamic law that began to influence the practice of Jewish law in the Jewish communities of the East; the latter, as a minority group, were influenced by legal practice as determined by the ruling majority, in several areas: legal theory, rules of inference, linguistic terminology, and literary creation. Patterns of Muslim legal literature also influenced the writings of leading Jewish legal authorities. Muslim influence was not without its effect on the lower echelons of Jewish society, which sometimes adopted customs from the environment that reflected Islamic law.

Several factors combined to influence patterns of influence in the second phase. First, the *geonim* were familiar with Islam and its law, which often provided the background to their own rulings. For example, one geonic responsum, discussing the question of whether a convert forfeits inheritance rights, writes: "...these Muslims... for in the religion of Ishmael they do not permit a convert to inherit the property of his father." R. Saadia Gaon is familiar with the legal terms relating to Muslim deeds: "I would like to know, concerning a scribe among the Muslims who knows ten formulations from the books of deeds by heart, what would his position be among them? Would he thereby become a sage, or a legal scholar, or a jurist, or a judge?" (all terms taken from Islamic law). In connection with the administration of oaths, R. Hai Gaon rules "that the oath sworn by the Ishmaelites, saying, 'There is no God but Allah,' is a major oath." Elsewhere, he

notes: "Thus we see that in this city in which we now live, that is, Baghdad, the non-Jewish courts admit evidence only from competent witnesses, adult and rich, of whom there has been no breath of theft, falsehood or vanity, who are specified in their religion and called *al-muʾaddilīm*." Islamic law is sometimes reflected in the formulation of questions, as in the case when Rav Natronai of Sura was asked: "In our locality it is customary that if a person frees his slave and that slave dies without sons, then his master inherits him" – as in Islamic law, where a master can inherit from a slave. On the other hand, one also finds negative reactions to Islamic law. Thus, R. Yehudai Gaon expresses disapproval of the practice of handing down a legal opinion to one of the litigants: "It is forbidden to discuss the law with him or tell him anything about the law. For that is the practice of the courts of the Cutheans [= non-Jews], that one requests a legal opinion in advance." And Rav Hai criticizes the Muslim version of the lunar calendar, whose festivals do not occur in the same season every year: "...[the Muslims' festivals] move around [from season to season], for their months are the months of the [lunar] year and they have no intercalation."

Another factor that figured in the flow of influence was the frequency of Jewish contact with Muslims and with the Muslim authorities, fear of which inspired the *geonim* to adopt a generally moderate attitude to Muslim religion, Islamic law, Muslim rulers, and their subjects. The *geonim* applied the principle of *dina de-malkhuta dina* ("the law of the state [lit.: kingdom] is law"), on the assumption that Muslim rule was a result of divine providence. Jewish legal authorities therefore acquiesced in the laws promulgated by the Muslim authorities, recognizing deeds issued or approved by Muslim courts, although explicit mention of *dina de-malkhuta* is fairly rare; their attitude to the Muslim authorities was generally positive: "These Muslims are most solicitous for us and most protective toward us." This may be an appreciation of their judicial autonomy under Muslim rule. However, they also complain of "a cruel and harsh government," implying apprehension of the ruling authorities and the need to make allowance for the imposition of Islamic law in certain areas, as in their ruling that it is permissible administer an oath to a non-Jewish partner, contrary to talmudic law (Sanh. 63b). Because of the prohibition of usury in Islamic law, Rav Hai prohibits loans at interest to Muslims, although the biblical injunction against usury does not apply to non-Jews: "It is not permitted to charge a non-Jew interest save in the case of non-Jews for whom this is proper; that is, who themselves lend and borrow at interest. But as for these Ishmaelites, who forbid this in their religion, it is forbidden to lend them at interest – even learned scholars, for that would involve desecration of God's name." Significantly, they do not consider Muslim wine as "libated wine," not categorizing Muslims as idolaters. There are many other cases of similar import.

A third factor influencing the absorption of Muslim usages was the lenience of Islamic law in certain areas, in regard to both substance and procedure, compared to the cor-

responding provisions of Jewish law – especially since Muslim courts possessed powers of coercion. Accordingly, there was a growing tendency among Jews to turn to Muslim courts, furthering an appreciation among Jews of the Muslim court system and its regulations. There is ample evidence, for example, of women in the category known as “rebellious wife” (*ishah moredet*) appealing to Muslim courts in order to circumvent Jewish law, which would not readily grant them a divorce; in such cases the *geonim* felt it necessary to deviate from talmudic law, in order to keep such women in the frame of Jewish courts.

A fourth factor furthering Muslim influence was the occasional encouragement of Jews to have recourse to Muslim courts, in the hope that such Jews might be persuaded to convert to Islam. This was done in two mutually complementary ways. First was the ruling in most areas of civil law, sometimes also in connection with personal status, such as marriage money, that there should be no difference in the treatment of Muslims and members of the “protected peoples” (*dhimmi*), including Jews; second, most Muslim jurists ruled that Islamic law would apply even in cases in which only one litigant had appealed to the court.

The above factors explain several innovatory halakhic rulings of the geonic period, as well as the assimilation of various Muslim legal norms in the legal literature, sometimes through the instrument of custom, at other times almost secretly, without any special indication. Customs taken over by the *geonim* from Muslim practice without change may be called “borrowed” customs, whereas others, constituting only a response to Muslim norms but not necessarily imitating them, may be termed “responsive” customs. Some adopted customs were intended to prevent recourse to Muslim courts, reflecting the fear of the *geonim* that the more lenient Islamic law might encourage conversion to Islam. Thus, the *geonim* created a *takkanah* (enactment) that a “rebellious wife” could obtain a divorce immediately, rather than wait the extensive time required by rabbinic law, without forfeiting the statutory value of her *ketubbah* (marriage contract). Recognition was accorded to the institution of “estimated” *mahr* (marriage money), according to which a woman who had lost her *ketubbah* was entitled to a sum of money as befitted a woman of her position, based on criteria taken from Islamic law. In connection with bankruptcy, they established various procedures at variance with talmudic law: they instituted a new oath of destitution, “I have no means,” as practiced in Islamic law (*yamin al-adam*); pronounced a ban on recalcitrant debtors as a substitute for the Muslim measure of imprisonment for debt; made arrangements for the needs of a debtor’s wife and children when his property was taken over, as was customary in Islamic law but contrary to the ruling of the Talmud. Similarly, we find instances of the *geonim* permitting husbands to give their adult daughters in marriage without the daughters’ explicit agreement, as permitted by some schools of Islamic law but contrary to talmudic law; this was done by creating a legal construct that brought the practice in line with the lat-

ter. Many examples of Muslim influence may be found in the realm of commercial law, one of the most prominent being the *suftaja* (bill of exchange; *diokni* in talmudic phraseology), in relation to which one geonic responsum states: “Our laws, strictly speaking, do not permit the sending of *suftaja*, since our Sages said, ‘It is forbidden to send money by *diokni*’ [טב בכ 104b]. . . . However, since we have seen that people use it, we have begun to sanction it, so that transactions among people should not be voided. So we have agreed to sanction it in accordance with the traders’ law, no more and no less.”

An example of a “responsive custom” is the institution of the “anonymous ban” (*herem setam*), which was devised as a substitute for the administration of oaths to litigants during a judicial procedure, when an actual oath was not sanctioned by talmudic law. The *geonim* thus created a parallel to the Muslim system of oaths, according to which, in cases of doubt, a litigant could be required to take an oath even in the course of a judicial procedure, not only at its end.

A striking feature of geonic assimilation of Islamic practices is the frequent use of accepted custom to that end; in fact, that was preferred over the talmudic principle of *dina de-malkhuta*, of which (as already mentioned) they made very little use, perhaps out of reluctance to admit the influence of an external source. They used custom, a well-proved legal source of Jewish law, as a kind of signpost indicating what might be an ad hoc measure, a step in the development of Jewish law according to the needs of time and place. Many such customs associated with the constraints of time and place disappeared later, when the constraints were no longer relevant, and were replaced by a return to talmudic law.

However, as stated previously, Islamic law also made its way into geonic *halakhah* by channels other than custom; only careful examination of Muslim legal literature can reveal the Muslim source, which is not obvious at first sight. Such examination will reveal the Muslim background prominent in monographs written by the *geonim* on practical legal topics, such as the laws of abutters’ rights or the laws of suretyship (which receive only sparse treatment in the Talmud), as well as on family law and matters of personal status.

Thus, there are clear-cut parallels between the “Book of Abutters’ Rights” (*Kitāb al-shuf’a*) by Rav Ḥofni b. Samuel (d. 1013) and Muslim works, not only in structure, but also in relation to specific laws that the author seems to have borrowed from Islamic law. A few examples, among many, will suffice: conferral of abutters’ rights to land acquired by barter; the right of rescission (*khiyār*); the existence of abutters’ rights in voidable sales; division of a property among abutters on the basis of their number rather than their proprietary rights in the abutting property; establishment of a hierarchy among parties with proprietary rights to the property itself (*nafs al-mubay*), parties with various non-proprietary rights pertaining to the property (such as right of way; *ḥuqūq al-mubay*), and abutters proper (i.e., owners of adjoining properties; *jār al-mulāṣaq*); abutters’ rights in the sale of a well or spring in another’s property; real-estate transactions that do not confer

abutters' rights, such as leasing, bailment, borrowing, or endowment. Moreover, the procedure in pleas concerning abutters' rights largely emulates that customary in Muslim courts. It is especially worthy of note that, even where R. Samuel b. Ḥofni adheres to talmudic law, his formulation is in the style of Muslim legal texts.

Similar links may be observed in R. Samuel b. Ḥofni's treatise on suretyship and hiring (*Kitāb al-ḍamān wa'l-kafāla*), many of whose provisions, in addition to the structure of the work and its division into chapters, are taken from the parallel Muslim literature or from the prevalent practice of the milieu. Thus, he devotes separate chapters to various types of suretyship. One chapter deals with suretyship for the obligee's person where the surety's only commitment is to bring the debtor to court. Another chapter deals with a surety who is also committed to defraying the debt in case he fails to present the obligee. There are chapters on the case of a surety who defrayed the debt before he himself or the obligee was sued by the principal, and on suretyship for an unknown sum. Sometimes, Muslim usage in matters of suretyship is cited in a responsum rather than in a special treatise, as in a responsum by R. Sherira Gaon on suretyship. Another work parallel to Islamic law in several aspects is R. Samuel b. Ḥofni's treatise on divorce. Rav Hai's great work *Mishpetei Shevu'ot* is marked in part by echoes of Islamic law, such as making arrangement for the assets of a bankrupt debtor, as well as the oath of destitution, already mentioned previously.

At this point it should be noted that some of the parallels cited above may well reflect the influence of a third legal system from which both Jewish and Islamic law borrowed, or from an earlier legal tradition (juristic *koiné*). This may indeed be the case in such areas as abutters' rights and suretyship; alternatively, Islamic law may have been merely the channel through which they reached Jewish law. Some of the parallels and similarities may be explained on the basis of S.D. Goitein's theory of feedback or "full circle," according to which an idea was adopted by Islam, transformed and reshaped, and subsequently, in a new guise, "came round full circle" and impacted Jewish law. Examples of this process are the Muslim *mahr* (marriage money, dowry) and suretyship for person, both already found in biblical law (in the latter case, some Muslim jurists admit this origin). Both institutions experienced further development in Islamic law, finally returning in a new figuration to influence Jewish law.

Links with Islamic law may also be identified in the area of legal theory (*uṣūl al-fiqh*), especially in the writings of R. Saadia Gaon and R. Samuel b. Ḥofni. As shown by M. Zucker and later scholars, Muslim writings are the source not only of the metaphorical terminology of "roots" and "branches" (*uṣūl, furū'*) in relation to legal analogy (*qiyās*), but also of some of the basic conceptions of *qiyās* and its practical application, especially as formulated in the writings of Saadya and Samuel b. Ḥofni, who were apparently influenced mainly by *Mu'tazila* scholars. Such is the case, e.g., in regard to the question of whether analogy produces certain knowledge or only plausi-

bility, or even in regard to the actual use of analogy as a source of law. The first signs of the use of consensus as a source of law in geonic works, including its definition and relationship to tradition, attest to the influence of the Muslim concept of *ijmā'*. The same is true of the use of interpretive tools taken over from commentaries on the Qur'ān, such as the terms *mahkamāt* (univocal expressions) and *mutashābahāt* (equivocal expressions), which were employed by both *geonim* and Muslims, among other resources, to explain contradictory verses in the Bible.

The primary genre of legal literature used by the *geonim* at this time, the halakhic monograph, dates back to R. Saadya Gaon, continuing in the later period of R. Samuel b. Ḥofni and Rav Hai. These authors' formularies (manuals of deeds, *shurūt, wathā'iq*) and dozens of other works, which later provided the basis for Maimonides' great work of codification, were written along the lines of the Muslim model.

After the geonic period, one finds less frequent instances of the influence of Muslim sources or of *responsa* written against the background of Islamic law or religious practice. An underpinning of Islamic law may be detected only rarely in the works of R. Joseph ibn Migash or R. Isaac Alfasi, both of whom, used concepts borrowed from the Muslim world, such as substance and accident (*jawhar, 'arḍ*), in connection with obligations concerning tangibles and intangibles. At times, Alfasi also employs Islamic legal terms, such as *nazar, dalīl*, and *istidlāl*, in his talmudic discourse. Maimonides, however, betrays Islamic influence more frequently in his wording, in legal formulas, in methods of interpretation (*tāwīl, zāhīr*, and *bāṭīn*), and in actual laws and legal institutions; but it is not always possible to determine whether he was influenced directly by Muslim sources and practice or, indirectly, by geonic rulings and terminology, themselves reflecting the influence of Islamic law. Particularly prominent in Maimonides' code are certain provisions in the area of public law, in his "Laws concerning Kings," which reflect Muslim thought and parallel elements of Islamic law. This is especially apparent where he rules, for example, that a Jewish king is not bound by normative penal law and procedure – recalling the Muslim institution of *al-nazar fi'l-mazālim* ("investigation of complaints concerning injustice"). In regard to the supervision of public morals, Maimonides' treatment recalls the Muslim institution of *muhtasib*. In family law and personal status he employs norms and practices borrowed from Islamic society and law: restrictions on women's freedom of movement, the husband's right to beat a wife who ignores her wifely duties, and so on. In private law (suretyship and abutters' rights) he lists a series of laws which, both in general and in particular, may well have been taken over from the Muslim legal literature. In legal theory he applies some aspects of analogy (*qiyās*) according to the Muslim model, makes frequent use of consensus (*ijmā'*) both in his code and in the *Guide of the Perplexed*, and divides human behavior into five "legal qualifications" (*aḥkām al-khamsa*), a common pattern in Muslim legal literature. The very structure of his code *Mishneh Torah* resembles in some

respects the style of the parallel Muslim literature (*fiqh*). Maimonides' usage in the area of legal theory and positive law shows at times the influence both of the Shi'a Isma'ili sect and of the Sunni Shafi'i school. These schools were particularly active in Egypt, which was also the locale of Maimonides' halakhic activity, and they most probably contributed to the consolidation of his legal theory. As is well known, Maimonides followed several *geonim* in ruling that Muslims were not to be considered as idolaters, and this ruling may have influenced his attitude to some of their practices and customs.

Where Islamic law contradicts Jewish law, however, Maimonides will often use rhetorical or polemical tools to reject it. Thus, he rules against imprisoning a debtor who pleads destitution or even against administering an oath to such a debtor; he stresses the halakhic requirement that divorce be effected by a written document, pointing out the danger of oral divorce as in Islam; he upholds the need for the public nature of the marriage ceremony; and in the area of commerce, he rules that a sale cannot be effected by oral means alone as in Islamic usage.

An acquaintance with Islamic law is also evident in the writings of Maimonides' son Abraham b. Maimon, and its influence may sometimes be detected. In one responsum (*Resp. R. Abraham ben ha-Rambam*, Jerusalem 1938, #97), he writes that the laws of abutters' rights are also practiced "by people other than our coreligionists," clearly referring to the Muslims. In another (*ibid.*, #66), he employs the phrase "the gate of investigation and analogy is not closed," echoing a dispute among Muslim scholars as to whether the "gates of *ijtihad*" were closed; and in his *Sefer ha-Maspik le-'Ovedei ha-Shem* he discusses the relationship between written law, analogy, and custom in terms that recall the Muslim approach: "Custom is not the main thing that should govern our conduct, but written material or analogy, or both together." Abraham b. Maimon is also known to have been influenced by Islam in synagogue procedures, such as ablution, prostration, and seating arrangements, among others.

Later Spanish-rabbinical authorities, such as R. Asher b. Jehiel, R. Solomon b. Adret, R. Simeon b. Zemaḥ Duran, and R. Solomon b. Simeon Duran, show only isolated instances of the influence of Islamic law. Such instances may be found in the area of marriage law, such as R. Simeon b. Zemaḥ Duran's discussion of polygamy, where he recommends the egalitarian treatment of polygamous wives, or the connection made by R. Simeon b. Zemaḥ, R. Isaac bar Sheshet, and R. Solomon b. Simeon Duran between the Jewish *ketubbah* and the Islamic *mahr* (*ṣadāq*). Islamic influence is also felt in the treatment by several authorities of the arrangement for payment of *ketubbah* money where a woman has lost her *ketubbah*. Further reference to Islamic law in these sources revolves around the question of the desirable Jewish attitude to Islamic religious customs and to the usage of the Muslim environment, such as the obligation of a witness to take an oath as to the truth of his testimony, cutting the hair, eating flesh of animals slaughtered according to Muslim custom or in the direction of Mecca,

taking off one's shoes upon entering the synagogue, hanging a mat with an illustration of the *Ka'ba* in the synagogue, and other subjects (R. Asher b. Jehiel and others).

Sources of the Law in Jewish and Islamic Tradition

The *Shari'a* recognizes four sources: The Qur'an, *Sunna*, *ijma'* (consensus), and *qiyās* (legal analogy). The first two, Qur'an and *Sunna*, are written sources (*naṣṣ*), whereas the last two, *ijma'* and *qiyās*, are unwritten methodological legal sources. Islamic law does not recognize laws of equity or any equivalent of the halakhic principle of *lifnim mi-shurat ha-din* ("beyond the strict letter of the law"). The principle of *istiḥsān* (public welfare), which seemingly allows for deviation from legal analogy where necessary for the public good, is not generally perceived as a rule of equity; it has been described by some authorities as a kind of hidden analogy, the basic idea being that the *ratio* of a legal rule from which inferences are to be made as to a new rule is not immediately obvious. By contrast, Jewish law recognizes a broad spectrum of legal sources, including midrashic exposition, enactment (*takkanah*), custom, reason (*sevara*), and precedent. In addition, there are valid rules of equity, such as the aforementioned *lifnim mi-shurat ha-din* or the rule based on the biblical verse "Do what is right and good" (Deut. 6:18).

Underlying the differences between the sources recognized in each system are their conflicting attitudes to the law in general. Common to the four Muslim sources, as emerges from the legal literature, is the tendency to leave the law and its sources in the province of divine revelation, and to restrict as far as possible – if not absolutely to avoid – human involvement in the development of law and the establishment of legal norms. Thus, the verses of the Qur'an are not readily interpreted in any sense other than the literal; any law in the *Sunna* must be supported by a *ḥadīth* consisting of the *matn*, the body of the tradition, and the *isnād*, a chain of transmitters traced back to Muḥammad or his companions and thereby endowed with an indelible prophetic stamp of approval. Consensus (*ijmā'*) is intended mainly to approve (a posteriori) norms upon which Muslims have agreed, such agreement attesting to their truth and divine origin; consensual norms are therefore almost inviolable, although consensus by itself cannot be used to establish future legal norms. The task of analogy (*qiyās*) is the expansion of existing law from a written source, but never the creation of new legal norms. Other principles accepted by Islamic law as tools to effect legal changes, such as the aforementioned *istiḥsān* (the principle of public welfare) and *ijtihad*, "effort," i.e., the use of individual reasoning or exegesis to decide the law, caused no significant change in the theological perception of law as based invariably on a divine source. We have already pointed out that *istiḥsān* was not seen as a channel of equity but as a kind of hidden analogy. In effect, therefore, Islamic law always remained "in heaven," the sole task of the jurist being to reveal it, with no freedom to exercise discretion in laying down the law.

In Jewish law, by contrast, the recognized sources grant halakhists extensive authority to develop legal creativity, on the basis of the biblical verse “It is not in heaven” [Deut. 30:12], as established in a celebrated dispute between R. Eliezer b. Hyrcanus and the Sages concerning the ritual purity of the “oven of Akhnai” (BM 59b). The difference between Jewish and Islamic law, in consequence of their different theological perceptions of the sources of law and the authority of legal scholars had implications in many areas of the law, determining the specific character of each. Islamic law, lacking suitable tools of jurisprudence, remained basically static, whereas Jewish law, by virtue of its sources of law, was more dynamic and enabled halakhists to cope more easily with changing realities.

These differences can be demonstrated in areas where the original legal nucleus of both systems was the same or similar, but because of the different nature of their legal sources, Islamic law remained relatively static, whereas Jewish law was capable of adapting itself to new conditions. Thus, for example, there was at first no basic difference between the Muslim *mahr* and the Jewish *ketubbah* (in the sense of a statutory payment). The biblical *mohar* (bride-price), originally a matter of oral agreement as to the payment made to the bride’s family at the time of the marriage, as was customary in Islamic law, gradually evolved into the written document known as the *ketubbah*. Rabbinic sources attribute this development to R. Simeon b. Shetaḥ, who “ordained that all the property of a husband is pledged for the *ketubbah* of his wife” (Ket. 82b); consequently, the payment, instead of being made before marriage, became a debt payable to the wife at a later date in the event of her being divorced or widowed. This revolutionary development created a major gap between the two systems, which might otherwise have remained very similar in this respect.

There are other aspects of divorce laws in which Jewish and Islamic law were at first largely in agreement, but later drew apart owing to the dynamic and adaptive nature of Jewish law. Thus, in Jewish law as represented by the Mishnah (Yev. 14:1), later also accepted by the *geonim* in Iraq, “While a woman may be divorced of her own free will or against her will, a man can give divorce only of his own free will.” Even more extreme was the attitude of R. Akiva, who taught that a husband may divorce his wife virtually at will, “even if he finds another woman more beautiful than she is” (Mishnah, Gitt. 9:10). The divorce procedure, too, is a private affair, with no involvement of the religious court. These aspects also exist in Islamic law as practiced (except for the halakhic requirement that the writ of divorce be handed to the woman, for which there is no parallel in Islamic law, and the biblical prohibition of remarrying one’s divorced wife if she herself had remarried in the meantime). Jewish law, however, as practiced by Ashkenazic Jews, was radically altered by an enactment, attributed to R. Gershom Me’or ha-Golah (Germany, 11th century), forbidding a husband to divorce his wife against her will. Another gap was thus formed between (Ashkenazic) Jewish law and Islamic law.

Another example of this pattern is the question of the lineage of a child of a mixed marriage, which in the Bible, according to critical consensus, was based on patrilineal descent, whether in marriages between Jews or between a Jew and a non-Jew. This principle was later superseded by that of matrilineal descent, based on a midrashic exposition of Scripture, in response to changing realities. The Mishnah reports the final stage in a process of halakhic change that had presumably begun beforehand, which ultimately became the halakhic norm: “Whatever [woman] cannot be betrothed to that particular person or with others, the issue follows her status; this is the case with the issue of a bondmaid or a gentile woman” (Kid. 3:12). Islamic law, however, maintained the principle of patrilineal descent (probably because Islamic law permits a Muslim man to marry a non-Muslim woman).

At times, the change in Jewish law can be attributed to changed values in the rabbinic world, such as the midrashic redefinition of the term *na’arah* (unmarried girl), previously understood as designating status (as in the Bible): the Midrash redefines the term as denoting a young girl between certain age limits, so that a woman beyond those limits was considered independent. By contrast, in some schools of Islamic law, the cognate term continued to designate status, the girl remaining under her father’s authority irrespective of her age. Similarly, the rabbinic interpretation of the scriptural verse “an eye for an eye” as referring not to physical retribution but to monetary compensation, has no parallel in Islamic law, which has retained the literal meaning of the phrase.

Both Islamic and Jewish law recognized the legitimacy of disagreement and legal pluralism, epitomized in the latter by the talmudic saying, “Both [conflicting opinions] represent the words of the living God.” In Islamic law, however, this principle received prominent normative significance, in the sense that it granted equal status to different legal schools. This situation made adjustment to changing realities possible by transferring the focus of legal development from the text to the personality at the head of a particular school. A diversity of opinions was thus generated, making for a more flexible machinery of legal decision and somewhat compensating for the lack of dynamic sources of the law. Jewish law, however, from the start, adopted a rigid system of decision rules, unparalleled in Islamic law, meant to guide the halakhic decisor in dealing with differences of opinion. This somewhat limited the Halakhist’s freedom to deviate from the halakhic text.

Legal Literature in Jewish and Islamic Law

The legal bases of the two systems, stemming as they did from diverse theological differences, affected their respective genres of literary creativity, as well as the nature and function of those genres. A basic similarity between the Bible and the Qur’an is that both laid the normative groundwork for their respective legal systems, transforming in part earlier practices. In both, the legal material occupies only part of the text, which also includes a good measure of narrative. The Muslims evolved a special literary genre for the legal material of the Qur’an,

known as *Aḥkām al-Qurʾān*, “Laws of the Qurʾān,” reminiscent of the contemporary Jewish genre of *Sefer ha-Mitzvot*.

Yet, the differences between the two systems outweigh the similarities. Primary is the difference in their mode of revelation. The theophany at Sinai was the sole source of the Torah, whereas the Qurʾān, according to Muslim tradition, was “brought down” from heaven, chapter by chapter, over 20 years. This gave rise to contradictions between different sections, leading to a criterion of “early” and “late” – later verses that repealed earlier ones – and as a result generated a genre specific to Islamic law to resolve such contradictions (*Kitāb al-nāsikh waʾl-mansūkh*). In Jewish law, however, the ruling principle was that no differentiation could be made between “early” and “late” material, and there was no need of such a genre. Instead, what emerged was recognition of an Oral Law accompanying the Written Law.

A special feature of Jewish legal tradition was the development, especially in the late Second Temple period and for some time afterwards, of literary genres designed to “prove” the Oral Law as being embodied in the Written. These “proofs” formed the basis for the compilations known collectively as “Halakhic Midrash,” as edited in the rival schools of R. Akiva and R. Ishmael. Both schools evolved a system of hermeneutical rules for the presentation of the Oral Law as embodied in Scripture. Tradition makes Hillel the Elder the expounder of seven such rules, expanded later by R. Ishmael to 13. Among the more familiar of these rules are *kal va-ḥomer* (argument a fortiori), *gezerah shavah* (comparison of similar expressions), *binyan av* (inference from a particular case), *davar ha-lamed me-inyano* (argument from context). Two general rules of scriptural interpretation, outside the realm of hermeneutics, are the principles: “The Torah speaks in human language” and “The Torah speaks of the present [situation]” (both enunciated by the school of R. Ishmael). These rules, instrumental in the confirmation of Oral Law, are unparalleled in the Muslim legal literature.

The two systems differ in other branches of legal creativity, some deriving from theological reasons, others from the particular practical needs of each system. Exceptions are certain literary genres in which Jewish literary creation emulated its Muslim counterpart, in view of similar needs – such as the appearance of halakhic monographs on a variety of topics. Sometimes, despite a superficial similarity of literary function, the structure of the work is quite different. Thus, while both systems in time committed their oral traditions to writing – though both had originally forbidden such a procedure – there are still fundamental, theologically based, differences in the methods of transmission, the level of authenticity of a tradition, and its sources. In Jewish law, the main sources of the Oral Law are the Mishnah, the Tosefta, and the Halakhic Midrashim. The transmission tradition that establishes the validity of the Oral Law was enunciated at the beginning of Tractate *Avot* of the Mishnah: “Moses received the Torah at Sinai and transmitted it to Joshua, and Joshua transmitted it to the Elders, and the Elders to the Prophets, and the Proph-

ets transmitted it to the men of the Great Synagogue...” Thus, the Oral Law (tradition) is firmly rooted in a divine source and is the basis of the authority of the editor of the Mishnah, R. Judah ha-Nasi. Muslim oral law, the *Sunna*, however, consisted of diverse collections of traditions, all endowed with canonical status; these were also based on chains of transmitters, but there the similarity ends: The *isnād* (chain of transmitters) is personal rather than institutional, extending from the last authority in the chain to the first, who is closest in time to Muḥammad or his companions; each law needs its own *isnād* as proof of its truth and authenticity. While rabbinic literature sometimes presents a similar concept of a chain of transmission, it is generally shorter and not necessarily based on names (such as the Mishnah, *Eduyot* 8:7; see Cook, “Opponents of the Writing of Tradition,” pp. 510–11), though at times a chain of tradition combines both personalities and institutions (as in the Mishnah, *Peʾah* 2:6). Some scholars believe that such chains were the model for the Muslim concept, which in turn had its influence on Jewish chains of tradition in later literature, in a kind of feedback effect; in the Mishnah and the Talmud, however, they were not a precondition for the validity of a law or a criterion of its authenticity. Because of this feature of Islamic law, there was a phenomenon of artificial chains as well as attempts to attribute late laws to the prophet himself. A similar phenomenon of attribution to prestigious authorities may also be found in geonic literature.

Around the same time as the consolidation and redaction of *Sunna* collections in Islamic law – a process that took more than 200 years, from the 9th to the mid-11th century – the genre of halakhic responsa evolved in Jewish law, to meet the needs of Jewish communities throughout the East. This genre made an inestimable contribution to the development of Jewish law and is unparalleled in contemporary Islamic law.

The different contemporary developments – emergence of the *Sunna* in Islam and of responsa literature in Judaism – reflect the different legal and historical needs of the two systems. Islam focused on the consolidation of a legal tradition and its attribution to Muḥammad, through the existence of independent legal centers in the Muslim world, which obviated the need to appeal to a single center. Jewish law, in contrast, was based on the already consolidated Oral Law; thus the leading legal center of authority in Iraq strove to decide questions of law generally, throughout the Jewish Diaspora, and with the institution of the responsum maintained its central position in the world of Jewish law. The responsa literature also served as a kind of corpus of legal precedents, again a phenomenon with no parallel in contemporary Muslim legal literature.

A further literary genre characteristic of Islamic law, but with no counterpart in Jewish law was that concerned with the “roots” of Islamic law, *Uṣūl al-fīqh*, that is, defining the legal sources of Islamic law, its theoretical bases, and rules for the derivation of rules from the “roots.” This genre was necessary because of the confrontation between the supporters of tradition (*ahl al-ḥadīth*) and the supporters of legal theory (*ahl*

al-ra'ý). The quite intense tension between these two groups required tools to define legal theory and the limits and rules of legal methodology. These tensions hardly existed in the rabbinical world of *halakhah*, where a separate branch of legal theory was not necessary. Such topics were nevertheless taken up on the periphery of legal writing, as in the works of R. Saadia Gaon and R. Samuel b. Ḥofni on scriptural exegesis, or in specialized works such as those written by Karaites in the same period; these works, however, did not constitute an independent halakhic genre.

Yet another specifically Islamic creation was the literature of legal devices or evasions (*hiyal*). Certain topics elaborated in Islamic legal theory resulted in significant discrepancies between what was taught in the law schools and the reality of practice, such as the prohibition of usury. The *hiyal* literature tried to bridge this gap between theory and practice by way of various legal devices or fictions (such as the “double sale” of property in order to circumvent the prohibition of usury). While Jewish law also makes use of legal fictions (in the geonic period – perhaps owing to Muslim literature), this never reached proportions that dictated the composition of specialized works on the subject, especially since the legal substrate available to Jewish law, as described above, obviated the need for such works.

The literature of “disagreements” (*ikhtilāf*), which concerned itself with disagreements between Muslim jurists over a broad spectrum of subjects, is not characteristic specifically of Islamic law. Indeed, a similar genre existed in pre-Islamic Jewish law – the literature of *hillukim*. Again, however, the difference was significant: the Muslim genre had to cope with the existence of multiple legal opinions so as to ensure the equal status of the different legal schools; no such need existed in contemporary Jewish law. The Muslim formularies (*shurūt*) also aimed to harmonize the rulings of the different legal schools.

The one field in which the *geonim* clearly took Muslim literature as a model was the writing of halakhic monographs, frequently on the very same topics. We thus have works on the duties of judges and formularies, among dozens of works on a variety of subjects. In this area the *fuqahā'* (religious lawyers of Islam) and the *geonim* had a similar goal: to help their contemporaries conduct themselves in accordance with the law and to inculcate a common vocabulary (*lingua franca*) of terms and concepts. The *geonim* made use of such works, written in Arabic, and their legal terminology, which they used as a contemporary frame of legal composition. The flourishing legal literature of the geonic period was made possible thanks to the Muslim authorities, who granted their non-Muslim “protected” subjects, the *dhimmi*s, including the Jews, legal autonomy, spurring the growth of a ramified legal literature in a contemporary legal form.

There was nevertheless a significant difference in the writing of legal monographs in both systems: The Muslims would write comprehensive works on the totality of legal topics, whereas the *geonim* as a rule devoted a separate work to

each topic. Later, however, it was these specialized works that provided the basis for the great comprehensive work of codification, in particular, for Maimonides' *Mishneh Torah*. Such codificatory activity was made possible by the existence of the rules of decision of Jewish law, which provided the backbone for these literary efforts. In Islamic law, however, with its pluralistic nature and the absence of an agreed system of rules of decision, the codificatory nature of the Muslim legal monographs was less obvious. The phenomenon of codification, which was unique to Jewish legal creativity under Islam (including R. Jacob b. Asher and his *Arba'ah Turim*, R. Joseph Caro and his *Shulḥan 'Arukh*), created a gap between the Spanish and Middle-Eastern works of *halakhah* and contemporary writing in Franco-Germany, where there was no such codificatory activity. This, then, is yet another example of the way Islamic law influenced the development of Jewish law in Eastern countries, sometimes leading to a veritable division between the Spanish and Middle-Eastern variety of Jewish law and that current in Franco-Germany (Ashkenaz), a division sometimes evident even in the actual content of specific laws.

[Gideon Libson (2nd ed.)]

JEWISH BOOK COUNCIL, THE, the literary arm of the organized Jewish community. The Council was established in 1946 in North America and became an international organization in 2005 with the establishment of the Jewish Book Council in Israel. The renaissance of Jewish books in the English-speaking world served as catalyst to expand its bound-

aries. The world-wide mission is to promote the reading, writing and publishing of quality English language books of Jewish interest.

Among its most prominent activities to advance these goals are sponsorship of the National Jewish Book Awards, now in its 55th year, and sponsorship of Jewish Book Month, which runs annually 30 days before Hanukkah.

Among its publications are *Jewish Book Annual* and *Jewish Book World: the Publishers Weekly of the Jewish World*. It also features Jewish Book NETWORK, a membership organization to promote Jewish book fairs in North America and Israel, and participates in major conferences, including the Jerusalem Book Fair, to promote Jewish books. The Council sponsors combined author programs between Israeli and American writers, and it serves as a resource for information on Jewish literature.

[Carolyn Hessel (2nd ed.)]

JEWISH BRIGADE GROUP, the only military unit to serve in World War II in the British army – and in fact in all the Allied forces – as an independent, national Jewish military formation. It was made up mainly of Jews from Palestine. The brigade had its own emblem, a gold Magen David on a background of blue-white-blue stripes and bearing the inscription “ה”י”ל [the initials of the Hebrew name *הַקְּטִיבָה הַיְהוּדִית לְוִחָמָת* – Jewish Fighting Brigade] – Jewish Brigade Group.” It saw service in Egypt, on the north Italian front, and in northwest Europe, in the years 1944–46.

The establishment of the brigade was the final result of prolonged efforts by the *yishuv* and the Zionist movement to achieve recognized participation and representation of the Jewish people in the war against the Nazis, to lift the mantle of anonymity from the war effort made by the *yishuv* with its tens of thousands of volunteers, and to reinforce the *yishuv*'s political standing and promote the aims of Zionism. The British authorities, opposed as they were to these aims, were reluctant to have Jews serving in fully fighting units and confined them to auxiliary corps, while the infantry was largely employed on guard duties in Palestine. These obstacles were overcome only after a sustained and unrelenting campaign, headed by Chaim Weizmann in London and by Moshe Shertok (*Sharett), head of the *Jewish Agency Political Department, in Jerusalem.

In 1940 the Jews of Palestine were permitted to enlist in Jewish companies attached to the East Kent Regiment (the “Buffs”), and 15 such companies came into being. In 1942–43 these companies were formed into three infantry battalions of a newly established “Palestine Regiment”; the battalions, whose men had previously served only in Palestine, were moved to Cyrenaica and Egypt, but there, too, as in Palestine, they did not receive their full equipment and continued to be engaged primarily in guard duties. The Jewish soldiers stepped up their demands for participation in the fighting and for the right to display the Jewish flag. It was not until September 1944, however, that the British government agreed to

the establishment of a “reinforced brigade” which would be fully trained and then join the troops at the front. The brigade was composed of the three infantry battalions of the “Palestine Regiment,” a field artillery regiment, and various other service and auxiliary units, largely made up of the Palestine Jewish units – particularly of the Royal Army Service Corps, which had seen service in North Africa. Brigadier Ernest Frank *Benjamin, a Canadian-born Jew serving in the Royal Engineers, was appointed brigade commander; the battalion commanders were British, while the company commanders were mostly Jewish. Some refugees and “illegal” immigrants also joined the brigade, and some Jews serving in British units were transferred to it. The total strength of the brigade was approximately 5,000.

After a period of training in Egypt, the brigade was moved to Italy, where it joined the Eighth Army and continued its training until the end of February 1945. It then took up positions on the Alfonsini sector of the front, where it soon engaged in the fighting, initiating two attacks (March 19–20, 1945), and took prisoners. Moving to another sector of the front, on the Senio River, the brigade found itself facing a German parachute division. In the course of further operations, the three battalions crossed the Senio on April 9, establishing a bridgehead which they broadened the following day. The brigade's casualties consisted of 30 killed and 70 wounded; 21 of its men were awarded military distinctions and 78 were mentioned in despatches.

In May 1945 the brigade was moved to northeast Italy, and it was there that it met for the first time with survivors of the Holocaust. Rescue committees were established in the brigade units to care for the Jewish refugees, while maintaining secret contact with the Jewish authorities' Merkaz la-Golah (“Diaspora Center”; see *Berihah). The brigade thus became a major factor in the care of the Jewish survivors of the ghettos and concentration camps. Without neglecting their military duties, the Jewish soldiers extended systematic aid to the refugees, provided them with clothes and educational facilities for their children, guided them across the frontiers, and smuggled them into Palestine. These activities continued when the brigade was moved to Holland and Belgium in July 1945. Some members of the brigade were attached to the tracing service of the occupation authorities and in their search for surviving Jews got as far as Poland and Czechoslovakia.

In the summer of 1946, in the wake of the increasing tension between Britain and the *yishuv*, the authorities decided on the disbandment of the brigade; most of its men were returned to Palestine and discharged there. Apart from its contribution to the war effort against Nazi Germany, the brigade fulfilled two historic functions: it was a decisive factor in strengthening the staying power of the Jewish survivors and refugees in Europe, and the experience it gained in military organization and in battle subsequently became one of the foundations of the Israel Defense Forces. Many of the officers of the Israel army, among them two chiefs of staff, M. Makleff and H. Laskov, had seen previous service in the Jewish Brigade.

JEWISH CAMPING, the collective term for the various forms in which the organized Jewish community and private Jewish entrepreneurs in North America have adapted the classic American summer *organized camping* format to meet the needs or desires of Jewish parents and/or the objectives of leaders of Jewish organizations and movements. A publication of the American Camping Association defines *organized camping* as “a sustained experience which provides a creative, recreational, and educational opportunity in group living in the out-of-doors. It utilizes trained leadership and the resources of natural surroundings to contribute to each camper’s mental, physical, social, and spiritual growth.” Jewish camping differs from Jewish youth movement activity (e.g., the Israeli *tenuot noar* or North American Jewish youth organizations) in that it refers to a program of varied activities which are focused at a permanent campsite which may be leased, though usually is owned by a sponsoring organization or in the cases of for-profit camps, by the camp’s owner(s).

A census of the Jewish camp world, done by Amy Sales, Leonard Saxe, and their staff at Brandeis University, in the year 2000, counted 191 “mainstream” residential Jewish Camps in the United States, each summer serving approximately 83,000 Jewish children and teenagers, and also involving 18,000 Jewish adults who serve on their staffs. Many of the latter are college students working as bunk counselors who are also regarded by the camp administration, in most of the camps, as targets of the educational program. This is especially true in the camps under denominational or organizational auspices

Camps were included in the census of Jewish camps done by Sales and Saxe if they met the following three conditions: “(1) The camp has Jewish owners or is sponsored by a Jewish organization; (2) at least half of the campers are Jewish; and (3) the camp identifies itself as a Jewish camp.” They suggest the usefulness of categorizing these 191 Jewish camps by their sponsorship and identify seven types of Jewish camps, which they divide into three major categories:

Community

Jewish federation/Jewish community center	35
Agency/organization	32

Movement

Zionist	15
Denominational	18

Private

Non-Orthodox for-profit	64
Foundation/independent nonprofit	15
Orthodox for-profit	12
Total	191

The extent to which Jewishness is reflected in the programs of these camps varies greatly. It can be charted along a continuum ranging from camps which simply meet the above three basic identification criteria but offer virtually no Jewish content programming, to camps in which the Jewishness is the primary factor controlling much or most of the content of the camp program.

The earliest Jewish-sponsored camps were camps that were sponsored by settlement houses, as then existed on Manhattan’s Lower East Side, with the purpose of taking the children of poor families out of the teeming city for a healthful fresh air experience in the country around the end of the 19th century. In 1893 the Jewish Working Girls Vacation Society of New York City opened Camp Lehman (eventually renamed Camp Isabella Friedman). This camp invigorated over the course of the years by the addition of a center for environmental education and a program for seniors was still operating in 2005. Another such camp, now known as Surprise Lake Camp, in Cold Spring, New York, was founded in 1901. In the 20th century as the *Settlement House movement declined, the Jewish “Y” movement and Jewish Center movement grew, camping was seen as an intrinsic part of the program of these institutions, and many of the Centers built and established camping programs. In 2004, the Jewish Community Center Association reports that its affiliates sponsor 35 resident camps and some 200 day camps (see below). Under the sponsorship of UJA-Federation of Greater New York, Surprise Lake Camp serves as the official camping program for five JCC’s throughout New York City, and five more in the surrounding suburban counties. Other Y’s and JCC’s have operated their own resident camps.

Directed as they often were by social workers, many of whom lacked significant Jewish backgrounds, the programmatic emphasis in the “Y” and JCC camps was laid upon recreational programming and especially upon the democratic values of group living emphasized in American schools of social work. The specifically Jewish aspect of the programs of these camps, if such existed, consisted of a brief religious service for the camp community on Friday evening or Saturday morning. In the last half of the 20th century, however, as Jewish community centers were pressed to intensify the Judaic content of their programs, so too, the summer camps affiliated with the centers intensified the Jewish content of their programs, including the importation of counseling staff from Israel, and observing the laws of *kashrut* in their kitchens.

In the 1920s and 1930s a recognition began to arise that the summer camp might play a significant role in Jewish education and the socialization of the Jewish child into Judaism. Samson Benderly, the first director of New York’s Bureau of

Jewish Education, was the first to recognize the unique opportunity that the summer camp offered for teaching modern Hebrew and other traditional Jewish values, through immersing children in a Hebrew and Judaic environment. In 1927 he opened Camp Achvah, the first Hebrew-speaking camp in Arverne, on New York City's Rockaway peninsula. In 1932, he sought to expand the program and purchased a campsite in a rural setting in upstate Godeffroy, New York. The expanded program retained the intensive Judaic program but was not Hebrew speaking, as had been the program at the Arverne site.

A.P. Schoolman, the director of the Central Jewish Institute, a *talmud torah* on Manhattan's upper East Side, saw the potential for creating a camp, conducted in English, which, along with its recreational program, would offer all kinds of activities with a Jewish content to them. Originally created in 1919 to complement the program of the CJI Hebrew school, the camp, located in Port Jervis, NY, grew to become the most significant non-Hebrew Jewish cultural camp. In later years, Schoolman's Camp Cejwin grew to accommodate some thousand children each summer. As an indication of its stature, each summer it hosted the noted scholar, Rabbi Mordecai Kaplan, the founder of Reconstructionist Judaism. Schoolman was long regarded as the "dean" of Jewish camping in North America.

Surprisingly, the years of World War II (1941–45) proved to be a very fertile period for the foundation of camps that were intensively Jewish. Jonathan Sarna refers to the 1940s as the "crucial decade in Jewish camping." This occurred despite the difficulties which wartime and the postwar period presented as regards to obtaining staff, obtaining building materials, purchasing foodstuffs, providing transportation, etc. The year 1941 in which the United States entered the war saw the birth year of Camp Massad, the most significant of the Hebrew camps. It was founded by a group of distinguished Jewish educators in New York City at the initiative of Hanoar Haivri – the Hebrew culture organization for Jewish youth, under the leadership of Shlomo Shulsinger who remained its director until he departed for Israel in 1977. That first summer, Massad opened as a day camp in the Far Rockaway section of New York City (not far from where Benderly had opened his first camp). The next summer, 1942, the camp operated at a leased campsite within an established Orthodox camp in the Catskill resort area. The following summer, 1943, the camp opened at its own site that it had purchased in Tannersville Pennsylvania, in the Pocono Mountains. Alumni of the Massad Camps speak glowingly of the Massad experience and point to the many distinguished Massad alumni. Shulsinger demanded that Hebrew alone be spoken at all times in the camp and gave awards to campers who achieved this goal.

Significantly, the Massad camps (at the zenith of their popularity there were three of them) and Camp Cejwin faded away toward the end of the 20th century, as the denominational camps (see below) flourished and grew in number. A number of reasons have been suggested for this development.

Probably most crucial was the factor that these camps, as they developed and flourished over time, became independent of any organizational or institutional base. The denominational camps could depend upon the support of nationwide movements made up of many hundreds of synagogues. In addition Massad and Cejwin were the products of charismatic individuals (Shulsinger and Schoolman) who remained as long time camp directors. When they retired from the scene without leaving behind equally talented successors, the camps floundered and then withered away. In the case of Massad, there was also the growing weakness of the centrist Orthodox community which had for decades provided the bulk of the camper populations, especially from the students of the Ramaz and Flatbush Yeshivot – the first in Manhattan and the second in Brooklyn. The availability of a trip to Israel as a summer option for students as well as the acquisition of summer homes by parents offered other options for a summer away from the hot city.

In 1943 steps were taken by Louis Hurwich, president of the Boston Hebrew College, to found a Hebrew-speaking camp, Camp Yavneh, which would carry on in the summer its work of preparing students in the college to be teachers for Jewish schools. It was also at this time that the College of Jewish Studies in Chicago undertook the founding of Camps Sharon and Avodah in Buchanan, Michigan – Sharon, a Hebrew teachers training camp, and Avodah, a farm camp for Chicago teenagers who volunteered to attend camp in order to replace farm hands who had been called up to military service. In 1944, the Cleveland College of Jewish Studies opened a children's camp, Camp Galil. Of these camps sponsored by the Hebrew Colleges, only Camp Yavneh survived into the 21st century.

Most notable in the immediate postwar period, because of their long-range impact, were the founding of the Conservative Ramah camping movement and the Reform UAHC (later URJ) Camp-Institutes movement. Both began with single camps serving the Chicago and broader Midwest area: the first Ramah Camp in Conover, Wisconsin (1947) and the first UAHC Camp-Institute in Oconomowoc, Wisconsin (1950). Attached as they were to well organized national synagogue movements, the Conservative movement's United Synagogue (now known as the United Synagogue of Conservative Judaism) and the Reform movement (now known as the Union for Reform Judaism), within a decade, camps were established throughout North America to serve the various geographical concentrations of North American Jews affiliated with the movements. The initiative and long-time supervision of the Conservative camps was vested in the Teachers' Institute of the Jewish Theological Seminary, the institution that trained Conservative rabbis and educators. Supervision of the Reform camps was vested in the Camping and Youth Department of the UAHC. While there are individual notable Orthodox educational camps, such as Camp Morasha in Lake Como, Pennsylvania, and the camps of the Bnei Akiva religious Zionist youth movement, the divisions within Ameri-

can Orthodoxy seem to have precluded the establishment of a national Orthodox camping movement, along the lines of the Ramah or URJ camps.

In the year 2004, there are 7 Ramah resident camps (in California, Ontario Canada, Georgia, Massachusetts, New York, Pennsylvania, and Wisconsin) serving 6,500 children and youth each summer. There are 13 URJ Camp-Institutes (in New York, Massachusetts (2), Ontario Canada, Pennsylvania, Georgia, California (2), Wisconsin, Indiana, Mississippi and Texas) serving a total of 10,000 children and youth each summer. An additional camp is under construction in the state of Washington. In addition there are 4 Reform camps sponsored by individual temples.

The programs of these two denominational camping networks lay emphasis on classes, religious services and observances, and a creative mix of activities planned in the spirit of the philosophy of the sponsoring movement. At the same time the camps offer programs rich in the classic recreational areas: sports, aquatics, arts and crafts, drama, dance, music, nature and camping. In the Ramah Camps, from the start, Hebrew was the official language; in the UAHF Camps, there are Hebrew-speaking units in each camp. There is no doubt that both these denominations attracted their future leadership from the summer camping experience.

While on the surface, Jewish camps which offer intensive educational programs appear to be recreational enterprises, resembling as they do their non-Jewish counterparts which in the summer provide children and youth with an enjoyable alternative to the school-burdened fall, winter and spring, they have turned out to be much more than that. The founders of the Reform and Conservative camping movements early on proclaimed the goal of offering an intensive educational program to supplement the classes offered in synagogue and temple religious schools. Moreover they had declared the goal of making their camps “hothouses” for the production of layman and professionals who would assume roles of knowledgeable leaders in the movements. An examination of the backgrounds of rabbis, cantors, educational directors, and teachers affiliated with these movements documents the achievement of this later goal. Further, in many ways, the educational programs offered in the camps served as a testing ground and a stimulus for educational activity within their movements, beyond the summer, among them: (1) the use of informal education techniques as an educational tool; (2) as a means of strengthening year-round youth movements; (3) as an opportunity to explore new curricular areas (notable work was done in the camps on teaching about the contemporary State of Israel, the Holocaust, and Soviet Jewry, all later replicated in the year-round schools); (4) as a location for offering innovative types of Jewish education for adolescents with developmental disabilities; (5) providing college students with training in educational techniques; and (6) encouraging the study of Judaica at the college and graduate level.

The camps played a unique and fruitful role in educating Jewish youth about the role of Israel in Jewish life through

injecting Israeli and Zionist themes throughout all aspects of the camp programs, by cooperating with the Jewish Agency in bringing Israeli counselors and specialists to serve on the camp staffs, and by integrating summer trips to Israel for the oldest campers into the range of camp experiences offered under the camp’s sponsorship.

While Jewish camping is largely an American phenomenon, Jewish camps on the American model are to be found in other countries. A few camps representing each of the major categories have been established in Canada: i.e., Reform, Conservative, Hebrew, Zionist, community center, and private for-profit. Notable are the Jewish institutional camps in South America and in Eastern Europe. When the Seminario Rabinico Latinoamericano was established by the American Conservative movement in Buenos Aires, a Ramah camp was also established. As rabbis were ordained by the Seminario, and took pulpits in other South American countries, they took the idea of the Jewish educational camp with them, and established camps in those locales. When the Masorti movement (the Israeli Conservative movement) sought a means to provide Jewish educational programs for the culturally and religiously deprived Jews of Eastern Europe, the American-born rabbis who were leaders of Masorti embraced the idea of establishing camps on the Ramah model which they established for short periods on leased premises in various Eastern European countries.

The Ronald S. Lauder Foundation has made notable use of camping as a tool of Jewish education in Eastern Europe to help realize its commitment to rebuilding Jewish life in that part of Europe where the destruction of the Holocaust was followed by the oppression of Communist rule. Especially notable is the large permanent campsite it has established at Szarvas, Hungary, operated in partnership with the American Jewish Joint Distribution Committee, which each summer offers intensive Jewish camping experiences to more than 1,000 youths from more than 20 countries. The Szarvas campers dance, swim, sing, and canoe, and they also attend daily prayer and learn what it means to observe Passover, Purim, and Hanukkah, which the staff recreates with them. The language of the camp is English, which also attracts campers anxious to become part of the global elite,

Ever since the 1950s, there has been much praise (especially in non-Orthodox circles) for the efficacy of the Jewish educational camps in socializing and educating young Jews into Jewish life. Based on Sherif’s research, Sales and Saxe identify the factors which make the summer camp such an effective medium for Jewish socialization of children and youth, as follows: “camp is an intense, enclosed setting,” “camp activities are absorbing,” camps “provide a framework for profound social learning,” camp “provides the luxury of extended time with participants,” “camp offers continuous interaction among campers and between campers and staff,” and “[c]amp emphasizes learning through doing.”

While there is a positive attitude toward camping in the Orthodox community, it seems to be mainly embraced as a

summer recreational setting for the child. Because of the intensive socializing role of the Jewish home and the synagogue, and the intensive program of Jewish studies which most Orthodox children pursue in the day school, parents feel less need to utilize the summer for the intensive education, such as do parents of children enrolled in the Conservative and Reform camps. Among the Orthodox only the Chabad, who utilize camping to teach Judaism to children from non-religious families, emphasize the educational potential of camping.

Two other types of camps which have played a significant role in the history of Jewish camping are the Yiddishist camps and the Zionist camps. The first Zionist camps, intended for the youth affiliated with the various Zionist youth movements, were built in the 1930s. Today, with the exception of the Young Judea camps, sponsored by the Hadassah Women's Zionist Organization, the others are sponsored by the American affiliates of Israeli political parties. These camps are essentially the summer "homes" of the year-round Zionist youth movements. Isaacman reports that in 1945 there were 30 Zionist-sponsored camps in North America, while in 2000 Sales and Saxe report the existence of 15 such camps. The major groupings of Zionist camps are the Bnei Akiva camps, the Habonim-Dror camps, and the Young Judea camps. The decline in the number of such camps mirrors the decline in youth affiliated with the Zionist youth organizations.

As for the Yiddish camps, Isaacman writes, in 1970, "There are five camps in our study that bear the identification of "Yiddish" camps... these camps are misnamed, since the Yiddish language does not play a significant role in all of the camps but one." This statement describes the character of these camps 35 years later. The designation of the camps as Yiddish pretty much reflects the goals of the organizations that sponsor these camps and not the camp programs. The 2005 website of Camp Kinder Ring, sponsored by the Workman's Circle states, "Many years ago all campers and counselors at Camp Kinder Ring spoke Yiddish ... American Jews have not kept up with the language of our grandparents ... we still have an appreciation for our *mamaloshn*... and we share this with our campers through the many Yiddish songs we sing."

There are also a significant number of Jewish day camps (some 200 under the sponsorship of Jewish Community Centers) in North America, which meet during the summer months, on Monday through Friday, usually from 9:00 A.M. through 4:00 P.M. These day camps replicate in their programs many of the types of activities offered by the overnight camps. Day campers live at home and are bussed to the campsite each morning. As a rule, a center that sponsors a resident camp will sponsor one or more day camps. The Conservative and Reform movements each sponsor a small number of day camps that serve as feeders to the overnight camps.

There have been a number of attempts to bring together the Jewish camping community over the years. Most often the effort was made to bring together the directors of the Jewish camps for annual meetings. Unfortunately, these efforts were poorly funded and rarely achieved more than holding an an-

nual conference and publishing its proceedings. In 1998, Robert and Elisa Bildner, parents of camp-aged children who were pleased with what the Ramah camping experience had done for them and their children, made a contribution of one million dollars as seed money to establish The Foundation for Jewish Camping, headquartered in New York City. "The Foundation advocates for Jewish camping, encourages growth of the camp system, helps camps recruit staff, makes grants to promote programmatic excellence, champions the growth of camp scholarships, and offers information resources to parents, camps and the Jewish community." The Foundation has been successful in eliciting additional funding for its programs from groups such as the Avi Chai Foundation.

JEWISH-CHRISTIAN RELATIONS. Christian-Jewish contacts have progressed significantly at the initiative of the major international Church organizations and of national and regional church bodies. Of special importance are the contacts with the main Church organizations: the Roman Catholic Church and the World Council of Churches, the latter being a federation embracing the majority of non-Catholic Churches, but representing mainly the interests and views of the Protestant Churches. Direct contacts with the Orthodox Churches, outside the framework of the wcc, are at a very initial stage. The political situation prevailing in countries with orthodox populations evidently does not encourage interreligious dialogue.

Contacts with the Roman Catholic Church

Since the historic declaration *Nostra Aetate* on the relationship of the Church to the non-Christian religions (No. 4), issued by the Second Vatican Council on Oct. 28, 1965 (for text see *Church Councils), the implementation of the Vatican Council's decision was entrusted to the Secretariat for promoting Christian unity, headed by Cardinal Johannes Willebrands, and a special office within the Secretariat maintained contact with representatives of Judaism until October 1974. The aims of this office are: combating antisemitism and racial prejudices, the solution of the problems of

human rights, and in general the desire to start an interreligious dialogue.

On Oct. 23, 1974, Pope Paul VI established a special commission with the aim of advancing and stimulating religious relations between Christians and Jews. The commission, having the status of an independent organism, is linked with the Secretariat for promoting Christian unity and is headed by Cardinal Willebrands. On Jan. 31, 1976, Pope Paul named eight consultants to the commission.

It is noteworthy that whereas the commission dealing with contacts with Judaism is linked with the Secretariat for Christian unity, a similar commission concerned with relations with Islam is linked with the Secretariat for non-Christian religions. The special relationship of Christianity with Judaism is thus also emphasized administratively. At a preliminary Catholic-Jewish consultation held in Rome in December 1970, it was recommended that an annual meeting of an international Catholic-Jewish Liaison Committee be held for the purpose of fostering mutual understanding between the two faiths and encouraging exchange of information and cooperation in areas of common concern and responsibility.

The first meeting took place in Paris in December 1971. Its five Catholic members, consisting of clergymen specializing in Jewish contacts, were appointed by Cardinal Willebrands, with the approval of Pope Paul VI. The six Jewish members represented the International Jewish Committee on Interreligious Consultations (IJCIC), comprising leading figures from the following Jewish organizations: the Union of American Hebrew Congregations, the World Jewish Congress, the Anti-Defamation League of B'nai B'rith, the Synagogue Council of America, the American Jewish Committee and the Jewish Council for Interreligious Consultations in Israel.

The second meeting was held in Marseilles in December 1972, at which preliminary papers on "Religious Community, People and Land in Jewish and Christian Traditions" were discussed. Information and views on subjects of common interest were also exchanged. The third annual meeting was held in Antwerp in December 1973, at which two papers on "People, Nation and Land" were submitted by Jewish and Catholic experts. The Committee also decided to initiate research on the moral and spiritual basis of human rights and religious liberty, according to the religious traditions of the two faiths.

The fourth meeting was held in Rome in January 1974, a month after the publication of the *Guidelines* by the Commission of the Catholic Church on Religious Relations with the Jews. The *Guidelines* and suggestions for implementing the Second Vatican Council declaration *Nostra Aetate* is a most important document. It was signed by Cardinal Willebrands, president of the commission, and by its newly appointed secretary Pierre Marie de Contenson O.P., and was issued with the aim of guiding Catholics in their attitude to Jews. It was expressly directed to the bishops and to the commissions or secretariats episcopally appointed for that purpose. The introduction to the document recalls the principal decision of

Vatican Council II, condemning antisemitism and all forms of discrimination and imposing the obligation of reciprocal understanding and esteem. It advocates a better knowledge on the part of Christians of the essence of Jewish religious tradition and self-identification. The text contains a series of concrete suggestions. One section calls for fraternal dialogue and for the establishment of in-depth doctrinal research and recommends joint prayer meetings.

Mention is made of the links between Christian and Jewish liturgy and the caution needed in dealing with biblical commentaries, and with liturgical explanations and translations. The section dealing with teaching and education clarifies the nexus between the two Testaments. The question of the trial and death of Jesus is touched upon and stress laid on the note of expectation which characterizes both Judaism and Christianity. Specialists are invited to engage in serious research, and the establishment of university chairs of Hebrew studies is encouraged as well as collaboration with Jewish scholars. The final section deals with the possibilities of shared social action in the quest for social justice and peace. The *Guidelines* conclude with an allusion to the ecumenical aspect of relations with Judaism, the initiatives on the part of local Churches, and the essential lines of the work of the new commission set up by the Holy See.

The International Jewish Committee for Interreligious Consultation (IJCIC) welcomed the *Guidelines* at the annual meeting held in January 1974. Reservations were, however, made concerning the lack of reference to the central role of the Land of Israel in Jewish religious thought and what in its view were the concealed conversionist aims of the document and certain of its proposed interreligious activities.

In January 1975 the members of the Liaison Committee had an audience with Pope Paul VI who mentioned the difficulties and the confrontations that had marked contacts between Christians and Jews over the past two millennia. He expressed the hope that the dialogue, carried out in mutual respect, would help both sides to become better acquainted with one another.

The fifth meeting of the Liaison Committee took place in Jerusalem in March 1976 and it was regarded of special significance that for the first time the meeting was held in the capital of Israel. The main subject of this consultation was a joint assessment of major developments in Catholic-Jewish relations since the publication of the *Nostra Aetate*.

At the sixth annual meeting held in Venice in March 1977, the main item on the agenda was a study paper on "Mission and Witness of the Church." The paper, delivered by Professor Tommaso Federici, claimed that the Catholic Church clearly rejects every form of proselytism affecting the Jews, including any sort of witness and preaching which constitutes physical, moral, psychological or cultural constraint on the Jews, whether individuals or communities, which might destroy or even simply reduce their personal judgment, free will and full autonomy of decision. Rabbi Siegman, a member of the IJCIC, observed that the paper was a Catholic document dealing with

theological issues, and as such its unqualified condemnation of proselytism among the Jews represented a notable advance in the Catholic Church which is bound to make for a deeper understanding between the two faiths. At this meeting the Catholic chairman introduced the newly appointed secretary, Reverend Jorge Mejia, who succeeded Father Contenson, who passed away in July 1976.

The seventh annual meeting was held in Madrid in April 1978. The opening session was held in the historic El Transito Church, formerly a *synagogue, which was returned to the Jewish community a few years earlier. The main topic of the meeting was "The image of Judaism in Christian education and the image of Christianity in Jewish education." Both sides noted significant progress in Catholic teaching on Judaism and Jewish teaching on Christianity. Information was exchanged on the recent Israeli law on conversion, the human rights situation in different countries, the resurgence of antisemitism, the Catholic-Muslim dialogue and contacts between Muslims and Jews. The discussions took place in an atmosphere of frankness and cordiality and were seen by both delegations as an important contribution to better mutual understanding. The members of the two delegations were, however, aware that there did not exist a perfect parallelism between the stand of the two sides because Judaism, unlike Christianity, links religion with peoplehood and land.

The eighth annual meeting took place in Regensburg (Bavaria) in October 1979. The significance of the meeting's being held in Germany was underlined in a telegram from Chancellor Helmut Schmidt. The two main subjects discussed at the encounter were: Religious Freedom, and Education for Dialogue in a Pluralistic Society.

Political Aspects of the Christian-Jewish Relationship

The influence of the political factor is particularly evident in the case of the Roman Catholic Church, since it is both a worldwide religion and a sovereign state. Although no formal diplomatic relations exist between the Vatican and the State of Israel, contacts have steadily improved during the past few years. Foreign ministers and high ranking Israeli officials met Pope Paul VI, his two predecessors, and dignitaries of the Vatican Secretariat. Highly significant was the audience granted by Pope Paul VI in January 1973 to Golda Meir, then Israel's prime minister. According to a joint statement released after the meeting, the Pontiff referred both to the sufferings of the Jewish people and to his humanitarian concern for the plight of the Arab refugees. He also expressed his concern regarding a solution to the problem of the status of the holy places and the maintenance of Jerusalem's universal character. The same solicitude for the Holy City was expressed by the pope during the audience granted in January 1977 to the late Foreign Minister Moshe Dayan. The late Pontiff showed his concern on a number of occasions in his speeches and meetings for the events taking place in the Holy Land and never discarded his proposal for the internationalization of Jerusalem, although he did not exclude other possibilities.

There is ample evidence of progress in the relationship between the State of Israel and the Holy See. Israeli official delegations were invited to the opening and closing sessions of the Vatican Council. Israeli official representatives were likewise invited to the funerals of deceased popes and to coronation ceremonies of the newly elected popes. Friendly messages were exchanged between presidents of Israel and Pope Paul VI, as well as his successors Pope John Paul I and Pope John Paul II. Since his election in October 1978, Pope John Paul II has granted private audiences to several Israeli representatives, among them the director general of the Foreign Ministry Yoseph Cjechanover and Ambassador Moshe Alon.

Political considerations have also influenced the attitude of the wcc toward Judaism and the people in Israel. The Arab Christian Churches, which are members of the wcc, have made their negative influence increasingly felt on the decisions of the prestigious Council, and in August 1980 the Council adopted a strong anti-Israel resolution at its conference held in Geneva, which *inter alia* urged member churches to "exert pressure on Israel through their respective governments to withhold any action on Jerusalem, the future of which should be included in negotiations on self-determination involving Israel and the Palestinian people." The wcc's Committee on the Church and the Jewish People stands, however, firmly for a relationship toward Judaism, uninfluenced by hostile political influence.

Contacts with the World Council of Churches

The relations of the wcc with Judaism have progressed in recent years and have become firmly established. It has its seat in Geneva and is an umbrella organization, the membership of which in the early 1970s was composed of 250 Churches from more than 80 countries, among them the majority of the Protestant Churches, the Anglican Church, the autocephalous Orthodox Churches, and Monophysite Churches.

The progress found its organizational expression in the inclusion of Judaism in the work of the sub-unit for Dialogue with People of Living Faith and Ideologies (Committee on the Church and the Jewish People), whereas previously the Committee functioned as a commission of the Division on Mission and Evangelism. This change in the administrative structure was carried out in conformity with the recommendations at the meeting in Addis Ababa of January 1971. The first joint meeting, opened by Dr. Eugene Blake, secretary general of the wcc, was held in June 1968. A further consultation was held in Locarno in October 1970.

A meeting cosponsored by the wcc and the IJCIC was held in Geneva in December 1972, the Jewish delegation consisting of representatives of the same bodies which met with the Catholic delegation. The principal theme of the meeting was "The Quest for World Community: Jewish and Christian Perspectives." Christian and Jewish scholars presented a series of papers, essaying to clarify common as well as divergent concepts and approaches to the organization of the world community as a "community of the communities." It

likewise provided an opportunity for an exchange of views of the following subjects: the problem of violence; racism in South Africa; human rights in the Soviet Union; the Middle East conflict; the Bible and social justice; and Christian-Jewish cooperation in relation to international organizations for the advancement of human rights. At the initiative of the WCC a consultation was held at Cartigny, near Geneva, in January 1974, which was attended by some 30 Christians from various theological traditions and from different countries. The main topics were the Middle East conflict and the impact of the Bible on the present situation in the Holy Land.

A multilateral dialogue, sponsored by the WCC's Department for Dialogue with People of Living Faiths and Ideologies, took place at Colombo, Sri Lanka, Ceylon, in April 1974, and was attended by 50 participants from 22 countries and 5 living traditions: Hindu, Buddhist, Jewish, Christian, and Muslim. They discussed their resources and responsibilities toward the world community.

A meeting of representatives of the WCC and of the IJCIC was held in London in January 1975 to discuss the concept of power in Jewish and Christian tradition, its application to the contemporary social order and its bearing on joint search for world community.

On Apr. 1, 1975, Dr. Franz von Hammerstein succeeded Rev. Johan M. Snoek as secretary of the Council's agency for Consultation of the Church and the Jewish People (CCJP). Both were well acquainted with Jewish aspirations and needs, having resided in Israel for many years.

The next meeting between representatives of the WCC and the IJCIC was held in Jerusalem in February 1976 and opened with a report on the WCC Nairobi conference and a discussion on its resolution on the Middle East and the status of Jerusalem. In a preliminary debate on "Relations between Churches and the Jewish People in the Wider Context of the Human Community," regret was expressed that the WCC had not paralleled the Vatican in issuing guidelines on Christian-Jewish relations. It was, however, plain that publication of such a document would have to be ratified by a plenary session of the Council and such an attempt might be doomed to failure, in view of the composite structure of the Council.

A planning meeting held in Geneva in October 1976 was followed by a Christian-Jewish Consultation in Zurich in February 1977, under the auspices of WCC and the IJCIC. A number of papers were submitted on the "Jewish and Christian Traditions concerning Nature, Science and Technology."

At a meeting held in Jerusalem in June 1977, representatives of the CCJP began work on a draft of the WCC's guidelines for the Christian-Jewish dialogue. The IJCIC was invited to submit comments on the draft, and did so at a Liaison and Planning Committee (LPC) meeting in Geneva in February 1979. An Ad Hoc Committee of the CCJP gave further attention to the draft in March 1980.

In September 1979 Rev. Allan R. Brockway succeeded Dr. Franz von Hammerstein as secretary of the council's agency for the CCJP.

A meeting on "Science and Faith" took place in July 1979 at the Massachusetts Institute of Technology (MIT).

A conference, cosponsored by the IJCIC and the WCC, was held in Toronto, Canada, in August 1980, the theme being "Religion and the Crisis of Modernity."

Contacts with Representatives of the Orthodox Churches

In March 1977, under the aegis of the Lucerne University's Department of Theology, an unprecedented academic dialogue was conducted between Jewish leaders and the representatives of the Greek Orthodox Church. This initial meeting was followed by a much larger forum held in Bucharest, Romania, in October 1979, with representatives of the IJCIC meeting with Orthodox theologians from Bulgaria, Cyprus, France, Greece, Romania, Switzerland, and the United States. Following the presentation of papers, the discussions centered on the interpretation of scripture in tradition,

Contacts with National Churches

In February 1979, a two-day meeting took place in Berlin between representatives of the IJCIC and the European Lutheran Commission on the Church and the Jewish People. A decision was taken to appoint a committee of two members from each organization to ensure the maintenance of contact between them.

A meeting between the IJCIC and Consultants of the Anglican Church on Interfaith Consultations was held at Ampert House, Andover, Hants in November 1980. The theme discussed was "Law and Religion in Contemporary Society."

Societies for Christian-Jewish Cooperation

In addition to the important Church bodies referred to, there exist in various European and American countries local organizations interested in fostering good relations between Christians and Jews and in combating antisemitism. Most of these societies were established during the Nazi period or immediately afterwards, in consequence of the shock produced by the terrible consequences of antisemitism. Both Catholic and Protestant Church leaders were active in such organizations. Among these societies are the Council of Christians and Jews in Great Britain, which publishes the quarterly *Common Ground*, and the National Conference of Christians and Jews in the U.S.A. of which Bernard J. Lasker was elected co-chairman in March 1978. The other two co-chairmen were William F. May representing the Protestant Church and Nicholas V. Petrov, the Eastern Orthodox. This body is 50 years old and has many branches with a considerable budget at its disposal. In 1947 these two societies convened an Emergency Conference at Seelisberg in Switzerland, and the "Ten Points" adopted then have served in the period under review as an important guide for the Protestant Churches in their attitude to Judaism.

Other important societies are the German Council for Jewish-Christian Cooperation, which has branches in many towns in Germany and publishes the bi-monthly *Emunah* ("Faith"); the Jewish-Christian Brotherhood in France which

publishes the quarterly *Sens*; the Christian-Jewish Cooperation in Switzerland which publishes the magazine *Christlich-jüdisches Forum*; the Action against Antisemitism in Austria; the Christian-Jewish Fraternity of Brazil, which publishes *Encontro*; the Council of Christians and Jews in Canada; and the Swedish Association for Cooperation among Jews and Christians.

Recently the national societies interested in fostering Christian-Jewish friendship held joint consultations, in order to extend their activities and influence, in view of the recrudescence of antisemitism in many parts of the world. As a result, there was established the International Council of Christians and Jews (ICCJ), a federation of the various national brotherhoods with an annual rotating chairman. Meetings of the ICCJ have taken place in Vienna (1973); in Basel (1974); in Cologne (1974); in Hamburg (1975); in Jerusalem (1976); in Southampton (1977); in Luxembourg (1977); in Vienna (1978); in New York (1979); and in Sigtuna, Sweden (1980). An ICCJ International Youth Conference was held in Jerusalem in August 1980.

Declaration by National Churches and Other Ecclesiastical Organizations

Most important on the national level was the Declaration of the French Episcopal Committee, headed by Mgr. Elchinger, Bishop of Strasbourg. The Declaration, issued on the eve of Passover 1973, referred to the Jewish document adopted by the Vatican Council, and emphasized that the new approach to Judaism should be considered a beginning rather than an end. Of momentous weight were the references of the Declaration to the ingathering of the Jewish people in the Land of the Bible and the statement that the conscience of mankind cannot deny the Jewish people, which has undergone so many vicissitudes in the course of its history, the right and the means for its own political existence among the nations.

Of special importance also was the manifesto "Christians and Jews," issued by the German Evangelical Church in 1975. It emphasized the Jewish origins of the Christian Church, and examined Christian-Jewish relationships from a theological perspective. The manifesto also recognized that full realization of Jewish life has been bound up with the Land of Israel in all ages, and therefore the present State of Israel, albeit a political entity, must also be understood in the historical context of the Chosen People.

Consultations were held by the Lutheran World Federation, the American Lutheran Church, the Baptist Convention, the General Conference of the United Methodists, the Reformed Church of Holland, and the European Mennonites. In an address given in July 1977 to the Jewish Board of Deputies, the Archbishop of Canterbury said that love, not power, should rule the world and stressed his strong opposition to any sort of racial discrimination.

The Interconfessional Dialogue in Israel

The interconfessional dialogue in Israel has been fostered on the initiative of selected groups of Jewish and Christian

scholars. Prominent in the interconfessional exchange is the "Rainbow Group," composed of Christian theologians and Jewish scholars, mainly professors of Bible and of comparative religion. The members of the group meet periodically to examine, compare, and evaluate their respective religious traditions and tenets.

Another interconfessional group is the Interfaith Committee, the aims of which are practical rather than scholarly. The committee has taken upon itself to guarantee that proper respect be shown to all creeds represented in the Holy Land. The Christian Fraternity of Theological Research, besides deepening ecumenical relations among Christian denominations, regards its task as the study of the attitude of those denominations toward Judaism. Active in the field of interconfessional dialogue are also the American Jewish Committee's office in Jerusalem, the Ecumenical Institute in Tantur near Jerusalem, the Ecumenical Discussion Center for Students in Jerusalem, and the Interreligious Group in Tel Aviv.

Whereas an interconfessional dialogue conducted between equals is considered positively by the majority of the Jews in Israel, all forms of Christian proselytizing activity among the Jews is deeply resented, and the main Christian Churches, aware of this, generally abstain from missionary activity. In practice, such activity is carried out mainly by some small Protestant sects, with little success. The mission problem, which from time to time agitates public opinion in Israel, became more acute with the appearance on the Israeli scene of the "Jews for Jesus Movement." Jewish religious quarters, which had always advocated antimissionary legislation, took the opportunity given by a change in the political constellation to pass in the Knesset a Penal Code Amendment which outlaws the use of bribery for religious conversion. The Amendment (enticement to change religion), enacted in December 1977, aroused concern in Christian and interfaith circles in Israel and abroad.

[Saul Paul Colbi]

Later Developments

Throughout the years since World War II, and under the impact of the revelation of the facts of the Holocaust and the establishment of the State of Israel, Christians individually and collectively have felt themselves impelled to reassess their relationships with Jews and Judaism, and at the very least to repudiate traditional antisemitism and the "teaching of contempt." This movement has been expressed in Church documents, in theological writings, and in dialogue with Jews. By 1985 the main lines had been drawn, and the last years of the 1980s were essentially a period of consolidation, and of educational initiatives to ensure that the guidelines of Churches would be absorbed into teaching and preaching. At the same time, however, a number of "sticking points" in the dialogue emerged clearly, and a series of incidents created tensions.

The Church of Rome

High level dialogue between the Roman Catholic Church and the Jewish people is undertaken by the International Catho-

lic-Jewish Liaison Committee (ILC). On the Catholic side, this consists of representatives of the Holy See's Commission on Religious Relations with the Jews, an office within the secretariat for Promoting Christian Unity. On the Jewish side, the representative body is the International Jewish Committee on Interreligious Consultations (IJCIC), composed of the World Jewish Congress, the Synagogue Council of America, the American Jewish Committee, B'nai B'rith International-Anti-Defamation League, and the Israel Jewish Council for Interreligious Relations.

The 1985 meeting of the ILC took place on October 28–30 in Rome, and was a major commemoration and reassessment of the publication 20 years previously of *Nostra Aetate* no. 4, part of the "Declaration on the Relationship of the Church to non-Christian Religions," the Second Vatican Council document which paved the way for the subsequent development of Catholic attitudes to Jews and Judaism. The progress which had taken place in the intervening years was evaluated, a program for the future outlined, and the importance attached by the Church to the proceedings emphasized by an audience with Pope John Paul II. An added touch to all of the foregoing activity was the recognition, by a special lecture, of the 850th anniversary of the death of Maimonides.

The most substantial discussions at the Rome meeting, however, were in connection with the newly prepared Vatican document, "Notes on the correct way to present the Jews and Judaism in preaching and catechesis in the Roman Catholic Church." This "internal" Church document, intended to develop the teaching of *Nostra Aetate* and to help integrate it into the everyday life of the Church, met with a mixed response from the Jewish delegation. On the positive side, the State of Israel was for the first time mentioned in a Vatican document, Jewish suffering in the Holocaust recognized, the "ongoing spiritual vitality of Judaism" to modern times appreciated, and guidance given on how to interpret New Testament texts without deriving antisemitism from them. On the other hand, Jews were upset that they had not been fully consulted in preparing the document, felt that treatment of the Holocaust failed to acknowledge any Christian guilt, were dissatisfied with the lack of a positive theological evaluation of Israel, and detected inconsistencies in the theological sections, including remnants of typology and "replacement theology."

On Sunday April 13, 1986, Pope John Paul II made a historic visit across the Tiber to the Synagogue in Rome, where he was welcomed by Chief Rabbi Elio Toaff. The president of the Jewish community, Professor Giacomo Saban, reminded the pope of the illustrious history of the Roman Jewish community, extending back to pre-Christian times. Generally, the visit was welcomed by Catholic and Jewish leaders as a signal of the pope's personal commitment to carrying forward the initiative of *Nostra Aetate*; indeed, the pope lost no opportunity to address Jewish communities in the numerous cities he visited around the world, frequently welcomed visiting Jewish dignitaries at the Vatican, and used these occasions repeatedly to denounce antisemitism and to recognize

Jewish sufferings in the "Shoah," as he consistently called the Holocaust.

It was at about this time that the *Auschwitz Convent controversy erupted (the Cracow Church's approval for the project had been given on September 30, 1984, without attracting attention), and plans for a major Consultation of the ILC on the subject of the Holocaust were postponed indefinitely. Relations were further exacerbated when the World Jewish Congress, in the form of a letter from its president, Edgar Bronfman, dated December 4, 1986, while declaring that its commitment to improving relations with the Catholic Church had never been stronger, launched a "global campaign" to force the Holy See to "recognize" Israel. Although the steering committee of the ILC continued to meet, no full Consultation took place until that in Prague in September 1990. One of the effects of this postponement was delay in producing a comprehensive Vatican statement on the Holocaust. Archbishop Edward (later Cardinal) Cassidy, who led the Catholic delegation at Prague in his capacity as president of the Commission on Religious Relations with the Jews in succession to Cardinal Willebrands, declared in his opening remarks "that antisemitism has found a place in Christian thought and practice calls for an act of *Teshuvah* (repentance) and of reconciliation on our part as we gather here in this city which is a testimony to our failure to be authentic witnesses to our faith at times in the past." The statement issued from the Prague meeting cited these words and was the first document with Vatican authority to acknowledge, if somewhat obliquely, Catholic guilt in relation to the Holocaust. The statement also stressed the educational task in Jewish-Christian relations, and the opportunities for common social work and spiritual witness. The statement was endorsed by John Paul II when he received the ILC on the occasion of the 25th anniversary of *Nostra Aetate* in December 1990.

Relations moved further ahead as a result of a Conference of the ILC in Baltimore in 1992 when the Vatican participants proposed the establishment of joint Catholic-Jewish delegations to appear before international bodies on matters of mutual concern. They also undertook to extend to other countries the initiative of the Italian bishops who had declared that one day a year in their dioceses would be devoted to the study of Judaism and the Jewish people. In the summer of 1992, the Vatican announced the opening of discussions with Israel for the normalization of relations between the two countries toward the establishment of diplomatic ties, which was finally achieved at the end of 1993. (See *Vatican for further developments.)

The World Council of Churches and Protestant Churches

The World Council of Churches (WCC), while unrelenting in its opposition to antisemitism, has progressed only slowly in dialogue in the period under review. This is thought to be partly because of political pressure from the Middle East Council of Churches, and partly because of the reluctance of some member Churches to abandon an actively evangelical approach toward non-Christians including Jews. Moreover,

whereas the Catholic Church has several times stated that relations with Jews and Judaism are at the center of Christian concern, the World Council tends to place the matter lower on its scale of priorities. The World Council is an amorphous federation rather than a hierarchical structure like the Roman Church; it cannot determine standards from the top down, but must work on the basis of consensus.

Some progress was made at the "Consultation on the Church and the Jewish People" in Arnoldshain, West Germany, February 10–14, 1986, but the most significant advance was the document formulated at the November 1988 meeting at Sigtuna, Sweden, of the wcc's Committee on the Church and the Jewish People. This document recognizes the lack of consensus among its members on mission and on the significance of the Land of Israel, but claimed wide agreement for the following:

1. The covenant of God with the Jewish people remains valid.
2. Antisemitism and all forms of the teaching of contempt for Judaism are to be repudiated.
3. The living tradition of Judaism is a gift of God.
4. Coercive proselytism directed toward Jews is incompatible with Christian faith.
5. Jews and Christians bear a common responsibility as witnesses to God's righteousness and peace in the world.

In addition, it agreed nine affirmations, which recognized Israel's call, acknowledged the spiritual treasures shared by Jews and Christians, made clear that Jews should not be blamed for Jesus' passion, and expressed sorrow at the Christian share of responsibility for Jewish suffering, culminating in the Holocaust.

Like the Vatican, the wcc engages in dialogue at the highest level with IJCTC. One of their most notable joint ventures was an African Christian-Jewish Consultation which took place in Nairobi, Kenya, from November 10–13, 1986; the emphasis here was on the shared concern of Jews and African Christians with tradition and its relationship with Scripture. As was aptly remarked, "Scripture is not a European creation."

Since the wcc can work only by consensus, the statements of its individual constituent Churches are of significance.

The Anglican Communion held its own Consultation with IJCTC at Shallowford House, Stafford (England), in 1986, focusing on two issues of common concern to Jews and Anglicans, AIDS and inner city deprivation, though few who were present would deny that the high point of that Consultation was Dr. Gerhart Riegner's spontaneous and moving narration of the events of 1942 when, from his Geneva office, he had battled against immense resistance to inform the unbelieving world of the implementation of the "Final Solution."

This Consultation undoubtedly fed into the 1988 Lambeth Conference, the 10-yearly gathering of Anglican Bishops from around the world. For the first time in their history they devoted attention to Christian-Jewish relations, and produced

and unanimously commended a document "Jews, Christians and Muslims: the Way of Dialogue." This, from assimilating the relationship with Judaism to that with all monotheists, clearly spelled out its special nature and obligations, Christian guilt for the "teaching of contempt" which provided the soil in which Nazism could thrive, and the nature of Judaism as a living religion not to be confused with a literal reading of the Old Testament.

The Lutheran Churches in Germany and elsewhere were among the first and most copious in the production of documents. The Lutheran European Commission "Church and the Jewish People," in its May 8, 1990, "Statement on the Encounter between Lutheran Christians and Jews" (Driebergen, Netherlands), recognizes that a prerequisite to a new, more tolerant relationship with the Jewish faith is "a partial renunciation of the requirement for evangelization of Jews, as well as the call for a self-critical analysis of the Lutherans' own theology."

Excellent statements and guidelines have emanated from other church groups within the wcc, such as Methodists and Presbyterians – and even from those outside the wcc, such as the Unification Church.

Special mention should be made of the June 12, 1990, "Statement by the Synod of the Reformed Church in Hungary on its Relations with the Jews," perhaps the first document of this nature to emanate from a non-Catholic Church in Central Europe since the imposition of communism, yet able to confess repentance in the words of a 1946 statement of its Reformed Free Council: "Under the responsibility resting upon us because of sins committed against the Jews, however late, we now ask the Hungarian Jews before God to forgive us."

The International Council of Christians and Jews and National CCJ's

Much of the dialogue at "grassroots" level is undertaken through local branches of the national Councils of Christians and Jews (CCJ's). The national councils are members of the International Council of Christians and Jews (IC CJ). With the admission in 1990 of CCJ's in Poland, Czechoslovakia, Hungary, and New Zealand, there are now 23 national groups.

Members of the national CCJ's are able to meet at the IC CJ's International Colloquium, held each year in a different country. In the period under consideration they have met in Dublin (1985), Salamanca (1986), Fribourg (1978), Montreal (1988), Lille (1989), and Prague (1990). The Salamanca meeting was notable for its strong Muslim participation, and some element of this has been maintained. At the Prague meeting, delegates from Central and East European countries outlined their local situations and problems. Each colloquium is combined with a women's symposium and a young leadership conference, though in 1990 the young leadership conference took place separately, in Israel.

IC CJ had sponsored other major meetings and initiatives, including "Identity and Commitment in the Religious Encounter," Jerusalem, December 1986. It had a first conference in Eastern Europe with its 1985 meeting in Budapest (see

below). This was followed, in September 1987, with a second “Seminar of Jews and Christians from the East and the West” in Buckow, then East Germany – an occasion remarkable for the presence of 12 Israeli scholars. Together with the Konrad Adenauer Stiftung it held a Symposium of Jews, Christians and Muslims from May 29–June 2, 1988, in Sankt Augustin, near Bonn, where there was much discussion of the stereotypes which hinder mutual understanding.

The largest popular gathering in Christian-Jewish relations is the National Workshop of the NCCJ in the United States. Such workshops attract well in excess of a thousand participants.

Opening up the East

THE DIALOGUE. Long before the demise of communism in Central Europe in 1989, contact had been established with the Churches and with the small remaining Jewish communities and the foundations laid for a positive development in Jewish-Christian relations. At that time the Churches themselves were struggling to exist in the face of a hostile regime. This gave them a sense of solidarity with the Jewish minority, but as against this was the lack of familiarity with Western developments in Christian theology, lack of knowledge of Judaism, and lack of local Jews with knowledge of their own faith.

In November 1985 the International Council of Christians and Jews, together with the Interchurch Peace Council in Hungary, sponsored a four-day conference on “Jewish-Christian Dialogue and its Contribution to Peace.” Hungary has not only a substantial Jewish community but also several native Jewish scholars. Mention has already been made of the September 1987 “Seminar of Jews and Christians from the East and the West” which took place in East Germany.

In Poland there had been, through much of the communist era, a fascination with Jewish culture, as manifested for instance in the continuation of the Yiddish theater, but only in the 1980s did a serious attempt at critical reassessment of the past commence. The pope, in his 1979 visit to Auschwitz, had perhaps initiated the process by referring there to “the great sufferings of the Jewish people.” A highly significant series of articles appeared in the Catholic journals *ZNAK* and *Tygodnik Powszechny*, commencing in 1983; Jan Blonski’s challenging 1987 article “The Poor Poles Look at the Ghetto” deserves special mention. In May 1986 the Polish Bishops’ Conference set up a sub-commission (later upgraded to a full commission) to examine, in a Polish context, relationships with Jews and Judaism, and under its chairman, Bishop Henrik Muszynski of Wloclawek, this group has led the Polish church to take seriously the new attitudes to Jews and Judaism emanating from Rome, and in 1990 published a book of recent Catholic documentation on Judaism and the Jews. Since the beginning of the decade there have been large international scholarly gatherings on the history and culture of Polish Jews; the Jagellonian University at Cracow has a special department for these subjects. International conferences on Jewish-Christian relations have also taken place, including one arranged

by the Bishops’ Commission together with the Anti-Defamation League of B’nai B’rith (Tyniec, 1987), and another at Cracow in November 1989, at which the Catholic sponsors were the KIK (Catholic Intellectuals’ Club) of Cracow, which has all along taken a leading part in these matters. Educational work has proceeded apace; 22 Polish seminary professors spent seven weeks in Chicago in 1989 studying together with rabbis and other Jewish scholars, and in April 1990 a British scholar, Rabbi Norman Solomon, lectured at the Academy of Catholic Theology in Warsaw.

THE CHURCHES AND THE RESURGENCE OF ANTISEMITISM. On the downside of the 1989 Central European rejection of communism has been a resurgence of antisemitism, coinciding with similar phenomena in Western Europe. It is difficult to know how much of this arises from Church influence, and how much from nationalist sentiment, but it has been interesting to observe the reactions of the Churches which, far from encouraging such attitudes, have been strongly condemnatory. In his letter of August 8, 1990, Dr. Emilio Castro, the general secretary of the World Council of Churches, reaffirmed the council’s 1948 pronouncement that “antisemitism is a sin against God and man,” reminded Christians of their special responsibility for antisemitism, and called upon them not to fail in resolute action against it. Responses from the Vatican and from the Lutheran World Federation were equally strong, and have been followed by declarations from numerous church bodies and leaders worldwide. The real interest focused on the Orthodox Churches which, though members of the World Council, have not previously evinced much interest in dialogue. They are dominant in many of the countries in which incidents have occurred; it was therefore reassuring that Archbishop Kirill, of the Russian Orthodox Church, unambiguously condemned, with the authority of January 30–31, 1990, meeting of his episcopal synod, “any teaching of hatred, violence or national exclusivity,” though it remains to be seen to what extent this condemnation will influence the behavior of Russian Christians.

The problem is that although the Churches do indeed condemn antisemitism, they will continue to foster it unintentionally unless they can achieve the reinterpretation of basic Christian teachings in the light of the new theology, thus abandoning “replacement theology” and the “teaching of contempt.” One should not underestimate the magnitude of such a task especially in countries where clergy training is minimal and old habits of thought persistent.

Latin America and the Theology of Liberation

Whereas for Europeans and North Americans the Holocaust casts its shadow over contemporary theology, the burning issue in South American and much third-world theology has been liberation from the centuries of bondage and oppression, even genocide, imposed by European Christian colonists, and from the grinding poverty and deprivation suffered by the masses still today. The biblical Exodus is the great paradigm

for the theology of liberation, though too few liberation theologians have perceived its relevance to the story of the modern Jewish liberation from the bondage of European oppression and Nazism to the freedom of independent statehood in Israel. Still, the return through Exodus to the “Jewish Old Testament,” and the emphasis of the new theology on “praxis” rather than theory, have combined with some influx of the new Catholic outlook on Jews and Judaism to enable serious Jewish-Christian dialogue to get under way.

The first Pan-American Conference on Catholic-Jewish Relations, jointly arranged by the American Jewish committee and the National Conference of Brazilian Bishops, São Paulo, Brazil, took place on November 3–5, 1985. The most recent major gathering was the November 1990 25th anniversary commemoration of *Nostra Aetate*, attended by Archbishop Cassidy, who agreed to transmit back to Rome a number of resolutions of the Brazilian National Commission on Catholic-Jewish Religious Dialogue, including a protest against the proposed canonization of Queen Isabella, and a denunciation of anti-Zionism as a current form of antisemitism.

Obstacles and Irritants

Incidents apart, there are two themes which constantly give rise to friction within the dialogue.

The first of these is the Christian commitment to evangelization. While the Roman Catholic Church and many other major Churches no longer target Jews, only a few Christians, whether because of the Holocaust or for more fundamental theological reasons, would demand the positive exclusion of Jews from evangelization. All nowadays reject coercive or deceitful evangelization, though definitions differ. However, a recent feature of Christian life has been the rise of small, independent evangelical sects who are beyond the control of the major Churches; some such groups do target Jews. Moreover, the 1990s were declared a “decade of evangelism,” and a fine balance would have to be struck between mission and dialogue. The 1980s saw a strong growth of Jewish anti-missionary groups, and it is difficult for mainstream Jews and Christians engaged in serious dialogue to remain indifferent to the snapping at their heels on both sides. The second major topic of friction is Israel, and this has both a political and a theological dimension. On the political level, both Jews and many Catholics found it hard during the period under review to accept the failure of the Holy See to establish normal diplomatic relations with the State of Israel. Of course, only the Roman church had this problem, as other churches do not claim to be sovereign territories. What is often overlooked is the extent to which documents from the non-Roman Churches affirm the existence of Israel. For instance, the World Council of Churches, in the Statement on the Middle East it adopted at its Sixth Assembly in Vancouver in 1983 and upheld subsequently, unambiguously affirmed “the right of all states, including Israel and Arab states, to live in peace with secure and recognized boundaries,” reflecting the terminology of United Nations Security Council Resolution 242. The Lambeth Con-

ference Resolutions of 1988 were similarly forthright, though few churches have gone as far as the Hungarian Reformed Church which declared, in the document cited above, “We express our joy over the fact that our country established diplomatic relations with Israel.”

Theological views differ. Conservative Evangelicals are often the strongest supporters of Israel, because they see the state as the fulfillment of prophecy, heralding the second coming of Jesus – and the conversion of any remaining Jews! The Roman Catholic Church made clear in the 1985 Notes that, while it understands the Jewish religious attachment to the Land, the Church itself related to the State of Israel solely on the basis of international law; Church spokesmen strongly denied that there was any theological impediment to full diplomatic relations. Others steer a middle course, seeing the restoration of the Jews to Israel as a significant divine act, but without commitment to literal interpretation of prophecy.

There are several irritants which one hopes will prove temporary rather than permanent sources of friction within the dialogue. The Auschwitz convent has been one of them, and the beatifications of Edith Stein and Maximilian Kolbe another. Requests for the beatification of Queen Isabella in 1992 have been formulated in certain Spanish Catholic circles. Several actions of the pope – his reception of Yasser Arafat and of Kurt Waldheim, some unfortunate Easter sermons – have been irksome. In the non-Catholic world Passion Plays, such as that at Oberammergau (greatly improved in 1990), have strained the Jewish-Christian relationship.

Conclusion

The 1980s saw a proliferation of writing in Jewish-Christian relations. Scholarly and deeply sensitive works appeared by Protestant scholars such as Hans-Joachim Krauss, Roy Eckardt, and Paul van Buren, and Catholics such as Franz Mussner, John Pawlikowski, and Eberhard Bethge. Churches of many denominations and in many countries produced statements and guidelines. Serious consideration has been given to the reinterpretation of fundamental Christian beliefs in the light of the new understanding of Jews and Judaism.

The Jewish-Christian dialogue reached a stage of maturity. It is not without problems and is not yet firmly rooted in either of the religious communities involved. The main task, however, remains that of education, of ensuring that the new insights of the Churches and their theologians actually become part of normal Christian teaching and preaching, not only in the better educated West, but amongst Christians in all lands.

For Vatican II and subsequent developments, see *Church, Catholic; *Church Councils.

Bibliographical Information

Christian-Jewish Relations, a quarterly published by the Institute of Jewish Affairs, London, in conjunction with the World Jewish Congress, published not only academic articles on the important themes, but the major documents and reports on

events, including those in Israel. It ceased to appear in 1993. *Immanuel*, published by the Ecumenical Research Fraternity in Jerusalem, carries high-caliber theological and historical articles, many of them translations of Hebrew articles. Other journals carrying documentary and original material are the *SIDIC* newsletter published in Rome by the Sisters of Sion and *El Olivo*, published in Madrid by the Centro de Estudios Judeo-Cristianos.

The last years of the 1980s saw a proliferation of books summing up the dialogue so far. In 1988 the International Catholic-Jewish Liaison Committee published its account of "Fifteen Years of Catholic-Jewish Dialogue 1970–1985" through the official Vatican publishers. In the same year the World Council of Churches published its documents and those of member churches, with an illuminating commentary by Allan Brockway and others, and an authoritative Jewish account of the dialogue, *Jewish-Christian Relations since the Second World War* by Geoffrey Wigoder, also appeared in 1988. David Novak's *Jewish-Christian Dialogue: A Jewish Justification* was published in 1989. One of the most sensitive and balanced Christian accounts is Marcus Braybrooke's *Time to Meet: Towards a Deeper Relationship between Jews and Christians* (1990).

Of the documentary collections the most comprehensive (though there are lacunae) is Rolf Rendtorff and Hans Hermann Henrix's *Die Kirchen und das Judentum: Dokumente von 1945–1985*. For English readers, the two volumes of *Stepping Stones* edited by Helga Croner (1977 and 1985) are the most useful.

[Normon Solomon]

JEWISH CHRONICLE, English newspaper and the oldest Jewish periodical in existence. It first appeared on Nov. 12. 1841 under the editorship of D. *Meldola and M. *Angel and was issued subsequently as a weekly, until publication was suspended in May 1842. Publication was resumed in October 1844 as a fortnightly, with Joseph Mitchell as its editor, but in 1847 it became a weekly newspaper again and has remained so ever since. Mitchell was editor of the *Jewish Chronicle* until 1854, when he was succeeded by M.H. Bresslau. In the following year A. *Benisch became proprietor and editor and edited the newspaper until his death in 1878, save for the years 1869 to 1875 when Michael *Henry was editor. Benisch bequeathed the *Chronicle* to the *Anglo-Jewish Association who sold it to Asher I. *Myers, its new editor, Sydney M. *Samuel, and Israel David. Later it passed into the control of a limited company, where it has since remained. The *Jewish Chronicle* rapidly established itself as the leading journal of Anglo-Jewry. Its efficient news service and near monopoly of personal advertising of family events made its position unchallengeable, and it swallowed its principal competitors, the *Hebrew Observer* and the *Jewish World*. The *Chronicle* also prided itself on being a quality newspaper. Under the editorship of Asher Myers, lavish literary and historic articles appeared and for many years Israel *Abrahams edited a literary page. A supplement in

modern Hebrew first came out in 1906 and a monthly literary supplement was brought out during the interwar years. Shortly before the outbreak of World War II, the *Jewish Chronicle* underwent considerable changes in format. After the war the newspaper steadily grew in size and by 1960 boasted a circulation of over 60,000 – more than three times the pre-war figure. At the same time the scope of the newspaper was considerably broadened. Events in Israel occupied increasingly more space, and the *Jewish Chronicle* also expanded its service of provincial, sports, and financial news and provided separate columns for women, children, teenagers, and students, thereby making it of interest to a wide cross section of Anglo-Jewry. It also ran an international Jewish news and feature service. From its inception, the *Jewish Chronicle* reflected Anglo-Jewry's desire for political and social equality in Britain and set out to arouse public opinion to the plight of Jews in Russia and later Romania. From 1891 to 1892 a monthly supplement called "Darkest Russia" was published, which gave detailed reports of the persecution of Russian Jews. The *Chronicle* was one of the first journals to inform the world of Nazi atrocities during World War II and later reported on outbreaks of antisemitism in the Soviet Union, Eastern Europe, and South America. Its viewpoint on domestic issues generally reflected that of the Anglo-Jewish establishment and upheld the authority of the chief rabbi and the Beth-Din. For many years the *Chronicle* was hostile to the Reform and Liberal movements, particularly during the editorship of Leopold *Greenberg, but the trend away from Orthodoxy in Anglo-Jewry led to a change in the newspaper's policy, and more space was given to developments in Progressive Judaism. At the same time the *Chronicle* became increasingly critical of the Orthodox position on halakhic issues, which it regarded as too rigid. When Rabbi Louis *Jacobs was passed over for the position as principal of Jews' College and later prevented from acting as minister of the New West Synagogue, the *Jewish Chronicle* – under the editorship of William Frankel – championed his cause against the authority of the chief rabbi, Beth-Din, and United Synagogue. The *Jewish Chronicle* consistently devoted considerable space to Israel and Zionism, and one of its first editors, Abraham Benisch, published news from Jerusalem, Tiberias, Safed, and Hebron. However, under the ownership of Asher Myers and Israel Davis, the paper was hostile to Zionism in line with the official line of the religious and lay leaders of the community. Nevertheless, on Jan. 17, 1896, the *Chronicle* published Herzl's first article "A Solution to the Jewish Problem," which appeared a month before *Der Judenstaat*, and with its editorial, "A Dream of a Jewish State" opened the readers' columns to a discussion of Herzl's plan. At the end of 1906 Israel David offered the *Jewish Chronicle* to Leopold J. Greenberg who, together with David *Wolffsohn, Joseph *Cowen, Jacobus H. *Kahn, and Leopold *Kessler, bought the shares. Greenberg became its editor in January 1907. He made the paper strongly Zionist. In 1917 the British government postponed publication of the Balfour Declaration for a week in order to allow the *Chronicle* to print the news at the same time as the rest of the press. The

Chronicle supported the formation of the Jewish Legion under Vladimir *Jabotinsky and, after the Palestine Mandate was allotted to Great Britain, the *Jewish Chronicle* remained firmly Zionist until Greenberg's death in 1931. In that year, Leopold Kessler became chairman of the board of directors, and the paper resumed a lukewarm Zionist line. In 1946 Ivan Greenberg was removed from editorship because of his support for Revisionism and John *Shaftesley was appointed in his place. In 1958 William Frankel became editor. David F. *Kessler, the son of Leopold Kessler, became the chairman and managing director of the Jewish Chronicle Ltd. Kessler remained editor until 1977, when he was succeeded by Geoffrey Paul (b. 1929), from 1977–90, and then by Edward J. Temko (b. 1952), from 1991. After the creation of the State of Israel it consistently maintained a sympathetic, though not always uncritical, attitude to the Jewish state, and is internationally known for its wide and intelligent range of opinion.

[Cecil Roth and Josef Fraenkel]

JEWISH COLONIAL TRUST, the first Zionist bank. The Jewish Colonial Trust (Juedische Colonial Bank) Ltd. was incorporated in London on March 20, 1899, in accordance with the decisions of the First and Second Zionist Congresses. Theodor *Herzl had been the leading proponent of this decision, as from the beginning he had foreseen the need for a powerful financial instrument for the political and economic realization of Zionism. In *Der Judenstaat* he had proposed the establishment of the "Jewish Company" for the orderly liquidation and transfer of the immigrants' capital; in his *Diaries* Herzl repeatedly spoke of the need for a strong financial instrument able to offer aid to Turkey in return for the granting of the desired "charter." Herzl's vision was of an organization like the East India Company, which had achieved a para-governmental status. The various aims of the institution are reflected in the Trust's Objectives, as set out in its statutes:

To promote, develop, work and carry on industries, undertakings and colonization schemes... migration from or immigration into any country or countries... and in particular of persons of the Jewish race into Palestine, Syria and other countries in the East... To carry on the business of banking so far as... considered expedient incidentally to any other business of the company... To acquire from any state or other authority in any part of the world any concessions, grants, decrees, rights and privileges whatsoever... to seek and obtain openings for the employment of capital in Palestine, Syria and in any part of the world, and, with a view thereto, to prospect, examine, explore, test and develop any mining, landed, agricultural and other properties, and to dispatch and employ expeditions, agents and others.

The political-economic character of the Trust made it necessary to vest control over it, by way of Founder Shares, in the bodies of the Zionist Organization. The Trust's authorized capital was £2,000,000 in shares of £1 each, but it took three

years (until 1902) before the statutory minimum of £250,000 that permitted it to commence operations was paid up. In that year in London the Trust incorporated the Anglo-Palestine Company, now Bank Leumi le-Israel BM, as its subsidiary for operations in Erez Israel. Banking, considered an incidental business in the Trust's Objectives, became its main activity. Although the JCT planned to open branches and agencies in various Jewish centers, such as New York and Odessa, only one branch, in Whitechapel, was actually opened in 1905. The various Balkan wars slowed down the development of business in its early years, and the Trust suffered considerable losses in Russia during World War I. With the advent of the British Mandate, the Trust invested in new ventures in Palestine, such as the General Mortgage Bank, the Workers' Bank (Bank ha-Po'alim), the Palestine Electric Corporation etc., and became deeply involved in some Jewish banking ventures in Eastern Europe, such as the Lodz Deposit Bank and the Jewish Central Bank, Kovno. In consequence of the economic depression, most of these latter assets, exceeding £550,000, became frozen or doubtful. Thus a reorganization of the Trust became necessary in 1933, and as of Jan. 1, 1934, the Trust handed over its banking business and investments in Palestine to the Anglo-Palestine Bank (formerly Anglo-Palestine Company). Profits on a share issue of the latter enabled the Trust to recover its share capital of £395,000 and £95,000 of its reserves. Since then the Trust has been solely the holding company for Anglo-Palestine Bank (Bank Leumi) shares.

In 1955 the Trust was converted into an Israel company under its original Hebrew name of Ozar Hityashevut ha-Yehudim. Its share capital in 1969 was increased from IL. 7,000,000 to IL. 10,000,000 by issue of bonus shares, and a 12% dividend was declared for 1968. The Trust holds 23.5% of Bank Leumi's outstanding share capital, but 88.3% of the (controlling) ordinary shares (as of March 31, 1969).

[Kurt Grunwald]

JEWISH COLONIZATION ASSOCIATION (ICA), philanthropic association to assist Jews in depressed economic circumstances or countries of persecution to emigrate and settle elsewhere in productive employment, founded by Baron Maurice de *Hirsch in 1891. It was incorporated in London as a joint-stock company whose other shareholders were Baron Edmond de *Rothschild, J. *Goldsmid, Sir Ernest Joseph *Cassel, F.D. *Mocatta, Benjamin S. Cohen, S.H. Goldschmidt, and Salomon *Reinach. In 1893 de Hirsch's shares were distributed between the *Anglo-Jewish Association, and the Jewish communities of Brussels, Berlin, and Frankfurt. The basic endowment was later increased to £8,000,000. The association's offices were located in Paris until transferred to London in 1949. De Hirsch was president until his death in 1896. He was succeeded by Salomon Goldsmid (1896), Narcisse *Leven (1896–1919), Franz *Philippson (1919–29), Lionel Leonard *Cohen (1929–34), Sir Osmond d'Avigdor *Goldsmid (1934–40), Leonard Montefiore (1940–47), and Sir Henry Joseph d'Avigdor *Goldsmid (1947–). De Hirsch's immediate

plan envisaged a mass emigration of the Jews from countries in Europe, where they were persecuted, to *Argentina, though circumstances forced ICA to give priority to the various needs of Jews in Europe.

EMIGRATION

Emigration was the cornerstone of ICA's activity throughout its history. From 1904 to 1914 ICA established 507 emigration committees in Russia, and a central office in St. Petersburg, with the approval of the Russian government. In New York the Hirsch Fund established a trade school in 1891 in order to prepare new immigrants for the task of earning a living. The large-scale immigration into America in the early 20th century led ICA and the Jewish Agricultural and Industrial Aid Society jointly to establish the Removal Committee. This organization linked immigrants in America with their relatives remaining in Europe. Information bureaus sprang up all over Europe, and by 1912 the Removal Committee had helped over 70,000 immigrants. In 1922 this organization was dissolved. After World War I many countries closed their doors to immigration, and new conditions demanded a new machinery. ICA's initiative led to the creation of immigration societies in Canada, Argentina, and Brazil. In 1921 ICA called a conference in Brussels and in 1922 in Paris for the establishment of a united emigration association. The conferences failed, but in 1925 the United Evacuation Committee was formed by ICA jointly with Emigdirekt and the *American Jewish Joint Distribution Committee (JDC). In 1927 *Hias (Hebrew Sheltering and Immigrant Aid Society), ICA, and Emigdirekt founded a new association, *Hicem, which had established 57 committees in 21 countries by 1937. In 1928 ICA formed an emigration bureau in Moscow to supervise emigration from Russia, and at the instigation of ICA all the private organizations dealing with emigrants jointly set up a committee for their protection, with its seat in Geneva. From 1933 to 1939 ICA spent £800,000 on the emigration of Jews from Germany.

AID AND SETTLEMENT

Eastern Europe

AGRICULTURE. In 1898 ICA began a detailed investigation into the position of the Jews in Russia and published the results in 1904 in the *Recueil des matériaux sur la situation économique des israélites de Russie*. In the different areas of Jewish settlement there, ICA officials worked to improve local farming methods, introduce new crops, and establish cooperatives, with the result that output rose considerably. During World War I the agricultural population in Russia was reduced by one-quarter. By 1930, due to ICA's efforts, 43 of the former colonies had been reestablished and supported a population of over 30,000. In the late 1920s ICA also successfully established a few thousand families on 50 new colonies founded on land provided by the government in south Ukraine.

In Poland ICA founded and supported eight agricultural cooperatives, and by 1930 had purchased some 2,500 hectares of land for the enlargement of existing small holdings. In Ro-

mania, ICA repaired the wartime damage and in 1930 established a new colony in southern Bessarabia.

EDUCATION. By 1914 ICA had established or supported some 40 technical and agricultural schools in Russia, ran adult education courses, and subsidized Jewish primary education. After the war ICA restored the majority of these schools to their prewar position, supporting them until they could exist independently. In Romania, ICA was subsidizing approximately 46 schools by 1914. In Galicia a number of technical and agricultural schools were founded, the most well-known being the agricultural school in Slobodka-Lesna, established on land acquired by ICA in 1900. The school flourished until it was damaged and closed during World War I. In postwar Poland ICA also reorganized the school system and introduced institutions for adult education in the centers of Jewish population.

COOPERATIVE LOAN AND SAVINGS BANKS. ICA established a network of cooperative loan and savings banks in Russia for farmers and artisans. From 1905 the Russian government allowed their unrestricted development and they spread rapidly, flourishing until World War I. By 1914, 680 such funds with over 450,000 members, and covering a sum of 40,000,000 roubles, had been organized and financed by ICA, a pioneer in this field. ICA resumed this work in 1922, in conjunction with the American Jewish Joint Distribution Committee, creating in 1924 the American Joint Reconstruction Foundation (AJRF). Its main aim was to continue the prewar work by supporting existing credit funds and creating new ones. In 1924 there were 322 such institutions in the 12 countries where the foundation worked. By 1930 the AJRF was supporting 760 loan banks with 325,000 members and a capital of 3,555,000 dollars. The association also established commercial banks for middle-class clients from 1930, supported workers' cooperatives, and rebuilt housing destroyed during the war. World War II ended all this activity, and in 1951 the AJRF was liquidated.

Argentina

In 1889 ICA aided Jewish immigrants in Argentina who purchased approximately 100,000 hectares of land in Santa Fé. They established the colony of Moisésville, and created a number of new settlements in the provinces of Santa Fé, Entre Ríos, La Pampa, and Buenos Aires, mainly before World War I. The colonists were given equipment, instruction, and credit, and a network of schools was established. By 1930, the peak of ICA settlement in Argentina, over 20,000 colonists farmed approximately 500,000 hectares of land, nearly half of which was owned by settlers who became independent. Progress was hampered by insufficient land for extensive cultivation and the unfavorable location of many of the colonies. The settlers attacked a system which permitted the repayment of debts and independence only over a long period of time; cooperatives also led a struggle against the ICA bureaucracy. During the 1930s several hundred families from Germany were settled on the land, but town life attracted many, and

by 1966 only 8,000 Jews remained in the ICA colonies, the population there being largely non-Jewish. Nearly all of the settlers by then owned their land and ICA's role in Argentina was rapidly diminishing.

Brazil

In 1904 ICA acquired land in the Rio Grande do Sul area, and a small colony was established for settlers from Bessarabia. The colony did not prosper and in 1928 was virtually liquidated. A further colony of 93,000 hectares was established in 1909 in Quatro Irmãos, but disintegration began before World War I. ICA tried to revive the colony by resettlement, but political troubles combined with mismanagement led to its liquidation in 1965. One further attempt at Brazilian settlement failed in the 1930s when ICA selected families in Germany for settlement on 2,000 hectares purchased in the State of Rio de Janeiro. From 1953 the Brazilian government followed a more liberal immigration policy, but potential settlers were lacking. By 1960 large areas of land held by ICA had been liquidated. Meanwhile ICA had established educational institutions and credit facilities in the main centers of Jewish settlement and from 1954 onward continued to support the latter in conjunction with the American Joint Distribution Committee.

United States

In 1891 Baron de Hirsch established the Baron de Hirsch *Fund with the aim of aiding Jewish immigrants to the United States and promoting the establishment of rural centers there. The fund founded the agricultural school of Woodbine in New Jersey and several others, and became the main organ used by ICA for its own work in the U.S. In 1900 the two organizations jointly established the Jewish Agricultural and Industrial Aid Society (later the *Jewish Agricultural Society), which acquired land in New York, New Jersey, Pennsylvania, and Connecticut in order to settle Jewish immigrants on the land. By World War I, 78 farms had been established. The main work of ICA in the United States was not, however, this small-scale colonization but the provision of credit facilities for the immigrants. By 1930, ICA had distributed over 10,000 loans. Work in the educational field was less successful, and Woodbine was closed down during the interwar years. By the outbreak of World War II ICA's activities in the United States had virtually ceased.

Canada

In 1892 ICA established the colony Hirsch in the province of *Saskatchewan in *Canada, where some Jewish families had already settled in the 1880s, and aided individual immigrants arriving from Russia in the early 20th century. Until 1903 the Jewish Agricultural Society of New York managed ICA's colonization work in Canada and several new colonies were established in *Manitoba and Saskatchewan. In 1909 their supervision passed to a Canadian committee formed for this purpose. By 1910 ICA had founded or aided five main colonies with a population of 777 on an area of 49,914 acres, and a few smaller centers. The Canadian government refused to sell

larger expanses of land, blocking the way to a more extensive settlement. The economic position after World War I led to the disintegration of the smaller centers. ICA tried to expand the more successful colonies, establishing 40 farms for new immigrants by 1930. After World War II, ICA settled a number of people from displaced persons' camps in the fertile Niagara peninsula and south Ontario, and by 1960 approximately 120 families were farming under the auspices of ICA.

Erez Israel

From 1896 ICA provided financial aid for independent colonists in Gederah, Haderah, Nes Ziyonah, and Mishmar ha-Yarden. In 1899 Baron Edmond de Rothschild transferred to ICA the colonies under his care, and those he himself had founded, providing 15,000,000 francs to finance their further development. He presided over an administrative body, the Palestine Commission, formed in Paris. In the Rothschild colonies ICA introduced new forms of cultivation and other reforms. ICA also continued its previous independent work and purchased land in Lower Galilee in order to found new settlements, Jabneel (Yemma), Bet Gan, Mesha (Kefar Tavor), Sejerah (Ilaniyyah), and others. Despite progress, ICA's work was continuously attacked by Zionist opponents who accused it of inept management, wasted funds, and diverse aims. During World War I Rothschild realized that impending political changes necessitated the formation of a stronger organization and established the Palestine Jewish Colonization Association (*PICA) in 1923. This returned the colonies to a direct Rothschild administration. ICA resumed work in Palestine after the 1929 riots, establishing Emica jointly with the Emergency Fund. Plans for draining the Huleh swamps were stopped by the outbreak of war, but Emica reconstructed Beer Toviyah and founded other settlements: Kefar Warburg, and later Nir Banim, Sedeh Moshe, Kefar Maimon, and Lachish. In 1955 Emica became "ICA in Israel," as Israel became the main field of activity. Jointly with the Jewish Agency, ICA participated in the development of Upper Galilee and in a project to assist some 30 immigrant settlements. In addition to credit facilities for agriculture, ICA provides extensive grants for educational institutions in Israel, among them Mikveh Israel, ORT, and the agricultural faculty of the Hebrew University.

Cyprus and Turkey

In 1897, at the request of the British government, ICA transferred 33 Russian refugee families from England to Cyprus, establishing three small colonies there. This venture failed and after a few years the settlers re-emigrated. In 1891 ICA bought land near Smyrna in Turkey, and established an agricultural training center, Or Yehudah, on an area totaling 3,000 hectares by 1902. Owing to numerous difficulties the center was closed in 1926. A group of Romanian Jews in Anatolia were assisted by ICA in the early 20th century, and a small-scale Russian immigration led ICA to establish an immigration bureau in Constantinople in 1910. ICA also bought land in Anatolia and Thrace, and founded Mesillah Hdashah and two other agricultural settlements for several hundred families. During

World War I the settlers were forced to leave, and in 1928 the colonies were practically liquidated, only the immigration bureau remaining to assist migrants in transit for Erez Israel.

WORLD WAR II AND AFTER

ICA found new fields of work as older ones dwindled in importance, Israel becoming the major concern. ICA also began to help North African Jewry, developing credit facilities in Tunisia and Morocco, in conjunction with the JDC, and founding an agricultural training center in Morocco. In 1952 ICA and the Alliance Israélite Universelle jointly founded the Société Agricole pour les Israélites Marocains. From 1965 ICA cooperated with the United Hias Service, contributing substantially to the "Special Rescue Program" for the transportation of emigrants from Eastern Europe and North Africa to Australia, Canada, and France. There ICA organizes mortgage facilities, and in Kenya provides loans for agriculture. Miscellaneous Jewish institutions in Britain, France, Belgium, Israel, Argentina, and Brazil receive financial assistance as in the past, special attention being paid to education and culture.

JEWISH COMMUNAL SERVICE ASSOCIATION OF NORTH AMERICA, THE (JCSA). The JCSA was founded in 1899 as the Conference of Jewish Charities. JCSA links together highly skilled and knowledgeable professional Jewish leadership in pursuit of the shared goals of advancing the Jewish community and enhancing professional development. JCSA assists local, regional, national and international efforts to enhance professional knowledge, research, education, and networking through:

- (a) promoting and sustaining professional standards for the field;
- (b) supporting and connecting the independent activities of local groups of Jewish communal professionals in Atlanta, Baltimore, Boston, Chicago, Cleveland, Los Angeles, Miami, New Orleans, New York, New Jersey, Philadelphia, and St. Louis;
- (c) supporting and connecting the independent activities of affiliated professional associations such as the Association of Jewish Aging Services, the Association of Jewish Center Professionals, the Association of Jewish Community Organization Professionals, the International Association of Jewish Vocational Services, the Jewish Social Services Professionals, the North American Association of Synagogue Executives, and the World Council of Jewish Communal Service;
- (d) providing special courses and seminars designed

to advance the careers of professionals and to enhance their ability to serve the Jewish community, including an annual program meeting;

- (e) advocating for family friendly work policies and gender equity through such sponsored activities as JCSA Networking Parents;
- (f) promoting the recruitment and retention of personnel through Networking Express, the JCSA Graduate Students Network, and the Young Professional of the Year Award;
- (g) offering group retirement, insurance policies, and other personnel benefits through the JCSA Benefits Program;
- (h) Publishing the *Journal of Jewish Communal Service*, a quarterly review of professional trends and developments, and a monthly e-newsletter.

JCSA's website address is www.jcsana.org and inquiries can be sent to info@jcsana.org.

JEWISH COUNCIL ON PUBLIC AFFAIRS (JCPA; formerly, The National Jewish Community Relations Advisory Council). The JCPA was formally established as the National Community Relations Advisory Council (NCRAC) in 1944 by the Council of Jewish Federations, with the object of formulating policy and coordinating the work of national and local Jewish agencies in the field of community relations in the United States. NCRAC was designed to be the public affairs branch of the organized Jewish community; its name has been changed twice. The first time, in 1968, just after the June 1967 War, the word Jewish was added to make it the National Jewish Community Relations Advisory Council and emphasize a fact that had previously not been manifest – that this was a Jewish organization – and a second time, in 1997, it was changed to the Jewish Council for Public Affairs to more accurately reflect its mission.

Before 1944, as organized antisemitic activity became a serious problem in the United States, there was much overlapping and competition among the Jewish organizations seeking to combat it. The Jewish Welfare Funds, beset with claims for support, exercised pressure for the coordination of activities, and the result was the establishment of the Council. It was composed initially of four national organizations and 14 local community relations councils. The purpose was to enable member agencies to exchange views and to work together voluntarily, while each member retained full autonomy.

While the Council secured a measure of coordination, competitive activity and jurisdictional conflicts remained, and in 1950, at the insistence of the larger welfare funds, the Council instituted a study of Jewish community relations work. The result was the R.M. MacIver Report, under which the authority and responsibilities of the Council would have been enlarged considerably and separate spheres of activity allotted to its member agencies. The Council generally favored these proposals, but the result was the withdrawal from membership of its two most active constituents, the American Jewish

Committee and the B'nai B'rith (1952). The latter returned to membership in 1965 and the Committee in the following year on terms which emphasized the autonomy of the member organizations. In 1968 the membership of the Council consisted of nine national organizations and 81 state or local community relations councils.

The Jewish Council for Public Affairs (JCPA) serves as the representative voice of the organized American Jewish community in addressing the mandate of the Jewish community relations field. The mandate is expressed in two, interrelated goals: (1) to safeguard the rights of Jews in the U.S., in Israel, and around the world; and, in order to accomplish that, (2) to protect, preserve, and promote a just American society, one that is democratic and pluralistic.

These goals are pursued in a non-partisan manner informed by Jewish values. The Council's dual goals link the safety and security of Jewish interests with the protection of American democratic traditions and social justice at home. The Jewish community, it believes, has a direct stake – along with an ethical imperative – in assuring that America remains a country wedded to the Bill of Rights and committed to the rule of law, whose institutions continue to function as a public trust.

The JCPA reflects a unique and inclusive partnership of national member agencies, local community relations councils and committees, and the federations of which they are a component part or affiliated agency. It convenes the “common table” around which member agencies, through an open, representative, inclusive and consensus-driven process, meet to identify issues, articulate positions, and develop strategies, programs, and approaches designed to advance the public affairs, goals and objectives of the organized Jewish community.

The work of the JCPA, especially in matters relating to democratic pluralism and social justice, reflects the organizations emphasis on the Jewish value of *tikkun olam*, the repair of the world. It expresses the conviction of the organized Jewish community that it must be active in the effort to build a just society. The JCPA has the responsibility to enhance the capacity of member agencies to effectively pursue the public affairs agenda. This responsibility requires the JCPA to provide coordination, support, and guidance for public affairs initiatives undertaken by national and local member agencies, to advocate on behalf of the public affairs policies of the organized Jewish community, and to respond to those member-identified needs which strengthen their individual and collaborative capacity to advance the communal public affairs agenda.

Among the national organizations that constitute JCPA are each of the major Jewish defense agencies, ADL, *American Jewish Committee and *American Jewish Congress (aside from the *Simon Wiesenthal Center), the major religious denominations, *Hadassah, and the *Jewish Labor Committee, the *Jewish War Veterans, *National Council of Jewish Women as well as 122 local equal and independent partner agencies.

The JCPA serves as a catalyst that heightens community awareness, encourages civic and social involvement, and deliberates key issues of importance to the Jewish community.

[Michael Berenbaum (2nd ed.)]

JEWISH CULTURAL RECONSTRUCTION, INC. (JCR), organization established in 1947 to deal with the collection and redistribution of heirless Jewish cultural property in the American Zone of Germany, centered in Offenbach and later in Wiesbaden. Its headquarters were in New York and its logistical and financial support came from the Jewish Restitution Successor Organization (JRSO). Its leadership was comprised of some of the foremost Jewish intellectuals of the day: Salo *Baron was its executive director; Joshua *Starr and later Hannah *Arendt served as executive secretaries. Gershom *Scholem, Shlomo Shunami, Bernard Heller, Mordechai *Narkiss, and E.G. Lowenthal were among those working in conjunction with JCR in Europe. Under the American Restitution Law (no. 59), JCR functioned as a trustee for those Jewish cultural items whose owners or heirs could not be located. By the end of its operations in 1951–52, JCR had redistributed hundreds of thousands of books and thousands of Torah scrolls and other ritual objects to major libraries and museums, including the Library of Congress and Bezalel in Jerusalem, as well as to institutions of higher learning such as the Jewish Theological Seminary in New York. A total of 85% of the cultural property was sent to Israel and the United States; 8% was allocated to Western European countries (with half going to Britain) and the remaining 7% was distributed to South Africa, Argentina, Brazil, Australia, Canada, and West Germany. Although it had no international standing, the organization encouraged the establishment of similar bodies in the British and French Zones of Occupation.

[Dana Herman (2nd ed.)]

JEWISH DAILY FORWARD (Yid. **Forverts**), U.S. Yiddish newspaper. Established in New York in 1897 as a more moderate offshoot of the militantly left-wing *Abendblatt* the *Forward* was in its heyday the wealthiest and most widely read Yiddish newspaper in the United States, with 11 local and regional editions reaching as far west as Chicago. Under the editorship of Abraham *Cahan, who ruled the paper for nearly half a century, from 1903 to 1951, for much of the time with the assistance of general manager Baruch Charney *Vladeck, the *Forward* combined conscientious journalism with a partisan commitment to democratic socialism and the Jewish labor movement. It published stories and serialized novels by such authors as Sholem *Asch, Jonah *Rosenfeld, Zalman *Shneour,

Abraham *Reisin, Israel Joshua *Singer and his brother Isaac *Bashevis Singer, gave lessons in English and other subjects for old and new immigrants, and counseled and consoled several generations of readers with its famous advice column, the *Bintel Brif* ("Bundle of Letters"). Its *Forward* building, completed in 1908, was from the first a landmark on New York's Lower East Side, where it housed the headquarters of the United Hebrew Trades, the Workmen's Circle, the Jewish Socialist Federation, and other organizations, and served as a center for the Jewish labor movement in the United States. The paper's peak circulation of nearly 200,000 was reached during World War I, when the intervention of Louis *Marshall barely saved it from being shut down by the U.S. government for its pro-German sympathies; thereafter its readership declined steadily, like that of the rest of the Yiddish press, though increased advertising revenues in the 1920s and 1930s cushioned it financially and even enabled it to launch its own Yiddish radio station, WEVD. At the time of Cahan's death in 1951 the *Forward's* circulation had fallen to 80,000, while in 1970 it was officially put at 44,000. In 1983, it was forced to become a weekly. Editors after Cahan were Hillel *Rogoff (1951–62), Lazar Fogelman (1962–68), Morris Crystal (1968–70), Simon Weber (1970–87), and Mordechai Strigler (1988–98).

From 1990, it published the weekly *Forward* in English as well as the Yiddish *Forverts*. The English *Forward* was edited by Seth Lipsky, who was replaced in July 2000 by J.J. Goldberg. In 1995–2005 the Forward Association also published the Russian *Forverts*. In 1998, the Yiddish prose-writer Boris Sandler (born in 1950 in Soviet Moldova), was appointed as editor of the Yiddish *Forverts*.

JEWISH DAY (Yid. *Der Yidische Tog*), U.S. Yiddish daily. Founded in 1914 by a group of New York City intellectuals and businessmen led by Judah *Magnes and Morris Weinberg, *The Day* aspired from the first to be a nonpartisan, liberal newspaper of high literary and journalistic standards that would enable it to live up to the slogan on its masthead, "The newspaper of the Yiddish intelligentsia." Under the editorship of William Edlin, it assembled a gifted staff that included critic Samuel *Niger; playwright David *Pinski; poet and essayist Aaron *Glanz; and reporters Joel Slonim, Peretz *Hirshbein, and Abraham *Coralnik. Its regular contributors included such outstanding figures as the novelist Joseph *Opatoshu and the poet *Yehoash. *The Day* reached a peak circulation of 81,000 in 1916. Thereafter, in common with the rest of the Yiddish press, and despite its absorption of Louis Miller's *Die Wahrheit* in 1919, its circulation declined. Throughout the 1930s, the paper was ridden by feuding between a politically

conservative faction led by editor Samuel *Margoshes and a left-wing element headed by the Yiddish journalist and author B.Z. *Goldberg. The conflict contributed to a bitter six-month strike in 1941 that almost led to the *Day's* extinction. However, the paper survived to merge with the **Jewish Morning Journal* in 1953. In 1970 the circulation of the combined *Day-Morning Journal* was estimated at 50,000. In 1971 the paper ceased publication.

JEWISH EDUCATION SERVICE OF NORTH AMERICA (JESNA). The Jewish Education Service of North America (JESNA) formally came into being on July 1, 1981 as the successor agency to the *American Association for Jewish Education (AAJE) founded in 1939.

In 1978, AAJE and the *Council of Jewish Federations (CJF) jointly appointed a "Committee to Consider Future Directions of the AAJE" which affirmed the need for a continental instrument for Jewish educational planning and services for the federation system. An Implementation Committee supervised the restructuring of the agency into JESNA and put in place a new governance in accordance with the recommendation of the Study Committee.

JESNA's goal is to make engaging, inspiring, high quality Jewish education available to every Jew in North America. Operating as a national resource, a community partner, a catalyst and a consultant, an innovator and a guarantor of quality, JESNA helps to recruit and prepare new generations of talented, committed Jewish educators; create and identify models of excellence in educational practice; and assist communities and front-line institutions in improving their programs and performance.

JESNA partners with local Jewish communities and with a dynamic and a growing group of individuals, organizations, institutions, and foundations to create consistent excellence in Jewish education. In addition, JESNA works closely with the central agencies for Jewish education that operate in more than 60 communities, and the Jewish federations in more than 150 communities, throughout North America.

JESNA has become a leading force promoting consistent excellence in Jewish education through a combination of high-quality community services and innovative initiatives that address Jewish education's foremost challenges. JESNA is responsive to the evolving needs of the community, which in the early 21st century focused on three overarching areas of activity:

- a) People: Recruiting talented educators and creating the conditions that will enable them to thrive;
- b) Best Practice: Identifying and disseminating models of excellence in educational practice; and
- c) Innovative Solutions: Developing creative new approaches to expand the impact of Jewish education.

JESNA works to significantly improve Jewish educator

recruitment and retention and to mobilize a coalition of communal leaders – both lay and professional – who will make this vision a reality. Teaching in Jewish schools was often a secondary career for those teaching elsewhere and in need of earning additional funds, or a way station for Israelis en route to Americanization. With the expanding day school movement in the United States there was a great need for initiatives to achieve three primary goals: attracting talented people into the field of Jewish education; creating a culture of support for Jewish educators within Jewish institutions; and developing meaningful career paths to allow people to grow and advance as Jewish educators throughout their lives. JERRI, the Jewish Educator Recruitment and Retention Initiative, was created to harness ideas, expertise, and resources from throughout the community to re-create Jewish education as an honored, joyous and sacred profession. JERRI is convening a broad consortium of partners to experiment with ideas and to implement programs that will catalyze the changes needed to imprint this vision onto reality.

JESNA works to identify and disseminate models of excellence in educational practice by providing expertise, resources, research and evaluation, and training. JESNA's Mandell L. Berman Jewish Heritage Center for Research and Evaluation in Jewish Education is uniquely placed to develop this combination of expertise, information, and communication that has the potential to effect major change in the Jewish world. With years of hands-on experience evaluating Jewish education programs, curricula, and innovative ventures, the Center has a talented and experienced staff, an extensive body of research, and strong relationships within the Jewish education community.

The Center's métier is evaluation, and in the world of Jewish education, it has a twofold effect. On the local level, evaluation enhances Jewish education programs, materials, and initiatives by assessing their impact and advising changes that improve quality and effectiveness. More globally, each evaluation contributes to a broader understanding of what works and what does not throughout Jewish education. Using findings from the nearly 80 evaluations of Jewish education programs and studies of Jewish education issues that it has completed since 1992, the Berman Center possesses the beginnings of a database of best practices and solid research that can be disseminated throughout the Jewish world.

The Berman Center seeks to increase and improve the utilization of evaluation to improve the quality of Jewish educational programs in North America; to raise the prominence and support the field of Jewish educational research; and to achieve a greater understanding of factors leading to Jewish identity, educational change, and improvement.

In addition to working to improve existing programs, JESNA develops creative new approaches to expand the impact of Jewish education. JESNA's Lippman Kanfer Institute is an action-oriented think tank for innovation in Jewish learning and engagement, focusing on designing and infusing the educational system with new ideas and approaches

that enable Jewish education to respond effectively to a rapidly changing world.

JESNA uses its three-pronged strategy to strengthen and improve key educational domains such as congregational education (through its Center for Excellence in Congregational Education) and youth (through its Youth Initiatives Program).

JESNA works closely with central agencies for Jewish education and federations in more than 150 communities throughout North America.

[Donald J. Sylvan (2nd ed.)]

JEWISH HISTORICAL INSTITUTE, WARSAW, institution devoted to the study of Polish Jewish history. The Central Jewish Committee in Poland (CKZ) came alive in summer 1944 simultaneously with the liberation of Poland by the Soviet and Polish armies. The CKZ established a Jewish Historical Commission in August 1944 and, from December 28, a Central Jewish Historical Commission (CJHK) in Lublin headed by the historian Philip Friedman. The CJHK moved to Lodz (1945) and Warsaw and established branches in 25 places, including Cracow, Katowice, Wrocław, Białystok, Tarnow, and Lublin. Its main task was to preserve a record of the gruesome events of the Holocaust by research, documentation, collection of evidence, and publications. The CJHK provided a framework for researchers, publishing methodical instructions for collecting materials and organizing proper archives, and libraries. They also established contacts with Jewish organizations abroad and with the Polish Academy of Sciences (PAN = Polska Akademia Nauk). The CJHK issued its first bulletin, *Yedies*, in November 1949 (in Yiddish, quarterly publication, *Biuletyn Żydowskiego Instytutu Historycznego* (1950–) in Polish (with summaries in English), and an annual in Yiddish, *Bleter far Geshikhte* (1948–). These activities were financed mainly by a grant from the Polish Academy of Sciences (PAN), and by the *American Jewish Joint Distribution Committee. In 1968 the official antisemitic campaign in Poland induced almost all the workers of the Institute to emigrate, and the publication of the quarterly was impaired. Among the major works inspired by the Institute were collections of documents on the German occupation of Poland, including various reports from the ghettos and concerning underground activities in the ghettos and camps (1946); *i Geshikhte fun Yidn in Poyln* ("History of the Jews in Poland," 1951), by Bernard (Berl) *Mark, of which only one volume (until the 17th century) appeared in print (Yiddish); and *Hitlerowska Polityka Zagłady Żydów* ("Hitler's Policies of Extermination of the Jews," 1961) by A. Eisenbach. The number of other publications runs into several scores, dealing mainly with the Holocaust period.

Netzer, "The Holocaust of Polish Jewry in Jewish Historiography," in: Y. Gutman and al. (eds.), *Historiography of the Holocaust Period* (1988), 133–40.

[Shlomo Netzer (2nd ed.)]

JEWISH HISTORICAL SOCIETY OF ENGLAND, English learned society. First projected in 1859, a serious attempt at its foundation was made in 1885–86 by Lucien Wolf and Alfred Newman. After the Anglo-Jewish Historical Exhibition of 1887, the plan was again brought forward, but the scheme became an actuality only in 1893, Lucien Wolf serving as first president. In recent times the Society held about ten meetings a year, at which a paper was presented by an expert speaker, and established branches in Birmingham, Manchester, Essex, and other places which also held periodic meetings. Through 2004, it published 39 volumes of its *Transactions* (renamed *Jewish Historical Studies* in 2000) and other miscellaneous material, especially on medieval Anglo-Jewry. It is probably the oldest existing Jewish historical society in the world and in the early years of the 21st century had about 800 members. Among its many distinguished presidents were Cecil *Roth, Albert M. *Hyamson, and Sir Isaiah *Berlin.

[Cecil Roth / William D. Rubinstein (2nd ed.)]

JEWISH IDENTITY. Through the ages Jewish identity has been determined by two forces: the consensus of thinking or feeling within the existing Jewish community in each age and the force of outside, often anti-Jewish, pressure, which continued to define and to treat as Jewish even such groups which had in their own consciousness and that of the Jews already severed all ties with Jewry. The most enduring definition of Jewish identity has been that of the *halakhah*, but it was not the first definition and it was not the only one, at least in some minority opinions, even during the many centuries when it was the dominant view. Among gentiles, hatred of Jews has generally dominated from age to age among those forces which have fashioned far more inclusive definitions of Jewish identity than Jews themselves would accept.

Biblical Period

In the biblical period Jewish identity meant belonging to the Jewish community as a religio-national entity. The “stranger” (*ger*) would become naturalized into this community by choosing to live its life. At the very beginning of Jewish history, in the Exodus from Egypt, a substantial number of strangers chose to accompany the Jews into the desert (Ex. 12:48; Lev. 24:10). During the conquest of Canaan, remnants of the earlier inhabitants of the land of Canaan remained resident among the Jews (1 Kings 9:20–21) and from time to time, some refugees from nearby peoples also came into the Land of Israel (Isa. 16:4; 24:14–15). These strangers were not treated as slaves and it was regarded as a religious obligation, oft repeated, to treat them fairly (Lev. 19:33; Mal. 3:5). However, they were not given land among the tribes of Israel, even though Ezekiel commanded even this (47:22). Marriage with *gerim* was expressly permitted, with the exception of those who descended from Ammonites and Moabites, and for three generations, those who descended from Edomites and Egyptians (Deut. 23:4–9). In ritual matters the obligations and the privileges of such resident aliens were not markedly different from those

of native Jews, especially if such strangers had undergone circumcision (see Ex. 12:48 and Lev. 17:8–14). There are some counterthemes in the Bible suggesting that the stranger remained not quite fully accepted religiously (in Deut. 14:21 he is the one who is permitted to eat *nevelah*, i.e., the flesh of a permitted animal which is, for one reason or another, not *kasher*). Nonetheless the situation in the Bible is such that a worthy such as *Naaman takes back with him to his own land soil from the land of the God of Israel and proclaims his reverence for that deity, without becoming a Jew (11 Kings 5:17). It is the alien who chooses to live permanently within the Jewish polity (*ger toshav*) who is in the course of time assimilated into and accepted within Jewry.

The first important change in these attitudes occurred after the Babylonian Exile. The handful of Jews who returned under Zerubbabel and Ezra in the 6th and 5th centuries B.C.E. were now an embattled minority, even in the very heart of their own settlement, in Jerusalem and the land nearby. They found that those Jews who had remained during the period of the Exile had intermarried with the tribes whom the Assyrians had brought to dwell in the land. Formal religious conversion had not yet been devised, and even had it been thought of then, as there is some contemporary evidence that it was (Neh. 10:29), mass conversion could not have solved the national problem of the feared dissolution of the returning Jews into some syncretism containing elements of their own faith and culture along with foreign elements (such as the practices of the Samaritans nearby). In this situation Ezra chose the uncompromising path of ordering all of those who wanted to remain faithful as Jews to put away their foreign wives (Ezra 9–10). A minority community, which remained, even after the rebuilding of the Temple, semi-autonomous but not nationally sovereign, could not return to the biblical practice of accepting any who chose to live within it. A community becoming a theocracy had now to conceive of its identity as primarily religious and to accept within itself only those who underwent formal acts of religious assent.

Such religious assent was not yet halakhic, in large measure, of course, because the rabbinic *halakhah* itself was yet in the process of being created. The *Samaritans, who were being separated from the main body of Jewry in the centuries that followed immediately after their quarrel with Ezra, were indeed defined by the *halakhah* as very nearly Jews, for they were regarded in rabbinic law as trustworthy with respect to all the commandments which they were known to keep (Kid. 76a). What divided them from Jews was that they refused to accept the centrality of the Temple in Jerusalem and thus chose a separate communal destiny, and the rabbis held that they could be received as Jews only after they renounced Mount Gerizim (Kuthim, end.). In later ages the Samaritans themselves were quite eclectic in their sense of identity. They chose to be regarded as Jews in those periods when such definition brought them practical advantage. In the course of time the leniency of the *halakhah* toward the Samaritans evaporated; they were regarded as the classic example of what happens to

some Jews who intermarry, adopt syncretistic religious practices, and live as a separate community, but this process of divergence, despite Ezra's anathemas, took generations.

Hellenistic and Early Christian Periods

The encounter of Jews with the Hellenistic world began with the presumption that the first few individuals who were acceptably learned in Greek language and ways could be regarded as both Jews and Greeks. There is a story, probably apocryphal, told by Clearchus, the disciple of Aristotle, that his master met a pious Jew whom, after conversation, he called "a Greek man both in language and in spirit." This openness soon became problematic. Hellenistic culture necessitated involvement of all those who wished to be part of it in activities which required formal worship of the pagan gods. There was much Jewish syncretism with the prevailing culture, as is proved by the fact that the Maccabees revolted, in the first instance, against the Hellenistic party within Judea itself. Nonetheless, most Jews were not "good citizens" in their widespread Diaspora or in their own land, when it was dominated by the foreigners. They were exempt from military service, because it interfered with the observance of the Sabbath and the festivals, and they did not take part in the liturgies, the physical service that all citizens gave in working on such tasks as road repair, and the contributions for the upkeep of the gymnasia. There continued to be Jews who wanted to be accepted as Hellenes, but even they were soon rejected. In Alexandria in 41 C.E. the local Greek community fought bitterly against the desire of some Jews to be admitted to the local gymnasium, the usual first step in attaining complete Greek citizenship. In this quarrel the Alexandrian Greeks were upheld by the Emperor Claudius, who made it clear in the text of his decree that he regarded the Jews as a separate and unique entity within his realms. By that time the attitude of the Hellenistic world had crystallized with substantial clarity: anyone who still belonged to Jewry, by any kind of religious affiliation, such as contributing to the support of the Temple in Jerusalem, even if he were culturally Hellenized, remained a Jew in the eyes of the pagan world; only complete conversion to Hellenistic paganism, the step taken by a figure such as Tiberius Alexander, the nephew of Philo, the outstanding figure of Hellenistic Jewry, could make an end of Jewish identity, as perceived by the gentiles. It was almost as completely agreed, as a number of haters of Jews had been saying for two centuries before the embittered battles between Greeks and Jews in Alexandria in the middle of the first century, that the peculiar practices and religion of the Jews represented an attack on the rest of society (see *Antisemitism).

The issues between Jews and Greeks had been sharpened by the Maccabean revolt. Greek writers had known as early as Herodotus that Jews were somewhat strange but there was no major venom in these encounters until the Maccabees raised the standard not merely of national independence but of the need to purify the national religion. Hellenistic paganism could not be accepted on any terms for the sake of civil peace;

it was idolatry which had to be destroyed. In the century before the Maccabean revolt there had appeared Jewish writers in Greek who claimed that all Greek and Egyptian wisdom had descended from Jewish biblical teachers. The inevitable angry answer was that Jews had been inferior disciples of the Egyptians. *Manetho, a Hellenized Egyptian priest who wrote, in the third pre-Christian century, the first serious attack on Jews, accused them of having been at the time of the Exodus from Egypt a group of lepers who were thrown out for the sake of the health of the country, and such attacks became frequent in the next century. In such an atmosphere sharp choices had to be made. There is some evidence that the Hellenistic party in Palestine totally left the Jewish community after the Maccabean victory. There is more convincing evidence that, at least for the next couple of centuries, Greek-speaking Jewry in the Diaspora had a very low rate of *apostasy, regardless of changing and often lessening factors of inner Jewish cohesion. Here the causative factor of Jewish cohesion was primarily external, the pressure of their enemies on Jews whose religion was becoming more and more syncretistic and ever more condemned by the rabbis.

The attitude within Jewry itself toward Jewish identity was being changed and new formulations arose because of the remarkable success that Jews were having in a variety of areas in converting others. The Hasmoneans forced Idumeans and a number of other border communities to convert to Judaism, and it is not entirely clear whether this conversion was conducted with more formality than those of the ancient biblical *gerim*, who were merely added to the life and fate of the Jewish polity. In the Diaspora there was an increasing number, perhaps millions by the first century, of *sebomenoi* (*metuentes, yereim* – God fearers), gentiles who had not gone the whole route toward conversion. There were some gentiles both in the Diaspora and in Erez Israel who did just that, among them even some of the great figures of Pharisaic history, such as the ancestors of Shemaiah and *Avtalyon among the early leaders and the translator of the Bible into Aramaic, *Onkelos. Most half-judaized gentiles remained in that estate, and were regarded not as Jews but as sympathizers, for Jewish identity had assumed, in the minds of most Jews, halakhic definitions, certainly by Hasmonean times. The gentile world, contemplating these *sebomenoi*, continued to regard them, even after many of them turned Christian, as people who harbored strange, unworthy private opinions, not far different in quality from the many others who had taken up Oriental mystery religions. This did not confer upon these believers any new legal status, such as exemption on the grounds of belief from civic duties. Late Hellenistic paganism regarded the *sebomenoi* not as Jews or as half-Jews but as suspiciously aberrant pagans.

The forces both of Jewish acceptance and of definition by gentiles were more nearly univocal in the case of nascent *Christianity. The earliest Pauline Christians, those gentile converts to the new religion who had not first become Jews according to the Law, were not regarded by anyone as Jews. The Jewish Christians, especially the circle in Jerusalem and

the Holy Land in the first century, were much more of a problem. Whatever may have been the exact beliefs of these Ebionites, their exclusion from the Jewish community did not occur primarily for halakhic reasons. By their own choice these Jewish Christians left Jerusalem and emigrated to Pella at the beginning of the war of 66–70, and they thus separated themselves from the national destiny of the Jews. Despite the fact that the Pharisaic leadership of that time was opposed to the war, this action by the Christians set the seal upon tensions which had originated in dislike of the beliefs of the new sect. Within a generation, by the end of the first century, the rabbis included a new prayer in the *Amidah*, “And for the *minim* let there be no hope” (cf. **Birkat ha-Minim*). By that time the Roman Imperial authorities were recognizing Christianity officially as a new religion, because the emperor Nerva (96–98) exempted the Christians from the *fiscus judaicus*.

The Jewish Christian group remained nonetheless for some years in an intermediate position, but this stance ended during the Bar Kokhba revolt (132–5) and its immediate aftermath. Those who did not participate in that glorious tragedy could no longer lay any claim on being Jewish. Official Christianity was by then largely gentile and it was systematically excluding all traces of the preeminence of Jews in the new religion. The animosity between the two groups was quite pronounced by the middle of the second century, and in the next century, when Christianity was declared an illegal religion, Judaism retained its status as a *religio licita*. Even in a religious convulsion of the most profound kind it was not ultimately theological formulation or even halakhic norms which were decisive for the separating definitions of Jewish and Christian identity. Matters of belief might have remained a family quarrel within Jewry. What ultimately separated the two communities was the choice of the Christians to live out a separate historic destiny – and the agreement of the Romans to permit them this choice.

Middle Ages to the 19th Century

The **Karaites* heresy through its various permutations from its origin 12 centuries ago was, for the most part, regarded as part of the Jewish community even though, paradoxically, the weight of halakhic opinion was that their legal practices, especially in relation to the marriage law, had excluded them from Jewry. Marriages between Karaites and Rabbanites continued well into the Middle Ages and did not cease entirely until the 15th and 16th centuries. Karaites were petitioned along with Rabbanites in Egypt, in the 11th century, and no doubt earlier and later, to help ransom captives from both communities; Karaite elders were at that time prominent in Fostat in the affairs of the largely Rabbanite community. All of this existed immediately after Saadia's leadership in both Palestine and Egypt, with all of his anathemas against the Karaites, the practice of pronouncing an excommunication each year on the Mt. of Olives by the Rabbanites against the Karaites, and the bitter Karaite continuing counter-polemics. Under Islam, the Karaites refused to accept the authority of the *geonim* and

the Exilarchs, who were Rabbanites. Nonetheless both groups continued to await the same national and messianic redemption; they shared the same destiny as Jews and they regarded each other as such and were so regarded by the gentile majority. All over the world, both Moslem and Christian, wherever both Rabbanites and Karaites were represented, they were treated throughout the centuries as belonging to the same community. The only exception occurred after 1795 in Czarist Russia when the legal discriminations against Jews were lifted entirely from Karaites, in the ensuing half-century, with the result that Karaites and Jews no longer regarded themselves as members of the same community.

The most complicated example of interweaving of internal and external forces was that of Marranism (see **Anusim*; **Marranos*). On occasion both Islam and Christianity forced Jews to apostasize, in such places as Yemen and North Africa, in the early centuries of Islam, and from late antiquity throughout the Middle Ages in the Iberian Peninsula, in the case of Christianity. The historic destinies of these various Marrano groups were not always the same. Under Islam forced apostates were usually allowed to return to Judaism within one generation. Those who chose not to do so usually rapidly assimilated. Under Christianity the situation was different. The majority which had forced the conversions looked upon the newcomers with suspicion for many generations. This “anti-semitism” always lasted longer than any intensity of Jewish feeling or affirmation among the Marranos themselves, for, especially wherever there was some opportunity to escape, those who chose to remain Marranos had, in one or two generations, little Jewish loyalty and even less secret Jewish practice than they were suspected of harboring. Remaining Jewish loyalties were revoked into new vigor in Spain of the 16th century not so much by memories of the past as by persecution by the Inquisition. The attacks continued in the 17th and 18th centuries in the name of the doctrine of **limpieza de sangre* (“purity of blood”), under which **New Christians* of even partial Jewish ancestry were barred from the highest offices of state and Church; there was therefore new reason for people who had ceased to be Jewish except by accident of birth to reinvent a kind of Judaism which was really their Christian upbringing, with the subtraction of its specifically Christian elements. For such figures, e.g., Uriel da **Costa*, their return to a Jewish community which was actually living normative Judaism, such as the one in Amsterdam in the 17th century, was a difficult and sometimes tragic journey into a strange and constricting world.

The Jewish community to which the escaping Marranos were returning was in theory defining its attitude toward them in terms of the *halakhah*. The basic view in all versions, both Franco-German and Spanish, of the legal tradition was that a Marrano, or any other kind of forced convert, remained a Jew and was to be welcomed back as such upon his return; indeed, in law, he was regarded as a Jew in a state of grave transgression. This definition was completely unproblematic so long as it was confronted either by forced apostates who threw

off their apostasy at the earliest possible moment or by apostates by choice who never looked back over their shoulder at what the Jewish community might be saying about their halakhic identity. It ran into difficulties when confronted by all the ambiguities and indefiniteness of Marranism, where the apostasy as such was not always forced but rather, as in Spain in 1492, largely the choice of many of the wealthy not to leave their property and to accept Christianity in the hope that some change might soon happen. Opportunities occurred in many situations, especially in Christian Spain in the 15th and 16th centuries, to escape, but the choice was most often not taken. Nonetheless some family ties remained, and were remembered, with Jews elsewhere; some inner cohesion, if only of evaporating sentiment, was still felt; and those who did escape, often the children or grandchildren of marriages that were questionable from the Jewish point of view, laid claim to Jewish identity and to full acceptance. The rabbinic authorities who dealt with this question were divided, the most liberal, Zemaḥ Duran, maintaining that even if the Marranos were to be regarded as true apostates they must nonetheless be accepted as Jews on purely halakhic grounds. On the other hand, Jacob Berab, who had himself fled from Spain, took a much harder line against those who had remained and ruled that the Marranos were gentiles in every respect except for the laws of marriage and divorce.

In actual fact these halakhic definitions were not ultimately determinant of the attitude of the Jewish community toward Marranos. The overwhelming evidence is that wherever they turned up, from the 15th to the 16th centuries, be it Venice, or Bordeaux, or Hamburg, and declared themselves to be Jews, the males were soon circumcised, the marriages were resolemnized, and no barriers were put in the way of their joining the existing Jewish communities. No serious questions were asked about the validity of the marriages of their Marrano ancestors. To be sure, there was halakhic warrant for this attitude, because in talmudic law in the absence of any evidence to the contrary a Jew is believed in any declaration that he makes about his personal status, and certainly about whether he is a Jew. It is also true that these returning Marranos formally accepted upon themselves all of the commandments of rabbinic Judaism. Nonetheless the determining act was their willingness to become part of the Jewish community, and all the halakhic doubts of rabbinic authorities remained theoretical in the face of acts of return.

A more curious case was that of the *Doenmeh, those followers of the false messiah Shabbetai Zevi who emulated their master and converted to Islam in 1686 or 1687. Their separation from the main body of Jewry was not complete for centuries. Even the rabbis spoke of them as "Jewish sinners" and not as "people uprooted and separated from Israel, who have no part in it." Halakhic considerations were here operative, for it had long been held, at least since Maimonides, that conversion to Islam was not a denial of the unity of God or a form of idolatry. Nonetheless these were not forced converts and, what is more, they held messianic ideas which had been

declared heretical in the most violent terms. On the other hand, the Doenmeh were never trusted by the Muslim majority and, at least in the early years during the persecution by the Pasha Hassan (1722), they were made to suffer as Jews. Until the middle of the 19th century, the Doenmeh studied Talmud with Jewish scholars and they discontinued this in 1859, along with making some other of their Jewish practices even more secret, only under investigation by Muslim authorities. The identity of the Doenmeh was still sufficiently separate, and separated, in the social sense for it to have been noted that young men of this origin were particularly prominent in the Young Turk Revolution of 1908. It is even still rumored that Kemal Atatürk belonged to the Doenmeh. The Doenmeh experience paralleled that of the Christian Marranos. After conversion something of their Jewish identity was maintained in secret by choice; persecution made the content of this identity ever harder to preserve, but it kept alive a pained sense of alienness for many generations.

The Modern Era

At the dawn of the modern era the definition of Jewish identity was no problem almost everywhere in the world. The trickle of Marranos coming out of the Iberian Peninsula ceased almost completely by 1800 and the Inquisition came to its effective end soon thereafter. On the European stage a Jew was someone defined by *halakhah*, that is one who was born of a Jewish mother (or who converted to Judaism) and who in actual practice regarded himself and was regarded as belonging to the Jewish community. This had legal relevance, for the Jew was structurally part of systems of law, both his own and of the governing powers, which depended on his identity's being clear cut. The only way that he could change was by conversion to another religion, which in actual practice in Europe meant some form of Christianity. Halakhically even this may not yet have excluded him from Jewry, but it did everywhere admit him to legal rights and status within the majority. So long as this was the action of a relative few, followed in due course by intermarriage with people not of Jewish stock (see *Mixed Marriage), some social discrimination might remain, but conversion effectively ended Jewish identity in most cases. Indeed in the aftermath of the Jacob *Frank episode in the 1770s his followers who converted to the Catholic faith quickly intermarried with Polish nobility, and the Jewish origins of their descendants were not widely remembered.

With the era of the *emancipation the whole question of Jewish identity appears in new forms. The structure of law which enshrined a precise definition of who was a Jew came to an end wherever any version of the modern secular state was created. Before the law religion became a matter of indifference and the choice to uphold one's own became purely voluntaristic. The law protected the right to private opinion and free association for worship, provided the specific practices of a religion were not flagrantly in conflict with public order as conceived by the state. This formulation had Christianity in mind, for it defined religion as containing dogma

about God and the world to come and as acting in specific forms of worship. These premises were accepted by the founders of *Reform Judaism both in Germany and in the United States, who constructed a modern definition of Jewish identity as that of individuals who belonged to the Jewish religious faith, now conceived as containing primarily ethical content and personal edification. This non-national definition of Judaism and Jewry was shared in many senses by the *neo-Orthodoxy that arose in Western and Central Europe under the leadership of Samson Raphael *Hirsch. Here too, the general culture was accepted and patriotic identification was made with the state. What was different was that neo-Orthodoxy identified the content of Jewish religion with every aspect of the inherited law, meticulously observed as divine commandment, but whatever was national in Judaism was relegated to far-off, apocalyptic days and thus made largely irrelevant. Both of these versions of Jewish identity could not utterly deny the obvious, that they were addressing themselves to the biological descendants of Jews, and that, regardless of their self-definitions, they were inevitably involved with all sorts of Jews, both in their own countries and all over the world. Many of those who thus began with definitions of Judaism, but wanted no identification with the Jewish people, moved into a general ethical humanism and entirely out of Jewry.

To be sure, in a number of European states the institutions of the Jewish religion were in some sense still “established” even after the emancipation, and in some jurisdictions, such as Hapsburg Austria and its successor republic and in Prussia, a Jew could cease paying some fractional tax to the Jewish community only by declaring himself “without religion.” It was, of course, an open secret that such people were, in the overwhelming majority, Jews, and some social discrimination was directed against them. Nonetheless at the height of 19th-century liberalism in Europe and America, it was possible for some Jews to “pass” without doing anything more than simply ceasing to function in any Jewish association of any kind. On the other hand, it was possible for Jews to feel a strong sense of Jewish identity on the basis of minimal or no association, even after every vestige of religious faith and practice had evaporated. Increasingly there arose the institutions of the voluntaristic Jewish *community of the modern era, which accepted this situation. These bodies regarded it as their task to serve any who claimed to be Jews, especially at moments of danger or when such people needed social services. Indeed, these very voluntaristic associations to alleviate suffering became increasingly the overarching Jewish community organization. This modern pattern had been forecast, when the delegates of the Portuguese Jews returned in February 1790 from Paris to Bordeaux with the news that their community had been granted equality. It was decided that very day to make an end of the historic “Spanish-Portuguese Jewish nation” and to reorganize the community as a welfare committee.

However, the majority community did not easily accept these various new forms of Jewish identity, especially as ever

greater numbers of Jews moved in the direction of appearing to be, and even feeling that they were, undifferentiated westerners, and so the marginal Jew appeared, marginal both to his own earlier identity and to the one that he was trying to acquire. Such figures had appeared at the very dawn of the era of the emancipation, in Isaac de Pinto, the Franco-Dutch Sephardi who debated with Voltaire, and David Friedlaender, the disciple of Mendelssohn. Men such as these, and their equivalents (e.g., Heine, Bernard Berenson) were to occur in every generation of the modern era, especially wherever the Jews were a minority fighting for equality. Some were ambivalent about their Jewishness and spent their lives in emotional torment, but most believed that Jews would achieve equality only by total assimilation to the way of life and outlook of the majority. An element of such a vision was an assumption of responsibility on the part of Jews for helping to create the kind of society which would live up to its most spacious new vision of equality for mankind. Inevitably the moral commandments of this doctrine moved Jews to turn away from specific concerns for their own community to the concerns of the general community, and the battle for Jewish rights itself could, and often was, identified with the struggle for the rights of all oppressed individuals and minorities. Since men do not easily jump out of their skins, this basic position was often identified as messianic, arising out of Jewish prophetic teaching and carrying it to the ultimate conclusion of the dissolution of Jewish specificity as the climactic act in the historic drama of Jewish existence.

The appearance of Jews in the revolutionary movements of the modern age was, in terms of Jewish identity, motivated by considerations comparable to those given just above which inspired their immediate Jewish predecessors in modernity, who did battle for the rights of Jews in the liberal era. Here there was already an awareness that bourgeois society was not living up to the promises of the middle-class revolutions and that from the perspective of all the oppressed, and certainly from that of the Jews, the only hope for real human equality was to uproot the past and to begin all over again in some new dispensation in which all men were equally cofounders. The more apocalyptic was the vision of a heaven on this earth, the more, either explicitly or in subterranean ways, did the allegiance of Jews to revolutionary movements represent both a conscious denial of specifically Jewish identity and an expression of certain aspects of that very identity. Here the battle against antisemitism and reechoes of Jewish prophetic messianism fused to create the post-Jewish revolutionary. So prominent have Jews been in modern movements of social reform, political revolution, new literary and art forms, and new modes of human self-understanding, that their enemies generally identified the hated and upsetting newness of things and thoughts with Jews. In many western countries during the last century the literary and intellectual community was heavily penetrated by Jews; and such subcultures as a whole, although Jews were often under attack within them, became identified as “Jewish,” even though the

Jews within these circles did not, except sometimes in crisis, function as Jews.

If inner Jewish commitment had become functional and diverse in the modern era, so had the outside world in which Jews were attempting to live. Before the middle of the 19th century the vision of the Enlightenment, an all-human society to which all regenerated men would belong, had been joined, both as ideal and as political doctrine in Europe, by nationalism. The question was therefore raised again whether Jews could ever participate in a national culture and society with historic roots in a distant past in which they did not share. More important, antisemitism was not in the process of coming to an end, not even among the most modern and revolutionary groups. On the contrary, to the older religious and economic rationales for hatred of Jews among some of the makers of modernity, such as Voltaire in the 18th century and some of the founders of socialism (Proudhon and Fourier) in the 19th, new anti-Jewish arguments were added about the ineradicable cultural alienness of even the most assimilated Jews. The racial theorists who followed after Gobineau defined Jews as a biologically alien race. Even non-socialists who were not anti-Jewish, such as Werner Sombart and Max Weber, elaborated on the essay (*Zur Judenfrage*) of the young Karl Marx, agreeing that the Jews had a very special, middleman and capitalist, role in the economy from the very beginning of their existence and that they were, if not by their very nature at least by long historical experience, removed from primary production and agriculture and thus unassimilable into all the healthy pursuits of a normal economy. From a variety of perspectives the Jew who wanted to become part of the contemporary world was thus faced with ever more complicated dilemmas. He could choose to remake himself even more thoroughly than he had imagined and get rid of every trace of his supposed past nature. He would nonetheless remain confronted by some, such as the German historian Treitschke, who would continue to insist that the most deJudaized of Jews had not yet become German. A future therefore had to be fashioned by the modern Jew in another direction: the creation of some realm of his own within which he could enter the contemporary world free of the intellectual and physical pressure of his enemies. This was all the more necessary for the westernizing Jewish intelligentsia that arose in the modern era, precisely because they were themselves part of all the secular and secularizing movements and states of mind to which their relationship was increasingly ambiguous.

All of this, especially as antisemitism became ever more virulent in the last third of the 19th century, led away from both reformed religious definitions of Jewish identity, or various modes of acculturation, to national definitions of what the contemporary Jew was or could become.

Its essential affirmation was that the Jews are a people, an organically developing historic community among many such communities which together make up human society. The Zionist version of this definition is not the only one, and it indeed arose somewhat later than most of the others. From

this perspective the Jewish people is unlike most others in the extent of its dispersion, its persistence for many centuries without a land of its own, and a number of other differences from the prevailing norms of modern national identity. Despite the fact that this was a people which harbored a particular religion, belonging to this people, from the beginning and certainly in the modern, secular era, was defined as a national sentiment rather than a matter of religious assent. Just as it was possible in the modern age of doubt to cease being Anglican and remain English, so it was possible to cease believing in Judaism and remain Jewish. At least in theory, such secularization solved the problem of Jewish identity and continuity in the modern age, but those who accepted these new premises remained confronted by two questions: why should an individual prefer one secular culture over another, unless his own is always demonstrably higher? In what sense can a secular culture lay moral onus on those who abandon it? Questions such as these led such theoreticians of Diaspora nationalism as Simon *Dubnow to opt for Jewish communal organization, an international Jewish parliament, and national institutions of culture and education to maintain the national ethos. Others, such as the Yiddishist movement which arose at the beginning of the 20th century, laid the accent on Yiddish as the spoken and living language of the vast majority of world Jewry, at least before 1939, and aimed at preserving a secular national culture in that language.

Even before the Nazi Holocaust, the Zionist criticism of Diaspora nationalism was its unrealism. It was argued that national identity would be abandoned by Jews in the Diaspora, at the very least because of economic and social demands made upon the individual Jew by his quest for personal economic success. Some sentiment might remain, but inner Jewish content would inevitably evaporate in any post-ghetto society, even in one such as Poland between the two world wars, where bitter discrimination continued to exist in many areas. Zionism held that a continuing secular Jewish identity was, as a matter of social fact, possible only where Jews had achieved territorial concentration. Moreover, to be historically valid, a nation had to be involved in its own land, the soil of its ancestors, not in some new arrangements in new places, and the people had to revive its capacity to speak its own classic language, Hebrew. This was not only valid historic identity, but also the preservation in the secular, modern context of the best resonances of the religio-national past.

In contemporary Israel, therefore, the question of Jewish identity revolves around the interpenetration between the older, religious and halakhic definitions of who is a Jew and the both more contemporary, and far older communal-national emphases. Very small elements within the whole of Israel would go so far as to declare themselves to be Jewish Canaanites; however, many are in sympathy with the idea that the strictest of religious tests cannot be applied to those non-Jews by birth who have chosen to identify themselves in Israel with its Jewry. On the other hand, in circles far wider than those of the officially Orthodox, there is continuing and

even increasing concern about returning to a sense of tradition which is beyond the purely secular. Indeed, one of the recurring problems studied by Israel sociologists is whether its population, and especially its younger population of Jews, regard themselves as primarily Israelis or primarily Jews. By all of the usually established criteria, from religious observance to involvement in the destiny of world Jewry, the Orthodox and most of the non-Sabras of all persuasions rank as "Jews." The non-Orthodox Sabras consider themselves "Israelis" on all counts except that they feel strongly about their connection to the Jews of all the world and their involvement in this international destiny.

In recent years the question of what is contemporary Jewish identity has been a matter of considerable political and social concern for the State of Israel. Under its Law of Return all Jews have a right to automatic admission and immediate citizenship in Israel. For this purpose non-Jewish spouses and the often halakhically non-Jewish children (of gentile mothers) have been allowed to accompany the Jewish member of the family who emigrated to the land of his ancestors. Many of the problems which have thus arisen have been solved individually by ritual conversion, but the question of definition was inevitably tested further by a Jew by birth who had become Christian (the Brother Daniel Case before the Supreme Court of Israel in 1966, see *Apostasy), and by intermarried nonbelievers who refused to allow their children to undergo ritual conversion (the Shalit Case of 1970). The Supreme Court of Israel decided against Brother Daniel, despite his valid halakhic claims to Jewish status, on the ground that he had chosen to remove himself by conversion from the history and destiny of the Jewish community. In the Shalit case, the court ruled that the technically non-Jewish children of this intermarried couple should be registered as Jews because they were growing up within the Jewish community of Israel as indissolubly bound to its destiny. Such registration, however, would have no bearing in matters of marriage and divorce. This emerging consensus was inevitably involved with concern about what such new, legal definitions of what is a Jew would do to the unity of world Jewry, where, in theory, the halakhic definition prevailed. Considerations such as these were important in the overturn by the Israeli Knesset of the Supreme Court's decision in the Shalit case, by reaffirming the halakhic definition. Years earlier, in 1958, after a governmental decision that anyone who declared himself to be Jewish would be registered as such, the then prime minister, David Ben-Gurion, wrote to a wide variety of Jewish religious, intellectual, and legal figures both in Israel and in the Diaspora. The answers that he received ranged from reaffirmation of the *halakhah* to acceptance of inner emotional choice and labeling by the outside world as valid forms of Jewish identity.

The social situation of world Jewry outside Israel more nearly approximates the second rather than the first definition. In the major center of the Jewish Diaspora, the United States, the rate of intermarriage is now generally held to be at least one in two. It is estimated that many thousands of con-

versions to Judaism are taking place every year, the largest number under Reform auspices, and thus not halakhically satisfactory. There are even a number of Jewish clergy in the U.S. who are officiating at intermarriages even without conversion. All of these non-Jews are coming into some relationship with the Jewish community, and even the many who live entirely outside it are affected in some degree, even in those cases where their spouses are substantially deJudaized. Among those born and raised as Jews, the whole corpus of contemporary American Jewish sociology has had as its major subject in this generation repeated study of such questions as the rapid evaporation of Jewish ritual observance and intensive Jewish learning, the negligible rate of regular synagogue attendance, and the erosion of opposition to associating or marrying outside the Jewish group. On the other hand, these same studies have proved a very high rate of almost exclusive association of Jews each with the other even among those younger Jews who affirm little or nothing of the content of the Jewish tradition and an ongoing sense of at least passive involvement in what happens to Jews all over the world. To be sure, there are small, though notable, circles of younger Jewish intellectuals in all of the extreme revolutionary groups, and Jews also figure prominently among those who are dropping out of society in the name of highly personalist, often mystic, fulfillment. Even among these, some Jewish consciousness is still present, and it certainly does exist among the vast majority of their less radical contemporaries. This emerging, or eroding, Jewish identity is historic, in a very muted way, and situational.

The fate of Jewish identity in Eastern Europe, particularly after World War I, evolved under far different circumstances. The fundamental fact underlying this development is the unchanging concept, shared there by Jews and non-Jews alike, that the Jews are a historic, ethnic unit, i.e., a people, a "nationality" or even a "nation," into which a person is born and to which he belongs, whether he lives up to it in his linguistic, cultural, and religious habits or not. Out of this concept emerged for some periods and under favorable political circumstances, certain forms of official Jewish autonomy, mainly in educational and cultural facilities (as, e.g., in Poland, the Baltic states, and also in the Soviet Union in its first decades, where even an unsuccessful experiment of Jewish territorial autonomy in *Birobidzhan was made). Ultimately, however, particularly from the 1950s, Jewish identity in the Soviet Union became trapped into an unprecedented cruel paradox. The obligatory registration of each individual born of Jewish parents as being of Jewish nationality, even when he is a declared atheist or even a convert, remained in force, though all traces of the Jewish historical heritage and of Jewish educational or cultural facilities were eradicated, thus transforming the Jewish population into a kind of a "ghost nation." In other East European countries, the registration of the Jewish nationality was optional, and not obligatory; but eventually this formality did not lead to the obliteration of Jewish identity through the assimilation of a sizable number of Jews into the majority nation, but rather to mass emigration, to Israel

or to other countries, since the formal option did not change the traditional concept of the Jew, sometimes even people of partly Jewish descent, as being ethnically different and “alien.” This fact was often exploited in antisemitic campaigns for political purposes, as, e.g., in Poland in 1968–70. In the U.S.S.R. the paradox of the obligatory registration of the Jewish nationality, though devoid of any historical or cultural content, caused a growing manifestation of Jewish identity and even identification with the independent Jewish nation in Israel, mainly among the younger generation, including spontaneous efforts of small groups to study Hebrew and Jewish history and to congregate en masse in and around the synagogues in the great cities. The tension engendered by it transformed the solution of the problem of Jewish identity in the Soviet Union gradually into an international moral issue of major magnitude (see *Antisemitism, in the Soviet Bloc, *Assimilation, in the Soviet Union, *Russia).

In the last third of the 20th century there were many Jews, especially that worldwide, intensely Jewish, religiously traditionalist minority, for whom the question of Jewish identity was decided by the *halakhah*. The overarching institutions of world Jewry, while paying respect to this view, determine their policy by broader and more amorphous considerations of history and situation. So, when the last remaining, completely deJudaized, almost entirely intermarried communists of Jewish parentage in Poland were purged in 1968, the Israeli government provided them with the necessary exit passports, even though few were going to Israel; the world Jewish social service budget took care of the overwhelming majority who opted to go to other countries. Those who suffer as Jews, regardless of their own perception of that suffering, and those whose Jewish consciousness might one day be rekindled, remain part of world Jewish concern. In the broadest sense, significant elements of world Jewry in the modern era have defined, and are defining, Jewish identity as a community of history and destiny of those who still feel their involvement in this community or about whom others feel strongly that these people belong to Jewry.

[Arthur Hertzberg]

In the last third of the 20st century significant developments occurred in the three largest centers of Jewish life – the Soviet Union, the United States, and Israel. In the Soviet Union, the upsurge of Jewish feeling triggered by Israel’s Six-Day War created steady pressure for immigration to Israel and the accompanying phenomenon of the “refusenik,” denied an exit visa by the Soviet authorities, as well as open celebration of Jewish holidays in the streets of Russian cities. With the collapse of the Communist system the mass emigration of Soviet Jewry commenced, most arriving in Israel, where it may be said that for most a process of “Israelification” set in which, though it involves sets of identities tied to the everydayness of life in a modern Western society, also bears the powerful imprint of the country’s Jewish identity. In the former Soviet Union itself, Jewish communal life has also revived, centered on synagogues, community centers, and an extensive Jewish

educational system, often under the auspices of Chabad rabbis but also with the support of the Jewish Agency and other international organizations. In the United States all the disturbing demographic trends noticeable since World War II continued, but here too Jewish identity was fortified among identifying Jews, partly as a result of the emotions generated by the Six-Day War and partly as part of the general upsurge of ethnic pride in the United States in which blacks and Alex Haley’s *Roots* played a pioneering role. However, the precise nature of this Jewish identity, which seeks to affirm Diaspora life as a legitimate variety of Jewish experience, no less valid than a Jewish experience centered in a Jewish state, remains problematic, if only for demographic reasons. In the last analysis, the Jewishness of this identity does not prevent Jews from drifting away from Judaism, even if Judaism is perceived as no more than a cultural identity or intellectualized under the rubric of a Diaspora multiculturalism that seeks “to create a community of communities and a culture of cultures,” as the editors of *Insider/Outsider* put it.

In Israel, Jewishness permeates everyday life. How one defines oneself – as a Jew, Israeli, human being, or professional person – does not alter the context of this daily life, which is life in a Jewish state whose symbols, ceremonies, aspirations, and commonality are rooted in palpable Jewish experience. In Israel one may be Jewish in spite of oneself. This is its saving grace, and the meaning of the Jewish state. It cements the Jewish identity and, like the strictest Orthodoxy, ensures its survival.

JEWISH IMMIGRANT AID SERVICES OF CANADA (JIAS), one of the oldest chartered nonprofit settlement organizations in Canada. For over 80 years JIAS has been the voice of the Canadian Jewish community on issues of integration and resettlement in Canada and has helped in the settlement of hundreds of thousands of Jewish immigrants to Canada. The agency continues to champion the cause of new immigrants and refugees by positively influencing Ca-

nadian immigration laws, policies, and practices, and by ensuring that they are humane in nature and responsive to the needs of new arrivals to Canada. JIAS also assists individuals to navigate the Canadian immigration process and works for the integration of Jewish immigrants into local communities across Canada.

JIAS was founded in the wake of World War I. In 1919, the Canadian Jewish Congress (CJC) was formed. At its plenary, the delegates, moved by the plight of Jewish refugees in Europe, called upon the government of Canada to maintain an open door policy and reject restrictionist pressure to exclude a “whole race or nation.” But CJC was weak, and its leaders, including Lyon *Cohen and Sam *Jacobs, realized that a separate organization was needed to deal with issues of immigration. The Jewish Immigrant Aid Society was established in 1920, and incorporated in 1922. JIAS opened an office in Montreal and was soon lobbying government on immigration issues and assisting individual Jews in dealing with immigration authorities. As a community agency, JIAS also became the center for the sponsorship and transportation of immigrants, challenging the fixers, agents, and lawyers who sought to profit from the immigration process.

JIAS was arguably the most active Jewish communal organization in the 1920s. In its early years JIAS was active in assisting Russian refugees trapped in Romania and immigrants detained at Canadian ports of arrival. While the agency suffered under the weight of serious financial strains and an increasingly restrictionist Canadian immigration policy, it succeeded in intervening with the government to allow the arrival of several thousand Jewish refugees and the release of most of the detainees. While its financial situation remained difficult, JIAS soon earned the respect of the government and the Jewish community for its efforts on behalf of Jewish immigration.

With the Nazi seizure of power in Germany, the situation for European Jewry became more precarious. CJC was revitalized and, in partnership with JIAS, turned to the challenge of dealing with the policies of a government determined to restrict immigration and that of Jews in particular. Jewish delegations met with government immigration authorities, but their lobbying efforts were rebuffed. Only after World War II and a reopening of immigration was JIAS able to turn its efforts to the rescue, resettlement, and rehabilitation of Jews. Notably, in the aftermath of the Holocaust, JIAS, together with the Jewish Labour Committee and the Canadian Jewish Congress, successfully lobbied the government to allow the entry of orphans and workers. In all, some 35,000 Holocaust survivors and their children settled in Canada between 1947 and 1957. Servicing so large and sudden an inflow of immigrants strained JIAS resources and led to a duplication of services by other Jewish agencies. In 1947 Joseph *Kage was appointed executive national vice president and, with Canada now a major immigrant-receiving country, Kage was instrumental in restructuring JIAS so as to assist in the immigration and integration of Holocaust survivors and other Jewish immigrants.

In 1956 JIAS was in the lead helping with the resettlement of Hungarian Jews fleeing the failed Hungarian Revolution, and the wave of Jewish immigrants arriving in Canada from North Africa. In 1968, a purge of “Zionist elements” in Poland led to the emigration of most of the Jewish community. JIAS helped in the resettlement of some in Canada. JIAS’ largest postwar challenge was assisting in the transport and integration of Soviet Jewry. Beginning in the 1970s, their migration to Canada grew until it reached some 30,000 arrivals. JIAS has helped not only with their resettlement but with their integration into Jewish life. Since the 1980s, JIAS has helped in the resettlement of Jews from Syria, the former Yugoslavia, and Argentina.

By the beginning of the 21st century there was an organizational restructuring of JIAS, so that there are three separate Jewish immigrant service provider agencies. Jewish Immigrant Aid Services of Canada, funded by UIA, with its head office located in Toronto assists Jewish newcomers to immigrate and settle in Canada. It also provides information and support to Jewish Family Service agencies serving new immigrants across the country. JIAS Toronto, located in Toronto, is a charitable organization (under the laws of Canada) funded jointly by the Jewish community and federal and provincial governments. Serving more than half of all Jewish immigrants arriving in Canada, JIAS Toronto assists newcomers to become part of the Toronto community. Similarly JIAS Montreal, located in Montreal, is also a charitable organization (under the laws of Quebec), funded jointly by the Jewish community and government to assist new immigrants to become part of the Montreal/Quebec society.

[Frank Bialystok (2nd ed.)]

JEWISH LABOR COMMITTEE, a Jewish communal agency linking the organized Jewish community and the Labor movement. Representatives from a number of trade unions and other organizations traditionally identified with the Jewish labor movement assembled at a conference in New York City in 1934 and launched the Jewish Labor Committee, charging it with the following tasks: (1) support of Jewish labor institutions in European countries; (2) assistance to the anti-Hitler underground movement; (3) aid to the victims of Nazism; (4) cooperation with American organized labor in fighting anti-democratic forces; (5) combating antisemitism and other evil effects of Fascism and Nazism upon American life.

During the first five years of its existence, the Jewish Labor Committee concentrated mainly on supporting anti-Nazi labor forces in Europe and sending relief to Jewish labor institutions there, especially those maintained by the *Jewish Labor Bund and the “left” Labor Zionist movement (the “right” Labor Zionists organized their own relief and rehabilitation committee), and encouraging and strengthening U.S. and Canadian opposition to the Nazis, in the labor and democratic left, as well as in the community-at-large. At the same time it organized mass anti-Nazi demonstrations; in 1936, with the American Jewish Congress, through the Joint

Boycott Council, it conducted a boycott on German goods and services.

After the outbreak of World War II, the emphasis shifted to efforts to save Jewish cultural and political figures, as well as Jewish and non-Jewish labor and socialist leaders facing certain death at the hands of the Nazis. With powerful help from the American Federation of Labor, the Committee succeeded in bringing over a thousand such individuals to the United States, or to temporary shelter elsewhere.

Beginning in the late 1930s, the Committee became increasingly concerned with Jewish defense work and community relations in the United States. It was one of the four founders of the short-lived General Jewish Council and helped organize the National Community Relations Advisory Council [re-named the National Jewish Community Relations Advisory Council in 1968 and Jewish Council for Public Affairs in the 1997], of which it is still an active member. Unlike other community relations agencies, the JLC has its sphere of action clearly delineated: it strives to represent Jewish interests in the American labor movement, and labor interests in the Jewish community. Working with the American Federation of Labor–Congress of Industrial Organization since the federation's formation in 1956, the JLC works with and has the support of a wide range of unions and their associated organizations, locally as well as nationally. Comprising diverse organizations and a variety of ideological groups, the Committee has been guided in its work by pragmatic policies rather than by a clear Jewish philosophy. While Bundist influence was significant in the organization, particularly in the early period, the organization has had a positive position on the State of Israel since 1948.

The JLC is a member of the Conference of Presidents of Major Jewish Organizations, the Memorial Foundation for Jewish Culture, as well as the Conference on Jewish Material Claims Against Germany and the National Conference on Soviet Jewry. The JLC holds both national conventions of delegates and committee meetings of its executive committee and national board. In 2005, the organization, with headquarters in New York, had staffed field offices in Boston, New York, Philadelphia, Detroit and Los Angeles, and lay-led groups in Washington, D.C.; Cleveland, Ohio; Phoenix, Arizona; and Seattle, Washington. Its funding comes from independent campaigns, contributions from trade unions, allocations from welfare funds, and grants from foundations. Originally a body of organizations and unions, the Committee has also had individual members since the mid-1960s.

JEWISH LANGUAGES.

History

The linguistic history of the Jews accurately mirrors their dispersion over the world. The prehistory of the Hebrews took place in the Aramaic sphere, and the impact of that tongue on the first "Jewish" language, Hebrew, was so strong that it has been called a fusion of Canaanite and Aramaic. The lifespan of Hebrew covers roughly the period of the political independence of those speaking it. It does not, however, coincide with the era in which they inhabited Erez Israel because, some centuries before the Christian era, Hebrew had started giving way to Aramaic, which had been spreading over wide areas of western Asia, including Palestine. Different branches developed which had their parallels in Judeo-Aramaic (i.e., the Jewish forms of Aramaic). Both language groups survived until the seventh century C.E. Two branches, however, are still alive – in far developed forms – the larger one in a few small communities in Kurdistan, Christian as well as Jewish. The language of the Jews there is known as Jabali.

Long before the end of the Second Temple period the Greek Koinē had been adopted by the Jews of the Hellenistic world – in the Balkans, Cyprus, southern Italy (Graecia Magna), the Black Sea region, and Egypt. The other great language of European classical antiquity, Latin, played a certain role in Jewish linguistic history. However, Blondheim's theory according to which the Judeo-Romance languages sprang from a common Judeo-Latin stock proved to be farfetched. The Jewish communities of Late Antiquity were Greek-speaking even after they settled in Rome and in the western provinces of the Empire. The crystallization of a specifically Jewish counterpart of the various Romance vulgars goes back to a far later period. Moreover not every scholar of Jewish languages would add the determiner "Judeo-" to the Romance languages spoken by Medieval Jews in the Romance country. The Old French used by Rashi in 11th-century France and the Old Spanish used by Iberian Jews before the expulsion do not seem to have differed from the languages of the Christian surroundings. Indeed, the use of Hebrew letters in order to commit the Romance vernaculars to writ does not constitute a sufficient criterion to consider a Jewish variety of Romance vulgar (*la'az*) a full-fledged Judeo-Language.

To the east of the Romance territory, Germanic has given rise to only one Jewish language: *Yiddish. This originated among Romance-speaking Jews who either immigrated to a German-speaking region or else inhabited a Romance area that had been taken over by a Germanic tribe. Nothing is known about the Jews in Germany between Roman times and the Carolingian period, so that Jewish history there effectively begins in the ninth century C.E. It is thought that *Yiddish did not evolve as a separate language before the 13th century, that is, at the stage of Middle German. The process of koineization that led to the crystallization of Proto-Yiddish is bound up with the beginning of the emigration of the German Jews eastwards, following the growing hostility of the Gentile surroundings. The components of this koiné are not always easy

to identify. Several theories compete. The first one sees Rhineland as the cradle of Yiddish. The second one associates the nucleus of Yiddish with Central dialects like Thuringian or East-Franconian. Besides, some features from such Southern dialects as Bavarian are recognizable in the koiné on which Yiddish is based.

A small element of Romance origin still survives in present-day Yiddish. But the most important external influence exerted upon Yiddish was that of the Slavic languages. When Yiddish- or Proto-Yiddish- speaking Jews still lived in Germany, they may have been in contact with Czech. Later on, after their migration to Eastern Central and Eastern Europe, Polish played a crucial role in the process of Slavization of Yiddish. Before WW I, Yiddish-speaking Jews comprised three-quarters of the entire Jewish people.

In the seventh century C.E. an important language change took place in the Orient. When the Arabs conquered much of western Asia, their new religion, Islam, was adopted by the inhabitants of wide areas in that region, and, with it, the Arabic language and alphabet. The Jews, too, adopted Arabic, although they did not abandon their religion and their alphabet. Their tongue, Judeo-Arabic, was like Arabic spoken over far too wide an area to remain uniform. Its most divergent branches are the Maghrebi ones of northwestern Africa, parallels to the local dialects of the Muslims (see *Judeo-Arabic/Judeo-Berber).

However, not all the areas that embraced Islam adopted Arabic. The most important exception was Persia, although here the Arabic alphabet was taken over, many Persian scholars and poets writing in Arabic and the Persian language itself being strongly influenced by that tongue. Thus, in the Iranian lands the Jews developed a Jewish variety of Farsi usually called *Judeo-Persian; in Central Asia, the Jews of Uzbekistan developed a Jewish variety of Tadjik; in Daghestan, the Dagh Churfut ("Mountain Jews") speak *Judeo-Tatic, an archaic variety of Farsi enriched with Hebrew words. In the southern Caucasus, in Georgia, we come across a non-Semitic, non-Indo-European Jewish language, Judeo-Georgian, which hardly differs from the Georgian spoken by the non-Jewish surrounding. To the west, there arose another language of neither Semitic nor Indo-European stock: Crimchak, spoken by the Crimean Jews and belonging to the Turkic language family (see *Krimchaks).

The languages of the Karaites form a group of their own; Karay in Lithuania and Poland; and Chaltay in the Crimea. Both of the latter go back to a common origin (in the Turkic family), but diverged widely.

The inroads of secularization in the 19th and 20th centuries have affected all the Jewish languages. Since statistics are not available, we do not know to what extent the number of speakers in each group has decreased.

Causes

New languages have perpetually come into being in the course of history. The causes are common to all linguistic development: migration, involving separation from the original lan-

guage territory; divergence, through the growth of different political centers; and intermingling of populations, through conquest or pacific interpenetration. Of these causes only one has played a role in Jewish linguistic history – migration, i.e., the dispersion of the Jews over Asia and Europe during the centuries around the beginning of the Christian era. However, once the dispersion had, in the main, been completed, migration only rarely accounted for linguistic evolution, as in the development of East Yiddish and Judeo-Spanish. Language is a function of group life. The Jewish group is a creation of the Jewish religion, and that this is true of the past is beyond doubt. Hence the Jewish languages are creations of the group-forming factor of religion. This basic cause is reflected in features common to all of them: (1) they contain an element of Hebrew and Aramaic; (2) they are written in the Hebrew alphabet; and (3) the origin of their respective spelling systems is talmudic orthography.

Name

The correct designation for the various linguistic structures of the Jews is Jewish languages. All other names make no sense in modern linguistic scholarship; the terms "dialects," "jargons," "mixed languages," "corrupted languages," "Creolized languages," "Judeo-...", etc. are to be rejected for the following reasons. Jewish languages are not jargons, because a jargon is the restricted vocabulary used by those engaged in a particular occupation, but does not form the general vehicle of communication among its members. The Jewish languages are not more mixed than many other tongues, ranging from English and German to Persian and Turkish. They are not corruptions, because they obviously fulfill their function. The individuals within the Jewish groups in question communicate with each other through the medium of the particular language. When a linguistic structure fulfills this function, it is not "corrupted." There is much less justification for calling these Jewish tongues "Creolized" languages than there would be for classifying French or Spanish as "Creolized Latin."

The Hebrew and Aramaic Elements

In the Jewish languages, Hebrew and Aramaic elements form part of an uninterrupted development in speech and writing: they represent the present linguistic stage of a continuous process, previous stages of which crystallized into the languages of the Bible, Mishnah, *Gemara*, Midrash, liturgy, etc. In other words, they are connected with the sphere of religion, Judaism. This does not mean that the words in question are exclusively religious terms. Only a small minority can be so described. Moreover, these elements are to be found not only in the vocabularies of the Jewish languages, but also in their morphology and syntax, which cannot have any connection with religion.

Script

The Hebrew script is not included as part of the Hebrew and Aramaic elements, because language and script are independent of each other. Thus the script constitutes evidence of its

own for the religious basis of the Jewish languages. It is a fact that the alphabet in which a language is written is, broadly speaking, decided by the religion of those speaking it. Maltese, for example, materially an Arabic language, is written in Latin characters because the Maltese are a Christian people belonging to the Western (Roman Catholic) Church. The same is true of the Croats, who, therefore, use the Latin alphabet for Croatian; while Serbian, for all practical purposes the exact same language, is written in the Cyrillic characters employed by the Eastern (Orthodox) Churches of Europe (apart from the Greek). The Arabic alphabet is used by the most heterogeneous languages and language-families (Persian, Urdu, Kurdish, Ottoman Turkish, Chagatay, Indonesian, Malay, Swahili, Malayalam, Hausa, Nubian, Fula, etc.), because those speaking them are Muslims. Cases where the religious factor has not been the historical cause for the use of a script appear to be very rare.

[Solomon Asher Birnbaum / Cyril Aslanov (2nd ed.)]

JEWISH LEGION, military formation of Jewish volunteers in World War I who fought in the British army for the liberation of Erez Israel from Turkish rule. When Turkey entered the war on the side of the Central Powers (Oct. 30, 1914), two different concepts of the Jewish role in the world conflict emerged among Zionists. In November David *Ben-Gurion and Yizḥak *Ben-Zvi submitted to the Turkish commander in Jerusalem a proposal to raise a Jewish Legion attached to the Turkish army. The project was approved by the Turkish military council in Jerusalem, and the first 40 Jewish volunteers began their training. Authorization, however, was soon canceled by Jamal Pasha, the supreme commander of the Turkish army in Palestine and Syria, who instigated severe persecutions of Zionists. Many were imprisoned; others, among them Ben-Zvi and Ben-Gurion, were deported. Of the 18,000 Jewish deportees and refugees, some 12,000 landed in Alexandria, Egypt.

The Zion Mule Corps

Vladimir Jabotinsky advanced a diametrically opposite concept. In December 1914, while a roving correspondent of a Moscow daily, he arrived in Alexandria and expounded to the Palestine deportees the idea of raising a Jewish Legion to fight with the Allies in order to liberate Palestine from the Turks. Joseph *Trumpeldor, one of the deportees, fully embraced Jabotinsky's idea. It was also endorsed by the major-

ity of the Palestine Refugees' Committee. On March 22, 1915, about half of the 200 people present signed a seven-line resolution in Hebrew "to form a Jewish Legion and propose to England its utilization in Palestine." Within a few days about 500 enlisted, and training started immediately. Nonetheless, General Maxwell, commander of the British force in Egypt, told a delegation of the volunteers that an offensive on the Palestine front was doubtful and that regulations prohibited the admission of foreign nationals into the British army. He suggested that the volunteers serve as a detachment for mule transport on some other sector of the Turkish front. His proposal was rejected by most members of the Legion Committee, including Jabotinsky, but Trumpeldor's position was that any anti-Turkish front would "lead to Zion."

Together with Lieutenant Colonel John Henry *Patterson, delegated by the British military authorities, Trumpeldor succeeded in forming the 650-strong Zion Mule Corps; 562 of its members were sent to the Gallipoli front under Patterson, with Trumpeldor as second in command. The Zion Mule Corps' services were highly appreciated by General Ian Hamilton, commander of the Gallipoli Expeditionary Force, who wrote to Jabotinsky on Nov. 17, 1915: "The men have done extremely well, working their mules calmly under heavy shell and rifle fire, and thus showing a more difficult type of bravery than the men in the front line who had the excitement of combat to keep them going." The unit, however, posed severe disciplinary problems, and punishments such as public flogging had to be meted out. In addition, the differences between the idealists and those who had joined only in order to escape from the misery of the refugee camps resulted in clashes between Trumpeldor, the "Russian", and the Sephardi Jews. It was Patterson's goodwill and patience, coupled with Trumpeldor's devotion, that held the unit together throughout the Gallipoli campaign. Six legionnaires were killed, 25 were wounded, three received military honors, and one was decorated with a Distinguished Conduct Medal. The Corps was disbanded after the withdrawal of the ill-fated Gallipoli expedition early in 1916.

The Royal Fusiliers

Pursuing his project of a Jewish Legion for the Palestine front, throughout 1915–16 Jabotinsky had been trying unsuccessfully to win understanding and support in Rome (together with Pinḥas *Rutenberg), Paris, and London. In London he was ignored by the War Office and met with active disapproval on the part of Jewish assimilationist circles, as well as most of the Zionist leadership; an exception was Chaim *Weizmann, who promised assistance. Among the few active supporters were also Meir *Grossman, Jacob *Landau, Joseph *Cowen, and Montagu *Eder. In 1915–17 Grossman was publishing a Yiddish biweekly, *Di Tribune*, in Copenhagen and promoted the Legion idea. Zionists in Russia, which Jabotinsky visited in 1915, were almost unanimous in their condemnation of the idea. Appeals to the Jewish youth in London's East End were frustrated by apathy, which frequently erupted into open hostility, fanned by anarchist and communist émigrés. Pub-

lic meetings, at which Jabotinsky, Trumpeldor, and Grossman tried to plead the Legion cause, were the scene of obstruction and abuse. Only about 300 signatures of men of military age were collected under the declaration: "Should the Government create a Jewish Regiment to be utilized exclusively for Home Defense or for operation on the Palestine front – I undertake to join such a Regiment."

At the end of 1916, when 120 former Zion Mule Corps soldiers, who again volunteered into the British army, had arrived in London, the tide began to turn. Assigned as a unit to the 20th London Battalion, they formed the nucleus of the Legion. Jabotinsky enlisted as a private in this battalion and, together with Trumpeldor, submitted to the British government a petition proposing the formation of a Jewish Legion for Palestine. Public opinion in Britain had been roused against the Russian Jews as "foreigners" who were earning their bread in the country and contributing nothing toward its defense. It was in this atmosphere that the British government decided to enlist the "foreigners." This decision, coupled with the revolution in Russia, weakened opposition to the Legion idea among Whitechapel's Jews. In July 1917, Patterson was ordered by the War Office to commence the organization of the Jewish regiment, and Jabotinsky was put in charge of recruitment. On August 23, when the British cabinet was already preparing the Balfour Declaration, the formation of a Jewish regiment was officially announced in the *London Gazette*. Initially, assurances were given that the unit would be unequivocally Jewish in character and would be provided with Jewish emblems. The efforts of anti-Zionist Jews, however, succeeded in frustrating these achievements, and the unit was designated as the "38th Battalion of the Royal Fusiliers." It was promised that when it had proved its mettle in action, it would be granted both a Jewish name and Jewish insignia. About 50% of the battalion were British-born or naturalized; the remainder included members of the former Zion Mule Corps, a large number of Russian Jews, and a curious mélange from several Allied and neutral countries. On Feb. 2, 1918, the battalion marched through the City of London with fixed bayonets, a special privilege granted by the Lord Mayor, and on the following day it embarked for Egypt, where it continued training. Late in April it was joined by the 39th Battalion of Royal Fusiliers, over 50% of which was American volunteers, commanded by Lieutenant Colonel Eliezer Margolin.

Transferred to Palestine in June 1918, the 38th Battalion was assigned front positions some 20 miles north of Jerusalem on the hills facing a Turkish encampment. There, Patterson later related, it "at once assumed a vigorous offensive policy" that "thoroughly scared the Turks, so much so that they never once attempted to come anywhere near our front." Afterward, the battalion spent seven weeks in the tropical Jordan Valley, where malaria took a heavy toll of the unit. Of 800 men, no more than 150, and only half of its 30 officers, remained in active service at the end of this ordeal. Over 20 were killed, wounded, or captured; the rest were stricken with malaria, of whom more than 30 died. On September 19, the 38th Battalion

and two companies of Margolin's 39th Battalion were assigned the task of capturing both sides of the Umm Shart ford across the Jordan River and advancing east beyond the Jordan. After the first attempt to gain the ford failed, Jabotinsky's company "was ordered to make the second attempt ... and achieve the purpose at all costs." The operation was successful. Margolin's two companies of American volunteers crossed the Jordan and marched to al Ṣalt, where Margolin was appointed commander of the town. General Chaytor, commander of Allenby's right wing, told the Legionnaires: "By forcing the Jordan fords you helped in no small measure to win the great victory gained at Damascus."

The Palestinian Volunteers

Early in 1918 a strong movement for the formation of a Palestinian Jewish Legion developed among the 18,000–20,000 Jews in the part of the country (Jerusalem, Tel Aviv, Jaffa, the settlements in Judea) by then occupied by the British army. The British forces were received as deliverers, and the call for volunteers, first made by General Hill, the British commander of the Jaffa-Tel Aviv area, received a response among the workers, the students of the Hebrew High School in Tel Aviv, and a few farmers, led by Moshe Smilansky. At a conference held in Jaffa on Feb. 15–16, 1918, the volunteers drafted their aims and chose a committee, and a mass meeting in Rehovot, attended by about 1,000 volunteers, was addressed by Jabotinsky. These volunteers encountered great difficulties in their desire to enlist, as there was much hesitation on the part of the British, and some influential circles in the *yishuv* also opposed the idea. In 1920 the British foreign office related that the initiative had come from "the Jewish population itself, rather than from any desire or even encouragement from the British authorities." A petition with several hundred signatures was submitted to the military authorities in January 1918 but the authorization for recruitment was not given before May. According to the Foreign Office, "practically the whole available Jewish youth, whatever their national status," had enlisted. The Jaffa area supplied 457 recruits (10% of its Jewish population) and Jerusalem supplied 350. Within the first few weeks, more than 1,000 men volunteered. Most of them were Ottoman subjects and, if captured by the Turks, would have been hanged. With the advancement of Allenby's army, more volunteers were coming forward from the areas in the north; permission to join was given to 92 Turkish Jews who were prisoners of war in Egypt. In August a recruiting office was opened in Cairo and attracted some 200 volunteers. Many Palestinian recruits were highly educated, with a thorough knowledge of the country; they spoke Arabic fluently, and were expert shots and horsemen. They were formed into the 40th Battalion of Royal Fusiliers, under the command of Colonel M.F. Scott, and were sent for training to the Tell al Kabir camp in Egypt, where they were kept for an unduly long time, so that they missed the decisive offensive in September 1918.

The American Volunteers

In America, enlisting for the Jewish Legion started practically

in 1917, after the publication of the Balfour Declaration. Most of the volunteers were aliens or holders of first naturalization papers and thus not eligible for the U.S. draft; some American-born citizens below the draft age of 21 deliberately misstated their age to join the Legion, and those eligible for the U.S. draft received transfers to the Legion-in-formation without difficulty. One of the prime movers of the idea was the Po'alei Zion Party led by Ben-Gurion and Ben-Zvi. The Zionist Organization of America, which had been opposed to the Legion project, now decided – largely due to Justice Brandeis' influence – that “the Jewish Legion is one of the most important factors in the realization of the aims of political Zionism.” In February 1918 the first group of 150 volunteers left New York for military training in Windsor, Canada; further contingents were leaving the United States at regular intervals of three weeks, and a total of 2,700 were ultimately accepted. Among them were some 200 Palestinian exiles in America, and 150 more were drawn from the local pioneer groups; Ben-Gurion and Ben-Zvi themselves enlisted on April 26, 1918. When a train carrying a group of volunteers passed through Bangor, Maine, it was flagged down to enable a crowd lining the tracks to see and embrace the Legionnaires. The volunteers wore the *Magen David* on their khaki uniforms and had their own blue-white banner with the inscription, “If I forget thee, O Jerusalem.” In August 1918 they sailed with the Canadians for further training, first to Camp Eggbuckland in Plymouth, England, and then to the Tell-al-Kabir camp in Egypt, where they joined the 39th Battalion. There was considerable dissatisfaction among them with the protracted training period, which lasted so long that the American volunteers did not see action in Palestine, for they arrived when the war had already ended.

After the War

When the armistice with Turkey was signed on October 31, the entire territory of Palestine was liberated from the Turks. The battered remnant of Patterson's 38th Battalion (predominantly “English” with an admixture of “Americans”) took over the “line of communication” duty. It was soon joined by Margolin's 39th Battalion (mostly American volunteers). Early in December 1918, the 40th Battalion (Palestinians only), which was deliberately kept in reserve in Egypt – allegedly for further training – also succeeded in being transferred to Palestine. By the beginning of 1919, the three battalions numbered over 5,000 men, about one-sixth of the entire British army of occupation, one-quarter of the infantry, and almost one-half of the white infantry regiments. While a large portion of the British contingent was transferred to Syria and southern Anatolia and another was sent to Egypt in the spring of 1919, the Legion's strength had increased threefold from 1918, when only 1,500 were able to actually take part in the military operations. The major component constituted the volunteers from the United States (34%), followed by the Palestinians (30%), volunteers from England (28%), Canada (6%), Argentina (1%), and Turkish war prisoners (1%). After the victorious end of the Palestine campaign, the name “Royal Fusiliers”

was changed, as promised, to “Judean Regiment”; its insignia became a *menorah* with the Hebrew word “*kadimah*” (before that, all officers and men at the front wore a *Magen David* on their sleeves: one battalion red, the second blue, and the third violet). The actual strength of the Legion could have been more than twice as large. Applications for enlistment came from several countries; 1,500 volunteered in Salonika; in Italy, 2,000 Transylvanian prisoners of war applied to be enlisted; the “Mountain Jews” from Dagestan in the Caucasus sent emissaries offering all their youth. The number of those who had actually enlisted – in addition to the 5,000 in active service – by Armistice Day (Nov. 11, 1918) was 5,600 (mostly Americans, with a sprinkling from Canada); however, it was not considered worthwhile to send them to the Palestine front. They were demobilized directly from the original Legion base at Plymouth, where they had gone through their training under the command of Colonel J.S. Miller, a Jew.

At an early stage, there was a definite plan to convert the Legion into a full-fledged brigade, comprising four battalions. Sir Nevil Maccready, adjutant general of the British War Office, told Patterson that his aim was the formation of a complete Jewish Brigade. Allenby opposed such a project at the outset but later wrote to Patterson that he would “form a provisional Brigade of the Jewish battalions until a complete Jewish Brigade can be formed.” This plan was never fulfilled. “Instead,” relates Patterson, “we were pushed around from brigade to brigade and from division to division; in the space of three months we found ourselves attached to not less than 12 different formations of the British Army.” British military authorities openly discriminated against the Legion. Jerusalem was placed out of bounds for Jewish soldiers. They were often so molested by the military police that, according to Patterson, the only way they could enjoy a peaceful walk outside the camp limits was by removing their distinctive badges. There were cases of disobedience and mutiny among the frustrated Legionnaires. 55 Canadian and U.S. volunteers in the 38th Battalion were sentenced by court martial to various terms of penal servitude, ranging from seven years downward (they were amnestied four months later), and 44 Legionnaires of the 39th Battalion received sentences of two to seven years (for most of them the term was reduced to one year; actually, they served six months).

The Demobilization

As long as the Legion remained in full strength, occupying strategically crucial positions, there was peace and order in the country. The situation began to deteriorate with the progressive whittling down of the Judeans. The anti-Zionist military administration was eager to promote their demobilization at the earliest possible date. When the formation of a standing army of occupation was announced, several hundred overseas (predominantly American) volunteers offered their services, but British headquarters sabotaged their reenlistment. Jabotinsky, who was urging the volunteers to stay on and who had himself registered for further service, was forcibly demobi-

lized in August 1919. Largely as a result of this official attitude, an ever-growing eagerness to be discharged and repatriated emerged among the American volunteers. Appeals to hold on in order to safeguard the security of the Palestine Jewish community were of little avail: very few believed that there was any real danger of Arab violence. A marked tendency toward speedy repatriation also developed among the Legionnaires from England. There were among them both volunteers and conscripts; the latter were predominantly tailors from the London East End, and only a few of them held Zionist convictions. The “tailors,” however, remained in Palestine longer than any other group of overseas Jewish soldiers and were among the last to be discharged. The urge for demobilization that developed among the Palestinian volunteers was largely motivated by eagerness to resume work or to join a *kevuṣah*. Yet several hundred of them clung to the belief that the upbuilding of Erez Israel required protection, and they fought strenuously against demobilization. When their period of engagement ended, they contrived to have it extended for three months and then for another three months. Nonetheless, the whittling down of the Legion proceeded. In the second part of 1919, only two of the three battalions were still in existence, then one (the Palestinian unit), and then only part of that. In the spring of 1920 a mere 300 to 400 men remained.

During the Riots of 1920–21

In 1920, when the first anti-Jewish riots broke out in Jerusalem, the remnants of the Jewish Legion were confined to barracks. Two companies of a self-defense corps (Haganah), organized by Jabotinsky and trained by demobilized Legionnaires, marched to the Jaffa and Damascus Gates of the Old City of Jerusalem, but found them closed and guarded by British troops. Jabotinsky and 19 others, mostly former Legionnaires, were subsequently arrested and sentenced to penal servitude by a British military tribunal (they were later amnestied). Sir Herbert *Samuel, the first high commissioner of Palestine, created a mixed Arab-Jewish militia, based on voluntary enlistment. The last 400 Palestinian Legionnaires joined this formation, and Margolin was appointed commander of its Jewish half. On May 1, 1921, when anti-Jewish riots broke out in Jaffa, leaving behind 13 massacred Jews, Margolin entered the town with his men fully armed, without asking permission from the military authorities. Accused of breach of discipline, he was forced to resign.

In 1921 the Executive of the World Zionist Organization requested of the British government that the 38th–40th Royal Fusiliers (“Judeans”), as established in 1917–18, should “continue to form part of the British Forces in Palestine”; recruiting of Jewish volunteers should be reinstated until their number reached at least one-half of the proposed total strength (7,700) of the British garrison in Palestine. This demand was subsequently endorsed by the Zionist General Council and by the 12th Zionist Congress at Carlsbad (August 1921). The initial program of the *Revisionist movement, voted upon at its first world conference (April 1925), included as its central plank the

demand that the Jewish regiment be “restored as an integral part of the British garrison in Palestine.” At the 14th Zionist Congress (Vienna, August 1925), however, Weizmann reversed his previous stand and declared that under the existing circumstances the demand for a Jewish Legion was “not only useless but even harmful.” Faced with the decision of the Mandatory administration to set up an Arab military unit for service in western Palestine and a Circassian one to serve on the borders of Transjordan, in October 1926 the *Vaad Le’ummi urged the administration to establish a purely Jewish military unit within the Transjordan Frontier Force. The demand remained unheeded, though individual Jews were accepted for service in it. The Palestine government promised to facilitate the settlement of demobilized Legionnaires on government land, but the promise was not honored, as areas offered by the government were not suitable for agricultural settlement. In 1932, 60 former Judeans from the United States, Canada, and Argentina founded a *moshav ovdim*, *Aviḥayil, north of Netanyah. Continuing the tradition of the Legion, 65 men, out of its population of 345, volunteered for military service during World War II. In 1961 a cultural center (Legion’s House) and Museum of the Legion was inaugurated there.

[Joseph B. Schechtman]

History

A definitive history of the Jewish Legion was published in Hebrew by Yigal Elam, under the title *Ha-Gedudim ha-Ivri'im be-Milḥemet ha-Olam ha-Rishonah* (1973).

Gilmor, *War and Hope – A History of the Jewish Legion* (1969); Dinur, Haganah, 1 (1954–56), 425–532, 641–4, 748–68, 868–90, and indexes; *Me-Hayyei Y. Trumpeldor, Kovez Mikhtavim ve-Kitei Reshimot* (1945), 115–314, 355–60; E. Golomb, *Hevyon Oz*, 1 (1953), 141–202, 353–70; D. Ever hadani, *Am be-Milḥamto* (1948), 7–181; Mifletet Po’alei Zion be-E.I., *Al ha-Saf* (1918); M. Smilansky, *Be-Zel ha-Pardesim* (1952).

JEWISH MESSENGER, THE, New York weekly. Issued first in 1857 as a semimonthly produced by the pupils of the school conducted by the Rev. S.M. *Isaacs, *The Jewish Messenger* soon became a weekly, edited by Isaacs till his death in 1878. It took a traditionalist, anti-Reform position in religious matters and identified itself closely with the Board of Delegates of American Israelites. Before and during the Civil War it was strongly Abolitionist in viewpoint. On the death of S.M. Isaacs, the paper was taken over by his son Myer S. *Isaacs. Under his direction, its outlook became more favorable to Reform Judaism. *The Jewish Messenger* was absorbed by the *American Hebrew* in 1903.

JEWISH MORNING JOURNAL (Yid. *Der Morgen Zhornal*), U.S. Yiddish daily. Founded in 1901 by the politically conservative and religiously Orthodox publisher Jacob Saphirstein, and edited by Peter Wiernik, the *Morning Journal* was for years New York City’s only morning Yiddish paper. This

resulted in it doing a highly profitable business in want ads. It was also unique in its support of the Republican Party. In 1916 it reached its peak circulation of 111,000. The same year Jacob *Fishman was appointed editor, and under his direction (1916–38) the paper took on a more liberal, intellectual tone. Among some of the prominent writers on Fishman's staff were the critics Bernard *Gorin and A. *Mukdoni, the poet Jacob *Glatstein, city editor Jacob *Magidov, and Gedaliah *Bublick, formerly editor of the *Yidishes Tagblat*. In common with the rest of the Yiddish press, the *Morning Journal's* readership declined steadily after World War I. In 1928 it absorbed the *Yidishes Tagblat* and in 1953 it merged with the *Jewish Day. In 1970 the circulation of *The Day-Morning Journal* was put at 50,000. It ceased publication in 1971.

JEWISH MUSEUM. The Jewish Museum in New York City is widely admired for its exhibitions and educational programs that inspire people of all backgrounds; it is the preeminent United States institution of its kind exploring 4,000 years of art and Jewish culture.

The Jewish Museum was established on January 20, 1904, when Judge Mayer Sulzberger donated 26 objects to The Jewish Theological Seminary of America as the core of a museum collection. The museum was the first institution of its kind in the United States and one of the very few in the world when it was established. The incorporation of several major collections – the H. Ephraim and Mordecai Benguiat Collection of objects from Smyrna, Turkey in 1924; the Danzig (then Germany and now Gdansk, Poland) Jewish Community Collection in 1939; the Benjamin and Rose Mintz Collection from Warsaw, Poland, in 1947; and ceremonial objects, looted by the Nazis and recovered by the United States Military Government in Germany, presented to the museum by the Jewish Cultural Reconstruction in 1952 – transformed the original holdings into a significant museum collection. A collection of numismatics was established through gifts of Samuel J. Friedenberg and his son, Daniel, for over 50 years beginning in 1948. Dr. Harry G. Friedman was a major donor, from 1941 until his death in 1965, who purchased for the museum over several thousand works in all media from Europe, North Africa, and the Middle East.

The collection was installed in the new Jacob H. Schiff Library of The Jewish Theological Seminary as The Museum of Jewish Ceremonial Objects in 1931. In 1944, Frieda Schiff Warburg gave the seminary her family residence at 1109 Fifth Avenue and 92nd Street to house the Museum. The Jewish Museum opened at its current location in the former Warburg mansion in 1947.

This led to a new emphasis on temporary exhibitions of objects of various media. A fine arts collection was developed that encompassed not only paintings and sculpture, but also prints, photographs, and drawings. In 1956, the Tobe Pascher

Workshop was established for the creation of Jewish ceremonial art in a modern style. In the late 1960s, The Jewish Museum began collecting and exhibiting archaeological artifacts from Israel and the ancient Jewish Diaspora. There was an added impetus in the 1980s to collect the works of Israeli artists and contemporary art by American artists, spurred by research related to several exhibitions. Established in 1981, the National Jewish Archive of Broadcasting has since become the largest and most comprehensive body of television and radio programs on 20th-century Jewish culture in the United States. In the late 1990s, collecting contemporary ceremonial art and photography received greater emphasis.

The museum reopened in dramatically expanded and renovated quarters at the Fifth Avenue mansion in 1993. In 2005 The Jewish Museum maintained an important collection of 25,000 objects – paintings, sculpture, works on paper, photographs, archeological artifacts, ceremonial objects, decorative arts, and broadcast media.

Culture and Continuity: The Jewish Journey, originally mounted in 1993 and reinstalled in two stages in 2000 and 2003, explores the dynamic interaction between continuity and change within Jewish culture and history that was important for Jewish survival over 4,000 years. Highlights include paintings by such artists as Max *Weber, Moritz Daniel *Oppenheim, Isidor *Kaufmann, Morris *Louis, Ken Apteckar, and Deborah Kass; prints by Ben *Shahn and El *Lisitzky; and sculptures by Chana *Orloff and Hannah Wilke. Displays of Torah ornaments and Hanukkah lamps allow the viewer to compare artistic styles from different parts of the world. Leonard Baskin's 1977 sculpture, *The Altar* (based on the biblical story of the sacrifice of Isaac), considered the artist's greatest carving, is on view as is George *Segal's 1982 work, *The Holocaust*. Featured television excerpts range from David Ben-Gurion declaring the independence of the State of Israel in 1948 to Abraham Joshua Heschel and Martin Luther King, Jr. in Alabama in 1965 to Adam *Sandler singing part of *The Hanukkah Song*.

The Jewish Museum has been host to some groundbreaking temporary exhibitions. Among them were *Artists of the New York School: Second Generation* (1957), featuring works by 23 emerging artists, including Helen *Frankenthaler, Jasper Johns, Robert Rauschenberg, and George Segal; *Primary Structures* (1966), the landmark exhibition that defined the Minimalist movement; *Lower East Side: Portal to American Life* (1966); *Masada: Struggle for Freedom* (1967); *Software* (1970), a pioneering exhibition about information technology and interactive art; *The Precious Legacy: Judaic Treasures from the Czechoslovak State Collections* (1984) which brought to the United States treasures from the State Jewish Museum in Prague, the bulk of which had been confiscated from the Jews of Bohemia and Moravia by the Nazis for a proposed museum to an extinct race; *Gardens and Ghettos: The Art of Jewish Life in Italy* (1986); *The Dreyfus Affair: Art, Truth and Justice* (1987), an acclaimed exhibition integrating the visual arts and social history; *Too Jewish? Challenging Traditional Identities*

(1996), which explored how ethnic consciousness had a profound effect on many Jewish artists; *Marc Chagall: 1907–1917* (1996); *An Expressionist in Paris: The Paintings of Chaim Soutine* (1998); *New York: Capital of Photography* (2002); *Schoenberg, Kandinsky, and the Blue Rider* (2003); *Modigliani: Beyond the Myth* (2004); *The Power of Conversation: Jewish Women and Their Salons* (2005); and *Sarah Bernhardt: The Art of High Drama* (2005).

[Jewish Museum Staff (2nd ed.)]

JEWISH NATIONAL FUND (Heb. קְרֵן הַיְשׁוּעָה לְיִשְׂרָאֵל – (ק"ק"ל), **Keren Kayemeth Leisrael**), the land purchase and development fund of the Zionist Organization. It was founded on December 29, 1901 at the Fifth Zionist Congress at Basle, which resolved: "The JNF shall be the eternal possession of the Jewish people. Its funds shall not be used except for the purchase of lands in Palestine and Syria." The Hebrew name comes from the talmudic dictum about good deeds "the fruits of which a man enjoys in this world, while the capital abides (*ha-keren kayyemet*) for him in the world to come" (Pe'ah 1:1). A land fund was first suggested by Judah *Alkalai in 1847. It was proposed by Hermann *Schapira at the *Katowice Conference in 1884 and again at the First Zionist Congress in 1897. Schapira based his idea of public ownership of land on the biblical injunction "The land shall not be sold forever for the land is Mine," and on the institution of the Jubilee Year, which stipulates that all holdings which have changed hands revert to their original owners in the 50th year (Lev. 25:10, 23–24).

JNF leasehold contracts run for 49 years and can be prolonged by the lessee or his heirs as long as they serve the purpose specified; holdings may neither be united with other domains nor divided among several heirs; the lessee needs the lessor's consent if he wishes to use his holding for a purpose other than that stipulated in the contract; on rural tracts, the lessee must cultivate his own soil; ground rents are to be kept as low as possible, whether the land serves farming, industry, housing, or other purposes.

Early Activities

Between 1902 and 1907, the JNF had its administration in Vienna, where Johann *Kremenezki created a worldwide organization for fund raising by means of JNF stamps, the Blue Box, a small tin collection box, and the Golden Book for honoring a person by donating a large contribution in his name which is inscribed in the book, which soon became popular Zionist symbols. In 1907 the head office was transferred to Cologne, with Max *Bodenheimer as chairman of the board of directors, and the JNF was incorporated in London as an "association limited by guarantee." The first tract of land acquired was that of Kefar Hittim in Lower Galilee (1904), followed in 1908 by Ben Shemen and Huldah in Judea, and Kinneret-Deganyah near Lake Kinneret. The JNF made its first experiments in tree planting in 1908 with the Herzl Forest, financed by its Olive Tree Fund. It aided urban development by long-term loans to the founders of Tel Aviv and by acquiring the building of the *Bezalel Art School in Jerusalem, land

for the Herzlia High School in Tel Aviv, and the *Technion in Haifa. It also financed the activities of the Palestine Office of the Zionist Organization. In 1914, with the outbreak of World War I, the head office was transferred to The Hague in neutral Holland under Nehemia de *Lieme. In July 1920, the London Conference of the Zionist Organization, which established an additional fund, the *Keren Hayesod, declared the JNF to be "the instrument of the urban and rural land policy of the Jewish people," devoted exclusively to land acquisition and improvement.

Under the Mandate

The first large settlement area was acquired in 1921 in the Jezreel Valley ("The Emek"), increasing JNF land property from 4,000 to almost 15,000 acres (16,000 to 59,000 dunams) after a violent debate with Zionist leaders who preferred the acquisition of urban holdings. In 1922, the head office was transferred to Jerusalem, and Menahem *Ussishkin became its president. During the later 1920s, it acquired the Emek Hefer, creating a continuous chain of Jewish settlement in the coastal plain, with the Plain of Zebulun as hinterland to Haifa port. The Arab riots of 1936–39, and the Peel Commission's partition plan (1937–38) lent increased political importance to JNF land acquisition. Jewish holdings and "*stockade and watchtower" settlements were rapidly extended to new regions (Beth-Shean and Huleh valleys, Manasseh Hills, Western Galilee, southern Coastal Plain). During World War II, the JNF sought intricate legal expedients to overcome the severe restrictions imposed in February 1940 by the land regulations issued under the British White Paper, and stepped up land acquisition even further. Opening up the northern Negev for Jewish settlement and strengthening positions in Galilee, it brought its possessions in 1947 to 234,000 acres (936,000 dunams), more than half the total Jewish holdings in Palestine. After Ussishkin's death in 1941, a committee of three – Berl *Katzenelson, Rabbi Meir *Bar-Ilan (Berlin), and Abraham *Granott – headed the JNF board of directors. In 1945, Granott took over as chairman and on his death in 1960 was succeeded by Jacob *Tsur.

In Independent Israel

With the founding of the State of Israel, the emphasis of JNF activity shifted from land purchase to land improvement and development as well as afforestation, headed by Joseph *Weitz from the early 1920s. Besides swamp drainage (Jezreel Valley, Hefer and Zebulun plains, etc.), much was done for hill reclamation through stone clearing and terracing, principally along the 1949 armistice borders, opening new areas for settlement. In the Negev contour-line plowing, planting of shelter belts around fields, and leveling of eroded terrain have won new areas for farming. The JNF's most important swamp draining enterprise was that of the Huleh Valley (1952–58). By 1967 the JNF had reclaimed a total of 120,000 acres (480,000 dunams) and another 125,000 acres (500,000 dunams) approximately through swamp draining, together totaling about a quarter of the 1.05 million acres of cultivated land inside Israel's 1966 borders. Up to 1947, the JNF planted 5,280,000 forest trees on

approximately 5,000 acres. Annual planting equaled or exceeded these figures since 1948, bringing the total in 1967 to more than 90,000,000 trees and 100,000 acres, in addition to thousands of acres of degenerated natural brush rehabilitated by adequate care. The JNF serves tourism by installing camping and picnic grounds in its forests, and participates in landscaping national parks and nature reserves. As part of its reclamation and afforestation programs, it has paved over c. 1200 miles (2,000 kilometers) of roads, particularly in border areas. It also constructs storage dams to make storm-flood water available for irrigation. The JNF has aided immigrant absorption by setting up "work villages" and providing work for newcomers, especially during periods of unemployment. Since the mid-1950s, the JNF has embarked on comprehensive regional development projects (the Adullam, Adoraim, Yatir regions in southern Judea, the Modi'in region in northern Judea, the Iron Hills and Mount Gilboa in Samaria, the Chorazim region north of Lake Kinneret, and, from 1963, Central Galilee bordering on Lebanon). In the 1960s, the JNF started building *Naḥal outpost villages in reclaimed border areas.

In July, 1960, the Knesset passed a fundamental law on Israel land holdings, followed by the Israel Land Administration Law. An agreement between the JNF and the government, signed on August 1, 1960, set up an Israel Land Authority for the administration of all government and JNF holdings, with a council of seven government and six JNF representatives, and a Land Development Authority functioning in the JNF framework, with seven JNF and six government representatives on its council. The latter is responsible for land development and afforestation of all public land. In 1967, JNF land holdings totaled more than 637,000 acres (2,549,000 dunams), including 332,500 acres (1,330,000 dunams) which the JNF acquired from the state after 1948. In 1967, the government approved a concession to the JNF for the development of state domain land totaling 125,000 acres (500,000 dunams).

The JNF derives its budget largely from contributions from world Jewry, which in the 1960s averaged IL24,000,000 per year; the balance of the IL56,000,000 budget comes from leasehold fees and other sources. It operates in approximately 40 countries. It engages in Zionist education in schools and youth movements both in Israel and abroad; a JNF teachers' council is active in Israel, as well as in a number of Diaspora countries. The JNF is headed by a board of directors consisting of 26 members elected by the Zionist General Council and up to three governors nominated by the Zionist Executive.

After the Six-Day War the JNF reclaimed 11,000 acres of land and helped establish new settlements in both the Rafiah area and the Aravah. In afforestation work, JNF trees reached the 100 million mark. During the 1980s a quarter of the JNF's trees were planted in the Negev, bringing its afforested area up to 45,000 acres. The JNF built dams and reservoirs to combat Israel's chronic water shortage, and in the 1990s started to rehabilitate the Hula Valley in order to prevent the flow of pollutants to the Sea of Galilee and restore the fertility of agricul-

tural lands. It also provided the infrastructure for housing the massive waves of immigrants during the decade.

In the hundred years since it was founded, the JNF has planted more than 240 million trees, built more than 180 dams and reservoirs, developed more than 250,000 acres of land, and created more than 1,000 parks throughout Israel. It ensured that Israel was the only nation in the world to end the 20th century with more trees than it had at the beginning.

JEWISH PUBLICATION SOCIETY, THE (JPS), a non-profit, non-denominational association established to disseminate works of Jewish content in English, founded on June 3, 1888, as a membership organization and publisher. Two earlier attempts to establish an "American Jewish Publication Society" failed: the first founded by Isaac *Leeser in Philadelphia in 1845 and discontinued in 1851; the second founded by a New York group and lasting from 1873 to 1875. The third such body, The Jewish Publication Society of America, succeeded and has been in continuous operation since 1888. The organizational meeting was called in Philadelphia, then still considered the cultural capital of the United States, by Rabbi Joseph *Krauskopf and Dr. Solomon *Solis-Cohen. In the 1990s, the Society dropped "of America" from its name, and broadened its original mission statement to encompass secular as well as religious works, for non-Jewish as well as Jewish readers throughout the world.

The Society functions through a board of trustees, whose membership reflects geographic, professional, and religious diversity. The first president was Morris Newburger; his successors have included leaders in business, law, education, and medicine. The editorial committee, consisting of scholars and learned laypeople and originally known as the publication committee, advises the professional staff and board of trustees on acquisitions. Committee chairs have included Mayer *Sulzberger, Cyrus *Adler, Jacob R. *Marcus, Gerson D. Cohen, Yosef Yerushalmi, and Chaim Potok. From 1919 to 1950 the Society also operated a Hebrew-English press, established through the gifts of Jacob H. *Schiff.

The Society's first book was Lady Kate Magnus's *Outline of Jewish History* (1890). In 1891 it began publication of Graetz's six volume *History of the Jews* (1891–98). Among the many authors on the Society's list are Solomon Schechter, Louis Ginzberg (*Legends of the Jews*, 7 vols., 1909–38), S.M. Dubnow, Leo Baeck, Cecil Roth, Jacob R. Marcus, Louis Finkelstein, S.W. Baron, Martin Buber, Mordecai Kaplan, S.Y. Agnon, Joseph Soloveitchik, Yehudah Amichai, and Avivah Zornberg.

JPS has published works covering every aspect of Jewish life. During its first few decades when it was the only North American publisher of Jewish books in English, the Society's list spanned the full spectrum of Jewish literature: history, Bible, rabbinics, textual commentary, biography and memoir, belles-lettres, politics and social science, folklore, intellectual history, contemporary thought, and children's books. After other presses – organizational, commercial, academic, and Jewish – began publishing Judaica in English beginning in the 1920s and expanding after World War II, the Society began to focus its publishing program. In recent times, it has moved away from scholarly monographs, belles-lettres, and overly commercial books, concentrating on Bible and commentary, classic texts in translation, reference and resources for adult Jewish learners and lay readers, and children's books for middle readers.

The Society has also published a number of series: the Schiff Classics (9 titles, 16 volumes); histories of Jewish communities (8 volumes); critical Bible commentaries (9 volumes, ongoing); and a series of biographies for young people. *The American Jewish Yearbook* (AJYB) was initiated by JPS in 1899, and was later published jointly by the Society and the American Jewish Committee from 1908 to 1995, after which AJC continued as sole publisher. Occasionally the Society publishes works jointly with other institutions and publishers. The annual number of volumes has varied between two and eighteen; in recent years, its annual list has averaged twelve new publications per year.

Among the Society's major undertakings have been two translations of the Hebrew Bible in English. The first translation, adapted from the Protestant Revised Standard Version in light of Jewish interpretive tradition, appeared in 1917 as *The Holy Scriptures*; a Hebrew–English edition appeared in 1955. That same year the Society began a second translation, this time based on the Hebrew Masoretic text rather than on earlier English translations, with the twin goals of incorporating the latest scientific research in philology, Comparative Semitics, and archaeology; and of making the Bible more comprehensible to modern readers. First appearing in three separate volumes – *Torah* (1962), *Prophets* (1978), and *Writings* (1982), the final one-volume *JPS TANAKH* was published in 1985. A Hebrew–English edition was published in 1999.

The Society's first editor was Henrietta *Szold, although she was never accorded the formal title. From 1892 to 1916, she served as secretary of the publication committee, and also performed the functions of editor, proofreader, sometime translator, and production manager. Later editors have included Isaac *Husik (1924–39); Solomon *Grayzel (1939–66); Chaim Potok (1966–74); and Ellen Frankel from 1981.

BIBLIOGRAPHY: AJYB (1899–), report of JPS; *Jewish Publication Society of America, 25th Anniversary* (1913); J. Bloch, *Of Making Many Books* (1953); Grayzel, in: JPS, *Bookmark*, 10 no. 4 (1963), 4–7; J. Sarna, *JPS: The Americanization of Jewish Culture, 1888–1988*.

JEWISH QUARTER. The existence of separate Jewish streets or quarters (Lat. Platea Judaeorum; Sp. Judería; Fr. Juiverie; It. Giudecca; Eng. Jewry; Ger. Judengasse, Pol. Ulica Żydowska) originated in the voluntary preference of the Jewish community to live in a way that would enable it to keep to its laws and customs and defend itself from hostile attacks if need be. The nature and character of Jewish life, entailing observance of the precepts, the necessity of maintaining a quorum for prayers, a cemetery, and *mikveh*, the need for providing mutual assistance as a persecuted and degraded minority as well as insecurity from attack by strangers and enemies – all combined to make Jews concentrate in a particular street or neighborhood in all the countries of Europe. At times, non-Jews also lived in the Jewish district, while Jews also lived outside it. These quarters were generally closed off by a wall and gates. Occasionally, they were even in the center of the city or in its main street. According to Benjamin of *Tudela, the Jews of *Constantinople had their separate quarter at the end of the 12th century. In several Spanish cities, such as *Toledo, *Seville, and *Saragossa, the Jewish quarter constituted a separate townlet, surrounded by a wall and even fortified. The right to live in a separate quarter surrounded by a wall was granted to the Jews of *Speyer in 1084 by the bishop, at the express request of the Jews themselves; similar privileges permitting fortified “Jewish quarters” were granted to Jews in Christian Spain during the Reconquest. This changed as the status of the Jews deteriorated and the image of the Jew was even more viciously blackened.

Establishment of the Ghetto

From the beginning of the 16th century, the name given in Italy to the Jewish quarter, which was separated and closed off by law from the other parts of the town by a wall and gates, was “*ghetto.” From then on, the word ghetto has also been used to designate Jewish quarters which were officially set aside in other countries. Figuratively and erroneously, this name has also been regularly applied to quarters, neighborhoods, and areas throughout the Diaspora, which became places of residence for numerous Jews.

The root of the word ghetto has been sought in Hebrew (*get* – “bill of divorcement”), in Yiddish, Latin, Greek, and Gothic. There is, however, no doubt that the origin is *geto nuovo* (“the new foundry”), the site of the first separate Jewish quarter in *Venice from 1516. The Jews of Italy occasionally referred to the ghetto in their dialect as *get*, but the usual appellation was “courtyard.” In the towns of southern France under papal rule where ghettos were established after the Italian model, they were named *carrière* in French and *mesillah* (“road”) in Hebrew.

The idea of the ghetto in its restricted sense resulted from the tendency implanted in Christianity from the fourth to fifth centuries to isolate the Jews and humiliate them. It first appears in the West in the proceedings of the Church *councils of the Middle Ages, especially at the third Lateran council (1179), where Jews and Christians were prohibited from liv-

ing together. Initially, this prohibition was enforced in a few places, as in London from 1276. From the beginning of the 15th century it was included – in conjunction with the prohibition on moneylending against interest and the order concerning the Jewish *badge – in the anti-Jewish program of the Christian religious orders, especially in Italy; it was thus applied, for example, in Bologna from 1417 and in Turin from 1425. However, the ghetto did not appear as a permanent institution until its introduction in Venice in 1516. Then Jews who sought refuge in the city, from which they had been banned over a lengthy period, were admitted on condition that they live in the *geto nuovo* quarter, an isolated island among the canals of Venice which could easily be completely cut off from its surroundings by a wall, gates, and drawbridges. In 1541, the *geto vecchio* (“the old foundry”) quarter was added for the integration of Jews from Oriental countries, and the whole area was from then on known as the “ghetto.”

In 1555, Pope Paul *IV in his bull *Cum nimis absurdum* ordered that the anti-Jewish program of the monks should be applied in Rome and the Papal States (see also Bulls, *papal). On July 26, 1555, which fell on the Ninth of Av, the Jews of Rome were compelled to move to the new quarter on the left bank of the Tiber River; the area was immediately surrounded by a wall to isolate it from the city. After a short while, this innovation was also introduced in the other towns of the Papal States, and from 1562 the new institution became known, even officially, by the name of the Jewish quarter of Venice – “ghetto.”

Pressure was also exerted on the other rulers of the Italian states to introduce the ghetto (in Tuscany in 1570–71; in Padua in 1601–03; in Verona in 1599; in the duchy of Mantua in 1612; etc.) so that the ghetto institution was finally established throughout Italy, with the exception of *Leghorn.

The ghetto introduced by Christians was accompanied by imposition of the badge, compulsory attendance of Jews at conversionary sermons, restriction of the professions they were authorized to practice, and other humiliations. Generally, the authorities did not allow extension of the ghetto boundaries, even when the population had increased; the ghettos were therefore crowded and unsanitary. For the same reason, additional stories were continually built onto the existing houses and the buildings were in constant danger of collapse; misfortunes occasionally occurred, and when fires broke out, severe damage was caused to the ghettos.

According to papal decree, when a ghetto was established it was to have one gate only. In fact, however, it usually had two or three gates. These were guarded by Christian gatekeepers, whose salaries the Jews were compelled to pay; they were closed at night and on all important Christian festivals, including the Easter period, from the Thursday until the Sunday of Holy Week. At night and during Christian festivals, no Jew was permitted to leave the ghetto. In several smaller localities, all the houses in the ghetto were connected to each other by passages and doors to facilitate movement in times of emergency. Non-Jewish landlords were not permitted

to raise the rents, and the rights of Jewish tenants were protected by *hazakah* (“established claim”), an ancient institution recognized by Italian law (under the name *jus gazaga*). Although Jews were not allowed to acquire the houses in which they lived, the right of *hazakah* could be sold, purchased, or bequeathed, as though it were an actual property right. The ghetto, as all Jewish quarters in all periods, was an almost autonomous town and the institutions of the Jewish community operated within its boundaries; at times, the communal life of the ghetto was better organized than that of the Christian town in which it was situated. There were even Jews who did not ignore the positive aspects of the ghetto. In Verona and Mantua it was customary to commemorate the anniversary of its establishment by a special prayer in the synagogue.

Toward the close of the 18th century, the severity of the ghetto regime was somewhat alleviated in several of the Italian states. In 1796 the armies of the French Republic tore down the ghetto walls of all the Italian towns. However, the ghettos were reestablished after the fall of Napoleon in 1815, but not with the same measure of stringency. The ghetto walls were only rebuilt in Rome, Modena, and a few other towns. With the consolidation of the liberal regime in Italy during the 19th century, the ghetto was again abolished, although there were still some occasional periods of reaction here and there. The gates of the Rome ghetto were destroyed in 1848; the right of residence of the Jews was, however, officially restricted to a special quarter until the fall of the papal regime in 1870. Outside Italy, the ghetto – in the original sense of the Italian term – was only enforced in the provinces under papal rule in southern France, in several German towns, and in a few places in eastern Europe. In detail, there were always considerable differences between them.

For Holocaust period, see *Ghetto.

[Cecil Roth]

In Muslim Countries

Well before the advent of *Islam the preference of religious and ethnic groups to live together in their own streets was commonly known in the Orient. These streets finally became distinct quarters. The quarters in which the majority of the population was Jewish were usually given the name of *hārat al-yahūd*, which literally translated from the Arabic means “Jewish Quarter,” or simply *al-hāra*, as in *Tunisia, *Algeria, and *Tripolitania. In *Persia they were known as *maḥallat al-Yahūd*, in the Balkans as *maḥalla*, while in *Yemen they were named *qāʿat al-Yahūd*; the term *masbata* (namely, the place where those who observe the Sabbath live) was also employed. The Jews themselves sometimes called their quarters *shekhunat ha-Yehudim*, the Hebrew equivalent of the various above-mentioned names. Barring a few exceptions, the Jewish quarters of Muslim countries had nothing in common with the ghettos of Christian countries. These quarters were not surrounded by a wall and did not have a gate which was closed at night, on the Sabbath, or on the Festivals. When such a wall existed, it was often because the whole town was divided

into several separate quarters which were partitioned off from each other by a wall which contained one or two gates; the gates were closed from dusk to dawn for security reasons or upon the order of the police. In the *Ottoman Empire the Jews were not compelled to live separately from the other inhabitants. The sole exception to this practice was in Yemen. Even when there were Jewish quarters, some Jewish families lived alone or in groups in the other quarters, dispersed among the Muslims. As early as the Middle Ages many Jews of *Baghdad lived in houses situated beyond the two quarters of the town where most of them had their dwellings. During the 12th century most of the Jews of *Fez lived in the north of the city, in a quarter which had been given to them when the town was founded at the beginning of the ninth century. There were, however, many others who lived in the center of the town, well inside the Muslim quarter. Those whose houses were directly adjacent to the Great Mosque were dispossessed when it was decided to enlarge the structure. They were indemnified for their losses and left the site. During the era of its splendor, *Kairouan had a Jewish quarter, but it appears to have been a common occurrence for Jews to live outside this quarter. In Muslim *Spain the Jews often lived among the other inhabitants. The fortified Jewish quarters did not become the general rule until the country was reconquered by the Christian Spaniards. During that period, however, there were also Muslims who lived in quarters with a Jewish majority. Muslims were never forbidden to live in the Jewish quarters. Any difficulties, rather, arose from rabbinic laws which disapproved of the sale or rental of dwellings in the Jewish street to a gentile and granted priority rights over these dwellings to any Jew from the neighborhood. On the other hand, private houses belonging to Jews and Christians were to be found in all the quarters of the town. For this reason the Muslim religious authorities would not allow these houses to be higher than the neighboring mosque or the houses of the "believers."

In Muslim countries, the Covenant of *Omar did not stipulate the physical separation of the Jews from the "faithful" (the Muslims), neither in towns nor in villages. On the contrary, in order to propagate their religion, the early Muslim theologians recommended that the "unbelievers" (Jews and Christians) be encouraged to live in all the quarters of the large towns. They said that they would thus become acquainted with the religion of the Prophet Muhammad by observing the lives of its believers at every moment. There were only a few Muslim jurists of the later periods who advised that non-Muslims be confined to separate quarters. Until the beginning of the 15th century, however, the orthodox Muslim rulers or their representatives had never officially prescribed the establishment of special quarters for the members of other religions. It was only in *Egypt, and then only for a short while at the beginning of the 11th century, that the Fatimid caliph al-Ḥākim, who had suddenly become insane, confined all the Jews of *Cairo to the Bāb-Zuwayla quarter. In the eastern part of the Muslim world, in the countries dominated by the Shi'ites (non-orthodox Muslims), the Jew were compelled to live in special

quarters which resembled the European ghettos. In Persia, as in *Afghanistan and the surrounding regions, the Jewish quarter was not only isolated behind a high wall but its inhabitants were also not authorized to own any shops beyond it. The Jews of Persia remained in their ghettos until recently, even though there was no law which forced them to do so.

In *Morocco the term mellah, which designates the Jewish quarter, was originally the name of the site to the south of Fez-Jaïd on which the first special quarter for Jews in Morocco was actually established (probably in 1438). This mellah was and has since remained a special quarter surrounded by a wall and distinctly separated from the surrounding quarters. The segregation of all the Jews of Fez into its area was ordered. It was thus a ghetto, the first and, for a long time, the only one in Morocco. It was not until 1557 that a second ghetto was established in the country, in *Marrakesh. Approximately 125 years later a third mellah was created in *Meknès, and in 1808 four new ghettos were simultaneously erected in the principal ports of Morocco, in *Tetuán, *Salé, *Rabat, and *Mogador. The sharif granted the Jews of these towns one year in which they could sell their houses in the different quarters and build new ones in the mellah. The only exception made was for some 20 eminent families of Mogador, who continued to occupy their luxurious houses in the same residential quarter as that of the Muslim and Christian notables. In 1808 the Jews of Tetuán were compelled to move into a mellah because the sultan wished to erect a mosque in a street which was inhabited by them. At the same time, the sultan exploited the proximity of the Jewish houses to the mosque of Salé as a pretext to order the Jews of this town to live in a special quarter. The Jews of Morocco considered the creation of each mellah as a catastrophe; they therefore hastily abandoned it as soon as they had the means or the possibility. From the beginning of the 20th century, only the poor Jews continued to live in the mellahs. The name mellah was at first given, after Fez, to the few ghettos mentioned above and then to a few other quarters in other towns which were inhabited by the Jewish masses. The mellah of *Casablanca, for example, did not have the characteristics of a ghetto. The decline of Muslim power generally resulted in the impoverishment of the Jewish communities, whose quarters reflected this situation. These quarters were often overpopulated. These ghettos, however, always contained a few well-kept streets with very large and beautiful houses, the properties of wealthy citizens, as was the case in Fez and Marrakesh.

In 1728 and 1731 the Ottoman authorities ordered the Jews of *Istanbul (Constantinople) to leave the quarters where they lived, under the pretext that their presence in these quarters profaned the sanctity of the neighboring mosques; but the Jews were not enclosed in a ghetto, they merely went to live in other quarters. In 1679 the Jews of Yemen were expelled from the towns in which they had lived until then, and they were only authorized to establish themselves outside these cities, in special quarters. In the Islamic countries the two holy cities Mecca and *Medina, as also the whole of the *Hejaz, are

prohibited to non-Muslims. Between the 13th and 15th centuries, for example, such Maghreb towns as Bougie, Gafsa, and Tebessa were, with intermissions, forbidden to non-Muslims. From the ninth century until the present the town of Moulay Idris, in Morocco, could not be visited by the “unbelievers.” Kairouan, once a great Jewish center, remained out of bounds to non-Muslims from the 13th century until the end of the 19th century. On the other hand, some towns were exclusively, or in their majority, inhabited by Jews. This was the case with Lucena in Muslim Spain, Aghmat-Ailan (near Marrakesh) in Morocco, and Tamentit in the Algerian Sahara until 1492. Many other examples exist.

JEWISH QUARTERLY REVIEW (JQR), learned journal published first in London and subsequently in Philadelphia. The *Jewish Quarterly Review* was established in 1889 by I. Abrahams and C.G. Montefiore, who acted as editors. The detailed editorial work was undertaken by Abrahams; Montefiore bore the expenses. Modeled on the scholarly journals published in Europe, the JQR attracted articles from the great savants of the day, and much original scholarship (e.g., Schechter's *genizah* discoveries) first appeared in its pages. But the JQR differed by giving space to more ephemeral topics, as well as including theological controversies. At the beginning of volume 20, the editors announced their intention to discontinue the “quarterly,” stating that their hope that it “might be the medium for a living theology” had been disappointed, and that Abrahams was finding his editorial duties too onerous.

Cyrus *Adler, president of the newly established Dropsie College in Philadelphia, offered to take over the JQR, and a new series, published by Dropsie College and edited by Cyrus Adler and Solomon *Schechter, began in July 1910. At the outset of their regime, the editors observed that “the fact that the *Review* has passed from the hands of private individuals into those of a learned institution with a strict academic character... will necessitate the exclusion of all matter not falling within the province of Jewish history, literature, philology and archaeology...” Volumes 1–6 of the new series were edited by Adler and Schechter and volumes 7–30 by Adler alone. A.A. Neuman and Solomon *Zeitlin edited volumes 31–57, while

Zeitlin was sole editor from volume 58 onward. After the discovery of the Dead Sea Scrolls, a considerable proportion of the space of the JQR was devoted to Zeitlin's views as to their authenticity.

The *Jewish Quarterly Review* is now published at the University of Pennsylvania for its Center for Advanced Judaic Studies. Considered to be the oldest English-language journal in the field of Jewish studies, the JQR strives to preserve the attention to textual detail that has always been characteristic of the journal, while attempting to reach a wider and more diverse audience.

[Sefton D. Temkin]

JEWISH SOCIAL DEMOCRATIC PARTY (or *żps*, the initials of the party's name in Polish), party existing in Galicia from 1905 to 1920, the equivalent there of the *Bund. In the early 1890s attempts were made in Galicia to establish a Jewish workers' party to be federatively joined to Polish and Ukrainian workers' parties. The reorganization of the Austrian Social Democratic Party on a federative basis in 1897, as well as the stress on the Polish character of the Social Democratic Party of Galicia (from 1897 the Polish Social Democratic Party of Galicia and of Cieszyn (Teschen) Silesia, the PPSD), gave rise to a movement among Jews for an autonomous Jewish workers' organization within the PPSD. The party leadership, and particularly its Jewish assimilationist members like H. *Diamond and Emil Haecker, opposed this project. However, the chauvinist Polish note of this opposition, the practical needs of organization and propaganda among Jewish workers, and the example of the Bund in Russia (which refused to extend direct help) led to the establishment of an initiating committee in Lvov in 1902, and of an organizing committee (August 1904) for the establishment of an independent Jewish Social Democratic Party. In October 1904 the PPSD convention, 40% of whose delegates were Jewish, rejected the idea. Subsequently, in a manifesto issued on May 1, 1905, the establishment of a Jewish Social Democratic Party (JSDP) was announced. The manifesto rejected the discriminatory Polonization tendency and pointed out that Jews, like the other nationalities, needed their own workers' organization. The leaders of the party included H. Grossman, its principal theoretician (after World War I an economist and communist in Germany), K. *Einaugler, R. Birnbaum, L. Landau, S. Blum, A. Mosler, L. Feiner, H. Schreiber, and J. *Bross, and later also J. Kissman. Membership in the party was collective through the trade unions, while intellectuals joined individually. There were 2,500 organized workers in the party in 1905, 3,500 in 1908, and 4,200 in 1910. The PPSD opposed the JSDP as “separationist” and “Zionist,” although the JSDP contended against the *Po'alei Zion. All the same, in 1906 the PPSD had to establish its own Jewish section. The leaders of the Austrian Social Democrats also denigrated the JSDP. Nathan *Birnbaum supported the party in Jewish circles. The second JSDP convention, held in Lemberg

in May 1906, put forward the claim for “national-cultural autonomy,” rejecting the slogan of “national curiae” in the electoral system. The establishment of the party and its national program prompted O. *Bauer to formulate his assimilationist conception in his *Die Nationalitaetenfrage und die Sozialdemokratie* (“The Problem of Nationalities and Social Democracy,” 1907). The fourth party convention in Lemberg, October 1910, demanded the establishment of state schools providing instruction in Yiddish, as well as recognition of Yiddish as a spoken language in the population census. It was supported in this matter by the Po’alei Zion. The Jewish section of the PPSD subsequently altered its policy and approved the principle of recognition of the Jewish nation (1907). In May 1911 an amalgamation agreement was signed between the JSDF and the section, represented by N. Korkeš, M. Zeterbaum, D. Salamander, and R. Buber. In view of the elections to the Austrian parliament, the PPSD agreed to amalgamation, but carried through omission of the article regarding national autonomy from the platform of the united party. The capitulation of the JSDF on this point aroused strong opposition from within. The demand was raised again only in 1917. Meanwhile the struggle of the PPSD for hegemony provoked new dissensions and a rift (1913). The Jewish Social Democrats in Bukovina, headed by J. Pistiner, joined the JSDF. At the end of World War I the party cooperated with other Jewish parties in the “national councils.” In 1920 the JSDF joined the Polish Bund.

[Moshe Mishkinsky]

JEWISH SOCIALIST VERBAND, U.S. organization devoted to the promotion of democratic socialism and the strengthening of Jewish group life on the basis of modern Yiddish culture. The Jewish Socialist Verband [JSV] was founded in 1921 by a minority group of Yiddish-speaking activists who split off from the leftist Jewish Socialist Federation (itself founded in 1912), when the latter voted in a hotly contested decision to sever its relationship with the Socialist Party, and a majority of the JSF embraced Communism (in 1922 it was absorbed into what became the Communist Party USA).

Small numerically, and led by such individuals as *Jewish Daily Forward* editor Abraham Cahan and the Workmen’s Circle’s Nathan Chanan, it had a close identification with the Jewish leaders of the needle-trade unions, the Workmen’s Circle, and the *Forward*. The JSV struggled to spread the gospel of social democracy and trade unionism, and combat Communist influence in the Jewish community.

The support it received from the *Forward* and the Workmen’s Circle enhanced its status in the Jewish community and enabled it to play a role in the field of Yiddish culture. The JSV published *Der Wecker*, beginning in September 1922

and continuing until the 1980s, and operated Farlag Wecker, a publishing house.

While the JSV’s approach to Jewish problems reflected the Bundist training and orientation of its leaders, as with much of the mainstream of the American Jewish labor movement, it gradually veered away from Bundist anti-Zionism; at a national convention in November 1967, for instance, it formally adopted a pro-Israel declaration.

The JSV was among the organizers of the Jewish Labor Committee and the World Congress for Jewish Culture. In the early 1970s, as part of a reorganization of socialist parties and non-party organizations in the United States, the JSV combined with a small group, the Union of Democratic Socialists, forming the JSV-UDS, which went on to merge with the Socialist Party of America in 1972. With the Socialist Party’s disintegration a year later, the JSV began a relationship with the fervently anti-Communist Social Democrats, USA.

[Charles Bezalel Sherman / Arieh Lebowitz (2nd ed.)]

JEWISH SOCIALIST WORKERS’ PARTY (also known as **Sejmists**, or **J.S.** = Jewish Socialists; Rus. abbrev., **serp** = Sotsialisticheskaya Yevreyskaya Rabochaya Partiya), party based on a synthesis of national and socialist ideas, founded at a conference in Kiev in April 1906. Its leaders were M. *Silberfarb, *Ben-Adir, M. *Ratner, N. *Shtib, J. Novakovski, I. *Yefroykin, Z.H. *Kalmanovich, M. Levkovski, V. Fabrikant, and B. Friedland. The party published an organ in Yiddish, *Folks-shtime* (1907), a collection, *Shtime* (2 vols., 1908), and a social-political organ in Russian, *Serp* (“Sickle,” 1907–08). The party evolved from differences within the *Po’alei Zion movement and was the successor of the *Vozrozhdeniye group. In general matters the Jewish Socialist Workers’ Party regarded itself as part of the international socialist movement, but claimed that the manifold national pressures from all sides confronted the Jewish proletariat and the Jewish people in general first and foremost with the national question. According to the party platform, autonomy was an essential principle for the multinational states. Hence the party demanded the assurance of a special legal status for the Jews as a national group to be embodied in an extraterritorial “national personal autonomy” (*Autonomism). The theoretical foundation for this claim also rested on the vital continuity of the historic trend in Jewry to preserve its specific forms of existence and creativity in all spheres of life.

The Sejmists derived their ideological inspiration from C. *Zhitlovsky, who had already advocated socialist autonomism in the 1890s. They were also influenced by S. *Dubnow and trends in Austrian Social Democracy. The party claimed

that the basis for Jewish autonomy should be the Jewish community, and its supreme institution, to be endowed with binding authority, a Jewish national Sejm (parliament). The Sejm would represent the collective affairs of the whole of Jewry. Its functions, whose details would be defined by a Jewish constituent assembly, would include cultural and educational matters, medical and health concerns, mutual aid, assistance in work, agricultural training, statistics, organization of emigration, and the settlement of emigrants in a “free, unsettled territory.” The acquisition of autonomy was a prerequisite for a Jewish territorial center to be established “anywhere” which would have an impact on all aspects of Jewish life in the Diaspora. But the realization of the project was put off to “some time” in the distant future.

Unlike the *Zionist Socialist Workers’ Party (ss) and the Po’alei Zion, the Jewish Socialist Workers’ Party did not adhere to Marxism. On the agrarian question the party identified with the Social Revolutionaries who were also more inclined than the Social Democrats to support federalist and autonomist solutions to the national question. The Jewish Socialist Workers’ Party was represented at the congresses of the Socialist International as a subsection of the Social Revolutionaries. In conjunction with the Social Revolutionaries, the Sejmists convened a conference of national socialist parties in Russia to discuss the national question in 1907.

The main stronghold of the Jewish Socialist Workers’ Party was in the Ukraine, with some adherents in Lithuania and none at all in Poland. It took part in the revolutionary events of 1905–06: in the series of strikes and in the “self-defense” organized by socialist parties against pogroms. In Yekaterinoslav (*Dnepropetrovsk) the Sejmists established a Jewish Council of workers’ delegates. They upheld the principle of inter-party solidarity within united trade unions. The party boycotted the elections for the First *Duma, while for the second it nominated candidates in six districts (Zhitlovsky was the candidate for Vitebsk). In other places it supported the Social Revolutionaries in preference to the Social Democrats, and the *Bund in preference to the Zionist Socialist Workers’ Party.

During the reaction that followed the 1905 Revolution the party became limited mainly to intelligentsia circles. Some of its active members went over to the Folkists (Folkspartei) while the SERP group, headed by Zhitlovsky, was also active in the United States. In 1909 it united with Po’alei Zion and the Socialist-Territorialists. The Jewish Socialist Workers’ Party cooperated with the world organization of Po’alei Zion and the Zionist Socialists toward the establishment of a Jewish section in the Socialist International. After the 1917 Revolution the Jewish Socialists united with the Zionist Socialists and established the *United Jewish Socialist Workers’ Party.

JEWISH SOCIETY FOR HISTORY AND ETHNOGRAPHY (Russ., *Yevreyskoye Istoriko-Etnograficheskoye Obshchestvo*), Jewish scholarly society in Russia. The society was established at the end of 1908 in St. Petersburg as a continuation of the Jewish Historical Ethnographical Committee of the *Society for the Promotion of Culture Among the Jews of Russia, which had been founded in 1892 on the initiative of Simon *Dubnow. The officers elected to the first committee of the new society were S. Dubnow, M. *Vinaver, and M. *Kulisher. It had a total membership of 774 in 1915. The society held lectures on Jewish history, especially Jewish history in Russia and Poland, and established archives, a museum, and a library. It assisted S. *An-Ski on a project to conduct ethnographic research in towns of the Pale of Settlement and awarded prizes for Jewish historical research.

Publication of documents relating to the history of the Jews in Russia, *Regesty i Nadpisi* (vols. 2–3, 1910–14), was continued by the society. Its major undertaking was the publication of a historical quarterly *Yevreyskaya Starina* (“Jewish Antiquities”), of which ten volumes (1909–18) were edited by Dubnow, and the last three (1924–30) by a collective editorship. The journal published studies, memoirs, and documents. After the 1917 Revolution the society published two volumes of documents on the origins of the pogroms of 1881 and 1903 in Russia. In the early years of the Soviet regime the activities of the society were permitted, although reduced. After Dubnow left Russia in 1922, a small group faithfully continued the work, which was sharply criticized by Jewish Communists of the *Yevseksiya. At the end of 1929 the society dissolved. The last volume of *Yevreyskaya Starina* was edited by I. *Zinberg and published after the society’s dissolution. Its museum and archives became the property of Soviet-Jewish institutions, including the Jewish Cultural Institute in Kiev.

[Yehuda Slutsky]

JEWISH STATE PARTY, Zionist political party formed by dissidents from the *Revisionist movement after the final split between Vladimir *Jabotinsky and most of his colleagues in the leadership of the world movement (at its session in Katowice, April 1933). The new party comprised a number of veteran leaders, including Meir *Grossman, the Hebrew poet Yaakov *Cahan, Richard *Lichtheim, Selig *Soskin, Robert *Stricker, and Jonah Machover, Herzl Rosenblum, and Baruch Weinstein, but only a fraction of the rank and file Revisionists and even less of the membership of the *Betar youth movement, who remained faithful to Jabotinsky. The point over

which the members of the Jewish State Party (or the “Grossmanites,” as they were popularly called) departed from Jabotinsky and the Revisionist majority was the attitude to the World Zionist Organization (wzo). Whereas Jabotinsky refused to recognize it as the only body representing the Zionist movement, wanted to act independently of it in the international field, and eventually secede from it, Grossman and his colleagues and followers unreservedly recognized the sovereignty and binding political discipline of the wzo. The group first appeared on the Zionist scene immediately after the 1933 split, when it contested the elections to the 18th Zionist Congress in 13 countries and received 11,821 votes, gaining three mandates. During the 18th Zionist Congress, a conference of dissident Revisionists from Austria, England, France, Latvia, Lithuania, Palestine, Poland, Romania, and South Africa officially formed the Jewish State Party. It was recognized by the wzo as a *Sonderverband* (see *Zionism: Zionist Organization, Organizational Structure) and granted representation on the Board of Directors of the *Jewish National Fund and the *Keren Hayesed. In the elections to the 19th Zionist Congress in 1935, the party received 24,322 votes in 16 countries, gaining nine mandates.

In 1937 the party convoked its first regular conference in Paris. Its rejection of the proposal of the British Royal Commission to partition Palestine led to Lichtheim and Soskin's resignation. In the elections to the Zionist Congress, it received 6,705 votes, gaining only six mandates. In the pre-World War II period, the party numbered some 8,000 registered members, mostly in Poland, Lithuania, and Austria. Following the split in the Revisionist movement in 1933, a group of dissidents from Betar formed a youth movement of the Jewish State Party called *Berit ha-Kanna'im* (Zealots' Union), with affiliates in Austria, Czechoslovakia, Germany, Palestine, and Poland. The first conference of the organization convoked in Lucerne in 1935 elected a high command (*mifkadah elyonah*) consisting of R. Feldschuh Ben-Shem, N. Neta-neli-Rothman, and F. Richter; Y. Cahan was elected its leader (*av Berit ha-Kanna'im*). In 1930 Weinstein was elected to the *Asefat ha-Nivharim* on the Revisionist slate; after he left the Revisionist fraction in April 1933, he was recognized representative of the Jewish State Party. At the outbreak of World War II the party's activities were paralyzed, and in 1946 it officially ceased to exist by merging with the Union of Zionist Revisionists, which had meanwhile rejoined the wzo under the name United Zionist Revisionists. Many of its leaders and members, however, including M. Grossman, later joined the *General Zionists. The publications of the party were: *Unzer Velt*, a weekly (Yid., Warsaw, 1936–39); *Die Neue Welt*, a weekly (Ger., Vienna, 1927–48), superseded by *Neue Welt und Judenstaat* (Ger., Vienna, 1948–52); and *Ha-Mattarah* (Heb., Tel Aviv, 1933).

[Yehuda Benari]

JEWISH STUDIES. Jewish studies, or often Judaic studies, refers here to the academic teaching of aspects of Jewish re-

ligion, history, philosophy, and culture, and associated languages and literatures, at the undergraduate and graduate level in institutions of higher education. Jewish studies scholarship and teaching is non-doctrinal, non-parochial, and non-denominational. At its best, it represents a mode of intellectual exploration that is open to all interested students regardless of their religious or ethnic backgrounds. Jewish studies include scholars and students who make use of a broad range of disciplinary methodologies from the full range of academic fields in the humanities and social studies. What defines this diverse and interdisciplinary area of inquiry is the object of its study – Jewish experience in its widest sense – rather than any specific analytical approach.

Jewish Studies in American Universities

The significant expansion of Jewish studies in American universities is a recent phenomenon. Nevertheless there are antecedents to this development which should be noted. In the 17th and 18th centuries, the Hebrew language was included in the curriculum of several of the earliest colleges to be established on the North American continent. The subject was taught as part of a theologically oriented curriculum designed to assist potential Christian clergymen in understanding their Christian heritage. The disappearance of the last vestiges of Hebrew from the curriculum in the early decades of the 19th century was the result of changing vogues in Protestant theology and in the dynamics of Christian denominationalism in the United States and was totally unrelated to any concern for Jews or Judaism.

More relevant was the growth of modern Jewish scholarship (as distinguished from traditional Jewish study of sacred texts) which emerged with the development of the *Wissenschaft des Judentums movement in Central Europe in the 1820s and thereafter. The researches of the Wissenschaft scholars created a body of knowledge, a literature and a method of research which made it possible to conceive of a Jewish cultural tradition which was the ongoing expression of a people and which was subject to the same methods of academically disciplined study as that of other peoples. While most early Jewish scholars viewed this tradition as essentially religious, it was nonetheless studied in its literary, philosophical and historical as well as its theological aspects.

This development of Jewish critical scholarship led to the hope that the study of Judaic culture would find a place in the developing world of the secular university. As early as 1838, Abraham *Geiger proposed the establishment of a “Jewish theological faculty” in a German university. For a variety of reasons, social and political as well as academic, this proposal and subsequent suggestions which were broached never came to fruition. Jewish scholarship remained a solitary and unremunerative occupation pursued by dedicated individuals. When such scholarship succeeded in finding a place in an academic setting, it was consigned to the modern theological seminaries which emerged in Central Europe in the last third of the 19th century. Some scholars, like Moritz *Steinschneider,

denigrated the development of such seminaries as a “new ghetto of Jewish learning” which could not transcend “scholarly immaturity.” However, nothing came of Steinschneider’s hope that European governments could somehow be induced to “establish professorships,” and the seminaries remained the only academic institutions in which at least some aspects of modern Jewish scholarship found a place.

In America the openness and diversity of the society and the participation of the Jews in the general culture generated more ambitious aspirations. The desirability of creating a faculty of Jewish studies was broached as early as 1818. Since higher education in 19th century America was almost exclusively sponsored by various religious denominations, Mordecai Manuel *Noah proposed that American Jewry emulate other sects and establish its own college in which Jewish studies would constitute a central element of the curriculum. The proposal was never implemented, not for lack of opportunity, but rather for lack of interest and intellectual resources on the part of the numerically small American Jewish community of that time.

In the 1840s and 50s suggestions for Jewish-sponsored colleges were revived by Isaac *Leeser and Isaac Mayer *Wise, both immigrants from Central Europe. A number of abortive efforts to organize such colleges were undertaken and in 1855 Wise actually announced the establishment of an institution known as Zion College in Cincinnati. This and subsequent efforts failed, again because of lack of support from the growing American Jewish community which was fragmented and was more concerned with integrating itself into the general culture than in fostering its own intellectual distinctiveness. When, in 1875, Wise finally succeeded in forming an academic institution, it was, like its European counterparts, a rabbinic seminary and not, as originally intended, a general college in which a Judaic faculty was a part of a larger academic enterprise. The original concept survived only in the name of the Reform movement rabbinical seminary which Wise called *Hebrew Union College.

Toward the end of the 19th century, chairs in “Semitics” were established in a handful of American universities: Columbia, Johns Hopkins, the University of Pennsylvania, and the University of Chicago. These positions reflected the contemporary interest in “scientific” biblical studies as well as the attainment of financial prominence by some Jews and of modest scholarly credentials by others. The chairs were initially held by Jews whose teaching was primarily related to Semitic philology rather than to the broader aspects of Jewish culture. There is little evidence of academic concern with the total Jewish experience, especially with the content of Jewish culture and history in the centuries following the separation of Christianity from its Jewish source.

In 1896 William Rosenau, a Baltimore Reform rabbi who taught “Semitics” at Johns Hopkins, wrote an article extolling the desirability of “Semitic studies in American Universities.” None of the benefits which he mentioned related to Jewish literature or Judaism. It is therefore a matter of judgment

whether or not the inception of Jewish studies in American universities can properly be dated from the establishment of these academic posts. At best, the number of positions remained small and the treatment of the totality of the Jewish tradition as an area of study of intrinsic worth without regard to its relationship to the predominant culture was negligible.

In the following decades, the development of Jewish scholarship in the United States was primarily centered in the theological seminaries and in institutions which were under Jewish sponsorship and were devoted solely to Jewish studies, such as Dropsie College in Philadelphia and a handful of communal Hebrew teachers colleges. The rise of Hitler and the destruction of Jewish institutions in Central and Eastern Europe led to an influx of distinguished Jewish scholars to the United States. These men assumed leading positions in Jewish institutions of higher learning and greatly enhanced the cultural resources of American Jewry. Despite their credentials, few found places in secular universities.

Prior to 1940 a few chairs of Judaica had been established in major universities, almost always due to the philanthropy of local Jewish communities. Some of these were occupied by outstanding scholars, most notably Salo W. *Baron in the department of history at Columbia and Harry A. *Wolfson in the department of Near Eastern languages at Harvard. In the late 1930s modest programs in the teaching of modern Hebrew had been established in universities in New York City, primarily as a result of the introduction of Hebrew language instruction into the curriculum of New York City public high schools and the need to certify teachers for positions. However, as late as 1945, no more than 12 full-time positions in Jewish studies existed in ten American universities. When, in 1943, Ismar Elbogen surveyed “American Jewish Scholarship,” his review dealt with the work of individual scholars and made no mention of Judaic studies in universities. These circumstances led Alfred Jospe to conclude that “it was only after the end of World War II that we find a growing awareness and recognition that Jews and Judaism are legitimate subjects of academic study and inquiry.”

Since that time the development of Judaic studies in American universities has been striking. By 1966, when Arnold Band of the University of California at Los Angeles completed his survey of “Jewish Studies in American Colleges and Universities” (AJYB, 1966), the number of institutions offering one or more aspects of Jewish studies had grown sevenfold. Band listed 61 full-time positions in the area of Jewish studies and estimated that approximately 40 accredited colleges and universities offered “fairly adequate training in undergraduate Judaic studies” and at least 25 others offered a “variety of courses, but no undergraduate major.”

In addition, by 1966, the number of universities offering graduate programs had grown from six to more than 20. Important new concentrations of Judaic teaching and scholarships had emerged in such disparate institutions as Brandeis University – a Jewish sponsored non-sectarian private uni-

versity – and the state-sponsored University of California in both its Los Angeles and Berkeley branches. The Jewish cultural heritage was on the agenda of the American academic enterprise.

Band's survey also revealed the growing maturity of American Jewry in providing its own intellectual leadership. Over one half of the faculty members engaged in the Jewish programs were either born in the United States or arrived as children. Even more significant, over 80% had received their graduate training in American universities. In almost every case, a period of study at a university in Israel provided essential supplementation; frequently the early doctoral graduates in Judaica relied heavily on training outside the university framework, especially in seminaries and yeshivot. Whatever the obstacles and lacunae, it was clear that, by 1966, the dependence of American Jewry on scholars imported from abroad was waning. A generation of American-born and trained scholars and teachers was emerging; resources of American universities to provide Judaic training were growing.

This development cannot be described as a "movement" since it was neither anticipated nor actively fostered by the organized Jewish community or by any other group. Indeed, there are indications that American Jewry was hardly aware of the growth taking place in its midst. In *The American Jew: A Reappraisal* (1964), edited by Oscar Janowsky, only one brief paragraph in 568 pages is devoted to Jewish studies in universities. The initial expansion was generated by changing circumstances within both the Jewish and the academic communities and not by deliberate design.

Since 1966 proliferation of Jewish studies throughout the North American continent has accelerated and shows no signs of abating, despite the general retrenchment currently taking place in American universities. Growth has continued not only in the number of institutions offering courses, but in the number and variety of subjects taught and in the size of Judaic faculties within universities, in the quality of the programs and in the number of students enrolled and majoring on both the undergraduate and graduate levels. Important new concentrations have developed in such state universities as Ohio State and the State University of New York, in prestigious private institutions such as Brown University, and in a number of Canadian universities. More recently, the major rabbinical seminaries have placed new emphasis on Ph.D. programs designed to train scholars to teach in secular universities.

The growth of the field was rapid. A 1973 survey by the Institute for Jewish Policy Analysis estimated that "over 350 institutions now offer one or more courses in Judaica" and observed that "Jewish studies programs have opened new teaching and research opportunities to Jewish scholars, increased the prestige and influence of professors in these areas, and encouraged graduate students to enter this field of study." By 2005, over 70 institutions had Jewish studies degree-granting programs of one kind or another.

The establishment the *Association for Jewish Studies (AJS) in 1969 to provide for regular communication among

scholars teaching in the field was another indication of the growth of Jewish studies in the last third of the 20th century. By 2005, this organization had over 1,500 members, most of whom were faculty teaching some area of Jewish studies in an institution of higher education. 20% of the membership consisted of graduate students, representing the future of Jewish studies in North America. In recent decades, several regional organizations, including the Midwestern Jewish Studies Association and the Western Jewish Studies Association have also been formed. These groups hold annual meetings. The Women's Caucus of the AJS, which was founded in 1986, meets in the context of the AJS annual conference.

Many factors contributed to the development of Jewish studies in North America. Perhaps the most basic was the recognition which emerged only after the creation of the State of Israel: that the Jewish people was a living and developing nation whose rich past was related to a vital present and whose historic and continuing experience was worthy of study. In addition, the dynamic development of Jewish culture within Israel society and of Jewish scholarship within Israel universities, provided a focal point for serious study, a body of literature, and a cadre of distinguished teachers who provided a significant impetus for the awakening of both the Jewish and the university worlds to the dimensions of Jewish culture and history and the quality of serious Jewish scholarship. Since American universities in the post-World War II period were broadening their areas of study to accommodate a variety of cultures and experiences outside the framework of the classical humanistic curriculum, Jewish studies were readily accepted and frequently encouraged in departments of religion, of modern and ancient Near Eastern studies, of history, and of comparative literature. In a few instances – most notably Brandeis University, Rutgers, and the University of Wisconsin – separate departments of Jewish studies were established. In a variety of settings, the American university was open to the entry of the diverse elements of Jewish studies.

At the same time, the growing self-consciousness and self-confidence of American Jewry in recent decades created a demand for Jewish studies and a desire to take advantage of the opportunities for learning. American Jewry's awareness of itself was nourished by the reaction to the Holocaust and the rise of the State of Israel. The trauma of the Six Day War in 1967 and the Yom Kippur War of 1973 provided added incentives for study of the Jewish past and present, which frequently accompanied a desire for renewal of identity and identification. The unprecedented number of Jewish "baby boomers" who descended on college campuses beginning in the mid-1960s obviously played a role as well, as did the growing number of Jews in the professoriate at this time.

Perhaps the final factor which contributed to the rapid growth of Jewish studies in the 1960s and 1970s was the assertiveness of other ethnic groups on the American campus, including African-Americans and Latinos, in advocating for academic courses that explored and analyzed their particular historical and cultural experiences. Another parallel was the

growing interest in women's and gender studies. Large numbers of Jewish students and faculty rediscovered the richness of their own tradition. They requested, and occasionally even demanded, that universities provide them with the same opportunity to study this tradition with the high level of critical examination and seriousness of purpose as were applied to all other academic pursuits. For the first time in American Jewish history large numbers of mature Jewish students outside of the yeshivot and theological seminaries had the opportunity to devote themselves to serious Jewish study.

The actual framework for such studies varied from institution to institution. In a few instances Jewish studies were taught in a separate department (as at Brandeis). More often they were concentrated in departments of history (as at Columbia), religion (as at Brown), Near Eastern Languages (as at Harvard), Comparative Literature (as at UCLA), Oriental Studies (as at University of Pennsylvania), or Philosophy (as at Washington University). Increasingly, interdepartmental concentrations in Jewish studies were organized, with various faculty members holding appointments in departments according to their scholarly disciplines (as in Ohio State University). In recent years, the free-standing Jewish or Judaic studies program that awards undergraduate degrees in Jewish/Judaic studies, and offers courses taught by faculty with appointments in regular academic departments, has become more common. Often donor endowments support the hiring of a faculty director and the operations of the program itself. This variety of organizational and structural approaches in the teaching of Jewish studies, depending on individual circumstance in any given institution, has remained a constant into the 21st century.

A significant number of Jewish studies programs requires Hebrew language and literature study for undergraduate majors and for graduate students. In some cases students must study Classical Hebrew language and texts; in others Modern Hebrew is required. The result has been a proliferation of Hebrew language study across North American institutions of higher education to a degree that would certainly not have occurred without the linkage of Hebrew to Jewish Studies. Several Jewish studies programs also offer instruction in Yiddish language and literature.

Prior to the 1970s most scholars and teachers of Jewish studies in North America were men, many of whom had moved into the academic world after completing rabbinic training. A noteworthy change in Jewish studies in North America in the decades between 1975 and 2005 is the number of women who have entered the field and climbed the academic ladder from graduate students to professors in every area of Jewish studies scholarship. Women have also assumed leadership roles in Jewish studies professional organizations, including the Association for Jewish Studies. This phenomenon reflects a larger sea change in the academic world in general as a result of the feminist movement of the last third of the 20th century and the changes it has wrought in expanding women's personal and professional opportunities. Concur-

rently, Jewish Studies teaching and scholarship has become more aware of gender as an intellectual category of analysis and of the necessity to consider the constructions and consequences of gender in explicating the Jewish experience. While some Jewish studies courses integrate female experience into a general curriculum, other courses have been created that focus entirely on women in specific historical eras, bodies of literature, or from particular disciplinary perspectives.

The teaching of Jewish subject matter in secular universities cannot be considered as "Jewish education" in the sense of religious education. As Alfred Jospe commented, "the purpose of Jewish studies in the university is the study of Judaism and the Jewish people and not the Judaization of young Jews, the stimulation of their Jewish commitment, or the strengthening of their Jewish identification." At the same time, Jewish studies programs have provided significant new "Jewish presences" on college campuses, as well as new resources for the entire university community that offer familiarity with Jewish culture and history and a new respect for the quality of Jewish creativity in the past and in the present.

[Leon A. Jick / Judith R. Baskin (2nd ed.)]
