anthropomorphism. Parts of this “head” symbolize the ways in which God acts: the brow refers to His acts of grace, the eye to His providence, the ear to His acceptance of prayer, the beard to the 13 facets of mercy, and so on. An allegorization of the theological concepts in the doctrine of the attributes, a symbolism which views its own imagery as an accurate allusion to that which is beyond all imagining, and an attempt to reconcile the apparently incompatible doctrines of the *Sefirot* and the earlier *Shi'ur Komah* – all meet in these symbols of the *Idrot* of the Zohar. The author never states openly that his descriptions entail a positing of “*Sefirot* within *Sefirot*” (which are mentioned in the main part of the Zohar and also in the Hebrew writings of Moses de Leon, but only incidentally and without any detail). Apparently he saw no need to offer any speculative theory to justify his use of corporeal images, so difficult to probe rationally in any detail. His world was symbolic rather than conceptual. However, the kabbalists from the beginning of the 14th century did give such “revelations” a theoretical interpretation, starting with the *Sefer ha-Gevul* (based on the *Idra Rabba* in the Zohar) by David b. Judah ha-Hasid and ending with Cordovero's *Elimah Rabbati* and his commentary to the Zohar. A similar doctrine is also evident in the writings of Joseph b. Shalom Ashkenazi. In their meditations on these internal reflections of the *Sefirot* within one another some kabbalists, such as Joseph ibn Sayyah, went as far as to describe in detail the play of lights inside the *Sefirot* to the fourth “degree,” as, for example, the “*Tiferet* which is in *Gedullah* which is in *Binah* which is in *Keter*.” Cordovero too went further along this path than most kabbalists.

In Cordovero's teachings this theory of *Sefirot* within *Sefirot* is connected with another – that of the *behinot*, the infinite number of aspects which can be differentiated within each *Sefirah* and whose main purpose is to explain how each *Sefirah* is connected with both the preceding and the following ones. According to Cordovero, there are, in the main, six of these aspects in each *Sefirah*:

- (1) its concealed aspect before its manifestation in the *Sefirah* which emanates it;
- (2) the aspect in which it is manifested and apparent in the emanating *Sefirah*;
- (3) the aspect in which it materializes in its correct spiritual location, that is to say, as an independent *Sefirah* in its own right;
- (4) the aspect which enables the *Sefirah* above it to instill within it the power to emanate further *Sefirot*;
- (5) the aspect by which it gains the power to emanate the *Sefirot* hidden within it to their manifested existence within its own essence; and
- (6) the aspect by which the following *Sefirah* is emanated to its own place, at which point the cycle begins again.

This complete array of *behinot* is seen as causal relationship, each *behinah* causing the awakening and the manifestation of the following *behinah* (*Pardes Rimmonim*, ch. 5, 5). But there are many other “aspects” in the *Sefirot* as well and their discovery depends on the perspective of their investiga-

tor. Each *Sefirah* “descends into itself,” and the process of this descent is infinite in its internal reflections. At the same time, however, it is also finite, in that it begets or brings into being from within itself another *Sefirah*. This concept necessitates the premise that the roots of emanation have a concealed “aspect” in *Ein-Sof* itself, and Cordovero interprets the three *zahzahot* mentioned above as the three hidden *behinot* of *Keter* in *Ein-Sof*. He is thus forced to demolish the natural boundary between *Ein-Sof* and the first *Sefirah*, despite his clear desire to establish such a natural division. He therefore postulates that the *behinot* of *Keter* within *Keter* within *Keter* and so on, although they potentially continue *ad infinitum*, do not in fact reach an identity with the essence of the Emanator, so that the propinquity of *Ein-Sof* and *Keter* remains asymptotic. All this, of course, is stated from the point of view of created beings for even the supernal awakening of “aspects” of the Will within the Will within the Will and so on does not reveal *Ein-Sof*, and it is this differential which comprises the leap from the essence of the Emanator to that of the emanated. On the other hand, the differential gap closes when it is regarded from the point of view of the Emanator Himself. Cordovero’s doctrine of the *behinot* shows how closely he approached a clearly dialectic mode of thought within the framework of kabbalistic ideas. With Cordovero the *Sefirot* are more than emanations which manifest the attributes of the Emanator, though they are this too. They actually become the structural elements of all beings, even of the self-manifesting God Himself. The implied contradiction between the processes of emanation and structuralism was never fully resolved by Cordovero himself, and it appears even in the systematic presentation of his ideas in *Shefa Tal* by Shabbetai Sheftel Horowitz. In such works as *Elimah Rabbati* and *Shefa Tal* zoharic Kabbalah undergoes an extremely profound speculative transformation in which as far as possible theosophy dispenses with its mythical foundations. Nevertheless, it is evident that this speculative trend does not turn Kabbalah into philosophy, and that the acknowledgment of a hidden life within the deity – the process of the emanation of the *Sefirot* – depends finally on mystical intuition, for by it alone can this domain be understood. In the Zohar this intuition is called “fleeting vision [of the eternal]” (*istakluta le-fum sha’ata*; 2, 74b; ZH 38c), and this is the element that the prophet and the kabbalist have in common (1, 97a and b).

In addition to the process of emanation which takes place between the *Sefirot*, there are two symbolic modes of expressing the way in which each *Sefirah* radiates upon the others:

(1) Reflected light. This is based on the premise that, in addition to the direct light which spreads from one *Sefirah* to the next, there is a light which is reflected back from the lower *Sefirot* to the upper. Thus the *Sefirah* can be seen as both a medium for the transference of the light from above to below, and as a mirror serving to reflect the light back to its source. This reflected light can re-ascend from any *Sefirah*, particularly from the last one, back up to the first, and it acts on its return path as an additional stimulus that causes the differen-

tiation of still further *behinot* in each *Sefirah*. Reflected light, according to Cordovero (*Pardes* 15), fulfills a great task in the consolidation of the potencies and *behinot* of judgment (*din*) in each *Sefirah*, for it functions through a process of restrictive contraction rather than free expansion. Only marginally based on early Kabbalah – e.g., the statements in the Zohar on the relationships among the first three *Sefirot* – this doctrine was developed by Solomon Alkabez and Cordovero alone and it formed an important factor in their dialectical reasoning.

(2) Channels. This is based on the premise that specific *Sefirot* stand in particular relationships of radiation with other *Sefirot* (though not necessarily with all of them). The face of one *Sefirah* turns toward another and consequently there develops between them a “channel” (*zinnor*) of influence which is not identical with actual emanation. Such channels are paths of reciprocal influence between different *Sefirot*. This process is not a one-way influx from cause to effect; it also operates from effect to cause, dialectically turning the effect into a cause.

It is not clear to what extent there is any identity between the symbols of reflected light and channels nor, if there is none at all, what their relationship is. Any interruption in the return influx from below to above is called a “breaking of the channels” (*shevirat ha-zinnorot*; Gikatilla, *Sha’arei Orah*), an idea which serves to explain the relations between the lower and upper worlds on the occasion of sin and divine disapproval. These channels are alluded to by the Gerona kabbalists, Gikatilla, Joseph of Hamadan (if this is the real name of the author of *Shushan ha-Birah*, a commentary to Song of Songs and to the *parashah Terumah* in British Museum Ms. Margoliouth 464), as well as other kabbalists of the 14th and 15th centuries, and the doctrine is presented in detail in chapter 7 of *Pardes Rimmonim*.

Earlier Worlds, Lower Worlds, and Cosmic Cycles (the Doctrine of the *shemittot*)

The emergence of God from the depths of Himself into creation, which constitutes the foundation of the doctrine of the *Sefirot*, was not always understood as a single, uninterrupted, straightforward process. In other views of the process of emanation and creation, a vital role was played by the midrashic legend concerning the worlds which were created and destroyed before the creation of our present world. An important variation of this idea lies at the root of a doctrine of the *Idrot* in the Zohar, in which the *Midrash* and other similar *aggadot* are connected with a description of how God entered into the form of the *Adam Kadmon* or Primeval Man, or into the different configurations of this form. Here we have a motif whose origin is in no way consistent with the classical formulation of the *Sefirot* doctrine, as can be easily seen from its reversed treatment of the male-female principle. Unlike in classical tradition, the male principle is considered here to be the principle of *din* or strict judgment which needs softening and “sweetening” by the female principle. A creation dominated solely by the forces of judgment could not survive. The exact nature of such earlier, unsuccessful creations, however – called in the

Zohar “the Kings of Edom” or “the Primeval Kings” (*malkhei Edom* or *malkin Kadma'in*) – is not made plain. It was only when the form of Primeval Man was fashioned perfectly, with a harmonious balance between the male and the female forces, that creation was able to sustain itself. This balance is called in the Zohar *matkela* (“the scales”), and only through its power did our world come into being. The biblical list of the kings of Edom (Gen. 35:31ff.) was interpreted in the light of this doctrine, for Edom was understood to represent the principle of judgment.

The author of the Zohar also expressed this doctrine in other ways. The worlds which preceded ours and were destroyed were like the sparks that scatter and die away when the forger strikes the iron with his hammer. This doctrine, in a completely new version, acquired a central place in Lurianic Kabbalah, while still other kabbalists tried to divest it of its literal meaning because of its theological difficulties. Cordovero's interpretation related it to the emanation of the *Sefirot* themselves, and to the dialectical process within each *Sefirah* – an interpretation quite out of keeping with the original idea. Other kabbalists of the Zohar period, such as Isaac ha-Kohen of Soria, expressed similar ideas, which they connected with the development of a “left-sided” emanation, that is, of an emanation of the forces of evil. The common element in all these doctrines is the supposition that during the first steps toward emanation certain abortive developments took place that had no direct effect on the actual creation of the present worlds, although remnants of these destroyed worlds did not entirely disappear and something of them still hovers disruptively among us.

Spanish Kabbalah concentrated its thinking on the emanation and structure of the *Sefirot*, a subject which is not dealt with at all in the writings of the philosophers. As regards the continuity of this process below the level of the last *Sefirah*, the kabbalists were in the main deeply influenced by medieval philosophical cosmology. Most kabbalists agreed that there was no essential break in the continuity of the influx of emanation which led to the development of additional areas of creation as well, such as the world of the intellect, the world of the spheres, and the lower world. But they maintained that whatever preceded these secondary stages was part of the divine domain, which they symbolically portrayed as a series of events in the world of emanation, whereas from this point on, the outward movement departed from the realm of the Godhead and was thought of as a creation distinct from the divine unity. This fundamental distinction between “the world of unity” of the *Sefirot* and “the world of separate intelligences” that was below them was made as early as the beginning of the 13th century. When the philosophers spoke of “separate intelligences,” however, which they identify with the angels, they thought of them as immaterial beings representing pure form, whereas in kabbalistic language the term refers rather to a separation from the sefirotic unity of the divine domain.

As the Kabbalah developed, the world of the Merkabah (see above) described in the *heikhalot* literature became quite

clearly distinguished from the world of the divine above it. The former was now often called “the domain of the Throne,” and a rich angelology developed around it which was only partly identical with the earlier angelology of the Merkabah literature. In the main body of the Zohar there are detailed descriptions of the inhabitants of the seven “palaces” which spread out below the *Sefirah Malkhut* and are the products of its emanative influx, and which have little in common with the *heikhalot* of earlier literature. No fixed hierarchical order had been established in earlier Kabbalah for the world of the angels, and the writings of various 13th- and 14th-century kabbalists contain quite different angelological systems. Such systems occupy an important place in the works of Isaac ha-Kohen, his brother Jacob, and their pupil Moses of Burgos, all of whom spoke in detail of secondary emanations which served as garments for the *Sefirot* and were situated even higher than the most prominent angels in the traditional angelology, such as Michael, Raphael, Gabriel, and so on. Other systems occur in the *Tikkunei Zohar*, in the *Sod Darkhei ha-Nekuddot ve-ha-Otiyyot* attributed to the school of Abraham b. David of Posquières, in the books of David b. Judah ha-Hasid, and in the *Sefer Toledot Adam*. Sometimes a distinction was made between the Merkabah as a symbol of the world of the *Sefirot* themselves, and the *merkevat ha-mishneh*, or “second chariot,” which represented the domain that came after the *Sefirah Malkhut*, and was itself divided into ten *Sefirot* of its own. Everything below the last *Sefirah* is subject to time and is called *beriah* (“creation”) since it is outside (*le-var*) the Godhead.

The general scheme of a world of the Godhead and the *Sefirot*, and of the intelligences and the spheres, did not prevent many kabbalists, such as the author of the Zohar and Gikatilla, from supposing the existence of a very large number of secondary worlds within each one of these primary worlds. This expansion of an originally narrower cosmological framework is analogous to similar motifs in Indian thought, although there is no need to try to establish a direct historical link between the two. Every stage in the process of creation is crystallized in a specific world where the creative power of the Creator achieves the perfect expression of one of its many aspects. At the same time, we can trace the development of a unified doctrine of a series of worlds from above to below forming one basic vector along which creation passes from its primeval point to its finalization in the material world (see G. Scholem, *Tarbiz*, 2–3, 1931–32). The outcome of this development, in which Jewish, Aristotelean, and neoplatonic principles were all mingled together, was a new doctrine of four basic *worlds, called *olam ha-azilut* (the world of emanation – the ten *Sefirot*), *olam ha-beriah* (the world of creation – the Throne and the Chariot), *olam ha-yezirah* (the world of formation – sometimes the world of the angels centered around Metatron), and *olam ha-asiyyah* (the world of making – which sometimes includes both the whole system of the spheres and the terrestrial world, and sometimes the terrestrial world only). This arrangement, although without the nomenclature of “worlds,” is already mentioned in the

later strata of the Zohar, particularly in the *Tikkunei Zohar*. It appears in the form of four actual worlds in the *Massekhet *Azilut*, from the beginning of the 14th century. Isaac of Acre also made frequent use of this arrangement and gave it, for the first time, the abbreviated name *abiya* (*azilut, beri'ah, yezirah, asiyyah*). However, the doctrine was not fully developed until the 16th century when the kabbalists of Safed went into the details even of the worlds of *beri'ah* and *yezirah*, particularly Cordovero and the school of Isaac Luria. In the *Tikkunei Zohar* the world of *asiyyah* was understood as the domain of the material world and of evil spirits, while according to the *Massekhet Azilut* it included the whole range of creation from the angels (known as *ofanim*) through the ten spheres to the world of matter. According to Lurianic Kabbalah, all the worlds, including the world of *asiyyah*, were originally spiritual, but through the “breaking of the vessels” the world of *assiyah*, after its descent from its earlier position, was commingled with the *kelippot* or impure “husks,” which in principle should have remained completely separate, thus producing a world of matter that contained nothing spiritual. The ten *Sefirot* are active in all four worlds according to their adaptation to each one, so that it is possible to speak of the *Sefirot* of the world of *beri'ah*, the *Sefirot* of the world of *yezirah* and so on. Some concomitant of the *Sefirot* may be seen in the lower world also. Even the image of *Adam Kadmon* is reflected in each of these worlds (*adam di-veriyah, adam de-azilut, etc.*, as in the writings of Moses de Leon, in the *Ra'aya Meheimna* and the *Tikkunim*). Even the terrestrial world of nature may be called *adam gadol* (“the great man”; macroanthropos). In another kabbalistic view dating to the period of the expulsion from Spain, nature is defined as *zel Shaddai*, that is, the shadow of the Divine Name.

Beginning in the 13th century, and especially from the 15th and 16th centuries, the kabbalists tried to make pictorial representations of the structure of creation as it progressed from *Ein-Sof* downward. Such diagrams were generally called *ilanot* (“trees”), and the obvious differences between them reflect divergences among the various doctrines and schemes of symbolism. Drawings of this kind are found in a large number of manuscripts. A detailed pictorial representation of the Lurianic system, called *ilan ha-gadol* (“the great tree”), which was made by Meir Poppers, has been published, first in the form of a long scroll (Warsaw 1864) and later as a book (Warsaw 1893).

These speculations were accorded a unique form in the doctrine of the *shemittot* or cosmic cycles which was based on a fixed periodicity in creation. Although dependent on aggadic motifs, this doctrine displays some relationship with similar non-Jewish systems, whose influence on Jewish authors can be traced in Muslim countries and in Spain, particularly in the writings of Abraham bar Hiyya. In his *Megillat ha-Megalleh*, he speaks of unnamed “philosophers” who believed in a long, even infinite series of cyclical creations. Some of them, he said, maintained that the world would last for 49,000 years, that each of the seven planets would rule for 7,000 years, and

that God would then destroy the world and restore it to chaos in the 50th millenium, only to subsequently recreate it once again. These were astrological ideas drawn from Arabic and Greek sources, which could easily be assimilated to certain views expressed in the *aggadah*, such as the statement of Rav Katina (Sanh. 97a) that the world would last for 6,000 years and be destroyed in the seventh millenium, in which a parallel is drawn between the days of creation and those of the world, seen as a great cosmic week, at the end of which it “rests” and is destroyed. The earlier kabbalists related these ideas to their own doctrine of emanation. Their new teaching concerning the cycles of creation, which was widely referred to and even summarized in the Kabbalah of Gerona, was fully articulated, although in a highly cryptic style, in the *Sefer ha-Temunah*, which was written about 1250. The main point of this doctrine is that it is the *Sefirot* and not the stars that determine the progress and span of the world. The first three *Sefirot* remain concealed and do not activate “worlds” outside themselves – or at least not worlds that we can recognize as such. From the *Sefirah Binah*, also called “the mother of the worlds,” the seven apprehendable and outgoing *Sefirot* are emanated. Each one of these *Sefirot* has a special role in one creation-cycle, which comes under its dominion and is influenced by its specific nature. Each such cosmic cycle, bound to one of the *Sefirot*, is called a *shemittah* or sabbatical year – a term taken from Deuteronomy 15 – and has an active life of 6,000 years. In the seventh millenium, which is the *shemittah* period, the Sabbath-day of the cycle, the sefirotic forces cease to function and the world returns to chaos. Subsequently, the world is renewed through the power of the following *Sefirah*, and is active for a new cycle. At the end of all the *shemittot* there is the “great jubilee,” when not only all the lower worlds but the seven supporting *Sefirot* themselves are reabsorbed into *Binah*. The basic unit of world history is therefore the 50,000-year jubilee, which is subdivided as described above. The details of this doctrine in the *Sefer Temunah* are complicated by the fact that, according to the author, the *Sefirah Yesod*, which is also called *Shabbat*, does not activate a manifest *shemittah* of its own. Rather, its *shemittah* remains concealed and works through the power of the other cosmic cycles. Nor is there explicit mention here of any new cycle of creation after the jubilee. According to the kabbalists of Gerona, the laws in the Torah concerning the sabbatical and the jubilee years refer to this mystery of recurrent creation.

An even more radical doctrine came into being in the 13th century, according to which the world-process lasts for no less than 18,000 jubilees (Baḥya b. Asher, on the Torah portion *Be-Ha'alothecha*). Moreover, the actual chronology of these calculations is not to be taken literally, because the *Sefer ha-Temunah* teaches that in the seventh millenium there sets in a gradual and progressive retardation in the movement of the stars and the spheres, so that the measurements of time change and become longer in geometrical progression. Fifty thousand “years” therefore becomes a much longer period. Hence other kabbalists, and Isaac of Acre in particular, ar-

rived at truly astronomical figures for the total duration of the world. Some kabbalists taught that after each “great jubilee” a new creation would begin *ex nihilo*, a view which passed from Bahya b. Asher to Isaac Abrabanel, and from him to his son Judah, who mentioned it in his famous Italian work, *Dialoghi di Amore*. These views were also accepted much later by the author of *Gallei Razaya* (1552), and even by Manasseh Ben Israel. No kabbalist posited an infinite number of jubilees. In contrast to such enormous vistas, others maintained that we do not know what will follow the jubilee and that investigation of the subject is forbidden.

There were also divergent views on the question of which *shemittah* in the jubilee period we are living in now. Generally speaking, the accepted position was that of the *Sefer ha-Temunah*, namely, that we are now in the *shemittah* of judgment, dominated by the *Sefirah Gevurah*, and the principle of strict justice. Consequently, this must have been preceded by the *shemittah* of *Hesed* or lovingkindness, which is described as a kind of “golden age,” akin to that of Greek mythology. According to another view (for example, that of the *Livnat ha-Sappir* by Joseph Angelino), we are in the last *shemittah* of the present jubilee period. Each *shemittah* experiences a revelation of the Torah, which is simply the complete articulation of the Divine Name or Tetragrammaton, but comprehension of it, that is, the combination of its letters, differs in every *shemittah*. Therefore, in the previous *shemittah* the Torah was read completely differently and did not contain the prohibitions which are the product of the power of judgment; similarly, it will be read differently in the *shemittot* to come. The *Sefer ha-Temunah* and other sources contain descriptions of the final *shemittot* which are of a distinctly utopian character. In their view, some souls from the previous *shemittah* still exist in our own, which is governed by a universal law of transmigration that includes the animal kingdom as well. As the power of judgment is mitigated in subsequent *shemittot*, so laws and customs will be relaxed also. This doctrine allowed tremendous play to the power of the imagination, which was particularly exploited by Isaac of Acre. It should be noted that in itself the premise that one and the same Torah could be revealed in a different form in each *shemittah* did not at the time arouse any open opposition, and was even extended by some who maintained that the Torah was read differently in each of the millions of worlds involved in the complex of creation – a view first expressed in Gikatilla’s *Sha’arei Zedek* (see *Tarbiz*, 39, 1970, 382–3). One of the most extreme manifestations of this belief was the theory that in the present *shemittah* one of the letters of the alphabet is missing and will be revealed only in the future, thus the reading of the Torah will obviously be absolutely transformed.

The influence of the *Sefer ha-Temunah* and the doctrine of the *shemittot* was extremely strong and it still had its champions as late as the 17th century. However, the author of the *Zohar* ignored it completely, apparently out of some fundamental disagreement, although he too held that there was a great jubilee lasting 50,000 years in the world. As the *Zohar*

became increasingly recognized as the authoritative and chief source for later Kabbalah, this silence on the subject strengthened opposition to the doctrine. Joseph ibn Zayyah, Cordovero, and Isaac Luria rejected it as a mistaken or unnecessary hypothesis, at least in the version found in the *Sefer ha-Temunah*, and as a result of their influence it more or less disappeared from later kabbalistic literature. However, Mordecai Jaffe, a contemporary of Isaac Luria, was still teaching at the end of the 16th century that sequences of *shemittot* existed, even within the limits of historical time. The *shemittah* of *Din* (“judgment”) began precisely at the time of the giving of the Torah, while everything that preceded it still belonged to the end of the *shemittah* of *Hesed* (“lovingkindness”). Its visionary utopianism and its mystical theory concerning the changing manifestations of the essence of the Torah were without doubt among the main reasons why the doctrine of *shemittot* was accepted so widely in kabbalistic circles. The disciples of Shabbetai Zevi made much of it, stressing its inherently anti-nomian implications.

The Problem of Evil

The question of the origin and nature of evil was one of the principal motivating forces behind kabbalistic speculation. In the importance attached to it lies one of the basic differences between kabbalistic doctrine and Jewish philosophy, which gave little original thought to the problem of evil. Various kabbalistic solutions were proffered. The *Ma’arekhet ha-Elohut* reveals the influence of the conventional neoplatonist position that evil has no objective reality and is merely relative. Man is unable to receive all the influx from the *Sefirot*, and it is this inadequacy which is the origin of evil, which has therefore only a negative reality. The determining factor is the estrangement of created things from their source of emanation, a separation which leads to manifestations of what appears to us to be the power of evil. But the latter has no metaphysical reality, and it is doubtful whether the author of the *Ma’arekhet ha-Elohut* and his disciples believed in the existence of a separate domain of evil outside the structure of the *Sefirot*. On the other hand, we already find in the *Sefer ha-Bahir* a categorization of the *Sefirah Gevurah*, as “the left hand of the Holy One blessed be He,” and as “an attribute whose name is evil” and which has many offshoots in the forces of judgment, the constricting and limiting powers in the universe. As early as Isaac the Blind this led to the conclusion that there must of necessity be a positive root of evil and death, which was balanced within the unity of the Godhead by the root of goodness and life. During the process of differentiation of these forces below the *Sefirot*, however, evil became substantiated as a separate manifestation. Hence the doctrine gradually developed which saw the source of evil in the superabundant growth of the power of judgment, which was made possible by the substantiation and separation of the attribute of judgment from its customary union with the attribute of lovingkindness. Pure judgment, untempered by any mitigating admixture, produced from within itself the *sitra ahra* (“the other side”), just as a vessel which is filled to

overflowing spills its superfluous liquid on the ground. This *sitra aḥra*, the domain of dark emanations and demonic powers, is henceforth no longer an organic part of the World of Holiness and the *Sefirot*. Though it emerged from one of the attributes of God, it cannot be an essential part of Him. This view became dominant in the Kabbalah through the writings of the Gerona kabbalists and the Zohar.

According to the “Gnostics” of Castile and, in a different version, the Zohar also, there exists a complete hierarchy of the “emanation of the left,” which is the power of uncleanness that is active in creation. However, this objective reality lasts only as long as it continues to receive fresh strength from the *Sefirah Gevurah*, which is in the holy order of the *Sefirot*, and in particular, only as long as man revives and fortifies it through his own sinful deeds. According to the Zohar, this *sitra aḥra* has ten *Sefirot* of its own, and a similar view, albeit with several variations and the addition of certain mythical elements, is expressed in the writings of Isaac ha-Kohen and in *Ammud ha-Semoli* by his pupil, Moses of Burgos. Isaac ha-Kohen taught that the first worlds that were destroyed were three dark emanations, which perished because of the overly concentrated power of strict judgment that they contained. The force of evil in this world, he argues, does not come from the *Sefirah Gevurah* but is a continuation of the *Sefirah Binah* that was substantiated in the destructive potencies corresponding to the seven constructive *Sefirot* of creation. These two forces battle with one another from the beginning of creation itself.

In the Zohar too it is implied that the evil in the universe originated from the leftovers of worlds that were destroyed. The power of evil is compared to the bark (*kelippah*) of the tree of emanation, a symbol which originated with Azriel of Gerona (see Altmann, *JJS*, 9, 1958, 73–81) and became quite common from the Zohar onward. Some kabbalists called the totality of the emanation of the left “the outer tree” (*ha-ilan ha-ḥizon*). Another association, found in the Gerona kabbalists, and following them in the Zohar as well, is with “the mystery of the Tree of Knowledge.” The Tree of Life and the Tree of Knowledge were bound together in perfect harmony until Adam came and separated them, thereby giving substance to evil, which had been contained within the Tree of Knowledge of Good and Evil and was now materialized in the evil instinct (*yezer ha-ra*). It was Adam therefore who activated the potential evil concealed within the Tree of Knowledge by separating the two trees and also by separating the Tree of Knowledge from its fruit, which was now detached from its source. This event is called metaphorically “the cutting of the shoots” (*kizzuz ha-netivot*) and is the archetype of all the great sins mentioned in the Bible, whose common denominator was the introduction of division into the divine unity. The essence of Adam’s sin was that it introduced “separation above and below” into what should have been united, a separation of which every sin is fundamentally a repetition – apart, that is, from sins involving magic and sorcery, which according to the kabbalists join together what should have remained separate. In

actual fact, this view too tends to stress the separation of the power of judgment contained within the Tree of Knowledge from the power of lovingkindness contained within the Tree of Life. The latter pours out its influence unstintingly, while the former is a restrictive force with a tendency to become autonomous. This it can do either as the result of man’s actions or of a metaphysical process in the upper worlds.

Both these views appear concurrently in kabbalistic literature without any clear distinction being drawn between them. The cosmic evil stemming from the inner dialectic of the emanating process is not differentiated here from the moral evil produced by human action. The Zohar tries to bridge these two realms by positing that the disposition toward moral corruption, toward evil in the guise of human temptation, derives from the cosmic evil which is in the domain of the *sitra aḥra* (3, 163a). The basic difference between the Zohar and the writings of the Gnostics in Castile was that the latter indulged in exaggerated personifications of the powers in this domain, resorting on occasion to earlier demonological beliefs and calling the potencies of “the emanation of the left” by proper names, whereas the author of the Zohar generally kept to more impersonal categories, with the exception of the figures of *Samael – the kabbalistic equivalent of Satan – and his mate *Lilith, to whom he assigned a central role in the realm of evil. Another departure from this rule is his detailed description of the “palaces of impurity” with their guardians in his commentary on Exodus 38–40 (2, 262–9), which follows a parallel description of the “palaces of holiness.”

In the symbolism of the Zohar concerning the *sitra aḥra*, a number of different themes confront and occasionally even conflict with one another. The *kelippot* (“shells” or “husks” of evil) are sometimes understood neoplatonically as the last links of the chain of emanation where all turns to darkness, as “the end of days” in the language of the Zohar. At other times they are defined simply as intermediaries between the upper and lower worlds, in which light they are not necessarily seen as evil. Indeed, every mediating principle is a “shell” from the perspective of that which is above it but a “mind” from the point of view of that which is below (Zohar, 1, 19b). In other descriptions the domain of evil is delineated as the natural waste product of an organic process and is compared to bad blood, a bitter branch on the tree of emanation, foul waters (2, 167b), the dross which remains after gold has been refined (*hittukhei ha-zahav*), or the dregs from good wine. Such descriptions of the *sitra aḥra* in the Zohar are particularly rich in mythical images. The identification of evil with physical matter, though it occurs occasionally in the Zohar and in other kabbalistic books, never became an official doctrine of either. The equivocation of medieval philosophy between the Aristotelian and Platonic-emanatist concepts of matter is equally strongly felt in the Kabbalah, although the problem of how matter is emanated is referred to only infrequently. Generally speaking, the question of the nature of matter is not central in the Kabbalah, where the major interest was rather the question of how the Divine was reflected in

matter. Occasional discussions of the nature of matter from a neoplatonic viewpoint can already be found in the literature of the *Sefer ha-Iyyun* circle. Cordovero, in his *Sefer Elimah*, explains the emanation of matter from spirit by means of a dialectic treatment of the concept of form that was common in medieval philosophy.

According to the Zohar there is a spark of holiness even in the domain of “the other side,” whether from an emanation of the last *Sefirah* or as an indirect result of man’s sin, for just as the fulfillment of a commandment strengthens the side of holiness, so a sinful act revitalizes the *sitra ahra*. The realms of good and evil are to an extent commingled, and man’s mission is to separate them. In contrast to this view which acknowledges the metaphysical existence of evil, an alternative approach has found its basic expression in Gikatilla, who defined evil as an entity which was not in its rightful place: “every act of God, when it is in the place accorded to it at creation, is good; but if it turns and leaves its place, it is evil.” These two views – that of the Zohar, which accords evil actual existence as the fire of God’s anger and justice, and that of Gikatilla, which attributes to it only a potential existence that nothing can activate save the deeds of men – occur throughout kabbalistic literature without any victory of one over the other. Even in the different versions of Lurianic doctrine the two are perpetually in conflict. (On the problem of evil in Lurianic Kabbalah, see below.)

A new and final development in regard to the problem of evil occurred in the doctrine of the Shabbateans, as formulated particularly in the writings of Nathan of Gaza. According to him, there were from the very beginning two lights in *Ein-Sof*: “the light which contained thought” and “the light which did not contain thought.” The first had in it from the very beginning the thought of creating worlds, while in the latter there was no such thought, its whole essence striving toward remaining concealed and resting within itself without emerging from the mystery of *Ein-Sof*. The first light was entirely active and the second light entirely passive and immersed in the depths of itself. When the thought of creation arose in the first light, it contracted to make room for this creation, but the thought-less light which had no share in creation remained in its place. Since it had no other purpose but to rest in itself, it passively resisted the structure of emanation which the light containing thought had built in the vacuum created by its own contraction. This resistance turned the light without thought into the ultimate source of evil in the work of creation. The idea of a dualism between matter and form as being at the root of good and evil here assumes a most original pattern: the root of evil is a principle within *Ein-Sof* itself, which holds itself aloof from creation and seeks to prevent the forms of the light which contains thought from being actualized, not because it is evil by nature but only because its whole desire is that nothing should exist apart from *Ein-Sof*. It refuses to receive within itself the light that contains thought, and consequently it strives to frustrate and destroy whatever is constructed by that light. Evil is therefore the out-

come of a dialectic between two aspects of the light of *Ein-Sof* itself. Its activity arises from its opposition to change. The approximation of this idea to the neoplatonic view of matter as the basis of evil is obvious. The struggle between the two lights is renewed at every stage of creation, nor will it come to an end until the time of final redemption, when the light that contains thought will penetrate through and through the light without thought and delineate therein its holy forms. The *sitra ahra* of the Zohar is no more than the totality of the structure which the light without thought is forced to produce as a result of this struggle. As the process of creation goes on, the struggle becomes sharper, because the light of thought wants by its very nature to penetrate all the space that has been vacated by its contraction and to leave nothing untouched in that formless, primordial realm that Nathan calls *golem* (the formless *hyle*). The premise that the principles of both good and evil exist together in the supreme mind of God and that there is no other possible logical solution to the problem of evil in a monotheistic system was shared by Leibnitz, who approached the problem similarly some 50 years later in his *Théodicée*.

Although there is no doubt that most kabbalists held that evil did have a real existence at various levels, even though it functioned through negation, they were divided in their views concerning the eschatological problem of how it would finally be terminated both in the world and in man. Would the power of evil be totally destroyed in the time to come? Would it perhaps survive, but without any possibility of influencing the redeemed world once good and evil, which had become intermingled, had now been finally separated? Or would evil perhaps be transformed into good once more? The view that in the future world, whenever that would be, all things would return to their original, holy state, had eminent advocates from the days of the Gerona kabbalists onward. Naḥmanides spoke of “the return of all things to their true essence” – a concept drawn perhaps from Christian eschatology and the doctrine of *apokatastis* – and he meant by this the reascent of every created being to its source in emanation which would no longer leave room for the continued existence of the kingdom of evil in creation or of the power of the evil instinct in man. It would appear, indeed, that this return was connected in his view with the great jubilee, according to the doctrine of the *shemittot*. Such a position accepted the reality of evil within the different *shemittot*, in each *shemittah* according to its specific nature.

Generally speaking, kabbalistic arguments about the ultimate fate of evil limited themselves to the time of the redemption and the final day of judgment. The dominant view was that the power of evil would be destroyed and disappear, since there would be no longer any justification for its continued existence. However, others held that the evil domain would survive as the place of eternal punishment for the wicked. A certain vacillation between these two beliefs is found in both the Zohar and Lurianic Kabbalah. On the whole, the Zohar emphasizes that the power of the *kelippot* will be terminated

and “broken” in the time to come, and in a number of places it states quite plainly that the *sitra aħra* “will pass from the world” and the light of holiness will shine “without hindrance.” Gikatilla states, on the other hand, that in the time to come “God will take the attribute of misfortune [i.e., the power of evil] to a place where it will not be able to be malignant” (*Sha‘arei Oraħ*, ch. 4). Those who upheld the doctrine that evil would once more become good claimed that Samael himself would repent and be transformed into an angel of holiness, which would automatically cause the disappearance of the kingdom of the *sitra aħra*. This view is expressed in the book *Kaf ha-Ketoret* (1500), and particularly in the *Asarah Ma‘amarot* of Menahem Azariah Fano, but is opposed in the writings of Vital, who took a less liberal position. A powerful symbolic statement of Samael’s future return to sanctity, and one particularly common from the 17th century onward, was the view that his name would be changed, the letter *mem*, signifying death (*mavet*), dropping out to leave Sa‘el, one of the 72 holy Names of God.

The Doctrine of Creation in Lurianic Kabbalah

The one factor common to all kabbalistic doctrines of emanation and creation before Isaac Luria was their belief in an inner, uni-directional development that led from the stirring of *Ein-Sof* toward creation by means of more or less continuous stages. This process was prone to assume more complex forms and to go beyond the general doctrine of the ten *Sefirot*, to delve into the inner dynamic of the *Sefirot* themselves, or to describe the world of emanation through other symbolic systems, such as that of the mutually evolving, mutually conjoining Names of God. But the basic theme always remained the same: the progressive manifestation of *Ein-Sof* as articulated through the processes of emanation and creation. Even the classic formulation of this doctrine in the books of Cordovero, with all its dialectic complexity, does not diverge from this basic line. In contrast to this, we find a crucial turning-point in Lurianic cosmogony, whose extremely dramatic conception introduced far-reaching changes in the structure of kabbalistic thought. The details of this system are extremely complex even where they are clearly expounded, as for example, with regard to the principal acts of the creation-drama, to say nothing of its many obscurities that mystical meditation alone can perhaps comprehend. Lurianic doctrine created an enormous chasm between *Ein-Sof* and the world of emanation, which in previous kabbalistic teachings had been closely bound together, and then proceeded to fill it with divine acts of which the earlier Kabbalah had known nothing, although they can often be better understood against the background of older motifs. The principal accounts of the stages of creation found in the different versions of Lurianic doctrine given in the writings of his disciples and their pupils (on these sources, see the article on Luria) are basically similar, but they vary in emphasis and in the speculative interpretations they give to the significance of the main acts of creation. It may indeed be said that with Isaac Luria a new period of kabbalistic specula-

tion was inaugurated which must be distinguished from earlier Kabbalah in all respects.

This new Kabbalah was based on three main doctrines, which determined its character: *zimzum*; “the breaking of the vessels”; and *tikkun*.

ZIMZUM (“CONTRACTION”). The basic source of this doctrine is found in an early fragment from the circle of the *Sefer ha-Iyyun* (a preface to a commentary on “the 32 paths of wisdom” in the Florence Ms.) which speaks of an act of divine contraction that preceded emanations: “How did He produce and create this world? Like a man who gathers in and contracts (*mezamzem*) his breath [Shem Tov b. Shem Tov has, “and contracts Himself”], so that the smaller might contain the larger, so He contracted His light into a hand’s breadth, according to His own measure, and the world was left in darkness, and in that darkness He cut boulders and hewed rocks.” Here the reference is to the creation of *Keter*, which was thought to evolve from an act of contraction that left room for that darkness which alone was *Keter*. This was also in fact Naħmanides’ view in his commentary to the *Sefer Yezirah*, but not until Luria was the idea elevated to a basic cosmological principle.

The main originality of this Lurianic doctrine lay in the notion that the first act of *Ein-Sof* was not one of revelation and emanation, but, on the contrary, was one of concealment and limitation. The symbols employed here indicate an extremely naturalistic point of departure for understanding the beginning of creation and their very audacity made them highly problematic. Not surprisingly, therefore, important points of Luria’s doctrine, which was preserved in its original wording in Luria’s own literary remains and in Joseph ibn Tabul’s version, were either obliterated (as in Vital’s *Ez Hayyim*) or completely suppressed (as in *Kanfei Yonah* by R. Moses Jonah). The starting point of this theory is the idea that the very essence of *Ein-Sof* leaves no space whatsoever for creation, for it is impossible to imagine an area which is not already God, since this would constitute a limitation of His infinity. (This problem was not a source of concern to either the Zohar or Cordovero.) Consequently, an act of creation is possible only through “the entry of God into Himself,” that is, through an act of *zimzum* whereby He contracts Himself and so makes it possible for something which is not *Ein-Sof* to exist. Some part of the Godhead, therefore, retreats and leaves room, so to speak, for the creative processes to come into play. Such a retreat must precede any emanation.

Unlike the midrashic use of the word (*mezamzem*), which speaks of God contracting Himself into the Holy of Holies in the abode of the cherubs, kabbalistic contraction has quite the reverse significance: it is not the concentration of God’s power *in* a place, but its removal *from* a place. The place from which He retreats is merely “a point” in comparison with His infinity, but it comprises from our point of view all levels of existence, both spiritual and corporeal. This place is primordial space, and it is called *tehiru*, a term taken from the Zohar (1, 15a). Luria also answers the question of how this *zimzum*

actually took place. Before *zimzum* all the forces of God were stored within His infinite Self and equitably balanced without any separation between them. Hence, even the forces of *Din* (“judgment”) were stored there but were not distinguishable as such. When the primal intention to create came into being, *Ein-Sof* gathered together the roots of *Din*, which had been previously concealed within him, into one place, from which the power of mercy had departed. In this way the power of *Din* became concentrated. *Zimzum* therefore was an act of judgment and self-limitation, and the process thus initiated was intended to continue by means of a progressive extraction and catharsis of the power of *Din* that was left in primordial space, where it was intermingled in a confused fashion with the remnants of the light of *Ein-Sof* that had remained behind even after *zimzum*, like the drops of oil that remain in a vessel after it has been emptied. This residue was called *reshimu*. Into this inchoate mixture, which is the hylic aspect of the future universe, there descends from the primordial, space-encompassing *Ein-Sof* a *yod*, the first letter of the Tetragrammaton, which contains a “cosmic measure” or *kav ha-middah*, that is, the power of formation and organization. This power may be seen as belonging to the attribute of mercy (*Rahamim*).

Creation, therefore, is conceived of as a double activity of the emanating *Ein-Sof* following on *zimzum*: the Emanator acts both as a receptive substratum in the light of the *reshimu*, and as a form-giving force which descends from the essence of *Ein-Sof* to bring order and structure to the original confusion. Thus, both the subject and object of the process of creation have their origin in God but were differentiated from each other in the *zimzum*. This process is expressed in the creation of “vessels” (*kelim*) in which the divine essence that remained in primordial space is precipitated out: at first this takes place still hylically, in the vessel called “primordial air” (*avir kadmon*), but subsequently it assumes a clearer form in the vessel called “primordial man” (*Adam Kadmon*) that is created by a raising and lowering of the “cosmic measure,” which serves as a permanent connection between *Ein-Sof* and the primordial space of *zimzum*.

This version of the doctrine of *zimzum* was obscured to a great extent by Vital, although occasional allusions to it remain scattered here and there in his works. At the beginning of his *Ez Hayyim*, however, there is a much simpler account. Without mentioning either the gathering out of the roots of *Din* or the *reshimu*, he describes a process whereby as a result of the act of divine contraction an empty vacuum was formed in the midst of *Ein-Sof*, into which emanated a ray of light that filled this space with ten *Sefirot*. Since the *zimzum* took place equally on all sides, the resulting vacuum was circular or spherical in shape. The light which entered it in a straight line after the *zimzum* has, therefore, two aspects from the start: it arranges itself both in concentric circles and in a unilinear structure, which is the form of “the primordial man that preceded every first thing.” The form of a circle and of a man are henceforth the two directions in which every created thing develops. Just as the first movement in creation was in

reality composed of two movements – the ascent of *Ein-Sof* into the depths of itself and its partial descent into the space of *zimzum* – so this double rhythm is a necessarily recurring feature of every stage in the universal process. This process works through the double beat of the alternately expanding movement of *Ein-Sof* and its desire to return to itself, *hitpash-tut* (“egression”) and *histalkut* (“regression”), as the kabbalists call it. Every movement of regression toward the source has something of a new *zimzum* about it. This double-facedness in the process of emanation is typical of the dialectical tendency of Lurianic Kabbalah. Every stage in the development of the emanating light has not only a circular and linear aspect but also the modes of both an “inner light” within the vessels that are produced and a “surrounding light,” as well as the modes of *azmut ve-kelim* (“substance and vessels”), and “direct light and reflected light,” that are taken from the teachings of Cordovero. Luria’s special interest in the structure of the spiritual worlds and their emergence through dialectical processes is also expressed in the distinction he makes between the structural “totality” (*kelalut*) of the forces of emanation and the structural “individuality” (*peratut*) of each, that is, the isolated articulation in itself of each such power that is active in a given overall structure.

Our earliest sources for the doctrine of *zimzum* clearly show that Luria did not differentiate between the substance of *Ein-Sof* and its light, in both of which *zimzum* occurred. Such a distinction was made only when problems arose concerning the harmonization of this doctrine with the idea of God’s immutability. This desire for consistency had two consequences:

(1) a differentiation between the substance of *Ein-Sof* and its light (i.e., its will), which made it possible to argue that the *zimzum* occurred only in the latter and not in its “possessor”; and

(2) the insistence that the concept of *zimzum* was not to be taken literally, being only figurative and based on a human perspective. These two beliefs were particularly stressed in the school of Israel Sarug, whose teachings on the subject were based on a combination of Ibn Tabul’s redaction of Lurianic doctrine with that of Moses Jonah in his *Kanfei Yonah*, which makes no mention of *zimzum* but speaks only of an emanation of one primal point comprising all the *Sefirot* without going into the details of how the latter came into being. To this Sarug added original ideas of his own which had a great influence on later Kabbalah; a summary of them can be found in his book *Limmudei Azilut*. According to him, the *zimzum* was preceded by processes of a more internal nature within *Ein-Sof* itself. In the beginning *Ein-Sof* took pleasure in its own autarchic self-sufficiency, and this “pleasure” produced a kind of “shaking” which was the movement of *Ein-Sof* within itself. Next, this movement “from itself to itself” aroused the root of *Din*, which was still indistinguishably combined with *Rahamim*. As a result of this “shaking,” “primordial points” were “engraved” in the power of *Din*, thus becoming the first forms to leave their markings in the essence of *Ein-Sof*. The contours

of this “engraving” were those of the primordial space, that was to come into being as the end-product of this process. As the light of *Ein-Sof* outside this “engraving” acted upon the points within it, the latter were activated from their potential state and the primordial Torah, the ideal world woven in the substance of *Ein-Sof* itself, was born. This Torah, the linguistic movement of *Ein-Sof* within itself, is called a *malbush* (“garment”), though in fact it is inseparable from the divine substance and is woven within it “like the grasshopper whose clothing is part of itself” to use the language of the Midrash. Sarug described the structure of this “garment” in great detail. Its length was made up of the alphabets of the *Sefer Yezirah* and had 231 “gates” (i.e., possible combinations of the 22 letters of the Hebrew alphabet in the progression אב, אב, אב, אב etc.), which form the archistructure of divine thought. Its breadth was composed of an elaboration of the Tetragrammaton according to the numerical value of the four possible spellings of the fully written names of its letters, viz., the “name” 45 (א, יו, ה, א), the “name” 52 (ה, ה, ו, ה), the “name” 72 (ה, ו, ו, ה), and the “name” 63 (ה, ו, ו, א), which were the “threads” of the “weave” that were originally situated in the hem of the garment. This primordial Torah contained potentially all that could possibly be revealed through the Torah to be given on earth. In effect, it was a kabbalistic version of the Platonic world of ideas. The size of this garment was twice the area necessary for the creation of all the worlds. After it had been woven, it was folded in two: half of it ascended and its letters stood behind the letters of the other half. The “names” 45 and 52 were arranged behind the “names” 72 and 63, and consequently the last *yod* of the “name” 63 was left without a partner in the folded garment. This folding constituted a contraction (*zimzum*) of the garment to half its area, and with the removal of half of it from its previous place, something was created in *Ein-Sof* that no longer partook of its substance. All that remained in this primordial square was the unmatched *yod*, which now assumed the dynamic task of transferring the light of *Ein-Sof*, which spread in circles, to the area produced by the act of *zimzum*, as in the version of Ibn Tabul. The empty area created by the folding of the garment is not an actual vacuum but is merely deprived of the garment or of the light of its substance. Yet the hidden law of the whole of creation that is inscribed within the “engraving” of *Ein-Sof* is henceforward active and expresses itself throughout all subsequent processes through the power invested in this one intruding *yod*. Made manifest in the vacated space are both the residue (*reshimu*) of the remaining light of its essence and some of the light of *Ein-Sof* itself, which acts as the soul that sustains all and without which all would return to *Ein-Sof* as before. This soul too contracts to a point, which is none other than the *anima mundi* of the philosophers. Moreover, the various movements of the *zimzum*, and the ascents and descents of this *yod*, produce still other points in space that constitute the primordial “world of points” (*olam ha-nekudot*), which at this stage still has no definite structure and in which the divine lights exist in an atomized state. According to Sarug, not one

but many contractions occur in the place of the *reshimu*, and even more so thereafter. Elsewhere he states that there are two kinds of *reshimu*, one of the divine substance and one of the folded garment, and that only the second is articulated in the world of the points. Only upon the return of the *yod*, which ascends to *Ein-Sof* and re-descends from it, is that supernal light created in the primordial space which is known as the *tehiru* or primal matter of every being.

The dialectical confusion apparent in Sarug’s presentations bears witness to the uncertainty and excitement caused by the new idea of the *zimzum*. The importance of the power of *Din* in those acts which led to its embodiment in primal matter is obliterated to a much greater extent in Sarug’s presentation than in that of Ibn Tabul, though it does not disappear altogether. The contradiction inherent in the opposing conceptions of the vacated primordial space, now as a square and now a sphere created by the activity of the emanating *yod*, posed an additional problem in Sarug’s work that was not found elsewhere and that had no consistent solution. In any case, extreme naturalistic descriptions in these accounts were qualified by the stress laid on their symbolic character.

One of the most interesting of the further speculative attempts to explain the theories of *zimzum*, which continued to be made for more than 200 years, is the daring interpretation of Shabbetai Sheftel Horowitz in his *Shefa Tal*. Horowitz tried to revise the doctrine of *zimzum* once again and to regard it as merely a symbolic account of the emanation of the *Sefirah Keter*. Following Sarug’s presentation, although without mentioning the *malbush* (“garment”), he attempted to equate the different stages in *zimzum* with what he considered to be the parallel stages in the emanation of *Keter* in Cordovero’s teachings. The emergence of the *tehiru* was no longer produced by the *zimzum* itself but by the emanation of the light of *Ein-Sof* from within the essence of *Ein-Sof* itself. Only within this emanated *tehiru* did a contraction take place of the light of *Ein-Sof*, a residue of which mingled with some of the emanated substance to form the *reshimu*. Thus, the soul came into being as a supernal point in the *Sefirah Keter*. This transformation of the *zimzum* into a second divine act following an original act of emanation made the doctrine once more compatible with Cordovero, who had also acknowledged the existence of a *zimzum* within the chain of emanations, in which the power of the Creator became inevitably restricted in a progressive manner. Thus, Horowitz’s interpretation removed the paradoxical thrust which was inherent in the doctrine of *zimzum* from its very conception.

From the 17th century onward kabbalistic opinion was divided on the doctrine of *zimzum*. Was it to be taken literally? Or was it to be understood symbolically as an occurrence in the depths of the Divine, which the human mind could only describe in figurative language? The question was a bone of contention in the many arguments that took place between the kabbalists and the more philosophically inclined who found kabbalistic speculation distasteful, for all that the concept of *zimzum* was in fact very close to ideas that later developed

in modern idealist philosophies, such as those of Schelling and Whitehead. As a result of the exposition of the doctrine given by the author of *Emek ha-Melekh*, many kabbalists were inclined to take the *zimzum* literally, a view that became especially popular among the Shabbateans, whose entire creed made a non-literal interpretation impossible. This position was clearly expressed in the writings of Nathan of Gaza and Nehemiah Hayon. It was Hayon's determined defense of the literalist interpretation, in fact, that prompted Joseph Ergas to stress even more keenly Abraham Herrera's view that the *zimzum* doctrine was symbolic. This dispute, which was also bound up with the anthropomorphic doctrine of the Shabbateans in general, broke out in 1714 and was summed up by Ergas in his *Shomer Emunim* (1736), which is our main source for that fundamental reinterpretation that restored Lurianic doctrine to its Cordoveroan starting-point. By then the Shabbatean side of the argument was no longer a factor, so that the literalist position was defended again, even in the camp of the orthodox kabbalists, whose chief spokesman was Immanuel Hai Ricchi in his *Yosher Levav* (1737). Ergas' system, on the other hand, was expanded in the *Amud ha-Avodah* by Baruch Kosover (written about 1763, but not printed until 1854). Ergas greatly influenced ḥasidic literature, especially the Ḥabad teachings of Shneur Zalman of Lyady and his pupil Aaron ha-Levi of Staroselye, who devoted a profound dialectical discussion to the subject in his *Avodat ha-Levi*. In his *Tanya* Shneur Zalman maintained that the Gaon of Vilna mistakenly took *zimzum* literally, but it is an open question if he was justified in interpreting the Gaon's teachings in this way. Aaron ha-Levi's system is based on the premise of a double *zimzum*. The first *zimzum*, also called *beki'ah* ("piercing"), is a contraction in the substance of *Ein-Sof* which renders possible the appearance of the Infinite in general and which is completely beyond our understanding. It leads to a revelation of the light of *Ein-Sof*, but it is so unfathomable that there is not the slightest mention of it in Ḥayyim Vital's *Ez Ḥayyim*. It is only after this *beki'ah*, which is conceived of as a "leap" from absolute *Ein-Sof* to relative *Ein-Sof*, that the second contraction occurs, whereby the Infinite light of *Ein-Sof* is made to appear finite. In fact, however, the finite has no existence at all and is made possible only through the emission of a line or a ray from the Infinite. The cathartic concept of *zimzum* mentioned above was developed independently in the writings of Moses Ḥayyim Luzzatto, who believed the crux of *zimzum* to lie in the fact that the Creator "overcomes, as it were, His innate law of goodness in creation, so that His creatures should not be made perfect, even seen from their own point of view, let alone seen from that of God." The metaphysical root of evil is inherent in the very privation that the act of *zimzum* involves, and the whole development of created beings depends on their being given an opportunity to perfect themselves according to their merits and to separate the power of evil from the power of good.

In sum, we can say that those kabbalists who wrote with one eye on the philosophers tended to stress the non-literal nature of *zimzum*, whereas those kabbalists who had little

use for Aristotelian philosophy to begin with presented the doctrine literally and unadorned. Nor should we overlook the close connection in the view of many kabbalists between *zimzum* and the existence of the hylic matter which served as the basis for creation as a whole. Even Ḥayyim Vital himself defined the Infinite as the Nothing, which became manifest in *Keter* only through *zimzum*, the hylic matter in the whole of creation (*Ez Ḥayyim*, ch. 42, para. 1). Others connected the existence of the *hyle* with the *reshimu*, the primordial space, or the primordial air which was made manifest through *zimzum*. A special discussion of the subject occurs in Eliakim b. Abraham Hart's *Zuf Novelot* (London, 1799), summarizing the far longer elaboration in *Novelot Hokhmah* by Joseph Solomon Delmedigo (1631).

THE BREAKING OF THE VESSELS. The point in *Ein-Sof* that was vacated in the act of *zimzum* was subsequently filled with a proliferation of worlds and ontological events, each one of which tends in Lurianic Kabbalah to become the subject of a description whose complexity verges on the extreme. Moreover, these descriptions themselves vary widely in the different redactions of Ibn Tabul, Moses Jonah, and Ḥayyim Vital, and highly contradictory versions of them can even be found in several of Vital's own works. Israel Sarug's attempts to make a unified whole out of this confusion only added still further to it. Nevertheless, in each of these many presentations the same broad outlines appear. Isaac Luria's main preoccupation, it would appear, was to trace the further development of the vessels that received the light of emanation which shone into the primordial space after the act of *zimzum*. In the actual emergence of these vessels a part was played both by the lights that were located in the *tehiru* after the *zimzum* and by the new lights that entered with the ray. The purpose of this process was the selecting out of the forces of *Din* that had collected, a catharsis that could have been attained either by eliminating these forces from the system entirely or else by integrating them within it by first "softening" and purifying them – two conflicting approaches which we frequently encounter side by side. In either case, however, in order to further those processes that were a necessary prelude to the complex hierarchy of creation, a progressive differentiation was called for in the vessels themselves, without which the emanating streams would have been unable to regulate themselves and function properly. To this end, the various conjunctions of the first emanating lights as they collided with each other resulted in the creation of the vessels, which "crystallized out," as it were, from certain modes that these lights contained.

All the Lurianic redactions agree that the ray of light that comes from *Ein-Sof* in order to organize the *reshimu* and the forces of *Din* that have filled the primordial space functions in two opposing fashions which inform all the developments in this space from beginning to end. These are the two aspects of "circle and line" (*iggul ve-yosher*). Practically speaking, a point can expand evenly in one of two ways, circularly or linearly, and herein is expressed a basic duality that runs

through the process of creation. The more harmonious of the two forms, which partakes of the perfection of *Ein-Sof*, is the circle; the latter conforms naturally to the spherical space of the *zimzum*, while the straight ray of light goes forth to seek its ultimate structure in the form of man, who represents the ideal aspect of *yosher* (“straightness”). Thus, while the circle is the natural form, the line is the willed form that is directed toward the figure of man. Moreover, because the line of light comes directly from *Ein-Sof*, it is of a higher degree than the circle, whose shape is a reflection of the *zimzum*. The former, according to Isaac Luria, comprehends the principle of the *ru'ah*, the latter the principle of the *nefesh* or natural perfection. Essentially, this doctrine is a restatement of the Pythagorean geometrical symbolism that dominated natural philosophy until the 17th century. Every act of emanation, therefore, contains these two aspects, and should one be missing various disruptions or unexpected developments will take place. All purposeful, teleological movements are basically those of the line, while to the circle belong all processes dominated by natural, immanent necessity.

The first form that emanation assumes after the *zimzum* is that of the *Adam Kadmon* (“primordial man”), which in the Lurianic system stands for a realm above the four worlds of *azilut*, *beriah*, *yezirah*, and *asiyyah* with which pre-Lurianic Kabbalah began. Isaac Luria did, it is true, seek to support this belief with a number of citations from the *Zohar* and the *Tikkunim*, but in fact it represented a completely new departure. Though he and his disciples maintained that many of the processes that take place in the *Adam Kadmon* are mysteries beyond human knowledge, they nevertheless discussed in great detail the manner in which the forces of emanation were organized after the *zimzum* in this form. Throughout their treatment of this figure and of the supernal lights that radiated from it, the double dialectical movement mentioned above remains dominant. Thus, the ten *Sefirot* first took shape in the *Adam Kadmon* in the form of concentric circles, of which the outermost, the circle of *Keter*, remained in close contact with the surrounding *Ein-Sof*. This was the *nefesh* of the *Adam Kadmon*. Next the ten *Sefirot* rearranged themselves as a line, in the form of a man and his limbs, though of course this must be understood in the purely spiritual sense of the incorporeal supernal lights. This was the *ru'ah* of the *Adam Kadmon*. The higher aspects of the *nefesh*, known as *neshamah*, *hayyah*, and *yehidah*, are also rooted in the upper *Sefirot* in their linear configurations. All of these lights possess vessels which are still so subtle and “pure” that they can hardly be considered vessels at all. The promotion of the *Adam Kadmon* to the rank of the first being to emerge after the *zimzum* accounts for the strong anthropomorphic coloring that accompanies all descriptions of the process of emanation in the Lurianic system. The *Adam Kadmon* serves as a kind of intermediary link between *Ein-Sof*, the light of whose substance continues to be active in him, and the hierarchy of worlds still to come. In comparison with the latter, indeed, the *Adam Kadmon* himself could well be, and sometimes was, called *Ein-Sof*.

From the head of the *Adam Kadmon* tremendous lights shone forth and aligned themselves in rich and complex patterns. Some assumed the form of letters while others took on still other aspects of the Torah or the Holy Tongue, such as the cantillations (*te'amim*), the vowel points, or the scribal affixes (*tagim*), which too are components of Holy Writ. Thus, two essentially different symbolisms – that of light, and that of language and writing – are here joined. Every constellation of light has its particular linguistic expression, though the latter is not directed toward the lower worlds but rather inward toward its own hidden being. These lights combine to form “names” whose concealed potencies become active and are made manifest through concealed “configurations” (*millu'im*) where each letter is fully written out by name in the alphabet. This primordial world from the lights of *Adam Kadmon's* forehead, which issued from the spot where the phylactery-of-the-head is laid. The lights issuing from the *Adam Kadmon's* ears, nose, and mouth, however, expanded linearly only, nor did their *Sefirot* have special vessels, since they were at first joined together in a common vessel in accord with the “collectivity” that was their structural nature. Vital called this sphere *olam ha-akudim*, meaning a world where the *Sefirot* were not yet differentiated (lit. bound together). The function assigned to these lights in the drama of creation was never clearly defined. The lights of the eyes, on the other hand, were differentiated into every *Sefirah*. In theory these lights should have issued from the navel, but the place of their appearance was deflected by a medium acting within the *Adam Kadmon* and referred to as *parsa* (apparently a reference to the diaphragm). This displacement is described as the result of another *zimzum* within the lights themselves. Having changed their path, these lights issued from the eyes both linearly and circularly, and each of their *Sefirot* commanded a vessel of its own. Vital calls these separated lights “the world of dots” (*olam ha-nikuddim*), but in other Lurianic writings they are grouped together with the light of the *tehiru* and referred to as “the world of points” (*olam ha-nekuddot*) or “the world of chaos” (*olam ha-tohu*) – the latter because at this stage the lights of the *Sefirot* had not yet attained a stable structural arrangement. All the lights of these *Sefirot* were given vessels, themselves made of thicker light, in which to arrange themselves and function.

At this point, however, there occurred what is known in Lurianic Kabbalah as “the breaking of the vessels” or “the death of the kings.” The vessels assigned to the upper three *Sefirot* managed to contain the light that flowed into them, but the light struck the six *Sefirot* from *Hesed* to *Yesod* all at once and so was too strong to be held by the individual vessels; one after another they broke, the pieces scattering and falling. The vessel of the last *Sefirah*, *Malkhut*, also cracked but not to the same degree. Some of the light that had been in the vessels retraced its path to its source, but the rest was hurled down with the vessels themselves, and from their shards the *kelippot*, the dark forces of the *sitra a'hra*, took on substance. These shards are also the source of gross matter. The irresistible pressure of the light in the vessels also caused every rank of worlds to de-

scend from the place that had been assigned to it. The entire world process as we now know it, therefore, is at variance with its originally intended order and position. Nothing, neither the lights nor the vessels, remained in its proper place, and this development – called after a phrase borrowed from the *Idrot* of the Zohar, “the death of the primordial kings” – was nothing less than a cosmic catastrophe. At the same time, the breaking of the vessels, which corresponds to the destruction of the first, unsuccessful worlds in earlier Kabbalah, was not understood in Lurianic writings to be an anarchic or chaotic process; rather, it too took place in accord with certain clear internal laws that were elaborated extensively. Similarly, the emergence of the *kelippot* as the root of evil was described as a process following fixed rules and involving only the shards of those vessels that had been struck by the first sparks of light. These lights remained “captured” among the *kelippot*, which are nourished by them; they, in fact, provide the life-force for the entire world of *kelippot*, which in one degree or another interpenetrated the whole hierarchy of worlds once the vessels had been broken. The broken vessels too, of course, were subjected to the process of *tikkun* or restoration which began immediately after the disaster, but their “dross” was unaffected, and from this waste matter, which can be compared to the necessary by-products of any organic process, the *kelippot*, in their strict sense as the powers of evil, emerged. The catastrophic aspects of the breaking of the vessels were especially stressed in the simplified versions of the story that appeared in popular kabbalistic literature which described the entire process in highly mythical imagery.

Widely differing explanations for the breaking of the vessels were offered in Lurianic writings. Some commentators were content to attribute it to the weak and atomized inner structure of “the world of points,” whose isolated, unorganized parts were too unstable to prevent the occurrence. Another explanation was that since the first emanations of the points were all circular rather than partly linear, an inevitable imbalance was created. In some texts it is stated that only the “branches” of the points went forth from *Adam Kadmon* while the “roots” remained within him, and that the former lacked the power by themselves to withstand the pressure of the light. All of these explanations are based on the premise that the unsound structure of the world of points was at fault, and view the breaking of the vessels as a mishap in the existence of the life-process of the Godhead. (See Tishby, *Torat ha-ra ve-ha-kelippah be-kabbalat ha-Ari*, 39–45.) Other explanations which seem to derive from Isaac Luria himself actually seek to justify this unsound structure by viewing it as a reaction to the roots of *Din* and the *kelippot* that were from the start present in the emanation. According to this view, the main design of the emanative process was to bring about a catharsis of these harsh elements and of the waste matter in the divine system. The presence of the roots of the *kelippot* in the emanation was the true inner reason for the breaking of the vessels. This cathartic explanation is frequently associated with the teleological view that the vessels were broken in order to pave the way for reward

and punishment in the lower worlds that were due to emerge as the last phase of the creation. Differently stressed versions of such explications can be found in Moses Jonah, Vital, and Ibn Tabul. The cathartic and teleological explanations represent basically different approaches and well illustrate the tension in Lurianic Kabbalah between mythic and theological modes of thought. Later kabbalists ruled that the teleological explanation was indeed the literally correct one but that the cathartic explanation represented the mystical truth (Meir Bikayam, *Me'orei Or*, 1752, 15c). In the Lurianic school of Israel Sarug an additional, organic analogy was offered: the world of points was like a sown field whose seeds could not bear fruit until they had first split open and rotted.

TIKKUN. The breaking of the vessels marks a dramatic turning-point in the relations between the *Adam Kadmon* and all that develops beneath him. All the subsequent processes of creation come about to restore this primal fault. In its imaginative boldness, the belief that such an event could take place within a realm that, according to all opinions, was still part of the self-manifesting Godhead can be compared only to the doctrine of the *zimzum* itself. Indeed, it was even suggested that the *zimzum* too represented a kind of primordial “breakage” within *Ein-Sof*. The laws by which the process of cosmic restoration and reintegration (*tikkun*) works itself out constitute the largest part of Lurianic Kabbalah, for they touch on all the realms of creation, including the “anthropological” and “psychological” ones. The details of the doctrine of *tikkun* are extremely complex and seem to have been intentionally designed as a challenge to mystical contemplation. The most crucial element in this doctrine is the concept that the chief medium of *tikkun*, that is, of the restoration of the universe to its original design in the mind of its Creator, is the light that issued from *Adam Kadmon's* forehead to reorganize the disorderly confusion that resulted from the breaking of the vessels. The main support of these lights comes from the linear *Sefirot* of “the world of points,” which did not undergo any breakage and henceforward have the task of encouraging the formation of balanced and stable structures in the future realms of creation. These new structures are called *parzufim*, that is, configurations or *gestalten*, and each comprises an organic pattern of hierarchies of *Sefirot* with its own dynamic laws.

These *parzufim* (literally, “faces” or “physiognomies”) now take the place of the *Sefirot* as the principal manifestations of *Adam Kadmon*. In each of them newly emanated forces are bonded together with others that were damaged in the breaking of the vessels; thus, each *parzuf* represents a specific stage in the process of catharsis and reconstruction. The *Sefirah Keter* is now re-formed as the *parzuf* of *Arikh Anpin* (literally, “the long-faced one,” i.e., “the indulgent one” or “forbearing one,” a phrase borrowed from the Zohar, where it appears as an Aramaic translation of the biblical *erekh-appa-yin*, “long-suffering”), or *Attika* (“the ancient one”), which are sometimes treated as two separate aspects of the same *parzuf*. The *Sefirot Hokhmah* and *Binah* now become the *parzufim* of

Abba and *Imma* (“father and mother”), which function in a dual capacity: they exist as a medium for the reindividuation and redifferentiation of all the emanated beings into transmitters and receivers of influx, and they also serve as the supreme archetype for that procreative “coupling” (*zivvug*) which, in its metaphorical aspect of “face-to-face contemplation” (*hish-takkelut panim-be-fanim*), is the common root of all intellectual and erotic unions. This “coupling” is aroused by the re-ascend of the 288 sparks that had been in the broken vessels and returned to the bowels of *Binah*, where they play the role of animating and quickening forces within a structure whose function is primarily receptive. Without such assisting forces, which are referred to as “female waters” (*mayim nukbin*), there can be neither “coupling” nor unification even in the world of *azilut*. From the union of *Abba* and *Imma* a new *parzuf* is born, known as *Zè'ir Anpin* (literally, “the short-faced one,” i.e., “the impatient” or “unindulgent one”), which is comprised of the six lower *Sefirot*, from *Gevurah* to *Yesod*. Here we have the center for the cathartic processes that take place in all the *parzufim* in order to mitigate the harsh powers of *Din*; their ultimate success depends on a long, almost endless series of developments. The self-manifestation of *Ein-Sof* in the created worlds takes place largely through this *parzuf*, which undergoes an embryonic development in the depths of *Imma*, followed by “birth,” “suckling,” and the progressive emergence of the formative powers known as “immaturity” (*katnut*) and “maturity” (*gadlut*). The latter in turn are reinvigorated through a second “conception” by means of new powers that join them from other *parzufim*. The structural unity of *Zè'ir Anpin* is assured by the workings of a principle called *zelem* (“image,” after the verse in Gen. 1:27), which involves the activity of certain lights that help serve as a constituent element in all the *parzufim* but are especially centered in *Zè'ir Anpin*. The last and tenth *Sefirah*, *Malkhut*, is also converted into a *parzuf*, which is named *Nukba de-Zè'ir*, “the female of *Zè'ir*,” and represents the latter’s complementary feminine aspect. The main source of this boldly anthropomorphic symbolism is in the *Idrot* of the *Zohar*, but in its development in the Lurianic Kabbalah it took a radical turn. Isaac Luria himself undoubtedly viewed the *parzufim* as power centers through which the creative dynamism of the Godhead was able to function and assume form. The various names, configurations, and sub-configurations that accompany these symbolic descriptions were probably intended to mute this almost provocatively conspicuous anthropomorphism to some extent. Over and above the five *parzufim* just mentioned, whose inner dialectic is extensively explained in *Ḥayyim Vital’s Ez Ḥayyim*, there are still other, secondary *parzufim* that constitute the articulation of certain powers in the *Zè'ir Anpin* and its feminine *Nukba*, such as *Yisrael Sava*, *Tevunah*, *Rahel*, and *Leah*. Indeed, in Isaac Luria’s richly associative thought, practically every biblical personage was immediately transformed into a metaphysical figure from which sprang new hypostases and *parzufim*. An outstanding example of this tendency can be found in chapter 32 of the *Ez Ḥayyim*, where all that hap-

pened to the “generation of the desert” is construed as representing processes in the *parzufim* of the three upper *Sefirot* of the *Zè'ir Anpin* and its female counterpart.

The five principal *parzufim* of *Abba*, *Imma*, *Arikh Anpin*, *Zè'ir Anpin*, and *Nukba de-Zè'ir* constitute the figure of the *Adam Kadmon* as it evolves in the first stages of *tikkun*, which is quite different from the figure of *Adam Kadmon* that existed before the breaking of the vessels. These *parzufim* also comprise “the world of balance” (*olam ha-matkela*), which is identical with the world of *azilut* of earlier Kabbalah. From this world, though not its substance, an influx of spiritual light descends downward to the lower worlds of *beriah*, *yezirah*, and *asiyyah*. At the bottom of each world is a “curtain” which serves to filter out the sefirotic substance that properly corresponds to the nature of that world and to let all else pass on through a secondary reflex which in turn becomes the substance of a subsequent stage. The basic structure of the world of *azilut* repeats itself with certain modifications in the three lower worlds. The *tikkun*, however, has not yet been completed. As a result of the breaking of the vessels, none of the worlds is located in its proper place. Each one of them stands a rank lower than it should be, the original place of the world beneath it. In consequence, the world of *asiyyah*, which in essence is also a spiritual world (like the Ideal Nature of the neoplatonists), has descended and commingled with the lowest part of the realm of the *kelippot* and with the physical matter that is dominant there.

The main concern of Lurianic Kabbalah, as has been mentioned, is with the details of the process of *tikkun* and the developments that take place in the *parzufim* of the different worlds, in the “*adam of azilut*,” the “*adam of beriah*,” etc. (Over three-quarters of the *Ez Ḥayyim* is devoted to this subject.) The crucial point in the various Lurianic discussions of these developments is that although the *tikkun* of the broken vessels has almost been completed by the supernal lights and the processes stemming from their activity, certain concluding actions have been reserved for man. These are the ultimate aim of creation, and the completion of *tikkun*, which is synonymous with the redemption, depends on man’s performing them. Herein lies the close connection between the doctrine of *tikkun* and the religious and contemplative activity of man, which must struggle with and overcome not only the historic exile of the Jewish people but also the mystic exile of the *Shekhinah*, which was caused by the breaking of the vessels.

The object of this human activity, which is designed to complete the world of *tikkun*, is the restoration of the world of *asiyyah* to its spiritual place, its complete separation from the world of the *kelippot*, and the achievement of a permanent, blissful state of communion between every creature and God which the *kelippot* will be unable to disrupt or prevent. Of crucial importance here is the Lurianic distinction between the inward and outward aspects of the supernal lights and the worlds of creation themselves: the *tikkun* of the outward aspects of the worlds is not up to man at all, whose mission is solely concerned with certain aspects of inwardness. In the

Lurianic system the hierarchical rank of the inward is always lower than that of the outward, but precisely because of this it is within reach of the truly spiritual, inward individual, to some extent at least. Should the latter perform his task properly, the “female waters” that enable the supernal couplings to take place will be aroused, and the work of outward *tikkun* will be completed by the supernal lights that have remained concealed in the *parzuf* of *Attika* and are due to reveal themselves only at some future time. At the very least, human activity in accordance with the Torah can prepare the way for the *tikkun* of the lower worlds.

The Gnostic character of this cosmogony cannot be denied, though the detailed manner in which it is worked out is drawn entirely from internal Jewish sources. Typically Gnostic, for example, are the depiction of the creation as a cosmic drama centered around a profoundly fateful crisis within the inner workings of the Godhead itself, and the search for a path of cosmic restoration, of a purging of the evil from the good, wherein man is assigned a central role. The fact that such an unrecognized Gnostic theology was able to dominate the mainstream of Jewish religious thought for a period of at least two centuries must surely be considered one of the greatest paradoxes in the entire history of Judaism. At the same time, side by side with this Gnostic outlook, we find a most astonishing tendency to a mode of contemplative thought that can be called “dialectic” in the strictest sense of the term as used by Hegel. This tendency is especially prominent in attempts to present formal explanations of such doctrines as that of the *zimzum*, the breaking of the vessels, or the formation of the *parzufim*.

In addition to the Lurianic texts mentioned above, the basic tenets of Lurianic Kabbalah are systematically and originally presented in the following works: *Ma'amar Adam de-Azilut* by Moses Praeger, in his *Va-Yakhel Moshe* (Dessau, 1699); Joseph Solomon Delmedigo's *Novelot Hokhmah* (Basle, actually Hanau, 1631); *Kelah* [138] *Pithei Hokhmah* by Moses Hayyim Luzzatto (Koretz, 1785); Jacob Meir Spielmann's *Tal Orot* (Lvov, 1876–83); Isaac Eisik Haver's (see Wildman) *Pithei She'arim* (1888); Solomon Eliashov's *Leshem Shevo ve-Ahlamah* (1912–48); and Judah Leib Ashlag's *Talmud Eser ha-Sefirot* (1955–67). Well-known expositions of Lurianic Kabbalah by Abraham Herrera and Joseph Ergas were greatly influenced by their tendency to reconcile or at least to correlate the Lurianic system with the teachings of Cordovero, as can be seen in Ergas' allegorization of the Lurianic doctrine of *zimzum*.

The Kabbalah and Pantheism

The question of whether, and to what degree, the Kabbalah leads to pantheistic conclusions has occupied many of its investigators from the appearance in 1699 of J.G. Wachter's study attempting to show that the pantheistic system of Spinoza derived from kabbalistic sources, particularly from the writings of Abraham Herrera. Much depends here, of course, on the definition of a concept which has been employed in widely different meanings. A teaching can be considered pantheistic when it insists that “God is everything” and that “everything

is God,” yet we must distinguish between occasional formulas which have this kind of pantheistic coloring and the exact place assigned them within the framework of a systematic theology. Such formulas are found extensively in Christian and Muslim mysticism as well, yet their actual content does not always conform to their outward pantheistic appearance. This is equally true of many similar utterances in kabbalistic literature, especially those which occur in expositions of kabbalistic thought deliberately intended for popular consumption, as in a great deal of ḥasidic writing. On the other hand, the opposite phenomenon may occur as well, and here and there we find explicitly theistic formulas that belie their inner pantheistic or near-pantheistic content. All depends on the internal context of a given system of thought. Apparent theistic tendencies can serve to conceal actually pantheistic views, while general formulas can more often than not be variously interpreted and do not therefore prove a great deal. Examples of this are Azriel's pronouncement that “nothing is outside” *Ein-Sof*; Meir ibn Gabbai's declaration that “everything is in Him and He is in everything,” or the recurring insistence in the Zohar that God “is everything” and that everything is unified in Him, “as is known to the mystics” (2, 85b). Such statements can also be found in orthodox theistic systems of thought, where they serve to underline the belief that nothing could exist without a first, divine cause and that the latter, since it is the cause of all, includes and comprehends within itself whatever it has caused. In this respect God can be said to be present and immanent in all that He has caused, and were He to discontinue His presence all caused existence would thereby be annihilated. The neoplatonic principle that every effect is included in its cause greatly influenced such formulations in the Kabbalah without casting them in a necessarily pantheistic mold.

Strictly speaking, however, the problem of pantheism does occur in connection with a number of specific questions that greatly preoccupied kabbalistic speculation and to which pantheistic doctrines were at least able to offer unambiguous answers. Such questions were:

(1) Is there a unity of substance between the Emanator and the emanated? Does the actual substance of God go forth into all or only the radiated potency of that substance?

(2) If there is a unity of substance between *Ein-Sof* and the *Sefirot*, is there also such a unity between *Ein-Sof* and created beings?

(3) Is God the soul of the world or identical with the world?

(4) Does God exist in created beings (or, in the language of the philosophers, is He immanent in them), or even in them alone?

Wherever we find positive answers to these questions there is good reason to assume that we are dealing with pantheism, and wherever we do not, we can assume the converse.

The majority of kabbalists from Isaac the Blind on rejected the notion that God's substance manifests itself in the

world of emanation and insisted, as did most medieval neoplatonists, that God's power alone, as opposed to his substance, goes forth in the emanative process. Some of the earliest kabbalists, however, in particular the author of the *Ma'arekhet ha-Elohut*, did believe the emanated *Sefirot* to be of one substance with the emanating *Ein-Sof*. Only in the realms below the *Sefirot*, they held, was the divine potency alone active as the cause of beings that were separate from the Godhead. On the whole, we find that this school of thought had clearly theistic tendencies. Isaac b. Samuel Mar Hayyim (1491) distinguished between an "emanation of essence," which is the beaming forth of the *Sefirot* within the substance of *Ein-Sof*, and an "emanation of influx," which is the potency of the Emanator as it manifests itself in accordance with the receptive capacity of the given medium. Those kabbalists who identified *Ein-Sof* with the *Sefirah Keter* were obliged to consider the *Sefirot* as consubstantial with *Ein-Sof*. Yet those who held this view also explicitly denied that there could be any oneness of substance between God and the separate intellects, much less between God and other created beings. Such, for instance, was the opinion of Joseph Gikatilla in his commentary on the *Guide of the Perplexed*. Even he, however, did not restrain himself from declaring that "He fills all and He is all." Many other kabbalists, on the other hand, denied the consubstantiality of God with the emanated world, in which they professed to see only His emanating potency. In carrying on the thought of Cordovero (see below), the disciples of his school emphasized the separate substance of the emanated as opposed to the substance of the Emanator whose "garment" the former was.

The author of the *Zohar* was not especially concerned with this problem and was content to dispose of it with conceptually vague formulations which were open to conflicting interpretations, but in Moses de Leon's Hebrew works there is a more discernible tendency to stress the unity of all beings in a continuous chain of being. There are no qualitative jumps in the links of this chain, and God's true essence is "above and below, in heaven and on earth, and there is no existence besides Him" (*Sefer ha-Rimmon*). In the theophany at Mount Sinai God revealed all the worlds to the children of Israel, who saw that there was nothing in them that was not His manifest glory and essence. Implied here is the suggestion that every being has a secondary existence of its own apart from the Godhead but that this disappears before the penetrating gaze of the mystic which uncovers the unity of essence behind it. The pantheistic tendencies in this line of thought are cloaked in theistic figures of speech, a device characteristic of a number of kabbalists. On the one hand such writers describe *Ein-Sof* in personalistic terms and stress its absolute transcendence over everything, even the *Sefirot*, which have no apprehension of it, while on the other hand they make much of its "clothing itself" in the latter, and through them in the lower worlds as well. There is also a certain ambiguity in their double interpretation of the *creatio ex nihilo*, sometimes insisting that it be taken literally, which would of course rule out any pantheistic approach, and sometimes explaining it symbolically, reject-

ing a simple literalism in order to leave the door open to the possibility that all being has its place, at least partially, in the divine reality. The true nothingness from which all was created manifests itself in the transition from *Ein-Sof* to the first *Sefirah*, nor is there in reality any jump or discontinuity in the structure of being. The creation from nothingness is a manifestation of the divine wisdom where human thought reaches its limit, or of that nothingness which is the first emanation, *Keter*. In those systems where *Ein-Sof* was identified with the *Keter*, it was *Ein-Sof* itself that became the Divine Nothingness in which all has its source. Such views left room for the belief that God, who is one with *Ein-Sof*, comprehends much more than what proceeds from Him in the emanative and creative processes but that He encompasses the latter within Himself as well. All is comprehended within the Godhead but not everything is identical with it. In the early 19th century the term "pantheism" was coined to distinguish such a view from pure pantheism. There is no doubt that the term could apply to a number of well-known kabbalists, who were able to argue – with some measure of justice – that a similar position is already implied in the statement in the Midrash (Gen. R. 68) that "The Holy One blessed be He is the place of the world but the world is not His place." The pantheist view offered a clear compromise between pure theism and pure pantheism and left room for a personalistic depiction of the Godhead.

It is evident, therefore, that while not a single kabbalist school of thought ever claimed that God has no existence apart from created beings, the position most commonly held was that He was nevertheless to be found within them in variously definable ways. Hence, too, the neoplatonic assertion frequently encountered in kabbalistic literature that God is "the soul of souls," a claim which is not entirely free of pantheistic nuances although it lends itself to other interpretations as well. This phrase was already favored by the *Zohar*, but it must be observed that "soul" (*neshamah*) in its precise sense often does not imply in such writings an actual inherence in or existence contingent on the body but rather a higher mode of being. The *neshamah* proper does not descend to the lower worlds at all but radiates downward to the mode that we call man's "soul." Such, for instance, was the opinion of Isaac Luria. Other kabbalists, on the other hand, especially Moses de Leon, considered the human soul "a part of God above" (Job 31:2), not just in a figurative sense, as it was generally understood to be, but quite literally. Thus, their thought was based on the assumption that there is something in the soul consubstantial with God. It was this same assumption that led Moses de Leon in his *Mishkan ha-Edut* (see *Midrash Talpilot* (1860), 113c) to challenge the view that the punishment of the souls of the damned in hell is eternal, for how is it possible that God should inflict such suffering on Himself? This opinion is also indirectly hinted at in the *Zohar*, where it is stated that that highest part of the soul (*nefesh*) that is called *neshamah* is incapable of sinning and departs from the sinner at the moment that a sin is committed. Shabbetai Sheftel Horowitz was in agreement with this view and conceded only

a quantitative distinction between the soul and the substance of God, a position that, because of its pantheistic implications, was challenged, especially by Manasseh Ben Israel in his *Nishmat Hayyim* (1652).

In contrast to the main part of the Zohar, its later strata (the *Ra'aya Meheimna* and the *Tikkunim*) have a markedly theistic flavor. Here too, however, it is especially stressed that if God stands apart from the world He is also within it ("He is outside as much as He is inside"), and that He "fills all and causes all" without this immanence precluding a personalistic and theistic view of Him. Such formulations in the Zohar became extremely popular among later kabbalists and in the writings of Ḥasidism, where they were used to bridge theistic and pantheistic opinions abounding in these texts. Kabbalistic works written between 1300 and 1500 tended on the whole to obscure the problem, as can be seen in the writings of the disciples of Solomon b. Adret and in the *Sefer ha-Peliah*. Similarly, popular kabbalistic texts written at the time of the expulsion from Spain show a marked preference for decidedly theistic formulations (Abraham b. Eliezer ha-Levi, Judah Ḥayyat, Abraham b. Solomon Arduziel), which in rare cases only conceal a different content between the lines.

A detailed discussion of the problematics of pantheism can be found in the writings of Cordovero, whose own pantheistic outlook was more carefully worked out than that of any other kabbalist, especially in his *Sefer Elimah* and *Shi'ur Komah*. His presentation of the question is extremely subtle and has nothing in common with that "Spinozist" approach which, in its more vulgar sense, a number of authors have sought to attribute to him. Cordovero understood full well that the salient point of the whole theory of emanation was the transition from *Ein-Sof* to the *Sefirah Keter* and he devoted great effort to its solution. The *Sefirot*, he argues, owe the source of their existence to *Ein-Sof*, but this existence is "hidden" in the same sense that the spark of fire is hidden in the rock until it is struck with metal. Moreover, this aspect of their existence is incomparably more rarified than their existence once they have been emanated to their respective places, for in their emanated existence they assume a totally new guise. Even in their ultimate, "hidden" mode of existence, however, when they are comprehended in the substance of *Ein-Sof* and united with it perfectly, they are nevertheless not truly identical with this substance, which apprehends them while remaining unapprehended by them. This being the case, should it be said that the first change in their ontological status takes place in their hidden existence or not until their manifest one? Cordovero avoided giving an unequivocal answer to this question, while at the same time developing the theory that even the highest aspects of the *Keter*, which he called "the *Keter* of the *Keter*," "the *Keter* of the *Keter* of the *Keter*," and so forth, approach the substance of *Ein-Sof* asymptotically until the human intellect can no longer distinguish them. Nevertheless they retain an identity distinct from it, so that there is a kind of leap between *Ein-Sof* and their hidden existence within it that continually approaches to infinity. The existence of these inward stages is

considered by Cordovero to represent an entirely new departure within the Godhead, and the coming into being of this hidden existence, or "Will of Wills" as he calls it, is what constitutes the act of creation from nothingness in its literal sense. The initial awakening of the Divine Will in this chain of wills (*re'utin*) is, he argues, the one occasion on which true creation from nothingness takes place, a view whose paradoxical nature testifies to the manner in which he felt torn between the theistic and the pantheistic approach. From the divine point of view God comprehends all, inasmuch as He encompasses the "wills" both by virtue of being their cause and of embracing them in His essence, but from the human point of view all of these subsequent stages comprise a secondary reality existing separately from *Ein-Sof* and contingent on it, so that they cannot possibly share a true identity with the substance of the Emanator. Even at the highest levels this substance clothes itself in "vessels" which are by their very nature secondary and preceded by a state of privation (*he'eder*).

In all of these processes, therefore, it is necessary to distinguish between the substance of the Emanator, which clothes itself in vessels, and the substance of the emanated. Though this distinction is somewhat obscured in the *Pardes Rimmonim*, it is emphasized in the *Sefer Elimah*, where Cordovero asserts that while in the act of emanation the divine substance goes forth into vessels, these vessels (*kelim*) or garments (*levushim*) assume an increasingly less refined existence as the process continues downward. And yet behind these infinite garments there is not a single link in the chain where the substance of *Ein-Sof* does not remain present and immanent. Even from the viewpoint of the human condition it is potentially possible to contemplatively "undress" these garments and reveal "the processions of the substance" (*tahalukhei ha-etzem*) which clothe themselves in them. Such a moment of revelation is the supreme happiness to which the mystic can attain in his lifetime. Yet again, this immanence of *Ein-Sof* in everything is not identical with the specific existence of the vessels: "The products of causation as they descend do not share one substance with their cause but rather... are diminished from their cause as they descend until the lowest [level of] existence." Only as they reascend toward their cause are they reunified with it, until they reach the Supreme Cause of all, which is the *Keter*, where there is no longer any distinction between the agent and the products of its action, for they adhere to it as far as is in any way possible and are truly united to *Ein-Sof*, "where there is no cause or caused but everything is cause" (*Elimah*, 18c). The single most definitive statement in Cordovero's treatment of the problem can be classed as pantheistic: "God is all that exists, but not all that exists is God" (*Elimah*, 24d). To be sure, this reascend toward first causes must be taken as applying to the culminating process of all creation in its return to the bosom of the Emanator rather than to the mystical experience of the individual. Moreover, in many passages Cordovero further dilutes the concept by warning against misunderstanding: the caused beings themselves will not be reabsorbed into the substance of *Ein-Sof* but only

their “spirituality” once their separate garments have been cast off. What has been forever sundered from the Godhead cannot be redefined.

Lurianic Kabbalah tended on the whole to avoid even the pantheistic formulations of Cordovero and to adopt an openly theistic position. The doctrine of the *zimzum*, by stressing the discontinuity between *Ein-Sof* and the world of emanation, heightened this proclivity even more. Granting even that something of the divine substance goes forth into the *Adam Kadmon* and even into the *parzufim* that emanate from him, clothing itself in them, this process comes to a definite end with the emanated *Sefirot* in the first world of *azilut*. Beneath them stretches a “curtain” which prevents the divine substance from finding garments for itself in the worlds of *beriah*, *yezirah*, and *asiyyah* as well. Of course it is possible to speak of a radiation of *Ein-Sof* into all the worlds, *asiyyah* included, but not of its substance being immanent in them. On the other hand, though such theistic arguments dominate most of the writings of Ḥayyim Vital and Ibn Tabul, even here there are occasional statements that are closer to Cordovero’s position. Indeed, the doctrine that every higher principle “clothes itself” in a lower one, which in the final analysis is a doctrine of divine immanence, was sometimes carried to extremes. Above all the kabbalist was expected to understand “how all the worlds share a single mode of being as garments of *Ein-Sof*, so that *Ein-Sof* clothes itself in them and surrounds [*sovev*] them and nothing goes beyond it. Everything can be seen under one aspect and all the worlds are bound to the Emanator,” although caution decrees that “it would be inadvisable to reveal more of this matter” (*Sha’ar ha-Hakdamot*, Hakdamah 4). Others, such as Ibn Tabul, emphasized that only God’s “inner light” (*ha-or ha-penimi*) was filtered out by the “curtains,” whereas His “comprehensive light” (*ha-or ha-mekif*) was not curtained off at all. Inasmuch as the latter comprises the main part of the divine substance that goes forth into the world of emanation, a door was here opened once again for a return to the pantheistic views of Cordovero.

Whether the light of *Ein-Sof* that goes forth into the vacuum of the *zimzum* and clothes itself in vessels can be considered part of the Godhead even though it does not partake of the latter’s substance remained an open question which most Lurianic kabbalists emphatically answered in the affirmative. The Lurianists held that without question the world of *azilut* with its inner dynamic processes belonged to the Godhead. Nevertheless, many of them denied that there was a unity of substance between the manifestations of the Godhead in *azilut* and the substantive properties of *Ein-Sof*. Even the highest circle of the *Sefirot* of the *Adam Kadmon*, they argued, was closer to the lowliest worm than to *Ein-Sof*. Such analogies bear witness to a continual equivocation between two inherently conflicting points of view. One radical solution to this ambivalence was the strict theistic doctrine of Moses Ḥayyim Luzzatto, who insisted that *azilut* could be called a “world” (*olam*) in the figurative sense only, because in it the Godhead manifested itself directly, whereas all the other

worlds were created by a free act of God from literal nothingness. No statement to the effect that these lower worlds had evolved or developed out of the world of *azilut* was to be taken literally, for at most it could mean that they had been patterned after *azilut*. “We must not think that there can be any bond [*hitkashrut*] between what is created and the Creator.” It would appear that Luzzatto had an especially firm grasp of the built-in contradiction between the doctrine of emanation and that of a paradigmatic creation, in the clash between which lay the crux of the problem of pantheism in the Kabbalah. Generally speaking, most kabbalistic texts that were written for the benefit of a wider audience, such as Ḥayyim Vital’s *Sha’arei Kedushah*, were theistic on the surface, sometimes concealing beneath it the germs of a different, essentially pantheistic interpretation. These germs, such as the Lurianic doctrines of the creative ray, the residue or *reshimu*, the primordial space of the *zimzum*, the unity of the chain of being, and so forth, nourished pantheistic tendencies which subsequently came to the fore once more in a number of the classic texts of Ḥasidism.

Man and His Soul (Psychology and Anthropology of the Kabbalah)

Over and above disagreements on specific details that tend to reflect different stages in the Kabbalah’s historical development, there exists a basic consensus among kabbalists on man’s essential nature. The fundamental doctrine of a hidden life of the Godhead which through a dynamism of its own determines the life of creation as a whole had inevitable implications as regards the human condition, in which the same theosophic process, though with certain significant differences, was thought to repeat itself. At opposite poles, both man and God encompass within their being the entire cosmos. However, whereas God contains all by virtue of being its Creator and Initiator in whom everything is rooted and all potency is hidden, man’s role is to complete this process by being the agent through whom all the powers of creation are fully activated and made manifest. What exists seminally in God unfolds and develops in man. The key formulations of this outlook can already be found in the Kabbalah of Gerona and in the Zohar. Man is the perfecting agent in the structure of the cosmos; like all the other created beings, only even more so, he is composed of all ten *Sefirot* and “of all spiritual things,” that is, of the supernal principles that constitute the attributes of the Godhead. If the forces of the *Sefirot* are reflected in him, he is also the “transformer” who through his own life and deeds amplifies these forces to their highest level of manifestation and redirects them to their original source. To use the neoplatonic formula, the process of creation involves the departure of all from the One and its return to the One, and the crucial turning-point in this cycle takes place within man, at the moment he begins to develop an awareness of his own true essence and yearns to retrace the path from the multiplicity of his nature to the Oneness from which he originated. The essential correspondence or parallelism between the in-

ward aspects of man, God, and creation introduces a mutual interplay among them that was frequently dramatized in the Kabbalah by means of anthropomorphic symbols, though the latter are nearly always accompanied by warnings that they are only to be understood “as if.” If the *Sefirot* in which God reveals Himself assume the form of man, making him a microcosm in himself – a doctrine which found universal acceptance among the kabbalists – then man on earth is obviously capable of exerting an influence upon the macrocosm and upon primordial man above. Indeed it is this which bestows on him the enormous importance that the kabbalists went to great lengths to describe. Because he and he alone has been granted the gift of free will, it lies in his power to either advance or disrupt through his actions the unity of what takes place in the upper and lower worlds. His essence is unfathomably profound; he is “a face within a face, an existence within an existence, and a form within a form” (Ezra of Gerona). Even man’s physical structure corresponds to that of the *Sefirot*, so that we find Ezra of Gerona’s description of the last *Sefirah* as “the form [*temunah*] that includes all forms” applied in the Zohar to man himself, who is called “the likeness [*deyokna*] that includes all likenesses.” Such speculations about man’s essence were most pithily expressed in various statements about Adam before his fall. Though his original harmony was disrupted by his sin, his principal mission remained to bring about a *tikkun* or restoration of this world and to connect the lower with the upper, thereby “crowning” creation by setting the Creator upon His throne and perfecting His reign over all His handiwork.

Man’s essence has a spiritual nature for which his body serves only as an outer cloak. One widespread belief was that prior to Adam’s sin his body too was spiritual, a kind of ethereal garment which became corporealized only after his fall. (In support of this view, the statement in Gen. 3:21 that God made “garments of skin,” *kotnot or*, for Adam and Eve after their expulsion from Eden, was taken as meaning that previously they had worn “garments of light,” *kotnot (or)*.) Had it not been for Adam’s sin, the supreme divine will would have continued to work unfragmentedly in Adam and Eve and all their descendants, and all of creation would have functioned in perfect harmony, transmitting the divine influx downward from above and upward from below, so that there would have been no separation between the Creator and His creation that adhered to Him. This uninterrupted communion, which is the goal of creation, was broken off at the time of Adam’s sin when his lower will was parted from the divine will by his own free volition. It was then that his individuality, whose origin lay in his separation from God with its attendant proliferation of multiplicity, was born. What had been intended to be nothing more than a series of periodic fluctuations within a single harmonic system now turned into an opposition of extremes that found their expression in the fierce polarization of good and evil. It is the concrete destiny of the human race, and of the Jew as the principal bearer of this mission and the recipient of God’s revelation through the Torah, to overcome

this polarization from within the human condition created by the first sin.

It is at this point that the problem of man in the world and the problem of evil in the world are interlaced. The sin which gave evil an active existence lies in mankind’s failure to achieve his primal purpose, a failure which occurred again and again in history. It is the function of good in the world, whose tools are the Torah and its commandments, to bridge the abyss of separation that was formed by man’s sin and to restore all existence to its original harmony and unity. The final goal, in other words, is the reunification of the divine and the human wills. It is likely that this kabbalistic doctrine of the corruption of the world through man’s first sin originated as a result of direct contact with Christian beliefs, although it is also possible that these Christian ideas were derived from the same sources from which homologous *aggadot* in the Midrash took their inspiration. There can be no doubt that the kabbalists accepted the doctrine that the entire creation was fundamentally flawed by man’s sin, after which the *sitra aħra* or “other side” achieved a dominion over man which will not be finally abolished until the ultimate redemption in which all things will revert to their original state. The crucial Christian element, however, is lacking here, for unlike the Christian dogma of original sin, the Kabbalah does not reject the idea that every man has the power to overcome this state of corruption, to the extent that he too is affected by it, by means of his own powers and with the help of divine aid prior to and independently of the final redemption. Speculations of this sort concerning the essence of sin as a disruption of the primordial order of things, the effects of which as it were reach up to and include the world of the *Sefirot* themselves, and concerning the means to achieve a *tikkun* whereby creation will be restored to its former grandeur, assumed a central place in the kabbalistic doctrine of man. This teaching developed out of purely religious motifs that only incidentally became motivated in the course of time with certain psychological motifs as well. Judah Halevi’s metaphor in the *Kuzari* of Israel constituting the heart of the nations was taken over by the author of the Zohar and the kabbalists of Gerona, who spoke of the Jewish people as being “the heart of the cosmic tree” [*lev ha-ilan*], a symbol borrowed from the *Sefer ha-Bahir*. Within this basic context, a fuller understanding of Israel’s mission depends on the kabbalistic teachings on the structure of man’s soul.

The kabbalists adopted the psychological doctrines of neoplatonism and tried to adapt them to the language of Jewish tradition. The Zohar occasionally mentions the three faculties or dispositions of a unified human soul as they are spoken of in the philosophy of Aristotle, but generally the Zohar refers to three essentially different parts of the soul that form a sequence from lower to higher and are designated by the Hebrew terms *nefesh*, *ru‘ah*, and *neshamah*. True, here too a unity was posited among these parts, but for the most part it remained problematic. The *nefesh* or first element is to be found in every man, for it enters him at the moment of birth and is the source of his animal vitality (*hiyyut*) and of the totality of his

psychophysical functions. Whatever is necessary for the well-being of these functions is already contained in it and it is equally the property of all human beings. The two other parts of the soul, on the other hand, are postnatal increments that are found only in the man who has awakened spiritually and made a special effort to develop his intellectual powers and religious sensibilities. The *ru'ah* or *anima* is aroused at an unspecified time when a man succeeds in rising above his purely vitalistic side. But it is the highest of the three parts of the soul, the *neshamah* or *spiritus*, which is the most important of all. It is aroused in a man when he occupies himself with the Torah and its commandments, and it opens his higher powers of apprehension, especially his ability to mystically apprehend the Godhead and the secrets of the universe. Thus, it is the intuitive power that connects mankind with its Creator. It is only in the most general terms, however, that this tripartite division was adopted by all the various kabbalistic schools of thought. The terminology indeed remains the same, but the meanings and interpretations assigned to it differ widely in detail.

The fundamental division of the soul into three parts and the use of the terms *nefesh*, *ru'ah*, and *neshamah* (*naran* in the kabbalistic acronym) to describe them came from such Jewish neoplatonists as Abraham ibn Ezra and Abraham bar Ḥiyya, but in the course of the Kabbalah's development in the 13th century the philosophical content of these categories became considerably blurred and yielded to occultistic associations under whose influence the strictly defined concepts of neoplatonic psychology took on fantastic and mythic dimensions. This process can be clearly traced in the classic texts of early Kabbalah. Already for the kabbalists of Gerona, though they still retained the original identification of the *neshamah* with the rational soul of the philosophers, the rational faculty of the soul was merged with the intuitive and mystic. Only the *neshamah*, they held, which was like a divine spark in man, was emanated directly from the Godhead itself rather than evolved from the separate intellects like the *ru'ah* or from the four elements like the *nefesh*. There is still an echo here of the philosophical division of the soul into its animal or vital, vegetative, and rational faculties and of the association of the soul's origin with the world of the intellects, and particularly of the active intellect, as in the philosophy of Isaac Israeli. Within this system man's *nefesh* is still a common denominator between him and the animal world, while only the rational *neshamah*, whose origin is in the world of the *Sefirot*, and more precisely in the *Sefirah Binah*, truly deserves to be called the human soul, for it is a divine spark, one that was created from nothingness, to be sure, but from a nothingness that belongs nonetheless to the realm of the Godhead itself. Some of the kabbalists of Gerona even held that the source of the *neshamah* was in the *Sefirah* of Divine Wisdom or *Ḥokhmah*, a difference of opinion which bore on the question of the heights to which man's mystical cognition could attain.

The different strata of the Zohar reflect the varying psychological doctrines toward which its author leaned at different times. In the *Midrash ha-Ne'elam* there is still a clear

debt to the psychology of the school of Maimonides with its doctrine of the "acquired intellect" which is activated in man through his pursuit of the Torah and its commandments and which alone has the power to bestow on him immortality of the soul. Together with this, however, we find the characteristic Aristotelian division of the soul, though minus the identification with the *nefesh*, *ru'ah*, and *neshamah*, and in connection with a number of functions that are peculiar to Moses de Leon alone. Thus, for instance, we find a distinction between the "speaking soul" (*ha-nefesh ha-medabberet*) and the "rational soul" (*ha-nefesh ha-sikhilit*), the latter alone possessing the supernal power which can bring man to perfection and which is identical with the true soul or *neshamah*. In effect the faculty called *nefesh* embraces all three forces, the animal, the vegetative, and the cognitive (*medabber*), which comprise the psycho-physical totality of man. The *neshamah*, in contrast, is a power concerned exclusively with mystical cognition, while the *ru'ah* represents an intermediate stage that involves the ethical power to distinguish between good and evil. The *neshamah* itself, on the other hand, by virtue of being "a part of God above," is capable of performing good only. It is impossible to speak here of a consistent approach: purely religious motifs alternate freely with philosophical ones, a confusion that extends to the relationship between intellectual awareness and the *neshamah* itself. In some instances the author, who expresses his views through the mouths of various rabbinic sages, even abandons the tripartite division of the soul entirely in favor of a twofold distinction between the vital soul (*ha-nefesh ha-ḥayyah*) and the *neshamah*. In the main corpus of the Zohar these divergent opinions are consolidated into a unified position of sorts in which religious motifs predominate over traditional philosophical and psychological ones. Here a fundamental contradiction emerges between the belief that the soul is universally the same for all mankind and another, double standard according to which the soul of the Jew and the soul of the gentile are dissimilar. The kabbalists of Gerona knew only of the former doctrine, that is, of the soul that is universally shared by all the descendants of Adam, and it is in the main body of the Zohar that we read for the first time of a twofold though corresponding division of souls into non-Jewish and Jewish. The first group has its source in the "other side" or *sitra aḥra*, the second in the "holy side" or *sitra di-kedusha*. Interest in the Zohar is almost entirely confined to the psychic structure of the Jew. In the later Kabbalah, particularly in the works of Ḥayyim Vital, this duality between the "divine soul" (*ha-nefesh ah-elohut*) and the "natural soul" (*ha-nefesh ha-tiv'it*) is given enormous emphasis.

An important problem for the Kabbalah was the different sources of the different parts of the soul in the different worlds of emanation. According to the *Midrash ha-Ne'elam* even the highest *neshamah* emanates only from the Throne of Glory, that is, from a realm beneath that of the *Sefirot* though above that of the intellects. It is thus considered to be something created, though a creation of the highest order. In the main corpus of the Zohar this view is abandoned and each part of

the soul is assigned a root in the world of the *Sefirot*: the *nefesh* originates in the *Sefirah Malkhut*, the *ru'ah* in the *Sefirah Tiferet*, and the *neshamah* in the *Sefirah Binah*. The descent of the supernal *neshamah* is brought about by the “holy union” of the “king” (*melekh*) and the “queen” (*matronita*), who are synonymous with the *Sefirot Tiferet* (or *Yesod*) and *Malkhut*. In its root every soul is a composite of male and female, and only in the course of their descent do the souls separate into masculine souls and feminine souls. The symbolism used to describe the descent of the souls from the world of emanation has a strongly mythical flavor. Especially prominent are the symbols of the tree of souls on which each soul blooms, and of the river which carries the souls downward from their supernal source. In both symbolisms the *Sefirah Yesod* is considered to be a halfway station through which all the souls must pass before entering the “treasure-house of souls” (*ozar ha-neshamot*), which is located in the celestial paradise (*ganeden shel ma'lah*), where they live in bliss until they are called to descend still further and assume a human form. Many differences in detail exist among the various accounts of this process, but all the kabbalists agree as to the preexistence of the soul, especially in the latter's more strictly defined sense. Undisputed too is the belief that the soul originates on a plane higher than that of the angels, a doctrine that is referred to repeatedly in discussions of the human condition, for if man is capable of plunging to indescribable depths of depravity, he also has the capacity, when he fulfills his true destiny, of rising even above the angelic realm. No angel has that potential power to restore the worlds to a state of *tikkun* which has been granted to man.

In addition to the three parts of the soul that were collectively referred to by the acronym *naran*, kabbalists after the Zohar came to speak of two more additional, higher parts of the soul which they called *hayyah* and *yehidah* and which were considered to represent the sublimest levels of intuitive apprehension and to be within the grasp only of a few chosen individuals. In Lurianic Kabbalah these five parts of the soul (*naran-hai* in acronym) became associated with the five *parzufim* of *Adam Kadmon* in each of the worlds of *azilut*, *beriah*, *yezirah*, and *asiyyah*, so that a tremendous multiplicity of potential soul-ranks was created in accordance with the particular world of emanation and *parzuf* from which a given soul stemmed. The soul having its source in the *yehidah* of the *Sefirah Keter* of the world of *azilut* was believed to be that of the Messiah. Unlike the masses of souls which are subject to the general laws of transmigration, such high-ranking souls were thought to remain concealed among the supernal lights until their time arrived and not to enter the cycle of reincarnation at all.

From the Zohar and through the works of the disciples of Isaac Luria mention is made of an aspect of man that is referred to in the Kabbalah as the *zelem* (the “image,” on the basis of Gen. 1:26, “Let us make man in our image, after our likeness”) and which is not identical with any of the parts of the soul referred to above. The *zelem* is the principle of indi-

viduality with which every single human being is endowed, the spiritual configuration or essence that is unique to him and to him alone. Two notions are combined in this concept, one relating to the idea of human individuation and the other to man's ethereal garment or ethereal body which serves as an intermediary between his material body and his soul. Because of their spiritual nature, the *neshamah* and *nefesh* are unable to form a direct bond with the body, and it is the *zelem* which serves as the “catalyst” between them. It is also the garment with which the souls clothe themselves in the celestial paradise before descending to the lower world and which they don once again after their reascend following physical death; during their sojourn on earth it is hidden within man's psycho-physical system and is discernible only to the intellectual eye of the kabbalist. The source of this belief is undoubtedly the similar doctrine held by the later neoplatonists concerning the ethereal body that exists in every man and that reveals itself to the mystical experience of those endowed with the gift of vision. Unlike the soul, the *zelem* grows and develops in accordance with the biological processes of its possessor. The kabbalists made use of a play on words to draw a parallel between a man's *zelem* and his shadow (*zel*). The Zohar apparently considers the shadow to be a projection of the inner *zelem*, a belief that brought with it various popular magical superstitions that were widespread in Europe during the Middle Ages. Supposedly the *zelem* was the repository of the years a man lived and it departed with the approach of his death. According to another view, the *zelem* was woven as a garment for the soul from a man's good deeds and served as a kind of supernal appearance that protected and clothed him after his death. An ancient belief concerning such an ethereal body, whose source lies in Persian religion and which reached the author of the Zohar through later legends to become associated in his mind with various occultist ideas, was that the *zelem* was actually a man's true self. In Lurianic Kabbalah the *nefesh*, *ru'ah*, and *neshamah* were each assigned a *zelem* of their own which made it possible for them to function in the human body. Without the *zelem* the soul would burn the body up with its fierce radiance.

Moses de Leon, in his Hebrew writings, connects Maimonides' teaching that man's mission in this world is the full realization of his intellectual power with the doctrines of the Kabbalah. In his *Ha-Nefesh ha-Hakhamah* (1290), De Leon writes: “The purpose of the soul in entering the body is to exhibit its powers and abilities in the world... And when it descends to this world, it receives power and influx to guide this vile world and to undergo a *tikkun* above and below, for it is of high rank, [being] composed of all things, and were it not composed in a mystic manner of what is above and below, it would not be complete... And when it is in this world, it perfects itself and completes itself from this lower world... And then it is in a state of perfection, which was not the case in the beginning before its descent.”

According to an even earlier belief, which is already present in the *heikhalot* literature, all the souls are initially

woven into a curtain (*pargod*) that hangs before the Throne of Glory, and this symbol of “the curtain of souls” was both adopted and adapted by a number of classic kabbalistic texts. The entire past history and future destiny of each single soul is recorded in this curtain. The *pargod* is not just a mystical fabric composed of spiritual ether which contains or is capable of receiving a record of each man’s life and works; it is in addition the abode of all those souls that have returned from below to their native land. The souls of the wicked will find no place in it.

The kabbalistic doctrine of man and his soul dealt at great length with such eschatological problems as the fate of the soul after death, and its ascent up a river of fire, which resembles a kind of purgatory, to the terrestrial paradise and from there to the still sublimer pleasures of the celestial paradise and the realm referred to by the early kabbalists as “eternal life” (*zeror ha-ḥayyim*), which is sometimes synonymous with the celestial paradise and sometimes taken to refer to one of the *Sefirot* themselves, to which the soul returns to partake of the life of the Godhead. Human life on earth, therefore, must be seen in the broad context of the soul’s life before birth and after death; hence the great interest of the Kabbalah in descriptions of heaven and hell such as those that we find in extensive and imaginative detail in the works of the kabbalists of Gerona or the Zohar, which inaugurated a long and influential tradition that flourished especially in the more popularly oriented literature of the Kabbalah until recent generations. Much use was made here of beliefs that were already to be found in the *aggadah*, particularly in a number of small, late Midrashim, and which were reinterpreted in the light of kabbalistic symbolism and embellished with further details. Many obvious parallels exist between such material and similar eschatological motifs in Christianity and Islam. None of these teachings was ever given a definitive or authoritative form, thus enabling them to preserve a great deal of imaginative freedom in which folkloristic and mystic elements came together. The kabbalists of the 13th century in particular, among them the author of the Zohar, were attracted to such speculations and devoted considerable attention to such questions as the garments of the souls in paradise, the nature of their perceptions, the expansion of their consciousness in the apprehension of the divine, and the unification of the highest level of the *ne-shamah* with God.

Generally speaking, however, the kabbalists were wary about speaking of an actual mystic union of the soul with God and preferred to talk in terms of a spiritual communion (*devekut*) and no more. In his commentary on the letters of the Hebrew alphabet, Jacob b. Jacob Kohen (1270) speaks of mystic union without defining its nature. Moses de Leon mentions a supreme but temporary condition in which the soul finds itself standing before God in a state of contemplation and ultimate bliss without any garment between it and Him, though as a rule it must don a garment of ether or light even in the celestial paradise. Descriptions of the soul’s union with God in terms of a divine nuptial are rare in the Kabbalah, though

there are occasional examples, such as commentaries on the Song of Songs interpreting it as a conjugal dialogue between God and the soul. Even here, however, the love that is described is that between a father and daughter rather than of an erotic nature nor is anything said about the dissolution of the soul in the substance of God but merely about its temporary rapture in His presence. Only in the writings and poetry of the kabbalists of Safed is there an obviously strong erotic overtone. Whether later schools of kabbalistic thought tended to the extreme mystical position, such as that found in Ḥabad Ḥasidism, which holds that the soul loses its selfhood entirely in God, remains open to question. The author of the Zohar (2, 253a) writes of the souls passing before God in the “room of love” from which the new souls depart to descend, but not in terms of conjugal imagery. On the contrary, the outcome of this divine “reception” is that God makes the soul swear to fulfill its earthly mission and attain to the “knowledge of the mysteries of the faith” which will purify it for its return to its homeland. By means of its awakening through the Torah and its commandments it gains new strength and helps complete the mystical figure of the *Keneset Yisrael* or Community of Israel, which is one with the *Shekhinah*. Only a few rare souls, such as those of Enoch and Elijah, ever achieve a permanent communion (*devekut*) with God; among the other biblical heroes of righteousness there are infinite degrees and differences of rank. Nor does a single fate await the different parts of the soul after death. The *nefesh* remains for a while in the grave, brooding over the body; the *ru’ah* ascends to the terrestrial paradise in accordance with its merits; and the *ne-shamah* flies directly back to its native home. Punishment and retribution are the lot of the *nefesh* and *ru’ah* alone. According to Moses de Leon, once in a cosmic jubilee the soul ascends from its communion with the *Shekhinah* to the hidden, celestial paradise in the world of the divine mind, that is, to the *Sefirah Ḥokhmah*.

The teachings of the Kabbalah concerning the soul are inextricably connected with the doctrine of transmigration, a basic kabbalistic principle that frequently came into conflict with other beliefs, such as that in the reward and punishment that are meted out to man in heaven and hell. (For further details, see *Gilgul.) In the course of the development of the Kabbalah the idea of transmigration was radically expanded from that of a punishment restricted to certain sins to that of a general law encompassing all the souls of Israel, and, in a later stage, the souls of all human beings and even, in its most radical form, of all creation from the angels to unsentient things. Thus, transmigration ceased to be considered merely a punishment and came also to be viewed as an opportunity for the soul to fulfill its mission and make up for its failures in previous transmigrations.

In comparison with the Zohar, the teachings of the Lurianic Kabbalah in regard to man’s psychic structure are far more complex, concerning both the source of soul and man’s inner make-up. In the works of Ḥayyim Vital there is also a discrepancy between his presentation of the subject in books

meant for popular consumption, such as his *Sha'arei Kedushah*, and in his more esoteric writings. In the former work Vital distinguishes clearly between three “quarries” (*maḥzevim*): the quarry of the *Sefirot*, which is all divinity, the quarry of the souls, and the quarry of the angels, who are not themselves divine. His explanation of the coming-into-being of the souls through the emanative process in his *Ez Ḥayyim*, on the other hand, is far more complex and largely parallels his outline of the development of the lights that manifest the divine existence in the worlds of *azilut* and *beriah*. Just as the supernal lights in the *parzufim* of *azilut* develop through conjunctions and “couplings” (*zivvugim*) of the *parzufim*, so are the souls born through corresponding processes. Within the *Sefirah Malkhut* of each *parzuf* are concealed souls in a potential state that ascend to the highest modes of that *parzuf* and are actualized as a result of the “unions” of the *Sefirot*. At the outset these souls exist only in the state of “female waters” (*mayim nukbin*); that is, they are passive potencies that possess the power of active arousal but still lack harmony and form, for their supernal source lies in those 288 sparks of light that fell into the *kelippot* at the time of the breaking of the vessels. Only through additional “couplings” of the *parzuf* of *Ze'ir Anpin* with its female counterpart or *nukba* do they receive the actual structure of souls. With each new arousal of the “female waters” in these *parzufim*, new opportunities arise for the creation of souls. Such a process occurs in all four worlds of emanation, the possible variations in modes of souls being practically infinite. Each of these souls recapitulates in miniature the structure of the worlds through which it passed in the process of being created, so that when it descends to enter a body in this world it will be able to work toward the latter's *tikkun* and uplifting and, to some extent, toward the uplifting of the higher worlds as well. On the other hand, a number of Lurianic texts stress the view that in substance the souls as such remain above and do not enter into bodies at all but rather radiate sparks of themselves that can be called souls (*neshamot*) by analogy only. The true soul hovers over a man, whether from near or afar, and maintains an immediate magic tie with its spark below. Popular expositions of these doctrines were always much simpler than their original elucidations, which tended to have a strong Gnostic flavor.

The soul of Adam was composed of all the worlds and was destined to uplift and reintegrate all the sparks of holiness that were left in the *kelippot*. Its garment was of spiritual ether and it contained within it all of the souls of the human race in perfect condition. It had 613 limbs, one for each of the commandments in the Torah, the spiritual aspect of which it was Adam's mission to uplift. Each of these limbs formed a complete *parzuf* in itself known as a “great root” (*shoresh gadol*), which in turn contained 613 or, according to other versions, up to 600,000 “small roots.” Each “small root,” which was also referred to as a “great soul” (*neshamah gedolah*), concealed within it 600,000 sparks or individual souls. These sparks too were apt to fission still further, but there remained a special affinity and power of attraction between all the sparks

that descended from a common root. Each of these sparks formed a complete structure or *kumah* in itself. Had Adam fulfilled his mission through the spiritual works of which he was capable, which called for contemplative action and deep meditation, the living chain between God and creation would have been closed and the power of evil, the *kelippah*, would have undergone that complete separation from holiness that, according to Luria, was the aim of the entire creative process. Thus, Adam had within him the fully developed powers of the *Adam Kadmon* in all his *parzufim* and the depth of his fall when he sinned was equal to the great height of his cosmic rank beforehand (see below). Instead of uplifting everything, however, he caused it to fall even further. The world of *asiyyah*, which had previously stood firmly on its own base, was now immersed in the realm of the *kelippot* and subjected to their domination. Where the *Adam Kadmon* had stood a satanic creature now rose up, the *Adam Beliyya'al* who gained power over man. As a result of the admixture of the world of *asiyyah* with the *kelippah*, Adam assumed a material body and all his psycho-physical functions were corporealized. Moreover, his soul shattered and its unity was smashed to pieces. In it were elements of high rank known as “upper light” (*zihara ila'ah*) which refused to participate in Adam's sin and departed for above; these will not return to this world again until the time of the redemption. Other souls remained in Adam even after his spiritual stature was diminished from cosmic to mundane dimensions; these were the holy souls that did not fall into the clutches of the *kelippot*, and among them were the souls of Cain and Abel, which entered their bodies through direct hereditary transmission rather than through the process of transmigration. The bulk of the souls that were in Adam, however, fell from him and were subjugated by the *kelippot*; it is these souls that must achieve their *tikkun* through the cycle of transmigration, stage after stage. In a manner of speaking, Adam's fall when he sinned was a repetition of the catastrophe of the breaking of the vessels. The Lurianic Kabbalah went to great lengths to play up the dramatic elements in Adam's sin and its consequences. The inner history of the Jewish people and the entire world was identified with the recurrent reincarnations through which the heroes of the Bible struggled to achieve *tikkun*. Among these heroes were both “original souls” (*neshamot mekoriyyot*), which embraced a great and powerful psychic collectivity and were capable of great powers of *tikkun* whereby the whole world stood to benefit, and other, private souls which could achieve a *tikkun* only for themselves. Souls descending from a single “root” comprised “families” who had special relations of affinity and were especially able to help each other. Now and then, though only very rarely, some of the upper souls that had not even been contained in the soul of Adam might descend to earth in order to take part in some great mission of *tikkun*. A complete innovation in Lurianic Kabbalah was the stress laid on the high rank of the souls of Cain and Abel, and particularly of the former. These two sons of Adam were taken to symbolize the forces of *gevurot* and *hasadim*, that is, the restrictive and outgoing

powers of creation. Though the outgoing power of *hesed* is at present greater than the restrictive power of *gevurah* and *din*, this order will be reversed in the state of *tikkun*. Paradoxically, therefore, many of the great figures of Jewish history are represented as stemming from the root of Cain, and as the messianic time approaches, according to Isaac Luria, the number of such souls will increase. Ḥayyim Vital himself believed that he was of the root of Cain.

The nature of Adam's sin itself was never authoritatively defined in kabbalistic literature and highly differing views of it can be found. The problem of the first sin is closely connected with the problem of evil discussed above. According to the Spanish Kabbalah, the crux of the sin lay in "the cutting of the shoots" (*kizzuz ha-netiyot*), that is, in the separation of one of the *Sefirot* from the others and the making of it an object of a special cult. The *Sefirah* that Adam set apart was *Malkhut*, which he "isolated from the rest." In the *Ma'arekhet Elohut*, nearly all the major sins mentioned in the Bible are defined as different phases of "the cutting of shoots," or as repetitions of Adam's sin which prevented the realization of the unity between the Creator and His creation. Such were the drunkenness of Noah, the building of the Tower of Babel, Moses' sin in the desert, and above all the sin of the golden calf, which destroyed everything that had been accomplished in the great *tikkun* that took place during the theophany at Mount Sinai. In the final analysis, even the destruction of the Temple and the exile of the Jewish people were the results of misinformed meditations that brought division into the emanated worlds. Such sins wreaked havoc above and below, or, in the symbolism of the *Zohar*, caused division between the "king" (*melekh*) and the "queen" (*matronita*) or *Shekhinah*. The exile of the *Shekhinah* from her husband was the main metaphysical outcome of these sins. The good deeds of the biblical heroes, on the other hand, especially those of the patriarchs Abraham, Isaac, and Jacob, came to set this fundamental fault in creation aright and to serve as a paradigm for those who came after. It is noteworthy that the author of the *Zohar* himself was reticent in his remarks on the nature of Adam's sin. The author of the *Tikkunei ha-Zohar* was less circumspect. Adam's sin, he held, took place above all in the divine mind itself, that is, in the first or second *Sefirah*, from which it caused God's departure; indeed, it was Adam's sin alone that caused God to become transcendent (*Tikkun* 69). As far as the effect of the first sin is concerned, we find two conflicting lines of thought:

(1) Whereas previously good and evil had been mixed together, the sin separated evil out as a distinct reality in its own right (as in Meir ibn Gabbai's *Avodat ha-Kodesh*);

(2) Good and evil were originally separate, but the sin caused them to become mixed together (such was Gikatilla's position, and in general, that of the Lurianic Kabbalah).

In the tradition of earlier teachings, such as those in the *Ma'arekhet ha-Elohut* and the *Sefer ha-Peli'ah*, Lurianic Kabbalah also occasionally explained the first sin as a "technical" mishap, though one with grave consequences, in the procedure of *tikkun*. This occurred because Adam was in a hurry to

complete the *tikkun* before its appointed time, which was to have been on the first Sabbath of creation, starting late on the afternoon of the sixth day. The tendency in such explanations is to emphasize that essentially the greatest biblical sinners meant to do good but erred in their choice of means.

The principal instrument for repairing the primal fault, both in the metaphysical aspect of completing the *tikkun* of the broken vessels and in relation to Adam's sin which disrupted the channels of communication between the lower and upper worlds, is human engagement in holiness through Torah and prayer. This activity consists of deeds, which restore the world in its outward aspects, and of mystical meditations, which affect it inwardly. Both have profound mystical dimensions. In the act of revelation God spoke and continues to speak to man, while in the act of prayer it is man who speaks to God. This dialogue is based on the inner structure of the worlds, on which each human action has an effect of which man himself is not always aware. The actions of the man who is conscious of their significance, however, have the greatest effect and help speed the ultimate *tikkun*. Because the world became corporealized as a result of the first sin, the great majority of the commandments in the Torah acquired a material meaning, because every instrument must be adjusted to the end it is meant to serve. Yet this does not detract from the inward spiritual dimension that each commandment possesses, whose collective purpose is the restoration and perfection of the true stature of man in all 613 of the limbs of his soul. (For further details, see *Reasons for *Commandments*.) The same Torah which prescribes a practical way of life for human beings in the light of revelation simultaneously provides an esoteric guide for the mystic in his struggle to commune with God. Evident in such an approach is the conservative character of the Kabbalah as a factor working to defend and deepen Jewish values. Observance of the Torah was sanctified as the way to abolish division in the world, and every man was called upon to play his part in this task in accordance with the rank of his soul and the role that was allotted him. The spiritual light that shines in every commandment connects the individual with the root of his soul and with the supernal lights in general. Thus, a mission was entrusted to the collective body of the souls of Israel which could not easily be carried out and involved many descents and ascents before all obstacles could be overcome, but which in the final analysis had a clear and urgent purpose: the *tikkun* and redemption of the world.

Exile and Redemption

It therefore follows that the historical exile of the Jewish people also has its spiritual causation in various disturbances and faults in the cosmic harmony for which it serves as a concrete and concentrated symbol. The situation of the spiritual worlds at the time of the exile was completely different from that ideal state in which they were supposed to exist according to the divine plan and in which they will find themselves at the time of redemption. In one form or another this belief recurs throughout the development of the Kabbalah. The kabbalists

of Gerona held that for as long as the exile continues the *Sefirot* do not function normally; as they are withdrawn toward the source of their original emanation, Israel lacks the power to adhere to them truly by means of the Divine Spirit, which has also departed for above. Only through individual effort can the mystic, and he alone, still attain to a state of *devekut*. In some texts we are told that only the five lower *Sefirot* continue to lead an emanated existence below, whereas the upper *Sefirot* remain above. When the Jewish people still lived in its own land, on the other hand, the divine influx descended from above to below and reascended from below to above all the way to the highest *Keter*. The letters of the Tetragrammaton, which contain all the emanated worlds, are never united for the duration of the exile, especially the final *vav* and *he*, which are the *Sefirot Tiferet* and *Malkhut*, and which were already parted at the time of Adam's first sin, when the exile in its cosmic sense began. Since then there has been no constant unity between the "king" and "queen," and this will be restored only in the future when the queen, who is the *Shekhinah* and the *Sefirah Malkhut*, reascends to be rejoined with the *Sefirah Tiferet*. Similarly, only in messianic times will man return to that paradisaical state in which "he did of his own nature that which it was right to do, nor was his will divided against itself" (Nahmanides on Deut. 30:6). It was in these same Spanish circles that there first arose the belief in the mystical nature of the Messiah, who was supposedly a harmony of all the levels of creation from the most rarified to the most gross, so that he possessed "a divine power, and an angelic power, and a human power, and a vegetative power, and an animal power" (Azriel in his Epistle to Burgos). The Messiah will be created through the special activity of *Malkhut*, and this origin will serve to elevate his powers of apprehension above those of the angels. The Zohar too takes the position that the crux of the redemption works itself out in the continuing conjunction of *Tiferet* and *Malkhut*, and that redemption of Israel is one with the redemption of God Himself from His mystic exile. The source of this belief is talmudic and can be found in both the Palestinian Talmud, *Sukkah* 4, 3 and in the *Midrash Va-Yikra Rabbah*, sect. 9, 3: "The salvation of the Holy One blessed be He is the salvation of Israel." At the time of the redemption "all the worlds will be in a single conjunction [*be-zivvug ehad*]," and in the year of the grand jubilee *Malkhut* will be joined not only with *Tiferet* but with *Binah* as well. In the *Ra'aya Meheimna* and the *Tikkunei Zohar* we find the idea that whereas during the period of the exile the world is in thrall to the Tree of Knowledge of Good and Evil, in which the realms of good and evil struggle between themselves so that there are both holiness and impurity, permitted acts and forbidden acts, sacred and profane, in the time of the redemption dominion will pass to the Tree of Life and all will be as before Adam's sin. The utopian motifs in the messianic idea are given their ultimate expression in these works and in those composed under their influence. The future abolition of the commandments mentioned in the Talmud (Nid. 61b) was taken by the kabbalists to refer to the complete spiritualiza-

tion of the commandments that would take place under the dominion of the Tree of Life. The details of this vision tended to vary greatly according to the homiletic powers of the particular kabbalist who embraced it.

In Lurianic Kabbalah too the exile of Israel is connected with Adam's sin, the outcome of which was the scattering of the holy sparks, both of the *Shekhinah* and of Adam's soul. When the sparks became diffused even further in Adam's descendants, the mission of gathering them and raising them up, that is, of preparing the way for redemption, was awarded to Israel. The exile is not, therefore, merely a punishment and a trial but is a mission as well. The Messiah will not come until the good in the universe has been completely winnowed out from the evil, for in Vital's words "the ingathering of the exiles itself means the gathering of all the sparks that were in exile." The exile may be compared to a garden that has been abandoned by its gardener so that weeds have sprung all over it (*Ez Hayyim*, ch. 42, para. 4). The *tikkun* progresses in predetermined stages from one generation to the next and all the transmigrations of souls serve this purpose. As the exile draws to an end, the *tikkun* of the human structure of the *Sefirot* reaches the "feet" (*akevayim*); thus, the souls that go forth in "the footsteps of the Messiah" are unusually obdurate and resistant to *tikkun*, from whence stem the special ordeals that will occur on the eve of the redemption.

Opinions varied as to whether the Messiah's soul too entered the cycle of transmigration: some kabbalists held that his soul had also been incarnated in Adam and in David (according to other views, in Moses as well), while others contended (a view first found in the *Sefer ha-Bahir*) that it was not subject to the law of transmigration. According to the Lurianic Kabbalah, each of the *parzufim* of the *Adam Kadmon* had a female counterpart (*nukba*) except for the *parzuf* of *Arikh Anpin*, which was instrumental in creating the world through a process of autogeny (*zivvug minnei u-vei*), that is, of "coupling" with itself. At the time of the redemption, however, it will be able to "couple" through the pairing of its *Yesod* with its *nukba* (the waxing *Sefirah Malkhut*), and the offspring of this act will be the most hidden root of the soul of the Messiah Son of David, which is its *yehidah*. The descent of this soul depends on the state of *tikkun* prevailing in the different worlds, for in every generation there is one righteous man who has the disposition to receive it if only the age is worthy. The soul of the Messiah Son of Joseph, on the other hand, who is the harbinger of the Messiah Son of David, is part of the regular cycle of transmigration. The redemption will not come all at once but will rather manifest itself in stages, some of which will be inwardly hidden in the spiritual worlds and others of which will be more apparent. The final redemption will come only when not a single spark of holiness is left among the *kelippot*. In the writings of Luria's school different views can be found on whether the Messiah himself has an active role to play in the process of redemption through his unique ability to raise up certain last sparks that are beyond the power of anyone else. This question assumed particular importance in the de-

velopment of the Shabbatean movement. In the course of the redemption certain hitherto concealed lights from the *parzuf* of *Attika* will manifest themselves and alter the structure of creation. In the final analysis, national and even nationalistic motifs blend with cosmic ones in the Lurianic Kabbalah to form a single great myth of exile and redemption.

The Torah and Its Significance

The role of the Torah in the Kabbalah as an instrument and a way of life in the service of a universal *tikkun* has already been discussed. The central position of the Torah in the Kabbalah, however, goes far beyond such definitions. The kabbalistic attitude to the Pentateuch, and in a somewhat lesser degree to the Bible as a whole, was a natural corollary of the overall kabbalistic belief in the symbolic character of all earthly phenomena. There was literally nothing, the kabbalists held, which in addition to its exterior aspect did not also possess an interior aspect in which there existed a hidden, inner reality on various levels. The kabbalists applied this view of the “transparency” of all things to the Torah as well, but inasmuch as the latter was the unique product of divine revelation, they also considered it the one object which could be apprehended by man in its absolute state in a world where all other things were relative. Regarded from this point of view in its quality as the direct word of God and thus unparalleled by any other book in the world, the Torah became for the kabbalists the object of an original mystical way of meditation. This is not to say that they sought to deny the concrete, historical events on which it was based, but simply that what interested them most was something quite different, namely, the conducting of a profound inquiry into its absolute nature and character. Only rarely did they discuss the relationship among the three parts of the Bible, the Pentateuch, the Prophets, and the Hagiographa, and for the most part their attention was concentrated almost exclusively on the Torah in its strict sense of the Five Books of Moses. The Zohar (3, 35a) actually attempts in one place to assert the absolute superiority of these books and their students over the Prophets and the Hagiographa and their students, yet only in the context of commenting on the talmudic statement that “the sage is preferable to the prophet.” In his *Ginnat Egoz* (1612, 34d ff.), Joseph Gikatilla also sought to attach a kabbalistic interpretation to the tripartite division of the Bible. On the whole, however, where kabbalistic commentaries do exist on the Prophets and the later writings (and especially on the Book of Psalms), their approach to these texts is essentially no different from that of the commentaries on the Torah.

The classic formulations of this approach appear as early as the 13th century, nor do later and bolder restatements of them, even in the Lurianic school, add anything fundamentally new. A large part of the literature of the Kabbalah consists of commentaries on the Pentateuch, the Five Scrolls, and the Book of Psalms, and the Zohar itself was largely written as a commentary on the Pentateuch, Ruth, and the Song of Songs. Books such as the commentaries on the Pentateuch by Me-

nahem Recanati, Bahya b. Asher, and Menahem Ziyoni became classic kabbalistic texts. Noteworthy too is the fact that there are practically no kabbalistic commentaries to speak of on entire books of the Prophets or on the Book of Job and the Book of Daniel. Only a few, isolated exegeses of fragments of these texts tend to recur regularly in connection with certain mystical interpretations. The only known kabbalistic commentary ever to have been composed on the entire Bible is the 16th-century *Minhat Yehudah*, written in Morocco, large sections of which have been preserved in various manuscripts. Outside the Pentateuch, the Song of Songs alone was made the subject of a large number of kabbalistic commentaries, beginning with Ezra of Gerona’s and continuing down to several written in recent generations.

The main basis of the Kabbalistic attitude toward the Torah is, as was mentioned above, the fundamental kabbalistic belief in the correspondence between creation and revelation. The divine emanation can be described both in terms of symbols drawn from the doctrine of *Sefirot* and of the emanated, supernal lights, and of symbols drawn from the sphere of language and composed of letters and names. In the latter case, the process of creation can be symbolized as the word of God, the development of the fundamentals of divine speech, and as such it is not essentially different from the divine processes articulated in the Torah, the inwardness of which reveals the same supreme laws that determine the hierarchy of creation. In essence, the Torah contains in a concentrated form all that was allowed to develop more expansively in the creation itself. Strictly speaking, the Torah does not so much mean anything specific, though it in fact means many different things on many different levels, as it articulates a universe of being. God reveals Himself in it as Himself rather than as a medium of communication in the limited human sense. This limited, human meaning of the Torah is only its most external aspect. The true essence of the Torah, on the other hand, is defined in the Kabbalah according to three basic principles: the Torah is the complete mystical name of God; the Torah is a living organism; and the divine speech is infinitely significant, and no finite human speech can ever exhaust it.

THE TORAH AS THE MYSTICAL NAME OF GOD. Underlying this principle is an originally magical belief which was transformed into a mystical one. Such a magical belief in the structure of the Torah can already be found in the *Midrash Tehillim* (on Ps. 3): “Had the chapters of the Torah been given in their correct order, anyone who read them would have been enabled to raise the dead and work miracles; therefore, the Torah’s [true] order has been hidden and is known [only] to God.” The magical uses of the Torah are discussed in the book *Shimmushei Torah*, which dates at the very latest from the geonic period, and in which it is related that together with the accepted reading of the Torah, Moses received yet another reading composed of Holy Names possessing magical significance. To read the Torah “according to the names” (Nahmanides’ introduction to his commentary on the Pentateuch) does not,

therefore, have any concrete human meaning but rather one that is completely esoteric: far from having to do with historical narrations and commandments, the Torah thus read is solely concerned with concentrations of the divine power in various combinations of the letters of God's Holy Names. From the magical belief that the Torah was composed of God's Holy Names, it was but a short step to the mystical belief that the entire Torah was in fact nothing else than the Great Name of God Himself. In it God expressed His own being insofar as this being pertained to creation and insofar as it was able to manifest itself through creation. Thus, the divine energy chose to articulate itself in the form of the letters of the Torah as they express themselves in God's Name. On the one hand this Name comprises the divine potency; on the other hand it comprehends within it the totality of the concealed laws of creation. Obviously, such an assumption about the Torah did not refer to the physical text written on parchment but rather to the Torah in its pre-existential state in which it served as an instrument of the creation. In this sense, the creation of the Torah itself was simply a recapitulation of the process by which the *Sefirot* and the individual aspects of the Divine Names were emanated from the substance of *Ein-Sof*. Nor is the Torah separate from this substance, for it represents the inner life of God. In its earliest and most hidden existence it is called "the primordial Torah," which is occasionally identified with the *Sefirah Hokhmah*. Thereafter it develops in two manifestations, that of the Written Torah and that of the Oral Torah, which exist mystically in the *Sefirot Tiferet* and *Mal-khut*, while on earth they exist concretely and are geared to the needs of man.

The relationship between the Torah as the all-comprehensive Name of God and the Ineffable Name or Tetragrammaton was defined by Joseph Gikatilla in his *Shāarei Orah*: "The entire Torah is like a commentary on the [Ineffable] Name of God." In what way is it essentially an explication of the Ineffable Name? In that it is a single "fabric" woven out of the epithets of God in which the Ineffable Name unfolds. Thus, the Torah is a structure the whole of which is built on one fundamental principle, namely, the Ineffable Name. It can be compared to the mystic body of the Godhead, and God Himself is the soul of its letters. This view evolved among the kabbalists of Gerona, and can be found in the Zohar and in contemporaneous works.

THE TORAH AS A LIVING ORGANISM. The weaving of the Torah from the Ineffable Name suggests the analogy that the Torah is a living texture, a live body in the formulation of both Azriel of Gerona and the Zohar. The Torah "is like an entire building; just as one man has many organs with different functions, so among the different chapters of the Torah some seem important in their outward appearance and some unimportant," yet in actual fact all are bound together in a single organic pattern. Just as man's unified nature is divided up among the various organs of his body, so the living cell of God's Name, which is *the* subject of revelation, grows into the

earthly Torah that men possess. Down to the last, seemingly insignificant detail of the masoretic text, the Torah has been passed on with the understanding that it is a living structure from which not even one letter can be excised without seriously harming the entire body. The Torah is like a human body that has a head, torso, heart, mouth, and so forth, or else it can be compared to the Tree of Life, which has a root, trunk, branches, leaves, bark, and pith, though none is distinct from another in essence and all form a single great unity. (According to Philo of Alexandria, a similar conception of the Torah as a living organism inspired the sect of Therapeutes, as it did to a certain extent his own biblical commentaries, without there of course being any demonstrable historical filiation between such sources and the Kabbalah.) This organic approach was well able to explain the apparent stylistic discrepancies in the Bible, which was part narrative (and sometimes even seemingly superfluous narrative), part law and commandment, part poetry, and part even raw statistic. Behind all these different styles stood the mystic unity of the great Name of God. Such outward appearances were simply the garments of the hidden inwardness that clothed itself in them, and "Woe is he who looks only at the garments!" Connected with this is the view that the Torah is revealed in a different form in each of the worlds of creation, starting with its primordial manifestation as a garment for *Ein-Sof* and ending with the Torah as it is read on earth – a view that was especially promulgated by the school of Israel Sarug (see above). There is a "Torah of *azilut*," a "Torah of *beriah*," and so forth, each one reflecting the particular function of the mystical structure of a given phase of creation. In each of these phases there is a relativization of the Torah's absolute essence, which is in itself unaffected by these changes, great though they be. Similarly, as was explained above, the single Torah appears in different forms in the different *shemmitot* or cosmic cycles of creation.

THE INFINITE SIGNIFICANCE OF THE DIVINE SPEECH. A direct consequence of this belief was the principle that the content of the Torah possessed infinite meaning, which revealed itself differently at different levels and according to the capacity of its contemplator. The unfathomable profundity of the divine speech could not possibly be exhausted at any one level alone, an axiom that applied as well to the concrete, historical Torah revealed by God in the theophany at Mount Sinai. From the outset this Torah possessed the two aspects mentioned above, a literal reading formed by its letters that combined to make words of the Hebrew language, and a mystical reading composed of the divine Names of God. But this was not all. "Many lights shine forth from each word and each letter," a view that was summed up in the well-known statement (itself an epigrammatic rendering of a passage in the *Otiyyot de-Rabbi Akiva*) that "the Torah has 70 faces." The conventional four categories by which the Torah was said to be interpretable, the literal (*peshat*), the allegorical (*remez*), the hermeneutical or homiletical (*derash*), and the mystical

(*sod*), served only as a general framework for a multiplicity of individual readings, a thesis which from the 16th century on was expressed in the widespread belief that the number of possible readings of the Torah was equal to the number of the 600,000 children of Israel who were present at Mount Sinai – in other words, that each single Jew approached the Torah by a path that he alone could follow. These four categories were first collectively given the acronym *pardes* (literally, “garden”) by Moses de Leon. Basically, this “garden of the Torah” was understood as follows. The *peshat* or literal meaning did not embrace only the historical and factual content of the Torah but also the authoritative Oral Law of rabbinic tradition. The *derash* or hermeneutical meaning was the path of ethical and aggadic commentary. The *remez* or allegorical meaning comprised the body of philosophical truths that the Torah contained. The *sod* or mystical meaning was the totality of possible kabbalistic commentaries which interpreted the words of the Torah as references to events in the world of the *Sefirot* or to the relationship to this world of the biblical heroes. The *peshat*, therefore, which was taken to include the corpus of talmudic law as well, was only the Torah’s outermost aspect, the “husk” that first met the eye of the reader. The other layers revealed themselves only to that more penetrating and latitudinous power of insight which was able to discover in the Torah general truths that were in no way dependent on their immediate literal context. Only on the level of *sod* did the Torah become a body of mystical symbols which unveiled the hidden life-processes of the Godhead and their connections with human life. This fourfold exegetical division was apparently influenced by the earlier yet similar categories of Christian tradition. Literal, aggadic, and philosophical-allegorical commentaries had previously been known to Jewish tradition as well, and Joseph ibn Aknin’s long commentary on the Song of Songs, for example, which was composed early in the 13th century, combined all three of these approaches. Bahya b. Asher was the first biblical commentator (1291) to introduce a kabbalistic aspect into his textual explications as well, though he did not use the acronym *pardes* and referred to the philosophical reading of the Torah as “the way of the intellect.” Explication on the level of *sod*, of course, had limitless possibilities, a classic illustration of which is Nathan Spira’s *Megalleh Amukkot* (1637), in which Moses’ prayer to God in Deuteronomy 3:23 ff. is explained in 252 different ways. In the main corpus of the Zohar, where use of the term “Kabbalah” is studiously avoided, such mystical interpretations are referred to as “mysteries of the faith” (*raza de-meheimnuta*), that is, exegesis based on esoteric beliefs. The author of the Zohar, whose belief in the primacy of kabbalistic interpretation was extreme, actually expressed the opinion (3, 152a) that had the Torah simply been intended as a series of literal narratives, he and his contemporaries would have been able to compose a better book! Occasionally kabbalistic interpretations would deliberately choose to stress certain words or verses that seemed insignificant on the surface and to attribute to them profound symbolic importance, as can be seen in the Zohar’s commentary on the list of the

kings of Edom in Genesis 36 or on the deeds Benaiah the son of Jehoiada related in 11 Samuel 23.

Since the Torah was considered to be essentially composed of letters that were nothing less than configurations of the divine light, and since it was agreed that it assumed different forms in the celestial and terrestrial worlds, the question arose of how it would appear in paradise or in a future age. Certainly its present reading had been affected by the corporealization of its letters that took place at the time of Adam’s sin. The answer given to this conundrum by the kabbalists of Safed was that the Torah contained the same letters prior to Adam’s sin but in a different sequence that corresponded to the condition of the worlds at that time. Thus, it did not include the same prohibitions or laws that we read in it now, for it was adjusted in its entirety to Adam’s state before his fall. Similarly, in future ages the Torah will cast off its garments and will again appear in a purely spiritual form whose letters will assume new spiritual meanings. In its primordial existence, the Torah already contained all the combinational possibilities that might manifest themselves in it in accordance with men’s deeds and the needs of the world. Had it not been for Adam’s sin, its letters would have combined to form a completely different narrative. In messianic times to come, therefore, God will reveal new combinations of letters that will yield an entirely new content. Indeed, this is the “new Torah” alluded to in the Midrash in its commentary on Isaiah 51:4, “For instruction shall go forth from Me.” Such beliefs continued to be widespread even in ḥasidic literature.

The most radical form that this view took was associated with the talmudic *aggadah* according to which prior to the creation of the world the whole of the Torah was written in black fire on white fire. As early as the beginning of the 13th century the daring notion was expressed that in reality the white fire comprised the true text of the Torah, whereas the text that appeared in black fire was merely the mystical Oral Law. Hence it follows that the true Written Law has become entirely invisible to human perception and is presently concealed in the white parchment of the Torah scroll, the black letters of which are nothing more than a commentary on this vanished text. In the time of the Messiah the letters of this “white Torah” will be revealed. This belief is referred to in a number of the classic texts of Ḥasidism as well.

The Mystic Way

DEVEKUT. Life in the framework of Judaism, through the study of Torah and prayer, offered the kabbalist a way of both active and passive integration in the great divine hierarchy of creation. Within this hierarchy, the task of the Kabbalah is to help guide the soul back to its native home in the Godhead. For each single Sefirah there is a corresponding ethical attribute in human behavior, and he who achieves this on earth is integrated into the mystic life and the harmonic world of the Sefirot. Cordovero’s *Tomer Devorah* is dedicated to this subject. The kabbalists unanimously agreed on the supreme rank attainable by the soul at the end of its mystic path, namely, that

of *devekut*, mystical cleaving to God. In turn, there might be different ranks of *devekut* itself, such as “equanimity” (*hishtavvut*, the indifference of the soul to praise or blame), “solitude” (*hitbodedut*, being alone with God), “the holy spirit,” and “prophecy.” Such is the ladder of *devekut* according to Isaac of Acre. In contrast, a running debate surrounded the question of what was the highest quality preparatory to such *devekut*, the love of God or the fear of God. This argument recurs throughout the literature of the Kabbalah with inconclusive results, and continued into the later *musar* literature that was composed under kabbalistic influence. Many kabbalists considered the worship of God in “pure, sublime fear,” which was quite another thing from the fear of punishment, to be an even higher attainment than the worship of Him in love. In the Zohar this “fear” is employed as one of the epithets of the highest Sefirah, thus giving it supreme status. Elijah de Vidas, on the other hand, in his *Reshit Hokhmah*, defended the primacy of love. In effect, both of these virtues lead to *devekut*.

The early Kabbalah of Provence already sought to define *devekut* both as a process by which man cleaves to his Creator and as an ultimate goal of the mystic way. According to Isaac the Blind: “The principal task of the mystics [*ha-maskilim*] and of they who contemplate on His Name is [expressed in the commandment] ‘And ye shall cleave unto Him’ [Deut. 13:5]. And this is a central principle of the Torah, and of prayer, and of [reciting] the blessings, to harmonize one’s thought with one’s faith as though it cleaved to [the worlds] above, to conjoin God in His letters, and to link [*likhol*] the ten *Sefirot* in Him as a flame is joined to a coal, articulating his epithets aloud and conjoining Him mentally in His true structure.” In a more general sense, Naḥmanides, in his commentary on Deuteronomy 11:22, defines *devekut* as the state of mind in which “You constantly remember God and His love, nor do you remove your thought from Him... to the point that when [such a person] speaks with someone else, his heart is not with them at all but is still before God. And indeed it may be true of those who attain this rank, that their soul is granted immortal life [*zērah bi-zēror ha-ḥayyim*] even in their lifetime, for they are themselves a dwelling place for the *Shekhinah*.” Whoever cleaves in this way to his Creator becomes eligible to receive the holy spirit (Naḥmanides, *Sha’ar ha-Gemul*). Inasmuch as human thought derives from the rational soul in the world of *aẓilut* it has the ability to return to its source there, “And when it reaches its source, it cleaves to the celestial light from which it derives and the two become one” (Meir ibn Gabbai). In his commentary on Job 36:7, Naḥmanides refers to *devekut* as the spiritual level that characterizes the true *ḥasid*, and in fact Baḥya ibn Pakuda’s definition of *ḥasidut* in his *Ḥovot ha-Levavot* (8, 10) is very similar to Azriel of Gerona’s definition of *devekut* in his *Sha’ar ha-Kavvanah*, for both speak in almost identical terms of the effacement of the human will in the divine will or of the encounter and conformity of the two wills together. On the other hand, kabbalistic descriptions of *devekut* also tend to resemble the common definitions of prophecy and its various levels. In his Epistle to Burgos, Azriel of

Gerona speaks of the way to prophecy as being also the way to *devekut*, while in his *Perush ha-Aggadot* (ed. Tishby, 40), he virtually equates the two.

Devekut results in a sense of beatitude and intimate union, yet it does not entirely eliminate the distance between the creature and its Creator, a distinction that most kabbalists, like most Ḥasidim, were careful not to obscure by claiming that there could be a complete unification of the soul and God. In the thought of Isaac of Acre, the concept of *devekut* takes on a semi-contemplative, semi-ecstatic character. (See E. Gottlieb, *Papers of the Fourth World Congress of Jewish Studies*, 1969, Vol. 2, 327–34.) Here and there ecstatic nuances can be found in the conceptions of *devekut* of other kabbalists. (See Y. Tishby, *Mishnat ha-Zohar* 2, 247–68; G. Scholem, *Review of Religion* 14, (1950), 115–39.)

PRAYER, KAVVANAH, AND MEDITATION. The main path traveled by the mystic was of course associated in the kabbalistic consciousness with the practical observance of the commandments, yet the two were not intrinsically connected, for essentially the mystic way involved the ascent of the soul to a state of ecstatic rapture through a process of concentrated thought and meditation. Above all, in the Kabbalah it is prayer that serves as the principal realm for this ascent. Prayer is unlike the practical commandments, each of which demands a certain well-defined action, the performance of which does not leave much room for meditation and mystical immersion. True, every commandment has its mystical aspect whose observance creates a bond between the world of man and the world of the *Sefirot*, but the full force of spirituality can express itself far better in prayer. The mystical intention or *kavvanah* that accompanies every commandment is in effect a concentration of thought upon the kabbalistic significance of the action at the time that it is performed; prayer, on the other hand, stands independent of any outward action and can easily be transformed into a comprehensive exercise in inward meditation. The tradition of mystical prayer accompanied by a system of meditative *kavvanot* that focused on each prayer’s kabbalistic content developed as a central feature of the Kabbalah from its first appearance among the Ḥasidei Ashkenaz and the kabbalists of Provence and on through the Lurianic Kabbalah and the latter’s last vestiges in modern times. The greatest kabbalists were all great masters of prayer, nor would it be easy to imagine the Kabbalah’s speculative development without such permanent roots in the experience of mystical prayer. In its kabbalistic guise, the concept of *kavvanah* was given new content far beyond that bestowed on it in earlier rabbinic and halakhic literature. (See Enelow, *Jewish Studies in Honor of Kaufmann Kohler* (Berlin, 1913), 82–107; G. Scholem, *MGWJ* 78, 1934, 492–518.)

Kabbalistic doctrine sought a way out of the dilemma, which the kabbalists themselves were aware of, that was posed by the theologically unacceptable notion that prayer could somehow change or influence the will of God. The Kabbalah regarded prayer as the ascent of man to the upper worlds, a

spiritual peregrination among the supernal realms that sought to integrate itself into their hierarchical structure and to contribute its share toward restoring what had been flawed there. Its field of activity in kabbalistic thought is entirely in the inward worlds and in the connections between them. Using the traditional liturgical text in a symbolic way, prayer repeats the hidden processes of the universe which, as was explained above, can themselves be regarded as essentially linguistic in nature. The ontological hierarchy of the spiritual worlds reveals itself to the kabbalist in the time of prayer as one of the many Names of God. This unveiling of a divine “Name” through the power of the “word” is what constitutes the mystical activity of the individual in prayer, who meditates or focuses his *kavvanah* upon the particular name that belongs to the spiritual realm through which his prayer is passing. In early Kabbalah, it is the name of the appropriate *Sefirah* on which the mystic concentrates when reciting the prayers and into which he is, as it were, absorbed, but in later Kabbalah, and especially in the Lurianic school, this is replaced by one of the mystical Names of God. Thus, while prayer has an aspect of “inward magic” by which it is empowered to help order and restore the upper worlds, it has no outwardly magical efficacy. Such “inward magic” is distinguished from sorcery in that its meditations or *kavvanot* are not meant to be pronounced. The Divine Names are not called upon, as they are in ordinary operational magic, but are aroused through meditative activity directed toward them. The individual in prayer pauses over each word and fully gauges the *kavvanah* that belongs to it. The actual text of the prayer, therefore, serves as a kind of a banister onto which the kabbalist holds as he makes his not un hazardous ascent, groping his way by the words. The *kavvanot*, in other words, transform the words of the prayer into holy names that serve as landmarks on the upward climb.

The practical application of mystical *meditation in the Kabbalah, therefore, is connected mainly, if not exclusively, with the moment of prayer. In terms of Jewish tradition, the principal innovation in this approach lay in the fact that it shifted the emphasis from group prayer to individual mystical prayer without in any way destroying the basic liturgical framework itself. Indeed, in their effort to preserve this framework, the first generations of kabbalists largely refrained from composing original prayers of their own that would reflect their beliefs directly. Only from the 16th century onward, and especially under the influence of the Lurianic school, were large numbers of kabbalistic prayers added to the old. The short meditations of the early kabbalists were now replaced by increasingly lengthy and involved *kavvanot* whose execution led to a considerable lengthening of the service. The system of *kavvanot* reached its maximum development in the school of the Yemenite kabbalist Shalom Sharabi, where prayer required an entire congregation of mystical meditators who were capable of great psychical exertion. Several such groups are actually known to have existed. According to Azriel of Gerona, he who meditates mystically in his prayer “drives away all ob-

stacles and impediments and reduces every word to its ‘nothingness.’” To achieve this goal is in a sense to open a reservoir whose waters, which are the divine influx, pour down on the praying individual. Because he has properly prepared himself for these supernal forces, however, he is not overwhelmed and drowned by them. Having completed his upward ascent, he now descends once again with the aid of fixed *kavvanot*, and in this manner unites the upper and the lower worlds. An excellent example of this circle of ascent and descent can be found in the *kavvanot* to the *Shema*.

In contrast to the contemplative character of prayer in the Kabbalah of Gerona and the Zohar, Lurianic Kabbalah emphasized its more active side. Every prayer was now directed not only toward the symbolic ascent of him who prays, but also toward the upraising of the sparks of light that belonged to his soul. “From the day the world was created until the end of time, no one prayer resembles another.” Despite the fact that there is a common collectivity to all the *kavvanot*, each one has its completely individual nature, and every moment of prayer is different and demands its own *kavvanah*. In this way, the personal element in prayer came to be highly stressed. Not even all the *kavvanot* listed in the writings devoted to them exhausted the totality of possibilities, just as a musical score cannot possibly contain the personal interpretation that the musician brings to it in the act of performance. In answer to the question in the Talmud, “From whence can it be known that God Himself prays?” the Kabbalah replied that through mystical prayer man was drawn upward or absorbed into the hidden, dynamic life of the Godhead, so that in the act of his praying God prayed too. On the other hand, the theory can also be found in kabbalistic literature that prayer is like an arrow shot upward by its reciter with the bow of *kavvanah*. In yet another analogy from the Lurianic school, which had a great impact on ḥasidic literature, the process of *kavvanah* is defined in terms of the drawing downward of the spiritual divine light into the letters and words of the prayer book, so that this light can then reascend to the highest rank (*Ḥesed le-Avraham*, 2, par. 44). In the opinion of the Zohar (2, 215b), the individual passes through four phases in his prayer: he accomplishes the *tikkun* of himself, the *tikkun* of this lower world, the *tikkun* of the upper world, and, finally, the *tikkun* of the Divine Name. Similarly, the morning service as a whole was interpreted as representing a symbolic progression, at the end of which the reciter was ready to risk all for God, whether by yielding to a near-ecstatic rapture or by wrestling with the *sitra ahra* in order to rescue the imprisoned holiness from its grasp. In Lurianic prayer a special place was reserved for *yihudim* (“acts of unification”), which were meditations on one of the letter combinations of the Tetragrammaton, or on configurations of such names with different vocalizations, such as Isaac Luria was in the habit of giving to his disciples, to each “in accordance with the root of his soul.” As employed in such individual *yihudim*, the *kavvanot* were detached from the regular liturgy and became independent instruments for uplifting the soul. They also were sometimes used as a method

of communing with other souls, particularly with the souls of departed *zaddikim*.

A wide kabbalistic literature was devoted to the path of prayer and to mystical interpretations of the traditional liturgy. Such interpretations were less commentaries in the ordinary sense than systematic handbooks for mystical meditation in prayer. Among the best known of these are Azriel of Gerona's *Perush ha-Tefillot* (extant in many Mss.); Menahem Recanati's *Perush ha-Tefillot* (1544); David b. Judah he-Ḥasid's *Or Zaru'a* (see Marmorstein in MGWJ 71 (1927), 39ff.) and a commentary by an anonymous author (c.1300), the long introduction to which has been published (*Kovez Madda'i le-Zekher Moshe Shor*, 1945, 113–26). Among such books written in the 16th century were Meir ibn Gabbai's *Tola'at Ya'akov* (1560); Jacob Israel Finzi's *Perush ha-Tefillot* (in Cambridge Ms.); and Moses Cordovero's *Tefillah le-Moshe* (1892). The rise of Lurianic Kabbalah led to an enormous outpouring of books of *kavvanot* and mystical prayers. The most detailed among them are Ḥayyim Vital's *Sha'ar ha-Kavvanot* and *Pri Ez Ḥayyim*, and Emmanuel Ḥai Ricchi's summary *Mishnat Ḥasidim* (1727). As early as Vital's circle the practice developed of compiling special prayer books with the corresponding *kavvanot*, and many copies of these circulated in manuscript under the title *Siddur ha-Ari* ("The Prayer Book of Isaac Luria"). A number of such prayer books were published, among them *Sha'arei Raḥamim* (Salonika, 1741); *Ḥesed le-Avraham* (Smyrna, 1764); Aryeh Loeb Epstein's *Mishnat Gur Aryeh* (Koenigsberg, 1765); the *Siddur ha-Ari* of the kabbalists of the Brody *Klaus* (Zolkiew, 1781); and the kabbalistic prayer books of Asher Margoliot (Lvov, 1788), Shabbetai Rashkover (1794), and Jacob Koppel Lipshitz, whose *Kol Ya'akov* (1804) is full of Shabbatean influence. The acme of such books was the prayer book of Shalom Sharabi, the bulk of which was published in Jerusalem in a long series of volumes beginning in 1910. To this day there are groups in Jerusalem who pray according to Sharabi's *kavvanot*, although the spiritual practice of this can take many years to master. Other guides to prayer from this period are Isaiah Horowitz's *Siddur ha-Shelah* (Amsterdam, 1717); Solomon Rocca's *Kavvanat Shelomo* (Venice, 1670); Moses Albaz's *Heikhal ha-Kodesh* (Amsterdam, 1653); and Ḥayyim Vital's son Samuel's *Hemdat Yisrael* (1901). In his *Sha'ar Ru'ah ha-Kodesh* (with commentary, 1874), Ḥayyim Vital discusses the *yihudim*. Numerous kabbalist prayer books were compiled for various specific occasions, a genre that began with Nathan Hannover's *Sha'arei Ziyyon* (1662).

ECSTASY. Beside the mystical meditation of prayer, a number of other mystical "disciplines" developed in Kabbalah. (On the ecstatic ascents of the Merkabah mystics, see above.) From the beginning of the geonic period there is a text called *Sefer ha-Malbush* describing a half-magical, half-mystical practice of "putting on the Name" (*levishat ha-Shem*), whose history apparently goes back even further. Of central importance in this context is the "prophetic Kabbalah" of Abraham Abulafia, in which an earlier tradition of systematic instruction based

on "the science of combination," *hokhmat ha-zeruf* (a play on the double meaning of the word in *zeruf ha-otiot*, "the combination of letters," and *zeruf ha-levavot*, "the purification of hearts"), was refashioned. This mystical discipline made use of the letters of the alphabet, and especially of the Tetragrammaton and the other Names of God, for the purpose of training in meditation. By immersing himself in various combinations of letters and names, the kabbalist emptied his mind of all natural forms that might prevent his concentrating on divine matters. In this way he freed his soul of its natural restraints and opened it to the divine influx, with whose aid he might even attain to prophecy. The disciplines of *kavvanah* and letter combination became linked together toward the end of the 13th century and from then on mutually influenced each other. The Lurianic *kavvanot* were especially heavily influenced by *hokhmat ha-zeruf*. The doctrine of the *Sefirot* was also absorbed by these disciplines, though Abulafia himself regarded it as a less advanced and less valuable system than "the science of combination" as the latter was expounded in his books.

In the further course of the development of the Kabbalah, many kabbalists continued to regard such disciplines as the most esoteric side of Kabbalah and were reluctant to discuss them in their books. Abulafia himself described quite explicitly, and in a seemingly objective manner, just what were the obstacles and dangers, as well as the rewards, that such mystical experience could bring. He drew a clear parallel between "the science of combination" and music, which too could conduct the soul to a state of the highest rapture by the combination of sounds. The techniques of "prophetic Kabbalah" that were used to aid the ascent of the soul, such as breathing exercises, the repetition of Divine Names, and meditations on colors, bear a marked resemblance to those of both Indian Yoga and Muslim Sufism. The subject sees flashes of light and feels as though he were divinely "anointed." In certain stages he lives through a personal identification with an inner spiritual mentor or *guru* who is revealed to him and who is really Metatron, the prince of God's countenance, or in some cases, the subject's own true self. The climactic stage of this spiritual education is the power of prophecy. At this point Abulafia's Kabbalah coincides with the discipline of *kavvanot* developed by the kabbalists of Gerona, which was also intended to train its practitioner so that "whoever has mastered it ascends to the level of prophecy."

Here and there mention is made in the Kabbalah of various other occult phenomena, but on the whole there is a clear-cut tendency to avoid discussing such things, just as most kabbalists refrained from recording their personal experiences in the autobiographical form that was extremely common in the mystical literature of both Christianity and Islam. Descriptions exist of the mystical sensation of the subtle ether or "aura," called also "the ether of the *zelem*," by which man is surrounded, of mystical visions of the primordial letters in the heavens (*Zohar*, 2, 130b), and of invisible holy books that could be read only with the inward senses (κs 4, 319). In a number

of places prophecy is defined as the experience wherein a man “sees the form of his own self standing before him and relating the future to him” (MTJM, 142). One anonymous disciple of Abulafia actually composed a memoir about his experiences with *hokhmat ha-zeruf* (MTJM, 147–55). Generally speaking, however, the autobiographical confession was strictly disapproved of by most kabbalists. In the Zohar, a description of mystical ecstasy occurs only once, and that in a highly circum-spect account of the experience of the high priest in the Holy of Holies on the Day of Atonement (3, 67a, and in the *Zohar Hadash*, 19a). Even in those writings that essentially continue the tradition of Abulafia, there is little of the latter’s ecstatic extravagance, and ecstasy itself is moderated into *devekut*. Not until the golden period of the ḥasidic movement in the late 18th century, particularly in the circle of the Maggid of Mezhiroch, are descriptions of ecstatic abandon once again encountered in the literature of Judaism. Several books or sections of books that dealt openly and at length with the procedure to be followed for the attainment of ecstasy and the holy spirit, such as Judah Albotini’s *Sulam ha-Aliyah* (c. 1500) and the last part of Hayyim Vital’s *Sha’arei Kedushah*, called *Ma’amar Hitbodedut*, “On Solitary Meditation” (Ginzburg Ms. 691, British Museum 749), were suppressed in their day and preserved only in manuscript. The only such book to have been actually published was the *Berit Menuḥah* (Amsterdam, 1648), the work of an anonymous 14th-century author that has been mistakenly attributed to Abraham of Granada. This book, which contains lengthy descriptions of visions of the supernal lights attained by meditating on various vocalizations of the Tetragrammaton with the aid of a symbolic system unparalleled elsewhere in the Kabbalah, borders on the frontier between “speculative Kabbalah” (*kabbalah iyyunit*), whose primary interest was in the inner spiritual guidance of the individual, and “practical Kabbalah” (*kabbalah ma’asit*), which was concerned above all with magical activity.

Practical Kabbalah

The disciplines discussed in the preceding section, though they deal with practical instructions for the spiritual life, do not belong to the realm of “practical Kabbalah” in the kabbalistic sense of the term, which refers rather to a different set of preoccupations. For the most part, the realm of practical Kabbalah is that of purely motivated or “white” magic, especially as practiced through the medium of the sacred, esoteric Names of God and the angels, the manipulation of which may affect the physical no less than the spiritual world. Such magical operations are not considered impossible in the Kabbalah, or even categorically forbidden, though numerous kabbalistic writings do stress the prohibitions against them. In any case, only the most perfectly virtuous individuals are permitted to perform them, and even then never for their private advantage, but only in times of emergency and public need. Whoever else seeks to perform such acts does so at his own grave physical and spiritual peril. Such warnings were generally observed in the breach, however, as is dem-

onstrated by the extensive literature of practical Kabbalah that has survived. In actual practice, moreover, the boundary between physical magic and the purely inward “magic” of letter combination and *kavvanot* was not always clear-cut and could easily be crossed in either direction. Many early scholarly investigators of the Kabbalah did not often distinguish clearly between the two concepts and frequently used the term “practical Kabbalah” to refer to the Lurianic school as opposed to Cordovero and the Zohar. This confusion can be traced as far back as Pico della Mirandola, who considered the Kabbalah of Abulafia to belong to the “practical” variety. Abulafia himself, however, was well aware of the distinction and in many of his books he fiercely attacked the “masters of names” (*ba’alei shemot*) who defiled themselves with magical practices. The anonymous author of a text once attributed to Maimonides (*Megillat Setarim*, published in *Hemdah Genuzah* 1 (1856), 45–52), who himself belonged to the Abulafian school, differentiates between three kinds of Kabbalah, “rabbinic Kabbalah,” “prophetic Kabbalah,” and “practical Kabbalah.” The latter is identified with theurgy, the magical use of Sacred Names, which is not at all the same thing as the meditation on such names. Before the term “practical Kabbalah” came into use, the concept was expressed in Hebrew by the phrase *hokhmat ha-shimmush*, which was a translation of the technical Greek term (*praxis*) used to denote magical activity. The Spanish kabbalists made a clear distinction between traditions that had come down to them from “masters of the doctrine of the *Sefirot*” (*ba’alei ha-sefirot*) and those that derived from magicians or “masters of the names.” Also known to them were certain magical practices that were referred to as “great theurgy” (*shimmusha rabba*) and “little theurgy” (*shimmusha zutta*; see *Tarbiz*, 16 (1945), 196–209). Unlike Abulafia, however, Gikatilla, Isaac ha-Kohen, and Moses de Leon all mention such “masters of the name” and their expositions without holding them up to reproach. From the 15th century on the semantic division into “speculative” and “practical” Kabbalah became prevalent, though it was not necessarily meant to be prejudicial to the latter. On the whole, however, general summaries of kabbalistic doctrine rarely referred to its “practical” side except accidentally, such as in Cordovero’s angelology *Derishot be-Inyanei ha-Mal’akhim* (at the end of R. Margalio’s *Malakhei Elyon*, 1945).

Historically speaking, most of the contents of practical Kabbalah considerably predate those of speculative Kabbalah and are not dependent on them. In effect, what came to be considered practical Kabbalah constituted an agglomeration of all the magical practices that developed in Judaism from the talmudic period down through the Middle Ages. The doctrine of the *Sefirot* hardly ever played a decisive role in these practices, despite occasional attempts from the late 13th century on to integrate the two. The bulk of such magical material to have been preserved is found in the writings of the Ḥasidei Ashkenaz, which for the most part were removed from the theological influences of Kabbalism, both in texts that were especially written on the subject, such as Eliezer

of Worms' *Sefer ha-Shem*, and in collected anthologies. Most earlier theurgical and magical works, such as the *Ḥarba de-Moshe* or the *Sefer ha-Razim* (see above), were eventually assimilated into practical Kabbalah. Various ideas and practices connected with the figure of the *golem* also took their place in practical Kabbalah through a combination of features drawn from the *Sefer Yeẓirah* and a number of magical traditions. The ostensible lines drawn by the kabbalists to set the boundaries of permissible magic were frequently overstepped and obscured, with the consequent appearance in practical Kabbalah of a good deal of "black" magic – that is, magic that was meant to harm others or that employed "the unholy names" (*shemot ha-tum'ah*, Sanh. 91a) of various dark, demonic powers, and magic used for personal gain. The open disavowal of practical Kabbalah by most kabbalists, to the extent that it was not simply an empty formality, was for the most part in reaction to practices like these. Such black magic embraced a wide realm of *demonology and various forms of sorcery that were designed to disrupt the natural order of things and to create illicit connections between things that were meant to be kept separate. Activity of this sort was considered a rebellion of man against God and a hubristic attempt to set himself up in God's place. According to the Zohar (1, 36b), the source of such practices was "the leaves of the Tree of Knowledge," and they had existed among men since the expulsion from the Garden of Eden. Alongside this view, there continued the ancient tradition, first found in the Book of Enoch, that the rebellious angels who had fallen from heaven were the original instructors of the magic arts to mankind. To this day, the Zohar relates (3, 208a, 212a–b), the sorcerers journey to "the mountains of darkness," which are the abode of the rebel angels Aza and Azael, to study under their auspices. The biblical archetype of the sorcerer is Balaam. Such black magic is called in the Kabbalah "apocryphal science" (*ḥokhmah ḥizonah*) or "the science of the Orientals" (*ḥokhmah benei kedem*, on the basis of 1 Kings 5:10), and though a theoretical knowledge of it is permitted – several kabbalistic books in fact treat of it at length – its practice is strictly forbidden. The sorcerer draws forth the spirit of impurity from the *kelippot* and mixes the clean and the unclean together. In the *Tikkunei Zohar* the manipulation of such forces is considered justifiable under certain circumstances, inasmuch as the *sitra aḥra* must be fought with its own weapons.

The opposition of the speculative kabbalists to black magic was unable to prevent a conglomeration of all kinds of magical prescriptions in the literature of practical Kabbalah. Often the white-magical practices of amulets and protective charms can be found side by side with the invocation of demons, incantations, and formulas for private gain (e.g., magical shortcuts, the discovery of hidden treasure, impregnability in the face of one's enemies, etc.), and even sexual magic and necromancy. The international character of magical tradition is evident in such collections, into which many originally non-Jewish elements entered, such as Arab demonology and German and Slavic witchcraft. It was this indiscriminate mixture

that was responsible for the rather gross image of practical Kabbalah that existed in the Jewish popular mind and eventually reached the Christian world too, where the theoretical kabbalistic distinction between forbidden and permitted magical practices was of course overlooked completely. The widespread medieval conception of the Jew as a powerful sorcerer was nourished to no small extent by the practical kabbalistic sources that fostered this confusion. As early as the geonic period the title *ba'al shem* or "master of the name" signified a master of practical Kabbalah who was an expert at issuing amulets for various purposes, invoking angels or devils, and exorcising evil spirits (see *Dibbuk) who had entered a human body. On the whole such figures were clearly identified with white magic in the popular mind, as opposed to sorcerers, witches, and wizards.

Among earlier kabbalistic works that are especially rich in material taken from practical Kabbalah are the Zohar, the writings of Joseph b. Shalom Ashkenazi and Menahem Ziyoni, and the *Berit Menuḥah*, while in the post-Lurianic period the *Emek ha-Melekh* is outstanding in this respect. Magical prayers attributed to some of the leading *tannaim* and *amoraim* were already composed long before the development of speculative Kabbalah, and indeed magical material that has been preserved from the geonic age contains many similarities to magical Greek papyri that have been discovered in Egypt. Contemporaneous with such sources are various magical reworkings of the *shemoneh esreh* prayer, such as the *Tefillat Eliyahu* (Cambridge Ms. 505), which was already known to Isaac the Blind, or the maledictory version of the same prayer, quoted from the archives of Menahem Recanati in the complete manuscript of *Shoshan Sodot*. Almost all such compositions have been preserved in manuscript only, except for occasional borrowings from them in more popular anthologies. Among the most important known manuscripts of practical Kabbalah with its characteristic mixture of elements are Sassoon Ms. 290; British Museum Ms. 752; Cincinnati Ms. 35; and Schocken Ms. 102. Literature of this sort was extremely widespread, however, and hundreds of additional manuscripts also exist. Noteworthy also are the anonymous *Sefer ha-Ḥeshek* (*Festschrift fuer Aron Freimann* (1935), 51–54) and *Shulḥan ha-Sekhel* (in Sassoon Ms.), and Joseph ibn Zayyah's *She'erit Yosef* (1549, formerly in the Jewish Library of Vienna). In none of these books, however, is there any serious attempt at a systematic exposition of the subject. In many popular anthologies, which were widely circulated, both practical Kabbalah and folk medicine were combined together.

Other prominent works of practical Kabbalah include Joel Ba'al Shem's *Toledot Adam* (1720) and *Mif'alot Elohim* (1727); *Derekh ha-Yashar* (Cracow, 1646); Zevi Chotsh's *Derekh Yesharah* (Fuerth, 1697); *Taalumot Ḥokhmah* (Venice, 1667); Zechariah Plongian's *Sefer ha-Zekhirah* (Hamburg, 1709); Abraham Ḥammawi's anthologies *He'ah Nafshenu* (1870), *Devek me-Aḥ* (1874), *Abi'ah Ḥidot* (1877), *Lidrosh Elohim* (1879), and *Nifla'im Ma'asekha* (1881); and Hayyim Palache's *Refu'ah ve-Ḥayyim* (1874). A great deal of valuable material from the

realm of practical Kabbalah can be found in *Mitteilungen der Gesellschaft fuer juedische Volkskunde* (1898–1929), and *Jahrbuecher fuer juedische Volkskunde*, 1–2 (1923–24). Ḥayyim Vital too compiled an anthology of practical Kabbalah mixed with alchemical material (Ms. in the Musayof Collection, Jerusalem). His son Samuel composed an alphabetical lexicon of practical Kabbalah called *Ta'alamot Hokhmah*, which has been lost. Moses Zacuto's comprehensive lexicon *Shor-shei ha-Shemot*, on the other hand, has been preserved in many manuscript copies (selections from it were published in French by M. Schwab, 1899). Clear proof exists of several books on the subject of practical Kabbalah written by some outstanding kabbalists, but these have not been preserved. Among the great masters of practical Kabbalah in the eyes of kabbalistic tradition itself were figures like Judah Ḥasid, Joseph Gikatilla, Isaac of Acre, Joseph della Reyna, Samson of Ostropol, and Joel Ba'al Shem Tov.

To the realm of practical Kabbalah also belong the many traditions concerning the existence of a special archangelic alphabet, the earliest of which was “the alphabet of Metatron.” Other such alphabets or *kolmosin* (“[angelic] pens”) were attributed to Michael, Gabriel, Raphael, etc. Several of these alphabets that have come down to us resemble cuneiform writing, while some clearly derive from early Hebrew or Samaritan script. In kabbalistic literature they are known as “eye writing” (*ketav einayim*), because their letters are always composed of lines and small circles that resemble eyes. Under exceptional circumstances, as when writing the Tetragrammaton or the Divine Names Shaddai and Elohim, these alphabets were occasionally used even in a text otherwise written in ordinary Hebrew characters. Such magical letters, which were mainly used in amulets, are the descendants of the magical characters that are found in theurgic Greek and Aramaic from the first centuries C.E. In all likelihood their originators imitated cuneiform writing that could still be seen in their surroundings, but which had become indecipherable and had therefore assumed magical properties in their eyes.

The well-known medieval book, *Clavicula Salomonis* (“Solomon's Key”), was not originally Jewish at all, and it was only in the 17th century that a Hebrew edition was brought out, a mélange of Jewish, Christian, and Arab elements in which the kabbalistic component was practically nil. By the same token, *The Book of the Sacred Magic of Abra-Melin* (London, 1898), which purported to be an English translation of a Hebrew work written in the 15th century by a certain “Abraham the Jew of Worms” and was widely regarded in European occultist circles as being a classical text of practical Kabbalah, was not in fact written by a Jew, although its anonymous 16th-century author had an uncommon command of Hebrew. The book was originally written in German and the Hebrew manuscript of it found in Oxford (Neubauer 2051) is simply a translation. Indeed, the book circulated in various editions in several languages. It shows the partial influence of Jewish ideas but does not have any strict parallel in kabbalistic literature.

The relationship of the Kabbalah to other “occult sciences” such as astrology, alchemy, physiognomy, and chiromancy was slight. Astrology and alchemy play at most a marginal role in kabbalistic thought. At the same time, practical Kabbalah did manifest an interest in the magical induction of the pneumatic powers of the stars through the agency of specific charms. This use of astrological talismans, which clearly derived from Arabic and Latin sources, is first encountered in the *Sefer ha-Levanah* (London, 1912), cited by Nahmanides. Another text of astrological magic is the Hebrew translation of the *Picatrix*, *Takhlit he-Ḥakham* (Arabic original and German translation, 1933 and 1962). This genre of magical book is also referred to in the Zohar (1, 99b), and several tracts on the subject have been preserved in manuscripts of practical Kabbalah. A number of kabbalistic works dealing with the preparation of magical rings combine astrological motifs with others taken from “the science of combination.” A book in this vein that claims to have been divinely revealed has been preserved in Sassoon Ms. 290. *The Sefer ha-Tamar*, which has been attributed to Abu Aflah (ed. G. Scholem, 1927), was preserved in practical kabbalistic circles but did not derive from them, having its source rather in Arabic astrological magic. Interestingly, kabbalistic attitudes toward astrological magic were highly ambivalent, and some leading kabbalists, such as Cordovero, actually approved of it.

Alchemy too had relatively little influence on the Kabbalah (G. Scholem, in: MGWJ, 69 (1925), 13–30, 95–110; *ibid.*, 70 (1926), 202–9). Indeed, there was a basic symbolic divergence between the two from the start, for while the alchemist considered gold to be the symbol of perfection, for the kabbalists gold, which symbolized *Din*, had a lower rank than silver, which symbolized *Ḥesed*. Nevertheless, efforts were made to harmonize the two systems and allusions to this can already be found in the Zohar. Joseph Taitazak, who lived at the time of the Spanish expulsion, declared the identity of alchemy with the divine wisdom of the Kabbalah (*Zefunot* 11 (1971), 86–87). In 17th-century Italy a kabbalistic alchemical text called *Esh Mezaref* was composed in Hebrew, but the original has been lost; some parts have been preserved in the Latin in Knorr von Rosenroth's *Kabbala Denudata* (Eng. London, 1714, and in a new edition, 1894). Ḥayyim Vital spent two years of his youth studying alchemy exclusively and composed a book on alchemical practices which he publicly repented of in old age. No kabbalistic reworkings of physiognomy are known, but there are several treatments of *chiromancy, especially in the Zohar and in traditions of the Lurianic school. Some kabbalists believed that the lines of the hand and the forehead contained clues to a man's previous reincarnations.

The practice of practical Kabbalah raised certain problems concerning occult phenomena (see also preceding section). A number of these come under the category of *giluy einayim*, whereby a man might be granted a vision of something that, generally speaking, only the rare mystic was permitted to see. Such visions included a glimpse of the “sapphiric ether” (*ha-avir ha-sappiri*) that surrounds all men and in which

their movements are recorded, “the book in which all one’s deeds are expressly written down” (especially in the works of Menahem Azariah Fano). The concept of the *zelem* was often associated with this ether, according to Lurianic sources, as was that of the angelic “eye-writing,” and invisible letters that spelled out the secret nature of each man’s thoughts and deeds which hovered over every head and might be perceived by initiates. Sometimes, especially during the performance of certain commandments such as circumcision, the initiate might also be granted a vision of the Tetragrammaton in the form of fiery letters that “appear and disappear in the twinkling of an eye.” A *mohel* who was also a kabbalist could tell by the hue of this fire what the fortune of the newborn child would be (*Emek ha-Melekh*, 175b). The *aggadah* about the rays of light that shone from Moses’ forehead (*Midrash Shemot Rabba*, 47) fathered the kabbalistic notion of a special halo that circled above the head of every righteous man (*Sefer Ḥasidim*, par. 370). This belief became widespread, although the halo was sometimes considered to appear only shortly before the *zaddik’s* death. Visions of angels were explained in a similar fashion: the angel’s form was imprinted in an invisible ether that was not the same as ordinary air, and could be seen by a select few, not because they were prophets but because God had opened their eyes as a reward for having purified their corporeal bodies (Cordovero in his *Derushei Mal’akhim*). Sorcerers who saw demons constituted an analogous phenomenon. Automatic writing is mentioned in a number of sources. Thus, Joseph b. Todros Abulafia, for example, composed a kabbalistic tract under the influence of “the writing name” (*Kerem Ḥemed*, 8, 105). Such “names” that facilitated the process of writing are referred to in a number of practical kabbalistic manuscripts. In describing a “revelation” that was granted to him, Joseph Taitazak speaks of “the mystic secret of writing with no hand.” The anthology *Shoshan Sodot* (Oxford Ms., par. 147) mentions the practice of automatic writing, “making marks [*ḥakikah*] by the pen,” as a method of answering vexing or difficult questions. A number of other spiritualistic phenomena, both spontaneous and deliberately induced, are also mentioned in various sources, among them the “levitating table,” which was particularly widespread in Germany from the 16th century on. According to one eyewitness report, the ceremony was accompanied by a recital of Divine Names taken from practical Kabbalah and the singing of psalms and hymns (Wagenseil, *Sota*, 1674, 530). An acquaintance of Wagenseil’s told him (*ibid.*, 1196) of how he had seen some yeshivah students from Wuerzburg who had studied in Fuerth lift such a table with the aid of Divine Names. Specific instructions for table levitation have been preserved in a number of kabbalistic manuscripts (e.g., Jerusalem 1070 80, p. 220). The use of divining rods is also known in such literature, from the 15th century on at the latest (Y. Perles, *Festschrift fuer H. Graetz* (1887), 32–34; see also Eliahu Kohen ha-Itamari, *Midrash Talpiot*, under *devarim nifla’im*).

Certain magical names or *shemot* were prescribed for certain special activities. The *shem ha-garsi* was invoked in

the study of Talmud or any rabbinic text (*girsā*); the *shem ha-doresh* was invoked by the preacher (*darshan*). There was a “name of the sword” (*shem ha-ḥerev*), a “name of ogdoad” (*shem ha-sheminiyut*), and a “name of the wing” (*shem hakanaf*). Some of these invocations were borrowed from non-Jewish sources, as for example, the name “Parakletos Jesus b. Pandera” that a preacher recommended for use in synagogue (*Hebr. Bibl.*, 6 (1863), 121; G. Scholem, *Kitvei Yad be-Kabbalah* (1930), 63).

THE WIDER INFLUENCES OF AND RESEARCH ON THE KABBALAH

The Influence of the Kabbalah on Judaism

Though it has been evaluated differently by different observers, the influence of the Kabbalah has been great, for it has been one of the most powerful forces ever to affect the inner development of Judaism, both horizontally and in depth. Jewish historians of the 19th century, while conceding the Kabbalah’s significant role, considered it to have been overwhelmingly negative and even catastrophic, but the appraisal of 20th-century Jewish historiography has been far more positive, no doubt due in part to profound changes in the course of Jewish history itself since the beginnings of the Zionist revival. There has been a new readiness in recent decades to acknowledge the wealth of rich symbolism and imagery that the kabbalistic imagination added to Jewish life, as well as to recognize the contributing role of the Kabbalah in strengthening the inner life of collective Jewry and the individual Jew. This reappraisal has made itself felt especially in the last two generations, both in literature and historical studies. Indeed, at times it has assumed panegyric proportions, as in the works of S.A. Horodezky, which have done little to further a fruitful discussion of the religious motives that found their expression in the Kabbalah with results that were sometimes problematic.

As was pointed out at the beginning of this exposition, the Kabbalah represented a theological attempt, open to only a relative few, whose object was to find room for an essentially mystical world-outlook within the framework of traditional Judaism without altering the latter’s fundamental principles and behavioral norms. To what extent if at all this attempt was successful remains open to debate, but there can be no doubt that it achieved one very important result, namely, that for the three-hundred-year period roughly from 1500 to 1800 (at the most conservative estimate) the Kabbalah was widely considered to be *the* true Jewish theology, compared with which all other approaches were able at best to lead an isolated and attenuated existence. In the course of this period an open polemical attack on the Kabbalah was practically unheard of, and characteristically, when such an attack appeared, it was almost always in the guise of a rebuke addressed to the later kabbalists for having misrepresented and corporealized the pure philosophy of their predecessors, rather than an open criticism of the Kabbalah itself. Examples of this tactic, which was dictated by necessity, can be found in the anonymous polemic written in Posen in the middle of the 16th century (see

P. Bloch, MGWJ 47, 1903, 153 ff., 263 ff.) and in Jacob Francis of Mantua's anti-kabbalistic poems from the middle of the 17th century. When Mordecai Corcos, on the other hand, wished to publish a book openly opposed to the Kabbalah itself in Venice in 1672, he was prevented from doing so by the Italian rabbinical authorities.

In the area of *halakhah*, which determined the framework of Jewish life in accordance with the laws of the Torah, the influence of the Kabbalah was limited though by no means unimportant. As early as the 13th century there began a tendency to interpret the *halakhah* in kabbalistic terms without actually seeking to effect halakhic rulings or discussions by this means. In the main such kabbalistic interpretations touched on the mystical reasons for the commandments. At times there was an undeniable tension between the kabbalists and the strict halakhists, which in some cases expressed itself partly in kabbalistic outbursts rooted both in the natural feeling of superiority, which, whether justified or not, is frequently found in mystics and spiritualists (as in the case of Abraham Abulafia), and partly in the lack of a certain religious intensity, that kabbalists believed characterized the outlook of some leading halakhists. The attacks on cut-and-dried legalism that can be found in Baḥya ibn Paquda's *Ḥovot ha-Levavot* and in the *Sefer Ḥasidim* clearly reflect an attitude that did not exist only in the imagination of the mystics and was responsible for the fierce polemical assaults of the authors of the *Ra'aya Meheimna* and the *Sefer ha-Peliah* against the "talmudists," that is, the halakhists. Popular witticisms directed against such scholars, such as the ironic reading of the word *ḥamor* ("donkey") as an acronym for the phrase *ḥakham mufla ve-rav rabanan* ("a great scholar and a rabbi of rabbis"; see Judah Barzilai's *Perush Sefer Yeẓirah*, 161), have their echoes in the *Ra'aya Meheimna* (3, 275b), whose author does not shrink from the pejorative expression *ḥamor de-matnitin* ("mishnaic donkey"), and in the mystical homily 127b, in a passage belonging to the *Tikkunei Zohar* that refers to the Mishnah in a double-entendre as "the burial place of Moses." Other similar discourses, such as the exegesis (*ibid.*) relating the verse in Exodus 1:4, "And they made their lives bitter with hard service," to talmudic studies, or the angry descriptions of rabbinic scholars in the *Sefer ha-Peliah*, reveal a good deal of resentment. On the other hand, there is no historical basis for the picture drawn by Graetz of an openly anti-talmudic campaign waged by the kabbalists, who in reality insisted in their own writings on a scrupulous observance of halakhic law, albeit of course from a mystical perspective. At the same time, however, true antinomian tendencies could easily spring from the Kabbalah when it joined forces with messianism, as happened in the case of the Shabbatean movement.

A trend toward actually ruling on moot halakhic questions by treating them according to kabbalistic principles first appears in the mid-14th century, in the *Sefer ha-Peliah* and especially in discussions of the commandments in the *Sefer ha-Kanah*. Dating from the same period or shortly after are a number of similarly minded rabbinic responsa that have been

attributed to Joseph Gikatilla (first published in the *Festschrift* for Jacob Freimann (1937) 163–70). Yet this school of thought remained in the minority, and most kabbalists, to the extent that they were also leading authorities on the *halakhah*, such as David b. Zimra, Joseph Caro, Solomon Luria, Mordecai Jaffe, and Ḥayyim Joseph Azulai, deliberately refrained from adopting halakhic positions that conflicted with talmudic law. The accepted rule among them was that decisions were only to be made on the basis of the Zohar when no clear talmudic guideline could be found (*Beit Yosef le-Orah Ḥayyim*, par. 141). The entire question of whether halakhic rulings could ever be made on the basis of the Zohar or other kabbalistic texts led to considerable controversy. No less accomplished a kabbalist than David b. Zimra declared that, apart from the Zohar itself, it was forbidden to cite a kabbalistic work in opposition to even an isolated halakhic authority. A differing view was expressed by Benjamin Aaron Selnik, a disciple of Moses Isserles, in his volume of responsa, *Mas'at Binyamin* (1633): "If all the [halakhic] writers since the closing of the Talmud were placed in one pan of the scales, and the author of the Zohar in the other, the latter would outweigh them all." The laws and regulations that could be gleaned from the Zohar were collected by Issachar Baer b. Pethahiah of Kremnitz in his *Yesh Sakhar* (Prague, 1609). Joseph Solomon Delmedigo (1629) assembled a large amount of material dealing with the attitudes of the halakhic authorities to various kabbalistic innovations (*Mazref le-Ḥokhmah* (1865), 66–82). The tremendous growth of new customs influenced by Lurianic Kabbalah led a number of kabbalists to seek to elevate Isaac Luria himself to a halakhically authoritative status. Even Ḥayyim Joseph David Azulai, who generally accepted as authoritative the halakhic opinions of Joseph Caro, wrote that Isaac Luria's interpretations of *halakhah* took precedence over Caro's Shulḥan Arukh (*Shiyurei Berakhah on Orah Ḥayyim*). The tendency to refer to kabbalistic sources in the course of halakhic discussions was much more prominent in the post-Lurianic period among the Sephardim than among the Ashkenazim. The influence of the Kabbalah was particularly felt in connection with observances involving prayer, the Sabbath, and holidays, and was much less pronounced in more purely legal matters. It was common practice to comment on halakhic fine points from a kabbalistic perspective without actually claiming for the latter any halakhic authority. Outstanding examples of this are the *Mekor Ḥayyim* (1878–79) of Ḥayyim ha-Kohen of Aleppo, a disciple of Ḥayyim Vital, and Jacob Ḥayyim b. Isaac Baruch's *Kaf ha-Ḥayyim* (1912–29), a compilation of all the kabbalistic matter connected with the *Orah Ḥayyim* of the Shulḥan Arukh.

In the realm of *aggadah*, the Kabbalah was unrestricted, and many kabbalists made use of this opportunity not only to compose far-reaching interpretations of the early *aggadot* of the Midrash, in which they saw the key to many of their mystic doctrines, but also to create a rich new body of aggadic legend bearing a strongly mythic character. In general, they were more at home in aggadic expression than in systematic exposition, and it is to this "kabbalization" of the *aggadah* that

much of the enormous attraction of the Zohar must be credited. As for the fresh aggadic material created by the kabbalists themselves, it largely consisted of a mystical dramatization of the epos of creation and of the interaction of upper and lower worlds in the lives of the biblical heroes. The latter are portrayed as acting against a broad cosmic background, drawing sustenance from supernal powers and affecting them in turn by their deeds. The classic anthology of nearly 500 years of this kabbalistic *aggadah* is Reuben Hoeshke of Prague's *Yalkut Re'uveni*, a first edition of which (Prague, 1660) was organized topically, while its second, enlarged version (Wilmersdorf, 1681), which was modeled after the early midrashic anthology, *Yalkut Shimoni*, was arranged as a commentary on the Torah. Another comprehensive collection of both exoteric and esoteric *aggadot* on the period from the first week of creation to Adam's sin is Nahum Breiner's *Yalkut Nahmani* (1937).

The main influence of Kabbalah on Jewish life must be sought in the three areas of prayer, custom, and ethics. Here the Kabbalah had practically unlimited freedom to exert its influence, which expressed itself in the creation of a broad body of literature that was directed at every Jewish home. From the middle of the 17th century onward, kabbalistic motifs entered the everyday prayer book and inspired special liturgies intended for a variety of specific occasions and rituals, many of which were in essence kabbalistic creations. This development began in Italy with books by Aaron Berechiah Modena and Moses Zacuto, and above all, with the appearance of Nathan Hannover's *Sha'arei Ziyyon* (Prague, 1662), one of the most influential and widely circulated of all kabbalistic works. In this volume the Lurianic doctrines of man's mission on earth, his connections with the powers of the upper worlds, the transmigrations of his soul, and his striving to achieve *tikkun* were woven into prayers that could be appreciated and understood by everyone, or that at least could arouse everyone's imagination and emotions. Such liturgies reached the furthest corners of the Diaspora and continued to be popular among Jews in Muslim countries long after they were excised from the prayer book by the Jewish communities of Central Europe as a consequence of the decline of the Kabbalah there in the 19th century. Sizable anthologies of highly emotional prayers composed under kabbalistic inspiration were published mainly in Leghorn, Venice, Constantinople, and Salonika. Especially important in this realm were the activities of Judah Samuel Ashkenazi, Abraham Anakawa, and above all, Abraham Hammawi (or Hamoj), who published a series of such books in Leghorn for the Jews of North Africa (*Bet Oved*, *Bet El*, *Bet ha-Kaporet*, *Bet ha-Behirot*, *Bet Av*, *Bet Din*, *Bet ha-Sho'evah*, *Bet Menuḥah*). The liturgical anthology *Ozar ha-Tefillot* (1914) reflects the last lingering kabbalistic influences on the prayers of Eastern European Jewry.

Popular customs and popular faith were also highly affected by the spread of the Kabbalah. Many kabbalistic concepts were absorbed at the level of folk beliefs, such as the doctrine of man's first sin as the cause of a disruption in the upper worlds, the belief in transmigration of souls, the kab-

balistic teachings about the Messiah, or the demonology of the later Kabbalah. Throughout the Diaspora, the number of folk customs whose origins were kabbalistic was enormous; many were taken directly from the Zohar, and many others from Lurianic tradition, the observances of which were compiled in the middle of the 17th century by Jacob Zemaḥ in his *Shulḥan Arukh ha-Ari* and *Naggid u-Mezavveh*. A more recent guide to Lurianic customs was the compilation *Ta'amei ha-Minhagim* (1911–12). Such customs came on the whole to fulfill four mystical functions: the establishment of a harmony between the restrictive forces of *Din* and the outgoing forces of *Rahamim*; to bring about or to symbolize the mystical "sacred marriage" (*ha-zivvug ha-kadosh*) between God and His *Shekhinah*; the redemption of the *Shekhinah* from its exile amid the forces of the *sitra aḥra*; the protection of oneself against the forces of the *sitra aḥra* and the battle to overcome them. Human action on earth assists or arouses events in the upper worlds, an interplay that has both its symbolic and its magical side. Indeed, in this conception of religious ceremony as a vehicle for the workings of divine forces, a very real danger existed that an essentially mystical perspective might be transformed in practice into an essentially magical one. Undeniably, the social effects of the Kabbalah on popular Jewish custom and ceremony were characterized by this ambivalence. Alongside the tendency to greater religious inwardness and insight was the tendency to a complete demonization of all life. The conspicuous growth of this latter trend at the expense of the former was undoubtedly one of the factors which, by reducing Kabbalah to the level of popular superstition, ultimately helped eliminate it as a serious historical force. (See G. Scholem, *The Kabbalah and its Symbolism* (1965), 118–57.)

Among kabbalistic customs that became particularly widespread were the holding of midnight vigils for the exile of the *Shekhinah*, the treating of the eve of the new moon as "a little Day of Atonement," and the holding of dusk-to-dawn vigils, which were dedicated to both ordinary and mystical study, on the nights of Pentecost, Hoshanah Rabba, and the seventh day of Passover. All such ceremonies and their accompanying liturgies and texts were referred to as *tikkunim* (e.g., "the *tikkun* of midnight" for the exile of the *Shekhinah*, etc.). A special atmosphere of solemn celebration surrounded the Sabbath, which was thoroughly pervaded with kabbalistic ideas about man's role in the unification of the upper worlds. Under the symbolic aspect of "the marriage of King and Queen," the Sabbath was enriched by a wealth of new customs that originated in Safed, such as the singing of the mystical hymn *Lekhah Dodi* and the recital of the Song of Songs and Chapter 31 of Proverbs ("A woman of valor who can find?"), all of which were intended as meditations on the *Shekhinah* in her aspect as God's mystical bride. Mystical and demonic motifs became particularly intertwined in the area of sexual life, to which an entire literature was devoted, starting with the *Iggeret ha-Kodesh*, later mistakenly ascribed to Nahmanides (see G. Scholem, in: *KS* 21 (1944), 179–86; and Monford Harris, in: *HUCA* 33 (1962), 197–220) and continuing up to Nahman of

Bratslav's *Tikkun ha-Kelali*. Connected with these motifs were also a number of common burial customs, such as the circling of corpses and the forbidding of sons to attend their fathers' funerals. Similar ideas were behind the fast days in the months of Tevet and Shevat for "the *tikkun* of the *shovevim*," that is, of the demonic offspring of nocturnal emission.

This penetration of kabbalistic customs and beliefs, which left no corner of Jewish life untouched, is especially well documented in two highly influential books: Isaiah Horowitz's *She'nei Luhot ha-Berit* (1648), which was accorded a particularly prominent place among Ashkenazi Jewry, and the anonymous *Hemdat Yamim* (1731), which was written by a moderate Shabbatean in the early 18th century. The latter book was circulated at first in Poland as well, but once its Shabbatean character came under attack its influence became largely restricted to the Sephardi world, where it fostered an entire literature of brevities and study texts for special occasions. Despite the bulkiness of such works, their expressive power and rich contents made them classics of their kind. Noteworthy among more recent examples of this literature is Mordecai Moses Sassoon of Baghdad's *Davar be-Itto* (1862–94). A custom that became particularly widespread among the Sephardim was that of reciting the Zohar aloud, paying no attention to its contents, simply as "salutary for the soul."

Most of the popular ethical works of *musar* literature, especially the more prominent of them, bear the stamp of kabbalistic influences from the 1570s until the beginning of the 19th century, and even until the latter's end in the Sephardi world. The pioneer works in this respect were Eliezer Azikri's *Sefer Haredim* (Venice, 1601), and Elijah de Vidas' *Reshit Hokhmah* (Venice, 1579), a comprehensive and exhaustive volume on all ethical aspects of Jewish life which served as a link between the motifs of medieval aggadic and *musar* literature and the new world of popular Kabbalah. Contemporaneous homiletic literature, much of which was also devoted to ethical instruction, also contains strong kabbalistic elements, which were further reinforced by the spread of Lurianic beliefs. The Lurianic doctrines of *tikkun*, the transmigration of souls, and the struggle with the *sitra aħra* were subjected to especially intensive popular treatment. Such exhortative works as Hayyim Vital's *Sha'arei Kedushah* (Constantinople, 1734), Zevi Hirsch Koidanover's *Kav ha-Yashar* (Frankfurt, 1705), Elijah ha-Kohen's *Shevet Musar* (Constantinople, 1712), and many others down to the *Nefesh ha-Hayyim* of Hayyim of Volozhin, a disciple of the Gaon of Vilna, manifest indebtedness to kabbalistic sources on every page. Even the crowning masterpiece of this type of ethical literature, Moses Hayyim Luzzatto's *Mesillat Yesharim* (Amsterdam, 1740), was basically inspired by a conception of the ethical education of the Jew as a stage on the way to mystical communion with God, despite its restricted use of kabbalistic citations and symbols. Similar works of ethical exhortation composed in Poland in the middle of the 18th century are highly charged with attitudes and ideas that clearly served as a prelude to the beginnings of Hasidism. Examples of such books are Moses b. Jacob of

Satanov's *Mishmeret ha-Kodesh* (Zolkiew, 1746), the *Bet Perez* (Zolkiew, 1759) of Perez b. Moses who was a kabbalist of the Brody Klaus, and Simḥah of Zalosic's *Lev Simḥah* and *Neti'ah shel Simḥah* (Zolkiew, 1757 and 1763). In the 20th century the deep influence of kabbalistic *musar* literature can still be felt in the works of R. Abraham Kook. Similarly, in the mid-19th century, we find R. Judah Alkalai of Belgrade, one of the earliest heralds of Zionism, still totally immersed in the ethical world of the Kabbalah (see his collected writings in Hebrew, Jerusalem, 1944).

The Christian Kabbalah

From the late 15th century onward, in certain Christian circles of a mystical and theosophical persuasion a movement began to evolve with the object of harmonizing kabbalistic doctrines with Christianity, and, above all, of demonstrating that the true hidden meaning of the teachings of the Kabbalah points in a Christian direction. Naturally, such views did not meet with a friendly reception from the kabbalists themselves, who expressed nothing but derision for the misunderstandings and distortions of kabbalistic doctrine of which Christian Kabbalah was full; but the latter undeniably succeeded in arousing lively interest and debate among spiritualistic circles in the West until at least the middle of the 18th century. Historically, Christian Kabbalah sprang from two sources. The first was the christological speculations of a number of Jewish converts who are known to us from the end of the 13th century until the period of the Spanish expulsion (G. Scholem, in *Essays Presented to Leo Baeck* (1954), 158–93), such as Abner of *Burgos (Yizḥak Baer, *Tarbiz* 27 (1958), 152–63), and Paul de Heredia, who pseudographically composed several texts of Christian Kabbalah entitled *Iggeret ha-Sodot* and *Galei Rezaya* in the name of Judah ha-Nasi and other *tanna'im*. Another such tract put out by Jewish converts in Spain toward the end of the 15th century, and written in imitation of the styles of the *aggadah* and the Zohar, circulated widely in Italy. Such compositions had little effect on serious Christian spiritualists, nor was their clearly tendentious missionary purpose calculated to win readers. Another matter entirely, however, was the Christian speculation about the Kabbalah that first developed around the Platonic Academy endowed by the Medicis in Florence and was pursued in close connection with the new horizons opened up by the Renaissance in general. These Florentine circles believed that they had discovered in the Kabbalah an original divine revelation to mankind that had been lost and would now be restored, and with the aid of which it was possible not only to understand the teachings of Pythagoras, Plato, and the Orphics, all of whom they greatly admired, but also the secrets of the Catholic faith. The founder of this Christian school of Kabbalah was the renowned Florentine prodigy Giovanni Pico della *Mirandola (1463–94), who had long passages of kabbalistic literature translated for him into Latin by the very learned convert Samuel b. Nissim Abulfaraj, later Raymond Moncada, also known as Flavius *Mithridates, Pico began his kabbalistic studies in 1486, and

when he displayed his 900 famous theses for public debate in Rome he included among them 47 propositions taken directly from kabbalistic sources, the majority from Recanati's commentary on the Torah, and 72 more propositions that represented his own conclusions from his kabbalistic research. These theses, especially the daring claim that "no science can better convince us of the divinity of Jesus Christ than magic and the Kabbalah," first brought the Kabbalah to the attention of many Christians. The ecclesiastical authorities fiercely rejected this and other of Pico's propositions, and there ensued the first real debate on the subject of the Kabbalah ever to take place in humanistic and clerical circles. Pico himself believed that he could prove the dogmas of the Trinity and the Incarnation on the basis of kabbalistic axioms. The sudden discovery of an esoteric Jewish tradition that had hitherto been completely unknown caused a sensation in the Christian intellectual world, and Pico's subsequent writings on the Kabbalah helped to further increase the interest of Christian Platonists in these newly uncovered sources, particularly in Italy, Germany, and France. Under Pico's influence the great Christian Hebraist Johannes *Reuchlin (1455–1522) also took up the study of Kabbalah and published two Latin books on the subject, the first ever to be written by a non-Jew, *De Verbo Mirifico* ("On the Miracle-working Name," 1494) and *De Arte Cabalistica* ("On the Science of the Kabbalah," 1517). The years between these two dates also witnessed the appearance of a number of works by the learned convert Paul Ricius, the private physician of Emperor Maximilian, who took Pico's and Reuchlin's conclusions and added to them through an original synthesis of kabbalistic and Christian sources. Reuchlin's own main contribution was his association of the dogma of the Incarnation with a series of bold speculations on the kabbalistic doctrine of the Divine Names of God. Human history, Reuchlin argued, could be divided into three periods. In the first or natural period, God revealed Himself to the patriarchs through the three-lettered name of Shaddai (שדד). In the period of the Torah He revealed Himself to Moses through the four-lettered name of the Tetragrammaton. But in the period of grace and redemption He revealed Himself through five letters, namely, the Tetragrammaton with the addition of the letter *shin*, signifying the Logos, thus spelling Yehoshua or Jesus. In the name of Jesus, which is the true Miraculous Name, the formerly forbidden name of God now became pronounceable. In Reuchlin's schematic arrangement, which was able to draw for support on the common abbreviation for Jesus in medieval manuscripts, JHS, Jewish beliefs in three world ages (Chaos, Torah, Messiah) blended with the tripartite Christian division of the millennialist school of Joachim of Fiore into a reign of the Father, a reign of the Son, and a reign of the Holy Ghost.

Pico's and Reuchlin's writings, which placed the Kabbalah in the context of some of the leading intellectual developments of the time, attracted wide attention. They led on the one hand to considerable interest in the doctrine of Divine Names and in practical Kabbalah, and on the other hand to further speculative attempts to achieve a synthesis between kabbalistic

motifs and Christian theology. The place of honor accorded to practical Kabbalah in Cornelius Agrippa of Nettesheim's great compendium *De Occulta Philosophia* (1531), which was a widely read summary of all the occult sciences of the day, was largely responsible for the mistaken association of the Kabbalah in the Christian world with numerology and witchcraft. Several Christian kabbalists of the mid-16th century made a considerable effort to master the sources of the Kabbalah more deeply, both in Hebrew and in Latin translations prepared for them, thus widening the basis for their attempts to discover common ground between the Kabbalah and Christianity. Among the most prominent of these figures were Cardinal Egidio da *Viterbo (1465–1532), whose *Scechina* (ed. F. Secret, 1959) and "On the Hebrew Letters" were influenced by ideas in the Zohar and the *Sefer ha-Temunah*, and the Franciscan Francesco *Giorgio of Venice (1460–1540), the author of two large and at the time widely read books, *De Harmonia Mundi* (1525) and *Problemata* (1536), in which the Kabbalah assumed a central place and manuscript material from the Zohar was used extensively for the first time in a Christian work. The admiration of these Christian authors for the Kabbalah aroused an angry reaction in some quarters, which accused them of disseminating the view that any Jewish kabbalist could boast of being a better Christian than an orthodox Catholic. A more original mystical thinker who was also better acquainted with the Jewish sources was the renowned Frenchman Guillaume *Postel (1510–1581), one of the outstanding personalities of the Renaissance. Postel translated the Zohar and the *Sefer Yezirah* into Latin even before they had been printed in the original, and accompanied his translation with a lengthy theosophical exposition of his own views. In 1548 he published a kabbalistic commentary in Latin translation on the mystical significance of the *menorah*, and later a Hebrew edition as well. These authors had many connections in Jewish circles.

During this period, Christian Kabbalah was primarily concerned with the development of certain religious and philosophical ideas for their own sake rather than with the desire to evangelize among Jews, though this latter activity was occasionally stressed to justify a pursuit that was otherwise suspect in many eyes. One of the most dedicated of such Christian kabbalists was Johann Albrecht *Widmanstetter (Widmanstadius; 1506–1557), whose enthusiasm for the Kabbalah led him to collect many kabbalistic manuscripts that are extant in Munich. Many of his contemporaries, however, remained content to speculate in the realm of Christian Kabbalah without any firsthand knowledge of the sources. Indeed, in the course of time the knowledge of Jewish sources diminished among the Christian kabbalists, and consequently the Jewish element in their books became progressively slighter, its place being taken by esoteric Christian speculations whose connections with Jewish motifs were remote. The Lurianic revival in Safed had no effect on these circles. Their commitment to missionary work increased, yet the number of Jewish converts to Christianity from kabbalistic motives, or of those who claimed such motives retrospectively, remained disproportionately small

among the numbers of converts in general. There is no clear evidence in the writings of such Christian theosophists to indicate whether or not they believed the Jewish kabbalists to be hidden or unconscious Christians at heart. In any event, Christian Kabbalah occupied an honored place both in the 16th century, primarily in Italy and France, and in the 17th century, when its center moved to Germany and England.

In the 17th century Christian Kabbalah received two great impetuses, one being the theosophical writings of Jacob Boehme, and the other Christian Knorr von Rosenroth's vast kabbalistic compendium *Kabbala Denudata* (1677–84), which for the first time made available to interested Christian readers, most of whom were undoubtedly mystically inclined themselves, not only important sections of the Zohar but sizable excerpts from Lurianic Kabbalah as well. In this work and in the writings of the Jesuit scholar Athanasius Kircher the parallel is drawn for the first time between the kabbalistic doctrine of *Adam Kadmon* and the concept of Jesus as primordial man in Christian theology. This analogy is pressed particularly in the essay entitled *Adumbratio Kabbalae Christianae* which appears at the end of the *Kabbala Denudata* (Fr. trans., Paris, 1899), and from which the very term Christian Kabbalah was taken over by many writers. Its anonymous author was in fact the well-known Dutch theosophist, Franciscus Mercurius van Helmont, all of whose works are shot through with kabbalistic ideas. It was Van Helmont who served as the link between the Kabbalah and the Cambridge Platonists led by Henry More and Ralph Cudworth, who made use of kabbalistic motifs for their own original speculative purposes, more especially. Somewhat earlier, students (as well as opponents) of Jacob Boehme had discovered the inner affinity between his own theosophical system and that of the Kabbalah, though there would seem to be no historical connection between them, and in certain circles, particularly in Germany, Holland, and England, Christian Kabbalah henceforward assumed a Bohemian guise. In 1673 a large chart was erected in front of a Protestant church in Teinach (southern Germany), which had as its purpose the presentation of a kind of visual summary of this school of Christian Kabbalah. Several different interpretations were given to it. As early as the late 16th century a pronounced trend had emerged toward the permeation of Christian Kabbalah with alchemical symbolism, thus giving it an oddly original character in its final stages of development in the 17th and 18th centuries. This mélange of elements typifies the works of Heinrich Khunrat, *Amphitheatrum Sapientiae Aeternae* (1609), Blaise de Vigenère, *Traité du Feu* (1617), Abraham von Frankenberg, Robert Fludd (1574–1637), and Thomas Vaughan (1622–1666), and reaches its apogee in Georg von Welling's *Opus Mago-Cabbalisticum* (1735) and the many books of F.C. Oetinger (1702–1782), whose influence is discernible in the works of such great figures of German idealist philosophy as Hegel and Schelling. In yet another form this mixture reappears in the theosophical systems of the Freemasons in the second half of the 18th century. A late phase of Christian Kabbalah is represented by Martines de Pasqually

(1727–1774) in his *Traité de la réintégration des êtres*, which greatly influenced theosophical currents in France. The author's disciple was the well-known mystic Louis Claude de St. Martin. Pasqually himself was suspected during his lifetime of being a secret Jew, and modern scholarship has in fact established that he was of Marrano ancestry. The sources of his intellectual indebtedness, however, have still to be clarified. The crowning and final achievement of Christian Kabbalah was Franz Josef Molitor's (1779–1861) comprehensive *Philosophie der Geschichte oder Ueber die Tradition*, which combined profound speculation in a Christian kabbalistic vein with highly suggestive research into the ideas of the Kabbalah itself. Molitor too still clung to a fundamentally christological view of the Kabbalah, whose historical evolution he completely failed to understand, yet at the same time he revealed an essential grasp of kabbalistic doctrine and an insight into the world of the Kabbalah far superior to that of most Jewish scholars of his time.

Scholarship and the Kabbalah

As implied above, the beginnings of scholarly investigation of the Kabbalah were bound up with the interests of Christian Kabbalah and its missionary zeal. A number of Christian kabbalists were led to study the literature of the Kabbalah first hand, one of the first being Reuchlin, who resorted primarily to the works of Gikatilla and to a large collection of early kabbalistic writings that has been preserved in Halberstamm Ms. 444 (in the Jewish Theological Seminary in New York). Though a significant number of kabbalistic works had been translated by the middle of the 16th century, only a few of these translations, such as one of Gikatilla's *Sha'arei Orach* (1516), had been published, while the majority remained in manuscript where they did little to stimulate further research. In addition, the theological presuppositions of the Christian kabbalists ruled out any historical, to say nothing of critical, perspective on their part. A crucial turning-point was the publication of Knorr von Rosenroth's *Kabbala Denudata*, despite its many erroneous translations which were further compounded in the retranslation of some of its parts into English and French (see MGWJ 75 (1932), 444–8). The appearance of this book aroused the interest of several scholars who had not previously had any attachment to Christian Kabbalah. Completely at variance with the latter's premises was Johann Georg Wachter's study of Spinozistic tendencies in Judaism, *Der Spinozismus im Juedenthumb* [sic!] (Amsterdam, 1699), which was the first work to interpret the theology of the Kabbalah pantheistically and to argue that the kabbalists were not disguised Christians but rather disguised atheists. Wachter's book greatly influenced discussions on the subject throughout the 18th century. Early in the 18th century J.P. Buddeus proposed the theory of a close connection between the early Gnostics and the Kabbalah in his "Introduction to the History of the Philosophy of the Jews" (in Latin, Halle, 1720), which was largely devoted to the Kabbalah. J.K. Schramm too, in his "Introduction to the Dialectics of the Kabbalists" (Braunschweig, 1703) sought to

discuss the subject in scientific and philosophical terms, while G. Sommer's *Specimen Theologiae Soharicae* (Gotha, 1734) presented an anthology of all the passages from the Zohar that were in the author's opinion close to Christian doctrine. A particularly valuable though now totally forgotten book was Hermann von der Hardt's *Aenigmata Judaeorum Religiosissima* (Helmstadt, 1705), which dealt with practical Kabbalah. J.P. Kleuker published a study in 1786 in which he argued the case for a decisive Persian influence on the kabbalistic doctrine of emanation. Common to all these early scholars was the belief that the Kabbalah was in essence not Jewish at all, but rather Christian, Greek, or Persian.

Scholarly investigation of the Kabbalah by Jews also first served a tendentious purpose, namely, to polemicize against what was felt to be the Kabbalah's undue influence on Jewish life. The first critical work to be written in this vein was Jacob Emden's highly influential *Mitpahat Sefarim* (Altona, 1768), which grew out of the author's battle with Shabbateanism and was intended to weaken the authority of the Zohar by proving that many of its passages were late interpolations. In the 19th century also most Jewish scholarship on the Kabbalah bore a polemical character primarily aimed against kabbalistic influences as they appeared in Ḥasidism. For the most part such scholars too considered the Kabbalah to have been an essentially foreign presence in Jewish life. At the time, indeed, Kabbalah was still a kind of stepdaughter in the field of Jewish scholarship whose actual literary sources were studied by only a few. Even from this limited perspective, however, important contributions to the investigation of the Kabbalah were made by Samuel David Luzzatto, Adolphe Franck, H.D. Joel, Senior Sachs, Aaron Jellinek, Isaac Mieses, Graetz, Ignatz Stern, and M. Steinschneider. The works of the single Jewish scholar of this period to devote in-depth studies to the Zohar and other important kabbalistic texts, Eliakim Milsahagi (Samiler), remained almost completely unpublished and were eventually forgotten and largely lost. All that has been preserved of them is his analysis of the Zohar (Jerusalem Ms. 4° 121), and the *Sefer Raziel*. Works on the Kabbalah during the Haskalah period are almost all practically worthless, such as the many tracts and books of Solomon Rubin. Exceptions are David Kahana's studies of Lurianic Kabbalah, which despite their polemic tendentiousness have some historical value. The only two scholars of the age to approach the Kabbalah out of a fundamental sympathy and even affinity for its teachings were the Christian P.J. Molitor and the Jew Elijah Benamozegh. The many books written on the subject in the 19th and 20th centuries by various theosophists and mystics lacked any basic knowledge of the sources and very rarely contributed to the field, while at times they even hindered the development of a historical approach. Similarly, the activities of French and English occultists contributed nothing and only served to create considerable confusion between the teachings of the Kabbalah and their own totally unrelated inventions. To this category of supreme charlatanism belong the many and widely read books of Eliphas Levi (actually Alphonse Louis Constant;

1810–1875), Papus (Gérard Encausse; 1868–1916), and Frater Perdurabo (Aleister Crowley; 1875–1946), all of whom had an infinitesimal knowledge of Kabbalah that did not prevent them from drawing freely on their imaginations instead. The comprehensive works of A.E. Waite, S. Karppe, and P. Vulliaud, on the other hand, were mere compilations made from secondhand sources.

The profoundly altered approach to Jewish history that followed in the wake of the Zionist revival and the movement for national rebirth led, particularly after World War I, to a renewal of interest in the Kabbalah as a vital expression of Jewish existence. A new attempt was made to understand, independently of all polemic or apologetic positions, the genesis, development, historical role, and social and intellectual influence of the Kabbalah within the total context of the internal and external forces that have determined the shape of Jewish history. The pioneers of this new approach were S.A. Horodezky, Ernst Mueller, and G. Scholem. In the years following 1925 an international center for kabbalistic research came to reside in the Hebrew University of Jerusalem. Among the foremost representatives of the school of historical criticism that developed there were G. Scholem, Y. Tishby, E. Gottlieb, and J. Ben-Shlomo. Elsewhere important contributions to kabbalistic scholarship were made too, particularly by G. Vajda, A. Altmann, and François Secret. With the development of new perspectives in recent years, scholarly investigation of the Kabbalah is only now emerging from its infancy. Ahead of it lies a great deal of room for fruitful expansion that will yet take in kabbalistic literature in the whole of its richness and its many implications with regard to the life of the Jewish people.

[Gershom Scholem]

KABBALAH IN THE LATE 20TH CENTURY

During and after World War II, numerous kabbalistic and hasidic centers were destroyed or weakened as a result of the Holocaust and the relocation of the Jewish communities of the Middle East and North Africa. However, powerful new centers were soon established, mostly in Israel and the United States. As a result, kabbalistic literature was written, published, and studied on a scale totally unknown even during its previous “Golden Ages,” such as the 13th and 16th centuries. This quantitative expansion accelerated the appearance of new forms of kabbalistic creativity. Thus, 20th-century Kabbalah often markedly diverged from its classical roots and acquired a distinctive modern (and even post-modern) character. This can be

best appreciated by considering several themes, which shall be enumerated after a brief presentation of central schools and figures.

Central Schools and Figures

THE ḤASIDIC WORLD. Large parts of the ḥasidic world were destroyed during the Holocaust. One example of a unique ḥasidic group devoted to intense mystical practice which was almost totally destroyed was the circle of Kalonymus Kalman Shapira (1889–1943) in Warsaw. The post-Holocaust recovery of the various ḥasidic schools was one of the most striking quantitative developments in the history of Kabbalah in the 20th century. The most influential ḥasidic school was that of *Chabad-Lubavitch. Under the leadership of its last rebbes, Joseph Isaac (1880–1950) and Menahem Mendel *Schneersohn (1902–1994), who operated from New York, Lubavitch expanded into a worldwide network, which utilized sophisticated technology to propagate its mystical and messianic doctrine (on the latter, see below). The late 20th century also saw the expansion of Braslav ḥasidism (which follows the leadership of Naḥman of Braslav) from a small sect into a diverse popular movement. Leaders of various branches of this school included Israel Odesser (1905?–1994), Eliezer Berland (1937–) and Jacob Meir Schechter (1931–). Numerous secular Israeli cultural figures went through a process of “return” and joined one of these branches. In the United States, the teachings of Naḥman of Braslav were popularized by the kabbalistic writer Aryeh *Kaplan (1934–1983), who was also one of the pioneers of the “return” movement.

THE NON-ḤASIDIC ULTRA-ORTHODOX. One of the most striking developments of 20th-century Kabbalah was the “kabbalization” of the non-ḥasidic Ultra-Orthodox world and especially the *Musar (Ethics) movement. The founders of this school, such as Israel *Salanter (1809–1883), were initially reserved towards the study of Kabbalah, preferring to focus on the transformation of everyday behavior and feeling. However, during the course of the 20th century, Musar thinkers such as Judah Leib Bloch (1860–1930) of Telz Yeshivah, Isaac *Hutner (1906–1980) of New York, and Shelomo Wolbe (1915–2005) of Israel often resorted to mystical doctrines in developing its psychological theory and praxis.

THE ORIENTAL JEWISH WORLD. During the first part of the 20th century, Oriental (Sephardi) kabbalists continued to engage in traditional kabbalistic practice in the Near East and North Africa. The most prominent among these included Joseph Ḥayyim of Baghdad (1834–1909) and his student Judah Petaya (1859–1942). In the middle of the century, the displacement of Oriental Jews from these centers significantly disrupted these activities. However, as a response to its social and cultural marginalization in its new home in Israel, the Oriental world enjoyed a marked resurgence during the course of the last two decades of the century. This included the establishment of numerous “Yeshivot for Kabbalists” as well as the expansion of existing institutions, such as Bet El, Aḥvat Shalom,

and Ha-Ḥayyim ve-ha-Shalom. One of the most prominent amongst the leaders of these yeshivot was Ovadiah Haddayah (1891–1969), who incorporated kabbalistic doctrines in his halakhic (legal) writing and public discourses. These influential kabbalists also included figures with a more magical orientation, such as Israel Abu-Hatzeira (1889–1984), who acquired a mass following as well as a marked effect on political and economic life in Israel. The most prominent of contemporary Oriental kabbalists are R. Isaac Kadoorie (1904?–2006) and Jacob Moses Hillel, himself an opponent of magical practices.

RELIGIOUS ZIONISM. Another major development was the rise of the messianic branch of Religious Zionism. This group is led by the followers of the first chief rabbi of Palestine, Abraham Isaac *Kook (1865–1935), whose writings reflect intense mystical practice and thought. This is most apparent in his diaries (*Shemonah Kevazim*, published 1999), which were previously censored by his followers, partly in order to obscure this aspect of his thought. His heirs included David Cohen (1887–1972), who further developed the mystical aspects of his thought, as well as Jacob Meir Harlap (1883–1951), and Zevi Judah *Kook (1891–1982) who emphasized the nationalistic elements of his doctrine. The most prominent contemporary leader of this school is Zevi Israel Tau (1938–) of the Har ha-Mor Yeshivah. Various aspects of the nationalistic interpretation of Kabbalah offered by Rabbi Kook and his disciples will be discussed below at length.

NON-JEWISH KABBALAH. Another central development was the proliferation of kabbalistic literature in the non-Jewish world. One result of this change was the flourishing of Christian interpretations of Kabbalah, as well as various “New Age” renderings of kabbalistic thought (see below). Another was the “marketing” of popular versions of Kabbalah to the non-Jewish world by some of the followers of Judah Leib Ashlag (1885–1954). Towards the end of the century, the Internet, as well as popular entertainment figures such as Madonna, played a prominent role in these processes. At the same time, more academic figures, such as the philosopher Jacques *Derrida (1930–2004) and the writer and theorist Umberto Eco (1932–), were also substantially influenced by kabbalistic ideas and images.

The Ideology of Dissemination

A distinct characteristic of 20th-century Kabbalah was the abandonment of earlier strictures placed on the study and propagation of kabbalistic literature, which was traditionally regarded as esoteric lore. This reservation was replaced by an ideology of mass dissemination of kabbalistic doctrines. The propagation of Kabbalah was to be accomplished through modern and popular interpretations designed to translate often obscure texts into accessible forms. Numerous 20th-century kabbalists regarded the spread of Kabbalah as an expression of the imminence, or even advent, of the messianic epoch – and sometimes even as the means of bringing it about.

Two of the figures mentioned above developed an elaborate ideological rationale for the dissemination of Kabbalah. Abraham Isaac Kook wrote that he was vouchsafed a prophetic revelation which legitimated the overriding of the talmudic prohibition against the revelation of mysteries. Furthermore, he saw the creation of a “popular literature” based on Kabbalah as a means towards the return of prophecy. Kook predicted that “the chosen will become multitudes”; in other words, that his small circle will eventually become a mass movement guided by this literature.

Judah Leib Ashlag expressed his belief in the rendering of Kabbalah into popular terms through a large-scale project of translation and interpretation of canonical kabbalistic texts (as in his “Ha-Sulam” series on the Zohar). Interpretation centered on a psychological re-reading of key kabbalistic concepts, to be described below. Ashlag’s heirs, and especially Philip *Berg (b. 1929, a breakaway student of Ashlag’s disciple R. Judah Brandwein (1904–1969)), utilized aggressive marketing and sophisticated technology in order to transform Ashlag’s ideology into a global mass “product.”

At the same time, the new ideology of dissemination was not unopposed. Various kabbalists, including members of Rabbi Kook’s circle and some adherents of the Musar school, insisted on the continuing restriction of the study of Kabbalah to the select few. This internal opposition was joined by certain Orthodox Jewish figures, such as Yeshayahu *Leibovitz (1903–1994), whose internalization of modern rationalism led them to decry the Kabbalah itself.

National Mysticism

The 20th century was marked by the proliferation of nationalistic interpretations of Kabbalah. These provided substantial support for the Zionist movement, and especially its more chauvinistic branches, such as the *Gush Emunim movement, which established numerous settlements in the territories occupied in 1967.

The concept of power played a key role in this discourse. While the Ultra-Orthodox branch of Jewry maintained the split between earthly and supernal power that originated after the destruction of the Second Temple, Religious Zionism sought to merge these domains. The latter attempt is nowhere more apparent than in the mystical vision of Abraham Isaac Kook. Kook saw the return of the Jews to embodied and seemingly mundane forms of empowerment as an expression of the power of the divine, rather than as its denial (as claimed by the Ultra-Orthodox). Furthermore, in his vision, the manifestation of Jewish power through the return to the Land of Israel would theurgically enhance the power of the divine domain. In one passage, Kook wrote that “our state, the state of Israel” is “the foundation of God’s throne in the world.”

However, Kook’s message was far from unequivocal. In another passage, written in response to the horrors of World War I, he envisioned the postponement of the establishment of the state until such time that it would be possible to forgo the “barbarity” of violence and war. This complexity, though

reflected in the works of one of his close students, David Cohen, was not maintained when the Kookist school became transformed into a mass movement. Kook's son, Zevi Judah, transformed his father's mystical reflections into an ideological platform, which was galvanized by the 1967 war and the occupation of the ancestral territories of Judea and Samaria (the West Bank). Zevi Judah and his students unequivocally taught that the political and military might of Israel is "one" with the power of God.

Nationalistic interpretations of the kabbalistic teachings on divine power may also be found in other streams of 20th century Jewish mysticism – most notably in the messianic thought of the last Rebbe of Lubavitch. One of his disciples, the kabbalist Isaac Ginsburg (1944–), composed a kabbalistic treatise detailing the theurgical benefits of the massacre committed in Hebron by Baruch Goldstein in 1995! Other nationalistic interpreters of Kabbalah included Zevi Ribek (1910–1995), whose work *Al Ketz ha-Tikkun* contains a detailed theosophical explanation of the fall of the Soviet Bloc and the Israeli-Arab conflict, and the French teacher Judah Leon Ashkenazi (1922–1996).

Psychological Interpretations

Alongside the proliferation of nationalistic interpretations, some 20th-century kabbalists offered an extensive psychological reinterpretation of classical kabbalistic symbols and ideas. The most prominent of these is the elaborate system constructed by Judah Leib Ashlag. Ashlag redefined the main concern of the canonical texts of Kabbalah as the struggle between two psychological forces – the "will to receive," or the egoistical impulse, and "the will to bestow" – the altruistic impulse. The essentially universalistic nature of this proposal ensured the smooth reception of Ashlagian doctrine in broad non-Jewish circles after his death.

As in the case of the nationalistic interpretation, the psychological reading includes a theurgical dimension: According to Ashlag, the highest form of giving is that of granting God pleasure by performing His will on earth. By doing so, Man imitates God's own generous bestowal of pleasure on Man. Actually, the greatest gift that God bestows on Man is the ability to give back to Him. Thus, one should only accept God's good with the intention of fulfilling the divine desire to give, and thus dialectically, receiving becomes giving. For Ashlag, the observance of Jewish law, and especially its social aspects, can be seen as training in overcoming one's innate egoistical tendencies and developing the capacity to give.

However, in this doctrine, the heart of Judaism is the Kabbalah, rather than the Law, for it is the former lore which uncovers the true intent of the Law, and most effectively leads to psychic transformation. While rationalistic cognition merely perpetuates the logic of self-interest, transcending rationality through mysticism enables a shift to a different order of being, which is characterized by pure generosity.

Here, psychology leads into social psychology: According to Ashlag, the elect or *zaddikim* (righteous) are those who

manifest the power of giving, as well as possessing access to the trans-rational. Therefore the ordinary individual should train to overcome his egotism by setting aside his own reason and accepting the directives of mystical leaders, such as Ashlag himself. This social doctrine was especially developed by some of Ashlag's successors, such as his son Baruch Ashlag (1907–1991), and Baruch's own heir, Michael Leitman, who expressed its social implications through their centralized leadership of the Bnei Baruch sect.

In one text (published in the collection *Ha-Ummah*), Ashlag's teachings on altruism are translated into an affinity to Socialism, which he found to express this ideal over and above other political systems. However, Ashlag warned that the perversion of Socialism in the Soviet Union was a sign that the implementation of this ideal in actual practice was premature and required the development of purer forms of altruism, which would overcome class warfare. In his vision, these would be cultivated by the study and practice of Kabbalah.

Besides Ashlag, several other figures in contemporary Kabbalah (such as Isaac Ginsburg) offered psychological renderings of its teachings. In the non-Jewish world such universalistic approaches were quite popular, as evidenced by the Jungian interpretation given to the Kabbalah by "Zeev Ben Shimeon Halevi" (Warren Kenton) in his *Kabbalah and Psychology*, as well as numerous "New Age" renderings of kabbalistic ideas. However, the influence of modern and post-modern psychology has penetrated into the most Orthodox of circles.

A striking example is that of the Musar (Ethics) movement. As mentioned above, its proponents initially insisted that their focus was on human failings and potential rather than divine realms. However, in the course of its development in the yeshivot of Eastern Europe, the Musar school increasingly turned to Kabbalah in order to embellish its elaborate psychological doctrine. The results of this shift could be later seen in the works of major Musar teachers of the late 20th century, such as Shelomo Wolbe and Chaim Friedlander (1923–1986).

Sacred Space and Sacred Persons

During the 20th century, the pivotal event of return to the Land of Israel intensified kabbalistic discourse on sacred space. On the one hand, certain kabbalists greatly enhanced the role of the land within their mystical schema. At times, however, the growing importance of the chosen person, or *zaddik*, supplanted the centrality of sacred space. In other words, the body of the saint was regarded as the true sacred space in certain kabbalistic texts.

Already in classical Kabbalah, one can find two basic models of sacred space; as an actual geographical location, and as an internal experiential state or site of consciousness. In general, Rabbi Kook and his followers developed the first model, and in fact reached new heights of valorization of the Land of Israel. For instance, Jacob Moses Harlap wrote (in his *Mei Marom*) that the Land of Israel is destined to reveal itself

as identical with the Infinite, or the highest level of divinity! In general, the leaders of the Kookian school saw themselves as the new prophets, whose higher inspiration was enhanced by the return to the Land, and the resultant renewal of the spirit of the Jewish nation.

However, in the previously censored diaries of Abraham Isaac Kook himself, one can discern a different theme, which echoes the second, more internal model. He wrote of Moses as an archetype of the spiritual leader whose level transcends that of the actual land, as his vision entails the transformation of the entire world into sacred space. Certain textual parallels disclose that R. Kook saw himself as a leader of this type (or *higher zaddik*), and thus as equivalent to the “higher Land of Israel.”

This tendency is far more readily apparent in 20th century Hasidism. During his last years, Menahem Mendel Schneerson of Lubavitch rather openly affirmed the faith expressed by his followers that he was in fact the Messiah. In the voluminous messianic literature composed by the Rebbe and his faithful, it is stated that the redemption would begin at the residence of the Rebbe in New York City, as the dwelling place of the “leader of the generation” is the true sacred space.

As in the case of Rabbi Kook, the spiritual leader is one who can transform the entire world into sacred space. However, while Rabbi Kook felt that this leader should naturally commence this messianic project in the land of Israel, the Lubavitcher Rebbe took this model one step further: he developed an even stronger messianic doctrine, in which the leader is charged with redeeming the Diaspora, and is thus absolved or even prevented from entering Israel prior to his coronation as “the King, the Messiah.”

Braslav Hasidism developed a further variant on this model. For these hasidim, the true sacred space is R. Nahman’s grave in Uman, Ukraine. During the late 20th century, this became a site for mass pilgrimage. As in the case of Lubavitch, the residence of the saint was seen as the true sacred space. In this case, however, it is his grave rather than his home. From a broader perspective, the displacement of concrete sacred space can be attributed to the decline of concrete location in an age of globalization. This process facilitated the creation of “transnational” sacred sites, such as Uman or the Rebbe’s house in Brooklyn.

The Loosening of the Link to *Halakhah* (Jewish Law)

A final theme to be considered is that of the loosening of the connection between contemporary Kabbalah and normative Jewish practice (*halakhah*) during the 20th century, and especially its last decades. Although this process partly reflected the expansion of Kabbalah beyond the boundaries of the Orthodox and indeed the Jewish world, it was paralleled by developments within Orthodox circles.

The decoupling of Kabbalah and *halakhah* can be located already in the censored writings of Rabbi Kook – the first chief rabbi of Palestine! In part, this expresses his self-image as a “higher *zaddik*.” For Kook, such saints are not bound by the

rules of rote halakhic observance, as they should remain free of all bondage, including that of the Law. Furthermore, Kook expressed sympathy for the non-halakhic conduct of the secular Zionists. In his view, this reflected the exalted level of their souls, which should not be judged by legalistic standards.

Rabbi Kook’s openness towards transgression of the law is closely related to his prophetic self-perception. Traditionally, a prophet is empowered to authorize a temporary transgression of the *halakhah*, and Rabbi Kook definitely regarded himself as such a figure. However, in one previously censored passage, he expresses the fear that he actually may have been a false prophet. This self-doubt may have led him to moderate the public expression of his radical views.

Another movement in which a looser connection to the law was readily apparent was the “Neo-Hasidism” of the late 20th century. Both in Israel and North America, figures such as Shlomo *Carlebach (1925–1994) anchored their avoidance of strict adherence to the *halakhah* in an updated interpretation of hasidic thought. One of the central sources for this move was the radical corpus composed by Mordecai Joseph Leiner (1801–1854), the Izbicher Rebbe. Neo-Hasidism delved into the works of this earlier figure, who espoused transcendence of the letter of the law in favor of deeper spiritual intuitions.

As in the case of sacred space, the displacement of halakhic norms owes much to the rise of the figure of the saint. As we have seen in the case of Rabbi Kook, spiritual virtuosi are seen as transcending mundane norms. Here developments in Jewish mysticism reflected more global phenomena. These included the marginal place of the *Shari’ah* (Islamic law) in Western Sufism, the antinomian behavior of certain Christian mystics (such as Thomas Merton, 1915–1968), and the extreme conduct of American Buddhist leaders such as Chogyam Trungpa (1939–1987).

Contemporary Kabbalah and Classical Kabbalah

The proliferation of Jewish mysticism in the late 20th century was part of a more global phenomena – that of the “New Age” movement. Empirical sociological studies of this movement showed that to a marked extent “New Age” spirituality increasingly displaced traditional forms of religious practice.

This was also the case for Kabbalah: While the core of most branches of classical Kabbalah was the idea and practice of influencing the divine realm through observance of Jewish law, in almost all 20th century schools, this theurgical goal gave way to focus on the human realm, whether from a national or psychological point of view. The radical implications of this shift were noticed and critiqued already at the beginning of the century, by more traditionally oriented kabbalists such as Solomon Eliashiv (1841–1928), the author of the “Leshem Shevo ve-Ahlamah” series.

While in earlier periods the kabbalistic endeavor was subsumed to normative religious pursuits, over the course of the century the propagation of the Kabbalah became a goal in itself. Thus, the halakhic restrictions placed on the dissemination of this lore, together with the notion of esotericism, were

the first “victims” of this radical change. At the same time, the authority of halakhic experts was increasingly undermined by that of the prophet, saint, or would-be Messiah.

An interesting sociological expression of the new centrality of the Kabbalah was the establishment of rural communities dedicated to the propagation of kabbalistic doctrine and the intensification of kabbalistic practice, such as the Or ha-Ganuz community of followers of Judah Leib Ashlag (in Galilee), or the Bat Ayin settlement in the West Bank, which was established by followers of Isaac Ginsburg.

The rise of magic was another important result of this cultural change. Though this was also part of a more global phenomenon, it had distinct manifestations within the kabbalistic world. Classical kabbalists usually frowned on “practical,” or magical, applications of their teachings, or saw them as secondary to the theurgical task. Yet late 20th century kabbalists, from the Oriental world to Philip Berg’s popular version, increasingly stressed the benefits of kabbalistic practice for marital, economic, and political success! This dramatic shift reflected not only the more global tendency towards weakening of rationalistic beliefs in this period, but also the essentially pragmatic, and often commercial, nature of late 20th century Kabbalah.

Another marked move away from more classical kabbalistic practice pertains to the role of women. One of the most revolutionary characteristics of late 20th century Kabbalah was the emergence of female mystical teachers, perhaps for the first time in the history of Jewish mysticism. These included the Israeli medium and mystic Yemima Avital (1929–1999), as well as American and Israel neo-ḥasidic teachers.

KABBALAH STUDIES

The present survey of scholarship in the field of Jewish mysticism attempts to point to the main lines of development in the generation following 1973. However, in order to better understand them we shall first briefly survey the fundamental phases of previous scholarship, periodize them, and then delineate the most important areas in which scholarship developed in the last decades.

Kabbalah Studies in the 20th Century: Three Main Stages from 1923 to 1998

The most influential event for future studies of Jewish mysticism was the arrival of Gershom Scholem in the Land of Israel in 1923 and the foundation, through his scholarship and teaching, of the Jerusalem school of studies in Jewish mysticism. In that same year his first book, his doctoral thesis on the book of *Bahir*, was published. This is a convenient starting point that neatly lends itself to a threefold division of the following 75 years into three phases of scholarship of roughly equal length which may be described as the creative, the reproductive, and the critical. This threefold scheme applies mainly to developments in the study of Kabbalah in Israel rather than abroad.

1923–1948: THE CREATIVE PERIOD. This phase spans the period between Scholem’s arrival in Israel and the establishment of the State of Israel. It is characterized by the intensive production of a wide-ranging series of studies, written and published in three languages, Hebrew, English, and German, mostly by Gershom Scholem. It is in this period that a clear outline for an historical understanding of Jewish mysticism emerged. The many articles of Scholem in *Kiryat Sefer*, *Tarbiz*, and *Zion* represented a comprehensive and mature exposition of Scholem’s insights, and those of his followers. This is obvious in two major books written toward the end of the creative period: *Major Trends in Jewish Mysticism*, originally delivered as a series of lectures in New York in 1939 and published in Jerusalem in 1941; and *Reshit ha-Kabbalah* (“Beginning of Kabbalah”), published in Hebrew in 1948. The two books complement one other, as Scholem himself once noted, covering all the main phases of Jewish mystical literatures. This is not the place to survey in detail Scholem’s enormous influence on the historiography and phenomenology of Kabbalah, as this has been done several times by various writers. It should be pointed out that as creative as this period indeed was, it did not lack critical attitudes, especially toward Kabbalah scholarship in previous generations. During this phase, two other scholars were active in this field in Israel, both Scholem’s students, who contributed significant studies. The most eminent was Isaiah Tishby, who wrote an analysis of the Lurianic Kabbalah and printed a critical edition of an early kabbalistic text,

and Chaim *Wirszubski, who wrote the first in-depth analyses of Shabbatean theosophy.

1948–1973: THE REPRODUCTIVE PERIOD. This phase saw the publication of still more studies of Jewish mysticism in Israel or by Israeli scholars abroad, most of which consolidated the findings and articulated in greater detail many of the theories first brought forth during the creative period. The most conspicuous evidence of the reproductive impulse is the fact that many of the chapters of Scholem's *Major Trends* become in this period full-fledged books. Thus, for example, Scholem himself contributed two books, one dealing with the first chapter, the *Hekhalot* literature, and his famous monograph on Sabbatai Sevi (*Shabbetai Zevi), first published in Hebrew in 1957 and then, in a much more elaborate English version, in 1973. Likewise, Tishby published in 1949 and 1961 his two volumes of *Mishnat ha-Zohar* paralleling in a way Scholem's two chapters on the Zohar in *Major Trends*. Joseph Dan published in 1968 his monograph on the esoteric theology of *Ḥasidei Ashkenaz and in the same year Rivka Schatz-Uffenheimer published her book on mystical, basically quietist aspects of Beshtian Ḥasidism. In fact, the single chapter in *Major Trends* which was not elaborated into a full-fledged monograph is that on Abraham *Abulafia, whose kabbalistic thought had to wait much longer for exposition. In fact, we may speak of a process of specialization, as each of the scholars mentioned above, with the exception of Scholem, analyzed only some part of the spectrum of mystical literature that had already been surveyed by the master. Though each of the students was destined to broaden his knowledge and studies to other fields, none of them offered an original picture of the whole field, based on his or her readings. Leaving aside for the moment *Major Trends*, another main contribution of Scholem's, which appeared in 1962, *Ursprung und Anfaenge der Kabbala*, is an expansion of the much shorter version published in 1948 as *Reshit ha-Kabbalah*.

The term reproductive does not intend solely to point to the external correspondences between the chapters in *Major Trends* and the subsequent monographs, including Scholem's own. The turning to details was in itself a sound development from the point of view of determining what was more important and what less. However, reproduction means much more the historical, phenomenological, and methodological continuity between Scholem's studies and those of his followers. If, for Scholem himself, the original thinker and writer, such continuity and elaboration is natural, it is much less so for other scholars. Little had been done to test Scholem's broad phenomenological and historical theories. With the major exception of the assaults of Baruch *Kurtzweil, who was an outsider from the point of view of Kabbalah scholarship, and an audacious critique of Scholem's *Sabbatai Sevi* by R.J. Zwi *Werblowsky, who was destined to retreat from his arguments and devote many years and much talent to translating the very book he so sharply criticized into an impeccable English, no methodological debates took place in the Scholemian school. In fact,

the points made in these two critiques were never accepted, not even with qualifications, by Scholem or any member of his school. The single significant divergence to be noted between Scholem and his most important follower, Isaiah Tishby, has to do with the polemic concerning the interpretation of Ḥasidism in messianic or non-messianic terms: While Tishby, who developed Ben-Zion *Dinur's thesis about the messianic message of Ḥasidism, adduced more material from kabbalistic Lurianic sources contemporary with early Ḥasidism in order to make the point only roughly advanced by the historian, Scholem remained convinced that his, basically Buberian understanding of the role of messianism in early Ḥasidism, is the correct explanation for the emergence of this movement.

In this period, an excellent and isolated monograph was written by Werblowsky on the 16th-century paragon of Jewish culture, R. Joseph *Caro, which significantly differed from the main methodological line in Scholem's school. Another senior member of the inner circle of the Scholemian school, Joseph ben Shlomo, published in 1965 his analysis of R. Moses *Cordovero's theology, written from a much more philosophical point of view than the more common historical-philological products of his colleagues.

Another significant phenomenon commencing precisely in 1948 and remaining constant during the whole reproductive period is Scholem's attendance at the Eranos conferences in Ascona, Switzerland. In a long series of lectures delivered there and published in several languages, Scholem took on a number of the main concepts of Kabbalah. These lectures may be regarded as the most important contribution to the study of Kabbalah in this period, as it adopted a far more phenomenological than historical approach. However, though these lectures contributed tremendously to the explication of Scholem's phenomenology, most of the theories advanced in those expositions had already been adumbrated, and sometimes even fully explicated, in the studies he produced during the creative phase.

There are indications in Scholem that modern historical events were regarded as being useful in opening up the possibility of understanding the past, including the symbols of Kabbalah. The existential matrix of modern scholars was sometimes conceived of as serving as powerful filters. Thus, for example, we read in an essay by Scholem written toward the end of World War II: "In a generation that has witnessed a terrible crisis in Jewish history, the ideas of these medieval Jewish esoterics no longer seem so strange. We see with other eyes, and the obscure symbols strike us as worth clarifying."

The phrase "other eyes" presupposes that prior to the crisis brought on by the terrible news concerning the Holocaust, one could not indeed understand properly the "obscure symbols." The history of the Jews, or more concretely their experience in recent times, is capable, therefore, of producing a new understanding of kabbalistic symbolism. This retrospective reading of kabbalistic symbolism also assumes the potential relevance of kabbalistic symbols for events which might take place hundreds of years later. A certain isomorphism makes

possible an understanding of the earlier by the later, namely of medieval Kabbalah by modern scholars of Kabbalah, and vice versa. The experience of exile and redemption shared by kabbalists and by scholars of Kabbalah creates the epistemological circle. This is the systemic basis of what Scholem designated as the “productive” scholarship of Kabbalah, and its relevance for understanding history. Indeed, in another essay, Scholem returns to the affinity between the expulsion of the Jews from Spain and the Holocaust: “From a historical point of view, Luria’s myth constitutes a response to the expulsion of the Jews from Spain, an event which more than any other in Jewish history down to the catastrophe of our time gave urgency to the question: why the exile of the Jews and what is their vocation in the world?”

The nexus between the Lurianic myth and the expulsion is hardly a matter of history. It is, if at all, a matter of psychology, of systemic restructuring of a complex theosophical lore: If the historical event that inspired the emergence of the Lurianic myth is unparalleled except by the recent catastrophe, is not the understanding of kabbalistic symbolism both easier and acutely relevant in the aftermath of the modern Holocaust? Is not scholarship an attempt to answer metaphysical questions about the meaning of national destiny and national vocation? The basic presupposition of Scholem and Tishby assumes a privileged historical and psychological status enjoyed by a certain academic school, which facilitates a proper understanding, hardly accessible to earlier scholars who did not endure the travails of historical catastrophes.

Isaiah Tishby, the other great scholar in Scholem’s school, juxtaposes the negative attitude of 19th century scholars to Kabbalah to that of 20th century scholars, writing as follows:

... especially those of the last generation who were expelled from Paradise into the great desolation and are wandering on the paths of life, divided and perplexed, without a compass and without a way ... reality revealed itself in its demonic, threatening face. The age of anxiety, which the kabbalists and those like them apprehended in their time and in other times returned again, an age of disintegration and breakdown of values. The crisis of values ... did not pass over the small Jewish world at all. We were standing, feeble and ill and without solid values. Our generation, as human beings and as Jews, as individuals and as a community, is pushed toward the chasm and before us there is a parting of the ways: to roll down the slope of nihilism or to be spiritually elevated and discover the existing values hidden within the external shattered reality. It is possible that a profound study of the wisdom of Kabbalah, and especially the meaning of the symbolistic approach for the values of Judaism, will illumine our eyes and help us in the search for the exit from the great perplexity.

Both Scholem and Tishby suffered from the consequences of the catastrophe and they spoke about it in a very direct manner. Scholem’s brother, Werner, was killed by the Nazis in Buchenwald early in the war, and his best friend, Walter *Benjamin, committed suicide in 1940. To him he dedicated his *Major Trends in Jewish Mysticism*, and the dedication ends with the sentence: “Died at Port Bou (Spain) on his way into

freedom.” Those deaths must have been terrible personal losses. Worse blows were part of Tishby’s experience while in Israel. He dedicated his first book – an M.A. thesis written under Scholem’s guidance earlier in 1939 – *The Doctrine of Evil and Shells in Lurianic Kabbalah*, published in 1942 – “To Father and Mother, who are imprisoned in the kingdom of Satan, and are waiting for imminent redemption,” but in the second edition, published in 1962, another dedication was added, “To the Memory of Father and Mother, who were imprisoned in the kingdom of Satan, and waited for imminent redemption.” Tishby was originally from Transylvania, Romania, from where he made *aliyah* to the Land of Israel; his parents remained in the Diaspora and perished toward the end of World War II. Never before had scholars in Jewish studies to deal with situations where redemption and freedom were not abstract concepts or cherished beliefs but matters of life and death, namely, the death of their closest relatives and friends. However, the tribulations of the Holocaust were not the end of his suffering. Tishby’s most important scholarly achievement, *Mishnat ha-Zohar*, whose first volume, co-authored by F. Lachover, was published in 1949, had the following dedication: “My work on *Mishnat ha-Zohar* is dedicated to the memory of my brother Shmuel, blessed be his memory, one of the survivors of the Nazi hell, who fell in the war for the defense of the homeland.”

Therefore, two of the most important studies on the nature of Kabbalah are explicitly dedicated to persons who lost their lives in fateful struggles for survival. The personal tragedy and the national one are mentioned explicitly by the scholars of Kabbalah. This is also the case with the scholarly oeuvre of Mendel Piekarz, a leading scholar of Ḥasidism, who suffered terrible family loss in the Holocaust. To a certain extent, his expositions of Ḥasidism also contain implicit and explicit criticism related to the role played by ḥasidic leaders during the Holocaust.

The terrible events of World War II were at least one of the main reasons for the strong focus on exile and redemption, and theories of evil, in the overall vision of the nature of Kabbalah and Ḥasidism. Not that these subjects are absent in numerous kabbalistic sources; nor are they negligible. It would seem that a variety of messianic ideas was as important for the kabbalists as they were for many traditional Jews, but their transformation by scholars into the main clue for understanding Kabbalah represents an overemphasis whose existential background has been briefly surveyed above.

In different ways, the scholarship of Kabbalah in this period advanced in a manner that resonates with the main concerns deriving from the two major events in the history of modern Jewry: the optimistic and the somewhat messianically oriented aspects of Zionism, on the one hand, and the pessimism generated by the Holocaust, which demanded answers to the perennial question of the meaning of Jewish tragic experiences, on the other. Like Martin *Buber at the beginning of the 20th century, who looked for spiritual alternatives in Ḥasidism, Scholem’s school preferred Kabbalah, understood

as reflecting antinomian and paradoxical tendencies, as the spiritual alternative. In other words, far from being detached scholars, as they are sometimes portrayed, both Scholem and Tishby looked to their academic subject-matter as a possible source of spiritual inspiration. From this point of view, they continued the spiritual experiments which non-traditional alternatives underwent in non-religious Zionism, started by Buber. However, they did so in the extraordinarily terrible circumstances of the Holocaust and under the spell of the exuberant impetus created by Zionism and the establishment of the State of Israel. All the vicissitudes of exile and the hopes for redemption were epitomized in the experience of the two representative scholars of the creative period, whose basic phenomenology reflects the dichotomy that informed the history of the Jewish nation. Scholarship of Kabbalah in the first generation of scholars active in Israel was not only a revival of old lore, a cold and distanced analysis of neglected ideas of old forgotten masters, but also a mirror for expressing deep personal and national quandaries. Studying Kabbalah certainly was, for both Scholem and Tishby, a total vocation that demanded infinite dedication and forms of sacrifices which we can hardly understand today in a period of abundance in universities, of unparalleled mobility, and speedy circulation of information. In the much greater propensity to criticism characteristic of the third period, however, the particular circumstances that shaped the achievements of the founding scholars should not be overlooked. By pointing out the importance of the historical circumstances that served as the background of modern studies of Kabbalah in Israel, and the impact of these circumstances on the structure of these studies, the achievements of those scholars are put in bold relief and seen as outstanding.

The first main reservations about Scholem's theories come from historians, even from some who were influenced by Scholem. In the writings of Yitzhak F. Baer, there are indications that some kabbalistic ideas are earlier than supposed. Jacob Katz doubted whether Scholem's suggested nexus between Shabbateanism and Reform in the 19th century was indeed plausible, while much earlier Azriel Shohat doubted the affinities seen by Scholem between the dissemination of Lurianic Kabbalah and the emergence of Shabbateanism. More vehemently and much later, Shmuel Ettinger criticized the historical method applied by Scholem's school to the study of Ḥasidism. However, as critical as some of their views were, they never touched the overall historical scheme of Scholem, and even less his phenomenology of religion. The first detailed and penetrating critique of a major tenet of Scholem's school came in 1978 with the publication of Mendel Piekarz's book on the beginnings of Ḥasidism. The book represents a major departure from the explication predominant in Scholem's school, based on the linkage between Ḥasidism and Shabbateanism. In its stead Piekarz pointed to the existence of what were regarded as radical views in the ethical-mystical literature that either preceded or were contemporary with the first generation of ḥasidic masters.

It is in this period that some of the studies of Shlomo Pines, an illustrious historian of philosophy, dealing with Jewish mysticism were published. They deal with an ancient Jewish theology that had interesting parallels in early Kabbalah, with the emergence of some of the main concepts of *Sefer Yeẓirah*, with views associated with the town of Ismailiyyah and reflecting on the thought of *Sefer ha-Bahir*, with kabbalistic views in *Sefer ha-Temunah*, 35 with the history of the magical concept of *ruḥaniyyut* – which had profound reverberations in Kabbalah, in Ḥasidism, and even among certain Jewish intellectuals of the early 20th century Germany – and with the Arabic origin of the concept of the angelic mentor known as *Maggid*. Pines put his unequalled knowledge of Arabic sources into the service of the scholarship of Jewish mysticism, pointing the way to solutions to questions concerning the sources of certain kabbalistic ideas in Islamic thought. Two major contributions of Pines to our general understanding of Kabbalah may be summarized as follows: (a) the possibility that ancient Jewish theologies hitherto not addressed by Kabbalah scholarship contributed to the emergence of the medieval kabbalistic theosophies; (b) the possibility that Arabic sources were significant catalysts for kabbalistic ideas, especially in the case of astro-magic.

1973–1998: THE PERIOD OF CRITICISM. In this period the critical attitude becomes much more prominent among scholars of Kabbalah. This does not mean that both creative and reproductive aspects are absent in the scholarship of the period.

There is good reason to choose the year 1973 as a significant turning point: in this year Werblowsky's English translation of Scholem's *Sabbatai Sevi* was published, which represents the last major formulation of the most important contribution of Scholem's historiography that introduced additional material. By then, in 1974, Scholem's last comprehensive summary of his oeuvre, his items in the *Encyclopaedia Judaica*, had been published as a separate book under the title *Kabbalah*. It is in the autumn of 1973, that one of the main scholars in Scholem's school, Ephraim Gottlieb, passed away.

In general terms, in the immediately following years a group of younger scholars in Israel began to emerge: Yehudah Liebes, Mordekhai Pachter, Moshe Hallamish, Rachel Elior, Amos Goldreich, Mikhal Kushnir-Oron, Bracha Sack, Assi Farber-Ginnat, Yoram Jacobson, Hava Tirosh-Rotschild, and Moshe Idel. Students of Alexander Altmann and George Vajda also entered the study of Jewish mysticism, such as Arthur I. Green, Daniel C. Matt, and Lawrence Fine.

The most important event that contributed to a shift in the direction of research among younger scholars in Israel was the Yom Kippur War. The profound restructuring of the Israeli worldview also changed the course of study in certain domains of Jewish studies, including Kabbalah, in subtle ways. The most important change is the more general and diffuse feeling that concepts that were conceived of as permanent and around which the national, political, or ideological

agenda was organized were inadequate. In the military-political realm the term used in modern Hebrew for "concept" is *konzeptziyah*, which represents unexamined presuppositions that guide major areas of thought and behavior. There is no need to dwell on the consequences of such a *konzeptziyah* on the military-political plane, or on the turmoil created in the wake of the Yom Kippur War on the intellectual plane. The more critical examination of the findings and theories of the founders of Kabbalah studies since that time reflects an upheaval which, though much more general and diffuse, is less evident in other fields of Judaica. The single most important shift is the modification of the earlier emphasis on the importance of *gnosticism as a historical source of medieval Kabbalah and the marginalization of the phenomenological affinities between the two types of literature.

New Developments in the Study of Jewish Mysticism since 1973

In the last generation, the volume of studies published on the subject of Jewish mysticism increased in a dramatic manner. Even if we ignore the more widespread trend of vulgarization and popularization of Kabbalah, which scholars themselves sometimes contribute to, and limit our survey to the more scholarly publications, we still see a huge increase in the number of published studies. This new harvest of studies differs in many cases from the earlier ones in a variety of ways: more and more studies are written in other languages than Hebrew, they address in many cases new topics, they also adopt methodologies other than the philological-historical one and sometimes offer different answers to questions that were answered in the previous generations of scholars. Some of these changes are the result of the greater diversification of the intellectual centers in which Jewish mysticism is studied. It is only after 1973 that we may speak of the significant expansion of the study of Jewish mysticism in centers other than Israel, especially the United States, France, Germany, Great Britain, and Italy. There are many signs of the establishment of Jewish mysticism as an independent field of research, with positions in universities, a growing number of students on all levels, the inevitable emergence of internal debates in the field as well as the emergence and development of specialized journals where topics related to Jewish mysticism are regularly discussed. This is part of both the renewed interest in Jewish mysticism in general and of the much greater resources the academic world has placed at the disposal of scholars in this field. In the limited space of this survey it is impossible to encompass all the variety of developments.

First and foremost, we should emphasize the expansion of study of topics that were the subject of intense earlier study. This does not mean that there are no new and important contributions in areas like Hekhalot literature, early Kabbalah, the origins of Kabbalah, the book of *Bahir*, *Nahmanides, the *Zohar, Abraham Abulafia, Safedian Kabbalah, or Shabbateanism. Moreover, many of the new developments are quite recent, and represent ongoing processes initiated by young

scholars, and we lack the necessary perspective to evaluate them properly.

There are six main topics, some relatively new in the scholarship of Jewish mysticism, in which major developments have been made in the last generation: emphasis on the experiential nature of Jewish mysticism, the relationship between Jewish mysticism and *halakhah*, the relation between magic and Jewish mysticism, a variety of discussions of hermeneutics in Jewish mysticism, the history of Kabbalah in the Renaissance and Christian Kabbalah, and more recently the attitude to sex and femininity in Jewish mysticism. All six topics represent the dialogue between scholars of Jewish mysticism and modern developments in the history of religion in general, and are less related to the historical aspects of Jewish mysticism that were at the center of most of the earlier studies of this lore. To be sure, all of them were touched upon in one way or another also earlier, but in the last generation they were put in much more bolder relief than previously, not only because more has been written about them but also because they were regarded as more important than earlier scholars assumed.

The more experiential nature of Jewish mysticism has been addressed in scholarship in different ways: the special emphasis on the importance of ecstasy, of mystical experiences, of *unio mystica*, of techniques and paths to reach such experiences. The interest in the writings of Abraham Abulafia, Isaac of Acre, and Hayyim *Vital, where these topics are dealt with, as well as in concepts like *hitbodedut*, namely isolation and mental concentration, *devekut* (union and communion with God), prophecy, and *hitpashtut mi-gashmiyyut*, namely divestment of corporeality and ascent of the soul, is much more pronounced. Especially in the studies of Yehudah Liebes, the affinities between the personal and the systemic aspects of the writings of some mystics, like Isaac *Luria and Shabbatai Zevi, have been emphasized. Most of the extant material which was until now found only in manuscripts has been published and analyzed.

Another major field of research that developed in the 1980s is the relationship between Kabbalah and *halakhah*. A small but basic series of studies on this subject has charted the most important developments in the long history of the relationship between Jewish mysticism and *halakhah*. The first major contribution is Jacob Katz's monograph on the subject, followed by Israel M. *Ta-Shma's book on the *Zohar* and his study of Joseph Caro, Moshe Hallamish's numerous studies dealing especially with Jewish liturgy and Kabbalah, Robert *Bonfil's study of Menahem Azariah of Fano, and Moshe Halbertal's analyses of Nahmanides's halakhic thought. The manifold affinities between the two religious aspects of Judaism now underlie scholarship more than the earlier emphasis on the antinomian and paradoxical approaches that were deemed to characterize Jewish mysticism.

A topic that draws more and more attention is the role played by magic, and sometimes also astrology, in the general economy of Jewish mysticism. This is especially evident in the material related to the Hekhalot literature, to the Kab-

balah during the Renaissance in Italy, to Safedian Kabbalah, and 18th century Ḥasidism.

The second half of the 20th century represents a linguistic turn in general philosophy, and its repercussions are evident also in the scholarship of Jewish mysticism. A series of studies dealing with Jewish mystical theories of the origin and nature of language, interpretation, the status of the text – mainly that of the Torah – and more general hermeneutical questions like the role of the reader and interpreter and the nature of the kabbalistic symbols, moved much closer to the center of scholarly interest than earlier. At the same time, the impact of Scholem's scholarship and that of others on main figures in modern thought like Harold *Bloom, Jacques Derrida, Umberto Eco, and George *Steiner can be detected.

A field having great potential which began to become more and more prominent is the history of Kabbalah in Italy and the emergence and development of the Christian Kabbalah. The prominence of the Italian Kabbalah has been placed in relief in studies by Ephraim Gottlieb, Moshe Idel, Fabrizio Lelli, David Ruderman, and Hava Tirosch-Samuelsen. Thanks to the innovative studies of Chaim Wirszubski, and more recently the publications of Brian Copenhaven and Giulio Busi, Giovanni Pico della Mirandola's and Johann Reuchlin's kabbalistic sources have been charted. Allison Coudert has contributed important studies to the impact of Jewish Kabbalah on 17th-century European thought.

The reluctance to resort to psychological explanations to understand Jewish mysticism, so evident in pre-1973 scholarship, changed dramatically afterwards. Under the impact of Freudian psychoanalysis in its various guises, and somewhat less so also Jungianism, new interpretations of Jewish mysticism have been advanced. Subjects like the appearance of the mandala during the mystical experience, the issue of Kabbalah as phallogocentric, androgyny, the status of feminine elements within kabbalistic thought, the theories of eroticism found in Jewish mysticism, can be found in the studies of Daniel Abrams, David Halperin, Moshe Idel, Yehudah Liebes, and in a more comprehensive and sophisticated manner in those of Elliot R. Wolfson. The impact of feminist scholarship on the understanding of Kabbalah can also be seen from time to time in the choice of the subjects addressed by scholars in recent decades.

Methodologically speaking, we should also mention the greater effort efforts to offer more phenomenological descriptions of Jewish mysticism, evident in the writings of Yehudah Liebes, who emphasizes the important role of myths, Moshe Idel, who proposed theories of the models informing the major developments of Jewish mysticism, Elliot R. Wolfson, who describes Jewish mysticism as phallogocentric, Haviva Pedaya's categorizations of mystical experiences, and Jonathan Garb, who put into relief the importance of concepts of power in many mystical literatures in Judaism.

To be sure, expansions of the subjects and phases of the study of Jewish mysticism as delineated above continued steadily also after 1973. The number of collections of Scholem's articles in different forms and translations, as well as studies

on his thought, proliferated, as the bibliography below demonstrates. Nevertheless, the one field in Jewish mysticism which flourished more than any other is modern Ḥasidism. In addition to monographs and numerous articles dealing with the history of Ḥasidism, a plethora of studies dealing with its mystical aspects, its approach to story-telling, to magic, to messianism, to the topic of interiorization, ecstasy, and psychologization, or to the sources of Ḥasidism have been published in the last generation. Many monographs dedicated to individual ḥasidic masters and schools put scholarship on a surer track than the earlier generalizations about the nature of Ḥasidism. Unlike the earlier debates between Buber and Scholem, or between Tishby and Scholem, scholarship in more recent years now emphasizes much more the particularity of each form rather than the global picture of this mystical movement. This is evident in the many studies and monographs dedicated to the Besht himself, to R. Naḥman of Braslav, and to the Chabad school. Also important are the critical editions of important ḥasidic texts, especially by Gedaliah Nigal, and the reprinting of almost the entire corpus of ḥasidic writings in two series of books, mainly in the United States.

From Martin Buber to Scholem's school, Ḥasidism has been studied mainly as a mystical movement. However, in a series of monographs, Mendel Piekarcz has described the social aspects of the ḥasidic movement, denying the main role of mystical elements.

There has also been increasing study of the Kabbalah of Naḥmanides and of R. *Elijah, the Gaon of Vilna, known as ha-Gra, and of his students, on the one hand, and the development of Kabbalah in North Africa, on the other.

The bibliographical survey compiled below is, for the most part, arranged according to the principal topics mentioned above, and is by definition incomplete.

[Moshe Idel (2nd ed.)]

KABBALAT SHABBAT (Heb. קַבְּלַת שַׁבָּת; “Reception of the Sabbath”), term designating the inauguration of the Sabbath in general and, in a more specifically liturgical sense, that part of the Friday evening service which precedes the regular evening prayer and solemnly welcomes the Sabbath. The inauguration begins considerably before nightfall “so as to add from the weekday to the holy day” (Yoma 81b). Much care is traditionally lavished on preparing for the Sabbath. All housework that is forbidden on the Sabbath, e.g. cooking, is completed beforehand (cf. Shab. 2:7; Shab. 119a). Before the Sabbath, some people used to read the weekly Torah section, twice in the original Hebrew texts and once in the Aramaic (Targum) version. It is customary to bathe before the beginning of the Sabbath and to put on festive clothes. The Talmud (Shab. 119a) tells that R. Ḥanina used to put on his Sabbath clothes and stand at sunset of Sabbath eve and exclaim: “Come and let us go forth to welcome the Queen Sabbath” and R. Yannai used to don his festive robes at that time and exclaim, “Come, O bride! Come, O bride!” These stories served as the main motif for the Sabbath hymn “*Lekhah Dodi” of Solomon b. Moses ha-Levi *Alkabez and formed the basis of the custom of the kabbalists of Safed, who welcomed the Sabbath by going into the fields on Fridays at sunset to recite special prayers and hymns in honor of the Sabbath amid nature. In traditional synagogues this prayer is recited no later than half an hour after sunset. It opens with Psalm 29 (in the Ashkenazi and some other rites with the six Psalms 95–99 and 29 corresponding to the six days of creation or the six weekdays). The hymn “Lekhah Dodi” is then sung, followed by Psalms 92 and 93. In some rituals the evening service is preceded by the recital of the *Song of Songs in honor of the Bride (or Queen) Sabbath. In many traditional rituals the hymn *Anna be-Kho’ah” is said before the “Lekhah Dodi” (or Psalm 121). Chapter 2 of Mishnah *Shabbat* (*Ba-Meh Madlikin*) is recited in some rites

before the main evening prayer, in other rites following it. In the Yemenite ritual special *piyyutim* are also inserted before the evening prayer on those Sabbaths which coincide with the New Moon as well as for Sabbaths in the *Omer period. The major deviations from the regular evening service are the elimination of the petitions of the *Amidah* and the substitution of blessings in honor of the Sabbath.

In modern Israel special *Kabbalat Shabbat* ceremonies are held on Friday at noontime in schools and kindergartens, and before supper in some kibbutzim, where they consist of lighting the Sabbath candles, reciting poetry, and singing songs in honor of the weekly day of rest. In the United States, many Reform and Conservative synagogues have introduced the late Friday evening service, which starts after the end of the business day in order to enable a greater number of the congregants to participate. The central feature of the service is the rabbi’s sermon; after the service an *Oneg Shabbat* (Sabbath Reception) is usually held.

[Meir Ydit]

KA’B BEN ASAD (d. 627), chief of the Jewish tribe of *Qurayza in Medina. When Ka’b saw the tragic fate awaiting his tribe as a result of their defeat by Muhammad’s forces and their betrayal by their Arab allies, he offered three suggestions to his council: conversion to Islam; that the men kill their wives and children to save them from slavery and dishonor, but that they continue to fight; and that they unexpectedly attack Muhammad’s forces on the Sabbath, thus desecrating the holy day. Each suggestion was rejected. He was put to death along with the rest of his tribe in 627, after refusing to accept Islam. Ka’b is the subject of Tchernichowsky’s poem “*Ha-Aḥaron li-Venei Kurayza*” (“The Last of the Banu Qurayza”).

KABĪR, ABRAHAM ṢĀLIḤ AL- (1885–), Iraqi official. Born in *Baghdad, al-Kabīr received a legal education and was at first employed in various banks, later joining the Iraqi treasury service; he held important and responsible positions, especially at the time when Ezekiel *Sassoon was finance minister. Al-Kabīr also played an active role in Jewish communal life, and in 1946 testified before the Anglo-American Commission of Inquiry on the discrimination practiced against Jews by the Iraqi authorities. He settled in London in the 1960s.

Abraham Ṣāliḥ’s brother, JOSEPH, also born in Baghdad, was a lawyer and communal worker. Al-Kabīr was at first employed in the Iraqi Ministry of Justice, but from 1925 he maintained a private law practice. From the early 1930s he lectured at the Baghdad School of Law on private international law and comparative law. He published his lectures in two books

(in Arabic). As a member of the general council of the Jewish community of Baghdad from 1932, he was among the critics of the community's administration by its president Sasson *Kadoorie and published a pamphlet on this subject (Baghdad, 1944). In 1935–36, he represented the Jews of Baghdad in the Iraqi Parliament.

[Hayyim J. Cohen]

KABRI (Heb. כַּבְּרִי), kibbutz bordering on Acre Plain and the hills of Upper Galilee in Israel, affiliated to Ha-Kibbutz ha-Me'uhad. It was founded in 1949 by settlers from *Bet Arabah who were forced to abandon their settlement north of the Dead Sea in the *War of Independence (1948). In 1968 Kabri, with 560 inhabitants, engaged in mixed farming. In 2002 its population numbered 728, with the economy based on the manufacture of aluminum and plastic products and a few farming branches such as fruit plantations and cattle. Large-scale excavations in 1986–93 revealed settlement on the site from the Neolithic period and enormous growth in the Middle Bronze II period (2000–1550 B.C.E.). By the end of the Bronze Age (1200 B.C.E.) the site was deserted. In Roman and Byzantine times, Kabri (*Kabriṯa) was a flourishing center (Tos. Shev. 4:11). Numerous ashlar and mosaic floors remain from this era, some of which were reused in the houses of the Arab village which was abandoned in 1948. Porous limestone beneath a stratum of impervious heavy soil resulted in the formation of four copious springs whose fresh waters were led a distance of about 7 mi. (12 km.) to Acre by the aqueduct built in 1800 by the governor Aḥmad al-Jazzār. Under British Mandatory rule, a British-owned plant bottled the “Kabri water.” In the spring of 1948, *Haganah soldiers on their way to reinforce the isolated kibbutz of *Yeḥi'am further east were caught at Kabri in an ambush, and 46 men fell; a memorial has been set up there. A government fruit-tree nursery, a Jewish National Fund (JNF) forest-tree nursery, and the JNF regional administration were located at Kabri.

KABRITHA, a village in the territory of Ptolemais (Acre). In the talmudic lists describing the area held by those who returned from Babylonian exile, it is located on the border between the “wall of Acre” to the north and the “spring of Ga'aton” to the south (Sif. 51; Tosef. Shev. 4:11; TJ, Shev. 6:1, 36c, et al.). Some scholars have looked for it at Khirbat Qabārṣa to the south of Nahariyyah and near the outlet of Naḥal Ga'aton, but as this position is too close to the sea and is also west of the coastal road which marked the theoretical boundary of the Holy Land, the identification with *Kabri to the northwest of Nahariyyah is preferable.

[Michael Avi-Yonah]

KACH, Israeli party established by Rabbi Meir *Kahane in 1971, as an outpost of the Jewish Defense League in the United States. Kach advocated that the *halakhah* should become the law of the State of Israel in Greater Israel, and proposed that the state's Arab inhabitants be given the option of becoming citizens after a security check, on condition that they would agree to serve in the defense forces and undertake other civilian duties, and accept the status of *ger toshav* (non-Jewish resident), or emigrating from the country. In the elections to the Eighth, Ninth and Tenth Knessets Kach ran but did not pass the 1% qualifying threshold. An attempt to disqualify the party from running in the elections to the Tenth Knesset failed. In that election campaign Kach advocated that the Arabs be expelled from the country, to prevent their becoming a majority. It also advocated that the Camp David Accords and the Egyptian-Israeli Peace Treaty be abrogated, that the Israeli response to acts of terror should be counterterror, and that the mosques be removed from the Temple Mount. Kach was disqualified by the Central Elections Committee from running in the Eleventh Knesset elections. However, the High Court of Justice ruled that the disqualification was illegal. In these elections Kach finally passed the qualifying threshold, and Kahane entered the Knesset. In the Knesset Kahane presented several bills that were rejected by the Knesset Presidium, headed by Knesset Speaker Shlomo *Hillel, since they were viewed as racist. On July 31, 1985, both Basic Law: the Knesset and the Election Law were amended to enable the Central Elections Committee to disqualify lists that incite to racism and deny the democratic character of the State of Israel. On this basis Kach was disqualified from running in the elections to the Twelfth Knesset.

Following the murder of Kahane in November 1990 in New York by an Egyptian assassin, Kach split into two movements. “Kahane Ḥai,” which was headed by his son Binyamin Ze'ev, who was killed in a terrorist attack in Samaria in December 2000, and Ko'ah, which soon assumed the name Kach, headed by Kahane's former assistant Baruch Marzel, who lives in Tel Rumeida in Hebron.

Following the massacre by Baruch Goldstein in the Cave of Machpelah on February 24, 1994 – which was welcomed by Kach – the movement was declared illegal, but it has since continued to exist underground, with its members participating in demonstrations, clashing with the police, and attacking Palestinians and Palestinian property. After the Government approved the plan for disengagement from the Gaza Strip and the dismantlement of settlements, Kach advocated violent resistance to the removal of settlements, while verbally and physically attacking ministers. Among its activists are Marzel, No'am Federman, Tiran Pollack, and Itamar Ben-Gvir, who have frequently been detained by the police.

[Susan Hattis Rolef (2nd ed.)]

KACYZNE (Katsizne), ALTER (1885–1941), Yiddish poet and essayist. Born in Vilna, he was a professional photographer and also wrote poetry, fiction, drama, and essays. His

earliest short stories were written in Russian and published by S. *An-Ski, one of whose literary executors he was; he also completed An-Ski's fragmentary drama *Tog un Nakht* ("Day and Night"), which was frequently performed on Yiddish, Polish, and German stages in the 1920s. Under the influence of I.L. *Peretz and modern Polish poets, Kacyzne wrote his first mystical drama, which was not favorably received. He aroused greater attention with his folk ballads and with semi-mystical, semi-realistic short stories, such as "Kranke Perl" ("Sick Pearl" in *Arabeskn*, 1922). His drama *Dukus* ("The Duke," 1926), whose hero was a legendary Vilna aristocrat who embraced Judaism, was first staged in Warsaw with Abraham *Morewski in the leading role and then often performed in Yiddish theaters worldwide. His less popular historical drama *Hordes* ("Herod," 1926) was generally held to be of greater literary value. His two-volume novel *Shtarke un Shvakhe* ("Strong and Weak"), dealing with Polish-Jewish intellectuals during World War I, was published posthumously in Argentina in 1954. Fleeing the Germans in 1941, he tried to escape to Tarnopol, but was seized by Ukrainian collaborators and beaten to death. His daughter Shulamit Reale published the first volume of his collected works in 1967.

[Melech Ravitch]

KACZÉR (originally **Katz**), **ILLÉS** (1887–1980), Hungarian author and journalist. Born in Szatmár, Kaczér began his career in provincial journalism before starting to write for Budapest newspapers. He made his name as a novelist and playwright, and his dramas enjoyed considerable success in Hungary during the 1920s. By this time, however, as a result of the revolution of 1918–19, he had left the country and gone to live first in Vienna and later in Berlin, Romania, and Czechoslovakia. In 1938 he moved to London but in 1959, at which time he was already established as a contributor of stories and essays to the Hungarian-language newspaper *Uj Kelet*, made his home in Israel. Kaczér was noted for his powerful treatment of Jewish themes, ranging from biblical times to the era of social and religious family conflict in the 19th and 20th centuries. His works include the novel *Khafrit, az egyiptomi aszony* (1916); the play *Megjött a Messiás* (1921); *Ikongo nem hal meg* (1936); *Fear Not, My Servant Jacob* (1947); and *The Siege of Jericho* (1949), originally published in London as *The Siege*, 2 vols; and *Három a csillag* (1956).

[Baruch Yaron]

KACZERGINSKY, SZMERKE (1908–1954), Yiddish writer. Born in Vilna (Lithuania), Kacerginsky joined the literary

group *Yung Vilne in 1929, contributing poems and stories to its publications. He worked as a printer and was active in underground communist movements, for which activity he was frequently arrested. During the German occupation he was one of several Yiddish intellectuals (including *Abraham Sutzkever) forced to select the most important holdings of the *YIVO Institute to be shipped to Germany (unchosen material was slated to be destroyed). This *Papir Brigade* smuggled both books to be hidden in the Vilna ghetto and weapons to the partisans. Kacerginsky escaped the ghetto before its liquidation and joined the partisans. After liberation Kacerginsky returned to Vilna, where he helped dig up the hidden materials and ship them to the new YIVO headquarters in New York. Discouraged by Soviet control, he left for Poland and then Paris. In May 1950 he settled in Argentina, where he became a leading figure in Yiddish cultural life. While returning from a lecture tour he was killed in an airplane crash. Kacerginsky's writings are notable for their simplicity and power. His most important work chronicles, in verse, prose, and drama, the Vilna ghetto and the Jewish partisan movement. Among his books are: *Khurbn Vilne* ("The Destruction of Vilna," 1947) and *Ikh Bin Geven a Partizan* ("I Was a Partisan," 1952); in his travels after the war he collected *Lider fun di Getos un Lagern* ("Songs of the Ghettos and Concentration Camps," 1948).

[Elias Schulman / Faith Jones (2nd ed.)]

KADAN (Czech **Kadaň**; Ger. **Kaaden**), town in N.W. Bohemia, Czech Republic. Jews are first mentioned in Kadan in 1339 and 1341. Between 1465 and 1517, seven Jews were formally granted citizenship. However, after the town had bought its freedom from the local lord, the Jews were expelled in 1520. After receiving permission from Frederick II, one Jewish family settled in Kadan in 1624; more followed (mainly from *Udlice) in spite of protests by the townsmen. This new community was expelled in 1650 after the execution of a visiting Jew on charges of killing a Christian child. The body of the child was preserved in a special altar in the church (which was burned down in 1810). There were ten Jewish families in the town in 1724 and nine in 1798. More lived there from the middle of the 19th century, totaling 118 in the district in 1869 and 219 in 1881. The congregation, founded in 1874, was approved in 1884 and legally became a community in 1893. From 409 in 1910, the number of Jews fell to 116 (1.5% of the total population) in 1930. The community was dispersed at the time of the Nazi occupation of the Sudeten area and the synagogue was set on fire on Nov. 10, 1938. Most of the Jews who remained in the Protectorate were sent to the death camps.

KÁDAR, JÁN (1918–1979), film director. Born in Budapest, Kádár was imprisoned in a Hungarian labor camp during World War II. Later he worked for the Czech state film studios, and with Elmar Klos made *Death Is Called Engelchen*, which won acclaim. He became known in the West for the film *The Shop on Main Street* (1965), which starred Ida Kaminska and won an Academy Award. Kádár was linked with the writers and artists involved in the liberal movement in Czechoslovakia in 1968. In 1969 he directed the American film of Bernard Malamud's story, *Angel Levine*.

KADARI, SHRAGA (1907–1982), Hebrew author. Born in Lvov, he went in 1927 to Erez Israel, where he worked as an agricultural laborer, and later was one of the founders of *Kefar Pines. In 1936 he joined the staff of the cultural department of the *Va'ad Le'ummi. After the establishment of the State of Israel he became an official of the Ministry of Social Welfare. His stories and articles appeared in many newspapers and journals (particularly the dailies *Davar* and *Ha-Zofeh*). He published several books, including *Mi-Martef ha-Olam* (1936), *Asonah shel Alinah* (1939), *Einayim Azumot* (1945), *Ez ha-Ahavah* (1956), *Mi Yitten Boker* (1960, a novel), *Megillat Korekh ha-Sefarim* (1962), *VeHa-Boker le-Darko Oleh* (a novel, 1981), and *Shezufe ha-Lehi ha-Ahat* (1967, a collection of stories).

[Getzel Kressel]

KADDARI, MENACHEM ZEVI (1925–), Hebrew scholar and linguist. Born in Mezőkövesd (Hungary), Kaddari studied philosophy and Semitic languages at the Pazmany-Peter University of Budapest and Jewish bibliography, Bible, and Jewish philosophy at the Rabbinical Seminary (1945–46). He immigrated to Israel in 1947 and continued his academic training in Hebrew, Bible, Jewish philosophy, and Kabbalah at the Hebrew University of Jerusalem (1947–50). In 1953 he submitted his Ph.D. thesis on *Grammar of the Aramaic Language of the Zohar* (published in 1971). Teaching at Bar-Ilan University from 1961, he was appointed full professor in 1970, where he also served as dean of the Faculty of Humanities (1967–70) and rector of the University (1971–74). He also taught at several universities abroad, among them UCLA (1967), the University of Leeds, U.K. (1978), and the University of Witwatersrand, Johannesburg (1979–81). Kaddari was elected a member of the Hebrew Academy in 1973 and its vice president in 1994. He received the Israel Prize in 1999. Kaddari's major fields of research are Aramaic, Hebrew syntax, biblical and rabbinic Hebrew, and, mainly, modern Hebrew. Among his major works are *Ozar Leshon ha-Mikrah: Konkordansi'ah Mele'ah*

u-Millon Ivri ve-Angli, letters ת–י, initiated by Y. Blau and S. Loewenstamm, with whom he had already collaborated in the publication of vol. 3 (letters ו–י), and *Tahbir ve-Semantikah ba-Ivrit shel-le-aḥar ha-Mikra: Iyyunim ba-Di'akhroni'ah shel ha-Lashon ha-Ivrit*, 2 vols. (1991, 1995). A full list of Kaddari's works and scientific publications appeared in *Mehkarim ba-Lashon ha-Ivrit ha-Attikah ve-ha-Ḥadashah li-Khevod Menachem Zevi Kaddari* (ed. S. Sharvit, 1999, 413–24).

During World War II, Kaddari was active in the clandestine pioneering Zionist movement in Hungary (1943–46) and a member of the joint secretariat of the *ma'pilim* (“illegal” immigration) camps in Cyprus (1946–47). During Israel's War of Independence, he fought in the Haganah in *Gush Etzyon (*Massu'ot Yitzhak) and Jerusalem.

[Aharon Maman (2nd ed.)]

KADDISH (Aram. קָדִישׁ; “holy”), a doxology, most of it in Aramaic, recited with congregational responses at the close of individual sections of the public service and at the conclusion of the service itself. There are four main types of *Kaddish*:

(a) THE WHOLE (OR COMPLETE) KADDISH, the text of which is as follows:

Glorified and sanctified be God's great name throughout the world which He has created according to His will. May He establish His kingdom in your lifetime and during your days, and within the life of the entire house of Israel, speedily and soon; and say, Amen.

The congregational response, which is repeated by the **sheli'ah zibbur* is

May His great name be blessed forever and to all eternity. Blessed and praised, glorified and exalted, extolled and honored, adored and lauded be the name of the Holy One, blessed be He, beyond all the blessings and hymns, praises and consolations that are ever spoken in the world; and say Amen. May the prayers and supplications of the whole house of Israel be accepted by their Father in heaven; and say, Amen. May there be abundant peace from heaven and life, for us and for all Israel; and say, Amen. He who creates peace in His high places, may He create peace for us and for all Israel; and say Amen.

It is recited by the *sheli'ah zibbur* after each **Amidah* (virtually concluding the whole service), except in the morning service when it comes after the prayer *U-Va le-Ziyyon*.

(b) THE “HALF” KADDISH consists of the above text with the exception of the concluding passage, from “May the prayers and supplications ...” until the end of the prayer. It is also recited by the *sheli'ah zibbur* and functions as a link between the sections of each service. In the morning service, the “Half” *Kaddish* is recited after the psalms (**Pesukei de-Zimra*), the *Amidah* (or the **Taḥanun*, when that is said), and the Reading of the Law. In the afternoon service, it is recited before the *Amidah*; in the evening service before *Ve-Hu Raḥum* (when the special psalms before it are recited) and before the *Amidah*. It is also recited before the **Musaf* service.

(c) THE KADDISH DE-RABBANAN (“the scholars’ *Kaddish*”) consists of the whole *Kaddish* with “May the prayers and supplications ...,” however, replaced by, “[We pray] for Israel, for our teachers and their disciples and the disciples of their disciples, and for all who study the Torah, here and everywhere. May they have abundant peace, loving-kindness, ample sustenance and salvation from their Father Who is in heaven; and say, Amen.” The prayer then continues with the passage “May there be abundant peace from Heaven ...” It is recited by mourners after communal study and in the synagogue, particularly after the reading of **Ba-Meh Madlikin* (Shab. 2) on Friday nights, after the early morning service, and after **Ein Ke-Eloheinu*.

(d) THE MOURNERS’ KADDISH contains the full text of the whole *Kaddish* with the exception of the line “May the prayers and supplications ...” It is recited by the close relatives of the deceased (see: **Mourning*) after the **Aleinu*, at the end of each service, and may be repeated after the reading of additional psalms.

All four forms of the *Kaddish* are recited standing, facing Jerusalem. In some communities, the whole congregation stands, in others only the mourners. If one stands at the beginning of the *Kaddish*, however, one should not sit down before the response “May His great name be blessed ...” When the *Kaddish* is recited at the burial service, an addition, stressing the eschatological aspect of the *Kaddish*, is made to the opening paragraph. It is also added to the *Kaddish* recited at the celebration marking the conclusion of the study of a Talmud tractate (*Siyum*).

The *Kaddish* is characterized by an abundance of praise and glorification of God and an expression of hope for the speedy establishment of His kingdom on earth. The brief reference to the latter (“May He establish His kingdom”) in the usual Ashkenazi version is expanded by the Sephardim with *ve-Yazmah purkaneih ve-karev meshihei* (“May He make His salvation closer and bring His Messiah near”). The congregational response “May His great name be blessed for ever and to all eternity” is the kernel of the prayer (Sifre to Deut. 32:3). The verse is akin to Daniel 2:20 (in Aramaic), to Job 1:21, and to Psalm 113:2 (in Hebrew), and to the eulogy “Blessed be the name of His glorious kingdom for ever and ever,” which was recited in the Temple (Yoma 3:8). According to R. Joshua b. Levi, “joining loudly and in unison in [this] congregational response ...” has the power of influencing the heavenly decree in one’s favor (Shab. 119b; cf. Mid. Prov. 10).

The simple form in which the eschatological pleas are phrased and the lack of allusion to the destruction of the Temple indicate the antiquity of the *Kaddish* prayer. The opening phrase, “Magnified and sanctified be His great name in the world ...” (whose origin is Ezek. 38:23), shows affinities to the “Lord’s Prayer” (Matt. 6:9–13); similar phrases were apparently used in a variety of public and private prayers (e.g., that of thanksgiving for rain, cited in TJ, Ta’an. 1:3, 64b). The *Kaddish* prayer was not originally part of the synagogue service. The Talmud (Sot. 49a, and Rashi ad loc.) specifically records

that it first served as a concluding prayer to the public aggadic discourse which was also conducted in Aramaic. The *Kaddish de-Rabbanan* testifies to this connection. Special verses were even inserted into the *Kaddish de-Rabbanan*, for the *nasi*, *resh galuta*, and the heads of the academies (cf. Schechter in *Gedenkbuch D. Kaufmann* (1900), Hebr. part 52–4), or, as in Yemen, for such distinguished scholars as Maimonides (Letter of Nahmanides to the French Rabbis, in *Kovez Teshuvot ha-Rambam*, Leipzig edition (1859), 9a).

The *Kaddish* is mentioned as part of the prescribed synagogue daily prayers for the first time in tractate *Soferim* (c. sixth century C.E.). By geonic times, it had become a statutory synagogue prayer requiring the presence of ten adult males. The name *Kaddish* is first mentioned in *Soferim* 10:7, and the explanatory passage beginning “Blessed and praised ... etc.” (which is recited in Hebrew) was added for non-Aramaic speakers. The plea for the acceptance of the prayer (“May the prayers and supplications ... etc.”), the prayer for the welfare of the supplicants (“May there be abundant peace from heaven ...”), and the concluding passage (“He who creates peace ... etc.” cf. Job 25:2), were all later additions.

The German and Italian text, quoted above, is derived from *Seder Rav Amram* (ed. by D. Hedegard, 1951) but exhibits local variations. In the Yemenite rite, the phrase *le-ella u-le-ella* (“much beyond all praises”) is repeated all the year round, and not only during the *ten days of penitence. In Jerusalem and Safed the word *kaddisha* is added in the *Kaddish de-Rabbanan* ending “in this holy place and everywhere,” and according to the *Mahzor Romanyah*, several additions were made to the passage “May the prayers and supplication ...” On the other hand, the final invitation to the congregation to respond “amen” (i.e., *ve-imru*, “and say”) is neither in the *Seder Rav Amram* nor in other old manuscripts.

The practice of mourners reciting the *Kaddish* seems to have originated during the 13th century, at the time of severe persecutions in Germany by the Crusaders. No reference is made to it in the *Mahzor Vitry* (the comment on page 74 is a later interpolation). According to a late *aggadah* (originating in *Seder Eliyahu Zuta*), R. Akiva rescued a soul from punishment in hell by urging the latter’s sons to recite the verse “May His great name be blessed ...” The idea was already earlier expressed in *Sanhedrin* 104a. The mourner’s *Kaddish*, now recited for 11 and not the full 12 months of the mourning period (according to the Sh. Ar., YD 376:4, the longer period implies a disrespectful view of the parents’ piety), is also recited on the **yahrzeit*. It has been suggested that the *Kaddish* became the mourner’s prayer because of the mention of the resurrection of the dead in the messianic passage at the beginning. (The phrase, however, no longer occurs in most versions today.) The *Kaddish* is not properly “a prayer for the soul of the departed,” but an expression of the *zidduk ha-din* (“justification of judgment”) by the bereaved, conforming to the spirit of the maxim: “Man is obliged to give praise for the evil [that befalls him] even as he gives praise for the good” (Ber. 9:5). However, the prayer is popularly thought to be a “prayer for

the dead” to the extent that a son, in Yiddish, is often called “a *Kaddish*,” and a man is said to have died “without leaving a *Kaddish*.”

Musical Rendition

The various forms and functions of the *Kaddish* in the service are matched by a variety of musical configurations. Melodies range from simple *parlando* recitatives to elaborate solo productions, from light tunes in the popular taste to most solemn and impressive compositions. Salamone de *Rossi even set the entire text for three- and five-part chorus (*Ha-Shirim asher li-Shelomo*, Venice, 1623, nos. 1 and 16). Nevertheless, some guiding principles may be ascertained from the multiplicity of *Kaddish* tunes. In the Ashkenazi rite, the *Kaddish* before the *Amidah* (especially in the *Musaf* prayer) is distinguished by a striving for sublime melodic expression (see *Music, Jewish, Ex. 30; and *Mi-Sinai Niggunim, Ex. 1, nos. 3, 7, 9); its music is sometimes identical with that of the following *Avot* benediction. The Sephardim emphasize rather the *Kaddish* preceding *Barekhu*, by means of elaborate coloraturas (Idelsohn, *Melodien*, 2 (1922), 97, no. 50; 4 (1930), 137, no. 32; 195, no. 220), or by melodic identity with the said benediction. In the Ashkenazi synagogues, certain liturgical situations evoke *Kaddish* melodies of a definite character or form. The *Kaddish* which closes the *Musaf* prayer is preferably sung to a lively and gay tune, sometimes in a dancelike manner (earliest example notated by Benedetto Marcello in his *Estro Poetico-Armonico*, Venice, 1724–27). During festivals

 veim - ru - A - men.

A *Kaddish* melody sung before *Barekhu* in the Sephardi morning service on *Rosh Ha-Shanah*. *Barekhu* is sung to the same melody. From O. Cahby (ed.), *Liturgie Sephardi* no 65, 1959. Courtesy World Sephardi Federation, London.

the *Kaddish* over the Torah scroll and that before the evening *Amidah* are “labeled” with musical motives characteristic of the feast in question. On *Simhat Torah*, which closes the cycle of holidays, the characteristic motives of all the festivals are assembled in the “Year-*Kaddish*.”

The particular tunes anchored in local traditions are also worth mentioning, such as the so-called *Trommel* (“drumming”) *Kaddish* which used to be sung in Frankfurt on the Main on “*Purim Vinz*” – the 20th of Adar, commemorating that day in 1616 when, after the *Fetmilch persecution, the Jews were brought back into the town “with trumpets and drums” as described in Elhanan Helen’s *Megillat Vinz* (see F. Ogutsch, *Der Frankfurter Kantor*, 1930, 103, no. 319). The famous “*Kaddish*” of R. *Levi Isaac of Berdichev, *A Din-Toyre mit Got*, is a kind of introduction to the liturgical *Kaddish*, in which Levi Isaac addresses and rebukes God in an extended “prose poem” whose melody comprises elements of the High Holiday liturgy (see Idelsohn, *Melodien*, 10 (1932), xII, 29, no. 104). Leonard Bernstein’s *Kaddish* (his Symphony no. 3, 1963) for narrator, choir, and orchestra is also a kind of “lawsuit with God” centering on the *Kaddish* and is thus a descendant of Levi Isaac’s song.

[Hanoch Avenary]

Women and Kaddish

Responsa literature, historical sources, and contemporary testimony indicate that at least since the 17th century some women have recited the mourner’s *Kaddish*, both at home during *shiva* and at daily services in the synagogue. Saying *Kaddish* at the grave during the funeral was also a customary practice among devout women in certain communities. The earliest known responsum in which the issue of women and *Kaddish* is discussed appears in the late 17th-century work of R. Jair Hayyim Ben Moses Samson *Bacharach, known as the *Havvat Yair*. Based on a particular set of circumstances in Amsterdam, R. Bacharach’s responsum, which became known as “the Amsterdam case,” concludes that women may recite *Kaddish*, but the nuances of the responsum are used by various rabbis in different ways. Among those who restrict the Amsterdam case, arguing variously for limitations on women’s expression of grief through public recitation of *Kaddish*, are the *Be’er Heitev*, *Gesher ha-Hayyim*, *Mishpetei Uziel*, *Mateh Ephraim*, and *Aseh Lekha Rav*. R. Israel Meir *Lau, former Ashkenazi chief rabbi in Israel, and Reuven Fink in the U.S. are adamant in their opposition to women’s saying *Kaddish*.

While R. Bacharach, who realized that he was transforming social practice, also articulated caution, those who restrict his opinion project a general fear of women’s entering the public religious sphere. This apprehension is absent in the vocal minority of decisors who offer lenient interpretations of the Amsterdam case, often adding specific details relevant to changed social circumstances. Examples are found in the writings of R. Joseph B. *Soloveitchik, R. Aaron *Soloveitchik, R. Moshe Leib Blair, and R. Yehuda Herzl Henkin.

In 1916, Henrietta *Szold expressed her conviction that it was never intended by Jewish law and custom that women

should be exempt from positive commandments if they were able to perform them, writing, "And of the *Kaddish* I feel sure this is particularly true" (letter to Haym Peretz, in *Four Centuries of Jewish Women's Spirituality*, ed. E. Umansky and D. Ashton (1992), 164–65).

Among Modern Orthodox women at the beginning of the 21st century, the recitation of *Kaddish* is widespread. In Reform, Reconstructionist, and most Conservative practice, women recite the mourner's *Kaddish* as a matter of course and are also counted among the ten persons required to constitute the *minyán* required for communal worship. In recent years, several women have written personal testimonies about reciting *Kaddish* in Orthodox settings. These include E.M. Broner (*Mornings and Mourning: A Kaddish Journal* (1994)) and Sara Reguer and Deborah E. Lipstadt (in essays anthologized in *On Being a Jewish Feminist*, ed. S. Heschel (1983; rep. 1995), 177–81, 207–9).

KADELBURG, LAVOSLAV (1910–1995), lawyer. Kadelburg was born in Vinkovci, Croatia, and completed his secondary education there. He participated in the local Herut youth organization (1925–30) and studied law and economics. He was appointed attorney general in the High Court of the Serbian Republic; later he acted as judge in the same court, retiring in 1966. In the following years acted as judge in International Arbitration Tribunals.

Before the Nazi invasion of Yugoslavia in April 1941, he was mobilized as a reserve officer of the Royal Yugoslav Army; he was interned in POW camps in Germany throughout WWII. Upon his return, Kadelburg developed close contacts with the new regime that took over the country under Tito's leadership and became involved again in Jewish affairs. Along with Dr. Albert *Vajs (Weiss), he helped in rehabilitating the few survivors of the Holocaust and in restoring Jewish life. On Vajs's death, he carried on as the president of the renewed Federation of Jewish Communities in Belgrade. He held that position for many years and was considered the mainstay of Jewry in that area. He was also a member of the Executive of the World Jewish Congress.

Commanding several languages, he was a widely respected figure in European Jewish assemblies, where his advice was often sought.

[Zvi Loker (2nd ed.)]

KADESH (Heb. קָדֵשׁ), name of several places in Erez Israel and Syria to which a sacred character is attributed.

(1) Kadesh, Kadesh-Barnea (Heb. קָדֵשׁ בְּרִנֵּעַ, קָדֵשׁ), an important oasis situated on the southern border of Canaan (Num. 34:4; Josh. 15:3; Ezek. 47:19; 48:28) in the wilderness of Zin (Num. 20:1; 27:14; 33:36; Deut. 32:51) – part of the wilderness of Paran (Num. 20:16) – at a distance of an eleven days' journey from Mt. Horeb (Deut. 1:2). Kadesh is alternatively called En-Mishpat ("spring of judgment"; Gen. 14:7) and the "waters of Meribah" ("strife," Num. 20:13, 24; 27:14; Deut. 32:51), names which indicate its special role as a sacred place of judgment and assembly for the desert tribes.

Kadesh-Barnea appears in the stories of Abraham (Gen. 16:14; 20:1) and in the description of the expedition of Chedorlaomer and his allies; Kadesh-Barnea, here called En-Mishpat, is said to have been inhabited by Amalekites (Gen. 14:7). During the Exodus it served as an assembly point for the Israelite tribes in the desert (Deut. 1:46). Some scholars regard it as the first amphictyonic center of the Israelites. From Kadesh-Barnea spies were sent to explore Canaan (Num. 13:26); the attempt was made to penetrate into Canaan which was prevented by Arad and Hormah (Num. 14:40–45; 21:1; 33:36–40); messengers were sent to the king of Edom; and from here the Israelites started out on their eastward march to Transjordan (Num. 20:14ff.; 33:36ff.; Deut. 1:46ff.; Judg. 11:16ff.). Biblical tradition associates Kadesh-Barnea with the family of Moses in particular: here Moses drew water abundantly from the rock; here he and Aaron were punished for their lack of faith by being denied entrance into the land of Canaan (Num. 20:2ff.); here his sister Miriam died and was buried (Num. 20:1); and Aaron died nearby at mount Hor (Num. 20:22–29; 33:37–39). Kadesh-Barnea has been identified with the group of springs 46 mi. (75 km.) south of Beer-Sheba and 15 mi. (25 km.) south of Nizzanah. The name is preserved at the southernmost spring 'Ayn Qudays, but 'Ayn al-Qudayrāt to the north of it is of much greater importance being a rich spring which waters a fertile plain. In its vicinity a large fortress from the time of the Judahite kings was discovered. Most scholars therefore identify Kadesh-Barnea with the larger spring; the entire group of springs may have originally been called Kadesh-Barnea and the name survived at the southern one despite its lesser importance. During the Sinai campaign a large Israelite fortress was discovered also above 'Ayn Qudays as well as numerous remains in the whole region from the Middle Bronze I (c. 2000 B.C.E.) and Israelite periods.

Large-scale excavations in 1976 and 1982 uncovered three superimposed fortresses on the site. The first was dated to the 11th century, the second to around the time of Hezekiah and measured 65 ft. × 195 ft. (20 × 60 m.) with six rectangular towers and a moat and glacis on three sides, and the third to the seventh century, probably destroyed by Nebuchadnezzar. Inscriptions indicate that the inhabitants of the fortress probably spoke Hebrew.

(2) Kedesh in Galilee (Heb. קָדֵשׁ בְּגָלִיל), one of the principal cities in Upper Galilee in the Canaanite and Israelite pe-

riods. In the opinion of some scholars, it is mentioned in the list of cities conquered by Thutmose III (c. 1468 B.C.E.) and depicted on a relief of Seti I (c. 1300 B.C.E.); others, however, argue that these references are to Kadesh on the Orontes. In the Bible, “Kadesh in Galilee in the hill country of Naphtali” appears in the list of defeated Canaanite kings (Josh. 12:22), as a city of refuge (Josh. 20:7) and a levitical city (Josh. 21:32; 1 Chron. 6:61), and as one of the fortified cities of the tribe of Naphtali (Josh. 19:37). It was conquered by Tiglath-Pileser III in his expedition in 733/2 B.C.E. (II Kings 15:29) but continued to exist in the Second Temple period eventually becoming a Hellenistic city in the territory of Tyre. Near Kadesh, Jonathan the Hasmonean defeated the army of Demetrius II (1 Macc. 11:63–73; Jos., Ant. 13:154). It is identified with Tell Qadis, a large tell overlooking the fertile plateau west of the Huleh, and containing remains and fortifications from the Canaanite, Israelite, and later periods. A Roman temple was partially excavated in 1981–84, dedicated under Hadrian in 117/8 C.E.

(3) Kadesh-Naphtali (Heb. קְדֵשׁ נַפְתָּלִי), the birthplace of Barak, son of Abinoam, located in Galilee in the territory of the tribe of Naphtali (Judg. 4:6, 9–11). It is generally identified with Kadesh (2) but this seems unsound for the following reasons:

(a) Kadesh Upper Galilee is far from Mt. Tabor in the vicinity of which Deborah’s battle with the Canaanite kings took place;

(b) “Elon-Bezaananim, which is by Kadesh” (Judg. 4:11) is also known from the border description of Naphtali where it is situated between the Tabor and the Jordan (Josh. 19:33).

Kadesh-Naphtali should therefore be sought east of Mount Tabor and in this area Khirbat al-Kadish near Poriyyah which contains extensive remains from the early Israelite period has been proposed as the location of the site.

(4) Kadesh on the Orontes, a major city in the Canaanite period on the Orontes River, identified with Tell Nabī Mind south of Lake Homs. Together with Megiddo, Kadesh headed the coalition of Canaanite kings against Thutmose III in their great battle in c. 1468 B.C.E. Although confined with the other defeated kings within the walls of Megiddo, the king of Kadesh succeeded in escaping the Egyptian siege and Kadesh was conquered only during Thutmose’s sixth campaign, in his eighth year. In the 14th century B.C.E. the city came under Hittite influence, as indicated by the *El-Amarna letters. It was conquered at the beginning of the 13th century by Seti I as shown in a stele discovered by Pézard in his excavations at Kadesh. A relief depicting Seti’s conquest may be preserved in the Karnak temple in Egypt but some scholars interpret it as referring to Kadesh in Galilee. During the reign of Ramses II, a famous battle between the Egyptians and the Hittites (c. 1280 B.C.E.) took place near Kadesh; it actually terminated in a defeat for the Egyptians and Kadesh remained in the possession of the Hittites. According to the peace treaty concluded after the battle, the border between the two kingdoms in the Lebanon al-Biq’a was moved south of Kadesh. Further information on the city is lacking. It was apparently destroyed in the invasion of

the Sea Peoples at the beginning of the 12th century B.C.E. and its place was taken over in the Israelite period by Riblah on the Orontes south of Kadesh. The border of Lebo-Hamath in the Bible corresponds to the Egyptian border south of Kadesh.

Excavations from 1975 reveal a settlement at the site in the sixth millennium B.C.E. and then reoccupation in the third millennium. The settlement was apparently destroyed around 1600 B.C.E. and reestablished by the time mentioned in the sources, i.e., 1468.

[Yohanan Aharoni]

KADIMAH (Heb. קְדִימָה; “Forward”), semi-urban settlement in central Israel. Kadimah was founded as a moshav in 1933. It was initially based almost exclusively on citrus groves, but suffered from the citrus crisis during World War II. After 1948 an immigrant camp (*ma’barah*) was established there and replaced later by permanent housing. In 1950 it received municipal council status. In 1969 Kadimah had 3,920 inhabitants, jumping to 9,130 in 2002 with an annual growth rate of 4.6%. Its municipal area, extending over 5 sq. mi. (13 sq. km.), included Ilanot (“Trees”), the national forest tree research station affiliated to the Agricultural Research Institute of Rehovot. In 2003 Kadimah was united with the nearby settlement of *Zoran, and the two became known as Kadimah-Zoran.

[Efram Orni / Shaked Gilboa (2nd ed.)]

KADIMAH, the first Jewish national students’ association, established in Vienna in 1882. The founders and leaders of the *Akademischer Verein Kadimah* were Ruben *Bierer, a physician from Lemberg and the oldest of the group, Moritz Tobias *Schnirer, a student of medicine from Bucharest, and Nathan *Birnbaum. Under the impression of the Russian pogroms, they were united in the conviction that only “the struggle against assimilation and the fostering of Jewish peoplehood are a barrier against the destruction of Judaism.” The three decided to found a Jewish students’ association at Vienna University that would be “a center for the cultivation and dissemination of the national idea and a workshop for the development of Jewish leadership for the future.” The group was greatly influenced by the Hebrew writer *Perez Smolenskin, who was then living in Vienna and editing the nationalist monthly *Ha-Shahar*. He became friendly with the group and named it “Kadimah,” with the double meaning *kedmah* – eastward, i.e., to Erez Israel – and *kidmah* – forward. In autumn

1882 the association was founded in Bierer's house in Vienna, although the governmental permit for the organization was issued only in March 1883. Because of the watchful eye of the Vienna police, the aim of the association was defined as "cultivation of Jewish literature and scholarship to the exclusion of any political tendency." In secret, however, every new member was requested to adopt a credo of three points: struggle against assimilation, Jewish nationhood, and the settlement of the land of Israel as a means toward Jewish independence. At the first official meeting (May 5, 1883) Schnirer was elected to head the association and P. Smolenskin and J.L. *Pinsker, who inspired the association, were elected as honorary members.

Already in its first year the group established its own library and reading room, housing German and Hebrew books, and regularly organized talks on Jewish nationalist topics. The publication of the group, **Selbst-Emancipation!* (renamed the *Juedische Volkszeitung* in 1894), was edited by N. Birnbaum and named after Pinsker's pamphlet **Autoemancipation!* (1882), which was of great influence on its members.

The first act of the association was to paste posters in German and Hebrew on the walls of Vienna University that proclaimed loudly the message of Jewish nationhood. This step was a daring one, since the majority of the Jewish students as well as the Viennese Jewish bourgeoisie opposed Kadimah's program. The association was exposed to attacks, but many young people from both Eastern and Western Europe joined it. From its beginnings Kadimah adopted customs of traditional German student associations, like regular beer drinking (*Kneipen*) and assemblies (*Kommers*), and in the early 1890s even changed into a "dueling fraternity." By then Kadimah had become a central institution of Jewish national activity and an educational framework for many who later became associates of *Herzl. Following the example of Kadimah, Jewish-nationalist associations and student fraternities were founded all over Europe.

[Getzel Kressel / Mirjam Triendl (2nd ed.)]

KADISHMAN, MENASHE (1932–), Israeli painter and sculptor. Kadishman was born in Tel Aviv, the son of Russian pioneers. When he was 15 his father died and he had to give up his education, leave school, and help his mother. During his army service Kadishman served as a shepherd at kibbutz Ma'yan Barukh. This experience made an indelible impression on him that was later expressed in his art. In 1959 Kadishman followed Itzhak *Danziger's advice and went to London to study sculpture in the St. Martin School of Art. During the 13 years that he spent in London he refined his Minimalist Conceptual style. Most of his sculptures from that period were

made from steel or aluminum and some of them included glass, too. The common theme in these sculptures was tension. The forms assembled in the sculptures created a strange posture that was contrary to the laws of nature. The ability of the sculptures to stand without falling constituted their formal power. Kadishman installed some of these sculptures in Israel on his return to his homeland (*Rising*, 1974, Habimah Square, Tel Aviv).

In 1978 Kadishman represented Israel in the Venice Biennial. He created an unforgettable performance in a sheep pen. Kadishman stood, as a shepherd, in the middle of the Israeli pavilion and painted the backs of the sheep blue. The smell of the pavilion and the bleating sounds attracted the curious, integrating conceptual art and biblical imagery.

The sheep motif returned in Kadishman's art in different kinds of media. Over time it became a ram and in 1983 the whole scene expanded to become the Sacrifice of Isaac. The inspiration for this subject was his son's military service in Lebanon. In the paintings and the sculptures that deal with the biblical scene Abraham appears as a secondary figure while the ram's image increases in significance (*Sacrifice of Isaac*, 1982–85, Jewish Museum, New York).

Another series of sculptures deal with birth. The mother and infant are described as silhouettes in exaggerated postures of pain. Toward the end of the 1990s the single motif of a screaming head was left in the sculptures. In a very impressive installation Kadishman placed hundreds of heads on the floor under the title *Shalekhet – Fallen Leaves* (1997–99, Julie M. Gallery, Tel Aviv). The reference to the famous painting of Edward Munch as well as the Holocaust symbolism was unmistakable. The romantic title was provocative, since the work had such a different meaning.

In 1995 Kadishman received the Israel Prize.

[Ronit Steinberg (2nd ed.)]

KADMAN (formerly **Kaufman**), **GURIT** (1897–1987), Israeli folk-dance teacher. Gurit Kadman, who was born in Leipzig, Germany, settled in Erez Israel in 1920 and for 18 years taught dancing and gymnastics in schools and kibbutzim. Through her initiative, the first folk-dance festival was held in kibbutz *Daliyyah in 1944 and the folk-dancing movement grew in popularity under her aegis, demonstrating the evolution, under various influences, toward a national style. She was awarded the Israel Prize in 1981 for dance. In her book, *Am Roked* (1968; *The New Folkdances of Israel*, 1968), she maintained that subtle changes had taken place over the decades; some of the dance movements introduced by early immigrants from Poland, Romania, Russia, and Yemen were becoming more restrained and Oriental, and in some of the later creations she detected an Eastern Mediterranean quality reminiscent of Greek and Bulgarian characteristics.

[Yohanan Boehm]

KADOORIE (Heb. קדוריה), Israel agricultural school at the northern foot of Mt. Tabor in Lower Galilee, founded in 1933 and named for Sir Elly Silas *Kadoorie whose contribution to the Palestine Mandate government made possible the establishment of the Jewish school and a similar school for Arabs at *Tül Karm. During the Arab riots of 1936–39, the *Haganah organized Kadoorie's pupils for self-defense, and during World War II, the nucleus of the *Palmaḥ was formed there, making the school a Palmaḥ training and organizational center. In agricultural education Kadoorie emphasized branches of hill farming.

[Efraim Orni]

KADOORIE, family with large business interests in the Far East, known for its philanthropy. The founder of the family, ṢĀLIḤ KADOORIE (d. 1876), was a well-known philanthropist in *Baghdad. His sons, SIR ELLIS (1865–1922) and SIR ELLY SILAS (1867–1944), were born in Baghdad. At the end of the 19th century they settled in *Hong Kong, developing their business in *Shanghai and other cities. Sir Ellis endowed a chair in physics at Hong Kong University and bequeathed funds for the building of two agricultural schools for Jews and Arabs in Mesopotamia. He also contributed generously to the Anglo-Jewish Association for education. He and his brother also established schools in Baghdad and Bombay. Sir Elly, an active Zionist from 1900, was president of the Palestine Foundation Fund in Shanghai and established agricultural schools in Palestine, as well as contributing a large sum toward the construction of the Hebrew University. In Baghdad in 1911 he established a school in honor of his wife Laura Kadoorie, as well as a girls' sewing school in 1922, also named after her; he set up an ophthalmic hospital in 1924 which was named after his mother Rima, with a trust for its maintenance. In 1935 he built a training school for the blind and in 1926 a club for women. In both *Basra and Mosul he founded separate schools for boys and girls, as well as a girls' sewing school. In 1934 he established in Kirkuk a school for boys and two schools for girls. He was knighted in 1926. His sons, BARON LAWRENCE (see next entry) (1899–1993) and SIR HORACE (1902–1995), continued their father's widespread business activities in Hong Kong. In 1951 they established the Kadoorie Agricultural Aid Loan Fund, which has assisted over 300,000 Chinese refugees. They also gave substantial support to the small Hong Kong Jewish community. A knighthood was conferred on Lawrence in the 1974 New Year Honours List for his manifold civic and philanthropic services in Hong Kong, and in the 1981 Queen's Birthday Honours he was made a life peer.

[Rudolph Loewenthal]

KADOORIE, LAWRENCE, BARON (1899–1993), Hong Kong businessman and communal leader. Kadoorie was descended from prominent Sephardi business families in Hong Kong and Britain; his mother was a *Mocatta. His father built

up a substantial business presence in Hong Kong as a banker and company financier, and, in particular, as head of China Power and Light, a major firm on the island and the mainland. Kadoorie was educated at Clifton College in England and then in Shanghai, where the family owned significant property. Kadoorie and his family were interned by the Japanese during World War II. After losing his mainland holdings following the Communist takeover in 1949, Kadoorie focused exclusively on Hong Kong. As head of Sir Elly Kadoorie & Sons, he was one of the most influential businessmen in the colony, holding 14 chairmanships in local companies and serving on Hong Kong's legislative and executive councils. He was knighted in 1974 and received a life peerage on the recommendation of Hong Kong's governor in 1981, possibly the last senior honor to be conferred on a British colonial figure. Shortly before receiving his title, Kadoorie's firm had placed an order worth £600 million with British companies, the largest order in Hong Kong's history. When he died, his fortune was estimated by *Fortune* magazine at \$3.3 billion. Baron Kadoorie was closely associated with Jewish and Sephardi causes and charities.

KADOORIE, SASSON (1885–1971), *Baghdad rabbi and community leader. Born in Baghdad, Kadoorie was educated at the rabbinical seminary there and later appointed head of the rabbinical court of the community. He was chief rabbi of Baghdad from 1927 to 1929. Before being appointed to this post, he supported Zionist institutions such as the *Jewish National Fund, but later he rejected *Zionism, to the anger of his congregation. Despite the fact that the Iraqi government supported him, the community forced him to resign. In 1932 he became chairman of the community and served in this capacity until 1949, when the members of the community again compelled him to resign, suspecting him of helping the authorities to suppress the Jewish national movement in Iraq. Together with Menahem and Ezra *Daniel, Kadoorie advocated opposition to Zionism in order to prevent the persecution of Iraqi Jewry by the Muslim population. In 1953 he resumed office as community chairman and also became again chief rabbi of the community.

KADUSHIN, MAX (1895–1980), U.S. rabbinic scholar. Kadushin was born in Minsk, Russia, and immigrated with his family to Seattle, Washington in 1897. He earned his B.A. at New York University (1916). He was ordained by the Jewish Theological Seminary of America in 1920, where he also received his D.H.L. in 1932. Kadushin held pulpits in New York City (Temple Israel, 1921–26) and left to seek distance from his mentor, Rabbi Mordecai Kaplan, in Chicago (Humboldt Blvd. Temple, 1926–31). A Reconstructionist at the time, Kadushin established the Midwest Council of the Society for the

Advancement of Judaism. Despite his success in the pulpit, he was drawn to the university and became the Hillel Foundation director at the University of Wisconsin (1931–42). He resigned and moved to New York in 1942, where he taught at the Hebrew High School of Greater New York (1942–52) and then had a series of pulpits, each of short duration. He later taught at the Academy for Higher Jewish Learning in New York, an interdenominational rabbinical school, of which he was also dean (from 1958). In 1960, he received a coveted academic appointment to the faculty of JTS, where he taught ethics and rabbinic thought. Kadushin's scholarly interest was the explication of talmudic thought. Basing his observations on the latest rabbinic texts and historical investigations, Kadushin explained the unique character of the rabbinic mind. Rather than being random and disorganized, Kadushin believed that the rabbis' thought-world was made up primarily of value concepts, which were expressed in such noun forms as *berakhah* ("blessing"), *zedakah* ("charity"), and *derekh erez* ("proper behavior," "ethics"). Kadushin believed that four rabbinic concepts play a dominant role in integrating the entire complex of concepts: *Middat ha-Din* (God's justice), *Middat Raḥamim* (God's love of mercy), Torah, and Israel. In addition, rabbinic thought reflects certain "emphatic trends," i.e., love, the individual, universality, and the experience of God, which Kadushin calls "normal mysticism." His major works are *The Theology of Seder Eliahu; A Study in Organic Thinking* (1932); *Organic Thinking: A Study in Rabbinic Thought* (1938); *The Rabbinic Mind* (1952, 1965); *Worship and Ethics: A Study in Rabbinic Judaism* (1964). His wife EVELYN GARFIEL was a psychologist and author. She taught at the universities of Chicago and Wisconsin and wrote *The Service of the Heart* (1958) on the prayer book. Together they created one of the first Hebrew-speaking homes in America.

[Michael Berenbaum (2nd ed.)]

KAEL, PAULINE (1919–2001), U.S. film critic. Probably the most influential film critic of her time, Kael, who was born in Petaluma, Calif., did not write movie criticism until she was 35. She reviewed movies for *The New Yorker* magazine from 1968 to 1979 and, after working in the film industry, again from 1980 to 1991. Enchanting her fans and infuriating her foes, she was rarely dull and often sharp and funny, with an intellectual bent. She was outspoken, sometimes to a fault, promoting her favorite films (*Last Tango in Paris*), actors and directors and dismissing some sacred cows. Always provocative, her writing style bred a legion of acolytes, known as Paulettes. Kael's appetite for movies began in childhood as the daughter of immigrants from Poland. Her father was a gentleman farmer and moviegoer, and her own trips to see films began early. Among her early favorites were the *Marx Brothers comedies *Monkey Business* of 1931 and *Duck Soup* of 1933. In 1936 she enrolled at the University of California at Berkeley, where she majored

in philosophy. However, she went to New York with a friend, the poet Robert Horan, for about three years. She returned to California, tried writing plays and helped make experimental films. Married and divorced three times, she supported herself and her daughter by writing advertising copy, clerking in a bookstore, and working as a cook, a seamstress, and a textbook writer. In 1953, while she was in a coffee shop in the San Francisco area, the editor of *City Lights* magazine asked her and a friend with whom she was arguing about a movie to review the Charlie Chaplin film *Limelight*. The friend turned in nothing. Kael's review called the film "slimelight," and a career was born. Kael began being published in magazines like *Sight and Sound* and *Partisan Review*, and her criticism was broadcast on a Berkeley listener-supported radio station. While managing an art theater, she wrote funny, feisty reviews for the programs and she began lecturing on film at universities in San Francisco and Los Angeles. She was 46 when her essays in *Partisan Review* led to an offer to publish her first book, *I Lost It at the Movies*, a collection of her articles and broadcasts. It became a bestseller. In it she praised movies like Jean Renoir's *Grand Illusion*, Vittorio de Sica's *Shoeshine*, and Martin Ritt's *Hud*. She attacked other critics, derided materialistic movie magnates, and attacked the pretensions of Alan Resnais's *Last Year at Marienbad*, calling it "the snow job in the ice palace." In 1968 she was invited to review for *The New Yorker*. Her first review was virtually the only rave that *Bonnie and Clyde* received in New York, but it compelled other critics to reconsider their assessments. Her favorite actors included Marlon Brando, Nicolas Cage, Sean Connery, Paul Newman, Diane Keaton, Anjelica Huston, Jessica Lange, and Debra Winger. She championed films of the 1970s like Francis Ford Coppola's *Godfather* and *Godfather, Part II*, and Martin Scorsese's *Mean Streets* and *Taxi Driver*. Her reviews and essays were assembled in a series of books whose double-entendre titles suggested the intimacy of her love affair with movies: *Kiss Kiss Bang Bang*, *Going Steady*, *Deeper into Movies*, *Reeling*, *When the Lights Go Down*, *Movie Love*, *Hooked* and *For Keeps*. In 1991, at 71, after 22 years at the magazine, Kael retired from regular reviewing.

[Stewart Kampel (2nd ed.)]

KAEMPF, SAUL ISAAC (1818–1892), rabbi and Orientalist. Kaempfer, who was born at Lissa (Leszno), Poznan, was a disciple of Akiva *Eger there. He later studied at the University of Halle where he was a student of *Gesenius. In 1845 he became a preacher in Prague and in 1858 professor of Semitics at the University of Prague. His works include the two-volume *Nichtandalusische Poesie andalusischer Dichter aus dem 11., 12. und 13. Jahrhundert* (2 vols., 1858), an important pioneering contribution to the study of Hebrew poetry; a biography of R. Akiva Eger with a eulogy at his death (1838); *Mantik Sod* (1861), a defense of Z. *Frankel's *Darkhei ha-Mishnah* against S.R. *Hirsch (1861); popular German translations of the *maḥzor* (1854) and of the *siddur* (1874), both following the rite of his temple in Prague (1874); *Das Ruchmen Moab's, oder*

die *Inscription auf dem Denkmal Mesa's* (1870); and collections of sermons and poetry.

[Jacob Hirsch Haberman]

KAF (Heb. כָּף; כּ, כ), the eleventh letter of the Hebrew alphabet; its numerical value is 20. In the Proto-Sinaitic and early Proto-Canaanite inscriptions the *kaf* was drawn as a pictograph of the palm of the hand  and hence its name. In the later Proto-Canaanite and in the early Phoenician scripts the letter was represented by three fingers meeting at a common base . From the late tenth century B.C.E. and onward a downstroke was added . The *kaf* developed in the various branches the following variations: כּ, כ, כּ, כּ (Phoenician); כּ, כּ, כּ (Hebrew); and כּ, כּ, כּ (Aramaic). From the fourth century B.C.E. Aramaic script the *kaf* (as well as *mem*, *nun*, *pe*, and *zadi*) in medial position began to bend its downstroke to the left, toward the next letter within the word, and the long downstroke was used only in the final forms. The distinction, which survived also in Syriac and Nabatean, is clear in the Jewish script: כּ (medial), כּ (final).

The Greek *kappa* – the ancestor of the Latin “K” – developed from the ninth-century Phoenician *kaf*. See *Alphabet, Hebrew.

[Joseph Naveh]

KAFAH (Kafih), YIHYE BEN SOLOMON (1850–1932), Yemenite scholar. Kafah was orphaned as a child and was brought up by his grandfather. Though a goldsmith by trade, he dedicated most of his life to study and teaching. He excelled in *halakhah* and many of the responsa of the *bet din* of San'a which were sent to inquirers from Yemen and other parts of the world were written by him. He studied the works of medieval Jewish scholars and Haskalah literature while his preoccupation with secular studies and languages (Arabic and Turkish) and his connections with scholars outside Yemen rendered him unique among his Yemenite contemporaries. Especially worthy of mention is his correspondence with A.I. *Kook and Hillel *Zeitlin concerning matters of Kabbalah. His study of philosophy and Haskalah literature and his contact and discussions with intellectuals and scholars such as Joseph Halevy and Eduard Glaser constituted a turning point in his mode of thought. The Young Turk revolution was also a factor in arousing Kafah's desire for reform, and he sought to introduce reforms in the social life of the Jews in all areas: in the way of thought, methods of education, prayer and study, in customs and superstitions (occult medicine, amulets, charms, etc.). For this purpose he set up the movement of Darda'im (a combination of Dor De'ah, after the learning and intellectualism which characterize the movement, and the name of one of the four ancient sages, Darda, who is mentioned in 1 Kings 5:11 [4:31]). This movement, which developed before World War I, was a microcosm of the Enlightenment of 18th-century European Jewry, which it resembled in its aspiration

for learning and reform in Jewish life. It led to a certain intellectual revival, but provoked a storm in the life of the community. Kafah wrote *Sefer Milhamot ha-Shem* (1931), which sought to prove that the Kabbalah harms the true unity of God. In his *bet midrash* he directed the study of Torah in a new spirit, away from the study of homiletics, allegories, and mystical interpretation and toward the simple meaning of the Torah and the study of philosophic speculation. His method of teaching developed a sense of reflection and criticism. In his time the writings of Maimonides were again fully studied. Previously Yemenite Jewry only studied the *Mishneh Torah*, but from this time Maimonides' other (Arabic) works were also studied, as were other classics, including the *Kuzari* of Judah Halevi and *Hovot ha-Levavot* of Bahya ibn Paquda. Kafah was also interested in the writings of the *rishonim*, both of Yemenite origin and others whose works reached Yemen. He spent considerable time searching for manuscripts, copying them, and preserving them.

[Yehuda Ratzaby]

In Jerusalem in 1914 the pamphlet *Amal u-Re'ut Ruaḥ ve-Ḥaramot u-Teshuvatom* was published, including the excommunication of Kafah by the Jerusalem rabbis and his reply. The pamphlet characterizes the energetic struggle of the movement against the Zohar and kabbalistic literature. Defending the Kabbalah, Yemenite rabbis answered it in *Emunat ha-Shem* (1937).

BIBLIOGRAPHY: *Shevut Teiman* (1945), 166–231; Yishayahu, in: *Harel* (1962), 255–8; S. Korah, *Iggeret Bokhim* (1963).

KAFAH (Kafih, כּפּאָה), YOSEF (1917–2000), Israeli rabbi and scholar, grandson of Yiḥye *Kafah, who was born in *San'a, *Yemen, first became a gold- and silversmith there and also owned a textile business. In 1943 he emigrated to Palestine and worked as a gold- and silversmith in Tel Aviv. Eventually, he gave up his trade and settled in Jerusalem where he enrolled in the Merkaz ha-Rav yeshivah. In 1950 Kafah was appointed a member of the *bet din* of Tel Aviv and a year later of that of Jerusalem.

Encouraged by M. Berlin (*Bar-Ilan), Kafah began to publish research in Yemenite Jewish literature and translated important works, written in Arabic, into Hebrew, including an edition of Maimonides' commentary on the Mishnah containing the Arabic text with a new Hebrew translation and notes (1963–68), and a three-volume edition (1963–68), consisting only of the translation. His scholarly editions of Arabic texts with Hebrew translation include: the Yemenite Nethanel b. Isaiah's commentary on the Pentateuch, *Me'or ha-Afelah* (1957); Saadiah's translation and commentary on Psalms (n.d.); Nethanel b. (or al-) Fayyumi's *Gan ha-Sekhalim* (1954, “Garden of Intellects”); and a collection of various translators and commentators on the Five Scrolls (1962); Saadiah's *Emunot ve-De'ot* (1970); Maimonides' *Book of Precepts*, his *Guide*, and his epistles to the Yemen and on resurrection with a concordance of biblical references in all his writings (all in 1971). He also edited a commentary by Saadiah on the Pentateuch (1963)

and on Psalms (1966); Isaac Alfasi's *Halakhot on Hullin* (1960); Abraham b. David of Posquière's *She'elot u-Teshuvot* ("Responsa," 1964) and his ritual treatise *Ba'alei ha-Nefesh*, with Zerahiah ha-Levi's strictures *Sela ha-Mahaloket* (1964); the responsa of Abraham b. Isaac (of Narbonne; 1962), and those of Yom Tov b. Abraham (Ritva; 1959). He translated Nathan b. Abraham's commentary on the Mishnah from the Arabic (1955). In the field of liturgy he edited a *siddur*, *Shivat Ziyon* (1952), and a Passover *Haggadah* according to the Yemenite rite with commentaries translated from the Arabic (1952). An important contribution to the history of Yemenite religious culture and folklore is Kafah's *Halikhhot Teiman* (1961). He received the Israel Prize in 1969 for his translation of Maimonides' commentary on the Mishnah. His translation of Maimonides' *Guide for the Perplexed* appeared in 1972 along with his translation of Ibn Pakuda's *Hovot ha-Levavot*. Kafah went on to write a total of 83 books and 182 articles. His collected writings, *Rav Yosef Kafah: Ketavim*, appeared in three volumes in 1989. His *magnum opus* was a 23-volume edition of Maimonides' *Mishneh Torah*. Kafah's edition contains a corrected text according to Yemenite manuscripts, as well as cross-references to all of Maimonides' other work and Kafah's own concise commentary. Despite his contribution in translating and publishing the works of Saadiah Gaon and the relatively large corpus of medieval Yemenite philosophical works, the center of Kafah's intellectual universe was Maimonides. Kafah never founded or taught in a yeshiva. Aside from his work as a rabbinical judge, he was the rabbi of a synagogue in Jerusalem where he gave both daily and weekly classes, many of which were devoted to the study of Maimonides. These classes were attended both by his congregants and by many others.

In 1969, Kafah was appointed to the Rabbinical Council of the Israeli Chief Rabbinate. He became a member of the Rabbinical High Court in 1970. Throughout his life, he received numerous prizes. Aside from the 1969 Israel Prize, he received the Rav Kook Prize from the Municipality of Tel Aviv-Yaffo twice, in 1964 and 1986. He received the Bialik Prize in 1973, the Katz Prize in 1986, and the Yizhak Ben-Zvi Prize in 1994 for his work on Yemenite Jewish communities. In 1997 he received an honorary doctorate from Bar-Ilan University. When asked why he never entered politics, Kafah answered that instead of trying to understand ministers and MKs, he would rather devote himself to understanding the commentaries on the *Mishneh Torah*. He retired from the Rabbinical Court in 1988 at the age of 70 and from the Rabbinical Council in 1997.

Known as a very precise person, who was always on time and never long-winded in speech or in print, Kafah was a unique rabbinic figure. His legacy includes historical works alongside the traditional rabbinic commentaries and halakhic responsa. At the same time, contrary to current trends, Kafah viewed the scientific and medical statements made in talmudic and medieval Jewish literature within their historical context. If these statements contradicted modern science, then they were to be discarded. Kafah contended that these statements were actually the opinions of the non-Jewish scientists

of those eras and therefore had no lasting authority. On the other hand, Kafah is quick to point out that this proves that these ancient Jewish sages did study science, thus teaching us the great value in studying science today. Kafah viewed scientific knowledge as necessary for forming firm religious convictions that are the essence of Jewish belief.

[Alexander Carlebach / David Derovan (2nd ed.)]

KAFKA, BRUNO ALEXANDER (1881–1931), Czechoslovak jurist. Born in Prague, Kafka was the son of a lawyer and a cousin of Franz *Kafka. He became a professor of law at the German University of Prague in 1918 and was the author of several works on civil and family law, including *Die eheliche Guetergemeinschaft* (1906) and *System des buergerlichen Rechtes* (1920). He also served on the commission for the reform of the Czechoslovakian code of civil law as an expert on family law. He was dean of the faculty of law on several occasions and was elected rector of the University of Prague in 1931, but died before taking office. Kafka entered politics in 1917 and became editor of *Bohemia*, the oldest German-language newspaper in Czechoslovakia. He sat in the Czechoslovakian parliament as a representative of the German Democratic Liberal Party, of which he was a founder. It advocated cooperation among the various national groups in the Republic and secured the cooperation of leading industrialists and intellectuals. Kafka converted to Catholicism.

[Yehuda Gera]

KAFKA, FRANTIŠEK (1909–1991), Czech author. His novel *Krutá léta* ("The Cruel Years," 1958), notable for its combination of poetic fantasy and reality, vividly describes the Lodz ghetto during the Nazi era. He also adapted for broadcasting his namesake Franz Kafka's *Letters to Milena*.

[Avigdor Dagan]

KAFKA, FRANZ (1883–1924), Czech-born German novelist, whose work has had an enormous impact on western art and literature. Kafka, who was born and raised in Prague, studied law at the German University there. He worked in a law office and then for an insurance company, writing only in his spare time. A tyrannical father greatly affected Kafka's psychological development. He never married, but three women played an important part in his life. The first was Felice Bauer, known only as F. or F.B. from Kafka's Diaries until she sold his letters to her to Schocken in 1955; they were finally published in 1967 as *Briefe an Felice (Letters to Felice)*, 1973). Kafka met her in 1912 and they were engaged twice before Kafka finally broke off their tortured relationship in 1916. Representing for Kafka the "real" world, the world of home and family, she could not overcome the pull of Kafka's other world, the

world of his literary imagination. The second woman was the journalist Milena Jesenska, wife of the Jewish intellectual Ernst Pollak, with whom he maintained a close relationship from 1920; the last was Dora Dymant, a Polish Jewess who nursed him in his last illness. During his lifetime, Kafka published some collections of sketches and stories: *Betrachtung* (1913); *Das Urteil* (1916); *Die Verwandlung* (1916; *The Metamorphosis*, 1937); *In der Strafkolonie* (1919; *The Penal Colony*, 1948); and *Ein Landarzt* (1919; *The Country Doctor*, 1945). Kafka suffered from migraine and insomnia for years. In 1917 his illness was diagnosed as tuberculosis, and he spent much of the rest of his life in a sanatorium. He deposited his manuscripts with his close friend and eventual biographer, Max *Brod, and when he was dying left instructions that they were to be burnt. Brod, however, was fully aware of the importance of Kafka's work, and succeeded in getting it published. Kafka's most famous novels are *Der Prozess* (1925; *The Trial*, 1937); *Das Schloss* (1926; *The Castle*, 1930); and *Amerika* (1927; *America*, 1938). Between 1925 and 1937 Brod published Kafka's collected works, together with his *Tagebuecher und Briefe*.

The action in most of Kafka's books is centered in the hero's unremitting search for identity. The nature of this identity is never revealed and can only be vaguely conjectured from the obstacles placed in the hero's path and his failure to reach his goal. The story generally begins with an event outside normal everyday experience: "Someone must have been telling lies about Joseph K. for without his having done anything wrong, he was arrested one fine morning." This is the opening of *The Trial*, a sentence which, in its sheer simplicity, foreshadows the nightmare quality of the novel. The hero never knows what he is accused of, never discovers the nature of his tribunal, and is either unconscious of any guilt, or only too conscious of it. *The Trial* has a tragic finale, but in the other novels there is no ending at all. *The Castle* is even more obscure: no goal is ever reached, the castle can never be entered.

Few writers are as difficult to interpret as Kafka. Some critics see in his works a mirror of his own life; others are psychoanalytical, stressing his relationship with his father. There are those who explain the alienation of his heroes from their environment in terms of the Jew's isolation in the world. Most interpreters, however, sense in his works a symbolic representation of the religious plight of contemporary man. Even these interpretations range from nihilistic existentialism to a positive faith in divine salvation. The latter view is that of Max Brod. However, Kafka must be regarded primarily as a creative artist, not as a prophet or a philosopher. Through his imaginative writing, he tried to elevate his own existential situation into the realm of what he himself called "the true, the pure, the indestructible." His prose is unusually lucid, with a melodic range that lifts it to the heights of poetry. His narration is full of surprises, sudden shifts of perspective, and contradictions whose humor only accentuates the grimness of a particular situation.

In common with most assimilated Prague Jews, Kafka was at first only vaguely conscious of his Jewish heritage, but

learned about Zionism from Max Brod and Hugo *Bergman. He heard about Jewish life in Eastern Europe from Isaac Loewy, an actor in a Yiddish theatrical troupe with whom he struck up a friendship. Through the writer Georg Langer, he became interested in *Hasidism. He studied Hebrew, attended lectures at the Hochschule fuer die Wissenschaft des Judentums in Berlin and, when he came to know Dora Dymant, toyed with the idea of settling in Palestine with her. This progress toward a deeper understanding and appreciation of Judaism corresponds to Kafka's search for his ideal of genuineness and his intense longing for a pure life.

Kafka's novels have been translated into many languages, including Hebrew. They have been adapted for plays, operas, and movies. The Theater of the Absurd is unthinkable without Kafka, and "Kafkaesque" has become an international word to describe the feeling of being trapped in a maze of grotesque happenings. In the introduction to the collection of unpublished stories and fragments issued in 1931 as *Beim Bau der chinesischen Mauer* ("The Building of the Chinese Wall"), Kafka is eulogized as "a master-stylist and a master of the short story, a novelist to be compared only with the very greatest, and an inexorable molder and interpreter of our time." It was not, however, until 1964 that the Czech Communist government thought fit to rehabilitate this "decadent" genius.

[Felix Weltsch]

KAFR KAMĀ, the larger of the two Muslim-Circassian villages in Israel, in eastern Lower Galilee, 3 mi. (4½ km.) northeast of Kefar Tavor. The second Circassian village is al-Rihāniyya, located in Upper Galilee. Kafr Kamā was founded toward the end of the 19th century on the remains of an earlier settlement which had existed from the Roman to the Early Arab period. The Circassian founding settlers, who abandoned their Caucasian homeland in 1878 when it was occupied by czarist Russia, were granted asylum in the Turkish Empire. During the Israeli *War of Independence (1948), the inhabitants of Kafr Kamā were not inimical toward their Jewish neighbors, and good economic relations subsequently developed. Farming includes field crops and livestock. In 1950 Kafr Kamā received municipal council status. Its population

rose from 1,330 in 1968 to 2,710 in 2002, occupying an area of 4 sq. mi. (10 sq. km.)

[Efraim Orni]

KAFR QĀSIM, Muslim-Arab village on the southwestern rim of the Samaritan Hills, Israel, northeast of Petaḥ Tikvah. The longest bridge in Israel is located nearby as part of Route 6, the Trans-Israel Highway. In 1968 Kafr Qāsim had 3,720 inhabitants, rising to 15,700 in 2002, on an area of 3.5 sq. mi. (9.2 sq. km.). Its farming was based on field and garden crops and fruit orchards. Income in the village was about half the national average. On the eve of the *Sinai Campaign (1956), the literal execution of a curfew order resulted in the shooting of 47 people, including women and children, by Israel border police. The military personnel responsible were tried and convicted of murder. The court also decided that obedience to an order from above (the defense counsel's argument) does not excuse military personnel from responsibility in the execution of crimes. During the trial, a public board, headed by the mayor of Petaḥ Tikvah, Pinḥas Rashish (d. 1978), was set up to determine compensation to the families of the victims and decided to pay out 11,500,000 in reparations. At the end of 1957, a reconciliation ceremony (*sulḥa*) was held between the families of the victims and a representative of the Jewish community (Avraham *Shapira).

[Efraim Orni]

KAGAN, ELIE (1928–1999), French photographer. Kagan was born in Paris to parents who had emigrated from Russia and Poland and worked in the garment industry. His father disappeared during the German occupation while he himself was hidden in the countryside. A member of the French Communist Party during his youth, he tried his hand at various jobs until he became a professional photographer in 1957. His most famous photographs are those he made during the repression of the FLN-organized Algerian demonstration in Paris on October 17, 1961. He was the only photographer to capture the faces of many who were not to survive the day. Probably the outstanding photojournalist on the French political scene in the 1960s and 1970s, with a clear leftist orientation, he displayed a measure of the humor and irreverence typical of the period. A partner of Serge and Beate *Klarsfeld in their campaign against Nazis who had committed crimes in France and their French accomplices, he expressed his solidarity with the State of Israel, which ran counter to the position of the far left. In 1969 he published *Le Reporter engagé: trente ans d'instantanés* (with Patrick Rotman), also including images of artists he had befriended. In 2001, Jean-Luc Einaudi published posthumously his *17 octobre 1961*. The collection of his photographs, deposited in the BDIC library in Nanterre, was used in 2004 for an exhibition on Michel Foucault as a political activist.

[Philippe Boukara (2nd ed.)]

KAGAN, HELENA (1889–1978), physician and social worker. Kagan was born in Turkestan and received her medical edu-

cation in Switzerland. In 1916 she founded the first children's hospital in Jerusalem, and from 1923 until 1943 was medical director of the Spafford Baby Home for Arab Children in the Old City of Jerusalem. After the establishment of the State she was associated with the Bikkur Ḥolim and Hadassah hospitals, and was prominently associated with WIZO and the Hebrew University. In 1958 she was awarded the Freedom of the City of Jerusalem for her outstanding services and in 1975 was awarded the Israel Prize.

KAGAN, JOSEPH, BARON (1915–1995), British businessman. Born Juozapas Kaganas in Lithuania, Kagan, with most of his family, managed to survive World War II in hiding near the Kaunas (Kovno) ghetto. Kagan migrated to Britain after the war to join his father (who lived to be 109), who had emigrated there in 1940 and established a successful textile business. In 1951 Kagan founded the enterprise for which he became well known, Gannex raincoats, made from waterproof nylon. In Bradford, Kagan became acquainted with Harold *Wilson, who had been born nearby and adopted the wearing of Gannex raincoats as his trademark. The coats enjoyed a fad throughout Britain in the 1950s and early 1960s, being worn as well by royalty. When Wilson became prime minister in 1964, Kagan became a close but unofficial advisor on industrial policy and technological innovation. It is also said that Kagan paid a monthly consultancy fee to Wilson before he became prime minister and financially assisted other members of Wilson's entourage. Kagan was knighted by Wilson in 1970 and received a life peerage from him in 1976.

In 1978 Kagan became the subject of national controversy when, charged with theft and fraud (in matters unrelated to his relationship with Harold Wilson), he fled to Israel. Kagan was forced to return to England, where he was fined £375,000 and served ten months in prison. He was stripped of his knighthood by the Queen but allowed to remain a peer. From 1982 he again became a frequent speaker in the House of Lords.

KAGAN, SOLOMON ROBERT (1889–1955), U.S. medical historian. Kagan was born in Orany, Lithuania, of a prominent rabbinic family. He was ordained as a rabbi but turned to medicine. He emigrated to the United States in 1922 and practiced in Boston. He was the author of many books including *Researches in Hebrew Literature* (2 vols. 1929–30), *American Jewish Physicians of Note* (1942), *Jewish Contributions to Medicine in America* (1934), *Leaders of Medicine* (1941), *The Modern Medical World* (1945), *Fielding H. Garrison; a biography* (1948), and *Jewish Medicine* (1952).

[Fred Rosner]

KAGANOVICH, LAZAR MOISEYEVICH (1893–1991), Soviet politician. Born in Kiev province, Kaganovich joined the Communist Party in 1911 and became a member of the Kiev committee of the party in 1914. In 1915 he was arrested and

restricted to residence in Kabana, his native village, but left illegally and for the following two years lived in various parts of Russia under false names. Kaganovich took an active part in the October Revolution in the Red Army, where he headed the Saratov war organization, and later in Belorussia, where he played a major role in taking Gomel. During the Civil War (1917–20) he served on the All-Russian Committee for building up the Red Army. He rose rapidly in the Party hierarchy. In 1924 he became a member of the Communist Party's Central Committee and from 1925 to 1928 was first secretary of the party organization in the Ukraine. Between 1930 and 1935 he was secretary of the Moscow party committee, headed the reconstruction of the capital, and managed the construction of the Moscow underground, which was named after him until 1957. In 1930 he became a member of the Politburo, the nine-man committee controlling the party. In 1932 he was in the Politburo for organizing terror in the party, and he took part in the execution of it. At the 17th party congress in 1934 he reported on "organizational questions" and was elected chairman of the party control commission.

Kaganovich organized the industrialization of the Moscow region. He was subsequently appointed commissar for communications and commissar for heavy industry. From 1938 he served also as vice chairman of the Council of Commissars of the Union. During World War II he was a member of the State Defense Committee. In 1947 he was again secretary of the party in Ukraine, and from March 1953 first vice chairman of the Council of Ministers of the Union. Kaganovich's subservience to Stalin was made abundantly clear in his pamphlet *Stalin vedyot nas k pobede komunizma* ("Stalin leads us to the victory of Communism") printed in 1950 in half a million copies. For a number of years he was the only Jew to occupy a top position in the Soviet leadership. In 1957, as a member of the "anti-Party group" of Molotov, Malenkov, and Shepilov, he was expelled from the Central Committee and dismissed from all government posts. In the years 1957–61 he was director of a metallurgical factory in the Ural area. And in 1961 he was expelled from the party and pensioned. Regarding Jewish matters, he was not only estranged from Zionism and the Bund, but he was also against the Yevseksiya. While visiting the Jewish State Theater in the 1930s, he called to show real Jewish heroes like the Maccabees and Bar-Kokhba. It is not clear what his role was in the Crimean Affair, and rumors say that he was in favor of a Jewish republic there.

KAGANOWSKI, EFRAIM (1893–1958), Yiddish writer. Deeply influenced by Chekhov and Maupassant, his many stories of his native Warsaw, which appeared in the best Yiddish journals, had an international vogue and were collected in the jubilee edition *Shriftn* ("Works," 1951) and *Poylishe Yorn* ("Polish Years," 1956). The title of his earliest group of short stories, *Meydlekh* ("Girls"), marked the importance of the erotic

theme in his works, but even more important was the specifically Jewish cultural richness that emerged from his portraits of Warsaw Jewry. Upon the German invasion of Warsaw, he found refuge in Soviet Russia, being repatriated to Poland in 1946. His last years were spent in Paris. Among his story collections are *Tiren-Fenster* ("Doors-Windows," 1921), *Leyb un Lebn* ("Body and Soul," 1928), *Figurn* ("Figures," 1937), and a novel, *A Shtot oyf der Volge* ("A City on the Volga," 1961).

KAGE, JOSEPH (1912–1996), Canadian Jewish educator, communal worker, and author. Kage was born in Minsk, Belarus, emigrating to Canada in his youth. He acquired an extensive university education, culminating in a doctorate in history at the University of Montreal. He worked in Jewish education and later in social work with the Jewish Family Services of Montreal. In 1947, he began working for Canada's Jewish Immigrant Aid Society, where he ultimately became national executive director and national executive vice president until his retirement in 1983. In this role, he became an authority on issues of Canadian immigration policy and was chair of the Canadian governmental Advisory Board on Immigrant Adjustment. He was active in numerous civic and Jewish community organizations, and was chair of the Canadian Jewish Congress National Conference on Yiddish and Yiddish culture as well as president of Montreal's Jewish Public Library.

He published *With Faith and Thanksgiving: The Story of Two Hundred Years of Jewish Immigration and Immigrant Aid Efforts in Canada* (1962) and *Chapter One: Sketches of Canadian Life Under the French Regime* (1964), which was published bilingually in English and in French.

KAHAN, BARUCH MORDECAI (pseudonym **P. Virgily**; 1883–1936), Bundist, born in Mogilev, Belorussia. His father Isaac, a wealthy Hasid, was the brother of Mordecai b. Hillel *Hacohen. Kahan, who studied in a yeshivah, joined the *Bund in Gomel, Belorussia, at the age of 18, becoming a professional revolutionary. In 1905 he helped to lead Jewish self-defense during the pogrom in Zhitomir and was one of the leaders during the revolution in *Lodz. He served as a reporter for the Bundist press. In the wake of a religious crisis, he returned to religion for a short time and worked as a simple laborer. He rejoined the Bund during World War I and in 1917 became a member of the Petrograd Soviet Workers' and Soldiers' Council. Between the two world wars he lived in Vilna, was active in ORT and YIVO and in Jewish educa-

tion, and represented the Bund on the communal and municipal councils.

KAHAN, LOUIS (1905–2002), Australian portraitist. Kahan, who was born in Vienna, originally studied tailoring and dress design. He showed a talent for portraiture and this was fostered during World War II, when as a member of the French Foreign Legion, he painted regimental murals and portraits. When the Americans landed in North Africa, Kahan became a war artist, sketching wounded soldiers of the Allied armies. After the war he was appointed staff artist to the French newspaper *Le Figaro*. He immigrated to Australia in 1951 and settled in Melbourne, where he sketched famous personalities for the literary magazine *Meanjin*, and for the weekend literary section of the *Age* newspaper. In 1981 he published *Australian Writers: The Face of Literature*. Kahan is represented in the National Gallery of each of the six states of Australia.

KAHAN, SALOMON (1896–1965), Yiddish essayist and musicologist. Born in Bialystok, he was educated in Warsaw and Berlin and immigrated to Mexico City in 1921 where he was professor of the history of modern civilization at the Mexican National Teachers' College (1925–39). He served as music critic for Mexican dailies and, between 1936 and 1964, published five volumes of critical and impressionistic articles on music, written in Spanish. He was editor of *Der Veg* (Mexico City, 1945–48), and managing editor of *Tribuna Israelita* (1953–65). He played an important role in the cultural life of Mexico's Jewish community and collected his many essays on literature, music, and important Jewish and Mexican personalities in five Yiddish volumes, of which the most significant was his *Literarische un Zhurnalistiche Fartseykhnungen* ("Literary and Journalistic Sketches," 1961). He published an abridged Spanish translation of *Graetz's *History of the Jews* under the title *Historia del pueblo de Israel*. His son, José Kahan, achieved renown as a concert pianist.

[Sol Liptzin]

KAHANA, name of several Babylonian *amoraim*. The first two of these *amoraim*, Kahana (1) and Kahana (2), were both disciples of Rav, and certain traditions relating to these two scholars have become conflated in the Babylonian Talmud. As a result it is necessary to trace the development of these traditions in order to determine which originally related to Kahana (1) and which to Kahana (2).

(1) The first Kahana, together with his companion *Assi, were already prominent scholars when Rav returned from Erez

Israel to Babylonia (c. 219 C.E.) but they immediately joined his academy (Sanh. 36b; Naz. 19a) and became his disciples (TJ, Suk. 1:1, 52a). Rav held them in very high esteem (Shab. 146b; Naz. 19a) and because of their profound erudition he was sometimes unable to answer their questions (Suk. 6b; Bezah 6a, 37b; et al.). Kahana later emigrated to Palestine where he joined some of the last of the *tannaim* such as *Simeon son of *Judah ha-Nasi (Zev. 59a), Judah and Hezekiah the sons of Hiyya (BK 10b), and *Oshaiah (TJ, Hag. 1:14, 57c). Among his pupils were *Eleazar b. Pedat (TJ, Kil. 1:7, 27b; MK 3:8, 83d), and *Zeiri (BM 60b). Rav's advice to Kahana: "flay carcasses in the marketplace and earn wages and do not say 'I am a priest and a great man and it is beneath my dignity'" (Pes. 113a) may indicate that Kahana lived in poverty. A Palestinian *aggadah* describes a meeting between Kahana (1) and *Johanan and *Simeon b. Lakish, two of the most prominent Palestinian *amoraim* (TJ, RH 4:1, 59b; PDRK, 345; Lev. R. 29, 684–5). This tradition is of special interest because certain elements of this story were later combined in the Babylonian Talmud with other narrative elements concerning events relating to Kahana (2) (see below). We are told in the Jerusalem Talmud (and in the parallel texts) that Johanan and Simeon b. Lakish were once sitting and studying together, when they encountered a difficulty concerning a certain *halakhah*. At that moment Kahana was passing by, so Johanan and Simeon b. Lakish said: "Behold, here is a great scholar (thus in TJ; in PDRK, Lev. R.: "a master of the teachings"); let us ask him." They asked Kahana, and he replied with an authoritative answer which they apparently accepted. From this story it is clear that (this) Kahana was already recognized as a mature and respected scholar, to whom both Johanan and Simeon b. Lakish felt comfortable turning to in order to resolve the problem which arose in their study together. There can therefore be no doubt that the Kahana mentioned in this tradition is the elder Kahana (see below).

(2) The second Kahana was also one of Rav's pupils, and used to read the weekly Bible portion at Rav's academy (Shab. 152a). He also stood in close contact with *Samuel and transmitted *halakhot* from both teachers (Ber. 14b; Ket. 101a, et al.). According to a well-known *aggadah* in the Babylonian Talmud (BK 117a), Kahana (2) was forced to escape from Babylonia after impulsively killing a person who had threatened to denounce a fellow-Jew to the Persian authorities – by "tearing out his windpipe." Rav advised him to flee to Erez Israel, but made him swear that he would sit passively in R. Johanan's academy and refrain from asking any difficult questions for a period of seven years, apparently in order not to embarrass R. Johanan with his superior scholarship. Kahana's reputation as a brilliant scholar preceded him, and R. Johanan, unaware of the oath which Kahana had taken, prepared his lesson for the next day with care, anticipating that Kahana might cause him some difficulties. Placed in the first row from which he would be able to engage the master directly, Kahana nevertheless remained silent. Considered by those present to be incapable of serious scholarly debate, he was progressively demoted, until he was seated in the seventh and final row. At this point, R.

Johanah mocked Kahana, saying that “the lion who has arrived from Babylonia has turned out to be no more than a fox.” After hearing this remark, Kahana held himself absolved of his oath, and began asking questions, which R. Johanah was unable to answer. Quickly regaining his position in the first row, Kahana continued raising objections. For each unanswered question they removed one cushion from under R. Johanah until all seven cushions had been removed and he was sitting on the floor. At this point, R. Johanah made an effort to get a good look at this “lion who arrived from Babylonia,” and saw that his mouth was distorted. R. Johanah, unaware that Kahana had a split lip, thought that Kahana was laughing at him and became upset at him, as a result of which Kahana died. After his students informed R. Johanah of his unfortunate mistake, Johanah went to the cave in which Kahana’s body was being kept. The mouth of the cave was, however, blocked by a snake with its tail in its mouth. At first Johanah demanded that the snake grant him entrance to the cave, so that “the master may go in to his pupil.” The snake did not respond. He then asked permission to enter the cave so that “one friend may visit another.” Still the snake did not respond. Finally he asked permission to enter the cave so that “the pupil may go in to his master.” Only then did the snake grant him entrance to the cave. Johanah offered to restore Kahana to life, but the latter apparently refused. R. Johanah then put to him “all the uncertainties that he had, and he solved them for him.” R. Johanah concluded by conceding that the Torah of Erez Israel was in fact derivative of the more incisive and original Torah of Babylonia.

After paring away the many supernatural and obviously legendary elements from this tale, the resulting “historical kernel” of this story has in the past been accepted by scholars as providing reliable historical information concerning the life and career of Kahana (2). In 1982 D. Sperber seriously challenged the historical authenticity of this tale as a whole, writing that its author “demonstrates ignorance of Palestinian chronology, of the structure of the Palestinian academy, and, on the other hand, he possesses a knowledge of Persian, of Sasanian folk-literature, courtly practice, and of the structure of the Babylonian academy” (Sperber, 93–94). In addition, the tendency of the entire story is polemical, “asserting Babylonian authority and ascendancy in learning” in opposition to the similar claims put forward by the yeshivot of Erez Israel (98). In Sperber’s view such a polemic must reflect a very late, certainly post-amoraic stage in the development of the Babylonian talmudic tradition. Some twenty years later, S. Friedman published a detailed analysis of this *aggadah*, revealing its literary sources, both in Palestinian and in other parallel Babylonian traditions, and explaining the way in which these sources were combined and reworked by the late Babylonian editor of this story. Particularly relevant here is the Palestinian version brought by Friedman of the events surrounding Kahana’s encounter with R. Johanah. The Jerusalem Talmud tells us (Ber. 2:8, 5c): “Kahana was a tall lad. When he came up here (i.e., to Erez Israel), a certain rogue saw him, and asked:

What do you hear all the way up there in the sky?” Kahana then impulsively replied: “[I heard that] your death sentence has been sealed.” In fact the rogue died. After the same thing happened a second time, Kahana was struck with remorse and said to himself: “I came to do good, and I ended up sinning.” Racked with doubts he considered leaving Erez Israel and returning to Babylonia. He then went to see R. Johanah and posed him the following enigmatic question: “If one’s mother despises you, but your father’s second wife treats you well, where should you go?” R. Johanah responded that he should return to the house of his father’s second wife. Kahana took this response to mean that he should return to Bavel, and again impulsively set off home without asking permission or taking his leave from R. Johanah. The description of Kahana (2) in this story is one of an impulsive and indecisive youth, lacking in self-confidence – inexperienced and clearly subordinate to R. Johanah in all respects. Friedman concluded that the first part of the Babylonian *aggadah* “appears to be a radical reworking of a Palestinian account concerning the *second* Rav Kahana, who causes death with a lack of self-restraint,” and the third part of the Babylonian *aggadah* “is a Babylonian expansion of the [Palestinian] tradition that R. Johanah revered the *first* Rav Kahana, and turned to him concerning perplexing questions” (Friedman, 258). Therefore the two Palestinian traditions cited above, which clearly distinguish between these two *amoraim*, must provide the starting point for any historical description of their lives and careers, and not the Babylonian tradition, which conflates the two – in all likelihood intentionally, as Sperber has made clear (cf. Pes. 49a, and Rashi to BK 117a).

(3) Another *amora* who lived in the second half of the third century C.E., was one of the prominent students of *Huna (MK 13b), the head of the academy of *Sura from 250 C.E., and of *Judah b. Ezekiel of *Pumbedita (Hul. 19b). He appears to have visited Erez Israel for a short while (BB 41b), after which he returned to Babylonia. Among his pupils were *Joseph b. Hiyya (Yev. 17a, 102a), *Rabbah b. Naḥamani (Yev. 102a), *Abba (Shab. 38a), and Isaac (RH 3b–4a). He may, however, be identical with the second Kahana.

(4) A pupil of Rabbah b. Naḥamani in Pumbedita (Sanh. 41b; Shevu. 36b), early part of the fourth century C.E. He knew the whole Mishnah order by heart at the age of 18 years (Shab. 63a). Among his associates were Aḥa b. Huna, Rama b. Hama, and *Safrā whom he accompanied on a journey to Erez Israel (Pes. 52b), remaining there for some time. There he joined a new circle of scholars, *Hiyya b. Abba (TJ, RH 2:6, 58b), Zera (TJ, Bik. 2:1, 64d) and *Jacob b. Aḥa with whom he collaborated in the fixing of the calendar (TJ, RH 2:6, 58b). Most probably it is this Kahana whom the Talmud refers to as an extremely handsome person (BM 84a; BB 58a). According to the *aggadah* he was compelled to sell baskets in the marketplace because of his poverty. On one occasion a Roman woman persuaded him to follow her, but he managed to escape from her home by jumping from the roof. The prophet Elijah rescued him and richly rewarded him (Kid. 40a).

(5) A pupil of Rava (Ket. 63a; BK 41b). Ḥanan of Nehardea was his colleague (Kid. 81b; Nid. 66b). He taught at the academy of Pure Nahara (Ḥul. 95b; BB 22a, 88a; et al.). Among his distinguished pupils was *Ashi, the redactor of the Babylonian Talmud (Ber. 39a, 42a; Ket. 69a; et al.). His sons were very wealthy (Me'il. 19a).

(6) *Amora* who died c. 414 C.E. He succeeded Rafram b. Papa as the head of the academy of Pumbedita from 396 until his death (*Iggeret R. Sherira Ga'on*, ed. Lewin, 90; cf. Halevy, *Dorot*, ii, 518, note 144). As a Kohen he once accepted a garment instead of silver coins for the ceremony of *Pidyon ha-Ben* (Kid. 8a; see also Tos. ad loc.). It is not always possible to distinguish between this Kahana and Kahana (2).

[Stephen G. Wald (2nd ed.)]

KAHANA, ABRAHAM (1874–1946), biblical scholar and historian. Kahana, who was born in Skomorochy, Russia, was self-educated and started writing on Jewish subjects at an early date. In 1923 he emigrated to Palestine where he engaged in teaching and also served as librarian at the Sha'ar Zion library in Tel Aviv. From 1903 onward, he edited the Hebrew Bible, with a critical commentary and introductions (*Perush Madda'i*), he himself being responsible for Genesis, Exodus, Numbers, Job, Proverbs, Ecclesiastes, Ezra, and Nehemiah. The project, with which H.P. *Chajes, A. *Kaminika, S. *Krauss, F. Perles, M.L. Margolis, and others were associated, was, however, not completed. Kahana also edited the two-volume *Apocrypha (1936–37), which went through many reprints. He translated part of the Greek text into Hebrew, added commentary and introductions to each book, and took care of a considerable number of the apocryphal and pseudepigraphical books himself. Kahana wrote the introduction to D. Ginzburg's edition of the Mantua version of *Josippon (1896–1913). His historical writings include: *Korot ha-Yehudim be-Roma* (1901, 1914²; "History of the Jews in Rome") based on the works of A. *Berliner and that of H. *Vogelstein and P. *Rieger; a biography in Hebrew of M.Ḥ. *Luzzatto (1898); an edition of Leone de *Modena's autobiography (1912); and an edition of the travel diary of David *Reuveni (1922). Kahana also published a two-volume historical anthology, *Sifrut ha-Historyah ha-Yisre'elit* (1922–23), and an anthology on Ḥasidism, *Sefer ha-Ḥasidut* (1922). His interest in the ḥasidic movement is also shown by his biography of Israel b. Eliezer Ba'al Shem Tov (1900) and his edition of *Sippurei Ma'asiyyot shel R. Naḥman mi-Bratslav* (1922). Kahana's contribution to linguistics consisted of a Hebrew grammar (1931), a translation into Hebrew of S.D. Luzzatto's grammar (1899, repr. 1944), and a Russian-Hebrew dictionary (1907, 1919⁴).

KAHANA, ABRAHAM ARYEH LEIB BEN SHALOM SHAKHNA (also called **Loeb Scheines**; d. 1788), rabbi and author. Born in Horodenka, Galicia, where his father was rabbi, Kahana is not to be confused with his great-uncle, Abraham b. Shalom Shakhna Kahana, who was rabbi in Brody, Ostrog, and Dubno. Kahana himself was rabbi in Berdichev and Polonnoye (south Russia). He wrote novellae to the first three and to the fifth orders of the Babylonian Talmud under the title *Or ha-Ne'erav*, which was published with annotations, *Divrei Shelomo*, by his son Solomon Zalman (Ostrog, 1824). His homilies and a Bible commentary entitled *Divrei Ḥemed* and *Zer Zahav*, respectively, remain unpublished.

[Joseph Elijah Heller]

KAHANA, AHARON (1905–1967), Israeli painter. Kahana was born in Stuttgart, Germany. As soon as he began painting as a child he discovered abstraction. He studied art at the Stuttgart Academy of Art from 1922 to 1925. After he finished his studies he traveled to Berlin and Paris to learn more about the history of art and the modern art of his time. In 1934 he immigrated to Erez Israel and settled in Ramat Gan. In his first decade in Israel, his style became Realistic. Only in 1943 did he return to abstraction. This was in keeping with the ideas of a new group of artists, New Horizons, that Kahana helped found. From 1962 Kahana painted in a very personal Pop Art style. He died suddenly of a heart attack in Paris during the Six-Day War.

Kahana was known for the unique art style he developed in the beginning of the 1950s. It was a mixture of Modernist forms, usually geometric, presenting very remarkable defining lines together with an archaic conceptual and biblical content. This style was suitable for wall decoration in public spaces in the young country, and using ceramic technique Kahana indeed decorated such walls (*Sacrifice of Isaac*, Hebrew University, Givat Ram).

During his last years he worked in a completely opposite style. The lines became soft and liquid, the figures were brimming with intensity, and the rhythm expressed vitality. The content of these drawings was more personal, showing nude figures and women's bodies.

Kahana's house in Ramat Gan was made into a museum of ceramic art in his memory.

[Ronit Steinberg (2nd ed.)]

KAHANA (Kogan), DAVID (1838–1915), scholar. Kahana, who was born in Odessa, published his first article in *Ha-Meliz* in 1866. He became known through his monographs on kabbalists, Shabbateans, and Ḥasidim which were first published in *Ha-Shaḥar* (1874–75; later in *Keneset Yisrael* 1886, and *Ha-Shilo'ah*, 1897, 1899, 1909), and then in book form. His main work in this field is concentrated in his two-volume *Toledot ha-Mekubbalim, ha-Shabbeta'im ve-ha-Ḥasidim* (1913; 1926²).

In the field of Bible studies he published (1) *Or Ḥadash* (1880) on Psalm 68; (2) *Mehkerei Kohelet ben David* (1881), an introduction to the Book of Ecclesiastes, with a commentary to Psalm 119 as an appendix; (3) *Devar Ester* (1881), introduction and commentary to the Book of Esther; (4) *Masoret Seyag la-Mikra* (1882), a defense of the masorah; (5) *Mavo le-Parshat Bilam u-Devar Atono* (1883); and (6) *Toledot Shelomo* (1883), on Solomon and Solomonic literature.

Kahana also wrote numerous studies on other periods of Jewish history, in particular a number of articles on medieval grammarians and poets published in *Ha-Shilo'ah*. Noteworthy among his other works are (1) *Le-Toledot R. Sa'adyah Ga'on* (1892); (2) *Rosh Petanim* (1883), on *Eisenmenger; (3) *Ma'asei Even Reshef* (1884), on the forgeries of *Firkovich; (4) *Hokhmat Yehudah* (1892), Jewish-Christian polemics on religion; (5) "On Lilienthal and the Russian Haskalah Movement" (*Ha-Shilo'ah*, 1912). Kahana also edited the Hebrew original of Ben Sira, *Hokhmat ben Sira* (1912; first published in *Ha-Shilo'ah*), together with the only Hebrew commentary on the book existing at that time; the collected poems, with introductions and notes, of Dunash b. Labrat (1894), Solomon Sharvit ha-Zahav (1894), and Abraham ibn Ezra (1894); and *Megillat Sefer* (1897), an autobiography of Jacob *Emden, based on manuscripts in Oxford. He died in Odessa.

[*Encyclopaedia Judaica* (Germany)]

KAHANA, JACOB BEN ABRAHAM (d. 1826), rabbinical scholar in Vilna. His father was rabbi at Brestowitz in the province of Grodno. Supported by his father-in-law, Issachar Baer, the brother of *Elijah of Vilna and one of the prominent rabbis of that town, he devoted himself to study. On the death of his father-in-law, he was appointed by the communal leaders of Vilna as trustee of the local charities. He is the author of a commentary in three parts on tractate *Eruvin*: on the tractate in the Babylonian Talmud, the *Tosefta*, and the Jerusalem Talmud respectively. Each section has a different title but the whole work was given the general title *Ge'on Ya'akov*. It was published, together with Joseph Padua's two-page pamphlet *Zikhron Yosef* (1863), by Raphael Nathan Neta *Rabbinovicz, who wrote a lengthy introduction containing a biography of the author. Kahana occupied no rabbinical position, but was held in the highest esteem.

BIBLIOGRAPHY: R.N.N. Rabbinovicz, in: J. Kahana, *Ge'on Ya'akov* (1863), introd.; S.J. Fuenn, *Kiryah Ne'emanah* (1915²), 239f.; L. Ginzberg, *Perushim ve-Ḥiddushim ba-Yerushalmi*, 1 (1941), 1x (Eng. introd.), 128f. (Heb. introd.).

[Itzhak Alfassi]

KAHANA, JEHIEL ZEVI BEN JOSEPH MORDECAI (first half of 19th century), member of a family of Hungarian rabbis. He was a grandson of Judah b. Joseph ha-Kohen, who was

a brother of Aryeh Leib b. Joseph ha-Kohen *Heller, author of the *Kezot ha-Ḥoshen*. Kahana served as *dayyan* in Sziget, and all three of his sons were well-known *dayyanim* in Hungary. The first, ḤAYYIM ARYEH (d. 1917), served as *dayyan* of Máramarossziget (Sighet). He was the author of *Divrei Ge'onim* (1870), containing 113 principles and themes in civil law. The work is in alphabetical order, collected from various responsa and books. In his introduction the author stresses that it was not his purpose "to give practical rulings of the law... and I only intend to stimulate these scholarly teachers who know the law thoroughly." The second son, JOSEPH MORDECAI (d. 1896), served as *dayyan* of Teczo, Hungary, and was the author of *Divrei Zaddikim* (2 parts, 1874–76), an alphabetical work on the reasons for the precepts and customs. In his introduction he stresses that the purpose of the work was to show "that Jewish customs are binding as law." The disregard of a good custom is tantamount to disregarding the commands of the Lord and His Torah. The third son, JACOB GEDALIAH, was the author of *Rimzei Torah ve-Alfa Beta* (1876), a commentary on Genesis, also giving the reasons for different customs in alphabetical order.

[Yehoshua Horowitz]

KAHANA, KALMAN (1910–1991), leader of the *Po'alei Agudat Israel movement. Born in Brody, Galicia, Kahana studied at the Berlin rabbinical seminary and the universities of Berlin and Wuerzburg. He was one of the founders of the Agudat Israel youth movement in Germany and moved to Palestine in 1938 with a group of young Orthodox settlers, joining the Po'alei Agudat Israel movement. Kahana was a founder of kibbutz *Ḥafez Ḥayyim (1944) and a member of the *Knesset from its establishment in 1949. He was deputy minister of education (1962–69). He became president of the Po'alei Agudat Israel movement. Kahana published several studies in rabbinics and wrote on Maimonides.

[Menachem Friedman]

In later years Kahana occupied himself with the *halakhah* pertaining to the agricultural laws which apply in Israel. In 1976 he published *Mizvot ha-Areẓ* and in 1980 tractate *Shevi'it* according to both the Babylonian and Jerusalem Talmuds with the notes and commentary of Elijah, Gaon of Vilna, and as an appendix his own commentary to the Mishnah and the Tosefta to the order *Zeraim*.

KAHANA (Kagan), KOPPEL (1895–1978), rabbinical scholar and authority on Jewish, Roman, and English law. Kahana, who was born in Eisiskes, Lithuania, studied at Lithuanian yeshivot and served as rabbi in Bialowieza and Rozanai, Poland. Before World War II, he went to Cambridge, where he studied law. From 1946 to 1968 he was lecturer in Talmud and codes at Jews' College, London, which before then had trained few

rabbis. The new Rabbinical Diploma Course, introduced by the principal, Isidore *Epstein and conducted by Kahana, attracted to the college also some of its former students, raising a new generation of Anglo-Jewish rabbis, who were inspired by his teaching. Among his published writings are: *Three Great Systems of Jurisprudence* (1955), a comparative study of Jewish, Roman, and English Law; *The Case for Jewish Civil Law in the Jewish State* (1960); and *The Theory of Marriage in Jewish Law* (1966). Under the name of K. Kagan, he contributed articles to some of the leading American and English law reviews. Kahana represented the rare type of Lithuanian *Gaon*, who was acquainted with modern legal studies and whose contributions in this field were considerable.

KAHANA, NAḤMAN (1861–1904), Hungarian rabbi. Kahana, the son-in-law of Joseph Meir *Weiss, was rabbi of Szaploneca. He became particularly well-known because of his *Orhot Ḥayyim* (2 pts., 1898; 1962²), on the Shulḥan Arukh *Orah Ḥayyim*, which for a long time was regarded as an indispensable reference work for every rabbi. It included the important glosses of Shalom Mordecai ha-Kohen Schwadron and Elijah David *Rabinowitz-Teomim. The author made use of more than 800 works of responsa and codes, assembling the material logically in a clear style. In the new edition glosses from the author's private copy, and by Solomon Zalman Ehrenreich, Ephraim Weinberger, and others were added. He also arranged the publication of the *Divrei Ge'onim* (1901) of his father, Ḥayyim Aryeh ha-Kohen, and of the *Likkutei Torah ve-ha-Shas* on Deuteronomy (1892) by Isaac Eichenstein of Zhidachov.

[Naphthali Ben-Menahem]

KAHANA, SOLOMON DAVID (1869–1953), Polish rabbi. Born in Yanova, province of Kovno, Kahana studied at the yeshiva of Volozhin and the *kolel of Kovno. He was ordained by R. Isaac Elhanan *Spektor. He collaborated with and later succeeded his father-in-law, R. Samuel Zanvil *Klepfish, as a member of the Warsaw rabbinate, where he was much in demand as an arbiter in business disputes. In matters of ritual law he took a lenient view. After World War I he took an active part in rehabilitation and relief, and in particular established a special department in Warsaw to deal with problems of war *agunot* (see *agunah), forming a network of information bureaus in the larger cities of Europe for this purpose. The information gathered about missing husbands made possible the remarriage of thousands of *agunot*. He was among the founders and a member of the presidium of the Agudat ha-Rabbanim of Poland, created after Poland's independence was restored in 1919. After the Nazi invasion of Poland in September 1939, he managed to escape to Erez Israel. He was appointed rabbi of the Old City of Jerusalem and took up

residence in the historic courtyard which 200 years earlier had been occupied by R. Ḥayyim b. *Attar. After the Holocaust he organized an *agunot* department on behalf of the Chief Rabbinate. With the outbreak of Arab disturbances in 1947 he was evacuated, with the help of the Belgian consul, to the new city of Jerusalem, where he lived until his death. With the exception of some responsa published in the compilations of other rabbis, his literary output was lost during his two forced evacuations. His son, Shmuel Zanvil Kahana (1905–), served as director general of the Ministry of Religions in Israel.

[Jacob Goldman]

KAHANA-CARMON, AMALIA (1926–), Israeli writer. Amalia Kahana-Carmon was born in kibbutz En-Ḥarod but lived in Tel Aviv since childhood. She served in the Negev Brigade during the War of Independence and took part in the capture of Beersheba. After studying at the Hebrew University in Jerusalem, she stayed for seven years in England and Switzerland, and then returned to Tel Aviv, where she worked for many years as a librarian. Chronologically she belongs to the group of writers who began writing in the 1940s and subsequently became known as the “Palmah generation,” but her work differs basically from theirs: though it does echo the events of the pre-State period and War of Independence and later periods, she makes no attempts to deal with external reality and social themes as such. Others consider her as a member of the experimental “New Wave.” Her prose is intrinsically lyrical, concentrating on the characters' inner responses. The events depicted are usually minor ones, the characters mainly described during an attempt to break out of their closed world, generally in order to reach another person. These attempts mostly fail, and the stories end with characters withdrawing into themselves again, resigned and somewhat changed. A contact that is established is frequently described as miraculous and blessed.

The lyrical nature of her prose is a reflection of her major themes: most of her characters are represented while reflecting on events rather than creating them, discovering their inability to break out and effect a change. Amalia Kahana-Carmon's style is remarkable for its capacity to represent the inner world of her characters, with all the subtle changes that take place there. Critics have praised her stylized impressionistic diction, her way of portraying in a refined poetic manner melodramatic moments as well as trivial daily matters. One of the first self-aware feminine voices in Hebrew prose, author of a series of articles in which she criticized the discrimination against women as writers and readers in a male-dominated, male-oriented Hebrew literature, Kahana-Carmon's oeuvre has become the subject of research and interpretation among scholars in the fields of Gender Studies and Feminist Theory. Her works include a collection of 17 short stories, *Bi-Khefifah Aḥat* (“Under One Roof,” 1966); the novel *Ve-Yareah be-*

Emek Ayalon ("And the Moon in the Valley of Ayalon," 1971); a collection of three novellas, *Sadot Magnetiyyim* ("Magnetic Fields," 1977); stories collected as *Himurim Gevohim* ("High Stakes," 1980); *Lema'alah be-Montifer* ("Up in Montifer," 1984); novellas and stories. The novel *Liviti Otah ba-Derekh Le-Veitah* ("I Escorted Her on the Way Home," 1991) depicts the relationship between Me'irah, a well-known middle-aged Ashkenazi actress, and an Oriental Israeli from a development town, twenty years her junior. *Kan Nagur* ("Here We'll Live," 1996), is composed of five novellas: Two of these depict the life of three students in Jerusalem under the British Mandate; "*Lev ha-Kayiz, Lev ha-Or*" portrays the life of a family from the point of view of a child, while "*Mi-Mar'ot Gesher ha-Barvaz ha-Yarok*" is a historic novella, focusing on the notion of captivity and personal freedom.

Kahana-Carmon received many major awards, including the Bialik Prize and the prestigious Israel Prize for literature (2000). Although much admired in Israel, very few of her works have been translated into other languages, mainly due to her own objection: "Despite interest from various publishers all over the world, I have not yet found the translator who is capable of transporting my words into another language," she said in an interview. The novel *Liviti Otah ba-Derekh Le-Veitah* was translated into Italian and Chinese, a few stories appeared in German anthologies of Hebrew literature. The story "Bridal Veil" appeared in G. Abramson (ed.), *Oxford Book of Hebrew Short Stories* (1996) as well as in R. Domb (ed.), *New Women's Writing from Israel* (1996). Further information regarding translation is available at the ITHL website at www.ithl.org.il

[Abraham Balaban / Anat Feinberg (2nd ed.)]

KAHANA COMMISSION, commission set up by the Israeli government on Sept. 28, 1982, to investigate "the atrocities committed by a unit of Lebanon forces against the civilian population in the Sabra and Shatilla camps" adjacent to Beirut between Sept. 16 and 18. The members were Justice Yitzhak

Kahan, president of the Supreme Court; and General (reserve) Yona Efrat.

The commission held 60 meetings and examined 58 witnesses. It also had available a number of official documents provided by the relevant government departments. The public at large, both in Israel and abroad, were invited to appear and present evidence. The commission was assisted in its work by a specially appointed professional unit. For reasons of security, many sessions were held *in camera* and part of the evidence was withheld from publication. Nine individuals (including the Israeli prime minister, the foreign minister, the defense minister, the chief of General Staff, and other military commanders) were specifically notified of their right to appear and be heard because of the harm that might accrue to them, and they all took the opportunity to do so.

The commission spent considerable time investigating the events preceding the killings, the intense divisions and hostilities – religious, ethnic and political – in the Lebanese population, the military and political relations existing between Israel and the Christian Phalange forces (as well as, in the south, with the Free Lebanese Army under Major Saad Haddad), and the differing evaluations made by the two intelligence arms, the Mossad and Army Intelligence, of the stability and battle behavior of these forces.

The commission found that the premature departure of the Multinational Force from Beirut induced the Israeli army to enter the city and rid it of terrorists, in the course of which it was decided to allow the Phalange to enter the camps, a step intended to involve them more closely in clearing the area. The forward Israeli army observation post close to the camps was, however, so sited that it was difficult or impossible to observe what was happening inside the camps. Israeli units advancing on the camps were halted by heavy gunfire and suffered considerable casualties.

The commission examined in depth the information available to the Israeli authorities, military and political, the meetings held with the Phalange commanders, and the warnings given not to harm the civilian population. Much of what transpired was not apparently recorded or minuted, and the faulty recollection of the persons involved led, in the view of the commission, to inconsistencies in the evidence. In addition, radio communication between the Phalange in the camps and their liaison officer in the forward post, which were overheard by the Israelis there and should have aroused concern about what was taking place, were either dismissed or ignored and certainly not reported to the upper military and political levels. The Israeli cabinet's attention was drawn to events only after a journalist had reported to a minister information he had heard from an Israeli officer or officers at the forward post. The minister informed the foreign minister, but recollection of the parties was confused. Equally disputed were the oral reports made by the chief of General Staff to the defense minister. No report reached the prime minister until he learned of the events from a British broadcast on September 18 after the Phalange had finally left the camps.

The commission could not establish precisely the number of people killed. Non-Israeli sources put it between 328 and 460. The International Red Cross indicated they included over 100 Lebanese and over 300 Palestinians, most of them males; women and children victims numbered 35. The commission noted the difficulty of distinguishing between those who fell in military action and those who were simply slain.

The report held that direct responsibility lay with the Phalange. The victims were all found in the camps which the Phalange alone had entered; no other forces were present or had means of entry. The Phalange were notorious for their extreme hostility to the Palestinians for their acts against Lebanese Christians during the civil war that had raged since 1975. The assassination of Bashir Jemayel, the Phalange leader, two days earlier, had also inflamed passions.

No evidence was produced to implicate the forces of Haddad. Nor was the IDF present in the camps throughout the three vital days, and the Phalange were refused the artillery and tank support they asked for.

In the opinion of the commission, the manner in which the decisions were reached at the political level and the handling of intelligence gave cause for concern. The decision of the minister of defense and the military command to allow entry to the Phalange was made without proper consideration as to its implementation and without thought for the likely consequences. The decision was not passed on in a timely manner to the political element or to other military elements that should have been informed. Nor were reports of what was happening that filtered through passed on or fully passed on, and then only after some delay that prevented appropriate orders to be issued or action to be taken. The commission was clear as to the steps to be taken to remedy the deficiencies disclosed. In addition to internal review by the military themselves, it recommended investigation by a ministerially appointed team of experts to establish the responsibility of those concerned.

Regarding the indirect responsibility of the nine persons who were notified of the jeopardy they were in, the commission came to the following conclusions: Prime Minister Menahem Begin, preoccupied as he was with other matters of state, was entitled to rely on the optimistic reports he received from the minister of defense and the chief of General Staff. Under the circumstances, however, he should have given thought to all the possibilities, especially those raised by other members of the government, but he seems to have distanced himself from the matter.

Although no clear warning was received from Intelligence by Minister of Defense Ariel Sharon, his disregard of the obvious dangers and his failure to order that suitable safeguards be taken could not be justified, especially in view of the very active role he played in the Lebanon War. The commission thought he should draw the necessary personal conclusions; if necessary, the prime minister should exercise his constitutional right to remove him from office.

Foreign Minister Yizhak Shamir, although informed by his deputy minister (with whom he was not on good terms)

of what was happening, did not show any special interest or attempt to investigate the matter or take it up with the minister of defense.

The Chief of Staff General Raphael Eitan knew from his past experience with Phalange that they could not be relied upon. His view that they were a disciplined force was entirely baseless, and he made no proper provision to control their actions; his belief that the Phalange would report fully was naive, especially in view of what he heard from the local Israeli commanders. Since he was soon due to retire, the commission made no recommendation in his regard.

The head of Military Intelligence, General Yehoshua Saguy, could not be believed when he said that he received no information about the plan to let the Phalange into the camps. He was present at all relevant meetings but acted with complete indifference. His awareness that his organization took second place to the Mossad in the deliberations did not justify his complete inactivity. It was recommended that he should cease to act.

The head of the Mossad did not initially know, nor should he have known, of the decision about the Phalange but, having learned of it, he failed in his duty to evaluate the situation, especially in the light of his close association with Phalange.

General Amir Drori, head of the Northern Command, had no explicit information. He relied on the chief of General Staff and acted correctly with understanding and responsibility, although he should have warned the CGS.

Brigadier Amos Yaron of the local command was severely criticized for the absence of critical oversight of events. He was content with taking Phalange promises at their face value. He did not act firmly though he knew that the behavior of the Phalange left much to be desired. He did not keep the chief of General Staff fully informed and made no suggestions as to how to proceed. It was recommended that he should not fill a position of command for at least three years.

Finally, the personal assistant of the minister of defense was exonerated, having, it seems, done what was to be expected from him.

[Peter Elman (2nd ed.)]

KAHANE, ARTHUR (1872–1932), German author and editor. Kahane, who was born and educated in Vienna, became literary adviser to the Deutsches Theater in Berlin, under the direction of Max Reinhardt, in 1905. He also edited the theater's journal, *Blaetter des deutschen Theaters* (later combined with *Das junge Deutschland*). Kahane's novels and essays reveal an extremely individualistic philosophy. In his two lyrical works, *Clemens und seine Maedchen* (1918) and *Willkommen und Abschied* (1919), he contrasts the modern age of materialism and brutality with an earlier era of love and tenderness. In *Das Judenbuch* (1931) Kahane declared: "I love the Jews and my own Jewish character"; but he believed that the Jews were destined to be restless forever. "Ahasver" (i.e., the *Wandering Jew), he contended, "will always remain the true symbol of our immortal people." Other works by Kahane deal with

his experiences in the theater. He left the Jewish community when he was 19 years old.

ADD. BIBLIOGRAPHY: T. Betz, in: W. Killy (ed.), *Literatur Lexikon*, 6 (1990), 186–87.

[Rudolf Kayser]

KAHANE, ISAAK (Yitzhak Ze'ev; 1904–1963), rabbinic scholar. Kahane was born in Munkacs, Hungary, and studied at talmudic schools in his hometown, where he was ordained. He continued his studies at the Jewish Theological Seminary of Breslau and the University of Prague. Subsequently he became rabbi of Pohorelice (Pohrlitz), Moravia, serving until his emigration to Palestine in 1939. In Jerusalem he was associated with several religious research institutions, chiefly Mosad ha-Rav Kook. During the last years of his life, he taught rabbinic literature at Bar-Ilan University. Kahane's major field of research was rabbinic responsa literature. In numerous studies he organized and analyzed a variety of topics and problems discussed in rabbinic responsa and also abstracted material of historical or linguistic interest from them. Among his works are *Shemittat Kesafim* (1945), on the cancellation of debts in the sabbatical year; *Le-Takkanat Agunot* (1946), on the *agunah* ("deserted wife") problem; *Sefer ha-Agunot* (1954), a voluminous collection of source material on the *agunah* question; and *Teshuvot, Pesakim u-Minhagim* (3 vols., 1957–62), responsa, rulings, and customs of Rabbi Meir of Rothenburg, systematically arranged and annotated. His contributions to Hebrew scholarly periodicals and publications include: "Military Service in Rabbinic Responsa" (*Sinai*, 1948); "Changes in the Value of Currency in Jewish Law" (*ibid.*, 1949); "Medicine in Post-Talmudic Halakhic Literature" (*ibid.*, 1950) and "Synagogue Art in Halakhic Literature" (*Beit ha-Keneset*, 1955). He also wrote on the history of the Jews of Moravia, including a monograph on the Jewish community of Nikolsburg (in J.L. Maimon (ed.), *Arim ve-Immahot be-Yisrael*, 4 (1950), 210–313).

BIBLIOGRAPHY: T. Preschel, in: *Aresheth*, 4 (1966), 511–7.

[Tovia Preschel]

KAHANE, MEIR (1932–1990), religious activist. Born in Brooklyn, New York, he was as a youth a member of the *Betar youth movement and was often imprisoned for his acts of violence. He was ordained as an Orthodox rabbi and graduated in law from New York University. In 1960, he founded the Jewish Defense League whose activities included self-defense of the Jewish community of Brooklyn threatened with urban violence and harassment of Soviet activities in New York as a protest against the treatment of Jews in Russia. In 1971 he moved to Israel and in 1976 founded the extremist nationalist *Kach movement, advocating the removal of Arabs from Israel. Kahane served as a member of the Knesset on its behalf, 1981–1985. His party was eventually disbanded for its racism and advocacy of violence. Kahane was assassinated while addressing a meeting in New York. An Egyptian-born Arab was acquitted of the murder on techni-

calities but in 1995 was sentenced to a long term of imprisonment for his involvement in Muslim fundamentalist terror in New York.

KAHANEMAN, JOSEPH (popularly known as the "**Ponevezher Rav**"; 1888–1969), rabbi and yeshivah head, founder of the talmudic educational complex in *Bene Berak, Israel. As a young man, Kahaneman studied in the yeshivah of Telz. The *rosh ha-yeshivah*, Eliezer *Gordon, had a lifelong influence on Kahaneman. For ever after, whenever Kahaneman made reference to "*der rov*," he meant Rabbi Gordon. After Telz, he spent a short time in the *musar* yeshivah of Navarodok. From there he went to join the *kolel* of the Hafez Hāyīm in Radin. It was there that Kahaneman became close with Rabbi Elhānan *Wasserman and Rabbi Hāyīm *Soloveitchik of Brisk. In 1910 he married the daughter of another famous Lithuanian rabbi, Aryeh Leib Rubin. In 1916 he was appointed head of the yeshivah of Grodno, where his outstanding organizing abilities soon became evident. Possessed of a dynamic and winning personality, he devoted himself not only to the development of the yeshivah, but also to the establishment of similar centers of learning throughout Lithuania, among them a preparatory yeshivah in Ponevezh. On the death of Isaac Rabinowitz, the rabbi of Ponevezh, in 1919, Kahaneman was appointed his successor. He opened a yeshivah which after the attainment of Lithuania's independence became one of the largest in the country. In addition to his preoccupation with the yeshivah, in which he lectured twice a week, and whose material needs he personally looked after, Kahaneman was active in many spheres of communal endeavor. He was a leader of *Agudat Israel and an elected member of the Lithuanian parliament. He established a Talmud Torah attended by 400 children and a preparatory yeshivah to serve as a feeder for the main institution.

Kahaneman was on a mission abroad when World War II broke out. In 1940 he settled in Erez Israel and from there directed efforts, in vain, toward the rescue of Lithuanian Jewry from the Nazis. Most of his family perished in the Holocaust. Thereafter, he devoted himself to reestablishing in Erez Israel a network of Torah institutions. In 1943 he established Batei Avot, an orphanage for refugee children. At the end of 1944 he laid the foundation of the Ponevezh Yeshivah in Bene Berak with seven students. Over the years, he traveled throughout the Jewish world to enlist financial support for his ambitious venture. The result was Kiryat Ponevezh, where more than 1,000 students have studied and which has included hostels for children and adults, a large library, and a memorial to Lithuanian Jewry. He instituted the *yarhei kallah*, an annual summer refresher course in talmudic studies for adults. All this, he stated, he did "with 21 fingers," those of his hands and feet and the finger of God. In later years, he established a branch yeshivah in the development town of Ashdod. He was widely revered among all sections of the population. Kahaneman was among those approached by Israeli Prime Minister David Ben-Gurion to answer the question, "Who is a Jew?"

In his answer, Kahaneman wrote, "I see the vision of the return to Zion in our generation as the revelation of the light of divine providence, which strengthens our hand and accompanies us through the evil waters that have risen against us ... I see miracles every moment, every hour! I am sure that His Honor [i.e., Ben-Gurion] sees the thing as I do, for who like the ship's captain standing at the wheel of the ship sees these miracles." Kahaneman also viewed the Six-Day War as a miracle. The Ponevezh Yeshivah in Bene Berak and its sister institution in Ashdod have thrived along with the communities Kahaneman built around them. In 1989 and again in 2003, collections of Kahaneman's writings and lectures were published, *Kovez Shi'urim ve-Ḥidushei Torah* and *Sefer Divrei ha-Rav*, respectively.

[Mordechai Hacohen / David Derovan (2nd ed.)]

KAHANOV, MOSES NEHEMIAH (1817–1883), Jerusalem talmudist. He was born in Belorussia but after his marriage at the age of 15, settled in Petroviche where at the age of 18 he was appointed assistant to the local rabbi. Some years later, he became rabbi of Khaslavich, a city noted for its scholars. In 1864 he set out for Jerusalem. On his arrival, after a journey of six months, he was appointed head of the Ez Ḥayyim yeshivah, the most important in Jerusalem, remaining in this position until his death. Kahanov was remarkably progressive for his time and environment. He appealed for the founding of industrial enterprises, a daring proposal for that time. He even consented to the proposal of Sir Moses *Montefiore to introduce the teaching of the vernacular, Arabic, in his yeshivah, but was obliged to abandon the proposal in the face of pressure from extremist elements. One of the first of the old *yishuv* to speak only Hebrew, he was also one of those who encouraged settlement outside the walls of the Old City of Jerusalem, building a house for himself in Nahlat Shivah.

Among his publications were *Erez Hefez* (1884), on laws of *terumah* and tithes; *Hukkot Olam* (1886), on mixed species (*kilayim); *Mei Menuḥot* (c. 1860) on the laws of the sabbath, to which was appended *Palgei Mayim*, giving rules for those traveling by ship on the sabbath; and *Netivot ha-Shalom* on the Shulḥan Arukh (pt. 1 (1858, 1875²), pt. 2 (1861)). He applied himself particularly to the question of the application of the laws of the sabbatical year which had become of practical importance with the establishment of the Jewish agricultural colonies, and in this connection published *Shenat ha-Sheva* (1881). The eulogies he delivered on the deaths of Baron Asher Rothschild and Sir Moses Montefiore were published. His *Sha'alu Shelom Yerushalayim* (1867) on the state of Jerusalem and its citizens was published three times. His will was published in 1968 (*Siftei Yeshenim*, Jerusalem) together with a responsum on Jerusalem and a brief biography.

[Itzhak Alfassi]

KAHANOVITCH, ISRAEL ISAAC (1872–1945), Canadian rabbi and communal leader in Winnipeg. Born in Grodno, Poland, Kahanovitch studied at the yeshivot in Grodno and Slobodka, Lithuania. He received his *semikhah* at age 20 from the leading halakhic authority, Rabbi Jehiel Michal Epstein, author of the *Arukh ha-Shulḥan*. In the wake of the 1905 pogroms, Kahanovitch moved to North America. For one year he served as rabbi in Scranton, Pennsylvania, and then moved to Winnipeg, where he lived out the rest of his life.

On the strength of his rabbinic learning, his speaking ability, and extraordinary energy, Kahanovitch was widely recognized as the rabbinic authority of Winnipeg, and he exercised influence across western Canada. A passionate advocate for Jewish education, he established groups for Talmud study and was actively involved in the creation and support of the Winnipeg Hebrew Free School first established in 1907 and in the construction of a proper building to house the school. Although a Mizrahi Zionist at heart, Kahanovitch participated in communal functions with secular Zionists. He served on the National Executive of the Zionist Organization of Canada and regularly attended the Zionist congresses in Canada. He also looked to strengthen Jewish communal bonding by supporting the Canadian Jewish Congress (CJC) at the national level, both in its first incarnation at the end of World War I and when it was revamped in the 1930s to counteract the bitter antisemitism and restrictive immigration policies of Depression-era Canada. He was elected a delegate to the first CJC meeting in Montreal by an overwhelming majority. At the local level, shortly after his arrival he was the prime mover behind the establishment of the United Hebrew Charities in Winnipeg and hoped in vain for a *kehillah*-type organization.

Kahanovich was appreciated by those in smaller Jewish communities across western Canada who struggled to sustain local Jewish community life and institutions. At a time when travel was often difficult and rabbinic authorities few and far between, Kahanovich supported the creation of a Jewish school in Regina, attended a teachers' conference in Saskatoon, and traveled to tiny Melville in Saskatchewan to dedicate a new synagogue, to name just a few of his activities outside of Winnipeg.

While highly regarded, Kahanovich's authority on matters of supervision of kosher slaughtering did not go unchallenged. His most serious challenger was Rabbi I.D. Gorodsky who also held a rabbinic position in Winnipeg between 1911 and 1919. But Kahanovitch remained a beloved figure among Jews, religious and secular, in Winnipeg and across western Canada. In 1927 a number of communal leaders established a special committee to raise money to increase Kahanovich's salary, when a rumor circulated that he was going to leave Winnipeg. His funeral in 1945 was attended by a crowd of

about 5,000, about one-third of the total adult Jewish community of Winnipeg.

KĀHINA (feminine form of the Ar. *Kāhin*, “soothsayer,” sometimes incorrectly thought to be derived from Cohen), the surname given by the Arabs to the *Berber queen of the mountainous Aurès region in southeast Algeria. According to Arabic authors, the powerful Jerawa tribe of Berber converts to Judaism, to which Kāhina belonged, was led by her during the final resistance to the Arab invasion. She defeated the armies of Ḥasān ibn al Nu‘mān and took prisoners, one of whom, Khālid b. Yazīd, she kept and adopted. Allegedly, Khālid betrayed Kāhina who died in combat (698 or 702). The Arabs then poured into Africa and invaded Spain with Berber troops. Arab authors’ accounts of Kāhina are partly legendary, but they nevertheless contain some historical facts such as the historical personage of the Queen of the Aurès. Her opposition to the Muslim Arabs was not religiously inspired; some authorities deny that she was Jewish. The history of Kāhina remains controversial.

[David Corcos]

°**KAHLE, PAUL ERNST** (1875–1965), Orientalist, masoretic scholar, and minister. Kahle, who was born in Hohenstein (East Prussia), served for five years as a pastor in Cairo. He then taught at the universities of Halle, Giessen, and Bonn, and from 1923 was director of the Oriental Institute at Bonn. Under his guidance, many of his students devoted themselves to the study of the **Genizah*, especially the early history of **piyyut*. Many of his students, including M. *Zulay, settled in Israel and became prominent in Jewish scholarship. In 1924 Kahle wrote an opinion defending the Talmud against the libels of the notorious antisemite, T. Fritsch. Because of his and his wife’s pro-Jewish activities following Kristallnacht, the family had to seek refuge in England (Oxford) in 1938. Kahle continued his work at Oxford University. He received two doctorates: his philosophy thesis was published as *Textkritische und Lexikalische Bemerkungen zum samaritanischen Pentateuchargument* (1898), while his theology thesis was published as *Der masoretische Text des Alten Testaments nach der Ueberlieferung der babylonischen Juden* (1902, repr. 1966). Masoretic studies were the dominating interest of his life. His first major work in this field was *Masoreten des Ostens* (1913, repr. 1966), and the two-part *Masoreten des Westens* (1927–30, repr. 1967). This research led him from the popular text of Jacob ben Ḥayyim’s

Second Rabbinic Bible (1524/25) to the Aaron ben Asher texts of the 11th century. Due to Kahle’s research, one of these texts, the Leningrad Codex B 19a, supplanted the former as basis for Kittel’s *Biblia Hebraica* (1937³ and later), and was later used for its successor, *Biblia Hebraica Stuttgartensia* (1969 ff.). Kahle’s main source of evidence for his study of the masorah were the fragments from the Cairo *Genizah*, in which his interest was aroused by Solomon Schechter. With the aid of the fragments he was able to make a pioneering contribution to the understanding of the emergence and development of the masoretic text. Using the *Genizah* material as his main source of evidence, he developed his thesis regarding Hebrew vocalization in which he contended that the two centers of rabbinic learning, Babylon and Palestine, each created both a simple and a complete system of vocalization, which ultimately emerged into the official Tiberian vocalization which is an integral part of the Ben Asher text and masorah.

This, and much else, is to be found in Kahle’s *Cairo Geniza* (1947, enlarged 1959²). Basically, to Kahle, all textual transmission was a matter of emergence from earlier traditions. The Targums of the Torah and the Prophets were originally free, random renderings and were later edited in Babylon as Targums Onkelos and Jonathan and transferred to Palestine as official renderings, c. 1000 C.E. The Septuagint, which originally had only the Torah, with its authorized form advocated in the Letter of *Aristeas, emerged as a full version only in and for the Christian Church. It was composed from a variety of Targum-like Greek renderings. This hypothesis was stretched to include all known versions. Opposition to Kahle’s view was widespread, and it is possible that his attempt to make his hypothesis so universally applicable shows that it has a fundamental weakness, but his text remains important as a parallel to the Aleppo text of the Hebrew University Bible project.

Kahle’s two-volume *Volkserzählungen aus Palaestina* (with H. Schmidt, 1918–30) deals with Erez Israel. He also wrote a series of articles on Muslim holy places in Palestine (in *PJB*, vols. 6–8, 1910–12), and studies of the Dead Sea Scrolls (*Die hebraeischen Handschriften aus der Höhle* (1951)). On the occasion of his 60th birthday, Kahle was honored by a festschrift (*Studien zur Geschichte und Kultur des Nahen und Fernen Ostens* (1935), with bibliography), and on his 80th birthday by a collection of his minor studies (*Opera Minora* (1956), again with bibliography). A memorial volume, *In memoriam Paul Kahle*, edited by M. Black and G. Fohrer, appeared in 1968.

[B.J. Roberts / Bjoern Siegel (2nd ed.)]

KAHLER, ERICH (1885–1970), historian and philosopher. Born in Prague, raised in Vienna, educated at the universities of Berlin, Munich, Heidelberg, and Vienna, he settled in

Munich after obtaining his doctorate in Vienna (1908) with his dissertation *Recht und Moral* (published 1911). His study, *Das Geschlecht Hapsburg* (1919), was followed by *Der Beruf der Wissenschaft* (1920), a polemic directed against Max Weber's *Wissenschaft als Beruf*. A publisher to whom he submitted the manuscript of his major work, *Der deutsche Charakter in der Geschichte Europas*, denounced him to the Nazis in 1933, but he had already escaped to Vienna, afterwards to Czechoslovakia, and then to Switzerland, where the book appeared in 1937 and aroused much attention. In 1938 he found a permanent refuge in Princeton. His public lectures and seminars at American universities, primarily at Cornell from 1947 to 1955, resulted in seven scholarly volumes. A book of tributes to him by John Berryman, G.A. Borgese, Hermann Broch, Albert Einstein, Rudolf Kassner, Thomas Mann, Wolfgang Pauli, and others appeared in 1951.

Kahler's approach to history was characterized by Hermann Broch as moral anthropology. This approach was apparent in his study of the Hapsburgs, which considered the royal family as a historical organism with common psychological traits throughout six centuries. In his sociological and historical study *Israel unter den Völkern* (1936) he found a common Jewish type persisting down the millennia from its tribal origin until the twentieth century. In *Der deutsche Charakter in der Geschichte Europas*, he presented the Germans as a specific historic organism, its evolution and its impact upon Europe. Its ideas continued to occupy Kahler's thinking and formed the basis for *The Germans* published in 1974. In it, the material was presented not topically, as in the earlier volume, but rather chronologically, from the confrontation of the German tribes with the Roman Empire until the Nazi assumption of power and the catastrophe of World War II.

Kahler's most important work, *Man the Measure* (1943), was subtitled *A New Approach to History*. It studied the human species as an organism whose historical changes were grafted on to an enduring psychic structure. It emphasized the evolution and transformation of human consciousness.

The Tower and the Abyss (1957) may be regarded as a sequel to *Man the Measure*. As an inquiry into the transformation of the individual, it stresses the evolutionary forces that converged to bring about the disruption, disintegration, and fragmentation of the contemporary individual personality from without and from within. Kahler sees the present as a state of transition from an individual form of existence to a supra-individual form, whose character is still obscure. The work concludes with Kahler's own vision of a possible Utopia, which will permit the reintegration of fragmented Man in free communities.

Kahler's essays were collected in the German volume *Die Verantwortung des Geistes* (1952) and in the English volumes *Out of the Labyrinth* (1947), *The Disintegration of Form in the Arts* (1968), and *The Inward Turn of the Narrative* (1973).

[Sol Liptzin (2nd ed.)]

KAHN, ALBERT (1860–1940), French philanthropist. Born in Marmoutier (Alsace) to a family of merchants, Kahn settled in Paris in 1876 and found a job at the Banque Goudchaux. However, he displayed such genius in the field of finance that he soon became a partner in the bank and founded his own bank in 1898. He built his fortune by investing in the diamond and gold mining projects developed by Cecil Rhodes in South Africa in the 1880s and 1890s. A confirmed bachelor, Kahn devoted his energy and his financial resources to the promotion of utopian concepts of peace and harmony in the world through better mutual understanding among the different civilizations and social forces. In 1898, he created the *Autour du monde* ("Around the World") fellowships to encourage young French intellectuals to travel and discover other parts of the world. The project was later extended to candidates from many other countries. His Archives de la Planète, created in 1912, sent photographers to various parts of the world and accumulated a wealth of rare animated images and photographs both of daily life and of specific events. In the same year, he sponsored the creation in the Collège de France, by Jean Brunhes, of a Human Geography cathedra.

From 1920, Albert Kahn endowed various French institutions of higher learning (notably the École Normale Supérieure in Paris) with documentation centers. He encouraged discussion of the social and human problems in a spirit of goodwill in the *Autour du monde* forum (1906) and the Comité national d'études sociales et politiques (1916), which published much material. A friend of Henri Bergson since the time of their youth, he supported the activities of the League of Nations in the field of intellectual cooperation. His connections were particularly close with Japan and were reflected in the Japanese garden in his mansion in Boulogne Billancourt (near Paris), combined with an Alsatian-style garden reminding him of his youth. Kahn was ruined by the economic crisis of the 1930s, and most of his public activities were curtailed. His garden remains open to the public at large, and from the 1990s, mainly through Japanese sponsorship, his films and photographs have been digitized and are available to visitors together with thematic exhibitions.

[Philippe Boukara (2nd ed.)]

KAHN, ALBERT (1869–1942), U.S. industrial architect. Kahn was born in Rhaunen, Germany, and was taken to the United States in 1881. He was trained in Detroit and specialized in factory design. He was engaged by Henry Ford as one of his principal architects. He also designed assembly plants for other leading automobile companies. His outstanding buildings include the General Motors Building in Detroit (1901) and the Ohio Steel Foundry Company Building (1940). In 1930 the Soviet government engaged him to design a series of factories in the Volga region, and members of his staff helped supervise the construction of industrial plants for the second 5-year plan. He built two Reform synagogues in Detroit for the Beth-El congregation of which he was a member, both in the classical style.

BIBLIOGRAPHY: R. Wischnitzer, *Synagogue Architecture in the United States* (1955); J.M. Fitch, *American Building*, 1 (1966²), index; J. Burchard and A. Bush-Brown, *Architecture of America* (1961), index.

KAHN, ALEXANDER (1881–1962), U.S. lawyer and newspaper executive. Kahn, who was born in Smolensk, Russia, was taken to the U.S. in 1893. He was an active member of the Socialist literary club that took part in the founding of the **Jewish Daily Forward* (1897) and became general counsel to the Forward Association, the nonprofit organization established to run the paper. In 1939 he became the paper's general manager. Kahn, a founder and vice president of the New York State Liberal Party, was an unsuccessful candidate for public office on that ticket as well as on the American Socialist Party and American Labor Party tickets on several occasions during his career. Extremely active in Jewish affairs, he was a founder and vice chairman of the American Jewish Joint Distribution Committee. He was also a founder of the liberal weekly magazine, the *New Leader*.

KAHN, ALFRED JOSEPH (1919–), U.S. educator and social planner. Born in New York City, Kahn received his B.S.S. from the City College of New York (1939), his Master's of Social Work from Columbia University School of Social Work (1946), and his Ph.D. in Social Welfare from Columbia University (1952). It was the first doctorate given at Columbia's School of Social Work.

He was with the U.S. Army Air Force from 1942 to 1946. After serving as a psychiatric social worker with the Jewish Board of Guardians in New York City (1946–47), he began teaching at the Columbia University School of Social Work and in 1954 was appointed a full professor. His special areas of expertise included delinquency, services for children, mental health, and social policy and planning. After his retirement from teaching, he became professor emeritus, special research scholar, and special lecturer at the Columbia University School of Social Work.

Kahn was a consultant to a number of social agencies and foundations. His writings show his special interest in social planning. These include *A Court for Children* (1953), *Planning Community Services for Children in Trouble* (1963), *Neighborhood Information Centers* (1965), and *Day Care as a Social Instrument* (1966, with Anna Mayer). His companion volumes *Theory and Practice of Social Planning* and *Studies in Social Policy and Planning*, published in 1969, are basic texts in this field. He was editor of *Issues in American Social Work* (1959). Kahn's recommendations have been incorporated in a number of social programs to meet the problems of the young.

Kahn served as consultant to federal, state, and local agencies; to voluntary organizations; and foundations concerned with the planning of social services, income maintenance, child welfare-related programs, international collaboration, and social policy. He was national chairman for the Division of Practice and Knowledge of the National As-

sociation of Social Workers and served for two terms on the NASW Board.

Kahn completed several overseas assignments for the Department of Health Education and Welfare, the State Department, private foundations, the UN, and various foreign governments. He received a Lifetime Achievement Award from the Council on Social Work Education (1990), the National Association of Social Workers (1996), and the Social Welfare Policy and Policy Practice Group (2001). In 2002, the Alfred J. Kahn Doctoral Fellowship was established at the Columbia University School of Social Work. Some of Kahn's later works, which he co-authored with Sheila Kamerman, include *Not for the Poor Alone* (1981), *Helping America's Families* (1982), *Maternity Policies and Working Women* (1983), *The Responsive Workplace* (1987), *Mothers Alone* (1988), *Child Support* (1988), and *Starting Right* (1995).

[Ruth Beloff (2nd ed.)]

KAHN, BERNARD (1876–1955), organization executive. Born in Oscarsham, Sweden, Kahn studied in Germany, where he became involved in Jewish communal affairs. In 1904 he was appointed secretary-general of the **Hilfsverein der Deutschen Juden*, a position he held until 1921 and from which he helped direct the large flow of Jewish emigration in those years from Germany and Central Europe to the United States. In 1921 he became director of the refugee department of the **American Jewish Joint Distribution Committee* (JDC), whose main European office was in Paris, and in 1924 overall European director of the JDC, as well as managing director of its subsidiary, the American Joint Reconstruction Foundation. Kahn held these positions until 1939, a period during which the Joint was called on to perform enormous tasks in the fields of resettlement, medical and financial help, and education and vocational training, particularly among the ravaged Jewish communities of Eastern Europe, to which he frequently traveled. His own special interest was in the Reconstruction Foundation, which created a large network of cooperative Jewish loan societies that provided a credit and banking structure for Jews who were being progressively shut out of economic life in various Central and Eastern European countries. His knowledge of finance also led him to play active roles in the Central Bank for Cooperative Investment in Palestine, the Palestine Economic Corporation, and Keren Hayesod. With the outbreak of World War II in 1939, Kahn emigrated to the U.S. He served as honorary chairman of the JDC European Council from 1939 to 1950 and as vice chairman of the JDC from 1950 until his death.

[Hillel Halkin]

KAHN, DOROTHY C. (1893–1955), U.S. social worker. Dorothy Kahn, who was born in Seattle, Washington, began her career as a caseworker for the Jewish Social Service Bureau, Chicago (1915–18). She subsequently held several important posts in the social work field, including: executive director of both the Jewish Social Service Bureau of Baltimore (1919–28),

and the Philadelphia County Board of Assistance (1932–38); faculty member at the Pennsylvania School of Social Work (1930–45); director of the department of economic adjustment and family service of the National Refugee Service, Inc. (1941–43); and chairman of the subcommittee on unemployment relief of the President's Committee on Social Security during World War II. From 1951 to 1954 she headed the social services section of the UN's Department of Social Affairs. As such, she represented the UN at social work and child welfare conferences at Madras and Bombay, India (1952), and advised the Israel government on social welfare administration.

KAHN, ELY JACQUES (1884–1972), U.S. architect, born in New York. He studied at Columbia University and in Paris. Kahn was an outstandingly versatile and successful New York architect in the period between the two world wars. He built houses, country clubs, office blocks, department stores, hospitals, factories, and other buildings and was also a designer in the applied arts. At the same time, he lectured on design and architecture. His buildings of Jewish interest are the Mount Sinai Hospital, New York, and the offices of the Jewish Federation for the Support of Philanthropic Societies of New York City. Kahn held that each new architectural problem demanded a fresh solution, free from the “heavy and deadly practice” of copying the architecture of the past. Although he built many skyscrapers in the manner of the period, some of his works, such as his country clubs, were built in a historical style despite his scruples. He also maintained that architectural beauty consists in proportions and material rather than in ornamentation. He wrote *Design in Art and Industry* (1935).

BIBLIOGRAPHY: A.T. North (ed.), *Ely Jacques Kahn* (Eng., 1931).

KAHN, ERICH ITOR (1905–1956), composer and pianist. Born in Germany, Kahn spent some time in France and then settled in the United States. He was a distinguished performer of chamber music. As a composer, he was influenced by the *Schoenberg school, and he also made frequent use of hasidic material. Among his important compositions are: *Rhapsodie Hassidique*, for mixed chorus (1938); *Ciaccona dei tempi di guerra*, for piano (1943); *Nenia Judaeis Qui Hac Aetate Perierunt*, for cello and piano (1943); *Actus Tragicus* for ten solo instruments (1946); and *Three Madrigals for Mixed Choir* (1956). He died after a road accident.

KAHN, FLORENCE PRAG (1866–1948), U.S. congresswoman. Elected in 1924 to the United States House of Representatives for the first of six two-year terms, Kahn in her first speech before the House observed that since Moses had conducted the world's first census, she was especially qualified to address the reapportionment issue. Kahn, a Republican from San Francisco, California, the first Jewish congresswoman, chose to introduce herself to her colleagues as a Jew.

Kahn's Polish parents reached San Francisco during the Gold Rush. Her father was a 49er, while her mother arrived

in 1852. Florence, born in Salt Lake City (where her parents lived briefly) grew up in a family and city where a Jewish woman had examples of success. In cosmopolitan San Francisco, Jews worked with non-Jews and faced relatively little antisemitism.

Educated in San Francisco's public and Jewish schools, Kahn earned a degree at the University of California at Berkeley in 1887. She became the first Berkeley graduate to teach in the San Francisco public school system. In 1899 Florence Prag married San Francisco Congressman Julius Kahn; he served in the House until 1924 except one term when he failed to win re-election.

In Washington, Florence served as her husband's secretary and observer for his local district, regularly sitting in the gallery of the House. Starting in 1919 she wrote columns for the *San Francisco Chronicle* which discussed a wide range of political issues.

After her husband's death in 1924, Kahn ran successfully for his seat in Congress. While her husband had been ill, she had been the de facto representative. The first piece of legislation Kahn introduced was a bill to reimburse Indians for land that had been taken from them in the treaties of 1851 and 1852. The bill was defeated. However, eventually California's native peoples received some compensation.

Kahn also helped her district's Chinese citizens. She supported an amendment providing citizenship for Chinese women married to American-born Chinese men, noting that the existing law deprived Chinese men and women of family life. In 1930 Congress changed the law to allow Chinese women who had married before the 1924 immigration legislation to enter the country. She also supported an amendment that passed on citizenship to children of American-born women residing outside the United States, the law already gave men this right.

Often receiving endorsements from both Republicans and Democrats, Kahn was the first woman appointed to the Committee on Military Affairs. She also served on the Appropriations Committee and co-authored legislation that obtained federal support for California's military installations and the building of the Oakland-Bay Bridge which connected Oakland to San Francisco.

For Kahn, citizenship rights for men and women, the Republican Party, and a confident Jewish identity were the core of her life and politics. She only voted against her party when Republicans supported prohibition and movie censorship, two issues that had a financial impact on her district. Known as a forceful, shrewd, and witty politician, Kahn's credo was “[t]here is no sex in citizenship, and there should be none in politics.”

[Ava F. Kahn (2nd ed.)]

KAHN, FRANZ (1895–1944), Zionist leader in Czechoslovakia. Born in Pilsen, Bohemia, Kahn joined the Zionist youth movement *Blau-Weiss when he was still in high school. He was severely wounded in World War I, losing his left arm. After the war he completed his studies in law. In 1921 he was appointed secretary-general of the Czechoslovak Zionist Federation and a member of its administrative committee, subsequently becoming deputy chairman of the federation. As director of the bureau of the Zionist Congress, Kahn was responsible for the organization of most *Zionist Congresses between the two world wars. Seeing Zionism as a safeguard for the survival of the Jewish people and a continuous aspiration toward the reform of Jewish society, Kahn devoted himself to the creation of an organizational framework for such a Zionist society. When Nazi Germany occupied Czechoslovakia, he viewed the future of Jewry with great pessimism. He did not believe that Jewish lives could be saved by making them useful to the oppressor, though he did not oppose the attempt. Considering it his duty to keep control over the activities of the Jewish institutions, without any self-deception, on the very day of the occupation he decided to remain behind. Later, in *Theresienstadt, he was mainly concerned in keeping contact with the pioneering youth movements, who saw him as the embodiment of the Jewish and human conscience. In 1944, at a meeting marking the 40th anniversary of Herzl's death, he addressed thousands of camp inmates. Summarizing Zionist teachings for the last time, he concluded his address with the call "The people of Israel lives." In October 1944 Kahn and his wife, along with many other militant Zionists, were taken to Auschwitz to perish in the gas chambers.

[Chaim Yahil]

KAHN, GUSTAVE (1859–1936), French poet and author. Kahn, who was born in Metz, was one of the outstanding poets of the Symbolist movement and, with Jules Laforgue, is considered the inventor of *vers libre* (free verse), which uses mixed rhythms, especially of common speech. His *Premiers poèmes* (1897) included "Les palais nomades" (1887), "Chansons d'amant" (1891), and "Le Domaine de fée" (1895). An admirer of Baudelaire and Verlaine, Kahn was also an art critic, and he sponsored the review *Vogue*. He published essays on French painters, including "François Boucher" (1905), "Jean-

Honoré Fragonard" (1907), and "Fantin-Latour" (1926). Kahn also wrote a work of criticism entitled *Symbolistes et décadents* (1902), and a few novels. Though generally remote from Jewish communal affairs, he became an enthusiastic advocate of the Zionist cause, which was, in his opinion, a romantic, heroic, and mystical form of Judaism. These sympathies inspired his *Contes juifs* (1926), *Vieil Orient, Orient neuf* (1928), *Images bibliques* (1929), and *Terre d'Israël* (1933). For many years Kahn edited the *Menorah*, a French Zionist periodical and, after his death, his manuscripts were deposited at the Jewish National and University Library in Jerusalem.

BIBLIOGRAPHY: *Univers Israélite* (Sept. 11, 1936); H. Talvart and J. Place, *Bibliographie des auteurs modernes de langue française*, 10 (1950), 213–23; J.C. Ireson, *Oeuvre poétique de Gustave Kahn* (1962).

[Moshe Catane]

KAHN, JEAN (1929–), French Jewish leader. Kahn was born in Strasbourg where he attended school and the university law school. He received his doctorate in law for a thesis on "Marriage in Jewish and Roman Law." Kahn qualified as a lawyer in 1953 but gave up his practice to enter the family textile business. He was early involved in communal affairs and from 1969 to 1990 was president of the Strasbourg Jewish Community. Active in the World Jewish Congress from 1979, he became president of its European Commission in 1979 and president of the European Jewish Congress in 1991. In 1983, Kahn was elected vice president of CRIF (the French Jewish Representative Council) and in 1989, by a 75% vote, he became its president. He has been involved in various major problems facing the European Jewish community, especially in view of the recrudescence of antisemitism. He was active in the efforts to transfer the Carmelite convent from Auschwitz, in the protests against the desecration of Jewish graves in the Carpentras cemetery, and in the struggle against France's National Front Party, including a crucial intervention in having the parliamentary immunity of its leader, Jean-Marie Le Pen, lifted so he could face charges before the European Parliament. In 1991 he became president of the Bas-Rhin Consistoire. He has been awarded the Legion of Honor and other honors.

[Gideon Kouts]

KAHN, JULIUS (1861–1924), U.S. congressman. Kahn, who was born in Kuppenheim, Germany, was taken to the U.S. in 1866. After following a career as an actor for ten years, Kahn became a lawyer (1894). He served one term in the California State Assembly. From 1899 to 1903 he was Republican congressman from California's Fourth District (representing part of San Francisco). Reelected in 1905, he served in the House until his death. Kahn, a strong advocate of universal military training and naval preparedness, was ranking Republican member of the House Military Affairs Committee during World War I. As such, he helped to steer through Congress President Wilson's World War program, particularly the administration's conscription bill which was opposed by the majority of Democratic committee members. In 1921 Kahn

became chairman of the House Military Affairs Committee and took charge of legislation for reorganizing the army on a peacetime basis. He was the first member of Congress to advocate that candidates be obliged to publish their primary campaign expenses and contributions. He was an active opponent of Zionism. Kahn was one of the founders of the Jewish Educational Society in San Francisco (1897). His widow, FLORENCE PRAG KAHN (1868–1948), was appointed to his House seat on his death. She served in the House until 1937.

BIBLIOGRAPHY: H. Schneiderman, in: *AJYB*, 27 (1925), 238–45.

[Robert E. Levinson]

KAHN, LÉON (1851–1900), French historian and publicist. Born in Paris, Kahn became secretary-general of the Paris *Consistory in 1895. He was active in many Jewish associations in Paris; for a time he edited *Univers Israélite* and collaborated on the yearbook of the *Archives Israélites*. A specialist on the history of the Jews of Paris, he wrote a book, *Les Juifs de Paris pendant la révolution* (1899), and a number of studies on that subject, based on archival material.

[Georges Weill]

KAHN, LOUIS (1895–1967), French general and naval engineer. Born in Versailles, Kahn commanded a battery in World War I and was wounded twice. After the war, he graduated as a maritime engineer and helped construct the first modern French cruisers. Head of the technical department of the Air Force Ministry between 1928 and 1938, he discovered a new method of cartographic projection, well-known to air navigators as the “transcontinental orthodromic itineraries.” He also participated in the design of modern aircraft carriers. In 1940 Kahn was dismissed from the French Navy by the Vichy government (see *France: Holocaust Period). He escaped to London where, as director of naval construction with the Free French, he introduced new techniques of submarine warfare. After the liberation, Kahn was put in charge of the reconstruction of industrial equipment and was responsible for coordinating the operations of refloating 1,400,000 tons of scuttled ships to reestablish navigation. In 1950 he was appointed secretary-general of the armed forces by Jules *Moch, then minister of national defense. Parallel to his military and naval career, Kahn always took an active part in Jewish cultural and communal affairs. He presided over the “Chema Israel” Jewish cultural association from 1925, and, after the liberation, drew up with Edmond *Fleg the manifesto of the Alliance Israélite *Universelle. From 1963, Kahn was president of the Central *Consistory of French Jews, deputy president of Alliance Israélite, and vice president of *Ort.

[Emmanuel Beer]

KAHN, LOUIS I. (1901–1974), U.S. architect. Born on the island of Osel (Saaremaa), Estonia, he was taken to the U.S. in 1905. After traveling in Europe he worked with Paul Cret, an academic architect, and later became an expert in city plan-

ning. During World War II he designed a number of housing projects with associates, and later became resident architect of the American Academy in Rome, design critic at Yale, and professor of architecture at the University of Pennsylvania.

His first building of importance was the Yale Art Gallery, New Haven (1952–55). In his Community Center of Trenton (1956–59), the cross-axial plan reveals the influence of the Beaux-Arts tradition. Here and in the Yale Art Gallery Kahn revived the use of the column as a means of defining space. The Richards Medical Research Building, University of Pennsylvania (1958–60), was a spectacular construction which placed Kahn at the forefront of international architecture. The horizontal buildings are surmounted by thrusting vertical towerlike ducts, the purpose of which is to allow toxic atmospheres to escape from the laboratories. By this means Kahn created a flamboyantly picturesque skyline out of a functional need.

Kahn later designed many synagogues. The exterior of his design for Congregation Mikveh Israel, Philadelphia (1963) is very austere and resembles a fortress. It features a series of massive, repetitive, round stone blocks. The rounded walls of the interior are broken up by arched openings which let in the light. Emphasis is placed on the area of space rising above the congregation. His notebooks and drawings were published in 1962.

BIBLIOGRAPHY: *L'architecture d'aujourd'hui* (special issue in honor of Louis I. Kahn), 142 (Feb.–March 1969), 1–99 (Eng.); I. McCallum, *Architecture U.S.A.* (1959), 83–88; Bush-Brown, in: *Horizon*, 5 (Sept. 1962), 57–63; V.J. Scully, *Louis I. Kahn* (Eng., 1962).

KAHN, MADELINE (Madeline Gail Wolfson; 1942–1999), U.S. actress. Born in Boston, Massachusetts, Kahn began acting in school productions during high school, first at a boarding school in Pennsylvania and then at Martin Van Buren High School in Queens, New York, where she earned a drama scholarship to Hofstra University. She graduated from Hofstra in 1964 and began auditioning for professional roles, landing her first part as a chorus girl in a City Center revival of *Kiss Me Kate* (1965). Kahn's first starring role on Broadway came three years later playing Cunegonde, the female lead in Leonard Bernstein's *Candide* (1968). Kahn made her film debut the same year in the comic mock-Swedish short film *The Dove*, but her first major film appearance was four years later, playing Ryan O'Neal's uptight fiancé in Peter Bogdanovich's *What's Up, Doc?* (1972). In 1973, Kahn received an Oscar nomination for Best Supporting Actress for another role opposite Ryan O'Neal in a second Bogdanovich film, *Paper Moon*, but the award eventually went to her fellow co-star in the film, Ryan O'Neal's 11-year-old daughter Tatum. The following year, Kahn delivered her unforgettable performance as saloon singer Lili Von Shtupp in Mel Brooks' irreverent comedy *Blazing Saddles*, for which she received her second Oscar nomination for Best Supporting Actress in two years. Kahn continued to work with Brooks in two subsequent films that further cemented her reputation as one of Hollywood's best

comedic actresses, *Young Frankenstein* (1974) and *High Anxiety* (1977). On the stage, Kahn was nominated for three Tony Awards before winning the Best Actress Tony in 1993 for the role of Gorgeous in Wendy Wasserstein's *The Sisters Rosenzweig*, the tale of three sisters, all accomplished assimilated Jewish women approaching middle-age, who gather to celebrate a birthday. Later Kahn played a major role on the television show *Cosby* (1996–99) and provided the voice of the Gypsy Moth in the animated Pixar film *A Bug's Life* (1998), before succumbing to ovarian cancer in 1999 at the age of 57.

[Walter Driver (2nd ed.)]

KAHN, OTTO HERMANN (1867–1934), U.S. banker, arts patron, and philanthropist. Kahn, who was born in Mannheim, Germany, was the son of Bernhard Kahn, a banker and arts patron. Otto Kahn began his banking career at a small bank in Karlsruhe. After service with a German elite cavalry regiment, he joined the Deutsche Bank. From 1888 to 1893 he worked at the bank's London branch, and became its assistant manager. In 1893 Kahn accepted a position with the New York banking house of *Speyer & Co. Three years later he married Addie, the daughter of Abraham Wolff, a partner in *Kuhn, Loeb & Co., and joined that firm in 1897. His financial aptitude attracted the attention of the world's financial leaders, and at the age of 30 he was considered a leading banking authority. Kahn opposed inflationary policies and excessive government intervention in economic affairs. During World War I, he advocated the establishment of a war finance board to cope with the complex situation. After the war, he opposed both the Versailles Peace Treaty and the League of Nations, and urged the cancellation of all foreign war debts provided that European governments curb their militaristic tendencies and limit armaments production. Kahn endowed and subsidized art schools, orchestras, universities, museums, galleries, opera projects, and theatrical productions, including *Habimah, Yiddish productions, and Max *Reinhardt's United States tour in 1928, and contributed prizes for black artists in New York. From 1903 to 1917 he served as chairman of the board of the Metropolitan Opera and from 1917 to 1931 was its president. He was instrumental in bringing Toscanini to New York. In recognition of his many public services, he was decorated by several foreign governments. His Jewish interest concentrated on the Federation of Jewish Philanthropies of New York of which he was a founder. Kahn's works include *Right Above Race* (1918); *Our Economic and Other Problems* (1920); and *Of Many Things* (1926).

[Joachim O. Ronall]

KAHN, RICHARD FERDINAND, LORD (1905–1989), British economist. Kahn, son of Augustus Kahn (1868–1944), a well-known educator and communal worker, was a disciple of the economist J.M. Keynes, whom he succeeded as bursar of King's College, Cambridge. Born in London, Kahn was

educated at St. Paul's and Cambridge and became a fellow of King's College, Cambridge, in 1930. In 1951 he was appointed professor of economics at Cambridge. He was the author of the "multiplier theory," which deals with the ability to save and invest as against the propensity to consume. Kahn was extremely influential in the origins of Keynes' celebrated General Theory (1936) and was the originator of several of its crucial concepts. An authority on investment and international trade, Kahn was a member of several government committees, a part-time member of the National Coal Board (1967), and an adviser to banking firms. In 1955 he was appointed to the research and planning division of the United Nations Economic Commission for Europe. He was created a life peer in 1965. Among his writings are "The Relation of Home Investment to Unemployment" (*Economic Journal*, 1931), and *Payments Arrangements among the Developing Countries for Trade Expansion* (1966). In early and later life Kahn was an observant Orthodox Jew.

[John M. Shaftesley]

KAHN, ROBERT I. (1910–), U.S. rabbi and community leader. Born in Des Moines, Kahn was a graduate of the University of Cincinnati (1932) and ordained by the Hebrew Union College (1935). He then became an assistant rabbi to Congregation Beth Israel in Houston. Kahn served in the infantry during World War II in New Guinea and the Philippines and then returned to Houston as rabbi of Congregation Emmanuel. Kahn preached and lectured all over the United States, in person and over radio and television. In a national "Back to God" telecast, he shared the camera with Billy Graham.

In his community, Kahn served on the boards of several social agencies such as Red Cross, Boy Scouts, Travelers Aid, Mental Health, Muscular Dystrophy, Houston Metropolitan Ministries, and United Fund. He was a member of B'nai B'rith, of which he was a past president, the Masons, and Shriners. He was president of the Houston Rotary Club in 1967–68, the largest rotary club in the world, and was district governor from 1978 to 1979. He was grand chaplain of the grand lodge of Texas.

He was honored by the Boy Scouts of America with the Silver Beaver and Ner Tamid Awards; by the Freedoms Foundation with a George Washington Medal; by the French government for service to veterans; by the Masonic Order with the 33rd degree; and by the State of Israel with the Prime Minister's Medal for Israel Bonds. A forest has been planted in his honor in Israel.

Among his writings are *Lessons for Life* (1963); *The Ten Commandments for Today* (1964); *May the Words of My Mouth* (1984); and the *Letter and the Spirit* (1972).

In Houston he taught at St. Thomas University and at St. Mary's University and was a guest lecturer on Judaism at universities and colleges throughout the Southwest. Upon his retirement in 1978 he returned to Hebrew Union College to teach liturgy, in keeping with his work as chair of the com-

mittee that published the new Reform Prayer Book *Gates of Prayer* in 1975.

[Michael Berenbaum (2nd ed.)]

KAHN, ROGER (1927–), U.S. sportswriter. Born and raised in Brooklyn, N.Y., Kahn worked at the *New York Herald Tribune* in the early 1950s covering the Brooklyn Dodgers. He was named sports editor at *Newsweek* in 1956, and editor at large at the *Saturday Evening Post* from 1963 to 1969 as well as writing freelance magazine essays for *Esquire*, *Sports Illustrated*, *Time*, and other publications. His most famous work among 17 books was the 1972 bestseller *The Boys of Summer*, an account of the Dodger teams of the 1950s and how the players aged 20 years later. He also wrote *How The Weather Was* (1973); *A Season in the Sun* (1977); *Good Enough to Dream* (1985), chronicling the Class A Utica Blue Sox baseball team in the summer of 1983; *Joe & Marilyn: A Memory of Love* (1986); the controversial *Pete Rose: My Story* (1989); *The Era: 1947–1957, When the Yankees, the Giants, and the Dodgers Ruled the World* (1993); *Games We Used to Play* (1994); *Memories of Summer: When Baseball Was an Art and Writing about It a Game* (1997); *Flame of Pure Fire: Jack Dempsey and the Roaring '20s* (1999); *Head Game: Baseball Seen From the Pitcher's Mound* (2000); and *October Men: Reggie Jackson, George Steinbrenner, Billy Martin, and the Yankees' Miraculous Finish in 1978* (2003). Kahn also wrote two non-sports books, *The Passionate People: What It Means to Be a Jew in America* (1968) and *The Battle for Morningside Heights: Why Students Rebel* (1970), and two novels, *But Not to Keep* (1979) and *The Seventh Game* (1982).

[Elli Wohlgeleerter (2nd ed.)]

KAHN, ZADOC (Zadig; 1839–1905), chief rabbi of France. Born in Mommenheim, Alsace, Kahn was the son of a village peddler. His mother was the daughter of Rabbi Isaac Weyl (Reb Eisik) of Wintzheim, whose father, Jacob Meyer, was a member of the Sanhedrin convened by Napoleon I, and chief rabbi of the Lower Rhine department. Kahn was educated in a yeshivah at Strasbourg and from 1856 at the Ecole Rabbinique in Metz (later in Paris), from which he graduated in 1862. He then became director of the Talmud Torah, a preparatory school of the Ecole. In 1866 Kahn became assistant to Chief Rabbi Isidore Lazare of Paris, whom he succeeded in 1868. Kahn's appointment over many candidates was determined by his excellent thesis, *L'Esclavage selon la Bible et le Talmud* (1867). In 1889 Kahn was appointed chief rabbi of France. His position both as chief rabbi of Paris and chief rabbi of France was marked by a series of critical events in the history of French and world Jewry. After the death of Adolphe *Crémieux in 1880, French Jewry had no recognized secular leader, and institutions and individuals turned to Kahn for advice and leadership. His freedom of action was often limited by the attitude of the official Franco-Jewish leaders, so that Kahn never

really became one of the great Jewish leaders who developed out of the period. French Jewry lost its most active communities during his tenure of office, when Alsace-Lorraine was annexed by Germany. The years 1881–82 witnessed the beginning of a mass emigration of East European Jews, some of whom turned to France. But Kahn was unable to influence this important event, as policy was dictated by the *Alliance Israélite Universelle and the Paris charity administration, which tried to limit the immigration. The plan for the first project on Jewish colonization in Argentina was addressed to Kahn and he forwarded it to Baron Maurice de *Hirsch.

From the establishment of *Hibbat Zion, Kahn was the head of the movement in France, directing it from Paris. He was also responsible for putting the leaders of Hibbat Zion in contact with Baron Edmund de *Rothschild. His activities in Hibbat Zion were for the most part disapproved of by the leaders of French Jewry. He was very involved with the practical problems of settlement in Erez Israel, as all the reports coming from Erez Israel and movement functionaries passed directly or indirectly through his hands. Kahn witnessed the birth of the Zionist Movement and sympathized with *Herzl, but officially he adopted the view that French Jews must in all aspects of their lives be faithful citizens of France alone and must therefore reject the idea of a Jewish state in Palestine. He was one of the first Jewish leaders to suspect that Alfred Dreyfus was the victim of an antisemitic campaign, but during the *Dreyfus Affair he was unable to persuade Franco-Jewish leaders to adopt a policy of self-defense instead of remaining silent. Kahn called a few meetings for the purpose of drafting a new policy, but they were unsuccessful, and the defense of Dreyfus was left in the hands of Jewish individuals and non-Jews. The same conservative attitude prevailed in response to the violent antisemitic campaign in Algeria. In 1880 Kahn was more successful in helping to create the *Société des Études *Juives, of which he was president and whose publication, **Revue des Etudes Juives*, became one of the leading scholarly periodicals for the study of Judaism. He was also the editor of a French Bible translation known as the "Bible of the Rabbinate," and of the *Bible de la Jeunesse* (both 1899). In addition, he assisted Isidore *Singer in preparing the *Jewish Encyclopaedia*. Kahn published a few volumes of his sermons. He was the last official chief rabbi of France. Shortly after his death the law of the Separation of the Church and the State was adopted and the Jewish Consistories were reorganized as nongovernmental religious bodies. Before his death Kahn tried to prepare the Consistories for such an event and took part in drafting the bylaws of the new nonofficial Consistories.

BIBLIOGRAPHY: J. Weill, *Zadok Kahn* (Fr. 1912); idem, in: REJ, 105 (1940), 3–9; E.M. Levy, in: *Cahiers de l'AITU*, 94 (1956), 15–19.

KAHNEMAN, DANIEL (1934–), Israeli-American scientist, psychology professor, and researcher; joint winner of the 2002 Nobel Prize in economic sciences. Kahneman was born in Tel Aviv (while his mother was visiting Palestine; his Lithuanian-born parents usually resided in Paris). He held dual

Israeli and United States citizenship. Kahneman studied at the Hebrew University in Jerusalem, receiving a B.A. in psychology and mathematics, and earned a Ph.D. in psychology at the University of California. Kahneman began his academic career lecturing psychology at the Hebrew University in 1961. He held a variety of positions, from visiting scientist to professor of psychology at several institutions throughout the United States, Canada, and England. From 1993 Kahneman was the Eugene Higgins Professor of Psychology and professor of public affairs at the Woodrow Wilson School of Public and International Affairs at Princeton University.

While Daniel Kahneman is not an economist, his work earned him half of the 2002 Nobel Prize in economic sciences, “for having integrated insights from psychological research into economic science, especially concerning human judgment and decision-making under uncertainty.” Among Kahneman’s recognitions in the field of psychology are the Hilgard Award for Lifetime Contribution to General Psychology, the Warren Medal of the Society of Experimental Psychologists, and a variety of other fellowships, recognitions and honorary degrees. His extensive work with colleague Amos Tversky (who died in 1996) was recognized in 2003 when the two were awarded the Grawemeyer Award for Psychology.

The focus of Kahneman’s work is the study of various aspects of experienced utility, or the measure of the utility of outcomes. His theories in behavior finance combine economics and cognitive science to decipher human risk management behaviors. His main findings demonstrate how human decisions may contradict what is predicted by standard economic theory. His work has inspired a new generation of study using cognitive psychology and human motivation in economics and finance. Kahneman’s work with Tversky challenges the traditional economic thought that people make rational decisions motivated by self-interest, including rational financial decisions. According to Kahneman and Tversky’s studies, people’s economic behavior is more psychologically and emotionally motivated.

In an autobiography Kahneman wrote for the Nobel award, he tells of his beginning interest in the field of psychology, describing an incident in France where he, as a child in either 1941 or 1942, was out past the 6 P.M. curfew that Jews were forced to adhere to. He had turned his brown sweater with the required Star of David inside out to hide the symbol, and he found himself face to face with a German soldier on an empty street. The soldier called to him, speaking in excited German, hugged him and showed him a picture of a young boy, and even gave him some money. Kahneman writes that he walked home convinced that his mother was right when she had told him that “people were endlessly complicated and interesting.”

Kahneman’s published works include articles in the *American Economic Review*, *Journal of Risk and Uncertainty*, *Journal of Environmental Economics and Management*, *Journal of Economic Perspectives*, and other scholarly and association journals.

[Lisa DeShantz-Cook (2nd ed.)]

KAHNSHTAM, AHARON (1859–1921), Hebrew and Yiddish educator. Born in Plock, Poland, Kahnshtam studied law but decided to devote his time to the study and practice of education. In 1895 he was invited to direct a *talmud torah* in Lodz. His ambition was to modernize Jewish schools and to train competent teachers. A gifted teacher, Kahnshtam partially realized his dream in Lodz where, after working diligently, he succeeded in making the *talmud torah* a model school. He organized summer camps in Lodz for culturally deprived children where they were taught such subjects as farming and carpentry. In 1898, Kahnshtam was invited to head the school of the Society for the Diffusion of Culture in St. Petersburg. Kahnshtam served in this post for nine years, and when the Society decided to establish a teachers training school in Grodno, Kahnshtam was appointed director. This school attracted many highly intelligent young Jews, among them writers and scholars, who were devoted to Zionism, Hebrew reform, and Jewish education. During World War I, because of the Grodno school’s proximity to the front lines, it was moved to Kharkov in 1915–16. However, in the new location the school’s existence was precarious because of the decline in the number of students, the decision to make the study of Yiddish mandatory, and the political upheaval of February 1917. Kahnshtam became the theoretician and an organizer of the “Tarbut Society, which in the postwar period developed a network of modern schools in Eastern Europe. In 1918–19 he became the director of the Tarbut Society’s teachers’ school in Kiev, but the school functioned only for a very short time.

[Judah Pilch]

KAHNWEILER, DANIEL-HENRY (1884–1979), German art patron, art dealer, and writer. Kahnweiler was born in Mannheim, Germany. Following his father’s profession he volunteered at the Paris Stock Exchange, but soon developed a passion for contemporary art. After a short time working in London he decided to open a gallery of contemporary art in Paris in 1907, sponsored by his family. While recruiting his artists, especially the circle of Montparnasse, he met Pablo Picasso and George Braque and became their principal agent, but he also supported the cubist painters Fernand Léger and Juan Gris. A famous portrait by Picasso of 1910 (Art Institute of Chicago) reveals the dominant role of Kahnweiler in the promotion of Cubism at that time. In 1909 Kahnweiler started his career as a publisher with *L’Enchanteur pourrisant* written by Guillaume Apollinaire with woodcarvings by André Derain. In 1914, Kahnweiler fled to Rome to escape German military service. Shortly after he moved in with a friend in Berne, where he began to write his first art book, *The Path to Cubism*, published in 1920. In 1920 he returned to Paris and together with André Simon launched the Galerie Simon. He tried to retrieve his art collection, which had been confiscated by the French government, and with the help of his brother Gustave and the art dealer Alfred Flechtheim was able to redeem part

of his former property. At the time Picasso and Juan Gris fell out with Kahnweiler when he tried to become their exclusive agent. Picasso was reconciled with him only after World War II, which Kahnweiler and his wife survived in hiding near Limoges. However, his gallery in Paris continued to exist under the name of Galerie Louise Leiris, his non-Jewish sister-in-law. Until his death in 1979 Kahnweiler organized more than 80 exhibitions of works by Braque, Picasso, Klee, Masson, Léger, and Gris. Moreover, he was the author of many books which were seminal to the popularization of contemporary art in general and cubist art in particular.

[Philipp Zschommler (2nd ed.)]

KAIFENG (formerly **P'ien-liang**), capital of Honan province, central China. Jews arrived in Kaifeng probably before 1127 from India or Persia. They were an ethnic unit of approximately 1,000 in all. It is believed that their daily language was New Persian and presumably they were experts in the production of cotton fabrics, in dyeing them, or printing patterns on them. This industry was well developed in India, but China with its rapidly increasing population was just introducing cotton, in order to meet the acute silk shortage. The first Kaifeng synagogue was constructed in 1163. It was restored in 1279 and after being destroyed in a disastrous flood was rebuilt again through the efforts of *Chao Ying-chên, a mandarin of Jewish descent, in 1653, when the sacred scrolls were also restored. Thereafter the community fell into rapid decay, most likely as a result of its complete isolation from other centers of Jewish life. By the middle of the 19th century the Jews of Kaifeng preserved only a rudimentary knowledge of Judaism and only the ruins of the former synagogue were left.

The first news concerning the presence of Jews in China reached Europe when Matteo Ricci, the Italian Jesuit missionary, informed his superior in Rome about the visit that the Kaifeng Jew *Ai T'ien of Kaifeng had paid him in 1605. Ai informed Ricci in detail about the status of his community which led Ricci to reach the conclusion that they were of Jewish descent. Other important records are four Chinese stone inscriptions of the Kaifeng Jewish community on three steles, dating from 1489, 1512, 1663, and 1679. Rubbings have been preserved of Chinese inscriptions on wooden tablets formerly in the Kaifeng synagogue. The Hebrew Union College in Cincinnati has in its possession a genealogical register in Chinese and Hebrew of the Kaifeng community (1660–70), as well as a large collection of prayer books obtained from Kaifeng by Christian missionaries in 1850–51. A unique scroll of the Book of Esther (in the Roth collection), with Chinese illuminations by three different artists, is believed to have probably come from the same source. Several outstanding members of the Kaifeng community, who became officials or military officers, are mentioned in provincial Chinese gazetteers. Gradually, however, the Jewish community adopted Chinese customs and

surnames: Ai, Chang, Chao, Chin, Chou, Huang, Li, Mu, Nieh, Pai, Tso, and Yen. At the end of World War II, about 200 or 250 traceable descendants of the original Kaifeng Jewish community still survived. Descendants of some of these families can still be traced locally, but all have intermarried with local Chinese including Muslims, and they more or less have lost their Jewish identity. Nonetheless the Jewish world still has great interest in the remnants of the community.

[Rudolf Loewenthal]

Further Information

In 1957 a Canadian Jewish visitor to Kaifeng was told by a local Communist cadre that of 2,000 individuals in the city known to be of Jewish extraction 700 still acknowledged their Judaic descent. The figures, the validity of which is not otherwise confirmed, seem to have been derived from the census of minority (non-Han) peoples taken by the Chinese government in 1953. In 1980 there appeared *Juifs de Chine* by J. Dehergne and D.D. Leslie, a collection of letters preserved in various Jesuit archives, several of which had never previously been published, which provide new information on the Jews of Kaifeng.

KAIROUAN (Qairuwān) Tunisian town situated 77 mi. (125 km.) S. of *Tunis. Kairouan was founded in 670 by *Uqba ibn Nāfi', the Arab conqueror of North Africa. For about four centuries it was the government center and the capital of the *Aghlabids, the *Fatimids (until 969), and the *Zirid emirs, and the meeting place of commerce of East and West. It is possible, though not certain, that Jews settled in the town from the time of its establishment. In about 690 the *Umayyad caliph 'Abd al-Malik ibn Marwān had 1,000 Copt families transferred from *Egypt to Kairouan. Some traditions have it that these families were Jewish. The fact remains that Jewish life prospered there. The community became the leading Jewish economic and cultural center in North Africa during the Middle Ages. The detailed extant information on this community begins with the ninth century. Studies of documents from the Cairo *Genizah have shed light on the Jewish society of Kairouan about which some aspects were previously known from rabbinical literature, especially responsa by Babylonian *geonim*. An important correspondence was maintained between the Jews of Kairouan and the Babylonian academies.

The academy of Kairouan was well-known throughout the Jewish world. Its heads, known as *resh kallah*, were outstanding scholars. When Natronai b. Hāvivai (c. 775) was not accepted as exilarch in Babylonia, he is said to have gone for

some time to the Maghreb, i.e., Kairouan. In the tenth century (c. 920) another exilarch, Mar Ukba, also settled in Kairouan, after being compelled to leave Baghdad. In 880 the mysterious Jewish traveler *Eldad ha-Dani, who claimed to belong to the lost Ten Tribes of Israel, also went to Kairouan. His presence and his knowledge aroused discussions among the rabbis of Kairouan, who also addressed themselves to this subject in correspondence with Zemaḥ Gaon of *Sura. The medical writer and philosopher, Isaac *Israeli, went to Kairouan from Egypt, and died there in 932 or 942. From 904 he was the private physician of Ziyādat-Allah III (903–909), the last Aghlabid sovereign, and later held the same position in the service of ʿUbayd Allah al-Mahdī (910–934), the founder of the Fatimid dynasty in Tunisia. His numerous students included the astronomer and physician *Dunash ibn Tamim, who was born in Kairouan at the beginning of the tenth century and spent his entire life as the private physician to the Fatimid caliphs.

Toward the end of the tenth century the arrival of *Ḥushi'el b. Elhanan in Kairouan marked a turning point in the study of *halakhah*. R. Ḥushi'el, like many other Jews, went to Kairouan from *Italy. The actual population which made up the Jewish community was varied in origin. In addition to numerous names which were obviously of *Berber origin, such as Labrat, Sighmar, and Masnut, documents from the Cairo *Genizah* have furnished many names of families of foreign origin which were established in Kairouan. These include Andalusī (of Spanish origin), Fasi (of *Fez), Taherti (of Tahert (now Tiaret) in southwestern *Algeria), and Siqili (of Sicily).

Kairouan scholars were in contact with Palestine where in fact there were many immigrants of North African origin. The *gaon* of the Palestinian academy at the beginning of the 11th century, Solomon b. Judah, who was originally from Fez, maintained contact with Kairouan. R. Ḥushi'el introduced a new method of study in his academy which did not rely upon the opinions of the Babylonian scholars. Moreover, the academy of R. Ḥushi'el asserted itself in a stronger fashion than was generally the case for such academies. This resulted in the intellectual and spiritual independence of the school of Kairouan, which was accentuated to an even greater degree when R. Ḥushi'el was succeeded by his son R. *Hananel, one of the great medieval Jewish scholars. However, other rabbis, such as *Jacob b. Nissim ibn Shahin, the head of a second academy in Kairouan and representative of the Babylonian academies, continued to correspond with the *Pumbedita *geonim* R. Sherira and his son R. Hai. From the end of the first half of the 11th century R. *Nissim, the son of R. Jacob, held a prominent position in Kairouan as a result of his vast erudition and his connections. He was the teacher of the Spanish poet Solomon ibn *Gabirol and his daughter married *Joseph, the son of *Samuel ha-Nagid of Granada. R. Nissim succeeded his friend Hananel b. Ḥushi'el as representative of the Babylonian academies in Kairouan. His writings are a valuable source for the history of the Jews of North Africa, as well as being important in the field of *halakhah*. R. Nissim witnessed the de-

struction of his community when the town was sacked in 1057 by Arabs who invaded North Africa from Egypt.

This invasion considerably impoverished the area occupied by present-day *Libya and Tunisia. It marked the end of Kairouan as a Jewish intellectual center; one finds its Jewish inhabitants scattered in Egypt and Sicily. The town itself never regained its former prosperity. The last **nagid* of Kairouan left for Egypt, where he was followed by large numbers of Tunisian Jews. The Jews of Cairo had to collect contributions in order to provide him with a livelihood. There is much documentary evidence to show the extraordinary prosperity of the community during the period which preceded its ruin. Its worldwide contacts, from *Spain in the West to *India in the East, were particularly active and intensive. The Jews, like the other inhabitants of the town, were spoiled by a life of wealth, and had extravagant tastes so that, for example, they desired expensive and richly colored cloths of Persian origin. They were also fond of perfumes and music. Their business firms were represented in many centers of commerce. These large firms were headed by families with numerous branches; they were noted for their activity and wealth. Typical examples include the following: the Ibn Sighmar family, which in addition to its economic importance and great influence at the court furnished Kairouan with at least four generations of *dayyanim*; the Berechiah family, which was made up of scholars and community leaders; the Majjani family, which played a prominent role in world commerce; and many other families.

The most important personalities of Kairouan during the first half of the 11th century included the first *nagid* of the Jewish community, Abu Ishāq Abraham ibn ʿAta, who was not only exceedingly wealthy, concerned with the welfare of others, and a scholar, but also a general in the army of the Zirids. The second *nagid* of Kairouan was Jacob b. Amram, whose power and generosity were lauded by the *geonim* of Palestine.

When Tunisia was conquered by the *Almohads in 1160, there is no mention of the Jews of Kairouan. From then until 1881, when Tunisia became a French protectorate, Kairouan, a holy city of *Islam, remained strictly out of bounds for all non-Muslims. From 1881, French civil servants were sent to Kairouan. Shortly afterwards Jewish shopkeepers settled there with their families and two synagogues were founded. The small community had its own *shoḥet* and *ḥazzan*. In 1936 there were 348 Jews in Kairouan. They suffered hardships during the German occupation (see *Tunisia: Holocaust period) when many fled. Some subsequently returned, and in 1946 there were 275 Jews in Kairouan. These, however, left – some for the bigger cities, some to other countries – and by the late 1960s no Jews remained in Kairouan.

[David Corcos]

KAISER, ALOIS (1840–1908), *hazzan* and composer. Born in Hungary, Kaiser sang as a boy with Salomon *Sulzer. From 1859 to 1863 he was *hazzan* in Vienna, then went to Prague and three years later to the U.S. where he officiated until his death at the Oheb Shalom Congregation in Baltimore. Kaiser's intention in his compositions and arrangements was to provide music for the American synagogue, based on the traditional melodies but stripped of all "unnecessary ornamentation." With William Sparger he was responsible for the first edition of the *Union Hymnal* (1897) for the Conference of American Rabbis and edited *A Collection of the Principal Melodies of the Synagogue from the Earliest to the Present* (1893).

KAISERSLAUTERN, city in Germany. The first documentary evidence for the existence of a Jewish community dates from 1242, but it is probably somewhat older. The community suffered during the *Black Death persecution of 1348–49. The Jews lived on a *Judengasse* and the community possessed both a cemetery and a synagogue, built by those who returned after the Black Death persecutions. Between 1383 and 1388 the Jews were expelled "forever," but during the 17th and 18th centuries a few *Schutzjuden* ("protected Jews") were tolerated. The community was reestablished after emancipation was granted during French rule (1797–1814). From 1828 it had a rabbi. A synagogue, built in 1823, was rebuilt in 1848, and a Reform synagogue was dedicated in 1886 (the massive neo-Gothic structure was sold and dismantled before November 1938). A cemetery was consecrated in 1858. In 1840 the community totaled 118 persons, and 716 (2.72% of the total) in 1880. The number remained stable until Nazi persecution reduced it to 395 in 1937 and 85 in 1939. Of the 74 remaining, 48 were deported to *Gurs on Oct. 22, 1940. In 1951 a synagogue was consecrated and in 1965 a community center serving about 150 Jews in the town and neighborhood was opened.

KĀKHYA (Kiāhya), Turkish version of the Persian *ketkhudā*, meaning majordomo or intendan (also: head of a guild). Many Jews served the sultans, viziers, and pashas as commissioners of revenue, superintendents of the mint, and farmers of tolls and customs. More important, they held monopolies on certain exported and imported goods. The *kākhya* appears as the official intercessor for the Jewish community with the Turkish authorities in 16th-century documents and responsa. From a responsum of R. Elijah *Mizraḥi (no. 15), chief *dayyan* of Constantinople, it appears that while serving as official spokesman for Constantinople, *Kākhya* Shaltiel accepted bribes. In 1518 representatives of the various congregations in

the city complained to Mizraḥi, and at the end of the year, in their presence and with their consent, he deprived the *kākhya* and his sons of all rights which they hitherto had enjoyed. In 1520 the judgment was reversed and Shaltiel was restored with the promise to act in a public capacity only with the permission of persons appointed by the congregations. The term *kākhya* also designates a representative of the Greek Orthodox and Armenian *millets and of the provincial tax farmers, each protecting the interests of his constituency at the Sublime Porte. Later on the *kākhya* appears as a minister in *Syria, or as representative of the pasha in *Palestine and *Egypt.

KALAI, JOSEPH B. JACOB (13th century), liturgical poet. Probably a native of Southern Europe (perhaps Greece or Sicily), the poet, whose surname קלעי is of Arabic origin, signs his name in addition as *hazzan*, *payyat* ("poet"), and כרפאן or כרפאן בן כרפאן. For the latter, neither Zunz, who renders it κορυφαίος ("precentor"), nor S. Krauss, who prefers "of Corfu," provides a satisfactory explanation. His compositions were adopted chiefly in the *Mahzor Romania* (Greek rite). Single poems were in use in Rome, Tripoli, Kaffa, and among the Karaites. Zunz (see bibl.) lists 23 poems by Kalai. His compositions include *yozerot*, *hatanu*, *taḥanun*, and *tokhahot*; two dialogues, one between Haman and Ahasuerus and the other between the Sabbath and the New Moon, deserve special mention.

KALAI (Kali), MORDECAI BEN SOLOMON (1556–1647), Salonikan talmudist. The family name derives from Calatayud in Spain. Kalai was born in Salonika, and studied under Aaron ben Ḥason and Aaron Sason. His manuscripts were destroyed in the great fire in Salonika in 1625, but he resumed writing. He was known as a capable communal leader, being active in the ransoming of captives and other charitable and benevolent activities. Among his many disciples who later served as rabbis in the cities of Peloponnesus were Daniel *Estrosa and David *Conforte. Kalai's responsa were included in the *Mekor Barukh* (Smyrna, 1659) of his brother Baruch, published by the latter's son. Kalai is quoted by many of his contemporaries, including Joshua Handali, Ḥayyim *Shabbetai (Maharḥash), and Judah Lerma, and by Solomon *Levi and Joseph of *Trani in their re-

sponsa. Mordecai's brother, BARUCH (d. 1597), who also studied under Aaron ben Ḥason, was rabbi of Siderocapsa, near Salonika. *Mekor Barukh* contains 61 responsa which consist of halakhic discussions with his teacher, and with Solomon Levi the Elder, in addition to those with his brother. He also wrote *Arba Shitot*, on four tractates of the Talmud, and left an unpublished volume of sermons on Sabbaths and festivals.

[Simon Marcus]

KALAI, SAMUEL BEN JOSEPH (d. 1754), Karaite scholar of Chufut-Qaleh, Crimea. He was the head of the study-house in Chufut-Qaleh. After his demise Simḥah Isaac *Luzki occupied his place.

He wrote *Me'il Shemu'el* (which survived in several mss. in St. Petersburg, NY, Oxford, and Cambridge), a supercommentary on *Sefer ha-Mivḥar* by *Aaron b. Joseph; the work remained unfinished and was later edited by S.I. Luzki.

[Isaak Dov Ber Markon]

KALAI (Ka'ī), SAMUEL BEN MOSES (16th century), Turkish rabbi. Kalai may have been born in Corfu. He was a son-in-law of Benjamin ibn Mattathias, author of *Binyamin Ze'ev*. At first he lived in Salonika and subsequently in Arta. In consequence of a dispute he left the town and stayed for a time in Trikkala, but later returned to Arta where he served as rabbi. In about 1560 he was appointed rabbi of Vidin in Bulgaria. He was compelled to leave Vidin because of a dispute that broke out between him and other rabbis as a result of his prohibiting the use of a certain cheese. He was among the signatories of the ban against the David (Da'ud), who had opposed Don Joseph *Nasi. In his old age Kalai settled in Salonika where he served as rabbi of the Keianah community. He was regarded as the talmudic authority for the whole country and problems were addressed to him from various Balkan towns. He was the author of the responsa *Mishpetei Shemu'el* (Venice, 1599).

[Simon Marcus]

KALĀM, meaning *‘ilm al-kalām* (the science of *Kalām*), is one of the branches of Islamic religious science. The common use of the word *kalām* is word, words, or speech. The *Koran is called *kalām Allāh*, i.e., the speech of God, and so, it was suggested, *‘ilm al-kalām* is “the science of the word [of God].” The exponent of *Kalām* is called *mutakallim* (lit. speaker, pl. *mutakallimūn*). The Hebrew designation *ha-medabberim* and the Latin *loquentes* are equivalent to *mutakallimūn*.

The term *Kalām*, which represents the use of dialectics in theology, probably has antecedents in Greek (as derived from *logos* or *dialexis*) and Syriac (as derived from both *mamlā*, i.e. *dialexis* and *mamlūt allāhūtā*, i.e., theology). *Kalām* is usually translated as “theology,” although this rendering is inaccurate, and it is best to use “speculative theology.” The theological arena in Sunnite *Islam consisted not only of the Mu'tazilite *mutakallimūn*, who used logical argumentation, in order to prove some of the principles of religion (= *'uṣūl al-dīn*), but mainly of traditionalist theologians, who were, and still are, the central trend of Islam. While *Kalām* gives precedence to human reason (= *'akl*) in the process of perceiving God and the world, Islamic traditional theology declares to draw its authority solely from divine revelation and tradition (= *naql*) and the teachings of the ancestors (= *salaf*) of the Muslim community. It should be noted, that even the Mu'tazilite *mutakallimūn* could not be considered pure rationalists, because they rely to some extent upon divine revelation.

Kalām is commonly identified with two rival schools in Sunnite Islam: the *Mu'tazila*, flourished as two separate schools in *Baṣra and *Baghdād from the first half of the 8th century until the middle of the 11th century, and the *Ash'ariyya*, founded in Baṣra in the first half of the 10th century. The eponym of the *Ash'ariyya*, Abū al-Ḥasan al-Ash'arī (d. 935) was a former Mu'tazilite, who used the rationalistic tools of the *Mu'tazila* in order to defend the doctrines of traditional Islam and to defeat the *Mu'tazila*. Another important theological school is the *Māturīdiyya-Hanafīyya*, probably founded in central Asia in the 11th century.

The beginning of *Kalām* is by all means connected to the Arab conquests of *Iraq and *Persia in the 7th century, when the relatively young Muslim community came into contact with Hellenistic philosophical thought, both Christian and non-Christian, and with other religious doctrines, mainly Mazdaean and Manichaeon. Public debates with holders of well-established faiths increased the need to use various rationalistic tools in order to defend Islamic doctrines and articles of faith (*'akāida* pl. *'akā'id*), whose origins are to be found in the Koran and *Ḥadīth* (= prophetic traditions), and to uproot what was perceived as heretical concepts (= *zandaqa*), infiltrated into Islamic thought. According to al-Tahānawī (d. circa 1745): “[*‘ilm al-kalām*] is the science, which enables one to assert the authenticity of religious beliefs and [discredit] others by giving proofs and dispelling doubts” (*al-Kashshāf*, vol. 1, p. 22).

The *mutakallimūn* comprehended their occupation as two-fold: on the one hand, *Kalām* is a process of a pure intellectual speculation in search of the ultimate truth, that is “to grasp the unity of God, and study the essence of God and His attributes” (al-Ghazālī, *Iḥyā' 'ulūm al-dīn*, vol. 1, p. 25); on the other hand, *Kalām* is a system of defense and attack. Defeating the adversary by using various dialectical instruments is the main feature of *Kalām*. Alongside the use of analogy (= *kiyās*), one of the prominent methods of *Kalām* is *ilzām*, which means forcing the adversary to admit heretical or absurd views, drawn from his own set of arguments.

Most of the activity of the *mutakallimūn* was in the inner circles of Islam, mainly against Sunnite traditionalist theologians. Nevertheless, the boundaries between the two groups were never definite. Although traditionalist scholars prohibited practicing *Kalām* and debating with *mutakallimūn*, *Kalām*'s methods had a huge impact upon them. For example, Ibn Taymiyya (d. 1328), who belonged to the ultra-traditionalist Ḥanbalite movement, used Mu'tazilite theses and arguments in his dispute with the Ash'arites about predestination and free will.

Another group challenged by *Kalām* and labeled as heretics were the Muslim philosophers, in spite of the resemblance between *Kalām*'s areas of interest and that of *falsafa* (= Muslim philosophy). The most elaborate endeavor in that direction is *Tahāfut al-Falāsifa* (= The Incoherence of the Philosophers) by the Ash'arite theologian *al-Ghazālī (d. 1111). The philosophers, on their part, attacked *'ilm al-kalām* and refuted its tenets and methods, as reflected in Ibn Rushd's (= Averroes, d. 1198) *Tahāfut al-Tahāfut* (= The Incoherence of the Incoherence).

Main Themes in Kalām

All *Kalām* manuals, after introducing the sources of knowledge of God and the world, viz. human reason and divine revelation, prove the existence of God and the creation of the world by using the proof from accidents, which is based on the doctrine of atoms. According to this doctrine, reality is made up of indivisible atoms with concomitant accidents, which exist only for an instant. Therefore, in every instant God is creating the world anew; there are no intermediate causes. This Islamic occasionalism allows for creation from nothing.

A point of dispute between the *Mu'tazila* and the *Ash'ariyya* is the denial of anthropomorphism (= *tashbīh*). This theme is derived from numerous Qur'anic verses, which ascribe human properties to God. The *Mu'tazila* denied the figurative interpretation and applied allegorical interpretation to these verses. The *Ash'ariyya* for their part used the doctrine of *bi-lā kayfa*, which means believing the Qur'anic formulae without trying to explain them.

The question of the unity of God (= *tawhīd*), which is actually a cluster of problems, such as proving the existence of God, proving the creation of the world and explaining divine attributes, set out numerous points of dispute between the *Mu'tazila* and the *Ash'ariyya*. In the question of divine attributes (= *ṣifāt*), for example, the *Mu'tazila* denied their real existence, while the *Ash'ariyya* stressed their independent status.

The *Mu'tazila* asserted man's free will, while stating that man creates his own good and bad actions, due to the power God grants him beforehand, and therefore he is liable to reward and punishment. The *Ash'ariyya*, on the other hand, emphasized that God, as a creator of all things, creates all human actions. Man's responsibility over his actions is maintained by using the doctrine of *kasb* (lit. acquisition), according to which, when God creates man's acts he also creates in him the

ability to "acquire" them. Designed to provide for man's responsibility for his actions, this doctrine is not far removed, if at all, from complete determinism.

The *Kalām* manuals discuss in length various topics regarding theodicy, eschatology and the status of prophecy. A major issue concerns the created or uncreated character of the Koran, and whether it exists as a divine attribute from all eternity.

Shi'ite Islam embraced Mu'tazilite theses as part of its doctrine from the 9th century, so in a sense they are current to some extent even nowadays. The Ash'arite manuals are being studied in Sunnite *madrāsas* (= religious boarding schools) alongside the works of the traditionalists.

[Livnat Holtzman (2nd ed.)]

Influence on Jewish Philosophy

The influence of *Kalām*, in its Mu'tazilite version only, on Jewish thinkers, both *Karaites and Rabbanites, during the Middle Ages was considerable. The earliest Jewish philosopher who was also influenced by *Kalām* was David ibn Marwan al-*Mukammis (first half of ninth century), who may have received it from his Christian teachers. It also had a great impact on *Saadia Gaon. Mu'tazilite influence is visible from the very opening of Saadia's *Book of Doctrines and Beliefs*, which begins with a demonstration of the createdness of the world and proceeds to deduce from this the existence of a creator. The very structure of Saadia's theological masterpiece follows the order of the five Mu'tazilite theses previously mentioned. Most of his proofs of the noneternity of the world are derived from the *Kalām*, except that Saadia did not hold the theory of atomism. Saadia uses *Kalām* arguments, as well, in proving the unity of God, and his doctrine of attributes is similar to that of the Mu'tazilah. In treating the commandments, Saadia distinguishes between rational and revealed commandments, thus sharing the Mu'tazilite distinction. In positing a future world in which children and animals will find reward for suffering in this world, Saadia merely repeats a doctrine based on the Mu'tazilite sense of justice. In general, one may say that through Saadia the Mu'tazilite *Kalām* exercised enormous influence on Jewish thought throughout the Middle Ages. *Samuel b. Hophni (d. 1013) followed closely the Mu'tazilite system in its Basran version. His son in law *Hai Gaon, did so to a lesser extent. Traces of the speculation of the *Kalām* are to be found in *Bahya ibn Paquda and Joseph ibn Zaddik's proofs of creation. *Maimonides expounded and refuted kalamitic doctrine in detail in the *Guide of the Perplexed* (1:73–76), although he did mention that his own point of view resembles the *Kalām* in certain respects (*ibid.*, 2: 19). The influence of *Kalām* on Karaite thinkers was very pronounced. Its earliest attestations are found in the formulation of normative beliefs by al-*Qumisi (late 9th century). It had become accepted by most medieval Karaite thinkers. Joseph b. Abraham ha-Kohen *al-Baṣīr wrote theological works that follow closely the Basran Mu'tazilah both in structure and in contents, and so did his disciple *Jeshua ben Judah. They even accepted the doc-

trine of atoms. As late as the 14th century, *Aaron ben Elijah the Younger of Nicomedia defended the *Kalām* outlook in his *Ez Ḥayyim*, which was intended to be the Karaite counterpart of Maimonides' *Guide*.

KALARASH (Rom. *Călărași*, formerly also **Tuzora**), town in Bessarabia, Moldova. Jews began to settle there in the first half of the 19th century. They numbered 4,593 in 1897, forming 89% of the population. Most were engaged in trade, primarily in agricultural produce, and some in agriculture. Most of the Jews were ḥasidim and spoke Yiddish. The wave of pogroms in Russia in October 1905 also hit Kalarash, where 60 Jews were killed, 300 were injured, and over 200 houses were burned down. After Bessarabia passed to Romania in 1918, communal life flourished in Kalarash. The community had welfare organizations and educational institutions, including a hospital (founded in 1890), a *talmud torah*, a library, and a loan and savings fund. In 1930 the Jewish population numbered 3,631 (76% of the total population). Israel *Giladi was born in Kalarash. Zionist organizations were also active.

[Eliyahu Feldman]

Holocaust Period and After

When World War II broke out, some of the community managed to escape from Kalarash, apparently to the Soviet Union. Those caught on the way were either killed on the spot or deported to Transnistria. In July 1941 Romanian troops assembled all the remaining Jews in Kalarash and took them to a forest not far from the city, where a deep ditch had been prepared. Some 250 Jews were thrown into the ditch and killed. This action had been ordered by the commander of the gendarmerie legion in the Lăpușna district, Lieut. Col. Nicolai Caracas. The local Kalarash gendarmerie commander also took part in the slaughter and looted Jewish property. In 1970 the Jewish population was estimated at about 750. The only synagogue was closed down by the authorities in 1961 and converted into a public library. The baking of matzah was stopped in 1962. In 1964 seven Jews were arrested for economic crimes allegedly committed 20 years earlier.

[Jean Ancel]

KALB, BERNARD (1922–), U.S. journalist. Born in New York, the son of immigrants from Poland and Russia, Kalb graduated from the City College of New York in 1942. He then

spent two years in the Army, mostly on an Army newspaper in the remote Aleutian Islands. His editor was Sgt. Dashiell Hammett, the detective story writer. After the war, Kalb got a job with *The New York Times*, first as a writer for its radio station and then as a reporter in New York City and at the United Nations bureau. On his first overseas assignment, he accompanied Adm. Richard E. Byrd on a mission to Antarctica in late 1955 and early 1956. Later, he was sent to Indonesia and served there until 1961, covering the chaotic rule of President Sukarno. In 1962 Kalb opened a CBS News bureau in Hong Kong and worked there until 1970. Returning to the United States, Kalb was posted to Washington, where he covered the State Department for eight years, traveling constantly with secretaries of state, until 1984, when he became the department's spokesman, with the title of assistant secretary of state for public affairs. It was the first time a journalist who covered the State Department had been named as its spokesman. Kalb worked there first for CBS News and after 1980 for NBC News. At the time of his appointment, Kalb's younger brother, Marvin, was chief diplomatic correspondent for NBC News. As a television correspondent, he accompanied President Nixon on the opening trip to China in 1972. As State Department spokesman, Kalb was with the U.S. delegation when President Reagan held his first summit with Mikhail Gorbachev in Geneva in November 1985. In 1986, when he read about the Reagan Administration's reported effort to deceive news organizations, Kalb resigned from the State Department. Kalb then became the founding anchor and a panelist on the weekly CNN program *Reliable Sources*, which turned a critical eye on the media in a weekly series that ran for 10 years. He was co-author with his brother of two books: *Kissinger* (1974), about the former secretary of state, and *The Last Ambassador* (1975), a novel about the collapse of Saigon.

[Stewart Kampel (2nd ed.)]

KALB, MARVIN (1930–), U.S. journalist. Born in New York City, Kalb graduated from the City College of New York. He earned a master's degree from Harvard and was completing studies for a doctorate in Russian history when he left in 1956 to accept a State Department appointment in Moscow. Kalb made his mark as a broadcast journalist, serving over a 30-year period as chief diplomatic correspondent for CBS News and NBC News and as moderator of the long-running *Meet the Press*. Among his many honors were two Peabody awards, the DuPont Prize from Columbia University, and more than half a dozen Overseas Press Club awards. Kalb was the first director of the Joan Shorenstein Center on the Press, Politics and Public Policy at Harvard, serving for 12 years. He also taught and lectured as the Edward R. Murrow Professor on Press and Politics. He left to be executive director of the institute's office in Washington, D.C., where he frequently led seminars addressing critical issues facing the business and practice of journalism. Kalb was also the host of a number of television series for the Public Broadcasting System, including *Vox Populi*, a four-part series on citizen attitudes toward government.

He authored or co-authored seven nonfiction books, including *Kissinger* (1974), *Roots of Involvement*, *The Nixon Memo* (1994), and *One Scandalous Story* (2001), which dissects Washington journalism in the breaking of the Monica Lewinsky scandal, as well as two best-selling novels.

[Stewart Kampel (2nd ed.)]

KALDOR, NICHOLAS, BARON (1908–1986), British economist. Born in Budapest as Miklos Kaldor, he was educated there and then studied at the London School of Economics, where he taught economics from 1932. At the end of World War II, Kaldor worked for the United States government as chief of the economic planning staff of the Strategic Bombing Survey and from 1947 to 1949 was director of the research and planning division of the Economic Commission for Europe. In 1952 he became a lecturer at Cambridge University, where he was appointed professor of economics in 1966. Kaldor acted as adviser on taxation and fiscal matters to various governments and from 1964 to 1970 was special adviser to the chancellor of the exchequer of the Labour government on employment, development, and fiscal policy. Kaldor's numerous publications advocate an extension of state control and high taxation as the prerequisite for faster economic growth. He edited *Essays on Economic Policy* (1964) and contributed essays to *National and International Measures for Full Employment* (1950), an economic report to the United Nations. Kaldor's lecture, *Accumulation and Economic Growth*, was published in *The Theory of Capital* (1961), a major work of the International Economic Association. Kaldor's emphasis on the role of the manufacturing industry in the growth process was of considerable influence on the Labour government of 1964–70, but his impact waned with the rise of monetarism. He was awarded a life peerage in 1974.

KALECKI, MICHAL (1899–1970), Polish economist. Born in Lodz and educated at Cambridge and Oxford, Kalecki worked for the United Nations Economic Department from 1947 to 1954. In 1957 he joined the Polish State Planning Commission where he was instrumental in preparing Poland's first 20-Year Plan (1959). He taught in Warsaw from 1961 to 1968 when, under pressure exerted by the Polish authorities, he resigned and ceased teaching. His studies on business cycles, inspired by Karl *Marx and Rosa *Luxemburg, anticipated much of Keynes' *General Theory of Employment, Interest and Money* (1936), and his work on war economics and full employment ensured him an eminent place, particularly among English-speaking economists. He was a member of the Polish Academy of Sciences. Outstanding among his more than 200 publications are *Essays in the Theory of Economic Fluctuations* (1939); *Studies in Economic Dynamics* (1943); *Theory of Economic Dynamics* (1954, 1965²); and *Zarys teorii wzrostu gospodarki socjalistycznej* ("Outline of the Theory of Development in a Socialist Economy", 1963).

BIBLIOGRAPHY: *Problems of Economic Dynamics and Planning* (1966).

KALEF, YEHOShUA (1875–1943), Bulgarian Zionist leader. Born in Plovdiv (Philippopolis) to a large and influential family, Kalef was educated in Alliance Israélite schools and later completed his law studies in Sofia and in Brussels. With the appearance of *Herzl, Kalef joined *Z.H.Belkowsky in his Zionist work. He began by publishing the Zionist newspaper *Kol ha-Am* (“Voice of the People”) in Bulgarian (1896) and together with K. *Herbst translated Herzl’s *Judenstaat* into Bulgarian (1896). He participated in the First Zionist Congress (1897) and thereafter fought for Zionist leadership in the Jewish communities, the crystallization of a Zionist consciousness among Bulgarian Jewry, and the domination of Jewish national ideology and of the Hebrew language in Jewish schools. Kalef was a member of the Bulgarian government’s delegation to the Paris Peace Conference after World War I. In 1920 he was elected chairman of the Jewish Consistory and later also president of the Zionist Organization in Bulgaria. Afterward, he moved to Alsace and then to Paris, where he lived out his life. In 1961 his remains were reinterred in Bet Hānan, a moshav of Bulgarian immigrants in Israel.

[Getzel Kressel]

KALÉKO, MASCHA, pseudonym of **Golda Malka Kaléko**; 1907–1975), German lyrical poet. Mascha Kaleko was born in Chrzanów (Poland), but grew up in Frankfurt, Marburg and Berlin. Escaping the poverty of the Berlin *Scheunenviertel*, she started to work at a young age as a shorthand typist and married the Hebraist Saul Kaléko. In 1938 she emigrated with her son and second husband, the musicologist and composer Chemjo *Vinaver, to New York. In 1959 she left the U.S. and settled with her family in Jerusalem. After the death of her son (1968) and her husband (1973) she lived in isolation until she died during a trip to Europe, in Zurich.

Between 1929 and 1933 Mascha Kaléko regularly published poems in newspapers, like the *Vossische Zeitung*, the *Berliner Tagblatt*, and the *Welt am Montag*. Her first book of verse, *Das Lyrische Stenogrammheft. Verse fuer den Alltag* (1933), though seemingly influenced by Erich Kaestner’s “Gebrauchslyrik” (lyrics for everyday use) with its cynical yet neo-romantic tone, nevertheless reveals a very personal style with a specific Berlinesque flavor. Her extraordinary sense of humor and a gift for playing on words kept her work fresh over the years, and her *Kleines Lesebuch fuer Grosse Gereimtes und Ungereimtes*, after it had been confiscated at the printer’s in 1935, was published together with her first book after the war in many editions.

Kaleko’s third volume, *Verse fuer Zeitgenossen* (published in the U.S. in 1945 and in Germany in 1958), reflects many facets in the life of the Jewish exiles, such as material and psychological misery, loneliness, and the difficulties of ac-

culturation in the new country. Her denunciation of the Nazi tyrants – in a poem dedicated to the victims of Hitler’s annihilation camps – concluded: “But you, who taught me hate, I hate the worst.”

Mascha Kaléko later expanded her scope to include children’s books and epigrams. After her death numerous collections of unpublished poems were printed, including *In meinen Traeumen laeutet es Sturm. Gedichte und Epigramme aus dem Nachlass* (1980) and *Heute ist morgen schon gestern. Gedichte aus dem Nachlass* (1980).

[Erich Gottgetreu / Mirjam Triendl (2nd ed.)]

KALFA, ISAAK BEN JOSEPH (d. 1801), Karaite scholar, *hazzan*, and teacher of Torah from *Chufut-Qaleh. He was a head of a study house where he taught both Karaite and Rabbanite treatises. One of his disciples was *Isaac ben Solomon, who became one of the last prominent scholars of the Crimea and who established the calendar reform (1779), which was supported by most scholars in Crimea and some other Karaite communities. Kalfa wrote a book on ritual slaughter and about the 10 principles of the Karaite faith, *Ziz Nezer ha-Kodesh* and a number of liturgical poems, some of which were included in Karaite *siddurim*. He corresponded with the Karaite community in Jerusalem and sent donations there.

[Golda Akhiezer (2nd ed.)]

KALIB, SHOLOM (1929–), *hazzan* and musicologist. Kalib was born in Dallas, Texas, and studied cantorial music with his father Morris Kalib. He also studied in Chicago with the *hazzanim* Todros Greenberg and Joshua Lind, both of whose cantorial compositions he later edited. He studied at Northwestern University and received a doctorate in music. In 1969 he was appointed professor of music at Eastern Michigan University and from 1977 was *hazzan* in Flint, Michigan. Kalib composed music for Sabbath and High Holiday services and wrote *hasidic* melodies. His *Days of Awe*, a concert rendition of the High Holiday service, was recorded with the Beth Abraham Youth Chorale conducted by Jerome B. Kopmar. His magnum opus as a musicologist is his five-volume *Musical Tradition of the Eastern European Synagogue*, which makes available a single, definitive resource for the vast musical, cultural, and historic legacy of the Eastern European synagogue.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

KALICH, BERTHA (1875–1939), U.S. actress born in Poland. She was the first outstanding Yiddish actress to win recognition on the English-speaking stage. Bertha Kalich trained for opera in Lemberg and later appeared in the Bucharest National Theater. Offered a leading role in *La Dame Blanche* at the Romanian Imperial Theater in 1894, she learned Romanian in three months and received an ovation for her performance.

She reached New York in 1895 and appeared in Yiddish repertory which included Ibsen's *Doll's House* and Tolstoy's *Kreutzer Sonata*. Her performance in Sardou's *Fedora* in English in 1905 led to a contract with Harrison Grey Fiske, who engaged her to appear in Maeterlinck's *Monna Vanna*. She remained under his management until 1910, and then acted for Lee Shubert in *Sappho* (1912) and *Rachel* (1913), and repeated in English some of her Yiddish successes, such as *The Riddle Woman* (1918) and *Magda* (1926).

[David S. Lifson]

KALICHSTEIN, JOSEPH (1946–), Israeli pianist. Born in Tel Aviv, Kalichstein studied with Prof. Sher at the Holon Conservatory. In 1962, he moved to the U.S. to study with Edward Steuermann and Ilona Kabos at the Juilliard School in New York. Kalichstein won the Young Concert Artists Award (1967) and the Leventritt Award in 1969. His extraordinary technique, coupled with a superb musical sensibility, made him a favorite with leading conductors and orchestras in the U.S., Europe, Japan, Australia, and Latin America. Kalichstein toured widely in a trio with the violinist Jaime Laredo and the cellist Sharon Robinson from 1976. Together with the Guarneri Quartet they presented Brahms' complete works for piano and strings in New York in 1983 to celebrate the 150th anniversary of the composer's birth. Their rapport, intimacy, and sense of communication earned the trio tremendous acclaim.

KALIK, MIKHAIL (Moshe; 1927–), Russian film director. The son of an actor, Kalik graduated in 1949 from the art history faculty of the State Institute of Cinematography in Moscow. From 1951 to 1954 he was imprisoned in a "corrective-labor" camp, having been sentenced for "Jewish bourgeois nationalism." After graduating from the Institute's directing faculty in 1958, he became one of the representatives of the so-called "poetic cinema," a significant aspect of the new wave in Soviet art in the early 1960s. Together with B. Rytsarev he made the film *Yunost' nashikh otsov* ("Youth of Our Fathers," 1958), adapted from the novel *Razgrom* ("The Rout") by Fadeyev in which the appearance of the Jewish hero Levinson was stressed, and *Ataman Kodr* ("The Cossack Leader Kodr," 1959). Kalik included scenes with Jewish characters in his films *Kolbel'naya* ("Cradle Song," 1960), and *Chelovek idet za solntsem* ("Man Goes Beyond the Sun," 1962). In his film *Do svidaniya, mal'chiki* ("Goodbye, Boys," 1965), Kalik partially relied on his personal experience to depict the tragic fate of his generation. One of the film's three heroes, a Jewish youth,

is arrested during the Doctors' Plot and perishes in prison. Despite his successes and prizes, he was not allowed to make films on Jewish themes, for example, about *Korczak. His television film *Tsena* ("The Price," 1969), based on the play by Arthur *Miller, was shown with the name of Kalik omitted from the credits several years after he immigrated to Israel in 1971 after a long struggle.

In Israel Kalik directed *Three Men and a Girl* (1975) based on short stories by Gorky, several short films, and a video-documentary about the country, which was shown at the entrance to the Israeli pavilion at the Moscow International Book Fair in 1987. In 1991 he made the autobiographical *And the Wind Returneth*.

[E. Kapitaikin / *The Shorter Jewish Encyclopaedia in Russian*]

KALIKOW, PETER S. (1943–), U.S. real-estate executive, civic official. Born in New York City and a graduate of Hofstra University, Kalikow began his career in real estate in 1967 with the family's 75-year-old company. He became president of H.J. Kalikow & Co. in 1973. The company, with his father at the helm, had concentrated on building middle-class housing in the borough of Queens. Following his father's death in 1982, he assumed responsibility for all Kalikow holdings, which included vast swaths of Manhattan residential and commercial buildings. He brought it into the big-time business of office and cooperative apartment development in Manhattan. Branching out, Kalikow in 1988 bought the *New York Post*, the oldest daily newspaper in the United States, from Rupert Murdoch, for about \$37.6 million (he later sold the paper back to Murdoch). But in 1991, Kalikow, once one of the wealthiest individuals in the United States, filed for personal bankruptcy protection. Burdened by debt taken on to expand his empire, Kalikow was forced to put up some of his property partnerships and other businesses as collateral during a wide-ranging reorganization. At the time Kalikow and his companies had more than \$1 billion in debt, some of which he defaulted on.

In 1994 Kalikow was appointed to the board of the Metropolitan Transportation Authority, an agency that oversees New York's subways, bridges and tunnels, and commuter railroads, by Gov. Mario M. Cuomo, and served for a little more than a year. Gov. George E. Pataki appointed him to be vice chairman of the MTA in 1999 and he became chairman in 2001. The organization provides mass transit to nearly 8 million riders each weekday and moves nearly 300 million vehicles through bridges and tunnels a year.

Kalikow was involved in numerous real estate, health, and philanthropic activities. In 1982 he was awarded the Peace Medal, the State of Israel's highest civilian award, for his many years in aiding Israel's development. In 1987 he was honored by the American Jewish Committee and in 1989 the Anti-Defamation League awarded him and his wife its first annual Jacob K. Javits award for outstanding accomplishment. He was a member of the board of trustees of New York's Museum of Jewish Heritage: A Living Memorial to the Holocaust and served on the board of the Jewish National Fund.

In 1995 he received the Jerusalem 3000 Award from the State of Israel Bonds for his chairmanship of the real-estate division for eight years.

[Stewart Kampel (2nd ed.)]

KALILA AND DIMNA, a cycle of fables which originated in *India in the third century C.E. and were collected and compiled in Kashmir. In the course of centuries the cycle has gone through numerous changes, especially as a result of having been translated into many languages: Persian, Arabic, Hebrew, Syriac, Ethiopian, Malay, Mongolian, Greek, and many European languages. Most of the translators also acted as adaptors and added material of their own. The story was greatly expanded and revised in the seventh century when Abdallah ibn al-Muqaffa^c translated it into Arabic from the Persian adaptation, i.e., from Pahlavi. In the 12th century this Arabic translation was the basis for the story's translation and adaptation into Hebrew by an author about whom nothing is known except his name, Joel. In the 13th century the poet *Jacob b. Eleazar not only translated the story into Hebrew, but also adapted it into rhymed rhetoric. Since the original source has been lost, these medieval Hebrew translations are of great importance in studying the textual changes in the story during succeeding generations. The apostate *John of Capua's 13th-century Latin translation of the story (*Directorium Vitae*), from which most European translations have been made, was executed in accordance with Joel's Hebrew translation. In 1881 both Hebrew translations, which had over centuries become deficient because of copying errors, were published in Paris, Joel's work being accompanied by Joseph Derenbourg's French translation. A new Hebrew translation from the Arabic was made by Abraham *Elmaleh and appeared in Tel Aviv in 1927.

In both content and form the story resembles other books that have come down from Indian sources, i.e., stories whose bare outlines had been fleshed out by the addition of new material or the substitution of new stories for old ones. *Kalila and Dimna* comprises a collection of moral fables and fables about birds and animals, Kalila and Dimna being the names of two foxes. The story, in outline, tells of a physician named Barzoyeh, who, at the behest of the king of *Persia, sought plants whose juice would not only bring health to the sick but immortality as well. Ultimately, the physician learns that such "plants" are really symbols for the books of wisdom which help man achieve perpetual life. Barzoyeh told the king of his discovery and the king ordered "all those books to be collected from every native and every traveler, and to be brought to the king's treasury." It is said that from these collected wisdom books, *Kalila and Dimna*, the essence of wisdom and morality, was compiled. The major part of the book is constituted by the king's queries and the replies of the philosopher Sindbar, or in Jacob b. Eleazar's translation, *Dod Hokhmah* (lit. "lover of wisdom," the Hebrew equivalent of philosopher). Some editions of the book including, apparently, the Hebrew translations, were accompanied by pictures.

[Abraham Meir Habermann]

KALININDORF (until 1927, **Bolshaya Seidemenukha**, from the Heb. קְנִינְדוֹרַף), Jewish settlement in Ukraine; one of the first four Jewish agricultural colonies to be founded in the province of Kherson in 1807. After several decades of hardship caused by droughts and the distant attitude of Russian clerks nominated to help and supervise, the settlement became a Jewish village whose inhabitants engaged in agriculture. In 1897 there were 1,786 Jewish inhabitants (81% of the population), most of them farmers with a few being artisans. From 1924 there was an influx of settlers into the vicinity and many lived temporarily in the settlement. By 1926 there were 2,400 Jews (89.3% of the population) living in the locality, and by 1939 the numbers had dropped to 1,879 (of a total 3,126). On March 22, 1927, Kalinindorf became the center of the first autonomous Jewish region in the Soviet Union. It had 11 county councils, eight of them Jewish, and 49 settlements, 39 of them Jewish. In 1927 there were in the region 15,833 Jews (87% of the total population), with the figures dropping to 7,717 (40% of the total) in 1939. The main cause was the severe crisis during the process of collectivization (1930–32), and many of the settlers left. In 1932 it comprised over 72,000 hectares of land. The largest villages were then the settlements of Kalinindorf (population 902), *Bobrovoy Kut (832), Lvova (702), and Stern-dorf (formerly called Malaya Seidemenukha, 503 inhabitants). During the 1920s a Jewish elementary school operated, enlarged later to a junior high, and in the 1930s there were a Jewish agricultural high school and a teachers' college. About 2,000 (in 1932), almost all Jewish children of the region, attended Jewish schools. During the 1930s a daily, *Kolvirt Emes*, was published in the area. Kalinindorf was occupied by the Germans on August 27, 1941. Some Jews succeeded in escaping. On September 17, 1,423 Jews were killed. A few days later Jews from neighboring villages, like Shterendorf and Judendorf, were brought there and murdered. More than 4,100 Jews were killed in the region during the Nazi occupation. After World War II Kalinindorf was rehabilitated, but most of its inhabitants were non-Jews; it was renamed Kalininskoye and the Jewish Autonomous Region was abolished.

KALINKOVICHI, townlet in Polesye district, Belarus. In 1811 there were 108 Jews, and in 1897 their number grew to 1,341. All inhabitants of the town were then Jews. Many of them traded in flour, and others worked in crafts. The invalid Jewish author Joseph Ḥayyim Dorozhka (1869–1919), who lived in Kalinkovichi, was the leading spirit behind an attempt made

during 1911–12 to introduce Hebrew as the spoken language of the town. For this purpose, a network of Hebrew schools was established. The townlet suffered heavily at the end of the Civil War (1920). In March 1920 the Polish soldiers staged a pogrom, and on November 10, 1920, Balakhovich's gang killed 32 Jews. At that time many Jews from the surrounding district flocked to the town. The 3,106 Jews living in Kalinkovichi in 1926 constituted about half of the total population, and in 1939 it reached 3,386 Jews (out of a total population of 9,799). From 1923 there was a Yiddish school, with 397 pupils enrolled in 1930. Classes for adult studies were also available at this time. Shlome *Simon, who was born there, described the town in *Vortslen* (1956) and *Tsvaygn* (1960). The Jewish Soviet poet Zalman Telesin was also a native of Kalinkovichi. The Germans occupied Kalinkovichi on August 22, 1941. Many Jews had fled before. On September 22, 1941, the remaining 700 were murdered by the Nazis. The last synagogue was closed down in 1960, after 10 of the 20 "aldermen" responsible for its upkeep were compelled to sign a letter accusing the Jews of organizing illegal activity within the synagogue.

KALIR, AVRAHAM (1903–1985), Israeli industrialist. Born in Bukovina, he immigrated to Israel in 1934, where he devoted himself to the development of the textile industry. Kalir is a pioneer in developing industrial projects in new development areas in the country, introducing modern technological methods. He distinguished himself in developing human relations in his enterprises and programs of technological training and instruction. In 1962 he became the chairman of the Israel Manufacturers Association, serving on its board for 20 years. In 1976 he was awarded the Industrial Prize by the Manufacturers Association. He was also active in security and defense matters prior to the establishment of the State of Israel and after that time contributed to the development of cultural and educational institutions. In 1961 he was one of the founders of the Beit Tzvi school for stage arts, named after his son Tzvi Kalir, who died during the War of Independence. Subsequently he served on the boards of directors of Bank Leumi and the Dead Sea Works. He also served on the boards of the Technion, the Hebrew University, and ORT. In 1978 he was named director of Bank Leumi's special fund for social projects. He was awarded the Israel Prize in 1977 for achievements in industry and social activities. In 1985 he was selected as one of the torchbearers in Israel's Independence Day ceremonies, representing industrialists.

KALISCH, DAVID (1820–1872), German playwright and humorist. Kalisch was born in Breslau. After a brief business career, he visited Paris in 1844 and there associated with a group of poets and socialists, among them Heinrich *Heine, Georg Herwegh, and Karl Marx. When his funds were

exhausted he returned to Germany and in 1846 started writing comic sketches and farces for various theaters, first in Leipzig and later in Berlin. The couplets of his comedy *Einmal Hunderttausend Taler* (1847) became extremely popular. In 1848 Kalisch founded the humorous and satirical weekly *Kladderadatsch* and edited it together with Ernst Dohm and Rudolf Löwenstein. This periodical spread his fame quickly throughout the German-speaking world. His successful farces and light comedies, some of which he wrote in collaboration with other playwrights, were popular on the Berlin stage for many years. His humorous writings were collected in *Berliner Volksbuehne*, 4 vols. (1864), and *Lustige Werke*, 3 vols. (1870).

KALISCH, MARKUS MORITZ (1825–1885), Hebraist and biblical commentator. Kalish was born in Treptow, Pomerania and studied at the Berlin University, where he graduated in 1848, and the Rabbinical College of Berlin. He was active in the struggle for freedom in Europe which resulted in the *emeute* of 1848 and as a result had to leave Germany; he settled in England, where he remained until his death. He was appointed secretary to Chief Rabbi N.M. *Adler, holding the post from 1848 to 1853, after which he served as tutor and literary adviser to the Rothschild family, a post in which he was able to devote himself to biblical scholarship and Hebrew grammar. He contemplated writing a comprehensive commentary on the Pentateuch, giving a resumé of Jewish and Christian scholarship to date, but completed only the first three volumes, Exodus (1885), Genesis (1858), and Leviticus (Part 1, 1867; Part 2, 1872), in the last of which he anticipated *Wellhausen to a considerable extent. Other publications were a Hebrew grammar in two parts and Bible studies on the book of Jonah (1876) and on the prophecies of Balaam (1877). In 1880 there appeared his last work *Path and Goal: A Discussion on the Elements of Civilization and the Conditions of Happiness*, consisting of an attempt to combine the views of the representatives of the main religions.

KALISCHER, JUDAH LEIB BEN MOSES (d. 1822), *av bet din* in Lissa. The head of the yeshiva of Lissa for many years, Kalischer was referred to as "the sharp sword" on account of his profound acumen in the study of the Talmud. He was the author of *Ha-Yad ha-Hazakah* (Breslau, 1820), novellae and casuistic discussions on 27 sections in talmudic law dealing with **hazakah* ("presumption"). In the work he stresses that "I have come to understand and learn, but not to give decisions." His glosses to the Talmud have remained in manuscript. Ka-

lischer was on friendly terms with Akiva *Eger. Kalischer had five sons, of whom one, ABRAHAM MOSES (d. 1812), was a son-in-law of Akiva Eger and served as rabbi of Schneidemuehl, dying there at an early age. One of his novellae is quoted at the end of the *Ha-Yad ha-Hazakah*.

[Josef Horovitz]

KALISCHER, ZEVI HIRSCH (1795–1874), rabbi and harbinger of the Zionist idea. Born in Lissa (Leszno), Posen district, Kalischer studied under the great scholars of his day, Jacob of Lissa (Lorberbaum) and Akiva Eger. In 1824 he settled in Thorn, where he lived until his death, rejecting invitations from many communities to serve as their rabbi. Even in Thorn he served only as unpaid acting rabbi and lived off the meager income supplied by his wife's small business. He published books on *halakhah* (*Even Boḥan; Moznayim la-Mishpat*, 1843–55) and on religious philosophy (*Emunah Yesharah*, 1843), and contributed to the Hebrew press for many years. (Before the existence of a regular Hebrew press, his articles were published in German translation in the German-Jewish press.) His major activity, however, throughout his life, was advocating the idea of mass settlement of European Jewry in Erez Israel. In his discussions with members of the Reform movement on the observance of religious precepts, the belief in the coming of the Messiah, the *mitzvot* connected with Erez Israel, etc., Kalischer revealed not only his strong attachment to religious tradition but also his preoccupation with the problems of the day.

As early as his meeting with Anshel *Rothschild in 1836, Kalischer revealed his opinion that the redemption of Israel would not come, as had been believed for generations, through a miracle, that “suddenly God would come down from the heavens or suddenly send His messiah,” but rather that salvation would be brought about by human endeavor. He stressed the idea that the natural redemption would serve as the first and main stage before the miraculous redemption at the end of days. This was a revolutionary departure from over 1,000 years of Jewish thinking about redemption. His system initially included the observance of the *mitzvot* connected with Erez Israel, especially those of sacrifice, as basic steps toward the future redemption, but at a later stage he disregarded this element in his ideology. Indeed, he wrote to Rothschild detailing the halakhic issues involved in renewing the practice of sacrifice on the Temple Mount. Shortly thereafter, Kalischer corresponded at length with his former teacher Akiva *Eger about the sanctity of the Temple Mount, the problems regarding the laws of purity and the genealogies of the priests. Unfortunately for Kalischer, Eger, who opposed Kalischer's ideas, died in 1837 before they could come to a resolution. Following Judah *Alkalai, he based his doctrine on the talmudic saying “It [the coming of the Messiah] depends solely on the return [to God]” (Sanh. 97b), interpreting the word “return” as return to Erez Israel. He based this interpretation on *Tikkunei Zohar*.

Thus he introduced an active human element into the concept of the redemption of the Jewish people, in opposition to most of the Orthodox rabbis of the time, who objected to this interpretation and its practical implications. His urge to gather supporters for the return to Erez Israel was reinforced by the various national movements in Europe, which were specifically cited by Kalischer. Pointing to the struggles of European nations to achieve independence, Kalischer chastised his fellow Jews for being the only people without such an aspiration. He was particularly critical of the Reform Jews who tried to emulate the gentile lifestyle. Kalischer urged them to emulate gentile nationalism as well by returning to the Jewish homeland, Erez Israel. Kalischer was a realist. He was aware that only a catastrophic event or the very slow process of education would change the attitudes of Europe's Jews. However, he felt that the mid-nineteenth century was ripe for this change, for there were enough wealthy Jewish leaders who could influence the European political leadership without begging for their mercy and good will. After Rothschild gave a noncommittal response, Kalischer approached Moses *Montefiore. Unfortunately, his correspondence with Montefiore has not survived. Nevertheless, the result was the same lukewarm response that did not produce any practical results.

Practical activities for the settlement in Erez Israel did not come into being until 1860, when Ḥayyim *Lorje established the first society for this purpose in Frankfurt on the Oder and Kalischer supported it. The society quickly attracted many of the leaders of the European Jewish community. Among them were Albert *Cohen, R. Joseph Blumenthal of Paris, R. Nathan *Adler of London, S.J. *Finn of Vilna, R. Judah *Alkalai and Dov Meisels, chief rabbi of Budapest. The society did not last long, basically because of the eccentric personality of its leader, but it did manage to publish Kalischer's book *Derishat Ziyyon* (1862), which for many years served as the basic book to explain the idea of the return to Erez Israel to Orthodox groups (the book came out in a number of editions, was translated into German, and portions of it were translated into English and other languages). In the book, Kalischer expounded at length his theory that redemption would come in two stages: the natural one, return to Erez Israel and labor – particularly agricultural – in the country, and the supernatural one to follow. The first stage would invigorate the *yishuv* and put it on a healthy economic foundation instead of its dependence upon donations from abroad (*halukkah*). In his program he did not ignore the unstable security situation (this argument was used against him mainly by the rabbis in Erez Israel), and he devoted one paragraph especially to the necessity of appointing guards trained for war and police duty. He also envisioned the establishment of an agricultural school for the younger generation. The book had a great influence on, inter alia, Moses *Hess, who included portions of it in German translation in his book *Rome and Jerusalem*. Even though the society founded by Lorje collapsed, it left Kalischer with numerous contacts and key friendships. One was with Rabbi Joseph Natank of Hungary, who became a

loyal and assiduous worker on Kalischer's behalf. From the time Kalischer published *Derishat Ziyyon*, his life was devoted to traveling through Europe in order to enlist the support of Jewish groups for his idea. He tried to win leading Jewish personalities over to his plan. He also published sermonizing articles in many Hebrew newspapers and journals. At the same time he continued his writing in the field of *halakhah* as well as his struggle against those who, in his opinion, undermined the foundations of religious tradition. He also found himself disputing with the rabbis who objected to his ideas on religious grounds, and especially with the rabbis in Erez Israel, who also brought up the argument that conditions, especially of security, in Erez Israel were not yet ripe for beginning agricultural settlement. Their vigorous opposition was also based on theological objections to Kalischer's view of redemption. At the same time, they feared that mass settlement would lead to the lessening of their authority. Kalischer stood his ground even before the great rabbis of his time. He distinguished between philanthropy on behalf of Erez Israel, in which German Orthodox rabbis were active, and settlement activity of redeeming value in the future. Thus he adopted a critical attitude toward the building of houses in Jerusalem at the beginning of the 1860s (the "*Battei Maḥaseh*" in the Old City), as he saw this project as a private endeavor and not promoting the "main objective." He believed that only agriculture on a large scale could serve as a stable solution for both the *yishuv* and the victims of persecution in Europe. Kalischer saw a small beginning of his ideal realized toward the end of his life when the agricultural school was opened at Mikveh Israel (1870) and even thought of settling there at the invitation of the school's director, Charles *Netter, to supervise the observance of the *mitzvot* connected with Erez Israel, but his desire was not realized. His son Ze'ev Wolf continued Kalischer's activity and, at his initiative, a tract of land near Rachel's tomb was purchased from the funds in Kalischer's estate. A selection of his Zionist writings was published together with an introduction by G. Kressel (1943). All his Zionist writings were collected with an introduction by I. Klausner (1947). Both collections have full bibliographies.

In practical terms, there was little difference between Kalischer's plans and those of Herzl: A Jewish state based on agriculture, with its own police and army. So why did Kalischer fail to start a mass Zionist movement? Kalischer was a bit of an anomaly. East European Orthodox Jews thought that his messianic ideas were too modern and were thus afraid that they might lead to assimilation. West European Jews saw him as an East European rabbi who spoke and wrote using a talmudic and rabbinic idiom that was foreign to them.

[Getzel Kressel / David Derovan (2nd ed.)]

KALISZ (Ger. **Kalisch**; **Kalish**), city in Poznan province, W. Poland; it had the most ancient community in Poland. The first Jews to arrive there, in the last third of the 12th century, were minters. They served Mieszko III the Oldster, prince of Great Poland (1127–1202), and his descendants. A large group of Jews from the Rhineland and other parts of Germany arrived in Kalisz by way of Silesia in the middle of the 13th century and received protection from the ruler. They established a settlement in the city of Kalisz, and engaged in financial activity and commerce. They were among the initiators of the Statute of Kalisz issued by *Boleslav v the Pious in 1264, which they apparently helped to draft. In 1287 the elders of the community (*judei seniores Kalisienses*) bought a plot of land from the owner, Rupinus, on which a cemetery was established. In the middle of the 14th century there existed a "Jewish street" in the city which was the center of varied financial activities. At the time of the *Black Death in 1349 the Jews in Kalisz suffered from persecutions. In 1358 the heads of the community obtained permission from King *Casimir III the Great to establish a synagogue; its erection was begun immediately, and it remained standing until 1857 when it was destroyed by fire. In 1364 the head of the Kalisz community, Falk, obtained Casimir's ratification of the charter of privileges for the Jews of Poland.

Apart from *moneylending, during the 15th and 16th centuries the Jews of Kalisz engaged in commerce with Cracow and Breslau, and in crafts including goldsmithing, tailoring, and butchery. The Jewish quarter was extended, and the community grew with the addition of immigrants and refugees from Bohemia (1542), Hungary, and Germany. During the 15th century many Jews in Kalisz moved to new settlements in other towns in Poland. At the beginning of the 16th century the Kalisz community was headed by a *kahal* administered by three to five *parnasim*.

Anti-Jewish disorders broke out in Kalisz in 1542 owing to the Jewish commercial competition with the townsmen. A *Host libel involving the Jews in Kalisz occurred in 1557. In 1565 the Kalisz community applied to the king for justice with a claim against the municipality for damages and desecration of the synagogue which had occurred during a mob outbreak

that year. At the end of the 16th century wealthy Jews of Kalisz engaged in extensive commercial activities at the fairs of Lublin, Cracow, and Poznan, and also with towns in Silesia. In 1580–81, they conveyed through the local customs station approximately 4,500 hides, 13,500 kg. wool, 4,000 kg. wax, and 70 kg. pepper, among other merchandise. Apart from this elite there existed a poorer stratum of Jews in Kalisz; in 1579 about one-third of the Jews of the city had not paid their taxes because they were in financial straits.

The Kalisz community was severely affected by the cataclysm in Poland in the middle of the 17th century. Hundreds of Jewish refugees from south and east Poland passed through Kalisz in 1648–49 escaping from the *Chmielnicki massacres. In 1659, toward the end of the war between Sweden and Poland, hundreds of Jews were killed in Kalisz and the Jewish quarter was razed by the troops of S. *Czarniecki. The Kalisz community was rehabilitated within a short time through the prompt assistance given it by the Jews of Poznan, *Leszno, and *Krotoszyn. By 1670 it was able to give asylum to refugees from Vienna. King John III Sobieski ratified the privileges of the Jews of Kalisz in 1676, and in 1678 the Sejm (diet) granted them tax reliefs to assist them to overcome a severe financial crisis. In the last third of the 17th century many Jews of Kalisz did business at the fairs of Breslau and *Leipzig, exporting furs and hides, and importing costly cloth, metal ware, and precious stones. Apart from commerce, the Jews of Kalisz also engaged in crafts as tailors, furriers, goldsmiths, saddlers, smiths, engravers, bakers, and butchers. From 1672 Jewish craftsmen were obliged to join crafts associations.

During a fire which broke out in Kalisz in 1706, 45 Jews perished, and two years later 450 Jews lost their lives in a plague in the town. Many Jews became ruined after these calamities and the financial crisis, and in 1713 the community was obliged to borrow money from Christians in order to aid the needy. The position of the Jews in Kalisz became even more serious when Christian merchants in the 1720s organized themselves in a confraternity one of whose main objectives was to oppose Jewish commerce. The economic position of the Jews in Kalisz improved only in the second half of the 18th century due to their success in dealing in grain, cattle, sheep, wool, and cloth, and in the production and sale of alcoholic liquor. In 1761 the community arrived at an agreement with the municipal authorities by which the Jewish population was exempted from the duty of supporting soldiers in exchange for an annual payment of 1,200 zlotys. Following a *blood libel incited by extreme Catholic circles in 1763, four Jews were sentenced to death. There were 809 Jews who paid the poll tax in Kalisz in 1765. In 1786 among 207 craftsmen 101 were Jews.

In the second half of the 17th century Kalisz was an important spiritual center of Polish Jewry. The first rabbi known by name, Solomon Zalman b. Jeremiah Jacob, officiated there from 1639 to 1643. Israel b. Nathan Shapira (R. Israel ha-Darshan) who served as rabbi in the second half of the 17th century, established an important yeshivah there. He was followed

until 1696 by *Judah b. Nissan, author of *Beit Yehudah*. From 1656 to 1683 Abraham Abele *Gombiner, author of *Magen Avraham*, served as *dayyan* there.

Within the framework of the *Councils of the Four Lands the communities of Kalisz, Poznan, Leszno (Lissa), and Krotoszyn, were the most important in the province of *Great Poland. In the second half of the 17th century the Kalisz community obtained the leadership of the provincial council, continuing to hold it until 1714 when the treasury of the council was transferred to the Leszno community. Representatives of the Kalisz community frequently served as *parnasim* of the Councils of Four Lands at the end of the 17th century and the beginning of the 18th. In 1737 the province of Poznan-Kalisz had the third-largest Jewish population in the kingdom of Poland (after the provinces of "Russia" and *Sandomierz-Krakow), and was responsible for 16% of the sum that the Jews of Poland were obliged to pay to the royal treasury.

When Kalisz was under Prussian rule (1793–1806), many Jews found employment in the expanding commerce and crafts, as well as in supplying the army. The number of Jews in the town had increased to 2,113 (c. 30% of the total population) in 1804. The struggle of the townsmen against the Jews now intensified, particularly after Kalisz was incorporated within Congress Poland in 1815. In 1827, under pressure by the local authorities, the government ordered that the Jews of Kalisz should reside in a separate quarter (*rewir*) which existed until 1862 and was severely overcrowded. In addition, until this year Jews from other places were prohibited, under the czarist regulations concerning residence of Jews in the border zones, from settling in Kalisz to the border with Prussia. The Jewish population numbered 3,463 (29% of the total) in 1827, and 4,352 (36%) in 1857. In 1854 only 23 Jews had houses outside the Jewish quarter.

From the 1840s Jewish economic activity became more extensive. Up to 1861 Jewish merchants and contractors developed enterprises for wool weaving and tanning, and also traded in cotton, wool, and wine. After the economic standstill resulting from the Polish uprising (1863–64) came to an end, and following the opening of the railway (1871), Jews with capital opened factories for soap, candles, and liqueurs, and in the 1870s began to develop the lace industry in Kalisz which soon became celebrated on the Russian and Chinese markets. Toward the end of the 19th century and the beginning of the 20th, Jewish manufacturers established modern textile works and knitting factories for mass-produced socks, as well as a toy factory (for dolls). The Jewish population in Kalisz numbered 7,580 (32% of the total) in 1897, and 14,318 (36%) in 1908; among the 67 factories in Kalisz that year, 32 were Jewish-owned. A Jewish hospital was founded in Kalisz in 1836 by the industrialist L. Mamroth, on the initiative of the physician Michael Morgenstern, which continued to exist until 1939. A Jewish school with Russian as the language of instruction was founded in Kalisz in 1875, in which 150 pupils were registered that year. In 1878 anti-Jewish riots occurred in the town, provoked by religious fanatics in which many peasants took part;

13 Jews were killed and damage caused to Jewish property in the city amounted to 200,000 rubles. From 1881 on, the Russian authorities organized frequent expulsions from Kalisz of Jews who were German or Austrian citizens. By the beginning of the 20th century there was a large stratum of Jewish workers in Kalisz, who in 1909 numbered over 3,000, including apprentices and hired workers employed in workshops. Toward the end of the 19th century and beginning of the 20th century *Hasidism gained influence in Orthodox circles in Kalisz, especially the Hasidim of Gur (*Gora Kalwaria), Kotsk (see Menahem Mendel of *Kotsk), and *Warka. Progressive circles established their own synagogue in 1911. Among rabbis of Kalisz in the 19th and 20th centuries were Solomon b. Akiva *Eger (1835–40), Elijah Ragoler (1840–50), Zevi Hirsch *Chajes (1851–55), Meir b. Isaac *Auerbach (1855–60), Hayyim Eleazar Waks (1862–81), Samson Ornstein (1881–1902), and Ezekiel Lipschuetz (until 1932).

When the German army occupied Kalisz in August 1914, the soldiers — as a result of deliberate incitement without any military justification — set fire to about 150 Jewish houses in the center of the city. Thirty-three Jewish residents of Kalisz lost their lives in this action, and many fled from the city. Later, schools were established, including a Tahkemoni school directed by Jacob Shalom Engel, and a national religious school for girls, Havazelet.

After the establishment of Polish rule, members of the *Endecja party in Kalisz organized a pogrom there in March 1919 in which two Jews lost their lives. In order to defend themselves against antisemitic agitation, Jewish youth and workers there organized *self-defense groups at the end of 1919 and in 1920. The Jewish population of Kalisz numbered 15,566 (35% of the total) in 1921, and 19,248 in 1931. During the interwar period all the Jewish parties were active in the city, as well as trade associations of workers in the lace factories, to which both Jews and Poles belonged, and of garment workers, leather workers, porters, and others. In the municipal elections held in 1927, 11 Jews were elected among 34 members of the council. A Jewish secondary school was opened in 1916. There were three Yiddish schools in Kalisz in the 1920s and 1930s (belonging to *СУНО*), founded by workers' parties. Periodicals published in Kalisz included a weekly of Zionist orientation, *Di Kalisher Vokh*, founded in 1919 and edited by M. Abramowitz, and an independent weekly, *Kalisher Lebn*, founded in 1927 by Dr. Fogelson, which continued as *Dos Naye Lebn* under the editorship of A. Mamelok until 1938. Between 1929 and 1937 *Agudat Israel published a weekly, *Kalisher Vokh*, under the editorship of Rabbi Littman. In the 1930s there were two synagogues and about 35 prayer-houses in Kalisz.

Antisemitic propaganda increased in Kalisz under the leadership of the Endecja party from 1933, and many attempts were made to impose an economic *boycott on Jewish businessmen and artisans there.

[Arthur Cygielman]

Holocaust Period

In 1939 there were over 20,000 Jews living in Kalisz (almost 50% of the total population). The Germans occupied Kalisz on Sept. 6, 1939. Jews were seized by the Germans in the streets for slave labor, and were subjected to confiscation of property. Measures were introduced imposing a curfew, and the wearing of the yellow *badge. The beards and earlocks of Orthodox Jews were cut off, Polish antisemites taking part in these activities with particular zeal. Over a short time about 20% of the local Jews managed to escape while 10,000 others were evicted from their homes in an *Aktion* on Nov. 20, 1939, to make room for Baltic *Volksdeutsche*. The evicted families were at first lodged in warehouses, but during the first two weeks of December were deported to the Lublin district of the General Government. Following the deportation several thousand additional Jews managed to escape from Kalisz and dispersed over many parts of Poland, including nearly 7,000 who found refuge in the *Warsaw ghetto (1940). The Germans established a labor camp in the nearby village of Kozminka where 1,300 able-bodied Jews were employed. By Jan. 1, 1940, 612 Jews remained in Kalisz, some of them craftsmen. In October 1940 the Germans murdered all those chronically ill in a nearby forest.

The Jewish community of Kalisz, reduced to some 400 able-bodied young people, was housed in three buildings, in which workshops were established. Some Jews were forced to dismantle the tombstones from the Jewish cemetery to be used for pavements. By the end of 1941, 200 Jews, including some children, were sent to the death camp at *Chelmno. A few months later the remaining Jews were sent to *Lodz ghetto, where the few Jews still in the Kozminka work camps were sent. Kalisz thus became **judenrein*.

The Jewish community numbered nearly 300 in 1946 after some of the survivors returned, but all eventually left. Several memorial books for the Kalisz community were published in Israel: *Sefer Kalish* (2 vols., Heb. and Yid., 1964–67); *The Kalish Book* (1968); and *Toledot Yehudei Kalish* (1961, by Y.D. Beit-Halevi).

KALLAH (Heb. כַּלָּה; “bride”), one of the minor tractates appended to the end of the fourth order, *Nezikin*, in the printed texts of the Babylonian Talmud. There are two separate versions of the tractate. The shorter one consists of a single chapter while the larger version contains ten chapters and is known as *Kallah Rabbati*. Originally only the shorter tractate was known and it was published in the printed edition of the Talmud and the *Maḥzor Vitry*. The manuscript of the longer version was first published by Naḥman Coronel (Vienna, 1864), and subsequently printed in the *Romm (Vilna) edition of the Talmud. In three places the Babylonian Talmud cites the same passage, which mentions a tractate *Kallah* (Shab. 114a; Ta’an. 10b; Kid. 49b). It is related that a person is considered a disciple of the wise when he can answer any question of *halakhah* connected with his studies “even though it is on a subject dealt with in the *Kallah* tractate.” Scholars are uncertain as to the exact meaning of this phrase. Some hold that the allusion is to this tractate, while others explain that the reference is to the semiannual assemblies of the Babylonian scholars which were termed *kallah* and at which a designated tractate was studied.

The smaller tractate of *Kallah* discusses the subject of betrothal, marriage, chastity, and moral purity both in thought and action. The subject matter of this treatise is culled from **beraitot* contained in the Babylonian Talmud. Its authorship was generally attributed to Yehudai Gaon (eighth century), but M. Higger concludes that the original *Kallah* was compiled by a disciple of *Eliezer b. Hyrcanus and that a later compiler added to it (intro. to M. Higger’s edition of *Kallah*, 13).

The larger tractate of *Kallah Rabbati* resembles the format of the Talmud, consisting of *beraitot* and *Gemara*. According to N. Friedmann (*Seder Eliyahu Zuta*, introd. p. 15), it emanated from the school of *Rava in Maḥzoza (Babylonia, third century). A. Aptowitz, however, held that the author was Rava, a disciple of Yehudai Gaon (REJ 57 (1909), 239–48). Of the ten chapters comprising *Kallah Rabbati* only the first two discuss betrothal and marriage and they form a commentary to the shorter version of *Kallah*. Except for chapter 8, the remaining chapters form an amplification of *Derekh Erez Rabbah* and *Derekh Erez Zuta*. Chapter 8 is closely related to “the chapter on the acquisition of the Torah” or “the *baraita* of R. Meir” appended to *Pirkei Avot*. Much aggadic material is contained in this tractate, including the interesting stories of Akiva and the spirit of a deceased man (ch. 2); the four sages

and the philosopher (ch. 7); Simeon b. Antipatros and his guests (ch. 9); and Akiva and the Athenian (ch. 10). A critical edition of the texts of *Kallah* and *Kallah Rabbati* was published by M. Higger in 1936. An English translation of these tractates was issued by Soncino Press in 1965.

KALLAH, MONTHS OF, a term for the months of Elul and Adar when, during the talmudic and geonic eras, large gatherings assembled to study Torah in the Babylonian academies. Many conjectures have been made about the etymology of the word *kallah*, but they are all doubtful (see Krauss, in *Tarbiz*, 20 (1949), 123ff. and bibliography). The custom of the institution of the *kallah* apparently began in Babylon in the third century. It is related that Rabbah b. Nahamani, head of the Pumbedita academy (end of the third and beginning of the fourth centuries), was calumniated to the government for hindering 12,000 people from paying their tax to the king during the two months of the *kallah*, since they refrained from work during this period (BM 86a). Rav Ashi stated that the gentiles of Mata Meḥasya, near Sura, were obdurate, since they saw the glory of the Torah twice a year, in the months of Adar and Elul, and yet remained unconverted (Ber. 17b). Besides the *benei kallah* (the “members of the *kallah*”) who participated in the studies during the whole day, many of the ordinary people would come just for the public sermon and were called *benei pirkei* (Ket. 62a). The students devoted themselves diligently to their studies during the *kallah* months. Bibi b. Abbaye had not the time even to go over the weekly Bible portion “twice in Hebrew and once in the Targum,” and would complete the reading on the eve of the Day of Atonement (Ber. 8b in Ms. readings and He-Arukh s.v. כָּל). Rav Naḥman (end of the third century) gave instructions that litigants who were members of the *kallah* were not to be summoned to appear before the courts during the *kallah* so as not to interrupt their studies (BK 113a). The Talmud mentions two heads of *kallah* by name: *Naḥman b. Isaac was the head of the *kallah* and Adda b. Abba used to “go over the discourse” with him every day before he went in to expound it in the *kallah* (BB 22a). It is said of Ab-bahu that he was one of the heads of the *kallah* of Refram (Ḥul. 49a). It is therefore evident that several heads of *kallah* served in that office during one *kallah* period.

During each *kallah* month the studies were one specific tractate, the “*kallah* tractate,” which the head of the academy announced at the end of the previous *kallah*, so that each participant could study it during the months intervening between one *kallah* and the next. During the *kallah* month, the head of the academy would give a discourse on that tractate and reply to the queries of the students, and then one of the scholars among those sitting in the first row, “the heads of the *kallah*,” would discuss the topic with the hearers until it was explained and clarified to all. In the last week of the *kallah* month the head of the academy would test and examine the permanent members of the academy, and if “he saw that one of them had not organized his studies ... he would diminish his stipend,

rebuke him, and reprimand him ... as a result they applied themselves and occupied themselves well with their studies in order not to come to grief in a halakhic matter before him” (Neubauer, 2 (1895), 87–88).

These descriptions, and others known from R. Nathan ha-Bavli, describe mainly the arrangements in the academies in the geonic era, but they had their source at the beginning of the talmudic era and continued unchanged in Babylonia for centuries. According to one tradition (*ibid.*) the month of Adar was used for the clarification of the written queries which reached the Babylonian academies. During this month the queries which reached the heads of the academy from the communities in the Diaspora were brought out, and the scholars of the academy examined them together, finally arriving at the practical *halakhah*. After “the truth had become clear to them,” the scribe committed the result to writing, and at the end of the month the head of the academy signed them and sent the replies to the inquirers. It is clear from other geonic sources, however, that during the rest of the year, too, replies were sent in answer to questions (S. Assaf, *Tekufat ha-Ge'onim ve-Sifrutah* (1955), 256–60). The institution of *kallah* months was unknown in Erez Israel, and is mentioned neither in the Jerusalem Talmud, nor in any *baraita*. The phrase “and even in the *kallah* tractate” in the *beraitot* of tractates *Ta'anit* (10b) and *Kiddushin* (49b) was added in accordance with the custom of the time among the Babylonians (see the Mss. and the parallels in the Tosefta and the Jerusalem Talmud). Rashi explains the expression “tractate *kallah*” as referring to tractate *Kallah Rabbati* or to the festival *halakhot* on which they were accustomed to discourse before the festival (Shab. 114a; et al.). But the correct meaning is that given by Hai Gaon (*Sefer ha-Ittim*, 246–8) and others, that the months of Adar and Elul are meant (see also the supplement to the Tanḥuma, No'ah 3). In modern Israel a modified form of the *kallah* month was instituted by Rabbi J. Kahaneman at the Ponevezh yeshivah in Bene-Berak, and it spread to other centers.

KALLEN, HORACE MEYER (1882–1974), U.S. philosopher and educator. Kallen was born in Berenstadt, Silesia, Germany, the son of a rabbi, and was taken to the United States in 1887. Early in his career he taught at Harvard University (1908–11), Clark College (1910), and the University of Wisconsin (1911–18). He was one of the founders of the New School for Social Research in New York City and taught there 1919–52, serving as dean of the graduate faculty of political and social

science, 1944–46. From 1952 to 1965 he was research professor there, and in 1965 he began teaching at Long Island University. Kallen was an active member of the Jewish community, working at such organizations as the American Jewish Congress, the American Association for Jewish education, of which he was vice president, and *YIVO. He served on many government committees, e.g., the Presidential Commission on Higher Education and the New York City Commission on Intergroup Relations (1961), and was active in such organizations as the International League for the Rights of Man and the Society for the Scientific Study of Religion. Kallen's philosophy has been characterized as Hebraism, aesthetic pragmatism, humanism, cultural pluralism, and cooperative individualism. Among its distinctive features is the stress on the variety of men and things in nature and society. Chance and individuality are primary in nature; law and group characteristics are secondary. Against the ancient Greek stress on fixity and eternity, Kallen's philosophy affirms the importance of time, change, becoming, and futurity. As a Hebraist he rejected predestination in any form. He believed in freedom of the will and in each individual's responsibility for his actions. Kallen's cultural pluralism affirms that each ethnic and cultural group in the United States has a special contribution to make to the variety and richness of American culture and, thus, provided a rationale for those Jews who wish to preserve their Jewish cultural identity in the American melting pot. He argued strongly for 60 years that the Jewish people need a homeland in Palestine to protect them against persecution and to enhance their Jewish cultural heritage. He also championed the ideal of a world in which all varieties of peoples and cultures will be able to live together, each one the equal of the others in its right to life, liberty, and the pursuit of happiness. According to Kallen, the goal of modern education and society is the creation of free men in an expanding free society. He warned that such a free society can be preserved only if moral conviction is accompanied by military strength. In the economic sphere he urged consumers' cooperatives as a protection against business exploitation. Kallen's aesthetics were concerned with the relations between beauty, use, and freedom in the context of each individual's experience. All ideas, values, deeds, tools, and methods are to be tested by their contribution to the satisfactions of human beings.

Although Kallen's philosophy was addressed to all mankind, he always affirmed his debt to the positive values of his Jewish inheritance. By affirming his integrity as a Jew he vindicated the integrity of the Jew as a man and thinker. His insistence on the link between thought and action led him into active participation in the extension of democracy at home and abroad, especially in relation to civil liberties and minority rights. Kallen's writings include, among many others, *The Book of Job as a Greek Tragedy* (1918); *Zionism and World Politics* (1921); *Judaism at Bay* (1932); *Individualism: An American Way of Life* (1933); *The Decline and Rise of the Consumer* (1936); *Art and Freedom* (2 vols., 1942); *The Education of Free Men* (1949); *Of Them Which Say They Are Jews* (1954), edited

by J. Pilch, a collection of Kallen's essays on the Jewish struggle for survival; *Utopians at Bay* (1958) on his impressions of Israel; and *Liberty, Laughter and Tears* (1968).

[Sidney Ratner]

KALLENBACH, HERMANN (1871–1945), South African architect and intimate of *Gandhi. Kallenbach was born in East Prussia and studied architecture in Stuttgart and Munich. In 1896 he went to South Africa, where he practiced as an architect. In 1904 he met Mohandas Gandhi, who was then working in South Africa. He became his intimate friend and dedicated devotee. Abandoning the life of a wealthy, sport-loving bachelor, he adopted the vegetarian diet and simple lifestyle of Gandhi. In Gandhi's words, they became "soulmates" and, for a time, shared Kallenbach's home. Together with another Jew, H.S.L. Polak, Kallenbach was associated with Gandhi throughout the *Satyagraha* (non-violent resistance) struggle which lasted in South Africa until 1914.

In 1910 Kallenbach purchased a farm near Johannesburg as a commune for the families of Indian resisters who had been imprisoned. It was named Tolstoy Farm and Kallenbach joined Gandhi there. During the great *Satyagraha* march of Indians in 1913, he risked his personal safety to confront hostile whites in defense of the Indians. In November 1913 he was imprisoned together with Gandhi. Upon their release they both went to England. Kallenbach planned to accompany Gandhi to India, but with the outbreak of World War I, he was detained in England because of his German citizenship. After the war he returned to South Africa, where he resumed his work as an architect, but continued to correspond with Gandhi.

The rise of Nazism shocked Kallenbach into a rediscovery of his Jewish roots. He became a convinced Zionist, served on the Executive of the South African Zionist Federation, and planned to settle in Erez Israel. At the request of Moshe Shertok (Sharett), Kallenbach visited Gandhi in May 1937 to enlist his sympathy and support for Zionism. In private conversations he gained the sympathy of Gandhi and his promise to take an interest in the Zionist cause. In his public statements, however, Gandhi continued to maintain a position unsympathetic to Zionism. Although disagreeing with Gandhi over Zionism and also in his (Kallenbach's) conviction that Hitler had to be resisted by violence, Kallenbach's deep friendship with Gandhi continued, and he visited him again in 1939. When Kallenbach died in 1945 he left a portion of his considerable estate for South African Indians, but the bulk was left for the benefit of Zionism. His large collection of books went to the Hebrew University, and his cremated remains were buried at Deganyah.

[Gideon Shimoni]

KALLIR, ELEAZAR (Heb. אֶלְעָזָר בֶּרֶיבִי קָלִיר, and קִלִּיר; instead of אֶלְעָזָר, also the Palestinian form לְעָזָר), the greatest and most prolific of the early *paytanim*, and one of the most influential liturgical poets. He apparently lived in Erez Israel and resided in Tiberias.

Works

Kallir wrote *piyyutim* for all the main festivals (sometimes more than one for the same festival), for the special Sabbaths, for weekdays of festive character, and for the fasts. The structures of his *yozer*, *kerovah*, *shivatah*, and *hoshana* poems, of his elegies, prayers for dew, and prayers for rain, which he often took from his predecessors and developed, have remained classic models. Poems written in his style are even called *Kalliri* after him. Kallir in his poetic writings drew on the didactic *aggadah*, thus preserving some otherwise forgotten aggadic traditions. Closely following the midrashic original in content, Kallir's poetic originality is expressed in his linguistic inventiveness. Probably the most audacious coiner of neologisms in Hebrew, Kallir was however very selective in his language and despite complicated poetic forms composed of intricate acrostics, interpolated with biblical verses, various types of rhyme, and auditory images, he rarely coined a word which did not fit the text. The new words, the many midrashic allusions, and the numerous errors in the extant texts of Kallir gave an aura of obscurity to Kallir's works, and thus commentaries to Kallir were written as early as the 11th century and perhaps even earlier; one of them is attributed to Rashi (cf. L. Ginzberg, and S. Klein, see bibl.). Kallir's *piyyutim* were widely known in the Orient, the Balkans, Italy, France, Germany, and Eastern Europe, and more than 200 are extant in various rites. The fact that more of his *piyyutim*, previously unknown, were found in the *Genizah* implies an even greater popularity than presumed. Several of these were published. A complete collection of Kallir's work, however, has not yet appeared.

Biography

Biographical facts about Kallir are shrouded in mystery. His name, country of birth, and when he lived are still unknown and can only be speculated upon. The assumption that *Natronai b. Hilai, *Gaon* of Sura in 857, mentions Kallir's poems is doubtful. *Saadia b. Joseph Gaon quotes Kallir as one of the old *paytanim* (see bibl., A. Harkavy). According to a late (12th-century) source, Kallir was killed by his teacher *Yannai (see bibl., S.J. Rapoport and I. Davidson) who apparently was jealous of him. There is evidence that as early as the tenth century Kallir had already become a subject for legends.

Derivation of his Name

An old tradition derives the name Kallir (קָלִיר) from *kalura* (Gr. κολλύρα), a cake that Jewish boys were given when they started school (*Arukh ha-Shalem* of *Nathan b. Jehiel, ed. by Kohut, s.v. קָלִיר). Another interpretation holds that the name was derived from the poet's or his father's hometown: Cagliari in Sardinia, Calais, Cologne, Kallirrhoe in Transjordan (A. Jellinek, S. Cassel), or Edessa in Syria, whose Greek name has

a phonetic resemblance to Kallir (F. Perles). J. Derenbourg assumes that Kallir may perhaps be a Latin nickname (*celer*, “the fast one”) which would have been attached to the real name of Kallir’s father, Jacob (alluding to Hosea 12:13, “And Jacob fled into the field of Aram”); S. Shullam claims to have found the acrostic **בְּרַבִּי יַעֲקֹב** *be-Rabbi Ya’akov*. J. Perles holds Kallir to be Cyril (Gr. Κύριλλος), a name popular in the Byzantine Empire. W. Heidenheim assumes that the hometown given in many acrostics as **קִרְיַת סֶפֶר** (*Kiryat Sefer*) could be identified with the biblical place in Erez Israel of the same name (Kiriath-Sepher; Jos. 15:15). S.J. Rapoport read **סֶפֶר** (*sefar*) and interpreted it as “coastal town,” associating it with Cagliari, Bari, or Ostia. Others, in a similar interpretation, suggested Civitas Portas, the former port of Rome (Derenbourg); Constantinople (S. Krauss); Civita di Penna in the Abruzzi (I.S. Reggio); while Luzzatto first suggested Bocheville in Normandy, Speyer in Germany, and later, cities in Babylonia: first Pumbedita and afterward nearby Sippar; L. Zunz suggested Lettere in southern Italy, later Antioch and Hama in Syria because of **סֶפֶר**; Bruell thought of the Phoenician town Byblos. S. Cassel read in the acrostic in Kallir’s prayer for rain **קִרְיַת שֶׁפֶר** *Kiryat Shefer* (“fairtown”) and identified it with Kallirrhoe in Palestine (from the Greek “fair,” “beautiful”). According to S. Eppenstein the town meant is Tiberias, the place of Masoretic biblical studies since the seventh century. R. Solomon b. Abraham Adret believed him to be the *tanna* *Eleazar b. Arakh (Resp. Rashba no. 449); while the tosafists identified him with the *tanna* *Eleazar b. Simeon (Ḥag. 13a).

Dates

The conjectures as to when Kallir lived cover several centuries (from the second to the tenth or eleventh). As early as the 12th century he was thought to have been a *tanna* (see above). Rapoport tried to place him around 970, but this had to be antedated by a century after M.H. Landauer’s discovery of Saadiah’s *Yezirah* commentary. According to Zunz the earliest acceptable date is the first half of the ninth century. Some modern scholars believe Kallir to have lived about 750 at the latest, a date deduced from a statement by al-Kirkisāni, a younger contemporary of Saadiah’s (see bibl., A. Harkavy), according to whom the *paytan* Yannai was a source for the founder of Karaism. Yannai, therefore, must have lived at least during the same period, if not earlier, and his pupil, Kallir, a generation later. Other scholars assume him to have lived no later than the sixth or the early seventh century, i.e., before the Arab conquest of Erez Israel in 635, since in his poems he laments the suffering inflicted and the destruction wrought by Edom (i.e., the Christians) only, and does not mention Ishmael (i.e., the Arabs).

From a linguistic point of view it would also seem that Kallir lived in Erez Israel at the end of the sixth century. Kallir’s language, considered by later medieval grammarians as ungrammatical, is a product of the poet’s conception of the grammatical structure of the Hebrew language. Abraham *Ibn Ezra (commentary to Eccles. 5:1) denounced the style of Kallir,

a criticism which centuries later influenced the *maskilim* in their disparagement of the *paytan*. Many of Kallir’s *piyyutim* are interlaced with Hebrew folk language. Like the Palestinian *piyyut*, Kallir’s works are an organic continuation of ancient Hebrew while the Hebrew poetry of Spain is a revival of the biblical language.

Published Works

Many of Kallir’s liturgical poems were published in different prayer books, *maḥzorim*, and also by various scholars. Those liturgical poems published until 1933 are listed by I. Davidson, in: *Ozar ha-Shirah ve-ha-Piyyut*, pt. 4 (1933), 367. Since then many more have been published: I.M. Elbogen, in *Jewish Studies in Memory of G.A. Kohut* (1935), 159–77; idem, in *Sefer ha-Yovel... S. Krauss* (1936), 307, 309–10; idem, in: *Sefer Klausner* (1937), 235–9; E. Fleischer, in: *Tarbiz* 36 (1967), 119–28, 139–40, 147f., 350–7; 38 (1969), 264–5, 271–2, 276–9; idem, in: *Sinai*, 62 (1967/68), 13–40, 142–51, 155–8; 63 (1968), 32–49; 64 (1968/69), 184; 65 (1969), 34–35; 66 (1969/70), 225–6; idem, in: *Ha-Sifrut*, 2 (1969/70), 202–4, 208–18, 229, 231–6; A.M. Habermann, in: *YMḤSI*, 5 (1939), 52–56, 76–77, 104; idem, in: *Tarbiz*, 14 (1943), 53ff. 59–65, 143; 15 (1944), 216; J. [*Encyclopaedia Judaica* (Germany)]

KALLIR, ELEAZAR BEN ELEAZAR (1728–1801), rabbi. Kallir's father died before his birth, and he was therefore given his father's name. In 1759 he was appointed rabbi of Zabłudow, and from there proceeded to Berlin where he lectured in the college of the wealthy Moses b. Isaac Levy. He was appointed rabbi of Rechnitz and head of its large yeshivah in 1768, and in 1781 rabbi of Kolin near Prague. Kallir was highly regarded by his contemporaries. *Azulai says, "he has the reputation of being sharpwitted and erudite," while Baruch Jeteles states that "after the death of Ezekiel *Landau, he was the sole remaining authority in the country." His first work, *Or Ḥadash*, on the Pentateuch, was an appendix to the *Kotnot Or* of his grandfather, Meir *Eisenstadt, which he published under the title *Me'orei Esh* (Fuerth, 1766). Under the same title he subsequently published commentaries on tractate *Pesahim* (Frankfurt on the Oder, 1771, and often republished) and on *Kiddushin* (Vienna, 1799); he also wrote *Havvot Ya'ir he-Ḥadash* (Prague, 1792), sermons and eulogies; *Heker Halakhah* (Vienna, 1838), responsa. His books met with a wide acceptance and are quoted by his contemporaries. Other works remain in manuscript. His son Alexander Susskind was a well-known philanthropist.

KALLIR (Kallier), MEIER (d. 1875), banker and politician in Brody (Galicia; now Ukraine). Son of Alexander Kallir, an émigré from Germany, Meier managed the banking business established by his father. He served as chairman of the Board of Commerce and Trade several times and in 1853 as deputy mayor of Brody. In 1848 he was elected to the Galician *Landtag* (Diet), and served as a deputy once more from 1861 to 1867. Together with two other Jewish deputies Kallir introduced the proposal for the emancipation of the Jews in 1861. Also active in the Jewish community of Brody, he supported agricultural settlement of the Galician Jews on the plains, publishing an appeal entitled *Galizyah Kol Titten*. However, since Orthodox Jewry opposed it, the project was never realized. Meier's son NATHAN VON KALLIR (1821–1886), also a deputy in the Galician *Landtag* (1870–73), was a noted philanthropist.

[Benjamin Lubelski]

KALLO, YIZHAK ISAAC (of Taub, 1751–1821), rabbi and ḥasidic **admor* in Hungary. According to legend his talents

were recognized by *Aryeh Leib Sarahs and the latter sent him to be educated by Samuel Shmelke *Horowitz of Nikolsburg, who was his teacher in Talmud as well as in Ḥasidism. He also studied for some time under *Elimelech of Lyzhansk. In 1781 he became rabbi of Kallo and district, where he resided for 40 years, and became known for his learning and piety. Yizhak Isaac was the first ḥasidic leader to live permanently in Hungary and helped to further the spread of the ḥasidic movement there. His contemporaries esteemed both his talmudic learning and ḥasidic teachings, but he left no works in writing. Possessed of great musical talent, he wrote songs in Yiddish and Hungarian and composed many melodies, some of them adaptations of Hungarian folk songs. Some of his grandsons were ḥasidic leaders in Kallo and other places.

KÁLMÁN, EMMERICH (Imre; 1882–1953), composer. Born in Siófok, Hungary, Kálmán studied at the Budapest Academy with Hans Koessler, while also taking his law degree. Until 1908 he worked in a law office, acted as a music critic, and composed several serious works. The success of the cabaret songs which he had written under a pseudonym drew him to the field of operetta. The first of his 21 works in this genre was *Tatárjárás* (1909), produced in Vienna as *Ein Herbstmanöver* (1909) and in the same year in New York as *The Gay Hussars*. Kálmán settled in Vienna, where he remained until 1936. In 1938 he went to Switzerland, then to France, and in 1940 to the United States. Returning to Europe in 1949 he was feted in Paris and in major German-speaking cities. He returned briefly to New York where he finished his last operetta, *Arizona Lady* (1954). The most famous of Kálmán's operettas are *Der Zigeunerprimas* (1912); *Die Bajadere* (1921); *Circus Princess* (1926); and the two world-wide successes – *Gypsy Princess* (1915), produced in the U.S. as *Riviera Girl*, and *The Countess Maritza* (1924). The latter, as well as most of his other works, were based on the melodic idiom of urban Hungarian folk and entertainment music, including the gypsy element. Kálmán's operettas – orchestrated by himself – have been appreciated for their melodic richness, which ranges from sentimental pathos to dashing gaiety. Together with Franz Lehár, Leo *Fall, and Oskar *Straus, Kálmán represents the third and last phase of the European operetta. His son Charles (1929–) was also a composer.

[Bathja Bayer]

KALMAN, MAIRA (1950–), U.S. author, illustrator, designer. Born in Tel Aviv, Kalman immigrated to New York in 1954. She met her husband, Tibor, at New York University,

where both were English students. While nurturing an ambition to write short stories, she helped her husband found M&Co, the quirky design firm. In 1987 she published her first book, *Stay Up Late* (1987), illustrating David Byrne's lyrics with an array of colorful primitive-looking characters. A year later she published *Hey Willy, See the Pyramids* (1988), a sarcastic, witty book abounding in non sequiturs and naïve drawings. Her major protagonist, a dog named Max, won children's hearts and book awards. She also wrote and illustrated *Chicken Soup, Boots; Next Stop Grand Central* (1999), based on murals she created for New York's Grand Central Terminal, and *What Pete Ate From A-Z* (2001), a culinary biography of her mutt Pete. After her husband's death in 1999, she continued their work with *(un)Fashion* (2000), a book about the way the non-Westernized world attires itself, and *Colors* (2002), an anthology of his work as editor of that magazine. She has written and illustrated a dozen children's books and runs M&Co as an entrepreneurial producer of paperweights, clocks, and "art" products. She also produced window displays for Sony and clothes mannequins for Pucci. Her book *Fireboat: The Heroic Adventures of the John J. Harvey* (2002), about the decommissioned boat that fought fires at the World Trade Center attack on 9/11, reveals a growing interest in fusing real life and art into an entertaining though poignant form of social commentary. Kalman endeared herself to countless readers with her illustration that appeared on the cover of *The New Yorker* magazine on December 8, 2001. It showed a simple pastel map, a flat, bird's-eye view of New York City drawn in pen and wash with the city's neighborhoods Afghanisticized: Lubavistan, Kvetchnya, Irate, Feh, Fattushis, Fuhgeddaboutitstan, etc. The map became almost as famous as the one Saul *Steinberg drew for the *New Yorker* cover of March 29, 1976, showing his *View of the World from Ninth Avenue*.

[Stewart Kampel (2nd ed.)]

KALMAN, TIBOR (1949–1999), U.S. graphic designer. A native of Budapest, Hungary, Kalman moved with his family in 1957 to Poughkeepsie, N.Y., after the unsuccessful Hungarian uprising. He spent a year at New York University, where he joined Students for a Democratic Society, and traveled to Cuba to pick cotton with the Venceremos Brigade, which took middle-class Americans to help support the Cuban regime. When he returned to the United States in 1971, Kalman did window displays for the Student Book Exchange at NYU, which was owned by Leonard Riggio, who later bought Barnes & Noble and made Kalman its first creative director. Kalman designed the bookstore's first shopping bag, featuring an antique woodcut of a scribe. The design was still in use decades later. In 1979 Kalman was hired as the creative director of the discount department store E.J. Korvettes ("Eight Jewish Korean War Veterans"). Unhappy, he established M&Co in his Greenwich Village apartment in 1980. The enigmatic name was typical of Kalman's wit: it gave an aura of mystery and confused his more traditional clientele, who wanted to know what the M stood for. His wife, Maira *Kalman, then a children's

book author and illustrator, had the nickname M. Kalman's transformation into a progressive design impresario came when M&Co designed an album for the rock group Talking Heads that featured four digitally manipulated photographs of the group's members and a title with upside-down letters. From that point on, the firm received attention in the design trade press for pushing beyond the conventions of design and typography. A number of cutting-edge designs produced by M&Co were sold at the Museum of Modern Art in New York for years. Kalman moved on to editing and being the creative director for the magazines *Art Forum* and *Interview*. He made a splash as editor in chief of *Colors*, the Italian and English magazine published by the Italian clothing company Benetton, an assignment that forced him to move his family to Rome. *Colors* focused on sociocultural issues like racism, AIDS, and sports. An issue devoted to racism had a featured titled "How to Change Your Race" and examined cosmetic means of altering hair, features, and skin color. Another feature was a collection of manipulated photographs showing famous people racially transformed. Kalman returned to New York in 1997 to battle cancer. In the last months of his life, Kalman designed the exhibition *Tiborocity*, which consisted of "neighborhoods" representing different aspects of his work as well as the protest posters and graphics that influenced him in the 1960s and 1970s. He told friends he intended the retrospective, which was shown at the San Francisco Museum of Modern Art, to be his last testament.

[Stewart Kampel (2nd ed.)]

KALMAN OF WORMS (d. 1560), Polish rabbi. Kalman is the first known rabbi of Lemberg and one of the leading Polish talmudic scholars of his time. He is known mainly from references in the works of contemporary rabbis. Joseph Katz of Cracow (the brother-in-law of Moses *Isserles) on one occasion enlisted his support and states: "The elder scholar... Kalman of Worms agreed with my decision..." (responsa *She'orit Yosef* (Cracow, 1590), no. 1). A responsum by Kalman himself, dated 1558 and signed "Kalman Wermeisa," appears in the responsa of Moses Isserles (responsum no. 15). It is possible he is the Kalman referred to in a responsum from Meir *Katzenellenbogen of Padua (in responsa *Maharshah* [S. Luria] (Lemberg, 1859), 38a, no. 37). Both David Gans and Jehiel Heilprin, in *Zemah David* and *Seder ha-Dorot* respectively, mention Kalman of Worms among the foremost scholars of the first half of the 16th century.

[Alexander Tobias]

KALMANOVITCH, ZELIG (1881–1944), Yiddish writer, philologist, and translator. Born in Goldingen, Latvia, in 1929, he settled in Vilna, where he joined the *YIVO Institute and became editor of its journal *YIVO Bleter*. Kalmanovitch published studies on Yiddish philology, the influence of Hebrew on Yiddish syntax (1906, 1907), and on the Yiddish dialect spoken

in Courland (1926). He translated into Yiddish Josephus' *Jewish Wars* (1914), Dubnow's *History of the Jews* (1909–10), and H.G. Wells' *Outline of History* (1930). During the Nazi occupation he was forced to select the books to be shipped to Germany. In the Vilna ghetto Kalmanovitch kept a diary in Hebrew. It is written in a spirit of resignation; he expresses the hope that, by carrying out the orders of the Nazis, some lives might be spared. With the liquidation of the Vilna ghetto in September 1943, he was deported to an extermination camp in Estonia where he died the following winter. His ghetto diary was published in an English translation in the *YIVO Annual of Jewish Social Science*, 8 (1951) and in a Yiddish translation in the *YIVO Bleter*, 35 (1951) and New Series, 3 (1997), 43–113.

[Elias Schulman / Gennady Estraiikh (2nd ed.)]

KALMANOWITZ, ABRAHAM (1891–1964), rabbi and *rosh yeshivah*. Born in Delyatis, Belorussia, he received his education at the yeshivot of Zavahil, Eisiskes, Slobodka, and Telz, and was ordained by the rabbis Raphael Shapiro of Volozhin, Elijah Baruch Komai of Mir, Moses Mordecai *Epstein of Slobodka, and Eliezer Rabinowitz of Minsk. At the unusually young age of 22, Kalmanowitz was chosen as the rabbi of Rakov (1913), where he later established an advanced yeshivah (1916). During the Bolshevik Revolution he aided Jews who had been arrested by the Bolsheviks and was consequently arrested and imprisoned in Minsk. Kalmanowitz served as a member of the *Mo'ezet Gedolei ha-Torah* of *Agudat Israel and was among the founders of the *Va'ad ha-Yeshivot* in Vilna. He assisted R. Hayyim Ozer *Grodzinski in organizing the *Ateret Zevi kolel* in Vilna which later moved to Otwock. In 1926, Kalmanowitz was elected president of the Mir yeshivah. In 1929 he became the rabbi of Tiktin (Tykocin) and also established a yeshivah there.

After the outbreak of World War II, Kalmanowitz accompanied the Mir yeshivah to Vilna, where it sought refuge. In 1940 he succeeded in emigrating to the United States and there devoted himself to rescuing European rabbis, heads of yeshivot, and their students. Kalmanowitz arranged for the transfer of the Mir yeshivah to Kobe, Japan, and later Shanghai, where Kalmanowitz made himself responsible for its upkeep for the duration of the war. In 1945 he arranged for its transfer to the United States and Erez Israel, and in 1946 he reopened the Mir yeshivah in Brooklyn, New York, with the new arrivals serving as the nucleus. American-born youngsters were gradually attracted to the new school and it became a leading American yeshivah. Later, Kalmanowitz was active in the *Ozar ha-Torah*, which aided Jewish education in Morocco, Algeria, and Tunisia, bringing youngsters from these countries to the United States to study in a special division of the Mir yeshivah.

[Aaron Rothkoff]

KALMS, SIR (Harold) STANLEY, BARON (1931–), British businessman, communal leader, and figure in the Conservative Party. Born in London in 1931, Kalms was chairman of the Dixon Group from 1948 to 2002, which he developed from a single photographic shop into one of the biggest and best known of British high street retail chains, specializing in electronic equipment, especially televisions and stereos, computers, and household appliances. Dixons also owned a number of other well-known British retail chains in the same field, such as Currys and PCWorld. Within the Anglo-Jewish community Kalms became well known as the author of the “Kalms Report” of 1992, entitled *A Time For Change*, which recommended a sweeping reorganization of the financial bases of the mainstream United Synagogue. He was also the founder of the Stanley Kalms Foundation to encourage Orthodox Jewish education. In addition, Kalms was an influential figure in the administrative organization of the Conservative Party, serving from 2001 as the Party's treasurer. He was knighted in 1996 and received a life peerage in 2004.

[William D. Rubinstein (2nd ed.)]

KALNITSKY, GEORGE (1917–), U.S. biochemist, born in Brooklyn, New York City. He worked at the University of Chicago and the U.S. Office of Scientific Research and Development before joining the University of Iowa College of Medicine (1946), where he became professor (1957). His main research field was bacterial and mammalian metabolism. He made major contributions to clarifying the intermediate steps in the citric acid (Krebs) cycle for generating energy from the oxidation of glucose. He also contributed to understanding the chemistry of enzyme action. He was active in Jewish communal affairs.

[Michael Denman (2nd ed.)]

KALONYMUS, one of the most eminent Jewish families in Germany which flourished from the 9th to the 13th century, especially in the cities near the Rhine. Among its members were numerous rabbis, preachers, poets, teachers, authors, moralists, and theologians, and most of the prominent communal leaders of this period came from its ranks. The origins of the family go back to eighth-century Italy, although the name Kalonymus appears in talmudic literature. The father of Onkelos, the great translator of the Bible, was, according to *Avodah Zarah* 11a, called Kalonymus, although other sources refer to him by a different name, e.g., Kolonikos (Git. 56b). While Kalonymus is the name of many medieval Jewish families, its appearance does not always indicate a connection with the family described here.

Two major events stand out in the family's history: the migration of the family from southern Italy to Germany in the ninth century, and their leadership of the Jews in Germany during the Crusades, especially during the massacres of 1096 (the year of the First Crusade) and the subsequent upheaval of the 12th and 13th centuries. The Kalonymus family tree, despite many attempts, has not been accurately described. The

family had many branches, with the same names frequently recurring in different cities and different generations, so that it is very easy to confuse them. The best and most complete tradition regarding the history of the family is given in a small polemical work written probably around 1220 by *Eleazar b. Judah (b. Kalonymus) of Worms, the author of the *Roke'ah*. Eleazar's aim in his polemic was to prove that the version of the prayers recited by himself and his circle was the true one, as opposed to the various changes introduced by rabbis in France and England. He gave a list of his family and teachers in order to demonstrate the antiquity and reliability of his version, which was printed by Joseph *Delmedigo in his *Mazref le-Hokhmah*. The list also appears in other manuscripts and has been discussed at length by many scholars, especially H. Gross and A. Neubauer. The Paris manuscript, no. 772, p. 60a, gives the following version:

"I, Eleazar ha-Katan, received the true version of the prayers from my father and teacher, Rabbi Judah, son of Rabbi Kalonymus, son of Moses, son of Rabbi Judah, son of Rabbi Kalonymus, son of Rabbi Moses, son of Rabbi Kalonymus, son of Judah.

"And I also received it from *Judah he-Hasid, as he received it from his father, Rabbi *Samuel he-Hasid, as he received it from Rabbi Eleazar he-Ḥazzan of Speyer; for when Rabbi Kalonymus died, his son Rabbi Samuel he-Ḥasid was only a boy, so he gave (transmitted) it to Rabbi Eleazar he-Ḥazzan of Speyer, and when he, Rabbi Samuel he-Ḥasid, grew up, he received [the secrets] from him, as was ordered by Rabbi Kalonymus the Elder.

"And Rabbi Kalonymus the Elder received [the tradition] from his father, Rabbi Isaac; and Rabbi Isaac received [it] from his father, Rabbi Eleazar the Great, son of Rabbi Isaac, son of Rabbi Joshua, son of Rabbi Abun, the Rabbi Abun who was the grandfather of Rabbi Simeon the Great, of Mainz.

"And Rabbi Eleazar the Great was a student of Rabbi Simeon the Great. For Rabbi Isaac, the father of Rabbi Simeon the Great, and Rabbi Joshua, the grandfather of Rabbi Eleazar the Great, were brothers. This is why Rabbi Simeon was like a father to him, for when Rabbi Isaac died his son Rabbi Eleazar the Great was just a small boy, and he grew up in his house and he taught him the Torah, And he was [with] Rabbi Gershom, Me'or ha-Golah.

"Rabbi Judah ha-Kohen also transmitted his [knowledge] to Rabbi Eleazar the Great. This was Rabbi Judah ha-Kohen who wrote the book of laws; he was the father of Rabbi Abraham ha-Kohen, and Rabbi Abraham ha-Kohen was the father of Rabbi Meir ha-Kohen, who was the father of Rabbi Eleazar ha-Kohen he-Ḥasid. Rabbi Eleazar ha-Kohen he-Ḥasid was the father of Rabbi Jacob ha-Kohen he-Ḥasid, the young one.

"They all received the secret of the true version of the prayers, teacher from his teacher, up to Abu Aaron, the son of Rabbi Samuel ha-Nasi, who came from Babylonia because of a misadventure, and had to wander from place to place [as a punishment], until he came to the country of Lombardy, to a city named Lucca, where he found Rabbi Moses [son of Kalonymus], who wrote the *piyyut*, *Eimat Norotekha*, and he [Abu Aaron] transmitted to him all his secrets. And he was Rabbi Moses, son of Kalonymus, son of Rabbi Judah. He was the first who left Lombardy, he and his sons, Rabbi Kalonymus and Rabbi

Jekuthiel, and his relation Rabbi Ithiel, and other important persons; for the king Charles brought them with him from the country of Lombardy, and settled them in Mainz, and there they multiplied and flourished very much; until God's fury hit all the holy communities in the year 1096. And then we were all lost, all perished, except very few who were left from our kinsmen. [Rabbi Kalonymus] the Elder who transmitted [the Torah] to Rabbi Eleazar he-Ḥazzan of Speyer, as we have written above, and Rabbi Eleazar he-Ḥazzan transmitted it to Rabbi Judah he-Ḥasid, and from him I, the small one, received the secrets of the prayers and other secrets."

This list is as close to a Kalonymus family tree as exists today, though many more members of the family are known from other sources (see below). It is evident that the family originally flourished in southern Italy, from where some of its members were moved by one of the Carolingian emperors to the Rhine cities in Germany. There was some controversy among scholars as to the identity of this ruler; some texts explicitly named Charlemagne as the king responsible for the move, but this seems to be a later emendation to the text. It is now accepted that it must have been Charles the Bald, who lived in the second half of the ninth century.

It should be noted that Eleazar of Worms stresses the fact that the family received "secrets" orally from the Babylonian scholar, Aaron son of Samuel. Generally, the Jewish communities in southern Italy were under the influence of the center of learning in Palestine, and not in Babylonia. It seems, therefore, that the traditions transmitted from generation to generation within the Babylonian and Palestinian elements of the family were fused together into one whole which gave the members of the family stature and importance among the scholars in Germany. No clear connection has been established between the Kalonymus family and another family which received secret traditions from Abu Aaron, and which is described in the *Megillat *Ahima'az* as an Italian family of the 8th to the 11th centuries.

The Kalonymus family provided the Jews in Germany with leaders of the communities, as attested by the chronicles describing the massacres of the crusaders from 1096 to the middle of the 13th century (see A.M. Habermann, *Gezerot Ashkenaz ve-Zarefat*, 1945). Their leadership extended to cultural fields as well. It is probable that more than a dozen prominent *paytanim*, who wrote of the sufferings of German Jewry during this period, belonged to this family. Many of the most prominent halakhists and talmudic scholars of the time were also members of the Kalonymus family. The *Ḥasidei Ashkenaz were led and directed by members of the family, who formulated their esoteric theology, and created their code of ethical, pious behavior – *Sefer *Ḥasidim*. Furthermore, the political and cultural life of the Jews in Germany between the 9th and 13th centuries was dominated by the family.

Among the prominent members of the Kalonymus family in Italy and Germany were KALONYMUS OF LUCCA, a *paytan*, who lived in Italy probably in the ninth century; *MOSES BEN KALONYMUS, a *paytan*, who lived in Italy but who moved to Mainz, and influenced the early *paytanim* in Germany,

especially *SIMEON BEN ISAAC; KALONYMUS BEN JUDAH HA-BAḤUR (the Younger), a *paytan* in Mainz at the end of the 11th century and the beginning of the 12th, who witnessed the persecutions of 1096 and who wrote of them in many liturgical poems; KALONYMUS BEN MOSES OF LUCCA, a talmudic scholar, halakhist, and author of many responsa, who probably also emigrated to Mainz; KALONYMUS BEN MESHULLAM HA-PARNAS, the leader of the Mainz community during the persecutions of 1096, who was martyred with his whole community; KALONYMUS BEN ISAAC HA-ZAKEN (the Elder), a communal leader and halakhist, and the founder of the branch of the Kalonymus family which most influenced German Jewry during the 12th and 13th centuries; his son *SAMUEL BEN KALONYMUS HE-HASID, the founder of the Ḥasidei Ashkenaz, author of a part of *Sefer Ḥasidim* and other works; Samuel's son, *JUDAH B. SAMUEL HE-HASID, who was the principal leader of the Ḥasidei Ashkenaz and the author of *Sefer Ḥasidim*. Other descendants of Kalonymus ha-Zaken were *JUDAH B. KALONYMUS B. MEIR OF SPEYER, author of the monumental talmudic lexicon, *Seder Yihusei Tanna'im ve-Amora'im*; and *JUDAH B. KALONYMUS B. MOSES OF MAINZ, a talmudic scholar and a poet, who was the father of *Eleazar of Worms. Eleazar's children were murdered by the crusaders, probably terminating his family line. The descendants of Judah b. Samuel he-Ḥasid, however, carried on for at least three more generations, giving rise to such scholars as MOSES ZALTMAN, son of Judah, who wrote a commentary on the Torah; *Eleazar b. Moses ha-Darshan, author of mystical and theological works; and MOSES B. ELEAZAR, great-grandson of Judah he-Ḥasid. KALONYMUS BEN GERSHON, a halakhist, also flourished in the 13th century. Among other *paytanim* of the Kalonymus family were *Meshullam ben Moses of the 11th century; MOSES BEN MESHULLAM OF LUCCA (probably the ninth century); KALONYMUS BEN MESHULLAM OF MAINZ, c. 1000; and notably *Meshullam b. Kalonymus of Rome of the tenth century, a *paytan* and halakhist who had contact with Gershon b. Judah, Me'or ha-Golah.

The name Kalonymus appears also among some families in Provence, where several great scholars and writers bear that name, for example the 13th-century writers Kalonymus ha-Nasi of Beaucaire and Kalonymus ben Kalonymus of Arles, author of *Even Boḥan*. However, it is not known whether the Provençal rabbis of this name were connected with the Italian-German family.

[Joseph Dan]

KALONYMUS BEN KALONYMUS (Ben Meir ha-Nasi; 1286–after 1328), author and translator. Probably born in Arles (Provence), Kalonymus pursued his studies in Salonica and devoted himself from his youth to the translation of Arabic scientific works into Hebrew. His first translation, Ibn Ridwan's *Principles of Medicine*, is believed to have been lost during the expulsion of the Jews from the territories directly under the rule of the king of France in 1306. During the years 1307–17 he lived in Arles (he was in Avignon in 1314), and in 1318 he stayed again for a time in Salonica. He later entered the service of Robert d'Anjou “the Wise” (1277–1343), king of Naples and count of Provence, for whom he is said to have made translations from Arabic and Hebrew into Latin. Probably in about 1319–21, Kalonymus traveled to Rome, where he frequented the circle to which the poet *Immanuel of Rome and the philosopher Judah b. Moses (among others) belonged. Whether, as some surmise, he was the representative sent by the Jews of Rome to the papal court at Avignon in 1321 remains uncertain. When Kalonymus was recalled to Arles, the Rome community addressed to the Jews of Arles a letter composed by the poet Immanuel explaining why it was desirable for Kalonymus to remain in Rome (*Mahberot Immanuel*, no. 23). However, Kalonymus subsequently made his way home and from there went to Catalonia, but returned to Provence after 1322. In 1324 he was again in Naples and in 1328 he was still busy in Arles working on the Latin translation of Averroes for the King.

The works of Kalonymus comprise a polemic epistle against Joseph *Kaspi (1318; ed. Perles, Munich 1879) written in Provence; *Massekhet Purim*, a parody for the festival of Purim, composed in Rome; this work, in the guise of a talmudic tractate in four chapters, has gone through many editions (Pesaro 1513, c. 1520; Venice 1552, etc.); a fragment on mathematics (Munich MS 290); *Iggeret Musar*, an ethical work written for his son, published by I. Sonne in *Kovez al Yad*, 1 (1936), 93–110; *Iggeret ha-Hitnazzelut ha-Katan*, published by J. Schatzmiller in *Sefunot*, 10 (1966), 9–52. One of his best-known works is *Even Boḥan*, a satire in rhymed prose, composed c. 1322 in Barcelona, on the moral and religious abuses prevailing among the author's contemporaries (Naples 1489; Venice 1546; Tel Aviv, ed. A.M. Habermann, 1956). He dedicated it to 10 notable Catalan Jews who had helped him during

his stay in Catalonia. As T. Rosen has commented, Kalonymus includes in his *Even Boḥan*, among others things, the case of a man who asks God to turn him into a female – something that is unique in Jewish literature. It can be seen as a critique of the Jewish view on the life of men and women. The author describes also with humor many aspects of the life of the Jewish communities of his time, the celebration of Jewish festivals, and many kinds of social types (rich people, physicians, astronomers, grammarians, experts in masorah, poets, talmudists, etc.), criticizing their habits in a way that is sometimes picturesque, sometimes even grotesque.

He also translated works on philosophy, natural sciences, medicine, mathematics, and astronomy by other writers (more than 30), including 10 works by Averroes, the *Centiloquium* attributed to Ptolemy, with the commentary of Abu Jaffar Ahmed ben Yussuf; the *Sphere and Cylinder* of Archimedes (two translations, one of which has been lost); Galen's *De clysteriis et colica* and *De Phebotomia*, the *Compendium of Arithmetic* by Nicomachus of Gerasa; the *Principles of Medicine* by Ibn Ridwan (second translation; the first was lost in 1306); the treatise *Cylinder and Cone* of Ibn Samkh; the *Figura sector* of Thabit b. Kurras, the *Hypotheses* of Ptolemy and "Iggeret Ba'alei Ḥayyim," from the 21st treatise of the *Encyclopedia of the Sincere Brethren* (Mantua 1557, etc.). Only one of Kalonymus' translations into Latin is known, namely the *Destructio destructionis* of Averroes (part printed, Venice 1497; Venice 1508). Other works and translations have been incorrectly attributed to Kalonymus.

E. Fleischer sees in the work of Kalonymus, with all his bitter criticism and his satiric humor, but at the same time with his philosophic and scientific knowledge and his literary virtues, the last brilliant representative of the culture of Provence, inspired by the Sephardi tradition.

[Umberto (Moses David) Cassuto / Angel Sáenz-Badillos (2nd ed.)]

***KALTENBRUNNER, ERNST** (1903–1946), Nazi lawyer, SS leader, chief of the Reichssicherheitshauptamt (*RSHA). Born in Ried im Innkreis, Austria, he attended school in Linz and was trained as a lawyer in Prague. He was an attorney. He joined the Nazis in 1932 and was imprisoned in Austria for his Nazi activities. After the Anschluss he was appointed undersecretary of state for public security in Ostmark (Nazi-renamed Austria) and was responsible for the Central Office for Jewish Emigration headed by Adolf *Eichmann. On January 30, 1943 he succeeded *Heydrich, who was assassinated the previous May, as chief of the RSHA and served in this assignment until the collapse of Nazi Germany. Kaltenbrunner, who was a boyhood friend of Eichmann and became his superior, was largely responsible for the implementation of the annihila-

tion policy against the Jews. He was previously responsible in part for the *Euthanasia program. A member of *Hitler's inner circle, he not only opposed *Himmler's efforts to seek peace with the West, but also sabotaged Himmler's order given in the last phase of the war to prevent the further murder of Jews. He was tried as a major war criminal by the International Military Tribunal in *Nuremberg, where he downplayed his role and knowledge, and was hanged on October 16, 1946.

[Yehuda Reshef]

KALUSH (Pol. **Kalusz**), city in Ivano-Frankovsk (Stanislavov) district in southwestern Ukraine, formerly within Poland; in 1772 it passed to Austria, reverting to Poland in 1919, and was within the U.S.S.R. from 1939 to 1991 when Ukraine gained independence. The salt mines in the area around Kalush became noted as early as the 15th century, and were leased on occasion by Jews during the following century; they were the main source of livelihood in the 19th century. An organized Jewish community existed in the city by 1650. According to the census of 1765, there were 1,087 Jews in Kalush who paid poll tax. They owned about 130 buildings in the city. The great synagogue was completed in 1825. In 1880 there lived in Kalush 4,266 Jews, representing 59% of the total population. Apart from salt, they controlled trade in lumber, grain, hides, and clothing. The community numbered 4,363 in 1910, about half the total population, and maintained six synagogues and charitable and religious institutions. During World War I the town suffered, mostly from Russian troops, leaving 200 widows, 400 orphans, and about 250 Jewish homes in the center of the city destroyed, along with the community's archives and records. In the fall of 1918 the region came under independent Ukrainian rule. A Jewish local council was set up and a Jewish militia organized to defend the community against pogroms. When Kalush reverted to independent Poland, the Jewish council and prewar communal organizations were disbanded and a government-appointed Jewish community council established. In 1921 there lived in Kalush 3,121 Jews, representing 47% of its total population. During the period between the two world wars, a Hebrew school (200 pupils in 1938), a *talmud torah*, a *Beth Jacob school, and various welfare associations were established. The community numbered approximately 6,000 in 1938, about one-third of the total population in Kalush.

[Arthur Cygielman]

Holocaust Period

During the period of Soviet occupation (1939–41), the Jewish community in Kalush underwent many changes: independent political activity was prohibited, and the community institutions, political parties, and youth movements were disbanded. Trade and industry were nationalized. After the German oc-

cupation of Kalush at the beginning of July 1941, the Jews and their property were attacked. In October 1941 several hundred Jews were murdered. Other *Aktionen* took place in March–April 1942, and the victims were sent to the *Belzec death camp, where they perished. On Sept. 15–17, 1942, the ghetto was destroyed and the city was declared *Judenrein*. The few remaining Jews in Kalush were transferred to *Stanislaw and subsequently perished. The community was not reconstituted after the war.

KALUSZYN, town in Warszawa province, E. central Poland. Jews lived there almost from the date of its foundation and always formed the majority of the population. There was an organized Jewish community from the beginning of the 17th century which established educational and cultural institutions. The most notable rabbi of the community was Meir Shalom Rabinowicz (1896–1902). Mordecai Mottel Mikhelson, one of the wealthiest merchants of the town during the 19th century, assumed the role of *shtadlan*. The community numbered 1,455 (80% of the total population) in 1827; 6,419 (76%) in 1897; 5,033 (82%) in 1921; 7,256 (82%) in 1931; and approximately 6,500 on the eve of the Holocaust. Jewish economic activity included industrial enterprises, such as pottery, flour mills, the weaving of prayer shawls, the fur trade which employed many Jewish workers, and crafts, notably tailoring and carpentry. The community administration elected in 1924 was composed of six members for *Agudat Israel, five for *Mizrachi, and one Zionist.

[Shimshon Leib Kirshenboim]

Holocaust Period

The German Army entered Kaluszyn on Sept. 11, 1939, after a heavy bombardment and conflagrations that killed around 1,000 Jews. Some 4,000 Jews were then confined 15–20 to a room in the part of the town still standing. In summer 1940 a ghetto was established, including also 1,000 Jewish refugees. On November 25, 1942, around 3,000 were deported to the *Treblinka death camp where they were exterminated. Another group of Jews from Minsk Mazowiecki was then deported to the Kaluszyn ghetto and in December 1942 also sent to Treblinka. The Jewish community was not reconstituted after the war.

KALVARIJA (Pol. *Kalwaria*; Rus. *Kalvariya*), town in S.E. Lithuania. Jews who had settled there, including several families of weavers, received a grant of privilege in 1713 to engage in commerce and crafts independently of the guilds, and permission to build a synagogue. A new synagogue was built in 1803.

The community numbered 1,055 poll tax payers in 1766 and 6,508 persons (over 80% of the population) in 1856. During the 1860s many Jews in Kalvariija immigrated to the United States, and by 1897 the community had decreased to 3,581 (37%). Isaac Slonimer, author of *Emek Yehoshua*, and Mordecai Klaczko (also called Mordecai Melzer), author of *Tekhelet Mordekhai*, served as rabbis in Kalvariija. Other prominent scholars and communal workers included Baer Ratner and Isaac Meir Margoliot. During World War I there was a further decline in the Jewish population when, owing to the war and a fire which broke out in 1915, many Jews moved to towns in Russia and Lithuania. Their numbers had decreased to 1,233 by 1923 (27%). The gradual nationalization of the agricultural import trade, from which Jews largely derived their livelihood, led to further emigration, and by 1939 only 1,000 Jews remained in Kalvariija. During the period of Lithuanian independence (1918–40) the community had five synagogues and three Jewish schools, a loan bank, and communal and cultural institutions.

Following the outbreak of World War II Jewish refugees from nearby Polish towns arrived in Kalvariija where they were warmly received by the community. After the Germans occupied Kalvariija on June 22, 1941, the Jews were brought to the Marijampole barracks on August 30 with thousands of other Jews from the area and murdered.

KAMELHAR, JEKUTHIEL ARYEH BEN GERSHON (1871–1937), Galician rabbi and author. Kamelhar was born in Kolaczyce, Galicia. During his youth, his parents moved to Tarnow, where he received a thorough talmudic education, and in 1897 took up residence in Rzeszow. In 1906 he was appointed head of the yeshiva Or Torah in the town of Stanislaw, Eastern Galicia. At the outbreak of World War I he went to Vienna as a refugee, returning to Rzeszow after the war. In 1926 he accepted an appointment as rabbi of the congregation Reisha-Kurtshin in New York. In 1933 he emigrated to Erez Israel, and lived in Jerusalem for the rest of his life. He wrote a number of biographies of rabbis: *Mofet ha-Dor* (1903), on Ezekiel *Landau; *Em le-Binah* (1909), a life of Zevi Hirsch of Romanov; *Hasidim ha-Rishonim* (1917), on *Samuel he-Hasid and his son *Judah he-Hasid; *Dor De'ah* (1933–35; new ed. under the title *Arba Tekufot ba-Hasidut ha-Beshtit*), biographies of the leaders of the modern hasidic movements; and another work of the same name (1935), which contains a survey of the activities of great talmudists and a methodology of their systems. His talmudic works are *Boker Yizrah* (1896), on the order of service for the blessing of the sun at the beginning of its cycle; a commentary on *Rosh ha-Shanah* attributed to Maimonides (1906, 1955², published by his son Moses); *Hedvata di-Shemateta* in 2 parts (1912–13), whose purpose was “to resolve doubts and problems in *halakhah* by means of authoritative sources and examples from the Babylonian and Jerusalem Talmuds.” He wrote *Ha-Talmud u-Madda'ei ha-Te-*

vel (1928), comprising a kind of methodology of the Talmud, and appended to it *Netivot ha-Talmud*, on tractate *Berakhot* of the Babylonian and Jerusalem Talmuds, giving general rules and principles derived from the *Gemara*, Rashi, and *tosafot* of the tractate. Among his other works was *Ma'amar ha-Avodah ve-Ishei Yisrael* (1935–36), a blueprint for the renewal of the Temple service in Jerusalem. Kamelhar was also the editor of *Ohel Mo'ed* – a talmudic periodical that appeared between the years 1898 and 1901. A complete bio-bibliography of the works of Kamelhar in the possession of the Jewish National and University Library, including unpublished manuscripts, incomplete works, projects and notes, has been published by Binyamin (Tel Aviv, 1978).

[Yehoshua Horowitz]

KAMENETSKY, YAAKOV (1891–1986), U.S. rabbi and scholar. A leader of modern Orthodox Jewry for more than a half-century, Kamenetsky was born in Kalushkave, a small Lithuanian village near Minsk. He studied under Torah luminaries at the Slobodka yeshivah, including Rabbi Moshe Mordechai Epstein and Rabbi Nosson Zvi Finkel (the *Sabba* of Slobodka), who nurtured the brilliant student's education and his interest in **musar* (spiritual self-improvement). By 18, Kamenetsky had become a renowned Torah scholar who had earned rabbinical ordination by several esteemed Lithuanian rabbis.

In 1919, Kamenetsky married Etta Heller, daughter of the *mashgi'ah* of the Slobodka yeshivah and continued to study at the Kollel Bet Yisroel in Slobodka. He accepted his first rabbinic position in 1926 at Zitavian, near Kovno, Lithuania, serving as communal rabbi until 1937. However, harsh Communist rule led Kamenetsky to immigrate to Seattle, Washington, in 1937 to accept a temporary position at Congregation Bikur Cholim. Later that same year, Kamenetsky moved to Toronto, where he served as rabbi of Congregation Toras Emes and as headmaster of a small yeshivah.

In 1946, Kamenetsky joined the faculty of Mesivta Torah Vo-Da'ath in Brooklyn, New York. Within two years, he headed the yeshivah (together with Rabbi Gedalya Schorr) following the passing of the dean, Rabbi Shraga Feivel Mendlowitz. Under Kamenetsky's energetic and inspiring leadership, the Mesivta Torah Vo-Da'ath added a high school, a post-high school seminary, and a *kolel* institute. Through these efforts, Kamenetsky helped fuel the unprecedented surge in Torah education in the U.S. in the post-Holocaust era. By the 1960s, Kamenetsky was widely regarded as one of the leading Torah scholars in the U.S. He served on the presidium of the Council of Torah Sages of the Agudath Israel of America (*Moetzet Gedolei HaTorah*) and as chairman of the Advisory Board of Torah U'Mesorah (National Society of Hebrew Day Schools).

Unlike many other Orthodox rabbis of his generation, Kamenetsky read and admired some works of classic secular literature. Such secular reading was controversial, as some feared the further secularizing influences on European and American Orthodox youth, many of whom were already shedding their religious lifestyles.

Kamenetsky retired to Monsey, New York, in 1968, where he continued to teach Talmud classes from his home, provide personal counseling and halakhic advice to those who sought it. He also wrote articles for the journals *Jewish Observer* and *Ha-Pardes*. He died at the age of 95.

His son, Nathan, a brilliant Talmudist, published a biography of his father, *The Making of a Gadol*. Respectful and insightful as it was, the book was banned because of the climate of Haredi Judaism in the early 20th century. Published in a limited edition of 1,000, the book is now rare and offered at auction at many times its original publication price. It seems that the ban has only excited the interest of would-be readers. The book will be reissued without the offending passages.

[Judy Gruen (2nd ed.)]

KAMENETS-PODOLSKI, city in Khmel'nitski district (until the 1950s district capital), in Ukraine; under the rule of Lithuania from the 14th century, and after the union with Poland (1569) under Poland-Lithuania (but for the short though important and formative interval of Ottoman rule there, 1672–99); it passed to Russia in 1795, and from then until the 1917 Revolution was capital of the province of Podolia. For a long time the municipality of Kamenets-Podolski prevented attempts of Jews to settle in this important trading and communications center in southeast Poland-Lithuania. In 1447 Jews were prohibited from staying there for more than three days. In 1598 King Sigismund III prohibited Jews from settling in the city and suburbs and from engaging in trade there; their visits were again restricted to three days only. During the **Chmielnicki* uprising, many Jews sought refuge in the fortified city which withstood attacks by the Cossacks in 1648 and 1652. Subsequently King John II Casimir permitted Jews to reside there, and they apparently continued to live in Kamenets-Podolski despite repeated prohibitions in 1654, 1665, and 1670. Under Ottoman rule Jewish settlement was permitted and grew to a considerable size.

After the city's return to Poland in 1699, the Christian citizens resumed their opposition to Jewish settlement. In 1737 the city council submitted a request to the state and Church authorities to banish the Jews from the city, maintaining that they had no right to settle there, and were competing with the Christian inhabitants and impoverishing them. King Augustus III expelled the Jews from Kamenets-Podolski in 1750. Their houses passed to the town council and the synagogue was demolished. The expelled Jews settled in the suburbs and in

nearby villages, which were under jurisdiction of Polish noblemen, and developed extensive trading activity there which led to additional complaints on the part of the citizens. In 1725 the Council of Four Lands met in Kamenets-Podolski.

In 1757 a public disputation was held by the Church in Kamenets-Podolski – enjoined by the local bishop – between the representatives of Podolian Jewry and Jacob *Frank and his supporters. After it took place the Talmud was publicly burned in the city on the bishop's orders (see *Disputations; *Talmud, Burning of).

After Kamenets-Podolski passed to Russia, Czar Paul I confirmed in 1797 the right of Jews to reside there. At that time 24 Jews belonging to merchant guilds and 1,367 Jewish inhabitants were registered in the tax-assessment books of the city. Two years later, in 1799, 29 merchants and 2,617 Jewish inhabitants were registered. In 1832 the Christians in Kamenets-Podolski petitioned the government to expel the Jews from the city, basing themselves upon their ancient privileges. The petition was rejected but in 1833 the government restricted the right of the Jews to build shops and new houses, or to acquire houses, to two suburbs of the city only in order to prevent them from residing in the city itself. The restriction was rescinded in 1859. The community numbered 4,629 in 1847, 16,211 (40% of the total population) in 1897, and they were busy in small industry, trade, and artisanship. Rabbis who served in the city were Pinkhas of Koretz, David Wahrman, a disciple of R. Levi Isaac from Berdichev, S.Y. Abramovitsh (Mendele Mokher Sforim), and Menakhem Poznanski; the poets Aharon Ashman and Avraham Rosen were active for various periods. In 1910 there were 22,279 Jews. Four private schools and modernized *hadarim* were operating, and later also two Hebrew schools and a library. All major Jewish parties were active there.

After 1918, during the civil war, the Jews in Kamenets-Podolski suffered severely and 200 Jews were killed there in pogroms by Petlyura's gangs in July 1919. After the establishment of the Soviet regime, many wealthy Jews fled across the frontier and the economy of the Jewish population was ruined. Jewish cultural and communal life was entirely suppressed after a protracted struggle with the *Yevseksiya. In 1922 ORT opened vocational schools to train Jewish youth in crafts. By 1926 only 12,774 Jews remained (29.9% of the total population), and by 1939 they numbered 13,796. In the 1920s 76 families left to settle in Crimea, and 80 to settle in Birobidzhan. Three Yiddish schools and two teachers' colleges opened there, but only one school was active in 1938.

Holocaust Period

The Germans entered the town on July 11, 1941. A ghetto was established on July 20, and by the end of the month 11,000 Jews were brought in from Hungary as well as from Czechoslovakia and Poland. From August 25 through 28, 23,600 Jews were killed. Laborers with skills, from town and from neighboring settlements, were concentrated in a labor camp within the ghetto. In January 1942, 4,000 were murdered and much

later 500 children (aged 4–8) were executed; 2,500 were killed in January 1943 and another 2,000 in February. In 1979 about 1,800 Jews lived in Kamenets-Podolski; most of them left in the 1990s for Israel or the West.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

KAMENETZKY, ABRAHAM SHALOM (1874–1943), Polish scholar. Kamenetzky, born in Slonim, studied Oriental languages at German and Swiss universities. Until 1914 he was on the staff of the *Yevreyskaya Entsiklopediya* and lectured at the St. Petersburg Institute of Jewish Studies. After World War I he was in charge of the library attached to the Warsaw Tlomackie Synagogue. During the Nazi occupation of Poland he was in Lodz, where he worked in the ghetto archives. He died in the ghetto. Kamenetzky's publications in Hebrew, Yiddish, German, and French appeared in various periodicals. He produced an illustrated geography of Erez Israel, *Geografyah Mezuyyeret shel Erez Yisrael* (1920 and subsequent editions), and coedited a shortened Hebrew version of Graetz's *Geschichte der Juden*, called *Divrei Yemei Yisrael* (6 vols., 1929–30), of which he translated parts three and four.

KAMENEV, LEV (pseudonym for **Lev Borisovich Rosenfeld**; 1883–1936), Soviet state and party activist. He was born in Moscow to a father who was an engineer and a Russian mother. Kamenev joined the Social Democratic Party in 1901, while studying law at Moscow University, and in 1903 the Bolshevik faction. Until 1914 he worked in the foreign press of the party, and returned to Russia to head the editorial board of *Pravda*. In 1915 he was exiled to Siberia and returned to Petersburg after the February 1917 revolution; he headed the Bolshevik Party until Lenin's return. He was against armed uprising and for a coalition with socialist parties, which countered Lenin's ideas. As a protest he resigned from the Central Committee of the party, and was restored only in mid-1918. In the years 1919–26 he was a member of the Politburo, and at the same time chairman of the Moscow Town Council, and chairman of the Council of the People's Commissars. In 1926 he was Commissar of Trade, and chief editor of Lenin's writings. In 1927 he was ambassador to Italy.

In 1922–24 he was, together with Zinovyev and Stalin, involved in a struggle with *Trotsky for the leadership of the party. In 1925 he headed together with Zinovyev the new opposition, and in 1926 he joined Trotsky. For that he was banished in 1927 from the Central Committee and the party. In 1928 he admitted his "mistakes," and was reinstated in the party, but given second-rate jobs. In 1932 he was again banished from the party and exiled to the Urals. He was freed but arrested again in December 1934, after the assassination of S. Kirov, and sentenced to five years' imprisonment. In July 1935 Stalin organized a closed trial, and only due to M. Gorki's intervention was he not executed but sentenced to ten years in

prison. In August 1936 in the first show trial he was accused together with Zinovyev and others of counterrevolution, terror, and espionage, and under physical and psychological pressure he admitted his guilt and was shot, according to an official announcement on August 25, 1936.

In the 1920s he promoted the Habimah theater, helped Prof. Shor of the Moscow Conservatory to immigrate to Erez Israel, and was active in reducing the arrest of Zionists to expulsion from the Soviet Union.

[Shmuel Spector (2nd ed.)]

KAMENKA, ZEVI HIRSCH OF (d. 1781), founder of a ḥasidic dynasty in Kamenka, Ukraine. Kamenka was one of seven brothers who were disciples and admirers of *Israel b. Eliezer, the Ba'al Shem Tov, and were active in furthering his influence. The eldest brother was SAMUEL (THE ELDER) OF KAMENKA (d. 1831?). A grandson of Zevi Hirsch, SAMUEL II OF KAMENKA, was a ḥasidic *admor, a disciple of *Baruch of Medzhibezh and *Abraham Joshua Heschel of Apta, and an outstanding disciple and colleague of *Levi Isaac of Berdichev. His grandson, ABRAHAM DAVID of Miropolye, a noted scholar and *admor* of many Ḥasidim, continued the dynasty. David's son, SAMUEL III, author of *Shem mi-Shemu'el*, succeeded to his father's position and moved to the United States.

The book *Shenei ha-Me'orot* (Kishinev, 1896) includes some of the sayings of Zevi Hirsch and his brothers, and of Samuel II of Kamenka.

[Adin Steinsaltz]

KAMENKA-BUGSKAYA (Pol. **Kamionka Strumiłowa**), city in Tarnopol district, Ukraine. The earliest information on Jewish settlement dates from 1456. An agreement reached between the burghers and the Jews, granting the latter rights of residence and free trade, was confirmed by King Sigismund III Vasa in 1589. Jews traded in grain, cattle, fish, and lumber. At the end of the 17th century the bishop of Lvov permitted the community to erect a wooden synagogue. The walls of this fine building were covered with paintings (done in 1730) mainly depicting animal figures. In 1662 there were 16 Jewish and 90 Christian houses in the town. At the beginning of the 18th century Ḥayyim b. Isaac *Reizes served as rabbi of the community, which was under the jurisdiction of the regional *kahal* of the province of "Russia." In 1719 and 1736 the Jews paid poll taxes of 786 and 400 zlotys respectively. Of the 522 Jews in the city in 1765, 79 were innkeepers. The community numbered 2,922 (48% of the total population) in 1880, 3,164 (43.3%) in 1900, and 2,685 (41%) in 1921. The drop in their number resulted from devastation by a large fire during WWI. From 1924 until 1939 there was a supplementary Hebrew school with about 200 pupils. In 1931 the Jewish population numbered 3,283; before September 1939 it had reached 4,000.

[*Encyclopaedia Judaica* (Germany)]

Holocaust Period

The Jewish community changed greatly during the Soviet period of 1939–41, when community institutions were dis-

solved and any independent political activity was forbidden. The traditional Jewish economy was also hurt. Jews tried to integrate into the new activities by organizing themselves into craftsmen's cooperatives and entering the municipal and civil service. On June 28, 1941, the city was occupied by the Germans, and the next day they murdered 200 Jews. On July 2, the Ukrainians, instigated by the Germans, carried out a pogrom, killing a few hundred Jews. On November 10, 1941, another 500 Jews were killed near the city. In the summer of 1942 a census was taken of the Jewish population; workers were given special permits, while of the others some 1,500 persons were deported to *Belzec death camp (Sept. 15, 1942). On Sept. 21, 1942, 600 persons were put to death in Zabuze (area beyond the River Bug), where Jews from *Busk, Cholozjow, and Radziechow (Radekhou) were also murdered. On Oct. 28, 1942, another group was deported to Belzec, thereby completing the murder of most of the community. In November 1941 a forced-labor camp was set up in which Jews from the entire neighborhood were concentrated. On July 10, 1943, more than 5,000 Jews were murdered there.

KAMENSZAIN, TOBIAS (1918–2000), lawyer and leader of the Argentinean Jewish community. Kamenzain was born in Ostrow, Poland. In 1928 his family emigrated to Buenos Aires. In addition to studying at a state school he attended the Hebrew school of the Zionist Federation (General Zionists). He joined Ha-Shomer ha-Za'ir as a teenager and in 1939 began his university studies, which he completed in 1946. He also joined the Right Po'alei Zion Party and was close to one of its leaders, Moshe Kostrinsky-*Kitron. In 1946 he married Eva Staif, a graduate in biochemistry. Her family was very active in Jewish life, and her father, Moshe Staif, was one of the founders of the Zionist Bialik School in Buenos Aires. Eva was much involved in Jewish education and for many years directed the ORT school. In 1947 Kamenzain was elected to the central committee of Right Po'alei Zion and became secretary of *Keren Kayemet with Isaac Kaplan as chairman. Subsequently he was secretary of *Keren Hayesod. When Yitzhak Harkavi made *aliyah*, Kamenzain was elected secretary general of Po'alei Zion. In 1960 and 1966 Kamenzain was elected chairman of AMIA-Ashkenazi Community of Buenos Aires. In 1966 he was also elected chairman of the Vaad Hakehilot – the federation of all the Jewish communities of Argentina. Among other positions, in the 1960s and 1970s he headed the board of Hamidrasha Haivrit (high school for Jewish studies and seminar for secondary school teachers) and in the 1990s the Keren Kayemet of Argentina.

[Efraim Zadoff (2nd ed.)]

KAMHI, JAK V. (1925–), Turkish industrialist. Born in Istanbul, Kamhi graduated as an engineer from Yıldız Technical University, becoming chairman of the board of the Profilo Group of companies. He was an adviser to the prime ministry of Turkey for Turkey-EU and Turkey-U.S. relations. He was the founding chairman of the Quincentennial Foundation, which was established in 1989 with the purpose of celebrating the arrival of the Sephardim exiled in 1492 to the Ottoman lands; and he lobbied on behalf of the Turkish Republic, especially in the U.S., where Turkey was severely criticized for denying the Armenian genocide and for the infringement of human rights. He was given several awards, including the High Service Award from the Turkish Ministry of Foreign Affairs, the Légion d'Honneur, and the rank of commander in the National Order of Merit from the president of the French Republic and the commander of the Order of Spanish Civil Merit from the king of Spain.

[Rifat Bali (2nd ed.)]

KAMHI, LEON (1898–1943), commercial agent and Zionist activist. Kamhi was born and lived in Bitola (Monastir) in the Yugoslav part of Macedonia, also known as Vardar Macedonia. He received his education in the Alliance school and intended to pursue studies in Paris, but family problems prevented him and he had to start earning a living without delay. Working hard, he soon became an independent businessman. From his youth on, he was a Zionist leader and organizer. He was influential also in the affairs of the Kehillah, helping in financing the participation of Macedonian Jewish youth in the Zionist summer camps, mostly held in the Julian Alps, in faraway Slovenia. He founded or managed Zionist groups in other towns of the region, such as Stip and the provincial capital, Skopje. He represented Macedonian Jewry in all countywide forums and gatherings, maintaining intimate ties with Jewish leaders in Zagreb, the Zionist center, as well as in Belgrade, the seat of the Federation of Jewish Communities. His assistance in promoting *aliyah* to Palestine was essential, including the sending of unmarried young girls or arranging for them fictional marriages to assure the fullest use of the very scarce available certificates (immigration affidavits) apportioned by the British, allocated through the services of the Jewish Agency for Palestine and its representatives in Zagreb.

Kamhi planned to emigrate himself and corresponded on this matter with his friends already residing in Palestine during the years 1934 to 1936, postponing the implementation of his plan time and again for personal and/or communal reasons.

He was the uncontested leader of Macedonian Jewry, eventually sharing their tragic fate in March 1943, when the Bulgarian fascists, cruel and willing collaborators with the Nazis, arrested all 7,000 Jews, mistreating them and handing them over to the Germans in the Bulgarian town of Lom, from where they were deported, in four transports, to their death in Treblinka.

[Zvi Loker (2nd ed.)]

KAMINER, ISAAC (1834–1901), Hebrew writer. Born in Lewkiow in the Ukraine, he was drawn into the Haskalah movement in his youth, and taught at the government school for Jews in Zhitomir (1854–59). Later he completed medical school at the University of Kiev and was a physician in that town till the end of the 1870s. During that period he inclined toward socialism and joined the circles of A.S. *Liebermann and Judah Loeb *Levin (Yehalel).

Kaminer wrote verse satires for the Hebrew socialist papers *Ha-Emet* and *Asefat Hakhamim* (among them his best poem *Shir ha-Yihud la-Matbe'a*), but he disagreed with the assimilationist tendencies prevalent in socialist circles. Only two works were published separately in his lifetime, *Kinot mi-Sidduram shel Benei Dan* (1878), and *Seder Kapparot le-Va'al Takse* (1878). Kaminer criticized not only the Hasidim and those clinging to old notions but also supporters of the Haskalah and the rich community leaders. In a series of poems, *Maskil el Dal*, he described, in a favorable light, folk figures like the peddler and the destitute rabbis. In some of his verse he strongly defended the use of the Hebrew language and lamented the younger generation's alienation from "Jewish nationality." After the pogroms of the 1880s he joined the Hibbat Zion movement and from then on his verse was dedicated to the cause of Jewish nationalism and the settlement of Palestine. The board of Hovevei Zion published his selected poems posthumously (1905), edited by *Aḥad Ha-Am and J.H. Rawnitzky. The selection was drastically edited. Kaminer's works have little artistic value but they had an influence upon the readers of his day.

BIBLIOGRAPHY: J.H. Rawnitzky, *Dor ve-Soferav* (1926), 143–59; Klausner, *Sifrut*, 6 (1950²), 208–42; Waxman, *Literature*, 3 (1960), 263–4.

[Yehuda Slutsky]

KAMINETSKY, JOSEPH (1911–1999), director of Torah Umesorah. Kaminetsky attended public school for one year, when his father realized that this would not do. He sold their home so he his son could attend Yeshiva Chaim Berlin in Brownsville, Brooklyn, New York. The boy then attended Talmudical Academy High School on the Lower East Side and was a student in the first freshman class of Yeshiva University. He graduated magna cum laude in 1932.

While working toward his doctoral degree in education at the Teacher's College at Columbia University, he was the founding principal of the after-school learning program of the Jewish Center Synagogue in Manhattan. Later, he was the congregation's assistant rabbi under Rabbi Leo Jung. After earning his degree, Rabbi Kaminetsky was appointed executive director of Manhattan Day School.

In 1946, he was handpicked by Rabbi Shraga Feivel Mendlowitz, founder of Torah Umesorah, the National Association for Hebrew Day Schools, to be its educational director, and then two years later, its national director. Upon his retirement, 36 years later, he was appointed director emeritus. Dr. Joe, as he was affectionately known, served Torah Umesorah for 41 years.

Kaminetsky was the key figure in the explosive growth of Orthodox day schools in the United States and Canada since World War II. When he began his tenure at Torah Umesorah, his goal was that every town or city with a Jewish population of at least 5,000 would establish a Jewish day school. As Kaminetsky put it in his memoirs, *Memorable Encounters*, his job was to create “a national bureau of ‘doers’ who could help communities establish all-day Jewish schools of their own.”

Dr. Hillel Goldberg of the National Council of Synagogue Youth, recalls that in the post-Holocaust 1940s, there was almost no American Jew who had all of Kaminetsky’s qualifications to become executive director of Torah Umesorah.

Goldberg wrote that

Dr. Kaminetsky could sell Jewish education, not just because he believed in it, understood it, or cared. He did not found scores of Jewish day schools on these qualities alone. Still less, on these qualities alone did he persuade others to give up potentially lucrative careers to found hundreds more day schools. The secret... *his* secret? Dr. Joseph Kaminetsky convinced you that *you* were building the school, *you* were the leader, *you* were the doer, *you* were making the sacrifice, *you* had the abilities, *you* were making the difference.

Today there are well over 600 yeshiva day schools in the United States and Canada with over 170,000 students.

Marvin Schick wrote of Rabbi Kaminetsky as an educator who bridged three worlds.

Torah Umesorah represented a coming together in common cause of a remarkable group of Roshei Yeshiva, lay leaders and staff. The Roshei Yeshiva set the over-all policy and decided difficult questions. Led by Rav Aharon Kotler, the transcendent Torah leader of American Orthodoxy in the post-Holocaust years, their involvement in day schools was remarkable in view of their personal histories and the character of the institutions which they headed. Their Torah Umesorah activities entailed, in a certain way, a measure of compromise, for they were sanctioning schools whose standards were at times more than a notch below what they ordinarily would be willing to accept. Yet they all knew that the building of Torah in America required nurturing.

In the mid-1950s, most lay leaders were Modern Orthodox, while the *roshei yeshiva*, generally, were also the leaders of the more stringent Agudath Israel. As Schick says, “There were strains, some serious, in the tripartite arrangement. Dr. Joe served as the mediator between the yeshivish world of Torah Umesorah leadership and the Modern Orthodox community.”

In his memoirs, Dr. Kaminetsky wrote

Although I felt sympathetic to the ideals of both the pure yeshivish and Modern Orthodox worlds, I was typed as a “modern” by some of the Torah Umesorah kehillah... In truth, in those early years, I did indeed find myself living ideologically in two worlds: the Modern Orthodox milieu of Yeshiva University and the more traditional yeshiva world of my early Brownsville days and of Torah Umesorah... I was criticized now and then by... religiously conservative people who objected to any hint of ideological flexibility on the day-school initiative – while at

the same time, many of my former friends at Yeshiva called me a “black-hatter.” Yet the L-rd was good to me and enabled me to maintain a careful equilibrium between the two worlds and to work with both for the sake of Torah.

[Jeanette Friedman (2nd ed.)]

KAMINKA, ARMAND (Aaron; 1866–1950), rabbi and scholar. Kaminka, who was born in Berdichev, studied at the universities of Berlin and Paris as well as at the orthodox Rabbinerseminar in Berlin and the *Lehranstalt fuer die Wissenschaft des Judentums* in Berlin. His first appointment was as rabbi at Frankfurt on the Oder, then as preacher at the Reform temple in Prague (1893–97). After serving as chief rabbi of Esseg (Oszyek), Slavonia (1897–1900), he moved to Vienna where he became secretary of the *Israelitische Allianz* (whose history he described in *Haolam*, 35 (1948), nos. 1–11). In 1903 Kaminka was sent by the *Israelitische Allianz* to Kishinev to investigate the pogrom that had taken place there that April. He also taught Talmud, philosophy, and history at the *bet hamidrash* of I.H. Weiss (1901–04), as well as at the community’s religious teachers’ training college. In 1924 Kaminka founded Maimonides College (for the spreading of Jewish knowledge among Viennese Jewry), and from 1926 lectured on Talmud and Jewish philosophy at the University of Vienna. With the annexation of Austria by Hitler in 1938, Kaminka settled in Palestine.

As secretary of the *Allianz*, Kaminka was involved in relief work for the victims of persecution in Romania and Russia to the end of World War I. He had been active from youth in the *Hibbat Zion* movement and was long associated with Theodor *Herzl, who considered Kaminka a suitable intermediary between himself and the Russian *Hovevei Zion*. Kaminka took part in the first Zionist Congress (1897), where he gave the official address on Jewish settlement in Palestine. Because of his interest in “practical Zionism,” he eventually fell out with Herzl.

Kaminka was a poet and translator. His translations into Hebrew from classical literature include: Marcus Aurelius’ *Meditations* (1923); Aristotle’s *De Anima* (1949); Seneca’s *Epistulae Morales* (1940–42), *Dialogues* (1943–45), and *Naturales Quaestiones* (1946); and a two-volume selection of tragedies by Aeschylus, Sophocles, and Euripides (*Tragedyot Nivharot...*, 1940–48). Kaminka’s own poetry as well as some of his translations were published in several collections. He also wrote a drama, *Shever Beit Aḥav* (“Downfall of the House of Ahab,” 1941).

In his writings on the Bible, Kaminka generally adopted a conservative line, strongly rejecting the theories of the Bible criticism and arguing for the unity of Isaiah and for the pre-Exilic origin of much of Psalms and Song of Songs. Kaminka also published numerous studies on the talmudic literature. Here, in contrast to his biblical research, he adopted a very critical view denying the historicity of many talmudic statements. He also began to publish a critical edition of the *She’iltot de-R. Aḥai Ga’on* (1908), a subject to which he returned in several

articles, claiming that the work is of a rhetorical and nonhalakic nature. Kaminka also prepared an edition of Al-Ḥarizi's *Taḥkemoni* (1899), with introduction and notes. In the field of Apocrypha, he translated the so-called IV Ezra from Latin into Hebrew as *Ḥazonot Asir She'alti'el* (1936), with notes and introduction. He also turned his attention to the early translators in his *Studien zur Septuaginta* (1928). In this study he tries to prove that the Septuagint did not have a textually different Hebrew version as its basis. Some of his scholarly articles were republished in *Mehkarim ba-Mikra u-va-Talmud...* (2 vols., 1938–51), and *Kitvei Bikkoret Historit* (1944).

BIBLIOGRAPHY: *Festschrift Armand Kaminka...* (Ger. and Heb., 1937), includes bibliography; M. Zucker, in: *Hadoar*, 29 (1950), 820–1, 840–1; Th. Herzl, *Complete Diaries...*, ed. by R. Patai, 5 (1960), index; Aḥad Ha-Am, *Iggerot...*, 6 vols. (1956–60²), index; Ḥ.N. Bialik, *Iggerot...*, 5 vols. (1938–39), index; I. Klausner, *Ha-Tenu'ah le-Ziyyon be-Rusyah...* (1962), index; A. Freud, in: *Zeitschrift fuer die Geschichte der Juden*, 3 (1966), 222–3.

[Tobias Grill (2nd ed.)]

KAMINSKI or KAMINSKA, family of Yiddish actors. ABRAHAM ISAAC KAMINSKI (1867–1918) organized his own theatrical company in Warsaw at the age of 20 and also toured the smaller towns. When the Russian ban on Yiddish theater was lifted in 1908, he also toured in Russia. Among the plays he staged were several of his own and translations of Gorki (*The Lower Depths*), Schiller (*Die Raueber*), and Molière (*Le Malade imaginaire*). Shortly before World War I he founded the Kaminski Theater in Warsaw.

His wife ESTHER RACHEL KAMINSKA (née Halpern; 1870–1925) won fame in her husband's company. When she appeared in St. Petersburg in 1905, she was hailed as “the Yiddish Duse.” Her repertoire included plays by Ibsen, Dumas, and Sudermann, but she was considered at her best in portrayals of the mother roles of Jacob *Gordin. She toured the U.S. in 1909–11, and played in London and Paris in 1913.

IDA KAMINSKA (1899–1980), their daughter, started her career as a child in her father's company and became its leading figure. Her first husband was Martin Sigmund *Turkow; her second Meir Melman (1899–1978), a leading actor.

On the invasion of Poland in 1939, the family fled into the Soviet-occupied zone and later into Central Asia. When she returned to Poland after World War II, she resumed activity in Lodz. In Warsaw she earned for her company the status of the “Jewish State Theater,” with which she toured Israel, North and South America, and later western Europe. She also achieved fame in films. Her role in the film *The Shop on Main Street* (1967) was widely acclaimed. She left Poland in 1968 as a result of the antisemitic campaign in the country when the emigration of many of the country's remaining Jews deprived her of her audience. After emigrating to the United States, where she starred in *Glueckel von Hameln*, Kaminska settled in Israel in 1975 with her actor-husband Meir Melman, and joined the newly formed Yiddish Theater in Tel Aviv.

Another member of the family, JOSEPH KAMINSKI (1903–1972), son of Abraham and Esther Rachel, studied mu-

sic in Berlin and Vienna, settled in Palestine in 1937, and became first violinist in the Israel Philharmonic Orchestra. He composed works for orchestra, chamber groups, and solo instruments.

[Joseph Leftwich]

KAMNIEL, ABU AL-HASAN MEIR IBN, physician in Seville who was invited by the Almoravide ruler Ali b. Yūsuf ibn Tāshfin (1106–43) to serve at his court in *Marrakesh. Ibn Kamniel was a friend of *Judah Halevi, who dedicated some of his poems to him. At the court in Marrakesh he met Solomon ibn al-Mu'allim, also a physician and poet, and a friend of Judah Halevi and Abraham *Ibn Ezra, who both praised Ibn al-Mu'allim in their poems. According to Ibn *Aknin, Ibn al-Mu'allim expounded verses to the ruler from Song of Songs according to their plain meaning, thereby arousing Ibn Kamniel's anger. At the time these Jewish physicians met in Marrakesh, which was the capital of the Almoravide empire and Ibn Tāshfin's residence, it was generally not permitted for Jews to live in the city. Therefore, Ibn Tāshfin's invitation to the two Jewish physicians from Spain to serve at his court must have been with good reason, particularly when his policies were not friendly toward Jews. It is known that there were competent Arab physicians in North Africa at the time. In sending for the Jewish physicians Ibn Tāshfin may have desired to establish a medical school in Marrakesh which could compete with that in Fez. Be that as it may, these physicians seem to have built the nucleus for a small Jewish community in Marrakesh which was destroyed by the *Almohads in the middle of the 12th century.

KAMPELMAN, MAX M. (1920–), U.S. lawyer and diplomat. Born in New York, Kampelman received his undergraduate and legal education at New York University, and his M.A. and Ph.D. in political science at the University of Minnesota. He taught political science at the University of Minnesota (1946–48) and at Bennington College (1948–50). He came under the influence of Senator Hubert H. Humphrey and served as his legislative counsel (1949–55). He then joined the law firm of Fried, Frank, Harris, Shriver and Kampelman, in Washington, D.C. He served as director and as chairman of the executive committee of the District of Columbia National Bank (1962–66). He was a creator and moderator of the popular television program *Washington Week in Review* (1967–70) and chairman of the Washington public broadcasting radio and television stations (1963–70).

Kampelman has had an active career as a major American diplomat, serving in several important and delicate negotiations. He has served as senior adviser to the U.S. delegation

to the United Nations. From 1980 to 1983, by appointment of President Carter and then of President Reagan, he was ambassador and head of the U.S. delegation to the Conference on Security and Cooperation in Europe (under the Final Act signed in Helsinki in 1975). Then he was appointed by President Reagan as ambassador and head of the Delegation on Negotiations on Nuclear and Space Arms.

Kampelman has a long and distinguished record of public and philanthropic service. By appointment of the president of the United States, he was chairman of the board of trustees of the Woodrow Wilson International Center for Scholars (1979–81), and continued as a member of the board of trustees. He was chairman of Freedom House (1983–85). He has served on the board of directors of Georgetown University, on the board of advisers of the Kennedy Institute of Ethics, on the board of trustees of the Law Center Foundation of New York University, on the board of trustees of the U.S. Council for International Business, as vice president of the Helen Dwight Reid Educational Foundation, vice chairman of the Coalition for a Democratic Majority, a member of the executive committee of the Committee on the Present Danger, and a member of the board of directors of the Atlantic Council of the United States. He was chairman of the Board of Governors of the United Nations Association (1989–93) and served as vice chairman of the United States Institute of Peace (1992–2001).

Kampelman has been actively identified with many Jewish and Israeli interests. He is honorary chairman of the Jerusalem Foundation and honorary governor of the Hebrew University of Jerusalem. He has served as honorary vice chairman of the B'nai B'rith Anti-Defamation League; as a member of the board of governors of Tel Aviv University and of the University of Haifa; as chairman of the National Advisory Committee of the American Jewish Committee; as a member of the board of directors of HIAS; as vice president of the Jewish Publication Society; on the board of trustees of the America-Israel Cultural Foundation and of the American Friends of the Israel Conservatory of Music; and on the board of trustees of the American Histadrut Cultural Exchange Institute.

In 1989 he received the Presidential Citizens Medal; in 1999 he was awarded the Presidential Medal of Freedom; and in 2000, he was among those who received the first Library of Congress Living Legend award. Kampelman is the author of many articles and pamphlets on public affairs, American foreign policy, and Jewish subjects. He also wrote *The Communist Party vs. the CIO* (1957) and *Entering New Worlds: The Memoirs of a Private Man in Public Life* (1991).

[Milton Ridvas Konvitz / Ruth Beloff (2nd ed.)]

KAMSON, YA'AKOV (Jacob) DAVID (1907–1980), Hebrew poet. Born in Vorna, Lithuania, Kamson immigrated to Palestine in 1926, living first in Jerusalem and later in Ashkelon. While in Germany he began publishing his poems in the German-Jewish press, and later contributed to most Hebrew

periodicals. His works include *Yerushalayim* (1950), a collection of poems on the theme of Jerusalem, and books of poetry and stories for children. He was an editor of the album about Lithuanian Jewry, *Yahadut Lita* (1959). He also wrote in Yiddish. For a list of English translations of his poetry see Goell, *Bibliography*, 30f.

[Getzel Kressel]

KAMZA AND BAR KAMZA, figures in one of the *aggadot* dealing with the events which led to the destruction of the Second Temple (Git. 55b–56a; cf. Lam. R. 4:2 no. 3). The passage opens with the statement, “Because of Kamza and Bar Kamza Jerusalem was destroyed,” and states that a certain man instructed his servant to invite his friend Kamza to a feast. By mistake the servant extended the invitation to a certain Bar Kamza, his master’s personal enemy. Bar Kamza was ordered to leave, but offered increasing sums of money to be allowed to stay and avoid the humiliation of being thrown out. His host remained obdurate. Bar Kamza was compelled to leave. Furious with the rabbis who witnessed the scene and did not speak up on his behalf Bar Kamza went to the emperor and informed him that the Jews were planning a revolt, the proof being that they would refuse to accept his sacrifice. The emperor sent a sacrifice through Bar Kamza, who inflicted a blemish on it which would disqualify it according to Jewish law but not according to Roman law. The sages were inclined to overlook this blemish and offer up the sacrifice so as not to offend the Romans. A certain *Zechariah b. Avkilus, however, objected strongly on the grounds that “people will think that blemished animals may be offered for sacrifice.” To a proposal that Bar Kamza be put to death to prevent him from informing the emperor, Zechariah b. Avkilus objected, maintaining that “people will think that the penalty for inflicting a blemish on sacrificial animals is death.”

There may well be a grain of historical truth in this legend. Josephus states that Eleazar, son of Hananiah the high priest, and a leader of zealots, sought to abolish sacrifices of non-Jews in the Temple, and maintains that this was the signal for the outbreak of the Roman War, since it meant the abolition of daily sacrifice for the emperor (Wars, 2:409 ff.), constituting an act of rebellion. In the story one can detect an echo of the factional dissensions that ravaged Jerusalem in the years preceding the destruction of the Temple. It should be associated with similar popular sayings from talmudic literature, e.g., “Why was the Second Temple destroyed...? Because of baseless hatred” (Yoma 9b).

Some scholars see a resemblance between the name Kamza and Bar Kamza and the name Compsus b. Compsus mentioned by Josephus (Life, 33). Compsus was a member of the aristocratic party in Tiberias and among the supporters of the Romans. Support for the theory is found in the fact that the legend is attributed to Johanan who taught in Tiberias, which might well have been the scene of the story.

[A'hron Oppenheimer]

KANAH, Cana (Heb. קַנָּה).

(1) City in the territory of Asher (Josh. 19:28), mentioned in Egyptian lists of cities conquered by Seti I and Thutmosis III (no. 26); now Kanah, 6 miles (10 km.) southeast of Tyre.

(2) Town in Galilee captured by Tiglath-Pileser III in 732 B.C.E. According to John 2, a marriage feast at Cana was the scene of Jesus' miracle of changing water into wine; there also he performed a miracle of healing (John 4:46 ff.). Josephus made it his headquarters early in 67 C.E. during the Jewish War (Life, 86). After the destruction of the Temple, Kanah was settled by priests of the Eliashib family. Identified since the Middle Ages with Kafr Kannā, the site is now more likely placed at Khirbat Kannā, 5 miles (8 km.) north of Sepphoris.

(3) River separating the territories of Manasseh and Ephraim (Josh. 17:9); now Wadi Kannā, a tributary of the Yarkon.

[Michael Avi-Yonah]

KANAH AND PELIYAH, BOOKS OF, two of the most important compositions of pre-Safedian *Kabbalah. The former is a lengthy commentary on the commandments, the latter a commentary on the first chapters of Genesis. Though different from the literary point of view, the two books have been confused by many kabbalists, the title *Kanah* being attributed to both. Written by the same kabbalist, they were attributed to members of the family of the famous tannaitic figure R. *Neḥunyah ben ha-Kanah, to whom some other kabbalistic writing had been attributed previously. The author introduces three generations of this family, who discuss and exchange among themselves kabbalistic ideas. The main assumption of the author is the superiority of Kabbalah, which contains the most important clues for understanding Judaism.

For many years the books were thought to have been composed in Spain, but findings of Kushnir-Oron and Ta-Shma established the Byzantine background of the books, presumably at the end of the 14th century. A study of the sources demonstrates that the anonymous kabbalist drew on a huge variety of kabbalistic sources starting from early Kabbalah, the book of the Zohar, prophetic Kabbalah, R. Joseph Gikatilla, R. Menahem Recanati, and R. Joseph b. Shalom Ashkenazi. Especially important is the impact of *Sefer ha-Temunah* and the kabbalistic thought in writings from its circle, plausibly produced in mid-14th century Byzantium. Also the appropriation of Heikhalot poems, late Midrashim, and Ashkenazi sources is detectable. Many of these sources were copied verbatim or with slight changes and interpolations. Despite the highly eclectic nature of these books, the recasting of the sources in a dialogue form, which uses many parables, was helpful in introducing the variety of ideas appropriated by the

author to wider and variegated audiences. Together with writings from the *Temunah* circle, the books of *Kanah* and *Peliyah* are cornerstones of Byzantine Kabbalah as a divergent school from the Spanish center of Kabbalah, and contributed a special blend of views which underscore transmigration and cosmic cycles (*shemittot*), surmising that the present eon is one of stern judgment, and show special interest in Hebrew letters and divine names.

The books contain ideas stemming from earlier sources which deviate from the consensus of the main kabbalistic schools in Spain. On the other hand, they express critical attitudes toward students of *Halakhah*, depicted as immersed in the study of Jewish law, but enjoying a good life instead of fasting and preaching to the Jews about their plight in exile. The style of admonition and the frequent appearance of Elijah, who teaches supernal secrets, permeate the two compositions and had an impact on later writings. Because of the recurring concern with messianism and eschatology – again following earlier kabbalistic sources – the books have been seen as a very reliable source because of their mooted early date. The computation of the year of arrival of the Messiah as 1490 evoked special interest after the expulsion of the Jews from Spain.

The impact of the books on the further development of Kabbalah has been quite substantial. They were canonized already at the beginning of the 16th century, and their influence is discernible among Spanish kabbalists who were expelled from Spain and others. The most important names in this context are Johanan *Alemanno, *Moses of Kiev, Solomon *Molcho, Joseph *Caro, Solomon ha-Levi *Alkabez, Meir ibn Gabbai, Moses *Cordovero, David ibn Zimra, *Shabbetai Zevi and other Shabbatean figures, and some in early Ḥasidism. Some of its more radical ideas contributed to the rejection of the books by other kabbalists, like R. Isaac *Luria.

Sefer ha-Kanah was published in part in 1617 in Prague, in 1730 in Wilharsdorf, in 1786 in Poritsk, and in 1894 in Cracow, and in 1974 in Jerusalem. *Sefer ha-Peliyah* was published twice, in 1784 in Koretz and in 1884 in Premislany.

[Moshe Idel (2nd ed.)]

KANDEL, ERIC RICHARD (1929–), neurophysiologist and Nobel laureate in physiology and medicine. Kandel was born in Vienna, Austria, and emigrated to the U.S. in April

1939 after a childhood experience of Nazi occupation which determined his life-long interest in behavior. After attending the Yeshiva of Flatbush elementary school, followed by Erasmus Hall High School, he majored in European history at Harvard before entering New York University Medical School with the initial intention of pursuing a career in psychiatry. An elective course at Columbia University with Harry Grundfest reinforced his decision to become a scientist. After graduation (1956) he joined the National Institutes of Health (NIH), Bethesda (1957–60), and trained in clinical psychiatry at Harvard Medical School (1960–65), a period which included a seminal year as a postdoctoral fellow with Ladislav Tauc in Paris. He formed a neurophysiology group at New York University (1965–72). In 1972 he moved to Columbia University College of Physicians and Surgeons as founding director of the Center for Neurobiology and Behavior, where he became professor (1983), senior investigator of the Howard Hughes Medical Institute (1984), and director of the Kavli Institute for Brain Sciences (2004). His research has centered on the biological basis of memory and its implications for normal and abnormal behavior. He was among the first to devise experimental methods for establishing the physiological and molecular basis of a crucial function of the brain. He worked initially on the relatively simple giant marine snail *Aplysia* and later on the hippocampus, the memory center, in mice, convinced that only simple systems would give insight into the formidable challenge of understanding consciousness and related brain function in humans. He ended previous fruitless speculation by establishing that memory involves the connections between nerve cells and patterns of protein synthesis in these cells. He was awarded the Nobel Prize (2000) jointly with Arvid Carlsson and Paul Greengard. His other honors include membership in the U.S. Academy of Sciences (1974), the Lasker Award (1983), the Gairdner Award (1987), the Harvey Prize of the Haifa Technion (1993), and the Wolf Prize (1999). His publications include (with J. Schwartz and T. Jessell) the standard textbook *Principles of Neural Science*.

[Michael Denman (2nd ed.)]

KANDEL, ISAAC LEON (1881–1965), U.S. educator, an internationally known specialist on comparative education. Kandel was born in Romania, and went to university in Manchester, England, and at Columbia University, New York. From 1914 to 1923 he was a research specialist for the Carnegie Foundation for the Advancement of Teaching and produced significant monographs, including one on the examination system in the United States. From 1923 to 1947, he was professor of education at Teachers College of Columbia University and editor of its *Educational Yearbook of the International Institute*. From 1944 to 1949 he edited *Universities Quarterly*, and from 1946 to 1953, *School and Society*. In 1948–50, Kandel was professor of American studies at the University of Manchester, England. Kandel contributed to the fields of educational history, educational theory, and comparative and international education. His most important work was *Comparative Educa-*

tion (1933), and his other books include *History of Secondary Education* (1930), *Conflicting Theories of Education* (1938), *Intellectual Cooperation: National and International* (1944), *The New Era in Education* (1955), and *American Education in the Twentieth Century* (1957). Of great significance was his pioneering study, *The Making of Nazis* (1935), in which he documented the theory and practice of Nazi education and warned of its dangers. Kandel's work is distinguished by vigorous opposition to extremism in progressive education, his advocacy of international cooperation in culture and education, and his application of a precise, multilingual approach to educational research. Kandel was a member of the advisory board of the American Friends of the Hebrew University, the editorial council of *Jewish Social Studies*, and of the Institute for Religious and Social Studies (Jewish Theological Seminary of America). He was coauthor of an article on Jewish education in Monroe's *Cyclopedia for Education*. He taught for a period at the Jewish Institute of Religion in New York.

BIBLIOGRAPHY: L.A. Cremin, *Isaac Leon Kandel* (1966); W.W. Brickman, in: *Educational Forum*, 15 (1950–51), 398–412; R.G. Templeton, *Isaac L. Kandel's Contribution to the Theory of American Education* (1956).

[William W. Brickman]

KANDLEIN OF REGENSBURG (14th century), community leader first mentioned in the records of Regensburg in 1351. Kandlein was a widow whose relatives, including her brother, son, and son-in-law, were the most prominent moneylenders in that city. The family, originally from Graz, also paid the highest taxes. Kandlein was one of the appointed leaders of the Regensburg Jewish community and was usually mentioned first in the listings of the important Jews. This group set the taxes for local Jews and regulated which Jews should be allowed to settle in Regensburg and what they should pay for the privilege. In July 1356, the Regensburg council gave Kandlein and others permission to live in Regensburg for two further years and all rights to sing in their synagogue and to their graveyard. Kandlein was murdered sometime before August 1365 during a robbery of her home.

BIBLIOGRAPHY: E. Taitz, S. Henry, and C.I. Tallan, "Kandlein of Regensburg," in: *The JPS Guide to Jewish Women, 600 B.C.E.–1900 C.E.* (2003), 79–80; F. Bastian and J. Wideman (eds.), *Monumenta Boica Regensburger Urkundbuch*, vol. 2, *Urkunden der Stadt 1351–1378* (1956).

[Cheryl Tallan (2nd ed.)]

KANE, BOB (1916–1998), U.S. comic book creator. Born in New York City with the surname Cahn, he attended Cooper Union and the Art Students League before entering the comics field. His first strips, *Peter Pupp* and *Hiram Hick*, were published in 1936. In 1938, while he was drawing adventure strips for National Comics, a comic book hero named Superman appeared. Kane's boss asked him and his high-school classmate, Bill Finger, then a shoe salesman, to come up with a Super-competitor. They developed *Batman*, which came out in May 1939 in *Detective Comics*, the successor to National. Batman

the Caped Crusader was not as strong as Superman, but he was much more agile, a better dresser, and had more sophisticated technological contraptions. He lived in the Batcave with his “ward,” Robin the Boy Wonder, drove the Batmobile, which had a crime laboratory and a closed-circuit television in the back, and owned a Batplane. In creating Batman, really a man named Bruce Wayne, a wealthy socialite, Kane said he drew on a number of sources: a 1920s movie, *The Mark of Zorro*, a radio show called *The Shadow*, and a 1930 movie called *The Bat Whispers*. As Batman’s popularity increased – there was a television series, Batman movies, toys, and costumes – over the years, Kane did less and less of the drawing. Although his name appeared on the strip until 1964, the work was done mostly by other artists. According to a recollection-tribute by Jerry Robinson, who was a writer during the creation of Batman, Kane and Finger, like himself and the creators of Superman, came from middle-class Jewish families beset by the Depression. Bruce Wayne, he wrote, “is rich, handsome and equipped with a butler, the Batmobile and an array of seductive women. That, of course, represented our ultimate fantasy.” The fantasy proved to be universal. Batman was soon speaking Greek, Arabic, and Japanese, among other languages. In 1966 Kane turned to children’s television cartoons and in his last years he devoted himself to Batman paintings and lithographs for collectors.

[Stewart Kampel (2nd ed.)]

KANE, CAROL (1952–), U.S. actress. Born in Cleveland, Ohio, Kane traveled extensively as a child, living with her parents in Paris and Haiti before settling with them in New York. She attended the Professional Children’s School in New York City until the age of 14, when she began acting professionally in theater roles in New York and around the Northeast. Kane’s first significant film roles were in *Carnal Knowledge* (1971) and *The Last Detail* (1973), and she played a memorable role as a bank teller-hostage in *Dog Day Afternoon* (1975). Later that year, Kane received an Oscar nomination for her portrayal of Gitl, a young Jewish bride in Joan Micklin Silver’s *Hester Street*, a tale of immigrant life on New York’s lower East Side circa 1896. In 1977, Kane played the role of Woody Allen’s first wife in *Annie Hall* and Gene Wilder’s girlfriend in *The World’s Greatest Lover*. Two years later, she received acclaim for her role as babysitter Jill Johnson in *When A Stranger Calls* (1979). Despite her success in film, however, Kane is perhaps best known for her role as the ditzy nonsense-speaking immigrant Simka on the television show *Taxi*. Kane’s performance as Simka, who eventually married Andy *Kaufman’s character on the show, Latka, won her Emmy Awards in 1982 and 1983. Subsequently, Kane appeared in a myriad of films and television shows while continuing to perform in the theater. Among these appearances, Kane’s other notable credits include the TV series *Brooklyn Bridge* (1991) and the films *Racing with the Moon* (1984), *The Princess Bride* (1987), *Ishtar* (1987), *Scrooged* (1988), *The Lemon Sisters* (1990), *Addams Family Values* (1993), *Even Cowgirls Get the Blues* (1994), *Office Killer* (1997), *Jaw-*

breaker (1999), *My First Mister* (2001), and *Confessions of a Teenage Drama Queen* (2004).

[Walter Driver (2nd ed.)]

KANE, GIL (1926–2000), U.S. comic book artist. Born in Latvia and named Eli Katz, he immigrated to New York with his family when he was three. Kane dropped out of high school at 15 to seek work penciling comic books, the first stage of the process. Some artists would go over his lines in ink, others would add words, and some would add color. His first job was at MLJ, publishers of *Archie* comics. Just before entering the army in 1944, Kane took a job with DC Comics. He returned there after the war to work at the dawn of a new medium and gradually became recognized as one of the greatest comic book artists. His breakthrough came in 1959 when he drew an early follow-up to DC’s *Flash*, a feature that had been a hit in the 1940s. He then revamped the characters Green Lantern and Atom and infused them with a vibrant new life. He represented an integral part of the resuscitation of superheroes in the 1960s, an era known as the “silver age” of comic books. He gave dynamic new interpretations to the Hulk, Captain Marvel, and Spider-Man. Kane drew tens of thousands of pages of superheroes for DC and Marvel Comics as well as for dozens of other companies.

[Stewart Kampel (2nd ed.)]

KANE, IRVING (1908–1988), U.S. attorney, businessman, and communal leader. Kane was born in Kiev, Russia, and went to America in 1913 with his parents, who settled first in Hoboken, New Jersey, and then moved to Cleveland, Ohio, in 1917. Kane worked in a Cleveland law firm until 1937, when he established his own firm. President of the Hospital Specialty Co. of Cleveland from 1941 to 1962, he owned and operated Irving Kane Associates, a consulting firm for business and finance. Kane first entered communal service as chairman of the Jewish Community Relations Committee of Cleveland in 1947. He served with both Jewish and non-Jewish organizations in various capacities, among them as chairman of the National Community Relations Advisory Council (1949–53), vice president of the American Jewish Congress (1956–58), and president of the Council of Jewish Federations and Welfare Funds (1959–62). He was a member of the campaign cabinet of the United Jewish Appeal from 1961. In 1964, Kane was one of the 29 high-profile guarantors of the newly formed *Cleveland Jewish News*, as well as one of the attorneys involved in negotiating the deal to create the English-language community Jewish newspaper. He also served as chairman of the American Israel Public Affairs Committee.

[Hillel Halkin / Ruth Beloff (2nd ed.)]

KANEE, SOL (1909–), Canadian philanthropist, lawyer, and businessman; Jewish community official. Kanee was born into an immigrant family in the small Saskatchewan farm community of Melville. He graduated with a B.A. from the University of Manitoba in 1929 before going on to complete a degree in

law at the University of Saskatchewan in 1932. He was admitted to the Saskatchewan Bar in 1933. Kanee returned to Melville to begin practicing law but with the outbreak of war in Europe he enlisted in the Canadian Army. From 1940 to 1945 he served in the Royal Canadian Artillery, retiring with the rank of major. Rather than return to Melville, Kanee settled in Winnipeg, where he combined law and business. He became president of Loo Line Mills and director of the Kanee Grain Company. In 1956 he was appointed director of the Bank of Canada and served on its board for 17 years, the longest anyone had ever sat as a director. He was also director of the Federal Business Development Bank, which offered financial services to support the long-term growth of businesses in all sectors of the Canadian economy.

Active in both Jewish and non-Jewish community life, Kanee supported a number of community organizations and service groups in Winnipeg. Long an officer of the Canadian Jewish Congress, he served as chairman of the National Executive of the Canadian Jewish Congress and president of the organization between 1971 and 1974. He was also chair of the University of Manitoba board of governors where an annual lecture series has been named in his honor. In addition, Kanee held executive volunteer positions with the World Jewish Congress, the United Way of Greater Winnipeg, the Royal Winnipeg Ballet, and the Canadian National Millers Association, among other organizations. A lifelong Liberal Party supporter and Israel advocate, he was close to leading Canadian and Israeli political figures. His record of community service was recognized when Winnipeg's Jewish nursing home was renamed in honor of the Kanee family and, among his many awards, Sol Kanee was inducted into the Order of Canada in 2000.

[Judith E. Szapor (2nd ed.)]

KANETI, SELIM (1934–1992), professor of civil and tax law. Born in Istanbul, Kaneti graduated from the Faculty of Law of Istanbul University. In 1968 he was an associate professor and in 1972 became a professor of civil law. In 1984 he was appointed president of the Finance and Economy Department of the Faculty of Law of Istanbul University and president of the Tax Law Department. He was also deputy director of the Center for Comparative Research and Application of Law in the Law Faculty. From 1957 he was a member of the Istanbul Bar Association and worked as a lawyer. He was president of the Secular Council of Turkey's Chief Rabbinate between 1989 and 1992. He wrote *Akđin İfa Edilmediđi Def'i* (1962); *İsviçre Federal Mahkemesi Borçlar Hukuku Kararları Özel Borç İlişkileri* (1969); *Hukuki İşlemlerin Çevrilmesi (Tahvil)* (1972); *Sınırlı Aynı Haklar* (1972); *Medeni Hukuk Sorunları* (1976); *Aile Hukuku* (1985); and *Vergi Hukuku* (1989).

[Rifat Bali (2nd ed.)]

KANEV, port on the Dnieper River in Kiev district, Ukraine. Jewish settlement began in the end of the 17th century or the beginning of the 18th. From 98 (including the surrounding

villages) in 1765, the Jewish population grew to 1,635 in 1847 and 2,682 (30% of the total population) in 1897. On the eve of WWI most of the petty trade in town was in Jewish hands, all groceries and textile shops as well as others. On November 6, 1917, local hoodlums ransacked many Jewish properties; this happened again in the beginning of autumn 1919 by General *Denikin's soldiers. The number of Jews in 1926 was 1,305 (17.2%), and it dropped to 487 in 1939 (total population 8,020). In the 1920s there was a two-grade school with 59 pupils. Kanee was occupied by the Germans on August 16, 1941. The Jews who remained were herded into one building under horrible conditions and robbed of all their property. After two months they were taken to Korsun and murdered in November 1941 together with the local Jews. Kanee was liberated on February 3, 1944.

[Shmuel Spector (2nd ed.)]

KANEV, ISAAC (1896–1980), specialist in social insurance. Born in the Crimea, Kanee studied science and economics at the University of Simferopol. He immigrated to Erez Israel in 1919 and took part in the defense of Tel Hai, where he was wounded. After working as an agricultural laborer he was appointed to the executive of Kuppas Holim in 1923, and henceforth devoted himself entirely to the field of social insurance, completing his studies in Vienna and London, after which he was made responsible for social health research at Kuppas Holim. In 1947 he founded the Institute for Social Research of the Histadrut and on the establishment of the state was appointed to work out a scheme for social insurance and social services, the results of which he published in 1950. He served in the First Knesset as a representative of *Mapai. In 1957 he was appointed by the government to work out a scheme for comprehensive health insurance. From 1928 he was a member of the executive of the International Social Security Association, of which he was vice president from 1955 to 1964, and in 1958 lectured at a United Nations seminar on the social and demographic problems of the Mediterranean countries. He published a large number of works on social insurance and was awarded the Israel Prize for social sciences in 1962.

[Shaked Gilboa (2nd ed.)]

KANIEVSKY, JACOB ISRAEL ("the Steipler"; 1899–1985), rabbi. Kanievsky was born in Hornistopol from which his appellation "the Steipler" was derived. From an early age he studied at the yeshivah of Gomel, which was directed by the "elder of Novogradok," Joseph Yozel *Hurvitz. Kanievsky soon became known as the *illui* ("genius") from Stopol. At the end of his teens he was pressed into service in the Russian army.

In 1925 his first book, *Sha'arei Tevunah*, was published. After the Hazon Ish, Avraham Yeshayahu *Karelitz, read the work, he offered his sister Miriam in marriage to Kanievsky and the two were married. Emigrating to Palestine in 1934 – about a year and a half after his brother-in-law had settled in Bene-Berak – Kanievsky was appointed the head of Bet Yosef-Novohardok yeshivah in Bene-Berak. Karelitz was once asked

was there any man in his generation for whom one could recite the blessing “blessed is He for having shared His wisdom with His reverers,” and the reply of the Ḥazon Ish was, “the Steipler.”

Kanievsky was the author of nearly 30 books and devoted much time to writing, teaching, and dealing with the vast public which constantly streamed to his home seeking spiritual guidance. Religious and nonreligious alike sought his counsel, and Jews from many communities looked to him for guidance. Some 200,000 people from all over Israel attended his funeral.

KANIN, FAY MITCHELL (1917–), screenwriter and leader in the U.S. film and television industries. Born in New York City to Bessie (Kaiser) and David Mitchell, Kanin grew up in Elmira, N.Y., where as a teenager she won the New York State Spelling Championship. Kanin attended Elmira College on a scholarship and received a B.A. from the University of Southern California after the family moved to Los Angeles.

Kanin got her start in film as a script reader at RKO Studios, where she met her future husband, Michael Kanin (1910–1993), who was writing his first screenplay. Fay and Michael, who married in 1940, raised two sons while collaborating for 20 years on dozens of scripts for film, theater, radio, and television. Their dramatic version of the Japanese film *Rashoman* (1957) continues to be performed. Michael Kanin's brother, Garson *Kanin, and his wife, Ruth Gordon, were a similar husband-and-wife team. Fay Kanin also wrote independently. Her play, *Goodbye, My Fancy*, about a congresswoman, was a Broadway success in 1949. Many of Fay Kanin's scripts present characters who reflect her own values as an educated, independent, career woman. They focus on the importance of personal integrity, academic freedom, and individual accomplishment. One of her most important scripts, *Friendly Fire* (1979), which starred Carol Burnett, won an Emmy for its moving depiction of an Iowa couple who lost their son in Vietnam. She also won an Emmy for *Tell Me Where it Hurts* (1974). Kanin, who was nominated with her husband for an Academy Award for writing *Teacher's Pet* (1958), was also nominated for a Tony Award for Best Book (Musical) for *Grind* in 1985.

Kanin served for over 25 years in various leadership roles in the film industry, including governor of the Academy of Motion Picture Arts and Sciences, representing the writers branch; president of the Academy Foundation, the educational and cultural arm of the Academy; and chair of the National Film Preservation Board of the Library of Congress. She was an officer of the Writers Guild Foundation and a member of the board of directors of the American Film Institute. From 1979 to 1983, Kanin was president of the Academy of Motion Picture Arts and Sciences for four consecutive terms, the only woman elected to that office since Bette Davis's brief stint as president in 1941.

[Sharon Pucker Rivo (2nd ed.)]

KANIN, GARSON (1912–1999), U.S. playwright and director. Kanin, born in Rochester, New York, became a Hollywood director for Samuel Goldwyn at 25. He directed John Barrymore in *A Great Man Votes* (1939) and Ginger Rogers in both *Bachelor Mother* (1939) and *Tom, Dick and Harry* (1941). After army service during World War II, Kanin was co-director, with Sir Carol Reed, of *The True Story* (1945). The film was about the Allied victory, and it won the Academy Award for Best Documentary.

Plays Kanin wrote that were performed on Broadway include *The Smile of the World* (1949), *Rat Race* (1950), *The Live Wire* (1950), *A Gift of Time* (1962), and *Come on Strong* (1962). He wrote and directed the Broadway hits *Born Yesterday* (1946) and *Do Re Mi* (based on his novella, 1960; Tony nominations for Best Musical and Best Director). He also directed such Broadway productions as *The Rugged Path* (1945), *Years Ago* (1947), *The Leading Lady* (1948), *The Diary of Anne Frank* (1955, Tony nomination for Best Director), *A Hole in the Head* (1957), *Sunday in New York* (1962), and *Funny Girl* (1964). He produced and directed *A Very Rich Woman* (1965), written and acted by his author-actress wife Ruth Gordon.

In the realm of cinema, Kanin and Gordon co-authored such films as *A Double Life* (1947, Oscar nomination for Best Screenplay), *Adam's Rib* (1949, Oscar nomination for Best Screenplay), *The Marrying Kind* (1952), *Pat and Mike* (1952, Oscar nomination for Best Screenplay), and *It Should Happen to You* (1954). In 1969 he wrote and directed the films *Where It's At* (based on his novel) and *Some Kind of a Nut*. In 1979 the couple co-wrote the TV movie *Hardhat and Legs*. In 1980, Kanin's novel *Movieola* (1979) was adapted into three separate made-for-TV movies: *This Year's Blonde*; *The Scarlett O'Hara War*; and *The Silent Lovers*.

Ruth Gordon died in 1985; Kanin married actress Marian Seldes in 1990. He was the brother of screenwriter Michael Kanin (1910–1993).

Among Garson Kanin's published works are *Remembering Mr. Maugham* (1966), *Cast of Characters: Stories of Hollywood* (1969), *Tracy and Hepburn: An Intimate Memoir* (1971), the novel *A Thousand Summers* (1973), *Hollywood* (1974), the novels *One Hell of an Actor* (1977) and *Smash* (1980), *Together Again: Stories of the Great Hollywood Teams* (1981), and the novel *Cordelia* (1982).

[Ruth Beloff (2nd ed.)]

KANIUK, YORAM (1930–), Israeli writer. Kaniuk, who was born in Tel Aviv, fought in the War of Independence, during which he was wounded, spent the 1950s as journalist and painter in New York, and in 1961 settled down in Tel Aviv. One of the country's most prolific writers, his oeuvre sets up a mirror to the changes within Israeli society while taking issue with the so-called Zionist narrative. Kaniuk's disillusioned, critical voice is reminiscent of that of Y.H. *Brenner, a writer whom he greatly admires and with whom he shares a thematic and expressive affinity.

His works, commingling autobiographical elements with collective concerns, revolve around three major themes: the Arab/Palestinian-Israeli conflict and in particular the War of Independence, the Holocaust, and the attitude of the New Jew, the Israeli, to Diaspora tradition.

The protagonist of Kaniuk's first novel, *Ha-Yored le-Maalal* (which appeared in an English translation as *The Acrophile* in 1961, two years before it was published in Hebrew!) is an Israeli living abroad, as it were an uprooted Sabra, who is tormented by guilt feelings for having killed an Arab boy during the war, preferring life in total isolation rather than to return to his native country. A similar theme, clearly inspired by the personal experience of Kaniuk in the U.S., is treated in the novel *Sus-Ez* (1974; *Rocking Horse*, 1977). The moral dilemma, present in several works of other writers of his generation, underlies many of Kaniuk's novels, including *Bitto* (1987; *His Daughter*, 1988) and *Aravi Tov* (1984; *Confessions of a Good Arab*, 1987), the latter being a compelling and deliberately provocative Arab-Jewish family saga, which "is out to fracture the badly set bone that deforms the Middle East" (*The Los Angeles Times*). While his second novel, *Himmo Melekh Yerushalayim* (1965; *Himmo King of Jerusalem*, 1969), describes the dramatic relationship between a severely wounded Israeli soldier and the nurse who attends to his needs in an old monastery in Jerusalem during the War of Independence, the third novel, *Adam Ben Kelev* (1968; *Adam Resurrected*, 1969; 1971) marks a new thematic and stylistic direction in Kaniuk's prose. In this novel as well as in *Ha-Yehudi ha-Aharon* (1982; *The Last Jew*, 2005), Kaniuk confronts the ever-open scars of Holocaust survivors and their traumatized life. In expressionistic style, harsh, gruesome, and provocative, Kaniuk tells the pathetic-grotesque story of Adam Stein, once a well-known clown in Europe, who survived the death camp because he entertained victims on their way to the gas chamber. Stein arrives in Israel but suffers a nervous breakdown. A patient at a rehabilitation and therapy institute, he presides over a demented kingdom which includes distraught persons, like Jenny, who provides him with medical and sexual services, and a "dog," who slowly shows feeling and finally can even speak. The novel, which has been translated into fourteen languages, was also successfully staged and is undoubtedly one of the most original and powerful Hebrew novels about the Holocaust. *The Last Jew*, one of Kaniuk's most ambitious works, attempting to present a historic panorama of Jewish fate in the 20th century, is the tragic-grotesque story of Ebenezer Schneerson, who believes he is the "last Jew." Confronting the Holocaust and the incurable wounds of the survivors prompted Kaniuk also to look closer at the relations between Germans and Jews. In *Post Mortem* (1992), an impressive, albeit disturbing portrait of his parents, Kaniuk does not hide his ambivalent emotions toward Germany and its culture. It was the father, Moshe Kaniuk, for many years director of the Tel Aviv Museum, who imbued his son with a passion for the German language and its culture. Kaniuk recounts how he, a boy in Tel Aviv of the 1930s, wished to rid himself of the ubiquitous Sabra attributes

and resemble the children of the German Templars. One of the most successful Israeli authors in Germany, Kaniuk visited that country many times and published in 2002 (first in German, two years later in Hebrew!) his impressions of a haunted and haunting country.

Other prose works by Kaniuk examine the Zionist Myth and its realization, as in *Afar ve-Teshukah* ("Soil and Desires," 1975) or *Ha-Sippur al Dodah Shlomziyon ha-Gedolah* (1976; *Aunt Schlomzion the Great*, 1978); tell of the passionate, obsessive love of a 60-year-old film producer for a much younger woman ("Another Love Story," 1996); relate an imaginary, humorous encounter with Queen Elizabeth (*Ha-Malkah va-Ani*; "The Queen and I," 2001); or recollect personal moments, both turbulent and inspiring, in New York of the 1950s (*Hayyim al Neyar Zekhukhit*, "I Did It My Way," 2003). In 2005 Kaniuk published *Ha-Ne'ederet mi-Nahal Zin*, a sophisticated thriller in which he examines the corrosion of values in Israeli society. Kaniuk also wrote books for young readers, such as *Wasserman* (1988), and a biographical novel about the commander of the famous ship *Exodus* (1999). Kaniuk won the Prix de Droits de l'Homme in Paris (1997), and he received the Bialik Prize (1999). In 2000 he was awarded the prestigious Prix Méditerranée Étranger.

Kaniuk's books have been translated into twenty languages, and a list is available at the ITHL website at www.ithl.org.il

[Anat Feinberg (2nd ed.)]

KANN, JACOBUS HENRICUS (1872–1945), banker; founder of the Zionist Organization in Holland. Born in The Hague, from 1891 Kann was the owner and manager of his family's bank, Lissa & Kann – one of the largest banks in Holland (established in 1805) and for three generations that of the Dutch royal family. Herzl's *Der Judenstaat* made a great impression on Kann, who was not at all involved in Jewish public life until then. He participated as an observer in the First Zionist Congress (1897) and later became Herzl's aide, especially in matters of banking. He and David *Wolffsohn were among the founders of the *Jewish Colonial Trust, despite his earlier hesitation about the financial effectiveness of the bank. He established the Zionist Organization in Holland, becoming its leader and representative at the Zionist General Council (then called Greater Actions Committee; 1897–1905). At the Seventh Zionist Congress (1905) he was elected to the Zionist Executive (the "Smaller Actions Committee"), reduced to three members, Kann, Wolffsohn, and Otto *Warburg, at the Eighth Zionist Congress (1907). Throughout, he was an enthusiastic fighter for Herzl's political Zionism as opposed to "practical" Zionism, which the Zionist organization introduced during his term of office in the executive. When the opposition to Wolffsohn was victorious at the Tenth Congress (1911), Kann also resigned, but he continued to manage the financial institutions (the Jewish Colonial Trust and the Anglo-Palestine Bank). The plot of the "Aḥuzzat Bayit" suburb near Jaffa, purchased by an association of settlers in Erez Israel and from which Tel Aviv developed, was registered under his name. Impressions of his visit to *Erez Israel* in 1907, published in his *Erez Israel* (Dutch, 1908; German, 1909; French, 1910), included a demand for Jewish autonomous home rule in Erez Israel. This demand aroused sharp criticism from V. *Jabotinsky, then head of the Zionist press in Constantinople, who claimed that Kann's statement was causing political harm to Zionism in the Ottoman capital. When Wolffsohn rejected his argument, Jabotinsky resigned and left Constantinople. From 1911, Kann remained in the Zionist opposition. He did not participate in the Zionist Congresses after World War I. Nevertheless, he moved to Palestine in 1923 as the consul-general of Holland (until 1927). He returned to Holland in 1931, working on behalf of different projects in Palestine (among them the establishment of the Jewish National Library on Mt. Scopus, using the resources of the Wolffsohn Fund, etc.). After the 1929 riots in Palestine, Kann published a pamphlet in English (1930) in which he criticized the actions of the Zionist Executive in economic matters and in Arab-Jewish relations. When Holland was occupied by the Germans in World War II, he was dismissed from the bank and eventually deported to *Theresienstadt, where he died shortly before the liberation.

[Getzel Kressel]

KANN, MOSES (d. 1761), head of the yeshivah in Frankfurt on the Main. Born of a wealthy and influential family which had resided in Frankfurt from 1530, Moses was a leading authority in his day. His first wife was a daughter of the famous Court Jew Samson *Wertheimer, who collaborated with Moses in enabling J.L. Frankfurter, the rabbi of Frankfurt, to publish a new edition of the Talmud (Amsterdam-Frankfurt, 1714–22). When the Talmud was confiscated following the denunciations of the apostate Paul Christian, Moses appealed to the elector of Mainz; the confiscation order was finally rescinded in 1753. Moses' second wife was a daughter of the Court Jew Behrend *Lehmann. The talmudic scholar Jacob Joshua *Falk owed his appointment to the rabbinate of Frankfurt largely to Moses' influence.

Moses and his brother BEER LOEB ISAAC doubled the sum of 10,000 thalers, which their father had bequeathed for the support of scholars, and presented it to the community in 1736. In 1749 David Meyer Kulp initiated a revolt against Beer Loeb Isaac's long and unpopular oligarchic rule over the community. The bone of contention was the control of the communal treasury. Frankfurt Jewry divided into opposing factions, disturbances broke out, and troops had to be called in. Beer Loeb Isaac was supported by the city council, while Kulp appealed to the emperor. An investigation absolved Beer Loeb Isaac of charges of embezzlement. Both contenders were impoverished by the continued litigation; the power of the Kann family was broken and constitutional reforms were introduced in the community. Beer Loeb Isaac died in 1754; his son, LAZARUS BEER ISAAC, settled in The Hague about a year later. Lazarus' son, HIRSCHEL (1772–1819), founded the firm of Lissa & Kann, which his son, ELEAZAR (1810–90), made into a leading banking house. Eleazar's grandson, Jacobus Henricus *Kann, also a banker, was a well-known philanthropist and Zionist.

Stevens, in: *Studia Rosenthaliana*, 4 (1970), 43–95; A. Dietz, *Stammbuch der Frankfurter Juden* (1907); H. Schnee, *Die Hoffinanz und der moderne Staat*, 6 (1967), 244–9.

KANN, PETER R. (1947–), U.S. publisher. A native of Princeton, N.J. Kann graduated from Harvard University with a bachelor's degree in journalism. Joining the San Francisco bureau of *The Wall Street Journal* in 1963, Kann became a staff reporter the following year and worked in the Pittsburgh and Los Angeles news bureaus. In 1967 Kann became the *Journal's* first resident reporter in Vietnam. From 1969 to 1975 he continued to cover the Vietnam War, as well as other events across Asia, as a roving reporter based in Hong Kong. In 1972 he was awarded a Pulitzer Prize for distinguished reporting on international affairs for his coverage of the 1971 India-Pakistan war. In 1976 Kann was named the first publisher and editor of *The Asian Wall Street Journal*, headquartered in Hong Kong. After 12 years in Asia, Kann returned to the United States in 1979,

and the following year he was named associate publisher of the *Journal* and a vice president of Dow Jones & Company, publisher of the *Journal*. Later that year he became chief operating officer of Dow Jones. He became chief executive officer in January 1991 and chairman in July 1991. During his tenure, the *Wall Street Journal* grew significantly as readers sought more business information. Kann also presided over the expansion of the *Journal* from five days to six days when it added a feature-oriented Saturday edition in 2005. Kann's wife, Karen Elliott House, who received a Pulitzer Prize for international reporting in 1984 for her coverage of the Middle East, became publisher of *The Wall Street Journal* in 2002.

[Stewart Kampel (2nd ed.)]

KANNEGISER, LEONID AKIMOVICH (1873–1918). Russian poet who assassinated M.S. Uritsky, the chairman of the Petrograd Secret Police, the Cheka. Kannegiser's grandfather, a physician, attained the status of nobility while his father was a famous engineer. Both were involved in Jewish communal life. Kannegiser was born in St. Petersburg. From 1915 to 1917 he studied at the Petrograd Polytechnical Institute, then joined the Union of Jewish polytechnic students. After the February Revolution of 1917 he entered the military academy and was elected chairman of the socialist cadets. His attitude toward the October Revolution was positive but after the conclusion of the Brest-Litovsk peace treaty he began to be highly critical of the Bolsheviks. The assassination of Uritsky and the attempt on the life of Lenin on the same day (August 30, 1918) served as a pretext for the Soviet authorities to declare their "red terror." Kannegiser was executed by the Cheka in Petrograd soon after.

From childhood Kannegiser had written poetry. He was close to the Acmeists (see O. *Mandelstamm). Jewish motifs appear in his poetry (e.g. in "Yevreyskoe venchanie"; "Jewish Betrothal"). The anthology *Leonid Kannegiser* containing several of his surviving lyric poems with memoirs of him by M. *Aldanov and others appeared in Paris in 1928. A major part of Kannegiser's literary heritage is preserved in the closed files of the Central Government Archives of Literature and Art in Moscow.

[*The Shorter Jewish Encyclopaedia in Russian*]

KANNER, LEO (1894–1981), U.S. child psychiatrist. Kanner, who was born in Klekotow, Austria, emigrated to the U.S. in 1924. In 1928 he began his connection with Johns Hopkins University, where he was appointed associate professor of psychiatry in 1948 and professor of child psychiatry in 1957. He was chairman of the child psychiatry section of the American Psychiatric Association in 1942–43.

Kanner may well be considered the father of American child psychiatry. Coming as he did from the tradition of psychobiologically oriented psychiatry, he gave proportionate attention, when describing the basis of behavior, to constitutional, biological, environmental, psychological, and situ-

ational aspects of the child's life. For more than two decades his *Child Psychiatry* (1935, 1957³) was the basic textbook in this field, and it has left its impact upon child psychiatry in the United States and Europe alike. He is particularly well known for his original description of "early infantile autism," or what is now called "Kanner's autism" – a severe behavioral disorder which is apparent from early infancy. He wrote the introduction to *Modern Perspective in International Child Psychiatry* (ed. by J.C. Howells, 1969).

[Joseph Marcus]

KANOVICH, GRIGORY (pseudonym of **Yakov Semenovich**; 1929–), Soviet prose writer, poet, and dramatist. Kanovich, who wrote in Russian and Lithuanian, was born in the town of Ionava near Kaunas or, according to another source, in Kaunas itself, into the family of an observant Jewish tailor. In 1953 he graduated from Vilnius University. His first writings were published in 1949. He wrote collections of poetry in Russian: *Dobroye utro* ("Good Morning," 1955) and *Vesenniy grom* ("Spring Thunder," 1960); of literary epigrams and parodies in Lithuanian ("*With a Joyful Eye*," 1964; *Naked Ones on Olympus*, 1981); 30 plays and film scenarios (some co-authored) on contemporary themes; and he translated literary prose from Lithuanian into Russian.

Kanovich's Russian prose works are almost all devoted to the life of Lithuanian Jewry. The theme of the moral quest of a Jewish boy from a Lithuanian shtetl in his long stories "Ya smotryu na zvezdy" ("I Gaze at the Stars," 1959) and "Lichnaya zhizn'" ("Private Life," 1967) is developed in his trilogy *Svechi na vetru* ("Candles in the Wind") consisting of the novels: *Ptitsy nad kladbishchem* ("Birds over the Cemetery," 1974), *Blagoslovi i list'ya i ogon'* ("Bless Both the Leaves and the Fire," 1977), *Kolybel'naya snezhnoy babe* ("Lullaby for a Snowman," 1979, translated into Hebrew in 1983). The trilogy, the action of which takes place between 1937 and 1943, recreates the traditional world and spirituality of East European Jewry. The events, even those on the most massive scale such as the Holocaust, are presented through the eyes of a youth and, as he develops, of a young man; in its structure the novel in places resembles a lyrical diary. An epic, philosophic element predominates in Kanovich's cycle of novels devoted to Jewish shtetl life of the end of the 19th and early 20th centuries – *Slëzy i molitvy durakov* ("Tears and Prayers of Fools," 1983); *I net rabam raya* ("There's No Heaven for Slaves," 1985), *Kozlenok za dva grosha* ("A Kid for Two Pennies"). The ethnic character of the novels (the heroes' way of thinking, reminiscent of Talmudic dialectics, and their way of speaking) and the problems they raise (the aspiration of the Jewish masses for national self-preservation, the feeling of responsibility for the ethical and ethnic essence of the people, the tendency of part of the Jewish intelligentsia to reject its identity for the sake of career, and assimilation) brought these works popularity among Soviet Jews. Kanovich visited Israel in 1980 and settled there in 1993.

[*The Shorter Jewish Encyclopaedia in Russian*]

KANOVITZ, HOWARD (1929–), U.S. painter. Kanovitz was born at Fall River, Mass., and studied at Providence College, Rhode Island (1947–49), and Rhode Island School of Design (1949–51). He taught at Brooklyn College and Pratt Institute, New York City, until 1964, when he moved to London. Kanovitz achieved international prominence with the development of “*Photo-Realism*” in the late 1960s and the exhibition under that title of American painters and sculptors, which toured Europe in 1973. Kanovitz’s work tends to be more complex than that of the meticulous imitators of reality; he often works in collage or three-dimensional forms. In an interview in the German magazine *Kunst* (4th quarter, 1971), he explained: “There is nothing in my work that isn’t real, yet there is nothing real in my work but paint, canvas, and stretcher. There is much, though, that seems to be real, and this resemblance is the way of cooling off my anxious vision.... The point for me is to find that stage in the painting of images that brings objects to a state of relaxed relationship to other objects, no matter how absurd, and all this should take place logically and with good sense.” His first one-man exhibition was at the Stable Gallery, New York, in 1962, since when he held numerous exhibitions in America, including the Jewish Museum, New York, in 1964.

[Charles Samuel Spencer]

KANSAS, midwestern state in the central United States. The population in 2001 numbered 2,692,000, with a Jewish population of 14,000, the bulk of the Jews living in the greater Kansas City area. Wichita has some 1,300 Jews. The first Jewish settlers began arriving soon after Kansas Territory was established in 1854. Two early arrivals were August *Bondi and Theodore Wiener, who were members of John Brown’s Free-Soil army and also fought in the Civil War. The state’s first Jewish cemetery was the Mt. Zion Cemetery Association, founded in Leavenworth in 1857. That city was also the site of the state’s earliest congregation, B’nai Jeshurun, which was formed in 1859. An Orthodox congregation, Beth Jacob, was organized much later. The second congregation to be formed in Kansas was Emanu-EL, of Wichita, in 1885. The first rabbi, Bernard Cantor, was killed in 1920 while serving as a representative of the Joint Distribution Committee in the Ukraine. An Orthodox congregation, Ahavath Achim, was organized in 1913. The I. Goldsmith Memorial Library, containing the largest collection of Judaica in Kansas, was located in Wichita. It was named after Ike Goldsmith, who opened the city’s first bookstore and was one of the founders of Temple Emanu-EL. There were many unsuccessful Jewish agricultural colonies, the most important of which was Beersheba, established in 1882 by Isaac Mayer Wise. Other colonies, such as Lasker, Montefiore, Gilead, Touro, Leeser, and Hebron also failed. The settlers returned to the East, moved on to Colorado, or joined other settlements. By 1890 Kansas contained six Jewish congregations, with a membership of 486. Between that date and 1905 only one more was formed, Ohev Shalom in Kansas City. In 1917 the Jewish Community Center of Kansas

Jewish population of Kansas, 2001.

City, Kansas first opened its doors. In 1924 Congregation Beth Shalom was organized in Topeka, and the city of Hutchinson later built a Jewish center. Many Jews were scattered among the smaller Kansas communities, where often there was not a sufficient number to organize a congregation. There are old Jewish cemeteries in Atchinson, Fort Scott, and Eudora, indicating that these towns once had Jewish communities, which have since disappeared. The Mid-Kansas Jewish Federation was created in 1935 to unify the Jewish population of south-central Kansas. In 1959 came the establishment of The Jewish Community Foundation of Kansas City, Kansas, which provides education and charitable contributions as well as caring for urgent economic needs of the community. The *Kansas City Jewish Chronicle* was founded in 1920 to provide the Jews of Kansas City, Kansas, and Missouri with news on their community. In recent years the Jewish population of Kansas has greatly diminished, mainly because young people attend colleges in areas of larger Jewish population, and do not return to Kansas. Still, both major universities in the state, the University of Kansas and Kansas State University, maintain Hillel houses that help their student populations to live a Jewish life on campus and offer courses in Jewish Studies. Several Kansas Jews have distinguished themselves in public life, such as Adolph Gluck, mayor of Dodge City; Sol Kohn, mayor of Wichita; and B.I. Litovich, president of the Kansas Bar Association. Kansas Jews are served by Topeka-Lawrence Jewish Federation and the Mid-Kansas Jewish Welfare Federation. Dan *Glickman was a U.S. congressman representing Wichita and later the first Jewish secretary of agriculture. Senator Arlen *Spector of Pennsylvania was born in Kansas and was a descendant of Jewish farmers.

[Helen Kragness-Romanishan / Ben Paul (2nd ed.)]

KANSAS CITY, Missouri commercial and industrial center on the Missouri River opposite Kansas City, Kansas; Jewish population totaled approximately 19,000 or 1.1 percent of the total city population which is listed as 2,692,000 (2005).

As early as 1839 several Jews had found their way to the settlement of Wyandotte, Missouri, which was not renamed “Kansas City” until 1889. Among the earliest Jewish residents were Herman and Benjamin Ganz, Henry Miller, and Lewis Hammerslough. During the Civil War, 12 Jews served in the local home guard and another, Lieutenant Colonel Reuben E. Hershfield, was commander of nearby Fort Leavenworth.

Kansas City, MO, is part of the greater Kansas City area, which incorporates Kansas City, Kansas, as well as their surrounding suburbs. The first Jewish organization in Kansas City was a burial society founded in 1864. Three years later a local chapter of B'nai B'rith was formed. The first synagogue, Bnai Jehudah, was established in 1870 as a Reform congregation. An Orthodox congregation, Keneseth Israel, was organized in 1878; a decade later its more liberal wing split off to become Congregation Beth Sholom. Bnai Jehudah opened the city's first Sunday school in the 1880s and Keneseth Israel founded a *talmud torah* in 1901. As the Jewish population of Kansas City grew, other institutions were not long in following. The city's first Jewish social group, the Progress Club, was established in 1881. In 1895 a chapter of the Council of Jewish Women was formed and in 1901 The Jewish Family and Children Services was established to aid in resettlement and counseling. In 1913 the first Hadassah group came into being after a visit by Henrietta Szold. A branch of the Workmen's Circle was created in 1904. A Jewish Home for the Aged was opened in 1912 and a Jewish Community Center and YMHA-YWHA in 1917. The Kansas City United Jewish Charities, chartered in 1901, established the Jewish Educational Institute in 1907 and a health center, the Alfred Benjamin Dispensary, in 1919. While the UJC was extending its services, newcomers developed other agencies which provided help in ways often more acceptable to their recipients, such as the Hebrew Ladies Relief, the Hebrew Free Loan Society, the Jewish Orphans' Home, and the Wayfarers' Lodge. Zionism had its supporters in Kansas City from the time of the first Zionist Congress in 1897, and several Zionist groups were formed shortly after. The 1920s witnessed the continued growth of institutional life. The weekly *Kansas City Jewish Chronicle* has been reporting on Jewish activity in the area since it began publication in 1920. In 1926 the Jewish Memorial Association was formed and soon after it received a bequest of \$200,000 for the erection of a hospital with a *kasher* kitchen. The building, first called Menorah Hospital and later the Menorah Medical Center, was dedicated in 1931.

The economic crisis of the 1930s posed a severe economic threat to Kansas City's Jewish institutions, and in 1933 the situation became so bad that the Jewish Community Center was almost forced to close its doors. To meet this challenge, several leaders of the community evolved a plan for setting up a federation and conducting a campaign for immediate needs. The joint drive was a success and since then the federation has continued to minister to the community's financial wants. The trend toward consolidation continued into the late 1930s and 1940s. In 1939 the Rabbinical Association was organized by Samuel S. Mayerberg and Gershon Hadas and in 1945 all community organizations were joined together into a council combined with the federation. In 1968 Kansas City had seven congregations: Bnai Jehudah, Beth El (est. 1958), and the New Reform Congregation (est. 1967) were Reform; Ohev Sholom (est. 1930), Beth Israel-Abraham (est. 1958), and Kehilath Israel (est. 1959) were Orthodox; and Beth Shalom in the Overland Park suburb was Conservative. In addition to con-

gregational schools, a Jewish day school, the Hebrew Academy, was founded in 1966. Adult Jewish education, formerly offered through the School of Jewish Studies (1946-56), was under the joint direction of the Jewish Community Center and the congregations in 1968.

In that same year, in the social services field, the United Jewish Charities, which was renamed the Jewish Family and Children's Service in 1960, continued to offer a wide variety of programs. The Jewish Vocational Service, helped into existence in 1950 by the Federation and Council for the initial purpose of finding jobs for newcomers, was largely occupied with guidance for young people. The Menorah Medical Center, enlarged in 1951 and again in 1960 and 1963, had a capacity of 335 beds. In 1966 the Jewish Educational Program was founded to help assist the Jewish community of Kansas better to understand their heritage.

Jews have played important roles in almost every phase of Kansas City's growth. The settlers, who often began as peddlers, soon moved into retail business and later became wholesale merchants. A goodly number became manufacturers and developed such enterprises as the important center for the manufacture of women's garments. Jews have been prominent dealers in grain and flour, cattle and hides, meat-packing and produce, insurance and real estate, and, in recent years, securities and banking. Civic and political participation by Jews has been significant for many years. Several Jews were on the board of trade as early as 1869. From 1904 to approximately 1934 Jewish aldermen and councilmen sat continuously on the city council. From 1932 to 1937 Rabbi Mayerberg assumed a leading part in spearheading the long, bitter, and ultimately successful campaign against the city's corrupt, machine-dominated government. After World War II, Richard H. Koenigsdorf was city counselor and then circuit judge. Kenneth Krakauer and Bert Berkley were presidents of the chamber of commerce, Irving Fane served on the police board and Richard L. Berkley was Republican county chairman. Early in 1948, when Jewish settlements in Palestine were under heavy Arab attack, several residents of Kansas City called upon Eddie *Jacobson, a fellow townsman and a close friend of President Truman, to persuade Truman to grant an audience to Chaim Weizmann, a mission which he successfully carried out.

In 1968 it was estimated that approximately 60 percent of the Jewish population was self-employed, approximately 20 percent were employed by others, and another 20 percent were in the professions. This relative isolation of Jewish economic achievement had its social counterpart in the generally small amount of intermingling with non-Jews. The major downtown social club began accepting Jewish members only in 1967. Other clubs still retained an informal practice of exclusion. The two Jewish country clubs, on the other hand, were almost totally devoid of non-Jews. Yet, the rate of intermarriage had steadily increased while the size of the Jewish population had remained practically unchanged from 1948 to 1968. Today many of the Jews in the Greater Kansas City area have moved out of the city center and into suburbs such

as Overland Park, Kansas. With a general population of over 160,000 (2004 estimate), Overland Park has become the new center of the Jewish community in Greater Kansas City. Several Jewish institutions have moved into Overland Park in recent decades, including the Jewish Historical Society and Temple Bnai Jehudah. This is part of a larger trend across the country, as Jewish populations in many metropolitan areas move steadily from the heart of the city and into more residential suburban communities.

[Gershon Hadas / Ben Paul (2nd ed.)]

In the early 21st century the Kansas City metropolitan area contained 12 synagogues, 7 Jewish cemeteries, and several new organizations devoted to Jewish life. The Midwest Center for Holocaust Education was founded in 1993 in Overland Park, with an endowment of \$2.4 million. The Kansas City community also sponsors the Village Shalom senior living community, located in the heart of the city. Although small in numbers, the Jewish community of Kansas City works hard to maintain its identity and ensure that its members receive a strong Jewish education.

°**KANT, IMMANUEL** (1724–1804), German philosopher. Born in Königsberg, East Prussia, Kant studied at the university in that city, where in 1755 he began to teach as a Privatdozent. In 1770 he was appointed to the chair of logic and metaphysics. His major work, the *Critique of Pure Reason*, in which he lay down the foundations of his critical philosophy, appeared in 1781. In 1783 he published the *Prolegomena to Every Future Metaphysic* in an effort to explain more clearly the main arguments of the *Critique*. The *Critique of Practical Reason* and the *Critique of Judgment* were published in 1790, *Religion Within the Limits of Reason Alone* in 1793, and the *Foundation of the Metaphysics of Morals* in 1797.

Attitude Toward Religion

Kant's statement in the *Critique of Pure Reason*, "I have found it necessary to deny knowledge in order to make room for faith" (*Critique of Pure Reason*, Bxxx) succinctly expresses his attitude to religion, revealing both its critical and constructive aspects. His critical analysis of pure reason leads Kant to limit the scope of theoretical, demonstrative knowledge to the phenomenal world, i.e., to the world of sense perception, thereby denying the possibility of metaphysics, and consequently the validity of the traditional proofs for the existence of God – the ontological, cosmological, and teleological arguments (*ibid.*, B811–25). But while Kant maintains that God, as a supersensuous being, cannot be an object of demonstrative knowledge, he does not claim that God does not exist, or that He is beyond the reach of reason as such. Indeed – and this is the constructive aspect of Kant's philosophy – he claims that reason must postulate the existence of God. In the realm of

scientific knowledge the need for a "regulative principle of the systematic unity of the manifold of empirical knowledge..." leads reason to postulate the existence of God. It is, however, mainly in the realm of ethics that the burden of establishing the existence of God lies. God comes into the picture here not as the giver of the moral law, for this would destroy the autonomy of the moral law which is fundamental to Kant's ethical theory, but as the "necessary condition for the possibility of the *summum bonum*," i.e., for the "distribution of happiness in exact proportion to morality" (*Critique of Practical Reason* (tr.) Beck (1956), 129). The existence of God is postulated in order to fulfill a fundamental requirement of the moral law, namely, that the virtuous man is worthy to be happy (*ibid.*, 135). True religion, in contrast to clericalism, is, therefore, ethical religion in which the kingdom of God is nothing else than the ethical commonwealth (*Religion Within the Limits of Reason Alone* (1960), 90ff.).

View of Judaism

Kant believes that Christianity, because of its idealized, spiritualized ethical teachings based on pure love, approaches this ideal of ethical religion more than any other historical religion. In contrast, following *Spinoza, he views Judaism as a mere national-political entity, contending that it fails to satisfy the essential criteria of religion in that it fails to inculcate the inner appropriation of morals, demanding only external obedience to statutes and laws. Interpreting Jewish messianism as nothing more than a national-political experience, Kant maintains that Judaism is concerned only with things of this world, and lacks any formulation of the concept of immortality.

Kant's negative view of Judaism, however, in no way interfered with his congenial relations with the Jewish community or with individual Jews, such as Moses *Mendelssohn. Nor did it deter many emancipated Jews from becoming attracted to Kantian philosophy. In Kant's lifetime Markus *Herz, Lazarus *Bendavid, and Solomon *Maimon were among his staunch supporters, and later, in the neo-Kantian revival, Hermann *Cohen and Ernst *Cassirer were numbered among his ardent followers. Kant also exercised an appreciable influence on Moritz *Lazarus, and a less pronounced, though significant, influence on Solomon *Formstecher, Solomon *Steinheim, and Franz *Rosenzweig.

Kant and Liberal Judaism

Kant's influence on Jewish philosophers may result from the basic affinity between his philosophic formulation of religion and the orientation of modern liberal Judaism (see *Reform Judaism). The exponents of liberal Judaism, regarding religion as essentially a system of ethics, found in Kant a philosophical formulation of religion which articulated their own conceptions of Judaism. The similarity between Kant and Judaism goes even deeper than the linking of religion with ethics. It is reflected in the structuring of the ethical system itself. The structure of Kant's ethics parallels that of biblical ethics with its source-consequences pattern and the central categories of "duty" and the "right" and not the Greek model

with its means-end pattern and the categories of the “good” and “happiness.” Yet it is at this point of closest similarity that basic differences emerge. For Kant the ethical source is reason. Thus religion is ultimately grounded in reason; it is “religion within the limits of reason alone,” and, as such, is ahistorical, universal, and available to every individual by virtue of his inherent rational capacity. For classical Judaism, on the other hand, the ethical source is God. Ethics is grounded not in reason but in the will of God, a will which expresses itself not in timeless continuity but at a specific moment in time through revelation. While for Kant, religion is grounded in ethics, in Judaism it is ethics which is grounded in religion. Hence, notwithstanding the similarities between Kant and Judaism, the two formulations of religion move in radically different “worlds,” making the attempt of adopting Kant as an authentic philosophic expression for Judaism problematic.

It is interesting to note that it was precisely in those aspects where he differed most from Judaism that Kant proved most congenial to his Jewish followers. This is understandable insofar as his followers were emancipated Jews for whom religion in its historical, particularistic manifestation, and its mystical, supernaturalistic, or ritualistic dimension was unacceptable. To be acceptable religion had to be thoroughly rationalized, ethicized, and universalized. These people gave up the attempt to find in Kant a philosophic formulation capable of authentically expressing Judaism, but sought rather to interpret Judaism in such a way that it would conform to Kant’s formulation of religion. Kant’s philosophic formulation became the norm and ideal. Indeed, for many of his followers the merit of Judaism lay precisely in being, as they thought, malleable to such a transformation.

Moritz Lazarus and Hermann Cohen

This can be seen in a particularly striking manner in the writings of Moritz *Lazarus and Hermann *Cohen. In his *Ethik des Judentums* (2 vols., 1898–1911; vol. 1 tr. into Eng. under the title *The Ethics of Judaism*, 1900) Lazarus, although he somewhat reinterprets the Kantian ethical imperative, follows Kant completely in giving priority to ethics over religion, and the autonomy of ethics is fully safeguarded (*Ethics of Judaism*, 1 (1900), no. 104). Ethics is not the content or expression of religion, rather religion is one of the subdivisions or expressions of ethics. Thus God is subjected to the ethical. He commands the ethical because it is ethical: “Moral laws, then, are not laws because they are written; they are written because they are laws” (*ibid.*, 1 (1900), no. 85).

In Hermann Cohen’s earlier writings there is a strong Kantian influence. The autonomy of ethics is never compromised. Religion, with its central idea of God, is established only on the basis of, and to the extent of, the requirements of ethical considerations. In his *Ethik des reinen Willens* (1904) he maintains that ethics require God as an idea, a hypothesis guaranteeing the existence of nature for the realization of the infinite ethical goal.

[Manfred H. Vogel]

KANTOR, JACOB ROBERT (1888–1984), U.S. psychologist. Born in Harrisburg, Pennsylvania, Kantor spent most of his teaching and research years at Indiana University. His major fields were behavior theory, language and logic, physiological psychology, and the history of psychology and related sciences. In 1937 he founded, and for decades contributed to, the journal *The Psychological Record*. Kantor was an important early spokesman in the U.S. for the view that the proper goal of psychology in its every aspect is to become an objective natural science of behavior, rather than a subjective or mentalistic discipline. In his writings, Kantor used the term “interbehavior” to emphasize certain theses: (1) that the variables which control behavior are physical, continuous, and instant; (2) that the physical consequences of behavior themselves become part of the complex of determiners of ensuing behavior; and (3) that behavior is an ever-changing stream, so that concepts of “stimulus” and “response” as static events do not provide analytic categories that are suitable starting points for behavior theory.

Following his retirement from Indiana University in 1959, Kantor served as visiting professor at New York University (1952–63) and at the University of Maryland (1963–64). He lectured often at universities and professional societies in the U.S. and, beginning in 1974, often lectured and gave seminars at universities in Mexico.

Among Kantor’s major works are *Principles of Psychology*, 2 vols. (1924, 1926), *An Objective Psychology of Grammar* (1935), *Psychology and Logic*, 2 vols. (1945–50), *Problems of Physiological Psychology* (1947), *The Logic of Modern Science* (1953), *Interbehavioral Psychology* (1958, 1959²), *The Scientific Evolution of Psychology*, 2 vols. (1963, 1969), *Psychological Linguistics* (1977), *Cultural Psychology* (1982), *Tragedy and the Event Continuum* (1983), and *Psychological Comments and Queries* (1984).

[William N. Schoenfeld / Ruth Beloff (2nd ed.)]

KANTOR, JUDAH LEIB (1849–1915), founder of the first Hebrew daily newspaper. Born in Vilna, he became a devotee of the Haskalah in his youth, graduated from the Government Rabbinical Seminary in Zhitomir, and also studied medicine in Berlin. After editing **Ha-Zefirah* in Berlin (1874–75) and

the Russian weekly *Russki Yevrey* (The Russian Jew, 1879–84), he founded the Hebrew daily **Ha-Yom* in 1886, a bold publication venture for the time. As a supplement to *Ha-Yom*, for which he wrote most of the articles under various pseudonyms, Kantor issued a scientific-literary monthly, *Ben-Ammi* (of which four issues appeared).

At first *Ha-Yom* was successful, but competition with the established papers, **Ha-Meliz* and *Ha-Zefirah*, which also became dailies under its influence, led to its demise. The failure of Kantor's literary projects was partly caused by his negative attitude to the *Ḥibbat Zion* movement, which alienated the only circles who regarded Hebrew and Hebrew literature as a vital national need. From 1888 to 1890 Kantor was one of the editors of *Ha-Meliz*; he also edited the Yiddish weekly, *Dos Yidishe Volksblat*.

Kantor was a representative of the last generation of *maskilim* in Hebrew literature who believed that Haskalah held the cure for all Jewry's ills and were unable to accept the nationalist and Zionist movements. In his last years he served as an official rabbi in Libau (1890–1904), Vilna (1905–08), and Riga (1909–15).

[Yehuda Slutsky]

KANTOR, MICHAEL (“Mickey”; 1939–), U.S. lawyer and lobbyist. Kantor was U.S. representative to the World Trade Organization (WTO) and then as secretary of commerce in the Clinton administration served as a staunch advocate of free trade and a tireless foe of restrictive trade barriers abroad. The scion of Nashville-based furniture retailers, Kantor attended Vanderbilt University, where he became a star shortstop for the baseball squad. Graduating in 1961, Kantor served four years as a lieutenant in the U.S. Navy, later studying law at Georgetown University Law Center, where he graduated in 1968. In 1972, he worked as a staff coordinator for vice presidential candidate R. Sargent Shriver during George McGovern's unsuccessful bid for office. After representing migrant farm groups as an anti-poverty lawyer and founding the Los Angeles Conservation Corps in 1973, Kantor managed Senator (D-California) Alan Cranston's reelection. In 1976, Kantor joined the Los Angeles lobbying firm of Manatt, Phelps, Phillips & Kantor, where he represented entertainment industry clients such as the U.S. National Cable Television Association as well as companies such as Occidental Petroleum, Lockheed, Philip Morris, and General Electric. Kantor specialized in securing market access and growing foreign markets through trade, direct investment, joint ventures, and strategic business alliances. Failure to repeat his success in ensuing political campaigns did not prevent Kantor, a friend of Hillary Clinton and an apt fundraiser and political dealmaker, from helping Bill Clinton secure the Democratic Party nomination and the presidency in 1992. Named to the Clinton transition team, Kantor became U.S. representative to the WTO in Janu-

ary 1993, a position he held until 1996, when he took over as commerce secretary after the death of Ron Brown in an airplane crash. Kantor left the Cabinet in 1997, involving himself in Clinton's efforts to fend off impeachment. That year, Kantor joined Mayer, Brown, Rowe & Maw, LLP, a Washington-based legal firm specializing in global project finance, and Morgan & Stanley Co. Inc. as a senior advisor. After a year's hiatus from politics, he lobbied on behalf of the American wheat industry and other major clients.

Described as “gruff,” “prodigiously tempered,” and possessing the “tact of a pit bull,” Kantor traumatized the international community, alternately charming and browbeating counterparts and governments from Canada and Mexico to China and Japan. During negotiations with Japan on behalf of American automakers, Kantor presented his opposite number, Ryutaro Hashimoto, a kendo martial-arts sword symbolizing courage, honesty, integrity, and patience. Hashimoto, who would become Japan's prime minister, is reputed to have feared that Kantor might use it on him, declaring that “He's scarier than my wife when I come home drunk.” As Clinton's trade enforcer, however, Kantor proved unusually successful, negotiating hundreds of trade agreements that generated close to \$100 billion in contracts for U.S. businesses. Kantor's achievements were offset by several personal tragedies, including the loss of his wife in a passenger-jet crash in 1978, and of a 17-year-old son in a car accident ten years later. He has two grown children and a nine-year-old daughter by his second wife, former NBC reporter Heidi Schulman.

[Sheldon Teitelbaum (2nd ed.)]

KANTOROVICH, LEONID (1912–1986), Soviet mathematician and economist, joint winner of the Nobel award for economics in 1975. A member of the Soviet Academy from 1958, he was also a winner of the Stalin (1949) and Lenin (1965) Prizes. He was a professor at Leningrad University in 1934–60. However, his position was weakened during the last years of Stalin's life, and his methods were criticized as “bourgeois science.” His applications of mathematical methods to economic planning were not favored by the Soviet leadership. However after 1953, he was again recognized and became a professor at Leningrad University, and at the Moscow Institute for Management of the People's Economy, apart from teaching in the Novosibirsk Mathematics Institute. The Nobel award called him “the leading representative of the mathematics school in Soviet research” and noted that in his book *The Best Use of Economic Resources*, he analyzed conditions for efficiency in an economy as a whole and demonstrated the connection between allocation of resources and the process of economic growth. He contended that a deficient Soviet investment policy has failed to achieve optimum economic growth.

KANTOROWICH, ROY (1917–1996), South African architect and town planner. Born in South Africa, the son of a Transvaal pioneer, Kantorowich won an international repu-

tation for town planning. In Israel, he was responsible for the master design and detailed plans for the town of *Ashkelon. In South Africa he planned a number of large-scale civic and industrial projects. These included the foreshore development scheme in Cape Town, the design for the Transvaal steel center of Vanderbijlpark, a central redevelopment scheme for Pretoria (with the British expert Lord Holford), and plans for several smaller towns. He prepared the winning design (with Jack Barnett) for the civic center in the new Orange Free State goldfields town of Welkom. He acted as consultant town planner for the city of Port Elizabeth and, with Lord Holford, advised on the replanning of central Durban.

Kantorowicz was president of the South African Institute of Town Planners in 1960. From 1961 he held the chair of town and country planning at the University of Manchester, England.

[Louis Hotz]

KANTOROWICZ, ERNST HARTWIG (1895–1963), German medieval historian. Born and educated in Prussia, he joined the army in World War I and was wounded at Verdun. At Heidelberg, Kantorowicz carried out research in ancient and then in medieval history and produced his first and most famous book *Kaiser Friedrich der Zweite* (2 vols., 1927), which combined deep historical insight with literary skill and imagination. Critics who termed his interpretation a *Mythenschau* were silenced by *Kaiser Friedrich der Zweite: Ergaenzungsband* (1931). The book ran through several editions and was translated into English (*Frederick the Second*, 1931) and into Italian. In 1930, Kantorowicz was appointed professor of medieval history at Frankfurt. Dismissed by Nazi pressure in 1934, he went to Oxford as a lecturer and from there to the U.S. to the University of California (Berkeley) from 1940 to 1949, and after 1951 as professor at the Institute for Advanced Study at Princeton. In America, Kantorowicz studied the nature of theocratic kingship as revealed in patristic, liturgical, and archaeological sources. He created a new area of studies, political theology, in *Laudes regiae* (1946, 1958²), in *The King's Two Bodies* (1957), and in many papers which were later collected in his *Selected Studies* (1965).

BIBLIOGRAPHY: Y. Malkiel in: *Romance Philology*, 18 (1964), 1–15; F. Baethgen, in: *Deutsches Archiv fuer Erforschung des Mittelalters*, 21 (1965), 1–17 (incl. bibl.).

[Helene Wieruszowski]

KANTOROWICZ, HERMANN (1877–1940), German jurist. Born in Posen, Kantorowicz became assistant lecturer at the University of Freiburg in 1908 and professor extraordinary in 1913. In 1923 he was made a member of the German parliamentary commission investigating the origins of World War I and the war debt question, and in 1929 was appointed full professor of jurisprudence and criminal law at the University of Kiel. He was removed from his post by the Nazis in 1933 and immigrated to the United States, where he taught at Columbia and New York universities. In 1935 he settled in

England, where he lectured and conducted legal research at the universities of London, Oxford, and Cambridge.

Kantorowicz was an authority on jurisprudence and legal history. He was the author of numerous works on jurisprudence, including *Kampf um die Rechtswissenschaft* (1906); *Rechtswissenschaft und Soziologie* (1911); *Der Geist der englischen Politik* (1929); *The Spirit of British Policy*, 1931) and *Dictatorships* (1935). In his last work, *Studies in the Glossators of the Roman Law* (1938), he examined the development of Roman law in the Middle Ages.

Silberg, "Hermann Kantorowicz und die Freirechtswissenschaft" (Dissertation; 2004); D. Ibbentson, "Hermann Kantorowicz and Walter Ullmann," in: J. Beatson, R. Zimmermann (eds.), *Jurists Uprooted – German-speaking Émigré Lawyers in Twentieth-Century Britain* (2004), 269–98.

[B. Mordechai Ansbacher]

KANTROWITZ, ADRIAN (1918–), U.S. cardiovascular surgeon born in New York City. He graduated as an M.D. from Western Reserve University (1943). After training in cardiovascular physiology, he became director of surgical services at Maimonides Medical Center in Brooklyn and professor of surgery at New York State University (1964–70), and chairman of the department of surgery at Sinai Hospital, Detroit (1970). He was also director of the biotechnology company LVAD of Detroit. He was a pioneer in bioengineering relating to the heart and cardiovascular surgery. He devised a plastic heart valve, a heart-lung machine, an internal pacemaker, the first partial mechanical heart implanted in humans, a machine recording blood loss during open heart surgery, devices to aid the failing heart ventricle to pump blood more effectively, and techniques for taking films inside the living heart. He carried out the world's second heart transplant (1967). His bioelectronic techniques have also been used to control bladder function in paraplegics. He won the Max Berg Award (1966).

[Michael Denman (2nd ed.)]

KANTROWITZ, ARTHUR (1913–), U.S. physicist and aerodynamicist. Kantrowitz, who was born in New York, worked with the National Advisory Council on Aeronautics from 1935–46, and for the next ten years was professor of aeronautical engineering and engineering physics at Cornell University. From 1956 he was director of the Avco-Everett Research and Laboratories and of Avco Corporation. His numerous scientific papers have been concerned with supersonic axial flow compressors, the effect of molecular vibrations on gas dynamics, magnetohydrodynamic generators, shock tube studies, shock waves in the interplanetary plasma, and the re-entry of space vehicles into the earth's atmosphere. He invented the high-intensity molecular beam which has been instrumental in several Nobel Prize-winning research projects. Kantrowitz also worked in medical engineering in the development of cardiac-assist devices.

[Samuel Aaron Miller]

KAPLAN, ABRAHAM (1918–1993), U.S. philosopher. Born in Odessa, Ukraine, Kaplan was the son of a rabbi and the youngest of eight children. The Kaplan family immigrated to the United States in 1923. Kaplan graduated high school in Duluth at the age of 14. He won five national debating awards at Duluth Junior College and the College of St. Thomas. He studied philosophy at the University of Chicago under Rudolf Carnap and visiting lecturer Bertrand Russell, with whom he became close friends.

Kaplan received his Ph.D. from the University of California in 1942, and taught philosophy there for many years. He taught in many other universities including Harvard, Columbia, and the University of Michigan and in 1966 was named by *Time* Magazine as one of the ten great teachers of America. He was director of the East-West Center in Hawaii and was chairman of the Israeli Philosophical Society. In 1972 Kaplan moved to Israel to join the Haifa University as dean of the philosophy-sociology department. The Haifa University, which had just been established, was seeking renowned Jewish professors to join the university's faculty. Kaplan was the only professor to oblige, fulfilling his and the Zionist aspirations of his wife, Iona.

Kaplan's philosophical interests were broad in scope, including ethics, aesthetics, political theory, and methodology of the social sciences, as well as Oriental philosophy and philosophy of religion, including Ḥasidic thought. He wrote *Power and Society* (with W.H.D. Lasswell, 1950); *The New World of Philosophy* (1962); *American Ethics and Public Policy* (1963); *Conduct of Inquiry* (1964); *Love... and Death* (1973) and *In Pursuit of Wisdom* (1977). He also published about a hundred articles in professional journals and became associate editor of *Philosophy East and West* in 1951. Kaplan's motto was "Interest in everything." As Kaplan said of himself: "I am by training a positivist, by inclination a pragmatist, in temperament a mystic, in practice a democrat; my faith Jewish, educated by Catholics, a habitual Protestant; born in Europe, raised in the Midwest, hardened in the East, softened in California and living in Israel."

[Eyal Diskin (2nd ed.)]

KAPLAN, ALEXANDER SENDER BEN ZERAH HAKOHN (d. 1884), Lithuanian rabbi. Few biographical details are known about him. Kaplan served first as *dayyan* in Wilkomierz (Ukmerge), but was later appointed rabbi of Kupishki (Kupiskis) in the district of Ponevezh (Panevezys), where he served for 40 years. He is best known for his *Shalmei Nedarim* (1881), a comprehensive commentary on tractate *Nedarim. He regarded the compilation of a commentary on tractate *Nedarim* as of prime importance, because many errors had crept into it through the fault of the printers. Already in the previous generations this had resulted in *haggahot* being added to it by both Isaiah *Berlin-Pick and Samuel Straschun. Appended to the volume is *Millu'im li-Shelamim* containing a letter from Elijah David Rabinowitz-Teomim on a halakhic problem submitted to Kaplan, and his reply. Another respon-

sum by Rabinowitz-Teomim to Kaplan is mentioned in the *Shalmei Nedarim* (p. 470). Kaplan's notes on the Talmud remain in manuscript.

BIBLIOGRAPHY: D. Kamzon et al., *Yahadut Lita, Temunot ve-Ziyyunim* (1959), 95, 237; *Yahadut Lita*, 3 (1967), 305, 343.

[Yehoshua Horowitz]

KAPLAN, ANATOLI LVOVICH (1902–1980), Russian draftsman and lithographer. Kaplan studied at the Leningrad Academy from 1921 to 1927 and then he worked as a stage designer for ten years. He became a member of the Union of Soviet Artists in 1939 and his work was regularly shown in Russia. In 1941 he was commissioned to arrange the Jewish exhibit in the Leningrad Ethnological Museum. Kaplan started doing lithographs in 1937. His prints are inspired by Jewish tradition and Russian folklore. An emphasis on decorative elements imbues many of his works with a fairy tale quality. Kaplan drew illustrations to *Shalom Aleichem's *Kasrilovka* (1937–41), *The Bewitched Tailor* (1953–57); and *Tevye the Milkman* (1957–61). The series "Views of Leningrad" (1946), executed during the days of the blockade, were acquired by many Russian museums. He also created lithographs for *Song of Songs* (1958–60), *Yiddish Folk Songs* (1959–60), and *The Little Goat* (1958). Kaplan, even at this late date, caught the atmosphere of the Jewish shtetl with simplicity and humor and succeeded in conveying the poetic mood of the literary sources.

BIBLIOGRAPHY: *Kaplan* (catalog of the Bezalel National Museum Jerusalem, 1962).

[Elisheva Cohen]

KAPLAN, ARYEH (1934–1982), U.S. scholar and author. Kaplan was a teacher of Judaism who had profound influence on the Teshuvah movement of the late 1950s and 1960s. He was a foremost figure in the Jewish meditation movement, a thinker and writer whose translations, commentaries, and essays inspired thousands of young Jews to a deeper connection with the Jewish religious tradition.

Born in the Bronx, Kaplan came from a family whose origins were in Salonika, Greece. He was educated in the Torah Voda'ath and Mir yeshivot in Brooklyn. Subsequently, he was ordained by Rabbi Eliezer Yehuda Finkel of the Mir Yeshivah in Jerusalem. Trained as a scientist (he was for a time the assistant of world-renowned physicist J. Robert Oppenheimer), he chose instead to devote his life to the teaching of Judaism.

Kaplan's writing career began in the early 1970s with booklets of the Young Israel Intercollegiate Hashkafa Series. Other booklets dealing with the fundamentals of Jewish observance were published by the Orthodox Union, and its youth wing, National Conference of Synagogue Youth (NCSY). He also wrote anti-missionary works, which were combined into the volume *The Real Messiah* (1976).

Kaplan was a pioneer in the study and teaching of Breslov Ḥasidism. On the initiative of Rabbi Zvi Aryeh Rosenfeld, who was the leading English-speaking Breslover teacher

in the U.S., he made the first reliable translation into English of Rebbe Nachman's writings.

He translated into English and wrote notes and introductions to classic works on the great classics of Jewish Mysticism, the *Bahir* ("Book of Illumination," 1989) and *Sefer Yezirah* (1997), which he elucidates in terms of traditional Kabbalistic doctrine, providing details of esoteric practice not ordinarily discussed in printed form. He also wrote three works on Jewish meditation.

In his works *Meditation and the Bible* (1989) and *Jewish Meditation* (1995) he considers meditation in relation to current Jewish practices through the prism of biblical texts and kabbalistic commentaries upon them.

His capacity for work was extraordinary as reflected in his more than 50 published books. His works ranged over a wide variety of subjects including Hasidism, Kabbalah, and *Aggadah*.

[Shalom Freedman (2nd ed.)]

KAPLAN, CHAIM ARON (1880–1942), educator and diarist of the Holocaust. Kaplan was born in Gorodishche, Belorussia. He received a talmudical education at the famous yeshivah of Mir and later studied at the Government Pedagogical Institute in Vilna. In 1902 he settled in Warsaw, where he founded a pioneering elementary Hebrew school, of which he was principal for 40 years. The school was known as "the Sixth Grade Grammar Elementary School of Ch. A. Kaplan." Kaplan was an exponent of the direct method of language teaching, in which Hebrew was taught as a spoken language, using the Sephardi pronunciation. Stubbornly following this system, despite strong opposition from exponents of traditional methods, he published several Hebrew textbooks advocating his method. An ardent Hebraist, he participated actively in the Society for Jewish Writers and Journalists in Warsaw, and contributed to many Hebrew and Yiddish periodicals.

Kaplan visited the United States in 1921. In 1936 he visited Erez Israel, intending to settle there in order to be with his two children who had emigrated there earlier, but was unable to obtain a position and returned to Warsaw. In 1937, Kaplan published a book in Hebrew called *Pezurai*, a collection of essays and articles on the Hebrew language and Jewish education that he had published during the 40 years of teaching. He also wrote Hebrew grammar and children's textbooks on Jewish history and customs.

Kaplan's Judaism seems to have been based on national and historic allegiance, rather than on traditional observance. Something of an introvert, he made books his friends and the walls of the academies his companions. At times he felt that his ambition to be independent was a primary obstacle to him in attaining leadership in the Warsaw community, and for that reason he was unable to develop his full talents and intellectual abilities. On the other hand, the fact that he was a respected member of the community gave him comfort and satisfaction.

Kaplan began a personal diary as early as 1933. This trained him for the mission he undertook at the beginning of World War II, to devote all his efforts to preserving a record for posterity. No diarist, of course, can be fully objective, even in a less tormented time than Kaplan's. Yet his intention of objectivity is carried out with remarkable tenacity, and with increasing dedication in the face of hardship, as the dreadful events increased his own physical and emotional suffering and his anguish at the mounting tragedy around him. It is significant that, although he had suffered from diabetes since 1928, there is no mention of this illness in his diary dealing with the war years. The diary has been preserved in toto, having been smuggled out of the Warsaw Ghetto before its total destruction. Kaplan himself was largely responsible for the miracle of its preservation. In 1942, when he knew that the Nazi noose was around his neck, he gave it to a Jewish friend named Rubinsztejn, who was working daily at forced labor outside the ghetto, returning each evening. Rubinsztejn smuggled the notebooks out one by one, handing them over to a Pole.

Kaplan's Hebrew script is clear and beautiful, with no erasures, a remarkable feat in view of the almost impossible conditions under which it was written. At the worst moments, on the brink of destruction, Kaplan sustained himself with the hope that the diary would be saved. His own future worried him little; the fate of his chronicle was his main concern. This concern increased in proportion with the daily atrocities of the Nazis. During the most tragic days, in the midst of frenzied flight from one place to another, he felt himself obligated to quicken the pace of his work. He wrote several times a day in order to include every detail of the horror surrounding him. It was not easy to "catch with the pen the knife which cuts down ceaselessly without a drop of pity," but he continued to record events with amazing regularity. Thus he writes in his last entry (August 4, 1942) during the Great Aktion that began on July 23 and lasted until September, "If the hunters do not stop, and if I am caught, I am afraid my work will be in vain. I am constantly bothered by the thought: If my life ends, what will become of my diary?"

The diary records the daily events and experiences of the author and the ghetto community. The heart of a pained, dedicated educator is revealed when he describes the yearning of the children for a bit of nature, the sight of a tree, or a blade of grass. A smile – the laughter of the condemned – illuminates his description of the bringing of the gypsies to the ghetto, for the gypsies, too, according to the Nazi ideology, were of inferior race.

The diarist has an eye for detail as well for major trends. He is concerned with politics as well as with philosophy. Since the diary was his constant companion, Kaplan poured into it a great deal of his intellectual life – his thoughts, his information, and all the conversations he had with his friends. He is not detached from the scene; indeed, he apparently sought out all possible first-hand information and his descriptions deal with the mood of the time, the hour of occurrence. Many seeming contradictions are really the hourly changes of those

fantastic times, with the result that at times he condemns the leaders of the Jewish community and at times praises them. He had no use for Adam *Czerniakow, the president of the *Judenrat whom he accused of usurping power at a time when the Warsaw Jewish community was powerless to elect a leader. Yet when Czerniakow committed suicide because he could no longer bring himself to deliver Jews to the Nazis, Kaplan wrote a noble eulogy of him, commenting: "His end proves conclusively that he worked and strove for the good of his people, though not everything that was done in his name was praiseworthy. Czerniakow earned immortality in a single instant." The diary has been translated into English, German, French, Danish, and Japanese.

[Abraham I. Katsh]

KAPLAN, ELIEZER (1891–1952), Israeli financial leader and politician, member of the First and Second Knessets. Born in Minsk in White Russia, as a child he studied in a *heder* and later on in a Russian gymnasium. Kaplan received a diploma in construction engineering from the Higher School for Technology in Moscow in 1917. In 1915 he joined the Socialist Zionists, and in 1918 *Zē'irei Zion*, becoming a member of its Central Committee and representing it on the Zionist Central Committee. In the course of World War I Kaplan was active in helping Jewish refugees and at the end of the war was a member of the Jewish delegation from Russia that participated in the *Comité des Délégations Juives, which represented the Jewish people at the peace negotiations at Versailles in 1919. In 1920 Kaplan was one of the initiators of the union between part of *Zē'irei Zion* and *Ha-Po'el ha-Zair*, that came to be known as *Ha-Hitahadut ha-Olamit*, and whose program was "pioneering and labor in Eretz Yisrael and popular socialism." He represented the *Hitahadut* at the London Zionist Conference in 1920 and was elected to the Zionist Executive.

Kaplan immigrated to Palestine in 1920, but was immediately sent to run the office of *Zē'irei Zion-Ha-Po'el ha-Zair* in Berlin. He returned to Palestine in 1923 and served as a member of the executive of the Public Works Department in the *Histadrut, that was later renamed *Solel Boneh*, and became a member of the *Histadrut Executive*. In 1923–25 he ran the technical department in the Tel Aviv municipality, and in 1925–33 was a member of the Tel Aviv Council. He was also a member of the *Ha-Po'el ha-Zair Central Committee*, and was one of the initiators of the union between *Ha-Po'el ha-Zair* with *Ahdut ha-Avodah* in 1930, and the foundation of *Mapai, becoming a member of its Central Committee. Within Mapai he was considered a moderate. In 1933–48 Kaplan served as the treasurer of the *Jewish Agency and was a member of its Executive; in 1943–48 he also served as head of its Settlement Department. As treasurer he managed to attain loans abroad

and made great efforts to introduce strict supervision over expenditure. He was among the initiators and implementers of all the major Zionist economic enterprises of the period. In those years he supported Chaim *Weizmann on the issue of moderation in the struggle against the British authorities, and opposed David *Ben-Gurion's activist line. During the transitional period toward the establishment of the State of Israel, he directed the financial affairs of *Minhelet ha-Am* (the People's Administration) and was appointed minister of finance in the Interim Government after the establishment of the State. Kaplan laid the foundations for the financial and fiscal policy of the State of Israel, and helped shape its policy toward the various branches of the economy, being particularly interested in the development of agriculture. In 1949 he obtained the first loan from the U.S. Ex-Im Bank. He also contributed to the organization of the Israel Bonds drive in the U.S. Kaplan served as minister of finance until June 1952, and resigned as a result of poor health, serving as deputy prime minister until his death in July. He published several books on the economy of Israel.

[Susan Hattis Rolef (2nd ed.)]

KAPLAN, ISAAC (1878–1976), leader of Jewish farmers in Argentina and veteran Zionist. Born in Svisloch, Belorussia, in 1895 Kaplan arrived in Argentina with his family and went directly to Colonia Clara in Entre Ríos, one of the colonies of the Jewish Colonization Association. Together with Miguel Sajaroff and Noé Yarcho, Kaplan was among the most enthusiastic promoters of the cooperative movement among the colonists through his work in the Fondo Communal of Clara, founded in 1904. Kaplan advocated the doctrines of the Fondo Communal, which began as an institution to help the colonists and later developed into a cooperative, in articles in *Colono Cooperador* (the Jewish settlers' monthly paper), which he headed from 1921 to 1947. He also held executive positions in the Federación Agraria Israelita Argentina, founded in 1925, and was an active participant in various national and provincial agrarian congresses. He promoted the passage of various laws in the Argentinian parliament for the welfare of all colonists and was appointed to serve on several projects by the secretary of agriculture. He was also one of the founders of the Zionist organizations in the Jewish colonies and held leading positions in the major Jewish institutions in Buenos Aires (e.g., the Federación Sionista Argentina, over which he presided for eight years; the JNF; Keren Hayesod; and DAIA).

[Victor A. Mirelman]

KAPLAN, JACOB (1895–1994), French rabbi and author. Born in Paris, Kaplan served with distinction in World War I and later graduated from the Sorbonne (1919) and the Séminaire Israélite de France (1921). He held rabbinical posts in Mulhouse, Alsace (1922), and in Paris (1929). During the German occupation he worked with the resistance movement.

He served briefly as interim chief rabbi of France (1944) and later became chief rabbi of Paris (1950). He participated in the creation of the Jewish-Christian friendship movement (1948) and in 1953 negotiated the return to their family of the *Finally children. He was appointed to the post of chief rabbi of France in 1955. He retired as chief rabbi of France at the end of 1980 and was appointed honorary chief rabbi. Kaplan openly proclaimed French Jewry's solidarity with the State of Israel during the period of the Six-Day War and after, when French official policy was hostile to Israel. Apart from his Jewish scholarship, Kaplan was also a lecturer at l'Institut d'Etudes Politiques and a member of the Académie des Sciences Morales et Politiques in Paris (1967). His published works include *Le Judaïsme et la justice sociale* (1937), *Racisme et Judaïsme* (1940), *French Jewry under the Occupation* (1945–46), *Le Judaïsme dans la société contemporaine* (1948), *Témoignages sur Israël* (1949), *Les Temps d'Épreuve* (1952), and *Notice sur la vie et les travaux de Georges Duhamel* (1968).

[Lucien Lazare]

KAPLAN, JOHANNA (1942–), U.S. author and teacher. Born in New York City, Kaplan became a teacher of emotionally disturbed children in the New York City school system and at Mt. Sinai Hospital. At the same time, she developed an interest in writing and following the publication of a collection of short stories and a novel was recognized as a significant talent among the younger generation of Jewish writers.

Her short stories collection, *Other People's Lives* (1975), revealed her sensitive development of character and dialogue, a talent exploited to the full in her first novel *O My America!* (1980). *O My America!* describes the life of a famous radical, Ezra Slavin, as told after his death by one of his children. The book follows Slavin's early years on the Lower East Side, his intellectual rise, and his attempted dissociation from his Jewish roots. As it unfolds, the novel also surveys several generations of the Jewish experience in America.

Johanna Kaplan also contributed book reviews to the *New York Times* and other journals.

[Susan Strul]

KAPLAN, JOSEPH (1902–1991), geophysicist. Kaplan was born in Tapolcza, Austro-Hungary, and moved with his family to Baltimore at the age of eight. He received his B.Sc. in chemistry in 1924 and his Ph.D. in physics in 1927 at Johns Hopkins University, Baltimore, after which he was a research fellow at Princeton University before moving to the University of California at Los Angeles (UCLA) in 1928. He remained at UCLA for the rest of his life. At UCLA he was a full professor from 1940, chairman of the Department of Physics (1939–44), and director of the Institute of Geophysics (1946–47). Kaplan's laboratory work simulated the atomic and molecular reactions which occur in the earth's upper atmosphere. His subsequent work characterized the physical nature of nitrogen in the upper atmosphere and the atmospheric bands of oxygen which contribute to the light of the night sky. With colleagues he

founded the science of "aeronomy," which studies the physics of the planetary atmosphere. Kaplan was an enthusiastic undergraduate and graduate teacher. He also contributed to the World War II program training U.S. Army Air Force weather officers. He was an outstanding contributor to international organizations concerned with geophysics, including the presidency of the International Union of Geodesy and Geophysics (1963). His many honors included membership in the U.S. National Academy of Sciences (elected 1957). He was an honorary member of the Board of Governors of the Hebrew University of Jerusalem and a member of the Board of Governors of the Weizmann Institute of Science.

[Michael Denman (2nd ed.)]

KAPLAN, LOUIS LIONEL (1902–2001), U.S. educator. Kaplan was born in Slonim, Russia, was taken to the U.S. in 1909, and educated in New York. From 1930, he served as executive director of the Baltimore Board of Jewish Education. He was president of the Baltimore Hebrew College, now *Baltimore Hebrew University, from 1930 to 1970. He was president of the National Council for Jewish Education (1939–41); and from 1940, he was a member of the board of governors of *Dropsie College, Philadelphia. He was also a member of the Board of Regents of the University of Maryland from 1952. He wrote *A New Approach to the Teaching of the Torah* (1942) and edited Hebrew texts and readers. Kaplan viewed Jewish education as an instrument for helping the individual, through a study of the unique Judaic religious-historical tradition, to find his place in the larger society of which he is a part.

From 1975 to 1981, he served as an interim rabbi at the Beth Am Synagogue in Baltimore.

With Theodor Schuchat, Kaplan wrote *Justice, Not Charity: A Biography of Harry Greenstein* (1967).

Baltimore Hebrew University has established the Louis L. Kaplan Prize in Hebrew Literature; and the University of Maryland awards the Louis L. Kaplan Scholarship to its most outstanding undergraduate student leaders.

ADD. BIBLIOGRAPHY: J. Fruchtman (ed.), *A Life in Jewish Education: Essays in Honor of Louis L. Kaplan* (1997).

[Leon H. Spotts / Ruth Beloff (2nd ed.)]

KAPLAN, MORDECAI MENAHEM (1881–1983), rabbi, philosopher, educator, activist, and founder of the *Reconstructionist school of thought. Kaplan was born in Svencian, Lithuania. His father, Israel Kaplan, was a talmudic scholar who immigrated to the United States in 1888, where he was joined a year later by his wife, Anna, and their two children, Sophie and Mordecai. Kaplan's early education was strictly Orthodox, but by the time he reached secondary school, he had been attracted to heterodox opinions, particularly regarding the critical approach to the Bible. After his ordination from the *Jewish Theological Seminary of America, he became the minister and superintendent of education of Kehilath Jeshurun, a noted Orthodox synagogue in New York City. It was only in 1908, when he was granted traditional ordination by

Rabbi Isaac Jacob *Reines, that the synagogue was prepared to honor the title of rabbi that had been conferred upon him by the Seminary. Meanwhile Kaplan had become uncomfortable at Kehilath Jeshurun, because by then he realized that he could no longer serve an Orthodox congregation in good conscience.

In 1909, Solomon *Schechter invited Kaplan to become the principal of the newly established Teachers Institute of the Jewish Theological Seminary. Shortly thereafter, he also began to teach homiletics as well as Midrash in the Seminary's rabbinical department. Later on, he began to teach philosophies of religion as well. For over 50 years, Kaplan influenced the thinking of Conservative rabbis. He spoke to their existential spiritual problems in light of contemporary philosophical and sociological developments and, in his view, the breakdown of traditional theology. Even those who disagreed with his views appreciated his direct approach. They were impressed by his emphasis on intellectual honesty in confronting the challenges posed by modern thought to traditional Jewish beliefs and practices. In his approach to Midrash and philosophies of religion, Kaplan combined scientific scholarship with creative application of the texts to contemporary problems. Kaplan's Reconstructionist philosophy influenced not only his own immediate students, but through them and through his extensive writings and public lectures over several decades, the American Jewish community at large. Many of his ideas, such as Judaism as a civilization (and not merely a religion or nationality), bat mitzvah, egalitarian involvement of women in synagogue and communal life, the synagogue as a Jewish center and not merely a place of worship, and living as Jews in a multicultural society, eventually came to be accepted as commonplace and implemented in all but strictly Orthodox segments of the community.

Kaplan was undoubtedly a product of his times. But he was also a cultural innovator. All advances in human thought are generated by seminal minds working on the knowledge they have acquired from equally creative thinkers. Early in his career, Kaplan became a devotee of the scientific and historical study of the Bible. He was the leading educator to confront rabbis, teachers, and laity with the changes in Jewish thought that had become necessary once the Bible had been exposed to modern techniques of examination and interpretation. But far from denigrating the genius of the biblical text, Kaplan taught his students to regard it as an indispensable source for an understanding of Jewish peoplehood and Jewish civilization.

Kaplan was a voracious reader. References in his published writings and in his Diaries are a veritable catalogue of the outstanding thinkers of ancient, medieval and modern times. Nonetheless, it can be said that for the most part, Kaplan's ideas were part of the *Zeitgeist* but not carbon copies of the thought of the men and women he quoted.

Kaplan did not live in an ivory tower. Although he produced studies on M.H. *Luzzatto and Hermann *Cohen, he was not primarily interested in academic scholarship. Instead, he focused on teaching future rabbis and educators to rein-

terpret Judaism and to make Jewish identity meaningful under modern circumstances. This was also the focus of many of his sermons and cross-continental lectures. He was heavily involved in communal efforts to improve Jewish education and was one of the founders of the New York Kehillah. He became the first rabbi of the Jewish Center, when it opened in 1918. Due to ideological conflicts with the Center's lay leadership, he resigned his position and, in 1922, organized the Society for the Advancement of Judaism. In 1935, he and his colleagues published the first issue of *The Reconstructionist*. A few years later, he participated in the founding of the Jewish Reconstructionist Foundation.

Kaplan was frequently called upon to participate in Zionist affairs. In 1925, when the Hebrew University of Jerusalem was officially opened, the American Zionist Organization sent Kaplan to Jerusalem as its official representative. His associations with Weizmann, Brandeis, Magnes, Ben-Gurion and other prominent figures constitute interesting chapters in Zionist history. In addition, Kaplan was very active in various aspects of Jewish social work and communal organization. He traveled the length and breadth of America to spread his ideas.

Kaplan's Philosophy of Judaism

In formulating his philosophy of Judaism, Kaplan drew upon classic rabbinic sources, as well as Jewish and non-Jewish philosophers, including the thinkers of the Haskalah, and the findings of the physical and human sciences. He defined Judaism as an "evolving religious civilization," attempting thereby to aid in the adjustment of world Jewry to the social and intellectual conditions of the 20th century. He maintained that as a civilization, the Jewish people possesses all the characteristics of land, language, political structure, culture, and other characteristics associated with that designation.

While Kaplan was always an ardent Zionist, he was equally convinced that the creative survival of the Jewish people in the free Diaspora was both possible and necessary. Although Jews had been forced for many centuries to live in exile, they had become a transterritorial people by choice. As long as Jews are free, they will live wherever they choose. And so, Kaplan thought, it is highly unlikely that the "ingathering of the exiles" will ever be fully implemented. Therefore, he never ceased to prod his people to formulate a new covenant, which would proclaim the centrality of Erez Israel in their transterritorial identity and state the historical and cultural elements of their unity and identity.

Jewish civilization, Kaplan argued, expresses its genius best in its historical religion. Religion entails clarifying the purposes and values of human existence, wrestling with God, whom Kaplan conceived in impersonal terms, and maintaining the vitality of the rituals of home, synagogue, and community. However, because Judaism is a civilization, the secular elements of culture are as essential as Jewish religion. These elements curb the frequent tendency of religion to foster rigidity, uniformity, and excessive worship of the past. For Kaplan,

Jewish religion should embrace all that pertains to the Jewish people's search for a meaningful existence for itself.

By "evolving," Kaplan means that Judaism should be considered from a pragmatic, historical point of view, rather than a metaphysical or revelational one. All concepts and rituals should be measured by their usefulness in sustaining individual and communal growth. The focus of Jewish life has to be the Jewish people, its needs and its response to challenge, rather than reliance on "revealed" texts or metaphysical constructions. Kaplan argued that the Jewish people will not and should not rely on a static theory of Judaism. After responsible study, each Jew must contribute his own understanding to solving the perplexities of life. Tradition must guide but not dictate. Kaplan fully embraced the pluralism inherent in his conception. He understood that his own naturalistic approach can be only an option. Henceforth, Jews will have to learn the art of compromise and how to orchestrate their differences with mutual respect.

Kaplan developed a concept of "sancta" by which he meant that civilizations differ from one another not so much ideationally in their ideas and values, which they claim are universally applicable, as they do existentially in the particular ways they express those ideas and values. For example, Kaplan designated as sancta texts, ritual and folk practices, festivals, or symbols which are regarded as sacred, namely as of special significance and as evoking respect and awe. The sancta of a civilization are continually subject to "revaluation," by which they are given new meaning, much as the term "democracy" was differently understood in ancient Athens from the way it is currently interpreted in the United States, or in totalitarian "people's democratic republics." Similarly, "God" and "Torah" were valued in different ways by Moses, Ezra, Hillel, and Maimonides. The ancient sancta of Judaism need to be subject to functional interpretation, by which Kaplan meant that we must understand how concepts and practices functioned in the lives of Jews over the centuries and how they might function today. Specifically, with regard to God, Kaplan argued that a functional interpretation of the theistic belief leads to an impersonal concept of God as cosmic process and not as a personal being. Like such nouns as parent, teacher, or president, God denotes function and not substance.

The most controversial aspect of Kaplan's thought is this pragmatic theology. Early in his career, he rejected the traditional notion of a personal God who intervenes in human affairs. Kaplan chose to emphasize the divine aspects of the universe and the creative forces that are embodied in our attempt to become fully human. His theology is complex and multi-layered. He explicitly rejected the terms naturalism and humanism to characterize his thought but rather looked to what he called transnaturalism, a realm beyond but not apart from the natural, where we find the reality of the divine.

In arguing that ideas of God are correlatives of ideas of man and the cosmos and therefore bear an organic relationship to man's understanding of himself and the world, Kaplan has been criticized for what is claimed to be his excessive re-

liance on human reason as expressed in the latest scientific theories of his day.

Nonetheless, it is noteworthy that some of the criticisms of Kaplan have only heightened the cogency of much of his thought. In defense of his theology, he exemplified intellectual modesty by pointing out that pluralism in this discipline was an ineluctable outcome of the uncertainties that seem to inhere in all efforts to plumb the depths of cosmic reality.

Kaplan was a strong supporter of the equality of women in Jewish life. He inaugurated the first bat mitzvah ceremony in 1922, when he called his daughter, Judith (*Eisenstein), to read from the Torah. He publicly advocated that Jewish rituals be reconstructed to include greater equality for women. Though his ideas were advanced for his time, he never attempted to revise the liturgy to be gender sensitive. But his call for reading the Bible as an inspired but man-made document, his demand for the equality of women, his insistence on adjusting liturgy to contemporary beliefs – these and other hallmarks of his philosophy are now generally accepted in all but strictly Orthodox ranks. One persistent criticism has related to what is mistakenly held to be Kaplan's failure to appreciate the primacy of emotion in worship. Kaplan, however, argued that emotion is purer when worshippers believe in the truth of the content of their prayers.

No understanding of Kaplan can be complete without reference to his Diaries, which are contained in 27 volumes of 300 handwritten pages each. The Diaries are an unmatched collection of autobiographical data, historical source material, philosophical reflection, literary criticism, sketches of innumerable persons, and reflections on life. The originals are housed in the library of the Jewish Theological Seminary of America.

On Denominationalism

For many years, Mordecai Kaplan sought to keep his philosophy of Judaism within the bounds of a school of thought. He resisted the pressure of some of his supporters to leave the Jewish Theological Seminary and accept the invitation of Rabbi Stephen S. *Wise to join the faculty of the Jewish Institute of Religion (founded in 1922), a move which might well have been the precursor of a new Jewish denomination. In 1927, Kaplan finally did resign his JTS position and accepted Wise's proposal. Although some of Kaplan's Seminary colleagues might have been pleased with this step, many students and alumni were not. Kaplan bowed to their pressure, withdrew his resignation, and remained at the Seminary until he retired in 1963. Despite his dissatisfaction with the Seminary, Kaplan believed that a new denomination would further fragment the American Jewish community. He advocated that Reconstructionism be conceived as a school of thought that could operate within all the streams in the American Jewish community. By the late 1940s, however, a number of laymen in synagogues throughout the United States decided to organize an independent federation of Reconstructionist synagogues. Kaplan was unable to forestall this development.

Meanwhile, some of Kaplan's primary supporters, including Rabbi Ira Eisenstein (his son-in-law), Solomon Goldman, Max Kadushin, Milton Steinberg, Joshua Loth Liebman, and Edward Israel urged him at various times to establish a new rabbinical school. In 1963, Kaplan retired from the Seminary at the age of 82. Within a short time, his supporters, led by Eisenstein, set up the Reconstructionist Rabbinical College, which is now located in Wyncote, Pennsylvania. Kaplan taught willingly at the College for a year or so. In addition to the slow growth of the Reconstructionist movement, which by the beginning of the 21st century included over a 100 congregations and havurot, increasing numbers of graduates of the Reconstructionist Rabbinical College and a successful summer camp, Kaplan's school of thought continues to permeate and to challenge other Jewish movements, especially the Reform, Conservative and modern Orthodox.

Literary Output

Although he began to publish books at what might be considered an advanced age, Kaplan was a prolific writer. His first and major work, *Judaism as a Civilization*, was first published in 1934, when Kaplan was 53. Other writings include *A New Approach to the Jewish Problem* (1924); the translation and editing of *Mesillat Yesharim*, by Moses Hayyim Luzzatto (1937); *The Meaning of God in Modern Jewish Religion* (1937); *The New Haggadah for the Pesah Seder* (1941); *The Faith of America* (ed. with Paul Williams, 1951); *Ha-Emunah ve-ha-Musar* (1954); *The Future of the American Jew* (1949); *A New Zionism* (1955); *Questions Jews Ask* (1956); *Judaism Without Supernaturalism* (1958); *The Greater Judaism in the Making* (1960); *Higher Jewish Learning* (1963); *The Purpose and Meaning of Jewish Existence* (1964); *Not So Random Thoughts* (1966); *The Religion of Ethical Nationhood* (1970); *If Not Now, When?* (with Arthur A. Cohen, 1973). Over the years, Kaplan was also the dominant figure in the production of the *siddurim*, *maḥzorim*, and other liturgical material of the Reconstructionist movement. Three of the above volumes have been translated into Hebrew: *The Meaning of God in Modern Jewish Religion*, *A New Zionism*, and *The Religion of Ethical Nationhood*. *Ha-Emunah ve-ha-Musar* appeared only in Hebrew. A full bibliography of over 400 items can be found in *The American Judaism of Mordecai Kaplan*, ed. by Emanuel S. Goldsmith, Mel Scult, and Robert Seltzer (1990).

KAPLAN, PESAḤ (1870–1943), Hebrew and Yiddish journalist. Born in Stawiski, Poland, Kaplan lived in Bialystok from

1888 and was active in Zionist circles, writing regularly in the Hebrew press. He also published a series of popular works and children's books in Hebrew. Later he moved away from Zionism, wrote in Yiddish, and served as journalist and editor of Yiddish periodicals. He was a member of the Judenrat in the Bialystok ghetto and perished in the Holocaust. Two diaries which he kept in the ghetto (on the Bialystok Judenrat, and on the expulsion of the Jews of Bialystok) are preserved in the archives of Yad Vashem in Jerusalem.

KAPLAN, ROBERT P. (Bob); 1936–), Canadian politician, lawyer, businessman. Kaplan was born in Toronto. He earned a B.A. (1958) and LL.B. (1961) from the University of Toronto, during which time he was awarded a number of academic prizes and wrote for the University's student newspaper and for the *Toronto Telegram*. Called to the Ontario Bar in 1963, he practiced corporate and tax law with several prominent firms. In 1968 he entered national politics, working on Pierre Elliott Trudeau's successful campaign for leadership of the Liberal Party. In the federal election that same year, Kaplan was elected to the House of Commons for Toronto's Don Mills riding. He lost his seat in the election of 1972 but was re-elected in 1974 in the heavily Jewish York Centre riding and held the seat until he retired from electoral politics in 1993.

In 1980 Trudeau appointed Kaplan to the cabinet post as solicitor general, responsible for Canadian law enforcement and for national security. He also held the post during the short-lived administration of Trudeau's successor, John Turner. Among Kaplan's contributions as solicitor general was overseeing a reorganization of the Royal Canadian Mounted Police and establishing the Canadian Security Intelligence Service. He also implemented the Young Offenders Act (1982), dealing with youth accountability for criminal actions, and reformed the Correctional Services of Canada. When the Liberals lost the 1984 federal election, Kaplan was personally re-elected in York Centre and became the Liberal opposition's justice critic.

Kaplan is best remembered in the Canadian Jewish community for his attempts to persuade a reluctant Liberal government to take action against war criminals living in Canada. The government, under Trudeau's influence, however, was wary of inciting inter-ethnic passions and refused to take action, despite strong lobbying by Jewish leaders. Nevertheless, Kaplan was able to extradite a Nazi war criminal, Helmut Rauca, to West Germany in 1982, where he was imprisoned.

Kaplan was honored with numerous awards, including the Order de la Pléiade for his service to francophonie in Canada. From 1994, he was honorary consul general of Kazakhstan in Canada and fostered relations and business contacts between that country and Canada. Kaplan was a member of committees at the University of Toronto, the Alliance Française in Toronto, the Canadian Jewish Congress, and B'nai

B'rith Canada. He sat on boards of a number of publicly traded companies and was a trustee of H&R REIT, one of Canada's largest real estate investment trusts, and a director of TV Niagara and European Goldfields.

[Frank Bialystok (2nd ed.)]

KAPLAN, SENDER MEYER (1914–1992), journalist and Zionist activist; honorary consul of Israel in Cuba. He was the son of Rabbi Zvi Kaplan, the spiritual leader of the Ashkenazi congregation Adath Israel in Havana (1929–31) and later of Knesset Israel (1931–41), Sender Kaplan emigrated from Poland to Cuba with his family at the age of 15. After serving a short time as an apprentice to a watchmaker, he began to work at the Yiddish periodical *Havaner Lebn*, serving as its editor from 1935 until it was closed down in 1960. *Havaner Lebn*, which was published twice a week, was the main Jewish periodical in Cuba, and Kaplan had a central role in shaping Jewish public opinion. An outstanding Zionist leader, he was the president of the Unión Sionista de Cuba in 1940–43. When JNF leader Nathan Bistrizky began to organize the Comité Cubano Pro Palestina Hebrea (the Cuban Committee for a Jewish Palestine) Kaplan served as the link with Cuban politicians and intellectuals. Thanks to his great devotion to the Zionist cause and to his close contacts in government circles, Kaplan was appointed honorary consul when the Consulate of Israel was opened in Havana (1952). In 1954 the Israeli ambassador in Mexico presented his credentials to President Batista, and Kaplan remained the only diplomatic representative of Israel residing in Havana until the Castro revolution. In 1961 Kaplan emigrated to Miami, where he continued to serve the Zionist cause. He worked as director of the Latin Department of the Jewish Federations of Greater Miami. He devoted the later years of his life to writing the history of the Jews of Cuba, but was unable to complete the work.

[Margalit Bejarano (2nd ed.)]

KAPLANSKY, KALMEN (1912–1997), Canadian labor leader and human rights advocate. Kaplansky was born in Bialystok, Poland, and, while still in his teens immigrated alone to Canada in 1929. He settled into Montreal's downtown Jewish immigrant community. A typesetter and linotype operator, during the Depression Kaplansky rose through the ranks of the labor movement. He was a delegate of Montreal Typographical Union 176 to the Trades and Labour Congress of Canada and, soon after, to the merged Canadian Labour Congress. In 1939, he helped organize the Jewish Labour Committee (JLC) in Canada, an offshoot of the American labor organization founded in 1933.

Kaplansky became the Canadian group's national director in 1946. Under his leadership the JLC was instrumental in forging the 1946 alliance of Jewish clothing manufacturers and labor leaders who convinced the federal government to open Canada's door to several thousand clothing workers from the Displaced Persons' camps in Europe. The JLC was also a key player in the tripartite committee of labor, manufactures, and

government responsible for selecting tailors in Europe for Canadian immigration.

A champion of human rights, Kaplansky was incensed by the discriminatory employment restrictions common in Canada, and organized the Joint Labour Committees Against Racial and Religious Discrimination, later known as the Labour Committees for Human Rights. He also convinced the Trades and Labour Congress of Canada and the Canadian Congress of Labour to establish parallel committees. Together they actively lobbied the Ontario government for legislation barring discrimination and, in large part, were responsible for the passing of the Ontario Fair Employment Practices Act in 1951 (subsequently used as a model for virtually all provincial and federal codes that followed), the Ontario Fair Accommodations Act in 1954, and, ultimately, the Ontario Human Rights Code. Kaplansky also pioneered efforts to eradicate discrimination against blacks and native peoples in Canada. He was involved in the Canadian Jewish Historical Society and twice ran for public office as a Co-Operative Commonwealth Federation (CCF) candidate.

Remembered as a humble, unpretentious man, loyal to his roots, Kaplansky was the recipient of many awards and commendations, including the Order of Canada, the nation's highest civilian award.

[Frank Bialystok (2nd ed.)]

KAPLANSKY, SHELOMO (1884–1950), Zionist labor leader. Born in Bialystok (then Russia), Kaplansky trained as an engineer and joined the Zionist labor movement at an early age. He lived in Vienna between 1903 and 1912, founded the *Po'alei Zion movement in Austria, and edited its journal *Der Juedische Arbeiter*, which appeared in German and Yiddish. He was a founder of the World Union of Po'alei Zion and was instrumental in having it accepted as a member of the Socialist International. He devised the idea of the Erez Israel Workers' Fund (Kuppat Po'alei Erez Yisrael) which was founded in 1910 by the World Union of Po'alei Zion to foster cooperative settlements and enterprises in Erez Israel. He went to Erez Israel in 1912 to settle there, but between 1913 and 1919 he was secretary of the *Jewish National Fund head office at The Hague. He was a member and chairman of the finance and economics committee of the Zionist Executive in London between 1919 and 1921. Kaplansky, who belonged to the moderate socialist trend, supported the participation of Po'alei Zion in the World Zionist Organization and all its institutions. At the 1920 World Conference of Po'alei Zion in Vienna he preferred the movement's split, repudiating its pro-Communist faction (the Left Po'alei Zion). Between 1927 and 1929 he was a member of the Zionist Executive in Jerusalem and the director of its Settlement Department. From 1929 until 1931 he lived in London as an emissary of the Zionist labor movement to the British Labour Party, which was then in power. From 1932 until his death, Kaplansky was director of the Haifa *Technion. During the debate over the partition of Palestine in 1937 he opposed the scheme, preferring the idea of a binational state

in the whole of Palestine. As a result, he left the *Mapai Party in 1944 and later joined *Mapam. Some of his many articles and pamphlets in Russian, German, English, Hebrew, and Yiddish are collected in *Hazon ve-Hagshamah* ("Vision and Fulfillment," 1950).

KAPO, prisoner in charge of a group of inmates in Nazi concentration camps. The derivation of the word is not clear; according to one view the name is Italian (*capo* = "boss"); according to others it is an abbreviation of *Kameradschaft-polizei* and would then have originated among the prisoners themselves. Similarly, it is not possible to ascertain when this unofficial term first came into use. The appointment of Kapos was made by the ss who guarded the camps; but the authority to appoint Kapos was never explicitly defined. It was the Kapo's task to carry out the orders of the ss and to ensure absolute control over the prisoners. The Kapo was not an expert like the "chief worker" (*Vorarbeiter*) but just a strong man. For the most part, Kapos were in charge of work gangs, but there were also Kapos for the hospitals or the kitchens. Certain camps even had a hierarchy: Oberkapo, Kapo, Unterkapo. Initially, Kapos were appointed from the ranks of ethnic German prisoners convicted on criminal charges. These criminals enjoyed extra privileges of great importance under camp conditions: better food, clothing, and housing. In return, many of them tyrannized the prisoners with a cruelty equal to that of the ss, motivated both by the desire to curry favor among the ss as well as by sadistic inclinations. In the course of time, the political prisoners in many camps succeeded in ousting some of the criminals and having them replaced by Kapos from their own ranks. Jews were appointed Kapos only in those camps which were all Jewish. Some Kapos exercised their power humanely and sensitively and worked to assist their fellow prisoners. Others mimicked the oppressive behavior of the ss and may have indeed internalized their values. Thus, the term Kapo became synonymous with a cruel and egocentric person who oppresses, tortures, and exploits others.

[Jozeph Michman (Melkman)]

KAPOSI (Kohn), MORITZ (1837–1902), dermatologist. Born in Kaposvar, Hungary, he became assistant to Ferdinand Hebra at the dermatological hospital, Vienna, in 1879, and the collaboration with the famous pathologist proved most fruitful. Kaposi completed Hebra's studies on the anatomical-pathological aspects of dermatology by new findings in chemistry and bacteriology. Together they were the first to describe several diseases. In 1875 Kaposi, a convert to Christianity,

was appointed professor of dermatology at Vienna University. Kaposi was an outstanding diagnostician and teacher as well as a prolific author. He wrote *Pathologie und Therapie der Hautkrankheiten* (1879) and *Handatlas der Hautkrankheiten* (1898–1900) which included the most complete descriptions and illustrations of skin diseases at that time. He was the first to describe multiple idiopathic hemorrhagic sarcoma, called Kaposi's sarcoma, and *xeroderma pigmentosum*, called Kaposi's disease. He wrote many articles in the field of dermatology and syphilology.

KAPOSVAR (Hung. **Kaposvár**), city in S.W. Hungary. In 1784 there were 15 Jews living in the town. The numbers increased to 95 in 1840; 1,078 in 1869; 3,505 in 1920; and 2,341 in 1941. A Jewish elementary school functioned from 1840 until the Holocaust. The synagogue was erected in 1862. Like those in all the surrounding communities the Jews of Kaposvar were inclined toward *assimilation. In 1860 A. Freystaedtler, a Jew, leased an estate from Count Esterházy and endeavored to employ Jews. At the beginning of the 20th century, many banks were owned by Jews, as well as several large factories and flour mills. A Jew served as deputy mayor for 20 years. Anti-Jewish attacks were made in 1848. The antisemite G. *Istóczy and some noblemen who had been dispossessed of their estates were responsible for anti-Jewish outbreaks in the town. Rabbis of the community included A. Ehrental (1852–54) and S. Kuttna (1853–71).

Holocaust Period

In 1940 all Jewish men were moved to a labor camp and after the German invasion in March 1944 around 6,000 Jews including refugees were concentrated in a ghetto around the synagogue in May. On July 4 all were deported to *Auschwitz. After the liberation of the town (December 1944) by the Red Army, Jewish men from the surrounding labor camps began to return to Kaposvar. Only about 200 of those deported from Kaposvar survived. There were 450 Jews living in the town in 1945 and 574 in 1949. After the revolution of 1956, many of them left the country, and by 1959 only 261 Jews remained in Kaposvar.

[Baruch Yaron]

KAPPAROT (Heb. כַּפְּרוֹת, plural of the Heb. כַּפְּרָה, *kapparah*; "expiation"), custom in which the sins of a person are symbolically transferred to a fowl. The custom is practiced in certain Orthodox circles on the day before the *Day of Atonement (in some congregations also on the day before *Rosh Ha-Shanah or on *Hoshana Rabba). Psalms 107:10, 14, 17–21, and Job 33:23–24 are recited; then a cock (for a male) or a hen (for a female) is swung around the head three times while the following is pronounced: "This is my substitute, my vicarious offering, my atonement; this cock (or hen) shall meet

death, but I shall find a long and pleasant life of peace.” The fowl is thought to take on any misfortune which might otherwise befall a person in punishment of his sins. After the ceremony, it is customary to donate the fowl to the poor, except for the intestines which are thrown to the birds. Some rabbis recommended that money, equivalent to the fowl’s value, be given instead.

This custom is nowhere mentioned in the Talmud. It appears first in the writings of the *geonim* of the 9th century, who explain that a cock is used in the rite because the word *gever* means both “man” and “cock”; the latter can, therefore, substitute for the former.

In Babylonia, other animals were used, especially the ram since Abraham offered a ram in lieu of his son Isaac (see: *Akedah and Gen. 22:13), or plants, e.g., beans, peas, (cf. Rashi, Shab. 81b). After the destruction of the Temple, no animals used in sacrificial rites could serve similar purposes outside the Temple (Magen Abraham to Sh. Ar., OH 605) and therefore cocks or hens were employed in the *kapparot* rite because they were not used in the Temple sacrificial cult. R. Solomon b. Abraham *Adret strongly opposed *kapparot* because it was similar to the biblical atonement rites (see *Azazel; cf. Lev. 16:5–22); he also considered the *kapparot* ritual to be a heathen superstition (“*Darkhei Emori*,” responsa ed. Lemberg (1811) pt. 1, no. 395). This opinion was shared by *Nahmanides and Joseph *Caro who called the *kapparot* “a stupid custom” (OH 605). The kabbalists (Isaac *Luria, Isaiah *Horowitz), however, invested the custom with mystical interpretations. These appealed strongly to the masses, and it became very popular when the rabbis acquiesced to it. Isserles made it a compulsory rite and enjoined for it many ceremonials similar to those of the sacrificial cult; e.g., the laying of the hands upon the animal, its immediate slaughter after the ceremony, prayers of confession, etc.

If a cock, or hen, cannot be obtained, other animals, fish or geese, may be used instead. A white cock or hen was especially desirable (based on Isa. 1:18, and Yoma 6:8). Some authorities, e.g., Joel Sirkes, forbade the use of a white cock on the grounds that it was a pagan rite (cf. Bayit Hadaash, to Tur., OH 605, and Av. Zar. 1:5 and 14a). *Kapparot* is not practiced with a fowl at all in some traditional and many modern congregations. Money is substituted for a cock and the formula is changed accordingly (“this coin shall go to charity but we...,” etc.). In Yiddish and popular Hebrew parlance the word *kapparot* may also refer to a financial or material loss, a regretted waste, or a vain effort.

KAPPER, SIEGFRIED or **VÍTĚZSLAV** (1821–1879), Czech poet and the first Jew to publish in Czech. Born and educated in Prague, Kapper graduated in medicine from the University of Vienna and spent some time as a physician, but he de-

voted his life mainly to writing. Like Moritz *Hartmann, the German revolutionary who became his brother-in-law, he belonged to the “Young Bohemia” circle and took an interest in Slavic culture. From 1839 Kapper was a contributor to *Ost und West*, and the following year he began translating Czech poems into German. In 1841 he moved to Vienna, where he met Václav Bolemír Nebeský, who urged him to devote himself to Czech and Slavic affairs. Accordingly, in 1843, Kapper began a press campaign, and a year later published his *Slavische Melodien*, some of which were later set to music. In his *České listy* (“Czech Epistles,” 1846), Kapper criticized the Austrian regime’s treatment of the Czechs and called for the restoration of their national and civic rights. In the same book he expressed his hopes for the cultural assimilation of Czech Jewry. Both the form and the ideology of the poems were completely rejected by the eminent nationalist critic, Karel Havlíček-Borovský, and as a result Kapper temporarily abandoned writing in Czech. It was at this period that he published three of the earliest “ghetto” stories in the German language (1845–49). During the 1848 Revolution Kapper was medical officer of the academic legion. The revolution inspired a volume of political poems, *Befreite Lieder* (1848–49). He then became a parliamentary reporter, but returned to medical practice in 1867.

Kapper’s works include *Suedslavische Wanderungen* (1851; *A Visit to Belgrade*, 1854); the epic poem *Fuerst Lazar* (1851), which was his major literary achievement; *Christen und Tuerken* (1854); *Boehmische Baeder* (1857); and several volumes of Czech and German translations of Serbian, Montenegrin, and Bulgarian folk songs, in which field he became an acknowledged authority. Though estranged from traditional Jewish life, Kapper developed ideas of a Czech-Jewish symbiosis which greatly impressed the younger generation of Czech Jewry, and the first Czech-Jewish students’ organization was named in his honor.

[Avigdor Dagan]

KAPUZATO, MOSES HA-YEVANI (fl. second half of 15th century), rabbi in Salonika. Moses was the author of a commentary on the Pentateuch in which he takes issue with Abraham ibn Ezra, Maimonides, and in particular with Karaite exposition. He was the author of the poem – a *reshut* for Passover: “*Imrei Higyonai Ashir ve-Azamer la-Adonai*” included in the Romaniot *mahzor* and the Kaffa and Aleppo rites. He was a trenchant opponent of the Karaites, who reacted violently to his criticism. He sharply criticized Aaron b. Joseph, author

of the *Sefer ha-Mivhar* and the Karaites Abraham *Bali, the physician, author of the *Iggeret ha-Issur Ner shel Shabbat*, and Caleb Abba *Afendopulo answered his criticisms. He was especially attacked by Elijah *Bashyazi in his *Aderet Eliyahu* for daring to speak against Aaron b. Joseph, against the Karaite scholars, and for following in the wake of Mordecai *Comtino. Moses is also mentioned by Karaites of later generations, such as Joseph Bagi (end of 15th and beginning of 16th centuries) in his *Iggeret Kiryah Ne'emanah*.

[Simon Marcus]

KARA (Cara), AVIGDOR BEN ISAAC (d. 1439), rabbi, kabbalist, and poet. Kara was of German origin. It is uncertain whether the name Kara indicates, as some think, that he was a descendant of Joseph *Kara, or whether it is a reference to his expert knowledge of Scripture (*Mikra*). His father, Isaac Kara, met a martyr's death. About 1389 Kara was appointed *dayyan* in Prague. He and Yom Tov Lipmann *Muehlhausen were among the most important rabbis of Prague of the age. Kara is the author of the elegy *Et Kol ha-Tela'ah asher Meza'atnu* to commemorate the sufferings which overtook the Jews of Prague on the last day of Passover 1389, as a result of an accusation that they had desecrated the Host. This elegy is recited by the Jews of Prague during the *Minḥah* service on the Day of Atonement. Like his colleague Yom Tov Lipmann Muehlhausen he became famous for his polemics with Christians. According to the tradition of Jacob *Moellin, which is not to be accepted as true, he was a favorite of Wenceslaus IV, king of Bohemia, and played an important role in his court. It may be assumed, however, that he had discussions with high Christian dignitaries on theological matters, and it appears that John Huss and his colleagues and disciples were influenced in no small degree by his views. The Hussite sect, founded by Huss, opposed the authority of the Church and many of its principles. Probably due to this the Jews were persecuted by the Catholics in the war that broke out between the Hussites and Catholics. Huss even made use of a poem by Kara on the unity of God, beginning *Eḥad Yaḥid u-Meyuḥad*, which has been published in the *Birkat ha-Mazon* (Amsterdam, 1722).

Kara was also known as a kabbalist, and was one of the first to cause the spread of the Spanish and German Kabbalah in his land. Moses *Cordovero and Menahem Azariah da *Fano wrongly attributed to him the authorship of **Kanah*, a kabbalistic work on the reasons for the precepts, and *Peli'ah*, a commentary on the first six chapters of Genesis. His kabbalistic compositions are still in manuscript, including: *Kodesh Hillulim*, a kabbalistic commentary on Psalm 150; and a biblical commentary based on *gematriot*. He appears also to have composed the kabbalistic work *Sefer ha-Emet*. He was known as a *paytan* and some of his *piyyutim* have been published in various places while others are still in manuscript. Some of

his responsa have also been preserved. MENAHEM BEN JACOB KARA, who wrote commentaries on various philosophical works, including Maimonides' *Guide of the Perplexed*, may have been his half brother. He is regarded as the originator of the movement whose aim was to find common ground between the Kabbalah of Eastern Europe and the doctrines of the Spanish scholars, particularly Maimonides. *Abraham b. Avigdor, a 16th-century rabbi of Prague, was his descendant.

[Abraham David]

KARA, JOSEPH (before c. 1060–70), Bible commentator from the north of France. The surname “Kara” (presumably Bible commentator) is an indication of Joseph's major occupation. The assumption that his surname means “teacher” is supported by his popular style and his frequent use of words in French (**la-az*), probably reflecting the fact that his commentaries are based on oral teaching.

His father, Simeon, was apparently also a scholar, but S.J. Rapoport's ascription to him of the authorship of *Yalkut Shimoni* has been shown by A. Epstein to be without foundation (see bibl.). Joseph studied under his paternal uncle, *Menahem b. Ḥelbo, and was also a student and colleague of Rashi. Rashi obviously knew Kara, who was about 25 years his junior, since he mentions him (cf. Rashi on Is. 10:24 and 64:3) and quotes some of his interpretations; at least in one case he states that Kara told him an explanation of Menahem b. Ḥelbo. Recent scholarship asserts that there is no evidence that Kara studied under Rashi. There is evidence that the latter occasionally accepted his biblical exegesis, and Samuel b. Meir calls Kara “our colleague” (Commentary on Gen. 37:13). Kara was the first to copy and edit Rashi's commentary. In the process he added his own remarks, some of which were approved by Rashi and many of them were integrated into the standard Rashi commentary. Some 100 such notes were compiled by A. *Berliner in his *Pletath Soferim*. Kara lived mainly in Troyes and for a period in Worms and is known to have taken part in theological discussions with Christians.

He wrote commentaries on most of the books of the Bible (possibly all), most of which remained in manuscript until recent times. Recently, fragments of his commentary on the Pentateuch have been discovered in the Italian *genizah*. Until recently, this commentary was only known from the many quotations in later works, some even incorporated in Rashi's commentary. The main characteristic of his biblical commentaries is the intention (cf. his remarks on I. Sam. 1:17; Judg. 5:4) of interpreting Scripture according to the *pe-shat* (“literal meaning”). Now and then, however, he deviates from this course and explains the text according to the

derash (“homiletical interpretation”; e.g., Jer. 2:3), especially where the text presents difficulties, and he sometimes gives *derash* together with the *peshat*. Nevertheless, there is still no explanation for the distinction he makes between homiletic explanations that “the ear may hear,” i.e., which are plausible (*aggadah ha-nishma'at la-ozen*, on Job 26:13) and those which are only meant to “make the Law great and glorious,” such as his commentary on I Sam. 1:17. Though Kara relied heavily upon Rashi’s commentary, at times even quoting it verbatim, he sometimes vigorously refutes his interpretations, stating of I Kings 7:33, for example: “This is a distortion of the words of the Living God, which causes all Israel to go astray.” Other characteristics of Kara’s approach are: indication of the connection between different scriptural verses; exegesis in accordance with the cantillation; differentiation between the language of the Mishnah and that of the Talmud and the Midrash; extensive use of Targum, including the Palestinian Targum, and frequent use of French and German **la'azim*; etymology of biblical words based on similar usage, roots, and sounds; pointing out words or phrases that are meaningless in context but allude to events or ideas that appear later on in the text; and literary analysis. In some places Kara’s text differs from the accepted one (Josh. 9:4; Jer. 25:13). Kara was well aware of some problems concerning the biblical text and its transmission. Sometimes, as on Joshua 9:4, he cites two different versions of the text, and at least once (on Jer. 25:13) he states that a certain interpretation would be acceptable “provided a fitting version can be found in some accurate book.” Kara’s commentaries on the Former Prophets, the Megillot (except Song of Songs), Job, and most of the Latter Prophets are now at our disposal. Since Kara considered his works as amplifications of Rashi’s commentaries, he often mentions, or even quotes, Rashi without referring to him. Some of Kara’s commentaries (on Ezekiel, for example), seem to have been edited by his pupils.

Kara was one of the first to participate in a unique phenomenon that occurred in French biblical exegesis at the end of the 11th century and the beginning of the 12th century: The sudden appearance of biblical commentary based on strict *peshat*, the explicit meaning of the text. This new trend dissipated by the end of the 12th century. This new trend is seen as an attempt to refute Christian interpretation of the Hebrew Bible. A close reading of Kara’s commentaries and those of Rashbam (*Samuel ben Meir, Rashi’s grandson) reveals a very strong anti-Christian polemic. Contemporary Jewish polemical works quote extensively from Kara’s work to refute the Christian attempts to use the Hebrew Bible (Old Testament) as proof for their theology. Even Kara’s occasional use of Midrash can be ascribed to this general purpose. Given heavy Christian censorship of Jewish books, Kara was careful to hide his polemical intentions.

In addition to his biblical commentary, Kara also commented extensively on the *piyyutim*, exerting a great influence in this field on his successors who often referred to him simply as “the commentator,” by virtue of his ability to penetrate

into their literal meaning and the beauty and simplicity of his style. He wrote commentaries on all *piyyutim* recited in his time on festivals and special Sabbaths, and on *kinot* and *hoshanot*. There is hardly a manuscript commentary on the liturgy which does not quote him. Many of his commentaries are also to be found in printed editions, in which however, they are often abridged and quoted anonymously. Kara received many of his explanations of the *piyyutim* from scholars in southern and northern France, Germany, and Rome, including Rashi, Menahem b. Hēlbo, and Kalonymus b. Shabbetai of Rome. Although the *aggadah* is an important source for the *piyyutim*, and Kara paid great attention to it in his commentaries, here too he extracted from the Midrash only what was essential to an understanding of the text, avoiding all extraneous matter. He explained the language and the literary aspects of the *piyyutim*, but did not concern himself with historical background. In his liturgical commentaries he made much use of his Bible commentary and laid down general principles of *piyyut*.

Berliner suggested that Kara was the author of the commentary on *Genesis Rabbah*, generally attributed to Rashi. Epstein, however, proved that it only contains additions by Kara and that the original commentary is not his.

[Avraham Grossman and Moshe-Max Arend / David Derovan (2nd ed.)]

KARA, MENAHEM BEN JACOB, *dayyan* and scribe in Prague at the beginning of the 15th century. Kara refers to Avigdor b. Isaac *Kara as “my brother” and he may in fact have been his half-brother from the same mother. If, however, he is to be identified, as some suggest, with the Menahem who signed a power of attorney in 1413, together with Avigdor and Yom Tov Lipman *Muelhausen (two *dayyanim*

in Prague), it must be assumed that the word means “relative” and not “brother.” He wrote commentaries on various parts of the Bible, and studied philosophical literature. The following known works by Kara are in manuscript: a commentary on Maimonides’ *Guide of the Perplexed*, a commentary on Al-Ghazālī’s *Kavvanot ha-Pilosofim*, and on the *Mareh Elohim* of Enoch Al-Kostantin. It is maintained by some that he aspired to bring the pietists and *kabbalists of Eastern Europe closer to the Torah teaching of the Sephardim, and in particular to the teaching of Maimonides. Kara was one of the Prague scholars attracted to philosophical speculation who exercised a considerable influence on subsequent generations.

[Yehoshua Horowitz]

KARÁCSONY, BENŐ (Bernát Klaermann; 1888–1944), Hungarian author. Karácsony, who lived in Kolozsvár (Cluj), was a leading social writer in Transylvania during the era of Romanian control. Though not class-conscious, he often satirized middle-class failings in works such as *Új élet kapujában* (“At the Gates of a New Life,” 1932) and *A napos oldalon* (“On the Sunny Side,” 1940). *A megnyugvásösvényein* (“For me, Tranquility”) appeared in 1946. He died in Auschwitz.

KARACZEWSKI, HANINA (1877–1926), music teacher and composer. Born in Petrovka, Bessarabia, he went in 1899 to Warsaw where for a time he conducted a military band. In 1908 he went to Palestine and taught music at various schools in Tel Aviv, chiefly at the Herzlia Gymnasium where he remained for 18 years. Here he instituted a choir and an orchestra. Many of his pupils became music educators and choral conductors. He also organized an adult choir of 200 voices whose most memorable appearance was at the cornerstone-laying ceremony of the Hebrew University in 1925. Karaczewski and A.Z. *Idelsohn were considered the “music teachers of the National Renaissance.” Only a few of Karaczewski’s songs and arrangements were published during his lifetime, but a collection of his works, *Zelilei Hanina* (1927), appeared after his death. Three of his songs entered the permanent “corpus” of Palestinian-Israeli folk songs: the song for Lag ba-Omer, *Ha-Yáarah be-Keshet va-Hez* (“To the Forest with Bow and Arrow”), with words by Samuel Leib *Gordon; *El Rosh ha-Har* (“To the Peak of the Mountain”), with words by Levin *Kipnis; and one of the most beautiful songs inspired by Lake Kinneret, *Al Sefat Yam Kinneret* (“On the Shore of Lake Kinneret”), with words by Jacob *Fichmann.

Musical Tradition

Name; Relation to Biblical Tradition

Scholars have had different opinions as to the exact vocalization of the name: Whether it is *qara'im* (sing. *qara'*), or *qera'im* (sing. *qera'i*). The common sing. form *qara'i*, seems to be secondary. The accepted meaning of the name of the sect – Kara'im, Ba'alei ha-Mikra (“people of the Scriptures”) – is assumed to imply the main characteristic of the sect: the recognition of the Scriptures as the sole and direct source of law, to the exclusion of the Oral Law as it is embodied in the talmudic-rabbinic tradition. At the early stage of the group’s history the name may have indicated their concentrated occupation with the text of the Hebrew Bible. At that stage their activity was perhaps connected to the Massorettes. Indeed, the famous authority on Massorah, Aharon ben Asher (who was responsible for the Massoretic element of the Aleppo Codex), was most probably a Karaite. There is, however, another interpretation of the name Kara'im, defining it as “callers” or “propagandists,” in the sense of the Arabic word *du'āt* by which the Shi'ite Muslim sect designated propagandists on behalf of 'Ali. Since a religion based on revelation cannot tolerate the complete exclusion of tradition, either in principle or in practice, the Karaite demand for a return to Scripture, and a rejection of any tradition as the authoritative interpretation of Scripture, should be taken as a theoretical watchword, directed not against all tradition, but specifically against the rabbinical tra-

Principal areas of Karaite settlement and main centers, 7th–20th centuries.

dition. As a matter of fact, the Karaites also developed a tradition of their own, described by them as *sevel ha-yerushah* (“burden of inheritance”), consisting of doctrines and usages which, although not found in the Bible, were accepted as binding by the entire community (the *qibbuz* or *‘edah*, corresponding to the Muslim term *ijmā‘*, “consensus”). According to the Karaite view, a large number of these had come down from the Jews who had returned from the Babylonian exile (those

designated as the “good figs,” Jer. 24:5). The Karaite alternative tradition has developed over the centuries, and in some areas has come quite close to rabbinic tradition.

Karaism and the Dead Sea Scrolls

The discovery of the documents of the Dead Sea Sect has given rise to much speculation as to the possible influence of that sect and its literature upon the early schismatics who

later merged into the Karaite sect. Assuming, with the overwhelming majority of students of the Dead Sea Scrolls, that they date from about the time of Jesus and that the Dead Sea sectarians went out of existence by the second century C.E., the problem may be considered under several aspects. The chronological aspect demands an explanation of the gap of some seven hundred years between the disappearance of the Dead Sea sectarians and the rise of the early Karaite schismatics. To account for it, several ancient notices of the finding of Jewish manuscripts in caves (by Origen, c. 217 C.E., Timothy, c. 800 C.E., and by al-Kirkisānī, c. 937 C.E.) are cited. Origen records the discovery of a Greek biblical manuscript and does not identify the contents of the other manuscripts found with it. al-Kirkisānī describes the manuscripts found in a cave as belonging to the literature of the pre-Christian sect of the Magharians, whose books, with two exceptions, he dismisses as “merely... idle tales.” The testimony of Timothy, Nestorian catholicos of Elam (south-western Iran), is perhaps more substantial. He tells of a letter that reached him from Jerusalem, reporting on scrolls found in a cave near Jericho that contained Hebrew texts resembling the Psalms. He requested that Jerusalem send him copies, but we do not know whether his request was ever fulfilled. A different case is the fragments of the so-called Damascus Document (medieval copies of which had been discovered in the Cairo *Genizah*) which were found among the Dead Sea documents. This provides substantial evidence that some Dead Sea documents did surface in the early Middle Ages. It can be argued, though, that this indicates only that the Damascus Document was known in Jewish circles, not necessarily Karaite alone, in Cairo early in the second millennium C.E. Nowhere in early Karaite literature so far known is there mention of the discovery of pre-Karaite documents confirming the righteousness of the Karaite teachings.

With respect to links between Dead Sea sects and the Karaites, there are several considerations for and against the theory that there was a connection of some kind between the two groups. A number of close parallels between Dead Sea and Karaite doctrines have been pointed out – for example, the emphasis on searching Scripture for right guidance, the implied rejection of oral tradition, the pressing and impatient messianism with its concomitant search in Scripture for hidden forecasts of the “end,” when the Messiah will come to redeem Israel, and the tendency to regard biblical events not as accounts of past happenings but as prognostications of present-day situations. The similarity is not only in doctrines but also in terminology. Added to all this is, of course, the common conviction that this is the true Mosaic faith, and that those who believe otherwise are misled into error. In addition they have in common the ritual rigor, with respect to the laws of purity and Sabbath. These similarities must be weighed against an at least equally substantial series of dissimilarities, which cannot be reconciled with historical Karaism: the dualism of the Dead Sea Sect which divided the world into two opposing camps of good and evil (“light and darkness”) sub-

ject to a predestined and immutable fate, and the rigid and absolute monastic hierarchy. Recent studies have suggested that there are significant parallels between Second Temple period controversies, including especially the Qumranites, and medieval controversies between Karaites and Rabbanites. In addition, the discussion of this question should differentiate between various pre-cursors of Karaism or its sub-groups. Some of those, like Mishawayh al-‘Ukbari, show perhaps more affinity to the Dead Sea Scrolls. The conclusion that may be drawn from all these considerations would therefore be the following: There is, at the present state of knowledge of the literature of both sects, no tangible evidence that the early Karaites had any direct contact with the Dead Sea writings, though some of them may have reached them. If they were influenced by them to any recognizable extent, this influence had little effect in the long run.

Historical Development

EMERGENCE OF THE SECT. The name “Karaites” was not applied to the sect until the ninth century; the precursor of the sect was known as “Ananites,” from the name of its founder, *‘Anan b. David. The sect appears to have come into being as the result of a combination of factors: the amalgamation of various heterodox trends in Babylonian-Persian Jewry, which clashed with the efforts of the heads of the Babylonian yeshivot to consolidate their position as the exclusive and central authority of Jewish law; the tremendous religious, political, and economic fermentation in the entire East, resulting from the Arab conquests and the collision of Islam with world religions. The Karaite sect absorbed both such Jewish sects as the Isawites (adherents of *Abu ‘Isā al-İṣfahānī) and *Yudghanites, who were influenced by East-Islamic tendencies, and other anti-traditional movements.

The Karaites themselves, however, trace their origin to the first split among the Jewish people, at the time of *Jeroboam; the true law had subsequently been preserved by the descendants of Zadok, who had discovered a portion of the truth. The process of this discovery of the truth was then continued by the exilarch ‘Anan (thus al-Kirkisānī and others). The unhistorical, fanciful, and biased Karaite sources also influenced the reports of Arab authors. Rabbanite sources, on the other hand, give their own one-sided version of the emergence of the Karaite schism, ascribing it exclusively to ‘Anan’s personal ambition and the injury his pride suffered when his younger brother Hananiah was elected exilarch.

The absorption by ‘Anan’s movement of many elements of an older, extra-talmudic tradition was pointed out particularly by A. Geiger and R. Mahler. As a matter of fact, ‘Anan’s system included many laws that are quoted from old rabbinic authorities in the Mishna, the Talmud and other tannaitic and targumic sources but were not accepted (e.g., the *lex talionis*, i.e., the literal interpretation of “an eye for an eye” principle in the criminal law). Anan cannot, however, be described as a “reformer” of Judaism in the modern sense; far from easing the “yoke” of traditional law, he made it more difficult to bear:

he did not recognize the minimum quantities (*shi'urim*) of forbidden foods fixed by the rabbis; he introduced more complicated regulations for the circumcision ceremony; he added to the number of fast days; he interpreted the prohibition of work on the Sabbath in stricter terms; etc. He was particularly severe with regard to the laws on marriage between relatives, ritual cleanliness, and relations with non-Jews. In his interpretation of Scripture, he made use of the 13 hermeneutic principles of R. *Ishmael b. Elisha, adding to them the principle of analogy (*hekkesh*, Ar. *qiyās*; the latter, perhaps, under the influence of Abu Ḥanīfah, the founder of the Ḥanafite school of Muslim jurisprudence).

The dictum quoted in Anan's name by *Japheth b. Ḳeli (commentary on Zech. 5:8), "Search well in the Torah and do not rely on my opinion," is composed of two clauses: the first in Aramaic, and the second in Hebrew. The second clause, though, is not found in the oldest ms of Japheth's commentary and seems to reflect a somewhat later development. The first half was possibly designed to uphold the Holy Scriptures as the sole source of the law through a process of thorough investigation; notwithstanding, the fragments of Anan's Book of Precepts contain several references to the definitive authority of Anan's own interpretations of Biblical verses. In the wake of Anan's activity, numerous groups and parties were formed, mainly in the eastern parts of the Caliphate. Some of them shared the designation "Karaites," and soon, as related by Kirkisānī, it became impossible to find two Karaites who held the same opinions on all religious issues. Anan's adherents, in the stricter sense, called themselves Ananites (Arabic *ʿanāniyya*, sometimes applied by Muslim authors to Karaites in general) and remained few in number (in Iraq, Syria and Spain). They seem to have disappeared some time during the 11th century. Anan's descendants, who, like Anan before them, were given the honorific title of *nasi* ("prince") by their contemporaries, lived first in Jerusalem, and then, from the early 11th century, for the most part in Egypt. The names of his son, *Saul b. Anan, and his grandson, Josiah b. Saul b. Anan, are known from the prayer for the dead in the Karaite Sabbath and festival liturgy; neither seems to have had any role in the further development of the sect. Saul is also mentioned in *Sefer ha-Kabbalah*, by Abraham ibn Daud, and Josiah in *Eshkol ha-Kofer*, by Judah Hadassi, and in *Gan Eden*, by Aaron b. Elijah the Younger of Nicomedia. Karaite traditions about Anan's emigration to Jerusalem and his settlement there refer possibly to his great-grandson, whose name was Anan.

As the non-Rabbanite, proto-Karaite movement did not recognize any single leader, it was not long before many groups arose in its midst, in opposition to the Ananites. Thus, in the first half of the ninth century, the ʿUkbarites, whose founder was *Ishmael of ʿUkbara, came into being in ʿUkbara, near Baghdad, at the time of the caliph al-Muʿtaṣim (833–842). Ishmael was violently opposed to Anan, "often denouncing him as a fool and an ass." Nothing of Ishmael's writing has been preserved, and the little known about him and his school derives almost exclusively from the reports of al-Kirkisānī,

at whose time (second half of the tenth century) the group was probably no longer in existence. In his teaching, Ishmael rejects, *inter alia*, the masoretic variants (*keri* and *ketiv*, the reading of certain words in the Bible in a manner that differs from their spelling).

The same town, ʿUkbara, was also the place of origin of another group, founded in the second half of the ninth century by Mishawayh al-ʿukbarī. Characteristic of this sect is the principle that in all disputed matters (such as the day of the New Year Festival and the determination of the new moon), the Rabbanite practice was to be followed ("all coins are counterfeit, so one might as well use the one at hand," i.e., observe the holidays with the "whole," the Rabbanites). Among Mishawayh's innovations is his opinion that the day, in the religious sense, begins at sunrise and comes to an end at the following sunrise (whereas according to the Rabbanites, and most other Jewish groups and movements, the day commences and ends at sunset). Another proto-Karaite sect was founded by a contemporary of Mishawayh, Mūsā (Moses) al-Zaʿfarānī, a resident of Tiflis (Tbilisi, Georgia); also known as Abu ʿImrān *al-Tiflisī, he was probably a native of Zaʿfarān, a district of Baghdad. The report by al-Kirkisānī (perhaps the earliest mention of Jewish settlement in the Caucasus) states that al-Tiflisī was a disciple of Ishmael of ʿUkbara, and the author of a treatise sanctioning the consumption of meat (whereas many sects, including the earliest Karaite authorities, regarded the eating of meat as prohibited as long as Zion was in ruins and Israel in exile). Mūsā was also mentioned by the Karaite authors Japheth b. Eli (10th century) and Judah Hadassi, and by *Saadia Gaon; the latter, in his commentary on the Pentateuch, cites the opinion held by al-Tiflisī and his supporters that the new month always commences at the moment when the new moon first makes its appearance, so that the day of the new moon is already a part of the new month (commentary to Gen. 1:14–18). Another sect, closely related to that of al-Tiflisī and its contemporary, was created at Ramleh in Erez Israel by *Mālik al-Ramlī. According to al-Kirkisānī, Mālik declared on oath on the Temple site in Jerusalem that chickens had been sacrificed at the Temple altar; by this oath, Mālik sought to strengthen his view – as reported by the Karaite author *Jacob b. *Reuben in his commentary on Leviticus – that the *torim* mentioned in Leviticus 1:14, which were used as Temple sacrifices, were chickens, thereby contradicting Anan and his successors, who translated the term *dukhi-fat* ("the hoopoe") in Leviticus 11:19, as hen, and accordingly classified the chicken as an impure, prohibited bird.

It follows that in the 9th century and the beginning of the 10th, the Karaite movement was a conglomeration of various anti-Rabbanite groups, some of which had sprung up after Anan's death. Al-Kirkisānī gives a vivid description of the countless differences on questions of religious ritual obtaining among the various Karaite groups, some of which still existed in al-Kirkisānī's time. In order to counter the Rabbanite arguments in polemics with the Karaites, based upon these heterogeneous views, al-Kirkisānī concludes his description

with a characteristic observation: the Karaite readers of his work, he states, had no reason for concern, for in this respect there was a great difference between them and the Rabbanites: “They [i.e., the Rabbanites] believe that their laws and regulations have been transmitted by the prophets; if that was the case, there ought not to exist any differences of opinion among, them and the fact that such differences of opinion do exist refutes their presumptuous belief. We, on the other hand, arrive at our views by our reason, and reason can lead to various results.”

The many sects which had come upon the proto-Karaite or early Karaite scene after Anan disappeared as fast as they had sprung up, without leaving any noticeable trace upon the movement. By their gradual self-liquidation, however, they prepared the ground for the consolidation of a well-defined, uniform doctrine which has subsisted to this very day as Karaism. The outstanding representative of the new movement in the ninth century was Benjamin b. Moses *Nahāwendī (from Nehavend, Persia; c. 830–860), who laid the groundwork for the new development of Karaite doctrine and was also the first Karaite writer to employ, according to some sources, the term *Kara'im* (*Benei Mikra*). Rabbanite scholars, such as Saadiah Gaon and Judah Halevi, regard Anan and Benjamin as the fathers and founders of the Karaite sect; Arabic and Karaite authors also refer to Karaites as *Aṣḥāb 'Anān wa-Binyāmīn* (i.e., followers of Anan and Benjamin). The Karaites themselves put Benjamin almost on the same level as Anan, and in the memorial prayer (*zikhronot*) Benjamin's name follows immediately upon those of Anan, Saul, and Josiah. It was Benjamin, in particular, who turned the free and independent individual study of the Scriptures into a basic principle of Karaism. In theory it became possible for Karaism to tolerate differing interpretations of the Bible. Benjamin also differed from Anan in making no special efforts to maintain a hostile attitude to the Rabbanites and stress a fundamental opposition to them. He sought to base each law upon the Bible (without differentiating between the Pentateuch, the Prophets, and the Hagiographa) and freely borrowed from the Rabbanites (although he declared such regulations as not binding upon Karaites). Furthermore, he advised his coreligionists to adopt the Rabbanite view in cases where the Bible did not provide a clear prescription. Benjamin is also the first Karaite to whom Karaite sources ascribe statements concerning dogmas and religious philosophy. Seeking to remove all taint of anthropomorphism from the conception of God, he embraced in his exegesis of the Bible ideas that are reminiscent of *Philo's theory of the Logos (which he may have known in Arabic translation or by the way of the *Maghāriyya* – the cave dweller – sect, mentioned by al-Kirkisānī; see also *Sects, Minor). Accordingly, the creator of the world, its builder, and its guide, was an angel created by God to represent His will; it was this angel who performed the miracles, revealed the Law, etc., and it is to this angel that the anthropomorphic passages in the Bible refer.

*Daniel b. Moses al-Qūmisī, who lived toward the end of the ninth century, seems to have been the first eminent Kara-

ite scholar to settle in Jerusalem. He was the first to make the “mourning in Zion” a basic tenet and a hallmark of Karaism. In an epistle ascribed to him he fervently urged Karaites in the Diaspora to immigrate to Erez Israel. In the same epistle he also expounded his particular positions on halakhic issues and, perhaps for the first time in Jewish history, proposed a set of normative, binding beliefs (“articles of faith”). He opposed Benjamin's method of Bible exegesis and denied the existence of angels, interpreting the term *malakhim* as natural forces employed by God to serve as His emissaries (cf. Psalms 78:49; 104:4). Opposing also Benjamin's leaning toward Rabbinic *halakhah*, he called for strict adherence to the literal sense of the Scriptures. This may also explain his fight against Anan, whom he had at first revered as “first among the sages” (“*rosh ha-maskilim*”), only to denounce him later as “first among the fools” (“*rosh ha-kesilim*”). Yet in his commentaries there are cases of alternative and homiletic interpretations. It may be assumed that it was his attitude to Anan that caused al-Qūmisī's exclusion from the Karaite memorial prayer, in spite of the great respect in which he was held by later Karaite writers. al-Qūmisī wrote commentaries on several books of the Bible, but of his commentaries only the one on Minor Prophets survived almost complete. He also taught that, in case of doubt, the more rigorous interpretation of the law should be accepted.

CONSOLIDATION: LATE NINTH TO 12TH CENTURIES. In the tenth century, when Karaism was already fairly consolidated, the movement adopted an aggressive attitude, designed to spread its doctrine. This was also the golden age of Karaite literature (with most of the Karaite works of this period being written in Arabic). Karaite attempts to gain mass support for their beliefs among the Rabbanites (which, however, seem to have attracted only a few converts of no particular distinction) brought forth, on both sides, an apologetic and polemic literature. There were in this period (ninth and tenth centuries) a considerable number of outstanding Karaite theologians, religious teachers, grammarians, lexicographers, and biblical exegetes. Rejection of secular sciences, which Anan had advocated, was not followed by all Karaites. Some Karaite scholars became active participants in the flourishing Arabic culture. Others (e.g. al-Qūmisī, Salmon ben Yerulim) prohibited any engagement in “foreign” books and sciences as leading to heresy. In view of the special significance attached by Karaism to the study of the Bible, the Karaites dedicated themselves with great zeal to massoretic and grammatical exegetic studies and must have had a stimulating influence upon Rabbanite scholars. The view of Jewish historians (such as J. Fuerst, S. Pinsker, H. Graetz) that some of the first and most appreciated Jewish massoretic and grammarians (notably Aharon ben Asher), and biblical exegetes had been Karaites, has been discussed again in recent research and probably proven correct.

Karaite missionary activity, while hardly successful, forced the Rabbanites to take note of their existence and combat them. The first prominent Rabbanite to attack the

Karaites was Saadiah Gaon, who at the age of 23 wrote a book (in Hebrew [rhymed] and Arabic versions) attacking Anan. On both sides the battle was waged with great ardor and often with a lack of objectivity; it remained in the main a war of words, but occasionally degenerated into physical violence, or resorted to harsh social measures (excommunication) or intervention by the Muslim authorities. The main targets of Karaite attacks were the anthropomorphisms of the *aggadah* and of Jewish mystical literature and the Rabbanite claims to divine origin of the Oral Law. Karaite literature flourished in most of the areas under Muslim rule – in Egypt, North Africa, and particularly in Erez Israel, in addition to Babylonia and Persia, where Karaism had come into being.

The greatest Karaite mind of the tenth century was Abu Yūsuf Ya'qūb al-Kirkisānī, whose work on religious law, *Kitāb al-Anwār wa-al-Marāqib*, particularly its opening chapter, represents one of the foremost sources for the history of the Karaite sect. *David b. Boaz, a descendant of Anan, attained great repute as a biblical commentator, and is also said to have composed a work (in Arabic) on the basic doctrines of religion. In the second half of the tenth century, David b. Abraham *Al-fasi, a native of Fez (Morocco) who emigrated to Erez Israel, became known as a lexicographer and biblical exegete. At the end of the century *Japheth b. Eli in Jerusalem translated the entire Hebrew Bible into Arabic and added his extensive commentary, becoming the most important Karaite Bible commentator. Japheth's son, Levi b. *Japheth, in addition to Bible commentary, also wrote an important book of precepts (extensive fragments of the Arabic original and the medieval Hebrew translation survived). One of the most active opponents of Rabbanism, and especially of Saadiah Gaon, was *Salmon b. Yeruḥim (mid-tenth century). In a similar vein was the work of *Sahl b. Maṣliḥ ha-Kohen, a skillful and eloquent Karaite missionary who wrote a commentary on the Pentateuch and was a religious teacher; his Hebrew introduction to his Arabic-language book of precepts contains important information on the Karaite community in Jerusalem.

At that time Jerusalem was the outstanding spiritual centers of Karaism. Among the scholars residing there at the end of the tenth century was *Joseph b. Noah, who gained fame as the head of a religious academy, biblical commentator, and Hebrew grammarian. His pupil, *Abu al-Faraj Hārūn (Aaron b. Jeshua), who lived in the first half of the 11th century, was also a noted grammarian (“the grammarian of Jerusalem”), lexicographer, and biblical exegete. A contemporary scholar was *Nissi b. Noah, a resident of Persia, author of a philosophical commentary on the Ten Commandments. The outstanding Karaite theologian and religious philosopher of the 11th century was Joseph b. Abraham ha-Kohen ha-Ro'eh *al-Baṣīr (Heb. “ha-Ro'eh,” euphemistically for “the Blind”), who had also been a disciple of Joseph b. Noah. Al-Baṣīr's religious philosophy was decisively influenced by the teachings of *Kalām; he denounced the extremist interpretations of forbidden marriages (the so-called *rikkuv* theory). His pupil *Jeshua b. Judah (Arabic name: Abu al-Faraj Furqān ibn Asad), the most pro-

lific Karaite writer in the 11th century, became known as a religious teacher and philosopher, as well as a translator of the Bible and an exegete (in the latter capacity he earned the admiration of Abraham *Ibn Ezra). Like his teacher, Jeshua was also an adherent of the philosophy of Kalām, and his opposition to the extension of the categories of forbidden marriages was even greater, and more decisive, than that of Joseph. Jeshua was the last important Karaite scholar in Erez Israel. At the end of the 11th century Karaite literary and scientific work in Erez Israel came to an abrupt end as the result of the First Crusade (1099). When the invading army, under Godfrey of Bouillon, took Jerusalem, some of the members of the Karaite community, with the Rabbanites, were driven into a synagogue and burned alive, while others were taken prisoners and ransomed expensively later. This marked the destruction of the first Karaite community in Jerusalem. Like the Rabbanites, the Karaites returned to Jerusalem after the city had come again under Muslim rule. In the 15th and 16th centuries the community had grown, and for some time even gained control over Samuel's tomb (al-Nabī Samwīl), which had become a very popular site of pilgrimage for Jews and Muslims alike. In 1642, according to the report of the Jewish traveler *Samuel b. David, there were only 27 Karaites living in Jerusalem. In the beginning of the 18th century the Karaites had to leave their residence in Jerusalem for a while, because they had been unable to pay their debts to Rabbanite Jews. In 1744 Samuel ben Abraham, a descendant of a Jerusalemite family, returned with several families from Damascus to the city and renewed the Karaite presence in the Old City. The ever-shrinking community endured until 1948. After 1967 a number of Karaites of Egyptian origin settled in Jerusalem. They maintain the synagogue that is said to have been established by Anan, the old Karaite courtyard in the Old City, and the cemetery in Abu Tor started by Samuel ben Abraham in the 18th century.

12TH TO 16TH CENTURIES: BYZANTIUM AND TURKEY. The decline of Karaism in the East began in the 12th century. No original writer of any significance came to the fore there after the first half of that century, even in the field of religious law. The only exception was in Egypt, where the Karaite communities (mainly in Cairo and Alexandria) still numbered members who possessed considerable financial means and had good political connections, or belonged to the intellectual or professional elite. When *Maimonides took up residence in Cairo their influence, social and religious, decreased, as well as their public standing. Notwithstanding, the Karaite community in Egypt remained the largest in the Islamic east until modern times. Also living in Egypt at this period was Moses b. Abraham *Dar'ī, the outstanding Karaite poet of his time. Other Karaite writers who lived in Egypt (mainly in Cairo) in the 12th to 15th centuries, such as *Japheth al-Barqamānī, Japheth ibn Nāghīr, *Israel ha-Mā'aravi, and *Samuel b. Moses *al-Maghribī, played no independent role in the further development of Karaism. But the Karaites in Egypt, and to a lesser

extent in Syria, Erez Israel, Iraq, and Persia continued to collect and study the writings of the Golden Age and to produce new copies. This may explain the very large book collections amassed in Karaite synagogues in these centers.

At the end of the 11th century, the center of Karaite intellectual activity shifted to Europe. This was largely the work of the many European disciples of Jeshua b. Judah, who, upon returning to their homes from Jerusalem, acted as the emissaries of Karaite doctrine. One such propagator of Karaism was Sidī ibn *al-Tarās, who was active in Spain in strengthening the Karaite, or Ananite presence (which had been there already for about two centuries), and whose wife continued his missionary work after his death. According to the description of Abraham ibn Da'ud in his *Sefer ha-Kabbalah*, after a short while the Castilian government, influenced by the Rabbanites, turned against the Karaites and extirpated the movement in Spain. However, the concentrated polemic of several Spanish writers in the 12th century (e.g., Abraham ibn Da'ud, Judah Ha-Levi, Abraham Ibn Ezra) against Karaism seems to testify that in that time the Karaites were still considered a threat to the Rabbanite hegemony.

In the Byzantine Empire, on the other hand, Karaism succeeded in gaining a firm foothold. A massive Karaite literature of translation came into being here, produced mainly by former disciples of Jeshua b. Judah who, for the most part, were residents of Constantinople. The most eminent among them was *Tobias b. Moses ha-Avel (known as "ha-Oved" [the worshiper] and also as "ha-Ma'tik" [the translator]) whose major work was the translation of the Arabic writings of Jeshua, as well as of Joseph b. Abraham al-Bašir. He also wrote a commentary on the Pentateuch, *Ozar Neḥmad*, based primarily upon the works of David b. Boaz and Japheth b. Ali. The only other name to be preserved is that of *Jacob b. Simeon, one of the most prominent Karaite translators of this period. To this period belongs also the work on Hebrew linguistics entitled *Me'or 'Ayin*, by an anonymous author. It seems to have been based on Arabic works of the Golden Age. It survived in a single ms, copied in 1208 (published by M. Zislin, 1990). Prominent religious scholars and biblical exegetes active in Byzantium in the 12th century were Jacob b. Reuben, author of a Bible commentary, *Sefer ha-Osher*, which consists largely of excerpts from Hebrew translations of works of earlier Karaite authors, especially those of Japheth b. Ali (part of the commentary on the Prophets and the entire commentary on the Writings was printed at the end of the edition of *Mivḥar Yesharim* by Aaron ben Joseph, 1836); Aaron b. Judah *Kusdini (from Constantinople), of whose works there survives only a responsum on marriage laws; and Judah b. Elijah *Hadassi, author of *Eshkol ha-Kofer*, an encyclopedic summary of Karaite theology, one of the most important works of Karaite literature and, undoubtedly, the outstanding Karaite work in Hebrew. Most Byzantine Karaite translations and original works of that period contain a considerable number of Greek glosses, or other phrases, which constitute very important evidence of early Medieval Judeo-Greek.

In the second half of the 13th century, Karaism in the Byzantine Empire entered a period of spiritual florescence. It was in this period that *Aaron b. Joseph ha-Rofe ("Aaron the Elder"), one of the most important Karaite biblical exegetes, was active; highly revered by his coreligionists, he was given the title of "ha-Kadosh" ("the Saint"), most probably for his work in arranging the hitherto unstable Karaite liturgy into an organized ritual, valid to this day. His commentary on the Bible, *Sefer ha-Mivḥar*, is regarded as the classic Karaite work in Bible exegesis; it shows the influence of Abraham ibn Ezra's commentary. *Aaron b. Elijah of Nicomedia ("the Last Aaron"), a codifier, biblical exegete, and religious philosopher who lived in the first half of the 14th century, was regarded by the Karaites as the "Karaite Maimonides"; he was the author of *Gan Eden*, a systematic code of Karaite law and belief, corresponding in its significance for Karaism to the *Turim* by R. *Jacob b. Asher; of *Keter Torah*, a Bible commentary which has enjoyed, for many centuries now, a status and prestige comparable to that of Rashi's commentary among Rabbanites; and of *Ez Hayyim*, which attempts to refute the Aristotelian views of Maimonides by a religious philosophy, which, while familiar with Aristotelian terminology and concepts, is basically committed to Mu'tazilite Kalām. To the same century belongs *Moses b. Samuel of Damascus, a native of Safed in Erez Israel who moved to Damascus and obtained an appointment as manager of the emir's private estates. In 1354 he was compelled, under threat of execution for allegedly blaspheming Islam, to become a Muslim and to accompany the emir on a pilgrimage to Mecca. What he saw of the pilgrimage rites moved him to flee to Egypt, where he found a kindlier superior in the vizier's office, and he returned to Judaism. Among his poetical works is a description of his forced conversion and pilgrimage.

The conquest of the Byzantine Empire by the Turks in 1453 was followed by a change in the relationship between Rabbanite and Karaite Jews. Some Jews expelled from Spain in 1492 were granted asylum in Turkey, where they were well treated, especially during the reign of *Suleiman the Magnificent. Jewish intellectual life rose to new heights. Jewish schools, synagogues, and printing presses were established, and Jewish scholars no longer confined themselves exclusively to talmudic studies, devoting themselves also to secular sciences – physics, astronomy, mathematics, and medicine. In the 15th and 16th centuries a rapprochement took place between the Karaite and Rabbanite Jews; Rabbanite scholars guided Karaites in the study of Jewish literature and secular sciences, and some, such as *Shemariah b. Elijah Ikriti, Mordecai b. Eliezer *Comtino, and Elijah b. Abraham *Mizrahi, even accepted Karaites as their students. One of the Karaite students of Comtino was Elijah b. Moses *Bashyazi, the most celebrated Karaite scholar of his time, whom the Karaites regard as "the final decider" (*ha-posek ha-aḥaron*). His code of law, *Adderet Eliyahu*, became the Karaite counterpart of the rabbinic *Shulḥan Arukh*. His pupil and brother-in-law, Caleb b. Elijah *Afendopolo, adapted *Adderet Eliyahu* and com-

pleted it; a versatile scholar, he himself also composed works on theological and liturgical themes and on secular subjects (mathematics, astronomy, law, philosophy), as well as religious and secular poems, some of which contain references to the expulsion from Spain and from Lithuania and Kiev (1495). A great-grandson of Elijah Bashyazi, Moses b. Elijah *Bashyazi, was the last outstanding Karaite author of this period, and his death also ended the Byzantine chapter in Karaite history (end of the 16th century). His works contain important Arabic quotations from the writings of the earliest Karaite authors, which he had discovered in manuscript in the course of his travels, especially in Egypt. The Byzantine-Turkish Karaite communities, similar to their brethren in Babylonia, Persia, and Egypt, gradually fell into a state of decline, and the center shifted once again to another area.

17TH TO 18TH CENTURIES: KARAITES IN CRIMEA AND LITHUANIA. In the 17th and 18th centuries, Karaite activity shifted to the Crimea and Lithuania, and Karaites in these areas assumed leadership of the sect. The existence of individual Karaites in the Crimea is traced back to the 12th century; *Pethahiah of Regensburg mentions meeting several sectarians among the Turkish nomads occupying parts of southern Russia, who observed the Sabbath in the dark and regarded even the cutting of bread as prohibited on that day. In the 13th century, at the time of the Tatar "Golden Horde," a considerable number of Karaites settled in the Crimea, mainly from the Byzantine Empire, perhaps also from Persia. At the end of the 14th century, according to a Karaite tradition, Grand Duke Witold of Lithuania, after defeating the Tatars (1392), carried a large group of Tatar prisoners, including some Karaite families, to *Troki (near Vilna), *Lutsk, and *Halicz, and settled them there. It seems more probable that the Karaites were brought or invited by Witold to Troki to help him develop the economy, rather than as prisoners, and that Karaites arrived in Lutsk and Halicz from Troki or somewhere else, early in the 15th century. From there the Karaites spread to other towns in Lithuania, Volhynia, and Podolia. Polish-Lithuanian Karaites continued to speak "Tatar" (actually a few different Turkish dialects) and translated the prayers into their language.

East European Karaites established firm contacts with their Byzantine coreligionists. Thus, letters have been preserved which were exchanged between the Karaites in Lutsk and Troki, and Elijah Bashyazi in Constantinople; the latter also had Lithuanian Karaites among his pupils. The Karaites living in the Crimea under Tatar rule were unable to engage in any intellectual and scientific activities; but their brethren in Lithuania benefited from their contact with the Rabbanite Jews in that area, which in the second half of the 16th century entered a period of spiritual renaissance. The first important Karaite author in Lithuania was Isaac b. Abraham *Troki (1533–1594), who wrote an anti-Christian treatise, *Hizzuk Emunah* (first published, with Latin translation, by Wagensel in his work *Tela ignea Satanae*, in 1681). The final compilation of the book was the work of Isaac Troki's pupil, Joseph

b. Mordecai *Malinovski, who also wrote several works of his own. Joseph's brother, Zephaniah Malinovski, wrote a treatise on the calendar. A contemporary of the Malinovski brothers, *Zerah b. Nathan of Troki, was well versed in both the natural sciences and rabbinic literature; in his letters to Joseph *Delmedigo, he raised 70 questions, mainly of mathematical-astronomical content, and this prompted Delmedigo to write *Elim* and *Iggeret Ahuz*. At the time of the *Chmielnicki massacres in 1648, the Karaites, for the most part, suffered the same fate as the Rabbanite Jews; in general the relations between the two groups were quite good in this period. One effect of the persecution of the Jews and Karaites was to arouse interest in the Karaite sect among Christian scholars; another was the creation of an apologetic historiography on the part of Lithuanian Karaites. Among the Christian works on the Karaites that appeared in this period were *Epistola de Karaitarum rebus in Lithuania* (1691), by Gustav Peringer, a professor at Uppsala; *Diatribes de Secta Karaeorum* (1703), by Jacob Trigland in Holland; and *Notitia Karaeorum* (1721), by Johann Christoph Wolf of Hamburg. Around 1700, at the request of two Swedish scholars, the Karaite scholar *Solomon b. Aaron Troki wrote a treatise on Karaism and its major differences with Rabbanite Judaism, under the title of *Appiryon Asah Lo*. The same author also composed polemics against Rabbanite Judaism and Christianity. In 1699, Mordecai b. Nisan *Kukizow wrote two treatises on Karaism; one, entitled *Dod Mordekhai*, was written in reply to inquiries submitted to him by Trigland, while the second, a smaller work, entitled *Levush Mordekhai*, sought to answer questions posed by King Charles XII of Sweden. In writing *Dod Mordekhai*, Mordecai b. Nisan was assisted by *Joseph b. Samuel ha-Mashbir, a relative; the latter also wrote many other works, including *Porat Yosef*, a valuable book on grammar. Born in Lithuania, Joseph became *hakham* of Halicz, Galicia, in about 1700 (thereby starting a dynasty of *hakhamim* and *hazzanim*) and was instrumental in raising the cultural standard of the Karaites in the area.

In the second half of the 18th century, the Crimean Karaites also entered upon a period of literary and scientific activity, profiting from a close connection with Lithuanian Karaites and the immigration of a group of Karaite scholars from Lutsk (Volhynia). Hitherto Crimean Karaites, who maintained fairly large communities in four major cities of the peninsula and were living under favorable economic conditions, had suffered from a lack of religious leaders and teachers (*hakhamim*, *hazzanim*, and *melammedim*). Outstanding among the group from Lutsk was Simḥah Isaac b. Moses *Luzki, a prolific author, who settled in *Chufut-Kale in 1750. Two of his numerous works appeared in print in the 18th and 19th centuries: *Or ha-Hayyim*, a philosophical commentary on *Ez Hayyim* by Aaron b. Elijah of Nicomedia (together with the text, Eupatoria, 1847) and *Orah Zaddikim*, a history of Karaism with an apologist tendency, which also contains the first attempt at a Karaite bibliography (together with *Dod Mordekhai* by Mordecai b. Nisan Kukizow, Vienna, 1830). Several other works have appeared in recent years.

UNDER RUSSIAN RULE: LEGAL SEPARATION FROM RABBANITES. A new epoch in the history of the Karaites was opened by the incorporation of Lithuania and Crimea (1793 and 1783, respectively) into Russia. Until then, the external history of the Karaites had been similar, and parallel, to that of the Rabbanite Jews; both considered each other as Jews and regarded even the most violent polemics between them as an internal Jewish quarrel. Wherever the Karaites had taken up residence, they had been treated as Jews. For example, a decree issued by Grand Duke Witold in 1388 describes the Karaites of Troki as “Judaei Trocenses” and grants them the same special legal status as that accorded to Jews of Brest-Litovsk and other Lithuanian communities. The decree was reconfirmed by King Sigismund I of Poland in 1507, for both Karaite and Rabbanite Jews in Lithuania. In 1495, Grand Duke Alexander expelled both Jews and Karaites from Lithuania, and both were admitted into Poland by his brother, King John Albert. John’s successor, Alexander, in turn permitted the return of both Jews and Karaites to Lithuania. During the Chmielnicki persecutions, hardly any difference was made between the two groups. In Lithuania, Poland, and Volhynia, the state taxes payable by Jews and Karaites had to be remitted in a lump sum; the Karaites would hand their taxes over to the Rabbanite Jews, and these would add their own taxes and transmit the whole sum to the government. Under the Tatar khans and the Ottoman Turks, Rabbanite Jews and Karaites in the Crimea also had the same legal status. It was only at the end of the 18th century, when Russia conquered the Crimea, that a difference in status was made between Rabbanite Jews and Karaites under the law. In 1795, Empress Catherine II relieved the Karaites of the double tax imposed upon the Jews, and also permitted them to acquire land. Thus the 1795 law created a wall of separation between Jews and Karaites, each group enjoying civil rights to a different degree (although legislative decrees continued to refer to Karaites as “Jews”).

Inequality before the law of the two groups was further expanded in 1827, when the Crimean Karaites, like the Crimean Tatars, were exempted from the general military draft law enacted by Czar Nicholas I, a privilege that was not extended to the Jews. In 1828, exemption from military service was also granted to the Karaites of Lithuania and Volhynia. In their attempts to improve their legal status, Russian Karaite leaders had at first refrained from resorting to attacks upon Rabbanite Jews; this policy was changed in 1835, when the Karaites, in appeals and memoranda to the Russian government, began to stress their fundamental difference from other Jews, namely their refusal to accept the validity of the Talmud. They also claimed to possess qualities which distinguished them from other Jews: that, contrary to the Rabbanites, they were industrious people, honest in their behavior and loyal to the throne. In 1835 they succeeded in having the Rabbanite Jews of Troki expelled from the town, on the basis of ancient Lithuanian privileges which granted them the sole right of settlement there. They also achieved a change in their official designation; instead of “Jews-Karaites” they first came

to be called “Russian Karaites of the Old Testament Faith,” and eventually simply “Karaites.” The special legal status accorded to Karaites, as compared with the other Jews, was also influenced by the difference in their social and economic situation. Whereas the Jews in the Crimea were mainly peddlers and artisans, the Karaites were wealthy landowners, deriving their income from tobacco plantations, orchards, and salt mines, and maintaining good relations with the authorities. In 1840 the Karaites were put on an equal footing with the Muslims, and were granted an independent church statute. Two dioceses were established, each headed by a *hakham*, with residences at *Feodosiya (Crimea) and Troki respectively; the *hakhamim* were laymen, elected by delegates from all Karaite communities. Each community also elected its *hazzan*, who performed religious functions and served as an assistant to the *hakham*. Finally, in 1863, the Karaites were given rights equal to those of the native Russian population.

The last Karaite spiritual leader under Tatar rule was Benjamin b. Samuel *Aga (d. 1824), who continued to hold his post – albeit unofficially – under Russian rule. A contemporary, Isaac b. *Solomon of Chufut-Kale, attempted to introduce a reform of the Karaite calendar and wrote a treatise on the subject, *Or ha-Levanah* (1872); he was also the author of *Iggeret Pinnat Yikrat* (1834, 1872), a treatise on the Karaite dogmas, and composed liturgical poems. Simḥah *Babovich, the first Karaite *hakham* to be recognized as such by the Russian government, played a major role in the political history of Russian Karaism and in the drafting of its statute as an autonomous congregation. In 1827 he was a member of the two-man delegation of Crimean Karaites (the other member being the Karaite scholar Joseph Solomon b. Moses *Luzki), which succeeded in persuading the Russian government in St. Petersburg to exempt Karaites from military service. Luzki wrote many works dealing with *halakhah*, the most important of which was a commentary on *Sefer ha-Mivḥar* by Aaron b. Joseph, published under the title *Ṭirat Kesef* (1835). Luzki’s views were opposed by David b. Mordecai *Kukizow (1777–1855), a great-grandson of Mordecai b. Nisan, who was the author of *Zemah David*, a theological work (1897). Mordecai b. Joseph *Sultansky, a versatile writer, composed works on theology, history, and grammar; one of his pupils was the *hakham* and writer Solomon b. Abraham *Beim.

The most eminent Karaite scholar of the 19th century, however, and the most active champion of the Karaite struggle for civil rights, was Abraham b. Samuel *Firkovich (1787–1874) whose advent upon the scene opened a new chapter in Karaite historiography. Notwithstanding the numerous forgeries, tendentious quasi-discoveries, and unfounded hypotheses which mar Firkovich’s writings (later to be refuted by Jewish scholars), Karaite historical studies, as well as Jewish studies, undoubtedly owe him a great debt of gratitude. During his travels in the Crimea, the Caucasus, Erez Israel, Syria, and Egypt, he discovered many works of Rabbanite and Karaite literature which had been presumed lost. His collection of valuable Jewish manuscripts is the largest in the world of

its kind. After his death his heirs sold it to the then Imperial Library, presently Russian National Library in St. Petersburg. Firkovich was the last Karaite writer of any importance; after his death, Karaite learning declined. Mention should be made, however, of several authors who exerted influence on Karaite spiritual life, writing in Hebrew, Tatar, and Russian: Samuel Pigit, *hazzan* in Yekaterinoslav (1849 – 1911), who composed homilies and poems in Hebrew (*Iggeret Niddehei Shemuel*, 1894) and a book of sermons in Tatar (*Davar Davur*, 1904); Elijah *Kazaz of Eupatoria (1832–1912), author of a Hebrew textbook, in Tatar (*Regel ha-Yeladim*) and translator of French philosophical works into Hebrew (Janet, Vigouroux, and others); Isaac Sinani, author of a biased history of Karaism, in Russian (2 vols, 1888–89); and Judah *Kukizow who wrote several works in Russian.

NUMBERS OF KARAITES. Toward the end of the 19th century the number of Karaites did not increase significantly. In 1783, when the Crimea was conquered by the Russians, there were 2,400 Karaites in Russia; according to official figures, their number (including all areas of former Poland and Lithuania) had grown to 9,725 in 1879, 12,894 in 1897, and 12,907 in 1910. In 1932 the number of Karaites in Russia (mainly in the Crimea) was estimated at 10,000. In 1910 a Karaite synod, held in Eupatoria, made an attempt to relax the Karaite marriage laws, which, however, was unsuccessful, as it was opposed by Karaite clerics in Troki, Constantinople, and Cairo. In 1911 Karaite students at the University of Moscow sought to inaugurate a Karaite renaissance and founded a Karaite monthly, in Russian, named *Karaimskaya Zhizn*; it had to close down before the year was over. In 1913–14 a Russian-language Karaite periodical, *Karaimskoye Slovo*, was published in Vienna, and in 1924 a Polish-language periodical, *Myśl Karaimska*, was founded, also in Vienna, which contained scholarly articles and reports on Karaite life.

In 1932 the number of Karaites outside Russia, in Poland (Halicz, Troki, Vilna), Constantinople, Jerusalem, Cairo, and Hit (on the Euphrates), was estimated at 2,000 (but this number seems to low, considering the fact that in 1877 their number in Egypt alone was recorded at 2,000). The total number of Karaites in the world was approximately 12,000. After World War I Vilna became a new center of Karaite life, and it was there that attempts were made at a reorganization of the Karaite sect. In 1932, the Polish Ministry of Culture and Education gave its provisional approval to the election of Serayah *Shapshal, a former senior Russian official, as *hakham* of Troki and spiritual leader of the Polish Karaites. On Jan. 9, 1939, the German Ministry of the Interior expressly stipulated that the Karaites did not belong to the Jewish religious community; their “racial psychology” was considered non-Jewish. This decision was subsequently applied to France. In Eastern Europe the Nazi *Einsatzgruppen* during World War II received orders to spare the Karaites, who enjoyed favorable treatment and were given positions of trust and authority with the German occupation authorities. On Oct. 6, 1942, the ruling of Jan. 9,

1939, was extended to the Crimea and the Ukraine, where the majority of Karaites lived. The Karaite question continued to be debated by the German authorities who queried the Rabbanite scholars Zelig *Kalmanovitch, Meir S. *Balaban, and Itzhak *Schipper on the origin of the Karaites. In order to save them, all three gave the opinion that the Karaites were not of Jewish origin. The behavior of the Karaites during the Holocaust period vacillated between indifference to the Jewish cause and some cases of actual collaboration with the Germans. No adequate study, however, has been made on this subject. In the Arab countries, on the other hand, the persecution of Jews which followed upon the establishment of the State of Israel caused the Karaites in Egypt and Iraq to settle in Israel, where they were welcomed and enabled to settle in compact groups, and were given government assistance in establishing themselves economically and in providing for their religious and educational needs.

CONTEMPORARY KARAITE LIFE. The Karaites came to Israel essentially in two waves: following the Suez Canal crisis (Operation Kadesh) in 1956 and in 1962. They first settled mainly in the Ramleh area and from there spread to other areas. Presently they live mostly in the following areas: Ashdod (the largest community), Ramleh district (the seat of the “World Center” and the central library and archives), Bat-Yam, Kiryat Gat, Ofakim, Rannen, Beersheba, and Acre. From the 1970s, the Karaite community in Israel has grown in numbers and has seen the consolidation of its institutions. According to their own estimate there are 30,000 Karaites in Israel. The actual number is probably lower. The major force behind this Karaite strengthening was Chief Rabbi Haim Hallevi of Ashdod. For many years, Hallevi had been acting chief rabbi of the Israeli Karaites, becoming chief rabbi in title, as well as in fact, with the death of Chief Rabbi David ben Moses Yerushalmi, in 1987. (Yerushalmi became chief rabbi in 1976, having succeeded the late Shelomo ben Shabbetai Nono.) Since 1991 Elijah Marzouk from Ofakim has been chief rabbi of the Karaites in Israel. In addition to the chief rabbi, Israel’s Karaites are served by 15 other rabbis and a larger number of *hazzanim*. Some of the rabbis function also as ritual slaughterers and circumcisers. There are additional slaughterers and circumcisers, although Rabbanite practitioners are often called in. Many books for their use have been published recently, including a complete prayer book, Bashyazi’s *Adderet Eliyahu*, and Aaron ben Elijah’s *Keter Torah*.

The majority of Israeli Karaites are of Egyptian origin. A small number came from Hit (Iraq). After the breakup of the Soviet Union an unknown number of Karaites emigrated from there to Israel. Not all of them identify as Karaites. Israeli Karaites have had difficulty maintaining their religious customs and their independent identity since immigrating to Israel, mostly in the 1950s. There are two basic problems. On the one hand, they have encountered many of the same phenomena of secularization as have confronted other traditional Jewish groups from Islamic countries. On the other hand,

there are strong forces of assimilation into the general Rabbanite Jewish community. For instance, since the Karaite holidays do not always coincide with those of most Israeli Jews, demands of work, army, and school make it difficult for many Karaites to continue their own customs. While *Ḥanukkah* is not considered a religious holiday by Karaites, it is often observed anyway as an Israeli national holiday. Though Karaism has its own laws of ritual slaughter, many Karaites are satisfied with the meat produced under Rabbanite supervision, which is more easily available. Some Karaites try to avoid any possibility of stigmatization by severing their ties with the Karaite community completely.

The Karaite leadership in Israel has tried to maintain the loyalty of their faithful by promoting various religious, cultural, and educational activities. Children participate in after school classes (there are no independent Karaite public schools) and summer camps. It is still too early to determine how successful these measures are. Some of the questions of Karaite assimilation and acculturation have been investigated by Emanuela Trevisan Semi, especially in her *Gli ebrei caraiti tra etnia e religione*, 1984 (which also deals with non-Israeli Karaites), and by Sumi E. Colligan in her dissertation, *Religion, Nationalism, and Ethnicity in Israel: The Case of the Karaite Jews*, 1980.

Although the Karaites are not fully recognized by Israeli law as a separate community, due to a decision by the Supreme Court (1995) their separate *bet din* is binding on members of the community in matters of marriage and divorce. According to Karaite legal usage in recent times, they disapprove of intermarriage with the rest of the Jewish population. According to the current usage in Rabbinic courts in Israel, the Karaites are permitted to intermarry with the rest of the Jewish population on condition that the Karaite member of the couple is willing formally to accept Rabbanism. Not all Rabbanite rabbis, however, are prepared to accept such intermarriages because of the problems of *mamzerut* (see **mamzer*). Karaites maintain *de facto*, but not *de jure*, authority over intra-Karaite marriage and uncontested divorce. These issues are discussed by Michael Corinaldi in his *The Personal Status of the Karaites in Israel*, 1984; Y. Shapira, in: *Meḥkeret Mishpat*, 19:1 (2002), 285–361 (both Heb.).

In 1983, the Karaite Jews of America were incorporated as a religious organization. Karaites claim that there are at least 1,200, and perhaps as many as 10,000, Karaite Jews of Egyptian origin in the United States, most of whom live in the San Francisco Bay Area of California. The Karaites in that region conduct services, either in private homes or monthly at a Conservative synagogue in Foster City. Other small concentrations of American Karaites are found in the New York and Chicago areas. There appears to be strong evidence of Americanization of this community.

The Karaites of Turkey are grouped particularly in Istanbul, but their deep religious attachment has led many to Israel in order to find Karaite mates to marry. Those who marry non-Karaite Jews or partners from other communi-

ties are automatically segregated from the community and constitute a loss for the Istanbul community, which numbers 50–60 families.

In recent years, many young Karaites have studied medicine, while others have tended towards craftsmanship such as jewelry. In some cases the jewelry artisanship is handed down from father to son and practiced in the Covered Bazaar in Istanbul. One Covered Bazaar street is called “The Street of the Karaites.” Similarly, an important business center of Istanbul has retained its name – “Karaköy.”

Following the destruction by fire of the great Karaite Synagogue, the Karaites have been using the Hasky Karaite Synagogue. This is the last available and usable Karaite sanctuary. Because their dwellings (Moda, Şişli, Nişantaşlı, Gayrettepe, etc.) are far away from the synagogue, Karaites are not able to attend as frequently as previously. The synagogue, led by Yusuf Sadik, never witnesses three generations attending together. Only during rare religious holidays do a few Karaites, usually elderly, come to pray. Nevertheless, the Karaites continue to survive and strive to maintain their numbers.

There are still a few Karaites in Cairo, mostly older people who look after the Karaite synagogue and precious manuscripts.

In 1970, 4,571 Karaites were reported to be in the Soviet Union. Following the breakup of the Soviet bloc and the Soviet Union, some awakening of Karaite identity and activity took place in these countries. According to a report by Mourad El-Qodsi (resident of Rochester, N.Y., originally from Egypt), who visited the Karaite communities of Eastern Europe in 1991, the overall number of Karaites there was approximately 1,400, with 800 of them living in the Crimea, and the rest in Poland (in Warsaw, Gdansk and Wrocław), Lithuania (in Vilna, Poniewiez and Troki), Halicz (Ukraine) and Moscow. In Russia there appeared a “Karaite National Movement,” which also attempted to achieve an autonomous political status for Russian Karaites. Similar attempts have been made by Crimean Karaites. The majority of the latter also developed the ideas of Seraya *Shapshal to unprecedented extremes, severing all links to Judaism (which was also accepted in Western Europe by Simon *Szyzman), and tracing their ethnic origin to Mongol-Turkic roots and their religion to Turkish pagan practices and the cult of the Turkic deity Tengri. Most of the minority of Crimean Karaites who did not share this line emigrated to Israel, as did Karaites from other eastern European communities, which brought a further decrease in their numbers.

Scholarship on Karaism and the Karaites

The Israeli Karaite community has been active in editing previously unpublished Karaite works or reissuing unavailable classics. These works included among others Aaron ben Elijah's *Keter Torah* and *Gan Eden* (both reissued, 1972), Isaac Troki's *Hizzuk Emunah* (1975), Caleb Afendopol's *Patshegen Ketav ha-Dat* (1977). All these were semi-critical editions. A major Karaite project of publishing semi-critical editions of tens of works

by medieval and early modern Karaite authors has been undertaken in recent years by the Institute Tiferet Yosef headed by Rabbi Yosef Algamil. The latter also published a multi-volume work on Karaite history and life. The first two volumes discuss in general the history of Karaism and Karaites, and the third volume is devoted to the Karaite community of Egypt. While characterized by a partisan Karaite interpretation of Karaite origins and history, these books contain much material about Karaism unavailable elsewhere. The personal accounts of Karaite communities and the many illustrations are especially important. Another recent one-sided exposition of Karaism is by the Paris-based Polish Karaite Simon *Szyzszman, *Le Karaïsme*, 1980 (German tr. *Das Karäertum*, 1983). Szyzszman has also begun a journal entitled *Bulletin d'Études Karaites*.

Leon *Nemoy continued to publish in the 1970s until the early 1990s on the subject almost 60 years after his first article on Kirkisani. His many publications during these years, ranging from early Karaism (and Kirkisani studies) to contemporary Karaism, have contributed greatly to Karaite studies. In honor of Nemoy's eightieth birthday, two Festschriften were published (*Studies in Judaica, Karaitica, and Islamica*, 1983, and *Jewish Quarterly Review* 73:2, October 1982), both with articles about many aspects of Karaism.

Georges *Vajda (d. 1981), in addition to his many publications in all fields of Jewish and Islamic thought, took special interest in early Karaite philosophy, law, and exegesis (see below).

The one question of Karaite studies which continues to intrigue scholars more than any other is the issue of Karaite origins and the possible relation between medieval sectarianism and Jewish groups of the Second Temple period. The issue, simply put, is whether Karaism was founded in the eighth century by *Anan ben David, or whether Anan merely reorganized and consolidated non-Rabbinic groups which had existed for hundreds of years. The discovery in 1947 of the *Dead Sea Scrolls, with certain obvious parallels to Karaite literature, occasioned a flurry of research comparing the ancient scrolls with medieval writings. While more and more parallels have been adduced between apocryphal and Qumranian literature, on the one hand, and Karaism, on the other, there is yet no decisive proof that an organic connection can be shown between Second Temple groups and Karaites. N. Wieder's *The Judean Scrolls and Karaism* appeared in 2005 in a revised expanded edition. A recent comprehensive contribution on the subject is Y. Erder, *The Karaite Mourners of Zion and the Qumran Scrolls*, (2004, Heb.). The latter work is representative of a revival of Karaite studies, especially in Israel, since the early 1970s. Studies have addressed a wide range of subjects related to Karaites and Karaism. Most scholars no longer accept the simplistic Rabbanite view of Karaism as a schismatic heresy begun by a single disgruntled individual, Anan. Some of the scholars who have addressed themselves recently to these issues are Haggai Ben-Shammai, Daniel Lasker, Yoram Erder, and Moshe Gil (who has also published *The Tustaris, Family and Sect*, 1981, about a sub-group of Karaites).

A large scale survey of "the state of the art" of Karaite studies is Meira Polliack (ed.), *Karaite Judaism: A Guide to Its History and Literary Sources*, (2003).

Research in Karaite exegesis and religious thought in recent decades included Georges Vajda, *Deux commentaires karaites sur l'Éclésiaste* (1971) and his edition of Joseph *al-Bašir's *Kitāb al-Mu'tawī* (edited by David R. Blumenthal). The book includes an edition of the original Arabic text and French translations or paraphrases, accompanied by extensive commentaries showing al-Bašir's dependence on contemporary Muslim Kalām, especially the works of 'Abd al-Jabbār. Uriel Simon, *Four Approaches to the Book of Psalms*, 1982, based his discussion of the Karaite approach upon the opinions of Salmon and Japheth. Haggai Ben-Shammai presented Japheth's (and Kirkisani's) philosophy in his dissertation, *The Doctrines of Religious Thought of Abū Yūsuf Ya'qūb al-Qirqisāni and Yefet ben 'Eli*, 1977. Moshe Sokolow's dissertation, *The Commentary of Yefet ben Ali on Deuteronomy XXXII*, 1974, provides an Arabic edition and Hebrew translation of part of Japheth's Torah commentary. Mention should be made of the studies of Bruno Chiesa, notably Bruno Chiesa and Wilfrid Lockwood, *Ya'qub al-Qirqisani on Jewish Sects and Christianity* (1984). Mention should be made also of Daniel Franks contributions: his Ph.D. thesis "The religious philosophy of the Karaite Aaron ben Elijah: the problem of divine justice" (1991), and *Search Scripture Well: Karaite Exegetes and the Origins of the Jewish Bible Commentary in the Islamic East* (2004).

In the area of Karaite Arabic Bible translations, M. Polliack dedicated a monograph to *The Karaite Tradition of Arabic Bible Translation* (1997). Further, in the area of exegesis and linguistics, mention should be made of the works of Geoffrey Khan, who published *The Early Karaite Tradition of Hebrew grammatical thought: including a critical edition, translation and analysis of the Diqduq of 'Abu Ya'qub Yusuf ibn Nuh on the Hagiographa* (2000) as well as the grammatical compendium of Abu 'l-Faraj Hārūn, *al-Kitāb al-Kāfi* (together with M. Angeles Gallego, J. Olszowy-Schlanger, 2003), and the studies of Aharon Maman.

Haggai ben-Shammai's and David Sklare's publications concerning early Karaite authors and their philosophies (Daniel ben Moses *al-Qūmisī, Kirkisani, Japheth ben Ali, *Jeshua ben Judah) have also shown the Kalamitic milieu of these Karaite thinkers. Daniel J. Lasker's studies of late Karaite philosophy (Judah *Hadassi, *Aaron ben Elijah, Elijah *Bashyazi) have challenged the widely held assumption that Karaites invariably remained loyal to the early Karaite Kalamitic thought. In fact, Aaron ben Elijah was greatly influenced by Aristotelianism, and Bashyazi was a follower of Maimonides. Mention should also be made of Sarah Stroumsa's dissertation edition of David *al-Mukammis' *Ishrūn Maqāla*, 1983, though it is unclear if the latter was indeed a Karaite.

Two large scale projects of Karaite studies have been undertaken at the Ben-Zvi Institute for the Study of Jewish

Communities in the East: (a) The most comprehensive bibliography ever compiled on Karaites and Karaism, including texts and studies, was prepared by B. Walfish (containing over 7,000 entries) and is scheduled to appear in 2006. (b) In the Center for the Study of Judeo-Arabic Culture and Literature, the cataloguing of the Judeo-Arabic manuscripts of the Firkovich Collection (over 9,000 items) has been under way. So far several thousand manuscripts have been catalogued and two printed catalogues have appeared, of manuscripts of writings by al-Baṣīr (1997), and of Japheth ben Eli's commentary on Genesis (2000).

Karaite ethnomusicology has been investigated extensively by Jehoash Hirshberg, who has compared the changes that have taken place in Egyptian Karaite musical traditions in Israel and in the United States. Rachel Kollender has specialized in Karaite liturgical music. Both authors have noted the role music has played in preserving Karaite identity.

The fate of Karaites during the Holocaust has been discussed recently by Warren P. Green and Shmuel Spector. All evidence seems to point to the conclusion that, while individual groups of Karaites were murdered, generally the Nazis regarded European Karaites as a Tataric group similar to other Crimeans.

Other scholars who have been engaged in Karaite research include the late Alexander Scheiber, Philip E. Miller, Giuliano Tamami, William Brinner, and Jonathan Shunari.

A major desideratum of Karaite studies is an intensified effort towards the publication of critical editions of Karaite texts, many of which remain either in manuscript or in inferior printed editions.

[Daniel J. Lasker and Eli Citonne / Haggai Ben-Shammai (2nd ed.)]

Karaite Doctrine

PRINCIPLES OF HERMENEUTICS AND LEGAL THOUGHT. In principle, the Bible in its entirety is the sole source of Karaite creed and law. All religious precepts must derive directly from the Bible, based upon the literal meaning of the text, the customary use of the words and the context. Tradition is accepted, provided it is indispensable for the application of precepts contained in the text, for the clarification of ambiguities, or to make up for deficiencies in the concrete details of precepts; it must not be at variance, explicit or implicit, with any Biblical statement, and it must have the general consensus of the (Karaite) community; even so, however, its role remains restricted and subordinate. Certain rabbinic laws are accepted, not as valid components of the Oral Law transmitted by the Rabbanites, but as clarifying prescriptions, indicated in the text and reinforced by custom and tradition (*sevel ha-yerushah*, "yoke of inheritance"; *ha'akah*, "transmission"). For the rest, every scholar must study Scripture for himself, and, if urged to do so by his own knowledge and conscience, alter earlier opinions. Thus, Karaite doctrine is characterized, on the one hand, by rigidity and immutability of tradition, and, on the other hand, by an absence of restrictions on individual understanding of the Scriptures.

In the initial period of the development of Karaism (ninth century), it was the individualist trend that predominated, resulting in an almost anarchic state of affairs. This situation in Karaism of an infinite variety of opinions, as it existed until the middle of the tenth century, is reported on by al-Kirkisānī, who also attempts to explain and justify it by the principle of a free conception of Scriptures based on human reason (see above). Eventually, Karaite doctrine underwent a process of systemization and unification and an alternative tradition(s) to the Rabbanite one (as was Anan's tradition in the beginning); in its essentials, this process was developed at the time of Judah Hadassi (middle of the 12th century), achieving its final form at the time of Elijah Bashyazi (end of 15th century).

The following principles were established as norms for the determination of the law:

(1) the literal meaning of the biblical text (*ketav, mishma*, Arabic *samʿ*);

(2) the consensus of the community (*ʿedah, kibbutz*, Arabic *ijmāʿ*);

(3) the conclusions derived from Scripture by the method of logical analogy (*hekkesh*, Arabic *qiyās*);

(4) knowledge based on human reason and intelligence (*ḥokhmat ha-daʿat*, Arabic *ʿaql*); this latter principle, however, was not universally accepted by Karaite scholars. The principle of logical analogy was applied in its broadest sense and encompassed inference based upon analogy of words (*gezerah shavah*), upon induction (*hekkesh ha-hippus*), and upon analogy of notions (e.g., in respect of the prohibition of *kilayim*, and others). Judah Hadassi established not less than 80 different hermeneutical rules, including those applied by the Talmud (*Eshkol ha-Kofer*, nos. 114, 168–73). The hermeneutical rules most widely applied (especially with regard to marriage laws and degrees of consanguinity) are:

(1) analogous interpretation of juxtaposed words and passages (*semukhin*);

(2) inferences drawn a fortiori (*kal va-ḥomer*);

(3) interpreting a general principle on the basis of individual examples (*kelal u-ferat; perat u-khelal; kelal u-ferat u-khelal*), as well as all kinds of subsumption under a general principle (*binyan av*, etc.);

(4) extensive interpretation of a notion (*hagbarah*);

(5) a variety of rules for the interpretation of special words and grammatical peculiarities (e.g., the hermeneutical interpretation of the particles *et* and *kol* in the expansive sense, and of *akh, rak*, and *min* in the restrictive sense).

CREED. Apart from its fundamental stand on the Oral Law, Karaite creed does not differ in its essentials from that of Rabbanite Judaism. In its early stages normative beliefs had been formulated already by Daniel al-Qumisi, and reflect Kalam-oriented theology. Later creeds in Arabic and Hebrew were also based on the same principles. A list of ten articles of faith was formulated by Judah Hadassi (mid-12th century). In the late Middle Ages the philosophical foundation of Karaite creed

was established in *Ez Hayyim*, the work of Aaron b. Elijah of Nicomedia, which the Karaites recognized as authoritative. Elijah Bashyazi and his pupil Caleb Afendopolo formulated the philosophy of the Karaite creed in ten principles (which are somewhat different from those of Hadassi):

(1) God created the whole physical and spiritual world in time, out of nothing;

(2) He is a creator who Himself was not created;

(3) He is formless, One in every respect, incomparable to anything, incorporeal, unique, and absolutely unitary;

(4) He sent our teacher Moses (this presumes belief in the Prophets);

(5) He sent us the Torah through Moses which contains the perfect truth (which cannot be complemented or altered by any other law, specifically not by the Oral Law recognized by the Rabbanites);

(6) every believer must learn to know the Torah in its original language and with its proper meaning (*mikra* and *perush*);

(7) God also revealed Himself to the other Prophets (although their gift of prophecy was less than that of Moses);

(8) God will resurrect the dead on the day of judgment;

(9) God rewards every man according to his way of life and his actions (individual providence, freedom of will, immortality of the soul, and just reward in the hereafter);

(10) God does not despise those living in exile; on the contrary, He desires to purify them through their sufferings, and they may hope for His help every day and for redemption by Him through the Messiah of the seed of David. (In some earlier Karaite creeds, e.g., Hadassi, the doctrine of the Messiah is omitted.)

LAW. Unlike Rabbanite Judaism, Karaism has no fixed number of commandments (of commission or omission). Karaite legal doctrine does not, of course, even approach rabbinic Judaism in its multi-faceted development. The calendar (including Sabbath and holidays), laws of marriage, dietary laws, and precepts on ritual purity have received the most intensive treatment in Karaism, usually in a strictly literal sense and with a tendency toward greater severity.

CALENDAR AND HOLIDAYS. The calendar was the subject by which the Karaites distinguished themselves from the Rabbanites. It was also the subject of much dispute among the Karaites. In principle the calculation of the Karaite calendar was based on lunar observation, and observation of the barley for the purpose of intercalation. By the middle of the 19th century the use of mathematical calculation, in addition to visual observation of the new moon, was accepted, following the lead of *Isaac ben Solomon, at least by the majority of the Crimean Karaites. Like the Rabbanite calendar, the Karaite calendar is based on the calculation of the new moon. Karaites also recognize the 19-year cycle with seven leap months of 29 days each; determination of the beginning of the month, however, in addition to being based upon the calculation of

the moment of the appearance of the new moon (*molad*) and its location in accordance with special tables, also depends upon direct observation of the new moon. Thus, if direct lunar observation is made on the eve of the 30th day of the month, the following day becomes the day of the new moon; otherwise, the 31st day becomes the day of the new moon and the preceding month is determined to have had 30 days. The month of Nisan is regarded as the first month of the calendar year. In practice, however, following the tables of Bashyazi, the calendar is calculated in advance, by approximation (*haqrava*), as though the new moon was observed. In Israel, in order to emphasize this "approximation," observations are conducted in advance, in the spring, and accordingly the calendar of the following year (starting in the month of Tishri) is printed. Rabbi Samuel Magdi has been trying for several years to introduce mathematical calculation in principle, so far without success.

In determining the date of the holy days, Karaites deviate from Rabbanite usage in the following manner: the New Year Festival may begin on any day of the week (contrary to the Rabbanite rule, which provides for the postponement of the day of the New Year in three specific cases); as a result, the Karaite Day of Atonement does not always coincide with the Rabbanite; Passover and Sukkot (Feast of Tabernacles) are observed everywhere in the world for seven days only; the Feast of Weeks (Shavuot) falls on the 50th day following the Saturday of the Passover week (in accordance with the literal interpretation of Lev. 23:11, which the Talmud interprets in a different manner), and is therefore always on a Sunday; Hanukkah is not recognized, but Purim is, although the Fast of Esther is not; the Fast of Gedaliah is observed on the 24th of Tishri (as it was by the exiles returning from Babylon). Other fast days, with the exception of the Tenth of Tevet, are also observed on dates that differ from the rabbinic fast days (Karaites relate the fast days to the destruction of the First Temple, not the Second Temple).

Special rules apply to the sanctification of the Sabbath. Prohibition of work extends, beyond the 39 actions proscribed by Rabbanite Judaism, to any action not forming part of the prayer service or not absolutely necessary for nourishment or the satisfaction of other physical human needs. The earlier Karaite teachers (up to Jeshua b. Judah), like the *Samaritans and the *Beta Israel, prohibited the kindling of lights on Friday for use on the Sabbath (see *Eshkol ha-Kofer*, no. 146), and even taught that a light already lit had to be extinguished on the Sabbath; Jeshua b. Judah and his successors, however, taught that light on the Sabbath was permitted as an indispensable need and for the joy of the Sabbath (see *Adderet Eliyahu*, 1835, 31a). To this day, however, Karaites are either "friends of light" or "enemies of light," depending on whether or not they use artificial light on the Sabbath. Sexual intercourse is also prohibited on the Sabbath, and Karaites also oppose a number of alleviations of Sabbath precepts sanctioned by the rabbis.

CIRCUMCISION AND DIETARY LAWS. Certain rabbinical precepts pertaining to circumcision (*peri'ah* and *mezizah*) are rejected by the Karaites. They also differ on the detailed regulations of ritual slaughter and therefore regard the meat of animals slaughtered according to Rabbanite regulations as prohibited. An important difference is the rejection of the “minimal quantities” (*shi'urim*) fixed by the Talmud in connection with dietary laws and the laws of purity. The prohibition contained in the Bible (Ex. 23:19; 34:26; Deut. 14:21) of boiling “a kid in its mother’s milk” is also accepted by the Karaites as forbidding the consumption of the meat of cattle (not of fowl) with milk or butter; they do not, however, accept the additional restrictions enacted by the rabbis. They also strictly prohibit the consumption of the meat of an animal taken alive from the womb of its slaughtered mother (*ben pequ'ah*). Karaites permit the consumption of the meat of those animals only that are enumerated in the Bible, and reject the criteria for permitted mammals and birds as formulated in the Talmud. Many Karaite scholars hold that, ever since the destruction of the Temple, any consumption of meat is prohibited.

MARRIAGE LAWS AND LAWS ON RITUAL PURITY. Karaite laws on marriage and the prohibited degrees of consanguinity are of special severity. In the early period, even the farthest removed degree of consanguinity was regarded as prohibited, with the result that by the 11th century the Karaite community was running the danger of extinction. The Karaite scholars of that period established the so-called *rikkuv* theory. Historically it was based on the adoption of Anan’s views on this subject in their entirety. Exegetically and logically it was based on the assumption that man and wife form a unity of flesh (according to Gen. 2:24), from which it follows that persons related by marriage are also blood relations (*she'ér*). In arriving at this conclusion, they made use not only of direct analogy (*hekkesh*) but also of derivative analogy (*hekkesh ha-hekkesh*), of the second, or even a higher degree. In this manner, the most distant relatives came to be included in the biblical term *she'ér*.

This extreme theory of incest was rejected by Joseph b. Abraham ha-Kohen ha-Ro'eh al-Bašir and his pupil Jeshua b. Judah and was replaced by a less stringent law consisting of a set of six regulations (five, according to Joseph ha-Ro'eh). The reforms were not accepted by all Karaites immediately, and the debates about it continued for several centuries. The first regulation states that, according to the Bible and tradition, “blood relatives” (*she'ér*) for a man are father and mother, brother and sister and their blood relatives; i.e., the father’s or the mother’s sister, the son’s daughter and the daughter’s daughter (in accordance with Lev. 18:10, 12, 13) and – by analogy – the brother’s daughter and the sister’s daughter. The corresponding relatives are regarded as prohibited for a woman (this is the second regulation). The third regulation prohibits the wife’s blood relatives (based on Lev. 18:17). The fourth prohibits blood rel-

atives of the wife’s blood relatives. The fifth forbids marriage between two blood relatives and two blood relatives, e.g., two brothers marrying a mother and her daughter, respectively, or two sisters a father and his son, respectively (based on Lev. 18:11). The sixth regulation prohibits marriage between two blood relatives and two blood relatives once removed (thus Jeshua b. Judah, on the basis of an extensive interpretation of Lev. 18:14). Furthermore, any prohibition applying to one person also applies to all his blood relatives in the ascending and descending line, ad infinitum (but only to a limited degree as far as lateral lines are concerned).

In respect of ritual impurity, especially the impurity of the menstruation period (*niddah*), Karaite regulations are far stricter than the ones fixed by the rabbis. Notwithstanding, Karaite women are not required to immerse in a *mikveh*. Instead, they are required to pour water on the body with a vessel, from the head over the back, downwards. Rabbanite women in 12th century Egypt adapted this custom, causing Maimonides to stage a public campaign against it, which resulted in the promulgation of specific regulations reiterating the obligation of Jewish women to immerse in a *mikveh*.

LITURGY, ZIZIT, AND TEFILLIN. Karaite liturgy – which originally consisted solely of biblical psalmody – has the least similarity with its Rabbanite counterpart. There are two prayer services a day, mornings and evenings; on the Sabbath and holy days the *Musaf* prayer and other non-obligatory prayers are added. Originally, the *Ma'amadot* (prayers referring to the Temple sacrifices) formed the main basis of the Karaite rite. A prayer may be short or long, but must consist of seven parts (*shevaḥim*, *hoda'ah*, *vidduy*, *bakkashah*, *teḥinnah*, *ze'akah*, *keriah*) and the confession of faith. The prayers consist mainly of passages from the Bible (with the emphasis on Psalms) and partly also of prayer-poems, unknown to the Rabbanite rite. The *Shema* prayer is included in the Karaite rite, but the *Shemoneh-Esreh* (daily prayer consisting of 18 benedictions, and their equivalents for Sabbath and holidays, consisting of seven benedictions) is not known. The yearly cycle of weekly reading-portions from the Torah is almost identical with that of the Rabbanites. Until the end of the Middle Ages they used to begin the cycle in the spring, but changed it later, to begin in the fall, after Sukkot. The *haftarot* selection used by the Karaites differs from the Rabbanite one. During the prayer service, Karaites wear *zizit* (a fringed garment), the *zizit* including a light-blue thread. The biblical prescriptions concerning *mezuzah* and *tefillin* are regarded by the Karaites as having a figurative and symbolic meaning, and they reject the rabbinical regulations based upon them.

[Joseph Elijah Heller / Leon Nemoy]

Attempts at Reconciliation between Karaism and Rabbanism

The basic disagreement between the Karaites and the Rabbanites over the authority of the post-biblical oral tradition, and

the unshakable conviction of the Karaites that their teaching represented the pure original Mosaic faith, free of Rabbanite distortion and corruption, made attempts at reconciliation anything but hopeful. The finality of Saadiyah's proscription of the Karaites as complete heretics, and the resultant extreme bitterness of his Karaite opponents, made any rapprochement impossible in the tenth century, while the Karaite propensity to repeat over and over again the dicta of their great scholars of the golden age extended this bitterness into later centuries. At the same time, in 11th–12th centuries Egypt, relations seem to have been much improved, as is attested, among others, by several marriage contracts between members of the highest social layers, in which one party was Rabbanite and the other Karaite. Eventually, however, feelings calmed down on both sides. No less an authority than Elijah Bashyazi quotes his predecessors approvingly to the effect that "most of the Mishnah and the Talmud comprise genuine utterances of our fathers, and... our people are obligated to study the Mishnah and the Talmud." On the Rabbanite side Maimonides states his view that the Karaites "should be treated with respect, honor, kindness, and humility, as long as they... do not... slander the authorities of the Mishnah and the Talmud. They may be associated with, and one may enter their homes, circumcise their children, bury their dead, and comfort their mourners." Two medieval efforts to heal the breach are noteworthy. The first, an Arabic tract on the differences between the two camps, was composed some time before 1284 by Sa'd ibn Kammūna, a Rabbanite physician and philosopher in Iraq. He cites the mutual accusations proffered by each side against the other, and offers his own replies to them, silently implying that both sides have sinned against each other and that the ancient split has long lost its pertinence. Half a century later, an Italian Rabbanite scholar who settled on the island of Crete, Shemariah b. Elijah of Negropont, surnamed Ikriti (the Cretan), wrote on the same theme, calling upon both camps to come together, "so that all Israel might once more become one union of brethren." The fact that in the 16th century Egyptian rabbis contested the agreement between Sephardi codifiers (Shulḥan Arukh) and Ashkenazi ones (Rabbi Moses Isserles) on the prohibition of mixed marriages, because of possible *mamzerut* (see **mamzer*), testifies to the correct relations between the two communities in Egypt at the time.

In modern times, the policy of the Karaite leaders in Russia and Poland in the 19th and 20th centuries, in completely dissociating themselves from their Rabbanite cousins, in order to escape the crushing disabilities and persecutions imposed on Jews there, led to a quiet but profound estrangement, although scholars in both camps continued to maintain an amicable dialogue in the course of their research into Karaite history and literature. (On the situation in Israel, see above.)

Karaite Printing

Unlike the Rabbanites, who produced a flood of Jewish printed books from the 1470s to the present day, the Karaites ignored the printing press down to the 18th century, and the very

few Karaite books printed earlier were the work of Rabbanite printers. The earliest Karaite printed work is an edition of the liturgy, set up in 1528/29 by Rabbanite typesetters at the press of Daniel Bomberg in Venice. The next Karaite book to come off the press, Bashyazi's *Adderet Eliyahu*, was produced Constantinople in 1530/31 by Gershom b. Moses, a member of the great Rabbanite family of master printers, the Soncinos. Two more works, Aaron the Elder's *Kelil Yofi* and Judah Fuki's *Sha'ar Yehudah*, were published in 1581 and 1582, respectively, likewise at Constantinople, by unnamed, but no doubt Rabbanite, printers. In the 17th century only one Karaite work, Joseph Malinovski's *Ha-Elef Lekha*, was published, at Amsterdam in 1643 by the press of *Manasseh b. Israel.

The first Karaite printers were the brothers Afdah (Afidah) and Shabbetai Yeraqa, who issued a few sample sheets of the liturgy in Constantinople, in 1733, under the auspices of the Crimean Karaite leader Isaac Sinani. They then moved to Chufut-Kale, in the Crimea, and there produced in 1734 a larger sample of their work, an edition of the *haftarot*. This was followed by an edition of the entire liturgy in 1737 and a booklet of benedictions in 1741; an edition of the Rabbanite liturgy according to the rite of Feodosiya and Karasubazar (in the Crimea) was also issued in 1735. The press apparently went out of business soon after 1741, although why Isaac Sinani, who lived on until 1756, permitted it to expire, is not known. In 1804, several years after the Crimea was annexed to Russia, a new Karaite press was organized, likewise at Chufut-Kale, and between 1804 and 1806 it produced four works – revised editions of the liturgy and the benedictions, and two tracts on the calendar. Then it too went out of existence, and the few Karaite books printed later came from non-Karaite presses in Vienna and Ortakoy (near Constantinople). The first more or less successful Karaite press was established in 1833 in Eupatoria and published some important texts. (See above, the section "Scholarship on Karaism and the Karaites").

The reason for this paucity of Karaite printing can only be conjectured. Presumably it was their traditional rigid conservatism and dislike of innovations, however beneficial, and the small demand for books, which made printing for the Karaite market an unprofitable undertaking.

[Leon Nemoy]

Musical Tradition

The musical tradition of the Karaite community has been mainly determined by two factors: their ethnic-historical heterogeneity, and their religious-conceptual homogeneity. It is reasonable to assume that the Karaites were not completely isolated from their surroundings, and that it ought to be possible to find traces of Byzantine, Sephardi, Tatar, Slavic, and Arabic traditions in their music. However, the only living tradition in Karaite music today is the one derived mainly from Egypt, which is almost entirely centered in Israel. This tradition finds expression in the recitation of prayers, partic-

ularly on Sabbaths, festivals, and life-cycle celebrations, and in the reading of the Torah and *haftarot*. The four volumes of the *Siddur ha-Tefillot ke-Minhag ha-Yehudim ha-Kara'im* ("Prayer Books of the Karaite Ritual") are richly endowed with psalms, *piyyutim*, and songs by Karaite poets, such as Samuel ha-Ḥazzan, Mordecai of Troki, Moses ha-Levi ha-Katan of the Sages of Kedar, and also by Rabbanite poets like *Judah

Halevi and Judah al-Harizi, who were greatly esteemed by the Karaites. These *piyyutim* are recited by the Karaites in an animated intonation somewhat resembling both cantillation and singing. In the prayer books there are many musical directions, such as *ברון גרון בהלל שיר וזמרה* "with note of throat in praising song and chant." Based on a center tone, the Karaite prayers are generally recited in a fairly flat melodic curve,

which ranges from a second to a third, and almost never exceeds the range of a fourth. On festivals, especially Simḥat Torah, the chants are far richer, both melodically and rhythmically. An example is the *piyyut Ekra be-shir ve-zimrah*, in which the range is a fifth and the *maqām is *nihāwand*. The *piyyut* is recited alternately by the cantor and the congregation, the congregation repeating the refrain, while the cantor sings the several stanzas with improvised rhythmic variants. However, a *piyyut* such as *Ashreikhem Yisrael*, which is also in *maqām nihāwand*, has the range of a seventh, and is somewhat dance-like in style. The Karaites read the Torah in *maqām sikāh* (similar to the Rabbanite Near Eastern communities), even though their reading is not always faithful to the *maqām*. They distinguish 21 cantillation accents, ignoring the *shalsholet*, *merkha kefulah*, *telisha ketannah*, *yarēah ben yomo*, and *munnah le-garme*. While the *etnah* lacks a clear melodic motive and tends to be expressed as a descending speech intonation, the *pazer gadol* ranges through a seventh, and the *revi'a* an octave (with about 20 notes). In the cantillation of the *haftarah*, the Karaites observe only eight accents. The reader ignores the remaining accents, “drawing” the other parts of the text into the eight motives. The outstanding characteristic of the reading of the *haftarah* is the frequency of actual motives amid a kind of dramatic recitation. The melodically richest songs are those sung at weddings and circumcisions. However, the loftiest musical expression is found in the songs of an artistic character, such as *Karati be-koli*, whose melody is attributed to David Ḥusni, a Karaite musician who lived and worked in Egypt during the first half of the 20th century. This song, in *maqām rāst* and in the ABA form, is common among the Karaites and enjoys special popularity. Section B of the song is in the Arab *mawāl* style. Although among the Egyptian Karaites it is still possible to find a musician who plays the *qānūn*, violin, drum, or even, nowadays, the accordion, the community as a whole does not like instrumental music. As with the cultures of all other communities in the Israel melting pot, the future of the Karaite tradition now hangs in a precarious balance.

KARAN, DONNA (1948–), U.S. fashion designer. Karan (born Donna Faske) was raised in the Forest Hills neighborhood of Queens, N.Y., to parents already immersed in the fashion business. Her father, Gabby Faske, who died when she was 3, was a custom tailor in New York City. Her mother, Helen, was a showroom model and sales representative. Karan – who got her surname from her first husband, Mark Karan – would become one of the best-known businesswomen in the U.S., head of a publicly owned company, her name on everything from apparel to accessories, from fragrances to furnishings. She designed her first collection while still in high school and staged her first fashion show while an undergraduate at Parsons School of Design in New York City. In 1968, she dropped out of school to become an assistant to Anne *Klein, a popular women’s sportswear designer known for skirts, blouses, sweaters, and jackets that could easily be mixed and matched. Klein, who had become Karan’s mentor, unexpectedly died of cancer in 1974. The 26-year-old Karan, who had given birth to a daughter only two days earlier, took over the line with co-designer Louis Dell’Olio and built it into a highly successful business.

In 1984, Karan, who had been divorced a year earlier, launched Donna Karan Co., her own business, in partnership with her second husband, sculptor Stephan Weiss, and Taki-hyo, a Japanese company that owned the Anne Klein firm. Her approach to dressing was geared more to practicality than to “fashion.” Just as Klein had promulgated a wardrobe of interchangeable parts, so did Karan. She identified with urban women who worked for a living and did not necessarily look like runway models or wealthy matrons, and they identified with her. Her design concept was based on a handful of interchangeable items that created a complete wardrobe able to flow from day to evening, and from weekday to weekend. It was distinguished by its use of black cashmere, leather, stretch fabrics and molded fabrics, and silhouettes that wrapped and sculpted the body. In short, clothes that were comfortable, flattering, and easy to organize. Karan called the jacket the foundation of a woman’s wardrobe, and advocated versatile blazers that were equally appropriate for home, business, or leisure. She took the concept a step further in 1985, when she launched DKNY, a subsidiary label that was a less expensive version of the Donna Karan collection. With its nod to city life, DKNY emphasized bodysuits and active sportswear, often

accompanied by loose, easy garments. Karan also returned to school at that time, earning a B.F.A. from Parsons in 1987. By the early 1990s, she had branched into men's wear and introduced a fragrance and a skin-care line. In 1996, the company made a heavily anticipated public offering, becoming one of the few firms on the New York Stock Exchange to be headed by a woman. It opened its first DKNY store in 1996, on New York's Madison Avenue. Karan's husband, Stephan, died in 2001, the same year her company was acquired by LVMH Môt Hennessy Louis Vuitton, a Paris-based fashion conglomerate, for \$243 million. Karan remained as artistic director, in control of all creative aspects. By 2004, the company – since renamed Donna Karan International – boasted 70 company-owned and licensed Donna Karan Collection and DKNY stores worldwide, including units in London, Manchester, and Tokyo. In 2004, it generated some \$1.4 billion in retail sales and employed 1,600 workers.

Karan was named Designer of the Year by the Council of Fashion Designers of America in 1985, 1990, and 1996, and men's wear Designer of the Year in 1992. The Fragrance Foundation saluted her for Best Fragrance of the Year in 1993.

That same year, she was honored for humanitarian efforts by the Design Industries Foundation for AIDS. In 1996, she won a Fashion Critics Award from Parsons. Karan was named Intimate Apparel Designer of the Year in 1999 and in 2003 she became the first American designer to receive a Superstar Award from Fashion Group International. She was presented with a Lifetime Achievement Award from the CFDA in 2004, the same year she got an honorary doctorate from Parsons. As a board member of the CFDA, Karan headed its Seventh on Sale fundraiser for AIDS awareness and education. She was a co-chair of New York's annual "Kids for Kids" events for the Elizabeth Glaser Pediatric AIDS Foundation, and co-chaired an annual flea market and barbecue to benefit Ovarian Cancer research. In 1999, she and her husband established the Karan Weiss Foundation to benefit children's causes, medical research, and the arts.

KARASUBAZAR (from 1945 **Belogorsk**), city in Crimea oblast, Ukraine, the main community of the Crimean Jews

(Krimchaks). In 1595, Selameth-Girey Khan granted the Jews of Karasubazar a privilege according to far-reaching concessions with regard to taxes and customs duties. This privilege was confirmed many times by the succeeding khans (for the last time in 1728). A collection of ancient *Sifrei Torah* and manuscripts was removed from the Karasubazar synagogue in 1839 by Abraham *Firkovich without the consent of the community; he later handed them over to the Imperial Library in St. Petersburg. From 1969 in 1847 the number of Jews in the town increased to 3,144 by 1897 (total population 13,000), the overwhelming majority of them Krimchaks, who spoke the Tatar language among themselves and prayed according to the Crimean rite (*minhag Kaffa*). There were also 47 Karaites living in the town. From 1866 to 1899 R. Ḥayyim Hezekiah *Medini, chief rabbi of the Crimean Jews, had his seat in Karasubazar. He was able to use his considerable influence to raise the religious and spiritual standards of his communities. The Jews of Karasubazar engaged in crafts, market gardening, and petty trade. During the Civil War, the community decreased in numbers as a result of famine and disease. In 1939 the number of Jews dropped to 429. In 1932 there were in the environs three Jewish farm settlements with 149 families. The Germans occupied Karasubazar on November 1, 1941. On December 10 they killed 76 Jews, and on January 17, 1942, using mobile vans, they gassed 468 Krimchak Jews from the town and surrounding settlements. The few remaining Jews (probably needed artisans) were shot later.

KARAVAN, DANI (1930–), Israeli painter, sculptor, and architect. Karavan was born in Tel Aviv when it was still full of orchards and plantations. One of his first artistic memories is of the sand dunes where, as a boy, he first sculpted forms in play. These sand structures, which involve building and digging, can be seen to anticipate his mature style. Karavan studied art in the Bezalel Academy of Art and Design in Jerusalem under Mordecai *Ardon. He remained a kibbutz member until 1950 for ideological reasons. This orientation could be seen later in his public art. Karavan continued his art studies in Florence, where he learned fresco techniques at the Accademia Della Belle Arti. In 1960–73 he created stage sets for Israeli theaters and for Israeli ballets. This can be seen as the beginning of his spatial work.

Karavan was known for his environmental sculptures and installations. He won the Israel Prize in 1977. While he moved between Tel Aviv, Paris, and Florence his works were shown all over the world.

Karavan's artistic language contained a limited number of forms. The basic form was taken from the architectural world. The dome, the pyramid, and the stair were integral components of his art. The location of these forms in the environment and in a sculptural space created a link between them. In spite of the repetitive style, each work looked different because the artist created a clear connection between the work and the chosen environment. Karavan emphasized the difference between sculptures, for example, by the selection of the material. In the desert near Beersheba he used bare concrete, in Jerusalem he used chiseled stone, and in Tel Aviv he used white concrete. (*Negev Monument*, 1963–68, Beersheba; *Environment Sculpture*, 1980, Givat Ram, Jerusalem; *White Square*, 1977–88, Tel Aviv). Another material used as a popular symbol in Karavan's works was the olive tree that grew between walls or above them. In some works the tree grew upside down. The sea also became a part of his works, especially in his impressive *Passages, The Memorial to Walter Benjamin* (1994, Portbou, Spain).

Karavan's most famous piece of art in Israel is the wall relief in the Knesset Assembly Hall, in Jerusalem (*Jerusalem City of Peace*, 1966). The location of the wall behind the speaker's podium made it a component of the visual forms that constitute the Israeli collective identity. One of Karavan's largest permanent works is three kilometers long. (*Exe Majeur*, 1980–86, Cergy Pontoise, France).

KAR-BEN/LERNER, U.S. publisher. Kar-Ben Publishing, a division of Lerner Publishing Group, is the largest publisher of Jewish children's books in North America. Founded in 1975 by Judyth Groner and Madeline Wikler, the imprint's first title was a self-published children's *Haggadah*, which had more than 2 million copies in print in the early 21st century. Over the next 27 years the company published more than 200 books for children and their families, the creative work of 60 authors and illustrators. In 2003, Groner and Wikler received the Sydney Taylor Body of Work Award from the Association of Jewish Libraries in recognition of their contribution to Jewish children's literature by creating Kar-Ben.

Kar-Ben's titles include such subjects as Jewish holidays, Bible, crafts, cooking, folktales, Holocaust, life-cycle events, and contemporary stories. Kar-Ben, which was purchased by Lerner Publishing Group in 2001, publishes 12–15 new titles a year, and celebrated its 30th anniversary in 2005.

Established in 1959, Lerner Publishing Group is based in Minneapolis, Minnesota. With more than 2,500 titles in print, Lerner Publishing Group is one of the largest independent educational children's book publishers in North America. Its titles include biographies, social studies, science, geography, sports, picture books, activity books, multicultural issues, and fiction. Company founder Harry J. Lerner also helped establish the Minnesota Book Publishers' Roundtable, the Minne-

sota Center for Book Arts, and the Jewish Historical Society of the Upper Midwest. He served as chief executive officer of Lerner Publishing Group; his son, Adam Lerner, became publisher and president.

[Joanna Sussman (2nd ed.)]

KARDINER, ABRAM (1891–1981), U.S. psychoanalyst. Born and educated in New York City, Kardiner studied with *Freud from 1921 to 1922. In 1949 he was appointed clinical professor of psychiatry at Columbia University and in 1955 director of the psychoanalytic clinic. He conducted joint seminars at Columbia University on the interplay of individual personality and culture in diverse societies. Various patterns of child rearing, the biography of adult behavior, and institutional structure were subjected to psychodynamic analysis. Inferences about the personality produced in the culture were drawn and checked by actual psychological tests. The findings were documented in Kardiner's *The Individual and His Society* (1939) and his *Psychological Frontiers of Society* (1945).

Kardiner, and those following his lead, believed it possible to elicit a "basic personality structure" – a set of trends entering into the characters of all individuals reared in the same culture. This structure was the product of "primary institutions" such as child training methods in dealing with aggression and sex and the family organization. The basic personality expressed itself unconsciously in secondary institutions such as folklore, art, and religion. It was from these cultural institutions, therefore, that the basic personality expected in the culture could be inferred.

Kardiner's theoretical procedure involved analyses of the social frustration of adult neurotics and "normal" individuals within the Western culture. From his conclusions he established how groups in any culture would react to similar social frustration.

Kardiner was one of the founders of the Association for Psychoanalytic Medicine (APM) and of the Columbia University Center for Psychoanalytic Training and Research. In recognition of his role as a renowned pioneer in the application of psychoanalysis to the study of culture, the APM established the Abram Kardiner Lectureship on Psychoanalysis and Culture in 1978.

BIBLIOGRAPHY: Kardiner co-authored with Lionel Ovesey *Mark of Oppression* (1951), which explored the impact of social pressures on the African-American personality. Other works by Kardiner include *The Traumatic Neuroses of War* (1941), *Sex and Morality* (1954), *They Studied Man* (1961), and *My Analysis with Freud: Reminiscences* (1977). **ADD. BIBLIOGRAPHY:** W. Manson, *The Psychodynamics of Culture: Abram Kardiner and Neo-Freudian Anthropology* (1988).

[Ephraim Fischhoff and Louis Miller / Ruth Beloff (2nd ed.)]

KARDOS, ALBERT (1861–1945), literary scholar and historian. Headmaster of the Debrecen Jewish high school, Kardos was an expert on 16th-century Hungarian literature. Even in his eighties, victimized by the Nazis, he continued his lit-

erary work. Two important products of his research were *A XVI század lírai költészete* ("Lyric Poetry of the 16th Century," 1883) and a history of Hungarian literature (1892). He died after deportation.

KARDOS, LÁSZLÓ (1898–1987), Hungarian literary scholar and translator. Kardos became a teacher at the Jewish high school in his native Debrecen. After World War II he worked in the Hungarian Ministry of Education until 1950, when he was appointed professor of world literature at Budapest University. Kardos made his name as a skilled translator from many languages. In addition to Greek and Latin authors he translated English, French, German, Czech, Polish, Romanian, and Russian classics into Hungarian. His literary sensitivity enabled him to translate even from languages which he did not know fluently. With the help of expert assistants he produced, for example, an anthology of Hebrew poetry, *Héber költők antológiája* (1942). Kardos also edited a Hungarian periodical devoted to world literature, *Nagyvilág*. His works include *Ay huszonegyéves Ady Endre* (1922), *Karinthy, Frigyes* (1946), *Válogatott műfordítások* (1953), and *Toth Árpád* (1955).

[Baruch Yaron]

KAREH, SOLOMON (Soleiman; 1804–1885), chief rabbi in San'a (Yemen). Kareh was an eminent scholar of Torah and Kabbalah. Upon the death of his father, R. Joseph, he was elected to succeed him as *av bet din*. After some years he was elevated to the position of chief rabbi of Yemenite Jewry, which he occupied for 40 years. His period was one of disorder and rebellions, when much suffering was endured by the community of San'a. In 1859, the year of Jacob *Saphir's visit to Yemen, he fled from San'a out of fear of the authorities and took refuge in Qaryat al-Qābil. With the Turkish occupation in 1872, he returned to the capital and the new Turkish governor appointed him *ḥakham bashi*. Under Turkish rule, he was given ceremonial honors, and by the authority of his office and his personal influence he protected his coreligionists from the authorities and succeeded in nullifying persecutory decrees which threatened his community.

[Yehuda Ratzaby]

KAREL, RUDOLPH (1880–1945), composer. Born in Pilsen, Czechoslovakia, Karel was the last pupil of Dvorak. He taught for a time in Russia, and returned to Prague in 1920, where he taught at the Prague Conservatory from 1923 to 1941. In 1943 he was arrested and died at the *Theresienstadt concentration camp. His compositions include stage works, four symphonies, and chamber music.

KARELITZ, AVRAHAM YESHAYAHU (1878–1953), outstanding talmudic scholar and one of the most prominent halakhic authorities of the 20th century, known from his work as the "Hazon Ish." Karelitz received his education from his father, head of the *bet din* at Kossow; from an early age he manifested unusual talent and diligence. He devoted his life to the study of the Torah, although also learning such sciences as astronomy, anatomy, mathematics, and botany, since he felt that knowledge of them was necessary for a full understanding of various aspects of Jewish law and practice. After his marriage he continued to lead an extremely modest life, his wife providing for their needs while he spent day and night in study. His first work, on *Orah Hayyim* and other parts of the Shulḥan Arukh, was published anonymously in Vilna in 1911 under the title *Hazon Ish*, the name by which Karelitz became almost exclusively known. It created a deep impression in the rabbinic world because of its vast knowledge and extreme profundity. He went on to write and publish dozens of volumes on numerous tractates of the Talmud, every section of the Shulḥan Arukh, the *Mishneh Torah* of Maimonides, and various specific halakhic topics. His collected letters were published in three volumes in 1990. When he moved to Vilna about 1920, he came to the notice of R. Ḥayyim Ozer Grodzinski who, henceforth, used to consult him in all religious and communal matters. Even though he lived in relative anonymity, his reputation for saintliness and knowledge was known and people from all walks of life would frequent his home, for scholarly discussions or to seek advice on religious, business or personal problems, or simply to receive his blessing. When in 1933 he settled in Erez Israel, his house in Bene-Berak became the address for thousands who sought his guidance. Karelitz was an example of a personality, holding no official position, who nevertheless became a recognized worldwide authority on all matters relating to Jewish law and life. He did not head any yeshivah, yet he was teacher and guide to thousands of students. He was not a communal leader, yet he exerted an enormous influence on the life and institutions of religious Jewry. He did not publish many responsa, but became the supreme authority on *halakhah*. On one occasion, he was consulted by David Ben-Gurion, the prime minister of Israel, on the question of conscription of young women into the Israel army. He was a lover of Zion, yet did not adhere to the official Zionist movement. He was neither a Ḥasid nor an extremist, but was intimate with both these groups. He considered man's duty in life to be the constant and meticulous study of Jewish law aiming at the attainment of a maximum degree of perfection in religious observance. Although essentially a talmudic scholar, he applied himself to practical problems, devoting much effort to the strengthening of religious life and institutions. His rulings on the use of the milking machine on Sabbath (to overcome the prohibition of milking in the usual way) and on cultivation by hydroponics during the sabbatical year (when he challenged the validity of the permission to cultivate the land given by the chief rabbin-ate) are two illustrations of his practical approach. He wrote

over 40 books which are models of lucidity and are written in a simple style.

Karelitz's theology was an attempt to adjust Maimonidean rationalism to a more Lithuanian, "mitnaggedic" set of values that corresponds to the tenets of *halakhah*. According to Karelitz, divine wisdom was transmitted directly to man by God through prophecy until the time of the Sages. Beginning with them, all that man could do was to reveal the hidden truths using his intellect. "There is no wisdom in our world unless it is delivered through the soul of a living wise man." Thus, the goal of Jewish life is to be a living wise man, i.e., a *talmid ḥakham*. The Ḥazon Ish also asserted that trust in God does not mean that God will always do what is best for the individual. Rather we can trust that God will always do what He thinks best.

Karelitz's theology stemmed from the world of *halakhah*. Even Jewish ethics are based on concrete laws, not on abstract principles. Indeed, Karelitz taught that the practice of *halakhah* trains a person in the right values.

Since the Ḥazon Ish did not study in any of the standard Lithuanian *yeshivot*, he developed his own method of Talmud study and halakhic decision-making. He rejected the cold analytical approach of Brisk and instead, integrated a human dimension into his interpretation. He maintained that the sages did not rely on abstract concepts. Rather, they often took into account social or psychological considerations. Contrary to Brisker thinking, where the Torah is the divine "word" detached from earthly reality, Karelitz grounded his interpretations in the real world. Thus, halakhic definitions should be based on the "natural senses" without involving scientific methods or social conventions. His approach was not a systematic methodology. As a result he could be contradictory. On the one hand he rejected critical readings of the talmudic text, yet on occasion he himself amended the text. He regarded the medieval and renaissance sages (the *rishonim*) as the main interpreters of the Talmud, yet he often disagreed with their comments. For the Ḥazon Ish, it was the individual scholar's own perusal and personal encounter with the text that was significant. Such an encounter was not limited to the words of the text, but also included the spirit of the text.

While he lived in an ultra-Orthodox world in Bene Brak, Karelitz did not follow the *ḥaredi* mainstream; he forged his own path. He had a tendency to be overly strict (*maḥmir*) in his halakhic rulings. He was not at all politically involved and criticized the religious Zionist camp for becoming politically involved, thus subjecting religious values to the interests of the Zionist enterprise. He rejected all public commemorations of the Holocaust.

Karelitz's efforts in the social sphere were aimed at building a strong *ḥaredi* community through the building of more *yeshivot*, more synagogues, and more *mikva'ot*. By 1942 he had gained a wide reputation in rabbinic circles because of his participation in halakhic debates. By 1948 he was already recognized as the foremost arbiter of *halakhah* in Israel. The Ḥazon Ish did not intend to create a revolutionary new *ḥaredi*

society in Israel, but his teachings, his strongly held views, and his very life served as the foundation for the thriving ultra-Orthodox community in today's modern Israel.

[Mordechai Hacohen / David Derovan (2nd ed.)]

KARET (Heb. קָרַת; "Extirpation"), a punishment at the hands of heaven mentioned in the Bible as the penalty for a considerable number of sins committed deliberately such as: idolatry, desecration of the Sabbath, the eating of leaven on Passover, incest and adultery; and for some forbidden foods. No previous warning need be given in these cases. The *halakhah* explains *karet* as premature death (Sifra, *Emor*, 14:4), and a *baraita* (MK 28a; TJ, Bik. 2:1, 64b) more explicitly as: "death at the age of 50," but some *amoraim* hold that it refers to "death between the ages of 50 and 60." The word *karet* is also used to indicate the degree of severity of a transgression, and serves as a "standard" for many other *halakhot*. The Mishnah (Ker. 1:1) enumerates the 36 transgressions mentioned in the Torah for which the penalty is *karet*, and lays down (*ibid.*, 1:2) that only where there is *karet* for the deliberate act is there a sin-offering for the act committed inadvertently. Since the punishment is divine, and the fact that it is deliberate is known only to God, it does not require witnesses or previous warning. The *halakhah* also lays it down that only the offspring of a union for which the penalty is *karet* have the status of **mamzerim* (Yev. 4:13).

There is a dispute between *tannaim* whether or not the penalty of *karet* exempts the transgressor from *flogging, which is the automatic punishment for most prohibitions of the Torah of which one is guilty after having been duly warned (Mak. 13a–b); according to the view that it does not exempt from flagellation, the flagellation itself exempts from *karet* (Mak. 23a–b). Repentance however has the effect of annulling *karet* (*ibid.*), and, with the exception of Neḥunya b. Ha-Kanah, all agree that *karet* does not absolve the guilty person from civil claims arising out of his action (Ket. 30a).

Every attempt toward a general rationale of this punishment involves serious halakhic and philosophical difficul-

ties, and the problem greatly exercised the early authorities; although the *halakhah* itself makes a distinction between *karet* and “death by the hand of heaven” (מק 28a), the difference between them is not clear. Some *rishonim* hold that “natural” death takes place at the age of 60 (or later), when the *karet* period has ended, and that “death by the hand of heaven” has no fixed time, save that one’s span of life is curtailed. Others hold, in accordance with the Jerusalem Talmud (Bik. 2:1), that *karet* comes at the age of 50, “death by the hand of heaven” at 60, and natural death between 60 and 70. The connection between the punishment of “*ariri*” and *karet* and the real nature of the former is also not clear. In the Bible the punishments of *karet* and *ariri* are frequently found together. Some *rishonim* hold that the minor children of a sinner are also punished through the father’s *karet*, and in their view this also constitutes the difference between *karet* and “death by the hand of heaven” (Rashi, Ket. 30b, et al.). Others, however, differ (Tos. to Shab. 25a). With regard to *karet* in the case of the old, it is laid down that the punishment lies in the manner of death, since “one dying in either one, two, or three days has suffered *karet*.”

The punishment of *karet* raised difficulties in the theory of reward and punishment current among medieval scholars, and constituted part of the polemic around Maimonides and his views on this subject. Basing himself upon the statement (Sanh. 90b): “*Hikkaret tikkaret: ‘hikkaret’* in this world, ‘*tikkaret’* in the world to come,” Maimonides (Yad, Teshuvah 8:1) lays down that: “The punishment of the wicked is that they are not vouchsafed this life [of the world to come], but they suffer *karet* and die... and this is the *karet* written in the Torah...” This constitutes a maximal punishment, since ordinary sinners, after being punished in *Gehinnom according to their sin, live again in the world to come (*ibid.* 8:3, 5). In the opinion of *Naḥmanides (in the *Sha’ar ha-Gemul*), the soul can never perish and be annihilated and he therefore holds that those liable to *karet* are also punished in the world to come according to their sin, and he divides sinners into three categories: those who have been guilty only once of a transgression involving the penalty of *karet*; those whose wicked deeds exceed their good in addition to this transgression; and lastly the blasphemers and idolaters. Only the last are punished both by *karet* of the body and of the soul in this world and in the next (Comm. to Lev. 18:29 and in *Sha’ar ha-Gemul*). *Karet* of the soul, according to Naḥmanides, does not mean absolute perishing; it means only a degradation, in a way of metamorphosis, and absolute negation of spiritual pleasures awaiting the souls of the righteous.

In the opinion of some *Karaites *karet* was death at the hand of man (*Eshkol ha-Kofer*, no. 267), and this too seems to have been the view of Philo and of Josephus (Ant. 3:12, 1).

[Israel Moses Ta-Shma]

KARFF, MONA MAY (1912–1998), seven-time winner of the U.S. women’s chess championship and one of the first four Americans to be named an international woman master by the International Chess Federation (1950). Born in Bessarabia, Karff learned chess from her father, Aviv Ratner, a Zionist who later became a real estate magnate in Israel. Karff, an intensely private person who was always mysterious about her background, came to the United States in the 1930s. She was married briefly to a cousin, Abe Karff, a Boston lawyer. Between 1938, when she won her first national title at the second U.S. women’s championship, to 1974, when she achieved her seventh national championship, Karff was in the forefront of women’s chess in the United States. Less consistently successful in top international competitions, she placed sixth representing Palestine in the women’s world championships in Stockholm in 1937 and came in fifth representing the United States at the 1939 world championships in Buenos Aires. Karff, who remained involved in the world of competitive chess throughout her life, had a long-term romantic relationship with Dr. Edward Lasker (d. 1981), a five-time winner of the U.S. Chess Open.

[Judith R. Baskin (2nd ed.)]

KARFUNKEL, AARON BEN JUDAH LEIB HA-KOHEN (d. 1816), rabbi and author. Karfunkel was born in Kalisz after his father had died, and his mother died in childbirth. As a result he was brought up in the home of his brother, Israel. According to his own statement he served as rabbi in different Polish communities, for example in Lask as *av bet din* – though his name is not mentioned in the list of rabbis of the Lask burial society – and in Daspirshi (a community otherwise unknown). He complains bitterly about his economic position in these communities, stating that he faced starvation until he was compelled to leave his wife and children, who were maintained by his father-in-law. In 1801 he was appointed rabbi of Nachod in Bohemia and in 1807 as deputy to Levin Saul Frankel, whom he later succeeded as regional rabbi of Silesia. Karfunkel was the author of the *Sheiltot Avyah* (being the acronym from his given names), notes and novellae on the Talmud in the form of responsa to questions which he himself posed. The work comprises 12 parts, each of which is named after one of the stones of the *ephod. Two parts only, *Nofekh* and *Bareket*, were published (Berlin, 1806), with one commentary entitled *Millu’at Even*, and another entitled *Meshu’ah Milḥamah* on difficulties in the views of the *rishonim*. His other works, *Avnei Zikkaron*, responsa, and *Zanif Tahor*, on the Book of Ecclesiastes, are still in manuscript in the British Museum. He also wrote the introduction to the constitution of the Nachod burial society and rabbinate.

[Itzhak Alfassi]

KARGAU, MENAHEM MENDEL BEN NAPHTALI HIRSCH (1772–1842), German rabbi and author. Kargau was born in Prostibor (Bohemia) and studied under Nathan *Adler and Phinehas *Horowitz in Frankfurt, Ezekiel *Landau in Prague, Joseph Yoske in Posen, and Herz Scheuer in Mainz. For some time he engaged in commerce in Paris, later returning to Germany and settling in Fuerth, where he devoted himself to the study of Talmud. He became friendly with Abraham Benjamin Wolf *Hamburg, in whose works *Simlat Binyamin* (Fuerth, 1841) and *Sha'ar ha-Zekenim* (*ibid.*, 1830), many of his halakhic statements are quoted. Kargau wrote hymns and poems, including a hymn in Hebrew to celebrate Napoleon's coronation (*Shir u-Mizmor* (Paris, 1805) with a free translation into French by Michel Berr). In 1840 he commemorated Moses *Montefiore's return from Damascus in another Hebrew hymn. Kargau died in Fuerth. His commentary on Shulhan Arukh, *Yoreh De'ah*, 201 (dealing with the laws of the *mikveh*) together with 41 of his halakhic responsa, was published after his death by his pupil Jonah Rosenbaum and by Asher Anshel Stern, later chief rabbi of Hamburg, under the title *Giddulei Tohorah* (Fuerth, 1845).

[Joseph Elijah Heller]

KARINTHY, FERENC (1921–1992), Hungarian author and playwright. Raised as a non-Jew, Karinty neither denied nor emphasized his Jewish roots but does not deal with Jewish subjects in his writings. His *Budapesti tavasz* ("Springtime in Budapest," 1953), while bowing to the requirements of the era, gives nevertheless a vivid picture of postwar Budapest.

[Eva Kondor]

KARIV, AVRAHAM YIZHAK (1900–1976), Hebrew literary critic, poet, and translator. Born in Slobodka, he made his way to the Ukraine and Crimea during World War I and entered the Tarbut Teachers' Seminary in Odessa, where he studied under Bialik and Klausner. In 1923 he went to Moscow and completed his studies in mathematics and physics. In 1934 he went to Palestine, where, after a short period of teaching, he took up editorial posts. Kariv began his literary career while studying in Odessa, and his first poems were warmly received by Bialik. In the ensuing years, until his arrival in Palestine, his poetry was published in Hebrew journals that appeared in Soviet Russia and elsewhere. After he settled in Palestine, he became a regular contributor to the Hebrew press, with essays and articles of literary criticism becoming his major endeavor and overshadowing his poetry. He wrote scathing criticism of the works of classic modern Hebrew authors, such as *Mendele Mokher Seforim, J.L. *Gordon, D. *Frischmann, J.H. *Brenner, and others. His collection of essays *Adabberah va-Yirvah Li* (1961) made a deep impression with its reevaluation of prevalent negative attitudes toward Jewish life in the Diaspora. The writers of the Haskalah, he claimed, accepted

the false premises of an antisemitic European culture and overlooked the moral grandeur of Jewish life in Eastern Europe. He published several collections of essays, a volume of poetry, *Kol u-Vat Kol* (1962), a book on the Bible, *Shivat Ammudei ha-Tanakh* (1968), and numerous translations from Russian and Yiddish literature. For English translations see Goell, *Bibliography*, 920–1.

[Getzel Kressel]

KARIYAH, AL- (**Qar'iyya, al-**), a Jewish sect which existed in *Egypt (near Cairo) until the middle of the 19th century. David Alfasi in his *Agron* (s.v. *kar*) maintains that they were descendants of the sons of Kareah (Jer. 40:8ff.), who led a remnant of the Judeans into Egypt after the murder of Gedaliah. Another, more likely, explanation is that of Judah *Hadassi in his *Eshkol ha-Kofer* and *Kirkisānī in his *Kitāb al-Anwār* (chapter 9) which derives the name from the Arabic *qar'* (cf. the talmudic קרא), meaning "pumpkin, gourd," since the sect, for reasons of ritual purity, used only vessels made of pumpkin shells. These writers report that the al-Kariyah would not employ hired labor and rested on Sunday. Kirkisānī quotes David al-Mukammis, who regards them as a pre-Christian sect later influenced by Christianity. Harkavy is inclined to agree with this theory, as they may have been one of the many Essene sects in Hellenistic Egypt; this would explain their ascetic life and opposition to hired labor. If Sunday rest was not adopted by them later under Christian influence, there may be some confusion due to the strictness of Sabbath observance which the al-Kariyah extended to the festivals as well. This is reported by Hadassi, who does not mention Sunday rest at all.

KARKAR (Qarqar), city on the Orontes, S. of Hamath and within its territory, now Khirbat Qarqur (the name signifies "flat (valley-earth) formation" (cf. Heb. קרקור, Judg. 8:10; Akk. *Qaqqaru*; cf. also קרקע). Karkar is famous as the site of a battle between Shalmaneser III of Assyria and a coalition of kings who came to the aid of Irhuleni king of Hamath. It is described on the monolith of Shalmaneser III found at Kurkh, some 20 miles south of Diyarbakir in Turkey (now in the British Museum), and mentioned in his various other inscriptions. The Assyrian king gives a detailed description of the forces of the 12 kings allied against him. The list, arranged in three groups – chariots, cavalry, and foot soldiers – is as follows (Monolith from Kurkh, col. 2, lines 90ff.):

1,200 chariots; 1,200 riding horses [i.e., cavalrymen]; 20,000 [foot-]soldiers of Adad-idri [Hadadezer = "Ben-Hadad II"] from Damascus [Imērišu]; 700 chariots; 700 riding horses [i.e., cavalrymen]; 10,000 [foot-] soldiers of Irhuleni [Erhuleni] from Hamath [Amatai(a/u)]; 2,000 chariots; 10,000 [foot-] soldiers of Ahab the Israelite [Aḥabbu (māt) Sir-'i-la-aii(u/a),

Sir'ilajj(u/a); 500 [foot-] soldiers from Gu [bal] [Gegal, Byblos; not: Guaiia, Que; see Tadmor, in bibl.]; 1,000 [foot-] soldiers from Egypt [Mušrajj(u/a); not the northern land of Musri; see Tadmor, in bibl.]; 10 chariots; 10,000 [foot-] soldiers from Arqa [= (mât) Er-qa-na-ta-aiiu/a; cf. ha-ʿArqi, Gen. 10:17]; 200 [foot-] soldiers of Mattan-Ba'al [Ma-ti-nu Ba-aḥ-li] of Arvad [Armadajj(u/a)]; 200 [foot-] soldiers of the State of Usnû [Usanatajj(u/a)]; 30 chariots; 10,000 [foot-] soldiers of Aduna-Ba'al [Adōni-Ba'al] from Shiānu (cf. ha-Sini, Gen. 10:17); 1,000 camel [-soldiers?] [gammalū] of Gindibu' the Arabean [(mât) Arbajju/a]; ... (erased) 100/1,000 [foot-] soldiers of Ba'asa (Baasa) son of Ruḥubi [Ben Rehob, i.e., the Beth-Rehobite] the Ammonite [or, far better: "from the mount of Amanah" ((har ha)-Amanah, Song 4:8); cf. Aram Beth Rehob, 11 Sam. 10:6; see *Aram].

The battle was joined in the sixth year of Shalmaneser III (853 B.C.E.). The inscription thus supplies the first extra-biblical confirmation of biblical chronology. The fact of *Ahab's participation in the battle of Karkar (side by side with his inveterate foes, the Arameans of Damascus, but see Ahab; *Ben-Hadad) is not mentioned in the Bible. The coalition was established to counter the growing Assyrian menace; although Shalmaneser gives a glowing account of the slaughter he wrought and of the capture of Karkar, the fact is that the battle ended in a stalemate and the Assyrian advance was halted (see *Jehu; *Mesopotamia, History). The great number of Ahab's chariots finds corroboration in the redating of the stables found at Megiddo (strata IV–V) to the period of Ahab instead of Solomon (see Yadin and Malamat in bibl.).

KARLE, JEROME (1918–), U.S. physicist and Nobel Laureate. He was born in New York City and educated at Abraham Lincoln High School before graduating with a B.S. from City College, New York (1933), an M.A. in biology from Harvard (1938), and a Ph.D. in chemistry from the University of Michigan. After working on the Manhattan Project at the University of Chicago (1944), he joined the Naval Research Laboratory, Washington (1946) as head of the Electron Diffraction Section (1946–68) and subsequently as chief scientist in the Laboratory for the Structure of Matter. He was also professor at the University of Maryland (1951–70). His research interests are crystallography and the structure of a broad range of macromolecules. Karle won the Nobel Prize in chemistry (1985) jointly with Herbert *Hauptman for his contributions to determining the structure of complex molecules by mathematical analysis of crystallographic observations. His later work analyzed the application of quantum crystallography to analyzing organic molecules. He served as chairman of the

National Research Council (1973–75) and president of the International Union of Crystallography (1981–84). He was a member of the U.S. National Academy of Sciences. He had a special interest in social issues of scientific research and ecological problems. He worked collaboratively with Isabella Lugoski, whom he married in 1942.

[Michael Denman (2nd ed.)]

KARLIN, a dynasty of *zaddikim* (family name **Perlov**), named after the town of Karlin. Its founder was AARON BEN JACOB, referred to in ḥasidic circles as "Aaron the Great" (1736–1772), the pioneer of Ḥasidism in Lithuania. He was a disciple of *Dov Baer the Maggid of Mezhirech. During the lifetime of his teacher, in the early 1760s, he founded the first ḥasidic *minyān in Karlin, from where he spread Ḥasidism throughout Lithuania. In contemporary sources "Karliner" became a synonym for "Ḥasid" in Lithuania. The spread of "Karliner" *minyānim* there was one of the causes of the campaign against Ḥasidism; in Karlin's sister town, *Pinsk, it was directed against Aaron personally. Aaron's activity showed his concern with social problems. He helped to enforce the *takkanot* issued in 1769 at Nesvizh, abolishing an unusual and heavy tax affecting the poor, using his personal authority and imposing a *herem*. His *azharot* ("Warnings"), a letter, and a testament have been preserved (in manuscript). Inclined toward asceticism, Aaron fasted frequently and even demanded of his disciples: "seclusion, one day every week in a special room, spent in fasting, repentance, and study of the Torah." But he warned against extremes in such practices. In his *azharot* he cautioned "to beware of pride and anger, even if over the observance of a precept, and all the more so over disputes." He instructed his Ḥasidim to study the Mishnah daily and to be versed in the Bible. He regarded melancholy as "the lowest abyss," while joy stems from sanctity. The Jew who does not rejoice in being a Jew is ungrateful to Heaven. Aaron composed a hymn for Sabbath: *Yah ekhsuf no'am Shabbat* ("Oh God, I yearn for the Sabbath's delight"), which is included in several *siddurim* and is sung every Sabbath by the Ḥasidim of Karlin and those related to them. The Ḥasidim of Karlin have about 20 melodies for this hymn, one having become renowned as *Ha-Niggun ha-Kadosh*. Aaron was succeeded by his disciple Solomon (see below) but the leadership later returned to Aaron's son, ASHER (d. 1826), a disciple of Solomon; before 1784 he went from Karlin with his teacher to Lodomeria (Vladimir-Volynskiy). Asher studied a short while under *Baruch of Medzibezh and Israel of *Kozienice, and was for a short time rabbi in Zelechów (Poland). He then settled in the townlet of *Stolin, near Karlin. Henceforward the Karlin Ḥasidim also became known as the Ḥasidim of Stolin. Asher supported *Abraham of Kalisk in opposition to *Shneur Zalman of Lyady. He was among leading Karlinists who were imprisoned in 1798. Subsequently he returned to Karlin. In his *Divrei Torah* he stresses the human and religious value of productive work, and teaches that a man "should not be lazy in any occupation, lest his [religious] study should also be

performed in laziness.” He criticized Jews who exploited the labor of non-Jewish workers.

He was succeeded by his son, AARON THE SECOND (d. 1872), under whose leadership Karlin Ḥasidism reached the height of its influence in Polesie and in Volhynia. Groups of Karlin Ḥasidim settled in Tiberias and Jerusalem, supported from the center in Karlin. It was Aaron’s custom to write “Words of Encouragement” to his Ḥasidim before Passover, which were particularly important as a solace during the oppressive reign of Czar Nicholas I. The celebrated Karlin ḥasidic melodies were composed during his leadership. In his *Beit Aharon* (1875) he emphasizes sincerity. He taught that “prayers should be followed by study... every day. God does not count the pages but the hours.” He advised that “repentance comes essentially out of joy and delight.” Regular daily life should also be considered Divine Worship, as both lead to the attainment of perfection, as a result of which redemption and the messianic era can be brought closer. Aaron also left Karlin before 1864 for Stolín, where he remained until his death. He died in the townlet of Mlinów, Volhynia, while on a journey, and was buried there.

He was succeeded by his son, ASHER THE SECOND (d. 1873), who emphasized the value of ritual immersion “which purifies the body and promotes sanctity.” He was buried in Drohobycz (Drogobych), Galicia. Asher left a four-year-old son named ISRAEL; he was immediately recognized by Karlin Ḥasidim as successor to the leadership and hence known as the “Yenuka mi-Stolín” (“Babe of Stolín”). However, he also retained the loyalty of the thousands of his followers when grown up as well as gaining respect among the *Mitnaggedim* thanks to his devoted and able leadership. In his two testaments – to his family and to his Ḥasidim – he recommended study also of “language... and secular studies which are necessary”; he stressed the necessity of care for “the education of girls, because the foundation of Judaism depends on this.” His son MOSES became rabbi of Stolín. A second son, ABRAHAM ELIMELECH, settled in Karlin as rabbi, a third JOHANAN (d. 1955), in Lutsk, Volhynia, and a fourth, JACOB, became rabbi of the Karlin Ḥasidim in the United States. Moses and Abraham Elimelech founded yeshivot and maintained contacts with Erez Israel. Both perished with their followers in the Holocaust. Johanan went to Erez Israel after the Holocaust; from there he emigrated to the United States where he died. In 1957 his body was taken to Tiberias for burial. He left a small grandson, and those of his Ḥasidim who have remained loyal to the dynasty undertook his education as its continuator, while a small number chose the *zaddik* of *Le-lev as their leader. SOLOMON BEN MEIR HA-LEVI OF KARLIN (1738–1792), ḥasidic *zaddik*, a disciple of Dov Baer, Maggid of Mezhibezh, and of Aaron the Great of Karlin, headed the Karlin Ḥasidim after Aaron’s death in 1772 (see above). He left no written works, but many of his sayings have been quoted and tales about him have been recorded. Almost all the subsequent *zaddikim* in Lithuania were his disciples or the disciples of his disciples.

KARLINER, BARUCH (c. 1810–1871 or 1879), *ḥazzan*. Taking his name from the Russian town of Karlin where he first became a *ḥazzan*, Karliner also served other communities including Pinsk and Brisk. He had neither a particularly tuneful voice nor any musical knowledge, but would compose “when the spirit came upon him,” even if this occurred during a part of the service which was not usually sung. His choir was accustomed to his sudden digressions from the rehearsed repertoire and when these occurred would continue to accompany him in his own style. His compositions, notable for their power and bold modulations, were written down by members of his choir and had a great influence on the following generations of *ḥazzanim*.

KARLSRUHE, city in Germany, formerly capital of *Baden. Jews settled there shortly after its foundation in 1715. By 1725 the community had a synagogue, bathhouse, infirmary, and cemetery. Nathan Uri Kahn served as rabbi of Karlsruhe from 1720 until his death in 1749. According to the 1752 Jewry ordinance Jews were forbidden to leave the city on Sundays and Christian holidays, or to go out of their houses during church services; but they were exempted from service by court summonses on Sabbaths. They could sell wine only in inns owned by Jews and graze their cattle, not on the commons, but on the wayside only. Business records had to be kept in German. The community officials, including two to three unmarried teachers, were exempted from tax. They exercised civic jurisdiction and could commit members of the community to the municipal prison for Jews. A *ḥevra kaddisha* was founded in 1726; the cemetery, also used by Jews of other towns, was enlarged in 1756 and 1794. There were nine Jewish families living in Karlsruhe in 1720, 50 in 1733, 80 in 1770, and 502 persons in 1802. Nethanel *Weil, who became chief rabbi of the two Baden margravates (1750–69), was succeeded by his son Jedidiah (Tiah) Weil (1770–1815).

Nethanel Weil’s commentary on *Asheri, Korban Netanel* (on tractates *Mo’ed* and *Nashim*), was printed in 1755 in Karlsruhe by L.J. Held, a successor to old and well-known Augsburg printers. His successors, F.W. Lotter and M. Macklott, continued publishing Hebrew works, including some by Jonathan *Eybeschuetz (printed 1762–82) and the *Torat Shabbat* of Jacob *Weil (1839). The firm continued printing until 1899, mainly liturgical items, Judeo-German circulars, and popular stories. D.R. Marx, licensed in 1814, printed in 1836 a Hebrew Bible (1845²), edited on behalf of the Jewish authorities (*Oberrat*) by a group of rabbis, among them Jacob *Ettlinger. Altogether some 60 Hebrew books were printed in Karlsruhe.

Karlsruhe was the seat of the central council (*Oberrat*) of Baden Jewry, according to the articles of the 1809 edict which granted them partial emancipation. Asher Loew, a participant in the Paris *Sanhedrin, was appointed rabbi of Baden and Karlsruhe in 1809; he was succeeded in 1837 by Elias Willstaedter. A new synagogue with organ was consecrated in 1875; the Orthodox faction seceded in 1878 and built its own synagogue in 1881.

From the 1820s Jews were permitted to practice law and medicine. After attaining complete emancipation in 1862, Jews were elected to the city council and the Baden parliament, and from 1890 were appointed judges.

The Jewish population numbered 670 in 1815, 1,080 in 1862 (3.6% of the total), 2,200 in 1892, 3,058 in 1913 (2.73%), 3,386 in 1925 (2.37%), 3,199 in June 1933 (2.01%), and 1,368 in May 1939. The Jews in Karlsruhe suffered from persecution during the *Hep! Hep! riots in 1819. Anti-Jewish demonstrations took place in 1843 and 1848, and in the 1880s the antisemitic movement of Adolf *Stoecker had its repercussions in Karlsruhe. The community maintained a variety of cultural and educational institutions. A *Lehrhaus* (school for adults) was founded in 1928.

During the first years of the Nazi regime the community continued to function and particularly to prepare Jews for emigration. An agricultural training school was founded and a biweekly newspaper (founded as a bulletin in 1840) was published. On Oct. 22, 1938, all male Polish Jews living in Karlsruhe were deported to Poland. The synagogues were destroyed on *Kristallnacht*, November 1938; most of the men were arrested and sent to *Dachau concentration camp, but were released after they had furnished proof that they intended to emigrate. In October 1940, 895 Jews were expelled and interned by the French Vichy authorities in *Gurs in southern France, most of whom were deported from there to *Auschwitz in November 1942. The 429 remaining Jews and non-Aryans were deported to the east between 1941 and 1944. There were 90 Jews living in Karlsruhe in May 1945, 63 in 1946, and 246 in 1968. An organized community was formed in 1945, and the Baden Central Jewish Council was reorganized in 1948. A new synagogue was consecrated in 1971. The Jewish community numbered 323 in 1989 and around 800 in 2004 after the immigration of Jews from the former Soviet Union.

[Toni Oelsner]

KÁRMÁN (formerly **Kleinman**), **MÓR** (1843–1915), Hungarian educator. Born at Szeged, he was probably the first Jew to take his doctorate at the University of Budapest (1866), where he became a lecturer in pedagogy, ethics, and psychology in 1872, and professor in 1909. In 1869 he was sent to Leipzig by the minister of religion and education, Baron Joseph Eötvös, to study methods of training teachers for secondary schools. There, he was entrusted with the writing of a curriculum for the training of teachers at the model elementary school and later served as director of education at the model secondary school in Budapest. He reorganized and expanded the national secondary school system. According to Kármán, religious education was a sound basis for morals and ethics. When, in 1873, the Hungarian government decided to underwrite the teaching of religion in public schools, Kármán was asked to administer the Jewish educational needs in the public schools. He edited a Hungarian educational journal, and participated in the publishing of school textbooks. Apart from his own scholarly contributions, Kármán translated numerous works into Hungarian. He devoted much of his energies to Jewish affairs, and issued the appeal which led to the foundation of IMIT – the Jewish-Hungarian Literary Society.

KÁRMÁN, THEODORE VON (1881–1963), aerodynamicist. Von Kármán was born in Hungary and studied in Budapest and Goettingen. During World War I he was a lieutenant in the Austro-Hungarian aviation corps. He invented a helicopter with two counter-rotating propellers, a type never developed by industry. After the war he became a consultant to many airplane companies. He first toured the U.S. in 1926 under the auspices of the Guggenheim Fund and settled permanently in 1930 as head of the Guggenheim Aeronautical Laboratory at the California Institute of Technology. Von Kármán published many papers on aerodynamics, hydrodynamics, elasticity, strength of materials, and vibration phenomena. “Karman Vortex Trail” and “Karman Similarity Theory of Turbulence” are now standard terms in scientific literature. The *Collected Works of Theodore von Kármán* was published in four volumes (1956). The development of high speed aircraft owes much to the influence of Von Kármán. He investi-

gated (1938) the possibility of using supersonic wind tunnels in ballistic research. He formed the Aerojet Engineering Corporation to manufacture rockets after unsuccessful attempts to interest American industry in this venture. During World War II he was in charge of all jet propulsion research in the U.S. Von Kármán was chairman of the U.S. Air Force's scientific advisory board (1944) and of the Aeronautical Research and Development Committee of the North Atlantic Treaty Organization (1951).

[Barry Spain]

KARMAZIN, MEL (1943–), U.S. media executive. Melvin Alan Karmazin was born and grew up in Long Island City, Queens, New York. His mother worked in a factory while his father drove a taxi. During high school Karmazin was a typist at an advertising agency in Manhattan. He attended Pace University at night while working as an advertising salesman by day. His first job at the Columbia Broadcasting System was selling ads for the radio division. In the late 1960s, when his commission exceeded \$70,000, his boss objected to his earnings, so Karmazin left to work for the giant broadcasting company Metromedia. At Metromedia from 1970 to 1981, Karmazin was general manager of WNEW-AM and FM, two well-known stations in New York City. One disc jockey who worked there at the time wrote that Karmazin “had no interest in music, news, sports, books, theater. It mattered not what a station proffered, only how it profited.” That attitude served Karmazin well in broadcasting. In 1981 he was hired to run Infinity Broadcasting, an owner of radio stations. Over the next 15 years, by dint of tight operating control and a string of shrewd acquisitions, he built Infinity into one of the largest radio networks in the nation. His most brilliant managerial stroke came in the late 1980s when he hired Howard Stern, a foul-mouthed talk-show host who had been fired by another station. Stern began earning millions for himself and for the station. Karmazin took Infinity public in 1992 for \$17.50 a share, then sold it in 1996, when it owned 44 radio stations, to CBS for \$170 a share, securing his reputation on Wall Street. In 1996, using a business strategy that became his trademark, Karmazin approached CBS, which had merged with Westinghouse in 1995, and proposed that Infinity buy the company. Instead, CBS acquired Infinity for \$4.9 billion, and Karmazin came aboard to run the combined radio operations of Infinity, Westinghouse, and CBS along with its outdoor advertising business. Intent on making his stamp on the company, Karmazin was instrumental in persuading Westinghouse to dump its industrial manufacturing assets and to refashion the company under the CBS name. The chairman and chief executive of CBS named Karmazin head of CBS's station division and in October 1998 Karmazin forced his superior's resignation. He became chief executive in 1999. One of his first acts at CBS was to buy broadcast rights for National Football League games from 1998 to 2006 for \$4 billion. He also in-

vested \$30 million to \$50 million in an early morning show, but that project was unsuccessful. In 2000 Karmazin became the chief operating officer of Viacom-CBS, one of the world's largest producers of news and entertainment and became the presumptive heir to Sumner M. Redstone, Viacom's chief executive, who was then 76 years old. Karmazin's relationship with Redstone was testy. He refused to conform to Redstone's more traditional conception of an entertainment mogul. Karmazin kept a close eye on expenses, a discipline anathema to many in entertainment. And Karmazin did not like the high-risk, potentially high-reward game of making blockbuster movies. For him the entertainment business was about controlling costs, selling ads, and watching pennies, not laying daring bets or dating starlets. In 2004, when he decided that he would not be succeeding the crusty octogenarian Redstone, Karmazin resigned as Viacom's president and chief operating officer, giving up his stewardship of CBS, MTV, Paramount, Simon & Schuster, and Infinity Broadcasting. He left with a severance agreement worth \$30 million. Later that year, Karmazin took the reins of Sirius Satellite Radio as chief executive. The announcement came a month after Sirius had signed Howard Stern to bring his show to the satellite airwaves from commercial radio.

[Stewart Kampel (2nd ed.)]

KARMEI, ILONA (1925–2000), Holocaust survivor and author. Born in Cracow, Poland, to Hirsch and Mita (Rosenbaum) Karmel, Ilona Karmel was taken to the Cracow ghetto in November 1942. Later that year, Karmel, her mother, and her older sister, Henryka, were deported to the nearby slave labor camp in Plaszow. In 1943, they were transported to Starzysko Kamienna, a labor camp near Leipzig, and then to the Buchenwald concentration camp. Karmel attributes her own and her sister's survival to their mother's pro-active protection at critical moments. In the final days of the war, a German military vehicle ran over Karmel and her mother, apparently deliberately. Karmel's mother died from her injuries, and Karmel's legs were crushed so severely that she spent two years convalescing in a Swedish hospital.

While in the camps, the Karmel sisters composed poetry on stolen paper. In 1947, they published a volume of these poems, *Spiew za Drutami* (“Song Behind the Wire”), depicting the inner life of slave laborers and their struggle against dehumanization. In Sweden, Karmel studied English by correspondence course and began writing fiction in English. Upon reaching New York in 1948, Karmel enrolled in Hunter College and continued writing. One story, “Fru Holm,” was awarded the 1950 prize for college fiction by *Mademoiselle* magazine. Karmel transferred to Radcliffe College, graduating with honors in 1952 under the mentorship of the poet Archibald MacLeish. Her first novel, *Stephania* (1953) emerged from her experiences in the Swedish hospital.

Karmel's masterpiece, *An Estate of Memory* (1969), was the product of a 10-year immersion in wartime memories. Set within a labor camp resembling Starzysko, the novel de-

picts the physical and psychological pressures on four women who form a surrogate family. Three of the women dedicate themselves to sustaining the secret pregnancy of the fourth. The novel explores their moral struggles and fear of degenerating. One character reflects, “Two kinds of evil ... were at work here. The first came from outside ... lurking in hunger, in typhus and the bitter dust. The other evil was new. It came from within” (121).

Karmel, who remained close to her sister, Henia Karmel-Wolfe, also a novelist, married physicist Francis Zucker, who had immigrated to the U.S. from Germany in 1938. The couple lived in Belmont, Massachusetts, taking frequent trips to Germany for Zucker’s work. Karmel taught creative writing at the Massachusetts Institute of Technology, where she received the Dean’s Award for Distinguished Service in 1994. M.I.T. further recognized Karmel by establishing the Ilona Karmel Writing Prizes to mark her retirement in 1995. Karmel died from leukemia.

[Sara Horowitz (2nd ed.)]

KARMI (Crémieux), French rabbinic family of the 18th century, consisting of Mordecai and Solomon Ḥayyim, the sons of Abraham, a learned merchant, and Moses, son of Solomon Ḥayyim and son-in-law of Mordecai. **MORDECAI KARMI** (1749–1825) was born in Carpentras. When Ḥ.J.D. Azulai was there in 1777 as an emissary of the Ereẓ Israel community, he became friendly with the Karmi family. Toward the end of his life Mordecai served as rabbi in Aix-en-Provence. He is the same Mordecai Crémieux who financed the edition of *Seder ha-Tamid*, the first prayer book of daily and Sabbath prayers according to the Provençal rite. He wrote *Ma’amar Mordekhai*, in two parts (Leghorn, 1784–86), an extensive commentary on the Shulḥan Arukh, *Orah Ḥayyim*. At the beginning of the work there is a poem by the author’s father in honor of his son and prefaces by his brother Solomon Ḥayyim and Solomon’s son Moses. The work also contains *hassagot* (“criticisms”) on Azulai’s *Birkei Yosef*. This gave rise to a sharp rejoinder by Azulai in his *Maḥazik Berakhah* (Leghorn, 1785), in which he remarked that it was not fitting that he should reply and was doing so only out of fear that his silence would be taken as a justification of Karmi’s strictures. Karmi again replied in a special work entitled *Divrei Mordekhai* (Leghorn, 1787). His brother **SOLOMON ḤAYYIM** was born in the middle of the 18th century in Carpentras, where he served as rabbi after the death of his father. At the age of 18 he compiled *Heshek Shelomo*, a supercommentary on Rashi’s commentary to the Pentateuch. Solomon Ḥayyim’s son **MOSES** (1766–1837) was born in Carpentras, but in 1790, together with his father and his uncle, moved to Aix, where he was appointed rabbi. He wrote *Ho’il Moshe Be’er*, a supercommentary in 12 volumes to Abraham ibn Ezra’s commentary to some of the books of the Pentateuch and to Proverbs, Job, and the Five *Scrolls (only vols. 1–6 and 12 were printed; Aix, 1833–36). He also published, under the same title, a commentary to the prayer book according to the Provençal rite (six volumes, Aix, 1829–35).

[Yehoshua Horowitz]

KARMI, DOV (1905–1962), Israel architect. Karmi was born in Russia and went to Palestine in 1921. He studied art in Jerusalem and architecture in Ghent. He began work as an independent architect in the early 1930s, mainly in Tel Aviv. Karmi belonged to the first generation of architects of the new Jewish settlement in Ereẓ Israel. He occupied an important place in the creation of a modern architectural style for the country and in creating prototypes, especially in domestic and commercial building styles. He was one of a group of architects who developed a unique Bauhaus style for Tel Aviv, later recognized by UNESCO as a world heritage site. He emphasized simplicity and functionalism. Karmi designed and built many public buildings and offices, including the Histadrut building in Tel Aviv, the Sherman (Administration) Building and the Wise Auditorium of the Hebrew University in Jerusalem, the El Al Building in Tel Aviv, the two buildings of the Tel Aviv Cameri Theater, and, together with Z. *Rechter, Tel Aviv’s Heikhal ha-Tarbut (Mann Auditorium). In 1957 he was awarded the Israel Prize for architecture.

[Abraham Erlik / Shaked Gilboa (2nd ed.)]

KARMI’EL (Heb. כַּרְמִיאֵל; “Vineyard of God,” alluding to the Bet ha-Kerem Valley and neighboring Majd al-Kurūm), town in Israel, 14 mi. (22 km.) E. of Acre. Its construction as a development town, in connection with the Central Galilee Development Project, began in 1963, and the first inhabitants arrived in 1964. In 1969, Karmi’el had 1,740 inhabitants, comprised of about 40% veteran Israelis, 40% immigrants from Eastern Europe (mainly Romania), and 20% immigrants from North Africa and North and South America. Anticipated to serve as an urban center for existing Arab villages of a fairly wide periphery and Jewish villages to be founded in the area, Karmi’el hardly exercised these functions in its initial years. On the other hand, its economic development was satisfactory, with 75% of its manpower employed in local industrial enterprises and workshops. In 1984 Karmi’el received municipal status. By the mid-1990s its population had risen to approximately 30,800, further increasing to 42,400 in 2002, including 17,000 new immigrants. Commensurate with its population increase, Karmi’el underwent vast expansion, with seven new neighborhoods created and a municipal area extending over 10 sq. mi. (26 sq. km.). ORT’s Braude College of Engineering, with approximately 3,500 students, is located in the city. Every summer Karmi’el hosts an international folk dancing festival.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

KARMINSKI, HANNAH (1897–1942), German social worker. Born in Berlin, she taught at a Jewish kindergar-

ten. After moving to Frankfurt, she took charge of a club for young girls. Here she met famous Jewish personalities who had a decisive influence on her future development. She made the acquaintance of Franz *Rosenzweig and Bertha *Pappenheim who persuaded her to work for the Juedische Frauenbund ("Jewish Women's Organization"). Hannah Karminski was appointed secretary general of this organization, which developed rapidly under her leadership. From 1924 she edited the Frauenbund's monthly journal, *Die Blaetter des juedischen Frauenbundes*. When Hitler's Gestapo ordered the organization to terminate its activities, Hannah Karminski became a leading figure in the work of the *Reichsvertretung (later Reichsvereinigung) der Juden in Deutschland, a body set up by the Nazis to represent the Jewish community and to manage its affairs. Hannah Karminski continued working until 1942 under incredibly difficult conditions. She was arrested while seriously ill and died on the way to a concentration camp in the East.

[Giora Lotan]

KARMINSKI, SIR SEYMOUR EDWARD (1902–1974), English judge. Born in London, Karminski was admitted to the bar in 1925 and specialized in divorce cases. During World War II he served in the Royal Navy, becoming lieutenant commander in 1943. In 1945 he was made a king's counsel and in 1951 was appointed judge of the divorce division of the High Court of Justice. He was senior judge of the divorce division for several years until his promotion to lord justice of appeal in 1969. Karminski was an active figure in the Jewish community as chairman of the London Jewish Board of Guardians (later the Jewish Welfare Board). He was a prominent member of the West London Reform Synagogue. In 1967 Karminski became a member of the privy council.

[Israel Finestain]

KARMIYYAH (Heb. כַּרְמִיָּיָה), kibbutz in the southern Coastal Plain of Israel, near the Gaza Strip, about 5 mi. (9 km.) S.W. of Ashkelon, affiliated to Ha-Kibbutz ha-Arzi Ha-Shomer ha-Za'ir. It was founded in 1950 by a group of pioneers from France and Tunisia. Newcomers from Argentina later made up the majority of the members. Field crops, citrus groves, and dairy cattle constituted the principal farm branches. The kibbutz also started up a textile and leather factory. In 2002 the population was 326. Nearby is the Shikmah Dam, a pilot water storage plant where winter floodwaters of Nahal Shikmah are filtered through porous sand dunes and stored underground. Thus protected from evaporation losses, they are recovered through wells for use in summer. The name Karmiyyah, which is derived from the Hebrew *kerem* ("vineyard"), also refers to the Hebrew form of Adolphe *Crémieux's name.

[Efraim Orni]

KARMON, ISRAEL (1915–1982), cantor and opera administrator. Karmon was a native of Vilna where he sang in the choir of the Vilna Great Synagogue with the cantor Gershon Sirota. He immigrated to Palestine in 1936 and studied at the Hebrew University, Jerusalem, in the department of fine arts. He was a cantor in Tel Aviv and also administrator of the Israel National Opera Company. From 1954 until his death in 1982 he was cantor of the Jewish community in Basle. He appeared in concerts in Europe and made records of cantorial music.

[Akiva Zimmerman (2nd ed.)]

KARNAIM (Heb. קַרְנַיִם), city of Bashan, associated with *Ashteroth in Genesis 14:5; in the Book of Jubilees, it is mentioned as one of the cities of the *Rephaim (29:11). Amos probably alludes to the capture of Karnaim by Jeroboam II (6:13). After the destruction of Ashteroth by Tiglath-Pileser, Karnaim became the capital of Bashan and gave its name to the Assyrian district of Qarnini. Judah Maccabee conquered the city in his campaign to Gilead (1 Macc. 5:43; the Karnion mentioned in 11 Macc. 12:21 seems to be a different locality). It appears in Midrash *Ruth Rabbah* 2:10 as Kiryanos (קִרְיָנוֹס). Eusebius identifies Karnaim with the village of Karnai in Arabia, "where the house of Job is shown" (Onom. 112:3 ff.). This would place the ancient site at Sheikh Sa'ad in Bashan, 3¼ mi. (6 km.) south of Nawā, where neo-Hittite sculpture and a stele of Ramses II (known locally as "Job's Stone") have been found.

[Michael Avi-Yonah]

KARNEI SHOMRON (Heb. קַרְנֵי שׁוֹמְרוֹן), urban community in Samaria. The settlement is located 13 mi. (20 km.) east of *Kefar Sava, in the Samaritan foothills, and occupies an area of 3 sq. mi. (7.5 sq. km.). Karnei Shomron was founded in 1977 by a group of young families. The first settlers lived in temporary houses, until their permanent homes were built. The town received municipal council status in 1991. In 2002 its population was 6,100, including 200 immigrant families from English-speaking countries. An industrial zone near the settlement houses workshops. During the second Intifada, the settlement was attacked by terrorists: a woman was killed in 2001 and three teenagers in 2002.

[Shaked Gilboa (2nd ed.)]

KARNI (Volovelski), YEHUDA (1884–1949), Hebrew poet. Born in Pinsk, his first Hebrew poem was printed in *Ha-Zefirah* when he was 12. In 1921 he settled in Palestine and from 1923 until his death was on the editorial board of the daily *Haaretz*.

Karni's early poetry, influenced by *Bialik and *Tchernichowsky, was individualistic, romantic, and abstract. His settling in Palestine brought about a radical change in his creative spirit. He was one of the first Hebrew poets who abandoned the Ashkenazi accentuation and shifted to the new Se-

phardi accent thus bringing his diction closer to rhythms of spoken Hebrew. His poetry became more concrete, reflecting the new landscape and his personal struggle for identity against the backdrop of the complex political, cultural, and economic issues which agitated the small Jewish community of mandatory Palestine. Particularly distinctive is his volume *Shirei Yerushalayim* (1948). Jerusalem in this volume looms as the eternal symbol of the people and its destiny. Although he encounters a city in apparently hopeless stagnation and decay, he senses the deeper, historical levels of consciousness of eternal Jerusalem. At the same time, he captures the concrete beauty of the Jerusalem landscape. In his last years Karni lamented the victims of the Holocaust. The poet's characteristics as moralist, lamenter, and artist were also evident in the articles and essays that appeared almost daily in *Haaretz* for 25 years. His other poetic works include *She'arim* (1923), *Bi-She'arayikh Moledet* (1935), *Shir ve-Dema* (1948), *Bimah Ketannah*, selected poetry and prose (1951), *Yalkut Shirim shel Yehuda Karni*, with introduction by Y. Ogen (1966). A collection of his poems (*Shirim*) with an introduction by Dan Miron appeared in 1992. A list of his works translated into English appears in Goell, *Bibliography*, 31, 100.

[Yitzhak Ogen]

KARNIOL, ALTER YEHIEL (1855–1929), *hazzan*. Born in 1855 in Dzialoszyce, Kielce province, Poland, he sang with several *hazzanim* in Hungary and then officiated in various congregations. In 1886 he was appointed *hazzan* for life by the congregation of Pecs, in Hungary, but resigned after seven years to go to the Ohab Zedek synagogue of New York. In 1898 he returned to Russia as *hazzan* of the Great Synagogue of Odessa. He refused then an invitation to join the Odessa Opera. When the pogroms broke out in 1905 he returned to the United States and was ultimately re-engaged as *hazzan* of Ohab Zedek. Karniol was noted for the extraordinary quality of his tenor which could also reach to the bass register. His style, intensely emotional, is conveyed only imperfectly in the recordings which he made in the U.S.

[Joshua Leib Ne'eman]

KARP, ABRAHAM J. (1921–2003), U.S. Conservative rabbi and scholar. Karp, who was born in Amidur, Poland, was taken to the United States in 1930. He was educated at Yeshiva University (B.A. 1942) and the Jewish Theological Seminary, where

he was ordained in 1945. For a time he served as assistant director of the Seminary College and director of the Metropolitan New York Region of the United Synagogue of America. He then held pulpits in Swampscott, Mass. (1948–1951), and Kansas City, Mo. (1951–1956) working with Gerson Hadas. From 1956 he was rabbi of Temple Beth El of Rochester, N.Y. He was also active in the Rabbinical Assembly serving as a member of the Cabinet, the Executive Council and on the editorial committee of the Joint Prayer Book Commission and of *Conservative Judaism*. While serving at Beth El, Karp became well known as an important scholar of American Judaism. He was a visiting professor at Dartmouth College (1967) and at the Hebrew University in Jerusalem; he taught American Jewish history at the Jewish Theological Seminary (1967–71, 1976). He left his rabbinic duties in 1972 and was the Philip Bernstein Professor of Jewish Studies at the University of Rochester retiring in 1991.

Karp served as president of the American Jewish Historical Society from 1972 to 1975, receiving the society's Lee M. Friedman Medal for distinguished service, and was named fellow of the Jewish Academy of Arts and Science in 1984.

Karp was what one admirer called the “greatest grassroots collector of Judaica in modern history.” Rarely spending more than five or ten dollars he combed flea markets and basements, dumpsters and library sales. In the end he amassed a collection of some 3,500 items of Americana Judaica which he gave to the Jewish Theological Seminary in 1990. Prof. Arthur Kiron, curator of Judaica Collections at the University of Pennsylvania Library, called Karp's Americana material “perhaps the finest private collection of its kind ever assembled.” In addition to books and manuscripts, the collection included ritual and ceremonial objects, paintings, synagogue records, newspapers, and diaries.

Karp is the author of *New York Chooses a Chief Rabbi* (1955), *Jewish Way of Life* (1962), and *History of the United Synagogue of America* (1964), all of which appeared in issues of the *Publication of the American Jewish Historical Society; Conservative Judaism – The Heritage of Solomon Schechter* (1963); and edited *Jewish Experience in America* (5 vols., 1969). He assisted in the Library of Congress's major exhibition of its Judaic treasures and wrote *From the Ends of the Earth: Judaic Treasures of the Library of Congress* (1991). He also wrote, *Jewish Perceptions of America: From Melting Pot to Mosaic* (1976), *Jewish Continuity in America: Creative Survival in a Free Society* (1998) and *To Give Life: UJA in the Shaping of the American Jewish Community* (1981).

[Jack Reimer / Michael Berenbaum (2nd ed.)]

KARP, MAX and SOPHIE, Yiddish actors. Max Karp (1856–1898) joined A. *Goldfaden's company in Odessa. In 1883 he went to London where he married Sophie (Sarah) Goldstein, also a member of the Goldfaden company, the first professional Yiddish actress. After appearances in England, the Karpes went to New York in 1888, and appeared in operettas and melodramas. Karp organized the Schiller Dramatic Society (1890). A collection of his poetry was published under

the title *Fun Oriental Teater*. Sophie Karp popularized Hurwitz and Sandler's song, "Eli, Eli."

KARPEL, HERMAN (1864–1942), French trade unionist. Karpel emigrated from Russia to France and in 1896 was co-founder of the cap-makers' union, the first Jewish trade union in France. Until 1914 Karpel played an active part in the Jewish labor movement in France. At the height of the *Dreyfus Affair in 1898, Karpel published a pamphlet entitled: "*Le Proletariat Juif. Lettre des ouvriers Juifs de Paris au Parti Socialiste Français*," which was an appeal by French Jewish workers to their non-Jewish comrades to join the fight against antisemitism. The pamphlet also pointed out the danger of ignoring antisemitism and the mistake in the belief that the Jewish people consisted entirely of capitalists.

BIBLIOGRAPHY: Z. Szajkowski, *Etyudn tsu der Geshikhte fun Ayngevandertn Yidishn Yishuv in Frankraykh*, 2 vols. (1936–37), index; idem, *Di Profesyonele Bavegung Tsvishn di Yidische Arbeter in Frankraykh biz 1914* (1937); E. Tcherikower and Z. Szajkowski, in: *Yidn in Frankraykh*, 2 (1942), 163–92.

KARPELES, GUSTAV (Gershon; 1848–1909), literary historian. Karpeles, who was born in Einwanowitz, Moravia, devoted himself to literary research in German and Jewish literature. One of his first studies was a biographical sketch, published anonymously, of Azriel *Hildesheimer (1870). In 1870 he became editor of the weekly *Juedische Presse*, founded by the latter, and at the same time of the German literary journal *Auf der Hoehe*. Karpeles edited the literary supplement of the *Breslauer Zeitung* and from 1878 to 1883 the influential *Westermanns Monatshefte*. In 1890 he became editor of the *Allgemeine Zeitung des Judentums*, and in 1898 editor of the *Jahrbuch fuer juedische Geschichte und Literatur*. This publication was a sequel to the founding of the Berlin Verein fuer juedische Geschichte und Literatur, by Karpeles, in association with others, an example soon followed by many other communities in Germany. These were eventually united, under his leadership, into the Verband der Vereine fuer juedische Geschichte und Literatur (1893). Karpeles published five books on *Heine, and four editions of his work. His writings include *Goethe in Polen* (1890), *Allgemeine Geschichte der Literatur...* (2 vols., 1891), and *Litterarisches Wanderbuch* (1898). His most important contribution to Jewish scholarship was the two-volume *Geschichte der juedischen Literatur* (1886, 1920–21³; partial tr. *History of Jewish Literature*, n.d.). Smaller works in this field are his *Die Frauen der juedischen Literatur* (1871); *Zionsharfe*, a German anthology of medieval Hebrew poetry (1889); and *Sechs Vortraege ueber die Geschichte der Juden* (1896; *A Sketch of Jewish History*, 1897). Also in English appeared *Jews and Judaism in the 19th Century* (1905). Karpeles was not an original or profound scholar, but he did much to popularize Jewish literature and history.

[Sol Liptzin]

KARPE, MAURICE JOSEPH (1891–1964), U.S. psychologist, social worker, and marriage counselor. Karpf, who was born in Austria, was brought to the U.S. as a boy, and studied sociology and psychology at Columbia University. After being employed as a psychologist in the Chicago school system (1912–14, 1916–18), he was superintendent of the Jewish Social Service Bureau, Chicago (1919–25), director and president of the faculty of the graduate school of Jewish Social Work in New York (1924–42), and executive director of the Federation of Jewish Welfare Organizations in Los Angeles (1942–47). Active in Jewish affairs, he served as president of the National Conference of Jewish Welfare (1930–32), chairman of the International Conference of Jewish Social Work (1932–35), and non-Zionist member of the Executive of the Jewish Agency for Palestine (1930–45). His works include: *The Scientific Basis of Social Work* (1931) and *Jewish Community Organization in the United States* (1938).

BIBLIOGRAPHY: M.H. Neumeier, in: *American Sociological Review*, 29 (1964), 753.

KARPINOVITSH, AVROM (1918–2004), Yiddish writer. Born in Vilna, he studied at the Vilna Realgymnasium where his teachers included the poet M. *Kulbak and the literary historian Max *Erik. He left Vilna in 1937 for Birobidjan, returning in 1944. Intercepted by the British in 1947 as an illegal immigrant to Palestine, he was interned in Cyprus, reached Israel in 1949, and settled in Tel Aviv, where he became the administrator of the Israel Philharmonic Orchestra. Throughout his career his writing remained focused on the life of Vilna's Jews. His collections *Af Vilner Gasn* ("On Vilna Streets," 1981), *Vilne, Mayn Vilne* ("Vilna, My Vilna," 1993), *Geven, Geven Amol Vilne* ("Once, Once There Was Vilna," 1997), among others, recapture the atmosphere of prewar Vilna Jewish society – not the city of high culture but the colorful Jewish underworld. He evokes its characters with humor, affection, and humanity, in an expressive Lithuanian Yiddish. His friend, poet Avrom *Sutskever, said that apart from Chaim *Grade no one could write about Vilna as well as Karpinovitsh. A passionate supporter of Yiddish culture, he co-edited the second *Almanakh fun di Yidische Shrayber in Yisroel* (1967) and was a frequent contributor to the quarterly *Di Goldene Keyt* and the newspaper *Letste Naves*.

[Israel Ch. Biletzky / Heather Valencia (2nd ed.)]

KARPLUS, HEINRICH (1905–1988), Israeli pathologist and founder of forensic medicine in Israel. Born in Vienna, he was the son of Johan Paul Karplus, known Viennese experimental neurophysiologist. Karplus graduated from the medical faculty of Vienna in 1930 and was a pupil of the Jewish pathologist Jakob Erdheim. He established the Institute of Pathology

at the Hadassah Tel Aviv Municipal Hospital and directed it from 1936 to 1945, and became involved in forensic medicine. Trained in forensic medicine at Stockholm University (1945–49), he returned to Israel as advisor to the IDF and director of the department of pathology of the newly established Tel Hashomer army hospital. He established and directed the National Leopold Greenberg Institute of Forensic Medicine in Abu-Kabir from 1955 to 1974. He was known for his academic independence and uncompromising adherence to truth and moral principles. He initiated the first regional Traumatology CPC conferences in 1966 which improved the care of patients with multiple injuries. He was professor of forensic medicine at the Hebrew University of Jerusalem and at Tel Aviv University, and educated generations of physicians, lawyers, and criminologists. After his retirement he devoted himself to the study of ethics and the history of medicine.

[Bracha Rager (2nd ed.)]

KARS (originally **Karpeles**), **JIŘÍ** (1882–1945), painter and graphic artist. Kars was born into a German family in Kralupy, Bohemia. After travels in Spain and Portugal he settled in Paris in 1907. After the Nazi occupation in 1940, he escaped to Switzerland. Kars experimented in formalistic constructivism, but after 1918 turned to figurative paintings of classical composition. His work was characterized by deep lyricism and intense sorrow, occasionally overcome by explosions of brilliant color. His life work was honored by one of the first large-scale postwar exhibitions held in Prague. Shortly afterward, Kars fell victim to a depression resulting from his war experiences and committed suicide.

[Avigdor Dagan]

KARSEN, FRITZ (1885–1951), educator. Born in Breslau, Germany, Karsen began his educational career in Berlin as a secondary school teacher. In 1920, at the national school conference he presented the *Einheitsschule* (unified primary school) idea, which aimed at the mixing of social classes. His major achievement during this period was the organization and direction, 1921–33, of a school complex (from kindergarten through secondary school), the Karl Marx School in Berlin-Neukoelln. He introduced various new procedures in these schools, such as individualized instruction, pupil government, and activity method. Karsen undertook study trips to the U.S. and the U.S.S.R. His plans for an elaboration of his school organization to include young people aged 18 to 19 were halted by the advent of the Nazis. In 1933 Karsen left Germany and settled permanently in New York, where he served as professor of German at City College and professor of education at Brooklyn College. From 1946 to 1948, Karsen served as higher education specialist in the U.S. military government in Germany. The recognition of his educational work in Germany was commemorated by the establishment of the Fritz Karsen School in Berlin. Karsen's main writings include *Die Schule*

der werdenden Gesellschaft (1921), *Deutsche Versuchsschulen der Gegenwart und ihre Probleme* (1923), and *Die neue Schulen in Deutschland* (1924), which he edited. He died in Guayaquil (Ecuador).

Eickhoff, *Fritz Karsen – Ein Wegbereiter der modernen Erlebnispädagogik* (1997); J.J. Choi, *Reformpädagogik als Utopie – Der Einheitsschulgedanke bei Paulo Oestreich und Fritz Karsen* (2004).

[William W. Brickman]

KARSKI, JAN (1914–2000), member of the Polish underground in World War II; Righteous Among the Nations. Born Jan Kozielowski, before the war Karski studied law and diplomatic sciences at Jan Kazimierz University in Lwow (Lvov), and in late 1939, after the German occupation, he joined the Polish underground. Because of his knowledge of languages and foreign countries, he served as a courier between the government-in-exile and the underground. In this capacity, he made several secret trips to France and England. On the eve of one of these trips, in the summer of 1942, he was asked to meet two Jewish leaders of the Warsaw ghetto (Menachem Kirschenbaum and Leon Feiner) to transmit a message to the Polish government-in-exile in London concerning the extermination of the Jewish population then taking place. They spelled out to him the utter hopelessness of their predicament – this was the end of the Jewish people on Polish soil. As they told him: “You other Poles are fortunate. You are suffering too. Many of you will die, but at least your nation goes on living. After the war Poland will be resurrected. Your cities will be rebuilt and your wounds will slowly heal. From this ocean of tears, pain, rage, and humiliation your country will emerge again but the Polish Jews will no longer exist. We will be dead. Hitler will lose his war against the human, the just, and the good, but he will win his war against the Polish Jews. No – it will not be a victory; the Jewish people will be murdered.” They urged Karski to call upon the Jewish leaders in the free world to stage a hunger strike in front of the offices of the English and American authorities, to move them to action. Fearing that his report on the fate of the Jews would be received with skepticism, Karski asked to be smuggled inside the Warsaw ghetto to be able to say that his report was based on what he saw with his own eyes. Still not satisfied with this, Karski asked to be smuggled into one of the camps. Dressed as one of the Latvian camp guards, Karski again witnessed, from a safe distance, the brutality which accompanied the unloading of Jews from the deportation wagons. Later, in London, he met the Bund representative Samuel *Zygelbojm, to whom Karski relayed the appeal by the Warsaw ghetto to Jewish leaders. Zygelbojm, who later committed suicide, felt that this approach would not produce any results. Shaken but resolved to carry the message of Polish Jewry to the United States, Karski arrived there in 1943 and personally reported to President *Roosevelt and other high American officials. Roosevelt lis-

tened attentively to the relation of events inside Poland, but when it came to the Jewish part, Karski felt that what he said fell on deaf ears. Karski emphasized: “The Jewish leaders are totally helpless. The Poles can save only individuals, they cannot stop extermination. Only the powerful Allied leaders can do that.” Roosevelt closed the 90-minute meeting with assurances that the Poles had a friend in the White House; that those guilty would be punished, and that justice and freedom would prevail. Karski also met with American Jewish leader and Supreme Court justice Felix *Frankfurter. When Karski finished, Frankfurter said: “I am unable to believe you.” Karski continued to address audiences, and plead for the rescue of the Jews. His book *Story of a Secret State* became a Book-of-the-Month Club selection. But frustration soon set in, as he realized that all he was getting was applause, not action. Settling in the United States, he earned a doctorate from Georgetown University, where he taught political science. After a long period of silence, he was persuaded by Elie *Wiesel in 1980 to speak up again, and subsequently appeared in public on numerous occasions. He was especially pained at the silence of the world’s leaders about the massacre of the Jews. “All those great individuals, presidents, ambassadors, cardinals, who said they were shocked; they lied. They knew or didn’t want to know. This shocked me.” In 1982, on a visit to Yad Vashem, he was declared a Righteous Among the Nations.

KARTELL-CONVENT DER VERBINDUNGEN DEUTSCHER STUDENTEN JUEDISCHEN GLAUBENS (KC), an umbrella organization of German Jewish student fraternities, founded in 1896. Fraternities of Jewish students were established (the first founded in Breslau, Oct. 23, 1886) in reaction to the mounting wave of antisemitism and the exclusion of Jews from German student fraternities. They adopted from their German counterparts not only the student rituals but also dress, manners, and all their activities. In this way they attempted to establish their equality by outdrinking and outfighting them. Special emphasis was put on Jewish honor in the face of antisemitism, especially the question of “*Satisfaktionsfaehigkeit*,” the right and capability of a Jew to be considered an opponent in a duel. The critical attitude of the KC toward the Jewish nationalist movement and political Zionism led students with differing views, particularly those from Eastern Europe, to found their own organizations, first the two branches of Bund Juedischer Corporationen and the Kartell Zionistischer Verbindungen, later amalgamating into the *Kartell Juedischer Verbindungen (KJV), which focused on the enhancement of Jewish consciousness and Jewish nationalism. Many prominent figures were members of the KC, such as Ludwig *Hollaender, leader of the *Central-Verein. The KC

was an association of fraternities at numerous German universities such as Heidelberg, Berlin, Munich, Freiburg, Leipzig, Frankfurt, and others. Membership of the KC increased from 836 in 1913 to approximately 2,100 in 1933. The KC published the *KC-Blaetter* from 1910 until 1933, when Hitler assumed power and the fraternities were dissolved. Its alumni, the so-called *Alte Herren* (“Old Boys”), were organized in separate organizations which continued to exist outside Germany after World War II.

KARTELL JUEDISCHER VERBINDUNGEN (KJV), an umbrella organization of Jewish university student fraternities in Germany. It was a fusion of two groups. One of them, the Bund juedischer Corporationen (BJC), was formed in 1901 and was composed of the Jewish student fraternity, Verein Juedischer Studenten (VJST), founded in Berlin in 1895, and similar groups in Leipzig, Breslau and Munich. In the following years the BJC established new groups in Strasbourg, Freiburg, Koenigsberg, Marburg, Bonn, Heidelberg, and Frankfurt. The BJC formulated its aims as follows: “... to function as the meeting center of all Jewish students who consciously feel themselves Jews and are willing to collaborate in the development of living Judaism.” The second group, Kartell Zionistischer Verbindungen (KZV), was formed in 1906 by Hasmonaea, the first explicitly Zionist students’ fraternity (founded in Berlin in 1902), and Jordania (Munich, 1905). A year later the Ivria (Freiburg i. Br.) joined the association. Gradually the BJC adopted an increasingly Zionist program. Thus in July 1914 both groups united in the KJV, which was dedicated to educate its members to strive for “national unity of the Jewish community” and for a “renewal in Erez-Israel.”

After World War I the Zionist orientation dominated the organization: the German students’ habits such as fencing and beer drinking were no longer compulsory but only optional, differing from university to university. Instead more emphasis was put on *haluziyyut* – whose aims were settling in Palestine and studying Hebrew. One group within the KJV was dissatisfied with this development and after a central convention (Kartelltag) of the KJV in 1919 established the Bund Zionistischer Corporationen (BZK), consisting primarily of the *Alte*

Herren (“Old Boys”) and university students in Berlin, Breslau, and Frankfurt, insisting on purely Zionist work. The BZK rejoined the KJV in 1929, however, when the latter officially adopted the *Basle Program as the basis of its activities. In the 1920s the KJV had a short period of cooperation with the *Blau-Weiss; fusion between the two groups was only temporary. Already in 1924 the KJV established a branch in Palestine. The KJV was active until 1933, when Hitler assumed power. By that time the organization had some 2,000 members, of whom over 1,200 so-called *Alte Herren* had entered professional life after their university studies. The *Alte Herren* were organized into 14 district associations and conducted local Zionist activities. By 1933 the KJV had branches at 20 German universities. Its organs were *Der juedische Student* (Berlin, 1902–33), and *Der juedische Wille* (1918–20, revived in 1933, and existed till 1937 as continuation of *Der juedische Student*). The KJV groups in Palestine, operating in Jerusalem, Tel Aviv, and Haifa, continued to meet for the next few decades. But the KJV itself was not reactivated after World War II.

KARU (Krupnik), BARUCH (1899–1972), Hebrew writer, journalist, editor, and translator. Born in Chernevtsy (Podolia), Karu lived in Warsaw until World War I. He spent the war years in Berne, and subsequently settled in Berlin where he served on the editorial board of the German *Encyclopaedia Judaica* and the Hebrew encyclopedia *Eshkol*. In 1932 he moved to Tel Aviv, where he joined the staff of the daily newspaper **Haaretz*. From 1942 until his retirement in 1962 he served on the editorial board of the daily *Ha-Boker*. He first began publishing in **Ha-Shilo’ah* in 1911 and contributed articles regularly on literature, science, and other topics to the Hebrew press. His many publications include a talmudic dictionary *Millon Shimmushi la-Talmud* (1927), a literary encyclopedia *Enziklopedyah le-Sifrut Yisre’elit u-Khelalit* (1942–61), an Aramaic dictionary, *Millon ha-Aramit ha-Hayyah ba-Ivrit she-bi-Khetav u-ve-Dibbur* (1967), and many translations into Hebrew.

[Getzel Kressel]

KASABI, JOSEPH BEN NISSIM (17th century), Turkish rabbi. Kasabi was a pupil of Joseph *Trani and was regarded

as one of the outstanding halakhists of Constantinople. Problems were addressed to him from Bosnia, Belgrade, Salonika, Bucharest, and elsewhere, and among his halakhic correspondents were Abraham *Rosanes, Moses *Benveniste, and Jacob *Alfandari. Kasabi migrated to Adrianople but subsequently returned to Constantinople. Most of his sermons were lost in the great fire of 1669. Some of his halakhic rulings are cited in the *Penei Moshe* of Moses Benveniste, some in the *Dat ve-Din* of his pupil, Eliezer ibn Shangi, and others in his own *Rav Yosef* which was published by his grandson Moses Kasabi, together with the *Muzzal me-Esh* of Jacob and Hayyim Alfandari.

[Simon Marcus]

KASDAN, LAWRENCE EDWARD (1949–), U.S. director, screenwriter, producer. A University of Michigan graduate with a master’s degree in education, Kasdan originally worked as an advertising copywriter and submitted his screenplays on the side. In 1976 he sold his first screenplay, *The Bodyguard*, but it was not produced until 1992. His big break came when Steven Spielberg took notice of his 1980 screenplay *Continental Divide* and introduced him to George Lucas. He joined Leigh Brackett to co-write *The Empire Strikes Back* (1980). Spielberg then recruited him to write the first Indiana Jones movie, *Raiders of the Lost Ark* (1981). Kasdan returned to the world of lightsabers in 1983 to pen *Return of the Jedi* (1983) with Lucas. Kasdan stepped behind the camera for the first time in 1981 with his directorial debut of *Body Heat*, which he also wrote. *The Big Chill* (1983) was written, produced, and directed by Kasdan and earned his first Academy Award nomination for Best Original Screenplay. In 1985, he acted in the first of a handful of small roles, portraying the detective #2 in John Landis’ *Into the Night*. Kasdan wrote, produced, and directed *The Accidental Tourist* (1988), which was nominated for an Academy Award for Best Picture. He and his wife, Meg Kasdan, co-wrote the Academy Award nominee for Best Original Screenplay *Grand Canyon* (1991), and he directed and produced the movie as well. In 1992, *The Bodyguard* was finally brought to life, but with Kevin Costner as the lead, not Steve McQueen, as Kasdan had originally imagined. It was a huge box-office hit. Other well-known Kasdan projects include *Wyatt Earp* (1994), *Mumford* (1999), and *Dreamcatcher* (2003), based on Stephen King’s novel. Kasdan has two sons, Jacob and Jonathan Kasdan, both of whom have followed in their father’s footsteps by screenwriting, directing, producing, and acting.

[Susannah Howland (2nd ed.)]

KASEJOVICE (Ger. *Kassowitz, Kasselowitz*), small town in S.E. Bohemia, Czech Republic. One Jewish family is mentioned in Kasejovice in 1570. By the 17th century there was a small community and a cemetery was consecrated in 1669. That same year a conference of notables confirmed the stat-

utes of the Boehmische *Landesjudenschaft in Kasejovice. The community comprised 24 families in 1721, but a synagogue was not built until 1818. Only 28 Jews lived in Kasejovice in 1930. In 1942 all the Jews in the town were deported to the Nazi extermination camps, and the synagogue furniture was sent to the Central Jewish Museum in Prague. The community was not reestablished after World War II, and the synagogue building was used as a local museum. Kasejovice was the first community in which Filip *Bondy preached in Czech.

[Jan Herman]

KASHAN, city in the central part of Iran. Its industrious people made Kashan prosperous, which also benefited the Jewish inhabitants. The beginning of Jewish settlement in Kashan is unknown but the dialect spoken by the Jews points to their antiquity. The earliest reference to the existence of a Jewish community in Kashan may be found in the colophon of a book of prose written in the year 1805; however, there is no doubt that their earliest presence far predated the 15th century. We know that Kashan was a flourishing city before the *Mongol invasion (early 13th century) and, although seriously damaged during the invasion, seems to have been rebuilt. Unlike many cities and towns across Persia populated by Sunni Muslims, Kashan was for the most part Shi'ite. As a result, it did not suffer from the establishment of the Shi'ite Safavid dynasty in the early 16th century, as did other Sunni cities and towns.

However, despite the beauty and prosperity of Kashan, its Jews suffered persecutions. There were several waves of forced conversion in the city. We know of these events from the account by *Babai ibn Lutf, who described the suffering of the Persian Jews between the years just before 1613 and early in 1662. The reign of Shah *Abbas II was particularly hard. From the beginning of 1657 to the beginning of 1662, Jews throughout the country (including 7,000 Jews of Kashan) were forced to convert to Islam. After seven years of apostasy, the Jews of Kashan were allowed to return to Judaism, thanks to the intervention of a Shi'ite priest, learned Sufi, and great poet Mohammad ibn Morteza Mohsen Fayz (d. 1680), as well as substantial payments to the ruling authorities in Kashan and *Isfahan and a change in local municipal government. According to *Babai ben Farhād, Jews of Kashan suffered persecutions around 1730.

Kashan is reputed for its Jewish poets and scholars such as Judah ben Eleazar, Babai ibn Lutf, Babai ibn Farhād, Samuel Pir Ahmad, Sarmad the Sufi (who later embraced Islam), *Amina, and others. The missionary Stern was twice in Kashan, in 1850 and 1852. He wrote that there lived in Kashan 150 Jewish families in the midst of 30,000 Muslim inhabitants and, due to the prosperity of the town the general condition of the Jews in Kashan was much better than those of Isfahan. On the other hand, *Benjamin II, who was in Kashan about the same time as Stern, claimed that 180 Jewish families lived

there in fear. According to Castleman the Jewish community of Kashan consisted of 100 families and most of them were poor. Neumark (1884), who did not visit Kashan, heard that the “plague of Bahaism which afflicted the Jews of Hamadan infected also the Kashani Jews.”

According to BAIU (1906) there lived in Kashan 2,000 Jews in 130 houses among 50,000 Muslim inhabitants. A Jewish school was founded in Kashan in 1910 by a local philanthropist named Jekutiel. There were 1,380 Jews living in Kashan in 1943 (*Ālam-e Yahud*, pp. 379, 472–73). Many of these Jews left Kashan to live in Teheran, London, and Israel. Lord David Alliance, a native of Kashan (b. 1932), who immigrated to London at the age of 17, became one of the greatest textile industrialists in England. At the end of the 20th century, Kashan, which once was called “the Little Jerusalem,” ceased to be a dwelling place of Jews.

[Amnon Netzer (2nd ed.)]

KASHANI, ELIEZER (1923–1947), Jew executed by the British in Palestine. Kashani was born in Petaḥ Tikvah to a poor family with many children. In his youth he was a member of the Maccabi sports organization in which he distinguished himself. Arrested on suspicion of belonging to the underground movement, he was exiled to Eritrea, and in the internment camp joined IẒL. On his release and return to Erez Israel, he became active in the movement, was arrested together with Drezner and Alkahī, sentenced to death, and hanged with them.

KASHDAN, ISAAC (1905–1985), U.S. chess master. Born in New York, Kashdan spent 1929–32 in Europe and established himself there with Salo *Flohr as a likely successor to world champion Alexander Alekhine. Although he was one of the strongest players in the world in the early 1930s, Kashdan could not support his family with his chess career, so he became an insurance agent and administrator to earn a living.

Kashdan was a member of the men's U.S. chess team in the 1928, 1930, 1931, 1933, and 1937 Chess Olympiads. He won three gold and one silver medal and 52 games overall, losing only five. He had many notable achievements in non-Olympic tournaments as well. In 1930 he won first prizes in the tournaments in Berlin, Stockholm, and Gyor. He placed second in New York in 1931, and tied for fourth the same year. In 1932 he tied for second in Pasadena, tied for first prize in Mexico City, and tied for second in Hastings. He tied for first place in the 1942 U.S. Championship but lost the playoff against Sam-

uel *Reshevsky. After the war, Kashdan maintained his ties to chess by organizing and directing tournaments. In 1933, he and Al Horowitz and Fred Reinfeld co-founded the monthly *Chess Review*, which he edited for a year. In 1969 the magazine merged with *Chess Life* to become *Chess Life and Review*. From 1955 to 1982 Kashdan served as editor of the chess column of the *Los Angeles Times*.

In 1950 he was awarded the IM (International Master) title; in 1954 the GM (Grand Master) title; and in 1960 the IA (International Arbiter) title. Kashdan edited two books: *First Piatigorsky Cup* (1965) and *Second Piatigorsky Cup* (1968).

[Ruth Beloff (2nd ed.)]

KASHER, or **KOSHER** (Heb. כָּשֵׁר), term originally used in the Bible in the sense of “fit” or “proper” (e.g., Esth. 8:5; Eccles. 10:10; 11:6), and later in rabbinic literature exclusively for objects that are ritually correct and faultless. Most often it denotes food that is permitted in contrast to that which is non-kasher, or **terefah*. It is also used to indicate that scrolls of the Torah, *tefillin*, and *mezuzot* are properly written, that *zizit* are correctly spun, and that a *mikveh* is properly constructed. Witnesses competent to testify in accordance with talmudic jurisprudence are also described as *kasher*. Recently, this word has been used popularly in Anglo-Saxon countries to indicate that which is proper and within the law.

KASHER, MENAHEM (1895–1983), rabbi and halakhist, distinguished for his research in talmudic and rabbinic literature. Kasher, born in Warsaw, studied under the greatest Polish rabbis of his time, and was primarily influenced in his method of study by Abraham Bornstein. He was ordained by Meir Dan *Plotzki in 1915 and went to Erez Israel in 1925 as an emissary of Abraham Mordecai Alter, the head of the ḥasidic Gur dynasty, on whose behalf he founded in Jerusalem the yeshivah Sefat Emet, which he directed and managed for two years. Despite his communal work and his religious activity, Kasher never held any official appointment, and his reputation derives mainly from his literary work. This consists for the most part of varied anthologies, encyclopedic in character, which he not only initiated and wrote, but also took the responsibility for financing. His *Torah Shelemah* is an encyclopedia of the Talmud and Midrash, in which all relevant material in the oral law, both published and in manuscript, is collected according to the Scriptural verse to which it applies together with notes, expositions, and supplements. Thirty-three volumes, covering Genesis–Leviticus 24:23 had been published by 1981 (the first volume appeared in 1927). For this work, Kasher was awarded the Israel Prize in 1962. *Gemara Shelemah* (1960) deals with the first nine pages of the tractate *Pesahim*, with variant readings from all the known manuscripts and with all the relevant comments of the *rishonim*, together with notes and expositions by Barukh Naeh edited by Kasher – the beginning of a long-term project toward a scientific edition of the entire Talmud. *Haggadah Shelemah* (1956³) comprises the Passover *Haggadah* with variant readings, notes, and expositions, to which are added a

selection of relevant homiletic comments. *Sarei ha-Elef* (1959) consists of a list of Hebrew books whose authors lived between 500 and 1500, edited and arranged in conjunction with J. Mandelbaum. These compilations are basic reference works for all research in talmudic and rabbinic literature. In 1950 Kasher founded, in Jerusalem and in New York, the Torah Shelemah Institute for research and publication.

In 1956 Kasher discovered an extensive collection of writings by Joseph *Rozin, author of *Zafanat Pa'ne'ah*. In order to edit and publish this material he founded, together with the *Yeshiva University in New York, the Zafanat Pa'ne'ah Institute, which by 1970 had issued 12 volumes. Aside from these projects, Kasher published many works on varied subjects: *Mefa'ne'ah Zefunot* (1959), elucidating the halakhic terms and concepts used by Rozin in the above-mentioned book; *Sefer ha-Rambam ve-ha-Mekhilta de-Rabbi Shimon b. Yoḥai* (1943), clarifications of the sources of Maimonides; *Shabbat Bereshit ve-Shabbat Sinai*, in *Talpiyoth*, 1 (1944), and *Ha-Shabbat u-Mizraḥ ha-Olam*, in *Ha-Pardes*, 28 (1954), elucidations of the problem of the International Date Line prompted by the dilemma of the Jewish war refugees in Japan; a small collection of responsa by Rashi (1925); *Targum Yerushalmi ha-Shalem* from a Rome manuscript, and others. Kasher also devoted himself to the clarification of contemporary halakhic problems, and to comparisons of the views of the sages with modern concepts. These appear mostly in the annual publication *No'am* (1958–) which Kasher founded and which he edited. The halakhic aspects of such problems as artificial insemination and autopsies are dealt with in this publication. Kasher also wrote an extensive article to prove the antiquity of the Zohar, and published many articles on the importance of manuscripts for a complete and correct understanding of the Talmud. He instituted an *eruv for Manhattan in New York which gave rise to considerable controversy. In 1968 there appeared his *Ha-Tekufah ha-Gedolah* in which he maintained that the establishment of the State of Israel is the beginning of the Redemption foretold by the prophets, and its development its progressive realization. A hitherto unknown work on a similar theme by R. Hillel Shklover, a disciple of Elijah Gaon of Vilna, is appended to the work with a commentary by Kasher.

[Israel Moses Ta-Shma]

His son Shimon (1914–1968) was a Hebrew poet and writer. He was born in Warsaw and went to Palestine with his family in 1925. His first poems were published in the literary journal *Gilyonot*. His poetry (which included a number of deeply religious poems), stories, and articles appeared in various publications. His volumes of poetry included: *Sullamot la-Rom* (“Ladders Heavenward,” 1938), *La-Boker Rinnah* (“Song to the Morning,” 1941), *Karmelit* (1949), and *Ha-Kol Zafui* (“All Is Foreseen,” 1964).

[Getzel Kressel]

KASHMIR, region in S. central Asia. The association of Kashmir with Jews was first alluded to by the 11th-century Muslim

scholar Al-Birūnī in his “India-Book”: “In former times the inhabitants of Kashmir used to allow one or two foreigners to enter their country, particularly Jews, but at present they do not allow any Hindus whom they do not know personally to enter, much less other people.” In the time of the Moghul emperor Akbar (1556–1605), the question of the association of Jews with Kashmir and the Jewish descent of the Kashmiris was raised by the Jesuit Monserrate, who regarded the old inhabitants of this region as Jews by race and custom in view of their appearance, physique, style of dress, and manner of conducting trade. As early as the 17th century François Bernier, the scholar and traveler, who was in India from 1656 to 1668, was asked by Melchisedec Thevenot (1620–1692), a traveler and publisher, to discover if Jews had long been resident in Kashmir. Bernier reported that Jews had once lived here, but that they had converted to Islam. Nonetheless, as he put it:

There are many signs of Judaism to be found in this country. On entering the kingdom after crossing the Pire-penjale mountains the inhabitants in the frontier villages struck me as resembling Jews. Their countenance and manner and that indescribable peculiarity which enables a traveler to distinguish the inhabitants of different nations all seemed to belong to that ancient people. You are not to ascribe what I say to mere fancy, the Jewish appearance of these villagers having been remarked by our Jesuit Fathers, and by several other Europeans, long before I visited Kashmir. A second sign is the prevalence of the name of Mousa, which means Moses, among the inhabitants of this city, notwithstanding they are Mahometans. A third is the tradition that Solomon visited this country and that it was he who opened a passage for the waters by cutting the mountain of Baramoulé. A fourth, the belief that Moses died in the city of Kashmir, and that his tomb is within a league of it. And a fifth may be found in the generally received opinion that the small and extremely ancient edifice seen on one of the high hills was built by Solomon; and it is therefore called the *throne of Solomon* to this day.

The claim to be of Israelite extraction is still widespread among Kashmiris, who point to the similarity of place names which appear to reflect biblical names like Mamre, Pisgah, and Mt. Nevo. The Internet is not deficient in web pages which purport to show historical connections between India and the Jews, India and Jesus (who is said to have gone there), the identical nature of Hebrew and Sanskrit, and so forth.

[Walter Joseph Fischel / Tudor Parfitt (2nd ed.)]

KASKEL (originally **Kaskele**), 17th-century family of German Court Jews and bankers, who went from Poland and settled in Dresden, Saxony, during one of the Polish-Saxonian unions. They became court bankers to the royal house of Saxony and Poland, bankers to the government, and founders of the Dresdner Bank, one of Germany's leading commercial banks. The first prominent member of the family was JACOB KASKELE (d. 1778), who in 1772 was appointed court agent. Several of

his eight children, too, served as court agents in Warsaw and Dresden. One member of the family became a commissioned officer in the Austrian army in 1813. MICHAEL KASKEL (b. 1775) continued the family's banking business; he also acted as a purveyor to the Saxonian army and the mint, in addition to wider-ranging trading activities.

Michael's son KARL (1798–1874) acquired citizenship in Dresden in 1830, rose to be privy councilor, consul general for Sweden and Norway, and in 1867 obtained Austrian nobility. He converted to Christianity. At the initiative of Eugen Gutmann, Karl Kaskel in cooperation with the Rothschilds of Frankfurt, Oppenheims of Cologne, and Bleichroeder of Berlin, incorporated his banking firm and formed the Dresdner Bank.

[Joachim O. Ronall]

KASOVSKY, CHAYIM YEHOSHUA (1873–1960), Israeli rabbinical scholar. Kasovsky received his early education at the Ez Ḥayyim Talmud Torah in Jerusalem where his father Abraham Abele Kasovsky was an instructor. At the age of 20, he was contributing articles to various periodicals on such subjects as Hebrew language and grammar, geometry, and talmudic themes.

Kasovsky's reputation rests upon the concordances which he compiled of the Mishnah, the Tosefta, Targum Onkelos, and the Babylonian Talmud (the last of which he was unable to complete). He undertook this task alone and under difficult conditions. He finally evolved a scheme which served as the “key” to the compilation of the concordances. Unable to afford a publisher, Kasovsky acquired a primitive press and set and printed the first volume of the concordance of the Mishnah himself. Its appearance in 1914 caused a sensation in the scholarly world. A committee was established to provide the necessary means to enable Kasovsky to continue his work: the four-volume *Ozar Leshon ha-Mishnah* (1957–60); the six-volume Tosefta concordance (1933–61); and the four-volume Onkelos (1933–40). Kasovsky's works subsequently became indispensable to all scholars in those fields. His Talmud concordance (1954–) consisted of 24 volumes by 1970, up to the letter *Mem*. After his death, his youngest son Benjamin continued the work (from vol. 10, 1962). His oldest son, Moshe, prepared a concordance of the Jerusalem Talmud under the auspices of the Israel Academy for Sciences and Humanities and the Jewish Theological Seminary of America. Kasovsky was active in the religious Zionist movement.

[Mordechai Hacohen]

The continuation of the *Talmudic Concordance* of Kasovsky by his son Benjamin, mentioned in the original article, reached volume 39 up to the letter *Ṿ*, before Benjamin's death in 1978. In 1981 the concordance was completed with the publication of volume 40. The remainder of the

concordance of the names in the Talmud of which 3 volumes have appeared, from Abba to Othniel (א to ו), has yet to be published.

Benjamin also published a concordance to the *Mekhilta* (4 vols., 5725–6), the *Sifra* (4 vols., 5726–9), and the *Sifrei* (5 vols., 5731–5).

KASPAROV, GARY (1963–), Russian chess master. Kasparov, whose father was Jewish and whose mother was an Armenian, was born in Baku. He was taught the basic rules of chess by his father, Kim Vainstein, an engineer who was killed in an accident (1970) when Kasparov was seven years of age. As his career in chess developed, he adopted his mother's maiden name – apparently at the behest of the Soviet authorities. After his exceptionally great talent for chess was discovered he was taught intensively by the former world champion Mikhail *Botvinnik, who clearly understood the great potential which Kasparov had in the field of chess. His career was meteoric: in 1980 he earned the title of grand master and won the World Junior Chess Championship; in 1981 he became chess champion of the Soviet Union. His path to the world championship was paved by his victory in the Moscow inter-district competition. He then won matches against the grand masters Alexander Blaiavsky and Viktor Korchnoi as well as defeating former world champion Vasili Smislov. The height of his achievement came after three dramatic duels against his immediate predecessor as holder of the world title, the Russian Anatoly Karpov. The first duel was called to a halt at the end of 1984 after 48 games because of the physical and mental fatigue of Karpov. Kasparov did not refrain from accusing FIDE (the World Chess Federation) and the Russian chess establishment of trying to aid his opponent. In the second battle, which was limited to 24 games and which ended in November 1985, Kasparov was the victor, the result being 13:11. He thus became the youngest person ever to hold the title of world champion. In the rematch which took place in London and Leningrad in 1986 Kasparov retained the title of world champion by a score of 12.5:11.5. As world champion he also played against – and defeated – some of the greatest players in the West, including among them Olaf Anderson of Sweden, Jan Timmam of the Netherlands, and Anthony Miles of Great Britain.

Kasparov's style of playing is deep, original, and devious. He tends to make bold moves and take chances to assume the offensive role. Kasparov puts great weight on the psychological aspects of the game and particularly on the ability to rebound after losses. He applied this in the 1986 match with Karpov after suffering three losses in a row. In 1990 he defeated Karpov again in the final meeting of a 24-game contest. He won 4, lost 3, and drew 17. In 1993 he retained his title, defeating Nigel Short of Britain.

Kasparov battled computer chess programs. In February 1996 IBM's Deep Blue defeated Kasparov in one game – the

first time a computer had bested a world champion – using normal time controls, but Kasparov won the match by gaining 3 wins and playing to 2 draws. In November 2003 he played against the x3D Fritz computer program using a virtual board, 3D glasses, and a speech recognition system in a four-game match. The first game ended in a draw, xD3 won the second, Kasparov the third, and the final game ended in a draw.

Kasparov wrote a number of books which deal with the theory of openings of games and an analysis of a selection of his games.

[Yisrael Shrenzel]

KASPI, ANDRÉ (1937–), French historian teaching the history of North America at the Sorbonne. Kaspi was born in Béziers (Hérault). Among his books are *L'indépendance américaine* (1976), *Le Watergate* (1983), *La guerre de Sécession* (1992), *Kennedy, les mille jours d'un président* (1993), *Les Américains: Les États-Unis de 1607 à nos jours* (2 vols., 1998), and *La peine de mort aux États-Unis* (2003). His two doctoral dissertations were published as *La mission de Jean Monnet à Alger, mars-octobre 1943* (1969) and *Le concours américain à la France, 1917–1918* (1976). In addition to his work on American civilization, Kaspi is a pioneer of Jewish historiography in France. In the 1970s he founded the first seminar on the Holocaust and the history of the Vichy government and published several books on these topics: *La Deuxième Guerre mondiale, chronologie commentée* (1990); *Les Juifs pendant l'Occupation* (1991); and *La libération de la France* (1994); as well as a biography, *Jules Isaac ou la passion de la vérité* (2002).

[Anne Grynberg (2nd ed.)]

KASPI, JOSEPH BEN ABBA MARI IBN (En Bonafoux del'Argentièrè; 1279–1340?), philosopher, biblical commentator, and grammarian. Motivated by an intense desire for wisdom and knowledge, and being a wealthy man, Kaspi spent most of his days traveling from one country to another, living successively in Arles, Tarascon, Aragon, Catalonia, and on the island of Majorca. Because of his admiration for *Maimonides, he left for Egypt in 1314 in order to hear explanations on the latter's *Guide of the Perplexed* from the author's grandchildren. He was, however, disappointed in his expectations and came to realize that the grandchildren of Maimonides were indeed "all righteous, but they did not occupy themselves with the study of the sciences." When he heard that the *Guide* was being studied in the Muslim philosophical schools of Fez, he left for that town (in 1332) in order to observe their method of study. At the time of the *Pastoureaux (Shepherds' Persecutions, 1320), he was in mortal danger and his life was saved only by great fortune.

Kaspi was a prolific writer. He began to write his works when 17 years old and composed over 30 books during his lifetime. These books dealt with a variety of subjects: logic, linguistics, ethics, theology, biblical exegesis, and super-commentaries to Abraham Ibn Ezra and Maimonides. Despite their variety, all have essentially the same purpose: to demon-

strate that a correct understanding of Scripture accords with the conclusions of philosophy. In his philosophic system he followed *Aristotle and *Averroes. On more than one occasion, however, he expressed contradictory opinions. Kaspi rejected the viewpoint that Maimonides had supposedly refuted the theory of the eternity of the world. He raised the importance of reason to the level of God, "because reason is God and God is reason." In spite of these ideas which border on heresy, Kaspi wrote that "after our God, blessed be He, we have no need for Plato, Aristotle, and their ilk, even if they dispute this fact."

At the same time, since the true meaning of Scripture, the opinions of the Greek philosophers and the views of Maimonides are identical regarding the creation of the world, Kaspi did not affirm the traditional belief in creation. On the other hand, since he was not only a philosopher, and his Bible commentary dealt with the plain or literal meaning (*peshat*) of Scripture, he was influenced to a great extent by the exegetical approach of Abraham ibn Ezra. Accordingly, he declared that "all the words of the Torah and the Bible are in my opinion to be accepted in their plain meaning, like the books on logic and nature of Aristotle" and, in his view, there was not "in the wonders of the prophets any action which departed from nature." He defines his aim as "not to be a fool who believes in everything, but only in that which can be verified by proof... and not to be of the second unthinking category which disbelieves from the start of its inquiry," since "certain things must be accepted by tradition, because they cannot be proven."

This complicated method adopted by Kaspi aroused violent criticism against him on the part of Jewish scholars. In referring to his first work, *Sefer ha-Sod* ("Book of the Secret"), his critics not only attacked his unorthodox opinions, but also accused him of inconsistency: "At times he is meticulous with groats and, on other occasions, he disregards golden coins." They also protested against his abuse of the masses, whom he had referred to as "animals," and accused him of having insulted the Jewish people. Kaspi was very offended by his critics and wrote of them with bitterness: "I know that if I had murdered and taken possession of ten guilders and presented them with these, they would have said that there is no man on earth like me for honesty and righteousness." He severely criticized "the great of our people." With sharp irony, he described them as "idling away all their days with unfounded arguments and lengthy discussions on the laws of uncleanness and purity which no longer apply." With the same scorn he wrote of the wealthy, whose "body is fat and whose neck is thick" and the whole of their wisdom lies in that they know how to "lend and extract [their] debts."

Kaspi's anger did not silence his opponents, and 150 years after his death Jewish scholars still differed over the evaluation of his personality and his works. Simeon b. Zemah *Durán and Isaac *Abrabanel considered him a dangerous heretic. On the other hand, Johanan Alemanno and Moses *Rieti praised his works and considered him among the most illustrious Jewish scholars.

Kaspi attempted to educate his children toward perfect virtues. He accustomed them to "meditate after every meal, morning and evening, on the ethics of the philosophers." Before one of his journeys, he wrote the work *Ha-Musar* ("Ethics") for his son Solomon, "lest the wind of God carries me off to a distant land or death overtake me... and perhaps these ethics will serve for [his son's] understanding and the instruction of many of the inhabitants of the country." In this work, which includes the fundamentals of his faith, he teaches his son that "truth should neither be cowardly nor bashful." This work also serves as a testament, since in it Kaspi hands down to his son a detailed program and guide of his system of learning: "and if he will act in this way, he will be a man who will combine wisdom with understanding."

Kaspi was the first to declare of the return of Israel to its country and the establishment of the Jewish state: "it becomes every intelligent person to believe in this by logic and reason, so that the promises of the Scriptures will not be required at all." After a comprehensive political survey of the changes and events of his time, he reached the conclusion that the return of Israel to its country could, without any difficulty, find its place within the framework of normal political events.

Kaspi's Works

Many of the titles of Kaspi's works include the word *keseif* ("silver"), a play on his name.

1. *Adnei Keseif* or *Sefer ha-Mashal*, commentary on the Prophetic books, ed. I.H. Last, pt. I, London 1911; pt. II, London 1912. The text is also being published anew in *Mikra'ot Gedolot 'Haketer'*, ed. Menachem Hacohen, Jerusalem 1992 ff.

2. *Amudei Keseif*, exoteric commentary on *The Guide of the Perplexed*, in: *Amudei Keseif u-Maskiyyot Keseif*, ed. S.A. Werbloner, Frankfurt a/M 1848.

3. Commentaries on the book of Job (two versions), in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. I, Presburg 1903.

4. Commentaries on the book of Proverbs (two versions), in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. I, Presburg 1903.

5. Commentary on Ibn Janah's *Sefer ha-Rikmah*, lost.

6. Commentary on Maimonides' *Milot ha-Higayyon*, Ms. Vatican 429.

7. Commentary on the Song of Songs, in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. I, Presburg 1903.

8. *Gelilei Keseif*, commentary on the book of Esther, in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. II, Presburg 1903.

9. *Gevi'a ha-Keseif*, treatise on esoteric topics in the book of Genesis, with English translation, ed. B.E. Herring, New York 1982.

10. *Hagorat Keseif*, commentary on the books of Ezra, Nehemiah, and Chronicles, in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. II, Presburg 1903.

11. *Hazozerot Keseif*, commentary on the book of Ecclesiastes, in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. I, Presburg 1903.

12. *Kappot Keseif*, commentaries on the books of Ruth and Lamentations, in: *Asarah Kelei Keseif*, ed. I.H. Last, vol. II, Presburg 1903.

13. *Ke'arot Kesef*, commentary on the book of Daniel, lost.
14. *Kesef Sigim*, 110 questions on the Bible, lost.
15. *Kevuzat Kesef* (two versions): Version A, in: *Asarah Kelei Kesef*, ed. I.H. Last, vol. 1, Presburg 1903; Version B, in E. Renan, *Les écrivains juifs français du XIV^e siècle*, Paris 1983, pp. 131–201.
16. *Kippurei Kesef*, critique of earlier Bible commentaries, lost.
17. *Maskiyot Kesef*, esoteric commentary on *The Guide of the Perplexed*, in: *Amudei Kesef u-Maskiyot Kesef*, ed. S.A. Werbloner, Frankfurt a/M 1848.
18. *Menorat Kesef*, in: *Asarah Kelei Kesef*, ed. I.H. Last, vol. 11, Presburg 1903.
19. *Mezamerot Kesef*, commentary on the book of Psalms, lost.
20. *Mazref la-Kesef*, systematic commentary on the Torah, ed. I.H. Last, Krakow 1906.
21. *Mitot Kesef*, treatise on the intentions of the Bible, lost.
22. *Mizrak la-Kesef*, treatise on Creation, lost.
23. *Parashat Kesef*, supercommentary on Ibn Ezra, unpublished, Ms. Vatican 151.
24. *Retukot Kesef*, principles of linguistics, Ms. Rome-Angelica 60.
25. *Sharshot Kesef*, dictionary of Hebrew roots, Ms. Rome-Angelica. Part published by I.H. Last, *JQR* 1907, pp. 651–687.
26. *Shulhan Kesef*, five exegetical and theological essays, ed. H. Kasher, Jerusalem 1996.
27. *Tam ha-Kesef*, eight theological essays, ed. I.H. Last, London 1913.
28. *Terumat Kesef*, brief treatise on ethics and politics, Ms. Wien 161. Part published by E.Z. Berman, *The Hebrew Versions of the Fourth Book of Averroes' Middle Commentary on the Nicomedean Ethics*, Jerusalem 1981 (Hebrew).
29. *Tirat Kesef* or *Sefer ha-Sod*, brief commentary on the Torah, ed. I.H. Last, Presburg 1905.
30. *Yoreh De'ah*, ethical treatise, with English translation, in: I. Abrahams (ed.), *Hebrew Ethical wills*, Philadelphia 1926, vol. 1, pp. 127–161.
31. *Zeror ha-Kesef*, Brief treatise on logic, unpublished, Ms. Vatican 183. Part published by S. Rosenberg in *Iyyun*, 32 (1984), pp. 275–295.

[Ephraim Kupfer / Hannah Kasher (2nd ed.)]

KASPI, NETHANEL BEN NEHEMIAH (15th century), author of religious-philosophical works. Kaspi was a disciple of Frat Maimon (Solomon b. Menahem). He composed the following works: (1) commentary on the *Kuzari*, completed in 1424, for which he made use of the Hebrew translations by Judah ibn Tibbon and Judah Cardinal; (2) commentary on the anonymous philosophical work *Ru’ah Hen*; (3) commentary on Maimonides’ *Shemonah Perakim*. All three commentaries appear to be primarily a record of Frat Maimon’s oral explanations. All three are contained in a Parma manuscript (no. 395), copied by Abraham Farissol in Ferrara in 1520. (4) *Lekutot* (“selections”), consisting of comments on passages in the Pentateuch, and polemical remarks against Christianity including, in the main, the arguments used by French rabbis in their debates with Christians, such as may be found in the writings of Joseph b. Nathan ha-Mekanne. Kaspi also copied works, among them *Levi b. Gershom’s commentary on the Pentateuch, in Avignon in 1429. He also copied *Alfasi’s *Hala-khot* (in 1454) and other rabbinical works.

BIBLIOGRAPHY: Steinschneider, *Uebersetzungen*, 404, 427; Renan, *Ecrivains*, 235, 409ff., 266; Gross, *Gal Jud*, 10, 69–70, 89, 390.

[Bernard Suler]

KASRILS, RONNIE (1938–), South African resistance leader and politician. Kasrils was a member of the banned South African Communist Party (SACP) and was active in the

armed wing of the African National Congress, Umkhonto we Sizwe (MK), from its creation. He was in MK's Natal regional command and personally carried out acts of sabotage and organized a major operation to provide it with dynamite. In 1962, he received a five-year banning order and narrowly escaped arrest under new security legislation. He remained on the run from the security police until October 1963, when he went abroad for military training. After several years in the ANC office in Dar es Salaam, Kasrils moved to London, where he worked with other exiled South African activists like Joe Slovo in establishing underground MK units in South Africa. In 1977, he held various senior positions within the resistance movements in Southern Africa, including Angola, Mozambique, and Zambia. He was chief of military intelligence in 1983–88 and was a coopted member of the ANC National Executive Committee from 1987. He was also a member of the SACP Central Committee and Politburo. With the onset of the reform process, he returned to South Africa in 1990. Following the transition to nonracial democracy in 1994, he served terms as deputy minister of defense (1994–99) and minister of water affairs and forestry (1999–2004). During the latter period, he took the lead in promoting local Jewish opposition to the policies of the State of Israel. He was appointed minister of intelligence in 2004. He wrote an autobiography called *Armed and Dangerous; My Undercover Struggle Against Apartheid* (1993).

[David Saks (2nd ed.)]

KASSEL, city in Germany, former capital of the state of *Hesse-Kassel. A record of 1293 maintains that a Jewess had been in possession of some property in Kassel at an earlier date. A Jews' street was in existence in 1318. During the *Black Death persecutions (1348–49) the Jews suffered, but some managed to escape and were living in Frankfurt (1360) and Erfurt. By 1398 there was an organized community, with a synagogue and cemetery in Kassel. The Jews' street is mentioned again in 1455 and 1486 and the "Jews' well" may date from this period. In 1513 Master Falke contributed to the construction of a local bridge; in 1520 he paid the rent for the cemetery, as did his widow in 1526. Landgrave Philip of Hesse expelled the Jews from Hesse-Kassel in 1524. However, in 1530 he admitted Michel Jud of Derenburg as court agent for ten years, and in 1532 issued a Jewry toleration law, amplified in 1539. Though restrictive and ordering Jews to attend Christian sermons, it was less severe than the extreme anti-Jewish proposals of the Reformation theologian Martin *Butzer. Only a few Jews were allowed in Kassel in the period, namely a physician and several silk knitters; in 1602 the *Court Jew Hayum was admitted as mint master.

During the Thirty Years' War the Jews were compelled to leave Kassel. However the Court Jew Benedict Goldschmidt received a residence privilege in 1635, extended in 1647 to include his two sons. From 1650 to 1715 private services were held in the Goldschmidts' house, led by the rabbi of the nearby village of Brettenhausen (later part of Kassel), where a cem-

etry was acquired in 1621. In 1714 a synagogue building was erected and enlarged in 1755; the community had grown by then to approximately 200 persons. A *Memorbuch was begun in 1720, and a *hevra kaddisha* founded in 1773. In 1772 the rabbinate was transferred from Witzenhausen, seat of the yeshivah, to Kassel.

In 1577 Landgrave William the Wise had initiated Hesse-Kassel Jewry assemblies, first held in Kassel. The *kehillah* Hebrew constitution papers, begun in 1633, and a *pinkas* (records and decisions) were ordered to be translated into German in 1734–40. Hesse-Kassel Jewry was under the civic jurisdiction of the *Fulda rabbinate until 1625, and that of *Friedberg until 1656.

From 1807 to 1813 Kassel was the capital of the short-lived kingdom of Westphalia. The emancipation law of 1808 granted civil rights to Jews and made possible the influx of Jews from other areas. A *consistory headed by Israel *Jacobson introduced synagogue and educational reforms. The government of the reestablished principality of Hesse-Kassel issued a more restrictive Jewry ordinance in 1823, which remained in force until 1866, when Kassel came under Prussian rule and Prussian emancipation laws prevailed. In 1836–39 a new synagogue was built, accommodating around 1,000 persons. An Orthodox faction separated after 1872 and built its own synagogue in 1898. The main synagogue was rebuilt in 1890–1907. The Hesse-Kassel yeshivah was transferred to Kassel as a teachers' seminary and elementary school. The community had a library of Judaica and Hebraica, and in the *Landesmuseum* a display of ceremonial objects as well as arts and crafts, which was restored after 1945. It also possessed an orphanage and an old age home. In 1905, 2,445 Jews lived in Kassel, 2,750 (1.62% of the total) in 1925, and 2,301 (1.31%) in June 1933.

On November 7, 1938, two days before the start of *Kristallnacht*, the main synagogue was set on fire, but the local firemen extinguished the blaze, something that they were explicitly instructed not to do on *Kristallnacht*. Two days later, the Liberal synagogue was burned down and the Orthodox synagogue destroyed, and a completed manuscript of the second volume of the history of the Jews in Kassel, prepared under community auspices, was destroyed, as later were all records on emigration and deportation. Three hundred Jews including the rabbi were sent to Buchenwald and 560 Jews emigrated over the next year. As to the remaining Jews, 470 were deported to Riga in 1941, 99 to Majdanek in 1942, and 323 to Theresienstadt that year. In 1945–46, 200 Jews (mainly Displaced Persons) lived in Kassel, 102 in 1955, 73 in 1959, and 106 in 1970. With municipal aid a synagogue with a community center was built in 1965. The Jewish community numbered about 1,220 in 2004 after the immigration of Jews from the former Soviet Union in the 1990s. Since the synagogue became too small it was pulled down and the architect Alfred Jacoby designed a new one with a community center, which was consecrated in 2000. It was financed by the Jewish community of Kassel, the Association of Jewish Communities in Hesse, the Federal state (Land) of Hesse, and the city of Kassel.

[Toni Oelsner]

KASSEL, DAVID (pseudonym of **Dovid Kisel**; 1881–1935), Yiddish writer. Born in Minsk, he was influenced by the *Bund, in whose publications his first poems appeared. After marrying the poet Sarah Reisen, sister of Abraham *Reisen, he settled in Warsaw and attracted attention with his short stories and novels, *In Dorf* (“In the Village,” 1912); *Unter a Vaysn Forhang* (“Behind a White Curtain,” 1922), and *On an Oysveg* (“No Way Out,” 1922). He also wrote a series of popular textbooks, prose anthologies, and translations of Tolstoy, Lermontov, and Jules Verne. His autobiographical novella *Moyshel's Kinderyorn* (“Moyshel's Childhood,” 1921) was a pioneering work in Yiddish children's literature.

KASSIL, LEV ABRAMOVICH (1905–1970), Soviet Russian author. Probably the most important Soviet writer for juveniles since the beginning of the 1930s, Kassil is known to tens of millions of young Russians for his novels about adolescents. *Konduit* (“Conduit,” 1930) and *Shvambraniya* (1933; *The Land of Shvambraniya*, 1935) describe the author's own childhood in a pre-revolutionary town on the Volga. *Vratar respubliki* (“The Goal-Keeper of the Republic”; 1939), *Cheremysh, brat geroya* (1938; *Brother of a Hero*, 1968), and *Khod beyol korolevy* (“The Gambit of the White Queen”; 1958) are about Soviet sportsmen. *Dorogiye moi malchiski* (“My Dear Kids”; 1944) shows children engaged in doing physical work during World War II, and *Ulitsa mladshego syna* (“The Street of the Younger Son”; 1949) describes the adventures of those youngsters who participated in the anti-Nazi underground. Kassil's works contain few Jewish themes or protagonists. One of the exceptions is his autobiographical *Shvambraniya*, which includes a scene in which Kassil, angry at the nasty antisemitic passages in Gogol's *Taras Bulba*, refuses to read the classic aloud in school. The scene was omitted from postwar editions of the book.

[Maurice Friedberg]

KASTEIN, JOSEF (pen name of **Julius Katzenstein**, 1890–1946), German writer and biographer. Kastein was born in Bremen to an assimilated family. He was an ardent Zionist from a young age and took part in the Tenth Zionist Congress in Basel. Kastein abandoned his legal career during the 1920s and devoted himself to Jewish historical studies. In 1927 he left Germany and settled in Switzerland, where he worked as a writer. He immigrated to Palestine in 1935 and lived in Tel Aviv for the rest of his life. Beginning with his well-known *Eine Geschichte der Juden* (1931; *History and Destiny of the Jews*, 1933), Kastein published a steady stream of original presentations of both the broad sweep of Jewish history and of particular historical figures and themes. His monographs include *Sabbatai Zewi, der Messias von Ismir* (1930; *The Messiah of Ismir*, 1931), *Uriel da Costa* (1932), *Suesskind von Trimberg* (1934), *Theodor Herzl* (1935), *Herodes* (1936), and *Jeremias* (1938). Among other works that appeared before the outbreak of World War II were *Jews in Germany* (1934; *Juden in Deutschland*, 1935), first published in English; *Das Geschichterlebnis des Juden* (1936), an indictment of Jewish assimilationism; and *Jerusalem; die Geschichte eines Landes* (1937). Though without pretensions to original scholarship, Kastein's books were written in a passionate style, expressing the author's faith in the mission and destiny of the Jewish people. Two works of a different type were the early verse collection *Logos und Pan* (1918) and *Eine palastinensische Novelle* (1942). Toward the end of his life Kastein also wrote a collection of Hebrew essays, which appeared posthumously as *Middot va-Arakhim* (1947).

[Rudolf Kayser / Noam Zadoff (2nd ed.)]

KASTORIA (Castoria), town and area of Macedonia, Greece, W. of Salonika. There was a Jewish settlement in the Kastoria fortress town during the reign of Justinian (527–565). In the 11th century, the community was headed by Tobias b. Eliezer, the author of *Lekah Tov*. One of his disciples was Meir of Kastoria, author of *Me'or Einayim*, a midrashic exegesis on the Torah. In the 11th century, many Jewish refugees settled in the city, in particular Jews from Hungary who escaped the pillage of the Crusaders. Noteworthy was the 14th century *Hakham* Leon Judah ben Moses Moskoni, who wrote on the Torah commentary of Rabbi Avraham Ibn Ezra, and the *paytan* David ben Eliezer, who composed the *Maḥzor Kastoria*. When the Ottomans conquered the city in 1385, the Jewish community was known as a Greek-speaking Romaniot culture. After the conquest of Constantinople in 1453, most of the Jews of Kastoria moved to the capital and formed a congregation in the Balat Quarter. In the 16th century Jewish refugees from Spain settled here, but most of the town's Jews came from Apulia, southern Italy. A Sicilian congregation was also formed in the 16th century. Despite the numerous Jewish immigrants from Apulia and Sicily, the Italian Jews after a gen-

eration assimilated into the Sephardi culture and lost their special Italian customs. From the 16th century onward, the Jewish merchants were active in the fur trade, and eventually gained a worldwide reputation in this field. There were also Jewish peddlers, artisans, and tax collectors. In the mid-17th century, there was an active Shabbatean following, including Rabbi Shemayah ben Moses Mayo, who in the end remained loyal to Jewish law. *Nathan of Gaza, the main disciple of the false messiah *Shabbetai Zevi spent time in Kastoria and wrote his work *Sefer ha-Beriah* there. Ali Pasha, governor of the region from 1788 to 1822, imposed oppressive taxes on the Jewish population of Kastoria. In 1828, the synagogue that was built in the mid-18th century was destroyed, and in 1830, in its place, the Aragon Synagogue was donated by the famous local philanthropist Isaac Behor Moses Rouso, nicknamed "Senor Shako." The Castorian Jewish community, whether in Castoria, Israel, or the U.S., has continually commemorated the annual date of the passing of this renowned 19th century benefactor. At the beginning of the 19th century the local rabbi was Moses Isaac ha-Levi, the author of *Ma'aseh Moshe*, a halakhic and aggadic index to the Talmud. A Jewish school was established in 1873. The community suffered blood libels in 1879 and 1908. The Spanish-Jewish dialect used by Kastoria Jews was of a special character. Beginning with the first decade of the 20th century, at the end of the Ottoman period, emigration from Kastoria to New York ensued. The city was annexed to Greece in 1912–13 after the Balkan Wars and Monastir Jews migrated to Castoria after World War I. In 1928 the Jewish community numbered 900. In the 1920s and 1930s, the youth of the community had an active Judeo-Spanish theater group. In the 1930s, graduates of the local AJJ (Agudat Jeunes Juives) youth movement founded by the Jewish school principal Jacob Jak Ashkenazi formed the nucleus of the *garin*, the agricultural settlement group, that in 1937 established Moshav Zur Moshe, one of the *Stockade and Watchtower settlements erected overnight in Erez Israel to evade the British prohibition against forming new Jewish settlements. In late March 1944, 763 Jews from Kastoria were arrested and deported to Auschwitz. In 1948 there were 35 Jews living in the town, and by 1965 their number had dwindled to 22.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

KASZTNER, REZSŐ RUDOLF (Israel; 1906–1957), journalist, lawyer, and a leader of the Zionist movement in Romania and Hungary. Born in Cluj, Transylvania (then part of Romania), Kasztner studied law. From 1925 to 1940 he worked on the Hungarian-language Zionist daily *Uj Kelet* in Cluj, and served as its political correspondent in *Bucharest from 1929 to 1931. During this period he was also the secretary of the parliamentary faction of the National Jewish Party. A leader of Aviva-Barissia, a Zionist youth movement (which eventually joined up with Ha-Ihud ha-Olami), he edited its periodi-

cal *No'ar* (in Hungarian) from 1926 to 1928. After Transylvania was annexed by Hungary (1940), *Uj Kelet* was closed down by the authorities; Kasztner then moved to *Budapest (1942), and joined the local *Keren Hayesod office. He was also active in the national headquarters of Ha-Ihud ha-Olami, and from 1943 to 1945 was deputy chairman of the small Hungarian Zionist Organization. As soon as he arrived in Budapest, Kasztner joined the Zionists' organized rescue efforts on behalf of the Jewish refugees from *Poland and Slovakia (see *Czechoslovakia). First in charge of semi-clandestine political work and later head of the rescue operations, Kasztner conducted negotiations with the Hungarian authorities and political leaders, including members of the opposition. He also maintained contact with the Hungarian military intelligence and the German intelligence (called *Abwehr*) which had come to Hungary even before its occupation by the Germans. After the German occupation of Hungary (March 19, 1944), rescue operations were stepped up and the Zionist contacts also came to include the officers of RSHA (Reich Security Main Office) who, headed by Adolf *Eichmann, arrived in Hungary to apply the "Final Solution" (see *Holocaust, General Survey). Kasztner conducted the rescue work jointly with Joel *Brand, who initially served as the main contact with the Germans. As a relatively unknown "foreigner" he could not have been effective with Hungarian politicians and officials so his area of contacts was with the Germans. The very idea of negotiating with the Germans was controversial both during the war and afterwards. The Nazis were imposing "The Final Solution;" they were clearly the enemy bent on destruction. Yet, they also were the only address if rescue was to be effectuated. The prime subject under discussion with the various German offices was the "*Blut fuer Ware*" ("Blood for Goods") plan by which Germany would receive quantities of supplies for the German war effort from neutral countries with the help of international Jewish bodies in exchange for the survival of the Jewish population and their transfer from German-occupied territories to safety abroad, especially to Palestine. By 1944, the German military situation was clearly deteriorating and their purposes were hardly humanitarian, but if they could improve their military situation, then the partial postponement of the murder of Jews in one sector of operation – postponement not cancellation – was a price they might be willing to pay. In connection with this plan Kasztner became the chief contact with Eichmann in place of Joel Brand, whom Eichmann had sent to Istanbul to open negotiations with Jewish leaders abroad. In the period of Aug. 21, 1944–April 1945 he visited Germany a number of times, and also went five times to Switzerland, in order to meet representatives of the *American Jewish Joint Distribution Committee and the *Jewish Agency on the rescue plan, and particularly to arrange its financing by Jewish organizations. These activities resulted in the Germans' transfer to Switzerland of two transports, first of 318 and later of 1,368 Jews from *Bergen-Belsen, most of them of Hungarian and Transylvanian origin (on Aug. 18 and Dec. 6, 1944). Among the people on the Kasztner train were the Satmar Rebbe, Joel

*Teitelbaum, and his entourage – saved by a Zionist – along with members of Kasztner’s own family and wealthy Jews whose support was essential to financing the operation. This was later to be a source of controversy. Kasztner’s negotiations with the Germans were also designed to ensure the survival of the Jews in the Budapest ghetto.

The postwar situation of Kasztner put him at the center of a storm. After the war Kasztner settled in Israel and was given a government post, becoming active in the *Mapai Party. He edited Mapai’s Hungarian-language weekly *A Jövő* and subsequently rejoined the editorial staff of *Uj Kelet*, reestablished in Tel Aviv in 1948. In 1953, an old Jew Malkiel Gruenwald of Jerusalem published a mimeographed leaflet in which he accused Kasztner of having collaborated with the German Nazis thereby hastening the destruction of Hungarian Jewry. He also alleged that at the Nuremberg trial of Kurt Becher, an ss officer, Kasztner had testified on his behalf and thereby helped in acquitting a war criminal. In view of the fact that the person being slandered was a government official, the Israel attorney general issued a writ of indictment against Gruenwald. The trial was a media sensation. A brilliant young right-wing attorney, Shmuel *Tamir, turned the defense of Gruenwald into an indictment of Kasztner and in turn of the Israeli government and the Zionist movement.

On June 22, 1955, the judge, Benjamin Halevy, who later was one of the judges at the Eichmann trial, gave his decision in the case, in which he accepted most of Gruenwald’s accusations and in a sharply worded judgment accused Kasztner of “selling his soul to Satan.” Halevy said that only the accusation that Kasztner has personally profited remained unproven and thus found for the plaintiff but awarded him a pittance. The Israel Cabinet instructed the attorney general to lodge an appeal, a decision which caused a cabinet crisis when the *General Zionists refused to support the government on a non-confidence motion. The Kasztner case thus became a major issue in the election campaign of 1955. The appeal, however, was submitted and on Jan. 17, 1958, the Supreme Court overturned the lower court’s decision, finding Gruenwald guilty on most points of the slander charge and thereby clearing Kasztner’s name. Kasztner himself was no longer alive; on March 3, 1957, a young man from Tel Aviv, Ze’ev Eckstein, influenced by the political atmosphere created by the lower court’s verdict,

shot Kasztner in the street. He succumbed nine days later. The story of Kasztner served as the model for a novel by Robert St. John, *The Man who Played God* (1962). It is a featured part of both right-wing and post-Zionist critiques of Zionist activities during the Holocaust.

The accusations against Kasztner include the argument that he should have informed Hungarian Jews of the “Final Solution.” He had been privy to the Vr’ba-Wetzler report and “knew” that Jews were being killed in massive numbers. Hungarian Jews should have been warned of their fate, that he had favored privileged rather than ordinary Jews in his rescue efforts, and that he saved his own family at the expense of others. His negotiations with the Germans were by their very nature unequal; they had power, he did not. They could open the gates; he could not, at least not without their approval. So his situation was compromised from the start. Kasztner defenders argue on his behalf that information about the “Final Solution” was available to Hungarian Jews from many sources, but such information was not accepted as credible and therefore could not serve as a basis for action. Furthermore, the support of wealthy Jews was essential to financing the rescue operation. Without their participation for humanitarian or self-interested reasons no possible rescue could have been achieved, and the rescue of his family was quite natural. Even in death, the controversy endures. It remains the subject of books, journalistic pieces, and even television shows and films. Kasztner remains a useful target for those who wish to attack the Zionist establishment of the Yishuv and the early years of statehood, and his circumstances reveal the utter powerlessness of Jews under German occupation once the “Final Solution” was German policy. Hero or villain or both, the debate over Kasztner will endure though quite often the discussion has less to do with him than with contemporary issues.

Kibbutz Nir David (also known as Tel Amal) was established in 1936 at the foot of Mount Gilboa. It is known as the first Jewish settlement to be built in those years in the form of a “Stockade and Watchtower” outpost. *Photo: The Central Zionist Archive, Jerusalem.*

THE TERM ZIONISM FIRST APPEARED AT THE END OF THE 19TH CENTURY TO DENOTE THE MOVEMENT TO REESTABLISH THE JEWISH HOMELAND IN EREZ ISRAEL. OVER THE PAST CENTURY, THE NATION OF ISRAEL HAS EXPERIENCED ONE OF THE MOST MIRACULOUS TRANSFORMATIONS IN HUMAN HISTORY. NOWHERE IS THIS MORE CLEARLY REVEALED THAN IN THE VAST DEVELOPMENTS IN ISRAEL'S ARCHITECTURE AND URBAN LANDSCAPE. OFFERED HERE ARE SOME STUNNING BEFORE-AND-AFTER VIEWS OF THE GROWTH OF ISRAEL AS WELL AS SOME OF THE FACES OF ISRAEL'S CITIZENS, WHO HAIL FROM MORE THAN ONE HUNDRED COUNTRIES.

ZIONISM
