Of course, industrial capital **also** hates labour, so there is a basis of an alliance between the two sides of capital, even if they do disagree over the specifics of the economic policies implemented. Given that a key aspect of the neo-liberal reforms was the transformation of the labour market from a post-war sellers' market to a nineteenth century buyers' market, with its effects on factory discipline, wage claims and proneness to strike, industrial capital could not but be happy with its effects. Doug Henwood correctly argues that *"Liberals and populists often search for potential allies among industrialists, reasoning that even if financial interests suffer in a boom, firms that trade in real, rather than fictitious, products would thrive when growth is strong. In general, industrialists are less sympathetic to these arguments. Employers in any industry like slack in the labour market; it makes for a pliant workforce, one unlikely to make demands or resist speedups."* In addition, *"many non-financial corporations have heavy financial interests."* [Op. Cit., p. 123, p. 135]

Thus the general stagnation afflicting much of the world, a stagnation which has developed into crisis as the needs of finance have undermined the real economy which, ultimately, it is dependent upon. The contradiction between short term profits and long term survival inherent in capitalism strikes again.

Crisis, as we have noted above, has appeared in areas previously considered as strong economies and it has been spreading. An important aspect of this crisis is the tendency for productive capacity to outstrip effective demand (i.e. the tendency to over-invest relative to the available demand), which arises in large part from the imbalance between capitalists' need for a high rate of profit and their simultaneous need to ensure that workers have enough wealth and income so that they can keep buying the products on which those profits depend (see [section C](#)). Inequality has been increasing in the USA, which means that the economy faces a realisation crisis (see [section C.7](#)), a crisis which has so far been avoided by deepening debt for working people (debt levels more than doubled between the 1950s to the 1990s, from 25% to over 60%).

Over-investment has been magnified in the East-Asian Tigers as they were forced to open their economies to global finance. These economies, due to their intervention in the market (and repressive regimes against labour) ensured they were a more profitable place to invest than elsewhere. Capital flooded into the area, ensuring a relative over-investment was inevitable. As we argued in [section C.7.2](#), crisis is possible simply due to the lack of information provided by the price mechanism -- economic agents can react in such a way that the collective result of individually rational decisions is irrational. Thus the desire to reap profits in the Tiger economies resulted in a squeeze in profits as the aggregate investment decisions resulted in over-investment, and so over-production and falling profits.

In effect, the South East Asian economies suffered from a problem termed the "fallacy of composition." When you are the first Asian export-driven economy, you are competing with high-cost Western producers and so your cheap workers, low taxes and lax environmental laws allow you to under-cut your competitors and make profits. However, as more tigers joined into the market, they end up competing against **each other** and so their profit margins would decrease towards their actual cost price rather than that of Western firms. With the decrease in profits, the capital that flowed into the region flowed back out, thus creating a crisis (and proving, incidentally, that free markets are destabilising and do not secure the best of all possible outcomes). Thus, the rentier regime, after weakening the Western economies, helped destabilise the Eastern ones too.

So, in the short-run, many large corporations and financial companies solved their profit problems by expanding production into "underdeveloped" countries so as to take advantage of the cheap labour there (and the state repression which ensured that cheapness) along with weaker environmental laws and lower taxes. Yet gradually they are running out of third-world populations to exploit. For the very process of "development" stimulated by the presence of Transnational Corporations in third-world nations increases competition and so, potentially, over-investment and, even more importantly, produces resistance in the form of unions, rebellions and so on, which tend to exert a downward pressure on the level of exploitation and profits (for example, in South Korea, labour' share in value-added increased from 23 to 30 per cent, in stark contrast to the USA, Germany and Japan, simply because Korean workers had rebelled and won new political freedoms).

This process reflects, in many ways, the rise of finance capital in the 1970s. In the 1950s and 1960s, existing industrialised nations experienced increased competition from the ex-Axis powers (namely Japan and Germany). As these nations re-industrialised, they placed increased pressure on the USA and other nations, reducing the global "degree of monopoly" and forcing them to compete with lower cost producers (which, needless to say, reduced the existing companies profits). In addition, full employment produced increasing resistance on the shop floor and in society as a whole (see [section C.7.1](#)), squeezing profits even more. Thus a combination of class struggle and global over-capacity resulted in the 1970s crisis. With the inability of the real economy, especially the manufacturing sector, to provide an adequate return, capital shifted into finance. In effect, it ran away from the success of working people asserting their rights at the point of production and elsewhere. This, combined with increased international competition from Japan and Germany, ensured the rise of finance capital, which in return ensured the current stagnationist tendencies in the economy (tendencies made worse by the rise of the Asian Tiger economies in the 1980s).

From the contradictions between finance capital and the real economy, between capitalists' need for profit and human needs, between over-capacity and demand, and others, there has emerged what appears to be a long-term trend toward **permanent** stagnation of the capitalist economy. This trend has been apparent for several decades, as evidenced by the continuous upward adjustment of the rate of unemployment officially considered to be "normal" or "acceptable" during those decades, and by other symptoms as well such as falling growth, lower rates of profit and so on.

This stagnation has recently become even more obvious by the development of crisis in many countries and the reactions of central banks trying to revive the real economies that have suffered under their rentier inspired policies. Whether this crisis will become worse is hard to say. The Western powers may act to protect the real economy by adopting the Keynesian policies they have tried to discredit over the last thirty years. However, whether such a bailout will succeed is difficult to tell and may just ensure continued stagnation rather than a real up-turn, if it has any effect at all.

Of course, a deep depression may solve the problem of over-capacity and over-investment in the world and lay the foundations of an up-turn. Such a strategy is, however, very dangerous due to working class resistance it could provoke, the deepness of the slump and the length it could last for. However, this, perhaps, has been the case in the USA in 1997-9 where over 20 years of one-sided class war may have paid off in terms of higher profits and profit rate. However, this may have more to do with the problems elsewhere in the world than a real economic change, in addition to rising consumer debt (there is now negative personal savings rate in the US), a worsening trade deficit and a stock market bubble. In addition, rising productivity has combined with stagnant wages to increase the return to capital and the profit rate (wages fell over much of the 1990s recovery and finally regained their pre-recession 1989 peak in 1999! Despite 8 years of economic growth, the typical worker is back only where they started at the peak of the last business cycle). This drop and slow growth of wages essentially accounts for the rising US profit rate, with the recent growth in real wages being hardly enough to make much of an impact (although it has made the US Federal Reserve increase interest rates to slow down even this increase, which re-enforces our argument that capitalist profits require unemployment and insecurity to maintain capitalist power at the point of production).

Such a situation reflects 1920s America (see [section C.7.3](#) for details) which was also marked by rising inequality, a labour surplus and rising profits and suggests that the new US economy faces the same potential for a slump. This means that the US economy must face the danger of over-investment (relative to demand, of course) sooner or later, perhaps sooner due to the problems elsewhere in the world as a profits-lead growth economy is fragile as it is dependent on investment, luxury spending and working class debt to survive -- all of which are more unstable and vulnerable to shocks than workers' consumption.

Given the difficulties in predicting the future (and the fact that those who try are usually proven totally wrong!), we will not pretend to know it and leave our discussion at highlighting a few possibilities. One thing is true, however, and that is the working class will pay the price of any "solution" -- unless they organise and get rid of capitalism and the state. Ultimately, capitalism need profits to survive and such profits came from the fact that workers do not have economic liberty. Thus any "solution" within a capitalist framework means the increased oppression and exploitation of working people.

Faced with negative balance sheets during recessions, the upper strata occasionally panic and agree to some reforms, some distribution of wealth, which temporarily solves the short-run problem of stagnation by increasing demand and thus permits renewed expansion. However, this short-run solution means that the working class gradually makes economic and political gains, so that exploitation and oppression, and

hence the rate of profit, tends to fall (as happened during the post-war Keynesian "Golden Age"). Faced with the dangers of, on the one hand, economic collapse and, on the other, increased working class power, the ruling class may not act until it is too late. So, on the basis that the current crisis may get worse and stagnation turn into depression, we will discuss why the "*economic structural crisis*" we have lived through for the later quarter of the 20th century (and its potential crisis) is important to social struggle in the [next section](#).

J.4.5 Why is this "*economic structural crisis*" important to social struggle?

The "*economic structural crisis*" we out-lined in the [last section](#) has certain implications for anarchists and social struggle. Essentially, as C. George Benello argues, "*[i]f economic conditions worsen. . . then we are likely to find an openness to alternatives which have not been thought of since the depression of the 1930s. . . It is important to plan for a possible economic crisis, since it is not only practical, but also can serve as a method of mobilising a community in creative ways.*" [From the **Ground Up**, p. 149]

In the face of economic stagnation and depression, attempts to improve the rate of exploitation (i.e. increase profits) by increasing the authority of the boss grow. In addition, more people find it harder to make ends meet, running up debts to survive, face homelessness if they are made unemployed, and so on. Such effects make exploitation ever more visible and tend to push oppressed strata together in movements that seek to mitigate, and even remove, their oppression. As the capitalist era has worn on, these strata have become increasingly able to rebel and gain substantial political and economic improvements, which have, in addition, lead to an increasingly willing to do so because of rising expectations (about what is possible) and frustration (about what actually is). This is why, since 1945, the world-wide "*family*" of progressive movements has grown "*ever stronger, ever bolder, ever more diverse, ever more difficult to contain.*" [Immanuel Wallerstein, **Geopolitics and Geoculture**, p. 110] It is true that libertarians, the left and labour have suffered a temporary setback during the past few decades, but with increasing misery of the working class due to neo-liberal policies (and the "*economic structural crisis*" they create), it is only a matter of time before there is a resurgence of radicalism.

Anarchists will be in the forefront of this resurgence. For, with the discrediting of authoritarian state capitalism ("Communism") in the Soviet Union and Eastern Europe, the anti-authoritarian faction of the left will increasingly be seen as its only credible one. Thus the ongoing structural crisis of the global capitalist economy, combined with the other developments springing from what Takis Fotopoulos calls (in his book **Towards and Inclusive Democracy**) a "*multidimensional crisis*" (which included economic, political, social, ecological and ideological aspects), could (potentially) lead over the next decade or two to a new **international** anti-authoritarian alliance linking together the new (and not so new) social movements in the West (feminism, the Green movement, rank-and-file labour militancy, etc.) with non-authoritarian liberation movements in the Third World and new anti-bureaucracy movements in formerly "communist" countries. However, this is only likely to happen if anarchists take the lead in promoting alternatives and working with the mass of the population. Ways in which anarchist

can do this are discussed in some detail in [section J.5](#).

Thus the "economic structural crisis" can aid social struggle by placing the contrast of "*what is*" with what "*could be*" in a clear light. Any crisis brings forth the contradictions in capitalism, between the production of use values (things people need) and of exchange value (capitalist profits), between capitalism's claims of being based on liberty and the authoritarianism associated with wage labour ("*[t]he general evidence of repression poses an ancient contradiction for capitalism: while it claims to promote human freedom, it profits concretely from the denial of freedom, most especially freedom for the workers employed by capitalist enterprise*" [William Greider, **One World, Ready or Not**, p. 388]) and so on. It shakes to the bone popular faith in capitalism's ability to "deliver the goods" and gets more and more people thinking about alternatives to a system that places profit above and before people and planet. The crisis also, by its very nature, encourages workers and other oppressed sections of the population to resist and fight back, which in turn generates collective organisation (such as unions or workplace-based assemblies and councils), solidarity and direct action -- in other words, collective self-help and the awareness that the problems of working class people can only be solved by themselves, by their own actions and organisations. The 1930s in the USA is a classic example of this process, with very militant struggles taking place in very difficult situations (see Howard Zinn's **A People's History of the United States** or Jeremy Brecher's **Strike!** for details).

In other words, the "economic structural crisis" gives radicals a lot potential to get their message across, even if the overall environment may make success seem difficult in the extreme at times!

As well as encouraging workplace organisation due to the intensification of exploitation and authority provoked by the economic stagnant/depression, the "economic structural crisis" can encourage other forms of libertarian alternatives. For example, "*the practical effect of finance capital's hegemony was to lock the advanced economies and their governments in a malignant spiral, restricting them to bad choices. Like bondholders in general, the new governing consensus explicitly assumed that faster economic growth was dangerous -- threatening to the stable financial order -- so nations were effectively blocked from measures that might reduce permanent unemployment or ameliorate the decline in wages. . . The reality of slow growth, in turn, drove the governments into their deepening indebtedness, since the disappointing growth inevitably undermined tax revenues while it expanded the public welfare costs. The rentier regime repeatedly instructed governments to reform their spending priorities -- that is, withdraw benefits from dependent citizens. . .*" [**Op. Cit.**, pp. 297-8]

Thus the "economic structural crisis" has resulted in the erosion of the welfare state (at least for the working class, for the elite, state aid is never far away). This development as potential libertarian possibilities. "*The decline of the state,*" argues L. Gambone, "*makes necessary a revitalisation of the notions of direct action and mutual aid. Without Mama State to do it for us, we must create our own social services through mutual aid societies.*" [**Syndicalism in Myth and Reality**, p. 12] As we argue in more depth in [section J.5.16](#), such a movement of mutual aid has a long history in the working class and, as it is under our control, it cannot be withdrawn from us to enrich and empower the ruling class as state run systems have been. Thus the decline of state run social services could, potentially, see the rise of a

network of self-managed, working class alternatives (equally, of course, it could see the end of all services to the most weak sections of our society -- which possibility comes about depends on what we do in the here and now. see [section J.5.15](#) for an anarchist analysis of the welfare state).

Food Not Bombs! is an excellent example of practical libertarian alternatives being generated by the economic crisis we are facing. Food Not Bombs helps the homeless through the direct action of its members. It also involves the homeless in helping themselves. It is a community-based group which helps other people in the community who are needy by providing free food to those in need. FNB! also helps other Anarchist political projects and activities.

Food Not Bombs! serves free food in public places to dramatise the plight of the homeless, the callousness of the system and our capacity to solve social problems through our own actions without government or capitalism. The constant harassment of FNB! by the cops, middle classes and the government illustrates their callousness to the plight of the poor and the failure of their institutions to build a society which cares for people more than money and property (and arms, cops and prisons to protect them). The fact is that in the US many working and unemployed people have no **feeling** that they are entitled to basic human needs such as medicine, clothes, shelter, and food. Food Not Bombs! does encourage poor people to make these demands, does provide a space in which these demands can be voiced, and does help to breakdown the wall between hungry and not-hungry. The repression directed towards FNB! by local police forces and governments also demonstrates the effectiveness of their activity and the possibility that it may radicalise those who get involved with the organisation. Charity is obviously one thing, mutual aid is something else. FNB! as it is a politicised movement from below, based on solidarity, is **not** charity, because, in Kropotkin's words, charity "*bears a character of inspiration from above, and, accordingly, implies a certain superiority of the giver upon the receiver*" and hardly libertarian [**Mutual Aid**, p. 222].

The last example of how economic stagnation can generate libertarian tendencies can be seen from the fact that, "*[h]istorically, at times of severe inflation or capital shortages, communities have been forced to rely on their own resources. During the Great Depression, many cities printed their own currency; this works to the extent that a community is able to maintain a viable internal economy which provides the necessities of life, independent of transactions with the outside.*" [C. George Benello, **Op. Cit.**, p. 150]

These local currencies and economies can be used as the basis of a libertarian socialist economy. The currencies would be the basis of a mutual bank (see sections [J.5.5](#) and [J.5.6](#)), providing interest-free loans to workers to form co-operatives and so build libertarian alternatives to capitalist firms. In addition, these local currencies could be labour-time based, eliminating the profits of capitalists by allowing workers to exchange the product of their labour with other workers. Moreover, "*local exchange systems strength local communities by increasing their self-reliance, empowering community members, and helping to protect them from the excesses of the global market.*" [Frank Lindenfield, "*Economics for Anarchists*," **Social Anarchism**, no. 23, p. 24] In this way local self-managing communes could be created, communes that replace hierarchical, top-down, government with collective decision making of

community affairs based on directly democratic community assemblies (see [section J.5.1](#)). These self-governing communities and economies could federate together to co-operate on a wider scale and so create a counter-power to that of state and capitalism.

This confederal system of self-managing communities could also protect jobs as the *"globalisation of capital threatens local industries. A way has to be found to keep capital at home and so preserve the jobs and the communities that depend upon them. Protectionism is both undesirable and unworkable. But worker-ownership or workers' co-operatives are alternatives."* [L. Gambone, **Syndicalism in Myth and Reality**, pp.12-13] Local communities could provide the necessary support structures which could protect co-operatives from the corrupting effects of working in the capitalist market (see [section J.5.11](#)). In this way, economic liberty (self-management) could replace capitalism (wage slavery) and show that anarchism is a practical alternative to the chaos and authoritarianism of capitalism, even if these examples are fragmentally and limited in nature.

However, these developments should **not** be taken in isolation of collective struggle in the workplace or community. It is in the class struggle that the real potential for anarchy is created. The work of such organisations as Food Not Bombs! and the creation of local currencies and co-operatives are supplementary to the important task of creating workplace and community organisations that can create effective resistance to both state and capitalists, resistance that can overthrow both (see sections [J.5.2](#) and [J.5.1](#) respectively). *"Volunteer and service credit systems and alternative currencies by themselves may not be enough to replace the corporate capitalist system. Nevertheless, they can help build the economic strength of local currencies, empower local residents, and mitigate some of the consequences of poverty and unemployment. . . . By the time a majority [of a community are involved it] will be well on its way to becoming a living embodiment of many anarchist ideals."* [Frank Lindenfield, **Op. Cit.**, p. 28] And such a community would be a great aid in any strike or other social struggle which is going on!

Therefore, the general economic crisis which we are facing has implications for social struggle and anarchist activism. It could be the basic of libertarian alternatives in our workplaces and communities, alternatives based on direct action, solidarity and self-management. These alternatives could include workplace and community unionism, co-operatives, mutual banks and other forms of anarchistic resistance to capitalism and the state. We discuss such alternatives in more detail in [section J.5](#), and so do not do so here.

Before moving on to the [next section](#), we must stress that we are **not** arguing that working class people need an economic crisis to force them into struggle. Such "objectivism" (i.e. the placing of tendencies towards socialism in the development of capitalism, of objective factors, rather than in the class struggle, i.e. subjective factors) is best left to orthodox Marxists and Leninists as it has authoritarian underpinnings (see [section H](#)). Rather we are aware that the class struggle, the subjective pressure on capitalism, is not independent of the conditions within which it takes place (and helped to create, we must add). Subjective revolt is always present under capitalism and, in the case of the 1970s crisis, played a role in creating it. Faced with an economic crisis we are indicating what we can do in response to it and how it could, potentially, generate libertarian tendencies within society. Economic crisis could,

in other words, provoke social struggle, collective action and generate anarchic tendencies in society. Equally, it could cause apathy, rejection of collective struggle and, perhaps, the embracing of **false** "solutions" such as right-wing populism, Leninism, Fascism or right-wing "libertarianism." We cannot predict how the future will develop, but it is true that if we do nothing then, obviously, libertarian tendencies will not grow and develop.

J.4.6 What are implications of anti-government and anti-big business feelings?

According to a report in **Newsweek** ("*The Good Life and its Discontents*" Jan. 8, 1996), feelings of disappointment have devastated faith in government and big business. Here are the results of a survey in which which people were asked whether they had a "*great deal of confidence*" in various institutions:

	1966	1975	1985	1994
Congress	42%	13%	16%	8%
Executive Branch	41%	13%	15%	12%
The press	29%	26%	16%	13%
Major Companies	55%	19%	17%	19%

As can be seen, the public's faith in major companies plunged 36% over a 28-year period in the survey, an even worse vote of "*no confidence*" than that given to Congress (34%).

Some of the feelings of disappointment with government can be blamed on the anti-big-government rhetoric of conservatives and right-wing populists. But such rhetoric is of potential benefit to anarchists as well. Of course the Right would never dream of **really** dismantling the state, as is evident from the fact that government grew more bureaucratic and expensive under "conservative" administrations than ever before.

Needless to say, this "decentralist" element of right-wing rhetoric is a con. When a politician, economist or business "leader" argues that the government is too big, he is rarely thinking of the same government functions you are. You may be thinking of subsidies for tobacco farmers or defence firms and they are thinking about pollution controls. You may be thinking of reforming welfare for the better, while their idea is to dismantle the welfare state totally. Moreover, with their support for "family values", "wholesome" television, bans on abortion, and so on their victory would see an increased level of government intrusion in many personal spheres (as well as increased state support for the power of the boss over the worker, the landlord over the tenant and so on).

If you look at what the Right has done and is doing, rather than what it is saying, you quickly see the

ridiculous of claims of right-wing "libertarianism" (as well as who is really in charge). Obstructing pollution and health regulations; defunding product safety laws; opening national parks to logging and mining, or closing them entirely; reducing taxes for the rich; eliminating the capital gains tax; allowing companies to fire striking workers; making it easier for big telecommunications companies to make money; limiting companies' liability for unsafe products-- the program here is obviously to help big business do what it wants without government interference, and to help the rich get richer. In other words, increased "freedom" for private power combined with a state whose role is to protect that "liberty."

Yet along with the pro-business, pro-private tyranny, racist, anti-feminist, and homophobic hogwash disseminated by right-wing radio propagandists and the business-backed media, important decentralist and anti-statist ideas are also being implanted in mass consciousness. These ideas, if consistently pursued and applied in all areas of life (the home, the community, the workplace), could lead to a revival of anarchism in the US -- but only if radicals take advantage of this opportunity to spread the message that capitalism is not **genuinely** anti-authoritarian (nor could it ever be), as a social system based on liberty must entail.

This does not mean that right-wing tendencies have anarchistic elements. Of course not. Nor does it mean that anarchist fortunes are somehow linked to the success of the right. Far from it (the reverse is actually the case). Similarly, the anti-big government propaganda of big business is hardly anarchistic. But it does have the advantage of placing certain ideas on the agenda, such as decentralisation. What anarchists try to do is point out the totally contradictory nature of such right-wing rhetoric. After all, the arguments against big government are equally applicable to big business and wage slavery. **If** people are capable of making their own decisions, then why should this capability be denied in the workplace? As Noam Chomsky points out, while there is a "*leave it alone*" and "*do your own thing*" current within society, it in fact *tells you that the propaganda system is working full-time, because there is no such ideology in the U.S. Business, for example, doesn't believe it. It has always insisted upon a powerful interventionist state to support its interests -- still does and always has -- back to the origins of American society. There's nothing individualistic about corporations. Those are big conglomerate institutions, essentially totalitarian in character, but hardly individualistic. Within them you're a cog in a big machine. There are few institutions in human society that have such strict hierarchy and top-down control as a business organisation. Nothing there about 'Don't tread on me.' You're being tread on all the time. The point of the ideology is to try to get other people, outside of the sectors of co-ordinated power, to fail to associate and enter into decision-making in the political arena themselves. The point is to atomise everyone else while leaving powerful sectors integrated and highly organised and of course dominating resources.*" He goes on to note that:

"There is a streak of independence and individuality in American culture which I think is a very good thing. This 'Don't tread on me' feeling is in many respects a healthy one. It's healthy up to the point where it atomises and keeps you from working together with other people. So it's got its healthy side and its negative side. It's the negative side that's emphasised naturally in the propaganda and indoctrination." [**Keeping the Rabble in Line**, pp. 279-80]

As the opinion polls above show, most people direct their dislike and distrust of institutions equally to Big Business, which shows that people are not stupid. However, the slight decrease in distrust for big business even after a period of massive business-lead class war, down-sizing and so on, is somewhat worrying. Unfortunately, as Gobbels was well aware, tell a lie often enough and people start to believe it. And given the funds available to big business, its influence in the media, its backing of "think-tanks," the use of Public Relations companies, the support of economic "science," its extensive advertising and so on, it says a lot for the common sense of people that so many people see big business for what it is. You simply cannot fool all the people all of the time!

However, these feelings can easily be turned into cynicism and a hopelessness that things can change for the better and than the individual can help change society. Or, even worse, they can be twisted into support for the right, authoritarian, populist or (so-called) "Libertarian"-Right. The job for anarchists is to combat this and help point the healthy distrust people have for government and business towards a real solution to societies problems, namely a decentralised, self-managed anarchist society.

J.4.7 What about the communications revolution?

Another important factor working in favour of anarchists is the existence of a sophisticated global communications network and a high degree of education and literacy among the populations of the core industrialised nations. Together these two developments make possible nearly instantaneous sharing and public dissemination of information by members of various progressive and radical movements all over the globe -- a phenomenon that tends to reduce the effectiveness of repression by central authorities. The electronic-media and personal-computer revolutions also make it more difficult for elitist groups to maintain their previous monopolies of knowledge. In short, the advent of the Information Age is potentially one of the most subversive variables in the modern equation.

Indeed the very existence of the Internet provides anarchists with a powerful argument that decentralised structures can function effectively in today's highly complex world. For the net has no centralised headquarters and is not subject to regulation by any centralised regulatory agency, yet it still manages to function quite effectively. Moreover, the net is also an effective way of anarchists and other radicals to communicate their ideas to others, share knowledge and work on common projects (such as this FAQ, for example) and co-ordinate activities and social struggle. By using the Internet, radicals can make their ideas accessible to people who otherwise would not come across anarchist ideas (obviously we are aware that the vast majority of people in the world do not have access to telephones, never mind computers, but computer access is increasing in many countries, making it available, via work, libraries, schools, universities, and so on to more and more working people). In addition, and far more important than anarchists putting their ideas across, the fact is that the net allows everyone with access to express themselves freely, to communicate with others and get access (by visiting webpages and joining mailing lists and newsgroups) and give access (by creating webpages and joining in with on-line arguments) to new ideas and viewpoints. This is very anarchistic as it allows people to express themselves and start to consider new ideas, ideas which may change how they think and act. Of course most people on the

planet do not have a telephone, let alone a computer, but that does not undermine the fact that the internet is a medium in which people can communicate freely (at least until it is totally privatised, then it may prove to be more difficult as the net could become a giant shopping centre).

Of course there is no denying that the implications of improved communications and information technology are ambiguous, implying Big Brother as well the ability of progressive and radical movements to organise. However, the point is only that the information revolution in combination with the other new social developments we are considering **could** (but will not **necessarily**) contribute to a social paradigm shift. Obviously such a shift will not happen automatically. Indeed, it will not happen at all unless there is strong resistance to governmental attempts to limit public access to information technology (e.g. encryption programs) and censor citizens' communications.

How anarchists are very effectively using the Internet to co-ordinate struggles and spread information is discussed in [section J.4.9](#).

This use of the Internet and computers to spread the anarchist message is ironic. The rapid improvement in price-performance ratios of computers, software, and other technology today seems to validate the faith in free markets. But to say that the information revolution proves the inevitable superiority of markets requires a monumental failure of short-term historical memory. After all, not just the Internet, but the computer sciences and computer industry represent a spectacular success of public investment. As late as the 1970s and early 1980s, according to Kenneth Flamm's 1988 book **Creating the Computer**, the federal government was paying for 40 percent of all computer-related research and probably 60 to 75 percent of basic research. Even such modern-seeming gadgets as video terminals, the light pen, the drawing tablet, and the mouse evolved from Pentagon-sponsored research in the 1950s, 1960s and 1970s. Even software was not without state influence, with database software having its roots in US Air Force and Atomic Energy Commission projects, artificial intelligence in military contracts back in the 1950s and airline reservation systems in 1950s air-defence systems. More than half of IBM's Research and Development budget came from government contracts in the 1950s and 1960s.

The motivation was national security, but the result has been the creation of comparative advantage in information technology for the United States that private firms have happily exploited and extended. When the returns were uncertain and difficult to capture, private firms were unwilling to invest, and government played the decisive role. And not for want of trying, for key players in the military first tried to convince businesses and investment bankers that a new and potentially profitable business opportunity was presenting itself, but they did not succeed and it was only when the market expanded and the returns were more definite that the government receded. While the risks and development costs were socialised, the gains were privatised. All of which make claims that the market would have done it anyway highly unlikely.

Looking beyond state aid to the computer industry we discover a "*do-it-yourself*" (and so self-managed) culture which was essential to its development. The first personal computer, for example, was invented by amateurs who wanted to build their own cheap machines. The existence of a "gift" economy among

these amateurs and hobbyists was a necessary precondition for the development of PCs. Without this free sharing of information and knowledge, the development of computers would have been hindered. In other words, socialistic relations between developers and within the working environment created the necessary conditions for the computer revolution. If this community had been marked by commercial relations, the chances are the necessary breakthroughs and knowledge would have remained monopolised by a few companies or individuals, so hindering the industry as a whole.

The first 20 years of the Internet's development was almost completely dependent on state aid -- such as the US military or the universities -- plus an anti-capitalist "gift economy" between hobbyists. Thus a combination of public funding and community based sharing helped create the framework of the Internet, a framework which is now being claimed as one of capitalism's greatest successes!

Encouragingly, this socialistic "gift economy" is still at the heart of computer/software development and the Internet. For example, the **Free Software Foundation** has developed the **General Public Licence** (GPL). GPL, also known as "*copyleft*", uses copyright to ensure that software remains free. Copyleft ensures that a piece of software is made available to everyone to use and modify as they desire. The only restriction is that any used or modified copyleft material must remain under copyleft, ensuring that others have the same rights as you did when you used the original code. It creates a commons which anyone may add to, but no one may subtract from. Placing software under GPL means that every contributor is assured that she, and all other users, will be able to run, modify and redistribute the code indefinitely. Unlike commercial software, copyleft code ensures an increasing knowledge base from which individuals can draw from and, equally as important, contribute to. In this way everyone benefits as code can be improved by everyone, unlike commercial code.

Many will think that this essentially anarchistic system would be a failure. In fact, code developed in this way is far more reliable and sturdy than commercial software. Linux, for example, is a far superior operating system than DOS, for example, precisely **because** it draws on the collective experience, skill and knowledge of thousands of developers. Apache, the most popular web-server, is another freeware product and is acknowledged as the best available. While non-anarchists may be surprised, anarchists are not. Mutual aid and co-operation are beneficial in evolution of life, why not in the evolution of software?

For anarchists, this "gift economy" at the heart of the communications revolution is an important development. It shows the superiority of common development and the walls to innovation and decent products generated by property systems. We hope that such an economy will spread increasingly into the "real" world.

J.4.8 What is the significance of the accelerating rate of change and the information explosion?

As Philip Slater points out in **A Dream Deferred**, the cumbersomeness of authoritarian structures becomes more and more glaring as the rate of change speeds up. This is because all relevant information

in authoritarian systems must be relayed to a central command before any decisions can be made, in contrast to decentralised systems where important decisions can be made by individuals and small autonomous groups responding immediately to new information. This means that decision making is slower in authoritarian structures, putting them at a disadvantage relative to more decentralised and democratic structures.

The failure of centrally planned state-capitalist ("Communist") economies due to overwhelming bureaucratic inertia provides an excellent illustration of the problem in question. Similarly, under private-property capitalism, small and relatively decentralised companies are generally more innovative and productive than large corporations with massive bureaucracies, which tend to be nearly as inflexible and inefficient as their "Communist" counterparts. In a world where the proliferation of information is accelerating at the same time that crucial economic and political decisions must be made ever more quickly, authoritarian structures are becoming increasingly maladaptive. As Slater notes, authoritarian systems simply cannot cope effectively with the information explosion, and for this reason more and more nations are realising they must either "democratise" or fall behind. He cites the epidemic of "democratisation" in Eastern Europe as well as popular pressure for democracy in Communist China as symptomatic of this phenomenon.

Unfortunately, Slater fails to note that the type of "democracy" to which he refers is ultimately a fraud (though better than state-capitalist totalitarianism), since the representative type of government at which it aims is a disguised form of political domination by the corporate rich. Nevertheless, the cumbersomeness of authoritarian structures on which he bases his argument is real enough, and it will continue to lend credibility to the anarchist argument that "representative" political structures embedded in a corporate-state complex of authoritarian institutions is very far from being either true democracy or an efficient way of organising society. Moreover, the critique of authoritarian structures is equally applicable to the workplace as capitalist companies are organised as mini-centrally planned states, with (official) power concentrated in the hands of bosses and managers. Any struggle for increased participation will inevitably take place in the workplace as well (as it has continually done so as long as wage slavery has existed).

J.4.9 What are Netwars?

Netwars refers to the use of the Internet by autonomous groups and social movements to co-ordinate action to influence and change society and fight government or business policy. This use of the Internet has steadily grown over the years, with a Rand corporation researcher, David Ronfeldt, arguing that this has become an important and powerful force (Rand is, and has been since it's creation in 1948, a private appendage of the military industrial complex). In other words, activism and activists power and influence has been fuelled by the advent of the information revolution. Through computer and communication networks, especially via the world-wide Internet, grassroots campaigns have flourished, and the most importantly, government elites have taken notice.

Ronfeldt specialises in issues of national security, especially in the areas of Latin American and the

impact of new informational technologies. Ronfeldt and another colleague coined the term "*netwar*" a couple years ago in a Rand document entitled "*Cyberwar is Coming!*". "Netwars" are actions by autonomous groups -- especially advocacy groups and social movements -- that use informational networks to co-ordinate action to influence, change or fight government policy.

Ronfeldt's work became a flurry of discussion on the Internet in mid-March 1995 when Pacific News Service correspondent Joel Simon wrote an article about Ronfeldt's opinions on the influence of netwars on the political situation in Mexico after the Zapatista uprising. According to Simon, Ronfeldt holds that the work of social activists on the Internet has had a large influence -- helping to co-ordinate the large demonstrations in Mexico City in support of the Zapatistas and the proliferation of EZLN communiqués across the world via computer networks. These actions, Ronfeldt argues, have allowed a network of groups that oppose the Mexican Government to muster an international response, often within hours of actions by it. In effect, this has forced the Mexican government to maintain the facade of negotiations with the EZLN and has on many occasions, actually stopped the army from just going in to Chiapas and brutally massacring the Zapatistas.

Given that Ronfeldt is an employee of the Rand Corporation (described by Paul Dickson, author of the book "*Think Tanks*", as the "*first military think tank. . . undoubtedly the most powerful research organisation associated with the American military*") his comments indicate that the U.S. government and its military and intelligence wings are very interested in what the Left and anarchists are doing on the Internet. Given that they would not be interested in this if it was not effective, we can say that this use of the "Information Super-Highway" is a positive example of the use of technology in ways unplanned of by those who initially developed it (let us not forget that the Internet was originally funded by the U.S. government and military). While the internet is being hyped as the next big marketplace, it is being subverted by activists -- an example of anarchistic trends within society worrying the powers that be.

Ronfeldt argues that "*the information revolution. . . disrupts and erodes the hierarchies around which institutions are normally designed. It diffuses and redistributes power, often to the benefit of what may be considered weaker, smaller actors.*" He continues, "*multi-organisational networks consist of (often small) organisations or parts of institutions that have linked together to act jointly... making it possible for diverse, dispersed actors to communicate, consult, co-ordinate, and operate together across greater distances, and on the basis of more and better information than ever.*" He emphasises that "*some of the heaviest users of the new communications networks and technologies are progressive, centre-left, and social activists... [who work on] human rights, peace, environmental, consumer, labour, immigration, racial and gender-based issues.*" In other words, social activists are on the cutting edge of the new and powerful "network" system of organising.

All governments, especially the U.S. government, have been extremely antagonistic to this idea of effective use of information, especially by the political Left and anarchists. The use of the Internet may facilitate another "crisis in democracy" (i.e. the development of **real** democracy rather than the phoney elite kind favoured by capitalism). To fight this possible use of the internet to combat the elite, Ronfeldt maintains that the lesson is clear: "*institutions can be defeated by networks, and it may take networks to*

counter networks." He argues that if the U.S. government and/or military is to fight this ideological war properly with the intend of winning -- and he does specifically mention ideology -- it must completely reorganise itself, scrapping hierarchical organisation for a more autonomous and decentralised system: a network. In this way, he states, "*we expect that. . . netwar may be uniquely suited to fighting non-state actors*".

Ronfeldt's research and opinion should be flattering for the political Left. He is basically arguing that the efforts of activists on computers not only has been very effective or at least has the potential, but more importantly, argues that the only way to counter this work is to follow the lead of social activists. Ronfeldt emphasised in a personal correspondence that the "*information revolution is also strengthening civil-society actors in many positive ways, and moreover that netwar is not necessarily a 'bad' thing that necessarily is a 'threat' to U.S. or other interests. It depends.*" At the same time, anarchists and other activists should understand the important implications of Ronfeldt's work: government elites are not only watching these actions (big surprise), but are also attempting to work against them.

This can be seen in many countries. For example, in 1995 a number of computer networks, so far confined to Europe, have been attacked or completely shut down. In Italy, members of the Carabinieri Anti-Crime Special Operations Group raided the homes of a number of activists -- many active in the anarchist movement. They confiscated journals, magazines, pamphlets, diaries, and video tapes. They also took their personal computers, one of which hosted "*BITS Against the Empire*", a node of Cybernet and Fidonet networks. The warrant ridiculously charged them for "*association with intent to subvert the democratic order*", carrying a penalty of 7 to 15 years imprisonment for a conviction.

In Britain, Terminal Boredom bulletin board system (BBS) in Scotland was shutdown by police in 1995 after the arrest of a hacker who was affiliated with the BBS. In the same year Spunk Press, the largest anarchist archive of published material catalogued on computer networks faced a media barrage in the UK press which has falsely accused them of working with known terrorists like the Red Army Faction of Germany, of providing recipes for making bombs and of co-ordinating the "*disruption of schools, looting of shops and attacks on multinational firms.*" Articles by the computer trade magazine, **Computing**, and the **Sunday Times**, entitled "*Anarchism Runs Riot on the Superhighway*" and "*Anarchists Use Computer Highway For Subversion*" respectively, nearly lead one of the organisers of Spunk Press loosing his job after the firm he works for received bad publicity. According to the book **Turning up the Heat: MI5 after that cold war** by Lara O'Hara, one of the journalists who wrote the Sunday Times article has contacts with MI5 (the British equivalent of the FBI).

It is not coincidence that this attack has started first against anarchists and libertarian-socialists. They are currently one of the most organised political grouping on the Internet. Even Simon Hill, editor of **Computing** magazine, admits that "*we have been amazed at the level of organisation of these... groups who have appeared on the Internet in a short amount of time*". According to Ronfeldt's thesis, this makes perfect sense. Who best can exploit a system that "*erodes hierarchy*" and requires the co-ordination of decentralised, autonomous groups in co-operative actions than anarchists and libertarian-socialists?

These attacks may not be confined to anarchists for long. Indeed, many countries have attempted to control the internet, using a number of issues as a means to do so (such as "terrorism", pornography and so on). Government is not the only institution to notice the power of the Internet in the hands of activists. In America, the Washington Post ("*Mexican Rebels Using a High-Tech Weapon; Internet Helps Rally Support*", by Tod Robberson), Newsweek ("*When Words are the Best Weapon: How the Rebels Use the Internet and Satellite TV*", by Russell Watson) and even CNN have done stories about the importance of the Internet and network communication organisation with respect to the Zapatistas.

It is important to point out that the mainstream media is not interested in the information that circulates across the Internet. No, they are interested in sensationalising the activity, even demonising it. They correctly see that the "rebels" possess an incredibly powerful tool, but the media does not report on what they either are missing or omitting.

A good example of this powerful tool is the incredible speed and range at which information travels the Internet about events concerning Mexico and the Zapatistas. When Alexander Cockburn wrote an article exposing a Chase Manhattan Bank memo about Chiapas and the Zapatistas in Counterpunch, only a small number of people read it because it is only a newsletter with a limited readership. The memo, written by Riordan Roett, was very important because it argued that "*the [Mexican] government will need to eliminate the Zapatistas to demonstrate their effective control of the national territory and of security policy*". In other words, if the Mexican government wants investment from Chase, it will have to crush the Zapatistas. This information was relatively ineffective when just confined to print. But when it was uploaded to the Internet (via a large number of List-servers and the USENET), it suddenly reached a very large number of people. These people in turn co-ordinated protests against the U.S and Mexican governments and especially Chase Manhattan. Chase was eventually forced to attempt to distance itself from the Roett memo that it commissioned.

Anarchists and the Zapatistas is just the tip of the proverbial iceberg. Currently there are a myriad of social activist campaigns on the Internet. From local issues like the anti-Proposition 187 movement in California to a progressive college network campaign against the Republican "*Contract [on] America*," the network system of activism is not only working -- and working well as Ronfeldt admits -- but is growing. It is growing rapidly in numbers of people involved and growing in political and social effectiveness. There are many parallels between the current situation in Chiapas and the drawn out civil war in Guatemala, yet the Guatemalan military has been able to nearly kill without impunity while the Mexican military received a co-ordinated, international attack literally hours after they mobilise their troops. The reason is netwars are effective as Ronfeldt concedes, and when they are used they have been very influential.

It is clear than Rand, and possibly other wings of the establishment, are not only interested in what activists are doing on the Internet, but they think it is working. It is also clear that they are studying our activities and analysing our potential power. We should do the same, but obviously not from the perspective of inhibiting our work, but the opposite: how to further facilitate it. Also, we should turn the tables as it were. They are studying our behaviour and actions -- we should study theirs. As was outlined

above, we should analyse their movements and attempt to anticipate attacks as much as possible.

As Ronfeldt argues repeatedly, the potential is there for us to be more effective. Information is getting out as is abundantly clear. But we can do better than just a co-ordination of raw information, which has been the majority of the "networking" so far on the Internet. To improve on the work that is being done, we should attempt to provide more -- especially in the area of in-depth analysis. Not just what we are doing and what the establishment is doing, but more to the point, we should attempt to co-ordinate the dissemination of solid analysis of important events. In this way members of the activist network will not only have the advantage of up-to-date information of events, but also a good background analysis of what each event means, politically, socially and/or economically as the case may be.

Thus Netwars are a good example of anarchistic trends within society, the use of communications technology (developed for the state and used by capitalism as a means to aid the selling process) has become a means of co-ordinating activity across the world in a libertarian fashion.

(This section of the FAQ is based on an article by Jason Wehling called *"NetWars' and Activists' Power on the Internet"* which has appeared in issue 2 of **Scottish Anarchist** magazine as well as **Z Magazine**)

C.10 Will "free market" capitalism benefit everyone, especially the poor?

Murray Rothbard and a host of other supporters of "free-market" capitalism make this claim. Again, it does contain an element of truth. As capitalism is a "grow or die" economy (see section [D.4.1](#)), obviously the amount of wealth available to society increases for **all** as the economy expands. So the poor will be better off **absolutely** in any growing economy (at least in economic terms). This was the case under Soviet state capitalism as well: the poorest worker in the 1980's was obviously far better off economically than one in the 1920's.

However, what counts is **relative** differences between classes and periods within a growth economy. Given the thesis that free-market capitalism will benefit the poor **especially**, we have to ask: can the other classes benefit equally well?

As noted above, wages are dependent on productivity, with increases in the wages lagging behind increases in productivity. If, in a free market, the poor "especially" benefited, wages would need to increase **faster** than productivity in order for the worker to obtain an increased share of social wealth. However, if this were the case, the amount of profit going to the upper classes would be proportionally smaller. Hence if capitalism "especially" benefited the poor, it could not do the same for those who live off the profit generated by workers.

For the reasons indicated above, productivity **must** rise faster than wages or companies will fail and recession could result. This is why wages (usually) lag behind productivity gains. In other words, workers produce more but do not receive a corresponding increase in wages. This is graphically illustrated by Taylor's first experiment in his "*scientific management*" techniques.

Taylor's theory was that when workers controlled their own work, they did not produce to the degree wanted by management. His solution was simple. The job of management was to discover the "one best way" of doing a specific work task and then ensure that workers followed these (management defined) working practices. The results of his experiment was a 360% increase in productivity for a 60% increase in wages. Very efficient. However, from looking at the figures, we see that the immediate result of Taylor's experiment is lost. The worker is turned into a robot and effectively deskilled (see section [D.10](#)). While this is good for profits and the economy, it has the effect of dehumanising and alienating the workers involved as well as increasing the power of capital in the labour market. But only those ignorant of economic science or infected with anarchism would make the obvious point that what is good for the economy may not be good for people.

This brings up another important point related to the question of whether "free market" capitalism will result in everyone being "better off." The typical capitalist tendency is to consider quantitative values as

being the most important consideration. Hence the concern over economic growth, profit levels, and so on, which dominate discussions on modern life. However, as E.P. Thompson makes clear, this ignores an important aspect of human life:

"simple points must be made. It is quite possible for statistical averages and human experiences to run in opposite directions. A per capita increase in quantitative factors may take place at the same time as a great qualitative disturbance in people's way of life, traditional relationships, and sanctions. People may consume more goods and become less happy or less free at the same time" [**The Making of the English Working Class**, p. 231]

For example, real wages may increase but at the cost of longer hours and greater intensity of labour. Thus, *"[i]n statistical terms, this reveals an upward curve. To the families concerned it might feel like immiseration."* [Thompson, **Op. Cit.**, p. 231] In addition, consumerism may not lead to the happiness or the "better society" which many economists imply to be its results. If consumerism is an attempt to fill an empty life, it is clearly doomed to failure. If capitalism results in an alienated, isolated existence, consuming more will hardly change that. The problem lies within the individual and the society within which they live. Hence, quantitative increases in goods and services may not lead to anyone "benefiting" in any meaningful way.

This is important to remember when listening to "free market" gurus discussing economic growth from their "gated communities," insulated from the surrounding deterioration of society and nature caused by the workings of capitalism (see sections [D.1](#) and [D.4](#) for more on this). In other words, quality is often more important than quantity. This leads to the important idea that some (even many) of the requirements for a truly human life cannot be found on any market, no matter how "free."

However, to go back to the "number crunching" that capitalism so loves, we see that the system is based on workers producing more profits for "their" company by creating more commodities than they would be able to buy back with their wages. If this does not happen, profits fall and capital dis-invests. As can be seen from the example of Chile (see section [C.11](#)) under Pinochet, "free market" capitalism can and does make the rich richer and the poor poorer while economic growth was going on. Indeed, the benefits of economic growth accumulated into the hands of the few.

To put it simply, economic growth in laissez-faire capitalism depends upon increasing exploitation and inequality. As wealth floods upwards into the hands of the ruling class, the size of the crumbs falling downwards will increase (after the economy is getting bigger). This is the real meaning of "trickle down" economics. Like religion, laissez faire capitalism promises pie at some future date. Until then we (at least the working class) must sacrifice, tighten our belts and trust in the economic powers that be to invest wisely for society. Of course, as the recent history of the USA or Chile shows, the economy can be made freer and grow while real wages stagnant (or fall) and inequality increase.

This can also be seen from the results of the activities of the pro-"free market" government in the UK,

where the number of people with less than half the average income rose from 9% of the population in 1979 to 25% in 1993 and the share of national wealth held by the poorer half of the population has fallen from one third to one quarter. In addition, between 1979 and 1992-3, the poorest tenth of the UK population experienced a fall in their real income of 18% after housing costs, compared to an unprecedented rise of 61% for the top tenth. Of course, the UK is not a "pure" capitalist system and so the defenders of the faith can argue that their "pure" system will spread the wealth. However, it seems strange that movements towards the "free market" always seem to make the rich richer and the poor poorer. In other words, the evidence from "actually existing" capitalism supports anarchist arguments that when ones bargaining power is weak (which is typically the case in the labour market) "free" exchanges tend to magnify inequalities of wealth and power over time rather than working towards an equalisation (see section [F.3.1](#), for example). Similarly, it can hardly be claimed that these movements towards "purer" capitalism have "especially" benefited the poor, quite the reverse.

This is unsurprising as "free market" capitalism cannot benefit **all** equally, for if the share of social wealth falling to the working class increased (i.e. it "especially" benefited them), it would mean that the ruling class would be **worse off** (and vice versa). Hence the claim that all would benefit is obviously false if we recognise and reject the sleight-of-hand of looking at the absolute figures so loved by the apologists of capitalism. And as the evidence indicates, movements towards a purer capitalism have resulted in "free" exchanges benefiting those with (economic) power more than those without, rather than benefiting all equally. This result is surprising, of course, only to those who prefer to look at the image of "free exchange" within capitalism rather than at its content.

In short, to claim that all would benefit from a free market ignores the fact that capitalism is a profit-driven system and that for profits to exist, workers **cannot** receive the full fruits of their labour. As the individualist anarchist Lysander Spooner noted over 100 years ago, *"almost all fortunes are made out of the capital and labour of other men than those who realise them. Indeed, large fortunes could rarely be made at all by one individual, except by his sponging capital and labour from others."* [quoted by Martin J. James, **Men Against the State**, p. 173f]

So it can be said that laissez-faire capitalism will benefit all, **especially** the poor, only in the sense that all can potentially benefit as an economy increases in size. If we look at actually existing capitalism, we can start to draw some conclusions about whether laissez-faire capitalism will actually benefit working people. The United States has a small public sector by international standards and in many ways it is the closest large industrial nation to laissez-faire capitalism. It is also interesting to note that it is also number one, or close to it, in the following areas [Richard Du Boff, **Accumulation and Power**, pp. 183-4]:

- lowest level of job security for workers, with greatest chance of being dismissed without notice or reason.
- greatest chance for a worker to become unemployed without adequate unemployment and medical insurance.
- less leisure time for workers, such as holiday time.

- one of the most lopsided income distribution profiles.
- lowest ratio of female to male earnings, in 1987 64% of the male wage.
- highest incidence of poverty in the industrial world.
- among the worse rankings of all advanced industrial nations for pollutant emissions into the air.
- highest murder rates.
- worse ranking for life expectancy and infant mortality.

It seems strange that the more laissez-faire system has the worse job security, least leisure time, highest poverty and inequality if laissez-faire will **especially** benefit the poor. Of course, defenders of laissez-faire capitalism will point out that the United States is far from being laissez-faire, but it seems strange that the further an economy moves from that condition the better conditions get for those who, it is claimed, will **especially** benefit from it.

Even if we look at economic growth (the rationale for claims that laissez faire will benefit the poor), we find that by the 1960s the rate of growth of per capita product since the 19th century was not significantly higher than in France and Germany, only slightly higher than in Britain and significantly lower than in Sweden and Japan (and do not forget that France, Germany, Japan and Britain suffered serve damage in two world wars, unlike America). So the *"superior productivity and income levels in the United States have been accompanied by a mediocre performance in the rise of those levels over time. The implication is no longer puzzling: if US per capita incomes did not grow particularly fast but Americans on average enjoy living standards equal to or above those of citizens of other developed nations, then the American starting point must have been higher 100 to 150 years ago. We now know that before the Civil War per capita incomes in the United States were high by contemporary standards, surpassed through the 1870s only by the British. . . To a great extent this initial advantage was a gift of nature."* [Op. Cit., p. 176]

Looking beyond the empirical investigation, we should point out the slave mentality behind these arguments. Afterall, what does this argument actually imply? Simply that economic growth is the only way for working people to get ahead. If working people put up with exploitative working environments, in the long run capitalists will invest some of their profits and so increase the economic cake for all. So, like religion, "free market" economics argue that we must sacrifice in the short term so that (perhaps) in the future our living standards will increase (*"you'll get pie in the sky when you die"* as Joe Hill said about religion). Moreover, any attempt to change the "laws of the market" (i.e. the decisions of the rich) by collective action will only harm the working class. Capital will be frightened away to countries with a more "realistic" and "flexible" workforce (usually made so by state repression).

In other words, capitalist economics praises servitude over independence, kow-towing over defiance and altruism over egoism. The "rational" person of neo-classical economics does not confront authority, rather he accommodates himself to it. For, in the long run, such self-negation will pay off with a bigger cake with (it is claimed) correspondingly bigger crumbs "trickling" downwards. In other words, in the short-term, the gains may flow to the elite but in the future we will all gain as some of it will trickle (back) down to the working people who created them in the first place. But, unfortunately, in the real

world uncertainty is the rule and the future is unknown. The history of capitalism shows that economic growth is quite compatible with stagnating wages, increasing poverty and insecurity for workers and their families, rising inequality and wealth accumulating in fewer and fewer hands (the example of the USA and Chile from the 1970s to 1990s and Chile spring to mind). And, of course, even **if** workers know how to bosses, the bosses may just move production elsewhere anyway (as tens of thousands of "downsized" workers across the West can testify). For more details of this process in the USA see Edward S. Herman's article *"Immiserating Growth: The First World"* in **Z Magazine**, July 1994.

For anarchists it seems strange to wait for a bigger cake when we can have the whole bakery. If control of investment was in the hands of those it directly effects (working people) then it could be directed into socially and ecologically constructive projects rather than being used as a tool in the class war and to make the rich richer. The arguments against "rocking the boat" are self-serving (it is obviously in the interests the rich and powerful to defend a given income and property distribution) and, ultimately, self-defeating for those working people who accept them. In the end, even the most self-negating working class will suffer from the negative effects of treating society as a resource for the economy, the higher mobility of capital that accompanies growth and effects of periodic economic and long term ecological crisis. When it boils down to it, we all have two options -- you can do what is right or you can do what you are told. "Free market" capitalist economics opts for the latter.

Finally, the average annual growth rate per capita was 1.4% between 1820 and 1950. This is in sharp contrast to the 3.4% rate between 1950 and 1970. If laissez-faire capitalism would benefit "everyone" more than "really existing capitalism," the growth rate would be **higher** during the earlier period, which more closely approximated laissez faire. It is not.

D.4 What is the relationship between capitalism and the ecological crisis?

Environmental damage has reached alarming proportions. Almost daily there are new upwardly revised estimates of the severity of global warming, ozone destruction, topsoil loss, oxygen depletion from the clearing of rain forests, acid rain, toxic wastes and pesticide residues in food and water, the accelerating extinction rate of natural species, etc., etc. Some scientists now believe that there may be as little as 35 years to act before vital ecosystems are irreparably damaged and massive human die-offs begin [Donella M. Meadows, Dennis L. Meadows, and Jorgen Randers, **Beyond the Limits: Confronting Global Collapse, Envisioning a Sustainable Future**, Chelsea Green Publishing Company, 1992]. Or, as Kirkpatrick Sale puts it, "*the planet is on the road to, perhaps on the verge of, global ecocide*" ["Bioregionalism -- A Sense of Place," **The Nation** 12: 336-339].

Many anarchists see the ecological crisis as rooted in the psychology of domination, which emerged with the rise of patriarchy, slavery, and the first primitive states during the Late Neolithic. Murray Bookchin, one of the pioneers of eco-anarchism (see [section E](#)), points out that "*[t]he hierarchies, classes, propertied forms, and statist institutions that emerged with social domination were carried over conceptually into humanity's relationship with nature. Nature too became increasingly regarded as a mere resource, an object, a raw material to be exploited as ruthlessly as slaves on a latifundium.*" [**Toward an Ecological Society** p. 41]. In his view, without uprooting the psychology of domination, all attempts to stave off ecological catastrophe are likely to be mere palliatives and so doomed to failure.

Bookchin argues that "*the conflict between humanity and nature is an extension of the conflict between human and human. Unless the ecology movement encompasses the problem of domination in all its aspects, it will contribute **nothing** toward eliminating the root causes of the ecological crisis of our time. If the ecology movement stops at mere reformism in pollution and conservation control - at mere 'environmentalism' - without dealing radically with the need for an expanded concept of revolution, it will merely serve as a safety valve for the existing system of natural and human exploitation.*" [**Ibid.**, p. 43]

Since capitalism is the vehicle through which the psychology of domination finds its most ecologically destructive outlet, most eco-anarchists give the highest priority to dismantling capitalism. "*Literally, the system in its endless devouring of nature will reduce the entire biosphere to the fragile simplicity of our desert and arctic biomes. We will be reversing the process of organic evolution which has differentiated flora and fauna into increasingly complex forms and relationships, thereby creating a simpler and less stable world of life. The consequences of this appalling regression are predictable enough in the long run -- the biosphere will become so fragile that it will eventually collapse from the standpoint human survival needs and remove the organic preconditions for human life. That this will eventuate from a society based on production for the sake of production is . . . merely a matter of time, although when it*

will occur is impossible to predict." [**Ibid.**, p. 68]

It's important to stress that capitalism must be **eliminated** because it **cannot** reform itself so as to become "environment friendly," contrary to the claims of so-called "green" capitalists. This is because *"[c]apitalism not only validates precapitalist notions of the domination of nature, . . . it turns the plunder of nature into society's law of life. To quibble with this kind of system about its values, to try to frighten it with visions about the consequences of growth is to quarrel with its very metabolism. One might more easily persuade a green plant to desist from photosynthesis than to ask the bourgeois economy to desist from capital accumulation."* [**Ibid.**, p. 66]

Thus capitalism causes ecological destruction because it is based upon domination (of human over human and so humanity over nature) and continual, endless growth (for without growth, capitalism would die).

D.4.1 Why must capitalist firms "grow or die?"

Industrial production has increased fifty fold since 1950. Obviously such expansion in a finite environment cannot go on indefinitely without disastrous consequences. Yet, as the quotation above suggests, it is impossible **in principle** for capitalism to kick its addiction to growth. It is important to understand why.

Capitalism is based on production for profit. In order to stay profitable, a firm must be able to produce goods and services cheaply enough to compete with other firms in the same industry. If one firm increases its productivity (as all firms must try to do), it will be able to produce more cheaply, thus undercutting its competition and capturing more market share, until eventually it forces less profitable firms into bankruptcy. Moreover, as companies with higher productivity/profitability expand, they often realise economies of scale (e.g. getting bulk rates on larger quantities of raw materials), thus giving them even more of a competitive advantage over less productive/profitable enterprises. Hence, constantly increasing productivity is essential for survival.

There are two ways to increase productivity, either by increasing the exploitation of workers (e.g. longer hours and/or more intense work for the same amount of pay) or by introducing new technologies that reduce the amount of labour necessary to produce the same product or service. Due to the struggle of workers to prevent increases in the level of their exploitation, new technologies are the main way that productivity is increased under capitalism (though of course capitalists are always looking for ways to increase the exploitation of workers on a given technology by other means as well).

But new technologies are expensive, which means that in order to pay for continuous upgrades, a firm must continually sell **more** of what it produces, and so must keep expanding its capital (machinery, floor space, workers, etc.). Indeed, to stay in the same place under capitalism is to tempt crisis - thus a firm must always strive for more profits and thus must always expand and invest. In other words, in order to survive, a firm must constantly expand and upgrade its capital and production levels so it can sell

enough to **keep** expanding and upgrading its capital -- i.e. "grow or die," or "production for the sake of production."

Thus it is impossible in principle for capitalism to solve the ecological crisis, because "grow or die" is inherent in its nature:

"To speak of 'limits to growth' under a capitalistic market economy is as meaningless as to speak of limits of warfare under a warrior society. The moral pieties, that are voiced today by many well-meaning environmentalists, are as naive as the moral pieties of multinationals are manipulative. Capitalism can no more be 'persuaded' to limit growth than a human being can be 'persuaded' to stop breathing. Attempts to 'green' capitalism, to make it 'ecological', are doomed by the very nature of the system as a system of endless growth." [Murray Bookchin, **Remaking Society**, pp. 93-94]

As long as capitalism exists, it will **necessarily** continue its "endless devouring of nature," until it removes the "organic preconditions for human life." For this reason there can be no compromise with capitalism: We must destroy it before it destroys us. And time is running out.

Capitalists, of course, do not accept this conclusion. Most simply ignore the evidence or view the situation through rose-coloured spectacles, maintaining that ecological problems are not as serious as they seem or that science will find a way to solve them before it's too late. Right libertarians tend to take this approach, but they also argue that a genuinely free market capitalism would provide solutions to the ecological crisis. In [section E](#) we will show why these arguments are unsound and why libertarian socialism is our best hope for preventing ecological catastrophe.

Section E - What do anarchists think causes ecological problems?

Introduction

E.1 What do eco-anarchists propose instead of capitalism?

E.1.1 Why do eco-anarchists advocate workers' control?

E.1.2 Why do eco-anarchists favour direct democracy?

E.2 Can "absolute" private property rights protect the environment?

E.3 Does economic power affect pollution controls?

E.4 Can "education" solve ecological problems under free market capitalism?

E.5 How does its need to focus on short-term profitability affect capitalism's ability to deal with the ecological crisis?

E.6 What is the population myth?

E.7 Can ethical consumerism stop the ecological crisis?

Section E - What do anarchists think causes ecological problems?

Anarchists have been at the forefront of ecological thinking and the green movement for decades. Murray Bookchin in particular has placed anarchist ideas at the centre of green debate, emphasising the **social** nature of the ecological problems we face and arguing that humanity's domination of nature is the result of domination **within** humanity itself. (See, for example **Toward an Ecological Society**). The ecological implications of many anarchist ideas (such as decentralisation, integration of industry and agriculture, and so forth) has meant that anarchists have quickly recognised the importance of ecological movements and ideas.

Precursors of eco-anarchism can be found in Peter Kropotkin's writings. For example, in his classic work **Fields, Factories and Workshops**, Kropotkin argued the case for "small is beautiful" 70 years before E. F. Schumacher coined the phrase. Through his investigations in geography and biology, Kropotkin discovered species to be interconnected with each other and with their environment. **Mutual Aid** is the classic source book on the survival value of co-operation within species, which Kropotkin regarded as the chief factor of evolution, arguing that those who claim competition is the chief factor have distorted Darwin's work. So, while a specifically "eco" anarchism did not develop until the revolutionary work done by Murray Bookchin from the 1950's onwards, anarchist theory has had a significant "proto-green" content since at least Kropotkin's time.

This section of the FAQ expands upon section D.4 (["What is the relationship between capitalism and the ecological crisis?"](#)) in which we indicated that since capitalism is based upon the principle of "growth or death," a "green" capitalism is impossible. By its very nature capitalism must expand, creating new markets, increasing production and consumption, and so invading more ecosystems, using more resources, and upsetting the interrelations and delicate balances that exist with ecosystems.

Takis Fotopoulos has argued that the main reason why the project of "greening" capitalism is just a utopian dream *"lies in a fundamental contradiction that exists between the logic and dynamic of the growth economy, on the one hand, and the attempt to condition this dynamic with qualitative interests"* on the other [*"Development or Democracy?"*, p. 82, **Society and Nature** No. 7, pp. 57-92]. Under capitalism, ethics, nature and humanity all have a price tag. And that price tag is god. This is understandable as every hierarchical social system requires a belief-system. Under feudalism, the belief-system came from the Church, whereas under capitalism, it pretends to come from science, whose biased practitioners (usually funded by the state and capital) are the new priesthood. Like the old priesthoods, only those members who produce "objective research" become famous and influential -- "objective research" being that which accepts the status quo as "natural" and produces what the elite want to hear (i.e. apologetics for capitalism and elite rule will always be praised as "objective" and "scientific" regardless of its actual scientific and factual content, the infamous "bell curve" and Malthus's "Law of Population" being classic examples). More importantly, capitalism needs science to be able to

measure and quantify everything in order to sell it. This mathematical faith is reflected in its politics and economics, where quantity is more important than quality, where 5 votes are better than 2 votes, where \$5 is better than \$2. And like all religions, capitalism needs sacrifice. In the name of "free enterprise," "economic efficiency," "stability" and "growth" it sacrifices individuality, freedom, humanity, and nature for the power and profits of the few.

Besides its alliance with the ecology movement, eco-anarchism also finds allies in the feminist and peace movements, which it regards, like the ecology movement, as implying the need for anarchist principles. Thus eco-anarchists think that global competition between nation-states is responsible not only for the devouring of nature but is also the primary cause of international military tensions, as nations seek to dominate each other by military force or the threat thereof. As international competition becomes more intense and weapons of mass destruction spread, the seeds are being sown for catastrophic global warfare involving nuclear, chemical, and/or biological weapons. Because such warfare would be the ultimate ecological disaster, eco-anarchism and the peace movement are but two aspects of the same basic project. Similarly, eco-anarchists recognise that domination of nature and male domination of women have historically gone hand in hand, so that eco-feminism is yet another aspect of eco-anarchism. Since feminism, ecology, and peace are key issues of the Green movement, anarchists believe that Greens are implicitly committed to anarchism, whether they realise it or not, and hence that they should adopt anarchist principles of direct political action rather than getting bogged down in trying to elect people to state offices.

Here we discuss some of the main themes of eco-anarchism and consider a few suggestions by non-anarchists about how to protect the environment, including the false free market capitalist claim that the answer to the ecological crisis is to privatise everything, the myth that population growth is a **cause** of ecological problems rather than the **effect** of deeper root-causes, and why green consumerism is doomed to failure. The issue of electing Green Parties to power will be addressed in section J.2.4 (["Surely voting for radical parties will be effective?"](#)) and so will be ignored here, as will the question of "single-issue" campaigns (like C.N.D. and Friends of the Earth), which will be discussed in section J.1.4 (["What attitude do anarchists take to 'single-issue' campaigns?"](#)).

For anarchists, unless we resolve the underlying contradictions within society, which stem from domination, hierarchy and a capitalist economy, ecological disruption will continue and grow, putting our Earth in increasing danger. We need to resist the system and create new values based on quality, not quantity. We must return the human factor to our alienated society before we alienate ourselves completely off the planet.

Many greens attack what they consider the "wrong ideas" of modern society, its "materialistic values" and counter-pose **new** ideas, more in tune with a green society. This approach, however, misses the point. Ideas and values do not "just happen", but are the **product** of a given set of social relationships. This means that it is not just a matter of changing our values in a way that places humanity in harmony with nature, but also of understanding the **social** and **structural** origins of the ecological crisis. Ideas and values **do** need to be challenged, but unless the authoritarian social relationships, hierarchy

and inequalities in power, i.e. the material base that produces these values and ideas, is also challenged and, more importantly, **changed** an ecological society is impossible. So unless ecologists recognise that this crisis did not develop in a social vacuum and is not the "fault" of people as **people** (as opposed to people in a hierarchical society), little can be done root out the systemic causes of the problems that we and the planet face.

E.1 What do eco-anarchists propose instead of capitalism?

In place of capitalism, eco-anarchists favour ecologically responsible forms of libertarian socialism (see [section I](#)), with an economy based on the principles of complementarity with nature; decentralisation of large-scale industries, reskilling of workers, and a return to more artisan-like modes of production; the use of environment-friendly technologies, energy sources, and products; the use of recycled raw materials and renewable resources; and worker-controlled enterprises responsive to the wishes of local community assemblies and labour councils in which decisions are made by direct democracy. (See, e.g. Murray Bookchin, **Toward and Ecological Society** and **Remaking Society**). Such an economy would be "steady-state," meaning that the rate of resource depletion would equal the rate of renewal and that it would not be subject to disastrous collapses in the absence of quantitative growth or stimulation by military spending.

As Bookchin emphasises, however, the ecological crisis stems not only from capitalism but from the principle of domination itself (see [D.4](#)) -- a principle embodied in institutional hierarchies and relations of command and obedience which pervade society at many different levels. Thus, *"[w]ithout changing the most molecular relationships in society -- notably, those between men and women, adults and children, whites and other ethnic groups, heterosexuals and gays (the list, in fact, is considerable) -- society will be riddled by domination even in a socialistic 'classless' and 'non-exploitative' form. It would be infused by hierarchy even as it celebrated the dubious virtues of 'people's democracies,' 'socialism' and the 'public ownership' of 'natural resources,' And as long as hierarchy persists, as long as domination organises humanity around a system of elites, the project of dominating nature will continue to exist and inevitably lead our planet to ecological extinction"* [**Toward an Ecological Society**, p. 76].

So, although we focus our attention below on the economic aspects of the ecological crisis and its solution, it should be kept in mind that a complete solution must be multi-dimensional, addressing all aspects of the total system of hierarchy and domination. This means that only anarchism, with its emphasis on the elimination of coercive authority in **all** areas of life, goes to the real root of the ecological crisis.

E.1.1 Why do eco-anarchists favour workers' control?

Eco-anarchists advocate workers' control of the economy as a necessary component of a steady-state economy. This means society-wide ownership of the means of production and all productive enterprises self-managed by their workers, as described further in [section I](#).

Most ecologists, even if they are not anarchists, recognise the pernicious ecological effects of the

capitalist "grow or die" principle; but unless they are also anarchists, they usually fail to make the connection between that principle and the **hierarchical form** of the typical capitalist corporation. In contrast, eco-anarchists emphasise that socially owned and worker self-managed firms, especially the type in which surpluses are shared equally among all full-time members, would be under far less pressure toward rapid expansion than the traditional capitalist firm.

The slower growth rate of co-operatives has been documented in a number of studies, which show that in the traditional capitalist firm, owners' and executives' percentage share of profits greatly increases as more employees are added to the payroll. This is because the corporate hierarchy is designed to facilitate exploitation by funnelling a disproportionate share of the surplus value produced by workers to those at the top of the pyramid (see [C.2, "Where do profits come from?"](#)) Such a design gives ownership and management a very strong incentive to expand, since, other things being equal (e.g. no recession), their income rises with every new employee hired. Hence the hierarchical form of the capitalist corporation is one of the main causes of runaway growth. [See e.g. Henry Levin "*Employment and Productivity of Producer Co-operatives*," in Robert Jackall and Henry Levin (eds.), **Worker Co-operatives in America**, UC Press, 1984; cf. David Schweickart, **Against Capitalism**].

By contrast, in an equal-share worker co-operative, the addition of more members simply means more people with whom the available pie will have to be equally divided -- a situation that immensely reduces the incentive to expand. Thus a libertarian-socialist economy will be able to function in a stationary state, requiring neither an expanding population nor technological innovation at a pace sufficient to guarantee increased production. Moreover, it will be able to switch from a growth state to a stationary state without excessive disruption. For if consumers start buying less, this will increase leisure time among producers, which will be shared by those firms affected first and then gradually spreading to other sectors. For these reasons, libertarian socialism based on producer co-operatives is essential for the type of steady-state economy necessary to solve the ecological crisis.

E.1.2 Why do eco-anarchists emphasise direct democracy?

The eco-anarchist argument for direct (participatory) democracy is that effective protection of the planet's ecosystems requires that ordinary citizens be able to take part at the grassroots level in decision-making that affects their environment, since they are more likely to favour stringent environmental safeguards than the large, polluting special interests that now dominate the "representative" system of government. Thus a solution to the ecological crisis presupposes participatory democracy in the political sphere -- a transformation that would amount to a political revolution.

However, as Bakunin emphasised, a political revolution of this nature must be preceded by a **socioeconomic** revolution based on workers' self-management. This is because the daily experience of participatory decision-making, non-authoritarian modes of organisation, and personalistic human relationships in small work groups would foster creativity, spontaneity, responsibility, independence, and respect for individuality -- the qualities needed for a directly democratic political system to function effectively.

Given the amount of time that most people spend at the workplace, the political importance of turning it into a training ground for the development of libertarian and democratic values can scarcely be overstated. As history has demonstrated, political revolutions that are not preceded by mass psychological transformation -- that is, by a deconditioning from the master/slave attitudes absorbed from the current system -- result only in the substitution of new ruling elites for the old ones (e.g. Lenin becoming the new "Tsar" and Communist Party apparatchiks becoming the new "aristocracy"). Therefore, besides having a slower growth rate, worker co-operatives with democratic self-management would lay the psychological foundations for the kind of directly democratic political system necessary to protect the biosphere. Thus "green" libertarian socialism is the only proposal radical enough to solve the ecological crisis.

In contrast, free market capitalism (an extreme example of this viewpoint being right-wing "libertarianism") not only cannot solve the ecological crisis but would in fact exacerbate it. Besides the fact that right libertarians do not propose to dismantle capitalism, which is necessarily based on "grow or die," they also do not wish to dismantle the hierarchical structure of the capitalist firm, which contributes its own greed-driven pressure for expansion, as discussed above. (Indeed, right-libertarian literature is full of arguments showing that hierarchical firms are necessary for reasons of "efficiency.") But since there would be no state regulatory apparatus to mitigate any of the negative ecological effects of capitalist expansion, "free market" capitalism would be even more environmentally malignant than the present system.

In sections E.2, to E.5 we discuss and refute some spurious free market capitalist "solutions" to the ecological crisis. Section E.7 discusses why "*green consumerism*," another basic capitalist assumption, is also doomed to failure.

F.10 Would laissez-faire capitalism be stable?

Unsurprisingly, right-libertarians combine their support for "absolute property rights" with a whole-hearted support for laissez-faire capitalism. In such a system (which they maintain, to quote Ayn Rand, is an "*unknown ideal*") everything would be private property and there would be few (if any) restrictions on "voluntary exchanges." "Anarcho"-capitalists are the most extreme of defenders of pure capitalism, urging that the state itself be privatised and no voluntary exchange made illegal (for example, children would be considered the property of their parents and it would be morally right to turn them into child prostitutes -- the child has the option of leaving home if they object).

As there have been no example of "pure" capitalism it is difficult to say whether their claims about are true (for a discussion of a close approximation see the section [F.10.3](#)). This section of the FAQ is an attempt to discover whether such a system would be stable or whether it would be subject to the usual booms and slumps. Before starting we should note that there is some disagreement within the right-libertarian camp itself on this subject (although instead of stability they usually refer to "equilibrium" -- which is an economics term meaning that all of a societies resources are fully utilised).

In general terms, most right-Libertarians' reject the concept of equilibrium as such and instead stress that the economy is inherently a dynamic (this is a key aspect of the Austrian school of economics). Such a position is correct, of course, as such noted socialists as Karl Marx and Michal Kalecki and capitalist economists as Keynes recognised long ago. There seems to be two main schools of thought on the nature of disequilibrium. One, inspired by von Mises, maintains that the actions of the entrepreneur/capitalist results in the market co-ordinating supply and demand and another, inspired by Joseph Schumpeter, who question whether markets co-ordinate because entrepreneurs are constantly innovating and creating new markets, products and techniques.

Of course both actions happen and we suspect that the differences in the two approaches are not important. The important thing to remember is that "anarcho"-capitalists and right-libertarians in general reject the notion of equilibrium -- but when discussing their utopia they do not actually indicate this! For example, most "anarcho"-capitalists will maintain that the existence of government (and/or unions) causes unemployment by either stopping capitalists investing in new lines of industry or forcing up the price of labour above its market clearing level (by, perhaps, restricting immigration, minimum wages, taxing profits). Thus, we are assured, the worker will be better off in "pure" capitalism because of the unprecedented demand for labour it will create. However, full employment of labour is an equilibrium in economic terms and that, remember, is impossible due to the dynamic nature of the system. When pressed, they will usually admit there will be periods of unemployment as the market adjusts or that full unemployment actually means under a certain percentage of unemployment. Thus, if you (rightly) reject the notion of equilibrium you also reject the idea of full employment and so the labour market becomes a buyers market and labour is at a massive disadvantage.

The right-libertarian case is based upon logical deduction, and the premises required to show that laissez-faire will be stable are somewhat incredible. If banks do not set the wrong interest rate, if companies do not extend too much trade credit, if workers are willing to accept (real wage related) pay cuts, if workers altruistically do not abuse their market power in a fully employed society, if interest rates provide the correct information, if capitalists predict the future relatively well, if banks and companies do not suffer from isolation paradoxes, then, perhaps, laissez-faire will be stable.

So, will laissez-faire capitalism be stable? Let us see by analysing the assumptions of right-libertarianism -- namely that there will be full employment and that a system of private banks will stop the business cycle. We will start on the banking system first (in section [F.10.1](#)) followed by the effects of the labour market on economic stability (in section [F.10.2](#)). Then we will indicate, using the example of 19th century America, that actually existing ("impure") laissez-faire was very unstable.

Explaining booms and busts by state action plays an ideological convenience as it exonerates market processes as the source of instability within capitalism. We hope to indicate in the next two sections why the business cycle is inherent in the system (see also sections [C.7](#), [C.8](#) and [C.9](#)).

F.10.1 Would privatising banking make capitalism stable?

It is claimed that the existence of the state (or, for minimal statist, government policy) is the cause of the business cycle (recurring economic booms and slumps). This is because the government either sets interest rates too low or expands the money supply (usually by easing credit restrictions and lending rates, sometimes by just printing fiat money). This artificially increases investment as capitalists take advantage of the artificially low interest rates. The real balance between savings and investment is broken, leading to over-investment, a drop in the rate of profit and so a slump (which is quite socialist in a way, as many socialists also see over-investment as the key to understanding the business cycle, although they obviously attribute the slump to different causes -- namely the nature of capitalist production, not that the credit system does not play its part -- see section [C.7](#)).

In the words of Austrian Economist W. Duncan Reekie, "*[t]he business cycle is generated by monetary expansion and contraction . . . When new money is printed it appears as if the supply of savings has increased. Interest rates fall and businessmen are misled into borrowing additional funds to finance extra investment activity . . . This would be of no consequence if it had been the outcome of [genuine saving] . . . -but the change was government induced. The new money reaches factor owners in the form of wages, rent and interest . . . the factor owners will then spend the higher money incomes in their existing consumption:investment proportions . . . Capital goods industries will find their expansion has been in error and malinvestments have been incoordinated.*" [**Markets, Entrepreneurs and Liberty**, pp. 68-9]

In other words, there has been "*wasteful mis-investment due to government interference with the market.*" [**Op. Cit.**, p. 69] In response to this (negative) influence in the workings of the market, it is

suggested by right-libertarians that a system of private banks should be used and that interest rates are set by them, via market forces. In this way an interest rate that matches the demand and supply for savings will be reached and the business cycle will be no more. By truly privatising the credit market, it is hoped by the business cycle will finally stop.

Unsurprisingly, this particular argument has its weak points and in this section of the FAQ we will try to show exactly why this theory is wrong.

Let us start with Reekie's starting point. He states that the "*main problem*" of the slump is "*why is there suddenly a 'cluster' of business errors? Businessmen and entrepreneurs are market experts (otherwise they would not survive) and why should they all make mistakes simultaneously?*" [Op. Cit., p. 68] It is this "*cluster*" of mistakes that the Austrians' take as evidence that the business cycle comes from outside the workings of the market (i.e. is exogenous in nature). Reekie argues that an "*error cluster only occurs when all entrepreneurs have received the wrong signals on potential profitability, and all have received the signals simultaneously through government interference with the money supply.*" [Op. Cit., p. 74] But is this **really** the case?

The simple fact is that groups of (rational) individuals can act in the same way based on the same information and this can lead to a collective problem. For example, we do not consider it irrational that everyone in a building leaves it when the fire alarm goes off and that the flow of people can cause hold-ups at exits. Neither do we think that it is unusual that traffic jams occur, after all those involved are all trying to get to work (i.e. they are reacting to the same desire). Now, is it so strange to think that capitalists who all see the same opportunity for profit in a specific market decide to invest in it? Or that the aggregate outcome of these individually rational decisions may be irrational (i.e. cause a glut in the market)?

In other words, a "cluster" of business failures may come about because a group of capitalists, acting in isolation, over-invest in a given market. They react to the same information (namely super profits in market X), arrange loans, invest and produce commodities to meet demand in that market. However, the aggregate result of these individually rational actions is that the aggregate supply far exceeds demand, causing a slump in that market and, perhaps, business failures. The slump in this market (and the potential failure of some firms) has an impact on the companies that supplied them, the companies that are dependent on their employees wages/demand, the banks that supplied the credit and so forth. The accumulative impact of this slump (or failures) on the chain of financial commitments of which they are but one link can be large and, perhaps, push an economy into general depression. Thus the claim that it is something external to the system that causes depression is flawed.

It could be claimed the interest rate is the problem, that it does not accurately reflect the demand for investment or relate it to the supply of savings. But, as we argued in section [C.8](#), it is not at all clear that the interest rate provides the necessary information to capitalists. They need investment information for their specific industry, but the interest rate is cross-industry. Thus capitalists in market X do not know if the investment in market X is increasing and so this lack of information can easily cause "mal-

investment" as over-investment (and so over-production) occurs. As they have no way of knowing what the investment decisions of their competitors are or how these decisions will affect an already unknown future, capitalists may over-invest in certain markets and the net effects of this aggregate mistake can expand throughout the whole economy and cause a general slump. In other words, a cluster of business failures can be accounted for by the workings of the market itself and **not** the (existence of) government.

This is **one** possible reason for an internally generated business cycle but that is not the only one. Another is the role of class struggle which we discuss in the [next section](#) and yet another is the endogenous nature of the money supply itself. This account of money (proposed strongly by, among others, the post-Keynesian school) argues that the money supply is a function of the demand for credit, which itself is a function of the level of economic activity. In other words, the banking system creates as much money as people need and any attempt to control that creation will cause economic problems and, perhaps, crisis (interestingly, this analysis has strong parallels with mutualist and individualist anarchist theories on the causes of capitalist exploitation and the business cycle). Money, in other words, emerges from **within** the system and so the right-libertarian attempt to "blame the state" is simply wrong.

Thus what is termed "credit money" (created by banks) is an essential part of capitalism and would exist without a system of central banks. This is because money is created from within the system, in response to the needs of capitalists. In a word, money is endogenous and credit money an essential part of capitalism.

Right-libertarians do not agree. Reekie argues that "*[o]nce fractional reserve banking is introduced, however, the supply of money substitutes will include fiduciary media. The ingenuity of bankers, other financial intermediaries and the endorsement and **guaranteeing of their activities by governments and central banks** has ensured that the quantity of fiat money is immense.*" [Op. Cit., p. 73]

Therefore, what "anarcho"-capitalists and other right-libertarians seem to be actually complaining about when they argue that "state action" creates the business cycle by creating excess money is that the state **allows** bankers to meet the demand for credit by creating it. This makes sense, for the first fallacy of this sort of claim is how could the state **force** bankers to expand credit by loaning more money than they have savings. And this seems to be the normal case within capitalism -- the central banks accommodate bankers activity, they do not force them to do it. Alan Holmes, a senior vice president at the New York Federal Reserve, stated that:

"In the real world, banks extend credit, creating deposits in the process, and look for the reserves later. The question then becomes one of whether and how the Federal Reserve will accommodate the demand for reserves. In the very short run, the Federal Reserve has little or no choice about accommodating that demand, over time, its influence can obviously be felt." [quoted by Doug Henwood, **Wall Street**, p. 220]

(Although we must stress that central banks are **not** passive and do have many tools for affecting the supply of money. For example, central banks can operate "tight" money policies which can have

significant impact on an economy and, via creating high enough interest rates, the demand for money.)

It could be argued that because central banks exist, the state creates an "environment" which bankers take advantage off. By not being subject to "free market" pressures, bankers could be tempted to make more loans than they would otherwise in a "pure" capitalist system (i.e. create credit money). The question arises, would "pure" capitalism generate sufficient market controls to stop banks loaning in excess of available savings (i.e. eliminate the creation of credit money/fiduciary media).

It is to this question we now turn.

As noted above, the demand for credit is generated from **within** the system and the comments by Holmes reinforce this. Capitalists seek credit in order to make money and banks create it precisely because they are also seeking profit. What right-libertarians actually object to is the government (via the central bank) **accommodating** this creation of credit. If only the banks could be forced to maintain a savings to loans ration of one, then the business cycle would stop. But is this likely? Could market forces ensure that bankers pursue such a policy? We think not -- simply because the banks are profit making institutions. As post-Keynesianist Hyman Minsky argues, "*[b]ecause bankers live in the same expectational climate as businessmen, profit-seeking bankers will find ways of accommodating their customers. . . . Banks and bankers are not passive managers of money to lend or to invest; they are in business to maximise profits. . . .*" [quoted by L. Randall Wray, **Money and Credit in Capitalist Economies**, p. 85]

This is recognised by Reekie, in passing at least (he notes that "*fiduciary media could still exist if bankers offered them and clients accepted them*" [Op. Cit., p. 73]). Bankers will tend to try and accommodate their customers and earn as much money as possible. Thus Charles P. Kindleberger comments that monetary expansion "*is systematic and endogenous rather than random and exogenous*" seem to fit far better the reality of capitalism than the Austrian and right-libertarian viewpoint [**Manias, Panics, and Crashes**, p. 59] and post-Keynesian L. Randall Wray argues that "*the money supply . . . is more obviously endogenous in the monetary systems which predate the development of a central bank.*" [Op. Cit., p. 150]

In other words, the money supply cannot be directly controlled by the central bank since it is determined by private decisions to enter into debt commitments to finance spending. Given that money is generated from **within** the system, can market forces ensure the non-expansion of credit (i.e. that the demand for loans equals the supply of savings)? To begin to answer this question we must note that investment is "*essentially determined by expected profitability.*" [Philip Arestis, **The Post-Keynesian Approach to Economics**, p. 103] This means that the actions of the banks cannot be taken in isolation from the rest of the economy. Money, credit and banks are an essential part of the capitalist system and they cannot be artificially isolated from the expectations, pressures and influences of that system.

Let us assume that the banks desire to maintain a loans to savings ratio of one and try to adjust their interest rates accordingly. Firstly, changes in the rate of interest "*produce only a very small, if any,*

movement in business investment" according to empirical evidence [**Op. Cit.**, pp. 82-83] and that *"the demand for credit is extremely inelastic with respect to interest rates."* [L. Randall Wray, **Op. Cit.**, p. 245] Thus, to keep the supply of savings in line with the demand for loans, interest rates would have to increase greatly (indeed, trying to control the money supply by controlling the monetary bases in this way will only lead to very big fluctuations in interest rates). And increasing interest rates has a couple of paradoxical effects.

According to economists Joseph Stiglitz and Andrew Weiss (in *"Credit Rationing in Markets with Imperfect Knowledge"*, **American Economic Review**, no. 71, pp. 393-410) interest rates are subject to what is called the *"lemons problem"* (asymmetrical information between buyer and seller). Stiglitz and Weiss applied the *"lemons problem"* to the credit market and argued (and unknowingly repeated Adam Smith) that at a given interest rate, lenders will earn lower return by lending to bad borrowers (because of defaults) than to good ones. If lenders try to increase interest rates to compensate for this risk, they may chase away good borrowers, who are unwilling to pay a higher rate, while perversely not chasing away incompetent, criminal, or malignantly optimistic borrowers. This means that an increase in interest rates may actually increase the possibilities of crisis, as more loans may end up in the hands of defaulters.

This gives banks a strong incentive to keep interest rates lower than they otherwise could be. Moreover, *"increases in interest rates make it more difficult for economic agents to meet their debt repayments"* [Philip Arestis, **Op. Cit.**, pp. 237-8] which means when interest rates **are** raised, defaults will increase and place pressures on the banking system. At high enough short-term interest rates, firms find it hard to pay their interest bills, which cause/increase cash flow problems and so *"[s]harp increases in short term interest rates . . . leads to a fall in the present value of gross profits after taxes (quasi-rents) that capital assets are expected to earn."* [Hyman Minsky, **Post-Keynesian Economic Theory**, p. 45]

In addition, *"production of most investment goods is undertaken on order and requires time for completion. A rise in interest rates is not likely to cause firms to abandon projects in the process of production . . . This does not mean . . . that investment is completely unresponsive to interest rates. A large increase in interest rates causes a 'present value reversal', forcing the marginal efficiency of capital to fall below the interest rate. If the long term interest rate is also pushed above the marginal efficiency of capital, the project may be abandoned."* [Wray, **Op. Cit.**, pp. 172-3] In other words, investment takes **time** and there is a lag between investment decisions and actual fixed capital investment. So if interest rates vary during this lag period, initially profitable investments may become white elephants.

As Michal Kalecki argued, the rate of interest must be lower than the rate of profit otherwise investment becomes pointless. The incentive for a firm to own and operate capital is dependent on the prospective rate of profit on that capital relative to the rate of interest at which the firm can borrow at. The higher the interest rate, the less promising investment becomes.

If investment is unresponsive to all but very high interest rates (as we indicated above), then a privatised banking system will be under intense pressure to keep rates low enough to maintain a boom (by, perhaps, creating credit above the amount available as savings). And if it does this, over-investment and crisis is the eventual outcome. If it does not do this and increases interest rates then consumption and investment will dry up as interest rates rise and the defaulters (honest and dishonest) increase and a crisis will eventually occur.

This is because increasing interest rates may increase savings **but** it also reduce consumption (*"high interest rates also deter both consumers and companies from spending, so that the domestic economy is weakened and unemployment rises"* [Paul Ormerod, **The Death of Economics**, p. 70]). This means that firms can face a drop off in demand, causing them problems and (perhaps) leading to a lack of profits, debt repayment problems and failure. An increase in interest rates also reduces demand for investment goods, which also can cause firms problems, increase unemployment and so on. So an increase in interest rates (particularly a sharp rise) could reduce consumption and investment (i.e. reduce aggregate demand) and have a ripple effect throughout the economy which could cause a slump to occur.

In other words, interest rates and the supply and demand of savings/loans they are meant to reflect may not necessarily move an economy towards equilibrium (if such a concept is useful). Indeed, the workings of a "pure" banking system without credit money may increase unemployment as demand falls in both investment and consumption in response to high interest rates and a general shortage of money due to lack of (credit) money resulting from the "tight" money regime implied by such a regime (i.e. the business cycle would still exist). This was the case of the failed Monetarist experiments on the early 1980s when central banks in America and Britain tried to pursue a "tight" money policy. The "tight" money policy did not, in fact, control the money supply. All it did do was increase interest rates and lead to a serious financial crisis and a deep recession (as Wray notes, *"the central bank uses tight money policies to raise interest rates"* [Op. Cit., p. 262]). This recession, we must note, also broke the backbone of working class resistance and the unions in both countries due to the high levels of unemployment it generated. As intended, we are sure.

Such an outcome would not surprise anarchists, as this was a key feature of the Individualist and Mutualist Anarchists' arguments against the "money monopoly" associated with specie money. They argued that the "money monopoly" created a "tight" money regime which reduced the demand for labour by restricting money and credit and so allowed the exploitation of labour (i.e. encouraged wage labour) and stopped the development of non-capitalist forms of production. Thus Lysander Spooner's comments that workers need *"money capital to enable them to buy the raw materials upon which to bestow their labour, the implements and machinery with which to labour . . . Unless they get this capital, they must all either work at a disadvantage, or not work at all. A very large portion of them, to save themselves from starvation, have no alternative but to sell their labour to others . . ."* [A Letter to Grover Cleveland, p. 39] It is interesting to note that workers **did** do well during the 1950s and 1960s under a "liberal" money regime than they did under the "tighter" regimes of the 1980s and 1990s.

We should also note that an extended period of boom will encourage banks to make loans more freely. According to Minsky's *"financial instability model"* crisis (see *"The Financial Instability Hypothesis"* in

Post-Keynesian Economic Theory for example) is essentially caused by risky financial practices during periods of financial tranquillity. In other words, *"stability is destabilising."* In a period of boom, banks are happy and the increased profits from companies are flowing into their vaults. Over time, bankers note that they can use a reserve system to increase their income and, due to the general upward swing of the economy, consider it safe to do so (and given that they are in competition with other banks, they may provide loans simply because they are afraid of losing customers to more flexible competitors). This increases the instability within the system (as firms increase their debts due to the flexibility of the banks) and produces the possibility of crisis if interest rates are increased (because the ability of business to fulfil their financial commitments embedded in debts deteriorates).

Even if we assume that interest rates **do** work as predicted in theory, it is false to maintain that there is one interest rate. This is not the case. *"Concentration of capital leads to unequal access to investment funds, which obstructs further the possibility of smooth transitions in industrial activity. Because of their past record of profitability, large enterprises have higher credit ratings and easier access to credit facilities, and they are able to put up larger collateral for a loan."* [Michael A. Bernstein, **The Great Depression**, p. 106] As we noted in section [C.5.1](#), the larger the firm, the lower the interest rate they have to pay. Thus banks routinely lower their interest rates to their best clients even though the future is uncertain and past performance cannot and does not indicate future returns. Therefore it seems a bit strange to maintain that the interest rate will bring savings and loans into line if there are different rates being offered.

And, of course, private banks cannot affect the underlying fundamentals that drive the economy -- like productivity, working class power and political stability -- any more than central banks (although central banks can influence the speed and gentleness of adjustment to a crisis).

Indeed, given a period of full employment a system of private banks may actually speed up the coming of a slump. As we argue in the [next section](#), full employment results in a profits squeeze as firms face a tight labour market (which drives up costs) and, therefore, increased workers' power at the point of production and in their power of exit. In a central bank system, capitalists can pass on these increasing costs to consumers and so maintain their profit margins for longer. This option is restricted in a private banking system as banks would be less inclined to devalue their money. This means that firms will face a profits squeeze sooner rather than later, which will cause a slump as firms cannot make ends meet. As Reekie notes, inflation *"can temporarily reduce employment by postponing the time when misdirected labour will be laid off"* but as Austrians (like Monetarists) think *"inflation is a monetary phenomenon"* he does not understand the real causes of inflation and what they imply for a "pure" capitalist system [Op. Cit., p. 67, p. 74]. As Paul Ormerod points out *"the claim that inflation is always and everywhere purely caused by increases in the money supply, and that there the rate of inflation bears a stable, predictable relationship to increases in the money supply is ridiculous."* And he notes that *"[i]ncreases in the rate of inflation tend to be linked to falls in unemployment, and vice versa"* which indicates its **real** causes -- namely in the balance of class power and in the class struggle. [**The Death of Economics**, p. 96, p. 131]

Moreover, if we do take the Austrian theory of the business cycle at face value we are drawn to conclusion that in order to finance investment savings must be increased. But to maintain or increase the stock of loanable savings, inequality must be increased. This is because, unsurprisingly, rich people save a larger proportion of their income than poor people and the proportion of profits saved are higher than the proportion of wages. But increasing inequality (as we argued in section [F.3.1](#)) makes a mockery of right-libertarian claims that their system is based on freedom or justice.

This means that the preferred banking system of "anarcho"-capitalism implies increasing, not decreasing, inequality within society. Moreover, most firms (as we indicated in section [C.5.1](#)) fund their investments with their own savings which would make it hard for banks to loan these savings out as they could be withdrawn at any time. This could have serious implications for the economy, as banks refuse to fund new investment simply because of the uncertainty they face when accessing if their available savings can be loaned to others (after all, they can hardly loan out the savings of a customer who is likely to demand them at any time). And by refusing to fund new investment, a boom could falter and turn to slump as firms do not find the necessary orders to keep going.

So, would market forces create "sound banking"? The answer is probably not. The pressures on banks to make profits come into conflict with the need to maintain their savings to loans ration (and so the confidence of their customers). As Wray argues, *"as banks are profit seeking firms, they find ways to increase their liabilities which don't entail increases in reserve requirements"* and *"[i]f banks share the profit expectations of prospective borrowers, they can create credit to allow [projects/investments] to proceed."* [**Op. Cit.**, p. 295, p. 283] This can be seen from the historical record. As Kindleberger notes, *"the market will create new forms of money in periods of boom to get around the limit"* imposed on the money supply [**Op. Cit.**, p. 63]. Trade credit is one way, for example. Under the Monetarist experiments of 1980s, there was *"deregulation and central bank constraints raised interest rates and created a moral hazard -- banks made increasingly risky loans to cover rising costs of issuing liabilities. Rising competition from nonbanks and tight money policy forced banks to lower standards and increase rates of growth in an attempt to 'grow their way to profitability'"* [**Op. Cit.**, p. 293]

Thus credit money ("fiduciary media") is an attempt to overcome the scarcity of money within capitalism, particularly the scarcity of specie money. The pressures that banks face within "actually existing" capitalism would still be faced under "pure" capitalism. It is likely (as Reekie acknowledges) that credit money would still be created in response to the demands of business people (although not at the same level as is currently the case, we imagine). The banks, seeking profits themselves and in competition for customers, would be caught between maintaining the value of their business (i.e. their money) and the needs to maximise profits. As a boom develops, banks would be tempted to introduce credit money to maintain it as increasing the interest rate would be difficult and potentially dangerous (for reasons we noted above). Thus, if credit money is not forthcoming (i.e. the banks stick to the Austrian claims that loans must equal savings) then the rise in interest rates required will generate a slump. If it is forthcoming, then the danger of over-investment becomes increasingly likely. All in all, the business cycle is part of capitalism and **not** caused by "external" factors like the existence of government.

As Reekie notes, to Austrians *"ignorance of the future is endemic"* [Op. Cit., p. 117] but you would be forgiven for thinking that this is not the case when it comes to investment. An individual firm cannot know whether its investment project will generate the stream of returns necessary to meet the stream of payment commitments undertaken to finance the project. And neither can the banks who fund those projects. Even **if** a bank does not get tempted into providing credit money in excess of savings, it cannot predict whether other banks will do the same or whether the projects it funds will be successful. Firms, looking for credit, may turn to more flexible competitors (who practice reserve banking to some degree) and the inflexible bank may see its market share and profits decrease. After all, commercial banks *"typically establish relations with customers to reduce the uncertainty involved in making loans. Once a bank has entered into a relationship with a customer, it has strong incentives to meet the demands of that customer."* [Wray, Op. Cit., p. 85]

There are example of fully privatised banks. For example, in the United States *"which was without a central bank after 1837"* "the major banks in New York were in a bind between their roles as profit seekers, which made them contributors to the instability of credit, and as possessors of country deposits against whose instability they had to guard." [Kindleberger, Op. Cit., p. 85]

In Scotland, the banks were unregulated between 1772 and 1845 but *"the leading commercial banks accumulated the notes of lessor ones, as the Second Bank of the United States did contemporaneously in [the USA], ready to convert them to specie if they thought they were getting out of line. They served, that is, as an informal controller of the money supply. For the rest, as so often, historical evidence runs against strong theory, as demonstrated by the country banks in England from 1745 to 1835, wildcat banking in Michigan in the 1830s, and the latest experience with bank deregulation in Latin America."* [Op. Cit., p. 82] And we should note there were a few banking "wars" during the period of deregulation in Scotland which forced a few of the smaller banks to fail as the bigger ones refused their money and that there was a major bank failure in the Ayr Bank.

Kindleberger argues that central banking *"arose to impose control on the instability of credit"* and did not cause the instability which right-libertarians maintain it does. And as we note in section [F.10.3](#), the USA suffered massive economic instability during its period without central banking. Thus, **if** credit money **is** the cause of the business cycle, it is likely that a "pure" capitalism will still suffer from it just as much as "actually existing" capitalism (either due to high interest rates or over-investment).

In general, as the failed Monetarist experiments of the 1980s prove, trying to control the money supply is impossible. The demand for money is dependent on the needs of the economy and any attempt to control it will fail (and cause a deep depression, usually via high interest rates). The business cycle, therefore, is an endogenous phenomenon caused by the normal functioning of the capitalist economic system. Austrian and right-libertarian claims that *"slump flows boom, but for a totally unnecessary reason: government inspired mal-investment"* [Reekie, Op. Cit., p. 74] are simply wrong. Over-investment **does** occur, but it is **not** "inspired" by the government. It is "inspired" by the banks need to make profits from loans and from businesses need for investment funds which the banks accommodate. In other words, by the nature of the capitalist system.

F.10.2 How does the labour market effect capitalism?

In many ways, the labour market is the one that affects capitalism the most. The right-libertarian assumption (like that of mainstream economics) is that markets clear and, therefore, the labour market will also clear. As this assumption has rarely been proven to be true in actuality (i.e. periods of full employment within capitalism are few and far between), this leaves its supporters with a problem -- reality contradicts the theory.

The theory predicts full employment but reality shows that this is not the case. Since we are dealing with logical deductions from assumptions, obviously the theory cannot be wrong and so we must identify external factors which cause the business cycle (and so unemployment). In this way attention is diverted away from the market and its workings -- after all, it is assumed that the capitalist market works -- and onto something else. This "something else" has been quite a few different things (most ridiculously, sun spots in the case of one of the founders of marginalist economics, William Stanley Jevons). However, these days most pro-free market capitalist economists and right-libertarians have now decided it is the state.

In this section of the FAQ we will present a case that maintains that the assumption that markets clear is false at least for one, unique, market -- namely, the market for labour. As the fundamental assumption underlying "free market" capitalism is false, the logically consistent superstructure built upon comes crashing down. Part of the reason why capitalism is unstable is due to the commodification of labour (i. e. people) and the problems this creates. The state itself can have positive and negative impacts on the economy, but removing it or its influence will not solve the business cycle.

Why is this? Simply due to the nature of the labour market.

Anarchists have long realised that the capitalist market is based upon inequalities and changes in power. Proudhon argued that "*[t]he manufacturer says to the labourer, 'You are as free to go elsewhere with your services as I am to receive them. I offer you so much.'* The merchant says to the customer, '*Take it or leave it; you are master of your money, as I am of my goods. I want so much.'* Who will yield? The weaker." He, like all anarchists, saw that domination, oppression and exploitation flow from inequalities of market/economic power and that the "*power of invasion lies in superior strength.*" [**What is Property?**, p. 216, p. 215]

This applies with greatest force to the labour market. While mainstream economics and right-libertarian variations of it refuse to acknowledge that the capitalist market is based upon hierarchy and power, anarchists (and other socialists) do not share this opinion. And because they do not share this understanding with anarchists, right-libertarians will never be able to understand capitalism or its dynamics and development. Thus, when it comes to the labour market, it is essential to remember that the balance of power within it is the key to understanding the business cycle. Thus the economy must be understood as a system of power.

So how does the labour market effect capitalism? Let us consider a growing economy, on that is coming out of a recession. Such a growing economy stimulates demand for employment and as unemployment falls, the costs of finding workers increase and wage and condition demands of existing workers intensify. As the economy is growing and labour is scarce, the threat associated with the hardship of unemployment is weakened. The share of profits is squeezed and in reaction to this companies begin to cut costs (by reducing inventories, postponing investment plans and laying off workers). As a result, the economy moves into a downturn. Unemployment rises and wage demands are moderated. Eventually, this enables the share of profits first of all to stabilise, and then rise. Such an *"interplay between profits and unemployment as the key determinant of business cycles"* is *"observed in the empirical data."* [Paul Ormerod, **The Death of Economics**, p. 188]

Thus, as an economy approaches full employment the balance of power on the labour market changes. The sack is no longer that great a threat as people see that they can get a job elsewhere easily. Thus wages and working conditions increase as companies try to get new (and keep) existing employees and output is harder to maintain. In the words of economist William Lazonick, labour *"that is able to command a higher price than previously because of the appearance of tighter labour markets is, by definition, labour that is highly mobile via the market. And labour that is highly mobile via the market is labour whose supply of effort is difficult for managers to control in the production process. Hence, the advent of tight labour markets generally results in more rapidly rising average costs . . . as well as upward shifts in the average cost curve. . ."* [**Business Organisation and the Myth of the Market Economy**, p. 106]

In other words, under conditions of full-employment *"employers are in danger of losing the upper hand."* [Juliet B. Schor, **The Overworked American**, p. 75] Schor argues that *"employers have a structural advantage in the labour market, because there are typically more candidates ready and willing to endure this work marathon [of long hours] than jobs for them to fill."* [p. 71] Thus the labour market is usually a buyers market, and so the sellers have to compromise. In the end, workers adapt to this inequality of power and instead of getting what they want, they want what they get.

But under full employment this changes. As we argued in section [B.4.4](#) and section [C.7](#), in such a situation it is the bosses who have to start compromising. And they do not like it. As Schor notes, America *"has never experienced a sustained period of full employment. The closest we have gotten is the late 1960s, when the overall unemployment rate was under 4 percent for four years. But that experience does more to prove the point than any other example. The trauma caused to business by those years of a tight labour market was considerable. Since then, there has been a powerful consensus that the nation cannot withstand such a low rate of unemployment."* [**Op. Cit.**, pp. 75-76]

So, in other words, full employment is not good for the capitalist system due to the power full employment provides workers. Thus unemployment is a necessary requirement for a successful capitalist economy and not some kind of aberration in an otherwise healthy system. Thus "anarcho"-capitalist claims that "pure" capitalism will soon result in permanent full employment are false. Any moves towards full employment will result in a slump as capitalists see their profits squeezed from

below by either collective class struggle or by individual mobility in the labour market.

This was recognised by Individualist Anarchists like Benjamin Tucker, who argued that mutual banking would *"give an unheard of impetus to business, and consequently create an unprecedented demand for labour, -- a demand which would always be in excess of the supply, directly contrary of the present condition of the labour market."* [**The Anarchist Reader**, pp. 149-150] In other words, full employment would end capitalist exploitation, drive non-labour income to zero and ensure the worker the full value of her labour -- in other words, end capitalism. Thus, for most (if not all) anarchists the exploitation of labour is only possible when unemployment exists and the supply of labour exceeds the demand for it. Any move towards unemployment will result in a profits squeeze and either the end of capitalism or an economic slump.

Indeed, as we argued in the [last section](#), the extended periods of (approximately) full employment until the 1960s had the advantage that any profit squeeze could (in the short run anyway) be passed onto working class people in the shape of inflation. As prices rise, labour is made cheaper and profits margins supported. This option is restricted under a "pure" capitalism (for reasons we discussed in the [last section](#)) and so "pure" capitalism will be affected by full employment faster than "impure" capitalism.

As an economy approaches full employment, *"hiring new workers suddenly becomes much more difficult. They are harder to find, cost more, and are less experienced. Such shortages are extremely costly for a firm."* [Schor, **Op. Cit.**, p. 75] This encourages a firm to pass on these rises to society in the form of price rises, so creating inflation. Workers, in turn, try to maintain their standard of living. *"Every general increase in labour costs in recent years,"* note J. Brecher and J. Costello in the late 1970s, *"has followed, rather than preceded, an increase in consumer prices. Wage increases have been the result of workers' efforts to catch up after their incomes have already been eroded by inflation. Nor could it easily be otherwise. All a businessman has to do to raise a price . . . [is to] make an announcement. . . . Wage rates . . . are primarily determined by contracts"* and so cannot be easily adjusted in the short term. [**Common Sense for Bad Times**, p, 120]

These full employment pressures will still exist with "pure" capitalism (and due to the nature of the banking system will not have the safety value of inflation). This means that periodic profit squeezes will occur, due to the nature of a tight labour market and the increased power of workers this generates. This in turn means that a "pure" capitalism will be subject to periods of unemployment (as we argued in section [C.9](#)) and so still have a business cycle. This is usually acknowledged by right-libertarians in passing, although they seem to think that this is purely a "short-term" problem (it seems a strange "short-term" problem that continually occurs).

But such an analysis is denied by right-libertarians. For them government action, combined with the habit of many labour unions to obtain higher than market wage rates for their members, creates and exacerbates mass unemployment. This flows from the deductive logic of much capitalist economics. The basic assumption of capitalism is that markets clear. So if unemployment exists then it can only be because the price of labour (wages) is too high (Austrian Economist W. Duncan Reekie argues that

unemployment will *"disappear provided real wages are not artificially high"* [**Markets, Entrepreneurs and Liberty**, p. 72]).

Thus the assumption provokes the conclusion -- unemployment is caused by an unclearing market as markets always clear. And the cause for this is either the state or unions. But what if the labour market **cannot** clear without seriously damaging the power and profits of capitalists? What if unemployment is required to maximise profits by weakening labours' bargaining position on the market and so maximising the capitalists power? In that case unemployment is caused by capitalism, not by forces external to it.

However, let us assume that the right-libertarian theory is correct. Let us assume that unemployment is all the fault of the selfish unions and that a job-seeker *"who does not want to wait will always get a job in the unhampered market economy."* [von Mises, **Human Action**, p. 595]

Would crushing the unions reduce unemployment? Let us assume that the unions have been crushed and government has been abolished (or, at the very least, become a minimum state). The aim of the capitalist class is to maximise their profits and to do this they invest in labour saving machinery and otherwise attempt to increase productivity. But increasing productivity means that the prices of goods fall and falling prices mean increasing real wages. It is high real wages that, according to right-libertarians, that cause unemployment. So as a reward for increasing productivity, workers will have to have their money wages cut in order to stop unemployment occurring! For this reason some employers might refrain from cutting wages in order to avoid damage to morale - potentially an important concern.

Moreover, wage contracts involve **time** -- a contract will usually agree a certain wage for a certain period. This builds in rigidity into the market, wages cannot be adjusted as quickly as other commodity prices. Of course, it could be argued that reducing the period of the contract and/or allowing the wage to be adjusted could overcome this problem. However, if we reduce the period of the contract then workers are at a suffer disadvantage as they will not know if they have a job tomorrow and so they will not be able to easily plan their future (an evil situation for anyone to be in). Moreover, even without formal contracts, wage renegotiation can be expensive. After all, it takes time to bargain (and time is money under capitalism) and wage cutting can involve the risk of the loss of mutual good will between employer and employee. And would **you** give your boss the power to "adjust" your wages as he/she thought was necessary? To do so would imply an altruistic trust in others not to abuse their power.

Thus a "pure" capitalism would be constantly seeing employment increase and decrease as productivity levels change. There exist important reasons why the labour market need not clear which revolve around the avoidance/delaying of wage cuts by the actions of capitalists themselves. Thus, given a choice between cutting wages for all workers and laying off some workers without cutting the wages of the remaining employees, it is unsurprising that capitalists usually go for the later. After all, the sack is an important disciplining device and firing workers can make the remaining employees more inclined to work harder and be more obedient.

And, of course, many employers are not inclined to hire over-qualified workers. This is because, once the economy picks up again, their worker has a tendency to move elsewhere and so it can cost them time and money finding a replacement and training them. This means that involuntary unemployment can easily occur, so reducing tendencies towards full employment even more. In addition, one of the assumptions of the standard marginalist economic model is one of decreasing returns to scale. This means that as employment increases, costs rise and so prices also rise (and so real wages fall). But in reality many industries have **increasing** returns to scale, which means that as production increases unit costs fall, prices fall and so real wages rise. Thus in such an economy unemployment would increase simply because of the nature of the production process!

Moreover, as we argued in-depth in section [C.9](#), a cut in money wages is not a neutral act. A cut in money wages means a reduction in demand for certain industries, which may have to reduce the wages of its employees (or fire them) to make ends meet. This could produce an accumulative effect and actually **increase** unemployment rather than reduce it.

In addition, there are no "self-correcting" forces at work in the labour market which will quickly bring employment back to full levels. This is for a few reasons. Firstly, the supply of labour cannot be reduced by cutting back production as in other markets. All we can do is move to other areas and hope to find work there. Secondly, the supply of labour can sometimes adjust to wage decreases in the wrong direction. Low wages might drive workers to offer a greater amount of labour (i.e. longer hours) to make up for any short fall (or to keep their job). This is usually termed the "*efficiency wage*" effect. Similarly, another family member may seek employment in order to maintain a given standard of living. Falling wages may cause the number of workers seeking employment to **increase**, causing a full further fall in wages and so on (and this is ignoring the effects of lowering wages on demand discussed in section [C.9](#)).

The paradox of piece work is an important example of this effect. As Schor argues, "*piece-rate workers were caught in a viscous downward spiral of poverty and overwork. . . . When rates were low, they found themselves compelled to make up in extra output what they were losing on each piece. But the extra output produced glutted the market and drove rates down further.*" [Juliet C. Schor, **The Overworked American**, p, 58]

Thus, in the face of reducing wages, the labour market may see an accumulative move away from (rather than towards) full employment. The right-libertarian argument is that unemployment is caused by real wages being too high which in turn flows from the assumption that markets clear. If there is unemployment, then the price of the commodity labour is too high -- otherwise supply and demand would meet and the market clear. But if, as we argued above, unemployment is essential to discipline workers then the labour market **cannot** clear except for short periods. If the labour market clears, profits are squeezed. Thus the claim that unemployment is caused by "too high" real wages is false (and as we argue in section [C.9](#), cutting these wages will result in deepening any slump and making recovery longer to come about).

In other words, the assumption that the labour market must clear is false, as is any assumption that

reducing wages will tend to push the economy quickly back to full employment. The nature of wage labour and the "commodity" being sold (i.e. human labour/time/liberty) ensure that it can never be the same as others. This has important implications for economic theory and the claims of right-libertarians, implications that they fail to see due to their vision of labour as a commodity like any other.

The question arises, of course, of whether, during periods of full employment, workers could not take advantage of their market power and gain increased workers' control, create co-operatives and so reform away capitalism. This was the argument of the Mutualist and Individualist anarchists and it does have its merits. However, it is clear (see section [J.5.12](#)) that bosses hate to have their authority reduced and so combat workers' control whenever they can. The logic is simple, if workers increase their control within the workplace the manager and bosses may soon be out of a job and (more importantly) they may start to control the allocation of profits. Any increase in working class militancy may provoke capitalists to stop/reduce investment and credit and so create the economic environment (i.e. increasing unemployment) necessary to undercut working class power.

In other words, a period of full unemployment is not sufficient to reform capitalism away. Full employment (nevermind any struggle over workers' control) will reduce profits and if profits are reduced then firms find it hard to repay debts, fund investment and provide profits for shareholders. This profits squeeze would be enough to force capitalism into a slump and any attempts at gaining workers' self-management in periods of high employment will help push it over the edge (after all, workers' control without control over the allocation of any surplus is distinctly phoney). Moreover, even if we ignore the effects of full employment may not last due to problems associated with over-investment (see section [C.7.2](#)), credit and interest rate problems (see section [F.10.1](#)) and realisation/aggregate demand disjoints. Full employment adds to the problems associated with the capitalist business cycle and so, if class struggle and workers power did not exist or cost problem, capitalism would still not be stable.

If equilibrium is a myth, then so is full employment. It seems somewhat ironic that "anarcho"-capitalists and other right-libertarians maintain that there will be equilibrium (full employment) in the one market within capitalism it can never actually exist in! This is usually quietly acknowledged by most right-libertarians, who mention in passing that some "temporary" unemployment **will** exist in their system -- but "temporary" unemployment is not full employment. Of course, you could maintain that all unemployment is "voluntary" and get round the problem by denying it, but that will not get us very far.

So it is all fine and well saying that "libertarian" capitalism would be based upon the maxim "*From each as they choose, to each as they are chosen.*" [Robert Nozick, **Anarchy, State, and Utopia**, p. 160] But if the labour market is such that workers have little option about what they "choose" to give and fear that they will **not** be chosen, then they are at a disadvantage when compared to their bosses and so "consent" to being treated as a resource from the capitalist can make a profit from. And so this will result in any "free" contract on the labour market favouring one party at the expense of the other -- as can be seen from "actually existing capitalism".

Thus any "free exchange" on the labour market will usually **not** reflect the true desires of working

people (and who will make all the "adjusting" and end up wanting what they get). Only when the economy is approaching full employment will the labour market start to reflect the true desires of working people and their wage start to approach its full product. And when this happens, profits are squeezed and capitalism goes into slump and the resulting unemployment disciplines the working class and restores profit margins. Thus full employment will be the exception rather than the rule within capitalism (and that is a conclusion which the historical record indicates).

In other words, in a normally working capitalist economy any labour contracts will not create relationships based upon freedom due to the inequalities in power between workers and capitalists. Instead, any contracts will be based upon domination, **not** freedom. Which prompts the question, how is libertarian capitalism **libertarian** if it erodes the liberty of a large class of people?

F.10.3 Was laissez-faire capitalism stable?

Firstly, we must state that a pure laissez-faire capitalist system has not existed. This means that any evidence we present in this section can be dismissed by right-libertarians for precisely this fact -- it was not "pure" enough. Of course, if they were consistent, you would expect them to shun all historical and current examples of capitalism or activity within capitalism, but this they do not. The logic is simple -- if X is good, then it is permissible to use it. If X is bad, the system is not pure enough.

However, as right-libertarians **do** use historical examples so shall we. According to Murray Rothbard, there was "*quasi-laissez-faire industrialisation [in] the nineteenth century*" [**The Ethics of Liberty**, p. 264] and so we will use the example of nineteenth century America -- as this is usually taken as being the closest to pure laissez-faire -- in order to see if laissez-faire is stable or not.

Yes, we are well aware that 19th century USA was far from laissez-faire -- there was a state, protectionism, government economic activity and so on -- but as this example has been often used by right-Libertarians' themselves (for example, Ayn Rand) we think that we can gain a lot from looking at this imperfect approximation of "pure" capitalism (and as we argued in section [F.8](#), it is the "quasi" aspects of the system that counted in industrialisation, **not** the laissez-faire ones).

So, was 19th century America stable? No, it most definitely was not.

Firstly, throughout that century there were a continual economic booms and slumps. The last third of the 19th century (often considered as a heyday of private enterprise) was a period of profound instability and anxiety. Between 1867 and 1900 there were 8 complete business cycles. Over these 396 months, the economy expanded during 199 months and contracted during 197. Hardly a sign of great stability (since the end of world war II, only about a fifth of the time has spent in periods of recession or depression, by way of comparison). Overall, the economy went into a slump, panic or crisis in 1807, 1817, 1828, 1834, 1837, 1854, 1857, 1873, 1882, and 1893 (in addition, 1903 and 1907 were also crisis years).

Part of this instability came from the eras banking system. "*Lack of a central banking system,*" writes

Richard Du Boff, *"until the Federal Reserve act of 1913 made financial panics worse and business cycle swings more severe"* [**Accumulation and Power**, p. 177] It was in response to this instability that the Federal Reserve system was created; and as Doug Henwood notes *"the campaign for a more rational system of money and credit was not a movement of Wall Street vs. industry or regional finance, but a broad movement of elite bankers and the managers of the new corporations as well as academics and business journalists. The emergence of the Fed was the culmination of attempts to define a standard of value that began in the 1890s with the emergence of the modern professionally managed corporation owned not by its managers but dispersed public shareholders."* [**Wall Street**, p. 93] Indeed, the Bank of England was often forced to act as lender of last resort to the US, which had no central bank.

In the decentralised banking system of the 19th century, during panics thousands of banks would hoard resources, so starving the system for liquidity precisely at the moment it was most badly needed. The creation of trusts was one way in which capitalists tried to manage the system's instabilities (at the expense of consumers) and the corporation was a response to the outlawing of trusts. *"By internalising lots of the competitive system's gaps -- by bring more transactions within the same institutional walls -- corporations greatly stabilised the economy."* [Henwood, **Op. Cit.**, p. 94]

All during the hey-day of laissez faire we also find popular protests against the money system used, namely specie (in particular gold), which was considered as a hindrance to economic activity and expansion (as well as being a tool for the rich). The Individualist Anarchists, for example, considered the money monopoly (which included the use of specie as money) as the means by which capitalists ensured that *"the labourers . . . [are] kept in the condition of wage labourers,"* and reduced *"to the conditions of servants; and subject to all such extortions as their employers . . . may choose to practice upon them"*, indeed they became the *"mere tools and machines in the hands of their employers"*. With the end of this monopoly, *"[t]he amount of money, capable of being furnished . . . [would assure that all would] be under no necessity to act as a servant, or sell his or her labour to others."* [Lysander Spooner, **A Letter to Grover Cleveland**, p. 47, p. 39, p. 50, p. 41] In other words, a specie based system (as desired by many "anarcho"-capitalists) was considered a key way of maintaining wage labour and exploitation.

Interestingly, since the end of the era of the Gold Standard (and so commodity money) popular debate, protest and concern about money has disappeared. The debate and protest was in response to the **effects** of commodity money on the economy -- with many people correctly viewing the seriously restrictive monetary regime of the time responsible for economic problems and crisis as well as increasing inequalities. Instead radicals across the political spectrum urged a more flexible regime, one that did not cause wage slavery and crisis by reducing the amount of money in circulation when it could be used to expand production and reduce the impact of slumps. Needless to say, the Federal Reserve system in the USA was far from the institution these populists wanted (after all, it is run by and for the elite interests who desired its creation).

That the laissez-faire system was so volatile and panic-ridden suggests that "anarcho"-capitalist dreams of privatising everything, including banking, and everything will be fine are very optimistic at best (and, ironically, it was members of the capitalist class who lead the movement towards state-managed

F.10 Would laissez-faire capitalism be stable?

capitalism in the name of "sound money").

C.9 Would laissez-faire capitalism reduce unemployment, as supporters of "free market" capitalism claim?

Firstly, we have to state that "actually existing capitalism" in the West actually manages unemployment to ensure high profit rates for the capitalist class (see [section C.8.3](#)) - market discipline for the working class, state protection for the ruling class, in other words. As Edward Herman points out:

"Conservative economists have even developed a concept of a 'natural rate of unemployment' [which Herman defines as "the rate of unemployment preferred by the propertied classes"] . . . [which] is defined as the minimum level consistent with price level stability, but, as it is based on a highly abstract model that is not directly testable, the natural rate can only be inferred from the price level itself. That is, if prices are going up, unemployment is below the 'natural rate' and too low. . . Apart from the grossness of this kind of metaphysical legerdemain, the very concept of a natural rate of unemployment has a huge built-in bias. It takes as granted all the other institutional factors that influence the price level-unemployment trade-off (market structures and independent pricing power, business investment policies at home and abroad, the distribution of income, the fiscal and monetary mix, etc.) and focuses solely on the tightness of the labour market as the controllable variable. Inflation is the main threat, the labour market (i.e. wage rates and unemployment levels) is the locus of the solution to the problem." [Beyond Hypocrisy, p. 94]

In a sense, it is understandable that the ruling class within capitalism desires to manipulate unemployment in this way and deflect questions about their profit, property and power onto the labour market. Managing depression (as indicated by high unemployment levels) allows greater profits to be extracted from workers as management hierarchy is more secure. When times are hard, workers with jobs think twice before standing up to their bosses and so work harder, for longer and in worse conditions. This ensures that surplus value is increased relative to real wages (indeed, in the USA, real wages have stagnated since 1973 while profits have grown massively). In addition, such a policy ensures that political discussion about investment, profits, power and so on ("*the other institutional factors*") are reduced and diverted because working class people are too busy trying to make ends meet.

Of course, it can be argued that as this "natural" rate is both invisible and can move, historical evidence is meaningless -- you can prove anything with an invisible, mobile value. But if this is the case then any attempts to maintain a "natural" rate is also meaningless as the only way to discover it is to watch inflation levels (and with an invisible, mobile value, the theory is always true after the fact -- if inflation rises as unemployment rises, then the natural rate has increased; if inflation falls as unemployment rises, it has fallen!). Which means that people are being made unemployed on the off-chance that the

unemployment level will drop below the (invisible and mobile) "natural" rate and harm the interests of the ruling class (high inflation rates harms interest incomes and full employment squeezes profits by increasing workers' power). Given that most mainstream economists subscribe to this fallacy, it just shows how the "science" accommodates itself to the needs of the powerful.

So, supporters of "free market" capitalism do have a point, "actually existing capitalism" has created high levels of unemployment. The question now arises, will a "purer" capitalism create full employment?

First, we should point out that some supporters of "free market" capitalism claim that the market has no tendency to equilibrium at all, which means full employment is impossible, but few explicitly state this obvious conclusion of their own theories. However, most claim that full employment can occur. Anarchists agree, full employment can occur in "free market" capitalism, but not for ever (nor for long periods). As the Polish economist Michal Kalecki pointed out in regards to pre-Keynesian capitalism, the *"reserve of capital equipment and the reserve army of unemployed are typical features of capitalist economy at least throughout a considerable part of the [business] cycle."* [quoted by George R. Feiwel, **The Intellectual Capital of Michal Kalecki**, p. 130]

Cycles of short periods of full employment and longer periods of rising and falling unemployment are actually a more likely outcome of "free market" capitalism than continued full employment. As we argued in sections [B.4.4](#) and [C.7.1](#) capitalism needs unemployment to function successfully and so "free market" capitalism will experience periods of boom and slump, with unemployment increasing and decreasing over time (as can be seen from 19th century capitalism). So, full employment under capitalism is unlikely to last long (nor would full employment booms fill a major part of the full business cycle). Moreover, the notion that capitalism naturally stays at equilibrium or that unemployment is temporary adjustments is false, even given the logic of neo-classical economics. As Proudhon argued:

*"The economists admit it [that machinery causes unemployment]: but here they repeat their eternal refrain that, after a lapse of time, the demand for the product having increased in proportion to the reduction in price [caused by the investment], labour in turn will come finally to be in greater demand than ever. Undoubtedly, **with time**, the equilibrium will be restored; but I must add again, the equilibrium will be no sooner restored at this point than it will be disturbed at another, because the spirit of invention never stops. . ."* [**System of Economical Contradictions**, pp. 200-1]

That capitalism creates permanent unemployment and, indeed, needs it to function is a conclusion that few, if any, pro-"free market" capitalists subscribe to. Faced with the empirical evidence that full employment is rare in capitalism, they argue that reality is not close enough to their theories and must be changed (usually by weakening the power of labour by welfare "reform" and reducing "union power"). Thus reality is at fault, not the theory (to re-quote Proudhon, *"Political economy -- that is, proprietary despotism -- can never be in the wrong: it must be the proletariat."* [**Op. Cit.**, p. 187]) So if

unemployment exists, then its because real wages are too high, not because capitalists need unemployment to discipline labour (see [section C.9.2](#) for evidence that the neo-classical theory is false). Or if real wages are falling as unemployment is rising, it can only mean that the real wage is not falling fast enough -- empirical evidence is never enough to falsify logical deductions from assumptions!

(As an aside, it is one of amazing aspects of the "science" of economics that empirical evidence is never enough to refute its claims. As the left-wing economist Nicholas Kaldor once pointed out, "[b]ut unlike any scientific theory, where the basic assumptions are chosen on the basis of direct observation of the phenomena the behaviour of which forms the subject-matter of the theory, the basic assumptions of economic theory are either of a kind that are unverifiable. . . or of a kind which are directly contradicted by observation." [Further Essays on Applied Economics, pp. 177-8] Or, if we take the standard economics expression "in the long run," we may point out that unless a time is actually given it will always remain unclear as to how much evidence must be gathered before one can accept or reject the theory.)

Of course, reality often has the last laugh on any ideology. For example, since the late 1970s and early 1980s right-wing capitalist parties have taken power in many countries across the world. These regimes made many pro-free market reforms, arguing that a dose of market forces would lower unemployment, increase growth and so on. The reality proved somewhat different. For example, in the UK, by the time the Labour Party under Tony Blair come back to office in 1997, unemployment (while falling) was still higher than it had been when the last Labour government left office in May, 1979. 18 years of labour market reform had not reduced unemployment. It is no understatement to argue, in the words of two critics of neo-liberalism, that the *"performance of the world economy since capital was liberalised has been worse than when it was tightly controlled"* and that *"[t]hus far, [the] actual performance [of liberalised capitalism] has not lived up to the propaganda."* [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 274, p. 223]

Lastly, it is apparent merely from a glance at the history of capitalism during its laissez-faire heyday in the 19th century that "free" competition among workers for jobs does not lead to full employment. Between 1870 and 1913, unemployment was at an average of 5.7% in the 16 more advanced capitalist countries. This compares to an average of 7.3% in 1913-50 and 3.1% in 1950-70. If laissez-faire did lead to full employment, these figures would be reversed. As discussed above (in [section C.7.1](#)),] full employment **cannot** be a fixed feature of capitalism due to its authoritarian nature and the requirements of production for profit. To summarise, unemployment has more to do with private property than the wages of our fellow workers.

However, it is worthwhile to discuss why the "free market" capitalist is wrong to claim that unemployment within their system will not exist for long periods of time. In addition, to do so will also indicate the poverty of their theory of, and "solution" to, unemployment and the human misery they would cause. We do this in the [next section](#).

C.9.1 Would cutting wages reduce unemployment?

The "free market" capitalist (or neo-classical or neo-liberal or "Austrian") argument is that unemployment is caused by workers real wage being higher than the market clearing level. Workers, it is claimed, are more interested in money wages than real wages (which is the amount of goods they can buy with their money wages). This leads them to resist wage cuts even when prices are falling, leading to a rise in their real wages. In other words, they are pricing themselves out of work without realising it (the validity of the claim that unemployment is caused by high wages is discussed in the [next section](#)).

From this analysis comes the argument that if workers were allowed to compete 'freely' among themselves for jobs, real wages would decrease. This would reduce production costs and this drop would produce an expansion in production which provides jobs for the unemployed. Hence unemployment would fall. State intervention (e.g. unemployment benefit, social welfare programmes, legal rights to organise, minimum wage laws, etc.) and labour union activity according to this theory is the cause of unemployment, as such intervention and activity forces wages above their market level, thus increasing production costs and "forcing" employers to "let people go."

Therefore, according to neo-classical economic theory, firms adjust production to bring the marginal cost of their products (the cost of producing one more item) into equality with the product's market-determined price. So a drop in costs theoretically leads to an expansion in production, producing jobs for the "temporarily" unemployed and moving the economy toward a full-employment equilibrium.

So, in neo-classical theory, unemployment can be reduced by reducing the real wages of workers currently employed. However, this argument is flawed. While cutting wages may make sense for one firm, it would not have this effect throughout the economy as a whole (as is required to reduce unemployment in a country as a whole). This is because, in all versions of neo-classical theory, it is assumed that prices depend (at least in part) on wages. If all workers accepted a cut in wages, all prices would fall and there would be little reduction in the buying power of wages. In other words, the fall in money wages would reduce prices and leave real wages nearly unchanged and unemployment would continue.

Moreover, if prices remained unchanged or only fell by a small amount (i.e. if wealth was redistributed from workers to their employers), then the effect of this cut in real wages would not increase employment, it would reduce it. For people's consumption depends on their income, and if their incomes have fallen, in real terms, so will their consumption. As Proudhon pointed out in 1846, *"if the producer earns less, he will buy less. . . [which will] engender. . . over-production and destitution"* because *"though the workmen cost you [the capitalist] something, they are your customers: what will you do with your products, when driven away by you, they shall consume no longer? Thus, machinery, after crushing, is not show in dealing employers a counter-blow; for if production excludes consumption, it is soon obliged to stop itself."* [**System of Economical Contradictions**, p. 204, p. 190]

However, it can be argued, not everyone's real income would fall: incomes from profits would increase. But redistributing income from workers to capitalists, a group who tend to spend a smaller portion of

their income on consumption than do workers, could reduce effective demand and increase unemployment. As David Schweickart points out, when wages decline, so does workers' purchasing power; and if this is not offset by an increase in spending elsewhere, total demand will decline [**Against Capitalism**, pp. 106-107]. In other words, contrary to neo-classical economics, market equilibrium might be established at any level of unemployment.

But in "free market" capitalist theory, such a possibility of market equilibrium with unemployment is impossible. Neo-liberals reject the claim that cutting real wages would merely decrease the demand for consumer goods without automatically increasing investment sufficiently to compensate for this. Neo-classicists argue that investment will increase to make up for the decline in working class consumption.

However, in order to make this claim, the theory depends on three critical assumptions, namely that firms can expand production, that they will expand production, and that, if they do, they can sell their expanded production. However, this theory and its assumptions can be questioned.

The first assumption states that it is always possible for a company to take on new workers. But increasing production requires more than just labour. If production goods and facilities are not available, employment will not be increased. Therefore the assumption that labour can always be added to the existing stock to increase output is plainly unrealistic.

Next, will firms expand production when labour costs decline? Hardly. Increasing production will increase supply and eat into the excess profits resulting from the fall in wages. If unemployment did result in a lowering of the general market wage, companies might use the opportunity to replace their current workers or force them to take a pay cut. If this happened, neither production nor employment would increase. However, it could be argued that the excess profits would increase capital investment in the economy (a key assumption of neo-liberalism). The reply is obvious: perhaps, perhaps not. A slumping economy might well induce financial caution and so capitalists could stall investment until they are convinced of the sustained higher profitability while last.

This feeds directly into the last assumption, namely that the produced goods will be sold. But when wages decline, so does worker purchasing power, and if this is not offset by an increase in spending elsewhere, then total demand will decline. Hence the fall in wages may result in the same or even more unemployment as aggregate demand drops and companies cannot find a market for their goods. However, business does not (cannot) instantaneously make use of the enlarged funds resulting from the shift of wages to profit for investment (either because of financial caution or lack of existing facilities). This will lead to a reduction in aggregate demand as profits are accumulated but unused, so leading to stocks of unsold goods and renewed price reductions. This means that the cut in real wages will be cancelled out by price cuts to sell unsold stock and unemployment remains.

So, the traditional neo-classical reply that investment spending will increase because lower costs will mean greater profits, leading to greater savings, and ultimately, to greater investment is weak. Lower costs will mean greater profits only if the products are sold, which they might not be if demand is

adversely affected. In other words, a higher profit margins do not result in higher profits due to fall in consumption caused by the reduction of workers purchasing power. And, as Michal Kalecki argued, wage cuts in combating a slump may be ineffective because gains in profits are not applied immediately to increase investment and the reduced purchasing power caused by the wage cuts causes a fall in sales, meaning that higher profit margins do not result in higher profits. Moreover, as Keynes pointed out long ago, the forces and motivations governing saving are quite distinct from those governing investment. Hence there is no necessity for the two quantities always to coincide. So firms that have reduced wages may not be able to sell as much as before, let alone more. In that case they will cut production, adding to unemployment and further lowering demand. This can set off a vicious downward spiral of falling demand and plummeting production leading to depression (the political results of such a process would be dangerous to the continued survival of capitalism). This downward spiral is described by Kropotkin (nearly 40 years before Keynes made the same point in his **General Theory of Employment, Interest and Money**):

"Profits being the basis of capitalist industry, low profits explain all ulterior consequences.

"Low profits induce the employers to reduce the wages, or the number of workers, or the number of days of employment during the week. . . [L]ow profits ultimately mean a reduction of wages, and low wages mean a reduced consumption by the worker. Low profits mean also a somewhat reduced consumption by the employer; and both together mean lower profits and reduced consumption with that immense class of middlemen which has grown up in manufacturing countries, and that, again, means a further reduction of profits for the employers." [**Fields, Factories and Workshops Tomorrow**, p. 33]

Thus, a cut in wages will deepen any slump, making it deeper and longer than it otherwise would be. Rather than being the solution to unemployment, cutting wages will make it worse (we will address the question of whether wages being too high actually causes unemployment in the first place, as maintained by neo-classical economics, below). Given that, as we argued in [section C.7.1](#), inflation is caused by insufficient profits for capitalists (they try to maintain their profit margins by price increases) this spiralling effect of cutting wages helps to explain what economists term "stagflation" -- rising unemployment combined with rising inflation (as seen in the 1970s). As workers are made unemployed, aggregate demand falls, cutting profit margins even more and in response capitalists raise prices in an attempt to recoup their losses. Only a very deep recession can break this cycle (along with labour militancy and more than a few workers and their families). Working people paying for capitalism's contradictions, in other words.

All this means that working class people have two options in a slump -- accept a deeper depression in order to start the boom-bust cycle again or get rid of capitalism and with it the contradictory nature of capitalist production which produces the business cycle in the first place (not to mention other blights such as hierarchy and inequality).

The "Pigou" (or "real balance") effect is another neo-classical argument that aims to prove that (in the end) capitalism will pass from slump to boom. This theory argues that when unemployment is sufficiently high, it will lead to the price level falling which would lead to a rise in the real value of the money supply and so increase the real value of savings. People with such assets will have become richer and this increase in wealth will enable people to buy more goods and so investment will begin again. In this way, slump passes to boom naturally.

However, this argument is flawed in many ways. In reply, Michal Kalecki argued that, firstly, Pigou had *"assumed that the banking system would maintain the stock of money constant in the face of declining incomes, although there was no particular reason why they should."* If the money stock changes, the value of money will also change. Secondly, that *"the gain in money holders when prices fall is exactly offset by the loss to money providers. Thus, whilst the real value of a deposit in bank account rises for the depositor when prices fell, the liability represented by that deposit for the bank also rises in size."* And, thirdly, *"that falling prices and wages would mean that the real value of outstanding debts would be increased, which borrowers would find it increasingly difficult to repay as their real income fails to keep pace with the rising real value of debt. Indeed, when the falling prices and wages are generated by low levels of demand, the aggregate real income will be low. Bankruptcies follow, debts cannot be repaid, and a confidence crisis was likely to follow."* In other words, debtors may cut back on spending more than creditors would increase it and so the depression would continue as demand did not rise. [Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 90]

So, as Schweickart, Kalecki and others correctly observe, such considerations undercut the neo-classical contention that labour unions and state intervention are responsible for unemployment (or that depressions will easily or naturally end by the workings of the market). To the contrary, insofar as labour unions and various welfare provisions prevent demand from falling as low as it might otherwise go during a slump, they apply a brake to the downward spiral. Far from being responsible for unemployment, they actually mitigate it. This should be obvious, as wages (and benefits) may be costs for some firms but they are revenue for even more.

C.9.2 Is unemployment caused by wages being too high?

As we noted in the [last section](#), most capitalist economic theories argue that unemployment is caused by wages being too high. Any economics student will tell you that high wages will reduce the quantity of labour demanded, in other words unemployment is caused by wages being too high -- a simple case of "supply and demand." From this theory we would expect that areas with high wages will also be areas with high levels of unemployment. Unfortunately for the theory, this does not seem to be the case.

Empirical evidence does not support the argument the neo-classical argument that unemployment is caused by real wages being too high. The phenomenon that real wages increase during the upward swing of the business cycle (as unemployment falls) and fall during recessions (when unemployment increases) renders the neo-classical interpretation that real wages govern employment difficult to maintain (real wages are *"pro-cyclical,"* to use economic terminology). But this is not the only evidence against the

neo-classical theory of unemployment. Will Hutton, the UK based neo-Keynesian economist, summaries research that suggests high wages do not cause unemployment (as claimed by neo-classical economists):

"the British economists David Blanchflower and Andrew Oswald [examined] . . . the data in twelve countries about the actual relation between wages and unemployment - and what they have discovered is another major challenge to the free market account of the labour market. . . [They found] precisely the opposite relationship [than that predicted in neo-classical theory]. The higher the wages, the lower the local unemployment - and the lower the wages, the higher the local unemployment. As they say, this is not a conclusion that can be squared with free market text-book theories of how a competitive labour market should work." [The State We're In, p. 102]

Blanchflower and Oswald state their conclusions from their research that employees *"who work in areas of high unemployment earn less, other things constant, than those who are surrounded by low unemployment."* [The Wage Curve, p. 360] This relationship, the exact opposite of that predicted by neo-classical economics, was found in many different countries and time periods, with the curve being similar for different countries. Thus, the evidence suggests that high unemployment is associated with low earnings, not high, and vice versa.

Looking at less extensive evidence we find that, taking the example of the USA, if minimum wages and unions cause unemployment, why did the South-eastern states (with a **lower** minimum wage and weaker unions) have a **higher** unemployment rate than North-western states during the 1960's and 1970's? Or why, when the (relative) minimum wage declined under Reagan and Bush, did chronic unemployment accompany it? [Allan Engler, **The Apostles of Greed**, p. 107]

Or the Low Pay Network report *"Priced Into Poverty"* which discovered that in the 18 months before they were abolished, the British Wages Councils (which set minimum wages for various industries) saw a rise of 18,200 in full-time equivalent jobs compared to a net loss of 39,300 full-time equivalent jobs in the 18 months afterwards. Given that nearly half the vacancies in former Wages Council sectors paid less than the rate which it is estimated Wages Councils would now pay, and nearly 15% paid less than the rate at abolition, there should (by the neo-classical argument) have been rises in employment in these sectors as pay falls. The opposite happened. This research shows clearly that the falls in pay associated with Wages Council abolition have not created more employment. Indeed, employment growth was more buoyant prior to abolition than subsequently. So whilst Wages Council abolition has not resulted in more employment, the erosion of pay rates caused by abolition has resulted in more families having to endure poverty pay.

(This does not mean that anarchists support the imposition of a legal minimum wage. Most anarchists do not because it takes the responsibility for wages from unions and other working class organisations, where it belongs, and places it in the hands of the state. We mention these examples in order to highlight that the neo-classical argument has flaws with it.)

While this evidence may come as a shock to neo-classical economics, it fits well with anarchist and other socialist analysis. For anarchists, unemployment is a means of disciplining labour and maintaining a suitable rate of profit (i.e. unemployment is a key means of ensuring that workers are exploited). As full employment is approached, labour's power increases, so reducing the rate of exploitation and so increasing labour's share of the value it produces (and so higher wages). Thus, from an anarchist point of view, the fact that wages are higher in areas of low unemployment is not a surprise, nor is the phenomenon of pro-cyclical real wages. After all, as we noted in [section C.3](#), the ratio between wages and profits are, to a large degree, a product of bargaining power and so we would expect real wages to grow in the upswing of the business cycle, fall in the slump and be high in areas of low unemployment. And, far more importantly, this evidence suggests that the neo-classical claim that unemployment is caused by unions, "too high" wage rates, and so on, is false. Indeed, by stopping capitalists appropriating more of the income created by workers, high wages maintain aggregate demand and contribute to higher employment (although, of course, high employment cannot be maintained indefinitely under wage slavery due to the rise in workers' power this implies). Rather, unemployment is a key aspect of the capitalist system and cannot be got rid off within it and the neo-classical "blame the workers" approach fails to understand the nature and dynamic of the system.

So, perhaps, high real wages for workers increases aggregate demand and reduces unemployment from the level it would be if the wage rate was cut. Indeed, this seems to be supported by research into the "wage curve" of numerous countries. This means that a "free market" capitalism, marked by a fully competitive labour market, no welfare programmes, unemployment benefits, higher inequality and extensive business power to break unions and strikes would see aggregate demand constantly rise and fall, in line with the business cycle, and unemployment would follow suit. Moreover, unemployment would be higher over most of the business cycle (and particularly at the bottom of the slump) than under a capitalism with social programmes, militant unions and legal rights to organise because the real wage would not be able to stay at levels that could support aggregate demand nor could the unemployed use their benefits to stimulate the production of consumer goods.

In other words, a fully competitive labour market would increase the instability of the market, as welfare programmes and union activity maintain aggregate income for working people, who spend most of their income, so stabilising aggregate demand -- an analysis which was confirmed in during the 1980s (*"the relationship between measured inequality and economic stability. . . was weak but if anything it suggests that the more egalitarian countries showed a more stable pattern of growth after 1979"* [Dan Corry and Andrew Glyn, *"The Macroeconomics of equality, stability and growth"*, in **Paying for Inequality**, Andrew Glyn and David Miliband (Eds.) pp. 212-213]).

C.9.3 Are "flexible" labour markets the answer to unemployment?

The usual neo-liberal argument is that labour markets must become more "flexible" to solve the problem of unemployment. This is done by weakening unions, reducing (or abolishing) the welfare state, and so on. However, we should note that the current arguments for greater "flexibility" within the labour market

as the means of reducing unemployment seem somewhat phoney. The argument is that by increasing flexibility, making the labour market more "perfect", the so-called "natural" rate of unemployment will drop (this is the rate at which inflation is said to start accelerating upwards) and so unemployment can fall without triggering an accelerating inflation rate. Of course, that the real source of inflation is capitalists trying to maintain their profit levels is not mentioned (after all, profits, unlike wages, are to be maximised for the greater good). Nor is it mentioned that the history of labour market flexibility is somewhat at odds with the theory:

*"it appears to be only relatively recently that the maintained greater flexibility of US labour markets has apparently led to a superior performance in terms of lower unemployment, despite the fact this flexibility is no new phenomenon. Comparing, for example, the United States with the United Kingdom, in the 1960s the United States averaged 4.8 per cent, with the United Kingdom at 1.9 per cent; in the 1970s the United States rate rose to 6.1 per cent, with the United Kingdom rising to 4.3 per cent, and it was only in the 1980s that the ranking was reversed with the United States at 7.2 per cent and the United Kingdom at 10 per cent. . . Notice that this reversal of rankings in the 1980s took place despite all the best efforts of Mrs Thatcher to create labour market flexibility. . . [I]f labour market flexibility is important in explaining the level of unemployment. . . why does the level of unemployment remain so persistently high in a country, Britain, where active measures have been taken to create flexibility?" [Keith Cowling and Roger Sugden, **Beyond Capitalism**, p. 9]*

If we look at the fraction of the labour force without a job in America, we find that in 1969 it was 3.4% (7.3% including the underemployed) and **rose** to 6.1% in 1987 (16.8% including the underemployed). Using more recent data, we find that, on average, the unemployment rate was 6.2% in 1990-97 compared to 5.0% in the period 1950-65. In other words, labour market "flexibility" has not reduced unemployment levels, in fact "flexible" labour markets have been associated with higher levels of unemployment.

Of course we are comparing different time periods. A lot has changed between the 1960s and the 1990s and so comparing these periods cannot be the whole answer. After all, the rise in flexibility and the increase in unemployment may be unrelated. However, if we look at different countries over the same time period we can see if "flexibility" actually reduces unemployment. As one British economist notes, this may not be the case:

*"Open unemployment is, of course, lower in the US. But once we allow for all forms of non-employment [such as underemployment, jobless workers who are not officially registered as such and so on], there is little difference between Europe and the US: between 1988 and 1994, 11 per cent of men aged 25-55 were not in work in France, compared with 13 per cent in the UK, 14 per cent in the US and 15 per cent in Germany." [Richard Layard quoted by John Gray in **False Dawn**, p. 113]*

In addition, all estimates of America's unemployment record must take into account America's incarceration rates. Over a million people more would be seeking work if the US penal policies resembled those of any other Western nation. [John Gray, **Op. Cit.**, p. 113]

Taking the period 1983 to 1995, we find that around 30 per cent of the population of OECD Europe lived in countries with average unemployment rates lower than the USA and around 70 per cent in countries with lower unemployment than Canada (whose relative wages are only slightly less flexible than the USA). Furthermore, the European countries with the lowest unemployment rates were not noted for their wage flexibility (Austria 3.7%, Norway 4.1%, Portugal 6.4%, Sweden 3.9% and Switzerland 1.7%). Britain, which probably had the most flexible labour market had an average unemployment rate higher than half of Europe. And the unemployment rate of Germany is heavily influenced by areas which were formally in East Germany. Looking at the former West German regions only, unemployment between 1983 and 1995 was 6.3%, compared to 6.6% in the USA (and 9.8% in the UK).

So, perhaps, "flexibility" is not the solution to unemployment some claim it is (after all, the lack of a welfare state in the 19th century did not stop unemployment nor long depressions occurring). Indeed, a case could be made that the higher open unemployment in Europe has a lot less to do with "rigid" structures and "pampered" citizens than it does with the fiscal and monetary austerity required by European unification as expressed in the Maastricht Treaty. As this Treaty has the support of most of Europe's ruling class such an explanation is off the political agenda.

Moreover, if we look at the rationale behind "flexibility" we find a strange fact. While the labour market is to be made more "flexible" and in line with ideal of "perfect competition", on the capitalist side no attempt is being made to bring **it** into line with that model. Let us not forget that perfect competition (the theoretical condition in which all resources, including labour, will be efficiently utilised) states that there must be a large number of buyers and sellers. This is the case on the sellers side of the "flexible" labour market, but this is **not** the case on the buyers (where, as indicated in [section C.4](#), oligopoly reigns). Most who favour labour market "flexibility" are also those most against breaking up of big business and oligopolistic markets or the stopping of mergers between dominant companies in and across markets. The model requires **both** sides to be "flexible," so why expect making one side more "flexible" will have a positive effect on the whole? There is no logical reason for this to be the case. Indeed, with the resulting shift in power on the labour market things may get worse as income is distributed from labour to capital. It is a bit like expecting peace to occur between two warring factions by disarming one side and arguing that because the number of guns have been halved peacefulness has doubled! Of course, the only "peace" that would result would be the peace of the graveyard or a conquered people -- subservience can pass for peace, if you do not look too close. In the end, calls for the "flexibility" of labour indicate the truism that, under capitalism, labour exists to meet the requirements of capital (or living labour exists to meet the needs of dead labour, a truly insane way to organise a society).

All this is unsurprising for anarchists as we recognise that "flexibility" just means weakening the bargaining power of labour in order to increase the power and profits of the rich (hence the expression "**flexploitation**"!). Increased "flexibility" has been associated with **higher**, not lower unemployment.

This, again, is unsurprising, as a "flexible" labour market basically means one in which workers are glad to have any job and face increased insecurity at work (actually, "insecurity" would be a more honest word to use to describe the ideal of a competitive labour market rather than "flexibility" but such honesty would let the cat out of the bag). In such an environment, workers' power is reduced, meaning that capital gets a larger share of the national income than labour and workers are less inclined to stand up for their rights. This contributes to a fall in aggregate demand, so increasing unemployment. In addition, we should note that "flexibility" may have little effect on unemployment (although not on profits) as a reduction of labour's bargaining power may result in **more** rather than less unemployment. This is because firms can fire "excess" workers at will, increase the hours of those who remain (the paradox of overwork and unemployment is just an expression of how capitalism works) and stagnating or falling wages reduces aggregate demand. Thus the paradox of increased "flexibility" resulting in higher unemployment is only a paradox in the neo-classical framework. From an anarchist perspective, it is just the way the system works.

And we must add that whenever governments have attempted to make the labour market "fully competitive" it has either been the product of dictatorship (e.g. Chile under Pinochet) or occurred at the same time increased centralisation of state power and increased powers for the police and employers (e.g. Britain under Thatcher, Reagan in the USA). Latin American Presidents trying to introduce neo-liberalism into their countries have had to follow suit and *"ride roughshod over democratic institutions, using the tradition Latin American technique of governing by decree in order to bypass congressional opposition. . . Civil rights have also taken a battering. In Bolivia, the government attempted to defuse union opposition . . . by declaring a state of siege and imprisoning 143 strike leaders. . . In Colombia, the government used anti-terrorist legislation in 1993 to try 15 trade union leaders opposing the privatisation of the state telecommunications company. In the most extreme example, Peru's Alberto Fujimori dealt with a troublesome Congress by simply dissolving it . . . and seizing emergency powers."* [Duncan Green, **The Silent Revolution**, p. 157]

This is unsurprising. People, when left alone, will create communities, organise together to collectively pursue their own happiness, protect their communities and environment. In other words, they will form associations and unions to influence the decisions that affect them. In order to create a "fully competitive" labour market, individuals must be atomised and unions, communities and associations weakened, if not destroyed, in order to fully privatise life. State power must be used to disempower the mass of the population, restrict their liberty, control popular organisations and social protest and so ensure that the free market can function without opposition to the human suffering, misery and pain it would cause. People, to use Rousseau's evil term, "must be forced to be free." And, unfortunately for neo-liberalism, the countries that tried to reform their labour market still suffered from high unemployment, plus increased social inequality and poverty and were still subject to the booms and slumps of the business cycle.

Ultimately, the only real solution to unemployment is to end wage labour and liberate humanity from the needs of capital.

C.9.4 Is unemployment voluntary?

Here we point out another aspect of the neo-classical "blame the workers" argument, of which the diatribes against unions and workers' rights highlighted above is only a part. This is the argument that unemployment is not involuntary but is freely chosen by workers. As the left-wing economist Nicholas Kaldor put it, for "free market" economists involuntary employment *"cannot exist because it is excluded by the assumptions."* [**Further Essays on Applied Economics**, p. x] The neo-classical economists claim that unemployed workers calculate that their time is better spent searching for more highly paid employment (or living on welfare than working) and so desire to be jobless. That this argument is taken seriously says a lot about the state of modern capitalist economic theory, but as it is popular in many right-wing circles, we should discuss it.

Firstly, when unemployment rises it is because of layoffs, not voluntary quitings, are increasing. When a company fires a number of its workers, it can hardly be said that the sacked workers have calculated that their time is better spent looking for a new job. They have no option. Secondly, unemployed workers normally accept their first job offer. Neither of these facts fits well with the hypothesis that most unemployment is "voluntary."

Of course, there are numerous jobs advertised in the media. Does this not prove that capitalism always provides jobs for those who want them? Hardly, as the number of jobs advertised must have some correspondence to the number of unemployed. If 100 jobs are advertised in an areas reporting 1,000 unemployed, it can scarcely be claimed that capitalism tends to full employment.

In addition, it is worthwhile to note that the right-wing assumption that higher unemployment benefits and a healthy welfare state promote unemployment is not supported by the evidence. As a moderate member of the British Conservative Party notes, the *"OECD studied seventeen industrial countries and found no connect between a country's unemployment rate and the level of its social-security payments."* [**Dancing with Dogma**, p. 118] Moreover, the economists David Blanchflower and Andrew Oswald "Wage Curve" for many different countries is approximately the same for each of the fifteen countries they looked at. This also suggests that labour market unemployment is independent of social-security conditions as their "wage curve" can be considered as a measure of wage flexibility. Both of these facts suggest that unemployment is involuntary in nature and cutting social-security will **not** affect unemployment.

Another factor in considering the nature of unemployment is the effect of nearly 20 years of "reform" of the welfare state conducted in both the USA and UK. During the 1960s the welfare state was far more generous than it was in the 1990s and unemployment was lower. If unemployment was "voluntary" and due to social-security being high, we would expect a decrease in unemployment as welfare was cut (this was, after all, the rationale for cutting it in the first place). In fact, the reverse occurred, with unemployment rising as the welfare state was cut. Lower social-security payments did not lead to lower unemployment, quite the reverse in fact.

Faced with these facts, some may conclude that as unemployment is independent of social security payments then the welfare state can be cut. However, this is not the case as the size of the welfare state does affect the poverty rates and how long people remain in poverty. In the USA, the poverty rate was 11.7% in 1979 and rose to 13% in 1988, and continued to rise to 15.1% in 1993. The net effect of cutting the welfare state was to help **increase** poverty. Similarly, in the UK during the same period, to quote the ex-Thatcherite John Gray, there *"was the growth of an underclass. The percentage of British (non-pensioner) households that are wholly workless - that is, none of whose members is active in the productive economy - increased from 6.5 per cent in 1975 to 16.4 per cent in 1985 and 19.1 per cent in 1994. . . Between 1992 and 1997 there was a 15 per cent increase in unemployed lone parents. . . This dramatic growth of an underclass occurred as a direct consequence of neo-liberal welfare reforms, particularly as they affected housing."* [False Dawn, p. 30] This is the opposite of the predictions of right-wing theories and rhetoric. As John Gray correctly argues, the *"message of the American [and other] New Right has always been that poverty and the under class are products of the disincentive effects of welfare, not the free market."* He goes on to note that it *"has never squared with the experience of the countries of continental Europe where levels of welfare provision are far more comprehensive than those of the United States have long co-existed with the absence of anything resembling an American-style underclass. It does not touch at virtually any point the experience of other Anglo-Saxon countries."* [Op. Cit., p. 42] He goes on to notes that:

"In New Zealand, the theories of the American New Right achieved a rare and curious feat - self-refutation by their practical application. Contrary to the New Right's claims, the abolition of nearly all universal social services and the stratification of income groups for the purpose of targeting welfare benefits selectively created a neo-liberal poverty trap." [Ibid.]

So while the level of unemployment benefits and the welfare state may have little impact on the level of unemployment (which is to be expected if the nature of unemployment is essentially involuntary), it **does** have an effect on the nature, length and persistency of poverty. Cutting the welfare state increases poverty and the time spent in poverty (and by cutting redistribution, it would also increase inequality).

If we look at the relative size of a nation's social security transfers as a percentage of Gross Domestic Product and its relative poverty rate we find a correlation. Those nations with a high level of spending have lower rates of poverty. In addition, there is a correlation between the spending level and the number of persistent poor. Those nations with high spending levels have more of their citizens escape poverty. For example, Sweden has a single-year poverty rate of 3% and a poverty escape rate of 45% and Germany has figures of 8% and 24% (and a persistent poverty rate of 2%). In contrast, the USA has figures of 20% and 15% (and a persistent poverty rate of 42%) [Greg J. Duncan of the University of Michigan Institute for Social Research, 1994].

Given that a strong welfare state acts as a kind of floor under the wage and working conditions of labour, it is easy to see why capitalists and the supporters of "free market" capitalism seek to undermine it. By undermining the welfare state, by making labour "flexible," profits and power can be protected from working people standing up for their rights and interests. Little wonder the claimed benefits of

"flexibility" have proved to be so elusive for the vast majority while inequality has exploded. The welfare state, in other words, reduces the attempts of the capitalist system to commodify labour and increases the options available to working class people. While it did not reduce the need to get a job, the welfare state did undermine dependence on any particular employer and so increased workers' independence and power. It is no coincidence that the attacks on unions and the welfare state was and is framed in the rhetoric of protecting the "right of management to manage" and of driving people back into wage slavery. In other words, an attempt to increase the commodification of labour by making work so insecure that workers will not stand up for their rights.

The human costs of unemployment are well documented. There is a stable correlation between rates of unemployment and the rates of mental-hospital admissions. There is a connection between unemployment and juvenile and young-adult crime. The effects on an individual's self-respect and the wider implications for their community and society are massive. As David Schweickart concludes:

"The costs of unemployment, whether measured in terms of the cold cash of lost production and lost taxes or in the hotter unions of alienation, violence, and despair, are likely to be large under Laissez Faire." [**Against Capitalism**, p. 109]

Of course, it could be argued that the unemployed should look for work and leave their families, home towns, and communities in order to find it. However, this argument merely states that people should change their whole lives as required by "market forces" (and the wishes -- "*animal spirits*," to use Keynes' term -- of those who own capital). In other words, it just acknowledges that capitalism results in people losing their ability to plan ahead and organise their lives (and that, in addition, it can deprive them of their sense of identity, dignity and self-respect as well), portraying this as somehow a requirement of life (or even, in some cases, noble).

It seems that capitalism is logically committed to viciously contravening the very values upon which it claims it be built, namely the respect for the innate worth and separateness of individuals. This is hardly surprising, as capitalism is based on reducing individuals to the level of another commodity (called "labour"). To requote Karl Polanyi:

"In human terms such a postulate [of a labour market] implied for the worker extreme instability of earnings, utter absence of professional standards, abject readiness to be shoved and pushed about indiscriminately, complete dependence on the whims of the market. [Ludwig Von] Mises justly argued that if workers 'did not act as trade unionists, but reduced their demands and changed their locations and occupations according to the labour market, they would eventually find work.' This sums up the position under a system based on the postulate of the commodity character of labour. It is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed." [**The Great Transformation**, p. 176]

However, people are **not** commodities but living, thinking, feeling individuals. The "labour market" is more a social institution than an economic one and people and work more than mere commodities. If we reject the neo-liberals' assumptions for the nonsense they are, their case fails. Capitalism, ultimately, cannot provide full employment simply because labour is **not** a commodity (and as we discussed in [section C.7](#), this revolt against commodification is a key part of understanding the business cycle and so unemployment).

C.3 What determines the distribution between profits and wages within companies?

At any time, there is a given amount of unpaid labour in circulation in the form of goods or services representing more added value than workers were paid for. This given sum of unpaid labour represents total available profits. Each company tries to maximise its share of that total, and if a company does realise an above-average share, it means that some other companies receive less than average. The larger the company, the more likely it is to obtain a larger share of the available surplus, for reasons discussed later (see [section C.5](#)). The important thing to note here is that companies compete on the market to realise their share of the total surplus of profits (unpaid labour). However, the **source** of these profits does not lie in the market, but in production. One cannot buy what does not exist and if one gains, another loses.

As indicated above, production prices determine market prices. In any company, wages determine a large percentage of the production costs. Looking at other costs (such as raw materials), again wages play a large role in determining their price. Obviously the division of a commodity's price into costs and profits is not a fixed ratio, which means that prices are the result of complex interactions of wage levels and productivity.

Within the limits of a given situation, the class struggle between employers and employees over wages, working conditions and benefits determines the degree of exploitation within a workplace and industry, and so determines the relative amount of money which goes to labour (i.e. wages) and the company (profits). As Proudhon argued, the expression "*the relations of profits to wages*" meant "*the war between labour and capital*." [**System of Economical Contradictions**, p. 130] This also means that an increase in wages may not drive up prices, as it may reduce profits or be tied to productivity; but this will have more widespread effects, as capital will move to other industries and countries in order to improve profit rates, if this is required.

The essential point is that the extraction of surplus value from workers is not a simple technical operation like the extraction of so many joules from a ton of coal. It is a bitter struggle, in which the capitalists lose half the time. Labour power is unlike all other commodities - it is and remains inseparably embodied in human beings. The division of profits and wages in a company and in the economy as a whole is dependent upon and modified by the actions of workers, both as individuals and as a class.

We are not saying that economic and objective factors play no role in the determination of the wage level. On the contrary, at any moment the class struggle can only act within a given economic framework. However, these objective conditions are constantly modified by the class struggle and it is this conflict between the human and commodity aspects of labour power that ultimately brings capitalism into crisis (see [section C.7](#)).

From this perspective, the neo-classical argument that a factor in production (labour, capital or land) receives an income share that indicates its productive power "at the margin" is false. Rather, it is a question of power -- and the willingness to use it. As Christopher Eaton Gunn points out, this argument *"take[s] no account of power -- of politics, conflict, and bargaining -- as more likely indicators of relative shares of income in the real world."* [**Workers' Self-Management in the United States**, p. 185] If the power of labour is increasing, its share in income will tend to increase and, obviously, if the power of labour decreased it would fall. And the history of the post-war economy supports such an analysis, with labour in the advanced countries share of income falling from 68% in the 1970s to 65.1% in 1995 (in the EU, it fell from 69.2% to 62%). In the USA, labour's share of income in the manufacturing sector fell from 74.8% to 70.6% over the 1979-89 period, reversing the rise in labour's share that occurred over the 1950s, 1960s and 1970s. The reversal in labour's share occurred at the same time as labour's power was undercut by right-wing governments and high unemployment.

Thus, for many anarchists, the relative power between labour and capital determines the distribution of income between them. In periods of full employment or growing workplace organisation and solidarity, workers wages will tend to rise faster. In periods where there is high unemployment and weaker unions and less direct action, labour's share will fall. From this analysis anarchists support collective organisation and action in order to increase the power of labour and ensure we receive more of the value we produce.

The neo-classical notion that rising productivity allows for increasing wages is one that has suffered numerous shocks since the early 1970s. Usually wage increases lag behind productivity. For example, during Thatcher's reign of freer markets, productivity rose by 4.2%, 1.4% higher than the increase in real earnings between 1980-88. Under Reagan, productivity increased by 3.3%, accompanied by a fall of 0.8% in real earnings. Remember, though, these are averages and hide the actual increases in pay between workers and managers. To take one example, the real wages for employed single men between 1978 and 1984 in the UK rose by 1.8% for the bottom 10% of that group, for the highest 10%, it was a massive 18.4%. The average rise (10.1%) hides the vast differences between top and bottom. In addition, these figures ignore the starting point of these rises -- the often massive differences in wages between employees (compare the earnings of the CEO of McDonalds and one of its cleaners). In other words, 2.8% of nearly nothing is still nearly nothing!

Looking at the USA again, we find that workers who are paid by the hour (the majority of employees) saw their average pay peak in 1973. Since then, it had declined substantially and stood at its mid-1960s level in 1992. For over 80 per cent of the US workforce (production and non-supervisory workers), real wages have fallen by 19.2 per cent for weekly earnings and 13.4 per cent for hourly earnings between 1973 and 1994. Productivity had risen by 23.2 per cent. Combined with this drop in real wages in the USA, we have seen an increase in hours worked. In order to maintain their current standard of living, working class people have turned to both debt and longer working hours. Since 1979, the annual hours worked by middle-income families rose from 3 020 to 3 206 in 1989, 3 287 in 1996 and 3 335 in 1997. In Mexico we find a similar process. Between 1980 and 1992, productivity rose by 48 per cent while

salaries (adjusted for inflation) fell by 21 per cent.

Between 1989 to 1997, productivity increased by 9.7% in the USA while medium compensation decreased by 4.2%. In addition, medium family working hours grew by 4% (or three weeks of full-time work) while its income increased by only 0.6 % (in other words, increases in working hours helped to create this slight growth). If the wages of workers were related to their productivity, as argued by neo-classical economics, you would expect wages to increase as productivity rose, rather than fall. However, if wages are related to economic power, then this fall is to be expected. This explains the desire for "flexible" labour markets, where workers' bargaining power is eroded and so more income can go to profits rather than wages. Of course, it will be argued that only in a perfectly competitive market (or, more realistically, a truly "free" one) will wages increase in-line with productivity. However, you would expect that a regime of **freer** markets would make things better, not worse. Moreover, the neo-classical argument that unions, struggling over wages and working conditions will harm workers in the "long run" has been dramatically refuted over the last 30 years -- the decline of the labour movement in the USA has been marked by falling wages, not rising ones, for example.

Unsurprisingly, in a hierarchical system those at the top do better than those at the bottom. The system is set up so that the majority enrich the minority. That is way anarchists argue that workplace organisation and resistance is essential to maintain -- and even increase -- labour's income. For if the share of income between labour and capital depends on their relative power -- and it does -- then only the actions of workers themselves can improve their situation and determine the distribution of the value they create.

C.5 Why does Big Business get a bigger slice of profits?

As described in the [last section](#), due to the nature of the capitalist market, large firms soon come to dominate. Once a few large companies dominate a particular market, they form an oligopoly from which a large number of competitors have effectively been excluded, thus reducing competitive pressures. In this situation there is a tendency for prices to rise above what would be the "market" level, as the oligopolistic producers do not face the potential of new capital entering "their" market (due to the relatively high capital costs and other entry/movement barriers). This form of competition results in Big Business having an "unfair" slice of available profits. As there is an **objective** level of profits existing in the economy at any one time, oligopolistic profits are *"created at the expense of individual capitals still caught up in competition."* [Paul Mattick, **Economics, Politics, and the Age of Inflation**, p. 38]

As argued in section [C.1](#), the price of a commodity will tend towards its production price (which is costs plus average profit). In a developed capitalist economy it is not as simple as this -- there are various "average" profits depending on what Michal Kalecki termed the *"degree of monopoly"* within a market. This theory *"indicates that profits arise from monopoly power, and hence profits accrue to firms with more monopoly power. . . A rise in the degree of monopoly caused by the growth of large firms would result in the shift of profits from small business to big business."* [Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 36] Thus a market with a high "degree of monopoly" will have a higher average profit level (or rate of return) than one which is more competitive.

The "degree of monopoly" reflects such factors as level of market concentration and power, market share, extent of advertising, barriers to entry/movement, collusion and so on. The higher these factors, the higher the degree of monopoly and the higher the mark-up of prices over costs (and so the share of profits in value added). Our approach to this issue is similar to Kalecki's in many ways although we stress that the degree of monopoly affects how profits are distributed **between** firms, **not** how they are created in the first place (which come, as argued in section [C.2](#), from the *"unpaid labour of the poor"* -- to use Kropotkin's words).

There is substantial evidence to support such a theory. J.S Bain in **Barriers in New Competition** noted that in industries where the level of seller concentration was very high and where entry barriers were also substantial, profit rates were higher than average. Research has tended to confirm Bain's findings. Keith Cowling summarises this later evidence:

"[A]s far as the USA is concerned. . . there are grounds for believing that a significant, but not very strong, relationship exists between profitability and concentration. . . [along with] a significant relationship between advertising and profitability [an important factor in a market's "degree of monopoly"] . . . [Moreover w]here the estimation is restricted to

an appropriate cross-section [of industry] . . . both concentration and advertising appeared significant [for the UK]. By focusing on the impact of changes in concentration overtime . . . [we are] able to circumvent the major problems posed by the lack of appropriate estimates of price elasticities of demand . . . [to find] a significant and positive concentration effect. . . It seems reasonable to conclude on the basis of evidence for both the USA and UK that there is a significant relationship between concentration and price-cost margins." [Monopoly Capitalism, pp. 109-110]

We must note that the price-cost margin variable typically used in these studies subtracts the wage and **salary** bill from the value added in production. This would have a tendency to reduce the margin as it does not take into account that most management salaries (particularly those at the top of the hierarchy) are more akin to profits than costs (and so should **not** be subtracted from value added). Also, as many markets are regionalised (particularly in the USA) nation-wide analysis may downplay the level of concentration existing in a given market.

This means that large firms can maintain their prices and profits above "normal" (competitive) levels without the assistance of government simply due to their size and market power (and let us not forget the important fact that Big Business rose during the period in which capitalism was closest to "laissez faire" and the size and activity of the state was small). As much of mainstream economics is based on the idea of "perfect competition" (and the related concept that the free market is an efficient allocator of resources when it approximates this condition) it is clear that such a finding cuts to the heart of claims that capitalism is a system based upon equal opportunity, freedom and justice. The existence of Big Business and the impact it has on the rest of the economy and society at large exposes capitalist economics as a house built on sand (see sections [C.4.2](#) and [C.4.3](#)).

Another side effect of oligopoly is that the number of mergers will tend to increase in the run up to a slump. Just as credit is expanded in an attempt to hold off the crisis (see section [C.8](#)), so firms will merge in an attempt to increase their market power and so improve their profit margins by increasing their mark-up over costs. As the rate of profit levels off and falls, mergers are an attempt to raise profits by increasing the degree of monopoly in the market/economy. However, this is a short term solution and can only postpone, but stop, the crisis as its roots lie in production, **not** the market (see section [C.7](#)) -- there is only so much surplus value around and the capital stock cannot be wished away. Once the slump occurs, a period of cut-throat competition will start and then, slowly, the process of concentration will start again (as weak firms go under, successful firms increase their market share and capital stock and so on).

The development of oligopolies within capitalism thus causes a redistribution of profits away from small capitalists to Big Business (i.e. small businesses are squeezed by big ones due to the latter's market power and size). Moreover, the existence of oligopoly can and does result in increased costs faced by Big Business being passed on in the form of price increases, which can force other companies, in unrelated markets, to raise **their** prices in order to realise sufficient profits. Therefore, oligopoly has a tendency to create price increases across the market as a whole and can thus be inflationary.

For these (and other) reasons many small businessmen and members of the middle-class wind up hating Big Business (while trying to replace them!) and embracing ideologies which promise to wipe them out. Hence we see that both ideologies of the "radical" middle-class -- Libertarianism and fascism -- attack Big Business, either as "the socialism of Big Business" targeted by Libertarianism or the "International Plutocracy" by Fascism.

As Peter Sabatini notes in **Libertarianism: Bogus Anarchy**, "*[a]t the turn of the century, local entrepreneurial (proprietorship/partnership) business [in the USA] was overshadowed in short order by transnational corporate capitalism. . . . The various strata comprising the capitalist class responded differentially to these transpiring events as a function of their respective position of benefit. Small business that remained as such came to greatly resent the economic advantage corporate capitalism secured to itself, and the sweeping changes the latter imposed on the presumed ground rules of bourgeois competition. Nevertheless, because capitalism is liberalism's raison d'etre, small business operators had little choice but to blame the state for their financial woes, otherwise they moved themselves to another ideological camp (anti-capitalism). Hence, the enlarged state was imputed as the primary cause for capitalism's 'aberration' into its monopoly form, and thus it became the scapegoat for small business complaint.*"

However, despite the complaints of small capitalists, the tendency of markets to become dominated by a few big firms is an obvious side-effect of capitalism itself. "*If the home of 'Big Business' was once the public utilities and manufacturing it now seems to be equally comfortable in any environment*" [M.A. Utton, **Op. Cit.**, p. 29]. This is because in their drive to expand (which they must do in order to survive), capitalists invest in new machinery and plants in order to reduce production costs and so increase profits (see section [C.2](#) and related sections). Hence a successful capitalist firm will grow in size over time and squeeze out competitors.

C.5.1 Aren't the super-profits of Big Business due to its higher efficiency?

Obviously the analysis of Big Business profitability presented in section [C.5](#) is denied by supporters of capitalism. H. Demsetz of the pro-"free" market "Chicago School" of economists (which echoes the right-libertarian "Austrian" position that whatever happens on a free market is for the best) argues that **efficiency** (not degree of monopoly) is the cause of the super-profits for Big Business. His argument is that if oligopolistic profits are due to high levels of concentration, then the big firms in an industry will not be able to stop smaller ones reaping the benefits of this in the form of higher profits. So if concentration leads to high profits (due, mostly, to collusion between the dominant firms) then smaller firms in the same industry should benefit too.

However, his argument is flawed as it is not the case that oligopolies practice overt collusion. The barriers to entry/mobility are such that the dominant firms in an oligopolistic market do not have to compete by price and their market power allows a mark-up over costs which market forces cannot

undermine. As their only possible competitors are similarly large firms, collusion is not required as these firms have no interest in reducing the mark-up they share and so they "compete" over market share by non-price methods such as advertising (advertising, as well as being a barrier to entry, reduces price competition and increases mark-up).

In his study, Demsetz notes that while there is a positive correlation between profit rate and market concentration, smaller firms in the oligarchic market are **not** more profitable than their counterparts in other markets [see M.A. Utton, **The Political Economy of Big Business**, p. 98]. From this Demsetz concludes that oligopoly is irrelevant and that the efficiency of increased size is the source of excess profits. But this misses the point -- smaller firms in concentrated industries will have a similar profitability to firms of similar size in less concentrated markets, **not** higher profitability. The existence of super profits across **all** the firms in a given industry would attract firms to that market, so reducing profits. However, because profitability is associated with the large firms in the market the barriers of entry/movement associated with Big Business stops this process happening. **If** small firms were as profitable, then entry would be easier and so the "degree of monopoly" would be low and we would see an influx of smaller firms.

While it is true that bigger firms may gain advantages associated with economies of scale the question surely is, what stops the smaller firms investing and increasing the size of their companies in order to reap economies of scale within and between workplaces? What is stopping market forces eroding super-profits by capital moving into the industry and increasing the number of firms, and so increasing supply? If barriers exist to stop this process occurring, then concentration, market power and other barriers to entry/movement (not efficiency) is the issue. Competition is a **process**, not a state, and this indicates that "efficiency" is not the source of oligopolistic profits (indeed, what creates the apparent "efficiency" of big firms is likely to be the barriers to market forces which add to the mark-up!).

It seems likely that large firms gather "economies of scale" due to the size of the firm, not plant, as well as from the level of concentration within an industry. *"Considerable evidence indicates that economies of scale [at plant level] . . . do not account for the high concentration levels in U.S. industry"* [Richard B. Du Boff, **Accumulation and Power**, p. 174] and, further, *"the explanation for the enormous growth in aggregate concentration must be found in factors other than economies of scale at plant level."* [M.A. Utton, **Op. Cit.**, p. 44] Co-ordination of individual plants by the visible hand of management seems to be the key to creating and maintaining dominant positions within a market. And, of course, these structures are costly to create and maintain as well as taking time to build up. Thus the size of the firm, with the economies of scale **beyond** the workplace associated with the administrative co-ordination by management hierarchies, also creates formidable barriers to entry/movement.

Another important factor influencing the profitability of Big Business is the clout that market power provides. This comes in two main forms - horizontal and vertical controls:

"Horizontal controls allow oligopolies to control necessary steps in an economic process from material supplies to processing, manufacturing, transportation and distribution.

Oligopolies. . . [control] more of the highest quality and most accessible supplies than they intend to market immediately. . . competitors are left with lower quality or more expensive supplies. . . [It is also] based on exclusive possession of technologies, patents and franchises as well as on excess productive capacity [. . .]

*"Vertical controls substitute administrative command for exchange between steps of economic processes. The largest oligopolies procure materials from their own subsidiaries, process and manufacture these in their own refineries, mills and factories, transport their own goods and then market these through their own distribution and sales network." [Allan Engler, **Apostles of Greed**, p. 51]*

Moreover, large firms reduce their costs due to their privileged access to credit and resources. Both credit and advertising show economies of scale, meaning that as the size of loans and advertising increase, costs go down. In the case of finance, interest rates are usually cheaper for big firms than small one and while *"firms of all sizes find most [about 70% between 1970 and 1984] of their investments without having to resort to [financial] markets or banks"* size does have an impact on the *"importance of banks as a source of finance"*: *"Firms with assets under \$100 million relied on banks for around 70% of their long-term debt. . . those with assets from \$250 million to \$1 billion, 41%; and those with over \$1 billion in assets, 15%"* [Doug Henwood, **Wall Street**, p. 75]. Also dominant firms can get better deals with independent suppliers and distributors due to their market clout and their large demand for goods/inputs, also reducing their costs.

This means that oligopolies are more "efficient" (i.e. have higher profits) than smaller firms due to the benefits associated with their market power rather than vice versa. Concentration (and firm size) leads to "economies of scale" which smaller firms in the same market cannot gain access to. Hence the claim that any positive association between concentration and profit rates is simply recording the fact that the largest firms tend to be most efficient, and hence more profitable, is wrong. In addition, *"Demsetz's findings have been questioned by non-Chicago [school] critics"* due to the inappropriateness of the evidence used as well as some of his analysis techniques. Overall, *"the empirical work gives limited support"* to this "free-market" explanation of oligopolistic profits and instead suggest market power plays the key role. [William L. Baldwin, **Market Power, Competition and Anti-Trust Policy**, p. 310, p. 315]

Unsurprisingly we find that the *"bigger the corporation in size of assets or the larger its market share, the higher its rate of profit: these findings confirm the advantages of market power. . . Furthermore, 'large firms in concentrated industries earn systematically higher profits than do all other firms, about 30 percent more. . . on average,' and there is less variation in profit rates too."* [Richard B. Du Boff, **Accumulation and Power**, p. 175]

Thus, concentration, not efficiency, is the key to profitability, with those factors what create "efficiency" themselves being very effective barriers to entry which helps maintain the "degree of monopoly" (and so mark-up and profits for the dominant firms) in a market. Oligopolies have varying degrees of

administrative efficiency and market power, all of which consolidate its position -- "[t]he barriers to entry posed by decreasing unit costs of production and distribution and by national organisations of managers, buyers, salesmen, and service personnel made oligopoly advantages cumulative - and were as global in their implications as they were national." [Ibid., p. 150]

This recent research confirms Kropotkin's analysis of capitalism found in his classic work **Fields, Factories and Workshops** (first published in 1899). Kropotkin, after extensive investigation of the actual situation within the economy, argued that "*it is not the superiority of the **technical** organisation of the trade in a factory, nor the economies realised on the prime-mover, which militate against the small industry . . . but the more advantageous conditions for **selling** the produce and for **buying** the raw produce which are at the disposal of big concerns.*" Since the "*manufacture being a strictly private enterprise, its owners find it advantageous to have all the branches of a given industry under their own management: they thus cumulate the profits of the successful transformations of the raw material. . . [and soon] the owner finds his advantage in being able to hold the command of the market. But from a **technical** point of view the advantages of such an accumulation are trifling and often doubtful.*" He sums up by stating that "*[t]his is why the 'concentration' so much spoken of is often nothing but an amalgamation of capitalists for the purpose of **dominating the market**, not for cheapening the technical process.*" [Fields, Factories and Workshops Tomorrow, p. 147, p. 153 and p. 154]

All this means is that the "degree of monopoly" within an industry helps determine the distribution of profits within an economy, with some of the surplus value "created" by other companies being realised by Big Business. Hence, the oligopolies reduce the pool of profits available to other companies in more competitive markets by charging consumers higher prices than a more competitive market would. As high capital costs reduce mobility within and exclude most competitors from entering the oligopolistic market, it means that only if the oligopolies raise their prices **too** high can real competition become possible (i.e. profitable) again and so "*it should not be concluded that oligopolies can set prices as high as they like. If prices are set too high, dominant firms from other industries would be tempted to move in and gain a share of the exceptional returns. Small producers -- using more expensive materials or out-dated technologies -- would be able to increase their share of the market and make the competitive rate of profit or better.*" [Allan Engler, **Op. Cit.**, p. 53]

Big Business, therefore, receives a larger share of the available surplus value in the economy, due to its size advantage and market power, not due to "higher efficiency".

C.4 Why does the market become dominated by Big Business?

"The facts show. . .that capitalist economies tend over time and with some interruptions to become more and more heavily concentrated." [M.A. Utton, **The Political Economy of Big Business**, p. 186] The dynamic of the "free" market is that it tends to become dominated by a few firms (on a national, and increasingly, international, level), resulting in oligopolistic competition and higher profits for the companies in question (see [next section](#) for details and evidence). This occurs because only established firms can afford the large capital investments needed to compete, thus reducing the number of competitors who can enter or survive in a given the market. Thus, in Proudhon's words, *"competition kills competition."* [**System of Economical Contradictions**, p. 242]

This *"does not mean that new, powerful brands have not emerged [after the rise of Big Business in the USA after the 1880s]; they have, but in such markets. . . which were either small or non-existent in the early years of this century."* The dynamic of capitalism is such that the *"competitive advantage [associated with the size and market power of Big Business], once created, prove[s] to be enduring."* [Paul Ormerod, **The Death of Economics**, p. 55]

For people with little or no capital, entering competition is limited to new markets with low start-up costs (*"In general, the industries which are generally associated with small scale production. . . have low levels of concentration"* [Malcolm C. Sawyer, **The Economics of Industries and Firms**, p. 35]). Sadly, however, due to the dynamics of competition, these markets usually in turn become dominated by a few big firms, as weaker firms fail, successful ones grow and capital costs increase -- *"Each time capital completes its cycle, the individual grows smaller in proportion to it."* [Josephine Guerts, **Anarchy: A Journal of Desire Armed** no. 41, p. 48]

For example, between 1869 and 1955 *"there was a marked growth in capital per person and per number of the labour force. Net capital per head rose. . . to about four times its initial level. . . at a rate of about 17% per decade."* The annual rate of gross capital formation rose *"from \$3.5 billion in 1869-1888 to \$19 billion in 1929-1955, and to \$30 billion in 1946-1955. This long term rise over some three quarters of a century was thus about nine times the original level."* [Simon Kuznets, **Capital in the American Economy**, p. 33 and p. 394, constant (1929) dollars]. To take the steel industry as an illustration: in 1869 the average cost of steel works in the USA was \$156,000, but by 1899 it was \$967,000 -- a 520% increase. From 1901 to 1950, gross fixed assets increased from \$740,201 to \$2,829,186 in the steel industry as a whole, with the assets of Bethlehem Steel increasing by 4,386.5% from 1905 (\$29,294) to 1950 (\$1,314,267). These increasing assets are reflect both in the size of workplaces and in the administration levels in the company as a whole (i.e. **between** individual workplaces).

With the increasing ratio of capital to worker, the cost of starting a rival firm in a given, well-developed, market prohibits all but other large firms from doing so (and here we ignore advertising and other

distribution expenses, which increase start-up costs even more - "*advertising raises the capital requirements for entry into the industry*" -- Sawyer, **Op. Cit.**, p. 108). J.S Bain [**Barriers in New Competition**] identified three main sources of entry barrier: economies of scale (i.e. increased capital costs and their more productive nature); product differentiation (i.e. advertising); and a more general category he called "*absolute cost advantage*."

This last barrier means that larger companies are able to outbid smaller companies for resources, ideas, etc. and put more money into Research and Development and buying patents. Therefore they can have a technological and material advantage over the small company. They can charge "uneconomic" prices for a time (and still survive due to their resources) -- an activity called "*predatory pricing*" -- and/or mount lavish promotional campaigns to gain larger market share or drive competitors out of the market. In addition, it is easier for large companies to raise external capital, and risk is generally less.

In addition, large firms can have a major impact on innovation and the development of technology -- they can simply absorb newer, smaller, enterprises by way of their economic power, buying out (and thus controlling) new ideas, much the way oil companies hold patents on a variety of alternative energy source technologies, which they then fail to develop in order to reduce competition for their product (of course, at some future date they may develop them when it becomes profitable for them to do so). Also, when control of a market is secure, oligopolies will usually delay innovation to maximise their use of existing plant and equipment or introduce spurious innovations to maximise product differentiation. If their control of a market is challenged (usually by other big firms, such as the increased competition Western oligopolies faced from Japanese ones in the 1970s and 1980s), they can speed up the introduction of more advanced technology and usually remain competitive (due, mainly, to the size of the resources they have available).

These barriers work on two levels - **absolute** (entry) barriers and **relative** (movement) barriers. As business grows in size, the amount of capital required to invest in order to start a business also increases. This restricts entry of new capital into the market (and limits it to firms with substantial financial and/or political backing behind them):

*"Once dominant organisations have come to characterise the structure of an industry, immense barriers to entry face potential competitors. Huge investments in plant, equipment, and personnel are needed. . . [T]he development and utilisation of productive resources **within** the organisation takes considerable time, particularly in the face of formidable incumbents . . . It is therefore one thing for a few business organisations to emerge in an industry that has been characterised by . . . highly competitive conditions. It is quite another to break into an industry. . . [marked by] oligopolistic market power."* [William Lazonick, **Business Organisation and the Myth of the Market Economy**, pp. 86-87]

Moreover, **within** the oligopolistic industry, the large size and market power of the dominant firms mean that smaller firms face expansion disadvantages which reduce competition. The dominant firms have

many advantages over their smaller rivals -- significant purchasing power (which gains better service and lower prices from suppliers as well as better access to resources), privileged access to financial resources, larger amounts of retained earnings to fund investment, economies of scale both within and **between** workplaces, the undercutting of prices to "uneconomical" levels and so on (and, of course, they can **buy** the smaller company -- IBM paid \$3.5 billion for Lotus in 1995. That is about equal to the entire annual output of Nepal, which has a population of 20 million). The large firm or firms can also rely on its established relationships with customers or suppliers to limit the activities of smaller firms which are trying to expand (for example, using their clout to stop their contacts purchasing the smaller firms products).

Little wonder Proudhon argued that "*[i]n competition. . . victory is assured to the heaviest battalions.*" [Op. Cit., p. 260]

As a result of these entry/movement barriers, we see the market being divided into two main sectors -- an oligopolistic sector and a more competitive one. These sectors work on two levels -- within markets (with a few firms in a given market having very large market shares, power and excess profits) and within the economy itself (some markets being highly concentrated and dominated by a few firms, other markets being more competitive). This results in smaller firms in oligopolistic markets being squeezed by big business along side firms in more competitive markets. Being protected from competitive forces means that the market price of oligopolistic markets is **not** forced down to the average production price by the market, but instead it tends to stabilise around the production price of the smaller firms in the industry (which do not have access to the benefits associated with dominant position in a market). This means that the dominant firms get super-profits while new capital is not tempted into the market as returns would not make the move worthwhile for any but the biggest companies, who usually get comparable returns in their own oligopolised markets (and due to the existence of market power in a few hands, entry can potentially be disastrous for small firms if the dominant firms perceive expansion as a threat).

Thus whatever super-profits Big Business reap are maintained due to the advantages it has in terms of concentration, market power and size which reduce competition (see [section C.5](#) for details).

And, we must note, that the processes that saw the rise of national Big Business is also at work on the global market. Just as Big Business arose from a desire to maximise profits and survive on the market, so "*[t]ransnationals arise because they are a means of consolidating or increasing profits in an oligopoly world.*" [Keith Cowling and Roger Sugden, **Transnational Monopoly Capitalism**, p. 20] So while a strictly national picture will show a market dominated by, say, four firms, a global view shows us twelve firms instead and market power looks much less worrisome. But just as the national market saw a increased concentration of firms over time, so will global markets. Over time a well-evolved structure of global oligopoly will appear, with a handful of firms dominating most global markets (with turnovers larger than most countries GDP -- which is the case even now. For example, in 1993 Shell had assets of US\$ 100.8 billion, which is more than double the GDP of New Zealand and three times that of Nigeria, and total sales of US\$ 95.2 billion).

Thus the very dynamic of capitalism, the requirements for survival on the market, results in the market becoming dominated by Big Business (*"the more competition develops, the more it tends to reduce the number of competitors."* [P-J Proudhon, **Op. Cit.**, p. 243]). The irony that competition results in its destruction and the replacement of market co-ordination with planned allocation of resources is one usually lost on supporters of capitalism.

C.4.1 How extensive is Big Business?

The effects of Big Business on assets, sales and profit distribution are clear. In the USA, in 1985, there were 14,600 commercial banks. The 50 largest owned 45.7 of all assets, the 100 largest held 57.4%. In 1984 there were 272,037 active corporations in the manufacturing sector, 710 of them (one-fourth of 1 percent) held 80.2 percent of total assets. In the service sector (usually held to home of small business), 95 firms of the total of 899,369 owned 28 percent of the sector's assets. In 1986 in agriculture, 29,000 large farms (only 1.3% of all farms) accounted for one-third of total farm sales and 46% of farm profits. In 1987, the top 50 firms accounted for 54.4% of the total sales of the **Fortune** 500 largest industrial companies. [Richard B. Du Boff, **Accumulation and Power**, p. 171]

The process of market domination is reflected by the increasing market share of the big companies. In Britain, the top 100 manufacturing companies saw their market share rise from 16% in 1909, to 27% in 1949, to 32% in 1958 and to 42% by 1975. In terms of net assets, the top 100 industrial and commercial companies saw their share of net assets rise from 47% in 1948 to 64% in 1968 to 80% in 1976 [RCO Matthews (ed.), **Economy and Democracy**, p. 239]. Looking wider afield, we find that in 1995 about 50 firms produce about 15 percent of the manufactured goods in the industrialised world. There are about 150 firms in the world-wide motor vehicle industry. But the two largest firms, General Motors and Ford, together produce almost one-third of all vehicles. The five largest firms produce half of all output and the ten largest firms produce three-quarters. Four appliance firms manufacture 98 percent of the washing machines made in the United States. In the U. S. meatpacking industry, four firms account for over 85 percent of the output of beef, while the other 1,245 firms have less than 15 percent of the market.

While the concentration of economic power is most apparent in the manufacturing sector, it is not limited to manufacturing. We are seeing increasing concentration in the service sector - airlines, fast-food chains and the entertainment industry are just a few examples.

The other effect of Big Business is that large companies tend to become more diversified as the concentration levels in individual industries increase. This is because as a given market becomes dominated by larger companies, these companies expand into other markets (using their larger resources to do so) in order to strengthen their position in the economy and reduce risks. This can be seen in the rise of "subsidiaries" of parent companies in many different markets, with some products apparently competing against each other actually owned by the same company!

Tobacco companies are masters of this diversification strategy; most people support their toxic industry

without even knowing it! Don't believe it? Well, if you ate any Jell-O products, drank Kool-Aid, used Log Cabin syrup, munched Minute Rice, quaffed Miller beer, gobbled Oreos, smeared Velveeta on Ritz crackers, and washed it all down with Maxwell House coffee, you supported the tobacco industry, all without taking a puff on a cigarette!

Ironically, the reason why the economy becomes dominated by Big Business has to do with the nature of competition itself. In order to survive (by maximising profits) in a competitive market, firms have to invest in capital, advertising, and so on. This survival process results in barriers to potential competitors being created, which results in more and more markets being dominated by a few big firms. This oligopolisation process becomes self-supporting as oligopolies (due to their size) have access to more resources than smaller firms. Thus the dynamic of competitive capitalism is to negate itself in the form of oligopoly.

C.4.2 What are the effects of Big Business on society?

Unsurprisingly many pro-capitalist economists and supporters of capitalism try to downplay the extensive evidence on the size and dominance of Big Business in capitalism.

Some deny that Big Business is a problem - if the market results in a few companies dominating it, then so be it (the right-libertarian "Austrian" school is at the forefront of this kind of position - although it does seem somewhat ironic that "Austrian" economists and other "market advocates" should celebrate the suppression of market co-ordination by **planned** co-ordination within the economy that the increased size of Big Business marks). According to this perspective, oligopolies and cartels usually do not survive very long, unless they are doing a good job of serving the customer.

We agree -- it is oligopolistic **competition** we are discussing here. Big Business has to be responsive to demand (when not manipulating/creating it by advertising, of course), otherwise they lose market share to their rivals (usually other dominant firms in the same market, or big firms from other countries). However, the "free market" response to the reality of oligopoly ignores the fact that we are more than just consumers and that economic activity and the results of market events impact on many different aspects of life. Thus our argument is not focused on the fact we pay more for some products than we would in a more competitive market -- it is the **wider** results of oligopoly we are concerned with here. If a few companies receive excess profits just because their size limits competition the effects of this will be felt **everywhere**.

For a start, these "excessive" profits will tend to end up in few hands, so skewing the income distribution (and so power and influence) within society. The available evidence suggests that *"more concentrated industries generate a lower wage share for workers"* in a firm's value-added. [Keith Cowling, **Monopoly Capitalism**, p. 106] The largest firms retain only 52% of their profits, the rest is paid out as dividends, compared to 79% for the smallest ones and *"what might be called rentiers share of the corporate surplus - dividends plus interest as a percentage of pretax profits and interest - has risen sharply, from 20-30% in the 1950s to 60-70% in the early 1990s."* [Doug Henwood, **Wall Street**, p. 75,

p. 73] The top 10% of the US population own well over 80% of stock and bonds owned by individuals while the top 5% of stockowners own 94.5% of all stock held by individuals. Little wonder wealth has become so concentrated since the 1970s [**Ibid.**, pp. 66-67]. At its most basic, this skewing of income provides the capitalist class with more resources to fight the class war but its impact goes much wider than this.

Moreover, the *"level of aggregate concentration helps to indicate the degree of centralisation of decision-making in the economy and the economic power of large firms."* [Malcolm C. Sawyer, **Op. Cit.**, p. 261] Thus oligopoly increases and centralises economic power over investment decisions and location decisions which can be used to play one region/country and/or workforce against another to lower wages and conditions for all (or, equally likely, investment will be moved away from countries with rebellious work forces or radical governments, the resulting slump teaching them a lesson on whose interests count). As the size of business increases, the power of capital over labour and society also increases with the threat of relocation being enough to make workforces accept pay cuts, worsening conditions, "down-sizing" and so on and communities increased pollution, the passing of pro-capital laws with respect to strikes, union rights, etc. (and increased corporate control over politics due to the mobility of capital).

Also, of course, oligopoly results in political power as their economic importance and resources gives them the ability to influence government to introduce favourable policies -- either directly, by funding political parties, or indirectly by investment decisions or influence the media and funding political think-tanks. Economic power also extends into the labour market, where restricted labour opportunities as well as negative effects on the work process itself may result. All of which shapes the society we live in the laws we are subject to, the "evenness" and "levelness" of the "playing field" we face in the market and the ideas dominant in society (see sections [D.2](#) and [D.3](#)).

So, with increasing size, comes the increasing power, the power of oligopolies to *"influence the terms under which they choose to operate. Not only do they **react** to the level of wages and the pace of work, they also **act** to determine them. . . The credible threat of the shift of production and investment will serve to hold down wages and raise the level of effort [required from workers] . . . [and] may also be able to gain the co-operation of the state in securing the appropriate environment . . . [for] a redistribution towards profits"* in value/added and national income. [Keith Cowling and Roger Sugden, **Transnational Monopoly Capitalism**, p. 99]

Since the market price of commodities produced by oligopolies is determined by a mark-up over costs, this means that they contribute to inflation as they adapt to increasing costs or falls in their rate of profit by increasing prices. However, this does not mean that oligopolistic capitalism is not subject to slumps. Far from it. Class struggle will influence the share of wages (and so profit share) as wage increases will not be fully offset by price increases -- higher prices mean lower demand and there is always the threat of competition from other oligopolies. In addition, class struggle will also have an impact on productivity and the amount of surplus value in the economy as a whole, which places major limitations on the stability of the system. Thus oligopolistic capitalism still has to contend with the effects of social

resistance to hierarchy, exploitation and oppression that afflicted the more competitive capitalism of the past.

The distributive effects of oligopoly skews income, thus the degree of monopoly has a major impact on the degree of inequality in household distribution. The flow of wealth to the top helps to skew production away from working class needs (by outbidding others for resources and having firms produce goods for elite markets while others go without). The empirical evidence presented by Keith Cowling "*points to the conclusion that a redistribution from wages to profits will have a depressive impact on consumption*" [**Op. Cit.**, p. 51] which may cause depression. High profits also means that more can be retaining by the firm to fund investment (or pay high level managers more salaries or increase dividends, of course). When capital expands faster than labour income over-investment is an increasing problem and aggregate demand cannot keep up to counteract falling profit shares (see [section C.7](#) on more about the business cycle). Moreover, as the capital stock is larger, oligopoly will also have a tendency to deepen the eventual slump, making it last long and harder to recover from.

Looking at oligopoly from an efficiency angle, the existence of super profits from oligopolies means that the higher price within a market allows inefficient firms to continue production. Smaller firms can make average (non-oligopolistic) profits **in spite** of having higher costs, sub-optimal plant and so on. This results in inefficient use of resources as market forces cannot work to eliminate firms which have higher costs than average (one of the key features of capitalism according to its supporters). And, of course, oligopolistic profits skew allocative efficiency as a handful of firms can out-bid all the rest, meaning that resources do not go where they are most needed but where the largest effective demand lies.

Such large resources available to oligopolistic companies also allows inefficient firms to survive on the market even in the face of competition from other oligopolistic firms. As Richard B. Du Boff points out, efficiency can also be "*impaired when market power so reduces competitive pressures that administrative reforms can be dispensed with. One notorious case was . . . U.S. Steel [formed in 1901]. Nevertheless, the company was hardly a commercial failure, effective market control endured for decades, and above normal returns were made on the watered stock. . . Another such case was Ford. The company survived the 1930s only because of cash reserves socked away in its glory days. Ford provides an excellent illustration of the fact that a really large business organisation can withstand a surprising amount of mismanagement.*" [**Accumulation and Power**, p. 174]

Thus Big Business reduces efficiency within an economy on many levels as well as having significant and lasting impact on society's social, economic and political structure.

The effects of the concentration of capital and wealth on society are very important, which is why we are discussing capitalism's tendency to result in big business. The impact of the wealth of the few on the lives of the many is indicated in [section D](#) of the FAQ. As shown there, in addition to involving direct authority over employees, capitalism also involves indirect control over communities through the power that stems from wealth.

Thus capitalism is not the free market described by such people as Adam Smith -- the level of capital concentration has made a mockery of the ideas of free competition.

C.4.3 What does the existence of Big Business mean for economic theory and wage labour?

Here we indicate the impact of Big Business on economic theory itself and wage labour. In the words of Michal Kalecki, perfect competition is *"a most unrealistic assumption"* and *"when its actual status of a handy model is forgotten becomes a dangerous myth."* [quoted by Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 8] Unfortunately mainstream capitalist economics is **built** on this myth. Ironically, it was against a *"background [of rising Big Business in the 1890s] that the grip of marginal economics, an imaginary world of many small firms. . . was consolidated in the economics profession."* Thus, *"[a]lmost from its conception, the theoretical postulates of marginal economics concerning the nature of companies [and of markets, we must add] have been a travesty of reality."* [Paul Ormerod, **Op. Cit.**, pp. 55-56]

That the assumptions of economic ideology so contradicts reality has important considerations on the "voluntary" nature of wage labour. If the competitive model assumed by neo-classical economics held we would see a wide range of ownership types (including co-operatives, extensive self-employment and workers hiring capital) as there would be no "barriers of entry" associated with firm control. This is not the case -- workers hiring capital is non-existent and self-employment and co-operatives are marginal. The dominant control form is capital hiring labour (wage slavery).

With a model based upon "perfect competition," supporters of capitalism could build a case that wage labour is a voluntary choice -- after all, workers (in such a market) could hire capital or form co-operatives relatively easily. But the **reality** of the "free" market is such that this model does not exist -- and as an assumption, it is seriously misleading. If we take into account the actuality of the capitalist economy, we soon have to realise that oligopoly is the dominant form of market and that the capitalist economy, by its very nature, restricts the options available to workers -- which makes the notion that wage labour is a "voluntary" choice untenable.

If the economy is so structured as to make entry into markets difficult and survival dependent on accumulating capital, then these barriers are just as effective as government decrees. If small businesses are squeezed by oligopolies then chances of failure are increased (and so off-putting to workers with few resources) and if income inequality is large, then workers will find it very hard to find the collateral required to borrow capital and start their own co-operatives. Thus, looking at the **reality** of capitalism (as opposed to the textbooks) it is clear that the existence of oligopoly helps to maintain wage labour by restricting the options available on the "free market" for working people.

As we noted in [section C.4](#), those with little capital are reduced to markets with low set-up costs and low concentration. Thus, claim the supporters of capitalism, workers still have a choice. However, this

choice is (as we have indicated) somewhat limited by the existence of oligopolistic markets -- so limited, in fact, that less than 10% of the working population are self-employed workers. Moreover, it is claimed, technological forces may work to increase the number of markets that require low set-up costs (the computing market is often pointed to as an example). However, similar predictions were made over 100 years ago when the electric motor began to replace the steam engine in factories. *"The new technologies [of the 1870s] may have been compatible with small production units and decentralised operations. . . That. . . expectation was not fulfilled."* [Richard B. Du Boff, **Op. Cit.**, p. 65] From the history of capitalism, we imagine that markets associated with new technologies will go the same way.

The reality of capitalist development is that even **if** workers invested in new markets, one that require low set-up costs, the dynamic of the system is such that over time these markets will also become dominated by a few big firms. Moreover, to survive in an oligopolised economy small cooperatives will be under pressure to hire wage labour and otherwise act as capitalist concerns (see [section J.5.11](#)). Therefore, even if we ignore the massive state intervention which created capitalism in the first place (see [section B.3.2](#)), the dynamics of the system are such that relations of domination and oppression will always be associated with it -- they cannot be "competed" away as the actions of competition creates and re-enforces them (also see sections [J.5.11](#) and [J.5.12](#) on the barriers capitalism place on co-operatives and self-management even though they are more efficient).

So the effects of the concentration of capital on the options open to us are great and very important. The existence of Big Business has a direct impact on the "voluntary" nature of wage labour as it produces very effective "barriers of entry" for alternative modes of production. The resultant pressures big business place on small firms also reduces the viability of co-operatives and self-employment to survive **as** co-operatives and non-employers of wage labour, effectively marginalising them as true alternatives. Moreover, even in new markets the dynamics of capitalism are such that **new** barriers are created all the time, again reducing our options.

Overall, the **reality** of capitalism is such that the equality of opportunity implied in models of "perfect competition" is lacking. And without such equality, wage labour cannot be said to be a "voluntary" choice between available options -- the options available have been skewed so far in one direction that the other alternatives have been marginalised.

D.2 What influence does wealth have over politics?

The short answer is: a great deal of influence, directly and indirectly. We have already touched on this in section B.2.3 ("[How does the ruling class maintain control of the state?](#)") Here we will expand on those remarks.

State policy in a capitalist democracy is usually well-insulated from popular influence but very open to elite influence and money interests. Let's consider the possibility of direct influence first. It's obvious that elections cost money and that only the rich and corporations can realistically afford to take part in a major way. Even union donations to political parties cannot effectively compete with those from the business classes. For example, in the 1972 US presidential elections, of the \$500 million spent, only about \$13 million came from trade unions. The vast majority of the rest undoubtedly came from Big Business and wealthy individuals. For the 1956 elections, the last year for which direct union-business comparisons are possible, the contributions of 742 businessmen matched those of unions representing 17 million workers. And this was at a time when unions had large memberships and before the decline of organised labour.

Therefore, logically, politics will be dominated by the rich and powerful -- in fact if not in theory -- since only the rich can afford to run and only parties supported by the wealthy will gain enough funds and favourable press coverage to have a chance (see section D.3, "[How does wealth influence the mass media?](#)"). Even in countries with strong union movements which support labour-based parties, the political agenda is dominated by the media. As the media are owned by and dependent upon advertising from business, it is hardly surprising that independent labour-based political agendas are difficult to follow or be taken seriously. Moreover, the funds available for labour parties are always less than those of capitalist supported parties, meaning that the ability of the former to compete in "fair" elections is hindered. And this is ignoring the fact that the state structure is designed to ensure that real power lies not in the hands of elected representatives but rather in the hands of the state bureaucracy (see [section J.2.2](#)) which ensures that any pro-labour political agenda will be watered down and made harmless to the interests of the ruling class.

To this it must be added that wealth has a massive **indirect** influence over politics (and so over society and the law). We have noted above that wealth controls the media and their content. However, beyond this there is what can be called "Investor Confidence," which is another important source of influence. If a government starts to pass laws or act in ways that conflict with the desires of business, capital may become reluctant to invest (and may even disinvest and move elsewhere). The economic downturn that results will cause political instability, giving the government no choice but to regard the interests of business as privileged. "What is good for business" really is good for the country, because if business suffers, so will everyone else.

David Noble provides a good summary of the effects of such indirect pressures when he writes firms *"have the ability to transfer production from one country to another, to close a plant in one and reopen it elsewhere, to direct and redirect investment wherever the 'climate' is most favourable [to business]. . . . [I]t has enabled the corporation to play one workforce off against another in the pursuit of the cheapest and most compliant labour (which gives the misleading appearance of greater efficiency). . . . [I]t has compelled regions and nations to compete with one another to try and attract investment by offering tax incentives, labour discipline, relaxed environmental and other regulations and publicly subsidised infrastructure. . . . Thus has emerged the great paradox of our age, according to which those nations that prosper most (attract corporate investment) by most readily lowering their standard of living (wages, benefits, quality of life, political freedom). The net result of this system of extortion is a universal lowering of conditions and expectations in the name of competitiveness and prosperity."* [**Progress Without People**, pp. 91-92]

And, we must note, even when a country **does** lower its standard of living to attract investment or encourage its own business class to invest (as the USA and UK did by means of recession to discipline the workforce by high unemployment), it is no guarantee that capital will stay. US workers have seen their companies' profits rise while their wages have stagnated and (in reward) hundreds of thousands have been "down-sized" or seen their jobs moved to Mexico or South East Asia sweatshops. In the far east, Japanese, Hong Kong, and South Korean workers have also seen their manufacturing jobs move to low wage (and more repressive/authoritarian) countries such as China and Indonesia.

As well as the mobility of capital, there is also the threat posed by public debt. As Doug Henwood notes, *"[p]ublic debt is a powerful way of assuring that the state remains safely in capital's hands. The higher a government's debt, the more it must please its bankers. Should bankers grow displeased, they will refuse to roll over old debts or to extend new financing on any but the most punishing terms (if at all). The explosion of [US] federal debt in the 1980s vastly increased the power of creditors to demand austere fiscal and monetary policies to dampen the US economy as it recovered . . . from the 1989-92 slowdown."* [**Wall Street**, pp. 23-24] And, we must note, Wall street made a fortune on the debt, directly and indirectly.

Commenting on Clinton's plans for the devolution of welfare programmes from Federal to State government in America, Noam Chomsky makes the important point that *"under conditions of relative equality, this could be a move towards democracy. Under existing circumstances, devolution is intended as a further blow to the eroding democratic processes. Major corporations, investment firms, and the like, can constrain or directly control the acts of national governments and can set one national workforce against another. But the game is much easier when the only competing player that might remotely be influenced by the 'great beast' is a state government, and even middle-sized enterprise can join in. The shadow cast by business [over society and politics] can thus be darker, and private power can move on to greater victories in the name of freedom."* [Noam Chomsky, "Rollback III", **Z Magazine**, March, 1995]

Economic blackmail is a very useful weapon in deterring freedom.

D.2.1 Is capital flight really that powerful?

Yes. By capital flight, business can ensure that any government which becomes too independent and starts to consider the interests of those who elected it will be put back into its place. Therefore we cannot expect a different group of politicians to react in different ways to the same institutional influences and interests. It's no coincidence that the Australian Labour Party and the Spanish Socialist Party introduced "Thatcherite" policies at the same time as the "Iron Lady" implemented them in Britain. The New Zealand Labour government is a case in point, where *"within a few months of re-election [in 1984], finance minister Roger Douglas set out a programme of economic 'reforms' that made Thatcher and Reagan look like wimps. . . . [A]lmost everything was privatised and the consequences explained away in marketspeak. Division of wealth that had been unknown in New Zealand suddenly appeared, along with unemployment, poverty and crime."* [John Pilger, "Breaking the one party state," **New Statesman**, 16/12/94]

An extreme example of capital flight being used to "discipline" a naughty administration can be seen in the 1974 to '79 Labour government in Britain. In January, 1974, the FT Index for the London Stock Exchange stood at 500 points. In February, the Miner's went on strike, forcing Heath (the Tory Prime Minister) to hold (and lose) a general election. The new Labour government (which included many left-wingers in its cabinet) talked about nationalising the banks and much heavy industry. In August, 1974, Tony Benn announced plans to nationalise the ship building industry. By December, the FT index had fallen to 150 points. By 1976 the Treasury was spending \$100 million a day buying back its own money to support the pound [**The Times**, 10/6/76].

The Times noted that *"the further decline in the value of the pound has occurred despite the high level of interest rates. . . . [D]ealers said that selling pressure against the pound was not heavy or persistent, but there was an almost total lack of interest amongst buyers. The drop in the pound is extremely surprising in view of the unanimous opinion of bankers, politicians and officials that the currency is undervalued."* [27/5/76]

The Labour government, faced with the power of international capital, ended up having to receive a temporary "bailing out" by the IMF, which imposed a package of cuts and controls, to which Labour's response was, in effect, *"We'll do anything you say,"* as one economist described. The social costs of these policies were disastrous, with unemployment rising to the then unheard-of-height of one million. And let's not forget that they *"cut expenditure by twice the amount the IMF were promised"* in an attempt to appear business-friendly. it [Peter Donaldson, **A Question of Economics**, p. 89]

Capital will not invest in a country that does not meet its approval. In 1977, the Bank of England failed to get the Labour government to abolish its exchange controls. Between 1979 and 1982 the Tories abolished them and ended restrictions on lending for banks and building societies:

"The result of the abolition of exchange controls was visible almost immediately: capital

*hitherto invested in the U.K. began going abroad. In the **Guardian** of 21 September, 1981, Victor Keegan noted that 'Figures published last week by the Bank of England show that pension funds are now investing 25% of their money abroad (compared with almost nothing a few years ago) and there has been no investment at all (net) by unit trusts in the UK since exchange controls were abolished'" [Robin Ramsay, **Lobster** no. 27, p. 3].*

Why? What was so bad about the UK? Simply stated, the working class was too militant, the trade unions were not "*shackled by law and subdued,*" as **The Economist** recently put it [February 27, 1993], and the welfare state could be lived on. The partial gains from previous struggles still existed, and people had enough dignity not to accept any job offered or put up with an employer's authoritarian practices. These factors created "inflexibility" in the labour market, so that the working class had to be taught a lesson in "good" economics.

By capital flight a rebellious population and a slightly radical government were brought to heel.

D.2.2 How extensive is business propaganda?

Business spends a lot of money to ensure that people accept the status quo. Referring again to the US as an example (where such techniques are common), various means are used to get people to identify "free enterprise" (meaning state-subsidised private power with no infringement of managerial prerogatives) as "the American way." The success of these campaigns is clear, since many working people now object to unions as having too much power or irrationally rejecting all radical ideas as "Communism" regardless of their content.

By 1978, American business was spending \$1 billion a year on grassroots propaganda (known as "Astroturf" by PR insiders, to reflect the appearance of popular support, without the substance, and "grasstops" whereby influential citizens are hired to serve as spokespersons for business interests). In 1983, there existed 26 general purpose foundations for this purpose with endowments of \$100 million or more, as well as dozens of corporate foundations. These, along with media power, ensure that force -- always an inefficient means of control -- is replaced by the "manufacture of consent": the process whereby the limits of acceptable expression are defined by the wealthy.

This process has been going on for some time. For example "*[i]n April 1947, the Advertising Council announced a \$100 million campaign to use all media to 'sell' the American economic system -- as they conceived it -- to the American people; the program was officially described as a 'major project of educating the American people about the economic facts of life.' Corporations 'started extensive programs to indoctrinate employees,' the leading business journal **Fortune** reported, subjected their captive audiences to 'Courses in Economic Education' and testing them for commitment to the 'free enterprise system -- that is, Americanism.'* A survey conducted by the American Management Association (AMA) found that many corporate leaders regarded 'propaganda' and 'economic education' as synonymous, holding that 'we want our people to think right'. . . [and that] 'some employers view. . . [it] as a sort of 'battle of loyalties' with the unions' -- a rather unequal battle, given the resources

available." [Noam Chomsky, **World Orders, Old and New**, pp. 89-90]

Various institutions are used to get Big Business's message across, for example, the Joint Council on Economic Education, ostensibly a charitable organisation, funds economic education for teachers and provides books, pamphlets and films as teaching aids. In 1974, 20,000 teachers participated in its workshops. The aim is to induce teachers to present corporations in an uncritical light to their students. Funding for this propaganda machine comes from the American Bankers Association, AT&T, the Sears Roebuck Foundation and the Ford Foundation.

As G. William Domhoff points out, "*[a]lthough it [and other bodies like it] has not been able to bring about active acceptance of all power elite policies and perspectives, on economic or other domestic issues, it has been able to ensure that opposing opinions have remained isolated, suspect and only partially developed.*" [**Who Rules America Now?**, pp. 103-4] In other words, "unacceptable" ideas are marginalised, the limits of expression defined, and all within a society apparently based on "the free marketplace of ideas."

The effects of this business propaganda are felt in all other aspects of life, ensuring that while the US business class is extremely class conscious, the rest of the American population considers "class" a swear word!

D.3 How does wealth influence the mass media?

Anarchists have developed detailed and sophisticated analyses of how the wealthy and powerful use the media to propagandise in their own interests. Perhaps the best of these analyses is the "*Propaganda Model*" expounded in **Manufacturing Consent** by Noam Chomsky and Edward Herman, whose main theses we will summarise in this section (See also Chomsky's **Necessary Illusions** for a further discussion of this model of the media).

Chomsky and Herman's "propaganda model" of the media postulates a set of five "*filters*" that act to screen the news and other material disseminated by the media. These "filters" result in a media that reflects elite viewpoints and interests and mobilises "*support for the special interests that dominate the state and private activity.*" [**Manufacturing Consent**, p. xi]. These "filters" are: (1) the size, concentrated ownership, owner wealth, and profit orientation of the dominant mass-media firms; (2) advertising as the primary income source of the mass media; (3) the reliance of the media on information provided by government, business, and "experts" funded and approved by these primary sources and agents of power; (4) "flak" (negative responses to a media report) as a means of disciplining the media; and (5) "anticommunism" as a national religion and control mechanism.

"The raw material of news must pass through successive filters leaving only the cleansed residue fit to print," Chomsky and Herman maintain. The filters "*fix the premises of discourse and interpretation, and the definition of what is newsworthy in the first place, and they explain the basis and operations of what amount to propaganda campaigns*" [**Manufacturing Consent**, p. 2]. We will briefly consider the nature of these five filters below (examples are mostly from the US media).

We stress again, before continuing, that this is a **summary** of Herman's and Chomsky's thesis and we cannot hope to present the wealth of evidence and argument available in either **Manufacturing Consent** or **Necessary Illusions**. We recommend either of these books for more information on and evidence to support the "propaganda model" of the media.

D.3.1 How does the size, concentrated ownership, owner wealth, and profit orientation of the dominant mass-media firms affect media content?

Even a century ago, the number of media with any substantial outreach was limited by the large size of the necessary investment, and this limitation has become increasingly effective over time. As in any well developed market, this means that there are very effective **natural** barriers to entry into the media industry. Due to this process of concentration, the ownership of the major media has become increasingly concentrated in fewer and fewer hands. As Ben Bagdikian's stresses in his book **Media Monopoly**, the 29 largest media systems account for over half of the output of all newspapers, and most

of the sales and audiences in magazines, broadcasting, books, and movies. The "top tier" of these -- somewhere between 10 and 24 systems -- along with the government and wire services, "defines the news agenda and supplies much of the national and international news to the lower tiers of the media, and thus for the general public" [**Ibid.**, p. 5]

The twenty-four top-tier companies are large, profit-seeking corporations, owned and controlled by very wealthy people. Many of these companies are fully integrated into the financial market, with the result that the pressures of stockholders, directors, and bankers to focus on the bottom line are powerful. These pressures have intensified in recent years as media stocks have become market favourites and as deregulation has increased profitability and so the threat of take-overs.

The media giants have also diversified into other fields. For example GE, and Westinghouse, both owners of major television networks, are huge, diversified multinational companies heavily involved in the controversial areas of weapons production and nuclear power. GE and Westinghouse depend on the government to subsidise their nuclear power and military research and development, and to create a favourable climate for their overseas sales and investments. Similar dependence on the government affect other media.

Because they are large corporations with international investment interests, the major media tend to have a right-wing political bias. In addition, members of the business class own most of the mass media, the bulk of which depends for their existence on advertising revenue (which in turn comes from private business). Business also provides a substantial share of "experts" for news programmes and generates massive "flak." Claims that they are "left-leaning" are sheer disinformation manufactured by the "flak" organisations described below.

Thus Herman and Chomsky:

"the dominant media forms are quite large businesses; they are controlled by very wealthy people or by managers who are subject to sharp constraints by owners and other market-profit-oriented forces; and they are closely interlocked, and have important common interests, with other major corporations, banks, and government. This is the first powerful filter that effects news choices." [**Ibid.**, p. 14]

Needless to say, reporters and editors will be selected based upon how well their work reflects the interests and needs of their employers. Thus a radical reporter and a more mainstream one both of the same skills and abilities would have very different careers within the industry. Unless the radical reporter toned down their copy, they are unlikely to see it printed unedited or unchanged. Thus the structure within the media firm will tend to penalise radical viewpoints, encouraging an acceptance of the status quo in order to further a career. This selection process ensures that owners do not need to order editors or reporters what to do -- to be successful they will have to internalise the values of their employers.

D.3.2 What is the effect of advertising as the primary income

source of the mass media?

The main business of the media is to sell audiences to advertisers. Advertisers thus acquire a kind of de facto licensing authority, since without their support the media would cease to be economically viable. And it is **affluent** audiences that get advertisers interested. As Chomsky and Herman put it, *"The idea that the drive for large audiences makes the mass media 'democratic' thus suffers from the initial weakness that its political analogue is a voting system weighted by income!"* [Ibid., p.16].

Political discrimination is therefore structured into advertising allocations by the emphasis on people with money to buy. In addition, *"many companies will always refuse to do business with ideological enemies and those whom they perceive as damaging their interests."* Thus overt discrimination adds to the force of the *"voting system weighted by income."* Accordingly, large corporate advertisers almost never sponsor programs that contain serious criticisms of corporate activities, such as negative ecological impacts, the workings of the military-industrial complex, or corporate support of and benefits from Third World dictatorships. More generally, advertisers will want *"to avoid programs with serious complexities and disturbing controversies that interfere with the 'buying mood.'"* [Ibid., p. 18].

This also has had the effect of placing working class and radical papers at a serious disadvantage. Without access to advertising revenue, even the most popular paper will fold or price itself out of the market. Chomsky and Herman cite the UK pro-labour and pro-union **Daily Herald** as an example of this process. The Daily Herald had almost double the readership of **The Times**, the **Financial Times** and **The Guardian** combined, but even with 8.1% of the national circulation it got 3.5% of net advertising revenue and so could not survive on the "free market".

As Herman and Chomsky note, a *"mass movement without any major media support, and subject to a great deal of active press hostility, suffers a serious disability, and struggles against grave odds."* [Ibid., pp. 15-16] With the folding of the **Daily Herald**, the labour movement lost its voice in the mainstream media.

Thus advertising is an effective filter for new choice (and, indeed, survival in the market).

D.3.3 Why do the media rely on information provided by government, business, and "experts" funded and approved by government and business?

Two of the main reasons for the media's reliance on such sources are economy and convenience: Bottom-line considerations dictate that the media concentrate their resources where important news often occurs, where rumours and leaks are plentiful, and where regular press conferences are held. The White House, Pentagon, and the State Department, in Washington, D.C., are centres of such activity.

Government and corporate sources also have the great merit of being recognisable and credible by their

status and prestige; moreover, they have the most money available to produce a flow of news that the media can use. For example, the Pentagon has a public-information service employing many thousands of people, spending hundreds of millions of dollars every year, and far outspending not only the public-information resources of any dissenting individual or group but the **aggregate** of such groups.

Only the corporate sector has the resources to produce public information and propaganda on the scale of the Pentagon and other government bodies. The Chamber of Commerce, a business **collective**, had a 1983 budget for research, communications, and political activities of \$65 million. Besides the US Chamber of Commerce, there are thousands of state and local chambers of commerce and trade associations also engaged in public relations and lobbying activities.

To maintain their pre-eminent position as sources, government and business-news agencies expend much effort to make things easy for news organisations. They provide the media organisations with facilities in which to gather, give journalists advance copies of speeches and upcoming reports; schedule press conferences at hours convenient for those needing to meet news deadlines; write press releases in language that can be used with little editing; and carefully organise press conferences and "photo opportunity" sessions. This means that, in effect, the large bureaucracies of the power elite **subsidise** the mass media by contributing to a reduction of the media's costs of acquiring the raw materials of, and producing, news. In this way, these bureaucracies gain special access to the media.

Thus "[e]conomics dictates that they [the media] concentrate their resources where significant news often occurs, where important rumours and leaks abound, and where regular press conferences are held. . . [Along with state bodies] business corporations and trade groups are also regular purveyors of stories deemed newsworthy. These bureaucracies turn out a large volume of material that meets the demands of news organisations for reliable, scheduled flows." [Ibid., pp. 18-19]

The dominance of official sources would, of course, be weakened by the existence of highly respectable unofficial sources that gave dissident views with great authority. To alleviate this problem, the power elite uses the strategy of "*co-opting the experts*" -- that is, putting them on the payroll as consultants, funding their research, and organising think tanks that will hire them directly and help disseminate the messages deemed essential to elite interests. "Experts" on TV panel discussions and news programs are often drawn from such organisations, whose funding comes primarily from the corporate sector and wealthy families -- a fact that is, of course, never mentioned on the programs where they appear.

D.3.4 How is "flak" used by the wealthy and powerful as a means of disciplining the media?

"Flak" refers to negative responses to a media statement or program. Such responses may be expressed as phone calls, letters, telegrams, e-mail messages, petitions, lawsuits, speeches, bills before Congress, or other modes of complaint, threat, or punishment. Flak may be generated by organisations or it may come from the independent actions of individuals. Large-scale flak campaigns, either by organisations or

individuals with substantial resources, can be both uncomfortable and costly to the media.

Advertisers are very concerned to avoid offending constituencies who might produce flak, and their demands for inoffensive programming exerts pressure on the media to avoid certain kinds of facts, positions, or programs that are likely to call forth flak. The most deterrent kind of flak comes from business and government, who have the funds to produce it on a large scale.

For example, during the 1970s and 1980s, the corporate community sponsored the creation of such institutions as the American Legal Foundation, the Capital Legal Foundation, the Media Institute, the Center for Media and Public Affairs, and Accuracy in Media (AIM), which may be regarded as organisations designed for the specific purpose of producing flak. Freedom House is an older US organisation which had a broader design but whose flak-producing activities became a model for the more recent organisations.

The Media Institute, for instance, was set up in 1972 and is funded by wealthy corporate patrons, sponsoring media monitoring projects, conferences, and studies of the media. The main focus of its studies and conferences has been the alleged failure of the media to portray business accurately and to give adequate weight to the business point of view, but it also sponsors works such as John Corry's "expose" of alleged left-wing bias in the mass media.

The government itself is a major producer of flak, regularly attacking, threatening, and "correcting" the media, trying to contain any deviations from the established propaganda lines in foreign or domestic policy.

And, we should note, while the flak machines steadily attack the media, the media treats them well. While effectively ignoring radical critiques (such as the "propaganda model"), flak receives respectful attention and their propagandistic role and links to corporations and a wider right-wing program rarely mentioned or analysed.

D.3.5 Why do the power elite use "anticommunism" as a national religion and control mechanism?

"Communism," or indeed any form of socialism, is of course regarded as the ultimate evil by the corporate rich, since the ideas of collective ownership of productive assets, giving workers more bargaining power, or allowing ordinary citizens more voice in public policy decisions threatens the very root of the class position and superior status of the elite.

Hence the ideology of anticommunism has been very useful, because it can be used to discredit anybody advocating policies regarded as harmful to corporate interests. It also helps to divide the Left and labour movements, justifies support for pro-US right-wing regimes abroad as "lesser evils" than communism, and discourages liberals from opposing such regimes for fear of being branded as heretics from the

national religion.

Since the end of the Cold War, anti-communism has not been used as extensively as it once was to mobilise support for elite crusades. Instead, the "Drug War" or "anti-terrorism" now often provide the public with "official enemies" to hate and fear. Thus the Drug War was the excuse for the Bush administration's invasion of Panama, and "fighting narco-terrorists" has more recently been the official reason for shipping military hardware and surveillance equipment to Mexico (where it's actually being used against the Zapatista rebels in Chiapas, whose uprising is threatening to destabilise the country and endanger US investments).

Of course there are still a few official communist enemy states, like North Korea, Cuba, and China, and abuses or human rights violations in these countries are systematically played up by the media while similar abuses in client states are downplayed or ignored. Chomsky and Herman refer to the victims of abuses in enemy states as **worthy victims**, while victims who suffer at the hands of US clients or friends are **unworthy victims**. Stories about worthy victims are often made the subject of sustained propaganda campaigns, to score political points against enemies.

"If the government of corporate community and the media feel that a story is useful as well as dramatic, they focus on it intensively and use it to enlighten the public. This was true, for example, of the shooting down by the Soviets of the Korean airliner KAL 007 in early September 1983, which permitted an extended campaign of denigration of an official enemy and greatly advanced Reagan administration arms plans."

*"In sharp contrast, the shooting down by Israel of a Libyan civilian airliner in February 1973 led to no outcry in the West, no denunciations for 'cold-blooded murder,' and no boycott. This difference in treatment was explained by the **New York Times** precisely on the grounds of utility: 'No useful purpose is served by an acrimonious debate over the assignment of blame for the downing of a Libyan airliner in the Sinai peninsula last week.' There **was** a very 'useful purpose' served by focusing on the Soviet act, and a massive propaganda campaign ensued." [Ibid., p. 32]*

D.3.6 Isn't it a "conspiracy theory" to suggest that the media are used as propaganda instruments by the elite?

Chomsky and Herman address this charge in the Preface to **Manufacturing Consent**: *"Institutional critiques such as we present in this book are commonly dismissed by establishment commentators as 'conspiracy theories,' but this is merely an evasion. We do not use any kind of 'conspiracy' hypothesis to explain mass-media performance. In fact, our treatment is much closer to a 'free market' analysis, with the results largely an outcome of the workings of market forces."*

They go on to suggest what some of these "market forces" are. One of the most important is the weeding-out process that determines who gets the journalistic jobs in the major media. *"Most biased choices in*

the media arise from the preselection of right-thinking people, internalised preconceptions, and the adaptation of personnel to the constraints of ownership, organisation, market, and political power."

In other words, important media employees learn to internalise the values of their bosses. *"Censorship is largely self-censorship, by reporters and commentators who adjust to the realities of source and media organisational requirements, and by people at higher levels within media organisations who are chosen to implement, and have usually internalised, the constraints imposed by proprietary and other market and governmental centres of power."* [Ibid., p. xii].

But, it may be asked, isn't it still a conspiracy theory to suggest that media leaders all have similar values? Not at all. Such leaders *"do similar things because they see the world through the same lenses, are subject to similar constraints and incentives, and thus feature stories or maintain silence together in tacit collective action and leader-follower behaviour."* [Ibid.]

The fact that media leaders share the same fundamental values does not mean, however, that the media are a solid monolith on all issues. The powerful often disagree on the tactics needed to attain generally shared aims, and this gets reflected in media debate. But views that challenge the legitimacy of those aims or suggest that state power is being exercised in elite interests rather than the "national" interest" will be excluded from the mass media.

Therefore the "propaganda model" has as little in common with a "conspiracy theory" as saying that the management of General Motors acts to maintain and increase its profits.

D.3.7 Isn't the "propaganda thesis" about the media contradicted by the "adversarial" nature of much media reporting, e.g. its exposes of government and business corruption?

As noted above, the claim that the media are "adversarial" or (more implausibly) that they have a "left-wing bias" is due to right-wing PR organisations. This means that some "inconvenient facts" are occasionally allowed to pass through the filters in order to give the **appearance** of "objectivity"--precisely so the media can deny charges of engaging in propaganda. As Chomsky and Herman put it: *"the 'naturalness' of these processes, with inconvenient facts allowed sparingly and within the proper framework of assumptions, and fundamental dissent virtually excluded from the mass media (but permitted in a marginalised press), makes for a propaganda system that is far more credible and effective in putting over a patriotic agenda than one with official censorship"* [Ibid., Preface].

To support their case against the "adversarial" nature of the media, Herman and Chomsky look into the claims of such right-wing media PR machines as Freedom House. However, it is soon discovered that *"the very examples offered in praise of the media for their independence, or criticism of their excessive zeal, illustrate exactly the opposite."* [Ibid.] Such flak, while being worthless as serious analysis, does

help to reinforce the myth of an "adversarial media" (on the right the *"existing level of subordination to state authority is often deemed unsatisfactory"* and **this** is the source of their criticism! [**Ibid.**, p. 301]) and so is taken seriously by the media.

Therefore the "adversarial" nature of the media is a myth, but this is not to imply that the media does not present critical analysis. Herman and Chomsky in fact argue that the *"mass media are not a solid monolith on all issues."* [**Ibid.**, p. xii] and do not deny that it does present facts (which they do sometimes themselves cite). But, as they argue, *"[t]hat the media provide some facts about an issue. . . proves absolutely nothing about the adequacy or accuracy of that coverage. The mass media do, in fact, literally suppress a great deal . . . But even more important in this context is the question given to a fact - its placement, tone, and repetitions, the framework within which it is presented, and the related facts that accompany it and give it meaning (or provide understanding) . . . there is no merit to the pretence that because certain facts may be found by a diligent and sceptical researcher, the absence of radical bias and de facto suppression is thereby demonstrated."* [**Ibid.**, pp xiv-xv]

Section D - How does statism and capitalism affect society?

Introduction

D.1 Why does state intervention occur?

D.1.1 Does state intervention cause the problems to begin with?

D.1.2 Is state intervention the result of democracy?

D.1.3 Is state intervention socialistic?

D.2 What influence does wealth have over politics?

D.2.1 Is capital flight that powerful?

D.2.2 How extensive is business propaganda?

D.3 How does wealth influence the mass media?

D.3.1 How does the size, concentrated ownership, owner wealth, and profit orientation of the dominant mass-media firms affect media content?

D.3.2 What is the effect of advertising as the primary income source of the mass media?

D.3.3 Why do the media rely on information provided by government, business, and "experts" funded and approved by these primary sources and agents of power?

D.3.4 How is "flak" used by the wealthy and powerful as a means of disciplining the media?

D.3.5 Why do the wealthy and powerful use "anticommunism" as a national religion and control mechanism?

D.3.6 Isn't it a "conspiracy theory" to suggest that the media are used as propaganda instruments by the elite?

D.3.7 Isn't the "propaganda thesis" about the media contradicted by the "adversarial" nature of much media reporting, e.g. its exposes of government and business corruption?

D.4 What is the relationship between capitalism and the ecological crisis?

D.4.1 Why must capitalist firms "grow or die?"

D.5 What causes imperialism?

D.5.1 Has imperialism changed over time?

D.5.2 Is imperialism just a product of private capitalism?

D.5.3 Does globalisation mean the end of imperialism?

D.5.4 What is the relationship between imperialism and the social classes within capitalism?

D.6 Are anarchists against Nationalism?

D.7 Are anarchists opposed to National Liberation struggles?

D.8 What causes militarism and what are its effects?

D.8.1 Will militarism change with the apparent end of the Cold War?

D.9 What is the relationship between wealth polarisation and authoritarian government?

D.9.1 Why does political power become concentrated under capitalism?

D.9.2 What is "invisible government"?

D.9.3 Why are incarceration rates rising?

D.9.4 Why is government "secrecy and surveillance of citizens on the increase?"

D.9.5 But doesn't authoritarian government always involve censorship?

D.9.6 What does the Right want?

D.10 How does capitalism affect technology?

D.11 What causes justifications for racism to appear?

D.11.1 Does free market ideology play a part in racist tendencies to increase?

Section D - How does statism and capitalism affect society?

This section of the FAQ indicates how both statism and capitalism affect the society they exist in. It is a continuation of sections B ([Why do anarchists oppose the current system?](#)) and C ([What are the myths of capitalist economics?](#)) and it discusses the impact of the underlying social and power relationships within the current system on society.

This section is important because the institutions and social relationships capitalism and statism spawn do not exist in a social vacuum, they have deep impacts on our everyday lives. These effects go beyond us as individuals (for example, the negative effects of hierarchy on our individuality) and have an effect on how the political institutions in our society work, how technology develops, how the media operates and so on. Therefore it is worthwhile to point out how (and why) statism and capitalism affect society as a whole outwith the narrow bounds of politics and economics.

So here we try and sketch some of the impact of concentrations of political and economic power has upon society. While many people attack the **results** of these processes (like state intervention, ecological destruction, imperialism, etc.) they ignore their **causes**. This means that the struggle against social evils will be never-ending, like a doctor fighting the symptoms of a disease without treating the disease itself. We have indicated the roots of the problems we face in sections [B](#) and [C](#); now we discuss some of the other problems they create. This section of the FAQ explores the interactions of the causes and results and draws out how the authoritarian and exploitative nature of capitalism affects the world we live in.

It is important to remember that most supporters of capitalism refuse to do this. Yes, many of them point out **some** flaws and problems within society but they never relate them to the system as such. As Noam Chomsky points out, they will attribute the catastrophes of capitalism "*to any other cause **other** than the system that consistently brings them about.*" [**Deterring Democracy**, p. 232]

That the system and its effects are interwoven can best be seen from the fact that while right-wing parties have been elected to office promising to reduce the role of the state in society, the actual size and activity of the state has not been reduced, indeed it has usually increased in scope (both in size and in terms of power and centralisation). This is unsurprising, as "free market" implies strong (and centralised) state -- the "freedom" of Management to manage means that the freedom of workers to resist authoritarian management structures must be weakened by state action. Thus, ironically, state intervention within society will continue to be needed in order to ensure that society survives the rigours of market forces and that elite power and privilege are protected from the masses.

Section B - Why do anarchists oppose the current system?

Introduction

B.1 Why are anarchists against authority and hierarchy?

B.1.1 What are the effects of authoritarian social relationships?

B.1.2 Is capitalism hierarchical?

B.1.3 What kind of hierarchy of values does capitalism create?

B.1.4 Why do racism, sexism and homophobia exist?

B.1.5 How is the mass-psychological basis for authoritarian civilisation created?

B.2 Why are anarchists against the state?

B.2.1 What is the main function of the state?

B.2.2 Does the state have subsidiary functions?

B.2.3 How does the ruling class maintain control of the state?

B.2.4 How does state centralisation affect freedom?

B.2.5 Who benefits from centralisation?

B.3 Why are anarchists against private property?

B.3.1 What is the difference between private property and possession?

B.3.2 What kinds of private property does the state protect?

B.3.3 Why is private property exploitative?

B.3.4 Can private property be justified?

B.4 How does capitalism affect liberty?

B.4.1 Is capitalism based on freedom?

B.4.2 Is capitalism based on self-ownership?

B.4.3 But no one forces you to work for them!

B.4.4 But what about periods of high demand for labour?

B.4.5 But I want to be "left alone"!

B.5 Is capitalism empowering and based on human action?

B.6 But will not the decisions made by intelligent individuals with their own financial success or failure on the line will be better most of the time?

B.7 What classes exist within modern society?

B.7.1 But do classes actually exist?

B.7.2 Why is the existence of classes denied?

B.7.3 What do anarchists mean by "*class consciousness*"?

Section B - Why do anarchists oppose the current system?

This section of the FAQ presents an analysis of the basic social relationships of modern society and the structures which create them, particularly those aspects of society that anarchists want to change.

Anarchism is, essentially, a revolt against capitalism. It was born at the same time as capitalism was born and grew in influence as capitalism colonised more and more parts of society. This does not mean that anarchistic ideas have not existed within society since before the dawn of capitalism. Far from it. Thinkers whose ideas can be classified as anarchist go back thousands of years and are found in Eastern as well as Western civilisations. It would be no exaggeration to say that anarchism was born the moment the state and private property were created.

However, anarchism as a political movement was the product of the transformation of society which accompanied the creation of the modern (nation-) state and capital. As such, the analysis and critique presented in this section of the FAQ will concentrate on modern, capitalist society.

Anarchists realise that the power of governments and other forms of hierarchy depends upon the agreement of the governed. Fear is not the whole answer, it is far more *"because they [the oppressed] subscribe to the same values as their governors. Rulers and ruled alike believe in the principle of authority, of hierarchy, of power."* [Colin Ward, **Anarchy in Action**, p. 15] With this in mind, we present in this section of the FAQ our arguments to challenge this "consensus," to present the case why we should become anarchists, why authoritarian social relationships and organisations are not in our interests.

From this discussion, it will become apparent why anarchists are dissatisfied with the very limited amount of freedom in modern mass society and why they want to create a truly free society. In the words of Noam Chomsky, the anarchist critique of modern society means:

"to seek out and identify structures of authority, hierarchy, and domination in every aspect of life, and to challenge them; unless a justification for them can be given, they are illegitimate, and should be dismantled, to increase the scope of human freedom. That includes political power, ownership and management, relations among men and women, parents and children, our control over the fate of future generations (the basic moral imperative behind the environmental movement. . .), and much else." ["Anarchism, Marxism and Hope for the Future", **Red and Black Revolution**, No. 2]

In [section J](#) of the FAQ will discuss how anarchists try to encourage this process of justification, this critical evaluation of authority and domination, this undermining of what previously was considered

"natural" or "common-sense" **until we started to question it.** Part of this process is to encourage **direct action** (see [section J.2](#)) by the oppressed against their oppressors as well as encouraging the anarchistic tendencies and awareness that exist (to a greater or lesser degree) in any hierarchical society.

However, this section of the FAQ is concerned directly with the critical or "negative" aspect of anarchism, the exposing of the evil inherent in all authority, be it from state, property or whatever. Later sections will indicate how, after analysing the world, anarchists plan to change it constructively, but some of the constructive core of anarchism will be seen even in this section. After this broad critique of the current system, we move onto more specific areas. [Section C](#) explains the anarchist critique of the economics of capitalism and [section D](#) discusses how the social relationships and institutions described in this section impact on society as a whole.

Section J - What do anarchists do?

Introduction

J.1 Are anarchists involved in social struggles?

J.1.1 Why are social struggles important?

J.1.2 Are anarchists against reforms?

J.1.3 Why are anarchists against reformism?

J.1.4 What attitude do anarchists take to "single-issue" campaigns?

J.1.5 Why do anarchists try to generalise social struggles?

J.2 What is direct action?

J.2.1 Why do anarchists favour using direct action to change things?

J.2.2 Why do anarchists reject voting as a means for change?

J.2.3 What are the political implications of voting?

J.2.4 Surely voting for radical parties will be effective?

J.2.5 Why do anarchists support abstentionism and what are its implications?

J.2.6 What are the effects of radicals using electioneering?

J.2.7 Surely we should vote for reformist parties in order to show them up for what they are?

J.2.8 Will abstentionism lead to the right winning elections?

J.2.9 What do anarchists do instead of voting?

J.2.10 Does rejecting electioneering mean that anarchists are apolitical?

J.3 What forms of organisation do anarchists build?

J.3.1 What are affinity groups?

J.3.2 What are "synthesis" federations?

J.3.3 What is the "Platform"?

[J.3.4 Why do many anarchists oppose the "Platform"?](#)

[J.3.5 Are there other kinds of anarchist federation?](#)

[J.3.6 What role do these groups play in anarchist theory?](#)

[J.3.7 Doesn't Bakunin's "Invisible Dictatorship" prove that anarchists are secret authoritarians?](#)

[J.3.8 What is anarcho-syndicalism?](#)

[J.3.9 Why are many anarchists not anarcho-syndicalists?](#)

[J.4 What trends in society aid anarchist activity?](#)

[J.4.1 Why is social struggle a good sign?](#)

[J.4.2 Won't social struggle do more harm than good?](#)

[J.4.3 Are the new social movements a positive development for anarchists?](#)

[J.4.4 What is the "economic structural crisis"?](#)

[J.4.5 Why is this "economic structural crisis" important to social struggle?](#)

[J.4.6 What are implications of anti-government and anti-big business feelings?](#)

[J.4.7 What about the communications revolution?](#)

[J.4.8 What is the significance of the accelerating rate of change and the information explosion?](#)

[J.4.9 What are Netwars?](#)

[J.5 What alternative social organisations do anarchists create?](#)

[J.5.1 What is community unionism?](#)

[J.5.2 Why do anarchists support industrial unionism?](#)

[J.5.3 What attitude do anarchists take to existing unions?](#)

[J.5.4 What are industrial networks?](#)

[J.5.5 What forms of co-operative credit do anarchists support?](#)

[J.5.6 What are the key features of mutual credit schemes?](#)

[J.5.7 Do most anarchists think mutual credit is sufficient to abolish capitalism?](#)

[J.5.8 What would a modern system of mutual banking look like?](#)

[J.5.9 How does mutual credit work?](#)

[J.5.10 Why do anarchists support co-operatives?](#)

[J.5.11 If workers really want self-management, why aren't there more producer co-operatives?](#)

[J.5.12 If self-management is more efficient, surely capitalist firms will be forced to introduce it by the market?](#)

[J.5.13 What are Modern Schools?](#)

[J.5.14 What is Libertarian Municipalism?](#)

[J.5.15 What attitude do anarchists take to the welfare state?](#)

[J.5.16 Are there any historical examples of collective self-help?](#)

[J.6 What methods of child rearing do anarchists advocate?](#)

[J.6.1 What are the main principles of raising free children and the main obstacles to implementing those principles?](#)

[J.6.2 What are some examples of libertarian child-rearing methods applied to the care of newborn infants](#)

[J.6.3 What are some examples of libertarian child-rearing methods applied to the care of young children?](#)

[J.6.4 If children have nothing to fear, how can they be good?](#)

[J.6.5 But how can children learn *ethics* if they are not given punishments, prohibitions, and religious instruction?](#)

[J.6.6 But how will a free child ever learn unselfishness?](#)

[J.6.7 Isn't what you call "libertarian child-rearing" just another name for spoiling the child?](#)

[J.6.8 What is the anarchist position on teenage sexual liberation?](#)

[J.6.9 But isn't this concern with teenage sexual liberation just a distraction from issues that should be of more concern to anarchists, like restructuring the economy?](#)

[J.7 What do anarchists mean by "*social revolution*"?](#)

J.7.1 Are all anarchists revolutionaries?

J.7.2 Is social revolution possible?

J.7.3 Doesn't revolution mean violence?

J.7.4 What would a social revolution involve?

J.7.5 What is the role of anarchists in a social revolution?

J.7.6 How could an anarchist revolution defend itself?

Section J - What do anarchists do?

This section discusses what anarchists get up to. There is little point thinking about the world unless you also want to change it for the better. And by trying to change it, you change yourself and others, making radical change more of a possibility. Therefore anarchists give their whole-hearted support to attempts by ordinary people to improve their lives by their own actions. As Max Stirner pointed out, "*[t]he true man does not lie in the future, an object of longing, but lies, existent and real, in the present.*" [**The Ego and Its Own**, p. 327]

For anarchists, the future is **already appearing in the present** and is expressed by the autonomy of working class self-activity. Anarchy is not some-day-to-be-achieved utopia, it is a living reality whose growth only needs to be freed from constraint. As such anarchist activity is about discovering and aiding emerging trends of mutual aid which work against capitalist domination (i.e. what is actually developing), so the Anarchist "*studies society and tries to discover its **tendencies**, past and present, its growing needs, intellectual and economic, and in his [or her] ideal he merely points out in which direction evolution goes.*" [Peter Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 47]

The kinds of activity outlined in this section are a general overview of anarchist work. It is by no means exclusive as we are sure to have left something out. However, the key aspect of *real* anarchist activity is **direct action** - self-activity, self-help, self-liberation and solidarity. Such activity may be done by individuals (for example, propaganda work), but usually anarchists emphasis collective activity. This is because most of our problems are of a social nature, meaning that their solutions can only be worked on collectively. Individual solutions to social problems are doomed to failure (for example green consumerism).

In addition, collective action gets us used to working together, promoting the experience of self-management and building organisations that will allow us to activity manage our own affairs. Also, and we would like to emphasis this, it's **fun** to get together with other people and work with them, it's fulfilling and empowering.

Anarchists do not ask those in power to give up that power. No, they promote forms of activity and organisation by which all the oppressed can liberate themselves by their own hands. In other words, we do not think that those in power will altruistically give up that power or their privileges. Instead, the oppressed must take the power **back** into their own hands by their own actions. We must free ourselves, no one else can do it for use.

As we have noted before, anarchism is more than just a critique of statism and capitalism or a vision of a freer, better way of life. It is first and foremost a movement, the movement of working class people attempting to change the world. Therefore the kind of activity we discuss in this section of the FAQ forms the bridge between capitalism and anarchy. By self-activity and direct action, people can change

both themselves and their surroundings. They develop within themselves the mental, ethical and spiritual qualities which can make an anarchist society a viable option.

As Noam Chomsky argues:

"Only through their own struggle for liberation will ordinary people come to comprehend their true nature, suppressed and distorted within institutional structures designed to assure obedience and subordination. Only in this way will people develop more humane ethical standards, 'a new sense of right', 'the consciousness of their strength and their importance as a social factor in the life of their time' and their capacity to realise the strivings of their 'inmost nature.' Such direct engagement in the work of social reconstruction is a prerequisite for coming to perceive this 'inmost nature' and is the indispensable foundations upon which it can flourish" [preface to Rudolf Rocker's **Anarcho-Syndicalism**, p. viii]

In other words, anarchism is not primarily a vision of a better future, but the actual social movement which is fighting within the current unjust and unfree society for that better future and to improve things in the here and now. Without standing up for yourself and what you believe is right, nothing will change. Therefore anarchists would agree whole-heartedly with Frederick Douglass (an Abolitionist) who stated that:

"If there is no struggle, there is no progress. Those who profess to favor freedom and yet deprecate agitation are people who want crops without plowing up the ground. They want rain without thunder and lightning. That struggle might be a moral one; it might be a physical one; it might be both moral and physical, but it must be a struggle. Power concedes nothing without a demand. It never did and never will. People might not get all that they work for in this world, but they must certainly work for all they get."

In this section of the FAQ we will discuss anarchist ideas on struggle, what anarchists actually (and, almost as importantly, do not) do in the here and now and the sort of alternatives anarchists try to build within statism and capitalism in order to destroy them. As well as a struggle against oppression, anarchist activity is also struggle for freedom. As well as fighting against material poverty, anarchists combat spiritual poverty. By resisting hierarchy we emphasize the importance of **living** and of **life as art**. By proclaiming *"Neither Master nor Slave"* we urge an ethical transformation, a transformation that will help create the possibility of a truly free society.

This point was argued by Emma Goldman after she saw the defeat of the Russian Revolution by a combination of Leninist politics and capitalist armed intervention:

"the ethical values which the revolution is to establish must be initiated with the revolutionary activities. . . The latter can only serve as a real and dependable bridge to the better life if built of the same material as the life to be achieved." [**Red Emma**

Speaks, p. 358]

In other words, anarchist activity is more than creating libertarian alternatives and resisting hierarchy, it is about building the new world in the shell of the old not only with regards to organisations and self-activity, but also within the individual. It is about transforming yourself while transforming the world - both processes obviously interacting and supporting each other -- *"the first aim of Anarchism is to assert and make the dignity of the individual human being."* [Charlotte Wilson, **Three Essays on Anarchism**, p. 17]

And by direct action, self-management and self-activity we can make the words first heard in Paris, 1968 a living reality:

"All power to the imagination!"

Words, we are sure, the classic anarchists would have whole-heartedly agreed with. There is a power in humans, a creative power, a power to alter what is into what should be. Anarchists try to create alternatives that will allow that power to be expressed, the power of imagination.

In the sections that follow we will discuss the forms of self-activity and self-organisation (collective and individual) which anarchists think will stimulate and develop the imagination of those oppressed by hierarchy, build anarchy in action and help create a free society.

D.10 How does capitalism affect technology?

Technology has an obvious effect on individual freedom, in some ways increasing it, in others restricting it. However, since capitalism is a social system based on inequalities of power, it is a truism that technology will reflect those inequalities, as it does not develop in a social vacuum.

No technology evolves and spreads unless there are people who benefit from it and have sufficient means to disseminate it. In a capitalist society, technologies useful to the rich and powerful are generally the ones that spread. This can be seen from capitalist industry, where technology has been implemented specifically to deskill the worker, so replacing the skilled, valued craftsperson with the easily trained (and eliminated!) "mass worker." By making trying to make any individual worker dispensable, the capitalist hopes to deprive workers of a means of controlling the relation between their effort on the job and the pay they receive. In Proudhon's words, the *"machine, or the workshop, after having degraded the labourer by giving him a master, completes his degeneracy by reducing him from the rank of artisan to that of common workman."* [**System of Economical Contradictions**, p. 202]

So, unsurprisingly, technology within a hierarchical society will tend to re-enforce hierarchy and domination. Managers/capitalists will select technology that will protect and extend their power (and profits), not weaken it. Thus, while it is often claimed that technology is "neutral" this is not (and can never be) the case. Simply put, "progress" within a hierarchical system will reflect the power structures of that system.

As George Reitzer notes, technological innovation under a hierarchical system soon results in *"increased control and the replacement of human with non-human technology. In fact, the replacement of human with non-human technology is very often motivated by a desire for greater control, which of course is motivated by the need for profit-maximisation. The great sources of uncertainty and unpredictability in any rationalising system are people. . . .McDonaldisation involves the search for the means to exert increasing control over both employees and customers"* [George Reitzer, **The McDonaldisation of Society**, p. 100]. For Reitzer, capitalism is marked by the *"irrationality of rationality,"* in which this process of control results in a system based on crushing the individuality and humanity of those who live within it.

In this process of controlling employees for the purpose of maximising profit, deskilling comes about because skilled labour is more expensive than unskilled or semi-skilled and skilled workers have more power over their working conditions and work due to the difficulty in replacing them. In addition it is easier to "rationalise" the production process with methods like Taylorism, a system of strict production schedules and activities based on the amount of time (as determined by management) that workers "need" to perform various operations in the workplace, thus requiring simple, easily analysed and timed movements. And as companies are in competition, each has to copy the most "efficient" (i.e. profit maximising) production techniques introduced by the others in order to remain profitable, no matter how dehumanising this may be for workers. Thus the evil effects of the division of labour and deskilling

becoming widespread. Instead of managing their own work, workers are turned into human machines in a labour process they do not control, instead being controlled by those who own the machines they use (see also Harry Braverman, **Labour and Monopoly Capital: The Degradation of Work in the Twentieth Century**, Monthly Review Press, 1974).

As Max Stirner noted (echoing Adam Smith), this process of deskilling and controlling work means that *"When everyone is to cultivate himself into man, condemning a man to **machine-like labour** amounts to the same thing as slavery. . . . Every labour is to have the intent that the man be satisfied. Therefore he must become a **master** in it too, be able to perform it as a totality. He who in a pin-factory only puts on heads, only draws the wire, works, as it were mechanically, like a machine; he remains half-trained, does not become a master: his labour cannot **satisfy** him, it can only **fatigue** him. His labour is nothing by itself, has no object **in itself**, is nothing complete in itself; he labours only into another's hands, and is **used**. (exploited) by this other"* [**The Ego and Its Own**, p. 121] Kropotkin makes a similar argument against the division of labour ("*machine-like labour*") in **The Conquest of Bread** (see chapter XV -- "*The Division of Labour*") as did Proudhon (see chapters III and IV of **System of Economical Contradictions**).

Modern industry is set up to ensure that workers do not become "masters" of their work but instead follow the orders of management. The evolution of technology lies in the relations of power within a society. This is because *"the viability of a design is not simply a technical or even economic evaluation but rather a political one. A technology is deemed viable if it conforms to the existing relations of power."* [David Noble, **Progress without People**, p. 63]

This process of controlling, restricting, and de-individualising labour is a key feature of capitalism. Work that is skilled and controlled by workers is empowering to them in two ways. Firstly it gives them pride in their work and themselves. Secondly, it makes it harder to replace them or suck profits out of them. Therefore, in order to remove the "subjective" factor (i.e. individuality and worker control) from the work process, capital needs methods of controlling the workforce to prevent workers from asserting their individuality, thus preventing them from arranging their own lives and work and resisting the authority of the bosses.

This need to control workers can be seen from the type of machinery introduced during the Industrial Revolution. According to Andrew Ure, a consultant for the factory owners, *"[i]n the factories for spinning coarse yarn. . . the mule-spinners [skilled workers] have abused their powers beyond endurance, domineering in the most arrogant manner. . . over their masters. High wages. . . have, in too many cases, cherished pride and supplied funds for supporting refractory spirits in strikes. . . . During a disastrous turmoil of [this] kind. . . several capitalists. . . had recourse to the celebrated machinists. . . of Manchester. . . [to construct] a self-acting mule. . . . This invention confirms the great doctrine already propounded, that when capital enlists science in her service, the refractory hand of labour will always be taught docility"* [Andrew Ure, **Philosophy of Manufactures**, pp. 336-368 -- quoted by Noble, **Op. Cit.**, p. 125]

Why is it necessary for workers to be "*taught docility*"? Because "[b]y the infirmity of human nature, it happens that the more skilful the workman, the more self-willed and intractable he is apt to become, and of course the less fit a component of mechanical system in which... he may do great damage to the whole." [**Ibid.**] Proudhon quotes an English Manufacturer who argues the same point:

"The insubordination of our workmen has given us the idea of dispensing with them. We have made and stimulated every imaginable effort to replace the service of men by tools more docile, and we have achieved our object. Machinery has delivered capital from the oppression of labour." [**System of Economical Contradictions**, p. 189]

As David Noble summarises, during the Industrial Revolution "*Capital invested in machines that would reinforce the system of domination [in the workplace], and this decision to invest, which might in the long run render the chosen technique economical, was not itself an economical decision but a political one, with cultural sanction.*" [**Op. Cit.**, p. 6]

A similar process was at work in the US, where the rise in trade unionism resulted in "*industrial managers bec[oming] even more insistent that skill and initiative not be left on the shop floor, and that, by the same token, shop floor workers not have control over the reproduction of relevant skills through craft-regulated apprenticeship training. Fearful that skilled shop-floor workers would use their scare resources to reduce their effort and increase their pay, management deemed that knowledge of the shop-floor process must reside with the managerial structure.*" [William Lazonick, **Organisation and Technology in Capitalist Development**, p. 273]

American managers happily embraced Taylorism (aka "*scientific management*"), according to which the task of the manager was to gather into his possession all available knowledge about the work he oversaw and reorganise it. Taylor himself considered the task for workers was "*to do what they are told to do promptly and without asking questions or making suggestions.*" [quoted by David Noble, **American By Design**, p. 268] Taylor also relied exclusively upon incentive-pay schemes which mechanically linked pay to productivity and had no appreciation of the subtleties of psychology or sociology (which would have told him that enjoyment of work and creativity is more important for people than just higher pay). Unsurprisingly, workers responded to his schemes by insubordination, sabotage and strikes and it was "*discovered . . . that the 'time and motion' experts frequently knew very little about the proper work activities under their supervision, that often they simply guessed at the optimum rates for given operations . . . it meant that the arbitrary authority of management has simply been reintroduced in a less apparent form.*" [David Noble, **Op. Cit.**, p. 272] Although, now, the power of management could hide begin the "objectivity" of "science."

Katherine Stone also argues (in her account of "*The Origins of Job Structure in the Steel Industry*" in America) that the "*transfer of skill [from the worker to management] was not a response to the necessities of production, but was, rather, a strategy to rob workers of their power*" by "*tak[ing] knowledge and authority from the skilled workers and creating a management cadre able to direct production.*" Stone highlights that this deskilling process was combined by a "*divide and rule*" policy by

management by wage incentives and new promotion policies. This created a reward system in which workers who played by the rules would receive concrete gains in terms of income and status. Over time, such a structure would become to be seen as *"the natural way to organise work and one which offered them personal advancement"* even though, *"when the system was set up, it was neither obvious nor rational. The job ladders were created just when the skill requirements for jobs in the industry were diminishing as a result of the new technology, and jobs were becoming more and more equal as to the learning time and responsibility involved."* The modern structure of the capitalist workplace was created to break workers resistance to capitalist authority and was deliberately *"aimed at altering workers' ways of thinking and feeling -- which they did by making workers' individual 'objective' self-interests congruent with that of the employers and in conflict with workers' collective self-interest."* It was a means of *"labour discipline"* and of *"motivating workers to work for the employers' gain and preventing workers from uniting to take back control of production."* Stone notes that the *"development of the new labour system in the steel industry was repeated throughout the economy in different industries. As in the steel industry, the core of these new labour systems were the creation of artificial job hierarchies and the transfer of skills from workers to the managers."* [Root & Branch (ed.), **Root and Branch: The Rise of the Workers' Movements**, pp. 152-5]

This process was recognised by libertarians at the time, with the I.W.W., for example, arguing that *"[l]abourers are no longer classified by difference in trade skill, but the employer assigns them according to the machine which they are attached. These divisions, far from representing differences in skill or interests among the labourers, are imposed by the employers that workers may be pitted against one another and spurred to greater exertion in the shop, and that all resistance to capitalist tyranny may be weakened by artificial distinctions."* [quoted by Katherine Stone, **Op. Cit.**, p. 157] For this reason, anarchists and syndicalists argued for, and built, industrial unions -- one union per workplace and industry -- in order to combat these divisions and effectively resist capitalist tyranny.

Needless to say, such management schemes never last in the long run nor totally work in the short run either -- which explains why hierarchical management continues, as does technological deskilling (workers always find ways of using new technology to increase their power within the workplace and so undermine management decisions to their own advantage).

This of process deskilling workers was complemented by many factors -- state protected markets (in the form of tariffs and government orders -- the *"lead in technological innovation came in armaments where assured government orders justified high fixed-cost investments"*); the use of *"both political and economic power [by American Capitalists] to eradicate and diffuse workers' attempts to assert shop-floor control"*; and *"repression, instigated and financed both privately and publicly, to eliminate radical elements [and often not-so-radical elements as well, we must note] in the American labour movement."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 218, p. 303]) Thus state action played a key role in destroying craft control within industry, along with the large financial resources of capitalists compared to workers.

Bringing this sorry story up to date, we find *"many, if not most, American managers are reluctant to develop skills [and initiative] on the shop floor for the fear of losing control of the flow of*

work." [William Lazonick, **Organisation and Technology in Capitalist Development**, pp. 279-280] Given that there is a division of knowledge in society (and, obviously, in the workplace as well) this means that capitalism has selected to introduce a management and technology mix which leads to inefficiency and waste of valuable knowledge, experience and skills.

Thus the capitalist workplace is both produced by and is a weapon in the class struggle and reflects the shifting power relations between workers and employers. The creation of artificial job hierarchies, the transfer of skills away from workers to managers and technological development are all products of class struggle. Thus technological progress and workplace organisation within capitalism have little to do with "efficiency" and far more to do with profits and power.

This means that while self-management has consistently proven to be more efficient (and empowering) than hierarchical management structures (see section [J.5.12](#)), capitalism actively selects **against** it. This is because capitalism is motivated purely by increasing profits, and the maximisation of profits is best done by disempowering workers and empowering bosses (i.e. the maximisation of power) -- even though this concentration of power harms efficiency by distorting and restricting information flow and the gathering and use of widely distributed knowledge within the firm (as in any command economy).

Thus the last refuge of the capitalist/technophile (namely that the productivity gains of technology outweigh the human costs or the means used to achieve them) is doubly flawed. Firstly, disempowering technology may maximise profits, but it need not increase efficient utilisation of resources or workers time, skills or potential (and as we argue in greater detail later, in section [J.5.12](#), efficiency and profit maximisation are two different things, with such deskilling and management control actually **reducing** efficiency -- compared to workers' control -- but as it allows managers to maximise profits the capitalist market selects it). Secondly, *"when investment does in fact generate innovation, does such innovation yield greater productivity? . . . After conducting a poll of industry executives on trends in automation, **Business Week** concluded in 1982 that 'there is a heavy backing for capital investment in a variety of labour-saving technologies that are designed to fatten profits without necessarily adding to productive output.'*" David Noble concludes that *"whenever managers are able to use automation to 'fatten profits' and enhance their authority (by eliminating jobs and extorting concessions and obedience from the workers who remain) without at the same time increasing social product, they appear more than ready to do."* [David Noble, **Progress Without People**, pp. 86-87 and p. 89]

Of course the claim is that higher wages follow increased investment and technological innovation ("in the long run" -- although usually "the long run" has to be helped to arrive by workers' struggle and protest!). Passing aside the question of whether slightly increased consumption really makes up for dehumanising and uncreative work, we must note that it is usually the capitalist who **really** benefits from technological change in money terms. For example, between 1920 and 1927 (a period when unemployment caused by technology became commonplace) the automobile industry (which was at the forefront of technological change) saw wages rise by 23.7%. Thus, claim supporters of capitalism, technology is in all our interests. However, capital surpluses rose by 192.9% during the same period -- 8 times faster! Little wonder wages rose! Similarly, over the last 20 years the USA and many other

countries have seen companies "down-sizing" and "right-sizing" their workforce and introducing new technologies. The result? Simply put, the 1970s saw the start of "*no-wage growth expansions*." Before the early 1970s, "*real wage growth tracked the growth of productivity and production in the economy overall. After . . . , they ceased to do so. . . Real wage growth fell sharply below measured productivity growth.*" [James K. Galbraith, **Created Unequal**, p. 79] So while real wages have stagnated, profits have been increasing as productivity rises and the rich have been getting richer -- technology yet again showing whose side it is on.

Overall, as David Noble notes (with regards to manufacturing):

"U.S. Manufacturing industry over the last thirty years . . . [has seen] the value of capital stock (machinery) relative to labour double, reflecting the trend towards mechanisation and automation. As a consequence . . . the absolute output person hour increased 115%, more than double. But during this same period, real earnings for hourly workers . . . rose only 84%, less than double. Thus, after three decades of automation-based progress, workers are now earning less relative to their output than before. That is, they are producing more for less; working more for their boss and less for themselves." [Op. Cit., pp. 92-3]

Noble continues:

"For if the impact of automation on workers has not been ambiguous, neither has the impact on management and those it serves -- labour's loss has been their gain. During the same first thirty years of our age of automation, corporate after tax profits have increased 450%, more than five times the increase in real earnings for workers." [Op. Cit., p. 95]

But why? Because labour has the ability to produce a flexible amount of output (use value) for a given wage. Unlike coal or steel, a worker can be made to work more intensely during a given working period and so technology can be utilised to maximise that effort as well as increasing the pool of potential replacements for an employee by deskilling their work (so reducing workers' power to get higher wages for their work). Thus technology is a key way of increasing the power of the boss, which in turn can increase output per worker while ensuring that the workers' receive relatively less of that output back in terms of wages -- "*Machines*," argued Proudhon, "*promised us an increase of wealth they have kept their word, but at the same time endowing us with an increase of poverty. They promised us liberty. . . [but] have brought us slavery.*" [Op. Cit., p. 199]

But do not get us wrong, technological progress does not imply that we are victims. Far from it, much innovation is the direct result of our resistance to hierarchy and its tools. For example, capitalists turned to Taylorism and "scientific management" in response to the power of skilled craft workers to control their work and working environment (the famous 1892 Homestead strike, for example, was a direct product of the desire of the company to end the skilled workers' control and power on the shop-floor). In response to this, factory and other workers created a whole new structure of working class power -- a

new kind of unionism based on the industrial level. This can be seen in many different countries. For example, in Spain, the C.N.T. (an anarcho-syndicalist union) adopted the *sindicato unico* (one union) in 1918 which united all workers of the same workplace in the same union (by uniting skilled and unskilled in a single organisation, the union increased their fighting power). In the UK, the shop stewards movement arose during the first world war based on workplace organisation (a movement inspired by the pre-war syndicalist revolt and which included many syndicalist activists). This movement was partly in response to the reformist TUC unions working with the state during the war to suppress class struggle. In Germany, the 1919 near revolution saw the creation of revolutionary workplace unions and councils (and a large increase in the size of the anarcho-syndicalist union FAU which was organised by industry). In the USA, the 1930s saw a massive and militant union organising drive by the C.I.O. based on industrial unionism and collective bargaining (inspired, in part, by the example of the I.W.W. and its broad organisation of unskilled workers).

More recently, workers in the 1960s and 70s responded to the increasing reformism and bureaucratic nature of such unions as the CIO and TUC by organising themselves directly on the shop floor to control their work and working conditions. This informal movement expressed itself in wildcat strikes against both unions and management, sabotage and unofficial workers' control of production (see John Zerzan's essay "*Organised Labour and the Revolt Against Work*" in **Elements of Refusal**). In the UK, the shop stewards' movement revived itself, organising much of the unofficial strikes and protests which occurred in the 1960s and 70s. A similar tendency was seen in many countries during this period.

So in response to a new developments in technology and workplace organisation, workers' developed new forms of resistance which in turn provokes a response by management. Thus technology and its (ab) uses is very much a product of the class struggle, of the struggle for freedom in the workplace.

With a given technology, workers and radicals soon learn to use it in ways never dreamed off to resist their bosses and the state (which necessitates a transformation of within technology again to try and give the bosses an upper hand!). The use of the Internet, for example, to organise, spread and co-ordinate information, resistance and struggles is a classic example of this process (see Jason Wehling, "*Netwars' and Activists Power on the Internet*", **Scottish Anarchist** no. 2 for details). There is always a "guerrilla war" associated with technology, with workers and radicals developing their own tactics to gain counter control for themselves. Thus much technological change reflects **our** power and activity to change our own lives and working conditions. We must never forget that.

While some may dismiss our analysis as "Luddite," to do so is make "technology" an idol to be worshipped rather than something to be critically analysed. Moreover, to do so is to misrepresent the ideas of the Luddites themselves -- they never actually opposed **all** technology or machinery. Rather, they opposed "*all Machinery hurtful to Commonality*" (as a March 1812 letter to a hated Manufacturer put it). Rather than worship technological progress (or view it uncritically), the Luddites subjected technology to critical analysis and evaluation. They opposed those forms of machinery that harmed themselves or society. Unlike those who smear others as "Luddites," the labourers who broke machines were not intimidated by the modern notion of progress. Their sense of right and wrong was not clouded by the notion that technology was somehow inevitable or neutral. They did not think that **human** values

(or their own interests) were irrelevant in evaluating the benefits and drawbacks of a given technology and its effects on workers and society as a whole. Nor did they consider their skills and livelihood as less important than the profits and power of the capitalists. In other words, they would have agreed with Proudhon's comment that machinery "*plays the leading role in industry, man is secondary*" **and** they acted to change this relationship. [Op. Cit., p. 204] Indeed, it would be tempting to argue that worshippers of technological progress are, in effect, urging us **not** to think and to sacrifice ourselves to a new abstraction like the state or capital. The Luddites were an example of working people deciding what their interests were and acting to defend them by their own direct action -- in this case opposing technology which benefited the ruling class by giving them an edge in the class struggle. Anarchists follow this critical approach to technology, recognising that it is not neutral nor above criticism.

For capital, the source of problems in industry is people. Unlike machines, people can think, feel, dream, hope and act. The "evolution" of technology will, therefore, reflect the class struggle within society and the struggle for liberty against the forces of authority. Technology, far from being neutral, reflects the interests of those with power. Technology will only be truly our friend once we control it ourselves and **modify** to reflect **human** values (this may mean that some forms of technology will have to be written off and replaced by new forms in a free society). Until that happens, most technological processes -- regardless of the other advantages they may have -- will be used to exploit and control people.

Thus Proudhon's comments that "*in the present condition of society, the workshop with its hierarchical organisation, and machinery*" could only serve "*exclusively the interests of the least numerous, the least industrious, and the wealthiest class*" rather than "*be employed for the benefit of all.*" [Op. Cit., p. 205]

While resisting technological "progress" (by means up to and including machine breaking) is essential in the here and now, the issue of technology can only be truly solved when those who use a given technology control its development, introduction and use. Little wonder, therefore, that anarchists consider workers' self-management as a key means of solving the problems created by technology. Proudhon, for example, argued that the solution to the problems created by the division of labour and technology could only be solved by "*association*" and "*by a broad education, by the obligation of apprenticeship, and by the co-operation of all who take part in the collective work.*" This would ensure that "*the division of labour can no longer be a cause of degradation for the workman [or workwoman].*" [The General Idea of the Revolution, p. 223]

While as far as technology goes, it may not be enough to get rid of the boss, this is a necessary first step in creating a technology which enhances freedom rather than controlling and shaping the worker (or user in general) and enhancing the power and profits of the capitalist (see also section I.4.9 -- [Should technological advance be seen as anti-anarchistic?](#)).

I.4 How could an anarchist economy function?

This is an important question facing all opponents of a given system -- what will you replace it with? We can say, of course, that it is pointless to make blueprints of how a future anarchist society will work as the future will be created by everyone, not just the few anarchists and libertarian socialists who write books and FAQs. This is very true, we cannot predict what a free society will actually be like or develop and we have no intention to do so here. However, this reply (whatever its other merits) ignores a key point, people need to have some idea of what anarchism aims for before they decide to spend their lives trying to create it.

So, how would an anarchist system function? That depends on the economic ideas people have. A mutualist economy will function differently than a communist one, for example, but they will have similar features. As Rudolf Rocker put it:

"Common to all Anarchists is the desire to free society of all political and social coercive institutions which stand in the way of the development of a free humanity. In this sense, Mutualism, Collectivism, and Communism are not to be regarded as closed systems permitting no further development, but merely assumptions as to the means of safeguarding a free community. There will even probably be in the society of the future different forms of economic co-operation existing side-by-side, since any social progress must be associated with that free experimentation and practical testing-out for which in a society of free communities there will be afforded every opportunity." [**Anarcho-Syndicalism**, p. 16]

So, given the common aims of anarchists, it's unsurprising that the economic systems they suggest will have common features such as workers' self-management, federation, free agreement and so on. For all anarchists, the "economy" is seen as a *"voluntary association that will organise labour, and be the manufacturer and distributor of necessary commodities"* and this *"is to make what is useful. The individual is to make what is beautiful."* [Oscar Wilde, **The Soul of Man Under Socialism**, p. 1183] For example, the machine *"will supersede hand-work in the manufacture of plain goods. But at the same time, hand-work very probably will extend its domain in the artistic finishing of many things which are made entirely in the factory."* [Peter Kropotkin, **Fields, Factories and Workplaces Tomorrow**, p. 152] Murray Bookchin, decades later, argued for the same idea: *"the machine will remove the toil from the productive process, leaving its artistic completion to man."* [**Post-Scarcity Anarchism**, p. 134]

This *"organisation of labour touches only such labours as others can do for us. . . the rest remain egoistic, because no one can in your stead elaborate your musical compositions, carry out your projects of painting, etc.; nobody can replace Raphael's labours. The latter are labours of a unique person, which only he is competent to achieve."* [Max Stirner, **The Ego and Its Own**, p. 268] Stirner goes on to ask *"for whom is time to be gained [by association]? For what does man require more time than is necessary to refresh his wearied powers of labour? Here Communism is silent."* He then answers his

own question by arguing it is gained for the individual "*[t]o take comfort in himself as unique, after he has done his part as man!*" [Op. Cit., p. 269] Which is exactly what Kropotkin also argued:

"He [sic!] will discharge his task in the field, the factory, and so on, which he owes to society as his contribution to the general production. And he will employ the second half of his day, his week, or his year, to satisfy his artistic or scientific needs, or his hobbies." [Conquest of Bread, p. 111]

Thus, while **authoritarian** Communism ignores the unique individual (and that was the only kind of Communism existing when Stirner wrote his classic book) **libertarian** communists agree with Stirner and are not silent. Like him, they consider the whole point of organising labour as the means of providing the individual the time and resources required to express their individuality. In other words, to pursue "*labours of a unique person.*" Thus all anarchists base their arguments for a free society on how it will benefit actual individuals, rather than abstracts or amorphous collectives (such as "*society*"). Hence chapter 9 of **The Conquest of Bread**, "*The Need for Luxury*" and, for that matter, chapter 10, "*Agreeable Work.*"

Or, to bring this ideal up to day, as Chomsky put it, "*[t]he task for a modern industrial society is to achieve what is now technically realisable, namely, a society which is really based on free voluntary participation of people who produce and create, live their lives freely within institutions they control, and with limited hierarchical structures, possibly none at all.*" [quoted by Albert and Hahnel in **Looking Forward: Participatory Economics for the Twenty First Century**, p. 62]

In other words, anarchists desire to organise voluntary workers associations which will try to ensure a minimisation of mindless labour in order to maximise the time available for creative activity both inside and outside "*work.*" This is to be achieved by free co-operation between equals, for while competition may be the "*law of the jungle*", co-operation is the law of civilisation.

This co-operation is **not** based on "*altruism,*" but self-interest. As Proudhon argued, "*[m]utuality, reciprocity exists when all the workers in an industry instead of working for an entrepreneur who pays them and keeps their products, work for one another and thus collaborate in the making of a common product whose profits they share amongst themselves. Extend the principle of reciprocity as uniting the work of every group, to the Workers' Societies as units, and you have created a form of civilisation which from all points of view - political, economic and aesthetic - is radically different from all earlier civilisations.*" [quoted by Martin Buber, **Paths in Utopia**, pp. 29-30] In other words, solidarity and co-operation allows us time to enjoy life and to gain the benefits of our labour ourselves - Mutual Aid results in a better life than mutual struggle and so "*the association for struggle will be a much more effective support for civilisation, progress, and evolution than is the struggle for existence with its savage daily competitions.*" [Luigi Geallani, **The End of Anarchism**, p. 26]

In the place of the rat race of capitalism, economic activity in an anarchist society would be one of the means to humanise and individualise ourselves and society, to move from **surviving** to **living**.

Productive activity should become a means of self-expression, of joy, of art, rather than something we have to do to survive. Ultimately, "work" should become more akin to play or a hobby than the current alienated activity. The priorities of life should be towards individual self-fulfilment and humanising society rather than "*running society as an adjunct to the market*," to use Polanyi's expression, and turning ourselves into commodities on the labour market. Thus anarchists agree with John Stuart Mill when he wrote:

"I confess I am not charmed with an ideal of life held out by those who think that the normal state of human beings is that of struggling to get on; that the trampling, crushing, elbowing, and treading on each other's heels, which form the existing type of social life, are the most desirable lot of human kind, or anything but the disagreeable symptoms of one of the phases of industrial progress." [**Collected Works**, vol. III, p. 754]

The aim of anarchism is far more than the end of poverty. Hence Proudhon's comment that socialism's "*underlying dogma*" is that the "*objective of socialism is the emancipation of the proletariat and the eradication of poverty*." This emancipation would be achieved by ending "*wage slavery*" via "*democratically organised workers' associations*." [**No Gods, No Masters**, vol. 1, p. 57 and p.62] Or, in Kropotkin's words, "*well-being for all*" -- physical, mental and moral! Indeed, by concentrating on just poverty and ignoring the emancipation of the proletariat, the real aims of socialism are obscured. As Kropotkin argued:

"The 'right to well-being' means the possibility of living like human beings, and of bringing up children to be members of a society better than ours, whilst the 'right to work' only means the right to be a wage-slave, a drudge, ruled over and exploited by the middle class of the future. The right to well-being is the Social Revolution, the right to work means nothing but the Treadmill of Commercialism. It is high time for the worker to assert his right to the common inheritance, and to enter into possession of it." [**The Conquest of Bread**, p. 44]

Combined with this desire for free co-operation is a desire to end centralised systems. The opposition to centralisation is often framed in a distinctly false manner. This can be seen when Alex Nove, a leading market socialist, argues that "*there are horizontal links (market), there are vertical links (hierarchy). What other dimension is there?*" [Alex Nove, **The Economics of Feasible Socialism**, p. 226] In other words, Nove states that to oppose central planning means to embrace the market. This, however, is not true. Horizontal links need not be market based any more than vertical links need be hierarchical. But the core point in his argument is very true, an anarchist society must be based essentially on horizontal links between individuals and associations, freely co-operating together as they (not a central body) sees fit. This co-operation will be source of any "*vertical*" links in an anarchist economy. When a group of individuals or associations meet together and discuss common interests and make common decisions they will be bound by their own decisions. This is radically different from a central body giving out orders because those affected will determine the content of these decisions. In other words, instead of decisions being handed down from the top, they will be created from the bottom up.

So, while refusing to define exactly how an anarchist system will work, we will explore the implications of how the anarchist principles and ideals outlined above could be put into practice. Bear in mind that this is just a possible framework for a system which has few historical examples to draw upon as evidence. This means that we can only indicate the general outlines of what an anarchist society could be like. Those seeking "*recipes*" and exactness should look elsewhere. In all likelihood, the framework we present will be modified and changed (even ignored) in light of the real experiences and problems people will face when creating a new society.

Lastly we should point out that there may be a tendency for some to compare this framework with the **theory** of capitalism (i.e. perfectly functioning "*free*" markets or quasi-perfect ones) as opposed to its reality. A perfectly working capitalist system only exists in text books and in the heads of ideologues who take the theory as reality. No system is perfect, particularly capitalism, and to compare "*perfect*" capitalism with any system is a pointless task. In addition, there will be those who seek to apply the "*scientific*" principles of the neo-classical economics to our ideas. By so doing they make what Proudhon called "*the radical vice of political economy*", namely "*affirming as a definitive state a transitory condition -- namely, the division of society into patricians and proletares.*" [**System of Economical Contradictions**, p. 67] Thus any attempt to apply the "*laws*" developed from theorising about capitalism to anarchism will fail to capture the dynamics of a non-capitalist system (given that neo-classical economics fails to understand the dynamics of capitalism, what hope does it have of understanding non-capitalist systems which reject the proprietary despotism and inequalities of capitalism?).

John Crump stresses this point in his discussion of Japanese anarchism:

*"When considering the feasibility of the social system advocated by the pure anarchists, we need to be clear about the criteria against which it should be measured. It would, for example, be unreasonable to demand that it be assessed against such yardsticks of a capitalist economy as annual rate of growth, balance of trade and so forth . . . evaluating anarchist communism by means of the criteria which have been devised to measure capitalism's performance does not make sense . . . capitalism would be . . . baffled if it were demanded that it assess its operations against the performance indicators to which pure anarchists attached most importance, such as personal liberty, communal solidarity and the individual's unconditional right to free consumption. Faced with such demands, capitalism would either admit that these were not yardsticks against which it could sensibly measure itself or it would have to resort to the type of grotesque ideological subterfuges which it often employs, such as identifying human liberty with the market and therefore with wage slavery. . . The pure anarchists' confidence in the alternative society they advocated derived not from an expectation that it would **quantitatively** outperform capitalism in terms of GNP, productivity or similar capitalist criteria. On the contrary, their enthusiasm for anarchist communism flowed from their understanding that it would be **qualitatively** different from capitalism. Of course, this is not to say that the pure anarchists were indifferent to questions of production and distribution . . . they certainly believed that anarchist communism would provide economic well-being for all. But*

neither were they prepared to give priority to narrowly conceived economic expansion, to neglect individual liberty and communal solidarity, as capitalism regularly does." [Hatta Shuzo and **Pure Anarchism in Interwar Japan**, pp. 191-3]

As Kropotkin argued, *"academic political economy has been only an enumeration of what happens under the . . . conditions [of capitalism] -- without distinctly stating the conditions themselves. And then, having described **the facts** [academic neo-classical economics usually does not even do that, we must stress, but Kropotkin had in mind the likes of Adam Smith and Ricardo, **not** modern neo-classical economics] which arise in our societies under these conditions, they represent to use these **facts** as rigid, inevitable economic laws."* [Kropotkin's **Revolutionary Pamphlets**, p. 179] So, by changing the conditions we change the *"economic laws"* of a society and so capitalist economics is not applicable to post (or pre) capitalist society (nor are its justifications for existing inequalities in wealth and power).

I.4.1 What is the point of economic activity in anarchy?

The basic point of economic activity in an anarchist society is to ensure that we produce what we desire to consume and that our consumption is under our own control and not vice versa. The second point may seem strange; how can consumption control us -- we consume what we desire and no one forces us to do so! It may come as a surprise that the idea that we consume only what we desire is not quite true under a capitalist economy. Capitalism, in order to survive, **must** expand, **must** create more and more profits. This leads to irrational side effects, for example, the advertising industry. While it goes without saying that producers need to let consumers know what is available for consumption, capitalism ensures advertising goes beyond this by creating needs that did not exist.

Therefore, the point of economic activity in an anarchist society is to produce as and when required and not, as under capitalism, to organise production for the sake of production. Production, to use Kropotkin's words, is to become *"the mere servant of consumption; it must mould itself on the wants of the consumer, not dictate to him [or her] conditions."* [Act For Yourselves, p. 57] However, while the basic aim of economic activity in an anarchist society is, obviously, producing wealth -- i.e. of satisfying individual needs -- without enriching capitalists or other parasites in the process, it is far more than that. Yes, an anarchist society will aim to create society in which everyone will have a standard of living suitable for a fully human life. Yes, it will aim to eliminate poverty, inequality, individual want and social waste and squalor, but it aims for far more than that. It aims to create free individuals who express their individuality within and without *"work."* After all, what is the most important thing that comes out of a workplace? Pro-capitalists may say profits, others the finished commodity or good. In fact, the most important thing that comes out of a workplace is the **worker**. What happens to them in the workplace will have an impact on all aspects of their life and so cannot be ignored.

Therefore, for anarchists, *"[r]eal wealth consists of things of utility and beauty, in things that help create strong, beautiful bodies and surroundings inspiring to live in."* Anarchism's *"goal is the freest possible expression of all the latent powers of the individual . . . [and this] is only possible in a state of society where man [and woman] is free to choose the mode of work, the conditions of work, and the freedom to*

work. One whom making a table, the building of a house, or the tilling of the soil is what the painting is to the artist and the discovery to the scientist -- the result of inspiration, of intense longing, and deep interest in work as a creative force." [Emma Goldman, **Red Emma Speaks**, p. 53 and p. 54]

To value "*efficiency*" above all else, as capitalism says it does (it, in fact, values **profits** above all else and hinders developments like workers' control which increase efficiency but harm power and profits), is to deny our own humanity and individuality. Without an appreciation for grace and beauty there is no pleasure in creating things and no pleasure in having them. Our lives are made drearier rather than richer by "*progress*." How can a person take pride in their work when skill and care are considered luxuries (if not harmful to "*efficiency*" and, under capitalism, the profits and power of the capitalist and manager)? We are not machines. We have a need for craftspersonship and anarchist recognises this and takes it into account in its vision of a free society.

This means that, in an anarchist society, economic activity is the process by which we produce what is both useful **and** beautiful in a way that empowers the individual. As Oscar Wilde put it, individuals will produce what is beautiful. Such production will be based upon the "*study of the needs of mankind, and the means of satisfying them with the least possible waste of human energy.*" [Peter Kropotkin, **The Conquest of Bread**, p. 175] This means that anarchist economic ideas are the same as what Political Economy should be, not what it actually is, namely the "*essential basis of all Political Economy, the study of the most favourable conditions for giving society the greatest amount of useful products with the least waste of human energy*" (and, we must add today, the least disruption of nature). [**Op. Cit.**, p. 144]

The anarchists charge capitalism with wasting human energy and time due to its irrational nature and workings, energy that could be spent creating what is beautiful (both in terms of individualities and products of labour). Under capitalism we are "*toiling to live, that we may live to toil.*" [William Morris, **Useful Work Versus Useless Toil**, p. 37]

In addition, we must stress that the aim of economic activity within an anarchist society is **not** to create equality of outcome -- i.e. everyone getting exactly the same goods. As we noted in [section A.2.5](#), such a "*vision*" of "*equality*" attributed to socialists by pro-capitalists indicates more the poverty of imagination and ethics of the critics of socialism than a true account of socialist ideas. Anarchists, like other socialists, support equality in order to maximise freedom, including the freedom to choose between options to satisfy ones needs.

To treat people equally, as equals, means to respect their desires and interests, to acknowledge their right to equal liberty. To make people consume the same as everyone else does not respect the equality of all to develop ones abilities as one sees fit. Thus it means equality of opportunity to satisfy desires and interests, not the imposition of an abstract minimum (or maximum) on unique individuals. To treat unique individuals equally means to acknowledge that uniqueness, not to deny it.

Thus the **real** aim of economic activity within an anarchy is to ensure "*that every human being should have the material and moral means to develop his humanity.*" [Michael Bakunin, **The Political**

Philosophy of Bakunin, p. 295] And you cannot develop your humanity if you cannot express yourself freely. Needless to say, to treat unique people "*equally*" (i.e. identically) is simply evil. You cannot, say, have a 70 year old woman do the same work in order to receive the same income as a 20 year old man. No, anarchists do not subscribe to such "*equality*," which is a product of the "*ethics of mathematics*" of capitalism and **not** of anarchist ideas. Such a scheme is alien to a free society. The equality anarchists desire is a social equality, based on control over the decisions that affect you. The aim of anarchist economic activity, therefore, is provide the goods required for "*equal freedom for all, an equality of conditions such as to allow everyone to do as they wish.*" [Errico Malatesta, **Life and Ideas**, p. 49] Thus anarchists "*demand not natural but social equality of individuals as the condition for justice and the foundations of morality.*" [Bakunin, **Op. Cit.**, p. 249]

Under capitalism, instead of humans controlling production, production controls them. Anarchists want to change this and desire to create an economic network which will allow the maximisation of an individual's free time in order for them to express and develop their individuality (or to "*create what is beautiful*"). So instead of aiming just to produce because the economy will collapse if we did not, anarchists want to ensure that we produce what is useful in a manner which liberates the individual and empowers them in all aspects of their lives. They share this desire with (some of) the classical Liberals and agree totally with Humbolt's statement that "*the end of man . . . is the highest and most harmonious development of his powers to a complete and consistent whole.*" [quoted by J.S. Mill in **On Liberty and Other Essays**, p. 64]

This desire means that anarchists reject the capitalist definition of "*efficiency.*" Anarchists would agree with Albert and Hahnel when they argue that "*since people are conscious agents whose characteristics and therefore preferences develop over time, to access long-term efficiency we must access the impact of economic institutions on people's development.*" [**The Political Economy of Participatory Economics**, p. 9] Capitalism, as we have explained before, is highly inefficient in this light due to the effects of hierarchy and the resulting marginalisation and disempowerment of the majority of society. As Albert and Hahnel go on to note, "*self-management, solidarity, and variety are all legitimate valiative criteria for judging economic institutions . . . Asking whether particular institutions help people attain self-management, variety, and solidarity is sensible.*" [**Ibid.**]

In other words, anarchists think that any economic activity in a free society is to do useful things in such a way that gives those doing it as much pleasure as possible. The point of such activity is to express the individuality of those doing it, and for that to happen they must control the work process itself. Only by self-management can work become a means of empowering the individual and developing his or her powers.

In a nutshell, to use William Morris' expression, useful work will replace useless toil in an anarchist society.

I.4.2 Why do anarchists desire to abolish work?

Anarchists desire to see humanity liberate itself from "work." This may come as a shock for many people and will do much to "prove" that anarchism is essentially utopian. However, we think that such an abolition is not only necessary, it is possible. This is because "work" is one of the major dangers to freedom we face.

If by freedom we mean self-government, then it is clear that being subjected to hierarchy in the workplace subverts our abilities to think and judge for ourselves. Like any skill, critical analysis and independent thought have to be practised continually in order to remain at their full potential. However, as well as hierarchy, the workplace environment created by these power structures also helps to undermine these abilities. This was recognised by Adam Smith:

"The understandings of the greater part of men are necessarily formed by their ordinary employments." That being so, "the man whose life is spent in performing a few simple operations, of which the effects too are, perhaps, always the same, or nearly the same, has no occasion to extend his understanding . . . and generally becomes as stupid and ignorant as it is possible for a human creature to be . . . But in every improved and civilised society this is the state into which the labouring poor, that is the great body of the people, must necessarily fall, unless government takes pains to prevent it." [Adam Smith, quoted by Noam Chomsky, **Year 501**, p. 18]

Smith's argument (usually ignored by those who claim to follow his ideas) is backed up by extensive evidence. The different types of authority structures and different technologies have different effects on those who work within them. Carole Pateman (in **Participation and Democratic Theory**) notes that the evidence suggests that "[o]nly certain work situations were found to be conducive to the development of the psychological characteristics [suitable for freedom, such as] . . . the feelings of personal confidence and efficacy that underlay the sense of political efficacy." [p. 51] She quotes one expert (R. Blauner from his **Freedom and Alienation**) who argues that within capitalist companies based upon highly rationalised work environment, extensive division of labour and "no control over the pace or technique of his [or her] work, no room to exercise skill or leadership" [**Op. Cit.**, p. 51] workers, according to a psychological study, is "resigned to his lot . . . more dependent than independent . . . he lacks confidence in himself . . . he is humble . . . the most prevalent feeling states . . . seem to be fear and anxiety." [p. 52]

However, in workplaces where "the worker has a high degree of personal control over his work . . . and a very large degree of freedom from external control . . . [or has] collective responsibility of a crew of employees . . . [who] had control over the pace and method of getting the work done, and the work crews were largely internally self-disciplining" [p. 52] a different social character is seen. This was characterised by "a strong sense of individualism and autonomy, and a solid acceptance of citizenship in the large society . . . [and] a highly developed feeling of self-esteem and a sense of self-worth and is therefore ready to participate in the social and political institutions of the community." [p. 52] She notes that R. Blauner states that the "nature of a man's work affects his social character and personality" and that an "industrial environment tends to breed a distinct social type." [cited by Pateman, **Op. Cit.**, p. 52]

As Bob Black argues:

"You are what you do. If you do boring, stupid, monotonous work, chances are you'll end up boring, stupid, and monotonous. Work is a much better explanation for the creeping cretinisation all around us than even such significant moronising mechanisms as television and education. People who are regimented all their lives, handed to work from school and bracketed by the family in the beginning and the nursing home in the end, are habituated to hierarchy and psychologically enslaved. Their aptitude for autonomy is so atrophied that their fear of freedom is among their few rationally grounded phobias. Their obedience training at work carries over into the families they start, thus reproducing the system in more ways than one, and into politics, culture and everything else. Once you drain the vitality from people at work, they'll likely submit to hierarchy and expertise in everything. They're used to it." [The Abolition of Work]

For this reason anarchists desire, to use Bob Black's phrase, *"the abolition of work."* "Work," in this context, does not mean any form of productive activity. Far from it. "Work" (in the sense of doing necessary things) will always be with us. There is no getting away from it; crops need to be grown, schools built, homes fixed, and so on. No, "work" in this context means any form of labour in which the worker does not control his or her own activity. In other words, **wage labour** in all its many forms. As Kropotkin put it, *"the right to work" simply "means the right to be always a wage-slave, a drudge, ruled over and exploited by the middle class of the future"* and he contrasted this to the *"right to well-being"* which meant *"the possibility of living like human beings, and of bringing up children to be members of a society better than ours."* [The Conquest of Bread, p. 44]

A society based upon wage labour (i.e. a capitalist society) will result in a society within which the typical worker uses few of their abilities, exercise little or no control over their work because they are governed by a boss during working hours. This has been proved to lower the individual's self-esteem and feelings of self-worth, as would be expected in any social relationship that denied self-government to workers. Capitalism is marked by an extreme division of labour, particularly between mental labour and physical labour. It reduces the worker to a mere machine operator, following the orders of his or her boss. Therefore, a libertarian that does not support economic liberty (i.e. self-management) is no libertarian at all.

Capitalism bases its rationale for itself on consumption. However, this results in a viewpoint which minimises the importance of the time we spend in productive activity. Anarchists consider that it is essential for individual's to use and develop their unique attributes and capacities in all walks of life, to maximise their powers. Therefore, the idea that "work" should be ignored in favour of consumption is totally mad. Productive activity is an important way of developing our inner-powers and express ourselves; in other words, be creative. Capitalism's emphasis on consumption shows the poverty of that system. As Alexander Berkman argues:

"We do not live by bread alone. True, existence is not possible without opportunity to satisfy our physical needs. But the gratification of these by no means constitutes all of life. Our present system of disinheriting millions, made the belly the centre of the universe, so

to speak. But in a sensible society . . . [t]he feelings of human sympathy, of justice and right would have a chance to develop, to be satisfied, to broaden and grow." [**ABC of Anarchism**, p. 15]

Therefore, capitalism is based on a constant process of alienated consumption, as workers try to find the happiness associated within productive, creative, self-managed activity in a place it does not exist -- on the shop shelves. This can partly explain the rise of both mindless consumerism and of religions, as individuals try to find meaning for their lives and happiness, a meaning and happiness frustrated in wage labour and hierarchy.

Capitalism's impoverishment of the individual's spirit is hardly surprising. As William Godwin argued, *"[t]he spirit of oppression, the spirit of servility, and the spirit of fraud, these are the immediate growth of the established administration of property. They are alike hostile to intellectual and moral improvement."* [**The Anarchist Reader**, p. 131] In other words, any system based in wage labour or hierarchical relationships in the workplace will result in a deadening of the individual and the creation of a "servile" character. This crushing of individuality springs **directly** from what Godwin called "the third degree of property" namely "a system. . . by which one man enters into the faculty of disposing of the produce of another man's industry" in other words, capitalism. [**Op. Cit.**, p. 129]

Anarchists desire to change this and create a society based upon freedom in all aspects of life. Hence anarchists desire to abolish work, simply because it restricts the liberty and distorts the individuality of those who have to do it. To quote Emma Goldman:

"Anarchism aims to strip labour of its deadening, dulling aspect, of its gloom and compulsion. It aims to make work an instrument of joy, of strength, of colour, of real harmony, so that the poorest sort of a man should find in work both recreation and hope." [**Anarchism and Other Essays**, p. 61]

Anarchists do not think that by getting rid of work we will not have to produce necessary goods and so on. Far from it, an anarchist society *"doesn't mean we have to stop doing things. It does mean creating a new way of life based on play; in other words, a ludic revolution . . . a collective adventure in generalised joy and freely interdependent exuberance. Play isn't passive."* [Bob Black, **Op. Cit.**]

This means that in an anarchist society every effort would be made to reduce boring, unpleasant activity to a minimum and ensure that whatever productive activity is required to be done is as pleasant as possible and based upon voluntary labour. However, it is important to remember Cornelius Castoriadis point that a *"Socialist society will be able to reduce the length of the working day, and will have to do so, but this will not be the fundamental preoccupation. Its first task will be to . . . transform the very nature of work. The problem is not to leave more and more 'free' time to individuals - which might well be empty time - so that they may fill it at will with 'poetry' or the carving of wood. The problem is to make all time a time of liberty and to allow concrete freedom to find expression in creative activity."* Essentially, *"the problem is to put poetry into work."* [**Workers' Councils and the Economics of a Self-**

Managed Society, p. 14 and p. 15]

This is why anarchists desire to abolish "*work*" (i.e. wage labour), to ensure that whatever "*work*" (i.e. economic activity) is required to be done is under the direct control of those who do it. In this way it can be liberated and so become a means of self-realisation and not a form of self-negation. In other words, anarchists want to abolish work because "*[l]ife, the art of living, has become a dull formula, flat and inert.*" [A. Berkman, **Op. Cit.**, p. 27] Anarchists want to bring the spontaneity and joy of life back into productive activity and save humanity from the dead hand of capital.

All this does not imply that anarchists think that individuals will not seek to "*specialise*" in one form of productive activity rather than another. Far from it, people in a free society will pick activities which interest them as the main focal point of their means of self-expression. "*It is evident,*" noted Kropotkin, "*that all men and women cannot equally enjoy the pursuit of scientific work. The variety of inclinations is such that some will find more pleasure in science, some others in art, and other again in some of the numberless branches of the production of wealth.*" This "*division of work*" is commonplace in humanity and can be seen under capitalism -- most children and teenagers pick a specific line of work because they are interested, or at least desire to do a specific kind of work. This natural desire to do what interests you and what you are good at will be encouraged in an anarchist society. As Kropotkin argued, anarchists "*fully recognise the necessity of specialisation of knowledge, but we maintain that specialisation must follow general education, and that general education must be given in science and handicraft alike. To the division of society into brain workers and manual workers we oppose the combination of both kinds of activities . . . we advocate the **education integrale** [integral education], or complete education, which means the disappearance of that pernicious division.*" He was aware, however, that both individuals and society would benefit from a diversity of activities and a strong general knowledge. In his words, "*[b]ut whatever the occupations preferred by everyone, everyone will be the more useful in his [or her] branch is he [or she] is in possession of a serious scientific knowledge. And, whosoever he [or she] might be . . . he would be the gainer if he spent a part of his life in the workshop or the farm (the workshop **and** the farm), if he were in contact with humanity in its daily work, and had the satisfaction of knowing that he himself discharges his duties as an unprivileged producer of wealth.*" [**Fields, Factories and Workshops Tomorrow**, p. 186, p. 172 and p. 186]

However, while specialisation would continue, the permanent division of individuals into manual or brain workers would be eliminated. Individuals will manage all aspects of the "*work*" required (for example, engineers will also take part in self-managing their workplaces), a variety of activities would be encouraged and the strict division of labour of capitalism will be abolished.

In other words, anarchists want to replace the division of labour by the division of work. We must stress that we are not playing with words here. John Crump presents a good summary of the ideas of the Japanese anarchist Hatta Shuzo on this difference:

"[W]e must recognise the distinction which Hatta made between the 'division of labour' . . . and the 'division of work' . . . he did not see anything sinister in the division of

work . . . On the contrary, Hatta believed that the division of work was a benign and unavoidable feature of any productive process: 'it goes without saying that within society, whatever the kind of production, there has to be a division of work.'" [Hatta Shuzo and **Pure Anarchism in Interwar Japan**, pp. 146-7]

As Kropotkin argued:

"while a **temporary** division of functions remains the surest guarantee of success in each separate undertaking, the **permanent** division is doomed to disappear, and to be substituted by a variety of pursuits -- intellectual, industrial, and agricultural -- corresponding to the different capacities of the individual, as well as to the variety of capacities within every human aggregate." [Fields, **Factories and Workshops Tomorrow**, p. 26]

As an aside, supporters of capitalism argue that **integrated** labour must be more inefficient than **divided** labour as capitalist firms have not introduced it. This is false for numerous reasons.

Firstly, we have to put out the inhuman logic of the assertion. After all, few would argue in favour of slavery if it were, in fact, **more** productive than wage labour but such is the logical conclusion of this argument. If someone did argue that the only reason slavery was not the dominant mode of labour simply because it was inefficient we would consider them as less than human. Simply put, it is a sick ideology which happily sacrifices individuals for the sake of slightly more products. Sadly, that is what many defenders of capitalism do, ultimately, argue for.

Secondly, capitalist firms are not neutral structures but rather a system of hierarchies, with entrenched interests and needs. Managers will only introduce a work technique that maintains their power (and so their profits). As we argue in [section J.5.12](#), while workers' participation generally see a rise in efficiency managers generally stop the project simply because it undercuts their power by empowering workers who then can fight for a greater slice of the value they produce. So the lack of integrated labour under capitalism simply means that it does not empower management, not that it is less efficient.

Thirdly, the attempts by managers and bosses to introduce "*flexibility*" by eliminating trade unions suggests that integration **is** more efficient. After all, one of the major complaints directed towards trade union contracts were that they explicitly documented what workers could and could not do. For example, union members would refuse to do work which was outside their agreed job descriptions. This is usually classed as an example of the evil of regulations.

However, if we look at it from the viewpoint of contract, it exposes the inefficiency and inflexibility of contract as a means of co-operation. After all, what is this refusal actually mean? It means that the worker refuses to do what is not specified in his or her contract! Their job description indicates what they have been contracted to do and anything else has not been agreed upon in advance. It specifies the division of labour in a workplace by means of a contract between worker and boss.

While being a wonderful example of a well-designed contract, managers discovered that they could not operate their workplaces because of them. Rather, they needed a general *"do what you are told"* contract (which of course is hardly an example of contract reducing authority) and such a contract **integrates** numerous work tasks into one. The managers diatribe against union contracts suggests that production needs some form of integrated labour to actually work (as well as showing the hypocrisy of the labour contract under capitalism as labour *"flexibility"* simply means labour *"commodification"* -- a machine does not question what its used for, the ideal for labour under capitalism is a similar unquestioning nature for labour). The union job description indicates that not only is the contract not applicable to the capitalist workplace but that production needs the integration of labour while demanding a division of work. As Cornelius Caastoriadis argued:

*"Modern production has destroyed many traditional professional qualifications. It has created automatic or semi-automatic machines. It has thereby itself demolished its own traditional framework for the industrial division of labour. It has given birth to a universal worker who is capable, after a relatively short apprenticeship, of using most machines. Once one gets beyond its class aspects, the 'posting' of workers to particular jobs in a big modern factory corresponds less and less to a genuine division of **labour** and more and more to a simple division of tasks. Workers are not allocated to given areas of the productive process and then riveted to them because their 'occupational skills' invariably correspond to the 'skills required' by management. They are placed there . . . just because a particular vacancy happened to exist."* [**Political and Social Writings**, vol. 2, p. 117]

Of course, the other option is to get rid of capitalism by self-management. If workers managed their own time and labour, they would have no reason to say *"that is not my job"* as they have no contract with someone who tells them what to do. Similarly, the process of labour integration forced upon the worker would be freely accepted and a task freely accepted always produces superior results than one imposed by coercion (or its threat). This means that *"[u]nder socialism, factories would have no reason to accept the artificially rigid division of labour now prevailing. There will be every reason to encourage a rotation of workers **between shops and departments** and between production and office areas."* The *"residues of capitalism's division of labour gradually will have to be eliminated"* as *"socialist society cannot survive unless it demolishes this division."* [**Ibid.**]

Division of tasks (or work) will replace division of labour in a free society. *"The main subject of social economy,"* argued Kropotkin, is *"the **economy** of energy required for the satisfaction of **human needs.**"* These needs obviously expressed both the needs of the producers for empowering and interesting work and their need for a healthy and balanced environment. Thus Kropotkin discussed the *"advantages"* which could be *"derive[d] from a combination of industrial pursuits with intensive agriculture, and of brain work with manual work."* The *"greatest sum total of well-being can be obtained when a variety of agricultural, industrial and intellectual pursuits are combined in each community; and that man [and woman] shows his best when he is in a position to apply his usually-varied capacities to several pursuits in the farm, the workshop, the factory, the study or the studio, instead of being riveted for life to one of*

these pursuits only." [**Fields, Factories and Workshops Tomorrow**, pp. 17-8]

By replacing the division of labour with the division of work, productive activity can be transformed into an enjoyable task (or series of tasks). By integrating labour, all the capacities of the producer can be expressed so eliminating a major source of alienation and unhappiness in society.

One last point on the abolition of work. May 1st -- International Workers' Day -- which, as we discussed in [section A.5.2](#), was created to commemorate the Chicago Anarchist Martyrs. Anarchists then, as now, think that it should be celebrated by strike action and mass demonstrations. In other words, for anarchists, International Workers' Day should be a non-work day! That sums up the anarchist position to work nicely -- that the celebration of workers' day should be based on the rejection of work.

I.4.3 How do anarchists intend to abolish work?

Basically by workers' self-management of production and community control of the means of production. It is hardly in the interests of those who do the actual "*work*" to have bad working conditions, boring, repetitive labour, and so on. Therefore, a key aspect of the liberation from work is to create a self-managed society, "*a society in which everyone has equal means to develop and that all are or can be at the time intellectual and manual workers, and the only differences remaining between men [and women] are those which stem from the natural diversity of aptitudes, and that all jobs, all functions, give an equal right to the enjoyment of social possibilities.*" [Errico Malatesta, **Anarchy**, p. 40]

Essential to this task is decentralisation and the use of appropriate technology. Decentralisation is important to ensure that those who do work can determine how to liberate it. A decentralised system will ensure that ordinary people can identify areas for technological innovation, and so understand the need to get rid of certain kinds of work. Unless ordinary people understand and control the introduction of technology, then they will never be fully aware of the benefits of technology and resist advances which may be in their best interests to introduce. This is the full meaning of appropriate technology, namely the use of technology which those most affected feel to be best in a given situation. Such technology may or may not be technologically "*advanced*" but it will be of the kind which ordinary people can understand and, most importantly, control.

The potential for rational use of technology can be seen from capitalism. Under capitalism, technology is used to increase profits, to expand the economy, not to liberate **all** individuals from useless toil (it does, of course, liberate a few from such "*activity*"). As Ted Trainer argues:

"Two figures drive the point home. In the long term, productivity (i.e. output per hour of work) increases at about 2 percent per annum, meaning that each 35 years we could cut the work week by half while producing as much as we were at the beginning. A number of OECD . . . countries could actually have cut from a five-day work week to around a one-day work week in the last 25 years while maintaining their output at the same level. In this

economy we must therefore double the annual amount we consume per person every 35 years just to prevent unemployment from rising and to avoid reduction in outlets available to soak up investable capital.

"Second, according to the US Bureau for Mines, the amount of capital per person available for investment in the United States will increase at 3.6 percent per annum (i.e. will double in 20-year intervals). This indicates that unless Americans double the volume of goods and services they consume every 20 years, their economy will be in serious difficulties

*"Hence the ceaseless and increasing pressure to find more business opportunities" ["What is Development", p 57-90, **Society and Nature**, Issue No. 7, p. 49]*

And, remember, these figures include production in many areas of the economy that would not exist in a free society - state and capitalist bureaucracy, weapons production, and so on. In addition, it does not take into account the labour of those who do not actually produce anything useful and so the level of production for useful goods would be higher than Trainer indicates. In addition, goods will be built to last and so much production will become sensible and not governed by an insane desire to maximise profits at the expense of everything else.

The decentralisation of power will ensure that self-management becomes universal. This will see the end of division of labour as mental and physical work becomes unified and those who do the work also manage it. This will allow *"the free exercise of **all** the faculties of man"* both inside and outside "work." [Peter Kropotkin, **The Conquest of Bread**, p. 148] The aim of such a development would be to turn productive activity, as far as possible, into an enjoyable experience. In the words of Murray Bookchin it is the **quality** and **nature** of the work process that counts:

*"If workers' councils and workers' management of production do not transform the work into a joyful activity, free time into a marvellous experience, and the workplace into a community, then they remain merely formal structures, in fact, **class** structures. They perpetuate the limitations of the proletariat as a product of bourgeois social conditions. Indeed, no movement that raises the demand for workers' councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place." [Post-Scarcity Anarchism, p. 146]*

Work will become, primarily, the expression of a person's pleasure in what they are doing and become like an art - an expression of their creativity and individuality. Work as an art will become expressed in the workplace as well as the work process, with workplaces transformed and integrated into the local community and environment (see section I.4.15 -- ["What will the workplace of tomorrow be like?"](#)). This will obviously apply to work conducted in the home as well, otherwise the *"revolution, intoxicated with the beautiful words, Liberty, Equality, Solidarity, would not be a revolution if it maintained slavery at home. Half [of] humanity subjected to the slavery of the hearth would still have to rebel against the*

other half." [Peter Kropotkin, **The Conquest of Bread**, p. 128]

In other words, anarchists desire "*to combine the best part (in fact, the only good part) of work -- the production of use-values -- with the best of play . . . its freedom and its fun, its voluntariness and its intrinsic gratification*" -- the transformation of what economists call production into productive play. [Bob Black, **Smokestack Lightning**]

In addition, a decentralised system will build up a sense of community and trust between individuals and ensure the creation of an ethical economy, one based on interactions between individuals and not commodities caught in the flux of market forces. This ideal of a "**moral economy**" can be seen in both social anarchists desire for the end of the market system and the individualists insistence that "*cost be the limit of price.*" Anarchists recognise that the "*traditional local market . . . is essentially different from the market as it developed in modern capitalism. Bartering on a local market offered an opportunity to meet for the purpose of exchanging commodities. Producers and customers became acquainted; they were relatively small groups . . . The modern market is no longer a meeting place but a mechanism characterised by abstract and impersonal demand. One produces for this market, not for a known circle of customers; its verdict is based on laws of supply and demand.*" [Man for Himself, pp. 67-68]

Anarchists reject the capitalist notion that economic activity should be based on maximising profit as the be all and end all of such work (buying and selling on the "*impersonal market*"). As markets only work through people, individuals, who buy and sell (but, in the end, control them -- in the "*free market*" only the market is free) this means that for the market to be "*impersonal*" as it is in capitalism it implies that those involved have to be unconcerned about personalities, including their own. Profit, not ethics, is what counts. The "*impersonal*" market suggests individuals who act in an impersonal, and so unethical, manner. The morality of what they produce, why they produce it and how they produce it is irrelevant, as long as profits are produced.

Instead, anarchists consider economic activity as an expression of the human spirit, an expression of the innate human need to express ourselves and to create. Capitalism distorts these needs and makes economic activity a deadening experience by the division of labour and hierarchy. Anarchists think that "*industry is not an end in itself, but should only be a means to ensure to man his material subsistence and to make accessible to him the blessings of a higher intellectual culture. Where industry is everything and man is nothing begins the realm of a ruthless economic despotism whose workings are no less disastrous than those of any political despotism. The two mutually augment one another, and they are fed from the same source.*" [Rudolph Rocker, **Anarcho-Syndicalism**, p. 11]

Anarchists think that a decentralised social system will allow "*work*" to be abolished and economic activity humanised and made a means to an end (namely producing useful things and liberated individuals). This would be achieved by, as Rudolf Rocker puts it, the "*alliance of free groups of men and women based on co-operative labour and a planned administration of things in the interest of the community.*" [Op. Cit., p. 62]

However, as things are produced by people, it could be suggested that a *"planned administration of things"* implies a *"planned administration of people"* (although few who suggest this danger apply it to capitalist firms which are like mini-centrally planned states). This objection is false simply because anarchism aims *"to reconstruct the economic life of the peoples from the ground up and build it up anew in the spirit of Socialism"* and, moreover, *"only the producers themselves are fitted for this task, since they are the only value-creating element in society out of which a new future can arise."* Such a reconstructed economic life would be based on anarchist principles, that is *"based on the principles of federalism, a free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions."* [Op. Cit., p. 61 and p. 53]

In other words, those who produce also administer and so govern themselves in free association (and it should be pointed out that any group of individuals in association will make *"plans"* and *"plan,"* the important question is who does the planning and who does the work. Only in anarchy are both functions united into the same people). Rocker emphasises this point when he writes that:

"Anarcho-syndicalists are convinced that a Socialist economic order cannot be created by the decrees and statutes of a government, but only by the solidaric collaboration of the workers with hand and brain in each special branch of production; that is, through the taking over of the management of all plants by the producers themselves under such form that the separate groups, plants, and branches of industry are independent members of the general economic organism and systematically carry on production and the distribution of the products in the interest of the community on the basis of free mutual agreements." [Op. Cit., p. 55]

In other words, the *"planned administration of things"* would be done by the producers **themselves**, in independent groupings. This would likely take the form (as we indicated in [section I.3](#)) of confederations of syndicates who communicate information between themselves and respond to changes in the production and distribution of products by increasing or decreasing the required means of production in a co-operative (i.e. *"planned"*) fashion. No *"central planning"* or *"central planners"* governing the economy, just workers co-operating together as equals (as Kropotkin argued, free socialism *"must result from thousands of separate local actions, all directed towards the same aim. It cannot be dictated by a central body: it must result from the numberless local needs and wants."* [Act for Yourselves, p. 54]).

Therefore, an anarchist society would abolish work by ensuring that those who do the work actually control it. They would do so in a network of self-managed associations, a society *"composed of a number of societies banded together for everything that demands a common effort: federations of producers for all kinds of production, of societies for consumption . . . All these groups will unite their efforts through mutual agreement . . . Personal initiative will be encouraged and every tendency to uniformity and centralisation combated."* [Peter Kropotkin, quoted by Buber in **Paths in Utopia**, p. 42]

In response to consumption patterns, syndicates will have to expand or reduce production and will have

to attract volunteers to do the necessary work. The very basis of free association will ensure the abolition of work, as individuals will apply for "work" they enjoy doing and so would be interested in reducing "work" they did not want to do to a minimum. Such a decentralisation of power would unleash a wealth of innovation and ensure that unpleasant work be minimised and fairly shared (see [section I.4.13](#)).

Now, any form of association requires agreement. Therefore, even a society based on the communist-anarchist maxim "*from each according to their ability, to each according to their need*" will need to make agreements in order to ensure co-operative ventures succeed. In other words, members of a co-operative commonwealth would have to make and keep to their agreements between themselves. This means that the members of a syndicate would agree joint starting and finishing times, require notice if individuals want to change "jobs" and so on within and between syndicates. Any joint effort requires some degree of co-operation and agreement. Moreover, between syndicates, an agreement would be reached (in all likelihood) that determined the minimum working hours required by all members of society able to work. How that minimum was actually organised would vary between workplace and commune, with work times, flexi-time, job rotation and so on determined by each syndicate (for example, one syndicate may work 8 hours a day for 2 days, another 4 hours a day for 4 days, one may use flexi-time, another more rigid starting and stopping times).

As Kropotkin argued, an anarchist-communist society would be based upon the following kind of "contract" between its members:

"We undertake to give you the use of our houses, stores, streets, means of transport, schools, museums, etc., on condition that, from twenty to forty-five or fifty years of age, you consecrate four or five hours a day to some work recognised as necessary to existence. Choose yourself the producing group which you wish to join, or organise a new group, provided that it will undertake to produce necessities. And as for the remainder of your time, combine together with whomsoever you like, for recreation, art, or science, according to the bent of your taste . . . Twelve or fifteen hundred hours of work a year . . . is all we ask of you. For that amount of work we guarantee to you the free use of all that these groups produce, or will produce." [**The Conquest of Bread**, pp. 153-4]

With such work "*necessary to existence*" being recognised by individuals and expressed by demand for labour from productive syndicates. It is, of course, up to the individual to decide which work he or she desires to perform from the positions available in the various associations in existence. A union card would be the means by which work hours would be recorded and access to the common wealth of society ensured. And, of course, individuals and groups are free to work alone and exchange the produce of their labour with others, including the confederated syndicates, if they so desired. An anarchist society will be as flexible as possible.

Therefore, we can imagine a social anarchist society being based on two basic arrangements -- firstly, an agreed minimum working week of, say, 20 hours, in a syndicate of your choice, plus any amount of hours doing "work" which you feel like doing -- for example, art, experimentation, DIY, playing music,

composing, gardening and so on. The aim of technological progress would be to reduce the basic working week more and more until the very concept of necessary "work" and free time enjoyments is abolished. In addition, in work considered dangerous or unwanted, then volunteers could trade doing a few hours of such activity for more free time (see [section I.4.13](#) for more on this).

It can be said that this sort of agreement is a restriction of liberty because it is "man-made" (as opposed to the "natural law" of "supply and demand"). This is a common defence of the free market by individualist anarchists against anarcho-communism, for example. However, while in theory individualist-anarchists can claim that in their vision of society, they don't care when, where, or how a person earns a living, as long as they are not invasive about it the fact is that any economy is based on interactions between individuals. The law of "supply and demand" easily, and often, makes a mockery of the ideas that individuals can work as long as they like - usually they end up working as long as required by market forces (i.e. the actions of other individuals, but turned into a force outwith their control, see [section I.1.3](#)). This means that individuals do not work as long as they like, but as long as they have to in order to survive. Knowing that "market forces" is the cause of long hours of work hardly makes them any nicer.

And it seems strange to the communist-anarchist that certain free agreements made between equals can be considered authoritarian while others are not. The individualist-anarchist argument that social co-operation to reduce labour is "authoritarian" while agreements between individuals on the market are not seems illogical to social anarchists. They cannot see how it is better for individuals to be pressured into working longer than they desire by "invisible hands" than to come to an arrangement with others to manage their own affairs to maximise their free time.

Therefore, free agreement between free and equal individuals is considered the key to abolishing work, based upon decentralisation of power and the use of appropriate technology.

I.4.4 What economic decision making criteria could be used in anarchy?

Firstly, it should be noted that anarchists do not have any set idea about the answer to this question. Most anarchists are communists, desiring to see the end of money, but that does not mean they want to impose communism onto people. Far from it, communism can only be truly libertarian if it is organised from the bottom up. So, anarchists would agree with Kropotkin that it is a case of not "*determining in advance what form of distribution the producers should accept in their different groups -- whether the communist solution, or labour checks, or equal salaries, or any other method*" while considering a given solution best in their opinion. [**Kropotkin's Revolutionary Pamphlets**, p. 166] Free experiment is a key aspect of anarchism.

While certain anarchists have certain preferences on the social system they want to live in and so argue for that, they are aware that objective circumstances and social desires will determine what is introduced

during a revolution (for example, while Kropotkin was a communist-anarchist and considered it essential that a revolution proceed towards communism as quickly as possible, he was aware that it was unlikely it would be introduced immediately -- see [section I.2.2](#) for details).

However, we will outline some possible means of economic decision making criteria as this question is an important one (it is the crux of the "*libertarian socialism is impossible*" argument, for example). Therefore, we will indicate what possible solutions exist in different forms of anarchism.

In a mutualist or collectivist system, the answer is easy. Prices will exist and be used as a means of making decisions. Mutualism will be more market orientated than collectivism, with collectivism being based on confederations of collectives to respond to changes in demand (i.e. to determine investment decisions and ensure that supply is kept in line with demand). Mutualism, with its system of market based distribution around a network of co-operatives and mutual banks, does not really need a further discussion as its basic operations are the same as in any non-capitalist market system. Collectivism and communism will have to be discussed in more detail. However, all systems are based on workers' self-management and so the individuals directly affected make the decisions concerning what to produce, when to do it, and how to do it. In this way workers retain control of the product of their labour. It is the social context of these decisions and what criteria workers use to make their decisions that differ between anarchist schools of thought.

Although collectivism promotes the greatest autonomy for worker associations, it should not be confused with a market economy as advocated by supporters of mutualism (particularly in its Individualist form). The goods produced by the collectivised factories and workshops are exchanged not according to highest price that can be wrung from consumers, but according to their actual production costs. The determination of these honest prices is to be by a "*Bank of Exchange*" in each community (obviously an idea borrowed from Proudhon). These "*Banks*" would represent the various producer confederations and consumer/citizen groups in the community and would seek to negotiate these "*honest*" prices (which would, in all likelihood, include "*hidden*" costs like pollution). These agreements would be subject to ratification by the assemblies of those involved.

As Guillaume puts it "*the value of the commodities having been established in advance by a contractual agreement between the regional co-operative federations [i.e. confederations of syndicates] and the various communes, who will also furnish statistics to the Banks of Exchange. The Bank of Exchange will remit to the producers negotiable vouchers representing the value of their products; these vouchers will be accepted throughout the territory included in the federation of communes.*" [**Bakunin on Anarchism**, p. 366] These vouchers would be related to hours worked, for example, and when used as a guide for investment decisions could be supplemented with cost-benefit analysis of the kind possibly used in a communist-anarchist society (see below).

Although this scheme bears a strong resemblance to Proudhonian "*People's Banks*," it should be noted that the Banks of Exchange, along with a "*Communal Statistical Commission*," are intended to have a "*planning*" function as well to ensure that supply meets demand. This does not imply a "*command*"

economy, but simple book keeping for "each Bank of Exchange makes sure in advance that these products are in demand [in order to risk] nothing by immediately issuing payment vouchers to the producers." [Op. Cit., p. 367] The workers syndicates would still determine what orders to produce and each commune would be free to choose its suppliers.

As will be discussed in more depth later (see [section I.4.8](#)) information about consumption patterns will be recorded and used by workers to inform their production and investment decisions. In addition, we can imagine that production syndicates would encourage communes as well as consumer groups and co-operatives to participate in making these decisions. This would ensure that produced goods reflect consumer needs. Moreover, as conditions permit, the exchange functions of the communal "banks" would (in all likelihood) be gradually replaced by the distribution of goods "in accordance with the needs of the consumers." In other words, most supporters of collectivist anarchism see it as a temporary measure before anarcho-communism could develop.

Communist anarchism would be similar to collectivism, i.e. a system of confederations of collectives, communes and distribution centres ("*Communal stores*"). However, in an anarcho-communist system, prices are not used. How will economic decision making be done? One possible solution is as follows:

"As to decisions involving choices of a general nature, such as what forms of energy to use, which of two or more materials to employ to produce a particular good, whether to build a new factory, there is a . . . technique . . . that could be [used] . . . 'cost-benefit analysis' . . . in socialism a points scheme for attributing relative importance to the various relevant considerations could be used . . . The points attributed to these considerations would be subjective, in the sense that this would depend on a deliberate social decision rather than some objective standard, but this is the case even under capitalism when a monetary value has to be attributed to some such 'cost' or 'benefit' . . . In the sense that one of the aims of socialism is precisely to rescue humankind from the capitalist fixation with production time/money, cost-benefit analyses, as a means of taking into account other factors, could therefore be said to be more appropriate for use in socialism than under capitalism. Using points systems to attribute relative importance in this way would not be to recreate some universal unit of evaluation and calculation, but simply to employ a technique to facilitate decision-making in particular concrete cases." [Adam Buick and John Crump, **State Capitalism: The Wages System Under New Management**, pp. 138-139]

This points system would be the means by which producers and consumers would be able to determine whether the use of a particular good is efficient or not. Unlike prices, this cost-benefit analysis system would ensure that production and consumption reflects social and ecological costs, awareness and priorities. Moreover, this analysis would be a **guide** to decision making and not a replacement of human decision making and evaluation. As Lewis Mumford argues:

"it is plan that in the decision as to whether to build a bridge or a tunnel there is a human

question that should outweigh the question of cheapness or mechanical feasibility: namely the number of lives that will be lost in the actual building or the advisability of condemning a certain number of men [and women] to spend their entire working days underground supervising tunnel traffic. As soon as our thought ceases to be automatically conditioned by the mine, such questions become important. Similarly the social choice between silk and rayon is not one that can be made simply on the different costs of production, or the difference in quality between the fibres themselves: there also remains, to be integrated in the decision, the question as to difference in working-pleasure between tending silkworms and assisting in rayon production. What the product contributes to the labourer is just as important as what the worker contributes to the product. A well-managed society might alter the process of motor car assemblage, at some loss of speed and cheapness, in order to produce a more interesting routine for the worker: similarly, it would either go to the expense of equipping dry-process cement making plants with dust removers -- or replace the product itself with a less noxious substitute. When none of these alternatives was available, it would drastically reduce the demand itself to the lowest possible level." [The Future of Technics and Civilisation, pp. 160-1]

Obviously, today, we would include ecological issues as well as human ones. However Mumford's argument is correct. Any decision making process which disregards the quality of work or the effect on the human and natural environment is a deranged process. However, this is how capitalism operates, with the market rewarding capitalists and managers who introduce de-humanising and ecologically harmful practices. Indeed, so biased against labour and the environment is capitalism that economists and pro-capitalists argue that reducing "efficiency" by such social concerns is actually **harmful** to an economy, which is a total reversal of common sense and human feelings (after all, surely the economy should satisfy human needs and not sacrifice those needs to the economy?). The argument is that consumption would suffer as resources (human and material) would be diverted from more "efficient" productive activities and so reduce, over all, our economic well-being. What this argument ignores is that consumption does not exist in isolation from the rest of the economy. What we what to consume is conditioned, in part, by the sort of person we are and that is influenced by the kind of work we do, the kinds of social relationships we have, whether we are happy with our work and life, and so on. If our work is alienating and of low quality, then so will our consumption decisions. If our work is subject to hierarchical control and servile in nature then we cannot expect our consumption decisions of totally rational -- indeed they may become an attempt to find happiness via shopping, a self-defeating activity as consumption cannot solve a problem created in production. Thus rampant consumerism may be the result of capitalist "efficiency" and so the objection against socially aware production is question begging.

Of course, as well as absolute scarcity, prices under capitalism also reflect relative scarcity (while in the long term, market prices tend towards their production price plus a mark-up based on the degree of monopoly in a market, in the short term prices can change as a result of changes in supply and demand). How a communist society could take into account such short term changes and communicate them through out the economy is discussed in section I.4.5 ("[What about 'supply and demand'?](#)"). Needless to say, production and investment decisions based upon such cost-benefit analysis would take into account

the current production situation and so the relative scarcity of specific goods.

Therefore, a communist-anarchist society would be based around a network of syndicates who communicate information between each other. Instead of the "*price*" being communicated between workplaces as in capitalism, actual physical data will be sent. This data is a summary of the use values of the good (for example labour time and energy used to produce it, pollution details, relative scarcity and so forth). With this information a cost-benefit analysis will be conducted to determine which good will be best to use in a given situation based upon mutually agreed common values. The data for a given workplace could be compared to the industry as a whole (as confederations of syndicates would gather and produce such information -- see [section I.3.5](#)) in order to determine whether a specific workplace will efficiently produce the required goods (this system has the additional advantage of indicating which workplaces require investment to bring them in line, or improve upon, the industrial average in terms of working conditions, hours worked and so on). In addition, common rules of thumb would possibly be agreed, such as agreements not to use scarce materials unless there is no alternative (either ones that use a lot of labour, energy and time to produce or those whose demand is currently exceeding supply capacity).

Similarly, when ordering goods, the syndicate, commune or individual involved will have to inform the syndicate why it is required in order to allow the syndicate to determine if they desire to produce the good and to enable them to prioritise the orders they receive. In this way, resource use can be guided by social considerations and "*unreasonable*" requests ignored (for example, if an individual "*needs*" a ship-builders syndicate to build a ship for his personal use, the ship-builders may not "*need*" to build it and instead builds ships for the transportation of freight). However, in almost all cases of individual consumption, no such information will be needed as communal stores would order consumer goods in bulk as they do now. Hence the economy would be a vast network of co-operating individuals and workplaces and the dispersed knowledge which exists within any society can be put to good effect (**better** effect than under capitalism because it does not hide social and ecological costs in the way market prices do and co-operation will eliminate the business cycle and its resulting social problems).

Therefore, production units in a social anarchist society, by virtue of their autonomy within association, are aware of what is socially useful for them to produce and, by virtue of their links with communes, also aware of the social (human and ecological) cost of the resources they need to produce it. They can combine this knowledge, reflecting overall social priorities, with their local knowledge of the detailed circumstances of their workplaces and communities to decide how they can best use their productive capacity. In this way the division of knowledge within society can be used by the syndicates effectively as well as overcoming the restrictions within knowledge communication imposed by the price mechanism.

Moreover, production units, by their association within confederations (or Guilds) ensure that there is effective communication between them. This results in a process of negotiated co-ordination between equals (i.e. horizontal links and agreements) for major investment decisions, thus bringing together supply and demand and allowing the plans of the various units to be co-ordinated. By this process of co-

operation, production units can reduce duplicating effort and so reduce the waste associated with over-investment (and so the irrationalities of booms and slumps associated with the price mechanism, which does not provide sufficient information to allow workplaces to efficiently co-ordinate their plans - see [section C.7.2](#)).

Needless to say, this issue is related to the "*socialist calculation*" issue we discussed in [section I.1.2](#). To clarify our ideas, we shall present an example.

Consider two production processes. Method A requires 70 tons of steel and 60 tons of concrete while Method B requires 60 tons of steel and 70 tons of concrete. Which method should be preferred? One of the methods will be more economical in terms of leaving more resources available for other uses than the other but in order to establish which we need to compare the relevant quantities.

Supporters of capitalism argue that only prices can supply the necessary information as they are heterogeneous quantities. Both steel and concrete have a price (say \$10 per ton for steel and \$5 per ton for concrete). The method to choose is clearly B as it has a lower price than A (\$950 for B compared to \$1000 for A). However, this does not actually tell us whether B is the more economical method of production in terms of minimising waste and resource use, it just tells us which costs less in terms of money.

Why is this? Simply because, as we argued in [section I.1.2](#), prices do not totally reflect social, economic and ecological costs. They are influenced by market power, for example, and produce externalities, environmental and health costs which are not reflected in the price. Indeed, passing on costs in the form of externalities and inhuman working conditions actually are rewarded in the market as it allows the company so doing to cut their prices. As far as market power goes, this has a massive influence on prices, directly in terms of prices charged and indirectly in terms of wages and conditions of workers. Due to natural barriers to entry (see [section C.4](#)), prices are maintained artificially high by the market power of big business. For example, steel could, in fact cost \$5 per ton to produce but market power allows the company to charge \$10 per ton,

Wage costs are, again, determined by the bargaining power of labour and so do not reflect the real costs in terms of health, personality and alienation the workers experience. They may be working in unhealthy conditions simply to get by, with unemployment or job insecurity hindering their attempts to improve their conditions or find a new job. Nor are the social and individual costs of hierarchy and alienation factored into the price, quite the reverse. It seems ironic that an economy which its defenders claim meets human needs (as expressed by money, of course) totally ignores individuals in the workplace, the place they spend most of their waking hours in adult life.

So the relative costs of each production method have to be evaluated but price does not, indeed cannot, provide a real indication of whether a method is economical in the sense of actually minimising resource use. Prices do reflect some of these costs, of course, but filtered through the effects of market power, hierarchy and externalities they become less and less accurate. Unless you take the term

"economical" to simply mean *"has the least cost in price"* rather than the sensible *"has the least cost in resource use, ecological impact and human pain"* you have to accept that the price mechanism is not a great indicator of economic use.

What is the alternative? Obviously the exact details will be worked out in practice by the members of a free society, but we can suggest a few ideas based on our comments above.

When evaluating production methods we need to take into account as many social and ecological costs as possible and these have to be evaluated. Which costs will be taken into account, of course, be decided by those involved, as will how important they are relative to each other (i.e. how they are weighted). Moreover, it is likely that they will factor in the desirability of the work performed to indicate the potential waste in human time involved in production (see [section I.4.13](#) for a discussion of how the desirability of productive activity could be indicated in an anarchist society). The logic behind this is simple, a resource which people **like** to produce will be a better use of the scarce resource of an individual's time than one people hate producing.

So, for example, steel may take 3 person hours to produce one ton, produce 200 cubic metres of waste gas, 2000 kilo-joules of energy, and has excellent working conditions. Concrete, on the other hand, may take 4 person hours to produce one ton, produce 300 cubic metres of waste gas, uses 1000 kilo-joules of energy and has dangerous working conditions due to dust. What would be the best method? Assuming that each factor is weighted the same, then obviously Method A is the better method as it produces the least ecological impact and has the safest working environment -- the higher energy cost is offset by the other, more important, factors.

What factors to take into account and how to weigh them in the decision making process will be evaluated constantly and reviewed so to ensure that it reflects real costs and social concerns. Moreover, simply accounting tools can be created (as a spreadsheet or computer programme) that takes the decided factors as inputs and returns a cost benefit analysis of the choices available.

Therefore, the claim that communism cannot evaluate different production methods due to lack of prices is inaccurate. Indeed, a look at the actual capitalist market -- marked as it is by differences in bargaining and market power, externalities and wage labour -- soon shows that the claims that prices accurately reflect costs is simply not accurate.

One final point on this subject. As social anarchists consider it important to encourage all to participate in the decisions that affect their lives, it would be the role of communal confederations to determine the relative points value of given inputs and outputs. In this way, **all** individuals in a community determine how their society develops, so ensuring that economic activity is responsible to social needs and takes into account the desires of everyone affected by production. In this way the problems associated with the *"Isolation Paradox"* (see [section B.6](#)) can be over come and so consumption and production can be harmonised with the needs of individuals as members of society and the environment they live in.

I.4.5 What about "*supply and demand*"?

Anarchists do not ignore the facts of life, namely that at a given moment there is so much a certain good produced and so much of it is desired to be consumed or used. Neither do we deny that different individuals have different interests and tastes. However, this is not what is usually meant by "*supply and demand*." Often in general economic debate, this formula is given a certain mythical quality which ignores the underlying realities which it reflects as well as some unwholesome implications of the theory. So, before discussing "*supply and demand*" in an anarchist society, it is worthwhile to make a few points about the "*law of supply and demand*" in general.

Firstly, as E.P. Thompson argues, "*supply and demand*" promotes *"the notion that high prices were a (painful) remedy for dearth, in drawing supplies to the afflicted region of scarcity. But what draws supply are not high prices but sufficient money in their purses to pay high prices. A characteristic phenomenon in times of dearth is that it generates unemployment and empty purses; in purchasing necessities at inflated prices people cease to be able to buy inessentials [causing unemployment] . . . Hence the number of those able to pay the inflated prices declines in the afflicted regions, and food may be exported to neighbouring, less afflicted, regions where employment is holding up and consumers still have money with which to pay. In this sequence, high prices can actually withdraw supply from the most afflicted area."* [**Customs in Common**, pp. 283-4]

Therefore "*the law of supply and demand*" may not be the "*most efficient*" means of distribution in a society based on inequality. This is clearly reflected in the "*rationing*" by purse which this system is based on. While in the economics books, price is the means by which scarce resources are "*rationed*" in reality this creates many errors. Adam Smith argued that high prices discourage consumption, putting "*everybody more or less, but particularly the inferior ranks of people, upon thrift and good management.*" [cited by Thompson, **Op. Cit.**, p. 284] However, as Thompson notes, "*[h]owever persuasive the metaphor, there is an elision of the real relationships assigned by price, which suggests. . . ideological sleight-of-mind. Rationing by price does not allocate resources equally among those in need; it reserves the supply to those who can pay the price and excludes those who can't. . . The raising of prices during dearth could 'ration' them [the poor] out of the market altogether.*" [**Op. Cit.**, p. 285]

In other words, the market cannot be isolated and abstracted from the network of political, social and legal relations within which it is situated. This means that all that "*supply and demand*" tells us is that those with money can demand more, and be supplied with more, than those without. Whether this is the "*most efficient*" result for society cannot be determined (unless, of course, you assume that rich people are more valuable than working class ones **because** they are rich). This has an obvious effect on production, with "*effective demand*" twisting economic activity. As Chomsky notes, "*[t]hose who have more money tend to consume more, for obvious reasons. So consumption is skewed towards luxuries for the rich, rather than necessities for the poor.*" George Barrett brings home of the evil of such a "*skewed*" form of production:

"To-day the scramble is to compete for the greatest profits. If there is more profit to be made in satisfying my lady's passing whim than there is in feeding hungry children, then competition brings us in feverish haste to supply the former, whilst cold charity or the poor law can supply the latter, or leave it unsupplied, just as it feels disposed. That is how it works out." [**Objections to Anarchism**]

Therefore, as far as *"supply and demand"* is concerned, anarchists are well aware of the need to create and distribute necessary goods to those who require them. This, however, cannot be achieved under capitalism. In effect, supply and demand under capitalism results in those with most money determining what is an *"efficient"* allocation of resources for if financial profit is the sole consideration for resource allocation, then the wealthy can outbid the poor and ensure the highest returns. The less wealthy can do without.

However, the question remains of how, in an anarchist society, do you know that valuable labour and materials might be better employed elsewhere? How do workers judge which tools are most appropriate? How do they decide among different materials if they all meet the technical specifications? How important are some goods than others? How important is cellophane compared to vacuum-cleaner bags?

It is answers like this that the supporters of the market claim that their system answers. However, as indicated, it does answer them in irrational and dehumanising ways under capitalism but the question is: can anarchism answer them? Yes, although the manner in which this is done varies between anarchist threads. In a mutualist economy, based on independent and co-operative labour, differences in wealth would be vastly reduced, so ensuring that irrational aspects of the market that exist within capitalism would be minimised. The workings of supply and demand would provide a more just result than under the current system.

However, collectivist, syndicalist and communist anarchists reject the market. This rejection often implies, to some, central planning. As the market socialist David Schweickart puts it, *"[i]f profit considerations do not dictate resource usage and production techniques, then central direction must do so. If profit is not the goal of a productive organisation, then physical output (use values) must be."* [**Against Capitalism**, p. 86]

However, Schweickart is wrong. Horizontal links need not be market based and co-operation between individuals and groups need not be hierarchical. What is implied in this comment is that there is just two ways to relate to others -- namely, by bribery or by authority. In other words, either by prostitution (purely by cash) or by hierarchy (the way of the state, the army or capitalist workplace). But people relate to each other in other ways, such as friendship, love, solidarity, mutual aid and so on. Thus you can help or associate with others without having to be ordered to do so or by being paid cash to do so -- we do so all the time. You can work together because by so doing you benefit yourself and the other person. This is the **real** communist way, that of mutual aid and free agreement.

So Schweickart is ignoring the vast majority of relations in any society. For example, love/attraction is a horizontal link between two autonomous individuals and profit considerations do not enter into the relationship. Thus anarchists argue that Schweickart's argument is flawed as it fails to recognise that resource usage and production techniques can be organised in terms of human need and free agreement between economic actors, without profits or central command. This system does not mean that we all have to love each other (an impossible wish). Rather, it means that we recognise that by voluntarily co-operating as equals we ensure that we remain free individuals and that we can gain the advantages of sharing resources and work (for example, a reduced working day and week, self-managed work in safe and hygienic working conditions and a free selection of the product of a whole society). In other words, a self-interest which exceeds the narrow and impoverished "egotism" of capitalist society. In the words of John O'Neil:

"[F]or it is the institutions themselves that define what counts as one's interests. In particular, the market encourages egoism, not primarily because it encourages an individual to be 'self-interested' -- it would be unrealistic not to expect individuals to act for the greater part in a 'self-interested' manner -- but rather because it defines an individual's interests in a particularly narrow fashion, most notably in terms of possession of certain material goods. In consequence, where market mechanism enter a particular sphere of life, the pursuit of goods outside this narrow range of market goods is institutionally defined as an act of altruism." [**The Market**, p. 158]

Thus free agreement and horizontal links are not limited to market transactions -- they develop for numerous reasons and anarchists recognise this. As George Barret argues:

*"Let us imagine now that the great revolt of the workers has taken place, that their direct action has made them masters of the situation. It is not easy to see that some man in a street that grew hungry would soon draw a list of the loaves that were needed, and take it to the bakery where the strikers were in possession? Is there any difficulty in supposing that the necessary amount would then be baked according to this list? By this time the bakers would know what carts and delivery vans were needed to send the bread out to the people, and if they let the carters and vanmen know of this, would these not do their utmost to supply the vehicles. . . If . . . [the bakers needed] more benches [to make bread] . . . the carpenters would supply them [and so on] . . . So the endless continuity goes on -- a well-balanced interdependence of parts guaranteed, because **need** is the motive force behind it all. . . In the same way that each free individual has associated with his brothers [and sisters] to produce bread, machinery, and all that is necessary for life, driven by no other force than his desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with other because by so doing it extends its own possibilities. There is no centralised State exploiting or dictating, but the complete structure is supported because each part is dependent on the whole . . . It will be a society responsive to the wants of the people; it will supply their everyday needs as quickly as it will respond to their highest aspirations. Its changing forms will be the passing expressions of humanity."* [**The Anarchist Revolution**, pp. 17-

To make productive decisions we need to know what others need and information in order to evaluate the alternative options available to us to satisfy that need. Therefore, it is a question of distributing information between producers and consumers, information which the market often hides (or actively blocks) or distorts due to inequalities in resources (i.e. need does not count in the market, "*effective demand*" does and this skews the market in favour of the wealthy). This information network has partly been discussed in the [last section](#) where a method of comparison between different materials, techniques and resources based upon use value was discussed. However, the need to indicate the current fluctuations in production and consumption needs to be indicated which complements that method.

In a non-Mutualist anarchist system it is assumed that confederations of syndicates will wish to adjust their capacity if they are aware of the need to do so. Hence, price changes in response to changes in demand would not be necessary to provide the information that such changes are required. This is because a *"change in demand first becomes apparent as a change in the quantity being sold at existing prices [or being consumed in a moneyless system] and is therefore reflected in changes in stocks or orders. Such changes are perfectly good indicators or signals that an imbalance between demand and current output has developed. If a change in demand for its products proved to be permanent, a production unit would find its stocks being run down and its order book lengthening, or its stocks increasing and orders falling . . . Price changes in response to changes in demand are therefore not necessary for the purpose of providing information about the need to adjust capacity."* [Pat Devine, **Democracy and Economic Planning**, p. 242]

To indicate the relative changes in scarcity of a given good it will be necessary to calculate a "*scarcity index*." This would inform potential users of this good whether its demand is outstripping its supply so that they may effectively adjust their decisions in light of the decisions of others. This index could be, for example, a percentage figure which indicates the relation of orders placed for a commodity to the amount actually produced. For example, a good which has a demand higher than its supply would have an index value of 101% or higher. This value would inform potential users to start looking for substitutes for it or to economise on its use. Such a scarcity figure would exist for each collective as well as (possibly) a generalised figure for the industry as a whole on a regional, "national," etc. level.

In this way, a specific good could be seen to be in high demand and so only those producers who **really** required it would place orders for it (so ensuring effective use of resources). Needless to say, stock levels and other basic book-keeping techniques would be utilised in order to ensure a suitable buffer level of a specific good existed. This may result in some excess supply of goods being produced and used as stock to buffer out unexpected changes in the aggregate demand for a good.

Such a buffer system would work on an individual workplace level and at a communal level. Syndicates would obviously have their inventories, stores of raw materials and finished goods "*on the shelf*," which can be used to meet excesses in demand. Communal stores, hospitals and so on would have their stores of supplies in case of unexpected disruptions in supply. This is a common practice even in capitalism,

although it would (perhaps) be extended in a free society to ensure changes in supply and demand do not have disruptive effects.

Communes and confederations of communes may also create buffer stocks of goods to handle unforeseen changes in demand and supply. This sort of inventory has been used by capitalist countries like the USA to prevent changes in market conditions for agricultural products and other strategic raw materials producing wild spot-price movements and inflation. Post-Keynesian economist Paul Davidson argued that the stability of commodity prices this produced "*was an essential aspect of the unprecedented prosperous economic growth of the world's economy*" between 1945 and 1972. US President Nixon dismantled these buffer zone programmes, resulting in "*violent commodity price fluctuations*" which had serious economic effects. [**Controversies in Post-Keynesian Economics**, p. 114 and p. 115]

Again, an anarchist society is likely to utilise this sort of buffer system to iron out short-term changes in supply and demand. By reducing short-term fluctuations of the supply of commodities, bad investment decisions would be reduced as syndicates would not be misled, as is the case under capitalism, by market prices being too high or too low at the time when the decisions were being made. Indeed, if market prices are not at their equilibrium level then they do not (and cannot) provide adequate knowledge for rational calculation. The misinformation conveyed by dis-equilibrium prices can cause very substantial macroeconomic distortions as profit-maximising capitalists response to unsustainable prices for, say, tin, and over-invest in a given branch of industry. Such mal-invest could spread through the economy, causing chaos and recession.

This, combined with cost-benefit analysis described in [section I.4.4](#), would allow information about changes within the "*economy*" to rapidly spread throughout the whole system and influence all decision makers without the great majority knowing anything about the original causes of these changes (which rest in the decisions of those directly affected). The relevant information is communicated to all involved, without having to be ordered by an "*all-knowing*" central body as in a Leninist centrally planned economy. As argued in [section I.1.2](#), anarchists have long realised that no centralised body could possibly be able to possess all the information dispersed throughout the economy and if such a body attempted to do so, the resulting bureaucracy would effectively reduce the amount of information available to society and so cause shortages and inefficiencies.

To get an idea how this system could work, let us take the example of a change in the copper industry. Let us assume that a source of copper unexpectedly dries up or, what amounts to the same thing, that the demand for copper increases. What would happen?

First, the initial difference would be a diminishing of stocks of copper which each syndicate maintains to take into account unexpected changes in requests for copper. This would help "*buffer out*" expected, and short lived, changes in supply or requests. Second, naturally, there is an increase in demand for copper for those syndicates which are producing it. This immediately increases the "*scarcity index*" of those firms, and so the "*scarcity index*" for the copper they produce and for the industry as a whole. For

example, the index may rise from 95% (indicating a slight over-production in respect to current demand) to 115% (indicating that the demand for copper has risen in respect to the current level of production).

This change in the "*scarcity index*" (combined with difficulties in finding copper producing syndicates which can supply their orders) enters into the decision making algorithms of other syndicates. This, in turn, results in changes in their plans (for example, substitutes for copper may be used as they have become a more efficient resource to use).

This would aid a syndicate when it determined which method of production to use when creating a consumer good. The cost-benefit analysis out-lined in the [last section](#) would allow a syndicate to determine the costs involved between competing productive techniques (i.e. to ascertain which used up least resources and therefore left the most over for other uses). Producers would already have an idea of the absolute costs involved in any good they are planning to use, so relative changes between them would be a deciding factor.

In this way, requests for copper products fall and soon only reflects those requests that need copper and do not have realistic substitutes available for it. This would result in the demand falling with respect to the current supply (as indicated by requests from other syndicates and to maintain buffer stock levels). Thus a general message has been sent across the "*economy*" that copper has become (relatively) scarce and syndicates plans have changed in light of this information. No central planner made these decisions nor was money required to facilitate them. We have a decentralised, non-market system based on the free exchange of products between self-governing associations.

Looking at the wider picture, the question of how to response to this change in supply/requests for copper presents itself. The copper syndicate federation and cross-industry syndicate federations have regular meetings and the question of the changes in the copper situation present themselves. The copper syndicates, and their federation, must consider how to response to these changes. Part of this is to determine whether this change is likely to be short term or long term. A short term change (say caused by a mine accident, for example) would not need new investments to be planned. However, long term changes (say the new requests are due to a new product being created by another syndicate or an existing mine becoming exhausted) may need co-ordinated investment (we can expect syndicates to make their own plans in light of changes, for example, by investing in new machinery to produce copper more efficiently or to increase efficiency). If the expected changes of these plans approximately equal the predicted long term changes, then the federation need not act. However, if they do then investment in new copper mines or large scale new investment across the industry may be required. The federation would propose such plans.

Needless to say, the future can be guessed, it cannot be accurately predicted. Thus there may be over-investment in certain industries as expected changes do not materialise. However, unlike capitalism, this would not result in an economic crisis as production would continue (with over investment within capitalism, workplaces close due to lack of profits, regardless of social need). All that would happen is that the syndicates would rationalise production, close down relatively inefficient plant and concentrate

production in the more efficient ones. The sweeping economic crises of capitalism would be a thing of the past.

Therefore, each syndicate receives its own orders and supplies and sends its own produce out. Similarly, communal distribution centres would order required goods from syndicates it determines. In this way consumers can change to syndicates which respond to their needs and so production units are aware of what it is socially useful for them to produce as well as the social cost of the resources they need to produce it. In this way a network of horizontal relations spread across society, with co-ordination achieved by equality of association and not the hierarchy of the corporate structure. This system ensures a co-operative response to changes in supply and demand and so reduces the communication problems associated with the market which help causes periods of unemployment and economic downturn (see [section C.7.2](#)).

While anarchists are aware of the "*isolation paradox*" (see [section B.6](#)) this does not mean that they think the commune should make decisions **for** people on what they were to consume. This would be a prison. No, all anarchists agree that is up to the individual to determine their own needs and for the collectives they join to determine social requirements like parks, infrastructure improvements and so on. However, social anarchists think that it would be beneficial to discuss the framework around which these decisions would be made. This would mean, for example, that communes would agree to produce eco-friendly products, reduce waste and generally make decisions enriched by social interaction. Individuals would still decide which sort goods they desire, based on what the collectives produce but these goods would be based on a socially agreed agenda. In this way waste, pollution and other "*externalities*" of atomised consumption could be reduced. For example, while it is rational for individuals to drive a car to work, collectively this results in massive **irrationality** (for example, traffic jams, pollution, illness, unpleasant social infrastructures). A sane society would discuss the problems associated with car use and would agree to produce a fully integrated public transport network which would reduce pollution, stress, illness, and so on.

Therefore, while anarchists recognise individual tastes and desires, they are also aware of the social impact of them and so try to create a social environment where individuals can enrich their personal decisions with the input of other people's ideas.

On a related subject, it is obvious that different collectives would produce slightly different goods, so ensuring that people have a choice. It is doubtful that the current waste implied in multiple products from different companies (sometimes the same company) all doing the same job would be continued in an anarchist society. However, production will be "*variations on a theme*" in order to ensure consumer choice and to allow the producers to know what features consumers prefer. It would be impossible to sit down beforehand and make a list of what features a good should have -- that assumes perfect knowledge and that technology is fairly constant. Both these assumptions are of limited use in real life. Therefore, co-operatives would produce goods with different features and production would change to meet the demand these differences suggest (for example, factory A produces a new CD player, and consumption patterns indicate that this is popular and so the rest of the factories convert). This is in addition to R&D

experiments and test populations. In this way consumer choice would be maintained, and enhanced as consumers would be able to influence the decisions of the syndicates as producers (in some cases) and through syndicate/commune dialogue.

Therefore, anarchists do not ignore *"supply and demand."* Instead, they recognise the limitations of the capitalist version of this truism and point out that capitalism is based on **effective** demand which has no necessary basis with efficient use of resources. Instead of the market, social anarchists advocate a system based on horizontal links between producers which effectively communicates information across society about the relative changes in supply and demand which reflect actual needs of society and not bank balances. The response to changes in supply and demand will be discussed in section I.4.8 ([What about investment decisions?](#)) and section I.4.13 ([Who will do the dirty or unpleasant work?](#)) will discuss the allocation of work tasks.

I.4.6 Surely anarchist-communism would just lead to demand exceeding supply?

Its a common objection that communism would lead to people wasting resources by taking more than they need. Kropotkin stated that *"free communism . . . places the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7]

But, some argue, what if an individual says they *"need"* a luxury house or a personal yacht? Simply put, workers may not *"need"* to produce for that need. As Tom Brown puts it, *"such things are the product of social labour. . . Under syndicalism. . . it is improbable that any greedy, selfish person would be able to kid a shipyard full of workers to build him a ship all for his own hoggish self. There would be steam luxury yachts, but they would be enjoyed in common"* [**Syndicalism**, p. 51]

Therefore, communist-anarchists are not blind to the fact that free access to products is based upon the actual work of real individuals -- *"society"* provides nothing, individuals working together do. This is reflected in the classic statement of communism -- *"From each according to their ability, to each according to their needs."* Therefore, the needs of both consumer **and** producer are taken into account. This means that if no syndicate or individual desires to produce a specific order an order then this order can be classed as an *"unreasonable"* demand - *"unreasonable"* in this context meaning that no one freely agrees to produce it. Of course, individuals may agree to barter services in order to get what they want produced if they **really** want something but such acts in no way undermines a communist society.

Communist-anarchists recognise that production, like consumption, must be based on freedom. However, it has been argued that free access would lead to waste as people take more than they would under capitalism. This objection is not as serious as it first appears. There are plenty of examples within current society to indicate that free access will not lead to abuses. Let us take three examples, public libraries, water and pavements. In public libraries people are free to sit and read books all day. However,

few if any actually do so. Neither do people always take the maximum number of books out at a time. No, they use the library as they need to and feel no need to maximise their use of the institution. Some people never use the library, although it is free. In the case of water supplies, its clear that people do not leave taps on all day because water is often supplied freely or for a fixed charge. Similarly with pavements, people do not walk everywhere because to do so is free. In such cases individuals use the resource as and when they need to.

We can expect a similar results as other resources become freely available. In effect, this argument makes as much sense as arguing that individuals will travel to stops **beyond** their destination if public transport is based on a fixed charge! And only an idiot would travel further than required in order to get "*value for money.*" However, for many the world seems to be made up of such idiots. Perhaps it would be advisable for such critics to hand out political leaflets in the street. Even though the leaflets are free, crowds rarely form around the person handing them out demanding as many copies of the leaflet as possible. Rather, those interested in what the leaflets have to say take them, the rest ignore them. If free access automatically resulted in people taking more than they need then critics of free communism would be puzzled by the lack of demand for what they were handing out!

Part of the problem is that capitalist economics have invented a fictional type of person, **Homo Economicus**, whose wants are limitless: an individual who always wants more and more of everything and so whose needs could only satisfied if resources were limitless too. Needless to say, such an individual has never existed. In reality, wants are not limitless -- people have diverse tastes and rarely want everything available nor want more of a good than that which satisfies their need.

Communist Anarchists also argue that we cannot judge people's buying habits under capitalism with their actions in a free society. After all, advertising does not exist to meet people's needs but rather to create needs by making people insecure about themselves. Simply put, advertising does not amplify existing needs or sell the goods and services that people already wanted. Advertising would not need to stoop to the level of manipulative ads that create false personalities for products and provide solutions for problems that the advertisers themselves create if this was the case.

Crude it may be, but advertising is based on the creation of insecurities, preying on fears and obscuring rational thought. In an alienated society in which people are subject to hierarchical controls, feelings of insecurity and lack of control and influence would be natural. It is these fears that advertising multiples -- if you cannot have real freedom, then at least you can buy something new. Advertising is the key means of making people unhappy with what they have (and who they are). It is naive to claim that advertising has no effect on the psyche of the receiver or that the market merely responds to the populace and makes no attempt to shape their thoughts. Advertising creates insecurities about such matter-of-course things and so generates irrational urges to buy which would not exist in a libertarian communist society.

However, there is a deeper point to be made here about consumerism. Capitalism is based on hierarchy and not liberty. This leads to a weakening of individuality and a lose of self-identity and sense of

community. Both these senses are a deep human need and consumerism is often a means by which people overcome their alienation from their selves and others (religion, ideology and drugs are other means of escape). Therefore the consumption within capitalism reflects **its** values, not some abstract "*human nature*." As Bob Black argues:

"what we want, what we are capable of wanting is relative to the forms of social organisation. People 'want' fast food because they have to hurry back to work, because processed supermarket food doesn't taste much better anyway, because the nuclear family (for the dwindling minority who have even that to go home to) is too small and too stressed to sustain much festivity in cooking and eating -- and so forth. It is only people who ccan't get what they want who resign themselves to want more of what they can get. Since we cannot be friends and lovers, we wail for more candy." [**Smokestack Lightning**]

Therefore, most anarchists think that consumerism is a product of a hierarchical society within which people are alienated from themselves and the means by which they can make themselves **really** happy (i. e. meaningful relationships, liberty, work, and experiences). Consumerism is a means of filling the spiritual hole capitalism creates within us by denying our freedom.

This means that capitalism produces individuals who define themselves by what they have, not who they are. This leads to consumption for the sake of consumption, as people try to make themselves happy by consuming more commodities. But, as Erich Fromm points out, this cannot work for and only leads to even more insecurity (and so even more consumption):

*"If I am what I have and if what I have is lost, who then am I? Nobody but a defeated, deflated, pathetic testimony to a wrong way of living. Because I **can** lose what I have, I am necessarily constantly worried that I **shall** lose what I have."* [**To Have Or To Be**, p. 111]

Such insecurity easily makes consumerism seem a "*natural*" way of life and so make communism seem impossible. However, rampant consumerism is far more a product of lack of meaningful freedom within an alienated society than a "*natural law*" of human existence. In a society that encouraged and protected individuality by non-hierarchical social relationships and organisations, individuals would have a strong sense of self and so be less inclined to mindlessly consume. As Fromm puts it: "*If I am what I am and not what I have, nobody can deprive me of or threaten my security and my sense of identity. My centre is within myself.*" [**Op. Cit.**, p. 112] Such self-centred individuals do not have to consume endlessly to build a sense of security or happiness within themselves (a sense which can never actually be created by those means).

In other words, the well-developed individuality that an anarchist society would develop would have less need to consume than the average person in a capitalist one. This is not to suggest that life will be bare and without luxuries in an anarchist society, far from it. A society based on the free expression of individuality could be nothing but rich in wealth and diverse in goods and experiences. What we are arguing here is that an anarchist-communist society would not have to fear rampant consumerism

making demand outstrip supply constantly and always precisely because freedom will result in a non-alienated society of well developed individuals.

Of course, this may sound totally utopian. Possibly it is. However, as Oscar Wilde said, a map of the world without Utopia on it is not worth having. One thing is sure, if the developments we have outlined above fail to appear and attempts at communism fail due to waste and demand exceeding supply then a free society would make the necessary decisions and introduce some means of limiting supply (such as, for example, labour notes, equal wages, and so on). Whether or not full communism **can** be introduced instantly is a moot point amongst anarchists, although most would like to see society develop towards a communist goal eventually.

I.4.7 What will stop producers ignoring consumers?

It is often claimed that with a market producers would ignore the needs of consumers. Without the threat (and fear) of unemployment and destitution and the promise of higher profits, producers would turn out shoddy goods. The holders of this argument point to the example of the Soviet Union which was notorious for terrible goods and a lack of consumer goods.

Capitalism, in comparison to the old Soviet block, does, to some degree make the producers accountable to the consumers. If the producer ignores the desires of the producer then they will loose business to those who do not and be forced, perhaps, out of business (large companies, of course, due to their resources can hold out far longer than smaller ones). Thus we have the carrot (profits) and the stick (fear of poverty) -- although, of course, the carrot can be used as a stick against the consumer (no profit, no sale, no matter how much the consumer may need it). Ignoring the obvious objection to this analogy (namely we are human beings, **not** donkeys!) it does have contain an important point. What will ensure that consumer needs are meet in an anarchist society?

In an Individualist-Mutualist anarchist system, as it is based on a market, producers would be subject to market forces and so have to meet consumers needs. Of course, there are three problems with this system. Firstly, those without money have no access to the goods produced and so the ill, the handicapped, the old and the young may go without. Secondly, inequalities may become more pronounced as successful producers drive others out of business. Such inequality would skew consumption as it does in capitalism, so ensuring that a minority get all the good things in life (Individualist anarchists would claim that this is unlikely, as non-labour income would be impossible). Lastly, there is the danger that the system would revert back to capitalism. This is because unsuccessful co-operatives may fail and cast their members into unemployment. This creates a pool of unemployed workers, which (in turn) creates a danger of wage-labour being re-created as successful firms hire the unemployed but do not allow them to join the co-operative. This would effectively end self-management and anarchy. Moreover, the successful could hire "*protection agencies*" (i.e. thugs) to enforce capitalist ideas of property rights.

This problem was recognised by Proudhon, who argued for an agro-industrial federation to protect self-

management from the effects of market forces, as well as the collectivist-anarchists. In both these schemes, self-management would be protected by agreements between co-operative workplaces to share their resources with others in the confederation, so ensuring that new workers would gain access to the means of life on the same terms as those who already use it. In this way wage-labour would be abolished. In addition, the confederation of workplaces would practice mutual aid and provide resources and credit at cost to their members, so protecting firms from failure while they adjust their production to meet consumer needs.

In both these systems producers would be accountable to consumers by the process of buying and selling between co-operatives. As James Guillaume put it, the workers' associations would "*deposit their unconsumed commodities in the facilities provided by the [communal] Bank of Exchange . . . The Bank of Exchange would remit to the producers negotiable **vouchers** representing the value of their products*" (this value "*having been established in advance by a contractual agreement between the regional co-operative federations and the various communes*"). [**Bakunin on Anarchism**, pp. 366] If the goods are not in demand then the producer associations would not be able to sell the product of their labour to the Bank of Exchange and so they would adjust their output accordingly. Overtime Guillaume hopes that this system would evolve into free communism as production develops and continually meets demand [**Op. Cit.**, p. 368].

While mutualist and collectivist anarchists can argue that producers would respond to consumer needs otherwise they would not get an income, communist-anarchists (as they seek a moneyless society) cannot argue their system would reward producers in this way. So what mechanism exists to ensure that "*the wants of all*" are, in fact, met? How does anarcho-communism ensure that production becomes "*the mere servant of consumption*" and "*mould itself on the wants of the consumer, not dictate to him conditions*"? [Peter Kropotkin, **Act for Yourselves**, p. 57]

Libertarian communists argue that in a **free** communist society consumers' needs would be met. This is because of the decentralised and federal nature of a communist-anarchist society.

So what is the mechanism which makes producers accountable to consumers in a libertarian communist society? Firstly, communes would practice their power of "*exit*" in the distributive network. If a syndicate was producing sub-standard goods or refusing to change their output in the face of changing consumer needs, then the communal stores would turn to those syndicates which **were** producing the goods desired. The original syndicates would then be producing for their own stocks, a pointless task and one few, if any, would do. After all, people generally desire their work to have meaning, to be useful. To just work, producing something no-one wanted would be such a demoralising task that few, if any, sane people would do it (under capitalism people put up with spirit destroying work as some income is better than none, such an "*incentive*" would not exist in a free society).

As can be seen, "*exit*" would still exist in libertarian communism. However, it could be argued that unresponsive or inefficient syndicates would still exist, exploiting the rest of society by producing rubbish (or goods which are of less than average quality) and consuming the products of other people's

labour, confident that without the fear of poverty and unemployment they can continue to do this indefinitely. Without the market, it is argued, some form of bureaucracy would be required (or develop) which would have the power to punish such syndicates. Thus the state would continue in "*libertarian*" communism, with the "*higher*" bodies using coercion against the lower ones to ensure they meet consumer needs or produced enough.

While, at first glance, this appears to be a possible problem on closer inspection it is flawed. This is because anarchism is based not only on "*exit*" but also "*voice*." Unlike capitalism, libertarian communism is based on association and communication. Each syndicate and commune is in free agreement and confederation with all the others. Thus, if a specific syndicate was producing bad goods or not pulling its weight, then those in contact with them would soon realise this. First, those unhappy with a syndicate's work would appeal to them directly to get their act together. If this did not work, then they would notify their disapproval by refusing to "*contract*" with them in the future (i.e. they would use their power of "*exit*" as well as refusing to provide the syndicate with any goods it requires). They would also let society as a whole know (via the media) as well as contacting consumer groups and co-operatives and the relevant producer and communal confederations which they and the other syndicate are members of, who would, in turn, inform their members of the problems (the relevant confederations could include local and regional communal confederations, the general cross-industry confederation, its own industrial/communal confederation and the confederation of the syndicate not pulling its weight). In today's society, a similar process of "*word of mouth*" warnings and recommendations goes on, along with consumer groups and programmes. Our suggestions here are an extension of this common practice (that this process exists suggests that the price mechanism does not, in fact, provide consumers with all the relevant information they need to make decisions, but this is an aside).

If the syndicate in question, after a certain number of complaints had been lodged against it, still did not change its ways, then it would suffer non-violent direct action. This would involve the boycotting of the syndicate and (perhaps) its local commune with products and investment, so resulting in the syndicate being excluded from the benefits of association. The syndicate would face the fact that no one else wanted to associate with it and suffer a drop in the goods coming its way, including consumption products for its members. In effect, a similar process would occur to that of a firm under capitalism that loses its customers and so its income. However, we doubt that a free society would subject any person to the evils of destitution or starvation (as capitalism does). Rather, it would provide a bare minimum of goods required for survival would still be available.

In the unlikely event this general boycott did not result in a change of heart, then two options are left available. These are either the break-up of the syndicate and the finding of its members new work places or the giving/selling of the syndicate to its current users (i.e. to exclude them from the society they obviously do not want to be part of). The decision of which option to go for would depend on the importance of the workplace in question and the desires of the syndicates' members. If the syndicate refused to disband, then option two would be the most logical choice (unless the syndicate controlled a scarce resource). The second option would, perhaps, be best as this would drive home the benefits of association as the expelled syndicate would have to survive on its own, subject to survival by selling the product of its labour and would soon return to the fold.

Kropotkin argued in these terms over 100 years ago. It is worthwhile to quote him at length:

"First of all, is it not evident that if a society, founded on the principle of free work, were really menaced by loafers, it could protect itself without the authoritarian organisation we have nowadays, and without having recourse to wagedom [or payment by results]?"

"Let us take a group of volunteers, combining for some particular enterprise. Having its success at heart, they all work with a will, save one of the associates, who is frequently absent from his post. . . . some day the comrade who imperils their enterprise will be told: 'Friend, we should like to work with you; but as you are often absent from your post, and you do your work negligently, we must part. Go and find other comrades who will put up with your indifference!'"

"This is so natural that it is practised everywhere, even nowadays, in all industries . . . [I]f [a worker] does his work badly, if he hinders his comrades by his laziness or other defects, if he is quarrelsome, there is an end of it; he is compelled to leave the workshop.

"Authoritarian pretend that it is the almighty employer and his overseers who maintain regularity and quality of work in factories. In reality . . . it is the factory itself, the workmen [and women] who see to the good quality of the work . . ."

"Not only in industrial workshops do things go in this way; it happens everywhere, every day, on a scale that only bookworms have as yet no notion of. When a railway company, federated with other companies, fails to fulfil its engagements, when its trains are late and goods lie neglected at the stations, the other companies threaten to cancel the contract, and that threat usually suffices.

"It is generally believed . . . that commerce only keeps to its engagements from fear of lawsuits. Nothing of the sort; nine times in ten the trader who has not kept his word will not appear before a judge. . . the sole fact of having driven a creditor to bring a lawsuit suffices for the vast majority of merchants to refuse for good to have any dealings with a man who has compelled one of them to go to law.

"This being so, why should means that are used today among workers in the workshop, traders in the trade, and railway companies in the organisation of transport, not be made use of in a society based on voluntary work?" [The Conquest of Bread, pp. 152-3]

Thus, to ensure producer accountability of production to consumption, no bureaucratic body is required in libertarian communism (or any other form of anarchism). Rather, communication and direct action by those affected by unresponsive producers would be an effective and efficient means of ensuring the accountability of production to consumption.

I.4.8 What about investment decisions?

Obviously, a given society needs to take into account changes in consumption and so invest in new means of production. An anarchist society is no different. As G.D.H Cole points out, *"it is essential at all times, and in accordance with considerations which vary from time to time, for a community to preserve a balance between production for ultimate use and production for use in further production. And this balance is a matter which ought to be determined by and on behalf of the whole community."* [**Guild Socialism Restated**, p. 144]

How this balance is determined varies according to the school of anarchist thought considered. All agree, however, that such an important task should be under effective community control.

The mutualists see the solution to the problems of investment as creating a system of mutual banks, which reduce interest rates to zero. This would be achieved *"[b]y the organisation of credit, on the principle of reciprocity or mutualism. . . In such an organisation credit is raised to the dignity of a social function, managed by the community; and, as society never speculates upon its members, it will lend its credit . . . at the actual cost of transaction."* [Charles A. Dana, **Proudhon and his "Bank of the People"**, p. 36] This would allow money to be made available to those who needed it and so break the back of the capitalist business cycle (i.e. credit would be available as required, not when it was profitable for bankers to supply it) as well as capitalist property relations.

So under a mutualist regime, credit for investment would be available from two sources. Firstly, an individual's or co-operative's own saved funds and, secondly, as zero interest loans from mutual banks, credit unions and other forms of credit associations. Loans would be allocated to projects which the mutual banks considered likely to succeed and repay the original loan.

Collectivist and communist anarchists recognise that credit is based on human activity, which is represented as money. As the Guild Socialist G.D.H. Cole pointed out, the *"understanding of this point [on investment] depends on a clear appreciation of the fact that all real additions to capital take the form of directing a part of the productive power of labour and using certain materials not for the manufacture of products and the rendering of services incidental to such manufacture for purposes of purposes of further production."* [**Guild Socialism Restated**, p. 143] So collectivist and communist anarchists agree with their Mutualist cousins when they state that *"[a]ll credit presupposes labour, and, if labour were to cease, credit would be impossible"* and that the *"legitimate source of credit"* was *"the labouring classes"* who *"ought to control it"* and *"whose benefit [it should] be used"* [Charles A. Dana, **Op. Cit.**, p. 35]

Therefore, in collectivism, investment funds would exist for syndicates, communes and their in community ("*People's*") "*banks*." These would be used to store depreciation funds and as well as other funds agreed to by the collectives for investment projects (for example, collectives may agree to allocate a certain percentage of their labour notes to a common account in order to have the necessary funds

available for major investment projects). Similarly, individual syndicates and communes would also create a store of funds for their own investment projects. In this, collectivist anarchism is like mutualism, with communal credit banks being used to facilitate investment by organising credit and savings on a non-exploitative basis (i.e. issuing credit at zero interest).

However, the confederations of syndicates to which these "*People's Banks*" would be linked would have a defined planning function as well -- i.e. taking a role in investment decisions to ensure that production meets demand (see below). This would be one factor in deciding which investment plans should be given funding (this, we stress, is hardly "*central planning*" as capitalist firms also plan future investments to meet expected demand).

In a communist-anarchist society, things would be slightly different as this would not have the labour notes used in mutualism and collectivism. This means that the collectives would agree that a certain part of their output and activity will be directed to investment projects. In effect, each collective is able to draw upon the sums approved of by the Commune in the form of an agreed claim on the labour power of all the collectives (investment "*is essentially an allocation of material and labour, and fundamentally, an allocation of human productive power.*" [Cole, **Op. Cit.**, pp. 144-5]). In this way, mutual aid ensures a suitable pool of resources for the future from which all benefit.

How would this work? Obviously investment decisions have implications for society as a whole. The implementation of these decisions require the use of **existing** capacity and so must be the responsibility of the appropriate level of the confederation in question. Investment decisions taken at levels above the production unit become effective in the form of demand for the current output of the syndicates which have the capacity to produce the goods required. This would require each syndicate to "*prepare a budget, showing its estimate of requirements both of goods or services for immediate use, and of extensions and improvements.*" [Cole, **Op. Cit.**, p. 145] These budgets and investment projects would be discussed at the appropriate level of the confederation (in this, communist-anarchism would be similar to collectivist anarchism).

The confederation of syndicates/communes would be the ideal forum to discuss (communicate) the various investment plans required -- and to allocate scarce resources between competing ends. This would involve, possibly, dividing investment into two groups -- necessary and optional -- and using statistical techniques to consider the impact of an investment decision (for example, the use of input-output tables could be used to see if a given investment decision in, say, the steel industry would require investment in energy production). In this way social needs **and** social costs would be taken into account and ensure that investment decisions are not taken in isolation from one another, so causing bottle-necks and insufficient production due to lack of inputs from other industries.

Necessary investments are those which have been agreed upon by the appropriate confederation. It means that resources and productive capacity are prioritised towards them, as indicated in the agreed investment project. It will not be required to determine precisely **who** will provide the necessary goods for a given investment project, just that it has priority over other requests. When a bank gives a company

credit, it rarely asks exactly where that money will be built. Rather, it gives the company the power to command the labour of other workers by supplying them with credit. Similarly in an anarcho-communist society, except that the other workers have agreed to supply their labour for the project in question by designating it a "*necessary investment*." This means when a request arrives at a syndicate for a "*necessary investment*" a syndicate must try and meet it (i.e. it must place the request into its production schedule before "*optional*" requests, assuming that it has the capacity to meet it). A list of necessary investment projects, including what they require and if they have been ordered, will be available to all syndicates to ensure such a request is a real one.

Optional investment is simply investment projects which have not been agreed to by a confederation. This means that when a syndicate or commune places orders with a syndicate they may not be met or take longer to arrive. The project may go ahead, but it depends on whether the syndicate or commune can find workers willing to do that work. This would be applicable for small scale investment decisions or those which other communes/syndicates do not think of as essential.

This we have two inter-related investment strategies. A communist-anarchist society would prioritise certain forms of investment by the use of "*necessary*" and "*optional*" investment projects. This socialisation of investment will allow a free society to ensure that social needs are met while maintaining a decentralised and dynamic "economy." Major projects to meet social needs will be organised effectively, but with diversity for minor projects. In addition, it will also allow such a society to keep track of what actual percentage of resources are being used for investment, so ensuring that current needs are not sacrificed for future ones and vice-versa.

As for when investment is needed, it is clear that this will be based on the changes in demand for goods in both collectivist and communist anarchism. As Guillaime puts it, "*[b]y means of statistics gathered from all the communes in a region, it will be possible to scientifically balance production and consumption. In line with these statistics, it will also be possible to add more help in industries where production is insufficient and reduce the number of men where there is a surplus of production.*" [Bakunin on Anarchism, p. 370] Obviously, investment in branches of production with a high demand would be essential and this would be easily seen from the statistics generated by the collectives and communes. Tom Brown states this obvious point:

"Goods, as now, will be produced in greater variety, for workers like producing different kinds, and new models, of goods. Now if some goods are unpopular, they will be left on the shelves. . . Of other goods more popular, the shops will be emptied. Surely it is obvious that the assistant will decrease his order of the unpopular line and increase his order of the popular." [Syndicalism, p. 55]

As a rule of thumb, syndicates that produce investment goods would be inclined to supply other syndicates who are experiencing excess demand before others, all other things being equal. Because of such guidelines and communication between producers, investment would go to those industries that actually required them. In other words, customer choice (as indicated by individuals choosing between

the output of different syndicates) would generate information that is relevant to investment decisions.

As production would be decentralised as far as it is sensible and rationale to do so, each locality/region would be able to understand its own requirements and apply them as it sees fit. This means that large-scale planning would not be conducted (assuming that it could work in practice, of course) simply because it would not be needed.

This, combined with an extensive communications network, would ensure that investment not only did not duplicate unused plant within the economy but that investments take into account the specific problems and opportunities each locality has. Of course, collectives would experiment with new lines and technology as well as existing lines and so invest in new technologies and products. As occurs under capitalism, extensive consumer testing would occur before dedicating major investment decisions to new products.

In addition, investment decisions would also require information which showed the different outcomes of different options. By this we simply mean an analysis of how different investment projects relate to each other in terms of inputs and outputs, compared to the existing techniques. This would be in the form of cost-benefit analysis (as outlined in [section I.4.4](#)) and would show when it would make economic, social and ecological sense to switch industrial techniques to more efficient and/or more empowering and/or more ecologically sound methods. Such an evaluation would indicate levels of inputs and compare them to the likely outputs. For example, if a new production technique reduced the number of hours worked in total (comparing the hours worked to produce the machinery with that reduced in using it) as well as reducing waste products for a similar output, then such a technique would be implemented.

Similarly with communities. A commune will obviously have to decide upon and plan civic investment (e.g. new parks, housing and so forth). They will also have the deciding say in industrial developments in their area as it would be unfair for syndicate to just decide to build a cement factory next to a housing co-operative if they did not want it. There is a case for arguing that the local commune will decide on investment decisions for syndicates in its area (for example, a syndicate may produce X plans which will be discussed in the local commune and 1 plan finalised from the debate). For regional decisions (for example, a new hospital) would be decided at the appropriate level, with information fed from the health syndicate and consumer co-operatives. The actual location for investment decisions will be worked out by those involved. However, local syndicates must be the focal point for developing new products and investment plans in order to encourage innovation.

Therefore, under social anarchism no capital market is required to determine whether investment is required and what form it would take. The work that apologists for capitalism claim currently is done by the stock market can be replaced by co-operation and communication between workplaces in a decentralised, confederated network. The relative needs of different consumers of a product can be evaluated by the producers and an informed decision reached on where it would best be used.

Without a capital market, housing, workplaces and so on will no longer be cramped into the smallest space possible. Instead, housing, schools, hospitals, workplaces and so on will be built within a "green" environment. This means that human constructions will be placed within a natural setting and no longer stand apart from nature. In this way human life can be enriched and the evils of cramping as many humans and things into a small a space as is "*economical*" can be overcome.

In addition, the stock market is hardly the means by which capital is actually raised within capitalism. As Engler points out, "*[s]upporters of the system . . . claim that stock exchanges mobilise funds for business. Do they? When people buy and sell shares, 'no investment goes into company treasuries . . . Shares simply change hands for cash in endless repetition.'* Company treasuries get funds only from new equity issues. These accounted for an average of a mere 0.5 per cent of shares trading in the US during the 1980s." [Apostles of Greed, pp. 157-158] Indeed, Doug Henwood argues that "*the signals emitted by the stock market are either irrelevant or harmful to real economic activity, and that the stock market itself counts little or nothing as a source of finance. Shareholders . . . have no useful role.*" [Wall Street, p. 292]

Moreover, the existence of a stock market has serious (negative) effects on investment. As Henwood notes, there "*are serious communication problems between managers and shareholders.*" This is because "*[e]ven if participants are aware of an upward bias to earnings estimates [of companies], and even if they correct for it, managers would still have an incentive to try to fool the market. If you tell the truth, your accurate estimate will be marked down by a sceptical market. So, it's entirely rational for managers to boost profits in the short term, either through accounting gimmickry or by making only investments with quick paybacks.*" So, managers "*facing a market [the stock market] that is famous for its preference for quick profits today rather than patient long-term growth have little choice but to do its bidding. Otherwise, their stock will be marked down, and the firm ripe for takeover.*" While "*[f]irms and economies can't get richer by starving themselves*" stock market investors "*can get richer when the companies they own go hungry -- at least in the short term. As for the long term, well, that's someone else's problem the week after next.*" [Op. Cit., p. 171]

Ironically, this situation has a parallel with Stalinist central planning. Under that system manager of State workplaces had an incentive to lie about their capacity to the planning bureaucracy. The planner would, in turn, assume higher capacity, so harming honest managers and encouraging them to lie. This, of course, had a seriously bad impact on the economy. Unsurprisingly, the similar effects caused by capital markets on economies subject to them as just as bad, downplaying long term issues and investment.

And it hardly needs to be repeated that capitalism results in production being skewed away from the working class and that the "*efficiency*" of market allocation is highly suspect.

Only by taking investment decisions away from "*experts*" and placing it in the hands of ordinary people will current generations be able to invest according to their, and future generations', self-interest. It is hardly in our interest to have a institution whose aim is to make the wealthy even wealthier and on

whose whims are dependent the lives of millions of people.

I.4.9 Should technological advance be seen as anti-anarchistic?

Not necessarily. This is because technology can allow us to *"do more with less,"* technological progress can improve standards of living for all people, and technologies can be used to increase personal freedom: medical technology, for instance, can free people from the scourges of pain, illness, and a *"naturally"* short life span; technology can be used to free labour from mundane chores associated with production; advanced communications technology can enhance our ability to freely associate. The list goes on and on. Therefore, most anarchists agree with Kropotkin when he pointed out that the *"development of [the industrial] technique at last gives man [sic!] the opportunity to free himself from slavish toil."* [Ethics, p. 2]

For example, increased productivity under capitalism usually leads to further exploitation and domination, displaced workers, economic crisis, etc. But it does not have to in an anarchist world. By way of example, consider a commune in which all resources are distributed equally amongst the members. Let us say that this commune has 5 people who desire to be bakers (or 5 people are needed to work the communal bakery) and, for the sake of argument, 20 hours of production per person, per week is spent on baking bread for the local commune. Now, what happens if the introduction of automation, **as desired, planned and organised by the workers themselves**, reduces the amount of labour required for bread production to 15 person-hours per week, including the labour cost spent in creating and maintaining the new machinery? Clearly, no one stands to lose -- even if someone's work is *"displaced"*, that person will continue to receive the same resource income as before -- and they might even gain. This last is due to the fact that 5 person-hours have been freed up from the task of bread production, and those person-hours may now be used elsewhere or converted to leisure, either way increasing each person's standard of living.

Obviously, this happy outcome derives not only from the technology used, but also (and critically) from its use in an equitable economic and social system. Certainly, a wide variety of outcomes would be possible under alternative social systems. Yet, we have managed to prove our point: in the end, there is no reason why the use of technology cannot be used to empower people and increase their freedom!

Of course technology can be used for oppressive ends. Human knowledge, like all things, can be used to increase freedom or to decrease it, to promote inequality or reduce it, to aid the worker or to subjugate them, and so on. Technology, as we argued in [section D.10](#), cannot be considered in isolation from the society it is created and used in. In a hierarchical society, technology will be introduced that serves the interests of the powerful and helps marginalise and disempower the majority (*"technology is political,"* to use David Noble's expression), it does not evolve in isolation from human beings and the social relationships and power structures between them. *"Capitalism has created,"* Cornelius Castoriadis correctly argued, *"a capitalist technology, for its own ends, which are by no means neutral. The real essence of capitalist technology is not to develop production for production's sake: it is to subordinate and dominate the producers."* This means that in an anarchist society, technology would have to be

transformed and/or developed which empowered those who used it, so reducing any oppressive aspects of it. In the words of Cornelius Castoriadis, the "*conscious transformation of technology will . . . be a central task of a society of free workers.*" [**Workers' Councils and the Economics of a Self-Managed Society**, p. 13]

However, as Kropotkin argued, we are (potentially) in a good position, because "*[f]or the first time in the history of civilisation, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose, therefore, as hitherto been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure well-being and further development for the few, is needed no more: well-being can be secured for all, without placing on anyone the burden of oppressive, degrading toil and humanity can at last build its entire social life on the basis of justice.*" [**Ethics**, p. 2] The question is, for most anarchists, how can we humanise and modify this technology and make it socially and individually liberatory, rather than destroying it (where applicable, of course, certain forms of technology will probably be eliminated due to their inherently destructive nature).

For Kropotkin, like most anarchists, the way to humanise technology and industry was for "*the workers [to] lay hands on factories, houses and banks*" and so "*present production would be completely revolutionised by this simple fact.*" This would be the start of a process which would **integrate** industry and agriculture, as it was "*essential that work-shops, foundries and factories develop within the reach of the fields.*" [**The Conquest of Bread**, p. 190] Such a process would obviously involve the transformation of both the structure and technology of capitalism rather than its simple and unthinking application.

There is another reason for anarchists seeking to transform rather than eliminate current technology. As Bakunin pointed out, "*to destroy. . . all the instruments of labour [i.e. technology and industry] . . . would be to condemn all humanity -- which is infinity too numerous today to exist. . . on the simple gifts of nature . . . -- to . . . death by starvation.*" His solution to the question of technology was, like Kropotkin's, to place it at the service of those who use it, to create "*the intimate and complete union of capital and labour*" so that it would "*not . . . remain concentrated in the hands of a separate, exploiting class.*" Only this could "*smash the tyranny of capital.*" [**The Basic Bakunin**, pp. 90-1]

Thus, most anarchists seek to transform technology and industry rather than get rid of it totally.

Most anarchists are aware that "*Capital invested in machines that would re-enforce the system of domination [within the capitalist workplace], and this decision to invest, which might in the long run render the chosen technology economical, was not itself an economical decision but a political one, with cultural sanction.*" [David Noble, **Progress Without People**, p. 6] But this does not change the fact that we need to be in possession of the means of production before we can decide what to keep, what to change and what to throw away as inhuman. In other words, it is not enough to get rid of the boss, although this is a necessary first step!

It is for these reasons that anarchists have held a wide range of opinions concerning the relationship between human knowledge and anarchism. Some, such as Peter Kropotkin, were themselves scientists and saw great potential for the use of advanced technology to expand human freedom. Others have held technology at arm's length, concerned about its oppressive uses, and a few have rejected science and technology completely. All of these are, of course, possible anarchist positions. But most anarchists support Kropotkin's viewpoint, but with a healthy dose of practical Luddism when viewing how technology is (ab)used in capitalism (*"The worker will only respect machinery **in the day** when it becomes his friend, shortening his work, rather than as **today**, his enemy, taking away jobs, killing workers."* [Emile Pouget quoted by David Noble, **Op. Cit.**, p. 15]).

Anarchists of all types recognise the importance of critically evaluating technology, industry and so on. The first step of any revolution will be the seizing of the means of production. The second **immediate** step will be the start of their radical transformation by those who use them and are affected by them (i.e. communities, those who use the products they produce and so on). Few, if any, anarchists seek to maintain the current industrial set-up or apply, unchanged, capitalist technology. We doubt that many of the workers who use that technology and work in industry will leave either unchanged. Rather, they will seek to liberate the technology they use from the influences of capitalism, just as they liberated themselves. In Kropotkin's words *"if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories"* and *"[s]laves can submit to them, but free men will create new conditions, and their will be pleasant and infinitely more productive."* [**The Conquest of Bread**, p. 121 and p. 123]

This will, of course, involve the shutting down (perhaps instantly or over a period of time) of many branches of industry and the abandonment of such technology which cannot be transformed into something more suitable for use by free individuals. And, of course, many workplaces will be transformed to produce new goods required to meet the needs of the revolutionary people or close due to necessity as a social revolution will disrupt the market for their goods -- such as producers of luxury export goods or suppliers of repressive equipment for state security forces. Altogether, a social revolution implies the transformation of technology and industry, just as it implies the transformation of society.

This process of transforming work can be seen from the Spanish Revolution. Immediately after taking over the means of production, the Spanish workers started to transform it. They eliminated unsafe and unhygienic working conditions and workplaces and created new workplaces based on safe and hygienic working conditions. Working practices were transformed as those who did the work (and so understood it) managed it. Many workplaces were transformed to create products required by the war effort (such as weapons, ammunition, tanks and so on) and to produce consumer goods to meet the needs of the local population as the normal sources of such goods, as Kropotkin predicted, were unavailable due to economic disruption and isolation. Needless to say, these were only the beginnings of the process but they clearly point the way any libertarian social revolution would progress, namely the total transformation of work, industry and technology. Technological change would develop along new lines, ones which will take into account human and ecological needs rather the power and profits of a minority.

Explicit in anarchism is the belief that capitalist and statist methods cannot be used for socialist and libertarian ends. In our struggle for workers' and community self-management is the awareness that workplaces are not merely sites of production -- they are also sites of reproduction, the reproduction of certain social relationships based on specific relations of authority between those who give orders and those who take them. The battle to democratise the workplace, to place the collective initiative of the direct producers at the centre of any productive activity, is clearly a battle to transform the workplace, the nature of work and, by necessity, technology as well.

As Kropotkin argued, a *"revolution is more than a mere change of the prevailing political system. It implies the awakening of human intelligence, the increasing of the inventive spirit tenfold, a hundredfold; it is the dawn of a new science . . . It is a revolution in the minds of men, as deep, and deeper still, than in their institutions . . . the sole fact of having laid hands on middle-class property will imply the necessity of completely re-organising the whole of economic life in the workplaces, the dockyards, the factories."* [**The Conquest of Bread**, p. 192] And some think that industry and technology will remain unchanged by such a process and that workers will continue doing the same sort of work, in the same way, using the same methods!

For Kropotkin *"all production has taken a wrong direction, as it is not carried on with a view to securing well-being for all"* under capitalism. [**Op. Cit.**, p. 101] Well-being for all obviously includes those who do the producing and so covers the structure of industry and the technological processes used. Similarly, well-being also includes a person's environment and surroundings and so technology and industry must be evaluated on an ecological basis. Thus Kropotkin supported the integration of agriculture and industry, with *"the factory and workshop at the gates of your fields and gardens."* These factories would be *"airy and hygienic, and consequently economical, factories in which human life is of more account than machinery and the making of extra profits."* [**Fields, Factories and Workshops Tomorrow**, p. 197]

Technological progress in an anarchist society, needless to say, will have to take into account these factors as well as others people think are relevant, otherwise the ideal of *"well-being for all"* is rejected.

Capitalism has developed many technologies, some of them harmful or dangerous, but those technologies do not develop by themselves. The technology of cheap solar power, for example, has scarcely moved at all because the capitalists have not chosen to invest in it. Chainsaws do not cut down rain forests, people do; and they do so because they have irresistible economic incentives to do so (whether they be capitalists who stand to make profits or workers who have no other way to survive). Until the economic system is abolished, these incentives will continue to drive technological progress and change.

So, technology always partakes of and expresses the basic values of the social system in which it is embedded. If you have a system (capitalism) that alienates everything, it will naturally produce alienated forms of technology and it will orient those technologies so as to reinforce itself. As we argued in

[section D.10](#), capitalists will select technology which re-enforces their power and profits and skew technological change in that direction rather than in those which empower individuals and make the workplace more egalitarian.

This does not mean that we have to reject all technology and industry because it has been shaped by, or developed within, class society. Certain technologies are, of course, so insanely dangerous that they will no doubt be brought to a prompt halt in any sane society. Similarly, certain forms of technology and industrial process will be impossible to transform as they are inherently designed for oppressive ends. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of their commercial or social rationales. But many technologies, however they may presently be misused, have few if any inherent drawbacks. They could be easily adapted to other uses. When people free themselves from domination, they will have no trouble rejecting those technologies that are harmful while adapting others to beneficial uses.

So if it is true that technology reflects the society which creates it, then technology cannot be inherently bad. A liberated, non-exploitative society will naturally create liberating, non-exploitative technologies, just as the present alienated social system naturally produces alienated forms (or uses) of technology.

Does this argument mean that most anarchists are against the "*abolition of work*"? No, unless you confuse all kinds of productive activity with work. It always takes some "*work*" to create a product (even only if it is food) but that work does not necessarily have to be wage labour or otherwise alienated or subject to domination and hierarchy. A life without dead time does not mean a life where you never have to move a muscle or use your head.

And, of course, different communities and different regions would choose different priorities and different lifestyles. As the CNT's Zaragoza resolution on libertarian communism made clear, "*those communes which reject industrialisation . . . may agree upon a different model of co-existence.*" Using the example of "*naturists and nudists*," it argues that they "*will be entitled to an autonomous administration released from the general commitments*" agreed by the communes and their federations and "*their delegates to congresses of the . . . Confederation of Autonomous Libertarian Communes will be empowered to enter into economic contacts with other agricultural and industrial Communes.*" [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 106]

(See Ken Knabb's **The Poverty of Primitivism** for more details -- we have extracted some of the above arguments from this excellent text).

All this means, of course, that technological progress is not neutral but dependent on who makes the decisions. As David Noble argues, "*[t]echnological determinism, the view that machines make history rather than people, is not correct . . . If social changes now upon us seem necessary, it is because they follow not from any disembodied technological logic, but form a social logic.*" Technology conforms to "*the interests of power*" but as "*technological process is a social process*" then "*it is, like all social processes, marked by conflict and struggle, and the outcome, therefore, is always ultimately*

indeterminate." Viewing technological development "as a social process rather than as an autonomous, transcendent, and deterministic force can be liberating . . . because it opens up a realm of freedom too long denied. It restores people once again to their proper role as subjects of the story, rather than mere pawns of technology . . . And technological development itself, now seen as a social construct, becomes a new variable rather than a first cause, consisting of a range of possibilities and promising a multiplicity of futures." [Forces of Production, pp. 324-5]

Change society and the technology introduced and utilised will likewise change. By viewing technological progress as a new variable, dependent on those who make the decisions and the type of society they live in, allows us to see that technological development is not inherently anti-anarchist. A non-oppressive, non-exploitative, ecological society will develop non-oppressive, non-exploitative, ecological technology just as capitalism has developed technology which facilitates exploitation, oppression and environmental destruction. Thus an anarchist questions technology: The best technology? Best for whom? Best for what? Best according to what criteria, what visions, according to whose criteria and whose visions?

For most anarchists, technological advancement is important in a free society in order to maximise the free time available for everyone and replace mindless toil with meaningful work. The means of doing so is the use of **appropriate** technology (and **not** the worship of technology as such). Only by critically evaluating technology and introducing such forms which empower, are understandable and are controllable by individuals and communities as well as minimising ecological distribution (in other words, what is termed appropriate technology) can this be achieved. Only this critical approach to technology can do justice to the power of the human mind and reflect the creative powers which developed the technology in the first place. Unquestioning acceptance of technological progress is just as bad as being unquestioningly anti-technology.

Whether technological advance is a good thing or sustainable depends on the choices we make, and on the social, political, and economic systems we use. We live in a universe that contains effectively infinite resources of matter and energy, yet at the moment we are stuck on a planet whose resources can only be stretched so far. Anarchists (and others) differ as to their assessments of how much development the earth can take, and of the best course for future development, but there's no reason to believe that advanced technological societies per se cannot be sustained into the foreseeable future if they are structured and used properly.

I.4.10 What would be the advantage of a wide basis of surplus distribution?

We noted earlier that competition between syndicates can lead to "*petty-bourgeois co-operativism*," and that to eliminate this problem, the basis of collectivisation needs to be widened so that surpluses are distributed industry-wide or even society-wide. We also pointed out another advantage of a wide surplus distribution: that it allows for the consolidation of enterprises that would otherwise compete, leading to a more efficient allocation of resources and technical improvements. Here we will back up this claim with

illustrations from the Spanish Revolution.

Collectivisation in Catalonia embraced not only major industries like municipal transportation and utilities, but smaller establishments as well: small factories, artisan workshops, service and repair shops, etc. Augustin Souchy describes the process as follows:

"The artisans and small workshop owners, together with their employees and apprentices, often joined the union of their trade. By consolidating their efforts and pooling their resources on a fraternal basis, the shops were able to undertake very big projects and provide services on a much wider scale . . . The collectivisation of the hairdressing shops provides an excellent example of how the transition of a small-scale manufacturing and service industry from capitalism to socialism was achieved."

"Before July 19th, 1936 [the date of the Revolution], there were 1,100 hairdressing parlours in Barcelona, most of them owned by poor wretches living from hand to mouth. The shops were often dirty and ill-maintained. The 5,000 hairdressing assistants were among the most poorly paid workers. . . Both owners and assistants therefore voluntarily decided to socialise all their shops."

*"How was this done? All the shops simply joined the union. At a general meeting they decided to shut down all the unprofitable shops. The 1,100 shops were reduced to 235 establishments, a saving of 135,000 pesetas per month in rent, lighting, and taxes. The remaining 235 shops were modernised and elegantly outfitted. From the money saved, wages were increased by 40%. Everyone having the right to work and everyone received the same wages. The former owners were not adversely affected by socialisation. They were employed at a steady income. All worked together under equal conditions and equal pay. The distinction between employers and employees was obliterated and they were transformed into a working community of equals -- socialism from the bottom up." ["Collectivisations in Catalonia," in Sam Dolgoff, **The Anarchist Collectives**, pp. 93-94]*

Therefore, co-operation ensures that resources are efficiently allocated and waste is minimised by cutting down needless competition. As consumers have choices in which syndicate to consume from as well as having direct communication between consumer co-operatives and productive units, there is little danger that rationalisation in production will hurt the interests of the consumer.

Another way in which wide distribution of surplus can be advantageous is in investment and research and development. By creating a fund for research and development which is independent of the fortunes of individual syndicates, society as a whole can be improved by access to useful new technologies and processes.

Therefore, in a libertarian-socialist society, people (both within the workplace and in communities) are

likely to decide to allocate significant amounts of resources for basic research from the available social output. This is because the results of this research would be freely available to all enterprises and so would aid everyone in the long term. In addition, because workers directly control their workplace and the local community effectively "owns" it, all affected would have an interest in exploring research which would reduce labour, pollution, raw materials and so on or increase output with little or no social impact.

This means that research and innovation would be in the direct interests of everyone involved. Under capitalism, this is not the case. Most research is conducted in order to get an edge in the market by increasing productivity or expanding production into new (previously unwanted) areas. Any increased productivity often leads to unemployment, deskilling and other negative effects for those involved. Libertarian socialism will not face this problem.

It should also be mentioned here that research would be pursued more and more as people take an increased interest in both their own work and education. As people become liberated from the grind of everyday life, they will explore possibilities as their interests take them and so research will take place on many levels within society - in the workplace, in the community, in education and so on.

In addition, it should be noted that basic research is not something which capitalism does well. The rise of the Pentagon system in the USA indicates that basic research often needs state support in order to be successful. As Kenneth Arrow noted over thirty years ago that market forces are insufficient to promote basic research:

"Thus basic research, the output of which is only used as an informational input into other inventive activities, is especially unlikely to be rewarded. In fact, it is likely to be of commercial value to the firm undertaking it only if other firms are prevented from using the information. But such restriction reduces the efficiency of inventive activity in general, and will therefore reduce its quantity also." ["Economic Welfare and the Allocation of Resources for Inventiveness," in National Bureau of Economic Research, **The Rate and Direction of Inventive Activity**, p. 618]

Would modern society have produced so many innovations if it had not been for the Pentagon system, the space race and so on? Take the Internet, for example -- it is unlikely that this would have got off the ground if it had not been for the state. Needless to say, of course, much of this technology has been developed for evil reasons and purposes and would be in need of drastic change (and, in many cases, abolition) before it could be used in a libertarian society. However, the fact remains that it is unlikely that a pure market based system could have generated most of the technology we take for granted. As Noam Chomsky argues:

"[Alan] Greenspan [head of the US Federal Reserve] gave a talk to newspaper editors in the US. He spoke passionately about the miracles of the market, the wonders brought by consumer choice, and so on. He also gave examples: the Internet, computers, information

processing, lasers, satellites, transistors. It's an interesting list: these are textbook examples of creativity and production in the public sector. In the case of the Internet, for 30 years it was designed, developed and funded primarily in the public sector, mostly the Pentagon, then the National Science Foundation -- that's most of the hardware, the software, new ideas, technology, and so on. In just the last couple of years it has been handed over to people like Bill Gates . . . In the case of the Internet, consumer choice was close to zero, and during the crucial development stages that same was true of computers, information processing, and all the rest . . .

"In fact, of all the examples that Greenspan gives, the only one that maybe rises above the level of a joke is transistors, and they are an interesting case. Transistors, in fact, were developed in a private laboratory -- Bell Telephone Laboratories of AT&T -- which also made major contributions to solar cells, radio astronomy, information theory, and lots of other important things. But what is the role of markets and consumer choice in that? Well, again, it turns out, zero. AT&T was a government supported monopoly, so there was no consumer choice, and as a monopoly they could charge high prices: in effect a tax on the public which they could use for institutions like Bell Laboratories . . . So again, it's publicly subsidised. As if to demonstrate the point, as soon as the industry was deregulated, Bell Labs went out of existence, because the public wasn't paying for it any more . . . But that's only the beginning of the story. True, Bell invented transistors, but they used wartime technology, which, again, was publicly subsidised and state-initiated. Furthermore, there was nobody to but transistors at that time, because they were very expensive to produce. So, for ten years the government was the major procurer . . . Government procurement provided entrepreneurial initiatives and guided the development of the technology, which could then be disseminated to industry." [Rogue States, pp. 192-3]

As well as technological developments, a wide basis of surplus generation would help improve the skills and knowledge of the members of a community. As Keynesian economist Michael Stewart points out, *"[t]here are both theoretical and empirical reasons to suppose that market forces under-provide research and development expenditures, as well as both education and training."* [Keynes in the 1990s, p. 77]

If we look at vocational training and education, a wide basis of surplus distribution would aid this no end. Under free market capitalism, vocational training suffers due to the nature of the market. The argument is simple. Under free market capitalism, if companies stood to gain, in terms of higher profits, from training more workers, they would train them. If they did not, that just proves that training was not required. Unfortunately, this piece of reasoning overlooks the fact that profit maximising firms will not incur costs that will be enjoyed by others. This means that firms will be reluctant to spend money on training if they fear that the trained workers will soon be poached by other firms which can offer more money because they had not incurred the cost of providing training. This means that few firms will provide the required training as they could not be sure that the trained workers will not leave for their competitors (and, of course, a trained work force also, due to their skill, have more workplace power and

are less replaceable).

By socialising training via confederations of workplaces, syndicates could increase productivity via increasing the skill levels of their members. Higher skill levels will also tend to increase innovation and enjoyment at "work" when combined with workers' self-management. This is because an educated workforce in control of their own time will be unlikely to tolerate mundane, boring, machine-like work and seek ways to eliminate it, improve the working environment and increase productivity to give them more free time.

The free market can also have a negative impact on innovation. This is because, in order to please shareholders with higher share prices, companies may reduce funds available for real investment and R&D, which would also depress growth and employment in the long term. What shareholders might condemn as "*uneconomic*" (investment projects and R&D) can, and does, make society as a whole better off. However, these gains are over the long term and, within capitalism, it is short-term gains which count. Higher share prices in the here and now are essential in order to survive and so see the long-run.

In a more socialised economy, wide-scale collectivisation could aid in allocating resources for Research and Development, long term investment, innovation and so on. Via the use of mutual banks or confederations of syndicates and communes, resources could be allocated which take into account the importance of long-term priorities, as well as social costs, which are not taken into account (indeed, are beneficial to ignore) under capitalism. Rather than penalise long term investment and research and development, a socialised economy would ensure that adequate funds are available, something which would benefit everyone in society in some way.

In addition to work conducted by syndicates, education establishments, communes and so on, it would be essential to provide resources for individuals and small groups to pursue "*pet projects*." Of course, syndicates and confederations will have their own research institutions but the innovatory role of the interested "*amateur*" cannot be over-rated. As Kropotkin argued:

"What is needed to promote the spirit of innovation is . . . the awakening of thought, the boldness of conception, which our entire education causes to languish; it is the spreading of a scientific education, which would increase the numbers of inquirers a hundred-fold; it is faith that humanity is going to take a step forward, because it is enthusiasm, the hope of doing good, that has inspired all the great inventors. The Social Revolution alone can give this impulse to thought, this boldness, this knowledge, this conviction of working for all.

"Then we shall have vast institutes . . . immense industrial laboratories open to all inquirers, where men will be able to work out their dreams, after having acquitted themselves of their duty towards society; . . . where they will make their experiments; where they will find other comrades, experts in other branches of industry, likewise coming to study some difficult problem, and therefore able to help and enlighten each other -- the encounter of their ideas and experiences causing the longed-for solution to be

found." [**The Conquest of Bread**, p. 117]

In addition, unlike under capitalism, where inventors often "*carefully hide their inventions from each other, as they are hampered by patents and Capitalism -- that bane of present society, that stumbling-block in the path of intellectual and moral progress,*" inventors within a free society will be able to build upon the knowledge of everyone and past generations. Rather than hide knowledge from others, in case they get a competitive advantage, knowledge would be shared, enriching all involved as well as the rest of society [**Ibid.**]. As John O'Neil argues:

"There is, in a competitive market economy, a disincentive to communicate information. The market encourages secrecy, which is inimical to openness in science. It presupposes a view of property in which the owner has rights to exclude others. In the sphere of science, such rights of exclusion place limits on the communication of information and theories which are incompatible with the growth of knowledge . . . science tends to grow when communication is open. . . [In addition a] necessary condition for the acceptability of a theory or experimental result is that it pass the public, critical scrutiny of competent scientific judges. A private theory or result is one that is shielded from the criteria of scientific acceptability." [**The Market**, p. 153]

Thus socialisation would aid innovation and scientific development. This is two fold, by providing the necessary resources for such work and by providing the community spirit required to push the boundaries of science forward.

Lastly, there is the issue of those who cannot work and general provision of public goods. With a wide distribution to surplus, communal hospitals, schools, universities and so on can be created. This simple fact is that any society has members who cannot (indeed, should not) work. For example, the young, the old and the sick. In a mutualist society, particularly an Individualist Anarchists mutualist society, there is no real provision for these individuals unless someone (a family member or friend) provides them with the money required for hospital fees and so on. However, with a communal basis for distribution every member of the commune can receive an education, health care and so on as a right -- and so live a fully human life as a right, rather than a privilege. Moreover, the experience of capitalist countries suggests that socialising, say, health care, leads to a service with lower costs than one which is predominately privatised. For example, the administrative costs of the British National Health Service are a fraction of the U.S. or Chilean systems (where a sizeable percentage of income ends up as profit rather than as health care).

This tendency for the use of surplus for communal services (such as hospitals and education) can be seen from the Spanish Revolution. Many collectives funded new hospitals and colleges for their members, providing hundreds of thousands with services they could never have afforded by their own labour. This is a classic example of co-operation helping the co-operators achieve far more than they could by their own isolated activities.

I.4.11 If libertarian socialism eliminates the profit motive, won't creativity and performance suffer?

Firstly, just to be totally clear, by the profit motive we mean money profit. As anarchists consider co-operation to be in our self-interest -- i.e. we will "*profit*" from it in the widest sense possible -- we are **not** dismissing the fact people usually act to improve their situation. However, money profit is a **very** narrow form of "*self-interest*," indeed so narrow as to be positively harmful to the individual in many ways (in terms of personal development, interpersonal relationships, economic and social well-being, and so on). In other words, do not take our discussion in this section of the FAQ on the "*profit motive*" to imply a denial of self-interest, quite the reverse. Anarchists simply reject the "*narrow concept of life which consist[s] in thinking that **profits** are the only leading motive of human society.*" [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 25]

Secondly, we cannot hope to deal fully with the harmful effects of competition and the profit motive. For more information, we recommend Alfie Kohn's **No Contest: The Case Against Competition and Punished by Rewards: The Trouble with Gold Stars, Incentive Plans, A's, Praise and Other Bribes**. He documents the extensive evidence accumulated that disproves the "*common sense*" of capitalism that competition and profits are the best way to organise a society.

According to Alfie Kohn, a growing body of psychological research suggests that rewards can lower performance levels, especially when the performance involves creativity. [*"Studies Find Reward Often No Motivator," Boston Globe*, Monday 19 January 1987] Kohn notes that "*a related series of studies shows that intrinsic interest in a task -- the sense that something is worth doing for its own sake -- typically declines when someone is rewarded for doing it.*"

Much of the research on creativity and motivation has been performed by Theresa Amabile, associate professor of psychology at Brandeis University. One of her recent experiments involved asking elementary school and college students to make "*silly*" collages. The young children were also asked to invent stories. Teachers who rated the projects found that those students who had contracted for rewards did the least creative work. "*It may be that commissioned work will, in general, be less creative than work that is done out of pure interest,*" Amabile says. In 1985, she asked 72 creative writers at Brandeis and at Boston University to write poetry:

"Some students then were given a list of extrinsic (external) reasons for writing, such as impressing teachers, making money and getting into graduate school, and were asked to think about their own writing with respect to these reasons. Others were given a list of intrinsic reasons: the enjoyment of playing with words, satisfaction from self-expression, and so forth. A third group was not given any list. All were then asked to do more writing.

"The results were clear. Students given the extrinsic reasons not only wrote less creatively than the others, as judged by 12 independent poets, but the quality of their work dropped significantly. Rewards, Amabile says, have this destructive effect primarily with creative

tasks, including higher-level problem-solving. 'The more complex the activity, the more it's hurt by extrinsic reward, she said.'" [Ibid.]

In another study, by James Gabarino of Chicago's Erikson Institute for Advanced Studies in Child Development, it was found that girls in the fifth and sixth grades tutored younger children much less effectively if they were promised free movie tickets for teaching well. *"The study, showed that tutors working for the reward took longer to communicate ideas, got frustrated more easily, and did a poorer job in the end than those who were not rewarded"* [Ibid.]

Such studies cast doubt on the claim that financial reward is the only effective way -- or even the best way -- to motivate people. As Kohn notes, *"[t]hey also challenge the behaviourist assumption that any activity is more likely to occur if it is rewarded."* Amabile concludes that her research *"definitely refutes the notion that creativity can be operantly conditioned."*

These findings re-enforce the findings of other scientific fields. Biology, social psychology, ethnology and anthropology all present evidence that support co-operation as the natural basis for human interaction. For example, ethnological studies indicate that virtually all indigenous cultures operate on the basis of highly co-operative relationships and anthropologists have presented evidence to show that the predominant force driving early human evolution was co-operative social interaction, leading to the capacity of hominids to develop culture. This is even sinking into capitalism, with industrial psychology now promoting *"worker participation"* and team functioning because it is decisively more productive than hierarchical management. More importantly, the evidence shows that co-operative workplaces are more productive than those organised on other principles. All other things equal, producers' co-operatives will be more efficient than capitalist or state enterprises, on average. Co-operatives can often achieve higher productivity even when their equipment and conditions are worse. Furthermore, the better the organisation approximates the co-operative ideal, the better the productivity.

All this is unsurprising to social anarchists (and it should make individualist anarchists reconsider their position). Peter Kropotkin argued that, *"[i]f we . . . ask Nature: 'Who are the fittest: those who are continually at war with each other, or those who support one another?' we at once see that those animals which acquire habits of mutual aid are undoubtedly the fittest. They have more chances to survive, and they attain, in their respective classes, the highest development of intelligence and bodily organisation."* [Mutual Aid, p. 24] From his observation that mutual aid gives evolutionary advantage to those who practice it, he derived his political philosophy -- a philosophy which stressed community and co-operative endeavour.

Modern research has reinforced his argument. For example, as noted, Alfie Kohn is also the author of **No Contest: The Case Against Competition** and he spent seven years reviewing more than 400 research studies dealing with competition and co-operation. Prior to his investigation, he believed that *"competition can be natural and appropriate and healthy."* After reviewing research findings, he radically revised this opinion, concluding that, the *"ideal amount of competition . . . in any environment, the classroom, the workplace, the family, the playing field, is none . . . [Competition] is always*

destructive." [Noetic Sciences Review, Spring 1990]

Here we present a very short summary of his findings. According to Kohn, there are three principle consequences of competition:

Firstly, it has a negative effect on productivity and excellence. This is due to increased anxiety, inefficiency (as compared to co-operative sharing of resources and knowledge), and the undermining of inner motivation. Competition shifts the focus to victory over others, and away from intrinsic motivators such as curiosity, interest, excellence, and social interaction. Studies show that co-operative behaviour, by contrast, consistently predicts good performance--a finding which holds true under a wide range of subject variables. Interestingly, the positive benefits of co-operation become more significant as tasks become more complex, or where greater creativity and problem-solving ability is required (as indicated above).

Secondly, competition lowers self-esteem and hampers the development of sound, self-directed individuals. A strong sense of self is difficult to attain when self-evaluation is dependent on seeing how we measure up to others. On the other hand, those whose identity is formed in relation to how they contribute to group efforts generally possess greater self-confidence and higher self-esteem.

Finally, competition undermines human relationships. Humans are social beings; we best express our humanness in interaction with others. By creating winners and losers, competition is destructive to human unity and prevents close social feeling.

Social Anarchists have long argued these points. In the competitive mode, people work at cross purposes, or purely for (material) personal gain. This leads to an impoverishment of society and hierarchy, with a lack of communal relations that result in an impoverishment of all the individuals involved (mentally, spiritually, ethically and, ultimately, materially). This not only leads to a weakening of individuality and social disruption, but also to economic inefficiency as energy is wasted in class conflict and invested in building bigger and better cages to protect the haves from the have-nots. Instead of creating useful things, human activity is spent in useless toil reproducing an injustice and authoritarian system.

All in all, the results of competition (as documented by a host of scientific disciplines) shows its poverty as well as indicating that co-operation is the means by which the fittest survive.

Moreover, as Kohn discusses in **Punished by Rewards**, the notion that material rewards result in better work is simply not true. Basing itself on simple behaviourist psychology, such arguments fail to meet the test of long-term success (and, indeed, can be counter-productive). Indeed, it means treating human beings as little better than pets or other animals (he argues that it is *"not an accident that the theory behind 'Do this and you'll get that' derives from work with other species, or that behaviour management is frequently described in words better suited to animals."*) In other words, it *"is by its very nature dehumanising."* [**Punished by Rewards**, p. 24 and p. 25]

Rather than simply being motivated by outside stimuli like mindless robots, people are not passive. We are *"beings who possess natural curiosity about ourselves and our environment, who search for and overcome challenges, who try and master skills and attain competence, and who seek new levels of complexity in what we learn and do . . . in general we act on the environment as much as we are acted on by it, and we do not do so simply in order to receive a reward."* [Op. Cit., p. 25]

Kohn presents extensive evidence to back upon his case that rewards harm activity and individuals. We cannot do justice to it here. We will present a few examples. One study with college students showed that those paid to work on a puzzle *"spent less time on it than those who hadn't been paid"* when they were given a choice of whether to work on it or not. *"It appeared that working for a reward made people less interested in the task."* Another study with children showed that *"extrinsic rewards reduce intrinsic motivation."* Scores of other studies confirmed this. This is because a reward is effectively saying that a given activity is not worth doing for its own sake -- and why would anyone wish to do something they have to be bribed to do? [Op. Cit., p. 70 and p. 71]

In the workplace, a similar process goes on. Kohn presents extensive evidence to show that extrinsic motivation also does not work in the workplace. Indeed, he argues that *"economists have it wrong if they think of work as a 'disutility' -- something unpleasant we must do in order to be able to buy what we need, merely a means to an end."* Kohn stresses that *"to assume that money is what drives people is to adopt an impoverished understanding of human motivation."* Moreover, *"the risk of **any** incentive or pay-for-performance system is that it will make people less interested in their work and therefore less likely to approach it with enthusiasm and a commitment to excellence. Furthermore, **the more closely we tie compensation (or other rewards) to performance, the most damage we do.**"* [Op. Cit., p. 131, p. 134 and p. 140]

Kohn argues that the idea that human's will only work for profit or rewards *"can be fairly described as dehumanising"* if *"the capacity for responsible action, the natural love of learning, and the desire to do good work are already part of who we are."* Also, it is *"a way of trying to control people"* and so to *"anyone who is troubled by a model of human relationships founded principally on the idea of one person controlling another must ponder whether rewards are as innocuous as they are sometimes made out to be."* He uses the example of a workplace, where *"there is no getting around the fact that 'the basic purpose of merit pay is manipulative.' One observer more bluntly characterises incentives as 'demeaning' since the message they really convey is, 'Please big daddy boss and you will receive the rewards that the boss deems appropriate.'"* [Op. Cit., p. 26]

Given that much work is controlled by others and can be a hateful experience under capitalism does not mean that it has to be that way. Clearly, even under wage slavery most workers can and do find work interesting and seek to do it well -- not because of possible rewards or punishment but because we seek meaning in our activities and try and do them well. Given that research shows that reward orientated work structures harm productivity and excellence, social anarchists have more than just hope to base their ideas. Such research confirms Kropotkin's comments:

*"Wage-work is serf-work; it cannot, it must not, produce all it could produce. And it is high time to disbelieve the legend which presents wagedom as the best incentive to productive work. If industry nowadays brings in a hundred times more than it did in the days of our grandfathers, it is due to the sudden awakening of physical and chemical sciences towards the end of the [18th] century; not to the capitalist organisation of wagedom, but **in spite** of that organisation."* [**The Conquest of Bread**, p. 150]

For these reasons, social anarchists are confident that the elimination of the profit motive within the context of self-management will not harm productivity and creativity, but rather **enhance** them (within an authoritarian system in which workers enhance the power and income of bureaucrats, we can expect different results). With the control of their own work and workplaces ensured, all working people can express their abilities to the full. This will see an explosion of creativity and initiative, not a reduction.

I.4.12 Won't there be a tendency for capitalist enterprise to reappear in any socialist society?

This is a common right-libertarian objection. Robert Nozick, for example, imagines the following scenario:

"[S]mall factories would spring up in a socialist society, unless forbidden. I melt some of my personal possessions and build a machine out of the material. I offer you and others a philosophy lecture once a week in exchange for yet other things, and so on . . . some persons might even want to leave their jobs in socialist industry and work full time in this private sector. . . [This is] how private property even in means of production would occur in a socialist society."

Hence Nozick claims that *"the socialist society will have to forbid capitalist acts between consenting adults."* [**Anarchy, State and Utopia**, pp. 162-3]

As Jeff Stein points out, however, *"the only reason workers want to be employed by capitalists is because they have no other means for making a living, no access to the means of production other than by selling themselves. For a capitalist sector to exist there must be some form of private ownership of productive resources, and a scarcity of alternatives. The workers must be in a condition of economic desperation for them to be willing to give up an equal voice in the management of their daily affairs and accept a boss."* ["Market Anarchism? Caveat Emptor!", a review of **A Structured Anarchism : An Overview of Libertarian Theory and Practice** by John Griffin, **Libertarian Labour Review** #13, Winter 1992-93, pp. 33-39]

In an anarchist society, there is no need for anyone to *"forbid"* capitalist acts. All people have to do is **refrain** from helping would-be capitalists set up monopolies of productive assets. This is because, as we have noted in [section B.3.2](#), capitalism cannot exist without some form of state to protect such

monopolies. In a libertarian-socialist society, of course, there would be no state to begin with, and so there would be no question of it *"refraining"* from doing anything, including protecting would-be capitalists' monopolies of the means of production. In other words, would-be capitalists would face stiff competition for workers in an anarchist society. This is because self-managed workplaces would be able to offer workers more benefits (such as self-government, better working conditions, etc.) than the would-be capitalist ones. The would-be capitalists would have to offer not only excellent wages and conditions but also, in all likelihood, workers' control and hire-purchase on capital used. The chances of making a profit once the various monopolies associated with capitalism are abolished are slim.

It should be noted that Nozick makes a serious error in his case. He assumes that the *"use rights"* associated with an anarchist (i.e. socialist) society are identical to the *"property rights"* of a capitalist one. This is **not** the case, and so his argument is weakened and loses its force. Simply put, there is no such thing as an absolute or *"natural"* law of property. As John Stuart Mill pointed out, *"powers of exclusive use and control are very various, and differ greatly in different countries and in different states of society."* [*Chapters on Socialism,* **Principles of Political Economy**, p. 432] Therefore, Nozick slips an ideological ringer into his example by erroneously interpreting socialism (or any other society for that matter) as specifying a distribution of private property rights (like those he, and other supporters of capitalism, believes in) along with the wealth. As Mill argued, *"[o]ne of the mistakes oftenest committed, and which are the sources of the greatest practical errors in human affairs, is that of supposing that the same name always stands for the same aggregation of ideas. No word has been subject of more of this kind of misunderstanding than the word property."* [**Ibid.**] Unfortunately, this error seems particularly common with right-wing libertarians, who assume any use of the word *"property"* means what they mean by the word (this error reaches ridiculous levels when it comes to their co-option of the Individualist Anarchists based on this error!).

In other words, Nozick assumes that in **all** societies property rights must replace use rights in both consumption **and** production (an assumption that is ahistorical in the extreme). As Cheyney C. Ryan comments, *"[d]ifferent conceptions of justice differ not only in how they would apportion society's holdings but in what rights individuals have over their holdings once they have been apportioned."* [*Property Rights and Individual Liberty*", in **Reading Nozick**, p. 331]

In effect, what possessions someone holds within a libertarian socialist society will not be his or her property (in the capitalist sense) any more than a company car is the property of the employee under capitalism. This means that as long as an individual remained a member of a commune and abided by the rules they helped create in that commune then they would have full use of the resources of that commune and could use their possessions as they saw fit (even *"melt them down"* to create a new machine, or whatever). Such lack of **absolute** *"ownership"* does not reduce liberty any more than the employee and the company car he or she uses (bar destruction and selling it, the employee can use it as they see fit).

This point highlights another flaw in Nozick's argument. If his argument is true, then it applies equally to capitalist society. For 40 hours plus a week, workers are employed by a boss. In that time they are given resources to use, under instructions of their boss. They are most definitely **not** allowed to melt

down these resources to create a machine or use the resources they have been given access to further their own plans. In other words, "*capitalist society will have to forbid capitalist acts between consenting adults.*" This can apply equally to rented accommodation as well, for example when landlords ban working from home or selling off the furniture that is provided. Thus, ironically, capitalism forbids capitalist acts between consenting adults all the time.

Of course, Nozick's reply to this point would be that the individual's involved have "*consented*" to these rules when they signed their contract. But the same can be said of an anarchist society -- it is freely joined and freely left. To join a communist-anarchist society it would simply be a case of agreeing to "*exchange*" the product of one's labour freely with the other members of that society. Thus you could smelt down personal possessions and create a machine, exchange your time with others and so on. However, if wage labour becomes involved then the individuals involved have ceased being members of "*the socialist society*" by their actions. They have violated their agreements with their fellows and so it is not a case of "*forbidding*" certain acts. Rather it is a case of individuals meeting their self-created obligations. If this is "*authoritarian*" then so is capitalism -- and we must stress that at least anarchist associations are based on self-management and so the individuals involved have an equal say in the obligations they live under.

Notice also that Nozick confuses exchange with capitalism ("*I offer you a lecture once a week in exchange for other things*"). This is a telling mistake by someone who claims to be an expert on capitalism, because the defining feature of capitalism is not exchange (which obviously took place long before capitalism existed) but labour contracts involving capitalist middlemen who appropriate a portion of the value produced by workers -- in other words, wage labour. Nozick's example is merely a direct labour contract between the producer and the consumer. It does not involve any capitalist intermediary taking a percentage of the value created by the producer. Nor does it involve exploitative wage labour, what makes capitalism capitalism. It is only this latter type of transaction that libertarian socialism prevents -- and not by "*forbidding*" it but simply by refusing to maintain the conditions necessary for it to occur, i.e. protection of capitalist property.

In addition, we must note that Nozick also confuses "*private property in the means of production*" with capitalism. Liberation socialism can be easily compatible with "*private property in the means of production*" when that "*private property*" is based on **possession** rather than capitalistic property. This can be seen from Kropotkin's arguments that peasant and artisan workers, those who "*exploit nobody,*" would **not** be expropriated in an anarchist revolution. [Act for Yourselves, pp. 104-5] Nozick, in other words, confuses private property with possession and confuses pre-capitalist forms of production with capitalist ones. Thus possession of the means of production by people outside of the free commune is perfectly acceptable to social anarchists (see also [section I.6.2](#)).

Lastly, we must also note that Nozick also ignores the fact that acquisition **must** come before transfer, meaning that before "*consenting*" capitalist acts occur, individual ones must precede it. As argued above, for this to happen the would-be capitalist must steal communally owned resources by barring others from using them. This obviously would restrict the liberty of those who currently used them and so be

hotly opposed by members of a community. If an individual did desire to use resources to employ wage labour then they would have effectively removed themselves from "*socialist society*" and so that society would bar them from using **its** resources (i.e. they would have to buy access to all the resources they currently took for granted).

Thus an anarchist society would have a flexible approach to Nozick's (flawed) argument. Individuals, in their free time, could "*exchange*" their time and possessions as they saw fit. These, however, are not "*capitalist acts*" regardless of Nozick's claims. However, the moment an individual employs wage labour then, by this act, they have broken their agreements with their fellows and, therefore, no longer part of "*socialist society*." This would involve them no longer having access to the benefits of communal life and to communal possessions. They have, in effect, placed themselves outside of their community and must fair for themselves. After all, if they desire to create "*private property*" (in the capitalist sense) then they have no right of access to communal possessions without paying for that right. For those who become wage slaves, a socialist society would, probably, be less strict. As Bakunin argued:

"Since the freedom of every individual is inalienable, society shall never allow any individual whatsoever legally to alienate his [or her] freedom or engage upon any contract with another on any footing but the utmost equality and reciprocity. It shall not, however, have the power to disbar a man or woman so devoid of any sense of personal dignity as to contract a relationship of voluntary servitude with another individual, but it will consider them as living off private charity and therefore unfit to enjoy political rights throughout the duration of that servitude." [Michael Bakunin: Selected Writings, pp. 68-9]

It should also be noted here that Nozick's theory does not provide any support for such appropriation of commonly held resources, meaning that his (right) libertarianism is totally without foundations (see [section B.3.4](#) for details). His argument in favour of such appropriations recognises that certain liberties are very definitely restricted by private property (and it should be kept in mind that the destruction of commonly held resources, such as village commons, were enforced by the state -- see [section F.8.3](#)). As Cheyney C. Ryan points out, Nozick "*invoke[s] personal liberty as the decisive ground for rejecting patterned principles of justice [such as socialism] and restrictions on the ownership of capital. . . [b]ut where the rights of private property admittedly restrict the liberties of the average person, he seems perfectly happy to trade off such liberties against material gain for society as a whole.*" ["Property Rights and Individual Liberty", in **Reading Nozack**, p. 339]

Again, as pointed out in section F.2 ("[What do 'anarcho'-capitalists mean by 'freedom?'](#)") right-libertarians would better be termed "*Propertarians*." Why is liberty accorded a primary importance when arguing against socialism but not when private property restricts liberty? Obviously, Nozick considers the liberties associated with private property as more important than liberty **in general**. Likewise, capitalism must forbid corresponding socialist acts by individuals (for example, squatting unused property or trespassing on private property) and often socialist acts between consenting individuals (for example, the formation of unions against the wishes of the property owner who is, of

course, sovereign over their property and those who use it, or the use of workplace resources to meet the needs of the producer rather than the owner).

So, to conclude, this question involves some strange logic (and many question begging assumptions) and ultimately fails in its attempt to prove libertarian socialism must "ban" "*capitalistic acts between individuals*." In addition, the objection undermines capitalism because it cannot support the creation of private property out of communal property in the first place.

I.4.13 Who will do the "*dirty*" or unpleasant work?

This problem affects every society, including capitalism of course. Under capitalism, this problem is "*solved*" by ensuring that such jobs are done by those at the bottom of the social pile. In other words, it does not really solve the problem at all -- it just ensures that some people are subject to this work the bulk of their working lives. However, most anarchists reject this flawed solution in favour of something better, one that shares the good with the bad and so ensure everyone's life is better.

How this would be done depends on the kind of libertarian community you are a member of. Obviously, few would argue against the idea that individuals will voluntarily work at things they enjoyed doing. However there are some jobs that few, if any, would enjoy (for example, collecting rubbish, processing sewage, dangerous work, etc.). So how would an anarchist society deal with it?

It will be clear what is considered unpleasant work in any society -- few people (if any) will volunteer to do it. As in any advanced society, communities and syndicates who required extra help would inform others of their need by the various form of media that existed. In addition, it would be likely that each community would have a "*division of activity*" syndicate whose work would be to distribute information about these posts and to which members of a community would go to discover what placements existed for the line of "work" they were interested in. So we have a means by which syndicates and communes can ask for new hands and the means by which individuals can discover these placements. Obviously, some work will still require qualifications and that will be taken into account when syndicates and communes "advertise" for help.

For "work" placements in which supply exceeded demand, it would be easy to arrange a work share scheme to ensure that most people get a chance to do that kind of work (see below for a discussion of what could happen if the numbers applying for a certain form of work were too high for this to work). When such placements are marked by an excess of demand by supply, its obvious that the activity in question is not viewed as pleasant or desirable. Until such time as it can be automated away, a free society will have to encourage people to volunteer for "work" placements they do not particularly want to do.

So, it is obvious that not all "jobs" are equal in interest or enjoyment. It is sometimes argued that people would start to join or form syndicates which are involved in more fun activities. By this process excess workers would be found in the more enjoyable "jobs" while the boring and dangerous ones would suffer

from a scarcity of willing workers. Hence, so the argument goes, a socialist society would have to force people to do certain jobs and so that requires a state. Obviously, this argument ignores the fact that under capitalism usually it is the boring, dangerous work which is the least well paid with the worse working conditions. In addition, this argument ignores the fact that under workers self-management boring, dangerous work would be minimised and transformed as much as possible. Only under capitalist hierarchy are people in no position to improve the quality of their work and working environment. As George Barrett argues:

"Now things are so strangely organised at present that it is just the dirty and disagreeable work that men will do cheaply, and consequently there is no great rush to invent machines to take their place. In a free society, on the other hand, it is clear that the disagreeable work will be one of the first things that machinery will be called upon to eliminate. It is quite fair to argue, therefore, that the disagreeable work will, to a large extent, disappear in a state of anarchism." [**Objections to Anarchism**]

Moreover, most anarchists would think that the argument that there would be a flood of workers taking up "easy" work placements is abstract and ignores the dynamics of a real society. While many individuals would try to create new productive syndicates in order to express themselves in innovative work outwith the existing research and development going on within existing syndicates, the idea that the majority of individuals would leave their current work at a drop of a hat is crazy. A workplace is a community and part of a community and people would value the links they have with their fellow workers. As such they would be aware of the impacts of their decisions on both themselves and society as a whole. So, while we would expect a turnover of workers between syndicates, the mass transfers claimed in this argument are unlikely. Most workers who did want to try their hand at new work would apply for work places at syndicates that required new people, not create their own ones. Because of this, work transfers would be moderate and easily handled.

However, the possibility of mass desertions does exist and so must be addressed. So how would a libertarian socialist society deal with a majority of its workers deciding to all do interesting work, leaving the boring and/or dangerous work undone? It, of course, depends on the type of anarchism in question and is directly related to the question of who will do the "dirty work" in an anarchist society. So, how will an anarchist society ensure that individual preferences for certain types of work matches the requirements of social demand for labour?

Under mutualism, those who desired a certain form of work done would reach an agreement with a workers or a co-operative and pay them to do the work in question. Individuals would form co-operatives with each co-operative would have to find its place on the market and so this would ensure that work was spread across society as required. Individuals desiring to form a new co-operative would either provide their own start up credit or arrange a interest free loan from a mutual bank. However, this could lead to some people doing unpleasant work all the time and so is hardly a solution. As in capitalism, we may see some people doing terrible work because it is better than no work at all. This is a solution few anarchists would support.

In a collectivist or communist anarchist society, such an outcome would be avoided by sharing such tasks as fairly as possible between a community's members. For example, by allocating a few days a month to all fit members of a community to do work which no one volunteers to do, it would soon be done. In this way, every one shares in the unpleasant as well as pleasant tasks (and, of course, minimises the time any one individual has to spend on it). Or, for tasks which are very popular, individuals would also have to do unpleasant tasks as well. In this way, popular and unpopular tasks would balance each other out.

Another possible solution could be to follow the ideas of Josiah Warren and take into account the undesirability of the work when considering the level of labour notes received or communal hours worked. In other words, in a collectivist society the individuals who do unpleasant work may be "rewarded" (along with social esteem) with a slightly higher pay -- the number of labour notes, for example, for such work would be a multiple of the standard amount, the actual figure being related to how much supply exceeds demand (in a communist society, a similar solution could be possible, with the number of necessary hours required by an individual being reduced by an amount that corresponds to the undesirability of the work involved). The actual levels of "reward" would be determined by agreements between the syndicates.

To be more precise, in a collectivist society, individuals would either use their own savings and/or arrange loans of community labour banks for credit in order to start up a new syndicate. This will obviously restrict the number of new syndicates being formed. In the case of individuals joining existing syndicates, the labour value of the work done would be related to the number of people interested in doing that work. For example, if a given type of work has 50% more people wanting to do it than actually required, then the labour value for one hours work in this industry would correspondingly be less than one hour. If fewer people applied than required, then the labour value would increase, as would holiday time, etc.

In this way, "*supply and demand*" for workers would soon approximate each other. In addition, a collectivist society would be better placed than the current system to ensure work-sharing and other methods to spread unpleasant and pleasant tasks equally around society due to its organs of self-management and the rising social awareness via participation and debate within those organs.

A communist-anarchist society's solution would be similar to the collectivist one. There would still be basic agreements between its members for work done and so for work placements with excess supply of workers the amount of hours necessary to meet the confederations agreed minimum would correspondingly increase. For example, an industry with 100% excess supply of volunteers would see its minimum requirement increase from (say) 20 hours a week to 30 hours. An industry with less applicants than required would see the number of required hours of "*work*" decrease, plus increases in holiday time and so on. As G.D.H. Cole argues in respect of this point:

"Let us first by the fullest application of machinery and scientific methods eliminate or reduce . . . 'dirty work' that admit to such treatment. This has never been tried. . . under

capitalism. . . It is cheaper to exploit and ruin human beings. . . Secondly, let us see what forms of 'dirty work' we can do without . . . [and] if any form of work is not only unpleasant but degrading, we will do without it, whatever the cost. No human being ought to be allowed or compelled to do work that degrades. Thirdly, for what dull or unpleasant work remains, let us offer whatever special conditions are required to attract the necessary workers, not in higher pay, but in shorter hours, holidays extending over six months in the year, conditions attractive enough to men who have other uses for their time or attention to being the requisite number to undertake it voluntarily." [**Guild Socialism Restated**, p. 76]

By these methods a balance between industrial sectors would be achieved as individuals would balance their desire for interesting work with their desires for free time. Over time, by using the power of appropriate technology, even such time keeping would be minimised or even got eliminated as society developed freely.

And it is important to remember that the means of production required by new syndicates do not fall from the sky. Other members of society will have to work to produce the required goods. Therefore it is likely that the syndicates and communes would agree that only a certain (maximum) percentage of production would be allocated to start-up syndicates (as opposed to increasing the resources of existing confederations). Such a figure would obviously be revised periodically in order to take into account changing circumstances. Members of the community who decide to form syndicates for new productive tasks or syndicates which do the same work but are independent of existing confederations would have to get the agreement of other workers to supply them with the necessary means of production (just as today they have to get the agreement of a bank to receive the necessary credit to start a new business). By budgeting the amounts available, a free society can ensure that individual desires for specific kinds of work can be matched with the requirements of society for useful production.

And we must point out (just to make sure we are not misunderstood) that there will be no group of "*planners*" deciding which applications for resources get accepted. Instead, individuals and associations would apply to different production units for resources, whose workers in turn decide whether to produce the goods requested. If it is within the syndicate's agreed budget then it is likely that they will produce the required materials. In this way, a communist-anarchist society will ensure the maximum amount of economic freedom to start new syndicates and join existing ones plus ensure that social production does not suffer in the process.

Of course, no system is perfect -- we are sure that not everyone will be able to do the work they enjoy the most (this is also the case under capitalism, we may add). In an anarchist society every method of ensuring that individuals pursue the work they are interested in would be investigated. If a possible solution can be found, we are sure that it will. What a free society would make sure of was that neither the capitalist market redeveloped (which ensures that the majority are marginalised into wage slavery) or a state socialist "*labour army*" type allocation process developed (which would ensure that free socialism did not remain free or socialist for long).

In this manner, anarchism will be able to ensure the principle of voluntary labour and free association as well as making sure that unpleasant and unwanted "work" is done. Moreover, most anarchists are sure that in a free society such requirements to encourage people to volunteer for unpleasant work will disappear over time as feelings of mutual aid and solidarity become more and more common place. Indeed, it is likely that people will gain respect for doing jobs that others might find unpleasant and so it might become "glamorous" to do such activity. Showing off to friends can be a powerful stimulus in doing any activity. So anarchists would agree with Albert and Hahnel when they say that:

*"In a society that makes every effort to depreciate the esteem that derives from anything other than conspicuous consumption, it is not surprising that great income differentials are seen as necessary to induce effort. But to assume that only conspicuous consumption can motivate people because under capitalism we have strained to make it so is unwarranted. There is plenty of evidence that people can be moved to great sacrifices for reasons other than a desire for personal wealth...there is good reason to believe that for nonpathological people wealth is generally coveted only as a **means** of attaining other ends such as economic security, comfort, social esteem, respect, status, or power."* [**The Political Economy of Participatory Economics**, p. 52]

We should note here that the education syndicates would obviously take into account the trends in "work" placement requirements when deciding upon the structure of their classes. In this way, education would respond to the needs of society as well as the needs of the individual (as would any productive syndicate).

I.4.14 What about the person who will not work?

Anarchism is based on voluntary labour. If people do not desire to work then they cannot (must not) be forced to. The question arises of what to do with those (a small minority, to be sure) who refuse to work.

On this question there is some disagreement. Some anarchists, particularly communist-anarchists, argue that the lazy should not be deprived of the means of life. Social pressure, they argue, would force those who take, but do not contribute to the community, to listen to their conscience and start producing for the community that supports them. Other anarchists are less optimistic and agree with Camillo Berneri when he argues that anarchism should be based upon *"no compulsion to work, but no duty towards those who do not want to work."* [*"The Problem of Work"*, in **Why Work?**, Vernon Richards (ed.), p. 74] This means that an anarchist society will not continue to feed, clothe, house someone who can produce but refuses to. Most anarchists have had enough of the wealthy under capitalism consuming but not producing and do not see why they should support a new group of parasites after the revolution.

Obviously, there is a difference between not wanting to work and being unable to work. The sick, children, the old, pregnant women and so on will be looked after by their friends and family (or by the commune, as desired by those involved). As child rearing would be considered "work" along with other more obviously economic tasks, mothers and fathers will not have to leave their children unattended and

work to make ends meet. Instead, consideration will be given to the needs of both parents and children as well as the creation of community nurseries and child care centres.

We have to stress here that an anarchist society will not deny anyone the means of life. This would violate the voluntary labour which is at the heart of all schools of anarchism. Unlike capitalism, the means of life will not be monopolised by any group -- including the commune. This means that someone who does not wish to join a commune or who does not pull their weight within a commune and are expelled will have access to the means of making a living outside the commune.

We stated that we stress this fact as many supporters of capitalism seem to be unable to understand this point (or prefer to ignore it and so misrepresent the anarchist position). In an anarchist society, no one will be forced to join a commune simply because they do not have access to the means of production and/or land required to work alone. Unlike capitalism, where access to these essentials of life is dependent on buying access to them from the capitalist class (and so, effectively, denied to the vast majority), an anarchist society will ensure that all have access and have a real choice between living in a commune and working independently. This access is based on the fundamental difference between possession and property -- the commune possesses as much land as it needs, as do non-members. The resources used by them are subject to the usual possession rationale -- they possess it only as long as they use it and cannot bar others using it if they do not (i.e., it is not property).

Thus an anarchist commune remains a voluntary association and ensures the end of all forms of wage slavery (see also [section I.1.4](#)). The member of the commune has the choice of working as part of a community, giving according to their abilities and taking according to their needs (or some other means of organising production and consumption such as equal income or receiving labour notes, and so on), or working independently and so free of communal benefits as well as any commitments (bar those associated with using communal resources such as roads and so on).

So, in most, if not all, anarchist communities, individuals have two options, either they can join a commune and work together as equals, or they can work as an individual or independent co-operative and exchange the product of their labour with others. If an individual joins a commune and does not carry their weight, even after their fellow workers ask them to, then that person will possibly be expelled and given enough land, tools or means of production to work alone. Of course, if a person is depressed, run down or otherwise finding it hard to join in communal responsibilities then their friends and fellow workers would do everything in their power to help and be flexible in their approach to the problem.

Some anarchist communities may introduce what Lewis Mumford termed "*basic communism*." This means that everyone would get a basic amount of "*purchasing power*," regardless of productive activity. If some people were happy with this minimum of resources then they need not work. If they want access to the full benefits of the commune, then they could take part in the communal labour process. This could be a means of eliminating all forces, even communal ones, which drive a person to work and so ensure that all labour is fully voluntary (i.e. not even forced by circumstances). What method a community would use would depend on what people in that community thought was best.

It seems likely, however, that in most anarchist communities people will have to work, but how they do so will be voluntary. If people did not work then some would live off the labour of those who do work and would be a reversion to capitalism. However, most social anarchists think that the problem of people trying not to work would be a very minor one in an anarchist society. This is because work is part of human life and an essential way to express oneself. With work being voluntary and self-managed, it will become like current day hobbies and many people work harder at their hobbies than they do at "real" work (this FAQ can be considered as an example of this!). It is the nature of employment under capitalism that makes it "work" instead of pleasure. Work need not be a part of the day that we wish would end. As Kropotkin argued (and has been subsequently supported by empirical evidence), it is **not** work that people hate. Rather it is overwork, in unpleasant circumstances and under the control of others that people hate. Reduce the hours of labour, improve the working conditions and place the work under self-management and work will stop being a hated thing. In his own words:

"Repugnant tasks will disappear, because it is evident that these unhealthy conditions are harmful to society as a whole. Slaves can submit to them, but free men create new conditions, and their work will be pleasant and infinitely more productive. The exceptions of today will be the rule of tomorrow." [**The Conquest of Bread**, p. 123]

This, combined with the workday being shortened, will help ensure that only an idiot would desire to work alone. As Malatesta argued, the *"individual who wished to supply his own material needs by working alone would be the slave of his labours."* [**The Anarchist Revolution**, p. 15]

So, enlightened self-interest would secure the voluntary labour and egalitarian distribution anarchists favour in the vast majority of the population. The parasitism associated with capitalism would be a thing of the past. Thus the problem of the "lazy" person fails to understand the nature of humanity nor the revolutionising effects of freedom and a free society on the nature and content of work.

I.4.15 What will the workplace of tomorrow look like?

Given the anarchist desire to liberate the artist in all of us, we can easily imagine that a free society would transform totally the working environment. No longer would workers be indifferent to their workplaces, but they would express themselves in transforming them into pleasant places, integrated into both the life of the local community and into the local environment. After all, *"no movement that raises the demand for workers' councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 146]

A glimpse of the future workplace can be seen from the actual class struggle. In the 40 day sit-down strike at Fisher Body plant #1 in Flint, Michigan in 1936, *"there was a community of two thousand strikers . . . Committees organised recreation, information, classes, a postal service, sanitation . . . There were classes in parliamentary procedure, public speaking, history of the labour movement."*

Graduate students at the University of Michigan gave courses in journalism and creative writing." [Howard Zinn, **A People's History of the United States**, p. 391] In the same year, during the Spanish Revolution, collectivised workplaces also created libraries and education facilities as well as funding schools, health care and other social necessities (a practice, we must note, that had started before the revolution when C.N.T. unions had funded schools, social centres, libraries and so on).

Therefore the workplace would be expanded to include education and classes in individual development (and so following Proudhon's comment that we should "*[o]rganise association, and by the same token, every workshop becoming a school, every worker becomes a master, every student an apprentice.*" [**No Gods, No Masters**, vol. 1, pp. 62-3]). This would allow work to become part of a wider community, drawing in people from different areas to share their knowledge and learn new insights and ideas. In addition, children would have part of their school studies with workplaces, getting them aware of the practicalities of many different forms of work and so allowing them to make informed decisions in what sort of activity they would be interested in pursuing when they were older.

Obviously, a workplace managed by its workers would also take care to make the working environment as pleasant as possible. No more "*sick building syndrome*" or unhealthy and stressful work areas. Buildings would be designed to maximise space and allow individual expression within them. Outside the workplace, we can imagine it surrounded by gardens and allotments which were tended by workers themselves, giving a pleasant surrounding to the workplace. There would, in effect, be a break down of the city/rural divide -- workplaces would be placed next to fields and integrated into the surroundings:

"Have the factory and the workshop at the gates of your fields and gardens, and work in them. Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women] . . . factories and workshops which men, women and children will not be driven by hunger, but will be attracted by the desire of finding an activity suited to their tastes, and where, aided by the motor and the machine, they will choose the branch of activity which best suits their inclinations." [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 197]

This vision of rural and urban integration is just part of the future anarchists see for the workplace. As Kropotkin argued, "*[w]e proclaim **integration**. . . a society of integrated, combined labour. A society where each individual is a producer of both manual and intellectual work; where each able-bodied human being is a worker, and where each worker works both in the field and the industrial workshop; where every aggregation of individuals, large enough to dispose of a certain variety of natural resources -- it may be a nation, or rather a region -- produces and itself consumes most of its own agricultural and manufactured produce.*" [**Op. Cit.**, p. 26]

The future workplace would be an expression of the desires of those who worked there. It would be based around a pleasant working environment, within gardens and with extensive library, resources for

education classes and other leisure activities. All this, and more, will be possible in a society based upon self-realisation and self-expression and one in which individuality is not crushed by authority and capitalism. To re-quote Kropotkin, *"if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories"* and *"[s]laves can submit to them, but free men will create new conditions, and their will be pleasant and infinitely more productive."* [**The Conquest of Bread**, p. 121 and p. 123]

"So in brief," argued William Morris, *"our buildings will be beautiful with their own beauty of simplicity as workshops . . . [and] besides the mere workshops, our factory will have other buildings which may carry ornament further than that, for it will need dinning-hall, library, school, places for study of different kinds, and other such structures."* Such a vision is possible and is only held back by capitalism which denounces such visions of freedom as *"uneconomic."* However, as William Morris points out:

*"Impossible I hear an anti-Socialist say. My friend, please to remember that most factories sustain today large and handsome gardens, and not seldom parks . . . **only** the said gardens, etc. are twenty miles away from the factory, **out of the smoke**, and are kept up for **one member of the factory only**, the sleeping partner to wit"* [**A Factory as It Might Be**, p. 9 and pp. 7-8]

Pleasant working conditions based upon the self-management of work can produce a workplace within which economic *"efficiency"* can be achieved without disrupting and destroying individuality and the environment (also see [section I.4.9](#) for a fuller discussion of anarchism and technology).

I.4.16 Won't a libertarian communist society be inefficient?

It is often argued that anarcho-communism and other forms of non-market libertarian-socialism would promote inefficiency and unproductive work. The basis of this argument is that without market forces to discipline workers and the profit motive to reward them, workers would have no incentive to work in a way which minimises time or resources. The net effect of this would be inefficient use of resources, particularly individual's time.

This is a valid point in some ways; for example, a society can (potentially) benefit from increasing productivity as the less time it takes to produce a certain good, the more time it gains for other activities (although, of course, in a class society the benefits of increased productivity generally accrue to, first and foremost, to those at the top). Indeed, for an individual, a decent society depends on people having time available for them to do what they want, to develop themselves in whatever way they want, to enjoy themselves. In addition, doing more with less can have a positive environment impact as well. And it is for these reasons that an anarchist society would be interested in promoting efficiency and productiveness during production.

While capitalism has turned improvements in productivity as a means of increasing work, enriching the few and generally proletarianising the working class, a free society would take a different approach to

the problem. As argued in [section I.4.3](#), a communist-anarchist society would be based upon this principle:

"for some much per day (in money today, in labour tomorrow) you are entitled to satisfy -- luxury excepted -- this or the other of your wants." [Peter Kropotkin, **Small Communal Experiments and why they fail**, p. 8]

Building upon this, we can imagine a situation where the average output for a given industry in a given amount of time is used to encourage efficiency and productivity. If a given syndicate can produce this average output with at least average quality in less time than the agreed average/minimum (and without causing ecological or social externalities, of course) then the members of that syndicate can and should have that time off.

This would be a powerful incentive to innovate, improve productivity, introduce new machinery and processes as well as work efficiently without reintroducing the profit motive and material inequality. With the possibility of having more time available for themselves and their own projects, people involved in productive activities would have a strong interest in being efficient. Of course, if the work in question is something they enjoy then any increases in efficiency would **enhance** what makes their work enjoyable and not eliminate it.

Rewarding efficiency with free time would also be an important means to ensure efficient use of resources as well as a means of reducing time spent in productive activity which was considered as boring or otherwise undesirable. The incentive of getting unpleasant tasks over with as quickly as possible would ensure that the tasks were done efficiently and that innovation was directed towards them.

Moreover, when it came to major investment decisions, a syndicate would be more likely to get others to agree to its plans if the syndicate had a reputation of excellence. This, again, would encourage efficiency as people would know that they could gain resources for their communities and workplaces (i.e. themselves) more easily if their work is efficient and reliable. This would be a key means of encouraging efficient and effective use of resources.

Similarly, an inefficient or wasteful syndicate would have negative reactions from their fellow workers. As we argued in section I.4.7 (["What will stop producers ignoring consumers?"](#)), a libertarian communist economy would be based on free association. If a syndicate or community got a reputation for being inefficient with resources then others would not associate with them (i.e. they would not supply them with materials, or place them at the end of the queue when deciding which production requests to supply, and so on). As with a syndicate which produced shoddy goods, the inefficient syndicate would also face the judgement of its peers. This will produce an environment which will encourage efficient use of resources and time.

All these factors, the possibility of increased free time, the respect and resources gained for an efficient

and excellent work and the possibility of a lack of co-operation with others for inefficient use of resources, would ensure that an anarchist-communist or anarchist-collectivist society would have no need to fear inefficiency. Indeed, by placing the benefits of increased efficiency into the hands of those who do the work, efficiency will no doubt increase.

With self-management, we can soon see human time being used efficiently and productively simply because those doing the work would have a direct and real interest in it. Rather than alienate their liberty, as under capitalism, they would apply their creativity and minds to transforming their productive activity in such a way as to make it enjoyable and not a waste of their time.

Little wonder Kropotkin argued, modern knowledge could be applied to a society in which people, *"with the work of their own hands and intelligence, and by the aid of the machinery already invented and to be invented, should themselves create all imaginable riches. Technics and science will not be lagging behind if production takes such a direction. Guided by observation, analysis and experiment, they will answer all possible demands. They will reduce the time required for producing wealth to any desired amount, so as to leave to everyone as much leisure as he or she may ask for. . . they guarantee . . . the happiness that can be found in the full and varied exercise of the different capacities of the human being, in work that need not be overwork."* [**Fields, Factories and Workshops Tomorrow**, pp. 198-9]

One last point. A free society will undoubtedly create new criteria for what counts as an efficient use of resources and time. What passes for *"efficient"* use capitalism often means what is efficient in increasing the power and profits of the few, without regard to the wasteful use of individual time, energy and potential as well as environmental and social costs. Such a narrow criteria for decision making or evaluating efficient production will not exist in an anarchist society (see our discussion of the irrational nature of the price mechanism in [section I.1.2](#), for example). While we use the term efficiency we mean the dictionary definition of efficiency (i.e. reducing waste, maximising use of resources) rather than what the capitalist market distorts this into (i.e. what creates most profits for the boss).

H.2 What parts of anarchism do Marxists particularly misrepresent?

Many people involved in politics will soon discover that Marxist groups (particularly Leninist and Trotskyist ones) organise "debates" about anarchism. These meetings are usually entitled "*Marxism and Anarchism*" and are usually organised after anarchists have been active in the area or have made the headlines somewhere.

These meetings, contrary to common sense, are usually not a debate as (almost always) no anarchists are invited to argue the anarchist viewpoint and, therefore, they present a one-sided account of "*Marxism and Anarchism*" in a manner which benefits the organisers. Usually, the format is a speaker distorting anarchist ideas and history for a long period of time (both absolutely in terms of the length of the meeting and relatively in terms of the boredom inflicted on the unfortunate attendees). It will soon become obvious to those attending that any such meeting is little more than an unprincipled attack on anarchism with little or no relationship to what anarchism is actually about. Those anarchists who attend such meetings usually spend most of their allotted (usually short) speaking time refuting the nonsense that is undoubtedly presented. Rather than a **real** discussion between the differences between anarchism and "Marxism" (i.e. Leninism), the meeting simply becomes one where anarchists correct the distortions and misrepresentations of the speaker in order to create the basis of a real debate. If the reader does not believe this summary we would encourage them to attend such a meeting and see for themselves.

Needless to say, we cannot hope to reproduce the many distortions produced in such meetings. However, when anarchists do hit the headlines (such as in the 1990 poll tax riot in London and the in current anti-globalisation movement), various Marxist papers will produce articles on "Anarchism" as well. Like the meetings, the articles are full of so many elementary errors that it takes a lot of effort to think they are the product of ignorance rather than a conscious desire to lie (the appendix "[Anarchism and Marxism](#)" contains a few replies to such articles and other Marxist diatribes on anarchism). In addition, many of the founding fathers of Marxism (and Leninism) also decided to attack anarchism in similar ways, so this activity does have a long tradition in Marxist circles (particularly in Leninist and Trotskyist ones). Sadly, Max Nettlau's comments on Marx and Engels are applicable to many of their followers today. He argued that they "*acted with that shocking lack of honesty which was characteristic of **all** their polemics. They worked with inadequate documentation, which, according to their custom, they supplemented with arbitrary declarations and conclusions -- accepted as truth by their followers although they were exposed as deplorable misrepresentations, errors and unscrupulous perversions of the truth.*" [A Short History of Anarchism, p. 132] As the reader will discover, this summary has not lost its relevance today. If they read Marxist "critiques" of anarchism they will soon discover the same repetition of "accepted" truths, the same inadequate documentation, the same arbitrary declarations and conclusions as well as an apparent total lack of familiarity with the source material they claim to be analysing.

This section of the FAQ lists and refutes many of the most common distortions Marxists make with regards to anarchism. As will become clear, many of the most common Marxist attacks on anarchism have little or no basis in fact but have simply been repeated so often by Marxists that they have entered the ideology (the idea that anarchists think the capitalist class will just disappear being, probably, the most famous one, closely followed by anarchism being in favour of "*small-scale*" production). We will not bother to refute the more silly Marxist assertions (such as anarchists are against organisation or are not "socialists"). Instead, we will concentrate on the more substantial and most commonly repeated ones. Of course, many of these distortions and misrepresentations coincide and flow into each other, but there are many which can be considered distinct issues and will be discussed in turn.

Moreover, Marxists make many major and minor distortions of anarchist theory in passing. For example, Engels asserted in his infamous diatribe "*The Bakuninists at work*" that Bakunin "[a]s early as September 1870 (in his *Lettres a un francais* [Letters to a Frenchman]) . . . had declared that the only way to drive the Prussians out of France by a revolutionary struggle was to do away with all forms of centralised leadership and leave each town, each village, each parish to wage war on its own." [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 141] In fact, the truth is totally different.

Bakunin does, of course, reject "*centralised leadership*" as it would be "*necessarily very circumscribed, very short-sighted, and its limited perception cannot, therefore, penetrate the depth and encompass the whole complex range of popular life.*" However, it is a falsehood to state that he denies the need for co-ordination of struggles and federal organisations from the bottom up. As he puts it, the revolution must "*foster the self-organisation of the masses into autonomous bodies, federated from the bottom upwards.*" With regards to the peasants, he thinks they will "*come to an understanding, and form some kind of organisation . . . to further their mutual interests . . . the necessity to defend their homes, their families, and their own lives against unforeseen attack . . . will undoubtedly soon compel them to contract new and mutually suitable arrangements.*" The peasants would be "*freely organised from the bottom up.*" ["*Letters to a Frenchman on the present crisis*", **Bakunin on Anarchism**, p. 196, p. 206 and p. 207] In this he repeated his earlier arguments concerning social revolution -- arguments that Engels was well aware of. In other words, Engels deliberately misrepresented Bakunin's political ideas.

Similarly, we find Trotsky asserting in 1937 that anarchists are "*willing to replace Bakunin's patriarchal 'federation of free communes' by the more modern federation of free soviets.*" [**Stalinism and Bolshevism**] It is hard to know where to start in this incredulous rewriting of history. Firstly, Bakunin's federation of free communes was, in fact, based on workers' councils ("soviets"). As he put it, "*the federative Alliance of all working men's associations . . . will constitute the Commune*" and "*revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation.*" [**Michael Bakunin: Selected Writings**, p. 170 and p. 172] The similarities with workers councils are clear. Little wonder historian Paul Avrich summarised as follows:

"As early as the 1860's and 1870's, the followers of Proudhon and Bakunin in the First International were proposing the formation of workers' councils designed both as a

weapon of class struggle against capitalists and as the structural basis of the future libertarian society." [**The Russian Anarchists**, p. 73]

As for the charge of supporting "*patriarchal*" communes, nothing could be further from the truth. In his discussion of the Russian peasant commune (the mir) Bakunin argued that "*patriarchalism*" was one of its "*three dark features*," indeed "*the main historical evil . . . against which we are obliged to struggle with all our might.*" [**Statism and Anarchy**, p. 206 and pp. 209-10]

As can be seen Trotsky's summary of Bakunin's ideas is totally wrong. Not only did his ideas on the organisation of the free commune as a federation of workers' associations predate the soviets by decades (and so much more "*modern*" than Marxist conceptions), he also argued against patriarchal relationships and urged their destruction in the Russian peasant commune (and elsewhere). Indeed, if any one fits Trotsky's invention it is Marx, not Bakunin. After all, Marx came round (eventually) to Bakunin's position that the peasant commune could be the basis for Russia to jump straight to socialism (and so bypassing capitalism) but without Bakunin's critical analysis of that institution and its patriarchal and other "*dark*" features. Similarly, Marx never argued that the future socialist society would be based on workers' associations and their federation (i.e. workers' councils). His vision of revolution was formulated in typically bourgeois structures such as the Paris Commune's municipal council.

We could go on, but space precludes discussing every example. Suffice to say, it is not wise to take any Marxist assertion of anarchist thought or history at face value. A common technique is to quote anarchist writers out of context or before they become anarchists. For example, Marxist Paul Thomas argues that Bakunin favoured "*blind destructiveness*" and yet quotes more from Bakunin's pre-anarchist works (as well as Russian nihilists) than Bakunin's anarchist works to prove his claim. [**Karl Marx and the Anarchists**, pp. 288-90] Similarly, he claims that Bakunin "*defended the federes of the Paris Commune of 1871 on the grounds that they were strong enough to dispense with theory altogether,*" yet his supporting quote does not, in fact say this. [**Op. Cit.**, p. 285] What Bakunin was, in fact, arguing was simply that theory must progress from experience and that any attempt to impose a theory on society would be doomed to create a "*Procrustean bed*" as no government could "*embrace the infinite multiplicity and diversity of the real aspirations, wishes and needs whose sum total constitutes the collective will of a people.*" He explicitly contrasted the Marxist system of "*want[ing] to impose science upon the people*" with the anarchist desire "*to diffuse science and knowledge among the people, so that the various groups of human society, when convinced by propaganda, may organise and spontaneously combine into federations, in accordance with their natural tendencies and their real interests, but never according to a plan traced in advance and imposed upon the ignorant masses by a few 'superior' minds.*" [**The Political Theory of Bakunin**, p. 300] A clear misreading of Bakunin's argument but one which fits nicely into Marxist preconceptions of Bakunin and anarchism in general.

This tendency to quote out of context or from periods when anarchists were not anarchists probably explains why so many of these Marxist accounts of anarchism are completely lacking in references. Take, for example, the British SWP's Pat Stack who wrote one of the most inaccurate diatribes against anarchism the world has had the misfortune to see (namely "*Anarchy in the UK?*" which was published in issue no. 246 of **Socialist Review**). There is not a single reference in the whole article,

which is just as well, given the inaccuracies contained in it. Without references, the reader would not be able to discover for themselves the distortions and simple errors contained in it. For example, Stack asserts that Bakunin "*claimed a purely 'instinctive socialism.'*" However, the truth is different and this quote from Bakunin is one by him comparing himself and Marx in the 1840s!

In fact, the **anarchist** Bakunin argued that "*instinct as a weapon is not sufficient to safeguard the proletariat against the reactionary machinations of the privileged classes,*" as instinct "*left to itself, and inasmuch as it has not been transformed into consciously reflected, clearly determined thought, lends itself easily to falsification, distortion and deceit.*" [**The Political Philosophy of Bakunin**, p. 215] Bakunin saw the process of class struggle as the means of transforming instinct into conscious thought. As he put it, the "*goal, then, is to make the worker fully aware of what he [or she] wants, to unjam within him [or her] a steam of thought corresponding to his [or her] instinct.*" This is done by "*a single path, that of **emancipation through practical action**,*" by "*workers' solidarity in their struggle against the bosses,*" of "*collective struggle of the workers against the bosses.*" This would be complemented by socialist organisations "*propagandis[ing] its principles.*" [**The Basic Bakunin**, p. 102, p. 103 and p. 109] Clearly, Stack is totally distorting Bakunin's ideas on the subject.

This technique of quoting Bakunin when he spoke about (or when wrote in) his pre-anarchist days in the 1840s, i.e. nearly 20 years **before** he became an anarchist, or from Proudhon's posthumously published work on property (in which Proudhon saw small-scale property as a bulwark against state tyranny) to attack anarchism is commonplace. As such, it is always wise to check the source material and any references (assuming that they are provided). Only by doing this can it be discovered whether a quote reflects the opinions of individuals when they were anarchists or whether they are referring to periods when they were no longer, or had not yet become, anarchists.

Ultimately, though, these kinds of articles by Marxists simply show the ideological nature of their own politics and say far more about Marxism than anarchism. After all, if their politics were so strong they would not need to distort anarchist ideas! In addition, these essays are usually marked by a lot of (usually inaccurate) attacks on the ideas (or personal failings) of individual anarchists (usually Proudhon and Bakunin and sometimes Kropotkin). No modern anarchist theorist is usually mentioned, never mind discussed. Obviously, for most Marxists, anarchists must repeat parrot-like the ideas of these "great men." However, while Marxists may do this, anarchists have always rejected this approach. We deliberately call ourselves **anarchists** rather than Proudhonists, Bakuninists, Kropotkinists, or after any other person. As Malatesta argued in 1876 (the year of Bakunin's death) "*[w]e follow ideas and not men, and rebel against this habit of embodying a principle in a man.*" [**Life and Ideas**, p. 198]

Therefore, anarchists, unlike many (most?) Marxists do not believe that some prophet wrote down the scriptures in past centuries and if only we could reach a correct understanding of these writings today we would see the way forward. Chomsky put it extremely well when he argued that:

"The whole concept of Marxist or Freudian or anything like that is very odd. These concepts belong to the history of organised religion. Any living person, no matter how

gifted, will make some contributions intermingled with error and partial understanding. We try to understand and improve on their contributions and eliminate the errors. But how can you identify yourself as a Marxist, or a Freudian, or an X-ist, whoever X may be? That would be to treat the person as a God to be revered, not a human being whose contributions are to be assimilated and transcended. It's a crazy idea, a kind of idolatry." [The Chomsky Reader, pp. 29-30]

This means that anarchists recognise that any person, no matter how great or influential, are just human. They make mistakes, they fail to live up to all the ideals they express, they are shaped by the society they live in, and so on. Anarchists recognise this fact and extract the positive aspects of past anarchist thinkers, reject the rest and develop what we consider the living core of their ideas. We develop the ideas and analyses of these pioneers of the anarchist ideal, reject the rubbish and embrace the good, learn from history and constantly try to bring anarchist ideas up-to-date (after all, a lot has changed since the days of Proudhon, Bakunin and Kropotkin and this has to be taken into account). As Max Nettlau put it with regards to Proudhon, *"we have to extract from his work useful teachings that would be of great service to our modern libertarians, who nevertheless have to find their own way from theory to practice and to the critique of our present-day conditions, as Proudhon did in his time. This does not call for a slavish imitation; it implies using his work to inspire us and enable us to profit by his experience."* [A Short History of Anarchism, pp. 46-7] Similarly for other anarchists -- we see them as a source of inspiration upon which to build rather than a template which to copy. This means to attack anarchism by, say, attacking Bakunin's or Proudhon's personal failings is to totally miss the point. While anarchists may be inspired by the ideas of, say, Bakunin or Proudhon it does not mean we blindly follow all of their ideas. Far from it! We critically analysis their ideas and keep what is living and reject what is useless or dead. Sadly, such common sense is lacking in many who critique anarchism.

However, the typical Marxist approach does have its benefits from a political perspective. As Albert Meltzer pointed out, *"[i]t is very difficult for Marxist-Leninists to make an objective criticism of Anarchism, as such, because by its nature it undermines all the suppositions basic to Marxism. If Marxism is held out to be indeed **the** basic working class philosophy, and the proletariat cannot owe its emancipation to anyone but itself, it is hard to go back on it and say that the working class is not yet ready to dispense with authority placed over it. Marxism therefore normally tries to refrain from criticising anarchism as such -- unless driven to doing so, when it exposes its own authoritarian . . . and concentrates its attacks not on **anarchism**, but on **anarchists**."* [Anarchism: Arguments for and Against, p. 37] Needless to say, this technique is the one usually applied by Marxists (although, we must stress that often their account of the ideas of Proudhon, Bakunin, and Kropotkin are so distorted that they fail even to do this!).

So anarchist theory has developed since Proudhon, Bakunin and Kropotkin. At each period in history anarchism advanced in its understanding of the world, the anarchism of Bakunin was a development of that of Proudhon, these ideas were again developed by the anarcho-communists of the 1880s and by the syndicalists of the 1890's, by the Italian Malatesta, the Russian Kropotkin, the Mexican Flores Magon and many other individuals and movements. Today we stand on their shoulders, not at their feet.

As such, to concentrate on the ideas of a few "*leaders*" misses the point totally. Ideas change and develop and anarchism has changed as well. While it contains many of the core insights of, say, Bakunin, it has also developed them and added to them. It has, concretely, taken into account, say, the lessons of the Russian and Spanish revolutions and so on. As such, even assuming that Marxist accounts of certain aspects of the ideas of Proudhon, Bakunin and Kropotkin were correct, they would have to be shown to be relevant to modern anarchism to be of any but historical interest. Sadly, Marxists generally fail to do this and, instead, we are subject to a (usually inaccurate) history lesson.

In order to understand, learn from and transcend previous theorists we must honestly present their ideas. Unfortunately many Marxists do not do this and so this section of the FAQ involves correcting the many mistakes, distortions, errors and lies that Marxists have subjected anarchism to. Hopefully, with this done, a real dialogue can develop between Marxists and anarchists. Indeed, this has happened between libertarian Marxists (such as council communists and Situationists) and anarchists and both tendencies have benefited from it. Perhaps this dialogue between libertarian Marxists and anarchists is to be expected, as the mainstream Marxists have often misrepresented the ideas of libertarian Marxists as well!

H.2.1 Do anarchists reject defending a revolution?

According to many Marxists anarchists either reject the idea of defending a revolution or think that it is not necessary.

The Trotskyists of **Workers' Power** present a typical Marxist account of what **they** consider as anarchist ideas on this subject:

"the anarchist conclusion is not to build any sort of state in the first place -- not even a democratic workers' state. But how could we stop the capitalists trying to get their property back, something they will definitely try and do?"

"Should the people organise to stop the capitalists raising private armies and resisting the will of the majority? If the answer is yes, then that organisation - whatever you prefer to call it -- is a state: an apparatus designed to enable one class to rule over another.

*"The anarchists are rejecting something which is necessary if we are to beat the capitalists and have a chance of developing a classless society." ["What's wrong with anarchism?", **World Revolution: PragueS26 2000**, pp. 12-13, p. 13]*

It would be simple to quote Malatesta on this issue and leave it at that. As he argued in 1891, some people "*seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for the **freedom** of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas.*" [**Anarchy**, p. 41] Pretty much common sense, so you would think! Sadly, this appears to not be the case. As Malatesta

pointed out 30 years later, the followers of Bolshevism *"are incapable of conceiving freedom and of respecting for all human beings the dignity they expect, or should expect, from others. If one speaks of freedom they immediately accuse one of wanting to respect, or at least tolerate, the freedom to oppress and exploit one's fellow beings."* [**Life and Ideas**, p. 145] As such, we have to explain anarchist ideas on the defence of a revolution and why this necessity need not imply a state and, if it does, then it signifies the end of the revolution.

The argument by **Workers' Power** is very common with the Leninist left and contains numerous fallacies and so we shall base our discussion on it. This discussion, of necessity, implies three issues. Firstly, we have to show that anarchists have always seen the necessity of defending a revolution. This shows that the anarchist opposition to the *"democratic workers' state"* (or *"dictatorship of the proletariat"*) has nothing to do with beating the ruling class and stopping them regaining their positions of power. Secondly, we have to discuss the anarchist and Marxist definitions of what constitutes a *"state"* and show what they have in common and how they differ. Thirdly, we must summarise why anarchists oppose the idea of a *"workers' state"* in order for the **real** reasons why anarchists oppose it to be understood. Each issue will be discussed in turn.

For revolutionary anarchists, it is a truism that a revolution will need to defend itself against counter-revolutionary threats. Bakunin, for example, while strenuously objecting to the idea of a *"dictatorship of the proletariat"* (see [section H.1.1](#) for details) also thought a revolution would need to defend itself. In his words:

"Immediately after established governments have been overthrown, communes will have to reorganise themselves along revolutionary lines . . . In order to defend the revolution, their volunteers will at the same time form a communal militia. But no commune can defend itself in isolation. So it will be necessary to radiate revolution outward, to raise all of its neighbouring communes in revolt . . . and to federate with them for common defence." [**No Gods, No Masters**, vol. 1, p. 142]

And:

"the Alliance of all labour associations . . . will constitute the Commune . . . there will be a standing federation of the barricades and a Revolutionary Communal Council . . . [made up of] delegates . . . invested with binding mandates and accountable and revocable at all times . . . all provinces, communes and associations . . . [will] delegate deputies to an agreed place of assembly (all . . . invested with binding mandated and accountable and subject to recall), in order to found the federation of insurgent associations, communes and provinces . . . and to organise a revolutionary force with the capacity of defeating the reaction . . . it is through the very act of extrapolation and organisation of the Revolution with an eye to the mutual defences of insurgent areas that the universality of the Revolution . . . will emerge triumphant." [**Op. Cit.**, vol. 1, pp. 155-6]

Malatesta agreed, arguing for the *"creation of voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention."* The workers must *"take possession of the factories"* and *"federate amongst themselves"* and only *"the people in arms, in possession of the land, the factories and all the natural wealth"* could defend a revolution [**Life and Ideas**, p. 166, p. 165 and p. 170] Alexander Berkman concurred: *"The armed workers and peasants are the only effective defence of the revolution. By means of their unions and syndicates they must always be on guard against counter-revolutionary attack."* [**ABC of Anarchism**, p. 82] Emma Goldman clearly and unambiguously stated that she had *"always insisted that an armed attack on the Revolution must be met with armed force"* and that *"an armed counter-revolutionary and fascist attack can be met in no way except by an armed defence."* [**Vision on Fire**, p. 222 and p. 217]

Clearly, anarchism has always recognised the necessity of defending a revolution and proposed ideas to ensure it (ideas applied with great success by, for example, the Makhnovists in the Ukrainian Revolution and the C.N.T militias during the Spanish). As such, any assertion that anarchism rejects the necessity of defending a revolution are simply false.

Which, of course, brings us to the second assertion, namely that any attempt to defend a revolution means that a state has been created (regardless of what it may be called). For anarchists, such an argument simply shows that Marxists do not really understand what a state is. While the Trotskyist definition of a *"state"* is *"an apparatus designed to enable one class to rule another,"* the anarchist definition is somewhat different. Anarchists, of course, do not deny that the modern state is (to use Malatesta's excellent expression) *"the bourgeoisie's servant and gendarme."* [**Anarchy**, p. 20] Every state that has ever existed has defended the power of a minority class and, unsurprisingly, has developed certain features to facilitate this. The key one is centralisation of power. This ensures that the working people are excluded from the decision making process and power remains a tool of the ruling class. As such, the centralisation of power (while it may take many forms) is the key means by which a class system is maintained and, therefore, a key aspect of a state. As Kropotkin put, the *"state idea . . . includes the existence of a power situated above society . . . a territorial concentration as well as the concentration of many functions of the life of societies in the hands of a few."* [**Selected Writings on Anarchism and Revolution**, p. 213] This was the case with representative democracy:

"To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more. . ." [Kropotkin, **Words of a Rebel**, p. 143]

This meant that the *"representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of events imposes it."* [**Op. Cit.**, p. 125] So while we agree with Marxists that the main function of the state is to defend class society, we also stress the structure of the state has evolved to execute that role.

In the words of Rudolf Rocker:

"[S]ocial institutions . . . do not arise arbitrarily, but are called into being by special needs to serve definite purposes . . . The newly arisen possessing classes had need of a political instrument of power to maintain their economic and social privileges over the masses of their own people . . . Thus arose the appropriate social conditions for the evolution of the modern state, as the organ of political power of privileged castes and classes for the forcible subjugation and oppression of the non-possessing classes . . . Its external forms have altered in the course of its historical development, but its functions have always been the same . . . And just as the functions of the bodily organs of . . . animals cannot be arbitrarily altered, so that, for example, one cannot at will hear with his eyes and see with his ears, so also one cannot at pleasure transform an organ of social oppression into an instrument for the liberation of the oppressed. The state can only be what it is: the defender of mass-exploitation and social privileges, and creator of privileged classes." [Anarcho-Syndicalism, p. 20]

As such, a new form of society, one based on the participation of all in the affairs of society (and a classless society can be nothing else) means the end of the state. This is because it has been designed to **exclude** the participation a classless society needs in order to exist. In anarchist eyes, it is an abuse of the language to call the self-managed organisations by which the former working class manage (and defend) a free society a state. If it **was** simply a question of consolidating a revolution and its self-defence then there would be no argument:

"But perhaps the truth is simply this: . . . [some] take the expression 'dictatorship of the proletariat' to mean simply the revolutionary action of the workers in taking possession of the land and the instruments of labour, and trying to build a society and organise a way of life in which there will be no place for a class that exploits and oppresses the producers.

"Thus constructed, the 'dictatorship of the proletariat' would be the effective power of all workers trying to bring down capitalist society and would thus turn into Anarchy as soon as resistance from reactionaries would have ceased and no one can any longer seek to compel the masses by violence to obey and work for him. In which case, the discrepancy between us would be nothing more than a question of semantics. Dictatorship of the proletariat would signify the dictatorship of everyone, which is to say, it would be a dictatorship no longer, just as government by everybody is no longer a government in the authoritarian, historical and practical sense of the word.

"But the real supporters of 'dictatorship of the proletariat' do not take that line, as they are making quite plain in Russia. Of course, the proletariat has a hand in this, just as the people has a part to play in democratic regimes, that is to say, to conceal the reality of things. In reality, what we have is the dictatorship of one party, or rather, of one' party's leaders: a genuine dictatorship, with its decrees, its penal sanctions, its henchmen and

above all its armed forces, which are at present [1919] also deployed in the defence of the revolution against its external enemies, but which will tomorrow be used to impose the dictator's will upon the workers, to apply a break on revolution, to consolidate the new interests in the process of emerging and protect a new privileged class against the masses." [Malatesta, **No Gods, No Masters**, vol. 2, pp. 38-9]

The question is, therefore, one of **who** "seizes power" -- will it be the mass of the population or will it be a party claiming to represent the mass of the population. The difference is vital and it confuses the issue to use the same word "state" to describe two such fundamentally different structures as a "bottom-up" self-managed communal federation and a "top-down" hierarchical centralised organisation (such as has been every state that has existed). This explains why anarchists reject the idea of a "democratic workers' state" as the means by which a revolution defends itself. Rather than signify working class power or management of society, it signifies the opposite -- the seizure of power of a minority (in this case, the leaders of the vanguard party).

Anarchists argue that the state is designed to exclude the mass of the population from the decision making process. This, ironically for Trotskyism, was one of the reasons why leading Bolsheviks (including Lenin and Trotsky) argued for a workers state. The centralisation of power implied by the state was essential so that the vanguard party could ignore the "the will of the majority." This particular perspective was clearly a lesson they learned from their experiences during the Russian Revolution.

As noted in [section H.1.2](#), Lenin was arguing in 1920 that "the dictatorship of the proletariat cannot be exercised through an organisation embracing the whole of the class, because in all capitalist countries (and not only over here, in one of the most backward) the proletariat is still so divided, so degraded, and so corrupted in parts . . . that an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship. It can be exercised only by a vanguard . . . Such is the basic mechanism of the dictatorship of the dictatorship of the proletariat, and the essentials of transitions from capitalism to communism . . . for the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation." [**Collected Works**, vol. 32, p. 21]

This argument, as can be seen, was considered of general validity and, moreover, was merely stating mainstream Bolshevik ideology. It was repeated in March 1923 by the Central Committee of the Communist Party in a statement issued to mark the 25th anniversary of the founding of the Communist Party. This statement summarised the lessons gained from the Russian revolution. It stated that "the party of the Bolsheviks proved able to stand out fearlessly against the vacillations within its own class, vacillations which, with the slightest weakness in the vanguard, could turn into an unprecedented defeat for the proletariat." Vacillations, of course, are expressed by workers' democracy. Little wonder the statement rejects it: "The dictatorship of the working class finds its expression in the dictatorship of the party." ["To the Workers of the USSR" in G. Zinoviev, **History of the Bolshevik Party**, p. 213, p. 214] It should be noted that this Central Committee included Trotsky who, in the same year, was stating that "[i]f there is one question which basically not only does not require revision but does not so much as admit the thought of revision, it is the question of the dictatorship of the Party." [**Leon Trotsky Speaks**,

p. 158]

Needless to say, **Workers' Power** (like most Trotskyists) blame the degeneration of the Russian revolution on the Civil War and its isolation. However, as these statements make clear, the creation of a party dictatorship was not seen in these terms. Rather, it was considered a necessity to suppress democracy and replace it by party rule. Indeed, as noted in [section H.1.2](#), Trotsky was still arguing in 1937 for the "*objective necessity*" for the "*dictatorship of a party*" due to the "*heterogeneity*" of the working class. [**Writings 1936-37**, pp. 513-4] Moreover, as we discuss in detail in the appendix on "[What happened during the Russian Revolution?](#)", the Bolshevik undermining of working class autonomy and democracy started **well** before the outbreak of civil war, thus confirming anarchist theory. These conclusions of leading Leninists simply justified the actions undertaken by the Bolsheviks from the start.

This is why anarchists reject the idea of a "*democratic workers' state*." Simply put, as far as it is a state, it cannot be democratic and in as far as it is democratic, it cannot be a state. The Leninist idea of a "*workers' state*" means, in fact, the seizure of power by the party. This, we must stress, naturally follows from the idea of the state. It is designed for minority rule and excludes, by its very nature, mass participation. As can be seen, this aspect of the state is one which the leading lights of Bolshevik agreed with. Little wonder, then, that in practice the Bolshevik regime suppressed of any form of democracy which hindered the power of the party (see the appendix on "[What happened during the Russian Revolution?](#)"). Maurice Brinton sums up the issue well when he argued that "*'workers' power' cannot be identified or equated with the power of the Party -- as it repeatedly was by the Bolsheviks . . . What 'taking power' really implies is that the vast majority of the working class at last realises its ability to manage both production and society -- and organises to this end.*" [**The Bolsheviks and Workers' Control**, p. xiv]

In summary, therefore, anarchists reject the idea that the defence of a revolution can be conducted by a state. As Bakunin once put it, there is the "*Republic-State*" and there is "*the system of the Republic-Commune, the Republic-Federation, i.e. the system of **Anarchism**. This is the politics of the Social Revolution, which aims at the abolition of the **State** and establishment of the economic, entirely free organisation of the people -- organisation from bottom to top by means of federation.*" [**The Political Philosophy of Bakunin**, p. 314] Indeed, creating a new state will simply destroy the most important gain of any revolution -- working class autonomy -- and its replacement by another form of minority rule (by the party). Anarchists have always argued that the defence of a revolution must not be confused with the state and so argue for the abolition of the state **and** the defence of a revolution (also see [section H.1.3](#) for more discussion). Only when working class people actually run themselves society will a revolution be successful. For anarchists, this means that "*effective emancipation can be achieved only by the **direct, widespread, and independent action . . . of the workers themselves, grouped . . . in their own class organisations . . . on the basis of concrete action and self-government, helped but not governed, by revolutionaries working in the very midst of, and not above the mass and the professional, technical, defence and other branches.***" [Voline, **The Unknown Revolution**, p. 197] This means that anarchists argue that the capitalist state cannot be transformed or adjusted, but has to be smashed by a social

revolution and replaced with organisations and structures created by working class people during their own struggles (see [section H.1.4](#) for details).

For a further discussion of anarchist ideas on defending a revolution, please consult sections [I.5.14](#) and [J.7.6](#).

H.2.2 Do anarchists reject "*class conflict*" as "*the motor of change*" and "*collective struggle*" as the "*means*"?

Of course not. Anarchists have always taken a keen interest in the class struggle, in the organisation, solidarity and actions of working class people. Indeed, class struggle plays a key role in anarchist theory and to assert otherwise is simply to lie about anarchism. Sadly, Marxists have been known to make such an assertion.

For example, Pat Stack of the British SWP argued that anarchists "*dismiss . . . the importance of the collective nature of change*" and so "*downplays the centrality of the working class*" in the revolutionary process. This, he argues, means that for anarchism the working class "*is not the key to change.*" He stresses that for Proudhon, Bakunin and Kropotkin "*revolutions were not about . . . collective struggle or advance.*" Indeed, that anarchism "*despises the collectivity.*" Amazingly he argues that for Kropotkin, "*far from seeing class conflict as the dynamic for social change as Marx did, saw co-operation being at the root of the social process.*" Therefore, "*[i]t follows that if class conflict is not the motor of change, the working class is not the agent and collective struggle not the means. Therefore everything from riot to bomb, and all that might become between the two, was legitimate when ranged against the state, each with equal merit.*" ["Anarchy in the UK?", **Socialist Review**, no. 246] Needless to say, he makes the usual exception for anarcho-syndicalists, thereby showing his total ignorance of anarchism **and** syndicalism (see [section H.2.8](#)).

Indeed, these assertions are simply incredible. It is hard to believe that anyone who is a leading member of a Leninist party could write such nonsense which suggests that Stack is aware of the truth and simply decides to ignore it. All in all, it is **very** easy to refute these assertions. All we have to do is, unlike Stack, to quote from the works of Bakunin, Kropotkin and other anarchists. Even the briefest familiarity with the writings of revolutionary anarchism would soon convince the reader that Stack really does not know what he is talking about.

Take, for example, Bakunin. Rather than reject class conflict, collective struggle or the key role of the working class, Bakunin based his political ideas on all three. As he put it, there was, "*between the proletariat and the bourgeoisie, an irreconcilable antagonism which results inevitably from their respective stations in life.*" He stressed "*war between the proletariat and the bourgeoisie is unavoidable*" and would only end with the "*abolition of the bourgeoisie as a distinct class.*" In order the worker to "*become strong*" they "*must unite*" with other workers in "*the union of all local and national workers' associations into a world-wide association, the great International Working-Men's Association.*" It

was only *"through practice and collective experience . . . [and] the progressive expansion and development of the economic struggle [that] will bring [the worker] more to recognise his [or her] true enemies: the privileged classes, including the clergy, the bourgeoisie, and the nobility; and the State, which exists only to safeguard all the privileges of those classes."* There was *"but a single path, that of **emancipation through practical action** . . . [which] has only one meaning. It means workers' solidarity in their struggle against the bosses. It means **trades-unions, organisation, and the federation of resistance funds**."* Then, *"when the revolution -- brought about by the force of circumstances -- breaks out, the International will be a real force and know what it has to do . . . take the revolution into its own hands . . . [and become] an earnest international organisation of workers' associations from all countries [which will be] capable of replacing this departing political world of States and bourgeoisie."* [*"The Policy of the International"*, **The Basic Bakunin**, pp. 97-8, p. 103 and p. 110]

Hardly the words of a man who rejected class conflict, the working class and the collective nature of change! Nor is this an isolated argument from Bakunin, they recur continuously throughout Bakunin's works. For example, he argued that socialists must *"[o]rganise the city proletariat in the name of revolutionary Socialism, and in doing this unite it into one preparatory organisation together with the peasantry."* [**The Political Philosophy of Bakunin**, p. 378] Similarly, he argued that *"equality"* was the *"aim"* of the International Workers' Association and *"the organisation of the working class its strength, the unification of the proletariat the world over . . . its weapon, its only policy."* He stressed that *"to create a people's force capable of crushing the military and civil force of the State, it is necessary to organise the proletariat."* [quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, p. 95 and p. 254]

Strikes played a very important role in Bakunin's ideas (as they do in all revolutionary anarchist thought). He saw the strike as *"the beginnings of the social war of the proletariat against the bourgeoisie . . . Strikes are a valuable instrument from two points of view. Firstly, they electrify the masses . . . awaken in them the feeling of the deep antagonism which exists between their interests and those of the bourgeoisie . . . secondly they help immensely to provoke and establish between the workers of all trades, localities and countries the consciousness and very fact of solidarity: a twofold action, both negative and positive, which tends to constitute directly the new world of the proletariat, opposing it almost in an absolute way to the bourgeois world."* [cited in Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism 1872-1886**, pp. 216-217]

Indeed, for Bakunin, strikes train workers for social revolution as they *"create, organise, and form a workers' army, an army which is bound to break down the power of the bourgeoisie and the State, and lay the ground for a new world."* [Bakunin, **The Political Philosophy of Bakunin**, pp. 384-5] Moreover, when *"strikes spread from one place to another, they come close to turning into a general strike. And with the ideas of emancipation that now hold sway over the proletariat, a general strike can result only in a great cataclysm which forces society to shed its old skin."* The very process of strikes, as noted, would create the framework of a socialist society as *"strikes indicate a certain collective strength already"* and *"because each strike becomes the point of departure for the formation of new groups."* [**The Basic Bakunin**, pp. 149-50] Thus the revolution would be *"an insurrection of all the people and the voluntary organisation of the workers from below upward."* [**Statism and Anarchy**, p.

179]

As we argue in sections [H.1.4](#) and [I.2.3](#), the very process of collective class struggle would, for Bakunin and other anarchists, create the basis of a free society. Thus, in Bakunin's eyes, the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal."* He saw the free society as being based on *"the land, the instruments of work and all other capital [will] become the collective property of the whole of society and be utilised only by the workers, in other words by the agricultural and industrial associations."* [**Michael Bakunin: Selected Writings**, p. 206 and p. 174] In other words, the basic structure created by the revolution would be based on the working classes own combat organisations, as created in their struggles within, but against, oppression and exploitation.

The link between present and future would be labour unions (workers' associations) created by working people in their struggle against exploitation and oppression. These played the key role in Bakunin's politics both as the means to abolish capitalism and the state and as the framework of a socialist society (this support for workers' councils predates Marxist support by five decades, incidentally). When he became an anarchist, Bakunin always stressed that it was essential to *"[o]rganise always more and more the practical militant international solidarity of the toilers of all trades and of all countries, and remember . . . you will find an immense, an irresistible force in this universal collectivity."* [quoted by Kenafick, **Op. Cit.**, p. 291] Quite impressive for someone who was a founding father of a theory which, according to Stack, downplayed the *"centrality of the working class,"* argued that the working class was *"not the key to change,"* dismissed *"the importance of the collective nature of change"* as well as *"collective struggle or advance"* and *"despises the collectivity"*! Clearly, to argue that Bakunin held any of these views simply shows that the person making such statements does not have a clue what they are talking about.

The same, needless to say, applies to all revolutionary anarchists. Kropotkin built upon Bakunin's arguments and, like him, based his politics on collective working class struggle and organisation. He consistently stressed that *"the Anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of Labour against Capital and its protector -- the State."* Such struggle, *"beetter than any other indirect means, permits the worker to obtain some temporary improvements in the present conditions of work, while it opens his eyes to the evil done by Capitalism and the State that supports it, and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State."* [**Evolution and Environment**, pp. 82-3] In his article on "Anarchism" for the **Encyclopaedia Britannica**, he stressed that anarchists *"have endeavoured to promote their ideas directly amongst the labour organisations and to induce those unions to a direct struggle against capital, without placing their faith in parliamentary legislation."* [**Kropotkin's Revolutionary Pamphlets**, p. 287]

Far from denying the importance of collective class struggle, he actually stressed it again and again. As he once wrote, *"to make the revolution, the mass of workers will have to organise themselves. Resistance*

and the strike are excellent means of organisation for doing this." He argued that it was *"a question of organising societies of resistance for all trades in each town, of creating resistance funds against the exploiters, of giving more solidarity to the workers' organisations of each town and of putting them in contact with those of other towns, of federating them . . . Workers' solidarity must no longer be an empty word by practised each day between all trades and all nations."* [quoted by Caroline Cahm, **Op. Cit.**, pp. 255-6] Kropotkin could not have been clearer.

Clearly, Kropotkin was well aware of the importance of popular, mass, struggles. As he put it, anarchists *"know very well that any popular movement is a step towards the social revolution. It awakens the spirit of revolt, it makes men [and women] accustomed to seeing the established order (or rather the established disorder) as eminently unstable."* [**Words of a Rebel**, p. 203] As regards the social revolution, he argues that *"a decisive blow will have to be administered to private property: from the beginning, the workers will have to proceed to take over all social wealth so as to put it into common ownership. This revolution can only be carried out by the workers themselves."* In order to do this, the masses have to build their own organisation as the *"great mass of workers will not only have to constitute itself outside the bourgeoisie . . . it will have to take action of its own during the period which will precede the revolution . . . and this sort of action can only be carried out when a strong **workers' organisation** exists."* This meant, of course, it was *"the mass of workers we have to seek to organise. We . . . have to submerge ourselves in the organisation of the people . . . When the mass of workers is organised and we are with it to strengthen its revolutionary idea, to make the spirit of revolt against capital germinate there . . . then it will be the social revolution."* [quoted by Caroline Cahm, **Op. Cit.**, pp. 153-4]

He saw the class struggle in terms of *"a multitude of acts of revolt in all countries, under all possible conditions: first, individual revolt against capital and State; then collective revolt -- strikes and working-class insurrections -- both preparing, in men's minds as in actions, a revolt of the masses, a revolution."* Clearly, the mass, collective nature of social change was not lost on Kropotkin who pointed to a *"multitude of risings of working masses and peasants"* as a positive sign. Strikes, he argued, *"were once 'a war of folded arms'"* but now were *"easily turning to revolt, and sometimes taking the proportions of vast insurrections."* [**Kropotkin's Revolutionary Pamphlets**, p. 144]

And Pat Stack argues that Kropotkin did not see *"class conflict as the dynamic for social change,"* nor *"class conflict"* as *"the motor of change"* and the working class *"not the agent and collective struggle not the means"!* Truly incredible and a total and utter distortion of Kropotkin's ideas on the subject.

As for other anarchists, we discover the same concern over class conflict, collective struggle and organisation and the awareness of a mass social revolution by the working class. Emma Goldman, for example, argued that anarchism *"stands for direct action"* and that *"[t]rade unionism, the economic area of the modern gladiator, owes its existence to direct action . . . In France, in Spain, in Italy, in Russian, nay even in England (witness the growing rebellion of English labour unions), direct, revolutionary economic action has become so strong a force in the battle for industrial liberty as to make the world realise the tremendous importance of labour's power. The General Strike [is] the supreme expression of the economic consciousness of the workers . . . Today every great strike, in order to win, must realise the*

importance of the solidaric general protest." [**Anarchism and Other Essays**, pp. 65-6] She places collective class struggle at the centre of her ideas and, crucially, she sees it as the way to create an anarchist society:

"It is this war of classes that we must concentrate upon, and in that connection the war against false values, against evil institutions, against all social atrocities. Those who appreciate the urgent need of co-operating in great struggles . . . must organise the preparedness of the masses for the overthrow of both capitalism and the state. Industrial and economic preparedness is what the workers need. That alone leads to revolution at the bottom . . . That alone will give the people the means to take their children out of the slums, out of the sweat shops and the cotton mills . . . That alone leads to economic and social freedom, and does away with all wars, all crimes, and all injustice." [**Red Emma Speaks**, pp. 309-10]

For Malatesta, *"the most powerful force for social transformation is the working class movement . . . Through the organisations established for the defence of their interests, workers acquire an awareness of the oppression under which they live and of the antagonisms which divide them from their employers, and so begin to aspire to a better life, get used to collective struggle and to solidarity."* This meant that anarchists *"must recognise the usefulness and importance of the workers' movement, must favour its development, and make it one of the levers of their action, doing all they can so that it . . . will culminate in a social revolution."* Anarchists must *"deepen the chasm between capitalists and wage-slaves, between rulers and ruled; preach expropriation of private property and the destruction of State."* The new society would be organised *"by means of free association and federations of producers and consumers."* [**Life and Ideas**, p. 113, pp. 250-1 and p. 184] Alexander Berkman, unsurprisingly, argued the same thing. As he put it, only *"the worst victims of present institutions"* could abolish capitalism as *"it is to their own interest to abolish them. . . labour's emancipation means at the same time the redemption of the whole of society."* He stressed that *"only the right organisation of the workers can accomplish what we are striving for . . . Organisation from the bottom up, beginning with the shop and factory, on the foundation of the joint interests of the workers everywhere . . . alone can solve the labour question and serve the true emancipation of man[kind]."* [**The ABC of Anarchism**, p. 44 and p. 60]

As can be seen, the claim that Kropotkin or Bakunin, or anarchists in general, ignored the class struggle and collective working class struggle and organisation is either a lie or indicates ignorance. Clearly, anarchists have placed working class struggle, organisation and collective direct action and solidarity at the core of their politics (and as the means of creating a libertarian socialist society) from the start.

Also see [section H.2.8](#) for a discussion of the relationship of anarchism to syndicalism.

H.2.3 Does anarchism "yearn for what has gone before"?

Pat Stack states that one of the *"key points of divergence"* between anarchism and Marxism is that the former, *"far from understanding the advances that capitalism represented, tended to take a wistful look*

back. Anarchism shares with Marxism an abhorrence of the horrors of capitalism, but yearns for what has gone before." ["Anarchy in the UK?", **Socialist Review**, no. 246]

Like his other "key point" (namely the rejection of class struggle -- see [last section](#)), Stack is simply wrong. Even the quickest look at the works of Proudhon, Bakunin and Kropotkin would convince the reader that this is simply distortion. Rather than look backwards for their ideas of social life, anarchism has always been careful to base its ideas on the current state of society and what anarchist thinkers considered positive current trends within society.

The dual element of progress is important to remember. Capitalism is a class society, marked by exploitation, oppression and various social hierarchies. In such a society progress can hardly be neutral. It will reflect vested interests, the needs of those in power, the rationales of the economic system (e.g. the drive for profits) and those who benefit from it, the differences in power between nations and companies and so on. Equally, it will be shaped by the class struggle, the resistance of the working classes to exploitation and oppression, the objective needs of production, etc. As such, trends in society will reflect the various class conflicts, social hierarchies, power relationships and so on which exist within it.

This is particularly true of the economy. The development of the industrial structure of a capitalist economy will be based on the fundamental need to maximise the profits and power of the capitalists. As such, it will develop (either by market forces or by state intervention) in order to ensure this. This means that various tendencies apparent in capitalist society exist specifically to aid the development of capital. This means that it does not follow that because a society which places profits above people has found a specific way of organising production "*efficient*" it means that a socialist society will do. As such, anarchist opposition to specific tendencies within capitalism (such as the increased concentration and centralisation of companies) does not mean a "*yearning*" for the past. Rather, it shows an awareness that capitalist methods are precisely that and that they need not be suited for a society which replaces the profit system with human and ecological need as the criteria for decision making.

For anarchists, this means questioning the assumptions of capitalist progress. This means that the first task of a revolution after the expropriation of the capitalists and the destruction of the state will be to transform the industrial structure and how it operates, not keep it as it is. Anarchists have long argued that that capitalist methods cannot be used for socialist ends. In our battle to democratise and socialise the workplace, in our awareness of the importance of collective initiatives by the direct producers in transforming their work situation, we show that factories are not merely sites of production, but also of reproduction -- the reproduction of a certain structure of social relations based on the division between those who give orders and those who take them, between those who direct and those who execute. Equally, the structure of industry has developed to maximise profits. Why assume that this structure will be equally as efficient in producing useful products by meaningful work which does not harm the environment?

A further aspect of this is that many of the struggles today, from the Zapatistas in Chiapas to those

against Genetically Modified (GM) food and nuclear power are precisely based on the understanding that capitalist 'progress' can not be uncritically accepted. To resist the expulsion of people from the land in the name of progress or the introduction of terminator seeds is not to look back to "*what had gone*", although this is also precisely what the proponents of capitalist globalisation often accuse us of. It is to put "*people before profit.*"

As such, only a sophist would confuse a critical evaluation of trends within capitalism with a yearning for the past. It means to buy into the whole capitalist notion of "*progress*" which has always been part of justifying the inhumanities of the status quo. Simply put, just because a process is rewarded by the profit driven market it does not mean that it makes sense from a human or ecological perspective. For example, as we argue in [section J.5.11](#), the capitalist market hinders the spread of co-operatives and workers' self-management in spite of their well documented higher efficiency and productivity. From the perspective of the needs of the capitalists, this makes perfect sense. In terms of the workers and efficient allocation of resources, it does not. Would Marxists argue that because co-operatives and workers' self-management of production are marginal aspects of the capitalist economy it means that they will play no part in a sane society or that if a socialist expresses interest in them it means that are "*yearning*" for a past mode of production? We hope not.

This common Marxist failure to understand anarchist investigations of the future is, ironically enough, joined with a total failure to understand the social conditions in which anarchists have put forward their ideas. Ironically, for all his claims that anarchists ignore "*material conditions*," it is Pat Stack (and others like him) who does so in his claims against Proudhon. Stack argues that Proudhon (like all anarchists) was "*yearning for the past*" when he advanced his mutualist ideas. Nothing, however, could be further from the truth. This is because the society in which the French anarchist lived was predominately artisan and peasant in nature. This was admitted by Marx and Engels in the **Communist Manifesto** ("*[i]n countries like France*" the peasants "*constitute far more than half of the population.*" [**The Marx-Engels Reader**, p. 493]). As such, for Proudhon to incorporate the aspirations of the majority of the population is not to "*yearn for what has gone before*" but rather an extremely sensible position to take.

Therefore, it is hardly an example of Proudhon "*yearning for the past*" for Stack to mention that Marx dubbed Proudhon ("*the founder of modern anarchism*") as "*the socialist of the small peasant or master craftsman.*" It is simply unsurprising, a simple statement of fact, as the French working classes were, at the time, predominately small peasants or master craftsmen (or artisans). As K. Steven Vincent points out Proudhon's "*social theories may not be reduced to a socialism for only the peasant class, nor was it a socialism only for the petite bourgeois; it was a socialism of and for French workers. And in the mid-nineteenth century . . . most French workers were still artisans.*" Indeed, "*[w]hile Marx was correct in predicting the eventual predominance of the industrial proletariat vis-a-vis skilled workers, such predominance was neither obvious nor a foregone conclusion in France during the nineteenth century. The absolute number of small industries even increased during most of the century.*" [**Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 5 and p. 282] Proudhon himself noted in 1851 that of a population of 36 million, 24 million were peasants and 6 million were artisans. Of the remaining 6 million, these included wage-workers for whom "*workmen's associations*" would be essential as "*a protest against the wage system,*" the "*denial of the rule of capitalists*" and for "*the*

management of large instruments of labour." [The General Idea of the Revolution, pp. 97-8]

To summarise, if the society in which you live is predominately made-up of peasants and artisans then it is hardly an insult to be called *"the socialist of the small peasant or master craftsman."* Equally, it can hardly represent a desire for *"what has gone before"* to tailor your ideas to the actual conditions in the country in which you live! And Stack accuses **anarchists** of ignoring *"material conditions"*!

Neither can it be said that Proudhon ignored the development of industrialisation in France during his lifetime. Quite the reverse, in fact, as indicated above. Proudhon did **not** ignore the rise of large-scale industry. He argued that such industry should be managed by the workers' themselves via workers associations. As he put it, *"certain industries" required "the combined employment of a large number of workers"* and so the producer is *"a collectivity."* In such industries *"we have no choice"* and so *"it is necessary to form an **association** among the workers"* because *"without that they would remain related as subordinates and superiors, and there would ensue two industrial castes of masters and wage-workers, which is repugnant to a free and democratic society."* [Op. Cit., pp. 215-6]

All in all, Stack is simply showing his ignorance of both Proudhon's ideas **and** the society (the *"material conditions"*) in which they were shaped and were aimed for. As can be seen, Proudhon incorporated the development of large-scale industry within his mutualist ideas and so the need to abolish wage labour by workers' associations and workers' control of production. Perhaps Stack can fault Proudhon for seeking the end of capitalism too soon and for not waiting patiently will it developed further (if he does, he will also have to attack Marx, Lenin and Trotsky as well for the same failing!), but this has little to do with *"yearn[ing] for what has gone before."*

After distorting Proudhon's ideas on industry, Stack does the same with Bakunin. He asserts the following:

"Similarly, the Russian anarchist leader Bakunin argued that it was the progress of capitalism that represented the fundamental problem. For him industrialisation was an evil. He believed it had created a decadent western Europe, and therefore had held up the more primitive, less industrialised Slav regions as the hope for change."

Now, it would be extremely interesting to find out where, exactly, Stack discovered that Bakunin made these claims. After all, they are at such odds with Bakunin's anarchist ideas that it is tempting to conclude that Stack is simply making it up. This, we suggest, explains the total lack of references for such an outrageous claim. Looking at his main source, we discover Paul Avrich writing that *"[i]n 1848"* (i.e. nearly 20 years **before** Bakunin became an anarchist!) Bakunin *"spoke of the decadence of Western Europe and saw hope in the primitive, less industrialised Slavs for the regeneration of the Continent."* [Op. Cit., p. 8] The plagiarism, again, is obvious, as are the distortions. Given that Bakunin became an anarchist in the mid-1860s, how his pre-anarchist ideas are relevant to an evaluation of anarchism escapes logic. It makes as much sense as quoting Marx to refute fascism as Mussolini was originally the leader of the left-wing of the Italian Socialist Party!

It is, of course, simple to refute Stack's claims. We simply need to do that which he does not, namely quote Bakunin. For someone who thought "*industrialisation was an evil*," a key aspect of Bakunin's ideas on social revolution was the seizing of industry and its placing under social ownership. As he put it, "*capital and all tools of labour belong to the city workers -- to the workers associations. The whole organisation of the future should be nothing but a free federation of workers -- agricultural workers as well as factory workers and associations of craftsmen.*" [**The Political Philosophy of Bakunin**, p. 410] Bakunin argued that "*to destroy . . . all the instruments of labour . . . would be to condemn all humanity -- wvhich is infinity too numerous today to exist. . . on the simple gifts of nature. . . -- to. . . death by starvation. Thus capital cannot and must not be destroyed. It must be preserved.*" Only when workers "*obtain not individual but **collective** property in capital*" and when capital is no longer "*concentrated in the hands of a separate, exploiting class*" will they be able "*to smash the tyranny of capital.*" [**The Basic Bakunin**, pp. 90-1] He stressed that only "*associated labour, this is labour organised upon the principles of reciprocity and co-operation, is adequate to the task of maintaining the existence of a large and somewhat civilised society.*" Moreover, the "*whole secret of the boundless productivity of human labour consists first of all in applying . . . scientifically developed reason . . . and then in the division of that labour.*" [**The Political Philosophy of Bakunin**, pp. 341-2] Hardly the thoughts of someone opposed to industrialisation!

Rather than oppose industrialisation and urge the destruction of industry, Bakunin considered one of the first acts of the revolution would be workers' associations taking over the means of production and turning them into collective property managed by the workers themselves. Hence Daniel Guerin's comment:

"Proudhon and Bakunin were 'collectivists,' which is to say they declared themselves without equivocation in favour of the common exploitation, not by the State but by associated workers of the large-scale means of production and of the public services. Proudhon has been quite wrongly presented as an exclusive enthusiast of private property." [*"From Proudhon to Bakunin"*, **The Radical Papers**, Dimitrios I. Roussopoulos (ed.), p.32]

Clearly, Stack does not have the faintest idea of what he is talking about! Nor is Kropotkin any safer than Proudhon or Bakunin from Stack's distortions. He claims that:

"Peter Kropotkin, another famous anarchist leader to emerge in Russia, also looked backwards for change. He believed the ideal society would be based on small autonomous communities, devoted to small scale production. He had witnessed such communities among Siberian peasants and watchmakers in the Swiss mountains."

First, we must note the plagiarism. Stack is summarising Paul Avrich's summary of Kropotkin's ideas. [**Anarchist Portraits**, p. 62] Rather than go to the source material, Stack provides an interpretation of someone else's interpretation of someone else's ideas! Clearly, the number of links in the chain means that something is going to get lost in the process and, of course, it does. The something which "gets lost"

is, unfortunately, Kropotkin's ideas.

Ultimately, Stack is simply showing his total ignorance of Kropotkin's ideas by making such a statement. At least Avrich expanded upon his summary to mention that Kropotkin's positive evaluation of using modern technology and the need to apply it on an appropriate level to make work and the working environment as pleasant as possible. As Avrich summarises, "[p]laced in small voluntary workshops, machinery would rescue human beings from the monotony and toil of large-scale capitalist enterprise, allow time for leisure and cultural pursuits, and remove forever the stamp of inferiority traditionally borne by manual labour." [Op. Cit., p. 63] Hardly "backward looking" to desire the application of science and technology to transform the industrial system into one based on the needs of people rather than profit!

Stack must be hoping that the reader has, like himself, not read Kropotkin's classic work **Fields, Factories and Workshops** for if they have then they would be aware of the distortion Stack subjects Kropotkin's ideas to. While Avrich does present, in general, a reasonable summary of Kropotkin's ideas, he does place it into a framework of his own making. Kropotkin while stressing the importance of decentralising industry within a free society did not look backward for his inspiration. Rather, he looked to trends within existing society, trends he thought pointed in an anti-capitalist direction. This can be seen from the fact he based his classic work **Field, Factories and Workshops** on detailed analysis of current developments in the economy and came to the conclusion that industry would spread across the global (which has happened) and that small industries will continue to exist side by side with large ones (which also has been confirmed). From these facts he argued that a socialist society would aim to decentralise production, combining agriculture with industry and both using modern technology to the fullest.

As we discuss the fallacy that Kropotkin (or anarchists in general) have argued for "*small autonomous communities, devoted to small scale production*" in [section I.3.8](#), we will not do so here. Suffice to say, Kropotkin's vision was one of federations of decentralised communities in which production would be based on the "*scattering of industries over the country -- so as to bring the factory amidst the fields . . . agriculture . . . combined with industry . . . to produce a combination of industrial with agricultural work.*" He considered this as "*surely the next step to be made, as soon as a reorganisation of our present conditions is possible.*" Indeed, he thought that this step "*is imposed by the very necessity of **producing for the producers themselves.***" Kropotkin attempted to show, based on a detailed analysis of modern economic statistics and trends, a vision of a decentralised, federated communal society where "*the workers*" were "*the real managers of industries*" and what this would imply once society was free of capitalism. Needless to say, he did not think that this "*next step*" would occur until "*a reorganisation of our present conditions [was] possible.*" [**Fields, Factories and Workshops Tomorrow**, pp. 157-8] In other words, until after a social revolution which expropriated industry and the land and placed social wealth into the hands of the producers. Until then, the positive trends he saw in modern society would remain circumscribed by the workings of the capitalist market.

He did not, as is often asserted, argue for "*small-scale production*" (he still saw the need for factories,

for example) but rather for production geared to *appropriate* levels, based on the objective needs of production (without the distorting effects generated by the needs of capitalist profits and power) and, of necessity, the needs of those who work in and live alongside industry (and today we would add, the needs of the environment). In other words, the transformation of capitalism into a society human beings could live full and meaningful lives in. Part of this would involve creating an industry based on human needs. *"Have the factory and the workshop at the gates of your fields and gardens and work in them,"* he argued. *"Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women]."* The new factories and workplaces would be *"airy and hygienic, and consequently economical, . . . in which human life is of more account than machinery and the making of extra profits."* [Op. Cit., p. 197] Under capitalism, he argued, the whole discourse of economics (like industrial development itself) was based on the logic and rationale of the profit motive:

"Under the name of profits, rent and interest upon capital, surplus value, and the like, economists have eagerly discussed the benefits which the owners of land or capital, or some privileged nations, can derive, either from the under-paid work of the wage-labourer, or from the inferior position of one class of the community towards another class, or from the inferior economical development of one nation towards another nation. . . ."

*"In the meantime the great question -- 'What have we to produce, and how?' necessarily remained in the background . . . The main subject of social economy -- that is, the **economy of energy required for the satisfaction of human needs** -- is consequently the last subject which one expects to find treated in a concrete form in economical treatises."* [Op. Cit., p. 17]

Kropotkin's ideas were, therefore, an attempt to discuss how a post-capitalist society could develop, based on an extensive investigation of current trends within capitalism, and reflecting the needs which capitalism ignores. As noted above, current trends within capitalism have positive (socialistic) and negative (capitalistic) aspects as capitalist industry has not developed neutrally (it has been distorted by the twin requirements to maintain capitalist profits and power).

For this reason Kropotkin considered the concentration of capital (which most Marxists base their arguments for socialism on) did not, in fact, represent an advance for socialism as it was *"often nothing but an amalgamation of capitalists for the purpose of **dominating the market**, not for cheapening the technical process."* [Fields, Factories and Workshops Tomorrow, p. 154] Indeed, by basing themselves on the trends of capital towards big business, Leninism simply locks itself into the logic of capitalism and, by implication, sees a socialist society which will basically be the same as capitalism, using the technology, industrial structure and industry developed under class society without change. After all, did Lenin not argue that *"Socialism is merely state capitalist monopoly made to benefit the whole people"?*

Rather than condemn Kropotkin, Stack's comments (and those like them) simply show the poverty of the Leninist critique of capitalism and its vision of the socialist future.

All in all, anyone who claims that anarchism is "*backward looking*" or "*yearns for the past*" simply has no idea what they are talking about.

H.2.4 Do anarchists think "*the state is the main enemy*" rather than just "*one aspect*" of class society?

Pat Stack argues that "*the idea that dominates anarchist thought*" is "*that the state is the main enemy, rather than identifying the state as one aspect of a class society that has to be destroyed.*" ["Anarchy in the UK?", **Socialist Review**, no. 246]] Paul Thomas states that "*Anarchists insist that the basis source of social injustice is the state.*" [**Karl Marx and the Anarchists**, p. 2]

On the face of it, such assertions make little sense. After all, was not the first work by the first self-declared anarchist called **What is Property?** and contain the revolutionary maxim "*property is theft*"? Surely this fact alone would be enough to put to rest the notion that anarchists view the state as the main problem in the world? Obviously not. Flying in the face of this well known fact as well as anarchist theory, Marxists have constantly repeated the falsehood that anarchists consider the state as the main enemy. Indeed, Stack and Thomas are simply repeating an earlier assertion by Engels:

*"Bakunin has a peculiar theory of his own, a medley of Proudhonism and communism. The chief point concerning the former is that he does not regard capital, i.e. the class antagonism between capitalists and wage workers which has arisen through social development, but the state as the main enemy to be abolished. . . . our view [is] that state power is nothing more than the organisation which the ruling classes -- landowners and capitalists -- have provided for themselves in order to protect their social privileges, Bakunin [on the other hand] maintains that it is the state which has created capital, that the capitalist has his capital **only be the grace of the state**. As, therefore, the state is the chief evil, it is above all the state which must be done away with and then capitalism will go to blazes of itself. We, on the contrary, say: Do away with capital, the concentration of all means of production in the hands of a few, and the state will fall of itself. The difference is an essential one . . . the abolition of capital is precisely the social revolution."* [Marx, Engels and Lenin, **Op. Cit.**, p. 71]

As will come as no surprise, Engels did not bother to indicate where he discovered Bakunin's ideas on these matters. Similarly, his followers raise this kind of assertion as a truism, apparently without the need for evidence to support the claim. This is hardly surprising as anarchists, including Bakunin, have expressed an idea distinctly at odds with Engels' claims, namely that the social revolution would be marked by the abolition of capitalism and the state at the same time. That this is the case can be seen from John Stuart Mill who, unlike Engels, saw that Bakunin's ideas meant "*not only the annihilation of*

all government, but getting all property of all kinds out of the hands of the possessors to be used for the general benefit." ["*Chapters on Socialism, Principles of Political Economy*, p. 376] If the great liberal thinker could discern this aspect of anarchism, why not Engels? After all, this vision of a **social** revolution (i.e. one that combined political, social **and** economic goals) occurred continuously throughout Bakunin's writings when he was an anarchist. Indeed, to claim that he, or anarchists in general, just opposed the state suggests a total unfamiliarity with anarchist theory. For Bakunin, like all anarchists, the abolition of the state occurs at the same time as the abolition of capital. This joint abolition **is** precisely the social revolution.

In 1865, for example, we discover Bakunin arguing that anarchists "*seek the destruction of all States*" in his "*Program of the Brotherhood*." Yet he also argued that a member of this association "*must be socialist*" and see that "*labour*" was the "*sole producer of social assets*" and so "*anyone enjoying these without working is an exploiter of another man's labour, a thief*." They must also "*understand that there is no liberty in the absence of equality*" and so the "*attainment of the widest liberty*" is possible only "*amid the most perfect (de jure and de facto) political, economic and social equality*." The "*sole and supreme objective*" of the revolution "*will be the effective political, economic and social emancipation of the people*." This was because political liberty "*is not feasible without political equality. And the latter is impossible without economic and social equality*." This mean that the "*land belongs to everyone. But usufruct of it will belong only to those who till it with their own hands*." As regards industry, "*through the unaided efforts and economic powers of the workers' associations, capital and the instruments of labour will pass into the possession of those who will apply them . . . through their own labours*." He opposed sexism, for women are "*equal in all political and social rights*." Ultimately, "*[n]o revolution could succeed . . . unless it was simultaneously a political and a social revolution. Any exclusively political revolution . . . will, insofar as it consequently does not have the immediate, effective, political and economic emancipation of the people as its primary objective, prove to be . . . illusory, phony . . . The revolution should not only be made for the people's sake: it should also be made by the people and can never succeed unless it implicates all of the rural as well as the urban masses*" [**No Gods, No Masters**, vol. 1, pp. 134-41]

In 1868, Bakunin was arguing the same ideas. The "*Association of the International Brethren seeks simultaneously universal, social, philosophical, economic and political revolution, so that the present order of things, rooted in property, exploitation, domination and the authority principle*" will be destroyed. The "*revolution as we understand it will . . . set about the . . . complete destruction of the State . . . The natural and necessary upshot of that destruction*" will include the "*[d]issolution of the army, magistracy, bureaucracy, police and clergy*" and "*[a]ll productive capital and instruments of labour . . . be[ing] confiscated for the benefit of toilers associations, which will have to put them to use in collective production*" as well as the "*[s]eizure of all Church and State properties*." The "*federated Alliance of all labour associations . . . will constitute the Commune*." The people "*must make the revolution everywhere, and . . . ultimate direction of it must at all times be vested in the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom up*." [**Op. Cit.**, pp. 152-6]

As these the words of a person who considered the state as the "*chief evil*" or "*that the state is the main*

enemy"? Of course not, rather Bakunin clearly identified the state as one aspect of a class society that has to be destroyed. As he put it, the "State, which has never had any task other than to regularise, sanction and . . . protect the rule of the privileged classes and exploitation of the people's labour for the rich, must be abolished. Consequently, this requires that society be organised from the bottom up through the free formation and free federation of worker associations, industrial, agricultural, scientific and artisan alike, . . . founded upon collective ownership of the land, capital, raw materials and the instruments of labour, which is to say, all large-scale property . . . leaving to private and hereditary possession only those items that are actually for personal use." [Op. Cit., p. 182]

In summary, rather than seeing the state as the main evil to be abolished, Bakunin always stressed that a revolution must be economic **and** political in nature, that it must ensure political, economic and social liberty and equality. As such, he argued for both the destruction of the state and the expropriation of capital (an act conducted, incidentally, by a federation of workers' associations or workers' councils). While the apparatus of the state was being destroyed (*"Dissolution of the army, magistracy, bureaucracy, police and clergy"*), capitalism was also being uprooted and destroyed (*"All productive capital and instruments of labour . . . confiscated for the benefit of toilers associations"*). To assert, as Engels did, that Bakunin ignored the necessity of abolishing capitalism and the other evils of the current system while focusing exclusively on the state, is simply distorting his ideas.

Kropotkin, unsurprisingly, argued along identical lines as Bakunin. He stressed that *"the revolution will burn on until it has accomplished its mission: the abolition of property-owning and of the State."* This revolution, he re-iterated, would be a *"mass rising up against property and the State."* Indeed, Kropotkin always stressed that *"there is one point to which all socialists adhere: the expropriation of capital must result from the coming revolution."* This meant that *"the area of struggle against capital, and against the sustainer of capital -- government"* could be one in which *"various groups can act in agreement"* and so *"any struggle that prepares for that expropriation should be sustained in unanimity by all the socialist groups, to whatever shading they belong."* [Words of a Rebel, p. 75 and p. 204] Little wonder Kropotkin wrote his famous article *"Expropriation"* on this subject! As he put it:

"Expropriation -- that is the guiding word of the coming revolution, without which it will fail in its historic mission: the complete expropriation of all those who have the means of exploiting human beings; the return to the community of the nation of everything that in the hands of anyone can be used to exploit others." [Op. Cit., pp. 207-8]

Strange words if Marxist assertions were true. As can be seen, Kropotkin is simply following Bakunin's ideas on the matter. He, like Bakunin, was well aware of the evils of capitalism and that the state protects these evils:

"When a workman sells his labour to an employer and knows perfectly well that some part of the value of his produce will be unjustly taken by the employer; when he sells it without even the slightest guarantee of being employed so much as six consecutive months, it is a sad mockery to call that a free contract. . . As long as three-quarters of humanity are

compelled to enter into agreements of that description, force is of course necessary, both to enforce the supposed agreements and to maintain such a state of things. Force -- and a great deal of force -- is necessary to prevent the labourers from taking possession of what they consider unjustly appropriated by the few; and force is necessary to continually bring new 'uncivilised nations' under the same conditions." [**Kropotkin's Revolutionary Pamphlets**, p. 69]

Little wonder he called anarchism *"the no-government system of socialism."* [**Op. Cit.**, p. 46] For Kropotkin, the *"State is there to protect exploitation, speculation and private property; it is itself the by-product of the rapine of the people. The proletariat must rely on his own hands; he can expect nothing of the State. It is nothing more than an organisation devised to hinder emancipation at all costs."* [**Words of a Rebel**, p. 27] Rather than see the state as the main evil, he clearly saw it as the protector of capitalism -- in other words, as one aspect of a class system which needed to be replaced by a better society.

Similarly with all other anarchists. Emma Goldman, for example, summarised for all anarchists when she argued that anarchism *"stands for . . . the liberation of the human body from the domination of property; liberation from the shackles and restraint of government."* [**Anarchism and Other Essays**, p. 62] Errico Malatesta in the *"Anarchist Programme"* he drafted listed *"Abolition of private property"* before *"Abolition of government"* and argued that *"the present state of society"* was one in *"which some have inherited the land and all social wealth, while the mass of the people, disinherited in all respects, is exploited and oppressed by a small possessing class."* It ends by arguing that anarchism wants *"the complete destruction of the domination and exploitation of man by man"* and for *"expropriation of landowners and capitalists for the benefit of all; and the abolition of government."* [**Life and Ideas**, p. 184, p. 183, p. 197 and p. 198] Nearly three decades previously, we find Malatesta arguing the same idea. As he put it in 1891, anarchists *"struggle for anarchy, and for socialism, because we believe that anarchy and socialism must be realised immediately, that is to say that in the revolutionary act we must drive government away, abolish property . . . human progress is measured by the extent government power and private property are reduced."* [**Anarchy**, pp. 53-4] He stressed that, for *"all anarchists,"* it was definitely a case that the *"abolition of political power is not possible without the simultaneous destruction of economic privilege."* [**Life and Ideas**, p. 158]

As Brian Morris correctly summarises:

"Another criticism of anarchism is that it has a narrow view of politics: that it sees the state as the fount of all evil, ignoring other aspects of social and economic life. This is a misrepresentation of anarchism. It partly derives from the way anarchism has been defined, and partly because Marxist historians have tried to exclude anarchism from the broader socialist movement. But when one examines the writings of classical anarchists. . . as well as the character of anarchist movements. . . it is clearly evident that it has never had this limited vision. It has always challenged all forms of authority and exploitation, and has been equally critical of capitalism and religion as it has been of the state." [*"Anthropology and Anarchism,"* **Anarchy: A Journal of Desire Armed**, no. 45,

p, p. 40]

All in all, Marxist claims that anarchists view the state as the "*chief evil*" or see the destruction of the state as the "*main idea*" of anarchism are simply talking nonsense. In fact, rather than anarchists having a narrow view of social liberation, it is, in fact, Marxists who do so. By concentrating almost exclusively on the (economic) class source of exploitation, they blind themselves to other forms of exploitation and domination that can exist independently of economic class relationships. This can be seen from the amazing difficulty that many of them got themselves into when trying to analyse the Stalinist regime in Russia. Anarchists are well aware that the state is just one aspect of the current class system. We just recognise that all the evils of that system must be destroyed at the same time to ensure a **social** revolution rather than just a change in who the boss is.

H.2.5 Do anarchists think "*full blown*" socialism will be created overnight?

Another area in which Marxists misrepresent anarchism is in the assertion that anarchists believe a completely socialist society (an ideal or "*utopian*" society, in other words) can be created "*overnight*." As Marxist Bertell Ollman puts it, "[u]nlike anarcho-communists, none of us [Marxists] believe that communism will emerge full blown from a socialist revolution. Some kind of transition and period of indeterminate length for it to occur are required." [Bertell Ollman (ed.), **Market Socialism: The Debate among Socialists**, p. 177] This assertion, while it is common, fails to understand the anarchist vision of revolution. We consider it a **process** and not an event -- as Malatesta argued, "[b]y revolution we do not mean just the insurrectionary act." [**Life and Ideas**, p. 156]

Once this is understood, the idea that anarchists think a "*full blown*" anarchist society will be created "*overnight*" is a fallacy. As Murray Bookchin pointed out, "*Bakunin, Kropotkin, Malatesta were not so naive as to believe that anarchism could be established overnight. In imputing this notion to Bakunin, Marx and Engels wilfully distorted the Russian anarchist's views.*" [**Post-Scarcity Anarchism**, p. 213]

Indeed, Kropotkin stressed that anarchists "*do not believe that in any country the Revolution will be accomplished at a stroke, in the twinkling of a eye, as some socialists dream.*" Moreover, "[n]o fallacy more harmful has ever been spread than the fallacy of a '*One-day Revolution*.'" [**The Conquest of Bread**, p. 81] Bakunin argued that a "*more or less prolonged transitional period*" would "*naturally follow in the wake of the great social crisis*" implied by social revolution. [**The Political Philosophy of Bakunin**, p. 412] The question, therefore, is not whether there will be a "*transitional*" society after a revolution but what **kind** of transition will it be.

As such, anarchists are aware that a "*full blown*" communist society will not come about immediately. Rather, the creation of such a society will be a **process** which the revolution will start off. As Alexander Berkman put it, "*you must not confuse the social revolution with anarchy. Revolution, in some of its stages, is a violent upheaval; anarchy is a social condition of freedom and peace. The revolution is the*

means of bringing anarchy about but it is not anarchy itself. It is to pave the road for anarchy, to establish condition which will make a life of liberty possible." However, the *"end shapes the means"* and so *"to achieve its purpose the revolution must be imbued with and directed by the anarchist spirit and ideas . . . the social revolution must be anarchist in method as in aim."* [**ABC of Anarchism**, p. 81]

In his classic introduction to anarcho-communist ideas, Alexander Berkman also acknowledged that *"full blown"* communism was not likely after a successful revolution. *"Of course,"* he argued, "when the social revolution has become thoroughly organised and production is functioning normally there will be enough for everybody. But in the first stages of the revolution, during the process of re-construction, we must take care to supply the people as best we can, and equally, which means rationing." [**Op. Cit.**, p. 67] Clearly, in such circumstances *"full blown"* communism would be impossible and, unsurprisingly, Berkman argues that would not exist. However, the principles that inspire communism and anarchism could be applied immediately. This meant that both the state and capitalism would be abolished. While arguing that *"[t]here is no other way of securing economic equality, which alone is liberty"* than communist anarchism, he also states that it is *"likely . . . that a country in social revolution may try various economic experiments . . . different countries and regions will probably try out various methods, and by practical experience learn the best way. The revolution is at the same time the opportunity and justification for it . . ."* Rather than dictate to the future, Berkman argued that his *"purpose is to suggest, in board outline the principles which must animate the revolution, the general lines of action it should follow if it is to accomplish its aim -- the reconstruction of society on a foundation of freedom and equality."* [**Op. Cit.**, p. 80]

As regards Malatesta, he argued along similar lines. While arguing for the *"complete destruction of the domination and exploitation of man by man"* by the *"expropriation of landlords and capitalists for the benefit of all"* and *"the abolition of government,"* he recognised that in *"the post-revolutionary period, in the period of reorganisation and transition, there might be 'offices for the concentration and distribution of the capital of collective enterprises', that there might or might not be titles recording the work done and the quantity of goods to which one is entitled."* However, he stressed that this *"is something we shall have to wait and see about, or rather, it is a problem which will have many and varied solutions according to the system of production and distribution which will prevail in the different localities and among the many . . . groupings that will exist."* He argued that while, eventually, all groups of workers (particularly the peasants) while eventually *"understand the advantages of communism or at least of the direct exchange of goods for goods,"* this may not happen *"in a day."* If some kind of money was used, then it people should *"ensure that [it] truly represents the useful work performed by its possessors"* rather than being *"a powerful means of exploitation and oppression"* is currently is. [**Life and Ideas**, pp. 198-9 and pp. 100-1]

Rather than seeing a *"full blown"* communist society appearing instantly from a revolution, anarcho-communists see a period of transition in which the degree of communism in a given community or area is dependent on the objective conditions facing it. This period of transition would see different forms of social experimentation but the desire is to see libertarian communist principles as the basis of as much of this experimentation as possible. To claim that anarcho-communists ignore reality and see communism as being created overnight is simply a distortion of their ideas. Rather, they are aware that the

development towards communism is dependent on local conditions, conditions which can only be overcome in time and by the liberated community re-organising production and extending it as required.

Clearly, our argument contradicts the widely held view that anarchists believed an utopian world would be created instantly after a revolution. Of course, by asserting that anarchists think "*full blown communism*" will occur without some form of transitional period, Marxists paint a picture of anarchism as simply utopian, a theory which ignores objective reality in favour of wishful thinking. However, as seen above, such is not the case. Anarchists are aware that "*full blown communism*" is dependent on objective conditions and, therefore, cannot be implemented until those conditions are met. Until such time as the objective conditions are reached, various means of distributing goods, organising and managing production, and so on will be tried. Such schemes will be based as far as possible on communistic principles.

Therefore, immediately after a successful revolution a period of reconstruction will begin in which society is slowly transformed towards "*full blown*" communism. The speed and nature of this transformation will, of course, depend on local conditions and needs. However, unlike Marxists, such a period of transition would be based on libertarian and communist principles. The organisation of society would be anarchist -- the state would be abolished and replaced by a free federation of workers and community associations. The economic structure would be socialist -- production would be based on self-managed workplaces and the principles of distribution would be as communistic as possible under the existing objective conditions.

It also seems strange for Marxists to claim that anarchists thought a "*full blown*" communist society was possible "*over-night*" given that anarchists had always stressed the difficulties facing a social revolution. Kropotkin, for example, continually stressed that a revolution would face extensive economic disruption. In his words:

"A political revolution can be accomplished without shaking the foundations of industry, but a revolution where the people lay hands upon property will inevitably paralyse exchange and production . . . This point cannot be too much insisted upon; the reorganisation of industry on a new basis . . . cannot be accomplished in a few days; nor, on the other hand, will people submit to be half starved for years in order to oblige the theorists who uphold the wage system. To tide over the period of stress they will demand what they have always demanded in such cases -- communisation of supplies -- the giving of rations." [The Conquest of Bread, pp. 72-3]

The basic principles of this "transition" period would, therefore, be based on the "*socialising of production, consumption and exchange.*" The state would be abolished and "*federated Communes*" would be created. The end of capitalism would be achieved by the "*expropriation*" of "*everything that enables any man -- be he financier, mill-owner, or landlord - - to appropriate the product of others' toil.*" Distribution of goods would be based on "*no stint or limit to what the community possesses in abundance, but equal sharing and dividing of those commodities which are scarce or apt to run*

short." [Op. Cit., p. 136, p. 61 and p. 76] Clearly, while not "full blown" communism by any means, such a regime does lay the ground for its eventual arrival. As Max Nettlau summarised, "[n]othing but a superficial interpretation of some of Kropotkin's observations could lead one to conclude that anarchist communism could spring into life through an act of sweeping improvisation, with the waving of a magic wand." [A Short History of Anarchism, p. 80]

This was what happened in the Spanish Revolution, for example. Different collectives operated in different ways. Some tried to introduce free communism, some a combination of rationing and communism, others introduced equal pay, others equalised pay as much as possible and so on. Over time, as economic conditions changed and difficulties developed the collectives changed their mode of distribution to take them into account. These collectives indicate well the practical aspects of anarchist and its desire to accommodate and not ignore reality.

Lastly, and as an aside, it this anarchist awareness of the disruptive effects of a revolution on a country's economy which, in part, makes anarchists extremely sceptical of pro-Bolshevik rationales that blame the difficult economic conditions facing the Russian Revolution for Bolshevik authoritarianism (see the appendix on ["What caused the degeneration of the Russian Revolution?"](#) for a fuller discussion of this). If, as Kropotkin argued, a social revolution inevitably results in massive economic disruption then, clearly, Bolshevism should be avoided if it cannot handle such inevitable events. In such circumstances, centralisation would only aid the disruption, not reduce it. This awareness of the problems facing a social revolution also led anarchists to stress the importance of local action and mass participation. As Kropotkin put it, the "immense constructive work demanded by a social revolution cannot be accomplished by a central government . . . It has need of knowledge, of brains and of the voluntary collaboration of a host of local and specialised forces which alone can attack the diversity of economic problems in their local aspects." [Kropotkin's Revolutionary Pamphlets, pp. 255-6] Without this local action, co-ordinated joint activity would remain a dead letter.

In summary, anarchists acknowledge that **politically** there is no transitional period (i.e. the state must be abolished and replaced by a free federation of self-managed working class organisations). Economically anarchists recognise that different areas will develop in different ways and so there will be various economical transitional forms. Rather than seeing "full blown communism" being the instant result of a socialist revolution, anarchist-communists actually argue the opposite -- "full blown communism" will develop only after a successful revolution and the inevitable period of social reconstruction which comes after it. A "full blown" communist economy will develop as society becomes ready for it. What we **do** argue is that any transitional economic form must be based on the principles of the type of society it desires. In other words, any transitional period must be as communistic as possible if communism is your final aim and, equally, it must be libertarian if your final goal is freedom.

Also see [section I.2.2](#) for further discussion on this issue.

H.2.6 How do Marxists misrepresent Anarchist ideas on mutual aid?

Anarchist ideas on mutual aid are often misrepresented by Marxists. Looking at Pat Stack's "*Anarchy in the UK?*" article, for example, we find a particularly terrible misrepresentation of Kropotkin's ideas. Indeed, it is so incorrect that it is either a product of ignorance or a desire to deceive (and as we shall indicate, it is probably the latter). Here is Stack's account of Kropotkin's ideas:

"And the anarchist Peter Kropotkin, far from seeing class conflict as the dynamic for social change as Marx did, saw co-operation being at the root of the social process. He believed the co-operation of what he termed 'mutual aid' was the natural order, which was disrupted by centralised states. Indeed in everything from public walkways and libraries through to the Red Cross, Kropotkin felt he was witnessing confirmation that society was moving towards his mutual aid, prevented only from completing the journey by the state. It follows that if class conflict is not the motor of change, the working class is not the agent and collective struggle not the means." ["*Anarchy in the UK?*", **Socialist Review**, no. 246]

There are three issues with Stack's summary. Firstly, Kropotkin did not, in fact, reject class conflict as the "*dynamic of social change*" nor reject the working class as its "*agent*." Secondly, all of Stack's examples of "*Mutual Aid*" do not, in fact, appear in Kropotkin's classic book **Mutual Aid**. They do, however, appear in other works by Kropotkin's, but **not** as examples of "*mutual aid*." Thirdly, in **Mutual Aid** Kropotkin discusses such aspects of working class "*collective struggle*" as strikes and unions. All in all, it is Stack's total and utter lack of understanding of Kropotkin's ideas which immediately stands out from his comments.

As we have discussed how collective, working class direct action, organisation and solidarity in the class struggle was at the core of Kropotkin's politics in [section H.2.2](#), we will not do so here. Rather, we will discuss how Stack lies about Kropotkin's ideas on mutual aid. As just noted, the examples Stack lists are not to be found in Kropotkin's classic work **Mutual Aid**. Now, **if** Kropotkin **had** considered them as examples of "*mutual aid*" then he would have listed them in that work. This does not mean, however, that Kropotkin did not mention these examples. He does, but in other works (notably his essay **Anarchist Communism**) and he does **not** use them as examples of mutual aid. Just as Stack's examples are not mentioned in **Mutual Aid**, so Kropotkin fails to use the words "*mutual aid*" in his essay **Anarchist-Communism: Its Basis and Principles**. Here is Kropotkin's own words as regards Stack's "examples":

"We maintain, moreover, not only that communism is a desirable state of society, but that the growing tendency of modern society is precisely towards communism -- free communism -- notwithstanding the seemingly contradictory growth of individualism. In the growth of individualism . . . we see merely the endeavours of the individual towards emancipating himself from the steadily growing powers of capital and the State. But side by side with this growth we see also . . . the latent struggle of the producers of wealth to maintain the partial communism of old, as well as to reintroduce communist principles in

a new shape, as soon as favourable conditions permit it. . . the communist tendency is continually reasserting itself and trying to make its way into public life. The penny bridge disappears before the public bridge; and the turnpike road before the free road. The same spirit pervades thousands of other institutions. Museums, free libraries, and free public schools; parks and pleasure grounds; paved and lighted streets, free for everybody's use; water supplied to private dwellings, with a growing tendency towards disregarding the exact amount of it used by the individual; tramways and railways which have already begun to introduce the season ticket or the uniform tax, and will surely go much further in this line when they are no longer private property: all these are tokens showing in what direction further progress is to be expected.

*"It is in the direction of putting the wants of the individual **above** the valuation of the service he has rendered, or might render, to society; in considering society as a whole, so intimately connected together that a service rendered to any individual is a service rendered to the whole society."* [Kropotkin's **Revolutionary Pamphlets**, pp. 59-60]

As is clear, the examples Stack selects have nothing to do with mutual aid in Kropotkin's eyes. Rather, they are examples of communistic tendencies within capitalism, empirical evidence that can be used to not only show that communism can work but also that it is not a utopian social solution but an expression of tendencies within society. Simply put, he is using examples from existing society to show that communism is not impossible.

Similarly with Stack's other examples. Kropotkin argued that:

"we are struck with the infinitesimal part played by government in our life. . . [A] striking feature of our century tells in favour of the . . . no-government tendency. It is the steady enlargement of the field covered by private initiative, and the recent growth of large organisations resulting merely and simply from free agreement. The railway net of Europe -- a confederation of so many scores of separate societies -- and the direct transport of passengers and merchandise over so many lines which were built independently and federated together, without even so much as a Central Board of European Railways, is a most striking instance of what is already done by mere agreement. . . .

"But there also is no lack of free organisations for nobler pursuits. One of the noblest achievements of our century is undoubtedly the Lifeboat Association. . . . The Hospitals Association and hundreds of like organisations, operating on a large scale and covering each a wide field, may also be mentioned under this head. . . hundreds of societies are constituted every day for the satisfaction of some of the infinitely varied needs of civilised man. . . in short, there is not a single direction in which men exercise their faculties without combining together for the accomplishment of some common aim. Every day new societies are formed, while every year the old ones aggregate together into larger units, federate across the national frontiers, and co-operate in some common work. . . One of

the most remarkable societies which has recently arisen is undoubtedly the Red Cross Society . . .

"These facts -- so numerous and so customary that we pass by without even noticing them -- are in our opinion one of the most prominent features of the second half of the nineteenth century. The just-mentioned organisms grew up so naturally, they so rapidly extended and so easily aggregated together, they are such unavoidable outgrowths of the multiplication of needs of the civilised man, and they so well replace State interference, that we must recognise in them a growing factor of our life. Modern progress is really towards the free aggregation of free individuals so as to supplant government in all those functions which formerly were entrusted to it, and which it mostly performed so badly." [Op. Cit., pp. 65-7]

As is clear, Kropotkin was using these examples **not** as expressions of "*mutual aid*" but rather as evidence that social life can be organised without government. Just as with communism, he gave concrete examples of libertarian tendencies within society to prove the possibility of an anarchist society. And just like his examples of communistic activities within capitalism, his examples of co-operation without the state are not listed as examples of "*mutual aid*."

All this would suggest that Stack has either not read Kropotkin's works or that he has and consciously decided to misrepresent his ideas. In fact, its a combination of the two. Stack (as proven by his talk at **Marxism 2001**) gathered his examples of "*mutual aid*" from Paul Avrich's essay "*Kropotkin's Ethical Anarchism*" contained in his **Anarchist Portraits**. As such, he has not read the source material. Moreover, he simply distorted what Avrich wrote. In other words, not only has he not read Kropotkin's works, he consciously decided to misrepresent the secondary source he used. This indicates the quality of almost all Marxist critiques of anarchism.

For example, Avrich correctly notes that Kropotkin did not "*deny that the 'struggle for existence' played an important role in the evolution of species. In Mutual Aid he declares unequivocally that 'life is struggle; and in that struggle the fittest survive.'*" Kropotkin simply argued that co-operation played a key role in determining who was, in fact, the fittest. Similarly, Avrich lists many of the same examples Stack presents but not in his discussion of Kropotkin's ideas on mutual aid. Rather, he correctly lists them in his discussion of how Kropotkin saw examples of anarchist communism in modern society and was "*manifesting itself 'in the thousands of developments of modern life.'*" This did not mean that Kropotkin did not see the need for a social revolution, quite the reverse. As Avrich notes, Kropotkin "*did not shrink from the necessity of revolution*" as he "*did not expect the propertied classes to give up their privileges and possession without a fight.*" This "*was to be a social revolution, carried out by the masses themselves*" achieved by means of "*expropriation*" of social wealth. [Paul Avrich, **Anarchist Portraits**, p. 58, p. 62 and p. 66]

So much for Stack's claims. As can be seen, they are not only a total misrepresentation of Kropotkin's work, they are also a distortion of his source!

A few more points need to be raised on this subject.

Firstly, Kropotkin never claimed that mutual aid "*was the natural order.*" Rather, he stressed that Mutual Aid was (to use the subtitle of his book on the subject) "*a factor of evolution.*" Never denying the importance of struggle or competition as a means of survival, he argued that co-operation within a species was the best means for it to survive in a hostile environment. This applied to life under capitalism. In the hostile environment of class society, then the only way in which working class people could survive would be to practice mutual aid (in other words, solidarity). Little wonder, then, that Kropotkin listed strikes and unions as expressions of mutual aid in capitalist society. Moreover, if we take Stack's arguments at face value, then he clearly is arguing that solidarity is not an important factor in the class struggle and that mutual aid and co-operation cannot change the world! Hardly what you would expect a socialist to argue. In other words, his inaccurate diatribe against Kropotkin backfires on his own ideas.

Secondly, Stack's argument that Kropotkin argued that co-operation was the natural order is in contradiction with his other claims that anarchism "*despises the collectivity*" and "*dismiss[es] the importance of the collective nature of change.*" How can you have co-operation without forming a collective? And, equally, surely support for co-operation clearly implies the recognition of the "*collective nature of change*"? Moreover, if Stack had bothered to **read** Kropotkin's classic he would have been aware that he listed both unions and strikes as expressions of "*mutual aid*" (a fact, of course, which would undermine Stack's argument that anarchists reject collective working class struggle and organisation).

Thirdly, **Mutual Aid** is primarily a work of popular science and not a work on revolutionary anarchist theory like, say, **The Conquest of Bread** or **Words of a Rebel**. As such, it does not present a full example of Kropotkin's revolutionary ideas and how mutual aid fits into them. However, it does present some insights on the question of social progress which indicate that he did not think that "*co-operation*" was "*at the root of the social process,*" as Stack claims. For example, he notes that "*[w]hen Mutual Aid institutions . . . began . . . to lose their primitive character, to be invaded by parasitic growths, and thus to become hindrances to process, the revolt of individuals against these institutions took always two different aspects. Part of those who rose up strove to purify the old institutions, or to work out a higher form of commonwealth.*" But at the same time, others "*endeavoured to break down the protective institutions of mutual support, with no other intention but to increase their own wealth and their own powers.*" In this conflict "*lies the real tragedy of history.*" He also noted that the mutual aid tendency "*continued to live in the villages and among the poorer classes in the towns.*" Indeed, "*in so far as*" as new "*economical and social institutions*" were "*a creation of the masses*" they "*have all originated from the same source*" of mutual aid. [**Mutual Aid**, pp. 18-9 and p. 180]

Kropotkin was well aware that mutual aid (or solidarity) could not be applied between classes in a class society. Indeed, his chapters on mutual aid under capitalism contain the strike and union. As he put it in an earlier work:

"What solidarity can exist between the capitalist and the worker he exploits? Between the head of an army and the soldier? Between the governing and the governed?" [Words of a Rebel, p. 30]

In summary, Stack's assertions about Kropotkin's theory of *"Mutual Aid"* are simply false. He simply distorts the source material and shows a total ignorance of Kropotkin's work (which he obviously has not bothered to read before criticising it). A truthful account of *"Mutual Aid"* would involve recognising that Kropotkin show it being expressed in both strikes and labour unions and that he saw solidarity between working people as the means of not only surviving within the hostile environment of capitalism but also as the basis of a mass revolution which would end it.

H.2.7 Who do anarchists see as their *"agents of social change"*?

It is often charged, usually without any evidence, that anarchists do not see the working class as the *"agent"* of the social revolution. Pat Stack, for example, states *"the failure of anarchism [is] to understand the centrality of the working class itself."* He argues that for Marx, *"the working class would change the world and in the process change itself. It would become the agent for social advance and human liberty."* For Bakunin, however, *"skilled artisans and organised factory workers, far from being the source of the destruction of capitalism, were 'tainted by pretensions and aspirations'. Instead Bakunin looked to those cast aside by capitalism, those most damaged, brutalised and marginalised. The lumpen proletariat, the outlaws, the 'uncivilised, disinherited, illiterate', as he put it, would be his agents for change."* [*Anarchy in the UK?*], **Socialist Review**, no. 246] He fails to provide any references for his accusations. This is unsurprising, as to do so would mean that the reader could check for themselves the validity of Stack's claims.

Take, for example, the quote *"uncivilised, disinherited, illiterate"* Stack uses as evidence. This expression is from an essay written by Bakunin in 1872 and which expressed what he considered the differences between his ideas and those of Marx. The quote can be found on page 294 of **Bakunin on Anarchism**. On the previous page, we discover Bakunin arguing that *"for the International to be a real power, it must be able to organise within its ranks the immense majority of the proletariat of Europe, of America, of all lands."* [**Bakunin on Anarchism**, p. 293] This is the context in which Bakunin made the comments Stack quotes. As such, he clearly is quoting out of context in terms of Bakunin's article. Moreover, as we will indicate, Stack's also quotes them outside the historical context as well as Bakunin's ideas taken as a whole.

Let us begin with Bakunin's views on *"skilled artisans and organised factory workers."* In **Statism and Anarchy**, for example, we discover Bakunin arguing that the *"proletariat . . . must enter the International [Workers' Association] en masse, form factory, artisan, and agrarian sections, and unite them into local federations"* for *"the sake of its own liberation."* [**Statism and Anarchy**, p. 51] This perspective is the predominant one in Bakunin's ideas. For example, he argued that anarchists saw *"the new social order"* being *"attained . . . through the social (and therefore anti-political) organisation and*

power of the working masses of the cities and villages." He argued that *"only the trade union sections can give their members . . . practical education and consequently only they can draw into the organisation of the International the masses of the proletariat, those masses without whose practical co-operation . . . the Social Revolution will never be able to triumph."* The International, in Bakunin's words, *"organises the working masses . . . from the bottom up"* and that this was *"the proper aim of the organisation of trade union sections."* He stressed that revolutionaries must *"[o]rganise the city proletariat in the name of revolutionary Socialism . . . [and] unite it into one preparatory organisation together with the peasantry."* [**The Political Philosophy of Bakunin**, p. 300, p. 310, p. 319 and p. 378]

This support for organised workers and artisans can also be seen from the rest of the essay in which Bakunin discusses the *"flower of the proletariat."* He goes on to discuss the policy that the **International Workingmen's Association** should follow (i.e. the organised revolutionary workers). He argued that its *"sections and federations [must be] free to develop its own policies . . . [to] attain real unity, basically economic, which will necessarily lead to real political unity . . . The foundation for the unity of the International . . . has already been laid by the common sufferings, interests, needs, and real aspirations of the workers of the whole world."* He stressed that *"the International has been . . . the work of the proletariat itself. . . It was their keen and profound instinct as workers . . . which impelled them to find the principle and true purpose of the International. They took the common needs already in existence as the foundation and saw the **international organisation of economic conflict against capitalism** as the true objective of this association. In giving it exclusively this base and aim, the workers at once established the entire power of the International. They opened wide the gates to all the millions of the oppressed and exploited."* The International, as well as *"organising local, national and international strikes"* and *"establishing national and international trade unions,"* would discuss *"political and philosophical questions."* The workers *"join the International for one very practical purpose: solidarity in the struggle for full economic rights against the oppressive exploitation by the bourgeoisie."* [**Bakunin on Anarchism**, pp. 297-8, pp. 298-9 and pp. 301-2]

All this, needless to say, makes a total mockery of Stack's claim that Bakunin did not see *"skilled artisans and organised factory workers"* as *"the source of the destruction of capitalism"* and *"agents for change."* Indeed, it is hard to find a greater distortion of Bakunin's ideas. Rather than dismiss *"skilled artisans"* and *"organised factory workers"* Bakunin desired to organise them along with agricultural workers into unions and get these unions to affiliate to the **International Workers' Association**. He argued again and again that the working class, organised in workers associations, were the means of making a revolution (i.e. *"the source of the destruction of capitalism,"* to quote Stack).

Only in **this** context can we understand Bakunin's comments as any apparent contradiction generated by quoting out of context is quickly solved by looking at Bakunin's work. This reference to the *"uncivilised, disinherited, illiterate"* comes from a polemic against Marx. From the context, it can quickly be seen that by these terms Bakunin meant the bulk of the working class. In his words:

"To me the flower of the proletariat is not, as it is to the Marxists, the upper layer, the aristocracy of labour, those who are the most cultured, who earn more and live more comfortably than all the other workers. Precisely this semi-bourgeois layer of workers

would, if the Marxists had their way, constitute their **fourth governing class**. This could indeed happen if the great mass of the proletariat does not guard against it. By virtue of its relative well-being and semi-bourgeois position, this upper layer of workers is unfortunately only too deeply saturated with all the political and social prejudices and all the narrow aspirations and pretensions of the bourgeoisie. Of all the proletariat, this upper layer is the least socialist, the most individualist.

"By the **flower of the proletariat**, I mean above all that great mass, those millions of the uncultivated, the disinherited, the miserable, the illiterates . . . I mean precisely that eternal 'meat' (on which governments thrive), that great **rabble of the people** (underdogs, 'dregs of society') ordinarily designated by Marx and Engels by the phrase . . . **Lumpenproletariat**" [Bakunin on Anarchism, p. 294]

Thus Bakunin contrasted a "semi-bourgeois" layer to the "great mass of the proletariat." In a later work, **Statism and Anarchy**, Bakunin makes the same point. He argues there was "a special category of relatively affluent workers, earning higher wages, boasting of their literary capacities and . . . impregnated by a variety of bourgeois prejudices . . . in Italy . . . they are insignificant in number and influence . . . In Italy it is the extremely poor proletariat that predominates. Marx speaks disdainfully, but quite unjustly, of this **Lumpenproletariat**. For in them, and only in them, and not in the bourgeois strata of workers, are there crystallised the entire intelligence and power of the coming Social Revolution." [Op. Cit., p. 334] Again it is clear that Bakunin is referring to a small minority within the working class and **not** dismissing the working class as a whole. He explicitly pointed to the "**bourgeois-influenced minority of the urban proletariat**" and contrasted this minority to "the mass of the proletariat, both rural and urban." [Michael Bakunin: Selected Writings, p. 254]

Clearly, Stack is distorting Bakunin's ideas on this subject when he claims that Bakunin thought **all** workers were "tainted by pretensions and aspirations." In fact, like Marx, Engels and Lenin, Bakunin differentiated between different types of workers. This did not mean he rejected organised workers or skilled artisans nor the organisation of working people into revolutionary unions, quite the reverse. As can be seen, Bakunin argued there was a group of workers who accepted bourgeois society and did relatively well under it. It was **these** workers who were "frequently no less egoistic than bourgeois exploiters, no less pernicious to the International than bourgeois socialists, and no less vain and ridiculous than bourgeois nobles." [The Basic Bakunin, p. 108] It is comments like this that Marxists quote out of context and use for their claims that Bakunin did not see the working class as the agent of social change. However, rather than refer to the whole working class, Stack quotes Bakunin's thoughts in relation to a minority strata within it. Clearly, from the context, Bakunin **did not** mean **all** working class people.

Also, let us not forget the historical context. After all, when Bakunin was writing, the vast majority of the working population across the world was, in fact, illiterate and disinherited. To get some sort of idea of the numbers of working people who would have been classed as "the uncultivated, the disinherited, the miserable, the illiterates" we have to provide some numbers. In Spain, for example, "in 1870, something like 60 per cent of the population was illiterate." [Gerald Brenan, **The Spanish Labyrinth**, p.

50] In Russia, in 1897 (i.e. 21 years after Bakunin's death), *"only 21% of the total population of European Russia was literate. This was mainly because of the appallingly low rate of literacy in the countryside -- 17% compared to 45% in the towns."* [S.A. Smith, **Red Petrograd**, p. 34] Stack, in effect, is excluding the majority of the working masses from the working class movement **and** the revolution in the 1860-70s by his comments. Little wonder Bakunin said what he said. By ignoring the historical context (as he ignores the context of Bakunin's comments), Stack misleads the reader and presents a distinctly distorted picture of Bakunin's thought.

In other words, Bakunin's comments on the *"flower of the proletariat"* apply to the majority of the working class during his lifetime and for a number of decades afterwards and **not** to an underclass, not to what Marx termed the "lumpenproletariat". As proven above, Bakunin's idea of what the *"lumpenproletariat"* is not what Marxists mean by the term. If Bakunin had meant the same as Marx by the "lumpenproletariat" then this would not make sense as the "lumpenproletariat" for Marx were not wage workers. This can best be seen when he argues that the International must organise this *"flower of the proletariat"* and conduct economic collective struggle against the capitalist class. In his other works (and in the specific essay these quotes are derived from) Bakunin stressed the need to organise all workers and peasants into unions to fight the state and bosses and his arguments that workers associations should not only be the means to fight capitalism but also the framework of an anarchist society. Clearly, Sam Dolgoff's summary of Bakunin's ideas on this subject is the correct one:

*"Bakunin's Lumpenproletariat . . . was broader than Marx's, since it included all the submerged classes: unskilled, unemployed, and poor workers, poor peasant proprietors, landless agricultural labourers, oppressed racial minorities, alienated and idealistic youth, declassé intellectuals, and 'bandits' (by whom Bakunin meant insurrectionary 'Robin Hoods' like Pugachev, Stenka Razin, and the Italian Carbonari)." ["Introduction", **Bakunin on Anarchism**, pp. 13-4]*

Nor is Stack the only anarchist to make such arguments as regards Bakunin. Paul Thomas quotes Bakunin arguing that the working class *"remains socialist without knowing it"* because of *"the very force of its position"* and *"all the conditions of its material existence"* and then, incredulously, adds that *"[i]t is for this reason that Bakunin turned away from the proletariat and its scientific socialism"* towards the peasantry. [**Karl Marx and the Anarchists**, p. 291] A more distorted account of Bakunin's ideas would be hard to find (and there is a lot of competition for that particular honour). The quotes Thomas provides are from Bakunin's *"The Policy of the International"* in which he discusses his ideas on how the International Working-Men's Association should operate (namely *"the collective struggle of the workers against the bosses"*). At the time (and for some time after) Bakunin called himself a revolutionary socialist and argued that by class struggle, the worker would soon *"recognise himself [or herself] to be a revolutionary socialist, and he [or she] will act like one."* [**The Basic Bakunin**, p. 103] As such, the argument that the social position workers are placed makes them *"socialist without knowing"* does not, in fact, imply that Bakunin thought they would become Marxists (*"scientific socialism"*) and, therefore, he turned against them. Rather, it meant that, for Bakunin, anarchist ideas were a product of working class life and it was a case of turning instinctive feelings into conscious thought by collective struggle. As noted above, Bakunin did not *"turn away"* from these ideas nor the proletariat. Indeed, Bakunin held

to the importance of organising the proletariat (along with artisans and peasants) to the end of his life. Quite simply, Thomas is distorting Bakunin's ideas.

Lastly, we have to point out a certain irony (and hypocrisy) in Marxist attacks on Bakunin on this subject. This is because Marx, Engels and Lenin held similar views on the corrupted "*upper strata*" of the working class as Bakunin did. Indeed, Marxists have a specific term to describe this semi-bourgeois strata of workers, namely the "*labour aristocracy*." Marx, for example, talked about the trade unions in Britain being "*an aristocratic minority*" and the "*great mass of workers . . . has long been outside*" them (indeed, "*the most wretched mass has never belonged.*") [Marx-Engels, **Collected Works**, vol. 22, p. 614]

Engels also talked about "*a small, privileged, 'protected' minority*" within the working class, which he also called "*the working-class aristocracy*." [Op. Cit., vol. 27, p. 320 and p. 321] Lenin quotes him arguing that the "*English proletariat is actually becoming more and more bourgeois, so that this most bourgeois of all nations is apparently aiming at the possession of . . . a bourgeois proletariat alongside the bourgeoisie*." [quoted by Lenin, **Collected Works**, vol. 22, p. 283] Like Lenin, Engels explained this by the dominant position of Britain within the world market. Indeed, Lenin argued that "*a section of the British proletariat becomes bourgeois*." For Lenin, imperialist "*superprofits*" make it "**possible to bribe the labour leaders and the upper stratum of the labour aristocracy**." This "*stratum of workers-turned-bourgeois, or the labour aristocracy, who are quite philistine in their mode of life, in the size of their earnings and in their entire outlook . . . are the real agents of the bourgeoisie in the working-class movement, the labour lieutenants of the capitalist class*." [Op. Cit., p. 284 and p. 194]

As can be seen, this is similar to Bakunin's ideas and, ironically enough, nearly identical to Stack's distortion of those ideas (particularly in the case of Marx). However, only someone with a desire to lie would suggest that any of them dismissed the working class as their "*agent of change*" based on this selective quoting. Unfortunately, that is what Stack does with Bakunin. Ultimately, Stack's comments seem hypocritical in the extreme attacking Bakunin while remaining quiet on the near identical comments of his heroes.

All in all, once a historic and textual context is placed on Bakunin's words, it is clear which social class was considered as the social revolution's "*agents of change*": the working class (i.e. wage workers, artisans, peasants and so on). In this, other revolutionary anarchists follow him. For anarchists, the social revolution will be made by the working class. Ultimately, for anyone to claim that Bakunin, for any social anarchist, rejects the working class as an agent of social change simply shows their ignorance of the politics they are trying to attack.

H.2.8 What is the relationship of anarchism to syndicalism?

One of the most common Marxist techniques when they discuss anarchism is to contrast the likes of Bakunin and Kropotkin to the revolutionary syndicalists. The argument runs along the lines that "classical" anarchism is individualistic and rejects working class organisation and power and

syndicalism is a step forward from it (i.e. a step closer to Marxism). Sadly, such arguments simply show the ignorance of the author rather than any form of factual basis. When the ideas of revolutionary anarchists like Bakunin and Kropotkin are compared to revolutionary syndicalism, the similarities are soon discovered.

This kind of argument can be found in Pat Stack's essay "*Anarchy in the UK?*" After totally distorting the ideas of anarchists like Bakunin and Kropotkin, Stack argues that anarcho-syndicalists "*tended to look to the spontaneity and anti-statism of anarchism, the economic and materialist analysis of Marxism, and the organisational tools of trade unionism. Practically every serious anarchist organisation came from or leant on this tradition . . . The huge advantage they had over other anarchists was their understanding of the power of the working class, the centrality of the point of production (the workplace) and the need for collective action.*" [Socialist Review, no. 246]

Given that Stack's claims that anarchists reject the "*need for collective action,*" do not understand "*the power of the working class*" and the "*centrality*" of the workplace are simply inventions, it would suggest that Stack's "*huge advantage*" does not, in fact, exist and is pure nonsense. Bakunin, Kropotkin and all revolutionary anarchists, as proven in [section H.2.2](#), already understood all this and based their politics on the need for collective working class struggle at the point of production. As such, by contrasting anarcho-syndicalism with anarchism (as expressed by the likes of Bakunin and Kropotkin) Stack simply shows his utter and total ignorance of his subject matter.

Moreover, if he bothered to read the works of the likes of Bakunin and Kropotkin he would discover that many of their ideas were identical to those of revolutionary syndicalism. For example, Bakunin argued that the "*organisation of the trade sections, their federation in the International, and their representation by Chambers of Labour, . . . [allow] the workers . . . [to] combin[e] theory and practice . . . [and] bear in themselves the living germs of **the social order**, which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself.*" [quoted by Rudolf Rocker, **Anarcho-Syndicalism**, p. 45] Like the syndicalists, he argued "*the natural organisation of the masses . . . is organisation based on the various ways that their various types of work define their day-to-day life; it is organisation by trade association*" and once "*every occupation . . . is represented within the International [Working-Men's Association], its organisation, the organisation of the masses of the people will be complete.*" Moreover, Bakunin stressed that the working class had "*but a single path, that of **emancipation through practical action** which meant '**workers' solidarity in their struggle against the bosses**' by '**trades-unions, organisation, and the federation of resistance funds**'*" [**The Basic Bakunin**, p. 139 and p. 103]

Like the syndicalists, Bakunin stressed working class self-activity and control over the class struggle:

"Toilers count no longer on anyone but yourselves. Do not demoralise and paralyse your growing strength by being duped into alliances with bourgeois Radicalism . . . Abstain from all participation in bourgeois Radicalism and organise outside of it the forces of the proletariat. The bases of this organisation are already completely given: they are the

workshops and the federation of workshops, the creation of fighting funds, instruments of struggle against the bourgeoisie, and their federation, not only national, but international.

"And when the hour of revolution sounds, you will proclaim the liquidation of the State and of bourgeois society, anarchy, that is to say the true, frank people's revolution . . . and the new organisation from below upwards and from the circumference to the centre." [quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, pp. 120-1]

This new society would be organised *"by free federation, from below upwards, of workers' associations, industrial as well as agricultural . . . in districts and municipalities at first; federation of these into regions, of the regions into nations, and the nations into a fraternal Internationalism."* Moreover, *"capital, factories, all the means of production and raw material"* would be owned by *"the workers' organisations"* while the land would be given *"to those who work it with their own hands."* [quoted by Kenafick, **Op. Cit.**, p. 241 and p. 240]

The similarities with revolutionary syndicalism could not be clearer. Little wonder that all serious historians see the obvious similarities between anarcho-syndicalism and Bakunin's anarchism. For example, George R. Esenwein's (in his study of early Spanish anarchism) comments that syndicalism *"had deep roots in the Spanish libertarian tradition. It can be traced to Bakunin's revolutionary collectivism."* He also notes that the class struggle was *"central to Bakunin's theory."* [**Anarchist Ideology and the Working Class Movement in Spain, 1868-1898**, p. 209 and p. 20]

Caroline Cahm, likewise, points to *"the basic syndicalist ideas of Bakunin"* and that he *"argued that trade union organisation and activity in the International [Working Men's Association] were important in the building of working-class power in the struggle against capital . . . He also declared that trade union based organisation of the International would not only guide the revolution but also provide the basis for the organisation of the society of the future."* Indeed, he *"believed that trade unions had an essential part to play in the developing of revolutionary capacities of the workers as well as building up the organisation of the masses for revolution."* [**Kropotkin and the Rise of Revolutionary Anarchism**, p. 219, p. 215 and p. 216]

Paul Avrich, in his essay *"The Legacy of Bakunin,"* agrees. *"Bakunin,"* he argued, *"perhaps even more than Proudhon, was a prophet of revolutionary syndicalism, who believed that a free federation of trade unions would be the 'living germs of a new social order which is to replace the bourgeois world.'"* [**Anarchist Portraits**, pp. 14-15] Bertrand Russell (in his justly famous discussion of socialism, anarchism and syndicalism) noted that *"[h]ardly any of these ideas [associated with syndicalism] are new: almost all are derived from the Bakunist [sic!] section of the old International"* and that this was *"often recognised by Syndicalists themselves."* [**Roads to Freedom**, p. 52]

Needless to say, anarchists agree with this perspective. Arthur Lehning, for example, summarises the anarchist perspective when he commented that *"Bakunin's collectivist anarchism . . . ultimately formed the ideological and theoretical basis of anarcho-syndicalism."* [*"Introduction"*, **Michael Bakunin:**

Selected Writings, p. 29] Kropotkin argued that syndicalism *"is nothing other than the rebirth of the International -- federalist, worker, Latin."* [quoted by Martin A. Miller, **Kropotkin**, p. 176] Malatesta stated in 1907 that he had *"never ceased to urge the comrades into that direction which the syndicalists, forgetting the past, call new, even though it was already glimpsed and followed, in the International, by the first of the anarchists."* [**The Anarchist Reader**, p. 221] Little wonder that Rudolf Rocker stated the following in his classic introduction to anarcho-syndicalism:

"Modern Anarcho-syndicalism is a direct continuation of those social aspirations which took shape in the bosom of the First International and which were best understood and most strongly held by the libertarian wing of the great workers' alliance." [**Anarcho-Syndicalism**, p. 49]

Murray Bookchin just states the obvious:

"Long before syndicalism became a popular term in the French labour movement of the late [eighteen]nineties, it already existed in the Spanish labour movement of the early seventies. The anarchist-influenced Spanish Federation of the old IWMA was . . . distinctly syndicalist." ["Looking Back at Spain," pp. 53-96, **The Radical Papers**, p. 67]

Perhaps, in the face of such evidence (and the writings of Bakunin himself), Marxists could claim that the sources we quote are either anarchists or "sympathetic" to anarchism. To counter this is very easy, we need only quote Marx and Engels. Marx attacked Bakunin for thinking that the *"working class . . . must only organise themselves by trades- unions"* and *"not occupy itself with politics."* Engels argued along the same lines, having a go at the anarchists because in the *"Bakuninist programme a general strike is the lever employed by which the social revolution is started"* and that they admitted *"this required a well-formed organisation of the working class"* (i.e. a trade union federation). Indeed, he summarised Bakunin's strategy as being to *"organise, and when all the workers, hence the majority, are won over, dispose all the authorities, abolish the state and replace it with the organisation of the International."* [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 48, p. 132, p. 133 and p. 72] Ignoring the misrepresentations of Marx and Engels about the ideas of their enemies, we can state that they got the basic point of Bakunin's ideas -- the centrality of trade union organisation and struggle as well as the use of strikes and the general strike. Therefore, you do not have to read Bakunin to find out the similarities between his ideas and syndicalism, you can read Marx and Engels. Clearly, most Marxist critiques of anarchism haven't even done that!

Latter anarchists, needless to say, supported the syndicalist movement and, moreover, drew attention to its anarchist roots. Emma Goldman noted that in the First International *"Bakunin and the Latin workers"* forged ahead *"along industrial and Syndicalist lines"* and stated that syndicalism *"is, in essence, the economic expression of Anarchism"* and that *"accounts for the presence of so many Anarchists in the Syndicalist movement. Like Anarchism, Syndicalism prepares the workers along direct economic lines, as conscious factors in the great struggles of to-day, as well as conscious factors in the task of reconstructing society."* After seeing syndicalist ideas in action in France in 1900, she *"immediately*

began to propagate Syndicalist ideas." [**Red Emma Speaks**, p. 66, p. 68 and p. 67]

Kropotkin argued anarchist communism "*wins more and more ground among those working-men who try to get a clear conception as to the forthcoming revolutionary action. The syndicalist and trade union movements, which permit the workingmen to realise their solidarity and to feel the community of their interests better than any election, prepare the way for these conceptions.*" [**Kropotkin's Revolutionary Pamphlets**, p. 174] His support for anarchist participation in the labour movement was strong, considering it a key method of preparing for a revolution and spreading anarchist ideas amongst the working classes. As he put it:

"The syndicat is absolutely necessary. It is the sole force of the workers which continues the direct struggle against capital without turning to parliamentarism." [quoted by Miller, **Op. Cit.**, p. 177]

"Revolutionary Anarchist Communist propaganda within the Labour Unions," he argued, *"had always been a favourite mode of action in the Federalist or 'Bakuninist' section of the International Working Men's Association. In Spain and in Italy it had been especially successful. Now it was resorted to, with evident success, in France and Freedom [the British Anarchist paper] eagerly advocated this sort of propaganda."* [**Act For Yourselves**, pp. 119-20] Caroline Cahm notes in her excellent account of Kropotkin's ideas between 1872 and 1886, he *"was anxious to revive the International as an organisation for aggressive strike action to counteract the influence of parliamentary socialists on the labour movement."* This resulted Kropotkin advocating a *"remarkable fusion of anarchist communist ideas with both the bakuninist [sic!] internationalist views adopted by the Spanish Federation and the syndicalist ideas developed in the Jura Federation in the 1870s."* This included seeing the importance of revolutionary labour unions, the value of the strikes as a mode of direct action and syndicalist action developing solidarity. [Cahm, **Op. Cit.**, p. 257]

Clearly, any one claiming that there is a fundamental difference between anarchism and syndicalism is talking nonsense. Syndicalist ideas were being argued by the likes of Bakunin and Kropotkin before syndicalism emerged in the French CGT in the 1890s as a clearly labelled revolutionary theory. Rather than being in conflict, the ideas of syndicalism find their roots in the ideas of Bakunin and "classical" anarchism. This would be quickly seen if the actual writings of Bakunin and Kropotkin were consulted. There **are**, of course, differences between anarchism and syndicalism, but they are **not** those usually listed by Marxists. [Section J.3.9](#) discusses these differences. As will quickly be discovered, they are **not** based on a rejection of working class organisation, direct action, solidarity and collective struggle!

Indeed, rather than acknowledge these similarities to Bakunin's ideas, Stack prefers to rewrite history by claiming (at his meeting on "*Marxism and Anarchism*" at the SWP's **Marxism 2001** conference) that Georges Sorel was the father of syndicalism! Any one familiar with the history of syndicalism and the ideas of Sorel would, of course, know the syndicalist movement had been in existence for a number of years before Sorel wrote **Reflections on Violence**. As such, he discussed from afar a movement which already existed. As the editor to a recent edition of Sorel's book notes, *"the immediate backdrop"* of

Reflections on Violence was "*the rise of the French syndicalist movement*" which "*Sorel had been following . . . since the late 1890s.*" It was only "*after 1902, when the Confederation Generale du Travail (CGT) launched a series of spectacular strikes, that syndicalism came to the forefront of Sorel's attention.*" In summary, "*Sorel did not create or even inspire the syndicalist movement.*" [**Reflections on Violence**, pp. viii-ix] Rather, syndicalism came about when anarchists (as Bakunin recommended thirty years previously) entered the trade unions. Indeed, Sorel acknowledges this in his work, arguing that historians "*will one day see in this entry of the anarchists into the **syndicats** one of the greatest events that has been produced in our time.*" [**Op. Cit.**, p. 35]

Ultimately, claims like Pat Stack's simply shows how unfamiliar the author is with the ideas they are pathetically attempting to critique. Anarchists from Bakunin onwards shared most of the same ideas as syndicalism (which is unsurprising as most of the ideas of anarcho-syndicalism have direct roots in the ideas of Bakunin). In other words, for Stack, the "*huge advantage*" anarcho-syndicalists have "*over other anarchists*" is that they, in fact, share the same "*understanding of the power of the working class, the centrality of the point of production (the workplace) and the need for collective action*"! This, in itself, shows the bankruptcy of Stack's claims and those like it.

H.2.9 Do anarchists have "*liberal*" politics?

Another assertion by Marxists is that anarchists have "*liberal*" politics or ideas. For example, one Marxist argues that the "*programme with which Bakunin armed his super-revolutionary vanguard called for the 'political, economic and social equalisation of classes and individuals of both sexes, beginning with the abolition of the right of inheritance.'* This is **liberal** politics, implying nothing about the abolition of capitalism." [Derek Howl, "*The Legacy of Hal Draper*," **International Socialism**, no. 52, p. 148] That Howl is totally distorting Bakunin's ideas can quickly be seen by looking at the whole of the programme. Simply put, Howl is knowingly quoting Bakunin out of context in order to discredit his ideas.

Howl is quoting from item 2 of the "*Programme of the Alliance.*" Strangely he fails to quote the end of that item, namely when it states this "*equalisation*" was "*in pursuance of the decision reached by the last working men's Congress in Brussels, the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, in other words by the agricultural and industrial associations.*" If this was not enough to indicate the abolition of capitalism, item 4 states that the Alliance "*repudiates all political action whose target is anything except the triumph of the workers' cause over Capital.*" [**Michael Bakunin: Selected Writings**, p. 174] Howl's dishonesty is clear. Bakunin **explicitly** argued for the abolition of capitalism in the same item Howl (selectively) quotes from. If the socialisation of land and capital under the control of workers' associations is not the abolition of capitalism, we wonder what is!

Equally as dishonest as this quoting out of context is Howl's non-mention of the history of the expression "*political, economic and social equalisation of classes and individuals of both sexes.*" After Bakunin sent the Alliance programme to the General Council of the **International Workingmen's**

Association, he received a letter date March 9, 1869 from Marx which argued that the term "*the equalisation of classes*" "*literally interpreted*" would mean "*harmony of capital and labour*" as "*persistently preached by the bourgeois socialists.*" The letter argues that it was "*not the logically impossible 'equalisation of classes', but the historically necessary, superseding 'abolition of classes'*" which was the "*true secret of the proletarian movement*" and which "*forms the great aim of the International Working Men's Association.*" Significantly, the letter adds the following:

"Considering, however, the context in which that phrase 'equalisation of classes' occurs, it seems to be a mere slip of the pen, and the General Council feels confident that you will be anxious to remove from your program an expression which offers such a dangerous misunderstanding." [Marx-Engels, **Collected Works**, vol 21, p. 46]

And, given the context, Marx was right. The phrase "*equalisation of classes*" placed in the context of the political, economic and social equalisation of individuals obviously implies the abolition of classes. The logic is simple. If both worker and capitalist shared the same economic and social position then wage labour would not exist (in fact, it would be impossible as it is based on social and economic **inequality**) and so class society would not exist. Similarly, if the tenant and the landlord were socially equal then the landlord would have no power over the tenant, which would be impossible. Bakunin agreed with Marx on the ambiguity of the term and the Alliance changed its Programme to call for "*the final and total abolition of classes and the political, economic and social equalisation of individuals of either sex.*" [Bakunin, **Ibid.**] This change ensured the admittance of the Alliance sections into the International Workingmen's Association (although this did not stop Marx, like his followers, bringing up the "*equality of classes*" years later). However, Howl repeating the changed phrase "*equalisation of classes*" out of context helps discredit anarchism and so it is done.

Simply put, anarchists are **not** liberals as we are well aware of the fact that without equality, liberty is impossible except for the rich. As Nicolas Walter put it, "*[l]ike liberals, anarchists want freedom; like socialists, anarchists want equality. But we are not satisfied by liberalism alone or by socialism alone. Freedom without equality means that the poor and weak are less free than the rich and strong, and equality without freedom means that we are all slaves together. Freedom and equality are not contradictory, but complementary; in place of the old polarisation of freedom versus equality -- according to which we are told that more freedom means equals less equality, and more equality equals less freedom -- anarchists point out that in practice you cannot have one without the other. Freedom is not genuine if some people are too poor or too weak to enjoy it, and equality is not genuine if some people are ruled by other.*" [**Reinventing Anarchy**, p. 43] Clearly, anarchists do **not** have liberal politics. Quite the reverse, as we subject it to extensive critique from a working class perspective.

To the claim that anarchism "*combines a socialist critique of capitalism with a liberal critique of socialism,*" anarchists say that this is mistaken. [Paul Thomas, **Karl Marx and the Anarchists**, p. 7] Rather, anarchism is simply a socialist critique of both capitalism and the state. Freedom under capitalism is fatally undermined by inequality -- it simply becomes the freedom to pick a master. This violates liberty and equality. Equally, as regards the state. "*Any State at all,*" argued Bakunin, "*no matter what kind, is a domination and exploitation. It is a negation of Socialism, which wants an equitable*

human society delivered from all tutelage, from all authority and political domination as well as economic exploitation." [quoted by Kenafick, **Op. Cit.**, pp. 95-6] As such, state structures violate not only liberty but also equality. There is no real equality in power between, say, the head of the government and one of the millions who may, or may not, have voted for them. As the Russian Revolution proved, there can be no meaningful equality between a striking worker and the "socialist" political police sent to impose the will of the state.

This means that if anarchists are concerned about freedom (both individual **and** collective) it is not because we are influenced by liberalism. Quite the reverse, as liberalism happily tolerates hierarchy and the restrictions of liberty implied by private property, wage labour and the state. As Bakunin argued, capitalism turns *"the worker into a subordinate, a passive and obedient servant."* [**The Political Philosophy of Bakunin**, p. 188] As such, anarchism rejects liberalism, although (as Bakunin put it), *"[i]f socialism disputes radicalism, this is hardly to reverse it but rather to advance it."* [**The Basic Bakunin**, p. 87] Therefore, anarchism rejects liberalism, not because it supports the idea of freedom, but precisely because it does not go far enough and fails to understand that without equality, freedom is little more than freedom for the master.

Lastly, a few words on the mentality that could suggest that anarchist concern for liberty means that it is a form of liberalism. Rather than suggest the bankruptcy of anarchism it, in fact, suggests the bankruptcy of the politics of the person making the accusation. After all, the clear implication is that a concern with individual, collective and social freedom is alien to socialist ideas. It also strikes at the heart of socialism -- its concern for equality -- as it clearly implies that some have more power (namely the right to suppress the liberty of others) than the rest. As such, it suggests a superficial understanding of **real** socialism.

Ultimately, to argue that a concern for freedom means *"liberalism"* (or, equally, *"individualism"*) indicates that the person is not a socialist. After all, a concern that every individual controls their daily lives (i.e. to be free) means a wholehearted support for collective self-management of group affairs. It means a vision of a revolution (and post-revolutionary society) based on direct working class participation and management of society from below upwards. To dismiss this vision by dismissing the principles which inspire it as *"liberalism"* means to support rule from above by the "enlightened" elite (i.e. the party) and the hierarchical state structures. It means arguing for **party** power, not **class** power, as liberty is seen as a **danger** to the revolution and so the people must be protected against the "petty-bourgeois"/"reactionary" narrowness of the people. Rather than seeing free debate of ideas and mass participation as a source of strength, it sees it as a source of "bad influences" which the masses must be protected from.

Moreover, it suggests a total lack of understanding of the difficulties that a social revolution will face. Unless it is based on the active participation of the majority of a population, any revolution will fail. The construction of socialism, of a new society, will face thousands of unexpected problems and seek to meet the needs of millions of individuals, thousands of communities and hundreds of cultures. Without the individuals and groups within that society being in a position to freely contribute to that constructive task, it will simply wither under the bureaucratic and authoritarian rule of a few party leaders. As such,

individual liberties are an essential aspect of **genuine** social reconstruction -- without freedom of association, assembly, organisation, speech and so on, the active participation of the masses will be replaced by an isolated and atomised collective of individuals subjected to autocratic rule from above.

Ultimately, as Rudolf Rocker suggested, the *"urge for social justice can only develop properly and be effective, when it grows out of man's sense of personal freedom and it based on that. In other words **Socialism will be free, or it will not be at all.** In its recognition of this lies the genuine and profound justification for the existence of Anarchism."* [**Anarcho-Syndicalism**, p. 20]

H.2.10 Are anarchists against leadership?

It is a common assertion by Marxists that anarchists reject the idea of *"leadership"* and so think in terms of a totally spontaneous revolution. This is also generally understood to imply that anarchists do not see the need for revolutionaries to organise together to influence the class struggle in the here and now. Hence the British SWP's Duncan Hallas:

"That an organisation of socialist militants is necessary is common ground on the left, a few anarchist purists apart. But what kind of organisation? One view, widespread amongst newly radicalised students and young workers, is that of the libertarians . . . [They have] hostility to centralised, co-ordinated activity and profound suspicion of anything smacking of 'leadership.' On this view nothing more than a loose federation of working groups is necessary or desirable. The underlying assumptions are that centralised organisations inevitably undergo bureaucratic degeneration and that the spontaneous activities of working people are the sole and sufficient basis for the achievement of socialism . . . some libertarians draw the conclusion that a revolutionary socialist party is a contradiction in terms. This, of course, is the traditional anarcho-syndicalist position." [**Towards a revolutionary socialist party**, p. 39]

Ignoring the usual patronising references to the age and experience of non-Leninists, this argument can be faulted on many levels. Firstly, while libertarians do reject centralised structures, it does **not** mean we reject co-ordinated activity. This may be a common Marxist argument, but it is a straw man one. Secondly, anarchists do **not** reject the idea of *"leadership."* We simply reject the idea of hierarchical leadership. Thirdly, while all anarchists do think that a *"revolutionary socialist party"* is a contradiction in terms, it does not mean that we reject the need for revolutionary organisations (i.e. organisations of anarchists). While opposing centralised and hierarchical political parties, anarchists have long saw the need for anarchist groups and federations to discuss and spread our ideas and influence. We will discuss each issue in turn.

The first argument is the least important. For Marxists, co-ordination equals centralism and to reject centralisation means to reject co-ordination of joint activity. For anarchists, co-ordination does not each centralism or centralisation. This is why anarchism stresses federation and federalism as the means of co-ordinating joint activity. Under a centralised system, the affairs of all are handed over to a handful of

people at the centre. Their decisions are then binding on the mass of the members of the organisation whose position is simply that of executing the orders of those whom the majority elect. This means that power rests at the top and decisions flow from the top downwards. As such, the "revolutionary" party simply mimics the very society it claims to oppose.

In a federal structure, in contrast, decisions flow from the bottom up by means of councils of elected, mandated and recallable **delegates**. In fact, we discover anarchists like Bakunin and Proudhon arguing for elected, mandated and recallable delegates rather than for representatives in their ideas of how a free society worked years before the Paris Commune applied them in practice. The federal structure exists to ensure that any co-ordinated activity accurately reflects the decisions of the membership. As such, anarchists *"do not deny the need for co-ordination between groups, for discipline, for meticulous planning, and for unity in action. But they believe that co-ordination, discipline, planning, and unity in action must be achieved **voluntarily**, by means of a self-discipline nourished by conviction and understanding, not by coercion and a mindless, unquestioning obedience to orders from above."* [**Post-Scarcity Anarchism**, p. 215] In other words, co-ordination comes **from below** rather than being imposed from above by a few leaders. To use an analogy, federalist co-ordination is the co-ordination created in a strike by workers resisting their bosses. It is created by debate amongst equals and flows from below upwards. Centralised co-ordination is the co-ordination imposed from the top-down by the boss.

As such, anarchists reject the "centralised" model of the party as it is a "revolutionary" grouping organised on the capitalist model. As such, it is not revolutionary at all. It simply reproduces the very problems within the "revolutionary" movement that, ironically, inspired the initial revolt of its members towards socialism. The idea that the membership should run the organisation becomes simply that the majority designates its rulers and, like the bourgeois system of parliamentary democracy it is copied from, quickly becomes drained of any real meaning and becomes a veil thrown over the unlimited power of the rulers. The membership does not run the party simply because it elects delegates once a year who, in turn, designate the central committee -- no more than the people are sovereign in a parliamentary-style republic because they vote for the deputies who designate the government. Moreover, it trains the membership in accepting a division between leaders and led which, if applied during a revolution, will quickly mean that the party, **not** the masses, have real power.

Ultimately, centralised organisations become very undemocratic and, equally as important, **ineffective**. Hierarchical organisations kill people's enthusiasm and creativity. Such organisations are organisations where plans and ideas are not adopted because they are the best but simply because it is what a handful of leaders **think** are best for everyone else. Really effective organisations are those which make decisions based frank and open co-operation and debate, where dissent is **not** stifled and ideas are adopted because of their merit, and not **who** suggests them (i.e. the leaders of the party). In their quest for power and command, authoritarians usually end up manipulating processes, railroad their agendas, and in the process alienate people -- exactly those people who are new to organising for social change. They cause experienced organisers to quit and put-off people who might otherwise join the movement.

This is why anarchists stress federalist organisations. It ensures that co-ordination flows from below and

there is no institutionalised leadership. By organising in a way that reflects the kind of society we want, we train ourselves in the skills and decision making processes required to make a free and classless society work. In other words, that means and ends are united and this ensures that the means used will result in the desired ends. Simply put, libertarian means must be used if you want libertarian ends.

Secondly, anarchists are not against all forms of "leadership." We are against hierarchical and institutionalised forms of leadership. In other words, of giving **power** to leaders. This is the key difference, as Albert Meltzer explains. "*Some people in some circumstance,*" he argues, "*do naturally 'give a lead.'* But this should not mean they are a class apart. Any revolutionary in a factory where the majority have no revolutionary experience, will at times, 'give a lead.' But no anarchist would form an **institutionalised leadership**, nor wait for a lead, but give one." [**Anarchism: Arguments for and against**, p. 36]

This means, as we argue in [section J.3.6](#), that anarchists seek to influence the class struggle as **equals**. Rather than aim for positions of power, anarchists want to influence people by the power of their ideas as expressed in the debates that occur in the organisations created in the social struggle itself. This is because anarchists recognise that there is an unevenness in the level of ideas within the working class. This fact is obvious. Some workers accept the logic of the current system, others are critical of certain aspects, others (usually a minority) are consciously seek a better society (and are anarchists, ecologists, Marxists, etc.) and so on. Only constant discussion, the clash of ideas, combined with collective struggle can develop and narrow the unevenness of ideas within the oppressed. As Malatesta argued, "*[o]nly freedom or the struggle for freedom can be the school for freedom.*" [**Life and Ideas**, p. 59]

From this perspective, it follows that any attempt to create an institutionalised leadership structure means the end of the revolutionary process. Such "leadership" automatically means a hierarchical structure, one in which the leaders have power and make the decisions for the rest. This just reproduces the old class division of labour between those who think and those who act (i.e. between order givers and order takers). Rather than the revolutionary masses taking power in such a system, it is the "leaders" (i.e. a specific party hierarchy) who do so and the masses role becomes, yet again, simply that of selecting which boss tells them what to do.

As such, the anarchist federation does not reject the need of "leadership" in the sense of giving a led, of arguing its ideas and trying to win people to them. It does reject the idea that "leadership" should become separated from the mass of the people. Simply put, no party, no group of leaders have all the answers and so the active participation of all is required for a successful revolution. "*To give full scope to socialism,*" argued Kropotkin, "*entails rebuilding from top to bottom a society dominated by the narrow individualism of the shopkeeper . . . it is a question of completely reshaping all relationships . . . In every street, in every hamlet, in every group of men gathered around a factory or along a section of the railway line, the creative, constructive, and organisational spirit must be awakened in order to rebuild life -- in the factory, in the village, in the store, in production, and in distribution of supplies.*" Hence the need to "**shatter the state**" and "*rebuild a new organisation, by beginning from the very foundations of society -- the liberated village commune, federalism, groupings from simple to*

*compound, free workingmen's [and women's] associations." Such a task could **not** be "carried out within the framework of the state and the pyramidal organisation which is the essence of the state." [Selected Writings on Anarchism and Revolution, pp. 261-2]*

As such, anarchists reject the idea of turning the organs created in the class struggle and revolutionary process into hierarchical structures. By turning them from organs of self-management into organs for nominating "leaders," the constructive tasks and political development of the revolution will be aborted before they really begin. The active participation of all will become the picking of new masters and the revolution will falter. For this reason, anarchists "differ from the Bolshevik type of party in their belief that genuine revolutionaries must function **within the framework of the forms created by the revolution**, not within forms created by the party. . . Anarcho-communists seek to persuade the factory committees, assemblies or soviets to make themselves into **genuine organs of popular self-management**, not to dominate them, manipulate them, or hitch them to an all-knowing political party. Anarcho-communists do not seek to rear a state structure over these popular revolutionary organs." [Bookchin, **Op. Cit.**, p. 217]

This means that "an organisation is needed to propagate ideas systematically -- and not ideas alone, but **ideas which promote the concept of self-management**." In other words, there "is a need for a revolutionary organisation -- but its function must always be kept clearly in mind. Its first task is propaganda . . . In a revolutionary situation, the revolutionary organisation presents the most advanced demands: it is prepared at every turn of events to formulate -- in the most concrete fashion -- the immediate task that should be performed to advance the revolutionary process. It provides the boldest elements in action and in the decision-making organs of the revolution." [Bookchin, **Op. Cit.**, pp. 216-7] But what it does not is supplant those organs or decision-making process by creating institutionalised, hierarchical leadership structures. As such, it is not a question of organisation versus non-organisation, or "leadership" versus non-"leadership" but rather what **kind** of organisation and the **kind** of leadership.

Clearly, then, anarchists do not reject or dismiss the importance of politically aware minorities organising and spreading their ideas within social struggles. As Caroline Cahm summarised in her excellent study of Kropotkin's thought between 1872 and 1886, "Kropotkin stressed the role of heroic minorities in the preparation for revolution." [**Kropotkin and the Rise of Revolutionary Anarchism, 1872-86**, p. 276] However, as John Crump correctly argues, the "key words here are **in the preparation for revolution**. By their courage and daring in opposing capitalism and the state, anarchist minorities could teach by example and thereby draw increasing numbers into the struggle. But Kropotkin was not advocating substitutionism; the idea that a minority might carry out the revolution in place of the people was as alien to him as the notion that a minority would exercise rule after the revolution. In fact, Kropotkin recognised that the former would be a prescription for the latter." [**Hatta Shuzo and Pure Anarchism in Interwar Japan**, p. 9] In Kropotkin's own words:

"The idea of anarchist communism, today represented by feeble minorities, but increasingly finding popular expression, will make its way among the mass of the people. Spreading everywhere, the anarchist groups . . . will take strength from the support they find among the people, and will raise the red flag of the revolution . . . On that day, what

is now the minority will become the People, the great mass, and that mass rising against property and the State, will march forward towards anarchist communism." [**Words of a Rebel**, p. 75]

This influence would be gained simply by the correctness of our ideas and the validity of our suggestions. This means that anarchists seek influence *"through advice and example, leaving the people . . . to adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others."* As such, any anarchist organisation would *"strive acquire overwhelming influence in order to draw the [revolutionary] movement towards the realisation of our ideas. But such influence must be won by doing more and better than others, and will be useful if won in that way."* This means rejecting *"taking over command, that is by becoming a government and imposing one's own ideas and interests through police methods."* [Malatesta, **The Anarchist Revolution**, pp. 108-9]

Moreover, unlike leading Marxists like Lenin and Karl Kautsky, anarchists think that socialist ideas are developed **within** the class struggle rather than outside it by the radical intelligentsia. According to Lenin (who was only agreeing with Kautsky, the leading light of German and International Social Democracy at the start of the twentieth century) socialist (or *"Social-Democratic"*) *"consciousness could only be brought to them [the workers] from without. The history of all countries shows that the working class, exclusively by its own effort, is able to develop only trade union consciousness."* Socialist ideas did not arise from the labour movement but from the *"educated representatives of the propertied classes, the intellectuals."* [*"What is to Be Done?"*, **Essential Works of Lenin**, p. 74]

Anarchists reject this perspective. Kropotkin argued that *"modern socialism has emerged out of the depths of the people's consciousness. If a few thinkers emerging from the bourgeoisie have given it the approval of science and the support of philosophy, the basis of the idea which they have given their own expression has nonetheless been the product of the collective spirit of the working people. The rational socialism of the International is still today our greatest strength, and it was elaborated in working class organisation, under the first influence of the masses. The few writers who offered their help in the work of elaborating socialist ideas have merely been giving form to the aspirations that first saw their light among the workers."* [**Words of a Rebel**, p. 59] In other words, anarchists are a part of the working class (either by birth or by rejecting their previous class background and becoming part of it), the part which has generalised its own experiences, ideas and needs into a theory called *"anarchism"* and seeks to convince the rest of the validity of its ideas and tactics. This would be a dialogue, based on both learning **and** teaching.

As such, this means that the relationship between the specifically anarchist groups and oppressed peoples in struggle is a two way one. As well as trying to influence the social struggle, anarchists also try and learn from the class struggle and try to generalise from the experiences of their own struggles and the struggles of other working class people. Rather than seeing the anarchist group as some sort of teacher, anarchists see it as simply part of the social struggle and its ideas can and must develop from active participation within the class struggle. As anarchists agree with Bakunin and reject the idea that their organisations should take power on behalf of the masses, it is clear that such groups are not imposing alien ideas upon people but rather try to clarify the ideas generated by working class people in

struggle. It is an objective fact that there is a great difference in the political awareness within the masses of oppressed people. This uneven development means that they do not accept, all at once or in their totality, revolutionary ideas. There are layers. Groups of people, by ones and twos and then in larger numbers, become interested, read literature, talk with others, and create new ideas. The first groups that explicitly call their ideas "*anarchism*" have the right and duty to try to persuade others to join them. This is not opposed to the self-organisation of the working class, rather it is how the working class self-organises.

Thirdly, as we discuss in [section J.3](#), anarchists recognise the need to create specifically anarchist organisations to spread anarchist ideas and influence the class struggle. As we discuss the different kinds of anarchist organisations in that section, we will not do so here. Suffice to say, the idea that anarchists reject this need to organise politically in order to achieve a revolution is not to be found in the theory and practice of all the major anarchist thinkers.

Ultimately, if spontaneity was enough to create (and ensure the success of) a social revolution then we would be living in a libertarian socialist society. The fact that we are not suggests that spontaneity, however important, is not enough in itself. This simple fact of history is understood by anarchists and all the major anarchist thinkers.

See [section J.3](#) for more details on what organisations anarchists create and their role in anarchist revolutionary theory. [Section J.3.6](#) has a fuller discussion of the role of anarchist groups in the class struggle. For a discussion of the role of anarchists in a revolution, see [section J.7.5](#). For a fuller discussion why anarchists reject the idea of a revolutionary socialist party see section H.5.1 ("[Why are vanguard parties anti-socialist?](#)").

H.2.11 Are anarchists "*anti-democratic*"?

One of the common arguments against anarchism is that it is "*anti-democratic*" (or "*elitist*"). For example, the British **Socialist Workers Party** journal **International Socialism** (number 52) denounces anarchism for being "*necessarily deeply anti-democratic*" due to its "*thesis of the absolute sovereignty of the individual ego as against the imposition of **any** 'authority' over it,*" which, it is claimed, is the "*distinctly anarchist concept.*" Then Hal Draper is quoted arguing that "*[o]f all ideologies, anarchism is the most fundamentally anti-democratic in principle, since it is not only unalterably hostile to democracy in general but particularly to any socialist democracy of the most ideal kind that could be imagined.*" This is because "*[b]y the 'principle of authority' the consistent anarchist means principled opposition to any exercise of authority, including opposition to authority derived from the most complete democracy and exercised in completely democratic fashion.*" The author of the review argues that this position is an "*idealist conception*" in which "***any** authority is seen as despotic; 'freedom' and 'authority' (and therefore 'freedom' and 'democracy' are opposites. This presumption of opposition to 'authority' was fostered by liberalism.*" Needless to say, he contrasts this with the "*Marxist*" "*materialist understanding of society*" in which it "*was clear that 'authority' is necessary in **any** society where labour*

is collaborative." [Derek Howl, "*The Legacy of Hal Draper*," **International Socialism**, no. 52, p. 145]

Such an argument is, of course, just ridiculous. Indeed, it is flawed on so many levels it's hard to know where to start. The obvious place to start is the claim that anarchism is the most "*fundamentally anti-democratic in principle.*" Now, given that there are fascists, monarchists, supporters (like Trotsky) of "*party dictatorship*" and a host of others who advocate minority rule (even by one person) over everyone else, can it be argued with a straight face that anarchism is the most "*anti-democratic*" because it argues for the liberty of all? Is the idea and practice of absolute monarchy **really** more democratic than anarchism? Clearly not, although this does indicate the quality of this kind of argument.

Another obvious point is that anarchists do not see **any** authority as "*despotic.*" As we indicated in [section H.4](#), this common Marxist assertion is simply not true. Anarchists have always been very clear on the fact they reject specific kinds of authority and not "*authority*" as such. In fact, by the term "*principal of authority*," Bakunin meant **hierarchical** authority, and not "*authority*" as such. This explains why Kropotkin argued that "*the origin of the anarchist inception of society . . . [lies in] the criticism . . . of the hierarchical organisations and the authoritarian conceptions of society*" and stressed that anarchism "*refuses all hierarchical organisation.*" [**Kropotkin's Revolutionary Pamphlets**, p. 158 and p. 137]

This means, just to state the obvious, that making and sticking by collective decisions are **not** acts of authority. Rather they are simply expressions of individual autonomy. Clearly in most activities there is a need to co-operate with other people. Indeed, **living** involves the "*absolute sovereignty of the individual ego*" (as if anarchists like Bakunin used such terms!) being "*restricted*" by exercising that "*sovereignty.*" Take, for example, playing football. This involves finding others who seek to play the game, organising into teams, agreeing on rules and so on. All terrible violations of the "*absolute sovereignty of the individual ego*," yet it was precisely the "*sovereignty*" of the "*individual*" which produced the desire to play the game in the first place. What sort of "*sovereignty*" is it that negates itself when it is exercised? Clearly, then, the Marxist "summary" of anarchist ideas on this matter, like of many others, is poverty stricken.

And, unsurprisingly enough, we find anarchist thinkers like Bakunin and Kropotkin attacking this idea of "*the absolute sovereignty of the individual ego*" in the most severe terms. Indeed, they thought it was a bourgeois theory which simply existed to justify the continued domination and exploitation of working class people by the ruling class. Kropotkin quite clearly recognised its anti-individual and unfree nature by labelling it "*the authoritarian individualism which stifles us*" and stressing its "*narrow-minded, and therefore foolish*" nature. [**Conquest of Bread**, p. 130] Similarly, it would do the Marxist argument little good if they quoted Bakunin arguing that the "*freedom of individuals is by no means an individual matter. It is a collective matter, a collective product. No individual can be free outside of human society or without its co-operation*" or that he considered "*individualism*" as a "*bourgeois principle.*" [**The Basic Bakunin**, p. 46 and p. 57] Perhaps, of course, these two famous anarchists were not, in fact, "*consistent*" anarchists, but that claim is doubtful.

Anarchism does, of course, derive from the Greek for "*without authority*" or "*without rulers*" and this, unsurprisingly, informs anarchist theory and visions of a better world. This means that anarchism is against the "*domination of man by man*" (and woman by woman, woman by man, and so on). However, "*[a]s knowledge has penetrated the governed masses . . . the people have revolted against the form of authority then felt most intolerable. This spirit of revolt in the individual and the masses, is the natural and necessary fruit of the spirit of domination; the vindication of human dignity, and the saviour of social life.*" Thus "*freedom is the necessary preliminary to any true and equal human association.*" [Charlotte Wilson, **Anarchist Essays**, p. 54 and p. 40] In other words, anarchism comes from the struggle of the oppressed against their rulers and is an expression of individual and social freedom. Anarchism was born from the class struggle.

Taking individual liberty as a good thing, the next question is how do free individuals co-operate together in such a way as to ensure their continued liberty. This, of course, means that any association must be one of equality between the associating individuals. This can only be done when everyone involved takes a meaningful role in the decision making process and because of this anarchists stress the need for **self-government** (usually called *self-management*) of both individuals and groups. Self-management within free associations and decision making from the bottom-up is the only way domination can be eliminated. This is because, by making our own decisions ourselves, we automatically end the division of society into governors and governed (i.e. end hierarchy). As anarchism clearly means support for freedom and equality, it automatically implies opposition to all forms of hierarchical organisation and authoritarian social relationship. This means that anarchist support for individual liberty does not end, as many Marxists assert, in the denial of organisation or collective decision making but rather in support for **self-managed** collectives. Only this form of organisation can end the division of society into rulers and ruled, oppressor and oppressed, exploiter and exploited and create an environment in which individuals can associate without denying their freedom and equality.

This is why anarchists stress such things as decision making by mass assemblies and the co-ordination of decisions by the free federation of mandated and recallable delegates. This would allow those affected by a decision to have a say in it, so allowing them to manage their own affairs directly and without hierarchy.

Therefore, the **positive** side of anarchism (which naturally flows from its opposition to authority) results in a political theory which argues that people must control their own struggles, organisations and affairs directly. This means we support mass assemblies and their federation via councils of mandated delegates subject to recall if they break their mandates (i.e. they act as they see fit, i.e. as politicians or bureaucrats, and not as the people who elected them desire). This way people directly govern themselves and control their own lives. Rather than imply an "individualism" which denies the importance of association and the freedom it can generate, anarchism implies an opposition to hierarchy in all its forms and the support free association of equals. In other words, anarchism can generally be taken to mean support for self-government or self-management, both by individuals and by groups.

In summary, anarchist support for individual liberty incurs a similar support for self-managed groups. In

such groups, individuals co-operate as equals to maximise their liberty. This means, for anarchists, Marxists are just confusing co-operation with coercion, agreement with authority, association with subordination. Thus the Marxist "*materialist*" concept of authority distorts the anarchist position and, secondly, is a supra-historical in the extreme. Different forms of decision making are lumped together, independent of the various forms it may assume. To equate hierarchical and self-managed decision making, antagonistic and harmonious forms of organisation, alienated authority or authority retained in the hands of those directly affected by it, can only be a source of confusion. Rather than being a "*materialistic*" approach, the Marxist one is pure philosophical idealism -- the postulating of a-historic concepts independently of the individuals and societies that generate specific social relationships and ways of working together.

Similarly, it would be churlish to note that Marxists themselves have habitually rejected democratic authority when it suited them. Even that "*higher type of democracy*" of the soviets was ignored by the Bolshevik party once it was in power. In response to the "*great Bolshevik losses in the soviet elections*" during the spring and summer of 1918 which resulted in "*big gains by the SRs and particularly by the Mensheviks,*" "*Bolshevik armed force usually overthrew the results of these provincial elections.*" In addition, "*the government continually postponed the new general elections to the Petrograd Soviet, the term of which had ended in March 1918. Apparently, the government feared that the opposition parties would show gains.*" Moreover, the Bolsheviks "*pack[ed] local soviets once they could no longer count on an electoral majority*" by giving representation to organisations they dominated. [Samuel Farber, **Before Stalinism**, pp. 23-4, p. 22 and p. 33] This, needless to say, made these elections meaningless and made the regime "soviet" in name only. The Bolsheviks simply undermined soviet democracy to ensure their hold in power.

In the workplace, the Bolsheviks replaced workers' economic democracy with "*one-man management*" appointed from above, by the state. Lenin was at the forefront of this process, arguing that workers' must "*unquestioningly obey the single will of the leaders of labour*" in April 1918 along with granting "*individual executives dictatorial power (or 'unlimited' powers).*" He argued that "*the appointment of individuals, dictators with unlimited powers*" was, in fact, "*in general compatible with the fundamental principles of Soviet government*" simply because "*the history of revolutionary movements*" had "*shown*" that "*the dictatorship of individuals was very often the expression, the vehicle, the channel of the dictatorship of revolutionary classes.*" He notes that "*[u]ndoubtedly, the dictatorship of individuals was compatible with bourgeois democracy.*" [**The Immediate Tasks of the Soviet Government**, p. 34 and p. 32] This nonsense reached its heights (or, more correctly, depths) with Trotsky's ideas on the "*militarisation of labour*" he advanced in late 1919 and early 1920 as a means of reconstructing Russia in a socialist (!) manner after the (fast approaching) end of the Civil War. Need we also mention that Trotsky also abolished democratic forms of organisation in the military **before** the start of the Civil War -- as he put it, the "*elective basis is politically pointless and technically inexpedient and has already been set aside by decree.*" [quoted by M. Brinton, **The Bolsheviks and Workers' Control**, pp. 37-8]

These are a few examples of Trotsky's argument that you cannot place "*the workers' right to elect representatives above the party. As if the Party were not entitled to assert its dictatorship even if that dictatorship clashed with the passing moods of the workers' democracy!*" He continued by stating the

"Party is obliged to maintain its dictatorship . . . regardless of temporary vacillations even in the working class . . . The dictatorship does not base itself at every moment on the formal principle of a workers' democracy." [quoted by Brinton, **Op. Cit.**, p. 78] He repeated this argument nearly two decades later, stating that the *"very same masses are at different times inspired by different moods and objectives. It is just for this reason that a centralised organisation of the vanguard is indispensable. Only a party, wielding the authority it has won, is capable of overcoming the vacillation of the masses themselves."* [**The Moralists and Sycophants**, p. 59] Ultimately, for Leninists, the revolution is seen purely as a way for the "revolutionary" party to take power. Trotsky, for example, argued that *"the proletariat can take power only through its vanguard"* and that a *"revolutionary party, even having seized power . . . is still by no means the sovereign ruler of society."* Note, the party is *"the sovereign ruler of society,"* **not** the working class. He stressed this by arguing that those *"who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat."* [**Stalinism and Bolshevism**]

So, remember when Lenin or Trotsky argue for *"the dictatorship of individuals,"* the over-riding of the democratic decisions of the masses by the party, the elimination of workers factory committees in favour of appointed managers armed with *"dictatorial"* power or when the Bolshevik disbanded soviets with non-Bolshevik majorities, it is **anarchism** which is fundamentally *"anti-democratic"*! All in all, that anyone can claim that anarchism is more *"anti-democratic"* than Leninism is a joke. However, all these anti-democratic acts do fit in nicely with Howl's *"materialist"* Marxist concept that *"'authority' is necessary in **any** society where labour is collaborative."* As such, since *"authority"* is essential and all forms of collective decision making are necessarily *"authoritarian"* and involve *"subordination,"* then it clearly does not really matter how collectives are organised and how decisions are reached. Hence the lack of concern for the liberty of the working people subjected to the (peculiarly bourgeois-like) forms of authority preferred by Lenin and Trotsky. It was precisely for this reason, to differentiate between egalitarian (and so libertarian) forms of organisation and decision making and authoritarian ones, that anarchists called themselves *"anti-authoritarians."*

Even if we ignore all the anti-democratic acts of Bolshevism (or justify them in terms of the problems facing the Russian Revolution, as most Leninists do), the anti-democratic nature of Marxist ideas still come to the fore. The Leninist support for centralised state power brings their attack on anarchism as being *"anti-democratic"* into clear perspective. Ultimately, Marxism results in the affairs of millions being decided upon by a handful of people in the Central Committee of the vanguard party. As an example, we will discuss Trotsky's arguments against the Makhnovist movement in the Ukraine.

Trotsky argued that the Makhnovists were against *"Soviet power."* This, he argued, was simply *"the authority of all the local soviets in the Ukraine"* because they all *"recognise the central power which they themselves have elected."* Consequently, the Makhnovists reject not only central authority about also the local soviets as well. Trotsky also argued that there were no *"appointed"* persons in Russia as *"there is no authority in Russia but that which is elected by the whole working class and working peasantry. It follows [!] that commanders appointed by the central Soviet Government are installed in their positions by the will of the working millions."* He stressed that one can speak of *"appointed"*

persons *"only under the bourgeois order, when Tsarist officials or bourgeois ministers appointed at their own discretion commanders who kept the soldier masses subject to the bourgeois classes."* [**The Makhno Movement**] When the Makhnovists tried to call the fourth regional conference of peasants, workers and partisans to discuss the progression of the Civil War in early 1919, Trotsky, unsurprisingly enough, banned it.

In other words, because the Bolshevik government had been elected one year previously under a regime which had manipulated and overturned soviet elections, he (as its representative) had the right to ban a conference which would have expressed the wishes of millions of workers, peasants and partisans fighting for the revolution! The fallacious nature of his arguments is easily seen. Rather than executing the will of millions of toilers, Trotsky was simply executing his own will. He did not consult those millions nor the local soviets who had, in Bolshevik ideology, surrendered their power to the handful of people in the central committee of the Bolshevik Party. By banning the conference he was very effectively undermining the practical, functional democracy of millions and replacing it with a purely formal "democracy" based on empowering a few leaders at the centre. Yes, indeed, truly democracy in action when one person can deny a revolutionary people its right to decide its own fate!

Unsurprisingly, the anarchist Nestor Makhno replied by arguing that he considered it *"an inviolable right of the workers and peasants, a right won by the revolution, to call congresses on their own account, to discuss their affairs. That is why the prohibition by the central authorities on the calling of such congresses . . . represent a direct and insolent violation of the rights of the workers."* [quoted by Peter Arshinov, **The History of the Makhnovist Movement**, p. 129] We will leave it to the readers to decide which of the two, Trotsky or Makhno, showed the fundamentally *"anti-democratic"* perspective.

Lastly, there are a few theoretical issues that need to be raised on this matter. Notice, for example, that no attempt is made to answer the simple question of why having 51% of a group automatically makes you right! It is taken for granted that the minority should subject themselves to the will of the majority before that will is even decided upon. Does that mean, for example, that Marxists refuse minorities the right of civil disobedience if the majority acts in a way which harms their liberties and equality? If, for example, the majority in community decides to implement race laws, does that mean that Marxists would **oppose** the discriminated minority taking direct action to change those laws? Or, to take an example closer to Marxism, in 1914 the leaders of the Social Democratic Party in the German Parliament voted for war credits. The anti-war minority of that group went along with the majority in the name of "democracy," "unity" and "discipline". Would Howl and Draper argue that they were right to do so? If they were not right to betray the ideas of Marxism and the international working class, then why not? They did, after all, subject themselves to the *"most perfect socialist democracy"* and so, presumably, made the correct decision. Simply put, the arguments that anarchists are *"anti-democratic"* are question-begging in the extreme.

As a general rule-of-thumb, anarchists have little problem with the minority accepting the decisions of the majority after a process of free debate and discussion. As we argue in [section A.2.11](#), such collective decision making is compatible with anarchist principles -- indeed, is based on them. By governing

ourselves directly, we exclude others governing us. However, we do not make a fetish of this, recognising that, in certain circumstances, the minority must and should ignore majority decisions. For example, if the majority of an organisation decide on a policy which the minority thinks is disastrous then why should they follow the majority? Equally, if the majority make a decision which harms the liberty and equality of a non-oppressive and non-exploitative minority, then that minority has the right to reject the "authority" of the majority. Hence Carole Pateman:

"The essence of liberal social contract theory is that individuals ought to promise to, or enter an agreement to, obey representatives, to whom they have alienated their right to make political decisions . . . Promising . . . is an expression of individual freedom and equality, yet commits individuals for the future. Promising also implies that individuals are capable of independent judgement and rational deliberation, and of evaluating and changing their own actions and relationships; promises may sometimes justifiably be broken. However, to promise to obey is to deny or limit, to a greater or lesser degree, individuals' freedom and equality and their ability to exercise these capacities. To promise to obey is to state that, in certain areas, the person making the promise is no longer free to exercise her capacities and decide upon her own actions, and is no longer equal, but subordinate." [The Problem of Political Obligation, p. 19]

Thus, for anarchists, a democracy which does not involve individual rights to dissent, to disagree and to practice civil disobedience would violate freedom and equality, the very values Marxists usually claim to be at the heart of their politics. The claim that anarchism is "anti-democratic" basically hides the argument that the minority must become the slave of the majority -- with no right of dissent when the majority is wrong (in practice, of course, it is usually meant the orders and laws of the minority who are elected to power). In effect, it wishes the minority to be subordinate, not equal, to the majority. Anarchists, in contrast, because we support self-management also recognise the importance of dissent and individuality -- in essence, because we are in favour of self-management ("democracy" does not do the concept justice) we also favour the individual freedom that is its rationale. We support the liberty of private individuals because we believe in self-management ("democracy") so passionately.

Indeed, Howl and Draper fail to understand the rationale for democratic decision making -- it is not based on the idea that the majority is always right but that individual freedom requires democracy to express and defend itself. By placing the collective above the individual, they undermine democratic values and replace them with little more than tyranny by the majority (or, more likely, those who claim to represent the majority).

Progress is determined by those who dissent and rebel against the status quo and the decisions of the majority. That is why anarchists support the right of dissent in self-managed groups -- in fact, as we argue in [section A.2.11](#), dissent, refusal, revolt by individuals and minorities is a key aspect of self-management. Given that Leninists do not support self-management (rather they, at best, support the Lockean notion of electing a government as being "democracy") it is hardly surprising they, like Locke, views dissent as a danger and something to denounce. Anarchists, on the other hand, recognising that

self-management's (i.e. direct democracy's) rationale and base is in individual freedom, recognise and support the rights of individuals to rebel against what they consider as unjust impositions. As history shows, the anarchist position is the correct one -- without rebellion, numerous minorities would never have improved their position and society would stagnate. Indeed, Howl's and Draper's comments are just a reflection of the standard capitalist diatribe against strikers and protestors -- they don't need to protest, for they live in a "democracy."

So, yes, anarchists do support individual freedom to resist even democratically made decisions simply because democracy **has to be** based on individual liberty. Without the right of dissent, democracy becomes a joke and little more than a numerical justification for tyranny. This does not mean we are "*anti-democratic*," indeed the reverse as we hold true to the fundamental rationale for democratic decision-making -- it allows individuals to combine as equals and not as subordinates and masters. Moreover, diversity is essential for any viable eco-system and it is essential in any viable society (and, of course, any society worth living in). This means that a healthy society is one which encourages diversity, individuality, dissent and, equally, self-managed associations to ensure the freedom of all.

As Malatesta argued, "*[t]here are matters over which it is worth accepting the will of the majority because the damage caused by a split would be greater than that caused by error; there are circumstances in which discipline becomes a duty because to fail in it would be to fail in the solidarity between the oppressed and would mean betrayal in face of the enemy . . . What is essential is that individuals should develop a sense of organisation and solidarity, and the conviction that fraternal co-operation is necessary to fight oppression and to achieve a society in which everyone will be able to enjoy his [or her] own life.*" [**Life and Ideas**, pp. 132-3]

As such, anarchists are not against majority decision making as such. We simply recognise it has limitations. In practice, the need for majority and minority to come to an agreement is one most anarchists would recognise:

"But such an adaptation [of the minority to the decisions of the majority] on the one hand by one group must be reciprocal, voluntary and must stem from an awareness of need and of goodwill to prevent the running of social affairs from being paralysed by obstinacy. It cannot be imposed as a principle and statutory norm. . .

"So . . . anarchists deny the right of the majority to govern in human society in general . . . how is it possible . . . to declare that anarchists should submit to the decisions of the majority before they have even heard what those might be?" [Malatesta, **The Anarchist Revolution**, pp. 100-1]

Therefore, while accepting majority decision making as a key aspect of a revolutionary movement and a free society, anarchists do not make a fetish of it. We recognise that we must use our own judgement in evaluating each decision reached simply because the majority is not always right. We must balance the need for solidarity in the common struggle and needs of common life with critical analysis and

judgement. As Malatesta argues:

"In any case it is not a question of being right or wrong; it is a question of freedom, freedom for all, freedom for each individual so long as he [or she] does not violate the equal freedom of others. No one can judge with certainty who is right and who is wrong, who is closer to the truth and which is the best road for the greatest good for each and everyone. Experience through freedom is the only means to arrive at the truth and the best solutions; and there is no freedom if there is not the freedom to be wrong.

"In our opinion, therefore, it is necessary that majority and minority should succeed in living together peacefully and profitably by mutual agreement and compromise, by the intelligent recognition of the practical necessities of communal life and of the usefulness of concessions which circumstances make necessary." [Life and Ideas, p. 72]

Needless to say, our arguments apply with even more force to the decisions of the **representatives** of the majority, who are in practice a very small minority. Leninists usually try and confuse these two distinct forms of decision making. When Leninists discuss majority decision making they almost always mean the decisions of those elected by the majority -- the central committee or the government -- rather than the majority of the masses or an organisation. Ultimately, the Leninist support for democracy (as the Russian Revolution showed) is conditional on whether the majority supports them or not. Anarchists are not as hypocritical or as elitist as this, arguing that everyone should have the same rights the Leninists usurp for their leaders.

Therefore the Marxist attack on anarchism as "*anti-democratic*" is not only false, it is ironic and hypocritical. Firstly, anarchists do **not** argue for "*the absolute sovereignty of the individual ego.*" Rather, we argue for individual freedom. This, in turn, implies a commitment to self-managed forms of social organisation. This means that anarchists do not confuse agreement with (hierarchical) authority. Secondly, Marxists do not explain why the majority is always right or why their opinions are automatically the truth. Thirdly, the logical conclusions of their arguments would result in the absolute enslavement of the individual to the representatives of the majority. Fourthly, rather than being supporters of democracy, Marxists like Lenin and Trotsky explicitly argued for minority rule and the ignoring of majority decisions when they clashed with the decisions of the ruling party. Fifthly, their support for "*democratic*" centralised power means, in practice, the elimination of democracy in the grassroots. As can be seen from Trotsky's arguments against the Makhnovists, the democratic organisation and decisions of millions can be banned by a single individual.

All in all, Marxists claims that anarchists are "*anti-democratic*" just backfire on Marxism.

H.2.12 Does anarchism survive only in the absence of a strong workers' movement?

Derek Howl argues that anarchism "*survives only in the absence of a strong workers themselves.*" This was based, apparently, anarchism is the politics of "*non-proletarians.*" As he puts it, there "*is a class basis of this. Just as Proudhon's 'anarchism' reflected the petty bourgeoisie under pressure, so too Bakuninism as a movement rested upon non-proletarians . . . In Italy Bakuninism was based upon the large 'lumpen bourgeoisie', doomed petty bourgeois layers. In Switzerland the Jura Federation . . . was composed of a world of cottage industry stranded between the old world and the new, as were pockets of newly proletarianised peasants that characterised anarchism in Spain.*" He quotes Hal Draper statement that anarchism "*was an ideology alien to the life of modern working people.*" ["*The Legacy of Hal Draper,*" **International Socialism**, no. 52, p. 148]

Ignoring the obvious contradiction of "*newly proletarianised peasants*" being "*non-proletarians,*" we have the standard Marxist "*class analysis*" of anarchism. This is to assert that anarchism is "*non-proletarian*" while Marxism is "*proletarian.*" On the face of it, such an assertion seems to fly in the face of historical facts. After all, when Marx and Engels were writing the **Communist Manifesto**, the proletariat was a tiny minority of the population of a mostly rural, barely industrialised Germany and France. Perhaps it was Engels experiences as a capitalist in England that allowed him an insight into "*the life of modern working people?*"

Beyond this there are a few problems with this type of argument. Firstly, there is the factual problems. Simply put, anarchism appealed to "*modern*" working people and Marxism has appealed to the "*non-proletarian*" groups and individuals (and vice versa, of course). This can be seen from the examples Howl lists as well as the rise of syndicalist ideas after the reformism of the first Marxist movement (social democracy) became apparent. Simply put, the rise of Marxism within the labour movement is associated with its descent into reformism, **not** revolution. Secondly, there is the slight ideological problem that Lenin himself argued that the working class, by its own efforts, did not produce socialist ideas which were generated far from "*the life of modern working people*" by the intelligentsia. Lastly, there is the assumption that two long dead Germans, living in an environment where "*modern working people*" (proletarians) were a small minority of the working population, could really determine for all history which is (and is not) "*proletarian*" politics.

Taking the countries Howl lists, we can see that any claim that anarchism is "*alien*" to the working class is simply false. Looking at each case, it is clearly the case that the **politics** of the people involved signify their working class credentials for Marxists, **not** their actual economic or social class. Thus we have the sociological absurdity that makes anarchist workers "*petty bourgeois*" while actual members of the bourgeoisie (like Engels) or professional revolutionaries (and the sons of middle class families like Marx, Lenin and Trotsky) are considered as representatives of "*proletarian*" politics. Indeed, when these radical members of the middle-class repress working class people (as did Lenin and Trotsky were in power) they **remain** figures to be followed and their acts justified in terms of the "objective" needs of the working people they are oppressing! Ultimately, for most Marxists, whether someone is "*non-proletariat*" depends on their ideological viewpoint and not, in fact, their actual class.

Hence we discover Marx and Engels (like their followers) blaming Bakunin's success in the International, as one historian notes, "*on the middle-class leadership of Italy's socialist movement and*

the backwardness of the country. But if middle-class leaders were the catalysts of proletarian revolutionary efforts in Italy, this was also true of every other country in Europe, not excluding the General Council in London." [T.R. Ravindranathan, **Bakunin and the Italians**, p. 168] And by interpreting the difficulties for Marxism in this way, Marx and Engels (like their followers) need not question their own ideas and assumptions. As Nunzio Pernicone notes, "*[f]rom the outset, Engels had consistently underestimated Bakunin as a political adversary and refused to believe that Italian workers might embrace anarchist doctrines.*" However, "*even a casual perusal of the internationalist and dissident democratic press would have revealed to Engels that Bakuninism was rapidly developing a following among Italian artisans and workers. But this reality flew in the face of his unshakeable belief that Italian internationalists were all a 'gang of declasses, the refuse of the bourgeoisie.'*" Even after the rise of the Italian Marxism in the 1890s, "*the anarchist movement was proportionately more working-class than the PSI*" and the "*the number of bourgeois intellectuals and professionals that supported the PSI [Italian Socialist Party] was vastly greater*" than those supporting anarchism. Indeed, "*the percentage of party membership derived from the bourgeoisie was significantly higher in the PSI than among the anarchists.*" [**Italian Anarchism, 1864-1892**, p. 82 and p. 282] Ironically, given Engels diatribes against the Italian anarchists stopping workers following "*proletarian*" (i.e. Marxist) politics and standing for elections, "*as the PSI grew more working-class, just before the outbreak of war [in 1914], its Directorate [elected by the party congress] grew more anti-parliamentary.*" [Gwyn A. Williams, **Proletarian Order**, p. 29]

As we noted in [section A.5.5](#), the role of the anarchists and syndicalists compared to the Marxists during the 1920 near revolution suggested that the real "*proletarian*" revolutionaries were, in fact, the former and **not** the latter. All in all, the history of the Italian labour movement clearly show that, for most Marxists, whether a group represents the "*proletariat*" is simply dependent on their ideological commitment, **not** their actual class.

As regards the Jura Federation, we discover that its support was wider than suggested by Marxists. As Marxist Paul Thomas noted, "*Bakunin's initial support in Switzerland -- like Marx's in England -- came from resident aliens, political refugees . . . but he also gathered support among **Gastarbeitier** for whom Geneva was already a centre, where builders, carpenters and and workers in heavy industry tended to be French or Italian . . . Bakunin . . . also marshalled considerable support among French speaking domestic workers and watchmakers in the Jura.*" [**Karl Marx and the Anarchists**, p. 390] It would be interesting to hear a Marxist claim that "*heavy industry*" represented the past or "*non-proletarian*" elements! Similarly, E. H. Carr in his (hostile) biography of Bakunin, noted that the "*sections of the International at Geneva fell into two groups.*" Skilled craftsmen formed the "*Right wing*" while "*the builders, carpenters, and workers in the heavier trades, the majority of whom were immigrants from France and Italy, represented the Left.*" Unsurprisingly, these different groups of workers had different politics. The craftsmen "*concentrated on . . . reform*" while the latter "*nourished hopes of a complete social upheaval.*" Bakunin, as would be expected, "*fanned the spirit of revolt*" among these, the proletarian, workers and soon had a "*commanding position in the Geneva International.*" [**Michael Bakunin**, p. 361] It should be noted that Marx and the General Council of the International consistently supported the reformist wing of the International in Geneva which organised political alliances with the middle-class liberals during elections. Given these facts, it is little wonder that Howl concentrates on the

support Bakunin received from domestic workers producing watches. To mention the support for Bakunin by organised, obviously proletarian, workers would undermine his case and so it is ignored.

Lastly, there is Spain. It seems funny that a Marxist would use Spain as an example **against** the class roots of anarchism. After all, that is one of the countries where anarchism dominated the working class movement. As one historian points out, "*it was not until the 1860s -- when anarchism was introduced -- that a substantive working class movement began to emerge*" and "*throughout the history of Spanish anarchism, its survival depended in large measure on the anarchists' ability to maintain direct links with the workers.*" [George R. Esenwein, **Anarchist Ideology and the Working-Class Movement in Spain, 1868-1898**, p. 6 and p. 207] As well as organising "*newly proletarianised peasants*," the "*Bakuninists*" also organised industrial workers -- indeed, far more successfully than the Socialists. Indeed, the UGT only started to approach the size of the CNT once it had started to organise "*newly proletarianised peasants*" in the 1930s (i.e. anarchist unions organised more of the industrial working class than the Socialist ones). From such a fact, we wonder if Marxists would argue that socialism rested on "*non-proletarian*" elements?

Moreover, the logic of dismissing anarchism as "*non-proletarian*" because it organised "*newly proletarianised peasants*" is simply laughable. After all, capitalism needed landless labours in order to start. This meant that the first proletarians existing in rural areas and were made up of ex-peasants. When these ex-peasants arrived in the towns and cities, they were still "*newly proletarianised peasants.*" To ignore these groups of workers would mean, of course, that they would lack basic socialist ideas once they reached urban areas, so potentially harming the labour movement there. And, of course, a large section of Bolshevik support in 1917 was to be found in "*newly proletarianised peasants*" whether in the army or working in the factories. Ironically enough, the Mensheviks argued that the Bolsheviks gained their influence from worker-peasant industrial "*raw recruits*" and not from the genuine working class. [Orlando Figes, **A People's Tragedy**, p. 830] As such, to dismiss anarchism because it gained converts from similar social strata as the Bolsheviks seems, on the face of it, a joke.

As can be seen Howl's attempts to subject anarchism to a "*class analysis*" simply fails. He selects the evidence which fits his theory and ignores that which does not. However, looking at the very examples he bases his case on shows how nonsensical it is. Simply put, anarchist ideas appealed to many types of workers, including typically "*proletarian*" ones who worked in large-scale industries. What they seem to have in common is a desire for radical social change, organised by themselves in their own combative class organs (such as unions). Moreover, like the early British workers movement, they considered that these unions, as well as being organs of class struggle, could also be the framework of a free socialist society. Such a perspective is hardly backward (indeed, since 1917 most Marxists pay lip-service to this vision!).

Which brings us to the next major problem with Howl's argument, namely the fate of Marxism and the "*strong*" labour movement it allegedly is suited for. Looking at the only nation which did have a "*modern*" working class during the most of Marx's life, Britain, the "*strong*" labour movement it produced was (and has) not been anarchist, it is true, but neither was it (nor did it become) Marxist. Rather, it has been a mishmash of conflicting ideas, predominately reformist state socialist ones which

owe little, if anything, to Marx. Indeed, the closest Britain came to developing a wide scale revolutionary working class movement was during the "*syndicalist revolt*" of the 1910s. Ironically, some Marxists joined this movement simply because the existing Marxist parties were so reformist or irrelevant to the "*life of modern working people.*"

Looking at the rise of capitalism in other countries, we find the same process. The rise of social democracy (Marxism) in the international labour movement simply signified the rise of reformism. Instead of producing a **revolutionary** labour movement, Marxism helped produce the opposite (although, initially, hiding reformist activity behind revolutionary rhetoric). So when Howl asserts that anarchism "*survives in the absence of a strong workers' movement,*" we have to wonder what planet he is on.

Thus, to state matters more correctly, anarchism flourishes during those periods when the labour movement and its members are radical, taking direct action and creating new forms of organisation which are still based on workers' self-management. This is to be expected as anarchism is both based upon and is the result of workers' self-liberation through struggle. In less militant times, the effects of bourgeois society and the role of unions within the capitalist economy can de-radicalise the labour movement and lead to the rise of bureaucracy within it. It is then, during periods when the class struggle is low, that reformist ideas spread. Sadly, Marxism aided that spread by its tactics -- the role of electioneering focused struggle away from direct action and into the ballot-box and so onto leaders rather than working class self-activity.

Moreover, if we look at the current state of the labour movement, then we would have to conclude that Marxism is "*an ideology alien to the life of modern working people.*" Where are the large Marxist working class unions and parties? There are a few large reformist socialist and Stalinist parties in continental Europe, but these are not Marxist in any meaningful sense of the word. Most of the socialist ones used to be Marxist, although they relatively quickly stopped being revolutionary in any meaningful sense of the word a very long time ago (some, like the German Social Democrats, organised counter-revolutionary forces to crush working class revolt after the First World War). As for the Stalinist parties, it would be better to consider it a sign of shame that they get any support in the working class at all. Simply put, in terms of revolutionary Marxists, there are various Trotskyist sects arguing amongst themselves on who is the **real** vanguard of the proletariat, but **no** Marxist labour movement.

Which, of course, brings us to the next point, namely the ideological problems for Leninists themselves by such an assertion. After all, Lenin himself argued that "*the life of modern working people*" could only produce "*trade-union consciousness.*" Indeed, according to him, socialist ideas were developed independently of working people by the socialist (middle-class) "*intelligentsia.*" As he put it in **What is to be done?**, "*the working class, exclusively by their own effort, is able to develop only trade union consciousness . . . the theoretical doctrine of Social-Democracy arose quite independently of the spontaneous growth of the labour movement; it arose as a natural and inevitable outcome of ideas among the revolutionary socialist intelligentsia.*" This meant that "*Social Democratic [i.e. socialist] consciousness . . . could only be brought to them [the workers] from without.*" [**Essential Works of Lenin**, pp. 74-5] Clearly, then, for Lenin, socialism was an ideology which was alien to the life of

modern working class people.

Lastly, there is the question of whether Marx and Engels can seriously be thought of as being able to decree once and for all what is and is not "*proletarian*" politics. Given that neither of these men were working class (one was a capitalist!) it makes the claim that they would know "*proletarian*" politics suspect. Moreover, they formulated their ideas of what constitute "*proletarian*" politics before a modern working class actually developed in any country bar Britain. This means, that from the experience of one section of the proletariat in one country in the 1840s, Marx and Engels have decreed for all time what is and is not a "*proletarian*" set of politics! On the face of it, it is hardly a convincing argument, particularly as we have over 150 years of experience of these tactics with which to evaluate them!

Based on this perspective, Marx and Engels opposed all other socialist groups as "*sects*" if they did not subscribe to their ideas. Ironically, while arguing that all other socialists were fostering their sectarian politics onto the workers movement, they themselves fostered their own perspective onto it. Originally, because the various sections of the International worked under different circumstances and had attained different degrees of development, the theoretical ideals which reflected the real movement would also diverge. The International, therefore, was open to all socialist and working class tendencies its general policies would be, by necessity, based on conference decisions that reflected this divergence. These decisions would be determined by free discussion within and between sections of all economic, social and political ideas. Marx, however, replaced this policy with a common program of "*political action*" (i. e. electioneering) by mass political parties via the fixed Hague conference of 1872. Rather than having this position agreed by the normal exchange of ideas and theoretical discussion in the sections guided by the needs of the practical struggle, Marx imposed what **he** considered as the future of the workers movement onto the International -- and denounced those who disagreed with him as sectarians. The notion that what Marx considered as necessary might be another sectarian position imposed on the workers' movement did not enter his head nor those of his followers.

Thus the Marxist claim that true working class movements are based on mass political parties based on hierarchical, centralised, leadership and those who reject this model and political action (electioneering) are sects and sectarians is simply their option and little more. Once we look at the workers' movement without the blinkers created by Marxism, we see that Anarchism was a movement of working class people using what they considered valid tactics to meet their own social, economic and political goals -- tactics and goals which evolved to meet changing circumstances. Seeing the rise of anarchism and syndicalism as the political expression of the class struggle, guided by the needs of the practical struggle they faced naturally follows when we recognise the Marxist model for what it is -- just one possible interpretation of the future of the workers' movement rather than **the** future of that movement (and as the history of Social Democracy indicates, the predictions of Bakunin and the anarchists within the First International were proved correct).

This tendency to squeeze the revolutionary workers' movement into the forms decreed by two people in the mid-nineteenth century has proved to be disastrous for it. Even after the total failure of social democracy, the idea of "*revolutionary*" parliamentarianism was fostered onto the Third International by

the Bolsheviks in spite of the fact that more and more revolutionary workers in advanced capitalist nations were rejecting it in favour of direct action and autonomous working class self-organisation. Anarchists and libertarian Marxists based themselves on this actual movement of working people, influenced by the failure of "*political action*," while the Bolsheviks based themselves on the works of Marx and Engels and their experiences in a backward, semi-feudal society whose workers had already created factory committees and soviets by direct action. It was for this reason that the anarcho-syndicalist Augustin Souchy said he referred "*to the tendencies that exist in the modern workers' movement*" when he argued at the Second Congress of the Communist International:

"It must be granted that among revolutionary workers the tendency toward parliamentarism is disappearing more and more. On the contrary, a strong anti-parliamentary tendency is becoming apparent in the ranks of the most advanced part of the proletariat. Look at the Shop Stewards' movement [in Britain] or Spanish syndicalism . . . The IWW is absolutely antiparliamentary . . . I want to point out that the idea of antiparliamentarism is asserting itself more strongly in Germany . . . as a result of the revolution itself. . . We must view the question in this light." [**Proceedings and Documents of the Second Congress 1920**, vol 1, pp. 176-7]

Of course, this perspective of basing yourself on the ideas and tactics generated by the action class struggle was rejected in favour of a return to the principles of Marx and Engels and their vision of what constituted a genuine "*proletarian*" movement. If these tactics were the correct ones, then why did they not lead to a less dismal set of results? After all, the degeneration of social democracy into reformism would suggest their failure and sticking "*revolutionary*" before their tactics (as in "*revolutionary parliamentarianism*") changes little. Marxists, like anarchists, are meant to be materialists, not idealists. What was the actual outcome of the Leninist strategies? Did they result in successful proletarian revolutions. No, they did not. The revolutionary wave peaked and fell and the Leninist parties themselves very easily and quickly became Stalinised. Significantly, those areas with a large anarchist, syndicalist or quasi-syndicalist (e.g. the council communists) workers movements (Italy, Spain and certain parts of Germany) came closest to revolution and by the mid-1930s, only Spain with its strong anarchist movement had a revolutionary labour movement. Therefore, rather than representing "*non-proletarian*" or "*sectarian*" politics forced upon the working class, anarchism reflected the politics required to build a **revolutionary** workers' movement rather than a reformist mass party.

As such, perhaps we can finally lay to rest the idea that Marx predicted the whole future of the labour movement and the path it must take like some kind of socialist Nostradamus. Equally, we can dismiss Marxist claims of the "*non-proletarian*" nature of anarchism as uninformed and little more than an attempt to squeeze history into an ideological prison. As noted above, in order to present such an analysis, the actual class compositions of significant events and social movements have to be manipulated. This is the case of the Paris Commune, for example, which was predominantly a product of artisans (i.e. the "*petit bourgeoisie*"), **not** the industrial working class and yet claimed by Marxists as an example of the "*dictatorship of the proletariat*." Ironically, many of the elements of the Commune praised by Marx can be found in the works of Proudhon and Bakunin which pre-date the uprising. Similarly, the idea that workers' fighting organisations ("*soviets*") would be the means to abolish the

state and the framework of a socialist society can be found in Bakunin's works, decades before Lenin paid lip-service to this idea in 1917. For a theory allegedly resting on "*non-proletarian*" elements it has successfully predicted many of the ideas Marxists claim to have learnt from proletarian class struggle!

So, in summary, the claims that anarchism is "*alien*" to working class life, that it is "*non-proletarian*" or "*survives in the absence of a strong workers' movement*" are simply false. Looking objectively at the facts of the matter quickly shows that this is the case.

H.2.13 Do anarchists reject "*political*" struggles and action?

A common Marxist claim is that anarchists and syndicalists ignore or dismiss the importance of "*political*" struggles or action. This is not true. Rather, as we discuss in [section J.2.10](#), we think that "*political*" struggles should be conducted by the same means as social and economic struggles, namely by direct action, solidarity and working class self-organisation.

As this is a common assertion, it is useful to provide a quick summary of why anarchists do not, in fact, reject "*political*" struggles and action as such. Rather, to quote Bakunin, anarchism "*does not reject politics generally. It will certainly be forced to involve itself insofar as it will be forced to struggle against the bourgeois class. It only rejects bourgeois politics . . . [as it] establishes the predatory domination of the bourgeoisie.*" [**The Political Philosophy of Bakunin**, p. 313] For Kropotkin, it was a truism that it was "*absolutely impossible . . . to confine the ideas of the working mass within the narrow circle of reductions in working hours and wage increases . . . The social question compels attention.*" This fact implied two responses: "*the workers' organisation propels itself either into the sterile path of parliamentary politics as in Germany, or into the path of revolution.*" [quoted by Caroline Cahm, **Kropotkin and the rise of Revolutionary Anarchism, 1872-1886**, p. 241]

So while Marxists often argue that anarchists exclusively interested in economic struggle and reject "*politics*" or "*political action*," the truth of the matter is different. We are well aware of the importance of political issues, although anarchists reject using bourgeois methods in favour of direct action. Moreover, we are aware that any social or economic struggle has its political aspects and that such struggles bring the role of the state as defender of capitalism and the need to struggle against it into focus:

"There is no serious strike that occurs today without the appearance of troops, the exchange of blows and some acts of revolt. Here they fight with the troops; there they march on the factories; . . . in Pittsburgh in the United States, the strikers found themselves masters of a territory as large as France, and the strike became the signal for a general revolt against the State; in Ireland the peasants on strike found themselves in open revolt against the State. Thanks to government intervention the rebel against the factory becomes the rebel against the State." [quoted by Caroline Cahm, **Op. Cit.**, p. 256]

As Malatesta argued, from "*the economic struggle one must pass to the political struggle, that is to*

struggle against government; and instead of opposing the capitalist millions with the workers' few pennies scraped together with difficulty, one must oppose the rifles and guns which defend property with the more effective means that the people will be able to defeat force by force." [**Life and Ideas**, pp. 193-4] So anarchists are well aware of the need to fight for political issues and reforms, and so are *"not in any way opposed to the political struggle, but in their opinion this struggle, too, must take the form of direct action, in which the instruments of economic [and social] power which the working class has at its command are the most effective. The most trivial wage-fight shows clearly that, whenever the employers find themselves in difficulties, the state steps in with the police, and even in some cases with the militia, to protect the threatened interests of the possessing classes. It would, therefore, be absurd for them to overlook the importance of the political struggle."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 65]

This means that the question of whether to conduct political struggles is **not** the one which divides anarchists from Marxists. Rather, it is a question of **how** this struggle is fought. For anarchists, this struggle is best fought using **direct action** (see [section J.2](#)) and fighting working class organisations based in our workplaces and communities. For Marxists, the political struggle is seen as being based on standing candidates in bourgeois elections. This can be seen from the resolution passed by the socialist ("Second") International in 1893. This resolution was designed to exclude anarchists and stated that only *"those Socialist Parties and Organisations which recognise the organisation of workers and of political action."* By "political action" it mean *"that the working-class organisations seek, in as far as possible, to use or conquer political rights and the machinery of legislation for the furthering of the interests of the proletariat and the conquest of political power."* [quoted by Susan Milner, **The Dilemmas of Internationalism**, p. 49] Significantly, while this International and its member parties (particular the German Social Democrats) were happy to expel anarchists, they never expelled the leading reformists from their ranks.

So, in general, anarchists use the word *"political action"* to refer exclusively to the taking part of revolutionaries in bourgeois elections (i.e. electioneering or parliamentarianism). It does not mean a rejection of fighting for political reforms or a lack of interest in political issues, quite the reverse in fact. The reason **why** anarchists reject this tactic is discussed in section J.2.6 (["What are the effects of radicals using electioneering?"](#)), which means we will give a short summary here.

Simply put, for anarchists, the net effect of socialists using bourgeois elections would be to put them (and the movements they represent) into the quagmire of bourgeois politics and influences. In other words, the parties involved will be shaped by the environment they are working within and not vice versa. As Bakunin argued, the *"inevitable result"* of electing workers into bourgeois state would be to see them *"become middle class in their outlook"* due to them being *"transferred to a purely bourgeois environment and into an atmosphere of purely bourgeois political ideas."* This meant that as *"long as universal suffrage is exercised in a society where the people, the mass of workers, are economically dominated by a minority holding exclusive possession the property and capital of the country . . . elections can only be illusory, anti-democratic in their results."* [**Op. Cit.**, p. 216 and p. 213] This meant that *"the election to the German parliament of one or two workers . . . from the Social Democratic*

Party" was "not dangerous" and, in fact, was "highly useful to the German state as a lightning-rod, or a safety-valve." Unlike the "political and social theory" of the anarchists, which "leads them directly and inexorably to a complete break with all governments and all forms of bourgeois politics, leaving no alternative but social revolution," Marxism, he argued, "inexorably enmeshes and entangles its adherents, under the pretext of political tactics, in endless accommodation with governments and the various bourgeois political parties -- that is, it thrusts them directly into reaction." [Bakunin, **Statism and Anarchy**, p. 193 and pp. 179-80] In the case of the German Social Democrats, this became obvious in 1914, when they supported their state in the First World war, and after 1918, when they crushed the German Revolution.

For Kropotkin, the idea that you could somehow "prepare" for a revolution by electioneering was simply a joke. "As if the bourgeoisie," he argued, "still holding on to its capital, could allow them [the socialists] to experiment with socialism even if they succeeded in gaining control of power! As if the conquest of the municipalities were possible without the conquest of the factories." He saw that "those who yesterday were considered socialists are today letting go of socialism, by renouncing its mother idea [" the need to replace the wage system and to abolish individual ownership of . . . social capital"] and passing over into the camp of the bourgeoisie, while retaining, so as to hide their turnabout, the label of socialism." [**Words of a Rebel**, p. 181 and p. 180]

Ultimately, the bourgeois tactics used ended up with bourgeois results. As Emma Goldman argued, socialism "was led astray by the evil spirit of politics" and "landed in the [political] trap and has now but one desire -- to adjust itself to the narrow confines of its cage, to become part of the authority, part of the very power that has slain the beautiful child Socialism and left begin a hideous monster." [**Red Emma Speaks**, p. 80] The net effect of "political action" was the corruption of the socialist movement into a reformist party which betrayed the promise of socialism in favour of making existing society better (so it can last longer). This process confirmed Bakunin's predictions as well as Kropotkin's comments:

"The middle class will not give up its power without a struggle. It will resist. And in proportion as Socialists will become part of the Government and share power with the middle class, their Socialism will grow paler and paler. This is, indeed, what Socialism is rapidly doing. Were this no so, the middle classes . . . would not share their power with the Socialists." [**Evolution and Environment**, p. 102]

In addition, as we argue in sections [H.1.5](#) and [J.2.5](#), direct action is either based on (or creates) forms of self-managed working class organisations. The process of collective struggle, in other words, necessitates collective forms of organisation and decision making. These combative organisations, as well as conducting the class struggle under capitalism, can also be the framework of a free society (see [section H.1.4](#)). However, standing in elections does **not** produce such alternative social structures and, indeed, hinders them as the focus for social changes becomes a few leaders working in existing (i.e. bourgeois) structures and bodies.

As can be seen, anarchists reject "*political*" struggle (i.e. electioneering) for good (and historically vindicated) reasons. This makes a mockery of Marxists assertions (beginning with Marx) that anarchists like Bakunin "*opposed all political action by the working class since this would imply 'recognition' of the existing state.*" [Derek Howl, "*The Legacy of Hal Draper*," **International Socialism**, no. 52, p. 147] This, in fact, is a common Marxist claim, namely that anarchists reject "*political struggle*" on principle (i.e. for idealistic purposes). In the words of Engels, Bakunin was "*opposed to all political action by the working class, since this would in fact involve recognition of the existing state.*" [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 49] Sadly, like all Marxists, he failed to indicate where, in fact, Bakunin actually said that. As can be seen, this was **not** the case. Bakunin, like all revolutionary anarchists, reject "*political action*" (in the sense of electioneering) simply because they feared that such tactics would be counterproductive and undermine the revolutionary nature of the labour movement. As the experience of Marxist Social Democracy showed, he was proved correct.

In summary, while anarchists reject standing of socialists in elections ("*political action*," narrowly defined), we do not reject the need to fight for political reforms or specific political issues. However, we see such action as being based on collective working class **direct action** organised around combative organs of working class self-management and power rather than the individualistic act of placing a cross on a piece of paper once every few years and letting leaders fight your struggles for you.

H.2.14 Are anarchist organisations either "*ineffective*," "*elitist*" or the "*downright bizarre*"?

Marxists often accuse anarchist organisations of being "*elitist*" or "*secret*." Pat Stack (of the British SWP) ponders the history of anarchist organisation (at least the SWP version of that history):

"how otherwise [than Leninist vanguard political parties] do revolutionaries organise? Apart from the serious efforts of anarcho-syndicalists to grapple with this problem, anarchists have failed to pose any serious alternative. In as much as they do, they have produced either the ineffective, the elitist or the downright bizarre. Bakunin's organisation, the 'Alliance of Social Democracy', managed all three: 'The organisation had two overlapping forms, one secret, involving only the "intimates", and one public, the Alliance of Social Democracy. Even in its open, public mode, the alliance was to be a highly centralised organisation, with all decisions on the national level approved by the Central Committee. Since it was the real controlling body, the secret organisation was even more tightly centralised . . . with first a Central Committee, then a "central Geneva section" acting as the "permanent delegation of the permanent Central Committee", and, finally, within the central Geneva section a "Central Bureau", which was to be both the "executive power . . . composed of three, or five, or even seven members" of the secret organisation and the executive directory of the public organisation.'

"That this was far more elitist and less democratic than Lenin's model is clear."

There are, as is obvious, numerous problems with Stack's assertions. Firstly, he makes absolutely **no** attempt to discuss anarchist ideas on the question of revolutionary organisation. In [section J.3](#), we discuss the various approaches anarchists have historically suggested in this area and Stack fails to mention any of them. Rather, he prefers to present a somewhat distorted account of the ideas of Bakunin on the structural aspects of his organisation, ideas which died with him in 1876! Secondly, as Stack fails to discuss how anarchists (including Bakunin) see their organisations operating, it's hard to determine whether they are "*ineffective*" or "*elitist*." This is hardly surprising, as they are neither. Thirdly, even as regards his own example (Bakunin's Alliance) his claim that it was "*ineffectual*" seems inappropriate in the extreme. Whether it was "*elitist*" or "*downright bizarre*" is hard to determine, as Stack quotes an unnamed author and their quotes from its structure. Fourthly, and ironically for Stack, Lenin's "*model*" shared many of the same features as those of Bakunin's!

As noted, Stack fails to discuss any of the standard anarchist ideas on how revolutionaries should organise. As we discuss in [section J.3](#), there are three main types: the "*synthesis*" federation, the "*class struggle*" federation and the "*Platform*." In the twenty-first century, these are the main types of anarchist organisation. As such, it would be extremely hard to argue that these are "*elitist*," "*ineffective*" or "*downright bizarre*." What these organisational ideas have in common is the vision of an anarchist organisation as a federation of autonomous self-managed groups which work with others as equals. How can directly democratic organisations, which influence others by the force of their ideas and by their example, be "*elitist*" or "*downright bizarre*"? Little wonder, then, that Stack used an example from 1868 to attack anarchism in the twenty-first century! If he actually presented an honest account of anarchist ideas then his claims would quickly be seen to be nonsense. And as for the claim of being "*ineffective*," well, given that Stack's article is an attempt to combat anarchist influence in the anti-globalisation movement it would suggest the opposite.

For a modern account of how anarchist groups operate, organise and try to influence the class struggle directly, by the "*natural influence*" (to use Bakunin's expression) of its members in working class organisations see [section J.3](#).

Even looking at the example of Bakunin's Alliance, we can see evidence that Stack's summary is simply wrong. Firstly, it seems strange for Stack to claim that the Alliance was "*ineffective*." After all, Marx spent many years combating it (and Bakunin's influence) in the First International. Indeed, so effective was it that anarchist ideas dominated most sections of that organisation, forcing Marx to move the General Council to America to ensure that it did not fall into the hands of the anarchists (i.e. of the majority). Moreover, it was hardly "*ineffective*" when it came to building the International. As Marxist Paul Thomas notes, "*the International was to prove capable of expanding its membership only at the behest of the Bakuninists [sic!]*" and "*[w]herever the International was spreading, it was doing so under the mantle of Bakuninism.*" [**Karl Marx and the Anarchists**, p. 315 and p. 319] Yet Stack considers this as an example of an "*ineffective*" organisation!

As regards Stack's summary of Bakunin's organisation goes, we must note that Stack is quoting an unnamed source on Bakunin's views on this subject. We, therefore, have no way of evaluating whether

this is a valid summary of Bakunin's ideas on this matter. As we indicate elsewhere (see [section J.3.7](#)) Leninist summaries of Bakunin's ideas on secret organising usually leave a lot to be desired (by usually leaving a lot out or quoting out of context certain phrases). As such, and given the total lack of relevance of this model for anarchists since the 1870s, we will not bother to discuss this summary. Simply put, it is a waste of time to discuss an organisational model which no modern anarchist supports.

However, as we discuss in [section J.3.7](#), there is a key way in which Bakunin's ideas on this issue were far **less "elitist"** and **more "democratic"** than Lenin's model. Simply, Bakunin always stressed that his organisation *"rules out any idea of dictatorship and custodial control."* The revolution *"everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation."* [**Michael Bakunin: Selected Writings**, p. 172] In other words, Bakunin saw the social revolution in terms of popular participation and control, **not** the seizing of power by a "revolutionary" party or group.

The *"main purpose and task of the organisation,"* argued Bakunin, would be to *"help the people to achieve self-determination."* It would *"not threaten the liberty of the people because it is free from all official character"* and *"not placed above the people like state power."* Its programme *"consists of the fullest realisation of the liberty of the people"* and its influence is *"not contrary to the free development and self-determination of the people, or its organisation from below according to its own customs and instincts because it acts on the people only by the natural personal influence of its members who are not invested with any power."* Thus the revolutionary group would be the *"helper"* of the masses, with an *"organisation within the people itself."* [quoted by Michael Confino, **Daughter of a Revolutionary**, p. 259, p. 261, p. 256 and p. 261] The revolution itself would see *"an end to all masters and to domination of every kind, and the free construction of popular life in accordance with popular needs, not from above downward, as in the state, but from below upward, by the people themselves, dispensing with all governments and parliaments -- a voluntary alliance of agricultural and factory worker associations, communes, provinces, and nations; and, finally, . . . universal human brotherhood triumphing on the ruins of all the states."* [**Statism and Anarchy**, p. 33]

Unlike Lenin, Bakunin did not confuse party power with people power. His organisation, for all its faults (and they were many), did not aim to take power in the name of the working class and exercise power through a centralised, top-down, state. Rather, its influence would be based on the *"natural influence"* of its members within mass organisations. The influence of anarchists would, therefore, be limited to the level by which their specific ideas were accepted by other members of the same organisations after discussion and debate. As regards the nature of the labour movement, we must point out that Bakunin provided the same *"serious"* answer as the anarcho-syndicalists -- namely, revolutionary labour unionism. As we discuss in [section H.2.8](#), Bakunin's ideas on this matter are nearly identical to those of the syndicalists Stack praises.

As noted, however, no anarchist group has reproduced the internal structure of the Alliance, which means that Stack's point is simply historical in nature. Sadly this is not the case with his own politics as

the ideas he attacks actually parallel Lenin's model in many ways (although, as indicated above, how Bakunin's organisation would function in the class struggle was fundamentally different, as Lenin's party sought power for itself). Given that Stack is proposing Lenin's model as a viable means of organising revolutionaries, it is useful to summarise it. We shall take as an example two statements issued by the Second World Congress of the Communist International in 1920 under the direction of Lenin. These are "*Twenty-One Conditions of Communism*" and "*Theses on the Role of the Communist Party in the Proletarian Revolution.*" These two documents provide a vision of Leninist organisation which is fundamentally elitist.

Lenin's "*model*" is clear from these documents. The parties adhering to the Communist International had to have two overlapping forms, one legal (i.e. public) and another "*illegal*" (i.e. secret). It was the "*duty*" of these parties "*to create everywhere a parallel illegal organisational apparatus.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 2, p. 767]

Needless to say, this illegal organisation would be the real controlling body, as it would have to be made up of trusted communists and could only be even more tightly centralised than the open party as its members could only be appointed from above by the illegal organisation's central committee. To stress that the "*illegal*" (i.e. secret) organisation controlled the party, the Communist International agreed that while "*the Communist Parties must learn to systematically combine legal and illegal activity,*" the legal work "*must be under the actual control of the illegal party at all times.*" [**Op. Cit.**, vol. 1, p. 199]

Even in its open, public mode, the Communist Party was to be a highly centralised organisation, with all decisions on the national level made by the Central Committee. The parties must be as centralised as possible, with a party centre which has strength and authority and is equipped with the most comprehensive powers. Also, the party press and other publications, and all party publishing houses, must be subordinated to the party presidium. This applied on an international level as well, with the decisions of its Communist International's Executive Committee were binding on all parties belonging to the Communist International. [**Op. Cit.**, vol. 2, p. 769]

Moreover, "*Communist cells of all kinds must be subordinate to each other in a strictly hierarchical order of rank as precisely as possible.*" Democratic centralism itself was fundamentally hierarchical, with its "*basic principles*" being that "*the higher bodies shall be elected by the lower, that all instructions of the higher bodies are categorically and necessarily binding on the lower.*" Indeed, "*there shall be a strong party centre whose authority is universally and unquestionably recognised for all leading party comrades in the period between congresses.*" Any "*advocacy of broad 'autonomy' for the local party organisations only weakens the ranks of the Communist Party*" and "*favours petty-bourgeois, anarchist and disruptive tendencies.*" [**Op. Cit.**, vol. 1, p. 198]

It seems strange for Stack to argue that Bakunin's ideas (assuming he presents an honest account of them, of course) were "*far more elitist and less democratic than Lenin's model*" as it obviously was not. Indeed, the similarities between Stack's summary of Bakunin's ideas and Leninist theory are striking. The Leninist party has the same division between open and secret (legal and illegal) structures as in

Bakunin's, the same centralism and top-down nature. Lenin argued that "*[i]n all countries, even in those that are freest, most 'legal,' and most 'peaceful' . . . it is now absolutely indispensable for every Communist Party to systematically combine legal and illegal work, legal and illegal organisation.*" He stressed that "*[o]nly the most reactionary philistine, no matter what cloak of fine 'democratic' and pacifist phrases he may don, will deny this fact or the conclusion that of necessity follows from it, viz., that all legal Communist parties must immediately form illegal organisations for the systematic conduct of illegal work.*" [**Collected Works**, vol. 31, p. 195]

This was due to the threat of state repression, which also faced Bakunin's Alliance. As Murray Bookchin argues, "*Bakunin's emphasis on conspiracy and secrecy can be understood only against the social background of Italy, Spain, and Russia the three countries in Europe where conspiracy and secrecy were matters of sheer survival.*" [**The Spanish Anarchists**, p. 24]

For anarchists, the similarity in structure between Bakunin and Lenin is no source of embarrassment. Rather, we argue that it is due to a similarity in political conditions in Russia and **not** similarities in political ideas. If we look at Bakunin's ideas on social revolution and the workers' movement we see a fully libertarian perspective -- of a movement from the bottom-up, based on the principles of direct action, self-management and federalism. Anarchists since his death have applied **these** ideas to the specific anarchist organisation as well, rejecting the non-libertarian elements of Bakunin's ideas which Stack correctly (if somewhat hypocritically and dishonestly) denounce. All in all, Stack has shown himself to be a hypocrite or, at best, a "*most reactionary philistine*" (to use Lenin's choice expression).

In addition, it would be useful to evaluate the effectiveness of Stack's Leninist alternative. Looking at the outcome of the Russian Revolution, we can only surmise that it is not very effective. This is because its goal is meant to be a socialist society based on soviet democracy. Did the Russian Revolution actually result in such a society? Far from it. The Kronstadt revolt was repressed in 1921 because it demanded soviet power (see ["What was the Kronstadt Rebellion?"](#)). Nor was this an isolated example. The Bolsheviks had been disbanding soviets with elected non-Bolshevik majorities since early 1918 (i.e. **before** the start of the Civil War) and by 1920 leading Bolsheviks were arguing that dictatorship of the proletariat could only be expressed by means of the dictatorship of the party (see [section 6](#) of the appendix on ["What happened during the Russian Revolution?"](#) for details). Clearly, the Bolshevik method is hardly "*effective*" in the sense of achieving its stated goals. Nor was it particularly effective before the revolution either. During the 1905 revolution, the Bolsheviks opposed the councils of workers' deputies (soviets) which had been formed and gave them an ultimatum: either accept the programme of the Bolsheviks or else disband! The soviets ignored them. In February 1917 the Bolshevik party opposed the actions that produced the revolution which overthrew the Tsar. Simply put, the one event that validates the Bolshevik model is the October Revolution of 1917 and even that failed.

The weakness of Stack's diatribe can be seen from his use of the Alliance example. Moreover, it backfires on his own politics. The similarities between Bakunin's ideas and Lenin's on this subject are clear. The very issues which Stack raises as being "*elitist*" in Bakunin (secret and open organisation, centralisation, top-down decision making) are shared by Lenin. Given that no other anarchist

organisation has ever followed the Alliance structure (and, indeed, it is doubtful the Alliance followed it!), it makes a mockery of the scientific method to base a generalisation on an exception rather than the norm (indeed, the only exception). For Stack to use Bakunin's ideas on this issue as some kind of evidence against anarchism staggers belief. Given that anarchists reject Bakunin's ideas on this subject while Leninists continue to subscribe to Lenin's, it is very clear that Stack is being extremely hypocritical in this matter.

All in all, anarchists would argue that it is Leninist ideas on the vanguard party which are "*elitist*," "*ineffective*" and "*downright bizarre*." As we discuss in [section H.5](#), the only thing the Leninist "revolutionary" party is effective for is replacing one set of bosses with a new set (the leaders of the party).

H.2.15 Do anarchists reject discipline?

The idea that anarchists reject the need for discipline, or are against organisation, or base their ideas on the whim of the individual, are common place in Marxism. Simply put, the idea that anarchists reject "*discipline*" is derived from the erroneous Marxist assertion that anarchism is basically a form of "*individualism*" and based on the "*absolute sovereignty of the individual ego*" (see [section H.2.11](#)). From this (incorrect) position, it is logically deduced that anarchism must reject the need for "*discipline*" (i.e. the ability to make and stick to collective decisions). Needless to say, this is false. Anarchists are well aware of the need to organise together and, therefore, the need to stick by decisions reached. The importance of solidarity in anarchist theory is an expression of this awareness.

However, there is "*discipline*" and "*discipline*." There can be no denying that in a capitalist workplace or army there is "*discipline*" yet few, if any, sane persons would argue that this distinctly top-down and hierarchical "*discipline*" is something to aspire to, particularly if you seek a free society. This cannot be compared to a making and sticking by a collective decision reached by free discussion and debate within a self-governing associations. As Bakunin argued:

"Discipline, mutual trust as well as unity are all excellent qualities when properly understood and practised, but disastrous when abused . . . [one use of the word] discipline almost always signifies despotism on the one hand and blind automatic submission to authority on the other . . .

"Hostile as I am to [this,] the authoritarian conception of discipline, I nevertheless recognise that a certain kind of discipline, not automatic but voluntary and intelligently understood is, and will ever be, necessary whenever a greater number of individuals undertake any kind of collective work or action. Under these circumstances, discipline is simply the voluntary and considered co-ordination of all individual efforts for a common purpose. At the moment of revolution, in the midst of the struggle, there is a natural division of functions according to the aptitude of each, assessed and judged by the collective whole: Some direct and others carry out orders. But no function remains fixed

and it will not remain permanently and irrevocably attached to any one person. Hierarchical order and promotion do not exist, so that the executive of yesterday can become the subordinate of tomorrow. No one rises above the others, and if he does rise, it is only to fall back again a moment later, like the waves of the sea forever returning to the salutary level of equality.

"In such a system, power, properly speaking, no longer exists. Power is diffused to the collectivity and becomes the true expression of the liberty of everyone, the faithful and sincere realisation of the will of all . . . this is the only true discipline, the discipline necessary for the organisation of freedom. This is not the kind of discipline preached by the State . . . which wants the old, routine-like, automatic blind discipline. Passive discipline is the foundation of every despotism." [Bakunin on Anarchism, pp. 414-5]

Clearly, anarchists see the need for **self**-discipline rather than the hierarchical "*discipline*" associated with capitalism and other class systems. It simply means that *"anyone who associates and co-operates with others for a common purpose must feel the need to co-ordinate his [or her] actions with those of his [or her] fellow members and do nothing that harms the work of others and, thus, the common cause; and respect the agreements that have been made -- except when wishing sincerely to leave the association when emerging differences of opinion or changed circumstances or conflict over preferred methods make co-operation impossible or inappropriate."* [Malatesta, **The Anarchist Revolution**, pp. 107-8] As such, we reject hierarchical "*discipline*," considering it as confusing agreement with authority, co-operation with coercion and helping with hierarchy.

Anarchists are not alone in this. A few Marxists have also seen this difference. For example, Rosa Luxemburg repeated (probably unknowingly) Bakunin's distinction between forms of "*discipline*" when she argued, against Lenin, that:

"Lenin . . . declares that 'it is no longer the proletarians but certain intellectuals in our party who need to be educated in the matters of organisation and discipline' . . . He glorifies the educative influence of the factory, which, he says, accustoms the proletariat to 'discipline and organisation' . . .

"Saying all this, Lenin seems to demonstrate . . . his conception of socialist organisation is quite mechanistic. The discipline Lenin has in mind being implanted in the working class not only by the factory but also by the military and the existing state bureaucracy -- by the entire mechanism of the centralised bourgeois state.

"We misuse words and we practice self-deception when we apply the same term -- discipline -- to such dissimilar notions as: (1) the absence of thought and will in a body with a thousand automatically moving hands and legs, and (2) the spontaneous co-ordination of the conscious, political acts of a body of men. What is there in common between the regulated docility of an oppressed class and the self-discipline and

organisation of a class struggling for its emancipation?

"The self-discipline of the social democracy is not merely the replacement of the authority of the bourgeois rulers with the authority of a socialist central committee. The working class will acquire the sense of the new discipline, the freely assumed self-discipline of the social democracy, not as a result of the discipline imposed on it by the capitalist state, but by extirpating, to the last root, its old habits of obedience and servility." [Rosa Luxemburg Speaks, pp. 119-20]

Like Luxemburg, anarchists stress the difference in forms of decision making and reject authoritarian organisations along with hierarchical "discipline" (see [section H.4](#)). This support for self-discipline within self-managed organisations flows directly from the anarchist awareness of the **collective** nature of social change: as "*[t]oday, in revolutionary action as in labour itself, collectivism must replace individualism. Understand clearly that in organising yourselves you will be stronger than all the political leaders in the world.*" [Bakunin, quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, p. 244]

For anarchists, collective organisation and co-operation does not mean the end of individuality. As Bakunin argued:

"You will think, you will exist, you will act collectively, which nevertheless will not prevent in the least the full development of the intellectual and moral faculties of each individual. Each of you will bring to you his own talents, and in all joining together you will multiply your value a hundred fold. Such is the law of collective action . . . in giving your hands to each other for this action in common, you will promise to each other a mutual fraternity which will be . . . a sort of free contract . . . Then proceed collectively to action you will necessarily commence by practising this fraternity between yourselves . . . by means of regional and local organisations . . . you will find in yourselves strength that you had never imagined, if each of you acted individually, according to his own inclination and not as a consequence of a unanimous resolution, discussed and accepted beforehand." [quoted by Kenafick, **Op. Cit.**, pp. 244-5]

Therefore, anarchists see the need for "discipline," assuming that it is created in appropriately libertarian ways. We reject it if it simply means blindly following the orders of those in power, which is usually done within modern society and, sadly, large parts of the labour and socialist movements. However, this does not mean that the majority is always right. As Malatesta argued, "*[t]here are matters over which it is worth accepting the will of the majority because the damage caused by a split would be greater than that caused by error; there are circumstances in which discipline becomes a duty because to fail in it would be to fail in the solidarity between the oppressed and would mean betrayal in face of the enemy. But when is convinced that the organisation is pursuing a course which threatens the future and makes it difficult to remedy the harm done, then it is a duty to rebel and to resist even at the risk of providing a split.*" Therefore, "*anarchists should extend our activities into all organisations to preach*

unity among all workers, decentralisation, freedom of initiative, within the common framework of solidarity . . . What is essential is that individuals should develop a sense of organisation and solidarity, and the conviction that fraternal co-operation is necessary to fight oppression and to achieve a society in which everyone will be able to enjoy his [or her] own life." [**Life and Ideas**, pp. 132-3]

In other words, anarchists reject the idea that obeying orders equals "*discipline*" and recognise that real discipline means evaluating the needs of solidarity and equality with your fellow workers and acting accordingly.

H.2.16 Does the Spanish Revolution show the failure of anarchism?

The actions of the anarchists of the CNT and FAI during the Spanish Civil War is almost always mentioned by Marxists when they attack anarchism. Take, for example, Pat Stack. He argues as follows:

"This question of state power, and which class holds it, was to prove crucial for revolutionaries during the Spanish Civil War and in particular during the revolutionary upheavals in Catalonia. Here anarchism faced its greatest test and greatest opportunity, yet it failed the former and therefore missed the latter.

"When the government in the region under the leadership of Companys admitted its impotence and offered to dissolve, effectively handing power to the revolutionary forces, the anarchists turned them down. CNT leader and FAI . . . militant Garcia Oliver explained, 'The CNT and the FAI decided on collaboration and democracy, renouncing revolutionary totalitarianism which would lead to the strangulation of the revolution by the anarchist and Confederal dictatorship. We had to choose, between Libertarian Communism, which meant anarchist dictatorship, and democracy, which meant collaboration.' The choice was between leaving the state intact and paving the way for Franco's victory or building a workers' government in Catalonia which could act as a focal point for the defeat of Franco and the creation of the structures of a new workers' state. In choosing the former the anarchists were refusing to distinguish between a capitalist state and a workers' state . . . The movement that started by refusing to build a workers' state ended up by recognising a capitalist one and betraying the revolution in the process." ["Anarchy in the UK?", **Socialist Review**, no. 246]

While we have addressed this issue in sections [I.8.10](#) and [I.8.11](#), it is useful to summarise a few key points on this issue. First, there is the actual objective situation in which the decision to collaborate was made in. Strangely, for all his talk of anarchists ignoring "*material conditions*," Stack fails to mention any when he discusses the decisions of Spanish Anarchism. As such, he critique is pure idealism, without any attempt to ground it in the objective circumstances facing the CNT and FAI. Second, the quote provided as the only evidence for Stack's analysis dates from a year after the decision was made.

Rather than reflect the actual concerns of the CNT and FAI when they made their decision, they reflect the attempts of the leaders of an organisation which had significantly departed from its libertarian principles to justify their actions. While this obviously suits Stack's idealist analysis of events, its use can be flawed for this reason. Thirdly, clearly the decision of the CNT and FAI **ignored** anarchist theory. As such, it seems ironic to blame anarchism when anarchists ignores its recommendations, yet this is what Stack argues. Lastly, there is the counter-example of Aragon, which clearly refutes Stack's analysis.

To understand why the CNT and FAI made the decisions it did, it is necessary to do what Stack fails to do, namely to provide some context. The decision to ignore anarchist theory, ignore the state rather than smashing it and work with other anti-fascist organisations was made immediately after the army had been defeated on the streets of Barcelona on the 20th of July, 1936. It is this fact, the success of a popular insurrection in one region against a **nation wide** military coup, which helps place the CNT's decisions into context. Catalonia is but one region in Spain. While the CNT had great strength in many regions of that country, it was not uniform. Some areas, such as around Madrid and in Asturias, the socialist UGT was stronger (although the CNT had been making inroads in both areas). This meant any decision to introduce libertarian communism in Catalonia would have, in all likelihood, meant isolation within Republican Spain and the possibility that the CNT would have to fight both the Republican state **as well as** Franco.

As such, the **real** choice facing the CNT was not "*between leaving the state intact . . . or building a workers' government in Catalonia which could act as a focal point for the defeat of Franco*" but rather something drastically different. Either work with other anti-fascists against Franco so ensuring unity against the common enemy and implement anarchism after victory **or** immediately implement libertarian communism and possibly face a conflict on two fronts, against Franco **and** the Republic (and, possibly, imperialist intervention against the social revolution). This situation made the CNT-FAI decided to collaborate with other anti-fascist groups in the Catalan **Central Committee of Anti-Fascist Militias**. To downplay these objective factors and simply blame the decision on anarchist politics is a joke. As we argue in [section I.8.10](#) in more detail, this dilemma was the one which was driving the decisions of the CNT leadership, **not** any failings in anarchist politics (see [section I.8.11](#) for a discussion of why applying anarchist ideas would have been the correct decision, although hindsight is always twenty-twenty).

Similarly, the Garica Oliver quote provided by Stack dated from a year **after** the events of July 1936. As discussed in [section I.8.11](#), these comments are justifications of CNT-FAI actions and were designed for political effect. As such, they simply cannot be taken at face value for two reasons.

Firstly, the decision to collaborate was obviously driven by fear of Franco and the concern not to divide the forces fighting him. As the 1937 report to the AIT put it, the CNT had a "*difficult alternative: to completely destroy the state, to declare war against the Rebels, the government, foreign capitalists . . . or collaborating.*" [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156] That was the reality facing the CNT -- not Stack's pondering of Garcia Oliver quotes ripped from

their historical context.

Secondly, Oliver's arguments are totally contradictory. After all, he is arguing that libertarian communism (a society based on directly democratic free associations organised and run from the bottom up) is an "*anarchist dictatorship*" and **less** democratic than the capitalist Republic Garica Oliver had been fighting against for most of his life! Moreover, libertarian communism **was** the revolution. As such, to choose it over capitalist democracy to stop "*the strangulation of the revolution*" makes no sense, as the revolution which was created by the rank-and-file of the anarchist movement after the defeat of Franco was based on libertarian communist ideas and ideals!

For these reasons, it is safe to take Garica Oliver's words with a large pinch of salt. To rely upon them for an analysis of the actions of the Spanish Anarchists or the failings of anarchism suggests an extremely superficial perspective. This is particularly the case when we look at both the history of the CNT and anarchist theory. According to anarchist ideas, the social revolution, to quote Bakunin, must "*totally destroy the State,*" expropriate capital and the land "*on behalf of workers' associations*" and create "*the federative Alliance of all working men's associations*" which "*will constitute the Commune.*" [**Michael Bakunin: Selected Writings**, p. 170] Therefore, it is "*not true to say that we completely ignore politics. We do not ignore it, for we definitely want to destroy it.*" [Bakunin, **The Political Philosophy of Bakunin**, p. 331] As can be seen, the CNT ignored these recommendations. Given that the CNT did **not** destroy the state, nor create a federation of workers' councils, then how can anarchist theory be blamed? It seems strange to point to the failure of anarchists to apply their politics as an example of the failure of those politics, yet this is what Stack is doing.

As we discuss in [section I.8.11](#), the CNT leadership, going against anarchist theory, decided to postpone the revolution until **after** Franco was defeated. As the Catalan CNT leadership put it in August 1936:

"Reports have also been received from other regions. There has been some talk about the impatience of some comrades who wish to go futher than crushing fascism, but for the moment the situation in Spain as a whole is extremely delicate. In revolutionary terms, Catalonia is an oasis within Spain.

"Obviously no one can foresee the changes which may follow the civil war and the conquest of that part of Spain which is still under the control of mutinous reactionaries." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 151-2]

As can be seen, concern that Catalonia would be isolated from the rest of the Republic is foremost in their minds. Equally, there is the acknowledgement that many CNT members were applying anarchist politics by fighting fascism via a revolutionary war. This can be seen by the rank and file of the CNT and FAI ignoring the decision "postpone" the revolution in favour of an anti-fascist war. All across Republican Spain, workers and peasants started to expropriate capital and the land, placing it under workers' self-management. They did so on their own initiative. They also applied anarchist ideas in full

in Aragon, where the **Council of Aragon** was created in October 1936 at a meeting of delegates from CNT unions, village collectives and militia columns. In other words, the creation of a federation of workers' associations as argued by Bakunin. Little wonder Stack fails to mention what happened in Aragon, it would undermine his argument against anarchism to mention it.

To contrast Catalonia and Aragon shows the weakness of Stack's argument. The same organisation, with the same politics, yet different results. How can anarchist ideas be blamed for what happened in Catalonia when they had been applied in Aragon? Such a position could not be logically argued and, unsurprisingly, Aragon usually fails to get mentioned by Marxists when discussing Anarchism during the Spanish Civil War. The continuity of what happened in Aragon with the ideas of anarchism and the CNT's 1936 Zaragoza Resolution on Libertarian Communism is clear.

In summary, how could anarchism have *"failed"* during the Spanish Revolution when it was ignored in Catalonia (for fear of fascism) and applied in Aragon? How can it be argued that anarchist politics were to blame when those very same politics had formed the Council of Aragon? It cannot. Simply put, the Spanish Civil War showed the failure of certain anarchists to apply their ideas in a difficult situation rather than the failure of anarchism.

Needless to say, Stack also claims that the **Friends of Durruti** group developed towards Marxism. As he puts it:

"Interestingly the one Spanish anarchist group that developed the most sophisticated critique of all this was the Friends of Durutti. As Felix Morrow points out, 'They represented a conscious break with the anti-statism of traditional anarchism. They explicitly declared the need for democratic organs of power, juntas or soviets, in the overthrow of capitalism, and the necessary state measures of repression against the counter-revolution.' The failure of the Spanish anarchists to understand exactly that these were the stark choices, workers' power, or capitalist power followed by reaction."

The **Friends of Durruti** (FoD) were an anarchist grouping within the CNT and FAI which, like a large minority of others, strongly and consistently opposed the policy of anti-fascist unity. However, rather than signify a *"conscious break"* with anarchism, it signified a conscious **return** to it. This can be clearly seen when we compare their arguments to those of Bakunin. As noted by Stack, the FoD argued for *"juntas"* in the overthrow of capitalism and to defend against counter-revolution. This is **exactly** what revolutionary anarchists have argued for since Bakunin (see [section H.2.1](#) for details)! The continuity of the ideas of FoD with the pre-Civil War politics of the CNT and the ideas of revolutionary anarchism are clear. As such, the FoD were simply arguing for a return to the traditional positions of anarchism and cannot be considered to have broken with it. If Stack or Morrow knew anything about anarchism, then they would have known this.

(See ["Did the Friends of Durruti 'break with' anarchism?"](#) in the ["Marxists and Spanish Anarchism"](#) appendix for a much fuller discussion of this topic.)

As such, the failure of the Spanish anarchists was not the "*stark choice*" between "*workers' power*" and "*capitalist power*" but rather the making of the wrong choice in the real dilemma of introducing anarchism (which would, by definition, be based on workers' power, organisation and self-management) or collaborating with other anti-fascist groups in the struggle against the greater enemy of Franco (i.e. fascist reaction). That Stack does not see this suggests that he simply has no appreciation of the dynamics of the Spanish Revolution and prefers abstract sloganeering to a serious analysis of the problems facing it.

Stack ends by summarising:

"The most important lesson . . . is that whatever ideals and gut instincts individual anarchists may have, anarchism, both in word and deed, fails to provide a roadworthy vehicle for human liberation. Only Marxism, which sees the centrality of the working class under the leadership of a political party, is capable of leading the working class to victory."

As a useful antidote to these claims, we need simply quote Trotsky on what the Spanish anarchists should have done. In his words: "*Because the leaders of the CNT renounced dictatorship for themselves they left the place open for the Stalinist dictatorship.*" [our emphasis, **Writings 1936-7**, p. 514] Hardly an example of "workers' power"!

Or, as he put it in his essay "*Stalinism and Bolshevism*," a "*revolutionary party, even having seized power (of which the anarchist leaders were incapable in spite of the heroism of the anarchist workers), is still by no means the sovereign ruler of society.*" [**Stalinism and Bolshevism**] Rather than seeing "*democratic organs of power, juntas or soviets, in the overthrow of capitalism*" as being the key issue, Trotsky considered the party as being the decisive factor. Indeed, the idea that such organs ("juntas" or "soviets," to use Stack's words) could replace the party dictatorship is dismissed:

"Those who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." [**Op. Cit.**]

Clearly, the leading Marxist at the time was not arguing for the "*centrality of the working class under the leadership of a political party.*" He was arguing for the dictatorship of a "revolutionary" party **over** the working class. Rather than the working class being "central" to the running of a revolutionary regime, Trotsky saw the party being in the central position. What sort of "*victory*" is possible when the party has dictatorial power over the working class and the "*sovereign ruler*" of society? Simply the kind of "*victory*" that leads to Stalinism.

Anarchists reject this vision. They also reject the first step along this path, namely the identification of party power with workers' power. Simply put, if the "revolutionary" party is in power then the working class is not. Rather than seeing working class organisations as the means by which working people run

society, Leninists see them purely in instrumental terms -- the means by which the party can seize power. As the Russian Revolution proved beyond doubt, in a conflict between workers' power and party power Leninists will suppress the former to ensure the latter (see the appendix on ["What happened during the Russian Revolution?"](#)). As Trotsky argued in 1939 (18 years after he made similar arguments when he was in power) the *"very same masses are at different times inspired by different moods and objectives. It is just for this reason that a centralised organisation of the vanguard is indispensable. Only a party, wielding the authority it has won, is capable of overcoming the vacillation of the masses themselves."* [**The Moralists and Sycophants**, p. 59]

To paraphrase Stack, the most important lesson from both the Russian and Spanish revolutions is that whatever ideals and gut instincts individual Leninists may have, Leninism, both in word and deed, fails to provide a roadworthy vehicle for human liberation. Only Anarchism, which sees the centrality of the working class management of the class struggle and revolution, is capable of ensuring the creation of a real, free, socialist society.

Therefore, rather than see the failure of anarchism, the Spanish Revolution showed the failure of anarchists to apply their politics due to exceptionally difficult objective circumstances, a mistake which almost all anarchists acknowledge and have learned from. This does not justify the decision, rather it helps to explain it. Moreover, the Spanish Revolution also has a clear example of anarchism being applied in the Council of Aragon. As such, it is hard to blame anarchism for the failure of the CNT when the same organisation applied its ideas successfully there. Simply put, Marxist claims that the Spanish Revolution shows the failure of anarchist ideas are not only wrong, they are extremely superficial and not rooted in the objective circumstances of the time.

Appendix : Anarchism and Marxism

This appendix exists to refute some of the many anti-anarchist diatribes produced by Marxists. While we have covered why anarchists oppose Marxism in [section H](#), we thought it would be useful to reply to Marxist webpages and books whose content is not explicitly covered in that section. In this way we hope to indicate that Marxism is a flawed theory, flawed even to the extent of not being able to present a honest critique of anarchism. This consistent attempt to smear anarchism and distort its history and ideas is no co-incidence -- rather it is required in order to present Marxism as the only viable form of socialism and, more importantly, to hide the fact that much of the populist Marxist rhetoric was, in fact, said by anarchists first and latter stolen by Marxists to hide the authoritarian basis of their politics.

One last point. We are aware that we repeat many of our arguments in these appendices. That, unfortunately, is avoidable for two reasons. Firstly, Marxists usually repeat the same false assertions against anarchism and so we have to answer them each time they appear. Marxists seem to subscribe to the point of view that repeating an error often enough makes it true. Secondly, we have tried to make each appendix as self-contained as possible and that meant repeating certain material and arguments to achieve this. We hope the reader understands.

Reply to errors and distortions in David McNally's pamphlet "Socialism from Below"

1. Introduction

2. Is anarchism the politics of the "small property owner"?
3. Does anarchism "glorify values from the past"?
4. Why are McNally's comments on Proudhon a distortion of his ideas?
5. Why are McNally's comments on Bakunin a distortion of his ideas?
6. Are the "quirks of personality" of Proudhon and Bakunin listed by McNally actually rooted "in the very nature of anarchist doctrine"?
7. Are anarchists against democracy?
8. Are Leninists in favour of democracy?
9. Why is McNally wrong on the relation of syndicalism to anarchism?
10. Do syndicalists reject working class political action?
11. Why is McNally's claim that Leninism supports the principle of working class self-emancipation is wrong?
12. Why is Marxist "class analysis" of anarchism contradictory?
13. If Marxism is "socialism from below," why do anarchists reject it?
14. Why is McNally's use of the term "socialism from below" dishonest?
15. Did Trotsky keep alive Leninism's "democratic essence"?

Marxists and Spanish Anarchism

1. Were the Spanish Anarchists "Primitive Rebels"?
2. How accurate is Felix Morrow's book on the Spanish Revolution?
3. Did a "highly centralised" FAI control the CNT?
4. What is the history of the CNT and the Communist International?
5. Why did the CNT not join the Workers' Alliance?
6. Was the October 1934 revolt sabotaged by the CNT?
7. Were the Friends of Durruti Marxists?
8. Did the Friends of Durruti "break with" anarchism?

9. Were the Friends of Durruti influenced by Trotskyists?
10. What does the Friends of Durruti's programme tell us about Trotskyism?
11. Why is Morrow's comments against the militarisation of the Militias ironic?
12. What is ironic about Morrow's vision of revolution?
13. Why do anarchists reject the Marxist "workers' state"?
14. What is wrong with Morrow's "*fundamental tenet*" of anarchism?
15. Did Spanish Anarchism aim for the creation of "collectives" before the revolution?
16. How does the development of the collectives indicate the differences between Bolshevism and anarchism?
17. Why is Morrow's support for "*proletarian methods of production*" ironic?
18. Were the federations of collectives an "*abandonment*" of anarchist ideas?
19. Did the experience of the rural collectives refute anarchism?
20. Does the experience of the Spanish Revolution indicate the failure of anarchism or the failure of anarchists?

Reply to errors and distortions in Phil Mitchinson's "*Marxism and direct action*"

1. How does Mitchinson impoverish the politics of the direct action groups?
2. Does anarchism "*juxtapose*" theory and action?
3. How does Mitchinson distort the London May Day demo?
4. Do anarchists really think "*the bosses will do nothing to defend their system*"?
5. How does Mitchinson misrepresent anarchist organisation?
6. How does Mitchinson define anarchism wrongly?
7. Does anarchism reject fighting for reforms?

8. Does anarchism see the state as the root of all problems?
9. Why is Mitchinson wrong about the "*Abolition [i.e. Abolition] of the state*"?
10. Why is Mitchinson's comment that we face either "*socialism or barbarism*" actually undermine his case?
11. Why is Mitchinson wrong to assert anarchists do not believe in defending a revolution?
12. Would the "workers' state" really be different, as Mitchinson claims?
13. Is the Marxist "worker's state" really the rule of one class over another?
14. Why do anarchists reject the Marxist notion of "conquest of power"?
15. What caused the degeneration of the Russian Revolution?
16. Did anarchists reject "*the need for organisation in the shape of trade unions*"?
17. Why do anarchists reject political activity?
18. How do anarchists struggle for reforms under capitalism?
19. How does Mitchinson distorts the use of the term "*Self-reliance*"?
20. Is anarchism an example of "*Philosophical idealism*"?
21. How is Mitchinson's critique self-contradictory?
22. How did Trotsky make the trains run on time?
23. Can centralised planning meet the needs of the whole of society?
24. Is technology neutral?
25. Do anarchists ignore the "*strength of the working class*"?
26. What does Mitchinson's article tell about the nature of Trotskyism?

Reply to errors and distortions in the SWP's "*Marxism and Anarchism*"

1. What does the anti-globalisation movement tell us about the effectiveness of the "vanguard" parties like the SWP?

2. What does the SWP miss out in its definition of anarchism?
3. Why does mentioning the history of anarchism weaken the SWP's argument?
4. How is the SWP wrong about centralisation?
5. Why does the SWP's "*picket line is 'authoritarian'*" argument totally miss the point?
6. Why are the SWP's examples of "*state functions*" wrong?
7. What is ironic about the SWP's comment that workers' councils must "*break up*" the capitalist state?
8. How do the SWP re-write the history of the Russian Revolution?
9. How do the SWP re-write the history of the Spanish Revolution?
10. Do anarchists ignore the fact that ideas change through struggle?
11. Why do anarchists oppose the Leninist "*revolutionary party*"?
12. Why do the SWP make a polemical fetish of "*unity*" and "*democracy*" to the expense of common sense and freedom?
13. How does the Battle of Prague expose the SWP as hypocrites?
14. Is the Leninist tradition actually as democratic as the SWP like to claim?
15. Why is the SWP's support for centralisation anti-socialist?
16. Why is the SWP wrong about the A16 Washington D.C. demo?
17. Why does the SWP's Washington example refute the SWP's own argument and not anarchism?
18. Why is a "*revolutionary party*" a contradiction in terms?
19. Do anarchists operate "*in secret*"?
20. Why is the SWP wrong about Bakunin's organisation?
21. Why is the SWP's attack on Bakunin's organisation ironic?
22. Was the F.A.I. a "*centralised and secret*" organisation that shunned "*open debate and common struggle*"?
23. Do anarchists wait for "*spontaneous upsurges by workers*"?
24. Do anarchists blame workers "*for being insufficiently revolutionary*"?
25. Why does the history of centralised parties refute the SWP's arguments?

Reply to errors and distortions in John Fisher's "*Why we must further Marxism and not Anarchism*"

- 1. Why should "*the so-called Anarchistic youth of today*" be concerned that Trotskyists consider them allies?**
- 2. What else do people learn about when they discover anarchism is more than "*utter rebellion*"?**
- 3. What do anarchists think will "*replace the smashed state machine*"?**
- 4. What did Trotsky and Lenin think must replace the bourgeois state?**
- 5. Is the "*proletarian 'state'*" really a new kind of state?**
- 6. Do anarchists "*hope the capitalists do not make any attempts of counterrevolution*"?**
- 7. Are Anarchists simply "*potential Marxists*"?**
- 8. Is Marxism a scientific?**
- 9. What does the Russian Revolution tell us about Trotskyism?**
- 10. Do anarchists reject "*leadership*"?**
- 11. Does the Spanish Revolution show anarchism is flawed?**
- 12. Does anarchism believe in spontaneous revolution?**

Section H - Why do anarchists oppose state socialism?

Introduction

H.1 Have anarchists always opposed state socialism?

H.1.1 What was Bakunin's critique of Marxism?

H.1.2 What are the key differences between Anarchists and Marxists?

H.1.3 Why do anarchists wish to abolish the state "overnight"?

H.1.4 Do anarchists have "absolutely no idea" of what the proletariat will put in place of the state?

H.1.5 Why do anarchists reject "utilising the present state"?

H.1.6 Why do anarchists try to "build the new world in the shell of the old"?

H.1.7 Haven't you read Lenin's "State and Revolution"?

H.2 What parts of anarchism do Marxists particularly misrepresent?

H.2.1 Do anarchists reject defending a revolution?

H.2.2 Do anarchists reject the need for collective working class struggle?

H.2.3 Does anarchism "yearn for what has gone before"?

H.2.4 Do anarchists think "the state is the main enemy" rather than just "one aspect" of class society?

H.2.5 Do anarchists think "full blown" socialism will be created overnight?

H.2.6 How do Marxists misrepresent Anarchist ideas on mutual aid?

H.2.7 Who do anarchists see as their "agents of social change"?

H.2.8 What is the relationship of anarchism to syndicalism?

H.2.9 Do anarchists have "liberal" politics?

[H.2.10 Are anarchists against leadership?](#)

[H.2.11 Are anarchists "*anti-democratic*"?](#)

[H.2.12 Does anarchism survive only in the absence of a strong workers' movement?](#)

[H.2.13 Do anarchists reject "political" struggles and action?](#)

[H.2.14 Are anarchist organisations either "*ineffective,*" "*elitist*" or "*downright bizarre*"?](#)

[H.2.15 Do anarchists reject discipline?](#)

[H.2.16 Does the Spanish Revolution show the failure of anarchism?](#)

[H.3 What are the myths of state socialism?](#)

[H.3.1 Do Anarchists and Marxists want the same thing?](#)

[H.3.2 Is Marxism "*socialism from below*"?](#)

[H.3.3 Is Leninism "*socialism from below*"?](#)

[H.3.4 Don't anarchists just quote Marxists selectively?](#)

[H.3.5 Has Marxist appropriation of anarchist ideas changed it?](#)

[H.3.6 Is Marxism the only revolutionary politics which have worked?](#)

[H.3.7 What is wrong with the Marxist theory of the state?](#)

[H.3.8 What is wrong with the Leninist theory of the state?](#)

[H.3.9 Is the state simply an agent of economic power?](#)

[H.3.10 Has Marxism always supported the idea of workers' councils?](#)

[H.3.11 Does Marxism aim to place power into the hands of workers organisations?](#)

[H.3.12 Is big business the precondition for socialism?](#)

[H.3.13 Why is state socialism just state capitalism?](#)

[H.3.14 Don't Marxists believe in workers' control?](#)

[H.3.15 Can objective factors explain the failure of the Russian Revolution?](#)

[H.3.16 Did Bolshevik ideology influence the outcome of the Russian Revolution?](#)

[H.4 Didn't Engels refute anarchism in his essay "On Authority"?](#)

H.4.1 Does organisation imply the end of liberty?

H.4.2 How does free love versus marriage indicate the weakness of Engels' argument?

H.4.3 How do anarchists propose to run a factory?

H.4.4 How does the class struggle refute Engels' arguments that industry required leaving "*all autonomy behind*"?

H.4.5 Is the way industry operates "*independent of all social organisation*"?

H.4.6 Why does Engels' "On Authority" harm Marxism?

H.4.7 Why does Engels' argument that revolution is "*the most authoritarian thing there is*" totally miss the point?

H.5 What is vanguardism and why do anarchists reject it?

H.5.1 Why are vanguard parties anti-socialist?

H.5.2 Have vanguardist assumptions been validated?

H.5.3 Why does vanguardism imply party power?

H.5.4 Did Lenin abandon vanguardism?

H.5.5 What is "*democratic centralism*"?

H.5.6 Why do anarchists oppose "*democratic centralism*"?

H.5.7 Is the way revolutionaries organise important?

H.5.8 Are vanguard parties effective?

H.5.9 What are vanguard parties effective at?

H.5.10 Why does "*democratic centralism*" produce "*bureaucratic centralism*"?

H.5.11 Can you provide an example of the negative nature of vanguard parties?

Section H - Why do anarchists oppose state socialism?

The socialist movement has been continually divided, with various different tendencies and movements. Two of the main tendencies of socialism are state socialism (Marxism, Leninism, Maoism and so on) and libertarian socialism (anarchism in all its many forms). The conflict and disagreement between anarchists and Marxists is legendary. As Benjamin Tucker noted:

"[I]t is a curious fact that the two extremes of the [socialist movement] . . . though united . . . by the common claim that labour should be put in possession of its own, are more diametrically opposed to each other in their fundamental principles of social action and their methods of reaching the ends aimed at than either is to their common enemy, existing society. They are based on two principles the history of whose conflict is almost equivalent to the history of the world since man came into it . . .

"The two principles referred to are AUTHORITY and LIBERTY, and the names of the two schools of Socialistic thought which fully and unreservedly represent one or the other are, respectively, State Socialism and Anarchism. Whoso knows that these two schools want and how they propose to get it understands the Socialistic movement. For, just as it has been said that there is no half-way house between Rome and Reason, so it may be said that there is no half-way house between State Socialism and Anarchism." [**The Individualist Anarchists**, pp. 78-9]

In addition to this divide between libertarian and authoritarian forms of socialism, there is another divide between reformist and revolutionary wings of these two tendencies. *"The term 'anarchist,'" Murray Bookchin writes, "is a generic word like the term 'socialist,' and there are probably as many different kinds of anarchists as there are socialists. In both cases, the spectrum ranges from individuals whose views derive from an extension of liberalism (the 'individualist anarchists', the social-democrats) to revolutionary communists (the anarcho-communists, the revolutionary Marxists, Leninists and Trotskyites)."* [**Post-Scarcity Anarchism**, p. 214f]

In this section of the FAQ we concentrate on the conflict between the revolutionary wings of both movements. Here we discuss why communist-anarchists, anarcho-syndicalists and other revolutionary anarchists reject Marxist theories, particularly the revolutionary ideas of Leninists and Trotskyites. We will concentrate almost entirely on the works of Marx, Lenin and Trotsky as well as the Russian Revolution. This is because many Marxists reject the Chinese, Cuban and other revolutions as being infected by Stalinism. In contrast, there is a general agreement in Marxist circles that the Russian Revolution was a true socialist revolution and the ideas of Lenin (and usually Trotsky) follow in Marx's footsteps. What we say against Marx and Lenin is also applicable to their more controversial followers, therefore we ignore them. We also dismiss out of hand any suggestion that the Stalinist regime was

remotely socialist. Unfortunately many serious revolutionaries consider Lenin's regime to be a valid example of a valid socialist revolution so we have to discuss why it was not.

As noted, two main wings of the revolutionary socialist movement, anarchism and Marxism, have always been in conflict. While, with the apparent success of the Russian revolution, the anarchist movement was overshadowed by its authoritarian name-sake in many countries, this situation has been changing. In recent years anarchism has seen a revival as more and more people recognise the fundamentally anti-socialist nature of the Russian "experiment" and the politics that inspired it. With this re-evaluation of socialism and the Soviet Union, more and more people are rejecting Marxism and embracing libertarian socialism. As can be seen from the press coverage from such events as the anti-Poll Tax riots in the UK at the start of the 1990s, the J18 and N30 anti-capitalist demonstrations in 1999, anarchism has become synonymous with anti-capitalism.

Needless to say, the self-proclaimed "vanguard(s) of the proletariat" become worried and hurriedly write patronising articles on "anarchism" (without bothering to really understand it or its arguments against Marxism). These articles are usually a mishmash of lies, irrelevant personal attacks, distortions of the anarchist position and the ridiculous assumption that anarchists are anarchists because no one has bothered to inform of us of what "Marxism" is "really" about. We do not aim to repeat such "scientific" analysis in our FAQ so we shall concentrate on politics and history. By so doing we will indicate that anarchists are anarchists because we understand Marxism and reject it as being unable to lead to a socialist society.

It is unfortunately common for many Marxists, particularly Leninist influenced ones, to concentrate on personalities and not politics when discussing anarchist ideas. Albert Meltzer put it well when he argued that it is *"very difficult for Marxist-Leninists to make an objective criticism of Anarchism, as such, because by its very nature it undermines all the suppositions basic to Marxism. If Marxism is held out to be indeed **the** basic working class philosophy, and the proletariat cannot owe its emancipation to anyone but itself, it is hard to go back on it and say that the working class is not yet ready to dispense with authority placed over it. Marxists therefore, normally refrain from criticising anarchism as such -- unless driven to doing so, when it exposes its own authoritarianism . . . and concentrates its attack not on **anarchism**, but on **anarchists**"* [**Anarchism: Arguments For and Against**, p. 37]

This can be seen, for example, when many Leninists attempt to "refute" the whole of anarchism, its theory and history, by pointing out the personal failings of specific anarchists. They say that Proudhon was anti-jewish and sexist, that Bakunin was racist, that Kropotkin supported the Allies in the First World War and so anarchism is flawed. All these facts about Proudhon, Bakunin and Kropotkin are true and they are all irrelevant to a critique of anarchism. Such a "critique" does not address anarchist ideas, all of which are ignored by this approach. In other words, they attack anarchists, not anarchism.

Even taken at face value, you would have to be stupid to assume that Proudhon's misogyny or Bakunin's racism had equal weighting with Lenin's and the Bolsheviks' behaviour (for example, the creation of a party dictatorship, the repression of strikes, free speech, independent working class organisation, the

creation of a secret police force, the attack on Kronstadt, the betrayal of the Makhnovists, the violent repression of the Russian anarchist movement, etc.) in the league table of despicable activity. It seems strange that personal bigotry is of equal, or even more, importance in evaluating a political theory than its practice during a revolution.

Moreover, such a technique is ultimately dishonest. Looking at Proudhon, for example, Proudhon's anti-semitic outbursts remained unpublished in his note books until well after his ideas and, as Robert Graham points out, "*a reading of **General Idea of the Revolution** will show, anti-semitism forms no part of Proudhon's revolutionary programme.*" ["Introduction", **The General Idea of the Revolution**, p. xxxvi] Similarly, Bakunin's racism is an unfortunate aspect of his life, an aspect which is ultimately irrelevant to the core principles and ideas he argued for. Moreover, Bakunin and his associates totally rejected Proudhon's sexism and argued for complete equality between the sexes. Why mention these aspects of their ideas at all? They are irrelevant to evaluating anarchism as a viable political theory. To do so is to dishonestly imply that anarchism is racist and sexist, which it is not.

If we look at Kropotkin's support for the Allies in the First World War we discover a strange hypocrisy on the part of Marxists as well as an attempt to distort history. Why hypocrisy? Simply because Marx and Engels supported the Prussian during the Franco-Prussian war (in contrast, Bakunin argued for a popular uprising and social revolution to stop the war). As Marx wrote to Engels on July 20th, 1870:

*"The French need to be overcome. If the Prussians are victorious, the centralisation of the power of the State will be useful for the centralisation of the German working class. Moreover, German ascendancy will transfer the centre of gravity of the European worker's movement from France to Germany . . . On a world scale, the ascendancy of the German proletariat the French proletariat will at the same time constitute the ascendancy of **our** theory over Proudhon's."* [quoted by Arthur Lehning, **Michael Bakunin: Selected Writings**, p. 284]

Marx, in part, supported the deaths of working class people in war in order to see **his** ideas become more important than Proudhon's! At least Kropotkin supported the allies because he was against the dangers to freedom implied by the German military state. The hypocrisy of the Marxists is clear -- if anarchism is to be condemned for Kropotkin's actions, then Marxism must be equally condemned for Marx's.

This analysis also rewrites history as the bulk of the Marxist movement supported their respective states during the conflict. A handful of the parties of the Second International opposed the war (and those were the smallest ones as well). The father of Russian Marxism, George Plekhanov, supported the Allies. The German Social Democratic Party (the jewel in the crown of the Second International) supported the war (a small minority of it did not). There was just one man in the German Reichstag in August 1914 who did not vote for war credits (and he did not even vote against them, he abstained). And many of the anti-war minority went along with the majority of party in the name of "discipline" and "democratic" principles.

In contrast, only a **very** small minority of anarchists supported any side during the conflict. The bulk of the anarchist movement (including such leading lights as Malatesta, Rocker, Goldman and Berkman) opposed the war, arguing that anarchists must *"capitalise upon every stirring of rebellion, every discontent in order to foment insurrection, to organise the revolution to which we look for the ending of all of society's iniquities."* [**No Gods, No Masters**, vol. 2., p. 36] As Malatesta noted at the time, the "pro-war" anarchists were *"not numerous, it is true, but [did have] amongst them comrades whom we love and respect most."* He stressed that the *"almost all"* of the anarchists *"have remained faithful to their convictions"* namely *"to awaken a consciousness of the antagonism of interests between dominators and dominated, between exploiters and workers, and to develop the class struggle inside each country, and solidarity among all workers across the frontiers, as against any prejudice and any passion of either race or nationality."* [**Life and Ideas**, p. 243, p. 248 and p. 244]

By pointing to Kropotkin, Marxists hide the fact that it was the official Marxist movement which betrayed the cause of internationalism, not anarchism. Indeed, the betrayal of the Second International was the natural result of the *"ascendancy"* of Marxism over anarchism that Marx had hoped. The rise of Marxism, in the form of social-democracy, ended as Bakunin predicted, with the corruption of socialism in the quagmire of electioneering and statism. As Rudolf Rocker correctly argues, *"the Great War of 1914 was the exposure of the bankruptcy of political socialism."* [**Marx and Anarchism**]

We will not follow this common Marxist approach here as the failings of Marxism, particularly in its Leninist form, come not from the personal failings of individuals but from their politics and how they would work in practice. No one ever lives up totally to their ideals in practice, we are all human and pointing out individual faults does not undermine the theory they contributed to. If this was the case then Marxism would be "refuted" because of Marx and Engel's anti-Slav feelings and their support for the German State during the Franco-Prussian war of 1871.

Rather, we will analyse Marxism in terms of its theories and how these theories worked in practice. Thus we will conduct a scientific analysis of Marxism, looking at its claims and comparing them to what they achieved in practice. Few, if any, Marxists present such an analysis of their own politics, which makes Marxism more a belief system rather than analysis. For example, many Marxists point to the success of the Russian Revolution and argue that while anarchists attack Trotsky and Lenin for being statists and authoritarians, that statism and authoritarianism saved the revolution.

In reply, anarchists point out that the Marxist revolution did, in fact, **fail**. After all, the aim of those revolutions was to create a free, democratic, classless society of equals. In fact it created a one party dictatorship based around a class system of bureaucrats exploiting and dominating working class people and a society lacking equality and freedom. As the stated aims of the Marxist revolution failed to materialise, anarchists would argue that those revolutions failed even though a "Communist" Party remained in power for over 70 years. And as for statism and authoritarianism "saving" the revolution, they saved it for Stalin, not socialism. That is nothing to be proud of.

From an anarchist perspective, this makes perfect sense as *"[n]o revolution can ever succeed as factor of*

liberation unless the MEANS used to further it be identical in spirit and tendency with the PURPOSE to be achieved." [Emma Goldman, **Patterns of Anarchy**, p. 113] In other words, statist and authoritarian means will result in statist and authoritarian ends. Calling a new state a "workers state" will not change the state's nature as a form of minority (and so class) rule. It has nothing to do with the ideas or nature of those who gain power, it has to do with the nature of the state and the social relationships it generates. The state structure is an instrument of minority rule, it cannot be used by the majority because it is based on hierarchy, centralisation and the empowerment of the minority at the top at the expense of everyone else. States have certain properties **just because they are states**. They have their own dynamics which place them outside popular control and are not simply a tool in the hands of the economically dominant class. Making the minority Socialists within a "workers' state" does not change the fundamental nature of the state as an instrument of minority rule -- it just changes the minority in charge, the minority exploiting and oppressing the majority.

Similarly, in spite of over 100 years of socialists and radicals using elections to put forward their ideas and the resulting corruption of every party which has done so, most Marxists still call for socialists to take part in elections. For a theory which calls itself scientific this ignoring of empirical evidence, the facts of history, is truly amazing. Marxism ranks with economics as the "science" which most consistently ignores history and evidence.

Indeed, this refusal to look at factual evidence can be seen from the common comment Marxists make of anarchists, namely that we are "*petty-bourgeois*." For anarchists, such comments indicate that, for many Marxists, class is more a source of insults than analysis. This can be seen when Marxists state that, say, Kropotkin or Bakunin was "petty-bourgeois." As if a member of the Russian ruling class could be petty-bourgeois! If we look at class as an socio-economic fact and a social relationship (which it is) rather than an insult, then we discover if Bakunin and Kropotkin were "petty-bourgeois" then so was Marx, for they both shared the same socio-economic situation! Nor can it explain how Marx (a member of the petty-bourgeois, an independent journalist, when he worked at all) and Engels (an **actual** bourgeois, a factory owner!) could have created a "proletarian science." After all, in order to be a "proletarian" theory it must be developed by working class people in struggle. It was not. Albert Meltzer explains the problems Marxists face when they call us "petty-bourgeois":

*"This leads them into another difficulty: How can one reconcile the existence of anarcho-syndicalist unions with 'petty bourgeois' origins -- and how does one get over the fact that most Marxist-Leninists of today are professional ladies and gentlemen studying for or belonging to the professions? The answer is usually given that **because** anarchism is 'petty bourgeois' those embracing it -- 'whatever their occupation or social origins' must also be 'petty bourgeois.' Thus because 'Marxism is working class', its adherents must be working class 'at least subjectively.' This is a sociological absurdity, as if 'working class' meant an ideological viewpoint. It is also a built in escape clause."* [Op. Cit., p. 39]

As this section of the FAQ will make clear, this name calling and concentration on the personal failings of individual anarchists by Marxists is not an accident. If we take the ability of a theory to predict future events as an indication of its power then it soon becomes clear that anarchism is far more useful a tool in

working class struggle than Marxism. After all, anarchists predicted with amazing accuracy the future development of Marxism. Bakunin argued that electioneering would corrupt the socialist movement, making it reformist and just another bourgeois party (see [section J.2](#)). This is what in fact happened to the Social-Democratic movement across the world by the turn of the twentieth century (the rhetoric remained radical for a few more years, of course). Murray Bookchin's comments about the German Social Democrats are appropriate here:

"[T]he party's preoccupation with parliamentarism was taking it ever away from anything Marx had envisioned. Instead of working to overthrow the bourgeois state, the SPD, with its intense focus on elections, had virtually become an engine for getting votes and increasing its Reichstag representation within the bourgeois state . . . The more artful the SPD became in these realms, the more its membership and electorate increased and, with the growth of new pragmatic and opportunistic adherents, the more it came to resemble a bureaucratic machine for acquiring power under capitalism rather than a revolutionary organisation to eliminate it." [**The Third Revolution**, vol. 2, p. 300]

The reality of working within the state soon transformed the party and its leadership, as Bakunin predicted. If we look at the 1920s, we discover a similar failure to consider the evidence:

"From the early 1920s on, the Leninist attachment to pre-WWI social democratic tactics such as electoral politics and political activity within pro-capitalist labour unions dominated the perspectives of the so-called Communist. But if these tactics were correct ones, why didn't they lead to a less dismal set of results? We must be materialists, not idealists. What was the actual outcome of the Leninist strategies? Did Leninist strategies result in successful proletarian revolutions, giving rise to societies worthy of the human beings that live in them? The revolutionary movement in the inter-war period was defeated. . ." [Max Anger, "The Spartacist School of Falsification", **Anarchy: A Journal of Desire Armed**, no. 43, Spring/Summer 1997, pp. 51-2]

As Scottish Anarchist Ethel McDonald argued in 1937, the tactics urged by Lenin were a disaster in practice:

"At the Second Congress of the Third International, Moscow, a comrade who is with us now in Spain, answering Zinoviev, urged faith in the syndicalist movement in Germany and the end of parliamentary communism. He was ridiculed. Parliamentarianism, communist parliamentarianism, but still parliamentarianism would save Germany. And it did. . . Saved it from Socialism. Saved it for Fascism." ["The Volunteer Ban", **Workers City**, Farquhar McLay (ed.), p. 74]

When the Nazi's took power in 1933 in Germany the 12 million Socialist and Communist voters and 6 million organised workers took no action. In Spain, it was the anarcho-syndicalist CNT which led the battle against fascism on the streets and helped create one of the most important social revolutions the

world has seen. The contrast could not be more clear. And many Marxists urge us to follow Lenin's advice today!

If we look at the "workers' states" created by Marxists, we discover, yet again, anarchist predictions proved right. Bakunin argued that "*[b]y popular government they [the Marxists] mean government of the people by a small under of representatives elected by the people. . . [That is,] government of the vast majority of the people by a privileged minority. But this minority, the Marxists say, will consist of workers. Yes, perhaps, of **former** workers, who, as soon as they become rulers or representatives of the people will cease to be workers and will begin to look upon the whole workers' world from the heights of the state. They will no longer represent the people but themselves and their own pretensions to govern the people.*" [**Statism and Anarchy**, p. 178] The history of every Marxist revolution proves Bakunin was right.

Due to these "workers' states" socialism has become associated with repressive regimes, with totalitarian regimes the total opposite of what socialism is actually about. Nor does it help when self-proclaimed socialists (such as Trotskyites) "*obscenely describe regimes that exploit, imprison and murder wage labourers in Cuba, North Korea, and China as 'workers' states'*" [Max Anger, **Op. Cit.**, p. 52] Little wonder many anarchists do not use the terms "socialist" or "communist" and just call themselves "anarchists." They are associated with regimes which have nothing in common with our ideas, or, indeed, the ideas of socialism as such.

This does not mean that anarchists reject everything Marx wrote. Far from it. Much of his analysis of capitalism is acceptable to anarchists, for example (both Bakunin and Tucker considered Marx's economic analysis as important). Indeed, there are some schools of Marxism which are very libertarian and are close cousins to anarchism (for example, council communism and autonomist Marxism are close to revolutionary anarchism). Unfortunately, these forms of Libertarian Marxism are a minority current within that movement.

In other words, Marxism is not all bad -- unfortunately the vast bulk of it is and those elements which are not are found in anarchism anyway. For most, Marxism is the school of Marx, Engels, Lenin and Trotsky, not Marx, Pannekoek, Gorter, Ruhle and Mattick. The minority libertarian trend of Marxism is based, like anarchism, on a rejection of party rule, electioneering and creating a "workers' state." They also, like anarchists, support direct action, self-managed class struggle, working class autonomy and a self-managed socialist society. These Marxists oppose the dictatorship of the party over the proletariat and, in effect, agree with Bakunin when he argued against Marx that socialists should "*not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction.*" Like Bakunin, they think that "*a free federation of agricultural and industrial associations . . . organised from the bottom upwards*" will be the basis of a new society (Libertarian Marxists usually call these associations workers' councils). [**Michael Bakunin: Selected Writings**, p. 237 and p. 172]

These libertarian forms of Marxism should be encouraged and not tarred with the same brush as Leninism and social democracy (indeed Lenin commented upon "*the anarchist deviation of the German Communist Workers' Party*" and other "*semi-anarchist elements*," the very groups we are referring to here under the term "libertarian Marxism." [**Marx, Engels and Lenin, *Anarchism and Anarcho-Syndicalism***, p. 333 and p. 338]). Over time, hopefully, such comrades will see that the libertarian element of their thought outweighs the Marxist legacy. So our comments in this section of the FAQ are mostly directed to the majority form of Marxism, not to its libertarian wing.

One last point. We should point out that in the past many leading Marxists have argued that anarchism and socialism were miles apart: indeed, that anarchism was not a form of socialism. The leading American Marxist Daniel De Leon took this line, along with many others. This is true, in a sense, as anarchists are not **Marxian** socialists -- we reject such "socialism" as deeply authoritarian. However, all anarchists **are** members of the socialist movement and we reject attempts by Marxists to monopolise the term. Be that as it may, sometimes in this section we may find it useful to use the term socialist/communist to describe "state socialist" and anarchist to describe "libertarian socialist/communist." This in no way implies that anarchists are not socialists. It is purely a tool to make our arguments easier to read.

In the sections that follow we will discuss Marxism and the practice of Marxists in power. This will indicate why anarchists reject it in favour of a **libertarian** form of socialism.

H.1 Have anarchists always opposed state socialism?

Yes. Anarchists have always argued that real socialism cannot be created using a state. The basic core of the argument is simple. Socialism implies equality, yet the state signifies inequality -- inequality in terms of power. As we argued in [section B.2](#), anarchists consider one of the defining aspects of the state is its hierarchical nature. In other words, the delegation of **power** into the hands of a few. As such, it violates the core idea of socialism, namely social equality. Those who make up the governing bodies in a state have more power than those who have elected them.

Hence these comments by Malatesta and Hamon:

"It could be argued with much more reason that we are the most logical and most complete socialists, since we demand for every person not just his [or her] entire measure of the wealth of society but also his [or her] portion of social power." [**No Gods, No Masters**, vol. 2, p. 20]

It is with this perspective that anarchists have combated the idea of state socialism and Marxism (although we should stress that libertarian forms of Marxism, such as council communism, have strong similarities to anarchism). This opposition to authoritarian socialism is a core aspect of anarchism, an opposition which has been consistent and strong. While it is sometimes argued by some on the right that libertarian socialists and anarchists only started voicing their opposition to Marxism and Leninism after the Soviet Union collapsed, the truth is totally different. Anarchists, we must stress, have been opposed to all forms of state socialism from the start (in the case of the Russian Revolution, the anarchists were amongst the first on the left to be suppressed by the Bolsheviks). Indeed, the history of Marxism is, in part, a history of its struggles against anarchists just as the history of anarchism is also, in part, a history of its struggle against the various forms of Marxism and its offshoots. To state, or imply, that anarchists have only lately opposed Marxism is false -- we have been arguing against Marxism since the start.

While both Stirner and Proudhon wrote many pages against the evils and contradictions of state socialism, anarchists have only really been fighting the Marxist form of state socialism since Bakunin. This is because, until the First International, Marx and Engels were relatively unknown socialist thinkers. Proudhon was aware of Marx (they had met in France in the 1840s and had corresponded) but Marxism was unknown in France during his life time and so Proudhon did not directly argue against Marxism (he did, however, critique Louis Blanc and other French state socialists). Similarly, when Stirner wrote **The Ego and Its Own** Marxism did not exist bar a few works by Marx and Engels. Indeed, it could be argued that Marxism finally took shape after Marx had read Stirner's classic and produced his notoriously inaccurate diatribe **The German Ideology** against him. However, like Proudhon, Stirner attacked **other** state socialists and communists.

Before discussing Bakunin's opposition and critique of Marxism in the [next section](#), we should consider the thoughts of Stirner and Proudhon on state socialism. These critiques contain many important ideas and so are worth summarising. However, it is worth noting that when both Stirner and Proudhon were writing communist ideas were all authoritarian in nature. Libertarian communism only developed after Bakunin's death in 1876. This means that when Proudhon and Stirner were critiquing "communism" they were attacking a specific form of communism, the form which subordinated the individual to the community. Anarchist communists like Kropotkin and Malatesta also opposed such kinds of "communism" (as Kropotkin put it, *"before and in 1848" communism "was put forward in such a shape as to fully account for Proudhon's distrust as to its effect upon liberty. The old idea of Communism was the idea of monastic communities . . . The last vestiges of liberty and of individual energy would be destroyed, if humanity ever had to go through such a communism."* [**Act for Yourselves**, p. 98]). Of course, it may be likely that Stirner and Proudhon would have rejected libertarian communism as well, but bear in mind that not all forms of "communism" are identical.

For Stirner, the key issue was that communism (or socialism), like liberalism, looked to the "human" rather than the unique. *"To be looked upon as a mere part, part of society,"* asserted Stirner, *"the individual cannot bear -- because he is more; his uniqueness puts from it this limited conception."* [**The Ego and Its Own**, p. 265] As such, his protest against communism was similar to his protest against liberalism (indeed, he drew attention to their similarity by calling socialism and communism "social liberalism").

Stirner was aware that capitalism was not the great defender of freedom it was claimed to be by its supporters. *"Restless acquisition,"* he argued, *"does not let us take breath, take a claim enjoyment: we do not get the comfort of our possessions."* Communism, by the "organisation of labour," can "bear its fruit" so that *"we come to an agreement about human labours, that they may not, as under competition, claim all our time and toil."* However, communism "is silent" over *"for whom is time to be gained."* He, in contrast, stresses that it is for the individual, *"[t]o take comfort in himself as the unique."* [**Op. Cit.**, pp. 268-9] Thus state socialism does not recognise that the purpose of association is to free the individual and instead subjects the individual to a new tyranny:

"it is not another State (such as a 'people's State') that men aim at, but their union, uniting, this ever-fluid uniting of everything standing -- A State exists even without my co-operation . . . the independent establishment of the State founds my lack of independence; its condition as a 'natural growth,' its organism, demands that my nature do not grow freely, but be cut to fit it." [**Op. Cit.**, p. 224]

Similarly, Stirner argued that *"Communism, by the abolition of all personal property, only presses me back still more into dependence on another, to wit, on the generality or collectivity . . . [which is] a condition hindering my free movement, a sovereign power over me. Communism rightly revolts against the pressure that I experience from individual proprietors; but still more horrible is the might that it puts in the hands of the collectivity."* [**The Ego and Its Own**, p. 257]

History has definitely confirmed this. By nationalising property, the various state socialist regimes turned the worker from a servant of the capitalist into a serf of the state. In contrast, communist-anarchists argue for free association and workers' self-management as the means of ensuring that socialised property does not turn into the denial of freedom rather than as a means of ensuring it. As such, Stirner's attack on what Marx termed "*vulgar communism*" is still important and finds echoes in communist-anarchist writings as well as the best works of Marx and his more libertarian followers.

To show the difference between the "communism" Stirner attacked and anarchist-communism, we can show that Kropotkin was not "silent" on why organising production is essential. Like Stirner, he thought that under libertarian communism the individual would "*discharge his [or her] task in the field, the factory, and so on, which he owes to society as his contribution to the general production. And he will employ the second half of his day, his week, or his year, to satisfy his artistic or scientific needs, or his hobbies.*" [**Conquest of Bread**, p. 111] In other words, he considered the whole point of organising labour as the means of providing the individual the time and resources required to express their individuality. As such, anarcho-communism incorporates Stirner's legitimate concerns and arguments.

Similar arguments to Stirner's can be found in Proudhon's works against the various schemes of state socialism that existing in France in the middle of the nineteenth century. He particularly attacked the ideas of Louis Blanc. Blanc, whose most famous book was **Organisation du Travail (Organisation of Work**, published in 1840) argued that social ills could be solved by means of government initiated and financed reforms. More specifically, he argued that it was "*necessary to use the whole power of the state*" to ensure the creation and success of workers' associations (or "*social workshops*"). Since that "*which the proletarians lack to free themselves are the tools of labour,*" the government "*must furnish them*" with these. "*The state,*" in short, "*should place itself resolutely at the head of industry.*" Capitalists would be encouraged to invest money in these workshops, for which they would be guaranteed interest. Such state-initiated workshops would soon force privately owned industry to change itself into social workshops, so eliminating competition. [quoted by K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 139]

Proudhon objected to this scheme on many levels. Firstly, he argued that Blanc's scheme appealed "*to the state for its silent partnership; that is, he gets down on his knees before the capitalists and recognises the sovereignty of monopoly.*" Given that Proudhon saw the state as an instrument of the capitalist class, asking that state to abolish capitalism was illogical and impossible. Moreover, by getting the funds for the "social workshop" from capitalists, Blanc's scheme was hardly undermining their power. "*Capital and power,*" Proudhon argued, "*secondary organs of society, are always the gods whom socialism adores; if capital and power did not exist, it would invent them.*" [quoted by Vincent, **Op. Cit.**, p. 157] He stressed the authoritarian nature of Blanc's scheme:

"M. Blanc is never tired of appealing to authority, and socialism loudly declares itself anarchistic; M. Blanc places power above society, and socialism tends to subordinate it to society; M. Blanc makes social life descend from above, and socialism maintains that it springs up and grows from below; M. Blanc runs after politics, and socialism is in quest of science. No more hypocrisy, let me say to M. Blanc: you desire neither Catholicism nor

monarchy nor nobility, but you must have a God, a religion, a dictatorship, a censorship, a hierarchy, distinctions, and ranks. For my part, I deny your God, your authority, your sovereignty, your judicial State, and all your representative mystifications." [**System of Economical Contradictions**]

Equally, Proudhon opposed the "top-down" nature of Blanc's ideas. Instead of reform from above, Proudhon stressed the need for working class people to organise themselves for their own liberation. As he put it, the "*problem before the labouring classes . . . [is] not in capturing, but in subduing both power and monopoly, -- that is, in generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the state and subjugate them.*" For, "*to combat and reduce power, to put it in its proper place in society, it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave.*" [**System of Economical Contradictions**, p. 398 and p. 397] Proudhon stressed in 1848 that "*the proletariat must emancipate itself without the help of the government.*" [quoted by George Woodcock, **Pierre-Joseph Proudhon: A Biography**, p. 125] This was because the state "*finds itself inevitably enchained to capital and directed against the proletariat.*" [Proudhon, **System of Economical Contradictions**, p. 399] In addition, by guaranteeing interest payments, Blanc's scheme insured the continued exploitation of labour by capital.

Proudhon, in contrast, argued for a two-way approach to undermining capitalism from below: the creation of workers associations and the organisation of credit. By creating mutual banks, which provided credit at cost, workers could create associations to compete with capitalist firms, drive them out of business and so eliminate exploitation once and for all by workers' self-management. In this way, the working class would emancipate itself from capitalism and build a socialist society from below upwards by their own efforts and activities. Proudhon, as Marxist Paul Thomas notes, "*believed fervently . . . in the salvation of working men, by their own efforts, through economic and social action alone . . . Proudhon advocated, and to a considerable extent inspired, the undercutting of this terrain [of the state] from without by means of autonomous working-class associations.*" [**Karl Marx and the Anarchists**, pp. 177-8]

Rejecting violent revolution (and, indeed, strikes as counter productive) he argued for economic means to end economic exploitation and, as such, he saw anarchism come about by reform via competition by workers' associations displacing capitalist industry (unlike later anarchists, who were revolutionaries that argued that capitalism cannot be reformed away and so supported strikes and other forms of collective working class direct action, struggle and combative organisation). Given that the bulk of the French working class was artisans and peasants, such an approach reflected the social context in which it was proposed.

It was this social context, this predominance of peasants and artisans in French society which informed Proudhon's ideas. He never failed to stress that association would be tyranny if imposed upon peasants and artisans (rather, he thought that associations would be freely embraced by these workers if they thought it was in their interests to). He also stressed that state ownership of the means of production was

a danger to the liberty of the industrial worker and, moreover, the continuation of capitalism with the state as the new boss. As he put it in 1848, he *"did not want to see the State confiscate the mines, canals and railways; that would add to monarchy, and more wage slavery. We want the mines, canals, railways handed over to democratically organised workers' associations . . . these associations [will] be models for agriculture, industry and trade, the pioneering core of that vast federation of companies and societies woven into the common cloth of the democratic social Republic."* [**No Gods, No Masters**, vol. 1, p. 62] Workers' associations would be applied for those industries which objectively needed it (i.e. capitalist industry) and for those other toilers who desired it.

Marx, of course, had replied to Proudhon's work **System of Economic Contradictions** with his **Poverty of Philosophy**. Marx's work aroused little interest when published, although Proudhon did carefully read and annotate his copy of Marx's work, claiming it to be *"a libel"* and a *"tissue of abuse, calumny, falsification and plagiarism"* (he even called Marx *"the tapeworm of Socialism."*) [quoted by George Woodcock, **Proudhon**, p. 102] Sadly, Proudhon did not reply to Marx's work due to an acute family crisis and then the start of the 1848 revolution in France. However, given his views of Louis Blanc and other socialists who saw socialism being introduced after the seizing of state power, he would hardly have been supportive of Marx's ideas.

So while none of Proudhon's and Stirner's arguments are directly aimed at Marxism, their ideas are applicable to much of mainstream Marxism as this inherited many of the ideas of the state socialism they attacked. Thus they both made forceful critiques of the socialist and communist ideas that existed during their lives. Much of their analysis was incorporated in the collectivist and communist ideas of the anarchists that followed them (some directly, as from Proudhon, some by co-incidence as Stirner's work was quickly forgotten and only had an impact on the anarchist movement when George Henry MacKay rediscovered it in the 1890s). This can be seen from the fact that Proudhon's ideas on the management of production by workers' associations, opposition to nationalisation as state-capitalism and the need for action from below, by working people themselves, all found their place in communist-anarchism and anarcho-syndicalism and in their critique of mainstream Marxism (such as social democracy) and Leninism.

Echoes of these critiques can be found Bakunin's comments of 1868:

"I hate Communism because it is the negation of liberty and because for me humanity is unthinkable without liberty. I am not a Communist, because Communism concentrates and swallows up in itself for the benefit of the State all the forces of society, because it inevitably leads to the concentration of property in the hands of the State . . . I want to see society and collective or social property organised from below upwards, by way of free associations, not from above downwards, by means of any kind of authority whatsoever . . . That is the sense in which I am a Collectivist and not a Communist." [quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, pp. 67-8]

It is with Bakunin that Marxism and Anarchism came into direct conflict. It was Bakunin who lead the

struggle against Marx in the **International Workingmen's Association** between 1868 and 1872. It was in these exchanges that the two schools of socialism (the libertarian and the authoritarian) clarified themselves. With Bakunin, the anarchist critique of Marxism (and state socialism in general) starts to reach its finalised form. Needless to say, this critique continued to develop after Bakunin's death (particularly after the experiences of actual Marxist movements and revolutions). However, much of this involved expanding upon many of Bakunin's original predictions and analyses.

We will discuss Bakunin's critique in the [next section](#).

H.1.1 What was Bakunin's critique of Marxism?

Bakunin and Marx famously clashed in the first **International Working Men's Association** between 1868 and 1872. This conflict helped clarify the anarchist opposition to the ideas of Marxism and can be considered as the first major theoretical analysis and critique of Marxism by anarchists. Later critiques followed, of course, particularly after the degeneration of Social Democracy into reformism and the failure of the Russian Revolution (both of which allowed the theoretical critiques to be enriched by empirical evidence) but the Bakunin/Marx conflict laid the ground for what came after. As such, an overview of Bakunin's critique is essential.

First, however, we must stress that Marx and Bakunin had many similar ideas. They both stressed the need for working people to organise themselves to overthrow capitalism. They both argued for a socialist revolution from below. They argued for collective ownership of the means of production. They both constantly stressed that the emancipation of the workers must be the task of the workers themselves. They differed, of course, in exactly how these common points should be implemented in practice. Both, moreover, had a tendency to misrepresent the opinions of the other on certain issues (particularly as the struggle reached its climax). Anarchists, unsurprisingly, argue Bakunin has been proved right by history, so confirming the key aspects of his critique of Marx.

So what was Bakunin's critique of Marxism? There are five main areas. Firstly, there is the question of current activity (i.e. whether the workers' movement should participate in "politics" and the nature of revolutionary working class organisation). Secondly, there is the issue of the form of the revolution (i.e. whether it should be a political **then** an economic one, or whether it should be both at the same time). Thirdly, there is the issue of the "dictatorship of the proletariat." Fourthly, there is the question of whether political power **can** be seized by the working class as a whole or whether it can only be exercised by a small minority. Fifthly, there was the issue of whether the revolution be centralised or decentralised in nature. We shall discuss each in turn.

On the issue of current struggle, the differences between Marx and Bakunin were clear. For Marx, the proletariat had to take part in bourgeois elections as an organised political party. As the resolution of the (gerrymandered) Hague Congress of First International put it, "*[i]n its struggle against the collective power of the possessing classes the proletariat can act as a class only by constituting itself a distinct political party, opposed to all the old parties formed by the possessing classes . . . the conquest of*

political power becomes the great duty of the proletariat." [Marx, Engels, Lenin, **Anarchism and Anarcho-Syndicalism**, p. 85]

This political party must stand for elections and win votes. As Marx argued in the preamble of the French Workers' Party, the workers must turn the franchise "*from a means of deception . . . into an instrument of emancipation.*" This can be considered as part of the process outlined in the **Communist Manifesto**, where it was argued that the "*immediate aim of the Communists is the same as that of all the other proletarian parties,*" namely the "*conquest of political power by the proletariat,*" the "*first step in the revolution by the working class*" being "*to raise the proletariat to the position of ruling class, to win the battle of democracy.*" Engels latter stressed (in 1895) that the "**Communist Manifesto** had already proclaimed the winning of universal suffrage, of democracy, as one of the first and most important tasks of the militant proletariat" and that German Social Democracy had showed workers of all countries "*how to make use of universal suffrage.*" [**Marx and Engels Reader**, p. 566, p. 484, p. 490 and p. 565]

With this analysis in mind, Marxist influenced political parties have consistently argued for and taken part in election campaigns, seeking office as a means of spreading socialist ideas and as a means of pursuing the socialist revolution. The Social Democratic parties which were the first Marxist parties (and which developed under Marx and Engels watchful eyes) saw revolution in terms of winning a majority within Parliamentary elections and using this political power to abolish capitalism (once this was done, the state would "wither away" as classes would no longer exist). In effect, these parties aimed to reproduce Marx's account of the forming of the Paris Commune on the level of the national Parliament. Marx in his justly famous work **The Civil War in France** reported how the Commune "*was formed of the municipal councillors*" who had been "*chosen by universal suffrage in the various wards of the town*" in the municipal elections held on March 26th, 1871. This new Commune then issued a series of decrees which reformed the existing state (for example, by suppressing the standing army and replacing it with the armed people, and so on). This Marx summarised by stating that "*the working class cannot simply lay hold of the ready-made state machinery, and wield it for its own purposes.*" [Marx and Engels, **Selected Works**, p. 287 and p. 285]

As Engels put it in a latter letter, it was "*simply a question of showing that the victorious proletariat must first refashion the old bureaucratic, administratively centralised state power before it can use it for its own purposes.*" [quoted by David P. Perrin, **The Socialist Party of Great Britain**, p. 64] He repeated this elsewhere, arguing that "*after the victory of the Proletariat, the only organisation the victorious working class finds **ready-made** for use is that of the State. It may require adaptation to the new functions. But to destroy that at such a moment would mean to destroy the only organism by means of which the victorious working class can exert its newly conquered power, keep down its capitalist enemies and carry out . . . economic revolution.*" [our emphasis, Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 173]

Bakunin, in contrast, argued that while the communists "*imagine they can attain their goal by the development and organisation of the political power of the working classes . . . aided by bourgeois radicalism*" anarchists "*believe they can succeed only through the development and organisation of the non-political or anti-political power of the working classes.*" The Communists "*believe it necessary to*

*organise the workers' forces in order to seize the political power of the State," while anarchists "organise for the purpose of destroying it." Bakunin saw this in terms of creating new organs of working class power in opposition to the state, organised "from the bottom up, by the free association or federation of workers, starting with the associations, then going on to the communes, the region, the nations, and, finally, culminating in a great international and universal federation." [Bakunin on Anarchism, pp. 262-3 and p. 270] In other words, a system of workers' councils. As such, he constantly argued for workers, peasants and artisans to organise into unions and join the **International Workingmen's Association**, so becoming "a real force . . . which knows what to do and is therefore capable of guiding the revolution in the direction marked out by the aspirations of the people: a serious international organisation of workers' associations of all lands capable of replacing this departing world of states." [Op. Cit., p. 174]*

To Marx's argument that workers should organise politically, and send their representations to Parliament, Bakunin argued that when *"the workers . . . send common workers . . . to Legislative Assemblies . . . The worker-deputies, transplanted into a bourgeois environment, into an atmosphere of purely bourgeois ideas, will in fact cease to be workers and, becoming Statesmen, they will become bourgeois . . . For men do not make their situations; on the contrary, men are made by them."* [The **Basic Bakunin**, p. 108]

As far as history goes, the experience of Social Democracy confirmed Bakunin's analysis. A few years after Engels' death in 1895, German Social Democracy was racked by the "revisionism" debate. This debate did not spring from the minds of a few leaders, isolated from the movement, but rather expressed developments **within** the movement itself. In effect, the revisionists wanted to adjust the party rhetoric to what the party was actually doing and so the battle against the revisionists basically represented a battle between what the party said it was doing and its actual practice. As one of the most distinguished historians of this period put it, the *"distinction between the contenders remained largely a subjective one, a difference of ideas in the evaluation of reality rather than a difference in the realm of action."* [C. Schorske, **German Social Democracy**, p. 38] Even Rosa Luxemburg (one of the fiercest critics of revisionism) acknowledged in **Reform or Revolution** that it was *"the final goal of socialism [that] constitutes the only decisive factor distinguishing the social democratic movement from bourgeois democracy and bourgeois radicalism."* [Rosa Luxemburg Speaks, p. 36] As such, the Marxist critics of "revisionism" failed to place the growth in revisionist ideas in the tactics being used, instead seeing it in terms of a problem in ideas. By the start of the First World War, the Social Democrats had become so corrupted by its activities in bourgeois institutions it supported its state (and ruling class) and voted for war credits rather than denounce the war as Imperialist slaughter for profits (see also [section J.2.6](#) for more discussion on the effect of electioneering on radical parties). Clearly, Bakunin was proved right.

However, we must stress that because Bakunin rejected participating in bourgeois politics, it did not mean that he rejected "politics" or "political struggle" in general (also see [section J.2.10](#)). As he put it, *"it is absolutely impossible to ignore political and philosophical questions" and "the proletariat itself will pose them"* in the International. He argued that political struggle will come from the class struggle, as *"[w]ho can deny that out of this ever-growing organisation of the militant solidarity of the proletariat*

against bourgeois exploitation there will issue forth the political struggle of the proletariat against the bourgeoisie?" Anarchists simply thought that the "*policy of the proletariat*" should be "*the destruction of the State*" rather than working within it. [Bakunin on Anarchism, p. 301, p. 302 and p. 276] As such, the people "*must organise their powers apart from and against the State.*" [The Political Philosophy of Bakunin, p. 376]

As should be obvious by now, the difference between Marx and Bakunin on the nature of working class organisation in the struggle reflected these differences on political struggle. Bakunin clearly advocated what would later be termed a syndicalist strategy based on direct action (in particular strikes) and workers' unions which would "*bear in themselves the living seeds of the new society which is to replace the old world. They are creating not only the ideas, but also the facts of the future itself.*" [Bakunin on Anarchism, p. 255] This union movement would be complemented by a specific anarchist organisation which would work within it to influence it towards anarchist aims by the "*natural influence*" of its members (see [section J.3.7](#) for a fuller discussion of this). Marx argued for political parties, utilising elections, which, as the history of Social Democracy indicates, did not have quite the outcome Marx would have liked. [Section J.2](#) discusses direct action, electioneering and whether anarchist abstentionism implies disinterest in politics in more detail.

Which brings us to the second issue, namely the nature of the revolution itself. For Bakunin, a revolution meant a **social** revolution from below. This involved both the abolition of the state **and** the expropriation of capital. In his words, "*the revolution must set out from the first [to] radically and totally to destroy the State.*" The "*natural and necessary consequences*" of which will be the "*confiscation of all productive capital and means of production on behalf of workers' associations, who are to put them to collective use . . . the federative Alliance of all working men's associations . . . will constitute the Commune.*" There "*can no longer be any successful political . . . revolution unless the political revolution is transformed into social revolution.*" [Michael Bakunin: Selected Writings, p. 170 and p. 171]

Which, incidentally, disproves Engels' claims that Bakunin considered "*the state as the main evil to be abolished.*" [Marx and Engels Reader, p. 728] Clearly, Engels' assertions misrepresent Bakunin's position, as Bakunin always stressed that economic and political transformation should occur at the same time during the revolutionary process. Given that Bakunin thought the state was the protector of capitalism, no economic change could be achieved until such time as it was abolished. This also meant that Bakunin considered a political revolution before an economic one to mean the continued slavery of the workers. As he argued, "*[t]o win political freedom first can signify no other thing but to win this freedom only, leaving for the first days at least economic and social relations in the same old state, -- that is, leaving the proprietors and capitalists with their insolent wealth, and the workers with their poverty.*" [The Political Philosophy of Bakunin, p. 294] With capitalists' economic power intact, could the workers' **political** power remain strong? As such, "*every political revolution taking place prior to and consequently without a social revolution must necessarily be a bourgeois revolution, and a bourgeois revolution can only be instrumental in bringing about bourgeois Socialism -- that is, it is bound to end in a new, more hypocritical and more skilful, but no less oppressive, exploitation of the*

proletariat by the bourgeois." [Op. Cit., p. 289]

Did Marx and Engels hold this position? Apparently so. Discussing the Paris Commune, Marx noted that it was *"the political form at last discovered under which to work out the economic emancipation of labour,"* and as the *"political rule of the producer cannot coexist with the perpetuation of his social slavery"* the Commune was to *"serve as a lever for uprooting the economic foundations upon which rests the existence of classes."* [Marx and Engels, **Selected Writings**, p. 290] Engels argued that the *"proletariat seizes the public power, and by means of this transforms the . . . means of production . . . into public property."* [The **Marx-Engels Reader**, p. 717] In the **Communist Manifesto** they argued that *"the first step in the revolution by the working class" is the "rais[ing] the proletariat to the position of ruling class, to win the battle of democracy."* The proletariat *"will use its political supremacy to wrest, by degrees, all capital from the bourgeois, to centralise all instruments of production in the hands of the State, i.e. of the proletariat organised as the ruling class."* [**Manifesto of the Communist Party**, p. 52]

Similarly, when Marx discussed what the "dictatorship of the proletariat" meant, he argued (in reply to Bakunin's question of *"over whom will the proletariat rule"*) that it simply meant *"that so long as other classes continue to exist, the capitalist class in particular, the proletariat fights it (for with the coming of the proletariat to power, its enemies will not yet have disappeared), it must use measures of force, hence governmental measures; if it itself still remains a class and the economic conditions on which the class struggle and the existence of classes have not yet disappeared, they must be forcibly removed or transformed, and the process of their transformation must be forcibly accelerated."* [The **Marx-Engels Reader**, pp. 542-3] Note, "capitalists," not "former capitalists," so implying that the members of the proletariat are, in fact, still proletariats after the "socialist" revolution and so still subject to wage slavery by capitalists.

Clearly, then, Marx and Engels considered the seizing of state power as the key event and, later, the expropriation of the expropriators would occur. Thus the economic power of the capitalists would remain, with the proletariat utilising political power to combat and reduce it. Anarchists argue that if the proletariat did not hold economic power, its political power would at best be insecure and would in fact degenerate. Would the capitalists just sit and wait while their economic power was gradually eliminated by political action? And what of the proletariat during this period? Will they patiently obey their bosses, continue to be oppressed and exploited by them until such time as the end of their "social slavery" has been worked out (and by whom)? As the experience of the Russian Revolution showed, Marx and Engels position proved to be untenable.

As we discuss in more detail in the appendix on ["What happened during the Russian Revolution?"](#), the Russian workers initially followed Bakunin's path. After the February revolution, they organised factory committees and raised the idea and practice of workers self-management of production. The Russian anarchists supported this movement whole-heartedly, arguing that it should be pushed as far as it would go. In contrast, Lenin argued for *"workers' control over the capitalists."* [Will the **Bolsheviks Maintain Power?**, p. 52] This was, unsurprisingly, the policy applied immediately after the Bolshevik seizure of power. However, as one Leninist writer admits, *"[t]wo overwhelmingly powerful forces obliged the*

Bolsheviks to abandon this 'reformist' course." One was the start of the civil war, the other "was the fact that the capitalists used their remaining power to make the system unworkable. At the end of 1917 the All Russian Congress of employers declared that those 'factories in which the control is exercised by means of active interference in the administration will be closed.' The workers' natural response to the wave of lockouts which followed was to demand that their [sic!] state nationalise the factories." [John Rees, "In Defence of October", pp. 3-82, **International Socialism**, no. 52, p. 42] By July 1918, only one-fifth of nationalised firms had been nationalised by the central government (which, incidentally, shows the unresponsiveness of centralised power). Clearly, the idea that a social revolution can come after a political was shown to be a failure -- the capitalist class used its powers to disrupt the economic life of Russia.

Faced with the predictable opposition by capitalists to their system of "control" the Bolsheviks nationalised the means of production. Sadly, **within** the nationalised workplace the situation of the worker remained essentially unchanged. Lenin had been arguing for one-man management (appointed from above and armed with "dictatorial" powers) since late April 1918. This aimed at replacing the capitalist managers with state managers, **not** workers self-management:

*"On three occasions in the first months of Soviet power, the [factory] committees leaders sought to bring their model [of workers' self-management of the economy] into being. At each point the party leadership overruled them. The Bolshevik alternative was to vest both managerial **and** control powers in organs of the state which were subordinate to the central authorities, and formed by them."* [Thomas F. Remington, **Building Socialism in Bolshevik Russia**, p. 38]

Bakunin's fear of what would happen if a political revolution preceded a social one came true. The working class continued to be exploited and oppressed as before, first by the bourgeoisie and then by the new bourgeoisie of state appointed managers armed with all the powers of the old ones (plus a few more). Russia confirmed Bakunin's analysis that a revolution must immediately combine political and economic goals in order for it to be successful.

Which brings us to the "dictatorship of the proletariat." While many Marxists basically use this term to describe the defence of the revolution and so argue that anarchists do not see the need to defend a revolution, this is incorrect. Anarchists from Bakunin onwards have argued that a revolution would have to defend itself from counter revolution and yet we reject the term totally (see sections [H.2.1](#), [I.5.14](#) and [J.7.6](#) for a refutation of claims that anarchists think a revolution does not need defending). So why did Bakunin reject the concept? To understand why, we must provide some historical context -- namely the fact that at the time he was writing the proletariat was a minority of the working masses.

Simply put, anarchists in the nineteenth century rejected the idea of the "dictatorship of the proletariat" simply because the proletariat was a **minority** of working people at the time. As such, to argue for a dictatorship of the proletariat meant to argue for the dictatorship of a **minority** class, a class which excluded the majority of toiling people. When Marx and Engels wrote the **Communist Manifesto**, for

example, over 80% of the population of France and Germany were peasants or artisans -- what Marx termed the "petit-bourgeois" and his followers termed the "petty-bourgeois." This fact meant that the comment in the **Communist Manifesto** that the "*proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority*" was simply not true. Rather, for Marx's life-time (and for many decades afterwards) the proletarian movement was like "[a]ll previous movements," namely "*movements of minorities, or in the interests of minorities.*" [**The Marx-Engels Reader**, p. 482]

Not that Marx and Engels were unaware of this. In the Manifesto they note that "*[i]n countries like France*" the peasants "*constitute far more than half of the population.*" In his famous 1875 work "Critique of the Gotha Program," Marx noted that "*the majority of the 'toiling people' in Germany consists of peasants, and not of proletarians.*" He stressed elsewhere around the same time that "*the peasant . . . forms a more or less considerable majority . . . in the countries of the West European continent.*" [**Op. Cit.**, p. 493, p. 536 and p. 543]

Clearly, then, Marx and Engels vision of proletarian revolution was one which involved a minority dictating to the majority. As such, Bakunin rejected the concept. He was simply pointing out the fact that a "dictatorship of the proletariat," at the time, actually meant a dictatorship by a **minority** of working people and so a "revolution" which excluded the majority of working people (i.e. artisans and peasants). As he argued in 1873:

"If the proletariat is to be the ruling class . . . then whom will it rule? There must be yet another proletariat which will be subject to this new rule, this new state. It may be the peasant rabble . . . which, finding itself on a lower cultural level, will probably be governed by the urban and factory proletariat." [**Statism and Anarchy**, pp. 177-8]

Bakunin continually stressed that the peasants "*will join cause with the city workers as soon as they become convinced that the latter do not pretend to impose their will or some political or social order invented by the cities for the greater happiness of the villages; they will join cause as soon as they are assured that the industrial workers will not take their lands away.*" As such, as noted above, while the Marxists aimed for the "*development and organisation of the political power of the working classes, and chiefly of the city proletariat,*" anarchists aimed for "*the social (and therefore anti-political) organisation and power of the working masses of the cities and villages.*" [**The Political Philosophy of Bakunin**, p. 401 and p. 300]

For Bakunin, to advocate the "dictatorship of the proletariat" in an environment where the vast majority of working people were peasants would be a disaster. It is only when we understand this social context that we can understand Bakunin's opposition to Marx's "dictatorship of the proletariat" -- it would be a dictatorship of a minority class over the rest of the working population (he took it as a truism that the capitalist and landlord classes should be expropriated and stopped from destroying the revolution!). For Bakunin, when the industrial working class was a minority, it was essential to "*[o]rganise the city proletariat in the name of revolutionary Socialism, and in doing this, unite it into one preparatory*

organisation together with the peasantry. An uprising by the proletariat alone would not be enough; with that we would have only a political revolution which would necessarily produce a natural and legitimate reaction on the part of the peasants, and that reaction, or merely the indifference of the peasants, would strangle the revolution of the cities." [Op. Cit., p. 378]

This explains why the anarchists at the St. Imier Congress argued that *"every political state can be nothing but organised domination for the benefit of one class, to the detriment of the masses, and that should the proletariat itself seize power, it would in turn become a new dominating and exploiting class."* As the proletariat was a minority class at the time, their concerns can be understood. For anarchists then, and now, a social revolution has to be truly popular and involve the majority of the population in order to succeed. Unsurprisingly, the congress stressed the role of the proletariat in the struggle for socialism, arguing that *"the proletariat of all lands . . . must create the solidarity of revolutionary action . . . independently of and in opposition to all forms of bourgeois politics."* Moreover, the aim of the workers' movement was *"free organisations and federations . . . created by the spontaneous action of the proletariat itself, [that is, by] the trade bodies and the autonomous communes."* [as cited in **Bakunin on Anarchism**, p. 438, p. 439 and p. 438]

Hence Bakunin's comment that *"the designation of the proletariat, the world of the workers, as **class** rather than as **mass**"* was *"deeply antipathetic to us revolutionary anarchists who unconditionally advocate full popular emancipation."* To do so, he argued, meant *"[n]othing more or less than a new aristocracy, that of the urban and industrial workers, to the exclusion of the millions who make up the rural proletariat and who . . . will in effect become subjects of this great so-called popular State."* [**Michael Bakunin: Selected Writings**, pp. 253-4]

Again, the experiences of the Russian Revolution tend to confirm Bakunin's worries. The Bolsheviks implemented the dictatorship of the city over the countryside, with disastrous results (see the appendix on ["What happened during the Russian Revolution?"](#) for more details).

One last point on this subject. While anarchists reject the "dictatorship of the proletariat" we clearly do not reject the key role the proletariat must play in any social revolution (see [section H.2.2](#) on why the Marxist assertion anarchists reject class struggle is false). We only reject the idea that the proletariat must dictate over other working people like peasants and artisans. We do not reject the need for working class people to defend a revolution, nor the need for them to expropriate the capitalist class nor for them to manage their own activities and so society.

Then there is the issue of whether, even if the proletariat **does** seize political power, whether the whole proletariat can actually exercise it. Bakunin raising the obvious questions:

"For, even from the standpoint of that urban proletariat who are supposed to reap the sole reward of the seizure of political power, surely it is obvious that this power will never be anything but a sham? It is bound to be impossible for a few thousand, let alone tens or hundreds of thousands of men to wield that power effectively. It will have to be exercised

by proxy, which means entrusting it to a group of men elected to represent and govern them, which in turn will unfailingly return them to all the deceit and subservience of representative or bourgeois rule. After a brief flash of liberty or orgiastic revolution, the citizens of the new State will wake up slaves, puppets and victims of a new group of ambitious men." [Op. Cit., pp. 254-5]

He repeated this argument in **Statism and Anarchy**, where he asked "[w]hat does it mean, 'the proletariat raised to a governing class?' Will the entire proletariat head the government? The Germans number about 40 million. Will all 40 millions be members of the government? The entire nation will rule, but no one will be ruled. Then there will be no government, no state; but if there is a state, there will also be those who are ruled, there will be slaves." Bakunin argued that Marxism resolves this dilemma "in a simple fashion. By popular government they mean government of the people by a small number of representatives elected by the people. So-called popular representatives and rulers of the state elected by the entire nation on the basis of universal suffrage -- the last word of the Marxists, as well as the democratic school -- is a lie behind which lies the despotism of a ruling minority is concealed, a lie all the more dangerous in that it represents itself as the expression of a sham popular will." [Statism and Anarchy, p. 178]

So where does Marx stand on this question. Clearly, the self-proclaimed followers of Marx support the idea of "socialist" governments (indeed, many, including Lenin and Trotsky, went so far as to argue that party dictatorship was essential for the success of a revolution -- see [next section](#)). Marx, however, is less clear. He argued, in reply to Bakunin's question if all Germans would be members of the government, that "[c]ertainly, because the thing starts with the self-government of the township." However, he also commented that "[c]an it really be that in a trade union, for example, the entire union forms its executive committee," suggesting that there **will** be a division of labour between those who govern and those who obey in the Marxist system of socialism. [The Marx-Engels Reader, p. 545 and p. 544] Elsewhere he talks about "a socialist government . . . com[ing] into power in a country." ["Letter to F. Domela-Nieuwenhuis," Eugene Schulkind (ed.), **The Paris Commune of 1871: The View from the Left**, p. 244]

As such, Bakunin's critique holds, as Marx and Engels clearly saw the "dictatorship of the proletariat" involving a socialist government having power. For Bakunin, like all anarchists, if a political party is the government, then clearly they are in power, not the mass of working people they claim to represent. Anarchists have, from the beginning, argued that Marx made a grave mistake confusing workers' power with the state. This is because the state is the means by which the management of people's affairs is taken from them and placed into the hands of a few. It signifies delegated **power**. As such, the so-called "workers' state" or "dictatorship of the proletariat" is a contradiction in terms. Instead of signifying the power of the working class to manage society it, in fact, signifies the opposite, namely the handing over of that power to a few party leaders at the top of a centralised structure. This is because "all State rule, all governments being by their very nature placed outside the people, must necessarily seek to subject it to customs and purposes entirely foreign to it. We therefore declare ourselves to be foes . . . of all State organisations as such, and believe that the people can be happy and free, when, organised from below upwards by means of its own autonomous and completely free associations, without the supervision of

any guardians, it will create its own life." [Marxism, Freedom and the State, p. 63] Hence Bakunin's constant arguments for decentralised, federal system of workers councils organised from the bottom-up. Again, the transformation of the Bolshevik government into a dictatorship **over** the proletariat during the early stages of the Russian Revolution supports Bakunin's critique of Marxism.

Which brings us to the last issue, namely whether the revolution will be decentralised or centralised. For Marx, the issue is somewhat confused by his support for the Paris Commune and its federalist programme (written, we must note, by a follower of Proudhon). However, in 1850, Marx stood for extreme centralisation of power. As he put it, the workers *"must not only strive for a single and indivisible German republic, but also within this republic for the most determined centralisation of power in the hands of the state authority."* He argued that in a nation like Germany *"where there is so many relics of the Middle Ages to be abolished"* it *"must under no circumstances be permitted that every village, every town and every province should put a new obstacle in the path of revolutionary activity, which can proceed with full force from the centre."* He stressed that *"[a]s in France in 1793 so today in Germany it is the task of the really revolutionary party to carry through the strictest centralisation."* [The Marx-Engels Reader, p. 509-10] Lenin followed this aspect of Marx's ideas, arguing that *"Marx was a centralist"* and applying this perspective both in the party and once in power [The Essential Works of Lenin, p. 310]

Ironically, it is Engels note to the 1885 edition of Marx's work which shows the fallacy of this position. As he put it, *"this passage is based on a misunderstanding"* and it *"is now . . . [a] well known fact that throughout the whole revolution . . . the whole administration of the departments, arrondissements and communes consisted of authorities elected by the respective constituents themselves, and that these authorities acted with complete freedom . . . that precisely this provincial and local self-government . . . became the most powerful lever of the revolution."* [The Marx-Engels Reader, p. 510f] Marx's original comments imply the imposition of freedom by the centre on a population not desiring it (and in such a case, how could the centre be representative of the majority in such a case?). Moreover, how could a revolution be truly social if it was not occurring in the grassroots across a country? Unsurprisingly, local autonomy has played a key role in every real revolution.

As such, Bakunin has been proved right. Centralism has always killed a revolution and, as he always argued, real socialism can only be worked from below, by the people of every village, town, and city. The problems facing the world or a revolution cannot be solved by a few people at the top issuing decrees. They can only be solved by the active participation of the mass of working class people, the kind of participation centralism and government by their nature exclude. As such, this dove-tails into the question of whether the whole class exercises power under the "dictatorship of the proletariat." In a centralised system, obviously, power **has to be** exercised by a few (as Marx's argument in 1850 showed). Centralism, by its very nature excludes the possibility of extensive participation in the decision making process. Moreover, the decisions reached by such a body could not reflect the real needs of society. In the words of Bakunin:

"What man, what group of individuals, no matter how great their genius, would dare to think themselves able to embrace and understand the plethora of interests, attitudes and

activities so various in every country, every province, locality and profession." [Michael Bakunin: Selected Writings, p. 240]

He stressed that *"the revolution should be and should everywhere remain independent of the central point, which must be its expression and product -- not its source, guide and cause . . . the awakening of all local passions and the awakening of spontaneous life at all points, must be well developed in order for the revolution to remain alive, real and powerful."* [Op. Cit., pp. 179-80] This, we must stress, does not imply isolation. Bakunin always stressed the importance of federal organisation to co-ordinate struggle and defence of the revolution. As he put it, all revolutionary communes would need to federate in order *"to organise the necessary common services and arrangements for production and exchange, to establish the charter of equality, the basis of all liberty -- a charter utterly negative in character, defining what has to be abolished for ever rather than the positive forms of local life which can be created only by the living practice of each locality -- and to organise common defence against the enemies of the Revolution."* [Op. Cit., p. 179]

In short, anarchists should *"not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction."* Rather, the revolution *"everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation."* [Op. Cit., p. 237 and p. 172]

Given Marx's support for the federal ideas of the Paris Commune, it can be argued that Marxism is not committed to a policy of strict centralisation (although Lenin, of course, argued that Marx **was** a firm supporter of centralisation). What is true is, to quote Daniel Guerin, that Marx's comments on the Commune differ *"noticeably from Marx's writings of before and after 1871"* while Bakunin's were *"in fact quite consistent with the lines he adopted in his earlier writings."* [No Gods, No Masters, vol. 1, p. 167] Indeed, as Bakunin himself noted, while the Marxists *"saw all their ideas upset by the uprising"* of the Commune, they *"found themselves compelled to take their hats off to it."* [Michael Bakunin: Selected Writings, p. 261] This modification of ideas by Marx was not limited just to federalism. Marx also praised the commune's system of mandating recallable delegates, a position which Bakunin had been arguing for a number of years previously. In 1868, for example, he was talked about a *"Revolutionary Communal Council"* composed of *"delegates . . . vested with plenary but accountable and removable mandates."* [Op. Cit., pp. 170-1] As such, the Paris Commune was a striking confirmation of Bakunin's ideas on many levels, **not** Marx's (who adjusted his ideas to bring them in line with Bakunin's!).

In summary, Bakunin argued that decentralisation of power was essential for a real revolution that achieves more than changing who the boss is. A free society could only be created and run from below, by the active participation of the bulk of the population. Centralisation would kill this participation and so kill the revolution. Marx and Engels, on the other hand, while sometimes supporting federalism and

local self-government, had a centralist streak in their politics which Bakunin thought undermined the success of any revolution.

Since Bakunin, anarchists have deepened this critique of Marxism and, with the experience of Bolshevism, argue that he predicted key failures in Marx's ideas. Given that his followers, particularly Lenin and Trotsky, have emphasised (although, in many ways, changed them) the centralisation and "socialist government" aspects of Marx's thoughts, anarchists argue that Bakunin's critique is as relevant as ever. Real socialism can only come from below.

H.1.2 What are the key differences between Anarchists and Marxists?

There are, of course, important similarities between anarchism and Marxism. Both are socialists, oppose capitalism and the current state, support and encourage working class organisation and action and see class struggle as the means of creating a social revolution which will transform society into a new one. However, the differences between these socialist theories are equally important. In the words of Errico Malatesta:

"The important, fundamental dissension [between anarchists and Marxists] is [that] . . . [Marxist] socialists are authoritarians, anarchists are libertarians.

"Socialists want power . . . and once in power wish to impose their programme on the people. . . Anarchists instead maintain, that government cannot be other than harmful, and by its very nature it defends either an existing privileged class or creates a new one; and instead of inspiring to take the place of the existing government anarchists seek to destroy every organism which empowers some to impose their own ideas and interests on others, for they want to free the way for development towards better forms of human fellowship which will emerge from experience, by everyone being free and, having, of course, the economic means to make freedom possible as well as a reality." [Life and Ideas, p. 142]

The other differences derive from this fundamental one. So while there are numerous ways in which anarchists and Marxists differ, their root lies in the question of power. Socialists seek power (in the name of the working class and usually hidden under rhetoric arguing that party and class power are the same). Anarchists seek to destroy hierarchical power in all its forms and ensure that everyone is free to manage their own affairs (both individually and collectively). From this comes the differences on the nature of a revolution, the way the working class movement such organise and the tactics it should apply and so on. A short list of these differences would include the question of the "dictatorship of the proletariat", the standing of revolutionaries in elections, centralisation versus federalism, the role and organisation of revolutionaries, whether socialism can only come "*from below*" or whether it is possible for it come "*from below*" and "*from above*" and a host of others (i.e. some of the differences we

indicated in the [last section](#) during our discussion of Bakunin's critique of Marxism). Indeed, there are so many it is difficult to address them all here. As such, we can only concentrate on a few in this and the following sections.

One of the key issues is on the issue of confusing party power with popular power. The logic of the anarchist case is simple. In any system of hierarchical and centralised power (for example, in a state or governmental structure) then those at the top are in charge (i.e. are in positions of power). It is **not** "the people," nor "the proletariat," nor "the masses," it is those who make up the government who have and exercise real power. As Malatesta argued, government means *"the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few"* and *"if . . . , as do the authoritarians, one means government action when one talks of social action, then this is still the resultant of individual forces, but only of those individuals who form the government."* [**Anarchy**, p. 40 and p. 36] Therefore, anarchists argue, the replacement of party power for working class power is inevitable because of the nature of the state. In the words of Murray Bookchin:

"Anarchist critics of Marx pointed out with considerable effect that any system of representation would become a statist interest in its own right, one that at best would work against the interests of the working classes (including the peasantry), and that at worst would be a dictatorial power as vicious as the worst bourgeois state machines. Indeed, with political power reinforced by economic power in the form of a nationalised economy, a 'workers' republic' might well prove to be a despotism (to use one of Bakunin's more favourite terms) of unparalleled oppression."

He continues:

"Republican institutions, however much they are intended to express the interests of the workers, necessarily place policy-making in the hands of deputies and categorically do not constitute a 'proletariat organised as a ruling class.' If public policy, as distinguished from administrative activities, is not made by the people mobilised into assemblies and confederally co-ordinated by agents on a local, regional, and national basis, then a democracy in the precise sense of the term does not exist. The powers that people enjoy under such circumstances can be usurped without difficulty. . . [I]f the people are to acquire real power over their lives and society, they must establish -- and in the past they have, for brief periods of time established -- well-ordered institutions in which they themselves directly formulate the policies of their communities and, in the case of their regions, elect confederal functionaries, revocable and strictly controllable, who will execute them. Only in this sense can a class, especially one committed to the abolition of classes, be mobilised as a class to manage society." [**The Communist Manifesto: Insights and Problems**]

This is why anarchists stress direct democracy (self-management) in free federations of free associations. It is the only way to ensure that power remains in the hands of the people and is not turned

into an alien power above them. Thus Marxist support for statist forms of organisation will inevitably undermine the liberatory nature of the revolution.

Thus the **real** meaning of a workers state is simply that the **party** has the real power, not the workers. After all, that is nature of a state. Marxist rhetoric tends to hide this reality. As an example, we can point to Lenin's comments in October, 1921. In an essay marking the fourth anniversary of the 1917 October Revolution, Lenin stated that the Soviet system "*provides the maximum of democracy for the workers and peasants; at the same time, it marks a break with bourgeois democracy and the rise of a new, epoch-making type of democracy, namely, proletarian democracy, or the dictatorship of the proletariat.*" ["Fourth Anniversary of the October Revolution," **Collected Works**, vol. 33, p. 55] Yet this was written years after Lenin had argued that "[w]hen we are reproached with having established a dictatorship of one party . . . we say, 'Yes, it is a dictatorship of one party! This is what we stand for and we shall not shift from that position . . .'" [**Op. Cit.**, vol. 29, p. 535] And, of course, they did not shift from that position! Indeed, Lenin's comments came just a few months after all opposition parties and factions within the Communist Party had been banned and after the Kronstadt rebellion and a wave of strikes calling for free soviet elections had been repressed. Clearly, the term "*proletarian democracy*" had a drastically different meaning to Lenin than to most people!

Indeed, the identification of party power and working class power reaches its height (or, more correctly, depth) in the works of Lenin and Trotsky. Lenin, for example, argued that "*the correct understanding of a Communist of his tasks*" lies in "*correctly gauging the conditions and the moment when the vanguard of the proletariat can successfully seize power, when it will be able during and after this seizure of power to obtain support from sufficiently broad strata of the working class and of the non-proletarian toiling masses, and when, thereafter, it will be able to maintain, consolidate, and extend its rule, educating, training and attracting ever broader masses of the toilers.*" Note, the vanguard (the party) seizes power, **not** the masses. Indeed, he stressed that the "*very presentation of the question -- 'dictatorship of the Party or dictatorship of the class, dictatorship (Party) of the leaders or dictatorship (Party) of the masses?' is evidence of the most incredible and hopeless confusion of mind*" and "[t]o go so far . . . as to draw a contrast in general between the dictatorship of the masses and the dictatorship of the leaders, is ridiculously absurd and stupid." [**Left-Wing Communism: An Infantile Disorder**, p. 35, p. 27 and p. 25]

Lenin stressed this idea numerous times. For example, in 1920 he argued that "*the dictatorship of the proletariat cannot be exercised through an organisation embracing the whole of the class, because in all capitalist countries (and not only over here, in one of the most backward) the proletariat is still so divided, so degraded, and so corrupted in parts . . . that an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship. It can be exercised only by a vanguard . . . Such is the basic mechanism of the dictatorship of the dictatorship of the proletariat, and the essentials of transitions from capitalism to communism . . . for the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation.*" [**Collected Works**, vol. 32, p. 21]

Trotsky agreed with this lesson and argued it to the end of his life:

"The revolutionary dictatorship of a proletarian party is for me not a thing that one can freely accept or reject: It is an objective necessity imposed upon us by the social realities -- the class struggle, the heterogeneity of the revolutionary class, the necessity for a selected vanguard in order to assure the victory. The dictatorship of a party belongs to the barbarian prehistory as does the state itself, but we can not jump over this chapter, which can open (not at one stroke) genuine human history. . . The revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution . . . Abstractly speaking, it would be very well if the party dictatorship could be replaced by the 'dictatorship' of the whole toiling people without any party, but this presupposes such a high level of political development among the masses that it can never be achieved under capitalist conditions. The reason for the revolution comes from the circumstance that capitalism does not permit the material and the moral development of the masses." [Writings 1936-37, pp. 513-4]

This point is reiterated in his essay, "*Stalinism and Bolshevism*" (again, written in 1937) when he argued that:

"Those who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." [Stalinism and Bolshevism]

How soviet democracy can exist within the context of a party dictatorship is left to the imagination of the reader! Rather than the working class as a whole seizing power, it is the "vanguard" which takes power -- *"a revolutionary party, even after seizing power . . . is still by no means the sovereign ruler of society."* [Op. Cit.] Needless to say, he was just repeating the same arguments he had made while in power during the Russian Revolution (see ["What happened during the Russian Revolution?"](#) for details). Nor was he the only one. Zinoviev, another leading Bolshevik, argued in 1920 along the same lines:

"soviet rule in Russia could not have been maintained for three years -- not even three weeks -- without the iron dictatorship of the Communist Party. Any class conscious worker must understand that the dictatorship of the working class can be achieved only by the dictatorship of its vanguard, i.e., by the Communist Party . . . All questions of economic reconstruction, military organisation, education, food supply -- all these questions, on which the fate of the proletarian revolution depends absolutely, are decided in Russia before all other matters and mostly in the framework of the party organisations . . . Control by the party over soviet organs, over the trade unions, is the single durable guarantee that any measures taken will serve not special interests, but the interests of the entire proletariat." [quoted by Oskar Anweiler, **The Soviets**, pp. 239-40]

How these positions, clearly argued as inevitable for **any** revolution, can be reconciled with workers' democracy, power or freedom is not explained. As such, the idea that Leninism (usually considered as

mainstream Marxism) is inherently democratic or a supporter of power to the people is clearly flawed. The leading lights of Bolshevism argued that the dictatorship of the proletariat could only be achieved by the dictatorship of the party. Indeed, the whole rationale for party dictatorship came from the fundamental rationale for democracy, namely that any government should reflect the changing opinions of the masses. In the words of Trotsky:

"The very same masses are at different times inspired by different moods and objectives. It is just for this reason that a centralised organisation of the vanguard is indispensable. Only a party, wielding the authority it has won, is capable of overcoming the vacillation of the masses themselves." [**The Moralists and Sycophants**, p. 59]

This position has its roots in the uneven political development within the working class (i.e. that the working class contains numerous political perspectives within it). As the party (according to Leninist theory) contains the most advanced ideas (and, again according to Leninist theory, the working class cannot reach beyond a trade union consciousness by its own efforts), the party must take power to ensure that the masses do not make "mistakes" or "waver" ("vacillation") during a revolution. From such a perspective to the position of party dictatorship is not far (and a journey that all the leading Bolsheviks, including Lenin and Trotsky, we must note, did in fact take).

In contrast, anarchists argue that precisely because of political differences we need the fullest possible democracy and freedom to discuss issues and reach agreements. Only by discussion and self-activity can the political perspectives of those in struggle develop and change. In other words, the fact Bolshevism uses to justify its support for party power is the strongest argument against it. For anarchists, the idea of a revolutionary government is a contradiction. As Italian anarchist Malatesta put it, *"if you consider these worthy electors as unable to look after their own interests themselves, how is it that they will know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing a genius from the votes of a mass of fools?"* [**Anarchy**, p. 53]

As such, anarchists think that power should be in the hands of the masses themselves. Only freedom or the struggle for freedom can be the school of freedom. That means that, to quote Bakunin, *"since it is the people which must make the revolution everywhere . . . the ultimate direction of it must at all times be vested in the people organised into a free federation of agricultural and industrial organisations . . . organised from the bottom up through revolutionary delegation."* [**No God, No Masters**, vol. 1, pp. 155-6]

Clearly, then, the question of state/party power is one dividing anarchists and most Marxists. These arguments by leading Bolsheviks confirm Bakunin's fear that the Marxists aimed for *"a tyranny of the minority over a majority in the name of the people -- in the name of the stupidity of the many and the superior wisdom of the few."* [**Marxism, Freedom and the State**, p. 63] Again, though, we must stress that libertarian Marxists like the council communists agree with anarchists on this subject and reject the whole idea that dictatorship of a party equals the dictatorship of the working class. As such, the Marxist

tradition as a whole does not confuse this issue, although the majority of it does. We must stress that not all Marxists are Leninists. A few (council communists, situationists, autonomists, and so on) are far closer to anarchism. They also reject the idea of party power/dictatorship, the use of elections, for direct action, argue for the abolition of wage slavery by workers' self-management of production and so on. They represent the best in Marx's work and should not be lumped with the followers of Bolshevism. Sadly, they are in the minority.

Finally, we should indicate other important areas of difference. Some are summarised by Lenin in his work **The State and Revolution**:

*"The difference between the Marxists and the anarchists is this: 1) the former, while aiming at the complete abolition of the state, recognise that this aim can only be achieved after classes have been abolished by the socialist revolution, as the result of the establishment of socialism which leads to the withering away of the state. The latter want to abolish the state completely overnight, failing to understand the conditions under which the state can be abolished 2) the former recognise that after the proletariat has conquered political power it must utterly destroy the old state machine and substitute it for it a new one consisting of the organisation of armed workers, after the type of the Commune. The latter, while advocating the destruction of the state machine, have absolutely no idea of **what** the proletariat will put in its place and **how** it will use its revolutionary power; the anarchists even deny that the revolutionary proletariat should utilise its state power, its revolutionary dictatorship; 3) the former demand that the proletariat be prepared for revolution by utilising the present state; the latter reject this."* [**Essential Works of Lenin**, p. 358]

We will discuss each of these points in the next three sections. Point one will be discussed in [section H.1.3](#), the second in [section H.1.4](#) and the third and final one in [section H.1.5](#).

H.1.3 Why do anarchists wish to abolish the state "overnight"?

As indicated at the end of the [last section](#), Lenin argued that while Marxists aimed "at the complete abolition of the state" they "recognise that this aim can only be achieved after classes have been abolished by the socialist revolution" while anarchists "want to abolish the state completely overnight." This issue is usually summarised by Marxists arguing that a new state is required to replace the destroyed bourgeois one. This new state is called by Marxists "the dictatorship of the proletariat" or a workers' state. Anarchists reject this transitional state while Marxists embrace it. Indeed, according to Lenin "a Marxist is one who **extends** the acceptance of the class struggle to the acceptance of the **dictatorship of the proletariat.**" [**Essential Works of Lenin**, p. 358 and p. 294]

So what does the "dictatorship of the proletariat" actually mean? Generally, Marxists seem to imply that this term simply means the defence of the revolution and so the anarchist rejection of the dictatorship of the proletariat means the rejection of the defence of a revolution. Anarchists, they argue, differ from

Marxist-communists in that we reject the need for the dictatorship of the proletariat, where the formerly oppressed use coercion to ensure that remnants of the oppressing classes do not resurrect the old society. This particular straw man was used by Lenin in **State and Revolution** when he quoted Marx to suggest that anarchists would "*lay down their arms*" after a successful revolution. Such a "*laying down of arms*" would mean the "*abolition of the state*" while defending the revolution by violence would mean "*giv[ing] the state a revolutionary and transitory form.*" [**Op. Cit.**, p. 315]

That such an argument can be made, never mind repeated, suggests a lack of honesty. It assumes that the Marxist and Anarchist definitions of "the state" are identical. They are not. As such, it is pretty meaningless to argue, as Lenin did, that when anarchists talk about abolishing the state they mean that they will not defend a revolution. As Malatesta put it, some "*seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for the **freedom** of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas.*" [**Anarchy**, p. 41]

For anarchists the state, government, means "*the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few.*" [Malatesta, **Op. Cit.**, p. 40] For Marxists, the state is "*an organ of class rule, an organ for the **oppression** of one class by another.*" [Lenin, **Op. Cit.**, p. 274] That these definitions are in conflict is clear and unless this difference is made explicit, anarchist opposition to the "dictatorship of the proletariat" cannot be clearly understood.

Anarchists, of course, agree that the current state is the means by which the bourgeois class enforces its rule over society. In Bakunin's words, "*the political state has no other mission but to protect the exploitation of the people by the economically privileged classes.*" [**The Political Philosophy of Bakunin**, p. 221] Under capitalism, as Malatesta succulently put, the state is "*the bourgeoisie's servant and gendarme.*" [**Op. Cit.**, p. 20] The reason why the state is marked by centralised power is due to its role as the protector of (minority) class rule. As such, a state cannot be anything but a defender of minority power as its centralised and hierarchical structure is designed for that purpose. If the working class really was running society, as Marxists claim they would be in the "dictatorship of the proletariat," then it would not be a state. As Bakunin argued, "*[w]here all rule, there are no more ruled, and there is no State.*" [**Op. Cit.**, p. 223]

As such, the idea that anarchists, by rejecting the "dictatorship of the proletariat," also reject defending a revolution is false. We do not equate the "dictatorship of the proletariat" with the need to defend a revolution or expropriating the capitalist class, ending capitalism and building socialism. Anarchists from Bakunin onwards have taken both of these necessities for granted (also see sections [H.2.1](#), [I.5.14](#) and [J.7.6](#)). As he stressed, "*the sole means of opposing the reactionary forces of the state*" was the "*organising of the revolutionary force of the people.*" This revolution involve "*the free construction of popular life in accordance with popular needs . . . from below upward, by the people themselves . . . [in] a voluntary alliance of agricultural and factory worker associations, communes, provinces, and nations.*" [**Statism and Anarchy**, p. 156 and p. 33]

As we discuss this particular Marxist straw man in [section H.2.1](#), we will leave our comments at this. Clearly, then, anarchists do not reject defending a revolution. We argue that the state must be abolished "overnight" as any state is marked by hierarchical power and can only empower the few at the expense of the many. The state will not "wither away" as Marxists claim simply because it excludes, by its very nature, the active participation of the bulk of the population and ensures a new class division in society: those in power (the party) and those subject to it (the working class).

Georges Fontenis sums up anarchist concerns on this issue:

"The formula 'dictatorship of the proletariat' has been used to mean many different things. If for no other reason it should be condemned as a cause of confusion. With Marx it can just as easily mean the centralised dictatorship of the party which claims to represent the proletariat as it can the federalist conception of the Commune.

"Can it mean the exercise of political power by the victorious working class? No, because the exercise of political power in the recognised sense of the term can only take place through the agency of an exclusive group practising a monopoly of power, separating itself from the class and oppressing it. And this is how the attempt to use a State apparatus can reduce the dictatorship of the proletariat to the dictatorship of the party over the masses.

"But if by dictatorship of the proletariat is understood collective and direct exercise of 'political power', this would mean the disappearance of 'political power' since its distinctive characteristics are supremacy, exclusivity and monopoly. It is no longer a question of exercising or seizing political power, it is about doing away with it all together!

"If by dictatorship is meant the domination of the majority by a minority, then it is not a question of giving power to the proletariat but to a party, a distinct political group. If by dictatorship is meant the domination of a minority by the majority (domination by the victorious proletariat of the remnants of a bourgeoisie that has been defeated as a class) then the setting up of dictatorship means nothing but the need for the majority to efficiently arrange for its defence its own social Organisation.

[...]

"The terms 'domination', 'dictatorship' and 'state' are as little appropriate as the expression 'taking power' for the revolutionary act of the seizure of the factories by the workers.

We reject then as inaccurate and causes of confusion the expressions 'dictatorship of the proletariat', 'taking political power', 'workers state', 'socialist state' and 'proletarian

state'." [**Manifesto of Libertarian Communism**, pp. 22-3]

In summary, anarchists argue that the state has to be abolished "overnight" simply because a state is marked by hierarchical power and the exclusion of the bulk of the population from the decision making process. It cannot be used to implement socialism simply because it is not designed that way. To extend and defend a revolution a state is not required. Indeed, it is a hindrance:

"The mistake of authoritarian communists in this connection is the belief that fighting and organising are impossible without submission to a government; and thus they regard anarchists . . . as the foes of all organisation and all co-ordinated struggle. We, on the other hand, maintain that not only are revolutionary struggle and revolutionary organisation possible outside and in spite of government interference but that, indeed, that is the only effective way to struggle and organise, for it has the active participation of all members of the collective unit, instead of their passively entrusting themselves to the authority of the supreme leaders.

"Any governing body is an impediment to the real organisation of the broad masses, the majority. Where a government exists, then the only really organised people are the minority who make up the government; and . . . if the masses do organise, they do so against it, outside it, or at the very least, independently of it. In ossifying into a government, the revolution as such would fall apart, on account of its awarding that government the monopoly of organisation and of the means of struggle." [Luigi Fabbri, "Anarchy and 'Scientific' Communism", in **The Poverty of Statism**, pp. 13-49, Albert Meltzer (ed.), p. 27]

For anarchists, the abolition of the state does not mean rejecting the need to extend or defend a revolution (quite the reverse!). It means rejecting a system of organisation designed by and for minorities to ensure their rule. To create a state (even a "workers' state") means to delegate power away from the working class and eliminate their power in favour of party power. In place of a state anarchists' argue for a free federation of workers' organisations as the means of conducting a revolution (and the framework for its defence).

As we discuss in the [next section](#), anarchists see this federation of workers' associations and communes (the framework of a free society) as being based on the organisations working class people create in their struggle against capitalism. These self-managed organisations, by refusing to become part of a centralised state, will ensure the success of a revolution.

H.1.4 Do anarchists have "*absolutely no idea*" of what the proletariat will put in place of the state?

Lenin's second claim is that anarchists, "*while advocating the destruction of the state machine, have*

*absolutely no idea of **what** the proletariat will put in its place"* and compares this to the Marxists who argue for a new state machine *"consisting of armed workers, after the type of the Commune."* [**Essential Works of Lenin**, p. 358] For anarchists, Lenin's assertion simply shows his unfamiliarity with anarchist literature and need not be taken seriously -- anyone familiar with anarchist theory would simply laugh at such comments. Sadly, most Marxists are **not** familiar with that theory, so we need to explain two things. Firstly, anarchists have very clear ideas on what to "replace" the state with (namely a federation of communes based on working class associations). Secondly, that this idea is based on the idea of armed workers, inspired by the Paris Commune (although predicted by Bakunin).

Moreover, for anarchists Lenin's comment seems somewhat incredulous. As George Barrett puts it, in reply to the question *"if you abolish government, what will you put in its place,"* this *"seems to an Anarchist very much as if a patient asked the doctor, 'If you take away my illness, what will you give me in its place?'"* *The Anarchist's argument is that government fulfils no useful purpose . . . It is the headquarters of the profit-makers, the rent-takers, and of all those who take from but who do not give to society. When this class is abolished by the people so organising themselves to run the factories and use the land for the benefit of their free communities, i.e. for their own benefit, then the Government must also be swept away, since its purpose will be gone. The only thing then that will be put in the place of government will be the free organisation of the workers. When Tyranny is abolished, Liberty remains, just as when disease is eradicated health remains."* [**Objections to Anarchism**]

However, Barrett's answer does contain the standard anarchist position on what will be the basis of a revolutionary society, namely that the *"only thing then that will be put in the place of government will be the free organisation of the workers."* This is a concise summary of anarchist theory and cannot be bettered. This vision, as we discussed in [section I.2.3](#) in some detail, can be found in the work of Bakunin, Kropotkin, Malatesta and a host of other anarchist thinkers. Since anarchists from Bakunin onwards have stressed that a federation of workers' associations would constitute the framework of a free society, to assert otherwise is little more than a joke or a slander. To quote Bakunin:

"the federative alliance of all working men's associations . . . [will] constitute the Commune . . . [the] Communal Council [will be] composed of . . . delegates . . . vested with plenary but accountable and removable mandates. . . all provinces, communes and associations . . . by first reorganising on revolutionary lines . . . [will] constitute the federation of insurgent associations, communes and provinces . . . [and] organise a revolutionary force capable defeating reaction . . . [and for] self-defence . . . [The] revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation. . ." [**Michael Bakunin: Selected Writings**, pp. 170-2]

And:

"The future social organisation must be made solely from the bottom up, by the free

association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal." [Op. Cit., p. 206]

Similar ideas can easily be found in the works of other anarchists. While the actual names and specific details of these federations of workers' associations may change (for example, the factory committees and soviets in the Russian Revolution, the collectives in Spain, the section assemblies in the French Revolution are a few of them) the basic ideas are the same. Bakunin also pointed to the means of defence, a workers' militia (the people armed, as per the Paris Commune):

"While it [the revolution] will be carried out locally everywhere, the revolution will of necessity take a federalist format. Immediately after established government has been overthrown, communes will have to reorganise themselves along revolutionary lines . . . In order to defend the revolution, their volunteers will at the same time form a communal militia. But no commune can defend itself in isolation. So it will be necessary for each of them to radiate outwards, to raise all its neighbouring communes in revolt . . . and to federate with them for common defence." [No Gods, No Masters, vol. 1, p. 142]

A major difference between anarchism and Marxism which Lenin points to is, clearly, false. Anarchists are well aware of what should "replace" the bourgeois state and have always been so. The **real** difference is simply that anarchists say what they mean while Lenin's "new" state did not, in fact, mean working class power but rather party power. We discussed this issue in more detail in [section H.1.2](#), so we will not do so here.

As for Lenin's comment that we have "*absolutely no ideas*" of how the working class "*will use its revolutionary power*" suggests more ignorance, as we have urged working people to expropriate the expropriators, reorganise production under workers' self-management and start to construct society from the bottom upwards (a quick glance at Kropotkin's **Conquest of Bread**, for example, would soon convince any reader of the inaccuracy of Lenin's comment). This summary by the anarchist Jura Federation (written in 1880) gives a flavour of anarchist ideas on this subject:

"The bourgeoisie's power over the popular masses springs from economic privileges, political domination and the enshrining of such privileges in the laws. So we must strike at the wellsprings of bourgeois power, as well as its various manifestations.

"The following measures strike us as essential to the welfare of the revolution, every bit as much as armed struggle against its enemies:

"The insurgents must confiscate social capital, landed estates, mines, housing, religious and public buildings, instruments of labour, raw materials, gems and precious stones and manufactured products:

"All political, administrative and judicial authorities are to be abolished.

". . . What should the organisational measures of the revolution be?

"Immediate and spontaneous establishment of trade bodies: provisional assumption by those of . . . social capital . . . : local federation of a trades bodies and labour organisation:

"Establishment of neighbourhood groups and federations of same . . .

[. . .]

"[T]he federation of all the revolutionary forces of the insurgent Communes . . . Federation of Communes and organisation of the masses, with an eye to the revolution's enduring until such time as all reactionary activity has been completely eradicated.

[. . .]

"Once trade bodies have been have been established, the next step is to organise local life. The organ of this life is to be the federation of trades bodies and it is this local federation which is to constitute the future Commune." [No Gods, No Masters, vol. 1, pp. 246-7]

Clearly, anarchists do have some ideas on what the working class will "*replace*" the state with and how it will use its "*revolutionary power*"!

Similarly, Lenin's statement that "*the anarchists even deny that the revolutionary proletariat should utilise its state power, its revolutionary dictatorship*" again distorts the anarchist position. As we argued in [section H.1.2](#), our objection to the "state power" of the proletariat is precisely **because** it cannot, by its very nature as a state, actually allow the working class to manage society directly (and, of course, it automatically excludes other sections of the working masses, such as the peasantry and artisans). We argued that, in practice, it would simply mean the dictatorship of a few party leaders. This position, we must stress, was one Lenin himself was arguing in the year after completing **State and Revolution**. Ironically, the leading Bolsheviks (as we have seen in [section H.1.2](#)) confirmed the anarchist argument that the "dictatorship of the proletariat" would, in fact, become a dictatorship **over** the proletariat by the party.

Italian anarchist Camillo Berneri sums up the differences well:

"The Marxists . . . foresee the natural disappearance of the State as a consequence of the destruction of classes by the means of 'the dictatorship of the proletariat,' that is to say State Socialism, whereas the Anarchists desire the destruction of the classes by means of a

social revolution which eliminates, with the classes, the State. The Marxists, moreover, do not propose the armed conquest of the Commune by the whole proletariat, but they propose the conquest of the State by the party which imagines that it represents the proletariat. The Anarchists allow the use of direct power by the proletariat, but they understand by the organ of this power to be formed by the entire corpus of systems of communist administration-corporate organisations [i.e. industrial unions], communal institutions, both regional and national-freely constituted outside and in opposition to all political monopoly by parties and endeavouring to a minimum administrative centralisation." ["Dictatorship of the Proletariat and State Socialism", **Cienfuegos Press Anarchist Review**, no. 4, p. 52]

Clearly, Lenin's assertions are little more than straw men.

H.1.5 Why do anarchists reject "*utilising the present state*"?

Lastly, there is the question of Marxists demanding (in the words of Lenin) "*that the proletariat be prepared for revolution by utilising the present state*" while anarchists "*reject this.*" Today, of course, this has changed. Libertarian Marxists, such as council communists, also reject "*utilising the present state*" to train the proletariat for revolution (i.e. for socialists to stand for elections). For anarchists, the use of elections does not "prepare" the working class for revolution (i.e. managing their own affairs and society). Rather, it prepares them to follow leaders and let others act for them. In the words of Rudolf Rocker:

"Participation in the politics of the bourgeois States has not brought the labour movement a hair's-breadth nearer to Socialism, but thanks to this method, Socialism has almost been completely crushed and condemned to insignificance. . . Participation in parliamentary politics has affected the Socialist Labour movement like an insidious poison. It destroyed the belief in the necessity of constructive Socialist activity, and, worse of all, the impulse to self-help, by inoculating people with the ruinous delusion that salvation always comes from above." [**Anarcho-Syndicalism**, p. 49]

While electoral ("political") activity ensures that the masses become accustomed to following leaders and letting them act on their behalf, anarchists' support direct action as "*the best available means for preparing the masses to manage their own personal and collective interests; and besides, anarchists feel that even now the working people are fully capable of handling their own political and administrative interests.*" [Luigi Galleani, **The End of Anarchism?**, pp. 13-4]

Anarchists, therefore, argue that we need to reclaim the power which has been concentrated into the hands of the state. That is why we stress direct action. Direct action means action by the people themselves, that is action directly taken by those directly affected. Through direct action, the people dominate their own struggles, it is they who conduct it, organise it, manage it. They do not hand over to others their own acts and task of self-liberation. That way, we become accustomed to managing our own

affairs, creating alternative, libertarian, forms of social organisation which can become a force to resist the state, win reforms and, ultimately, become the framework of a free society. In other words, direct action creates organs of self-activity (such as community assemblies, factory committees, workers' councils, and so on) which, to use Bakunin's words, are "*creating not only the ideas but also the facts of the future itself.*"

In other words, the idea that socialists standing for elections somehow prepares working class people for revolution is simply wrong. Utilising the state, standing in elections, only prepares people for following leaders -- it does not encourage the self-activity, self-organisation, direct action and mass struggle required for a social revolution. Moreover, as we noted in the [section H.1.1](#), use of elections has a corrupting effect on those who use it. The history of radicals using elections has been a long one of betrayal and the transformation of revolutionary parties into reformist ones (see [section J.2.6](#) for more discussion). Thus using the existing state ensures that the division at the heart of existing society (namely a few who govern and the many who obey) is reproduced in the movements trying to abolish it. It boils down to handing effective leadership to special people, to "leaders," just when the situation requires working people to solve their own problems and take matters into their own hands. Only the struggle for freedom (or freedom itself) can be the school for freedom, and by placing power into the hands of leaders, utilising the existing state ensures that socialism is postponed rather than prepared for.

Moreover, Marxist support for electioneering is somewhat at odds with their claims of being in favour of collective, mass action. There is nothing more isolated, atomised and individualistic than voting. It is the act of one person in a box by themselves. It is the total opposite of collective struggle. The individual is alone before, during and after the act of voting. Indeed, unlike direct action, which, by its very nature, throws up new forms of organisation in order to manage and co-ordinate the struggle, voting creates no alternative organs of working class self-management. Nor can it as it is not based on nor does it create collective action or organisation. It simply empowers an individual (the elected representative) to act on behalf of a collection of other individuals (the voters). Such delegation will hinder collective organisation and action as the voters expect their representative to act and fight for them -- if they did not, they would not vote for them in the first place!

Given that Marxists usually slander anarchists as "individualists" the irony is delicious!

If we look at the Poll-Tax campaign in the UK in the late 1980s and early 1990s, we can see what would happen to a mass movement which utilised electioneering. The various left-wing parties, particularly Militant (now the Socialist Party) spent a lot of time and effort lobbying Labour Councillors not to implement the tax (with no success). Let us assume they had succeeded and the Labour Councillors had refused to implement the tax (or "socialist" candidates had been elected to stop it). What would have happened? Simply that there would not have been a mass movement or mass organisation based on non-payment, nor self-organised direct action to resist warrant sales, nor community activism of any form. Rather, the campaign would have consisted to supporting the councillors in their actions, mass rallies in which the leaders would have informed us of their activities on our behalf and, perhaps, rallies and marches to protest any action the government had inflicted on them. The leaders may have called for

some form of mass action but this action would not have come from below and so not a product of working class self-organisation, self-activity and self-reliance. Rather, it would have been purely reactive and a case of follow the leader, without the empowering and liberating aspects of taking action by yourself, as a conscious and organised group. It would have replaced the struggle of millions with the actions of a handful of leaders.

Of course, even discussing this possibility indicates how remote it is from reality. The Labour Councillors were not going to act -- they were far too "practical" for that. Years of working within the system, of using elections, had taken their toll decades ago. Anarchists, of course, saw the usefulness of picketing the council meetings, of protesting against the Councillors and showing them a small example of the power that existed to resist them if they implemented the tax. As such, the picket would have been an expression of direct action, as it was based on showing the power of our direct action and class organisations. Lobbying, however, was building illusions in "leaders" acting for us to and based on pleading rather than defiance. But, then again, Militant desired to replace the current leaders with themselves and so would not object to such tactics.

Unfortunately, the Socialists never really questioned **why** they had to lobby the councillors in the first place -- if utilising the existing state **was** a valid radical or revolutionary tactic, why has it always resulted in a de-radicalising of those who use it? This would be the inevitable results of any movement which "complements" direct action with electioneering. The focus of the movement will change from the base to the top, from self-organisation and direct action from below to passively supporting the leaders. This may not happen instantly, but over time, just as the party degenerates by working within the system, the mass movement will be turned into an electoral machine for the party -- even arguing against direct action in case it harms the election chances of the leaders. Just as the trade union leaders have done again and again.

All in all, the history of socialists actually using elections has been a dismal failure. Rather than prepare the masses for revolution, it has done the opposite. As we argue in [section J.2](#), this is to be expected. That Lenin could still argue along these lines even after the betrayal of social democracy indicates a lack of desire to learn the lessons of history.

H.1.6 Why do anarchists try to "*build the new world in the shell of the old*"?

Another key difference between anarchists and Marxists is on how the movement against capitalism should organise in the here and now. Anarchists argue that it should prefigure the society we desire -- namely it should be self-managed, decentralised, built and organised from the bottom-up in a federal structure. This perspective can be seen from the justly famous "*Circular of the Sixteen*":

"The future society should be nothing but a universalisation of the organisation which the International will establish for itself. We must therefore take care to bring this

organisation as near as possible to our ideal . . . How could one expect an egalitarian and free society to grow out of an authoritarian organisation? That is impossible. The International, embryo of the future human society, must be, from now on, the faithful image of our principles of liberty and federation." [quoted by Marx, **Fictitious Splits in the International**]

This simply echoes Bakunin's argument that the *"organisation of the trade sections, their federation in the International, and their representation by the Chambers of Labour, not only create a great academy, in which the workers of the International, combining theory and practice, can and must study economic science, they also bear in themselves the living germs of the new social order, which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself."* [quoted by Rocker, **Anarcho-Syndicalism**, p. 45] Anarchists apply this insight to all organisations they take part in, stressing that the only way we can create a self-managed society is by self-managing our own struggles and organisations today. In this way we turn our class organisations (indeed, the class struggle itself) into practical and effective *"schools of anarchism"* in which we learn to manage our own affairs without hierarchy and bosses.

Marxists reject this argument. Instead they stress the importance of centralisation and consider the anarchist argument as utopian. For effective struggle, strict centralisation is required as the capitalist class and state is also centralised. In other words, to fight for socialism there is a need to organise in a way which the capitalists have utilised -- to fight fire with fire. Unfortunately they forget to extinguish a fire you have to use water. Adding more flame will only increase the combustion, **not** put it out!

Of course, Marx misrepresented the anarchist position. He argued that the Paris Communards *"would not have failed if they had understood that the Commune was 'the embryo of the future human society' and had cast away all discipline and all arms -- that is, the things which must disappear when there are no more wars!"* [**Ibid.**] Needless to say this is simply a slander on the anarchist position. Anarchists, as the Circular makes clear, recognise that we cannot totally reflect the future and so the current movement can only be *"as near as possible to our ideal."* Thus we have to do things, such as fighting the bosses, rising in insurrection, smashing the state or defending a revolution, which we would not have to do in a socialist society. Such common sense, unfortunately, is lacking in Marx who instead decides to utter nonsense for a cheap polemical point. He never answered the basic point -- how do people become able to manage society if they do not directly manage their own organisations and struggles? How can a self-managed society come about unless people practice it in the here and now? Can people create a socialist society if they do not implement its basic ideas in their current struggles and organisations?

Ironically enough, given his own and his followers claims of his theory's proletarian core, it is Marx who was at odds with the early labour movement, **not** Bakunin and the anarchists. Historian Gwyn A. Williams notes in the early British labour movement there were *"to be no leaders"* and the organisations were *"consciously modelled on the civil society they wished to create."* [**Artisans and Sans-Culottes**, p. 72] Lenin, unsurprisingly, dismissed the fact that the British workers *"thought it was an indispensable sign of democracy for all the members to do all the work of managing the unions"* as *"primitive democracy"* and *"absurd."* He also complained about *"how widespread is the 'primitive' conception of*

democracy among the masses of the students and workers" in Russia. [**Essential Works of Lenin**, pp. 162-3] Clearly, the anarchist perspective reflects the ideas the workers' movement before it degenerates into reformism and bureaucracy while Marxism reflects it during this process of degeneration. Needless to say, the revolutionary nature of the early union movement compared to the reformism and bureaucratic control of the ones with "full-time professional officers" clearly shows who was correct!

Related to this is the fact that Marxists (particularly Leninists) favour centralisation while anarchists favour decentralisation within a federal organisation. As such, anarchists do not think that decentralisation implies isolation or narrow localism. We have always stressed the importance of **federalism** to co-ordinate decisions. Power would be decentralised, but federalism ensures collective decisions and action. Under centralised systems, anarchists argue, power is placed into the hands of a few leaders. Rather than the real interests and needs of the people being co-ordinated, centralism simply means the imposition of the will of a handful of leaders, who claim to "represent" the masses. Co-ordination, in other words, is replaced by coercion in the centralised system and the needs and interests of all are replaced by those of a few leaders at the centre.

Similarly, anarchists and Marxists disagree on the nature of the future economic and social system of socialism. While it is a commonplace assumption that anarchists and Marxists seek the same sort of society but disagree on the means, in actuality there are substantial differences in their vision of a socialist society. While both aim for a stateless communist society, the actual structure of that society is different. Anarchists see it as fundamentally decentralised and federal while Marxists tend to envision it as fundamentally centralised. Moreover, Marxists such as Lenin saw "socialism" as being compatible with one-man management of production by state appointed "directors," armed with "dictatorial" powers (see [section 10](#) of the appendix on "[What happened during the Russian Revolution?](#)" for further discussion). As such, anarchists argue that the Bolshevik vision of "socialism" is little more than state capitalism -- with the state replacing the boss as exploiter and oppressor of the working class. As we discuss this issue in section [H.3.13](#), we will not do so here.

By failing to understand the importance of applying a vision of a free society to the current class struggle, Marxists help ensure that society never is created. By copying bourgeois methods within their "revolutionary" organisations (parties and unions) they ensure bourgeois ends (inequality and oppression).

H.1.7 Haven't you read Lenin's "State and Revolution"?

This question is often asked of people who critique Marxism, particularly its Leninist form. Lenin's **State and Revolution** is often considered his most democratic work and Leninists are quick to point to it as proof that Lenin and those who follow his ideas are not authoritarian. As such, its an important question. So how do anarchists reply when people point them to Lenin's work as evidence of the democratic (even libertarian) nature of Marxism? Anarchists reply in two ways.

Firstly, we argue many of the essential features of Lenin's ideas are to be found in anarchist theory.

These features had been aspects of anarchism for decades **before** Lenin put pen to paper. Bakunin, for example, talked about mandated delegates from workplaces federating into workers' councils as the framework of a (libertarian) socialist society in the 1860s. In the same period he also argued for popular militias to defend a revolution. Hence Murray Bookchin:

*"much that passes for 'Marxism' in **State and Revolution** is pure anarchism -- for example, the substitution of revolutionary militias for professional armed bodies and the substitution of organs of self-management for parliamentary bodies. What is authentically Marxist in Lenin's pamphlet is the demand for 'strict centralism,' the acceptance of a 'new' bureaucracy, and the identification of soviets with a state."* [**Post-Scarcity Anarchism**, p. 213]

That this is the case is hidden in Lenin's work as he deliberately distorts anarchist ideas in it (see sections [H.1.3](#) and [H.1.4](#) for examples). Therefore, when Marxists ask whether anarchists have read Lenin's **State and Revolution** we reply by arguing that most of Lenin's ideas were first expressed by anarchists (while Lenin hide this fact). All in all, Lenin's work just strikes anarchists as little more than a re-hash of many their own ideas but placed in a statist context which totally and utterly undermines them in favour of party rule.

Secondly, anarchists argue that regardless of what Lenin argued for in **State and Revolution**, he did not apply those ideas in practice (indeed, he did the exact opposite). Therefore, the question of whether we have read Lenin's work simply drives how the ideological nature and theoretical bankruptcy of Leninism in all its many forms. This is because the person asking this kind of question is asking you to evaluate their politics based on what they say rather than on what they do, like any politician.

To use an analogy, what would you say to a politician who has cut welfare spending by 50% and increased spending on the military and who argues that this act is irrelevant and that you should look at their manifesto which states that they were going to do the opposite? Simply put, you would consider this argument as laughable and them as liars as you would evaluate them by their actions, not by what they say. Yet supporters of Leninism cannot do this (and, ironically enough, often quote Marx's words that it is impossible to judge either parties or peoples by what they say or think about themselves, you have to look at what they do). Leninists, by urging you to read Lenin's "State and Revolution" are asking you to evaluate them by what their manifesto says and ignore what they did. Anarchists, on the other hand, ask you to evaluate the Leninist manifesto by comparing it to what they actually did in power. Such an evaluation is the only means by which we can judge the validity of Leninist claims and politics.

As we discuss the Russian Revolution in more depth in the appendix on ["What happened during the Russian Revolution?"](#), we will not provide a summary of Lenin's claims in his famous work **State and Revolution** and what he did in practice here. However, we will say here that the difference between reality and rhetoric was extremely large and, therefore, it is a damning indictment of Bolshevism. Simply put, if the **State and Revolution** is the manifesto of Bolshevism, then not a single promise in that work was kept by the Bolsheviks when they got into power. As such, Lenin's work cannot be used

to evaluate Bolshevism ideology as Bolshevism paid no attention to it once it had taken state power. While Lenin and his followers chant rhapsodies about the Soviet State (this 'highest and most perfect system of democracy") they quickly turned its democratic ideas into a fairy-tale, and an ugly fairy-tale at that, by simply ignoring it in favour of party power (and party dictatorship).

To state the obvious, to quote theory and not relate it to the practice of those who claim to follow it is a joke. It is little more than sophistry. If you look at the actions of the Bolsheviks after the October Russian Revolution you cannot help draw the conclusion that Lenin's **State and Revolution** has nothing to do with Bolshevik policy and presents a false image of what Leninists desire. As such, we must present a comparison between rhetoric and reality.

It will be objected in defence of Leninism that it is unfair to hold Lenin responsible for the failure to apply his ideas in practice. The terrible Civil War, in which Soviet Russia was attacked by numerous armies, and the resulting economic chaos meant that the objective circumstances made it impossible to implement his democratic ideas. This argument contains three flaws. Firstly, as we indicate in [section 3](#) of the appendix on "[What caused the degeneration of the Russian Revolution?](#)", the undemocratic policies of the Bolsheviks started **before** the start of the Civil War (so suggesting that the hardships of the Civil War were not to blame). Secondly, Lenin at no time indicated in **State and Revolution** that it was impossible or inapplicable to apply those ideas during a revolution in Russia (quite the reverse!). Given that Marxists, including Lenin, argue that a "dictatorship of the proletariat" is required to defend the revolution against capitalist resistance it seems incredulous to argue that Lenin's major theoretical work on that regime was impossible to apply in precisely the circumstances it was designed for. Lastly, of course, Lenin himself in 1917 mocked those who argued that revolution was out of the question because *"the circumstances are exceptionally complicated."* He noting that any revolution, *"in its development, would give rise to exceptionally complicated circumstances"* and that it was *"the sharpest, most furious, desperate class war and civil war. Not a single great revolution in history has escaped civil war. No one who does not live in a shell could imagine that civil war is conceivable without exceptionally complicated circumstances. If there were no exceptionally complicated circumstances there would be no revolution."* [**Will the Bolsheviks Maintain Power?**, p. 80 and p. 81] As such, to blame difficult objective circumstances for the failure of Bolshevism to apply the ideas in **State and Revolution** means to argue that those ideas are inappropriate for a revolution (which, we must stress, is what the leading Bolsheviks actually **did** end up arguing by their support for party dictatorship).

All in all, discussing Lenin's **State and Revolution** without indicating that the Bolsheviks failed to implement its ideas (indeed, did the exact opposite) suggests a lack of honesty. It also suggests that the libertarian ideas Lenin appropriated in that work could not survive being grafted onto the statist ideas of mainstream Marxism. As such, **The State and Revolution** laid out the foundations and sketched out the essential features of an alternative to Leninist ideas -- namely anarchism. Only the pro-Leninist tradition has used Lenin's work, almost to quiet their conscience, because Lenin, once in power, ignored it totally. The Russian Revolution shows that a workers state, as anarchists have long argued, means minority power, not working class self-management of society. As such, Lenin's work indicates the contradictory nature of Marxism -- while claiming to support democratic/libertarian ideals they promote structures

(such as centralised states) which undermine those values in favour of party rule. The lesson is clear, only libertarian means can ensure libertarian ends and they have to be applied consistently within libertarian structures to work. To apply them to statist ones will simply fail.

What happened during the Russian Revolution?

This appendix of the FAQ is not a full history of the Russian Revolution. The scope of such a work would simply be too large. Instead, this section will concentrate on certain key issues which matter in evaluating whether the Bolshevik revolution and regime were genuinely socialist or not. This is not all. Some Leninists acknowledge that that Bolshevik policies had little to do with socialism as such were the best that were available at the time. As such, this section will look at possible alternatives to Bolshevik policies and see whether they were, in fact, inevitable.

So for those seeking a comprehensive history of the revolution will have to look elsewhere. Here, we concentrate on those issues which matter when evaluating the socialist content of the revolution and of Bolshevism. In other words, the development of working class self-activity and self-organisation, workers' resistance to their bosses (whether capitalist or "red"), the activity of opposition groups and parties and the fate of working class organisations like trade unions, factory committees and soviets. Moreover, the role of the ruling party and its ideals also need to be indicated and evaluated somewhat (see ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#) for a fuller discussion of the role of Bolshevik ideology in the defeat of the revolution).

This means that this section is about two things, what Alexander Berkman termed "*the Bolshevik Myth*" and what Voline called "*the Unknown Revolution*" (these being the titles of their respective books on the revolution). After his experiences in Bolshevik Russia, Berkman came to the conclusion that it was "*[h]igh time the truth about the Bolsheviks were told. The whited sepulchre must unmasked, the clay feet of the fetish beguiling the international proletariat to fatal will o' wisps exposed. The Bolshevik myth must be destroyed.*" By so doing, he aimed to help the global revolutionary movement learn from the experience of the Russian revolution. Given that "*[t]o millions of the disinherited and enslaved it became a new religion, the beacon of social salvation*" it was an "*imperative to unmask the great delusion, which otherwise might lead the Western workers to the same abyss as their brothers in Russia.*" Bolshevism had "*failed, utterly and absolutely*" and so it was "*incumbent upon those who have seen through the myth to expose its true nature . . . Bolshevism is of the past. The future belongs to man and his liberty.*" [**The Bolshevik Myth**, p. 318 and p. 342]

Subsequent events proved Berkman correct. Socialism became linked to Soviet Russia and as it fell into Stalinism, the effect was to discredit socialism, even radical change as such, in the eyes of millions. And quite rightly too, given the horrors of Stalinism. If more radicals had had the foresight of Berkman and the other anarchists, this association of socialism and revolution with tyranny would have been combated and an alternative, libertarian, form of socialism would have risen to take the challenge of combating capitalism in the name of a **genuine** socialism, rooted in the ideals of liberty, equality and solidarity.

However, in spite of the horrors of Stalinism many people seeking a radical change in society are drawn

to Leninism. This is partly to do with the fact that in many countries Leninist parties have a organised presence and many radicalised people come across them first. It is also partly to do with the fact that many forms of Leninism denounce Stalinism for what it was and raise the possibility of the "genuine" Leninism of the Bolshevik party under Lenin and Trotsky. This current of Leninism is usually called "Trotskyism" and has many offshoots. For some of these parties, the differences between Trotskyism and Stalinism is pretty narrow. The closer to orthodox Trotskyism you get, the more Stalinist it appears. As Victor Serge noted of Trotsky's "Fourth International" in the 1930s, *"in the hearts of the persecuted I encountered the same attitudes as in their persecutors [the Stalinists] . . . Trotskyism was displaying symptoms of an outlook in harmony with the very Stalinism against which it had taken its stand . . . any person in the circles of the 'Fourth International' who went so far as to object to [Trotsky's] propositions was promptly expelled and denounced in the same language that the bureaucracy had] employed against us in the Soviet Union."* [**Memoirs of a Revolutionary**, p. 349] As we discuss in [section 3](#) of the appendix on ["Were any of the Bolshevik oppositions a real alternative?"](#), perhaps this is unsurprising given how much politically Trotsky's "Left Opposition" had shared with Stalinism.

Other Trotskyist parties have avoided the worse excesses of orthodox Trotskyism. Parties associated with the **International Socialists**, for example portray themselves as defending what they like to term *"socialism from below"* and the democratic promise of Bolshevik as expressed during 1917 and in the early months of Bolshevik rule. While anarchists are somewhat sceptical that Leninism can be called *"socialism from below"* (see [section H.3.3](#)), we need to address the claim that the period between February 1917 to the start of the Russian civil war at the end of May 1918 shows the real nature of Bolshevism. In order to do that we need to discuss what the Russian anarchist Voline called *"The Unknown Revolution."*

So what is the *"Unknown Revolution"*? Voline, an active participant in 1917 Russian Revolution, used that expression as the title of his classic account of the Russian revolution. He used it to refer to the rarely acknowledged independent, creative actions of the revolutionary people themselves. As Voline argued, *"it is not known how to study a revolution"* and most historians *"mistrust and ignore those developments which occur silently in the depths of the revolution . . . at best, they accord them a few words in passing . . . [Yet] it is precisely these hidden facts which are important, and which throw a true light on the events under consideration and on the period."* This section of the FAQ will try and present this *"unknown revolution,"* those movements *"which fought the Bolshevik power in the name of true liberty and of the principles of the Social Revolution which that power had scoffed at and trampled underfoot."* [**The Unknown Revolution**, p. 19 and p. 437] Voline gives the Kronstadt rebellion (see the appendix on ["What was the Kronstadt Rebellion?"](#)) and the Makhnovist movement (see the appendix on ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#)) pride of place in his account. Here we discuss other movements and the Bolshevik response to them.

Leninist accounts of the Russian Revolution, to a surprising extent, fall into the official form of history -- a concern more with political leaders than with the actions of the masses. Indeed, the popular aspects of the revolution are often distorted to accord with a predetermined social framework of Leninism. Thus the role of the masses is stressed during the period before the Bolshevik seizure of power. Here the

typical Leninist would agree, to a large extent, with summarised history of 1917 we present in [section 1](#). They would undoubtedly disagree with the downplaying of the role of the Bolshevik party (although as we discuss in [section 2](#), that party was far from the ideal model of the vanguard party of Leninist theory and modern Leninist practice). However, the role of the masses in the revolution would be praised, as would the Bolsheviks for supporting it.

The real difference arises once the Bolsheviks seize power in November 1917 (October, according to the Old Style calendar then used). After that, the masses simply disappear and into the void steps the leadership of the Bolshevik party. For Leninism, the "*unknown revolution*" simply stops. The sad fact is that very little is known about the dynamics of the revolution at the grassroots, particularly after October. Incredible as it may sound, very few Leninists are that interested in the realities of "workers' power" under the Bolsheviks or the actual performance and fate of such working class institutions as soviets, factory committees and co-operatives. What is written is often little more than vague generalities that aim to justify authoritarian Bolshevik policies which either explicitly aimed to undermine such bodies or, at best, resulted in their marginalisation when implemented.

This section of the FAQ aims to make known the "*unknown revolution*" that continued under the Bolsheviks and, equally important, the Bolshevik response to it. As part of this process we need to address some of the key events of that period, such as the role of foreign intervention and the impact of the civil war. However, we do not go into these issues in depth here and instead cover them in depth in the appendix on "[What caused the degeneration of the Russian Revolution?](#)". This is because most Leninists excuse Bolshevik authoritarianism on the impact of the civil war, regardless of the facts of the matter. As we discuss in the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the ideology of Bolshevism played its role as well -- something that modern day Leninists strenuously deny (again, regardless of the obvious). As we indicate in this section, the idea that Bolshevism came into conflict with the "*unknown revolution*" is simply not viable. Bolshevik ideology and practice made it inevitable that this conflict erupted, as it did **before** the start of the civil war (also see [section 3](#) of the appendix on "[What caused the degeneration of the Russian Revolution?](#)").

Ultimately, the reason why Leninist ideas still have influence on the socialist movement is due to the apparent success of the Russian Revolution. Many Leninist groups, mainly Trotskyists and derivatives of Trotskyism, point to "Red October" and the creation of the first ever workers state as concrete examples of the validity of their ideas. They point to Lenin's **State and Revolution** as proving the "democratic" (even "libertarian") nature of Leninism while, at the same time, supporting the party dictatorship he created and, moreover, rationalising the utter lack of working class freedom and power under it. We will try to indicate the falseness of such claims. As will become clear from this section, the following summation of an anonymous revolutionary is totally correct:

"Every notion about revolution inherited from Bolshevism is false."

In this, they were simply repeating the conclusions of anarchists. As Kropotkin stressed in 1920:

"It seems to me that this attempt to build a communist republic on the basis of a strongly centralised state, under the iron law of the dictatorship of one party, has ended in a terrible fiasco. Russia teaches us how not to impose communism." [Peter Kropotkin, quoted by Guerin, **Anarchism**, p. 106]

Ultimately, the experience of Bolshevism was a disaster. And as the Makhnovists in the Ukraine proved, Bolshevik ideology and practice was **not** the only option available (see the appendix on ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#)). There **were** alternatives, but Bolshevik ideology simply excluded using them (we will discuss some possibilities in this various subsections below). In other words, Bolshevik ideology is simply not suitable for a real revolutionary movement and the problems it will face. In fact, its ideology and practice ensures that any such problems will be magnified and made worse, as the Russian revolution proves.

Sadly many socialists cannot bring themselves to acknowledge this. While recognising the evils of the Stalinist bureaucracy, these socialists deny that this degeneration of Bolshevism was inevitable and was caused by outside factors (namely the Russian Civil War or isolation). While not denying that these factors did have an effect in the outcome of the Russian Revolution, the seeds for bureaucracy existed from the first moment of the Bolshevik insurrection. These seeds where from three sources: Bolshevik politics, the nature of the state and the post-October economic arrangements favoured and implemented by the ruling party.

As we will indicate, these three factors caused the new "workers' state" to degenerate long before the outbreak of the Civil war in May of 1918. This means that the revolution was **not** defeated primarily because of isolation or the effects of the civil war. The Bolsheviks had already seriously undermined it from within **long before** the effects of isolation or civil war had a chance to take hold. The civil war which started in the summer of 1918 did take its toll in what revolutionary gains survived, not least because it allowed the Bolsheviks to portray themselves and their policies as the lessor of two evils. However, Lenin's regime was already defending (state) capitalism against genuine socialist tendencies before the outbreak of civil war. The suppression of Kronstadt in March 1921 was simply the logical end result of a process that had started in the spring of 1918, at the latest. As such, isolation and civil war are hardly good excuses -- particularly as anarchists had predicted they would affect every revolution decades previously and Leninists are meant to realise that civil war and revolution are inevitable. Also, it must be stressed that Bolshevik rule was opposed by the working class, who took collective action to resist it and the Bolsheviks justified their policies in ideological terms and **not** in terms of measures required by difficult circumstances (see the appendix on ["What caused the degeneration of the Russian Revolution?"](#)).

One last thing. We are sure, in chronicling the "excesses" of the Bolshevik regime, that some Leninists will say "they sound exactly like the right-wing." Presumably, if we said that the sun rises in the East and sets in the West we would also "sound like the right-wing." That the right-wing also points to certain **facts** of the revolution does not in any way discredit these facts. How these facts are used is what counts. The right uses the facts to discredit socialism and the revolution. Anarchists use them to argue for

libertarian socialism and support the revolution while opposing the Bolshevik ideology and practice which distorted it. Similarly, unlike the right we take into account the factors which Leninists urge us to use to excuse Bolshevik authoritarianism (such as civil war, economic collapse and so on). We are simply not convinced by Leninist arguments.

Needless to say, few Leninists apply their logic to Stalinism. To attack Stalinism by describing the facts of the regime would make one sound like the "right-wing." Does that mean socialists should defend one of the most horrific dictatorships that ever existed? If so, how does that sound to non-socialists? Surely they would conclude that socialism **is** about Stalinism, dictatorship, terror and so on? If not, why not? If "sounding like the right" makes criticism of Lenin's regime anti-revolutionary, then why does this not apply to Stalinism? Simply because Lenin and Trotsky were not at the head of the dictatorship as they were in the early 1920s? Does the individuals who are in charge override the social relations of a society? Does dictatorship and one-man management become less so when Lenin rules? The apologists for Lenin and Trotsky point to the necessity created by the civil war and isolation within international capitalism for their authoritarian policies (while ignoring the fact they started **before** the civil war, continued after it **and were justified at the time** in terms of Bolshevik ideology). Stalin could make the same claim.

Other objections may be raised. It may be claimed that we quote "bourgeois" (or even worse, **Menshevik**) sources and so our account is flawed. In reply, we have to state that you cannot judge a regime based purely on what it says about itself. As such, critical accounts are required to paint a full picture of events. Moreover, it is a sad fact that few, if any, Leninist accounts of the Russian Revolution actually discuss the class and social dynamics (and struggles) of the period under Lenin and Trotsky. This means we have to utilise the sources which **do**, namely those historians who do not identify with the Bolshevik regime. And, of course, any analysis (or defence) of the Bolshevik regime will have to account for critical accounts, either by refuting them or by showing their limitations. As will become obvious in our discussion, the reason why latter day Bolsheviks talk about the class dynamics post-October in the most superficial way is that it would be hard, even impossible, to maintain that Lenin's regime was remotely socialist or based on working class power. Simply put, from early 1918 (at the latest) conflict between the Bolsheviks and the Russian working masses was a constant feature of the regime. It is only when that conflict reached massive proportions that Leninists do not (i.e. cannot) ignore it. In such cases, as the Kronstadt rebellion proves, history is distorted in order to defend the Bolshevik state (see the appendix on ["What was the Kronstadt Rebellion?"](#) for details).

The fact that Leninists try to discredit anarchists by saying that we sound like the right is sad. In effect, it **blocks** any real discussion of the Russian Revolution and Bolshevism (as intended, probably). This ensures that Leninism remains above critique and so no lessons can be learnt from the Russian experience. After all, if the Bolsheviks had no choice then what lessons **are** there to learn? None. And if we are to learn no lessons (bar, obviously, mimic the Bolsheviks) we are doomed to repeat the same mistakes -- mistakes that are partly explained by the objective circumstances at the time and partly by Bolshevik politics. But given that most of the circumstances the Bolsheviks faced, such as civil war and isolation, are likely to reappear in any future revolution, modern-day Leninists are simply ensuring that Karl Marx was right -- history repeats itself, first time as tragedy, second time as farce.

Such a position is, of course, wonderful for the pro-Leninist. It allows them to quote Lenin and Trotsky and use the Bolsheviks as the paradigm of revolution while washing their hands of the results of that revolution. By arguing that the Bolsheviks were "*making a virtue of necessity*," (to use the expression of Leninist Donny Gluckstein [**The Tragedy of Bukharin**, p. 41]), they are automatically absolved of proving their arguments about the "democratic" essence of Bolshevism in power. Which is useful as, logically, no such evidence could exist and, in fact, there is a whole host of evidence pointing the other way which can, by happy co-incidence, be ignored. Indeed, from this perspective there is no point even discussing the revolution at all, beyond praising the activities and ideology of the Bolsheviks while sadly noting that "fate" (to quote Leninist Tony Cliff) ensured that they could not fulfil their promises. Which, of course, almost Leninist accounts **do** boil down to. Thus, for the modern Leninist, the Bolsheviks cannot be judged on what they did nor what they said while doing it (or even after). They can only be praised for what they said and did **before** they seized power.

However, anarchists have a problem with this position. It smacks more of religion than theory. Karl Marx was right to argue that you cannot judge people by what they say, only by what they do. It is in this revolutionary spirit that this section of the FAQ analyses the Russian revolution and the Bolshevik role within it. We need to analyse what they did when they held power as well as the election manifesto. As we will indicate in this section, neither was particularly appealing.

Finally, we should note that Leninists today have various arguments to justify what the Bolsheviks did once in power. We discuss these in the appendix on ["What caused the degeneration of the Russian Revolution?"](#). We also discuss in the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#) the ideological roots of the counter-revolutionary role of the Bolsheviks during the revolution. That the politics of the Bolsheviks played its role in the failure of the revolution can be seen from the example of the anarchist influenced Makhnovist movement which applied basic libertarian principles in the same difficult circumstances of the Russian Civil War (see ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#) on this important movement).

1 Can you give a short summary of what happened in 1917?

2 How did the Bolsheviks gain mass support?

3 Surely the Russian Revolution proves that vanguard parties work?

No, far from it. Looking at the history of vanguardism we are struck by its failures, not its successes. Indeed, the proponents of "*democratic centralism*" can point to only one apparent success of their model, namely the Russian Revolution. However, we are warned by Leninists that failure to use the vanguard party will inevitably condemn future revolutions to failure:

"The proletariat can take power only through its vanguard. . . Without the confidence of the class in the vanguard, without support of the vanguard by the class, there can be no talk of the conquest of power . . . The Soviets are the only organised form of the tie between the vanguard and the class. A revolutionary content can be given this form only by the party. This is proved by the positive experience of the October Revolution and by the negative experience of other countries (Germany, Austria, finally, Spain). No one has either shown in practice or tried to explain articulately on paper how the proletariat can seize power without the political leadership of a party that knows what it wants." [Trotsky, **Stalinism and Bolshevism**]

To anarchist ears, such claims seem out of place. After all, did the Russian Revolution actually result in socialism or even a viable form of soviet democracy? Far from it. Unless you picture revolution as simply the changing of the party in power, you have to acknowledge that while the Bolshevik party **did** take power in Russian in November 1917, the net effect of this was **not** the stated goals that justified that action. Thus, if we take the term "*effective*" to mean "an efficient means to achieve the desired goals" then vanguardism has not been proven to be effective, quite the reverse (assuming that your desired goal is a socialist society, rather than party power). Needless to say, Trotsky blames the failure of the Russian Revolution on "*objective*" factors rather than Bolshevik policies and practice, an argument we address in detail in ["What caused the degeneration of the Russian Revolution?"](#) and will not do so here.

So while Leninists make great claims for the effectiveness of their chosen kind of party, the hard facts of history are against their positive evaluation of vanguard parties. Ironically, even the Russian Revolution disproves the claims of Leninists. The fact is that the Bolshevik party in 1917 was very far from the "*democratic centralist*" organisation which supporters of "*vanguardism*" like to claim it is. As such, its success in 1917 lies more in its divergence from the principles of "*democratic centralism*" than in their application. The subsequent degeneration of the revolution and the party is marked by the increasing **application** of those principles in the life of the party.

Thus, to refute the claims of the "*effectiveness*" and "*efficiency*" of vanguardism, we need to look at its one and only success, namely the Russian Revolution. As the Cohen-Bendit brothers argue, "*far from leading the Russian Revolution forwards, the Bolsheviks were responsible for holding back the struggle of the masses between February and October 1917, and later for turning the revolution into a bureaucratic counter-revolution -- in both cases because of the party's very nature, structure and ideology.*" Indeed, "*[f]rom April to October, Lenin had to fight a constant battle to keep the Party leadership in tune with the masses.*" [**Obsolete Communism**, p. 183 and p. 187] It was only by continually violating its own "*nature, structure and ideology*" that the Bolshevik party played an important role in the revolution. Whenever the principles of "*democratic centralism*" were applied, the Bolshevik party played the role the Cohen-Bendit brothers subscribed to it (and once in power, the party's negative features came to the fore).

Even Leninists acknowledge that, to quote Tony Cliff, throughout the history of Bolshevism, "*a certain conservatism arose.*" Indeed, "*[a]t practically all sharp turning points, Lenin had to rely on the lower*

strata of the party machine against the higher, or on the rank and file against the machine as a whole." [Lenin, vol. 2, p. 135] This fact, incidentally, refutes the basic assumptions of Lenin's party schema, namely that the broad party membership, like the working class, was subject to bourgeois influences so necessitating central leadership and control from above.

Looking at both the 1905 and 1917 revolutions, we are struck by how often this "*conservatism*" arose and how often the higher bodies were behind the spontaneous actions of the masses and the party membership. Looking at the 1905 revolution, we discover a classic example of the inefficiency of "democratic centralism." Facing in 1905 the rise of the soviets, councils of workers' delegates elected to co-ordinate strikes and other forms of struggle, the Bolsheviks did not know what to do. "*The Petersburg Committee of the Bolsheviks,*" noted Trotsky, "*was frightened at first by such an innovation as a non-partisan representation of the embattled masses, and could find nothing better to do than to present the Soviet with an ultimatum: immediately adopt a Social-Democratic program or disband. The Petersburg Soviet as a whole, including the contingent of Bolshevik workingmen as well ignored this ultimatum without batting an eyelash.*" [Stalin, vol. 1, p. 106] More than that, "[t]he party's Central Committee published the resolution on October 27, thereby making it the binding directive for all other Bolshevik organisations." [Oskar Anweiler, **The Soviets**, p. 77] It was only the return of Lenin which stopped the Bolshevik's open attacks against the Soviet (also see [section 8](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)").

The rationale for these attacks is significant. The St. Petersburg Bolsheviks were convinced that "*only a strong party along class lines can guide the proletarian political movement and preserve the integrity of its program, rather than a political mixture of this kind, an indeterminate and vacillating political organisation such as the workers council represents and cannot help but represent.*" [quoted by Anweiler, **Op. Cit.**, p. 77] In other words, the soviets could not reflect workers' interests because they were elected by the workers! The implications of this perspective came clear in 1918, when the Bolsheviks gerrymandered and disbanded soviets to remain in power (see [section 6](#)). That the Bolshevik's position flowed naturally from Lenin's arguments in **What is to be Done?** is clear. Thus the underlying logic of Lenin's vanguardism ensured that the Bolsheviks played a negative role with regards the soviets which, combined with "democratic centralism" ensured that it was spread far and wide. Only by ignoring their own party's principles and staying in the Soviet did rank and file Bolsheviks play a positive role in the revolution. This divergence of top and bottom would be repeated in 1917.

Given this, perhaps it is unsurprising that Leninists started to rewrite the history of the 1905 revolution. Victor Serge, a "Left Oppositionist" and anti-Stalinist asserted in the late 1920s that in 1905 the Petrograd Soviet was "*led by Trotsky and inspired by the Bolsheviks.*" [**Year One of the Russian Revolution**, p. 36]. While the former claim is correct, the latter is not. As noted, the Bolsheviks were initially opposed the soviets and systematically worked to undermine them. Unsurprisingly, Trotsky at that time was a Menshevik, not a Bolshevik. After all, how could the most revolutionary party that ever existed have messed up so badly? How could democratic centralism faired so badly in practice? Best, then, to suggest that it did not and give the Bolsheviks a role better suited to the rhetoric of Bolshevism than its reality.

Trotsky was no different. He, needless to say, denied the obvious implications of these events in 1905. While admitting that the Bolsheviks "*adjusted themselves more slowly to the sweep of the movement*" and that the Mensheviks "*were preponderant in the Soviet,*" he tries to save vanguardism by asserting that "*the general direction of the Soviet's policy proceeded in the main along Bolshevik lines.*" So, in spite of the lack of Bolshevik influence, in spite of the slowness in adjusting to the revolution, Bolshevism was, in fact, the leading set of ideas in the revolution! Ironically, a few pages later, he mocks the claims of Stalinists that Stalin had "*isolated the Mensheviks from the masses*" by noting that the "*figures hardly bear [the claims] out.*" [Op. Cit., p. 112 and p. 117] Shame he did not apply this criteria to his own claims.

Of course, every party makes mistakes. The question is, how did the "*most revolutionary party of all time*" fare in 1917. Surely that revolution proves the validity of vanguardism and "democratic centralism"? After all, there was a successful revolution, the Bolshevik party did seize power. However, the apparent success of 1917 was not due to the application of "democratic centralism," quite the reverse. While the myth of 1917 is that a highly efficient, democratic centralist vanguard party ensured the overthrow of the Provisional Government in November 1917 in favour of the Soviets (or so it seemed at the time) the facts are somewhat different. Rather, the Bolshevik party throughout 1917 was a fairly loose collection of local organisations (each more than willing to ignore central commands and express their autonomy), with much internal dissent and infighting and no discipline beyond what was created by common loyalty. The "democratic centralist" party, as desired by Lenin, was only created in the course of the Civil War and the tightening of the party dictatorship. In other words, the party became more like a "democratic centralist" one as the revolution degenerated. As such, the various followers of Lenin (Stalinists, Trotskyists and their multitude of offshoots) subscribe to a myth, which probably explains their lack of success in reproducing a similar organisation since. So assuming that the Bolsheviks did play an important role in the Russian revolution, it was because it was **not** the centralised, disciplined Bolshevik party of Leninist myth. Indeed, when the party **did** operate in a vanguardist manner, failure was soon to follow.

This claim can be proven by looking at the history of the 1917 revolution. The February revolution started with a spontaneous protests and strikes. As Murray Bookchin notes, "*the Petrograd organisation of the Bolsheviks opposed the calling of strikes precisely on the eve of the revolution which was destined to overthrow the Tsar. Fortunately, the workers ignored the Bolshevik 'directives' and went on strike anyway. In the events which followed, no one was more surprised by the revolution than the 'revolutionary' parties, including the Bolsheviks.*" [Post-Scarcity Anarchism, p. 194] Trotsky quotes one of the Bolshevik leaders at the time:

"Absolutely no guiding initiative from the party centres was felt . . . the Petrograd Committee had been arrested and the representative of the Central Committee . . . was unable to give any directives for the coming day." [quoted by Trotsky, **History of the Russian Revolution**, vol. 1, p. 147]

Not the best of starts. Of course rank and file Bolsheviks took part in the demonstrations, street fights

and strikes and so violated the principles their party was meant to be based on. As the revolution progressed, so did the dual nature of the Bolshevik party (i.e. its practical divergence from "democratic centralism" in order to be effective and attempts to force it back into that schema which handicapped the revolution). However, during 1917, "democratic centralism" was ignored in order to ensure the the Bolsheviks played any role at all in the revolution. As one historian of the party makes clear, in 1917 and until the outbreak of the Civil War, the party operated in ways that few modern "vanguard" parties would tolerate:

"The committees were a law unto themselves when it came to accepting orders from above. Democratic centralism, as vague a principle of internal administration as there ever has been, was commonly held at least to enjoin lower executive bodies that they should obey the behests of all higher bodies in the organisational hierarchy. But town committees in practice had the devil's own job in imposing firm leadership . . . Insubordination was the rule of the day whenever lower party bodies thought questions of importance were at stake.

"Suburb committees too faced difficulties in imposing discipline. Many a party cell saw fit to thumb its nose at higher authority and to pursue policies which it felt to be more suited to local circumstances or more desirable in general. No great secret was made of this. In fact, it was openly admitted that hardly a party committee existed which did not encounter problems in enforcing its will even upon individual activists." [Robert Service, **The Bolshevik Party in Revolution 1917-1923**, pp. 51-2]

So while Lenin's ideal model of a disciplined, centralised and top-down party had been expounded since 1902, the operation of the party never matched his desire. As Service notes, *"a disciplined hierarchy of command stretching down from the regional committees to party cells"* had *"never existed in Bolshevik history."* In the heady days of the revolution, when the party was flooded by new members, the party ignored what was meant to be its guiding principles. As Service constantly stresses, Bolshevik party life in 1917 was the exact opposite of that usually considered (by both opponents and supporters of Bolshevism) as its normal mode of operation. *"Anarchist attitudes to higher authority,"* he argues, *"were the rule of the day"* and *"no Bolshevik leader in his right mind could have contemplated a regular insistence upon rigid standards of hierarchical control and discipline unless he had abandoned all hope of establishing a mass socialist party."* This meant that *"in the Russia of 1917 it was the easiest thing in the world for lower party bodies to rebut the demands and pleas by higher authority."* He stresses that *"[s]uburb and town committees . . . often refused to go along with official policies . . . they also . . . sometimes took it into their heads to engage in active obstruction."* [Op. Cit., p. 80, p. 62 p. 56 and p. 60]

This worked both ways, of course. Town committees did *"snub their nose at lower-echelon viewpoints in the time before the next election. Try as hard as they might, suburb committees and ordinary cells could meanwhile do little to rectify matters beyond telling their own representative on their town committee to speak on their behalf. Or, if this too failed, they could resort to disruptive tactics by criticising it in public and refusing it all collaboration."* [Op. Cit., pp. 52-3] Even by early 1918, the

Bolshevik party bore little resemblance to the "democratic centralist" model desired by Lenin:

"The image of a disciplined hierarchy of party committees was therefore but a thin, artificial veneer which was used by Bolshevik leaders to cover up the cracked surface of the real picture underneath. Cells and suburb committees saw no reason to kow-tow to town committees; nor did town committees feel under compulsion to show any greater respect to their provincial and regional committees than before." [Op. Cit., p. 74]

It is this insubordination, this local autonomy and action in spite of central orders which explains the success of the Bolsheviks in 1917. Rather than a highly centralised and disciplined body of "professional" revolutionaries, the party in 1917 saw a *"significant change . . . within the membership of the party at local level . . . From the time of the February revolution requirements for party membership had been all but suspended, and now Bolshevik ranks swelled with impetuous recruits who knew next to nothing about Marxism and who were united by little more than overwhelming impatience for revolutionary action."* [Alexander Rabinowitch, **Prelude to Revolution**, p. 41]

This mass of new members (many of whom were peasants who had just recently joined the industrial workforce) had a radicalising effect on the party's policies and structures. As even Leninist commentators argue, it was this influx of members who allowed Lenin to gain support for his radical revision of party aims in April. However, in spite of this radicalisation of the party base, the party machine still was at odds with the desires of the party. As Trotsky acknowledged, the situation *"called for resolute confrontation of the sluggish Party machine with masses and ideas in motion."* He stressed that *"the masses were incomparably more revolutionary than the Party, which in turn was more revolutionary than its committeemen."* Ironically, given the role Trotsky usually gave the party, he admits that *"[w]ithout Lenin, no one had known what to make of the unprecedented situation."* [Stalin, vol. 1, p. 301, p. 305 and p. 297]

Which is significant in itself. The Bolshevik party is usually claimed as being the most "revolutionary" that ever existed, yet here is Trotsky admitting that its leading members did not have a clue what to do. He even argued that *"[e]very time the Bolshevik leaders had to act without Lenin they fell into error, usually inclining to the Right."* [Op. Cit., p. 299] This negative opinion of the Bolsheviks applied even to the *"left Bolsheviks, especially the workers"* whom we are informed *"tried with all their force to break through this quarantine"* created by the Bolshevik leaders policy *"of waiting, of accommodation, and of actual retreat before the Compromisers"* after the February revolution and before the arrival of Lenin. Trotsky argues that *"they did not know how to refute the premise about the bourgeois character of the revolution and the danger of an isolation of the proletariat. They submitted, gritting their teeth, to the directions of their leaders."* [History of the Russian Revolution, vol. 1, p. 273] It seems strange, to say the least, that without one person the whole of the party was reduced to such a level given that the aim of the "revolutionary" party was to develop the political awareness of its members.

Lenin's arrival, according to Trotsky, allowed the influence of the more radical rank and file to defeat the conservatism of the party machine. By the end of April, Lenin had managed to win over the majority of

the party leadership to his position. However, as Trotsky argues, this *"April conflict between Lenin and the general staff of the party was not the only one of its kind. Throughout the whole history of Bolshevism . . . all the leaders of the party at all the most important moments stood to the right of Lenin."* [Op. Cit., p. 305] As such, if "democratic centralism" had worked as intended, the whole party would have been arguing for incorrect positions the bulk of its existence (assuming, of course, that Lenin was correct most of the time).

For Trotsky, *"Lenin exerted influence not so much as an individual but because he embodied the influence of the class on the Party and of the Party on its machine."* [Stalin, vol. 1, p. 299] Yet, this was the machine which Lenin had forged, which embodied his vision of how a "revolutionary" party should operate and was headed by him. In other words, to argue that the party machine was behind the party membership and the membership behind the class shows the bankruptcy of Lenin's organisational scheme. This *"backwardness,"* moreover, indicates an independence of the party bureaucracy from the membership and the membership from the masses. As Lenin's constantly repeated aim was for the party to seize power (based on the dubious assumption that class power would only be expressed, indeed was identical to, party power) this independence held serious dangers, dangers which became apparent once this goal was achieved.

Trotsky asks the question *"by what miracle did Lenin manage in a few short weeks to turn the Party's course into a new channel?"* Significantly, he answers as follows: *"Lenin's personal attributes and the objective situation."* [Ibid.] No mention is made of the democratic features of the party organisation, which suggests that without Lenin the rank and file party members would not have been able to shift the weight of the party machine in their favour. Trotsky seems close to admitting this:

"As often happens, a sharp cleavage developed between the classes in motion and the interests of the party machines. Even the Bolshevik Party cadres, who enjoyed the benefit of exceptional revolutionary training, were definitely inclined to disregard the masses and to identify their own special interests and the interests of the machine on the very day after the monarchy was overthrown." [Stalin, vol. 1, p. 298]

Thus the party machine, which embodied the principles of "democratic centralism" proved less than able to the task assigned it in practice. Without Lenin, it is doubtful that the party membership would have over come the party machine:

"Lenin was strong not only because he understood the laws of the class struggle but also because his ear was faultlessly attuned to the stirrings of the masses in motion. He represented not so much the Party machine as the vanguard of the proletariat. He was definitely convinced that thousands from among those workers who had borne the brunt of supporting the underground Party would now support him. The masses at the moment were more revolutionary than the Party, and the Party more revolutionary than its machine. As early as March the actual attitude of the workers and soldiers had in many cases become stormily apparent, and it was widely at variance with the instructions issued

by all the parties, including the Bolsheviks." [Op. Cit., p. 299]

Little wonder the local party groupings ignored the party machine, practising autonomy and initiative in the face of a party machine inclined to conservatism, inertia, bureaucracy and remoteness. This conflict between the party machine and the principles it was based on and the needs of the revolution and party membership was expressed continually throughout 1917:

"In short, the success of the revolution called for action against the 'highest circles of the party,' who, from February to October, utterly failed to play the revolutionary role they ought to have taken in theory. The masses themselves made the revolution, with or even against the party -- this much at least was clear to Trotsky the historian. But far from drawing the correct conclusion, Trotsky the theorist continued to argue that the masses are incapable of making a revolution without a leader." [Daniel & Gabriel Cohn-Bendit, Op. Cit., p. 188]

Looking at the development of the revolution from April onwards, we are struck by the sluggishness of the party hierarchy. At every revolutionary upsurge, the party simply was not to the task of responding to the needs of masses and the local party groupings closest to them. This can be seen in June, July and October itself. At each turn, the rank and file groupings or Lenin had to constantly violate the principles of their own party in order to be effective. The remoteness and conservatism of the party even under Lenin can be constantly seen.

For example, when discussing the cancellation by the central committee of a demonstration planned for June 10th by the Petrograd Bolsheviks, the unresponsiveness of the party hierarchy can be seen. The *"speeches by Lenin and Zinoviev [justifying their actions] by no means satisfied the Petersburg Committee. If anything, it appears that their explanations served to strengthen the feeling that at best the party leadership had acted irresponsibly and incompetently and was seriously out of touch with reality."* Indeed, many *"blamed the Central Committee for taking so long to respond to Military Organisation appeals for a demonstration."* [Rabinowitch, Op. Cit., p. 88 and p. 92]

During the discussions in late June, 1917, on whether to take direct action against the Provisional Government there was a *"wide gulf"* between lower organs evaluations of the current situation and that of the Central Committee. [Rabinowitch, Op. Cit., p. 129] Indeed, among the delegates from the Bolshevik military groups, only Lashevich (an old Bolshevik) spoke in favour of the Central Committee position and he noted that *"[f]requently it is impossible to make out where the Bolshevik ends and the Anarchist begins."* [quoted by Rabinowitch, Op. Cit., p. 129]

In the July days, the breach between the local party groups and the central committee increased. As we noted in the [section 1](#), this spontaneous uprising was opposed to by the Bolshevik leadership, in spite of the leading role of their own militants (along with anarchists) in fermenting it. While calling on their own militants to restrain the masses, the party leadership was ignored by the rank and file membership who played an active role in the event. Sickened by being asked to play the role of *"fireman,"* the party

militants rejected party discipline in order to maintain their credibility with the working class. Rank and file activists, pointing to the snowballing of the movement, showed clear dissatisfaction with the Central Committee. One argued that it *"was not aware of the latest developments when it made its decision to oppose the movement into the streets."* Ultimately, the Central Committee appeal *"for restraining the masses . . . was removed from . . . Pravda . . . and so the party's indecision was reflected by a large blank space on page one."* [Rabinowitch, **Op. Cit.**, p. 150, p. 159 and P. 175] Ultimately, the indecisive nature of the leadership can be explained by the fact it did not think it could seize state power for itself. As Trotsky noted, *"the state of popular consciousness . . . made impossible the seizure of power by the Bolsheviks in July."* [**History of the Russian Revolution**, vol. 2, p. 81]

The indecision of the party hierarchy did have an effect, of course. While the anarchists at Kronstadt looked at the demonstration as the start of an uprising, the Bolsheviks there were *"wavering indecisively in the middle"* between them and the Left-Social Revolutionaries who saw it as a means of applying pressure on the government. This was because they were *"hamstrung by the indecision of the party Central Committee."* [Rabinowitch, **Op. Cit.**, p. 187] Little wonder so many Bolshevik party organisations developed and protected their own autonomy and ability to act!

Significantly, one of the main Bolshevik groupings which helped organise and support the July uprising, the Military Organisation, started their own paper after the Central Committee had decreed after the failed revolt that neither it, nor the Petersburg Committee, should be allowed to have one. It *"angrily insisted on what it considered its just prerogatives"* and in *"no uncertain terms it affirmed its right to publish an independent newspaper and formally protested what is referred to as 'a system of persecution and repression of an extremely peculiar character which had begun with the election of the new Central Committee.'"* [Rabinowitch, **Op. Cit.**, p. 227] The Central Committee backed down, undoubtedly due to the fact it could not enforce its decision.

As the Cohn-Bendit brothers argue, *"five months after the Revolution and three months before the October uprising, the masses were still governing themselves, and the Bolshevik vanguard simply had to toe the line."* [**Op. Cit.**, p. 186] Within that vanguard, the central committee proved to be out of touch with the rank and file, who ignored it rather than break with their fellow workers.

Even by October, the party machine still lagged behind the needs of the revolution. In fact, Lenin could only impose his view by going over the head of the Central Committee. According to Trotsky's account, *"this time he [wa]s not satisfied with furious criticism"* of the *"ruinous Fabianism of the Petrograd leadership"* and *"by way of protest he resign[ed] from the Central Committee."* [**History of the Russian Revolution**, vol. 3, p. 131] Trotsky quotes Lenin as follows:

"I am compelled to request permission to withdraw from the Central Committee, which I hereby do, and leave myself freedom of agitation in the lower ranks of the party and at the party congress." [quoted by Trotsky, **Op. Cit.**, p. 131]

Thus the October revolution was precipitated by a blatant violation of the principles Lenin spent his life

advocating. Indeed, if someone else other than Lenin had done this we are sure that Lenin, and his numerous followers, would have dismissed it as the action of a "*petty-bourgeois intellectual*" who cannot handle party "*discipline.*" This is itself is significant, as is the fact that he decided to appeal to the "*lower ranks*" of the party. Simply put, rather than being "democratic" the party machine effectively blocked communication and control from the bottom-up. Looking at the more radical party membership, he "*could only impose his view by going over the head of his Central Committee.*" [Daniel and Gabriel Cohn-Bendit, **Op. Cit.**, p. 187] He made sure to send his letter of protest to "*the Petrograd and Moscow committees*" and also made sure that "*copies fell into the hands of the more reliable party workers of the district locals.*" By early October (and "*over the heads of the Central Committee*") he wrote "*directly to the Petrograd and Moscow committees*" calling for insurrection. He also "*appealed to a Petrograd party conference to speak a firm word in favour of insurrection.*" [Trotsky, **Op. Cit.**, p. 131 and p. 132]

In October, Lenin had to fight what he called "*a wavering*" in the "*upper circles of the party*" which lead to a "*sort of dread of the struggle for power, an inclination to replace this struggle with resolutions protests, and conferences.*" [quoted by Trotsky, **Op. Cit.**, p. 132] For Trotsky, this represented "*almost a direct pitting of the party against the Central Committee,*" required because "*it was a question of the fate of the revolution*" and so "*all other considerations fell away.*" [Trotsky, **Op. Cit.**, pp. 132-3] On October 8th, when Lenin addressed the Bolshevik delegates of the forthcoming Northern Congress of Soviets on this subject, he did so "*personally*" as there "*was no party decision*" and the "*higher institutions of the party had not yet expressed themselves.*" [Trotsky, **Op. Cit.**, p. 133] Ultimately, the Central Committee came round to Lenin's position but they did so under pressure of means at odds with the principles of the party.

This divergence between the imagine and reality of the Bolsheviks explains their success. If the party had applied or had remained true to the principles of "democratic centralism" it is doubtful that it would have played an important role in the movement. As Alexander Rabinowitch argues, Bolshevik organisational unity and discipline is "*vastly exaggerated*" and, in fact, Bolshevik success in 1917 was down to "*the party's internally relatively democratic, tolerant, and decentralised structure and method of operation, as well as its essentially open and mass character -- in striking contrast to the traditional Leninist model.*" In 1917, he goes on, "*subordinate party bodies with the Petersburg Committee and the Military Organisation were permitted considerable independence and initiative . . . Most importantly, these lower bodies were able to tailor their tactics and appeals to suit their own particular constituencies amid rapidly changing conditions. Vast numbers of new members were recruited into the party . . . The newcomers included tens of thousands of workers and soldiers . . . who knew little, if anything, about Marxism and cared nothing about party discipline.*" For example, while the slogan "*All Power to the Soviets*" was "*officially withdrawn by the Sixth [Party] Congress in late July, this change did not take hold at the local level.*" [**The Bolsheviks Come to Power**, p. 311, p. 312 and p. 313]

It is no exaggeration to argue that if any member of a current vanguard party acted as the Bolshevik rank and file did in 1917, they would quickly be expelled (this probably explains why no such party has been remotely successful since). However, this ferment from below was quickly undermined within the party with the start of the Civil War. It is from this period when "democratic centralism" was actually applied within the party and clarified as an organisational principle:

"It was quite a turnabout since the anarchic days before the Civil War. The Central Committee had always advocated the virtues of obedience and co-operation; but the rank-and-filers of 1917 had cared little about such entreaties as they did about appeals made by other higher authorities. The wartime emergency now supplied an opportunity to expatiate on this theme at will." [Service, **Op. Cit.**, p. 91]

Service stresses that *"it appears quite remarkable how quickly the Bolsheviks, who for years had talked idly about a strict hierarchy of command inside the party, at last began to put ideas into practice."* [**Op. Cit.**, p. 96]

In other words, the conversion of the Bolshevik party into a fully fledged *"democratic centralist"* party occurred during the degeneration of the Revolution. This was both a consequence of the rising authoritarianism within the party and society as well as one of its causes. As such, it is quite ironic that the model used by modern day followers of Lenin is that of the party during the decline of the revolution, not its peak. This is not surprising. Once in power, the Bolshevik party imposed a state capitalist regime onto the Russian people. Can it be surprising that the party structure which it developed to aid this process was also based on bourgeois attitudes and organisation? Simply put, the party model advocated by Lenin may not have been very effective during a revolution but it was exceedingly effective at prompting hierarchy and authority in the post-revolutionary regime. It simply replaced the old ruling elite with another, made up of members of the radical intelligentsia and odd ex-worker or ex-peasant.

This was due to the hierarchical and top-down nature of the party Lenin had created. While the party base was largely working class, the leadership was not. Full-time revolutionaries, they were either middle-class intellectuals or (occasionally) ex-workers and (even rarer) ex-peasants who had left their class to become part of the party machine. Even the delegates at the party congresses did not truly reflect class basis of the party membership. For example, the number of delegates was still dominated by white-collar or others (59.1% to 40.9%) at the sixth party congress at the end of July 1917. [Cliff, **Lenin**, vol. 2, p. 160] So while the party gathered more working class members in 1917, it cannot be said that this was reflected in the party leadership which remained dominated by non-working class elements. Rather than being a genuine working class organisation, the Bolshevik party was a hierarchical group headed by non-working class elements whose working class base could not effectively control them even during the revolution in 1917. It was only effective because these newly joined and radicalised working class members ignored their own party structure and its defining ideology.

After the revolution, the Bolsheviks saw their membership start to decrease. Significantly, *"the decline in numbers which occurred from early 1918 onwards"* started happening *"contrary to what is usually assumed, some months before the Central Committee's decree in midsummer that the party should be purged of its 'undesirable' elements."* These lost members reflected two things. Firstly, the general decline in the size of the industrial working class. This meant that the radicalised new elements from the countryside which had flocked to the Bolsheviks in 1917 returned home. Secondly, the lost of popular support the Bolsheviks were facing due to the realities of their regime. This can be seen from the fact

that while the Bolsheviks were losing members, the Left SRS almost doubled in size to 100,000 (the Mensheviks claimed to have a similar number). Rather than non-proletarians leaving, "*[i]t is more probable by far that it was industrial workers who were leaving in droves. After all, it would have been strange if the growing unpopularity of Sovnarkom in factory milieu had been confined exclusively to non-Bolsheviks.*" Unsurprisingly, given its position in power, "*[a]s the proportion of working-class members declined, so that of entrants from the middle-class rose; the steady drift towards a party in which industrial workers no longer numerically predominated was under way.*" By late 1918 membership started to increase again but "*[m]ost newcomers were not of working-class origin . . . the proportion of Bolsheviks of working-class origin fell from 57 per cent at the year's beginning to 48 per cent at the end.*" It should be noted that it was not specified how many were classed as having working-class origin were still employed in working-class jobs. [Robert Service, **Op. Cit.**, p. 70, pp. 70-1 and p. 90] A new ruling elite was thus born, thanks to the way vanguard parties are structured and the application of vanguardist principles which had previously been ignored.

In summary, the experience of the Russian Revolution does not, in fact, show the validity of the "vanguard" model. The Bolshevik party in 1917 played a leading role in the revolution only insofar as its members violated its own organisational principles (Lenin included). Faced with a real revolution and an influx of more radical new members, the party had to practice anarchist ideas of autonomy, local initiative and the ignoring of central orders which had no bearing to reality on the ground. When the party did try to apply the top-down and hierarchical principles of "democratic centralism" it failed to adjust to the needs of the moment. Moreover, when these principles were finally applied they helped ensure the degeneration of the revolution. As we discussed in [section H.5](#), this was to be expected.

4 Was Lenin's "State and Revolution" applied after October?

In a nutshell, no. In fact the opposite was the case. Post-October, the Bolsheviks not only failed to introduce the ideas of Lenin's **State and Revolution**, they in fact introduced the exact opposite. As one historian puts it:

"To consider 'State and Revolution' as the basic statement of Lenin's political philosophy -- which non-Communists as well as Communists usually do -- is a serious error. Its argument for a utopian anarchism never actually became official policy. The Leninism of 1917 . . . came to grief in a few short years; it was the revived Leninism of 1902 which prevailed as the basis for the political development of the USSR." [Robert V. Daniels, **The Conscience of the Revolution**, pp. 51-2]

Daniels is being far too lenient with the Bolsheviks. It was not, in fact, "*a few short years*" before the promises of 1917 were forgotten. In some cases, it was a few short hours. In others, a few short months. However, in a sense Daniels is right. It did take until 1921 before all hope for saving the Russian Revolution finally ended. With the crushing of the Kronstadt rebellion, the true nature of the regime became obvious to all with eyes to see. Moreover, the banning of factions within the party at the same time did mark a return to the pattern of "*What is to be Done?*" rather than the more fluid practice

Bolshevism exhibited in, say, 1917 (see [section 3](#)). However, as we discuss in the appendix "[Were any of the Bolshevik oppositions a real alternative?](#)", the various Bolshevik oppositions were, in their own way, just as authoritarian as the mainstream of the party.

In order to show that this is the case, we need to summarise the main ideas contained in Lenin's work. Moreover, we need to indicate what the Bolsheviks did, in fact, do. Finally, we need to see if the various rationales justifying these actions hold water.

So what did Lenin argue for in **State and Revolution**? Writing in the mid-1930s, anarchist Camillo Berneri summarised the main ideas of that work as follows:

"The Leninist programme of 1917 included these points: the discontinuance of the police and standing army, abolition of the professional bureaucracy, elections for all public positions and offices, revocability of all officials, equality of bureaucratic wages with workers' wages, the maximum of democracy, peaceful competition among the parties within the soviets, abolition of the death penalty." [*"The Abolition and Extinction of the State," Cienfuegos Press Anarchist Review*, no. 4, p. 50]

As he noted, "[n]ot a single one of the points of this programme has been achieved." This was, of course, under Stalinism and most Leninists will concur with Berneri. However what Leninists tend not to mention is that in the 7 month period from November 1917 to May 1918 none of these points was achieved. So, as an example of what Bolshevism "really" stands for it seems strange to harp on about a work which was never implemented when the its author was in a position to do so (i.e. before the onslaught of a civil war Lenin thought was inevitable anyway!).

To see that Berneri's summary is correct, we need to quote Lenin directly. Obviously the work is a wide ranging defence of Lenin's interpretation of Marxist theory on the state. As it is an attempt to overturn decades of Marxist orthodoxy, much of the work is quotes from Marx and Engels and Lenin's attempts to enlist them for his case (we discuss this issue in [section H.3.10](#)). Equally, we need to discount the numerous straw men arguments about anarchism Lenin inflicts on his reader (see sections [H.1.3](#), [H.1.4](#) and [H.1.5](#) for the truth about his claims). Here we simply list the key points as regards Lenin's arguments about his "workers' state" and how the workers would maintain control of it:

1) Using the Paris Commune as a prototype, Lenin argued for the abolition of "*parliamentarianism*" by turning "*representative institutions from mere 'talking shops' into working bodies.*" This would be done by removing "*the division of labour between the legislative and the executive.*" [**Essential Works of Lenin**, p. 304 and p. 306]

2) "*All officials, without exception, to be elected and subject to recall at any time*" and so "*directly responsible to their constituents.*" "*Democracy means equality.*" [**Op. Cit.**, p. 302, p. 306 and p. 346]

- 3) The *"immediate introduction of control and superintendence by all, so that all shall become 'bureaucrats' for a time and so that, therefore, no one can become a 'bureaucrat'."* Proletarian democracy would *"take immediate steps to cut bureaucracy down to the roots . . . to the complete abolition of bureaucracy"* as the *"essence of bureaucracy"* is officials becoming transformed *"into privileged persons divorced from the masses and superior to the masses."* [Op. Cit., p. 355 and p. 360]
- 4) There should be no *"special bodies of armed men"* standing apart from the people *"since the majority of the people itself suppresses its oppressors, a 'special force' is no longer necessary."* Using the example of the Paris Commune, Lenin suggested this meant *"abolition of the standing army."* Instead there would be the *"armed masses."* [Op. Cit., p. 275, p. 301 and p. 339]
- 5) The new (workers) state would be *"the organisation of violence for the suppression of . . . the exploiting class, i.e. the bourgeoisie. The toilers need a state only to overcome the resistance of the exploiters"* who are *"an insignificant minority,"* that is *"the landlords and the capitalists."* This would see *"an immense expansion of democracy . . . for the poor, democracy for the people"* while, simultaneously, imposing *"a series of restrictions on the freedom of the oppressors, the exploiters, the capitalists. . . their resistance must be broken by force: it is clear that where is suppression there is also violence, there is no freedom, no democracy."* [Op. Cit., p. 287 and pp. 337-8]

This would be implemented after the current, bourgeois, state had been smashed. This would be the *"dictatorship of the proletariat"* and be *"the introduction of complete democracy for the people."* [Op. Cit., p. 355] However, the key practical ideas on what the new "semi-state" would be are contained in these five points. He generalised these points, considering them valid not only for Russia in 1917 but in all countries. In this his followers agree. Lenin's work is considered valid for today, in advanced countries as it was in revolutionary Russia.

Three things strike anarchist readers of Lenin's work. Firstly, as we noted in [section H.1.7](#), much of it is pure anarchism. Bakunin had raised the vision of a system of workers' councils as the framework of a free socialist society in the 1860s and 1870s. Moreover, he had also argued for the election of mandated and recallable delegates as well as for using a popular militia to defend the revolution (see [section H.2.1](#)). What is not anarchist is the call for centralisation, equating the council system with a state and the toleration of a "new" officialdom. Secondly, the almost utter non-mention of the role of the party in the book is deeply significant. Given the emphasis that Lenin had always placed on the party, it's absence is worrying. Particularly (as we indicate in [section 5](#)) he had been calling for the party to seize power all through 1917. When he does mention the party he does so in an ambiguous way which suggests that it, not the class, would be in power. As subsequent events show, this was indeed what happened in practice. And, finally, the anarchist reader is struck by the fact that every one of these key ideas were not implemented under Lenin. In fact, the opposite was done. This can be seen from looking at each point in turn.

The first point as the creation of "working bodies", the combining of legislative and executive bodies. The first body to be created by the Bolshevik revolution was the "Council of People's

Commissars" (CPC) This was a government separate from and above the Central Executive Committee (CEC) of the soviets congress. It was an executive body elected by the soviet congress, but the soviets themselves were not turned into "working bodies." Thus the promises of Lenin's **State and Revolution** did not last the night.

As indicated in [section 5](#), the Bolsheviks clearly knew that the Soviets had alienated their power to this body. However, it could be argued that Lenin's promises were kept as this body simply gave itself legislative powers four days later. Sadly, this is not the case. In the Paris Commune the delegates of the people took executive power into their own hands. Lenin reversed this. His executive took legislative power from the hands of the people's delegates. In the former case, power was decentralised into the hands of the population. In the latter case, it was centralised into the hands of a few. This concentration of power into executive committees occurred at all levels of the soviet hierarchy (see [section 6](#) for full details). Simply put, legislative and executive power was taken **from** the soviets assemblies and handed to Bolshevik dominated executive committees.

What of the next principle, namely the election and recall of all officials? This lasted slightly longer, namely around 5 months. By March of 1918, the Bolsheviks started a systematic campaign against the elective principle in the workplace, in the military and even in the soviets. In the workplace, Lenin was arguing for appointed one-man managers "*vested with dictatorial powers*" by April 1918 (see [section 10](#)). In the military, Trotsky simply decreed the end of elected officers in favour of appointed officers (see [section 14](#)). And as far as the soviets go, the Bolsheviks were refusing to hold elections because they "*feared that the opposition parties would show gains.*" When elections were held, "*Bolshevik armed force usually overthrew the results*" in provincial towns. Moreover, the Bolsheviks "*pack[ed] local soviets*" with representatives of organisations they controlled "*once they could not longer count on an electoral majority.*" [Samuel Farber, **Before Stalinism**, p. 22, p. 24 and p. 33] This gerrymandering was even practised at the all-Russian soviet congress (see [section 6](#) for full details of this Bolshevik onslaught against the soviets). So much for competition among the parties within the soviets! And as far as the right of recall went, the Bolsheviks only supported this when the workers were recalling the opponents of the Bolsheviks, not when the workers were recalling them.

In summary, in under six months the Bolsheviks had replaced election of "*all officials*" by appointment from above in many areas of life. Democracy had simply being substituted by appointed from above (see [section 4](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)" for the deeply undemocratic reasoning used to justify this top-down and autocratic system of so-called democracy). The idea that different parties could compete for votes in the soviets (or elsewhere) was similarly curtailed and finally abolished.

Then there was the elimination of bureaucracy. As we show in [section 7](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", a new bureaucratic and centralised system quickly emerged. Rather than immediately cutting the size and power of the bureaucracy, it steadily grew. It soon became the real power in the state (and, ultimately, in the 1920s became the social

base for the rise of Stalin). Moreover, with the concentration of power in the hands of the Bolshevik government, the "essence" of bureaucracy remained as the party leaders became "*privileged persons divorced from the masses and superior to the masses.*" They were, for example, more than happy to justify their suppression of military democracy in terms of them knowing better than the general population what was best for them (see [section 4](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)" for details).

Then there is the fourth point, namely the elimination of the standing army, the suppression of "*special bodies of armed men*" by the "*armed masses.*" This promise did not last two months. On the 20th of December, 1917, the Council of People's Commissars decreed the formation of a political (secret) police force, the "*Extraordinary Commission to Fight Counter-Revolution.*" This was more commonly known by the Russian initials of the first two terms of its official name: The Cheka. Significantly, its founding decree stated it was to "*watch the press, saboteurs, strikers, and the Socialist-Revolutionaries of the Right.*" [contained in Robert V. Daniels, **A Documentary History of Communism**, vol. 1, p. 133]

While it was initially a small organisation, as 1918 progressed it grew in size and activity. By April 1918, it was being used to break the anarchist movement across Russia (see [section 23](#) for details). The Cheka soon became a key instrument of Bolshevik rule, with the full support of the likes of Lenin and Trotsky. The Cheka was most definitely a "*special body of armed men*" and not the same as the "*armed workers.*" In other words, Lenin's claims in **State and Revolution** did not last two months and in under six months the Bolshevik state had a mighty group of "*armed men*" to impose its will.

This is not all. The Bolsheviks also conducted a sweeping transformation of the military within the first six months of taking power. During 1917, the soldiers and sailors (encouraged by the Bolsheviks and other revolutionaries) had formed their own committees and elected officers. In March 1918, Trotsky simply abolished all this by decree and replaced it with appointed officers (usually ex-Tsarist ones). In this way, the Red Army was turned from a workers' militia (i.e. an armed people) into a "*special body*" separate from the general population (see [section 15](#) for further discussion on this subject).

So instead of eliminating a "*special force*" above the people, the Bolsheviks did the opposite by creating a political police force (the Cheka) and a standing army (in which elections were a set aside by decree). These were special, professional, armed forces standing apart from the people and unaccountable to them. Indeed, they were used to repress strikes and working class unrest, a topic we now turn to.

Then there is the idea of that Lenin's "workers' state" would simple be an instrument of violence directed at the exploiters. This was not how it turned out in practice. As the Bolsheviks lost popular support, they turned the violence of the "worker's state" against the workers (and, of course, the peasants). As noted above, when the Bolsheviks lost soviet elections they used force to disband them (see [section 6](#) for further details). Faced with strikes and working class protest during this period, the Bolsheviks responded with state violence (see [section 5](#) of the appendix on "[What caused the degeneration of the Russian Revolution?](#)" for details). We will discuss the implications of this for Lenin's theory below. So, as regards the claim that the new ("workers") state would repress only the exploiters, the truth was that it

was used to repress whoever opposed Bolshevik power, including workers and peasants.

As can be seen, after the first six months of Bolshevik rule not a single measure advocated by Lenin in **State and Revolution** existed in "revolutionary" Russia. Some of the promises were broken in quiet quickly (overnight, in one case). Most took longer. For example, the democratisation of the armed forces had been decreed in late December 1917. However, this was simply acknowledging the existing revolutionary gains of the military personnel. Similarly, the Bolsheviks passed a decree on workers' control which, again, simply acknowledged the actual gains by the grassroots (and, in fact, limited them for further development -- see [section 9](#)). This cannot be taken as evidence of the democratic nature of Bolshevism as most governments faced with a revolutionary movement will acknowledge and "legalise" the facts on the ground (until such time as they can neutralise or destroy them). For example, the Provisional Government created after the February Revolution also legalised the revolutionary gains of the workers (for example, legalising the soviets, factory committees, unions, strikes and so forth). The real question is whether Bolshevism continued to encourage these revolutionary gains once it had consolidated its power. Which they did not. Indeed, it can be argued that the Bolsheviks simply managed to do what the Provisional Government it replaced had failed to do, namely destroy the various organs of popular self-management created by the revolutionary masses. So the significant fact is not that the Bolsheviks recognised the gains of the masses but that their toleration of the application of what their followers say were their real principles did not last long and was quickly ended. Moreover, when the leading Bolsheviks looked back at this abolition they did not consider it in any way in contradiction to the principles of "communism" (see [section 14](#)).

We have stressed this period for a reason. This was the period **before** the out-break of major Civil War and thus the policies applied show the actual nature of Bolshevism, it's essence if you like. This is a significant date as most Leninists blame the failure of Lenin to live up to his promises on this even. In reality, the civil war was **not** the reason for these betrayals -- simply because it had not started yet (see [section 16](#) on when the civil war started and its impact). Each of the promises were broken in turn months before the civil war happened. "*All Power to the Soviets*" became, very quickly, "*All Power to the Bolsheviks*." In the words of historian Marc Ferro:

*"In a way, **The State and Revolution** even laid the foundations and sketched out the essential features of an alternative to Bolshevik power, and only the pro-Leninist tradition has used it, almost to quieten its conscience, because Lenin, once in power, ignored its conclusions. The Bolsheviks, far from causing the state to wither away, found endless reasons for justifying its enforcement."* [**October 1917**, pp. 213-4]

Where does that leave Lenin's **State and Revolution**? Well, modern-day Leninists still urge us to read it, considering it his greatest work and the best introduction to what Leninism really stands for. For example, we find Leninist Tony Cliff calling that book "*Lenin's real testament*" while, at the same time, acknowledging that its "*message . . . which was the guide for the first victorious proletarian revolution, was violated again and again during the civil war.*" Not a very good "*guide*" or that convincing a "*message*" if it was not applicable in the very circumstances it was designed to be applied in (a bit like

saying you have an excellent umbrella but it only works when it is not raining). Moreover, Cliff is factually incorrect. The Bolsheviks "*violated*" that "*guide*" before the civil war started (i.e. when "*the victories of the Czechoslovak troops over the Red Army in June 1918, that threatened the greatest danger to the Soviet republic,*" to quote Cliff). Similarly, much of the economic policies implemented by the Bolsheviks had their roots in that book and the other writings by Lenin from 1917 (see [section 5](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)"). [Lenin, vol. 3, p. 161 and p. 18]

Given this, what use is Lenin's **State and Revolution**? If this really was the "*guide*" it is claimed to be, the fact that it proved totally impractical suggests it should simply be ignored. Simply put, if the side effects of a revolution (such as civil war) require it to be ripped up then modern Leninists should come clean and admit that revolution and workers' democracy simply do not go together. This was, after all, the conclusion of Lenin and Trotsky (see [section H.3.8](#)). As such, they should not recommend Lenin's work as an example of what Bolshevism aims for. If, however, the basic idea of workers' democracy and freedom are valid and considered the only way of achieving socialism then we need to wonder **why** the Bolsheviks did not apply them when they had the chance, particularly when the Makhnovists in the Ukraine did. Such an investigation would only end up by concluding the validity of anarchism, **not** Leninism.

This can be seen from the trajectory of Bolshevik ideology post-October. Simply put, it was not bothered by the breaking of the promises of **State and Revolution** and 1917 in general. As such, Cliff is just wrong to assert that while the message of **State and Revolution** was "*violated again and again*" it "*was also invoked again and again against bureaucratic degeneration.*" [Cliff, **Op. Cit.**, p. 161] Far from it. Lenin's **State and Revolution** was rarely invoked against degeneration by the mainstream Bolshevik leadership. Indeed, they happily supported party dictatorship and one-man management. Ironically for Cliff, it **was** famously invoked against the state capitalist policies being implemented in early 1918. This was done by the "Left Communists" around Bukharin in their defence of workers' self-management against Lenin's policy! Lenin told them to reread it (along with his other 1917 works) to see that "state capitalism" was his aim all along! Not only that, he quoted from **State and Revolution**. He argued that "*accounting and control*" was required "*for the proper functioning of the first stage of communist society.*" "*And this control,*" he continued, "*must be established not only over 'the insignificant capitalist minority, over the gentry . . .', but also over the workers who 'have been thoroughly corrupted by capitalism . . .'*" He ended by saying it was "*significant that Bukharin did not emphasise this.*" [**Collected Works**, vol. 27, pp. 353-4] Needless to say, the Leninists who urge us to read Lenin's work do not emphasis that either.

As the Bolsheviks lost more and more support, the number of workers "*thoroughly corrupted by capitalism*" increased. How to identify them was easy: they did not support the party. As historian Richard summarises, a "*lack of identification with the Bolshevik party was treated as the absence of political consciousness altogether.*" [**Soviet Communists in Power**, p. 94] This is the logical conclusion of vanguardism, of course (see [section H.5.3](#)). However, to acknowledge that state violence was also required to "control" the working class totally undermines the argument of **State and Revolution**.

This is easy to see and to prove theoretically. For example, by 1920, Lenin was more than happy to admit that the "workers' state" used violence against the masses. At a conference of his political police, the Cheka, Lenin argued as follows:

"Without revolutionary coercion directed against the avowed enemies of the workers and peasants, it is impossible to break down the resistance of these exploiters. On the other hand, revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves." [**Collected Works**, vol. 42, p. 170]

This was simply summarising Bolshevik practice from the start. However, in **State and Revolution** Lenin had argued for imposing "a series of restrictions on the freedom of the oppressors, the exploiters, the capitalists." In 1917 he was "clear that where is suppression there is also violence, there is no freedom, no democracy." [**Op. Cit.**, pp. 337-8] So if violence is directed against the working class then, obviously, there can be "no freedom, no democracy" for that class. And who identifies who the "wavering and unstable" elements are? Only the party. Thus any expression of workers' democracy which conflicts with the party is a candidate for "revolutionary coercion." So it probably just as well that the Bolsheviks had eliminated military democracy in March, 1918.

Trotsky expands on the obvious autocratic implications of this in 1921 when he attacked the Workers' Opposition's ideas on economic democracy:

"The Party . . . is . . . duty bound to retain its dictatorship, regardless of the temporary vacillations of the amorphous masses, regardless of the temporary vacillations even of the working class. This awareness is essential for cohesion; without it the Party is in danger of perishing . . . At any given moment, the dictatorship does not rest on the formal principle of workers' democracy . . . if we look upon workers' democracy as something unconditional . . . then . . . every plant should elect its own administrative organs and so on . . . From a formal point of view this is the clearest link with workers' democracy. But we are against it. Why? . . . Because, in the first place, we want to retain the dictatorship of the Party, and, in the second place, because we think that the [democratic] way of managing important and essential plants is bound to be incompetent and prove a failure from an economic point of view . . ." [quoted by Jay B. Sorenson, **The Life and Death of Soviet Trade Unionism**, p. 165]

Thus the Russian Revolution and the Bolshevik regime confirmed anarchist theory and predictions about state socialism. In the words of Luigi Fabbri:

"It is fairly certain that between the capitalist regime and the socialist there will be an intervening period of struggle, during which proletariat revolutionary workers will have to work to uproot the remnants of bourgeois society . . . But if the object of this struggle and this organisation is to free the proletariat from exploitation and state rule, then the role of guide, tutor or director cannot be entrusted to a new state, which would have an

interest in pointing the revolution in a completely opposite direction. . .

"The outcome would be that a new government - battenning on the revolution and acting throughout the more or less extended period of its 'provisional' powers - would lay down the bureaucratic, military and economic foundations of a new and lasting state organisation, around which a compact network of interests and privileges would, naturally, be woven. Thus in a short space of time what one would have would not be the state abolished, but a state stronger and more energetic than its predecessor and which would come to exercise those functions proper to it - the ones Marx recognised as being such - 'keeping the great majority of producers under the yoke of a numerically small exploiting minority.'

"This is the lesson that the history of all revolutions teaches us, from the most ancient down to the most recent; and it is confirmed . . . by the day-to-day developments of the Russian revolution . . .

"Certainly, [state violence] starts out being used against the old power . . . But as the new power goes on consolidating its position . . . ever more frequently and ever more severely, the mailed fist of dictatorship is turned against the proletariat itself in whose name that dictatorship was set up and is operated! . . . the actions of the present Russian government [of Lenin and Trotsky] have shown that in real terms (and it could not be otherwise) the 'dictatorship of the proletariat' means police, military, political and economic dictatorship exercised over the broad mass of the proletariat in city and country by the few leaders of the political party.

"The violence of the state always ends up being used AGAINST ITS SUBJECTS, of whom the vast majority are always proletarians . . . The new government will be able to expropriate the old ruling class in whole or in part, but only so as to establish a new ruling class that will hold the greater part of the proletariat in subjection.

*"That will come to pass if those who make up the government and the bureaucratic, military and police minority that upholds it end up becoming the real owners of wealth when the property of everyone is made over exclusively to the state. In the first place, the failure of the revolution will be self evident. In the second, in spite of the illusions that many people create, the conditions of the proletariat will always be those of a subject class." ["Anarchy and 'Scientific' Communism", in **The Poverty of Statism**, pp. 13-49, Albert Meltzer (ed.), pp. 26-31]*

The standard response by most modern Leninists to arguments like this about Bolshevism is simply to downplay the authoritarianism of the Bolsheviks by stressing the effects of the civil war on shaping their ideology and actions. However, this fails to address the key issue of why the reality of Bolshevism (even before the civil war) was so different to the rhetoric. Anarchists, as we discuss in ["How did Bolshevik](#)

[ideology contribute to the failure of the Revolution?](#)", can point to certain aspects of Bolshevik ideology and the social structures its favoured which can explain it. The problems facing the revolution simply brought to the fore the limitations and dangers inherent in Leninism and, moreover, shaping them in distinctive ways. We draw the conclusion that a future revolution, as it will face similar problems, would be wise to avoid applying Leninist ideology and the authoritarian practices it allows and, indeed, promotes by its support of centralisation, confusion of party power with class power, vanguardism and equation of state capitalism with socialism. Leninists, in contrast, can only stress the fact that the revolution was occurring in difficult circumstances and hope that "fate" is more kind to them next time -- as if a revolution, as Lenin himself noted in 1917, would not occur during nor create "difficult" circumstances! Equally, they can draw no lessons (bar repeat what the Bolsheviks did in 1917 and hope for better objective circumstances!) from the Russian experience simply because they are blind to the limitations of their politics. They are thus doomed to repeat history rather than make it.

So where does this analysis of Lenin's **State and Revolution** and the realities of Bolshevik power get us? The conclusions of dissent Marxist Samuel Farber seem appropriate here. As he puts it, *"the very fact that a Sovnarkom had been created as a separate body from the CEC [Central Executive Committee] of the soviets clearly indicates that, Lenin's **State and Revolution** notwithstanding, the separation of at least the top bodies of the executive and the legislative wings of the government remained in effect in the new Soviet system."* This suggests *"that **State and Revolution** did not play a decisive role as a source of policy guidelines for 'Leninism in power.'" After all, "immediately after the Revolution the Bolsheviks established an executive power . . . as a clearly separate body from the leading body of the legislature. . . Therefore, some sections of the contemporary Left appear to have greatly overestimated the importance that **State and Revolution** had for Lenin's government. I would suggest that this document . . . can be better understood as a distant, although doubtless sincere [!], socio-political vision . . . as opposed to its having been a programmatic political statement, let alone a guide to action, for the period immediately after the successful seizure of power."* [Farber, **Op. Cit.**, pp. 20-1 and p. 38]

That is **one** way of looking at it. Another would be to draw the conclusion that a *"distant . . . socio-political vision"* drawn up to sound like a *"guide to action"* which was then immediately ignored is, at worse, little more than a deception, or, at best, a theoretical justification for seizing power in the face of orthodox Marxist dogma. Whatever the rationale for Lenin writing his book, one thing is true -- it was never implemented. Strange, then, that Leninists today urge use to read it to see what "Lenin really wanted." Particularly given that so few of its promises were actually implemented (those that were just recognised the facts on the ground) and **all** of were no longer applied in less than six months after the seize of power.

The best that can be said is that Lenin did want this vision to be applied but the realities of revolutionary Russia, the objective problems facing the revolution, made its application impossible. This is the standard Leninist account of the revolution. They seem unconcerned that they have just admitted that Lenin's ideas were utterly impractical for the real problems that any revolution is most likely to face. This was the conclusion Lenin himself drew, as did the rest of the Bolshevik leadership. This can be seen from the actual practice of "Leninism in power" and the arguments it used. And yet, for some

reason, Lenin's book is still recommended by modern Leninists!

5 Did the Bolsheviks really aim for Soviet power?

It seems a truism for modern day Leninists that the Bolsheviks stood for "soviet power." For example, they like to note that the Bolsheviks used the slogan "*All Power to the Soviets*" in 1917 as evidence. However, for the Bolsheviks this slogan had a radically different meaning to what many people would consider it to mean.

As we discuss in [section 25](#), it was the anarchists (and those close to them, like the SR-Maximalists) who first raised the idea of soviets as the means by which the masses could run society. This was during the 1905 revolution. At that time, neither the Mensheviks nor the Bolsheviks viewed the soviets as the possible framework of a socialist society. This was still the case in 1917, until Lenin returned to Russia and convinced the Bolshevik Party that the time was right to raise the slogan "*All Power to the Soviets*."

However, as well as this, Lenin also advocated a somewhat different vision of what a Bolshevik revolution would result in. Thus we find Lenin in 1917 continually repeating the basic idea: "*The Bolsheviks must assume power.*" The Bolsheviks "*can and **must** take state power into their own hands.*" He raised the question of "*will the Bolsheviks dare take over full state power alone?*" and answered it: "*I have already had occasion . . . to answer this question in the affirmative.*" Moreover, "*a political party . . . would have no right to exist, would be unworthy of the name of party . . . if it refused to take power when opportunity offers.*" [**Selected Works**, vol. 2, p 328, p. 329 and p. 352]

He equated party power with popular power: "*the power of the Bolsheviks -- that is, the power of the proletariat.*" Moreover, he argued that Russia "*was ruled by 130,000 landowners . . . and they tell us that Russia will not be able to be governed by the 240,000 members of the Bolshevik Party -- governing in the interest of the poor and against the rich.*" He stresses that the Bolsheviks "*are not Utopians. We know that just any labourer or any cook would be incapable of taking over immediately the administration of the State.*" Therefore they "*demand that the teaching should be conducted by the class-consciousness workers and soldiers, that this should be started immediately.*" Until then, the "*conscious workers must be in control.*" [**Will the Bolsheviks Maintain Power?** p. 102, pp. 61-62, p. 66 and p. 68]

As such, given this clear and unambiguous position throughout 1917 by Lenin, it seems incredulous, to say the least, for Leninist Tony Cliff to assert that "*[t]o start with Lenin spoke of the **proletariat**, the **class** -- not the Bolshevik Party -- assuming state power.*" [**Lenin**, vol. 3, p. 161] Surely the title of one of Lenin's most famous pre-October essays, usually translated as "*Can the Bolsheviks Retain State Power?*", should have given the game away? As would, surely, quoting numerous calls by Lenin for the Bolsheviks to seize power? Apparently not.

This means, of course, Lenin is admitting that the working class in Russia would **not** have power under the Bolsheviks. Rather than "the poor" governing society directly, we would have **the Bolsheviks** governing in their interests. Thus, rather than soviet power as such, the Bolsheviks aimed for "party

power through the soviets" -- a radically different position. And as we discuss in the [next section](#), when soviet power clashed with party power the former was always sacrificed to ensure the latter. As we indicate in [section H.1.2](#), this support for party power before the revolution was soon transformed into a defence for party dictatorship after the Bolsheviks had seized power. However, we should not forget, to quote one historian, that the Bolshevik leaders "*anticipated a 'dictatorship of the proletariat,' and that concept was a good deal closer to a party dictatorship in Lenin's 1917 usage than revisionist scholars sometimes suggest.*" [Sheila Fitzpatrick, "*The Legacy of the Civil War*," pp. 385-398, **Party, State, and Society in the Russian Civil War**, Diane P. Koenker, William G. Rosenberg and Ronald Grigor Suny (eds.), p. 388]

While modern-day Leninists tend to stress the assumption of power by the soviets as the goal of the Bolshevik revolution, the Bolsheviks themselves were more honest about it. For example, Trotsky quotes Lenin at the first soviet congress stating that it was "*not true to say that no party exists which is ready to assume power; such a party exists: this is our party.*" Moreover, "*[o]ur party is ready to assume power.*" As the Second Congress approached, Lenin "*rebuked those who connected the uprising with the Second Congress of the Soviets.*" He protested against Trotsky's argument that they needed a Bolshevik majority at the Second Congress, arguing (according to Trotsky) that "*[w]e have to win power and not tie ourselves to the Congress. It was ridiculous and absurd to warn the enemy about the date of the rising . . . First the party must seize power, arms in hand, and then we could talk about the Congress.*" [**On Lenin**, p. 71, p. 85]

Trotsky argued that "*the party could not seize power by itself, independently of the Soviets and behind its back. This would have been a mistake . . . [as the] soldiers knew their delegates in the Soviet; it was through the Soviet that they knew the party. If the uprising had taken place behind the back of the Soviet, independently of it, without its authority . . . there might have been a dangerous confusion among the troops.*" Significantly, Trotsky made no mention of the proletariat. Finally, Lenin came over to Trotsky's position, saying "*Oh, all right, one can proceed in this fashion as well, provided we seize power.*" [**Op. Cit.**, p. 86 and p. 89]

Trotsky made similar arguments in his **History of the Russian Revolution** and his article **Lessons of October**. Discussing the July Days of 1917, for example, Trotsky discusses whether (to quote the title of the relevant chapter) "*Could the Bolsheviks have seized the Power in July?*" and noted, in passing, the army "*was far from ready to raise an insurrection in order to give the power to the Bolshevik Party.*" As far as the workers were concerned, although "*inclining toward the Bolsheviks in its overwhelming majority, had still not broken the umbilical cord attaching it to the Compromisers*" and so the Bolsheviks could not have "*seized the helm in July.*" He then lists other parts of the country where the soviets were ready to take power. He states that in "*a majority of provinces and county seats, the situation was incomparably less favourable*" simply because the Bolsheviks were not as well supported. Later he notes that "*[m]any of the provincial soviets had already, before the July days, become organs of power.*" Thus Trotsky was only interested in whether the workers could have put the Bolsheviks in power or not rather than were the soviets able to take power themselves. Party power was the decisive criteria. [**History of the Russian Revolution**, vol. 2, p. 78, p. 77, p. 78, p. 81 and p. 281]

This can be seen from the October insurrection. Trotsky again admits that the *"Bolsheviks could have seized power in Petrograd at the beginning of July"* but *"they could not have held it."* However, by September the Bolsheviks had gained majorities in the Petrograd and Moscow soviets. The second Congress of Soviets was approaching. The time was considered appropriate to think of insurrection. By in whose name and for what end? Trotsky makes it clear. *"A revolutionary party is interested in legal coverings,"* he argued and so the party could use the defending the second Congress of Soviets as the means to justify its seizure of power. He raises the question: *"Would it not have been simpler . . . to summon the insurrection directly in the name of the party?"* and answers it in the negative. *"It would be an obvious mistake,"* he argued, *"to identify the strength of the Bolshevik party with the strength of the soviets led by it. The latter was much greater than the former. However, without the former it would have been mere impotence."* He then quotes numerous Bolshevik delegates arguing that the masses would follow the soviet, not the party. Hence the importance of seizing power in the name of the soviets, regardless of the fact it was the Bolshevik party who would in practice hold *"all power."* Trotsky quotes Lenin as asking *"Who is to seize power?"* *"That is now of no importance,"* argued Lenin. *"Let the Military Revolutionary Committee take it, or 'some other institution,' which will declare that it will surrender the power only to the genuine representatives of the interests of the people."* Trotsky notes that *"some other institution"* was a *"conspirative designation for the Central Committee of the Bolsheviks."* And who turned out to be the *"genuine representatives of the interests of the people"*? By amazing co-incidence the Bolsheviks, the members of whose Central Committee formed the first "soviet" government. [Op. Cit., vol. 3, p. 265, p. 259, p. 262, p. 263 and p. 267]

As we discuss in [section H.3.11](#), Trotsky was simply repeating the same instrumentalist arguments he had made earlier. Clearly, the support for the soviets was purely instrumental, simply a means of securing party power. For Bolshevism, the party was the key institution of proletarian revolution:

"The party set the soviets in motion, the soviets set in motion the workers, soldiers, and to some extent the peasantry . . . If you represent this conducting apparatus as a system of cog-wheels -- a comparison which Lenin had recourse at another period on another theme -- you may say that the impatient attempt to connect the party wheel directly with the gigantic wheel of the masses -- omitting the medium-sized wheel of the soviets -- would have given rise to the danger of breaking the teeth of the party wheel." [Trotsky, Op. Cit., p. 264]

Thus the soviets existed to allow the party to influence the workers. What of the workers running society directly? What if the workers reject the decisions of the party? After all, **before** the revolution Lenin *"more than once repeated that the masses are far to the left of the party, just as the party is to the left of the Central Committee."* [Trotsky, Op. Cit., p. 258] What happens when the workers refuse to be set in motion by the party but instead set themselves in motion and reject the Bolsheviks? What then for the soviets? Looking at the logic of Trotsky's instrumentalist perspective, in such a case we would predict that the soviets would have to be tamed (by whatever means possible) in favour of party power (the real goal). And this is what did happen. The fate of the soviets after October prove that the Bolsheviks did not, in fact, seek soviet power without doubt (see [next section](#)). And as we discuss in [section 4](#) of the

appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the peculiar Bolshevik definition of "soviet power" allowed them to justify the elimination of from the bottom-up grassroots democracy in the military and in the workplace with top-down appointments.

Thus we have a distinctly strange meaning by the expression "*All Power to the Soviets.*" In practice, it meant that the soviets alienate its power to a Bolshevik government. This is what the Bolsheviks considered as "soviet power," namely party power, pure and simple. As the Central Committee argued in November 1917, "*it is impossible to refuse a purely Bolshevik government without treason to the slogan of the power of the Soviets, since a majority at the Second All-Russian Congress of Soviets . . . handed power over to this government.*" [contained in Robert v. Daniels (ed.), **A Documentary History of Communism**, vol. 1, pp. 128-9] Lenin was clear, arguing mere days after the October Revolution that "*our present slogan is: No Compromise, i.e. for a homogeneous Bolshevik government.*" [quoted by Daniels, **Conscience of the Revolution**, p. 65]

In other words, "soviet power" exists when the soviets hand power over the someone else (namely the Bolshevik leaders)! The difference is important, "*for the Anarchists declared, if 'power' really should belong to the soviets, it could not belong to the Bolshevik party, and if it should belong to that Party, as the Bolsheviks envisaged, it could not belong to the soviets.*" [Voline, **The Unknown Revolution**, p. 213]

Which means that while anarchists and Leninists both use the expression "*All Power to the Soviets*" it does not mean they mean exactly the same thing by it. In practice the Bolshevik vision simply replaced the power of the soviets with a "soviet power" above them:

"The success of the Bolsheviks in the October Revolution -- that is to say, the fact that they found themselves in power and from there subordinated the whole Revolution to their Party is explained by their ability to substitute the idea of a Soviet power for the social revolution and the social emancipation of the masses. A priori, these two ideas appear as non-contradictory for it was possible to understand Soviet power as the power of the soviets, and this facilitated the substitution of the idea of Soviet power for that of the Revolution. Nevertheless, in their realisation and consequences these ideas were in violent contraction to each other. The conception of Soviet Power incarnated in the Bolshevik state, was transformed into an entirely traditional bourgeois power concentrated in a handful of individuals who subjected to their authority all that was fundamental and most powerful in the life of the people -- in this particular case, the social revolution. Therefore, with the help of the 'power of the soviets' -- in which the Bolsheviks monopolised most of the posts - they effectively attained a total power and could proclaim their dictatorship throughout the revolutionary territory . . . All was reduced to a single centre, from where all instructions emanated concerning the way of life, of thought, of action of the working masses." [Peter Arshinov, **The Two Octobers**]

Isolated from the masses, holding power on their behalf, the Bolshevik party could not help being

influenced by the realities of their position in society and the social relationships produced by statist forms. Far from being the servants of the people, they become upon the seizing of power their masters. As we argue in [section 7](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the experience of Bolshevism in power confirmed anarchist fears that the so-called "workers' state" would quickly become a danger to the revolution, corrupting those who held power and generating a bureaucracy around the new state bodies which came into conflict with both the ruling party and the masses. Placed above the people, isolated from them by centralisation of power, the Bolsheviks pre-revolutionary aim for party power unsurprisingly became in practice party dictatorship.

In less than a year, by July 1918, the soviet regime was a **de facto** party dictatorship. The theoretical revisions soon followed. Lenin, for example, was proclaiming in early December 1918 that while legalising the Mensheviks the Bolsheviks would "*reserve state power for ourselves, and for ourselves alone.*" [**Collected Works**, vol. 28, p. 213] Victor Serge records how when he arrived in Russia in the following month he discovered "*a colourless article*" signed by Zinoviev on "*The Monopoly of Power*" which said "*Our Party rules alone . . . it will not allow anyone . . . The false democratic liberties demanded by the counter-revolution.*" [**Memoirs of a Revolutionary**, p. 69] Serge, like most Bolsheviks, embraced this perspective wholeheartedly. For example, when the Bolsheviks published Bakunin's "confession" to the Tsar in 1921 (in an attempt to discredit anarchism) "*Serge seized on Bakunin's passage concerning the need for dictatorial rule in Russia, suggesting that 'already in 1848 Bakunin had presaged Bolshevism.'*" [Lawrence D. Orton, "*introduction*," **The Confession of Mikhail Bakunin**, p. 21] At the time Bakunin wrote his "confession" he was not an anarchist. At the time Serge wrote his comments, he was a leading Bolshevik and reflecting mainstream Bolshevik ideology.

Indeed, so important was it considered by them, the Bolsheviks revised their theory of the state to include this particular lesson of their revolution (see [section H.3.8](#) for details). As noted in [section H.1.2](#), all the leading Bolsheviks were talking about the "*dictatorship of the party*" and continued to do so until their deaths. Such a position, incidentally, is hard to square with support for soviet power in any meaningful term (although it is easy to square with an instrumentalist position on workers' councils as a means to party power). It was only in the mid-30s that Serge started to revise his position for this position (Trotsky still subscribed to it). By the early 1940s, he wrote that "*[a]gainst the Party the anarchists were right when they inscribed on their black banners, 'There is no worse poison than power' -- meaning absolute power. From now on the psychosis of power was to captive the great majority of the leadership, especially at the lower levels.*" [Serge, **Op. Cit.**, p. 100]

Nor can the effects of the civil war explain this shift. As we discuss in the [next section](#), the Bolshevik assault on the soviets and their power started in the spring of 1918, months before the start of large scale civil war. And it should be stressed that the Bolsheviks were not at all bothered by the creation of party dictatorship over the soviets. Indeed, in spite of ruling over a one party state Lenin was arguing in November 1918 that "*Soviet power is a million times more democratic than the most democratic bourgeois republic.*" How can that be when the workers do not run society nor have a say in who rules them? When Karl Kautsky raised this issue, Lenin replied by saying he "*fails to see the class nature of the state apparatus, of the machinery of state . . . The Soviet government is the first in the world . . . to*

*enlist the people, specifically the **exploited** people in the work of administration.*" [Collected Works, vol. 28, p. 247 and p. 248]

However, the key issue is not whether workers take part in the state machinery but whether they determine the policies that are being implemented, i.e. whether the masses are running their own lives. After all, as Ante Ciliga pointed out, the Stalinist GPU (secret police) "*liked to boast of the working class origin of its henchmen.*" One of his fellow prisoners retorted to such claims by pointing out they were "*wrong to believe that in the days the Tsar the gaolers were recruited from among the dukes and the executioners from among the princes!*" [The Russian Engima, pp. 255-6] Simply put, just because the state administration is made up of bureaucrats who were originally working class does not mean that the working class, as a class, manages society.

In December of that year Lenin went one further and noted that at the Sixth Soviet Congress "*the Bolsheviks had 97 per cent*" of delegates, i.e. "practically all representatives of the workers and peasants of the whole of Russia." This was proof of "*how stupid and ridiculous is the bourgeois fairy-tale about the Bolsheviks only having minority support.*" [Op. Cit., pp. 355-6] Given that the workers and peasants had no real choice in who to vote for, can this result be surprising? Of course not. While the Bolsheviks **had** mass support a year previously, pointing to election results under a dictatorship where all other parties and groups are subject to state repression is hardly convincing evidence for current support. Needless to say, Stalin (like a host of other dictators) made similar claims on similarly dubious election results. If the Bolsheviks were sincere in their support for soviet power then they would have tried to organise genuine soviet elections. This was possible even during the civil war as the example of the Makhnovists showed.

So, in a nutshell, the Bolsheviks did not fundamentally support the goal of soviet power. Rather, they aimed to create a "soviet power," a Bolshevik power above the soviets which derived its legitimacy from them. However, if the soviets conflicted with that power, it were the soviets which were repudiated **not** party power. Thus the result of Bolshevik ideology was the marginalisation of the soviets and their replacement by Bolshevik dictatorship. This process started before the civil war and can be traced to the nature of the state as well as the underlying assumptions of Bolshevik ideology (see "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)").

6 What happened to the soviets after October?

As indicated in the last question, the last thing which the Bolsheviks wanted was "*all power to the soviets.*" Rather they wanted the soviets to hand over that power to a Bolshevik government. As the people in liberal capitalist politics, the soviets were "sovereign" in name only. They were expected to delegate power to a government. Like the "sovereign people" of bourgeois republics, the soviets were much praised but in practice ignored by those with real power.

In such a situation, we would expect the soviets to play no meaningful role in the new "workers' state." Under such a centralised system, we would expect the soviets to become little more than a fig-leaf for

party power. Unsurprisingly, this is **exactly** what they did become. As we discuss in [section 7](#) of the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", anarchists are not surprised by this as the centralisation so beloved by Marxists is designed to empower the few at the centre and marginalise the many at the circumference.

The very first act of the Bolshevik revolution was for the Second Congress of Soviets to alienate its power and hand it over to the "Council of People's Commissars." This was the new government and was totally Bolshevik in make-up (the Left SRs later joined it, although the Bolsheviks always maintained control). Thus the first act of the revolution was the creation of a power **above** the soviets. Although derived from the soviet congress, it was not identical to it. Thus the Bolshevik "workers' state" or "semi-state" started to have the same characteristics as the normal state (see [section H.3.7](#) for a discussion of what marks a state).

The subsequent marginalisation of the soviets in the "soviet" state occurred from top to bottom should not, therefore be considered an accident or a surprise. The Bolshevik desire for party power within a highly centralised state could have no other effect. At the top, the Central Executive Committee (CEC or VTsIK) was quickly marginalised from power. This body was meant to be the highest organ of soviet power but, in practice, it was sidelined by the Bolshevik government. This can be seen when, just four days after seizing power, the Bolshevik Council of People's Commissars (CPC or Sovnarkom) *"unilaterally arrogated to itself legislative power simply by promulgating a decree to this effect. This was, effectively, a Bolshevik **coup d'etat** that made clear the government's (and party's) pre-eminence over the soviets and their executive organ. Increasingly, the Bolsheviks relied upon the appointment from above of commissars with plenipotentiary powers, and they split up and reconstituted fractious Soviets and intimidated political opponents."* [Neil Harding, **Leninism**, p. 253] Strange actions for a party proclaiming it was acting to ensure "All power to the soviets" (as we discussed in the [last section](#), this was always considered by Lenin as little more than a slogan to hide the fact that the party would be in power).

It is doubtful that when readers of Lenin's **State and Revolution** read his argument for combining legislative and executive powers into one body, they had this in mind! But then, as we discussed in [section 4](#), that work was never applied in practice so we should not be too surprised by this turn of events. One thing is sure, four days after the "soviet" revolution the soviets had been replaced as the effective power in society by a handful of Bolshevik leaders. So the Bolsheviks immediately created a power **above** the soviets in the form of the CPC. Lenin's argument in **The State and Revolution** that, like the Paris Commune, the workers' state would be based on a fusion of executive and administrative functions in the hands of the workers' delegates did not last one night. In reality, the Bolshevik party was the **real** power in "soviet" Russia.

Given that the All-Russian central Executive Committee of Soviets (VTsIK) was dominated by Bolsheviks, it comes as no surprise to discover it was used to augment this centralisation of power into the hands of the party. The VTsIK (*"charged by the October revolution with controlling the government,"* the Sovnarkom) was *"used not to control but rather extend the authority and centralising*

*fiat of the government. That was the work of Iakov Sverdlov, the VTsIK chairman, who -- in close collaboration with Lenin as chairman of the Sovnarkom -- ensured that the government decrees and ordinances were by the VTsIK and that they were thus endowed with Soviet legitimacy when they were sent to provincial soviet executive committees for transmission to all local soviets . . . To achieve that, Sverdlov had to reduce the 'Soviet Parliament' to nothing more than an 'administrative branch' (as Sukhanov put it) of the Sovnarkom. Using his position as the VTsIK chairman and his tight control over its praesidium and the large, disciplined and compliant Bolshevik majority in the plenary assembly, Sverdlov isolated the opposition and rendered it impotent. So successful was he that, by early December 1917, Sukhanov had already written off the VTsIK as 'a sorry parody of a revolutionary parliament,' while for the Bolshevik, Martin Latsis-Zurabs, the VTsIL was not even a good rubberstamp. Latsis campaigned vigorously in March and April 1918 for the VTsIK's abolition: with its 'idle, long-winded talk and its incapacity for productive work' the VTsIK merely held up the work of government, he claimed. And he may have had a point: during the period of 1917 to 1918, the Sovnarkom issued 474 decrees, the VTsIK a mere 62." [Israel Getzler, **Soviets as Agents of Democratisation**, p. 27]*

This process was not an accident. Far from it. In fact, the Bolshevik chairman Sverdlov knew exactly what he was doing. This included modifying the way the CEC worked:

*"The structure of VTsIK itself began to change under Sverdlov. He began to use the presidium to circumvent the general meeting, which contained eloquent minority spokesmen . . . Sverdlov's use of the presidium marked a decisive change in the status of that body within the soviet hierarchy. In mid-1917 . . . [the] plenum had directed all activities and ratified bureau decisions which had a 'particularly important social-political character.' The bureau . . . served as the executive organ of the VTsIK plenum . . . Only in extraordinary cases when the bureau could not be convened for technical reason could the presidium make decisions. Even then such actions remained subject to review by the plenum." [Charles Duval, "Yakov M. Sverdlov and the All-Russian Central Executive Committee of Soviets (VTsIK)", pp. 3-22, **Soviet Studies**, vol. XXXI, no. 1, January 1979, pp. 6-7]*

Under the Bolsheviks, the presidium was converted *"into the **de facto** centre of power within VTsIK."* It *"began to award representations to groups and factions which supported the government. With the VTsIK becoming ever more unwieldy in size by the day, the presidium began to expand its activities."* The presidium was used *"to circumvent general meetings."* Thus the Bolsheviks were able *"to increase the power of the presidium, postpone regular sessions, and present VTsIK with policies which had already been implemented by the Sovnarkom. Even in the presidium itself very few people determined policy."* [Charles Duval, **Op. Cit.**, p.7, p. 8 and p. 18]

So, from the very outset, the VTsIK was overshadowed by the "Council of People's Commissars" (CPC). In the first year, only 68 of 480 decrees issued by the CPC were actually submitted to the Soviet Central Executive Committee, and even fewer were actually drafted by it. The VTsIK functions *"were never clearly delineated, even in the constitution, despite vigorous attempts by the Left SRs . . . that Lenin never saw this highest soviet organ as the genuine equal of his cabin and that the*

*Bolsheviks deliberated obstructed efforts at clarification is [a] convincing" conclusion to draw. It should be stressed that this process started before the outbreak of civil war in late May, 1918. After that the All-Russian Congress of soviets, which convened every three months or so during the first year of the revolution, met annually thereafter. Its elected VTsIK "also began to meet less frequently, and at the height of the civil war in late 1918 and throughout 1919, it never once met in full session." [Carmen Sirianni, **Workers' Control and Socialist Democracy**, pp. 203-4]*

The marginalisation of the soviets can be seen from the decision on whether to continue the war against Germany. As Cornelius Castoriadis notes, under Lenin "[c]ollectively, the only real instance of power is the Party, and very soon, only the summits of the Party. Immediately after the seizure of power the soviets as institutions are reduced to the status of pure window-dressing (we need only look at the fact that, already at the beginning of 1918 in the discussions leading up to the Brest-Litovsk Peace Treaty, their role was absolutely nil)." [The role of Bolshevik Ideology in the birth of the Bureaucracy, p. 97] In fact, on the 26th of February, 1918, the Soviet Executive "began a survey of 200 local soviets; by 10 March 1918 a majority (105-95) had come out in favour of a revolutionary war, although the soviets in the two capitals voted . . . to accept a separate peace." [Geoffrey Swain, **The Origins of the Russian Civil War**, p. 128] This survey was ignored by the Bolshevik Central Committee which voted 4 against, 4 abstain and 5 for it. This took Russia out of the Great War but handed over massive areas to imperialist Germany. The controversial treaty was ratified at the Fourth Soviet Congress, unsurprisingly as the Bolshevik majority simply followed the orders of their Central Committee. It would be pointless to go over the arguments of the rights and wrongs of the decision here, the point is that the 13 members of the Bolshevik Central Committee decided the future faith of Russia in this vote. The soviets were simply ignored in spite of the fact it was possible to consult them fully. Clearly, "soviet power" meant little more than window-dressing for Bolshevik power.

Thus, at the top summits of the state, the soviets had been marginalised by the Bolsheviks from day one. Far from having "all power" their CEC had given that to a Bolshevik government. Rather than exercise real power, it's basic aim was to control those who did exercise it. And the Bolsheviks successfully acted to undermine even this function.

If this was happening at the top, what was the situation at the grassroots? Here, too, oligarchic tendencies in the soviets increased post-October, with "[e]ffective power in the local soviets relentlessly gravitated to the executive committees, and especially their presidia. Plenary sessions became increasingly symbolic and ineffectual." The party was "successful in gaining control of soviet executives in the cities and at **uezd** and **guberniya** levels. These executive bodies were usually able to control soviet congresses, though the party often disbanded congresses that opposed major aspects of current policies." Local soviets "had little input into the formation of national policy" and "[e]ven at higher levels, institutional power shifted away from the soviets." [C. Sirianni, **Op. Cit.**, p. 204 and p. 203] The soviets quickly had become rubber-stamps for the Communist government, with the Soviet Constitution of 1918 codifying the centralisation of power and top-down decision making. Local soviets were expected to "carry out all orders of the respective higher organs of the soviet power" (i.e. to carry out the commands of the central government).

This was not all. While having popular support in October 1917, the realities of "Leninism in power" soon saw a backlash develop. The Bolsheviks started to lose popular support to opposition groups like the Mensheviks and SRs (left and right). This growing opposition was reflected in two ways. Firstly, a rise in working class protests in the form of strikes and independent organisations. Secondly, there was a rise in votes for the opposition parties in soviet elections. Faced with this, the Bolsheviks responded in three ways, delaying elections, gerrymandering or force. We will discuss each in turn.

Lenin argued in mid-April 1918 that the "*socialist character of Soviet, i.e. **proletarian**, democracy*" lies, in part, in because "*the people themselves determine the order and time of elections.*" [**The Immediate Tasks of the Soviet Government**, pp. 36-7] However, the reality in the grassroots was somewhat different. There "*the government [was] continually postponed the new general elections to the Petrograd Soviet, the term of which had ended in March 1918*" because it "*feared that the opposition parties would show gains. This fear was well founded since in the period immediately preceding 25 January, in those Petrograd factories where the workers had decided to hold new elections, the Mensheviks, SRs, and non-affiliated candidates had won about half the seats.*" [Samuel Farber, **Before Stalinism**, p. 22] In Yaroslavl, the "*more the Bolsheviks tried to postpone the elections, the more the idea of holding new elections became an issue itself.*" When the Bolsheviks gave in and held elections in early April, the Mensheviks won 47 of the 98 seats, the Bolsheviks 38 and the SRs 13. ["*The Mensheviks' Political Comeback: The Elections to the Provincial City Soviets in Spring 1918*", **The Russian Review**, vol. 42, pp. 1-50, p. 18] The fate of the Yaroslavl soviet will be discussed shortly. As Geoffrey Swain summarizes, Menshevik and SR "*successes in recalling Bolshevik delegates from the soviets had forced the Bolsheviks increasingly to delay by-elections.*" [**The Origins of the Russian Civil War**, p. 91]

As well as postponing elections and recall, the Bolsheviks also quickly turned to gerrymandering the soviets to ensure the stability of their majority in the soviets. In this they made use of certain institutional problems the soviets had had from the start. On the day which the Petrograd soviet was formed in 1917, the Bolshevik Shlyapnikov "*proposed that each socialist party should have the right to two seats in the provisional executive committee of the soviet.*" This was "*designed, initially, to give the Bolsheviks a decent showing, for they were only a small minority of the initiating group.*" It was agreed. However, the "*result was that members of a dozen different parties and organisations (trades unions, co-operative movements, etc.) entered the executive committee. They called themselves 'representatives' (of their organisations) and, by virtue of this, they speedily eliminated from their discussions the committee members chosen by the general assembly although they were the true founders of the Soviet.*" This meant, for example, Bolshevik co-founders of the soviet made way for such people as Kamenev and Stalin. Thus the make-up of the soviet executive committee was decided upon by "*the leadership of each organisation, its executive officers, and not with the [soviet] assembly. The assembly had lost its right to control.*" Thus, for example, the Bolshevik central committee member Yoffe became the presidium of the soviet of district committees without being elected by anyone represented at those soviets. "*After October, the Bolsheviks were more systematic in their use of these methods, but there was a difference: there were now no truly free elections that might have put a brake to a procedure that could only benefit the Bolshevik party.*" [Marc Ferro, **October 1917**, p. 191 and p. 195]

The effects of this can be seen in Petrograd soviet elections of June 1918. In these the Bolsheviks "*lost the absolute majority in the soviet they had previously enjoyed*" but remained its largest party. However, the results of these elections were irrelevant. This was because "*under regulations prepared by the Bolsheviks and adopted by the 'old' Petrograd soviet, more than half of the projected 700-plus deputies in the 'new' soviet were to be elected by the Bolshevik-dominated district soviets, trade unions, factory committees, Red Army and naval units, and district worker conferences: thus, the Bolsheviks were assured of a solid majority even before factory voting began.*" [Alexander Rabinowitch, **Early Disenchantment with Bolshevik Rule**, p. 45] To be specific, the number of delegates elected directly from the workplace made up a mere third of the new soviet (i.e. only 260 of the 700 plus deputies in the new soviet were elected directly from the factories): "*It was this arbitrary 'stacking' of the new soviet, much more than election of 'dead souls' from shut-down factories, unfair campaign practices, falsification of the vote, or direct repression, that gave the Bolsheviks an unfair advantage in the contest.*" [Alexander Rabinowitch, **The Petrograd First City District Soviet during the Civil War**, p. 140]

In other words, the Bolsheviks gerrymandered and packed soviets to remain in power, so distorting the soviet structure to ensure Bolshevik dominance. This practice seems to have been commonplace. In Saratov, as in Petrograd, "*the Bolsheviks, fearing that they would lose elections, changed the electoral rules . . . in addition to the delegates elected directly at the factories, the trade unions -- but only those in favour of soviet power, in other words supporters of the Bolsheviks and Left SRs -- were given representation. Similarly, the political parties supporting Soviet power automatically received twenty-five seats in the soviets. Needless to say, these rules heavily favoured the ruling parties*" as the Mensheviks and SRs "*were regarded by the Bolsheviks as being against Soviet power.*" [Brovkin, **Op. Cit.**, p. 30]

A similar situation existed in Moscow. For example, the largest single union in the soviet in 1920 was that of soviet employees with 140 deputies (9% of the total), followed by the metal workers with 121 (8%). In total, the bureaucracies of the four biggest trade unions had 29.5% of delegates in the Moscow soviet. This packing of the soviet by the trade union bureaucracy existed in 1918 as well, ensuring the Bolsheviks were insulated from popular opposition and the recall of workplace delegates by their electors. Another form of gerrymandering was uniting areas of Bolshevik strength "*for electoral purposes with places where they were weak, such as the creation of a single constituency out of the Moscow food administration (MPO) and the Cheka in February 1920.*" [Richard Sakwa, **Soviet Communists in Power**, p. 179 and p. 178]

However, this activity was mild compared to the Bolshevik response to soviet elections which did not go their way. According to one historian, by the spring of 1918 "*Menshevik newspapers and activists in the trade unions, the Soviets, and the factories had made a considerable impact on a working class which was becoming increasingly disillusioned with the Bolshevik regime, so much so that in many places the Bolsheviks felt constrained to dissolve Soviets or prevent re-elections where Mensheviks and Socialist Revolutionaries had gained majorities.*" [Israel Getzler, **Martov**, p. 179] This is confirmed by other sources. "*By the middle of 1918,*" notes Leonard Schapiro, "*the Mensheviks could claim with some justification that large numbers of the industrial working class were now behind them, and that for the*

systematic dispersal and packing of the soviets, and the mass arrests at workers' meetings and congresses, their party could eventually have won power by its policy of constitutional opposition. In the elections to the soviets which were taking place in the spring of 1918 throughout Russia, arrests, military dispersal, even shootings followed whenever Mensheviks succeeded in winning majorities or a substantial representation." [The Origin of the Communist Autocracy, p. 191]

For example, the Mensheviks *"made something of a comeback about Saratov workers in the spring of 1918, for which the Bolsheviks expelled them from the soviet."* [Donald J. Raleigh, **Experiencing Russia's Civil War**, p. 187] Izhevsk, a town of 100,000 with an armaments industry which was the main suppliers of rifles to the Tzar's Army, experienced a swing to the left by the time of the October revolution. The Bolsheviks and SR-Maximalists became the majority and with a vote 92 to 58 for the soviet to assume power. After a revolt by SR-Maximalist Red Guards against the Bolshevik plans for a centralised Red Army in April, 1918, the Bolsheviks became the sole power. However, in the May elections the Mensheviks and [right] SRs *"experienced a dramatic revival"* and for *"the first time since September 1917, these two parties constituted a majority in the Soviet by winning seventy of 135 seats."* The Bolsheviks *"simply refused to acquiesce to the popular mandate of the Mensheviks and Socialist Revolutionaries."* In June, the Bolshevik leadership *"appealed to the Karzan' Soviet . . . for assistance."* The troops sent along with the Bolshevik dominated Red Guards *"abrogated the results of the May and June elections"* and imprisoned the SR and Menshevik soviet delegates. The summer of 1918 also saw victories for the SRs and Mensheviks in the soviet elections in Votkinsk, a steel town near Izhevsk. *"As in Izhevsk the Bolsheviks voided the elections."* [Stephan M. Merk, *"The 'Class-Tragedy' of Izhevsk: Working Class Opposition to Bolshevism in 1918"*, pp. 176-90, **Russian History**, vol. 2, no. 2, p. 181 and p. 186]

However, the most in depth account of this destruction of soviet is found in the research of Vladimir Brovkin. According to him, there *"are three factors"* which emerge from the soviet election results in the spring of 1918. These are, firstly, *"the impressive success of the Menshevik-SR opposition"* in those elections in all regions in European Russia. The second *"is the Bolshevik practice of outright disbandment of the Menshevik-SR-controlled soviets. The third is the subsequent wave of anti-Bolshevik uprisings."* In fact, *"in all provincial capitals of European Russia where elections were held on which there are data, the Mensheviks and the SRs won majorities on the city soviets in the spring of 1918."* Brovkin stresses that the *"process of the Menshevik-SR electoral victories threatened Bolshevik power. That is why in the course of the spring and summer of 1918, the soviet assemblies were disbanded in most cities and villages. To stay in power, the Bolsheviks had to destroy the soviets. . . These steps generated a far-reaching transformation in the soviet system, which remained 'soviet' in name only."* Brovkin presents accounts from numerous towns and cities. As an example, he discusses Tver' where the *"escalation of political tensions followed the already familiar pattern"* as the *"victory of the opposition at the polls"* in April 1918 *"brought about an intensification of the Bolshevik repression. Strikes, protests, and marches in Tver' lead to the imposition of martial law."* [Brovkin, **Op. Cit.**, p. 46, p. 47, p. 48 and p. 11] Thus Bolshevik armed force not only overthrew the election results, it also suppressed working class protest against such actions. (Brovkin's book **The Mensheviks after October** contains the same information as his article).

This Bolshevik attack on the soviets usually started with attempts to stop new elections. For example, after a demonstration in Petrograd in favour of the Constituent Assembly was repressed by the Bolsheviks in mid-January 1918, calls for new elections to the soviet occurred in many factories. *"Despite the efforts of the Bolsheviks and the Factory Committees they controlled, the movement for new elections to the soviet spread to more than twenty factories by early February and resulted in the election of fifty delegates: thirty-six SRs, seven Mensheviks and seven non-party."* However, the Bolsheviks *"unwillingness to recognise the elections and to seat new delegates pushed a group of Socialists to . . . lay plans for an alternative workers' forum . . . what was later to become the Assembly of Workers' Plenipotentiaries."* [Scott Smith, *"The Social-Revolutionaries and the Dilemma of Civil War"*, **The Bolsheviks in Russian Society**, pp. 83-104, Vladimir N. Brovkin (Ed.), pp. 85-86] This forum, like all forms of working class protest, was crushed by the Bolshevik state. By the time the elections were held, in June 1918, the civil war had started (undoubtedly favouring the Bolsheviks) and the Bolsheviks had secured their majority by packing the soviet with non-workplace "representatives."

In Tula, again in the spring of 1918, local Bolsheviks reported to the Bolshevik Central Committee that the *"Bolshevik deputies began to be recalled one after another . . . our situation became shakier with passing day. We were forced to block new elections to the soviet and even not to recognise them where they had taken place not in our favour."* In the end, the local party leader was forced to abolish the city soviet and to vest power in the Provincial Executive Committee. This refused to convene a plenum of the city soviet for more than two months, knowing that newly elected delegates were non-Bolshevik. [Smith, **Op. Cit.**, p. 87]

In Yaroslavl', the newly elected soviet convened on April 9th, 1918, and when it elected a Menshevik chairman, *"the Bolshevik delegation walked out and declared the soviet dissolved. In response, workers in the city went out on strike, which the Bolsheviks answered by arresting the strike committee and threatening to dismiss the strikers and replace them with unemployed workers."* This failed and the Bolsheviks were forced to hold new elections, which they lost. Then *"the Bolsheviks dissolved this soviet as well and places the city under martial law."* A similar event occurred in Riazan' (again in April) and, again, the Bolsheviks *"promptly dissolved the soviet and declared a dictatorship under a Military-Revolutionary Committee."* [**Op. Cit.**, pp. 88-9]

The opposition parties raised such issues at the All-Russian Central Executive Committee of Soviets (VTsIK), to little avail. On the 11th of April, one *"protested that non-Bolshevik controlled soviets were being dispersed by armed force, and wanted to discuss the issue."* The chairman *"refus[ed] to include it in the agenda because of lack of supporting material"* and such information be submitted to the presidium of the soviet. The majority (i.e. the Bolsheviks) *"supported their chairman"* and the facts were *"submitted . . . to the presidium, where they apparently remained."* It should be noted that the *"same fate befell attempts to challenge the arrests of Moscow anarchists by the government on 12 April."* The chairman's *"handling of the anarchist matter ended its serious discussion in the VTsIK."* [Charles Duval, **Op. Cit.**, pp. 13-14] Given that the VTsIK was **meant** to be the highest soviet body between congresses, the lack of concern for Bolshevik repression against soviets and opposition groups clearly shows the Bolshevik contempt for soviet democracy.

Needless to say, this destruction of soviet democracy continued during the civil war. For example, the Bolsheviks simply rejected the voice of people and would refuse to accept an election result. Emma Goldman attended an election meeting of bakers in Moscow in March, 1920. *"It was," she said, "the most exciting gathering I had witnessed in Russia."* However the *"chosen representative, an Anarchist, had been refused his mandate by the Soviet authorities. It was the third time the workers gathered to re-elect their delegate . . . and every time they elected the same man. The Communist candidate opposing him was Semashko, the Commissar of the Department of Health . . . [who] raved against the workers for choosing a non-Communist, called anathema upon their heads, and threatened them with the Tcheka and the curtailment of their rations. But he had no effect on the audience except to emphasise their opposition to him, and to arouse antagonism against the party he represented. The workers' choice was repudiated by the authorities by the authorities and later even arrested and imprisoned."* After a hunger strike, they were released. In spite of chekists with loaded guns attending union meetings, the bakers *"would not be intimidated"* and threatened a strike unless they were permitted to elect their own candidate. This ensured the bakers' demands were met. [**My Disillusionment in Russia**, pp. 88-9]

Unsurprisingly, *"there is a mass of evidence to support the Menshevik accusations of electoral malpractice"* during elections in May 1920. And in spite of Menshevik *"declaration of support for the Soviet regime against the Poles"* the party was *"still subject to harassment."* [Skawa, **Op. Cit.**, p. 178]

This gerrymandering was not limited to just local soviets. The Bolsheviks used it at the fifth soviet congress as well.

First, it should be noted that in the run up to the congress, *"on 14 June 1918, they expelled Martov and his five Mensheviks together with the Socialist Revolutionaries from the Central Executive Committee, closed down their newspapers . . . and drove them underground, just on the eve of the elections to the Fifth Congress of Soviets in which the Mensheviks were expected to make significant gains."* [Israel Getzler, **Martov**, p. 181] The rationale for this action was the claim that the Mensheviks had taken part in anti-soviet rebellions (as we discuss in [section 23](#), this was not true). The action was opposed by the Left SRs, who correctly questioned the legality of the Bolshevik expulsion of opposition groupings. They *"branded the proposed expulsion bill illegal, since the Mensheviks and SRs had been sent to the CEC by the Congress of Soviets, and only the next congress had the right to withdraw their representation. Furthermore, the Bolsheviks had no right to pose as defenders of the soviets against the alleged SR counter-revolution when they themselves has been disbanding the peasants' soviets and creating the committees of the poor to replace them."* [Brovkin, **The Mensheviks After October**, p. 231] When the vote was taken, only the Bolsheviks supported it. Their votes were sufficient to pass it.

Given that the Mensheviks had been winning soviet elections across Russia, it is clear that this action was driven far more by political needs than the truth. This resulted in the Left Social Revolutionaries (LSRs) as the only significant party left in the run up to the fifth Congress. The LSR author (and ex-commissar for justice in the only coalition soviet government) of the only biography of LSR leader (and long standing revolutionary who suffered torture and imprisonment in her fight against Tsarism) Maria Spiridonova states that *"[b]etween 900 and 100 delegates were present. Officially the LSR numbered 40*

percent of the delegates. Their own opinion was that their number were even higher. The Bolsheviks strove to keep their majority by all the means in their power." He quotes Spiridonova's address to the Congress: "You may have a majority in this congress, but you do have not a majority in the country." [I. Steinberg, **Spiridonova**, p. 209]

Historian Geoffrey Swain indicates that the LSRs had a point:

*"Up to the very last minute the Left SRs had been confident that, as the voice of Russia's peasant masses, they would receive a majority when the Fifth Congress of Soviets assembled . . . which would enable them to deprive Lenin of power and launch a revolutionary war against Germany. Between April and the end of June 1918 membership of their party had almost doubled, from 60,000 to 100,000, and to prevent them securing a majority at the congress Lenin was forced to rely on dubious procedures: he allowed so-called committees of poor peasants to be represented at the congress. Thus as late as 3 July 1918 returns suggested a majority for the Left SRs, but a Congress of Committees of Poor Peasants held in Petrograd the same day 'redressed the balance in favour of the Bolsheviks,' to quote the **Guardian's** Philips-Price, by deciding it had the right to represent the all those districts where local soviets had not been 'cleansed of kulak elements and had not delivered the amount of food laid down in the requisitioning lists of the Committees of Poor Peasants.' This blatant gerrymandering ensured a Bolshevik majority at the Fifth Congress of Soviets." [The Origins of the Russian Civil War, p. 176]*

Historian Alexander Rabinowitch confirms this gerrymandering. As he put it, by the summer of 1918 "popular disenchantment with Bolshevik rule was already well advanced, not only in rural but also in urban Russia" and the "primary beneficiaries of this nationwide grass-roots shift in public opinion were the Left SRs. During the second half of June 1918, it was an open question which of the two parties would have a majority at the Fifth All-Russian Congress of Soviets . . . On the evening of 4 July, virtually from the moment the Fifth Congress of Soviets opened in Moscow's Bolshoi Theatre, it was clear to the Left SRs that the Bolsheviks had effectively 'fabricated' a sizeable majority in the congress and consequently, that there was no hope whatever of utilising it to force a fundamental change in the government's pro-German, anti-peasant policies." While he acknowledges that an "exact breakdown of properly elected delegates may be impossible to ascertain" it was possible ("based on substantial but incomplete archival evidence") to conclude that "it is quite clear that the Bolshevik majority was artificially inflated and highly suspect." He quotes the report of one leading LSR, based on data from LSR members of the congress's Credentials Committee, saying that the Bolsheviks "conjured up" 299 voting delegates. "The Bible tells us," noted the report's author, "that God created the heavens and the earth from nothing . . . In the twentieth century the Bolsheviks are capable of no lesser miracles: out of nothing, they create legitimate credentials." ["Maria Spiridonova's 'Last Testament'", **The Russian Review**, pp. 424-46, vol. 54, July 1995, p. 426]

This gerrymandering played a key role in the subsequent events. "Deprived of their democratic majority," Swain notes, "the Left SRs resorted to terror and assassinated the German ambassador

Mirbach." [Swain, **Op. Cit.**, p. 176] The LSR assassination of Mirbach and the events which followed were soon labelled by the Bolsheviks an "*uprising*" against "soviet power" (see [section 23](#) for more details). Lenin "*decided that the killing of Mirbach provided a fortuitous opportunity to put an end to the growing Left SR threat.*" [Rabinowitch, **Op. Cit.**, p. 427] After this, the LSRs followed the Mensheviks and Right SRs and were expelled from the soviets. This in spite of the fact that the rank and file knew nothing of the plans of the central committees and that their soviet delegates had been elected by the masses. The Bolsheviks had finally eliminated the last of their more left-wing opponents (the anarchists had been dealt with in April, see [section 24](#) for details).

As discussed in [section 21](#), the Committees of Poor Peasants were only supported by the Bolsheviks. Indeed, the Left SRs opposed them as being utterly counter-productive and an example of Bolshevik ignorance of village life. Consequently, we can say that the "delegates" from the committees were Bolsheviks or at least Bolshevik supporters. Significantly, by early 1919 Lenin admitted the Committees were failures and ordered them disbanded. The new policy reflected Left SR arguments against the Committees. It is hard not to concur with Vladimir Brovkin that by "*establishing the committees of the poor to replace the [rural] soviets . . . the Bolsheviks were trying to create some institutional leverage of their own in the countryside for use against the SRs. In this light, the Bolshevik measures against the Menshevik-led city soviets . . . and against SR-led village soviets may be seen as a two-pronged attempt to stem the tide that threatened to leave them in the minority at the Fifth Congress of Soviets.*" [**The Mensheviks after October**, p. 226]

Thus, by July 1918, the Bolsheviks had effectively secured a monopoly of political power in Russia. When the Bolsheviks (rightly, if hypocritically) disbanded the Constituent Assembly in January 1918, they had claimed that the soviets (rightly) represented a superior form of democracy. Once they started losing soviet elections, they could find no better way to "secure" workers' democracy than to destroy it by gerrymandering soviets, disbanding them and expelling opposition parties from them. All peaceful attempts to replace them had been destroyed. The soviet CEC was marginalised and without any real power. Opposition parties had been repressed, usually on little or no evidence. The power of the soviets had been replaced by a soviet power in less than a year. However, this was simply the culmination of a process which had started when the Bolsheviks seized power in November 1917. Simply put, the Bolsheviks had always aimed for "all power to the party via the soviets" and once this had been achieved, the soviets could be dispensed with. Maurice Brinton simply stated the obvious when he wrote that "*when institutions such as the soviets could no longer be influenced by ordinary workers, the regime could no longer be called a soviet regime.*" [**The Bolsheviks and Workers' Control**, p. xiii] By this obvious criteria, the Bolshevik regime was no longer soviet by the spring of 1918, i.e. before the outbreak of civil war. While opposition groups were not finally driven out of the soviets until 1923 (i.e. three years **after** the end of the civil war) their presence "*does not indicate the existence of a multi-party system since they in no way threatened the dominating role of the Bolsheviks, and they had not done so from mid-1918.*" [Richard Sakwa, **Op. Cit.**, p. 168]

Tony Cliff, leader of the British Leninist party the SWP, justified the repression of the Mensheviks and SRs on the grounds that they were not prepared to accept the Soviet system and rejected the role of

"constitutional opposition." He tries to move forward the repression until after the outbreak of full civil war by stating that "[d]espite their strong opposition to the government, for some time, i.e. until after the armed uprising of the Czechoslovakian Legion [in late May, 1918] -- the Mensheviks were not much hampered in their propaganda work." If having papers banned every now and then, members arrested and soviets being disbanded as soon as they get a Menshevik majority is *"not much hampered"* then Cliff does seem to be giving that phrase a new meaning. Similarly, Cliff's claim that the *"civil war undermined the operation of the local soviets"* also seems lacking based on this new research. [**Lenin: Revolution Besieged**, vol. 3, p. 163, p. 167 and p. 150]

However, the Bolshevik assault on the soviets started during the spring of 1918 (i.e. in March, April and May). That is **before** the Czech rising and the onset of full scale civil war which occurred in late May (see [section 3](#) of the appendix on ["What caused the degeneration of the Russian Revolution?"](#) on Bolshevik repression before the Czech revolt). Nor is it true that the Mensheviks rejected constitutional methods. Though they wished to see a re-convocation of the Constituent Assembly they believed that the only way to do this was by winning a majority of the soviets (see [section 23](#)). Clearly, attempts to blame the Civil War for the elimination of soviet power and democracy seems woefully weak given the actions of the Bolsheviks in the spring of 1918. And, equally clearly, the reduction of local soviet influence cannot be fully understood without factoring in the Bolshevik prejudice in favour of centralisation (as codified in the Soviet Constitution of 1918) along with this direct repression.

The simple fact is that the soviets were marginalised and undermined after the October Revolution simply because they **did** reflect the wishes of the working class, in spite of their defects (defects the Bolsheviks exploited to consolidate their power). The problem was that the workers no longer supported Lenin. Few Leninists would support such an obvious conclusion. For example, John Rees states that *"[i]n the cities the Reds enjoyed the fierce and virtually undivided loyalty of the masses throughout the civil war period."* [*"In Defence of October"*, pp. 3-82, **International Socialism**, no. 52, p. 47] Which, of course, explains the vast number of strikes and protests directed against the Bolshevik regime and the workers' resolutions calling its end! It also explains why the Bolsheviks, in the face of such *"undivided loyalty"*, had to suppress opposition parties and impose a party dictatorship!

Simply put, **if** the Bolsheviks did have the support Rees states they did then they had no need to repress soviet democracy and opposition parties. Such *"fierce"* loyalty would not have been amenable to opposition arguments. Strange, then, that the Bolsheviks continually explained working class unrest in terms of the influence of Mensheviks, Left SRs and so on during the civil war. Moreover, Rees contradicts himself by arguing that if the Kronstadt revolt had succeeded, then it would have resulted in *"the fall of the Bolsheviks."* [**Op. Cit.**, p. 63] Now, given that the Kronstadt revolt called for free soviet elections (and **not** *"soviets without parties"* as Rees asserts), why did the Bolsheviks not agree to them (at least in the cities)? If, as Rees argues, the Reds had the fierce loyalty of the city workers, then why did the Bolsheviks not introduce soviet democracy in the cities after the end of the Civil War? Simply because they knew that such *"loyalty"* did not, in fact, exist. Zinoviev, for example, declared that the Bolsheviks' support had been reduced to 1 per cent in early 1920. [Farber, **Before Stalinism**, p. 188]

So much for working class "loyalty" to the Bolsheviks. And, needless to say, Rees' comments totally ignore the election results **before** the start of the civil war which prompted the Bolsheviks to pack or disband soviets. As Bertrand Russell summarised from his experiences in Lenin's Russia during the civil war (in 1920): *"No conceivable system of free elections would give majorities to the Communists, either in the town or country."* [**The Practice and Theory of Bolshevism**, pp. 40-1] Thus we have a major contradiction in the pro-Leninist argument. On the one hand, they stress that the workers supported the Bolsheviks wholeheartedly during the civil war. On the other, they argue that party dictatorship had to be imposed. If the Bolsheviks had the support they claimed they had, then they would have won soviet elections easily. They did not and so free soviet elections were not held.

This fact also explains the fate of the so-called "non party" conferences favoured by the Bolsheviks in late 1920. In spite of praising the soviets as *"more democratic"* than anything in the *"best democratic republics of the bourgeois world,"* Lenin also argued that non-Party conferences were also required *"to be able to watch the mood of the masses, to come closer to them, to respond to their demands."* [**Left-Wing Communism**, p. 33 and p. 32] If the soviets were as democratic as Lenin claimed, then the Bolsheviks would have no need of "non-party" conferences. Significantly, the Bolsheviks "responded" to these conferences and "their demands" by disbanding them. This was because *"[d]uring the disturbances"* of late 1920, *"they provided an effective platform for criticism of Bolshevik policies."* Their frequency was decreased and they "were discontinued soon afterward." [Richard Sakwa, **Soviet Communists in Power**, p. 203] In other words, they meet the same fate as the soviets in the spring and summer of 1918.

Perhaps we should not be too surprised by these developments. After all, as we discuss in [section 8](#) of the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#), the Bolsheviks had long had a distinctly undemocratic political ideology. Their support for democratic norms were less than consistent. The one thing they **were** consistent was their hypocrisy. Thus democratic decisions were to be binding on their opponents (even if that majority had to be manipulated into being) but not upon them. Before the revolution Lenin had openly espoused a double standard of discipline. *"We will not permit,"* he argued, *"the idea of unity to tie a noose around our necks, and we shall under no circumstances permit the Mensheviks to lead us by the rope."* [quoted by Robert V. Daniels, **The Conscience of the Revolution**, p. 17] Once in power, their political perspectives had little trouble ignoring the will of the working class when it clashed with what they, as that class's self-proclaimed vanguard, had decided what was in its best interests. As we discussed in [section H.5](#), such an autocratic perspective is at the heart of vanguardism. If you aim for party power, it comes as no surprise that the organs used to achieve it will wither under it. Just as muscles only remain strong if you use them, so soviets can only work if it is used to run society, not nominate the handful of party leaders who do. As Kropotkin argued in 1920:

"The idea of soviets . . . of councils of workers and peasants . . . controlling the economic and political life of the country is a great idea. All the more so, since it necessarily follows that these councils should be composed of all who take part in the production of natural wealth by their own efforts."

"But as long as the country is governed by a party dictatorship, the workers' and peasants' councils evidently lose their entire significance. They are reduced to . . . [a] passive role . . . A council of workers ceases to be free and of any use when liberty of the press no longer exists . . . [and they] lose their significance when the elections are not preceded by a free electoral campaign, and when the elections are conducted under pressure of a party dictatorship . . . It means the death-knell of the new system." [**Kropotkin's Revolutionary Pamphlets**, pp. 254-5]

Clearly, the fate of the soviets after October shows the dangers of Bolshevism to popular self-management and autonomy. We should be try and learn the lessons from the experience rather than, as pro-Bolsheviks do, rationalise and justify the usurpation of power by the party. The most obvious lesson to learn is to oppose the creation of any power **above** the soviets. This was not lost on Russian anarchists active in the revolution. For this reason, anarcho-syndicalists resolved, in August 1918, that they *"were for the soviets but categorically against the Soviet of People's Commissars as an organ which does not stem from the soviet structure but only interferes with its work."* Thus they were *"for the establishment of **free soviets** of workers' and peasants' representatives, and the abolition of the Soviet of People's Commissars as an organisation inimical to the interests of the working class."* [contained in Paul Avrich, **The Anarchists in the Russian Revolution**, p. 118 and p. 117] This resolution was driven by the experience of the Bolshevik dominated "soviet" regime.

It is also worth quoting Rudolf Rocker at length on this issue:

"Let no one object that the 'dictatorship of the proletariat' cannot be compared to run of the mill dictatorship because it is the dictatorship of a class. Dictatorship of a class cannot exist as such, for it ends up, in the last analysis, as being the dictatorship of a given party which arrogates to itself the right to speak for that class. Thus, the liberal bourgeoisie, in their fight against despotism, used to speak in the name of the 'people'. . .

"We already know that a revolution cannot be made with rosewater. And we know, too, that the owning classes will never yield up their privileges spontaneously. On the day of victorious revolution the workers will have to impose their will on the present owners of the soil, of the subsoil and of the means of production, which cannot be done -- let us be clear on this -- without the workers taking the capital of society into their own hands, and, above all, without their having demolished the authoritarian structure which is, and will continue to be, the fortress keeping the masses of the people under dominion. Such an action is, without doubt, an act of liberation; a proclamation of social justice; the very essence of social revolution, which has nothing in common with the utterly bourgeois principle of dictatorship.

"The fact that a large number of socialist parties have rallied to the idea of councils, which is the proper mark of libertarian socialist and revolutionary syndicalists, is a confession, recognition that the tack they have taken up until now has been the product of

a falsification, a distortion, and that with the councils the labour movement must create for itself a single organ capable of carrying into effect the unmitigated socialism that the conscious proletariat longs for. On the other hand, it ought not to be forgotten that this abrupt conversion runs the risk of introducing many alien features into the councils concept, features, that is, with no relation to the original tasks of socialism, and which have to be eliminated because they pose a threat to the further development of the councils. These alien elements are able only to conceive things from the dictatorial viewpoint. It must be our task to face up to this risk and warn our class comrades against experiments which cannot bring the dawn of social emancipation any nearer -- which indeed, to the contrary, positively postpone it.

"Consequently, our advice is as follows: Everything for the councils or soviets! No power above them! A slogan which at the same time will be that of the social revolutionary." [Anarchism and Sovietism]

The validity of this argument can be seen, for example, from the expulsion of opposition parties from the soviets in June and July 1918. This act exposes the hollowness of Bolshevik claims of their soviet system presented a form of "higher" democracy. If the Bolshevik soviet system was, as they claimed, based on instant recall then why did they, for example, have to expel the Mensheviks and Right SRs from the soviet CEC in the first place? Why did the electors not simply recall them? It was two weeks after the Czech revolt before the Bolsheviks acted, surely enough time for voters to act? Perhaps this did not happen because the CEC was not, in fact, subject to instant recall at all? Being nominated at the quarterly soviet congress, they were effectively isolated from popular control. It also means that the Bolshevik government was even more insulated from popular control and accountability. To "recall" it, electors would have to either wait for the next national soviet congress or somehow convince the CEC to call an emergency one. As an example of workers' running society, the Bolshevik system leaves much to be desired.

Another obvious lesson to learn was the use of appointments to the soviets and their executives from other organisations. As seen above, the Bolsheviks used the "representation" of other bodies they control (such as trade unions) to pack soviet assemblies in their favour. Similarly, allowing political parties to nominate representatives in soviet executives also marginalised the soviet assemblies and those delegates actually elected in the workplaces.

This was obvious to the Russian anarchists, who argued *"for effective soviets organised on collective lines with the direct delegation of workers and peasants from every factory, workshop, village, etc., and not political chatterboxes gaining entry through party lists and turning the soviets into talking shops."* [contained in Paul Avrich, **The Anarchists in the Russian Revolution**, p. 118] The Makhnovists, likewise, argued that *"[o]nly labourers who are contributing work necessary to the social economy should participate in the soviets. Representatives of political organisations have no place in worker-peasant soviets, since their participation in a workers' soviet will transform the latter into deputies of the party and can lead to the downfall of the soviet system."* [contained in Peter Arshinov's

History of the Makhnovist Movement, p. 266] As we discuss in [section 15](#) of the appendix on "[Why does the Makhnovist movement show there is an alternative to Bolshevism?](#)", Leninists sometimes distort this into a claim that the Makhnovists opposed members of political standing for election.

This use of party lists meant that soviet delegates could be anyone. For example, the leading left-wing Menshevik Martov recounts that in early 1920 Bolsheviks in a chemical factory "*put up Lenin against me as a candidate [to the Moscow soviet]. I received seventy-six votes he-eight (in an open vote).*" [quoted by Israel Getzler, **Martov**, p. 202] How would either of these two intellectuals actually know and reflect the concerns and interests of the workers they would be "delegates" of? If the soviets were meant to be the delegates of working people, then why should non-working class members of political parties be elected to a soviet?

However, in spite of these problems, the Russian soviets were a key means of ensuring working class participation in the revolution. As recognised by all the socialist oppositions to the Bolsheviks, from the anarchists to the Mensheviks. As one historian put it:

"Small wonder that the principal political demand of Mensheviks, Left SRs, SR Maximalists, Kronstadt sailors and of many oppositionists . . . has been for freely elected soviets which would this be restored to their original role as agents of democratisation." [Israel Getzler, **Soviets as Agents of Democratisation**, p. 30]

The sad fate of the soviets after the Bolshevik seizure of power simply confirms the opinion of the left Menshevik Martov who had "*rubbed it in to the Bolsheviks . . . at the first All-Russian Congress of Trade Unions [in January 1918], that they who were now extolling the Soviets as the 'highest forms of the socialist development of the proletariat,' had shown little love of them in 1905 or in 1917 after the July days; they loved Soviets only when they were 'in the hands of the Bolshevik party.'*" [Getzler, **Martov**, p. 174] As the next few months showed, once the soviets left those hands, then the soviets themselves were destroyed. The civil war did not start this process, it just gave the latter-day supporters of Bolshevism something to use to justify these actions.

7 How did the factory committee movement develop?

8 What was the Bolshevik position on "workers' control" in 1917?

9 What happened to the factory committees after October?

10 What were the Bolshevik economic policies in 1918?

- 11 Did Bolshevik economic policies work?**
- 12 Was there an alternative to Lenin's "state capitalism" and "war communism"?**
- 13 Did the Bolsheviks allow independent trade unions?**
- 14 Was the Red Army really a revolutionary army?**
- 15 Was the Red Army "filled with socialist consciousness"?**
- 16 How did the civil war start and develop?**
- 17 Was the civil war between just Reds and Whites?**
- 18 How extensive was imperialist intervention?**
- 19 Did the end of the civil war change Bolshevik policies?**
- 20 Can the Red Terror and the Cheka be justified?**
- 21 Did Bolshevik peasant policies work?**
- 22 Was there an alternative to grain requisition?**
- 23 Was the repression of the socialist opposition justified?**
- 24 What did the anarchists do during the revolution?**
- 25 Did the Russian revolution refute anarchism?**

How did Bolshevik ideology contribute to the failure of the Revolution?

It is a truism of Leninism that Stalinism has nothing to do with the ideas of Bolshevism. Moreover, most are at pains to stress that these ideas have no relation to the actual practice of the Bolshevik Party after the October Revolution. To re-quote one Leninist:

"it was overwhelmingly the force of circumstance which obliged the Bolsheviks to retreat so far from their own goals. They travelled this route in opposition to their own theory, not because of it -- no matter what rhetorical justifications were given at the time." [John Rees, *"In Defence of October,"* pp. 3-82, **International Socialism**, no. 52, p. 70]

His fellow party member Duncan Hallas argued that it was *"these desperate conditions"* (namely terrible economic situation combined with civil war) which resulted in *"the Bolshevik Party [coming] to substitute its own rule for that of a decimated, exhausted working class"* anarchists disagree. [**Towards a Revolutionary Socialist Party**, p. 43]

We have discussed in the appendix on ["What caused the degeneration of the Russian Revolution?"](#) why the various *"objective factors"* explanations favoured by Leninists to explain the defeat of the Russian Revolution are unconvincing. Ultimately, they rest on the spurious argument that if only what most revolutionaries (including, ironically, Leninists!) consider as inevitable side effects of a revolution did not occur, then Bolshevism would have been fine. It is hard to take seriously the argument that if only the ruling class disappeared without a fight, if the imperialists had not intervened and if the economy was not disrupted then Bolshevism would have resulted in socialism. This is particularly the case as Leninists argue that only **their** version of socialism recognises that the ruling class will **not** disappear after a revolution, that we will face counter-revolution and so we need a state to defend the revolution! As we argued in [section H.2.1](#), this is not the case. Anarchists have long recognised that a revolution will require defending and that it will provoke a serious disruption in the economic life of a country.

Given the somewhat unrealistic tone of these kinds of assertions, it is necessary to look at the ideological underpinnings of Bolshevism and how they played their part in the defeat of the Russian Revolution. This section, therefore, will discuss why such Leninist claims are not true. Simply put, Bolshevik ideology **did** play a role in the degeneration of the Russian Revolution. This is obvious once we look at most aspects of Bolshevik ideology as well as the means advocated by the Bolsheviks to achieve their goals. Rather than being in opposition to the declared aims of the Bolsheviks, the policies implemented by them during the revolution and civil war had clear relations with their pre-revolution ideas and visions. To quote Maurice Brinton's conclusions after looking at this period:

"there is a clear-cut and incontrovertible link between what happened under Lenin and

Trotsky and the later practices of Stalinism. We know that many on the revolutionary left will find this statement hard to swallow. We are convinced however that any honest reading of the facts cannot but lead to this conclusion. The more one unearths about this period the more difficult it becomes to define - or even to see - the 'gulf' allegedly separating what happened in Lenin's time from what happened later. Real knowledge of the facts also makes it impossible to accept . . . that the whole course of events was 'historically inevitable' and 'objectively determined'. Bolshevik ideology and practice were themselves important and sometimes decisive factors in the equation, at every critical stage of this critical period. Now that more facts are available self-mystification on these issues should no longer be possible. Should any who have read these pages remain 'confused' it will be because they want to remain in that state -- or because (as the future beneficiaries of a society similar to the Russian one) it is their interest to remain so." [The Bolsheviks and Workers' Control, p. 84]

This is unsurprising. The Leninist idea that politics of the Bolsheviks had no influence on the outcome of the revolution, that their policies during the revolution were a product purely of objective forces, is unconvincing. The fact of the matter is that people are faced with choices, choices that arise from the objective conditions that they face. What decisions they make will be influenced by the ideas they hold -- they will **not** occur automatically, as if people were on auto-pilot -- and their ideas are shaped by the social relationships they experience. Thus, someone who favours centralisation and sees nationalisation as the defining characteristic of socialism will make different decisions than someone who favours decentralising power and sees self-management as the key issue. The former will also create **different** forms of social organisation based on their perceptions of what "socialism" is and what is "efficient." Similarly, the different forms of social organisation favoured will also impact on how a revolution develops and the political decisions they make. For example, if you have a vision which favours centralised, hierarchical organisation then those placed into a position of power over others within such structures will act in certain ways, have a certain world view, which would be alien to someone subject to egalitarian social relations.

In summary, the ideas in people's heads matter, including during a revolution. Someone in favour of centralisation, centralised power and who equates party rule with class rule (like Lenin and Trotsky), will act in ways (and create structures) totally different from someone who believes in decentralisation and federalism. The organisation they create will create specific forms of social relationships which, in turn, will shape the ideas of those subject to them. This means that a centralised, hierarchical system will create authoritarian social relationships and these will shape those within them and the ideas they have in totally different ways than a decentralised, egalitarian system.

Similarly, if Bolshevik policies hastened the alienation of working class people and peasants from the regime which, in turn, resulted in resistance to them then some of the "objective factors" facing Lenin's regime were themselves the products of earlier political decisions. Unwelcome and unforeseen (at least to the Bolshevik leadership) consequences of specific Bolshevik practices and actions, but still flowing from Bolshevik ideology all the same. So, for example, when leading Bolsheviks had preconceived biases against decentralisation, federalism, "petty-bourgeois" peasants, "declassed" workers or "anarcho-

syndicalist" tendencies, this would automatically become an ideological determinant to the policies decided upon by the ruling party. While social circumstances may have limited Bolshevik options, these social circumstances were also shaped by the results of Bolshevik ideology and practice and, moreover, possible solutions to social problems were also limited by Bolshevik ideology and practice.

So, **political ideas do matter**. And, ironically, the very Leninists who argue that Bolshevik politics played no role in the degeneration of the revolution accept this. Modern day Leninists, while denying Bolshevik ideology had a negative on the development of the revolution also subscribe to the contradictory idea that Bolshevik politics were essential for its "success"! Indeed, the fact that they **are** Leninists shows this is the case. They obviously think that Leninist ideas on centralisation, the role of the party, the "*workers' state*" and a host of other issues are correct and, moreover, essential for the success of a revolution. They just dislike the results when these ideas were applied in practice within the institutional context these ideas promote, subject to the pressures of the objective circumstances they argue **every** revolution will face!

Little wonder anarchists are not convinced by Leninist arguments that their ideology played no role in the rise of Stalinism in Russia. Simply put, if you use certain methods then these will be rooted in the specific vision you are aiming for. If you think socialism is state ownership and centralised planning then you will favour institutions and organisations which facilitate that end. If you want a highly centralised state and consider a state as simply being an "*instrument of class rule*" then you will see little to worry about in the concentration of power into the hands of a few party leaders. However, if you see socialism in terms of working class managing their own affairs then you will view such developments as being fundamentally in opposition to your goals and definitely **not** a means to that end.

So part of the reason why Marxist revolutions yield such anti-working class outcomes is to do with its ideology, methods and goals. It has little to do with the will to power of a few individuals (important a role as that can play, sometimes, in events). In a nutshell, the ideology and vision guiding Leninist parties incorporate hierarchical values and pursue hierarchical aims. Furthermore, the methods and organisations favoured to achieve (their vision of) "socialism" are fundamentally hierarchical, aiming to ensure that power is centralised at the top of pyramidal structures in the hands of the party leaders.

It would be wrong, as Leninists will do, to dismiss this as simply a case of "idealism." After all, we are talking about the ideology of a ruling party. As such, these ideas are more than just ideas: after the seizure of power, they became a part of the real social situation within Russia. Individually, party members assumed leadership posts in all spheres of social life and started to apply their ideology. Then, overtime, the results of this application ensured that the party could not be done otherwise as the framework of exercising power had been shaped by its successful application (e.g. Bolshevik centralism ensured that all its policies were marked by centralist tendencies, simply because Bolshevik power had become centralised). Soon, the only real instance of power is the Party, and very soon, only the summits of the Party. This cannot help but shape its policies and actions. As Castoriadis argues:

"If it is true that people's real social existence determines their consciousness, it is from

that moment illusory to expect the Bolshevik party to act in any other fashion than according to its real social position. The real social situation of the Party is that of a directorial organ, and its point of view toward this society henceforth is not necessarily the same as the one this society has toward itself." [**The role of Bolshevik Ideology in the birth of the Bureaucracy**, p. 97]

As such, means and ends are related and cannot be separated. As Emma Goldman argued, there is *"no greater fallacy than the belief that aims and purposes are one thing, while methods and tactics are another. This conception is a potent menace to social regeneration. All human experience teaches that methods and means cannot be separated from the ultimate aim. The means employed become, through individual habit and social practice, part and parcel of the final purpose; they influence it, modify it, and presently the aims and means become identical. . . The great and inspiring aims of the Revolution became so clouded with and obscured by the methods used by the ruling political power that it was hard to distinguish what was temporary means and what final purpose. Psychologically and socially the means necessarily influence and alter the aims. The whole history of man is continuous proof of the maxim that to divest one's methods of ethical concepts means to Sink into the depths of utter demoralisation. In that lies the real tragedy of the Bolshevik philosophy as applied to the Russian Revolution. May this lesson not be in vain."* In summary, *"[n]o revolution can ever succeed as a factor of liberation unless the MEANS used to further it be identical in spirit and tendency with the PURPOSES to be achieved."* [**My Disillusionment in Russia**, pp. 260-1]

If this analysis of the anarchists against Bolshevism is true then it follows that the Bolsheviks were not just wrong on one or two issues but their political outlook right down to the core was wrong. Its vision of socialism was flawed, which produced a flawed perspective on the potentially valid means available to achieve it. Leninism, we must never forget, does not aim for the same kind of society anarchism does. As we discussed in [section H.3.1](#), the short, medium and long term goals of both movements are radically different. While both claim to aim for "communism," what is meant by that word is radically different in details if somewhat similar in outline. The anarchist ideal of a classless, stateless and free society is based on a decentralised, participatory and bottom-up premise. The Leninist ideal is the product of a centralised, party ruled and top-down paradigm.

This explains why Leninists advocate a democratic-centralist "Revolutionary Party." It arises from the fact that their programme is the capture of state power in order to abolish the *"anarchy of the market."* Not the abolition of wage labour, but its universalisation under the state as one big boss. Not the destruction of alienated forces (political, social and economic) but rather their capture by the party on behalf of the masses. In other words, this section of the FAQ is based on the fact that Leninists are not (libertarian) communists; they have not broken sufficiently with Second International orthodoxy, with the assumption that socialism is basically state capitalism (*"The idea of the State as Capitalist, to which the Social-Democratic fraction of the great Socialist Party is now trying to reduce Socialism."* [Peter Kropotkin, *The Great French Revolution*, vol. 1, p. 31]). Just as one cannot abolish alienation with alienated means, so we cannot attack Leninist *"means"* also without distinguishing our libertarian *"ends"* from theirs.

This means that both Leninist means and ends are flawed. Both will fail to produce a socialist society. As Kropotkin said at the time, the Bolsheviks *"have shown how the Revolution is **not** to be made."* [quoted by Berkman, **The Bolshevik Myth**, p. 75] If applied today, Leninist ideas will undoubtedly fail from an anarchist point of view while, as under Lenin, "succeeding" from the limited perspective of Bolshevism. Yes, the party may be in power and, yes, capitalist property may be abolished by nationalisation but, no, a socialist society would be no nearer. Rather we would have a new hierarchical and class system rather than the classless and free society which non-anarchist socialists claim to be aiming for.

Let us be perfectly clear. Anarchists are **not** saying that Stalinism will be the inevitable result of any Bolshevik revolution. What we are saying is that some form of class society will result from any such a revolution. The exact form this class system will take will vary depending on the objective circumstances it faces, but no matter the specific form of such a post-revolutionary society it will not be a socialist one. This is because of the ideology of the party in power will shape the revolution in specific ways which, by necessity, form new forms of hierarchical and class exploitation and oppression. The preferred means of Bolshevism (vanguardism, statism, centralisation, nationalisation, and so on) will determine the ends, the ends being not communist anarchism but some kind of bureaucratic state capitalist society labelled *"socialism"* by those in charge. Stalinism, in this perspective, was the result of an interaction of certain ideological goals and positions as well as organisational principles and preferences with structural and circumstantial pressures resulting from the specific conditions prevalent at the time. For example, a Leninist revolution in an advanced western country would not require the barbaric means used by Stalinism to industrialise Russia.

This section of the FAQ will, therefore, indicate the key areas of Bolshevik ideology which, when applied, will undermine any revolution as they did the Russian. As such, it is all fine and well for Trotskyist Max Shachtman (like so many others) to argue that the Bolsheviks had *"convert[ed] the expediencies and necessities of the civil war period into virtues and principles which had never been part of their original program."* Looking at this *"original program"* we can see elements of what was latter to be applied. Rather than express a divergence it could be argued that it was this that undermined the more democratic aspects of their original program. In other words, perhaps the use of state power and economic nationalisation came into conflict with, and finally destroyed, the original proclaimed socialist principles? And, perhaps, the *"socialist"* vision of Bolshevism was so deeply flawed that even attempting to apply it destroyed the aspirations for liberty, equality and solidarity that inspired it? For, after all, as we indicated in [section H.3.1](#), the anarchist and mainstream Marxist visions of socialism and how to get there **are** different. Can we be surprised if Marxist means cannot achieve anarchist (i.e. authentic socialist) ends? To his credit, Shachtman acknowledges that post-civil war salvation "required full democratic rights" for all workers, and that this was *"precisely what the Bolsheviks . . . were determined not to permit."* Sadly he failed to wonder **why** the democratic principles of the *"original program"* were only *"honoured in the breach"* and why *"Lenin and Trotsky did not observe them."* The possibility that Bakunin was right and that statism and socialism cannot go together was not raised. ["Introduction" to Trotsky's **Terrorism and Communism**, p. xv]

Equally, there is a tendency of pro-Leninists to concentrate on the period between the two revolutions of 1917 when specifying what Bolshevism "really" stood for, particularly Lenin's book *State and Revolution*. To use an analogy, when Leninists do this they are like politicians who, when faced with people questioning the results of their policies, ask them to look at their election manifesto rather than what they have done when in power. As we discuss in [section 4](#) of the appendix "[What happened during the Russian Revolution?](#)" Lenin's book was never applied in practice. From the very first day, the Bolsheviks ignored it. After 6 months **none** of its key ideas had been applied. Indeed, in all cases the exact opposite had been imposed. As such, to blame (say) the civil war for the reality of "Bolshevik in power" (as Leninists do) seems without substance. Simply put, **State and Revolution** is no guide to what Bolshevism "really" stood for. Neither is their position **before** seizing power if the realities of their chosen methods (i.e. seizing state power) quickly changed their perspective, practice **and** ideology (i.e. shaped the desired ends). Assuming of course that most of their post-October policies were radically different from their pre-October ones, which (as we indicate here) they were not.

With that said, what do anarchists consider the key aspects of Bolshevik ideology which helped to ensure the defeat of the Russian Revolution and had, long before the civil war started, had started its degeneration into tyranny? These factors are many and so we will, by necessity, concentrate on the key ones. These are believe in centralisation, the confusion of party power with popular power, the Marxist theory of the state, the negative influence of Engels' infamous essay "*On Authority*", the equation of nationalisation and state capitalism with socialism, the lack of awareness that working class economic power was a key factor in socialism, the notion that "big" was automatically "more efficient," the identification of class consciousness with supporting the party, how the vanguard party organises itself and, lastly, the underlying assumptions that vanguardism is based on.

Each one of these factors had a negative impact on the development of the revolution, combined they were devastating. Nor can it be a case of keeping Bolshevism while getting rid of some of these positions. Most go to the heart of Bolshevism and could only be eliminated by eliminating what makes Leninism Leninist. Thus some Leninists now pay lip service to workers' control of production and recognise that the Bolsheviks saw the form of property (i.e., whether private or state owned) as being far more important than workers' management of production. Yet revising Bolshevism to take into account this flaw means little unless the others are also revised. Simply put, workers' management of production would have little impact in a highly centralised state ruled over by an equally centralised vanguard party. Self-management in production or society could not co-exist with a state and party power nor with "*centralised*" economic decision making based on nationalised property. In a nutshell, the only way Bolshevism could result in a genuine socialist society is if it stopped being Bolshevik!

1 How did the Marxist historical materialism affect Bolshevism?

As is well known, Marx argued that history progressed through distinct stages. After his death, this "*materialist conception of history*" became known as "*historical materialism*." The basic idea of this is that the "*totality of [the] relations of production constitutes the economic structure of society, the real foundation, on which arises a legal and political superstructure and to which correspond definite forms*

of social consciousness . . . At a certain stage of development, the material productive forces of society come into conflict with the existing relations of production or -- this merely expresses the same thing in legal terms -- with the property relations within the framework of which they have operated hitherto. From forms of development of productive forces these relations turn into their fetters. Then begins an era of social revolution." [A Contribution to the Critique of Political Economy, pp. 20-1]

Thus slavery was replaced by feudalism, feudalism with capitalism. For Marx, the *"bourgeois mode of production is the last antagonistic form of the social process of production"* and *"the productive forces developing within bourgeois society create also the material conditions for a solution of this antagonism."* [Op. Cit., p. 21] In other words, after capitalism there would be socialism:

"The monopoly of capital becomes a fetter upon the mode of production which has flourished alongside and under it. The centralisation of the means of production and the socialisation of labour reach a point at which they become incompatible with their capitalist integument. The integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated." [Karl Marx, **Capital**, vol. 1, p. 929]

Socialism replaces capitalism once the *"proletariat seized political power and turns the means of production into state property."* By so doing, *"it abolishes itself as proletariat, abolishes all class distinctions and class antagonisms, abolishes also the state as state."* [Engels, **The Marx-Engels Reader**, p. 713]

Most Marxists subscribe to this schema of historical progress. For example, Tony Cliff noted that, *"[f]or Lenin, whose Marxism was never mechanical or fatalistic, the definition of the dictatorship of the proletariat as a **transition period** meant that there could be **two** outcomes of this phase: going forward to socialism, or backsliding to capitalism. The policy of the party would tip the balance."* [**Revolution Besieged**, p. 364]

Marxists, like Marx, argue that socialism was the society which would come after capitalism. Thus the Bolsheviks had the mindset that whatever they did there was only two possibilities: (their version of) socialism or the restoration of capitalism. However, this is based on a false premise. Is it valid to assume that there is only one possible post-capitalist future, one that, by definition, is classless? If so, then any action or structure could be utilised to fight reaction as after victory there can be only one outcome. However, if there is more than one post-capitalist future then the question of means becomes decisive. If we assume just two possible post-capitalist futures, one based on self-management and without classes and another with economic, social and political power centralised in a few hands, then the means used in a revolution become decisive in determining which possibility will become reality.

If we accept the Marxist theory and assume only one possible post-capitalist system, then all that is required of revolutionary anti-capitalist movements is that they only need to overthrow capitalism and they will wind up where they wish to arrive as there is no other possible outcome. But if the answer no,

then in order to wind up where we wish to arrive, we have to not only overthrow capitalism, we have use means that will push us toward the desired future society. As such, **means** become the key and they cannot be ignored or downplayed in favour of the ends -- particularly as these ends will never be reached if the appropriate means are not used.

This is no abstract metaphysical or ideological/theoretical point. The impact of this issue can be seen from the practice of Bolshevism in power. For Lenin and Trotsky, **any** and **all** means could and were used in pursuit of their ends. They simply could not see how the means used shaped the ends reached. Ultimately, there was only two possibilities -- socialism (by definition classless) or a return to capitalism.

Once we see that because of their flawed perspective on what comes after capitalism we understand why, for the Bolsheviks, the means used and institutions created were meaningless. We can see one of the roots for Bolshevik indifference to working class self-management. As Samuel Farber notes that *"there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [**Before Stalinism**, p. 44] There was no need, for such means had no impact on achieving the ends Bolshevik power had set itself. As we discuss in [section 6](#), such questions of meaningful working class participation in the workplace or the soviets were considered by the likes of Trotsky as fundamentally irrelevant to whether Bolshevik Russia was socialist or whether the working class was the ruling class or not, incredible as it may seem.

So if we accept Marx's basic schema, then we simply have to conclude that what means we use are, ultimately, irrelevant as there is only one outcome. As long as property is nationalised and a non-capitalist party holds state power, then the basic socialist nature of the regime automatically flows. This was, of course, Trotsky's argument with regard to Stalinist Russia and why he defended it against those who recognised that it was a new form of class society. Yet it is precisely the rise of Stalinism out of the dictatorship of the Bolsheviks which exposes the limitations in the Marxist schema of historical development.

Simply put, there is no guarantee that getting rid of capitalism will result in a decent society. As anarchists like Bakunin argued against Marx, it is possible to get rid of capitalism while not creating socialism, if we understand by that term a free, classless society of equals. Rather, a Marxist revolution would *"concentrate all the powers of government in strong hands, because the very fact that the people are ignorant necessitates strong, solicitous care by the government. [It] will create a single State bank, concentrating in its hands all the commercial, industrial, agricultural, and even scientific production; and they will divide the mass of people into two armies -- industrial and agricultural armies under the direct command of the State engineers who will constitute the new privileged scientific-political class."* [**The Political Philosophy of Bakunin**, p. 289] As Bolshevism proved, there **was** always an alternative to socialism or a reversion to capitalism, in this case **state** capitalism.

So libertarians have long been aware that actually existing capitalism could be replaced by another form

of class society. As the experience of Bolshevik tyranny proves beyond doubt, this perspective is the correct one. And that perspective ensured that during the Russian Revolution the Makhnovists **had** to encourage free soviets and workers' self-management, freedom of speech and organisation in order for the revolution to remain socialist (see the appendix on "[Why does the Makhnovist movement show there is an alternative to Bolshevism?](#)"). In contrast, the Bolsheviks implemented party dictatorship, nationalisation and one-man management while proclaiming this had something to do with socialism. Little wonder Trotsky had such difficulties understanding the obvious truth that Stalinism has **nothing** to do with socialism.

2 Why did the Marxist theory of the state undermine working class power?

As discussed in [section H.3.7](#), anarchists and Marxists have fundamentally different definitions of what constitutes a state. These different definitions resulted, in practice, to the Bolsheviks undermining **real** working class power during the Russian Revolution in favour of an abstract "power" which served as little more than a fig-leaf for Bolshevik power.

For anarchists, the state is marked by centralised power in the hands of a few. The state, we argue, is designed to ensure minority rule and, consequently, cannot be used by the majority to manage their own affairs. Every bourgeois revolution, moreover, has been marked by a conflict between centralised power and popular power and, unsurprisingly, the bourgeois favoured the former over the latter. As such, we would expect centralised power (i.e. a state) to be the means by which a minority class seized power **over** the masses and never the means by which the majority managed society themselves. It was for this reason that anarchists refuse to confuse a federation of self-managed organisations with a state:

"The reader knows by now that the anarchists refused to use the term 'State' even for a transitional situation. The gap between authoritarians and libertarians has not always been very wide on this score. In the First International the collectivists, whose spokesman was Bakunin, allowed the terms 'regenerate State,' 'new and revolutionary State,' or even 'socialist State' to be accepted as synonyms for 'social collective.' The anarchists soon saw, however, that it was rather dangerous for them to use the same word as the authoritarians while giving it a quite different meaning. They felt that a new concept called for a new word and that the use of the old term could be dangerously ambiguous; so they ceased to give the name 'State' to the social collective of the future." [Daniel Guerin, **Anarchism**, pp. 60-1]

This is no mere semantics. The essence of statism is the removal of powers that should belong to the community as whole (though they may for reasons of efficiency delegate their actual implementation to elected, mandated and recallable committees) into the hands of a tiny minority who claim to act on our behalf and in our interests but who are not under our direct control. In other words it continues the division into rulers and ruled. Any confusion between two such radically different forms of organisation

can only have a seriously negative effect on the development of any revolution. At its most basic, it allows those in power to develop structures and practices which disempower the many while, at the same time, taking about extending working class "power."

The roots of this confusion can be found at the root of Marxism. As discussed in [section H.3.7](#), Marx and Engels had left a somewhat contradictory inheritance on the nature and role of the state. Unlike anarchists, who clearly argued that only confusion would arise by calling the organs of popular self-management required by a revolution a "state," the founders of Marxism confused two radically different ideas. On the one hand, there is the idea of a radical and participatory democracy (as per the model of the Paris Commune). On the other, there is a centralised body with a government in charge (as per the model of the democratic state). By using the term "state" to cover these two radically different concepts, it allowed the Bolsheviks to confuse party power with popular power and, moreover, replace the latter by the former without affecting the so-called "proletarian" nature of the state. The confusion of popular organs of self-management with a state ensured that these organs **were** submerged by state structures and top-down rule.

By confusing the state (delegated power, necessarily concentrated in the hands of a few) with the organs of popular self-management Marxism opened up the possibility of a "workers' state" which is simply the rule of a few party leaders over the masses. The "truth of the matter," wrote Emma Goldman, "is that the Russian people have been **locked out** and that the Bolshevik State -- even as the bourgeois industrial master -- uses the sword and the gun to keep the people out. In the case of the Bolsheviks this tyranny is masked by a world-stirring slogan . . . Just because I am a revolutionist I refuse to side with the master class, which in Russia is called the Communist Party." [My Disillusionment in Russia, p. xlix] In this, she simply saw in practice that which Bakunin had predicted would happen. For Bakunin, like all anarchists, "every state power, every government, by its nature and by its position stands outside the people and above them, and must invariably try to subject them to rules and objectives which are alien to them." It was for this reason "we declare ourselves the enemies of every government and state every state power . . . the people can only be happy and free when they create their own life, organising themselves from below upwards." [Statism and Anarchy, p. 136]

The "workers' state" proved no exception to that generalisation. The roots of the problem, which expressed itself from the start during the Russian revolution, was the fatal confusion of the state with organs of popular self-management. Lenin argued in "State and Revolution" that, on the one hand, "the armed proletariat itself shall **become the government**" while, on the other, that "[w]e cannot imagine democracy, not even proletarian democracy, without representative institutions." If, as Lenin asserts, democracy "means equality" he has reintroduced inequality into the "proletarian" state as the representatives have, by definition, more power than those who elected them. [Essential Works of Lenin, p. 363, p. 306 and p. 346] Yet, as noted in [section H.1.2](#), representative bodies necessarily place policy-making in the hands of deputies and do not (and cannot) mean that the working class **as a class** can manage society. Moreover, such bodies ensure that popular power can be usurped without difficulty by a minority. After all, a minority already **does** hold power.

True equality implies the abolition of the state and its replacement by a federation of self-managed communes. The state, as anarchists have long stressed, signifies a power **above** society, a concentration of power into a few hands. Lenin, ironically, quotes Engels on the state being marked by *"the establishment of a **public power**, which is no longer directly identical with the population organising itself as an armed power."* [quoted by Lenin, **Op. Cit.**, p. 275] As Lenin supported **representative** structures rather than one based on elected, mandated and recallable **delegates** then he has created a *"public power"* no longer identical with the population.

Combine this with an awareness that bureaucracy must continue to exist in the "proletarian" state then we have the ideological preconditions for dictatorship **over** the proletariat. *"There can be no thought,"* asserted Lenin, *"of destroying officialdom immediately everywhere, completely. That is utopia. But to **smash** the old bureaucratic machine at once and to begin immediately to construct a new one that will enable all officialdom to be gradually abolished is **not** utopia."* In other words, Lenin expected *"the gradual 'withering away' of all bureaucracy."* [**Op. Cit.**, p. 306 and p. 307]

Yet why expect a "new" bureaucracy to be as easy to control as the old one? Regular election to posts does not undermine the institutional links, pressures and powers a centralised "officialdom" will generate around itself, even a so-called "proletarian" one. Significantly, Lenin justified this defence of temporary state bureaucracy by the kind of straw man argument against anarchism *"State and Revolution"* is riddled with. *"We are not utopians,"* asserted Lenin, *"we do not indulge in 'dreams' of dispensing **at once** with all administration, with all subordination: these anarchist dreams . . . are totally alien to Marxism, and, as a matter of fact, serve only to postpone the socialist revolution until human nature has changed. No, we want the socialist revolution with human nature as it is now, with human nature that cannot dispense with subordination, control and 'managers.'"* [**Op. Cit.**, p. 307] Yet anarchists do not wish to "dispense" with "all administration," rather we wish to replace government **by** administration, hierarchical positions ("*subordination*") with co-operative organisation. Equally, we see the revolution as a process in which "*human nature*" is changed by the struggle itself so that working class people become capable of organising itself and society without bosses, bureaucrats and politicians. If Lenin says that socialism "*cannot dispense*" with the hierarchical structures required by class society why should we expect the same kinds of structures and social relationships to have different ends just because "*red*" managers are in power?

Thus Lenin's work is deeply ambiguous. He is confusing popular self-management with a state structure. Anarchists argue that states, by their very nature, are based on concentrated, centralised, alienated power in the hands of a few. Thus Lenin's "*workers' state*" is just the same as any other state, namely rule by a few over the many. This is confirmed when Lenin argues that *"[u]nder socialism, **all** will take part in the work of government in turn and will soon become accustomed to no one governing."* In fact, once the "*overwhelming majority*" have "*learned to administer the state **themselves**, have taken this business into their own hands . . . the need for government begins to disappear. The more complete democracy becomes, the nearer the moment approaches when it becomes unnecessary. The more democratic the 'state' of the armed workers -- which is 'no longer a state in the proper sense of the word' -- becomes, the more rapidly does **the state** begin to wither away."* Moreover, *"[u]ntil the 'higher' phase of communism arrives, the Socialists demand the **strictest** control, by society **and by the state**, of the amount of labour*

and of consumption." [Op. Cit., p. 361, p. 349 and p. 345]

Clearly, the "proletarian" state is **not** based on direct, mass, participation by the population but, in fact, on giving power to a few representatives. It is **not** identical with "*society*," i.e. the armed, self-organised people. Rather than look to the popular assemblies of the French revolution, Lenin, like the bourgeoisie, looked to representative structures -- structures designed to combat working class power and influence. (at one point Lenin states that "*for a certain time not only bourgeois right, but even the bourgeois state remains under communism, without the bourgeoisie!*" This was because "*bourgeois right in regard to the distribution of articles of consumption inevitably presupposes the existence of the bourgeois state, for right is nothing without an apparatus capable of enforcing the observance of the standards of right.*" [Op. Cit., p. 346]).

Can we expect the same types of organs and social relationships to produce different results simply because Lenin is at the head of the state? Of course not.

As the Marxist theory of the state confused party/vanguard power with working class power, we should not be surprised that Lenin's "*State and Revolution*" failed to discuss the practicalities of this essential question in anything but a passing and ambiguous manner. For example, Lenin notes that "[b]y educating the workers' party, Marxism educates the vanguard of the proletariat which is capable of assuming power and of **leading the whole people** to socialism, of directing and organising the new order." [Op. Cit., p. 288] It is not clear whether it is the vanguard or the proletariat as a whole which assumes power. Later, he states that "*the dictatorship of the proletariat*" was "*the organisation of the vanguard of the oppressed as the ruling class for the purpose of crushing the oppressors.*" [Op. Cit., p. 337] Given that this fits in with subsequent Bolshevik practice, it seems clear that it is the vanguard which assumes power rather than the whole class. The negative effects of this are discussed in [section 8](#).

However, the assumption of power by the party highlights the key problem with the Marxist theory of the state and how it could be used to justify the destruction of popular power. It does not matter in the Marxist schema whether the class or the party is in power, it does not impact on whether the working class is the "*ruling class*" or not. As Lenin put it. "*democracy is not identical with the subordination of the minority to the majority. Democracy is a state which recognises the subordination of the minority to the majority, i.e. an organisation for the systematic use of violence by one class against the other, by one section of the population against another.*" [Op. Cit., p. 332] Thus the majority need not actually "*rule*" (i.e. make the fundamental decisions) for a regime to be considered a "*democracy*" or an instrument of class rule. That power can be delegated to a party leadership (even dictatorship) without harming the "*class nature*" of the state. This results of such a theory can be seen from Bolshevik arguments in favour of party dictatorship during the civil war period (and beyond).

The problem with the centralised, representative structures Lenin favours for the "*dictatorship of the proletariat*" is that they are rooted in the inequality of power. They constitute in fact, if not initially in theory, a power **above** society. As Lenin put it, "*the essence of bureaucracy*" is "*privileged persons divorced from the masses and superior to the masses.*" [Op. Cit., p. 360] In the words of Malatesta, a

"government, that is a group of people entrusted with making laws and empowered to use the collective power to oblige each individual to obey them, is already a privileged class and cut off from the people. As any constituted body would do, it will instinctively seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to its special interests. Having been put in a privileged position, the government is already at odds with the people whose strength it disposes of." [Anarchy, p. 34] As we discussed in appendix ["What happened during the Russian Revolution?"](#), Lenin's regime provides more than enough evidence to support such an analysis.

This is the fatal flaw in the Marxist theory of the state. As Bakunin put it, *"the theory of the state" is "based on this fiction of pseudo-popular representation -- which in actual fact means the government of the masses by an insignificant handful of privileged individuals, elected (or even not elected) by mobs of people rounded up for voting and never knowing what or whom they are voting for -- on this imaginary and abstract expression of the imaginary thought and will of the all the people, of which the real, living people do not have the faintest idea."* Thus the state represents *"government of the majority by a minority in the name of the presumed stupidity of the one and the presumed intelligence of the other."* [Op. Cit., pp. 136-7]

By confusing popular participation with a state, by ignoring the real inequalities of power in any state structure, Marxism allowed Lenin and the Bolsheviks to usurp state power, implement party dictatorship **and** continue to talk about the working class being in power. Because of Marxism's metaphysical definition of the state (see [section H.3.7](#)), actual working class people's power over their lives is downplayed, if not ignored, in favour party power.

As parties represent classes in this schema, if the party is in power then, by definition, so is the class. This raises the possibility of Lenin asserting the *"working class"* held power even when his party was exercising a dictatorship **over** the working class and violently repressing any protests by it. As one socialist historian puts it, *"while it is true that Lenin recognised the different functions and democratic raison d'etre for both the soviets and his party, in the last analysis it was the party that was more important than the soviets. In other words, the party was the final repository of working-class sovereignty. Thus, Lenin did not seem to have been reflected on or have been particularly perturbed by the decline of the soviets after 1918."* [Samuel Farber, **Before Stalinism**, p. 212] This can be seen from how the Marxist theory of the state was changed **after** the Bolsheviks seized power to bring into line with its new role as the means by which the vanguard ruled society (see [section H.3.8](#)).

This confusion between two radically different concepts and their submersion into the term *"state"* had its negative impact from the start. Firstly, the Bolsheviks constantly equated rule by the Bolshevik party (in practice, its central committee) with the working class as a whole. Rather than rule by all the masses, the Bolsheviks substituted rule by a handful of leaders. Thus we find Lenin talking about *"the power of the Bolsheviks -- that is, the power of the proletariat"* as if these things were the same. Thus it was a case of *"the Bolsheviks"* having *"to take the whole governmental power into their own hands,"* of *"the complete assumption of power by the Bolsheviks alone,"* rather than the masses. Indeed, Russia had been *"ruled by 130,000 landowners"* and *"yet they tell us that Russia will not be able to be governed by the*

240,000 members of the Bolshevik Party -- governing in the interests of the poor and against the rich." [Will the Bolsheviks Maintain Power?, p. 102, p. 7 and pp. 61-2]

However, governing in the "interests" of the poor is **not** the same as the poor governing themselves. Thus we have the first key substitution that leads to authoritarian rule, namely the substitution of the power of the masses by the power of a few members who make up the government. Such a small body will require a centralised state system and, consequently, we have the creation of a hierarchical body around the new government which, as we discuss in [section 7](#), will become the real master in society.

The preconditions for a new form of class society have been created and, moreover, they are rooted in the basic ideas of Marxism. Society has been split into two bodies, the masses and those who claim to rule in their name. Given this basic inequality in power we would, according to anarchist theory, expect the interests of the masses and the rulers to separate and come into conflict. While the Bolsheviks had the support of the working class (as they did in the first few months of their rule), this does not equal mass participation in running society. Quite the reverse. So while Lenin raised the vision of mass participation in the "final" stage of communism, he unfortunately blocked the means to get there.

Simply put, a self-managed society can only be created by self-managed means. To think we can have a "public power" separate from the masses which will, slowly, dissolve itself into it is the height of naivety. Unsurprisingly, once in power the Bolsheviks held onto power by all means available, including gerrymandering and disbanding soviets, suppressing peaceful opposition parties and violently repressing the very workers it claimed ruled in "soviet" Russia (see [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)"). Significantly, this conflict developed before the start of the civil war (see [section 3](#) of the appendix on "[What caused the degeneration of the Russian Revolution?](#)" for details). So when popular support was lost, the basic contradictions in the Bolshevik position and theory became clear. Rather than be a "soviet" power, the Bolshevik regime was simply rule over the workers in their name, nothing more. And equally unsurprising, the Leninists revised their theory of the state to take into account the realities of state power and the need to justify minority power **over** the masses (see [section H.3.8](#)).

Needless to say, even electoral support for the Bolsheviks should not and cannot be equated to working class management of society. Echoing Marx and Engels at their most reductionist (see [section H.3.9](#)), Lenin stressed that the state was "*an organ or machine for the subjection of one class by another . . . when the State has become proletarian, when it has become a machine for the domination of the proletariat over the bourgeoisie, then we shall fully and unreservedly for a strong government and centralism.*" [Op. Cit., p. 75] The notions that the state could have interests of its own, that it is not simply an instrument of class rule but rather **minority** class rule are nowhere to be found. The implications of this simplistic analysis had severe ramifications for the Russian Revolution and Trotskyist explanations of both Stalinism and its rise.

Which brings us to the second issue. It is clear that by considering the state simply as an instrument of class rule Lenin could downplay, even ignore, such important questions of **how** the working class can

"rule" society, how it can be a "ruling" class. Blinded by the notion that a state could not be anything **but** an instrument of class rule, the Bolsheviks simply were able to justify any limitation of working class democracy and freedom and argue that it had no impact on whether the Bolshevik regime was really a "dictatorship of the proletariat" or not. This can be seen from Lenin's polemic with German Social-Democrat Karl Kautsky, where he glibly stated that "*[t]he form of government, has absolutely nothing to do with it.*" [**Collected Works**, vol. 28, p. 238]

Yet the idea that there is a difference between **who** rules in a revolutionary situation and **how** they rule is a key one, and one raised by the anarchists against Marxism. After all, if the working class is politically expropriated how can you maintain that a regime is remotely "proletarian"? Ultimately, the working class can only "rule" society through its collective participation in decision making (social, economic and "political"). If working class people are not managing their own affairs, if they have delegated that power to a few party leaders then they are **not** a ruling class and could never be. While the bourgeoisie can, and has, ruled economically under an actual dictatorship, the same cannot be said to be the case with the working class. Every class society is marked by a clear division between order takers and order givers. To think that such a division can be implemented in a socialist revolution and for it to remain socialist is pure naivety. As the Bolshevik revolution showed, representative government is the first step in the political expropriation of the working class from control over their fate.

This can best be seen by Trotsky's confused analyses of Stalinism. He simply could not understand the nature of Stalinism with the simplistic analytical tools he inherited from mainstream Marxism and Bolshevism. Thus we find him arguing in 1933 that:

"The dictatorship of a class does not mean by a long shot that its entire mass always participates in the management of the state. This we have seen, first of all, in the case of the propertied classes. The nobility ruled through the monarchy before which the noble stood on his knees. The dictatorship of the bourgeoisie took on comparatively developed democratic forms only under the conditions of capitalist upswing when the ruling class had nothing to fear. Before our own eyes, democracy has been supplanted in Germany by Hitler's autocracy, with all the traditional bourgeois parties smashed to smithereens. Today, the German bourgeoisie does not rule directly; politically it is placed under complete subjection to Hitler and his bands. Nevertheless, the dictatorship of the bourgeoisie remains inviolate in Germany, because all the conditions of its social hegemony have been preserved and strengthened. By expropriating the bourgeoisie politically, Hitler saved it, even if temporarily, from economic expropriation. The fact that the bourgeoisie was compelled to resort to the fascist regime testifies to the fact that its hegemony was endangered but not at all that it had fallen." [Trotsky, **The Class Nature Of The Soviet State**]

Yet Trotsky is confusing the matter. He is comparing the actions of class society with those a socialist revolution. While a minority class need not "*participate*" **en mass** the question arises does this apply to the transition from class society to a classless one? Can the working class **really** can be "*expropriated*" politically and still remain "*the ruling class*"? Moreover, Trotsky fails to note that the working class was

economically and **politically** expropriated under Stalinism as well. This is unsurprising, as both forms of expropriation had occurred when he and Lenin held the reins of state power. Yet Trotsky's confused ramblings do serve a purpose in showing how the Marxist theory of the state can be used to rationalise the replacement of popular power by party power. With such ideological baggage, can it be a surprise that the Bolshevik replacement of workers' power by party power could be a revolutionary goal? Ironically, the Marxist theory of the state as an instrument of class rule helped ensure that the Russian working class did **not** become the ruling class post-October. Rather, it ensured that the Bolshevik party did.

To conclude, by its reductionist logic, the Marxist theory of the state ensured that the substitution of popular power by party power could go ahead and, moreover, be justified ideologically. The first steps towards party dictatorship can be found in such apparently "libertarian" works as Lenin's *"State and Revolution"* with its emphasis on "representation" and "centralisation." The net effect of this was to centralise power into fewer and fewer hands, replacing the essential constructive working class participation and self-activity required by a social revolution with top-down rule by a few party leaders. Such rule could not avoid becoming bureaucratized and coming into conflict with the real aspirations and interests of those it claimed to represent. In such circumstances, in a conflict between the *"workers' state"* and the actual workers the Marxist theory of the state, combined with the assumptions of vanguardism, made the shift to party dictatorship inevitable. As we discussed in [section 3](#) of the appendix on ["What caused the degeneration of the Russian Revolution?"](#), authoritarian tendencies had surfaced before the civil war began.

The strange paradox of Leninism, namely that the theoretical dictatorship of the proletariat was, in practice, a dictatorship **over** the proletariat comes as no surprise. In spite of Lenin announcing *"all power to the soviets"* he remained committed to a disciplined party wielding centralised power. This regime soon expropriated the soviets while calling the subsequent regime "Soviet." Rather than create the authoritarian tendencies of the Bolshevik state the "objective factors" facing Lenin's regime simply increased their impact. The preconditions for the minority rule which the civil war intensified to extreme levels already existed within Marxist theory. Consequently, a Leninist revolution which avoided the (inevitable) problems facing a revolution would still create some kind of class society simply because it reproduces minority rule by creating a *"workers' state"* as its first step. Sadly, Marxist theory confuses popular self-government with a state so ensuring the substitution of rule by a few party leaders for the popular participation required to ensure a successful revolution.

3 How did Engels' essay "On Authority" affect the revolution?

We have discussed Engels' infamous diatribe against anarchism already (see [section H.4](#) and subsequent sections). Here we discuss how its caricature of anarchism helped disarm the Bolsheviks theoretically to the dangers of their own actions, so helping to undermine the socialist potential of the Russian revolution. While the Marxist theory of the state, with its ahistoric and ambiguous use of the word "state" undermined popular autonomy and power in favour of party power, Engels' essay *"On Authority"* helped undermine popular self-management.

Simply put, Engels' essay contained the germs from which Lenin and Trotsky's support for one-man management flowed. He provided the Marxist orthodoxy required to undermine real working class power by confusing all forms of organisation with "*authority*" and equating the necessity of self-discipline with "*subordination*" to one will. Engels' infamous essay helped Lenin to destroy self-management in the workplace and replace it with appointed "*one-man management*" armed with "*dictatorial powers*."

For Lenin and Trotsky, familiar with Engels' "*On Authority*," it was a truism that any form of organisation was based on "*authoritarianism*" and, consequently, it did not really matter **how** that "*authority*" was constituted. Thus Marxism's agnostic attitude to the patterns of domination and subordination within society was used to justify one-man management and party dictatorship. Indeed, "*Soviet socialist democracy and individual management and dictatorship are in no way contradictory . . . the will of a class may sometimes be carried by a dictator, who sometimes does more alone and is frequently more necessary.*" [Lenin, **Collected Works**, vol. 30, p. 476]

Like Engels, Lenin defended the principle of authority. The dictatorship of the Party over the proletariat found its apology in this principle, thoroughly grounded in the practice of bureaucracy and modern factory production. Authority, hierarchy, and the need for submission and domination is inevitable given the current mode of production, they argued. And no foreseeable change in social relations could ever overcome this blunt necessity. As such, it was (fundamentally) irrelevant **how** a workplace is organised as, no matter what, it would be "*authoritarian*." Thus "*one-man management*" would be, basically, the same as worker's self-management via an elected factory committee.

For Engels, any form of joint activity required as its "*first condition*" a "*dominant will that settles all subordinate questions, whether this will is represented by a single delegate or a committee charged with the execution of the resolutions of the majority of persons interested. In either case there is very pronounced authority.*" Thus the "*necessity of authority, and of imperious authority at that.*" Collective life, he stressed, required "*a certain authority, no matter how delegated*" and "*a certain subordination, are things which, independently of all social organisation, are imposed upon us.*" [**The Marx-Engels Reader**, p. 732]

Lenin was aware of these arguments, even quoting from this essay in his **State and Revolution**. Thus he was aware that for Engels, collective decisions meant "*the will of the single individual will always have to subordinate itself, which means that questions are settled in an authoritarian way.*" Thus there was no difference if "*they are settled by decision of a delegate placed at the head of each branch of labour or, if possible, by a majority vote.*" The more advanced the technology, the greater the "*despotism*": "*The automatic machinery of a big factory is much more despotic than the small capitalist who employ workers ever have been.*" [**Op. Cit.**, p. 731] Thus Engels had used the modern factory system of mass production as a direct analogy to argue against the anarchist call for workers' councils and self-management in production, for workers' autonomy and participation. Like Engels, Lenin stressed the necessity of central authority in industry.

It can be argued that it was this moment that ensured the creation of state capitalism under the Bolsheviks. This is the moment in Marxist theory when the turn from economics to technics, from proletarian control to technocracy, from workers' self-management to appointed state management was ensured. Henceforth the end of any critique of alienation in mainstream Marxism was assured. Submission to technique under hierarchical authority effectively prevents active participation in the social production of values. And there was no alternative.

As noted in [section 8](#) of the appendix "[What happened during the Russian Revolution?](#)"). and [section H.3.14](#), during 1917 Lenin did not favour workers' self-management of production. He raised the idea of "*workers' control*" after the workers spontaneously raised the idea and practice themselves during the revolution. Moreover, he interpreted that slogan in his own way, placing it within a statist context and within institutions inherited from capitalism (see [section H.3.12](#)). Once in power, it was (unsurprisingly) **his** vision of socialism and workers' control that was implemented, **not** the workers' factory committees. The core of that vision he repeatedly stressed had been raised **before** the October revolution.

This vision can be best seen in **The Immediate Tasks of the Soviet Government**, written by Lenin and published on the 25th of April 1918. This occurred before the start of the civil war and, indeed, he starts by arguing that "*[t]hanks to the peace which has been achieved*" the Bolsheviks had "*gained an opportunity to concentrate its efforts for a while on the most important and most difficult aspect of the socialist revolution, namely the task of organisation.*" The Bolsheviks, who had "*managed to complete the conquest of power,*" now faced "*the principal task of convincing people*" and doing "**practical organisational work.**" Only when this was done "*will it be possible to say that Russia has become not only a Soviet, but also a socialist, republic.*" [**The Immediate Tasks of the Soviet Government**, p. 2 and p. 8]

Sadly, this "*organisation*" was riddled with authoritarianism and was fundamentally top-down in nature. His "socialist" vision was simply state capitalism (see [section 10](#) of the appendix "[What happened during the Russian Revolution?](#)"). However, what interests us here is that his arguments to justify the "socialist" policies he presented are similar to those put forward by Engels in "*On Authority.*" As such, we can only reach the following conclusions. Firstly, that the "*state capitalist*" vision of socialism imposed upon Russia by the Bolsheviks was what they had always intended to introduce. It was their limited support for workers' control in 1917 that was atypical and not part of their tradition, **not** their policies once in power (as modern day Leninists assert). Secondly, that this vision had its roots in classical Marxism, specifically Engels' "*On Authority*" and the identification of socialism with nationalised property (see [section H.3.13](#) for more on this).

That Engels diatribe had a negative impact on the development of the Russian revolution can easily be seen from Lenin's arguments. For example, Lenin argues that the "*tightening of discipline*" and "*harmonious organisation*" calls "*for coercion -- coercion precisely in the form of dictatorship.*" He did not object to granting "*individual executives dictatorial power (or 'unlimited' powers)*" and did not think "*the appointment of individual, dictators with unlimited power*" was incompatible with "*the fundamental principles of the Soviet government.*" After all, "*the history of revolutionary movements*" had "*shown*"

that *"the dictatorship of individuals was very often the expression, the vehicle, the channel of the dictatorship of revolutionary classes."* He notes that *"[u]ndoubtedly, the dictatorship of individuals was compatible with bourgeois democracy."* [Op. Cit., p. 28 and p. 32] It would be churlish to note that previous revolutionary movements had not been **socialist** in nature and did not aim to **abolish** classes. In such cases, the government appointing people with dictatorial powers would not have harmed the nature of the revolution, which was transferring power from one minority class to another.

Lenin mocked the *"exceedingly poor arguments"* of those who objected, saying that they *"demand of us a higher democracy than bourgeois democracy and say: personal dictatorship is absolutely incompatible with your, Bolshevik (i.e. not bourgeois, **but socialist**) Soviet democracy."* As the Bolsheviks were *"not anarchists,"* he admitted the need *"coercion"* in the *"transition from capitalism to socialism,"* its form being determined *"by the degree of development of the given revolutionary class, and also by special circumstances."* In general, he stressed, there was *"absolutely **no** contradiction in principle between Soviet (**that is, socialist**) democracy and the exercise of dictatorial powers by individuals."* [Op. Cit., pp. 32-3 and p. 33] Which is, of course, sophistry as dictatorship by a few people in some aspects of life will erode democracy in others. For example, being subject to the economic power of the capitalist during work harms the individual and reduces their ability to participate in other aspects of social life. Why should being subject to "red" bosses be any different?

In particular, Lenin argued that *"individual dictatorial power"* was required because *"large-scale machine industry"* (which is the *"foundation of socialism"*) calls for *"absolute and strict **unity of will**, which directs the joint labours of hundreds, thousands and tens of thousands of people. . . But how can strict unity of will be ensured? By thousands subordinating their will to the will of one."* He reiterated that the *"**unquestioning subordination** to a single will is absolutely necessary for the success of processes organised on the pattern of large-scale machine industry."* The people must *"**unquestioningly obey the single will** of the leaders of labour."* And so it was a case (for the workers, at least) of *"[o]bedience, and unquestioning obedience at that, during work to the one-man decisions of Soviet directors, of the dictators elected or appointed by Soviet institutions, vested with dictatorial powers."* [Op. Cit., p. 33, p. 34 and p. 44]

The parallels with Engels' *"On Authority"* could not be clearer, as are the fallacies of Lenin's assertions (see, for example, [section H.4.4](#)). Lenin, like Engels, uses the example of modern industry to bolster his arguments. Yet the net effect of Lenin's argument was to eliminate working class economic power at the point of production. Instead of socialist social relationships, Lenin imposed capitalist ones. Indeed, no capitalist would disagree with Lenin's workplace regime -- they try to create such a regime by breaking unions and introducing technologies and techniques which allow them to control the workers. Unsurprisingly, Lenin also urged the introduction of two such techniques, namely *"piece-work"* and *"applying much of what is scientific and progressive in the Taylor system."* [Op. Cit., pp. 23-4] As Trotskyist Tony Cliff reminds us, *"the employers have at their disposal a number of effective methods of disrupting th[e] unity [of workers as a class]. Once of the most important of these is the fostering of competition between workers by means of piece-work systems."* He notes that these were used by the Nazis and the Stalinists *"for the same purpose."* [State Capitalism in Russia, pp. 18-9] Obviously piece-work is different when Lenin introduces it! Similarly, when Trotsky notes that *"[b]lind obedience is not*

a thing to be proud of in a revolutionary," it is somewhat different when Lenin calls upon workers to do so (or, for that matter, Trotsky himself when in power -- see [section 6](#) for Trotsky's radically different perspective on blind obedience of the worker to "his" state in 1920!). [**Terrorism and Communism**, p. xlvii]

The **economic** dominance of the bourgeoisie ensures the political dispossession of the working class. Why expect the introduction of capitalist social relations in production to have different outcomes just because Lenin was the head of the government? In the words of libertarian socialist Maurice Brinton:

"We hold that the 'relations of production' -- the relations which individuals or groups enter into with one another in the process of producing wealth - are the essential foundations of any society. A certain pattern of relations of production is the common denominator of all class societies. This pattern is one in which the producer does not dominate the means of production but on the contrary both is 'separated from them' and from the products of his own labour. In all class societies the producer is in a position of subordination to those who manage the productive process. Workers' management of production -- implying as it does the total domination of the producer over the productive process -- is not for us a marginal matter. It is the core of our politics. It is the only means whereby authoritarian (order-giving, order-taking) relations in production can be transcended and a free, communist or anarchist, society introduced.

"We also hold that the means of production may change hands (passing for instance from private hands into those of a bureaucracy, collectively owning them) with out this revolutionising the relations of production. Under such circumstances -- and whatever the formal status of property -- the society is still a class society for production is still managed by an agency other than the producers themselves. Property relations, in other words, do not necessarily reflect the: relations of production. They may serve to mask them -- and in fact they often have." [**The Bolsheviks and Workers' Control**, p. vii-viii]

The net effect of Lenin's arguments, as anarchist Peter Arshinov noted a few years later, was that the "fundamental fact" of the Bolshevik revolution was "that the workers and the peasant labourers remained within the earlier situation of 'working classes' -- producers managed by authority from above." He stressed that Bolshevik political and economic ideas may have "remov[ed] the workers from the hands of individual capitalists" but they "delivered them to the yet more rapacious hands of a single ever-present capitalist boss, the State. The relations between the workers and this new boss are the same as earlier relations between labour and capital . . . Wage labour has remained what it was before, expect that it has taken on the character of an obligation to the State. . . . It is clear that in all this we are dealing with a simple substitution of State capitalism for private capitalism." [**The History of the Makhnovist Movement**, p. 35 and p. 71] Moreover, Lenin's position failed to understand that unless workers have power at the point of production, they will soon lose it in society as a whole. Which, of course, they soon did in Bolshevik Russia, even in the limited form of electing a "revolutionary" government.

So while the causes of the failure of the Russian Revolution were many fold, the obvious influence of Engels' "*On Authority*" on the fate of the workers' control movement should be noted. After all, Engels' argument confuses the issues that Bakunin and other anarchists were trying to raise (namely on the nature of the organisations we create and our relationships with others). If, as Engels' argues, all organisation is "*authoritarian*," then does this mean that there no real difference between organisational structures? Is a dictatorship just the same as a self-managed group, as they are both organisations and so both "*authoritarian*"? If so, surely that means the kinds of organisation we create are irrelevant and what **really** matters is state ownership? Such logic can only lead to the perspective that working class self-management of production is irrelevant to socialism and, unfortunately, the experience of the Russian Revolution tends to suggest that for mainstream Marxism this is the case. The Bolsheviks imposed distinctly authoritarian social structures while arguing that they were creating socialism.

Like Engels, the Bolsheviks defended the principle of authority. The dictatorship of the Party over the proletariat in the workplace (and, indeed, elsewhere) ultimately found its apology in this principle, thoroughly grounded in the practice of bureaucracy and modern factory production. Authority, hierarchy, and the need for submission and domination is inevitable, given the current mode of production, they argued. And, as Engels had stressed, no foreseeable change in social relations could ever overcome this blunt necessity. As such, it was (fundamentally) irrelevant for the leading Bolsheviks **how** a workplace is organised as, no matter what, it would be "*authoritarian*." Thus "*one-man management*" would be, basically, the same as worker's self-management via an elected factory committee. As Trotsky made clear in 1920, for the Bolsheviks the "*dictatorship of the proletariat is expressed in the abolition of private property in the means of production, in the supremacy over the whole Soviet mechanism of the collective will of the workers [i.e. the party, which Trotsky cheerfully admits is exercising a **party** dictatorship], and not at all in the form in which individual economic enterprises are administered.*" Thus, it "*would be a most crying error to confuse the question as to the supremacy of the proletariat with the question of boards of workers at the head of the factories.*" [**Terrorism and Communism**, p. 162]

By equating "*organisation*" with "*authority*" (i.e. hierarchy) and dismissing the importance of revolutionising the social relationships people create between themselves, Engels opened the way for the Bolsheviks' advocacy of "*one-man management*." His essay is at the root of mainstream Marxism's agnostic attitude to the patterns of domination and subordination within society and was used to justify one-man management. After all, if Engels was right, then it did not matter **how** the workplace was organised. It would, inherently, be "*authoritarian*" and so what mattered, therefore, was who owned property, **not** how the workplace was run. Perhaps, then, "*On Authority*" was a self-fulfilling prophecy -- by seeing any form of organisation and any form of advanced technology as needing hierarchy, discipline and obedience, as being "*authoritarian*," it ensured that mainstream Marxism became blinded to the key question of **how** society was organised. After all, if "*despotism*" was a fact of life within industry regardless of how the wider society was organised, then it does not matter if "*one-man management*" replaces workers' self-management. Little wonder then that the continued alienation of the worker was widespread long before Stalin took power and, more importantly, before the civil war started.

As such, the dubious inheritance of classical Marxism had started to push the Bolshevik revolution down an authoritarian path and create economic structures and social relationships which were in no way socialist and, moreover, laid the foundations for Stalinism. Even if the civil war had not occurred, capitalist social relationships would have been dominant within "socialist" Russia -- with the only difference being that rather than private capitalism it would have been state capitalism. As Lenin admitted, incidentally. It is doubtful that this state capitalism would have been made to serve "*the whole people*" as Lenin naively believed.

In another way Engels identification of organisation with authority affected the outcome of the revolution. As **any** form of organisation involved, for Engels, the domination of individuals and, as such, "*authoritarian*" then the nature of the socialist state was as irrelevant as the way workplaces were run. As both party dictatorship and soviet democracy meant that the individual was "*dominated*" by collective decisions, so both were "*authoritarian.*" As such, the transformation of the soviet state into a party dictatorship did not fundamentally mean a change for the individuals subject to it. Little wonder that no leading Bolshevik called the end of soviet democracy and its replacement by party dictatorship as a "retreat" or even as something to be worried about (indeed, they all argued the opposite, namely that party dictatorship was essential and not an issue to be worried about).

Perhaps this analogy by the SWP's Tony Cliff of the relationship between the party and the working class provides an insight:

*"In essence the dictatorship of the proletariat **does not** represent a combination of abstract, immutable elements like democracy and centralism, independent of time and space. The actual level of democracy, as well as centralism, depends on three basic factors: 1. the strength of the proletariat; 2. the material and cultural legacy left to it by the old regime; and 3. the strength of capitalist resistance. The level of democracy feasible must be indirect proportion to the first two factors, and in inverse proportion to the third. The captain of an ocean liner can allow football to be played on his vessel; on a tiny raft in a stormy sea the level of tolerance is far lower."* [Lenin, vol. 3, p. 179]

Ignoring the obvious points (such as comparing working class freedom and democracy to a game!), we can see shades of Engels in Cliff's words. Let us not forget that Engels argued that "*a ship on the high seas*" at a "*time of danger*" required "*the necessity of authority, and of imperious authority at that.*" [Op. Cit., p. 732] Here Cliff is placing the party into the Captain's role and the workers as the crew. The Captain, in Engels argument, exercised "*imperious authority.*" In Cliff's, the party decides the freedoms which working class people are allowed to have -- and so subjects them to its "*imperious authority.*"

Little wonder Bolshevism failed. By this simple analogy Cliff shows the authoritarian essence of Bolshevism and who really has "*all power*" under that system. Like the crew and passengers dominated by the will of the captain, the working class under Leninism will be dominated by the party. It does not bode well that Cliff thinks that democracy can be "*feasible*" in some circumstances, but not others and it is up to those in power (i.e. the party leaders) to determine when it was. In his rush to justify Bolshevik

party dictatorship in terms of "objective conditions" he clearly forgot his earlier comments that the *"liberation of the working class can only be achieved through the action of the working class. Hence one can have a revolution with more or less violence, with more or less suppression of civil rights of the bourgeoisie and its hangers-on [a general catch-all category which, if Bolshevik practice is anything to go by, can include rebel workers, indeed the whole working class!], with more or less political freedom, but one cannot have a revolution, as the history of Russia conclusively demonstrates, without workers' democracy -- even if restricted and distorted. Socialist advance must be gauged by workers' freedom, by their power to shape their own destiny . . . Without workers' democracy the immediate means leads to a very different end, to an end that is prefigured in these same means."* [Op. Cit., p. 110] Obviously if Lenin and Trotsky are the captains of the ship of state, such considerations are less important. When it is Lenin wielding *"imperious authority"* then workers' democracy can be forgotten and the regime remain a *"workers' state"*!

By ignoring the key issue Bakunin and other anarchists drew attention to by attacking *"authority"* (and let us not forget that by that they meant hierarchical organisations in which power is concentrated at the top in a few hands -- see [section H.4](#)), Engels opened up the way of seeing democratic decision as being less than important. This is **not** to suggest that Engels favoured dictatorship. Rather we are suggesting that by confusing two radically different forms of organisation as self-management and hierarchy he blunted latter Marxists to the importance of participation and collective decision making from below. After all, if all organisation is *"authoritarian"* then it matters little, in the end, how it is structured. Dictatorship, representative democracy and self-management were all equally *"authoritarian"* and so the issues raised by anarchism can safely be ignored (namely that electing bosses does not equate to freedom). Thus the Bolshevik willingness to equate their dictatorship with rule by the working class is not such a surprise after all.

To conclude, rather than the anti-authoritarians not knowing *"what they are talking about," "creating nothing but confusion," "betraying the movement of the proletariat"* and *"serv[ing] the reaction,"* it was Engels' essay that aided the Bolshevik counter-revolution and helped, in its own small way, to lay the foundations for Leninist tyranny and state capitalism. [Engels, **Op. Cit.**, p. 733] Ultimately, Engels *"On Authority"* helped give Lenin the ideological premises by which to undermine workers' economic power during the revolution and recreate capitalist social relations and call it *"socialism."* His ill thought out diatribe had ramifications even he would never have guessed (but were obvious at the time to libertarians). His use of the modern factory system to argue against the anarchist call for workers' councils, federalism and workers' autonomy, for participation, for self-management, became the basis for re-imposing **capitalist** relations of production in revolutionary Russia.

4 How did the Bolshevik vision of "democracy" affect the revolution?

As discussed in [section H.3.2](#), Marx and Engels had left their followers with a contradictory legacy as regards *"socialism from below."* On the one hand, their praise for the Paris Commune and its libertarian ideas pointed to a participatory democracy run from below. On the other, Marx's comments during the

German Revolution in 1850 that the workers must "*strive for . . . the most determined centralisation of power in the hands of the state authority*" because "*the path of revolutionary activity*" can "proceed only from the centre" suggests a top-down approach. He stressed that centralisation of power was essential to overcome local autonomy, which would allow "*every village, every town and every province*" to put "*a new obstacle in the path*" the revolution due to "*local and provincial obstinacy.*" [**Marx-Engels Reader**, p. 509]

Building upon this contradictory legacy, Lenin unambiguously stressed the "*from above*" aspect of it (see [section H.3.3](#) for details). The only real exception to this perspective occurred in 1917, when Lenin was trying to win mass support for his party. However, even this support for democracy from below was always tempered by reminding the reader that the Bolsheviks stood for centralisation and strong government once they were in power (see [section 7](#)).

Once in power, the promises of 1917 were quickly forgotten. Unsurprisingly, modern day Leninists argue that this was due to the difficult circumstances facing the Bolsheviks at the time. They argue that the words of 1917 represent the true democratic vision of Bolshevism. Anarchists are not impressed. After all, for an idea to be useful it must be practical -- even in "exceptional circumstances." If the Bolshevik vision is not robust enough to handle the problems that have affected every revolution then we have to question the validity of that vision or the strength of commitment its supporters hold it.

Given this, the question becomes which of these two aspects of Marxism was considered its "essence" by Lenin and the Bolsheviks. Obviously, it is hard to isolate the real Bolshevik vision of democracy from the influence of "objective factors." However, we can get a taste by looking at how the Bolsheviks acted and argued during the first six months in power. During this period, the problems facing the revolution were hard but not as bad as those facing it after the Czech revolt at the end of May, 1918. Particularly after March, 1918, the Bolsheviks were in a position to start constructive work as in the middle of that month Lenin claimed that the "*Soviet Government has triumphed in the Civil War.*" [quoted by Maximoff, **The Guillotine at Work**, p. 53]

So the question as to whether the Bolsheviks were forced into authoritarian and hierarchical methods by the practical necessities of the civil war or whether all this was inherent in Leninism all along, and the natural product of Leninist ideology, can be answered by looking at the record of the Bolsheviks prior to the civil war. From this we can ascertain the effect of the civil war. And the obvious conclusion is that the record of the initial months of Bolshevik rule point to a less than democratic approach which suggests that authoritarian policies were inherent in Leninism and, as such, pointed the revolution into a path where further authoritarian policies were not only easy to implement, but had to be as alternative options had been eliminated by previous policies. Moreover, Bolshevik ideology itself made such policies easy to accept and to justify.

As discussed in [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)", it was during this period that the Bolsheviks started to gerrymander soviets and disband any they lost elections to. As we indicate in [section 9](#) of the appendix "[What happened during the Russian Revolution?](#)", they

undermined the factory committees, stopping them federating and basically handed the factories to the state bureaucracy. Lenin argued for and implemented one-man management, piecework, Taylorism and other things Stalinism is condemned for (see [section 3](#), for example). In the army, Trotsky disbanded the soldier committees and elected officers by decree.

How Trotsky defended this policy of appointing officers is significant. It mirrors Lenin's argument in favour of appointed one-man management and, as such, reflects the basic Bolshevik vision of democracy. By looking at his argument we can see how the Bolshevik vision of democracy fatally undermined the Russian Revolution and its socialist content. The problems of the civil war simply deepened the abscess in democracy created by Lenin and Trotsky in the spring of 1918.

Trotsky acknowledged that that *"the soldier-workers and soldier-peasants" needed "to elect commanders for themselves" in the Tzarist army "not [as] military chiefs, but simply [as] representatives who could guard them against attacks of counter-revolutionary classes."* However, in the new Red Army this was not needed as it was the *"workers' and peasants' Soviets, i.e. the same classes which compose the army"* which is building it. He blandly asserted that *"[h]ere no internal struggle is possible."* To illustrate his point he pointed to the trade unions. *"The metal workers,"* he noted, *"elect their committee, and the committee finds a secretary, a clerk, and a number of other persons who are necessary. Does it ever happen that the workers should say: 'Why are our clerks and treasurers appointed, and not elected?' No, no intelligent workers will say so."* [**Leon Trotsky Speaks**, p. 112-3]

Thus in less than six months, Lenin's call in *"State and Revolution"* that *"[a]ll officials, without exception, [would be] elected and subject to recall at any time"* was dismissed as the demand that *"no intelligent workers"* would raise! [**Essential Works of Lenin**, p. 302] But, then again, Trotsky was in the process of destroying another apparent *"principle"* of Leninism, namely (to quote, like Lenin, Marx) *"the suppression of the standing army, and the substitution for it of the armed people."* [quoted by Lenin, **Op. Cit.**, p. 300]

Trotsky continues his argument. The Trade union committee, he asserts, would say *"You yourselves have chosen the committee. If you don't like us, dismiss us, but once you have entrusted us with the direction of the union, then give us the possibility of choosing the clerk or the cashier, since we are better able to judge in the matter than you, and if our way of conducting business is bad, then throw us out and elect another committee."* After this defence of elected dictatorship, he states that the *"Soviet government is the same as the committee of a trade union. It is elected by the workers and peasants, and you can at the All-Russian Congress of the Soviets, at any moment you like, dismiss that government and appoint another."* Until that happens, he was happy to urge blind obedience by the sovereign people to their servants: *"But once you have appointed it, you must give it the right to choose the technical specialists, the clerks, the secretaries in the broad sense of the word, and in military affairs, in particular."* He tried to calm the nerves of those who could see the obvious problems with this argument by asking whether it was *"possible for the Soviet government to appoint military specialists against the interests of the labouring and peasant masses?"* [**Op. Cit.**, p. 113]

And the answer to that question is, of course, an empathic yes. Even looking at his own analogy, namely that of a trade union committee, it is obvious that an elected body can have interests separate from and in opposition to those who elected it. The history of trade unionism is full of examples of committees betraying the membership of the unions. And, of course, the history of the Soviet government under Lenin and Trotsky (never mind Stalin!) shows that just because it was once elected by a majority of the working people does not mean it will act in their best interests.

Trotsky even went one better. *"The army is now only in the process of formation,"* he noted. *"How could the soldiers who have just entered the army choose the chiefs! Have they have any vote to go by? They have none. And therefore elections are impossible."* [Op. Cit., p. 113] If only the Tsar had thought of that one! If he had, he would still be in power. And, needless to say, Trotsky did not apply that particular logic to himself. After all, he had no experience of holding governmental office or building an army (or even being in combat). Nor did any of the other Bolshevik leaders. By the logic of his argument, not only should the workers not been allowed to vote for a soviet government, he and his fellow Bolsheviks should not have assumed power in 1917. But, clearly, sauce for the goose is definitely **not** sauce for the gander.

For all his talk that the masses could replace the Bolsheviks at the All-Russian Congress of Soviets, Trotsky failed to realise that these proposals (and other ones like it) ensured that this was unlikely to happen. Even assuming that the Bolsheviks had not gerrymandered and disbanded soviets, the fact is that the Bolshevik vision of "democracy" effectively hollowed out the grassroots participation required to make democracy at the top anything more than a fig-leaf for party power. He honestly seemed to believe that eliminating mass participation in other areas of society would have no effect on the levels of participation in soviet elections. Would people subjected to one-man management in the workplace and in the army really be truly free and able to vote for parties which had not appointed their bosses? Could workers who were disenfranchised economically and socially remain in political power (assuming you equate voting a handful of leaders into power with *"political power"*)? And does being able to elect a representative every quarter to the All-Russian congress really mean that the working class was really in charge of society? Of course not.

This vision of top-down "democracy" can, of course, be traced back to Marx's arguments of 1850 and Lenin's comments that the *"organisational principle of revolutionary Social-Democracy"* was *"to proceed from the top downward."* (see sections [H.3.2](#) and [H.3.3](#)). By equating centralised, top-down decision making by an elected government with "democracy," the Bolsheviks had the ideological justification to eliminate the functional democracy associated with the factory committees and soldiers committees. In place of workers' and soldiers' direct democracy and self-management, the Bolsheviks appointed managers and officers and justified because a workers' party was in power. After all, had not the masses elected the Bolsheviks into power? This became the means by which **real** democracy was eliminated in area after area of Russian working class life. Needless to say, a state which eliminates functional democracy in the grassroots will not stay democratic in any meaningful sense for long. At best, it will be like a bourgeois republic with purely elections where people elect a party to misrepresent them every four or so years while real economic, political and social power rests in the hands of a few.

At worse, it would be a dictatorship with "elections" whose results are known before hand.

The Leninist vision of "democracy" is seen purely as a means of placing the party into power. Thus power in society shifts to the top, to the leaders of the centralised party in charge of the centralised state. The workers' become mere electors rather than actual controllers of the revolution and are expected to carry out the orders of the party without comment. In other words, a decidedly bourgeois vision of "democracy." Anarchists, in contrast, seek to dissolve power back into the hands of society and empower the individual by giving them a direct say in the revolution through their workplace and community assemblies and their councils and conferences.

This vision was not a new development. Far from it. While, ironically enough, Lenin's and Trotsky's support for the appointment of officers/managers can be refuted by looking at Lenin's **State and Revolution**, the fact is that the undemocratic perspectives they are based on can be found in Lenin's **What is to be Done?**. This suggests that his 1917 arguments were the aberration and against the true essence of Leninism, not his and Trotsky's policies once they were in power (as Leninists like to argue).

Forgetting that he had argued against "*primitive democracy*" in *What is to Be Done?*, Lenin had lambasted the opportunists and "present Kautskyists" for "*repeat[ing] the vulgar bourgeois jeers at 'primitive' democracy.*" Now, in 1917, it was a case that "*the transition from capitalism to socialism is impossible without some 'reversion' to 'primitive' democracy (how else can the majority, even the whole population, proceed to discharge state functions?)*" [Op. Cit., p. 302] Very true. As Leninism in power showed, the conscious elimination of "*primitive democracy*" in the army and workplace ensured that socialism was "*impossible.*" And this elimination was not justified in terms of "difficult" circumstances but rather in terms of principle and the inability of working people to manage their own affairs directly.

Particularly ironic, given Trotsky's trade union committee analogy was Lenin's comment that "*Bernstein [the arch revisionist and reformist] combats 'primitive democracy' . . . To prove that 'primitive democracy' is worthless, Bernstein refers to the experience of the British trade unions, as interpreted by the Webbs. Seventy years of development . . . convinced the trade unions that primitive democracy was useless, and they substituted ordinary democracy, i.e. parliamentarism, combined with bureaucracy, for it.*" Lenin replied that because the trade unions operated "*in absolute capitalist slavery*" a "*number of concessions to the prevailing evil, violence, falsehood, exclusion of the poor from the affairs of the 'higher' administration 'cannot be avoided.'* Under socialism much of the '*primitive*' democracy will inevitably be revived, since, for the first time in history of civilised society, the **mass** of the population will rise to **independent** participation, not only in voting and elections, **but also in the everyday administration of affairs**" [Op. Cit., p. 361] Obviously things looked a bit different once he and his fellow Bolshevik leaders were in power. Then the exclusion of the poor from the affairs of the "*higher*" administration was seen as normal practice, as proven by the practice of the trade unions! And as we note in [section H.3.8](#), this "*exclusion*" was taken as a key lesson of the revolution and built into the Leninist theory of the state.

This development was not unexpected. After all, as we noted in [section H.5.5](#), over a decade before

Lenin had been less than enthralled by "*primitive democracy*" and more in agreement with Bernstein than he lets on in **State and Revolution**. In **What is to Be Done?**, he based his argument for centralised, top-down party organisation on the experiences of the labour movement in democratic capitalist regimes. He quotes the same book by the Webb's to defend his position. He notes that "*in the first period of existence in their unions, the British workers thought it was an indispensable sign of democracy for all members to do all the work of managing the unions.*" This involved "*all questions [being] decided by the votes of all the members*" and all "*official duties*" being "*fulfilled by all the members in turn.*" He dismisses "*such a conception of democracy*" as "*absurd*" and "*historical experience*" made them "*understand the necessity for representative institutions*" and "*full-time professional officials.*" Ironically, Lenin records that in Russia the "*'primitive' conception of democracy*" existed in two groups, the "*masses of the students and workers*" and the "*Economists of the Bernstein persuasion.*" [Op. Cit., pp. 162-3]

Thus Trotsky's autocratic and top-down vision of democracy has its roots within Leninism. Rather than being forced upon the Bolsheviks by difficult circumstances, the eroding of grassroots, functional ("primitive") democracy was at the core of Bolshevism. Lenin's arguments in 1917 were the exception, not his practice after he seized power.

This fundamentally undemocratic perspective can be found today in modern Leninism. As well as defending the Bolshevik dictatorship during the civil war, modern Leninists support the continuation of party dictatorship after its end. In particular, they support the Bolshevik repression of the Kronstadt rebellion (see appendix "[What was the Kronstadt Rebellion?](#)" for more details). As Trotsky put it in 1937, if the Kronstadt demand for soviet elections had been implemented then "*to free the soviets from the leadership [sic!] of the Bolsheviks would have meant within a short time to demolish the soviets themselves . . . Social-Revolutionary-anarchist soviets would serve only as a bridge from the proletarian dictatorship [sic!] to capitalist restoration.*" He generalised this example, by pointing to the "*experience of the Russian soviets during the period of Menshevik and SR domination and, even more clearly, the experience of the German and Austrian soviets under the domination of the Social Democrats.*" [Lenin and Trotsky, **Kronstadt**, p. 90] Modern day Leninists repeat this argument, failing to note that they sound like leftist Henry Kissingers (Kissinger, let us not forget, ensured US aid for Pinochet's coup in Chile and argued that "*I don't see why we need to stand by and watch a country go communist due to the irresponsibility of its own people*").

Today we have Leninists combining rhetoric about democratic socialism, with elections and recall, with a mentality which justifies the suppression of working class revolt because they are not prepared to stand by and watch a country go capitalist due to the irresponsibility of its own people. Perhaps, unsurprisingly, previously in 1937 Trotsky expressed his support for the "*objective necessity*" of the "*revolutionary dictatorship of a proletarian party*" and, two years later, that the "*vanguard of the proletariat*" must be "*armed with the resources of the state in order to repel dangers, including those emanating from the backward layers of the proletariat itself.*" (see [section H.3.8](#)). If only modern day Leninists were as honest!

So the Bolshevik contempt for working class self-government still exists. While few, however, explicitly proclaim the logic of this position (namely party dictatorship) most defend the Bolsheviks implementing this conclusion in practice. Can we not conclude that, faced with the same problems the Bolsheviks faced, these modern day Leninists will implement the same policies? That they will go from party power to party dictatorship, simply because they know better than those who elected them on such matters? That answer seems all too obvious.

As such, the Bolshevik preference for centralised state power and of representative forms of democracy involved the substitution of the party for the class and, consequently, will facilitate the dictatorship **over** the proletariat when faced with the inevitable problems facing any revolution. As Bakunin put it, a *"people's administration, according to [the Marxists], must mean a people's administration by virtue of a small number of representatives chosen by the people . . . [I]t is a deception which would conceal the despotism of a governing minority, all the more dangerous because it appears as a sham expression of the people's will . . . [T]he vast majority, the great mass of people, would be governed by a privileged minority . . . [of] former workers, who would stop being workers the moment they became rulers or representatives, and would then come to regard the whole blue-collared world from governmental heights, and would not represent the people but themselves and their pretensions."* So the Marxist state would be *"the reign of the scientific mind, the most aristocratic, despotic, arrogant and contemptuous of all regimes. There will be a new class, a new hierarchy of real of bogus learning, and the world will be divided into a dominant, science-based minority and a vast, ignorant majority. And then let the ignorant masses beware!"* [Michael Bakunin: Selected Writings, p. 268, pp. 268-9 and p. 266]

In summary, Trotsky's deeply undemocratic justification for appointing officers, like Lenin's similar arguments for appointing managers, express the logic and reality of Bolshevism far better than statements made before the Bolsheviks seized power and never implemented. Sadly, modern Leninists concentrate on the promises of the election manifesto rather than the grim reality of Bolshevik power and its long standing top-down vision of "democracy." A vision which helped undermine the revolution and ensure its degeneration into a party dictatorship presiding over a state capitalist economy.

5 What was the effect of the Bolshevik vision of "socialism"?

As we discussed in [section H.3.1](#), anarchists and most Marxists are divided not only by **means** but also by **ends**. Simply put, libertarians and Leninist do **not** have the same vision of socialism. Given this, anarchists are not surprised at the negative results of the Bolshevik revolution -- the use of anti-socialist means to attain anti-socialist ends would obviously have less than desirable results.

The content of the Bolshevik vision of "socialism" is criticised by anarchists on two main counts. Firstly, it is a top-down, centralised vision of "socialism." This can only result in the destruction of working class economic power at the point of production in favour of centralised bureaucratic power. Secondly, for Bolshevism nationalisation, **not** workers' self-management, was the key issue. We will discuss the first issue here and the second in the following section.

The Bolshevik vision of "socialism" was inherently centralised and top-down. This can be seen from the organisational schemas and arguments made by leading Bolsheviks before and immediately after the Revolution. For example, we discover Trotsky arguing in March 1918 that workplaces "*will be subject to policies laid down by the local council of workmen's deputies*" who, in turn, had "*their range of discretion . . . limited in turn by regulations made for each class of industry by the boards or bureaux of the central government.*" He dismissed Kropotkin's communalist ideas by saying local autonomy was not "*suited to the state of things in modern industrial society*" and "*would result in endless frictions and difficulties.*" As the "*coal from the Donets basin goes all over Russia, and is indispensable in all sorts of industries*" you could not allow "*the organised people of that district [to] do what they pleased with the coal mines*" as they "*could hold up all the rest of Russia.*" [contained in Al Richardson (ed.), **In Defence of the Russian Revolution**, p. 186]

Lenin repeated this centralised vision in June of that year, arguing that "*Communism requires and presupposes the greatest possible centralisation of large-scale production throughout the country. The all-Russian centre, therefore, should definitely be given the right of direct control over all the enterprises of the given branch of industry. The regional centres define their functions depending on local conditions of life, etc., in accordance with the general production directions and decisions of the centre.*" He continued by explicitly arguing that "*[t]o deprive the all-Russia centre of the right to direct control over all the enterprises of the given industry . . . would be regional anarcho-syndicalism, and not communism.*" [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 292]

Thus the Bolshevik economic ideal was centralised and top-down. This is not unsurprising, as Lenin had promised precisely this when the Bolsheviks got into power. As in the Bolshevik party itself, the lower organs were controlled by the higher ones (and as we will discuss, these higher ones were not directly elected by the lower ones). The problems with this vision are many fold.

Firstly, to impose an "ideal" solution would destroy a revolution -- the actions and decisions (**including what others may consider mistakes**) of a free people are infinitely more productive and useful than the decisions and decrees of the best central committee. Moreover, a centralised system by necessity is an imposed system (as it excludes by its very nature the participation of the mass of the people in determining their own fate). Thus **real** socialisation must proceed from below, reflecting the real development and desires of those involved. Centralisation can only result in replacing socialisation with nationalisation and the elimination of workers' self-management with hierarchical management. Workers' again would be reduced to the level of order-takers, with control over their workplaces resting not in their hands but in those of the state.

Secondly, Trotsky seems to think that workers at the base of society would be so unchanged by a revolution that they would hold their fellow workers ransom. And, moreover, that other workers would let them. That, to say the least, seems a strange perspective. But not as strange as thinking that giving extensive powers to a central body will **not** produce equally selfish behaviour (but on a wider and more dangerous scale). The basic fallacy of Trotsky's argument is that the centre will not start to view the whole economy as its property (and being centralised, such a body would be difficult to effectively control). Indeed, Stalin's power was derived from the state bureaucracy which ran the economy in its

own interests. Not that did not suddenly arise with Stalin. It was a feature of the Soviet system from the start. Samuel Farber, for example, notes that, *"in practice, [the] hypercentralisation [pursued by the Bolsheviks from early 1918 onwards] turned into infighting and scrambles for control among competing bureaucracies"* and he points to the *"not untypical example of a small condensed milk plant with few than 15 workers that became the object of a drawn-out competition among six organisations including the Supreme Council of National Economy, the Council of People's Commissars of the Northern Region, the Vologda Council of People's Commissars, and the Petrograd Food Commissariat."* [**Before Stalinism**, p. 73]

In other words, centralised bodies are not immune to viewing resources as their own property and doing as they please with it. Compared to an individual workplace, the state's power to enforce its viewpoint against the rest of society is considerably stronger and the centralised system would be harder to control. The requirements of gathering and processing the information required for the centre to make intelligent decisions would be immense, thus provoking a large bureaucracy which would be hard to control and soon become the **real** power in the state. A centralised body, therefore, effectively excludes the mass participation of the mass of workers -- power rests in the hands of a few people which, by its nature, generates bureaucratic rule. If that sounds familiar, it should. It is precisely what **did** happen in Lenin's Russia and laid the basis for Stalinism.

Thirdly, to eliminate the dangers of workers' self-management generating "propertarian" notions, the workers' have to have their control over their workplace reduced, if not eliminated. This, by necessity, generates bourgeois social relationships and, equally, appointment of managers from above (which the Bolsheviks did embrace). Indeed, by 1920 Lenin was boasting that in 1918 he had *"pointed out the necessity of recognising the dictatorial authority of single individuals for the pursue of carrying out the Soviet idea"* and even claimed that at that stage *"there were no disputes in connection with the question"* of one-man management. [quoted by Brinton, **Op. Cit.**, p. 65] While the first claim is true (Lenin argued for one-man management appointed from above before the start of the Civil War in May 1918) the latter one is not true (excluding anarchists, anarcho-syndicalists and Maximalists, there were also the dissent *"Left Communists"* in the Bolshevik party itself).

Fourthly, centralism was not that efficient. The central bodies the Bolsheviks created had little knowledge of the local situation and often gave orders that contradicted each other or had little bearing to reality, so encouraging factories to ignore the centre: *"it seems apparent that many workers themselves . . . had now come to believe . . . that confusion and anarchy [sic!] at the top were the major causes of their difficulties, and with some justification. The fact was that Bolshevik administration was chaotic . . . Scores of competitive and conflicting Bolshevik and Soviet authorities issued contradictory orders, often brought to factories by armed Chekists. The Supreme Economic Council. . . issu[ed] dozens of orders and pass[ed] countless directives with virtually no real knowledge of affairs."* [William G. Rosenberg, **Russian Labour and Bolshevik Power**, p. 116] The Bolsheviks, as Lenin had promised, built from the top-down their system of *"unified administration"* based on the Tsarist system of central bodies which governed and regulated certain industries during the war. [Brinton, **Op. Cit.**, p. 36] This was very centralised and very inefficient (see [section 7](#) for more discussion).

Moreover, having little real understanding of the circumstances on the ground they could not compare their ideological assumptions and preferences to reality. As an example, the Bolshevik idea that "big" was automatically "more efficient" and "better" had a negative impact on the revolution. In practice, as Thomas F. Remington notes, this simply resulted generated waste:

"The waste of scarce materials at [the giant] Putilov [plant] was indeed serious, but not only political unrest had caused it. The general shortage of fuel and materials in the city took its greatest toll on the largest enterprises, whose overhead expenditures for heating the plant and firing the furnaces were proportionally greater than those for smaller enterprises. This point -- explained by the relative constant proportions among needed inputs to producers at any given point in time -- only was recognised latter. Not until 1919 were the regime's leaders prepared to acknowledge that small enterprises, under the conditions of the time, might be more efficient in using resources: and not until 1921 did a few Bolsheviks theorists grasp the economic reasons for this apparent violation of their standing assumption that larger units were inherently more productive. Thus not only were the workers accused of politically motivated resistance, but the regime blamed them for the effects of circumstances which the workers had no control." [**Building Socialism in Bolshevik Russia**, p. 106]

All in all, the Bolshevik vision of socialism was a disaster. Centralism was a source of massive economic mismanagement and, moreover, bureaucratisation from the start. As anarchists had long predicted. As we discuss in [section 12](#) of the appendix "[What happened during the Russian Revolution?](#)", there was an alternative in the form of the factory committees and the federation. Sadly this was not part of the Bolshevik vision. At best they were tacked onto this vision as a (very) junior partner (as in 1917) or they were quickly marginalised and then dumped when they had outlived their usefulness in securing Bolshevik power (as in 1918).

While some Leninists like to paint the economic policies of the Bolsheviks in power as being different from what they called for in 1917, the truth is radically different. For example, Tony Cliff of the UK's "Socialist Workers Party" asserts, correctly, that in April 1918 the *"defence of state capitalism constituted the essence of his economic policy for this period."* However, he also states that this was *"an entirely new formulation,"* which was not the case in the slightest. [Cliff, **Op. Cit.**, p. 69] As Lenin himself acknowledged.

Lenin had always confused state capitalism with socialism. *"State capitalism,"* he wrote, *"is a complete material preparation for socialism, the threshold of socialism, a rung on the ladder of history between which and the rung called socialism there are no gaps."* He argued that socialism *"is nothing but the next step forward from state capitalist monopoly. In other words, Socialism is merely state capitalist monopoly made to benefit the whole people; by this token it ceases to be capitalist monopoly."* [**The Threatening Catastrophe and how to avoid it**, p. 38 and p. 37] This was in May, 1917. A few months latter, he was talking about how the institutions of state capitalism could be taken over and used to create socialism (see [section H.3.12](#)). Unsurprisingly, when defending Cliff's *"new formulation"* against the

"*Left Communists*" in the spring of 1918 he noted that he gave his "'high' appreciation of state capitalism" "*before the Bolsheviks seized power.*" [**Selected Works**, vol. 2, p. 636]

And, indeed, his praise for state capitalism and its forms of social organisation can be found in his *State and Revolution*:

"the post-office [is] an example of the socialist system . . . At present . . . [it] is organised on the lines of a state capitalist monopoly. Imperialism is gradually transforming all trusts into organisations of a similar type . . . the mechanism of social management is here already to hand. Overthrow the capitalists . . . Our immediate object is to organise the whole of national economy on the lines of the postal system . . . It is such a state, standing on such an economic basis, that we need." [**Essential Works of Lenin**, pp. 307-8]

Given this, Lenin's rejection of the factory committee's model of socialism comes as no surprise (see [section 10](#) of the appendix "[What happened during the Russian Revolution?](#)" for more details). As we noted in [section H.3.14](#), rather than promote workers' control, Lenin effectively undermined it. Murray Bookchin points out the obvious:

"In accepting the concept of worker's control, Lenin's famous decree of November 14, 1917, merely acknowledged an accomplished fact; the Bolsheviks dared not oppose the workers at this early date. But they began to whittle down the power of the factory committees. In January 1918, a scant two months after 'decreeing' workers' control, Lenin began to advocate that the administration of the factories be placed under trade union control. The story that the Bolsheviks 'patiently' experimented with workers' control, only to find it 'inefficient' and 'chaotic,' is a myth. Their 'patience' did not last more than a few weeks. Not only did Lenin oppose direct workers' control within a matter of weeks . . . even union control came to an end shortly after it had been established. By the summer of 1918, almost all of Russian industry had been placed under bourgeois forms of management." [**Post-Scarcity Anarchism**, pp. 200-1]

Significantly, even his initial vision of workers' control was hierarchical, centralised and top-down. In the workplace it was to be exercised by factory committees. The "*higher workers' control bodies*" were to be "*composed of representatives of trade unions, factory and office workers' committees, and workers' co-operatives.*" The decisions of the lower bodies "*may be revoked only by higher workers' control bodies.*" [quoted by Cliff, **Op. Cit.**, p. 10] As Maurice Brinton notes:

"there [was] . . . a firm hierarchy of control organs . . . each Committee was to be responsible to a 'Regional Council of Workers' Control', subordinated in turn to an 'All-Russian Council of Workers' Control'. The composition of these higher organs was decided by the Party.

"The trade unions were massively represented in the middle and higher strata of this new

pyramid of 'institutionalised workers' control.' For instance the All-Russian Council of Workers' Control was to consist of 21 'representatives': 5 from the All-Russian Central Executive Committee of the Soviets, 5 from the Executive of the All-Russian Council of Trade Unions, 5 from the Association of Engineers and Technicians, 2 from the Association of Agronomists, 2 from the Petrograd Trade Union Council, 1 from each All-Russian Trade Union Federation numbering fewer than 100,000 members (2 for Federations of over this number)... and 5 from the All-Russian Council of Factory Committees! The Factory Committees often under anarcho-syndicalist influence had been well and truly 'cut down to size'." [Op. Cit., p. 18]

As we note in [section 10](#) of the appendix "[What happened during the Russian Revolution?](#)", this was a conscious preference on Lenin's part. The factory committees had started to federate, creating their own institutional framework of socialism based on the workers own class organisation. Lenin, as he had explained in 1917, favoured using the institutions created by "*state capitalism*" and simply tacked on a form of "*workers' control*" distinctly at odds with the popular usage of the expression. He **rejected** the suggestions of factory committees themselves. The Supreme Economic Council, established by the Soviet government, soon demonstrated how to really mismanage the economy.

As such, the economic developments proposed by Lenin in early 1918 and onwards were **not** the result of the specific problems facing the Russian revolution. The fact is while the dire problems facing the Russian revolution undoubtedly made many aspects of the Bolshevik system worse, they did not create them. Rather, the centralised, bureaucratic and top-down abuses Leninists like to distance themselves from where, in fact, built into Lenin's socialism from the start. A form of socialism Lenin and his government explicitly favoured and created in opposition to other, authentically proletarian, versions.

The path to state capitalism was the one Lenin wanted to trend. It was not forced upon him or the Bolsheviks. And, by re-introducing wage slavery (this time, to the state) the Bolshevik vision of socialism helped undermine the revolution, workers' power and, sadly, build the foundations of Stalinism.

6 How did Bolshevik preference for nationalisation affect the revolution?

As noted in the [last section](#), unlike anarchism, for Bolshevism nationalisation, **not** workers' self-management, was the key issue in socialism. As noted in [section 3](#), Lenin had proclaimed the necessity for appointed one-man managers and implementing "*state capitalism*" in April 1918. Neither policy was thought to harm the socialist character of the regime. As Trotsky stressed in 1920, the decision to place a manager at the head of a factory instead of a workers' collective had no political significance:

"It would be a most crying error to confuse the question as to the supremacy of the proletariat with the question of boards of workers at the head of factories. The

dictatorship of the proletariat is expressed in the abolition of private property in the means of production, in the supremacy of the collective will of the workers and not at all in the form in which individual economic organisations are administered." [**Terrorism and Communism**, p. 162]

Nor was this considered a bad thing or forced upon the Bolsheviks as a result of terrible circumstances. Quite the reverse: *"I consider if the civil war had not plundered our economic organs of all that was strongest, most independent, most endowed with initiative, we should undoubtedly have entered the path of one-man management in the sphere of economic administration much sooner and much less painfully."* [**Op. Cit.**, pp. 162-3] As discussed in the [previous section](#), this evaluation fits perfectly into Bolshevik ideology and practice before and after they seized power. One can easily find dozens of quotations from Lenin expressing the same idea.

Needless to say, Trotsky's *"collective will of the workers"* was simply a euphemism for the Party, whose dictatorship **over** the workers Trotsky glibly justified:

"We have more than once been accused of having substituted for the dictatorship of the Soviets the dictatorship of the party. Yet it can be said with complete justice that the dictatorship of the Soviets became possible only by means of the dictatorship of the party. It is thanks to the . . . party . . . [that] the Soviets . . . [became] transformed from shapeless parliaments of labour into the apparatus of the supremacy of labour. In this 'substitution' of the power of the party for the power of the working class there is nothing accidental, and in reality there is no substitution at all. The Communists express the fundamental interests of the working class." [**Op. Cit.**, p. 109]

While Trotsky's honesty on this matter is refreshing (unlike his followers today who hypocritically talk about the "leadership" of the Bolshevik party) we can say that this was a **fatal** position to take. Indeed, for Trotsky **any** system (including the militarisation of labour) was acceptable as the key *"differences . . . is defined by a fundamental test: who is in power?"* -- the capitalist class or the proletariat (i.e. the party) [**Op. Cit.**, pp. 171-2] Thus working class control over their own affairs was of little importance: *"The worker does not merely bargain with the Soviet State; no, he is subordinated to the Soviet State, under its orders in every direction -- for it is **his** State."* [**Op. Cit.**, p. 168] This, of course, echoed his own arguments in favour of appointment (see [section 4](#)) **and** Lenin's demands for the *"exercise of dictatorial powers by individuals"* in the workplace (see [section 3](#)) in early 1918. Cornelius Castoriadis points out the obvious:

"The role of the proletariat in the new State was thus quite clear. It was that of enthusiastic and passive citizens. And the role of the proletariat in work and in production was no less clear. On the whole, it was the same as before -- under capitalism -- except that workers of 'character and capacity' [to quote Trotsky] were to be chosen to replace factory managers who had fled." [**The Role of the Bureaucracy in the birth of the Bureaucracy**, p. 99]

Trotsky's position, it should be noted, remained consistent. In the early 1930s he argued (in respect to Stalin's regime) that *"anatomy of society is determined by its economic relations. So long as the forms of property that have been created by the October Revolution are not overthrown, the proletariat remains the ruling class."* [**The Class Nature of The Soviet State**] Obviously, if the prime issue is property and not who **manages** the means of production (or even *"the state"*) then having functioning factory-committees becomes as irrelevant as having democratic soviets when determining whether the working class is in power or not.

(As an aside, we should not be surprised that Trotsky could think the workers were the *"ruling class"* in the vast prison-camp which was Stalin's USSR, given that he thought the workers were the *"ruling class"* when he and Lenin headed the Bolshevik party dictatorship! Thus we have the strange division Leninists make between Lenin's dictatorship and Stalin's (and those of Stalin's followers). When Lenin presides over a one-party dictatorship, breaks up strikes, bans political parties, bans Bolshevik factions, and imprisons and shoots political dissidents these are all regrettable but necessary steps in the protection of the "proletarian state." When Stalin does the exact same thing, a few years later, they are all terrible examples of the deformation of this same "proletarian state"!)

For anarchists (and other libertarian socialists) this was and is nonsense. Without workers' self-management in production, socialism cannot exist. To focus attention of whether individuals own property or whether the state does is fundamentally a red-herring. Without workers' self-management of production, private capitalism will simply have been replaced by **state** capitalism. As one anarchist active in the factory committee movement argued in January, 1918, it is *"not the liberation of the proletariat when many individual plunders are changed for one very powerful plunder -- the state. The position of the proletariat remains the same."* Therefore, *"[w]e must not forget that the factory committees are the nuclei of the future socialist order"* nor must we forget *"that the state . . . will try to maintain its own interests at the expense of the interests of the workers. There is no doubt that we will be witnesses of a great conflict between the state power in the centre and the organisations composed exclusively of workers which are found in the localities."* He was proved right. Instead of centralised the Bolshevik vision of state capitalism, the anarchists argued that factory committees *"be united on the basis of federalism, into industrial federations . . . [and] poly-industrial soviets of national economy."* Only in that way could **real** socialism be created. [quoted by Frederick I. Kaplan, **Bolshevik Ideology and the Ethics of Soviet Labour**, p. 163 and p. 166] (see [section 7](#) of the appendix ["What happened during the Russian Revolution?"](#) for more on the factory committee movement).

The reason is obvious. It is worth quoting Cornelius Castoriadis at length on why the Bolshevik system was doomed to failure:

"So we end up with the uncontested power of managers in the factories, and the Party's exclusive 'control' (in reality, what kind of control was it, anyway?). And there was the uncontested power of the Party over society, without any control. From that point on, nobody could prevent these two powers from merging, could anyone stop the two strata embodying them from merging, nor could the consolidation of an irremovable

bureaucracy ruling over all sectors of social life be halted. The process may have been accelerated or magnified by the entry of non-proletarian elements into the Party, as they rushed to jump on the bandwagon. But this was a consequence, and not a cause, of the Party's orientation . . .

"Who is to manage production . . .? . . . the correct answer [is] the collective organs of labouring people. What the party leadership wanted, what it had already imposed -- and on this point there was no difference between Lenin and Trotsky -- was a hierarchy directed from above. We know that this was the conception that triumphed. We know, too, where this 'victory' led . . .

"In all Lenin's speeches and writings of this period, what recurs again and again like an obsession is the idea that Russia ought to learn from the advanced capitalist countries; that there are not a hundred and one different ways of developing production and labour productivity if one wants to emerge from backwardness and chaos; that one must adopt capitalist methods of 'rationalisation' and management as well as capitalist forms of work 'incentives.' All these, for Lenin, are just 'means' that apparently could freely be placed in the service of a radically different historical end, the building of socialism.

*"Thus Trotsky, when discussing the merits of militarism, came to separate the army itself, its structure and its methods, from the social system it serves. What is criticisable in bourgeois militarism and in the bourgeois army, Trotsky says in substance, is that they are in the service of the bourgeoisie. Except for that, there is nothing in them to be criticised. The sole difference, he says, lies in this: **'Who is in power?'** Likewise, the dictatorship of the proletariat is not expressed by the 'form in which individual economic enterprises are administered.'*

"The idea that like means cannot be placed indifferently into the service of different ends; that there is an intrinsic relationship between the instruments used and the result obtained; that, especially, neither the army nor the factory are simple 'means' or 'instruments,' but social structures in which are organised two fundamental aspects of human relations (production and violence); that in them can be seen in condensed form the essential expression of the type of social relations that characterise an era -- this idea, though perfectly obvious and banal for Marxists, was totally 'forgotten.' It was just a matter of developing production, using proven methods and structures. That among these 'proofs' the principal one was the development of capitalism as a social system and that a factory produces not so much cloth or steel but proletariat and capital were facts that were utterly ignored.

"Obviously, behind this 'forgetfulness' is hidden something else. At the time, of course, there was the desperate concern to revive production as soon as possible and to put a collapsing economy back on its feet. This preoccupation, however, does not fatally dictate

*the choice of 'means.' If it seemed obvious to Bolshevik leaders that the sole effective means were capitalist ones, it was because they were imbued with the conviction that capitalism was the only effective and rational system of production. Faithful in this respect to Marx, they wanted to abolish private property and market anarchy, but not the type of organisation capitalism had achieved at the point of production. They wanted to modify the **economy**, not the relations between people at work or the nature of labour itself.*

"At a deeper level still, their philosophy was to develop the forces of production. Here too they were the faithful inheritors of Marx -- or at least one side of Marx, which became the predominant one in his mature writings. The development of the forces of production was, if not the ultimate goal, at any rate the essential means, in the sense that everything else would follow as a by-product and that everything else had to be subordinated to it. . .

*"To manage the work of others -- this is the beginning and the end of the whole cycle of exploitation. The 'need' for a specific social category to manage the work of others in production (and the activity of others in politics and in society), the 'need' for a separate business management and for a Party to rule the State -- this is what Bolshevism proclaimed as soon as it seized power, and this is what it zealously laboured to impose. We know that it achieved its ends. Insofar as ideas play a role in the development of history -- and, **in the final analysis**, they play an enormous role -- the Bolshevik ideology (and with it, the Marxist ideology lying behind it) was a decisive factor in the birth of the Russian bureaucracy." [Op. Cit., pp. 100-4]*

Therefore, we *"may therefore conclude that, contrary to the prevailing mythology, it was not in 1927, or in 1923, or even in 1921 that the game was played and lost, but much earlier, during the period from 1918 to 1920. . . . [1921 saw] the beginning of the reconstruction of the productive apparatus. This reconstruction effort, however, was already firmly set in the groove of bureaucratic capitalism."* [Op. Cit., p. 99] In this, they simply followed the economic ideas Lenin had expounded in 1917 and 1918, but in an even more undemocratic way. Modern-day Leninism basically takes the revolutionised Russia of the Bolsheviks and, essentially, imposes upon it a more democratic form of government rather than Lenin's (and then Stalin's). Anarchists, however, still oppose the economy.

Ironically, proof that libertarians are right on this issue can be found in Trotsky's own work. In 1936, he argued that the *"demobilisation of the Red Army of five million played no small role in the formation of the bureaucracy. The victorious commanders assumed leading posts in the local Soviets, in economy, in education, and they persistently introduced everywhere that regime which had ensured success in the civil war. Thus on all sides the masses were pushed away gradually from actual participation in the leadership of the country."* [The Revolution Betrayed] Needless to say, he failed to note who had abolished the election of commanders in the Red Army in March 1918, namely himself (see [section 4](#)). Similarly, he failed to note that the *"masses"* had been *"pushed . . . from actual participation in the leadership of the country"* well before the end of the civil war and that, at the time, he was not concerned

about it. Equally, it would be churlish to note that back in 1920 he thought that *"Military' qualities . . . are valued in every sphere. It was in this sense that I said that every class prefers to have in its service those of its members who, other things being equal, have passed through the military school . . . This experience is a great and valuable experience. And when a former regimental commissary returns to his trade union, he becomes not a bad organiser."* [**Terrorism and Communism**, p. 173]

In 1937 Trotsky asserted that *"liberal-anarchist thought closes its eyes to the fact that the Bolshevik revolution, with all its repressions, meant an upheaval of social relations in the interests of the masses, whereas Stalin's Thermidorian upheaval accompanies the reconstruction of Soviet society in the interest of a privileged minority."* [Trotsky, **Stalinism and Bolshevism**] Yet Stalin's "upheaval" was built upon the social relations created when Lenin and Trotsky held power. State ownership, one-man management, and so on were originally advocated and implemented by Lenin and Trotsky. The bureaucracy did not have to expropriate the working class economically -- "real" Bolshevism had already did so. Nor can it be said that the social relations associated with the political sphere had fundamentally changed under Stalin. He had, after all, inherited the one-party state from Lenin and Trotsky. In a nutshell, Trotsky is talking nonsense.

Simply put, as Trotsky himself indicates, Bolshevik preference for nationalisation helped ensure the creation and subsequent rise of the Stalinist bureaucracy. Rather than be the product of terrible objective circumstances as his followers suggest, the Bolshevik state capitalist economic system was at the heart of their vision of what socialism was. The civil war simply brought the underlying logic of vision into the fore.

7 How did Bolshevik preference for centralism affect the revolution?

The next issue we will discuss is centralisation. Before starting, it is essential that it be stressed that anarchists are **not** against co-ordinated activity and organisation on a large scale. Anarchists stress the need for federalism to meet the need for such work (see [section A.2.9](#), for example). As such, our critique of Bolshevik centralism is **not** a call for "localism" or isolation (as many Leninists assert). Rather, it is a critique of **how** the social co-operation essential for society will be conducted. Will it be in a federal (and so bottom-up) way or will it be in a centralised (and so top-down) way?

It goes almost without saying that Bolshevik ideology was centralist in nature. Lenin repeatedly stressed the importance of centralisation, arguing constantly that Marxism was, by its very nature, centralist (and top-down -- [section H.3.3](#)). Long before the revolution, Lenin had argued that within the party it was a case of *"the transformation of the power of ideas into the power of authority, the subordination of lower Party bodies to higher ones."* [**Collected Works**, vol. 7, p. 367] Such visions of centralised organisation were the model for the revolutionary state. In 1917, he repeatedly stressed that after it the Bolsheviks would be totally in favour of *"centralism"* and *"strong state power."* [Lenin, **Selected Works**, vol. 2, p. 374] Once in power, they did not disappoint.

Anarchists argue that this prejudice in favour of centralisation and centralism is at odds with Leninist claims to be in favour of mass participation. It is all fine and well for Trotskyist Tony Cliff to quote Lenin arguing that under capitalism the *"talent among the people"* is *"merely suppressed"* and that it *"must be given an opportunity to display itself"* and that this can *"save the cause of socialism,"* it is something else for Lenin (and the Leninist tradition) to favour organisational structures that allow that to happen. Similarly, it is fine to record Lenin asserting that *"living, creative socialism is the product of the masses themselves"* but it is something else to justify the barriers Leninist ideology placed in the way of it by its advocacy of centralism. [quoted by Tony Cliff, **Lenin**, vol. 3, p. 20 and p. 21]

The central contradiction of Leninism is that while it (sometimes) talks about mass participation, it has always prefers an organisational form (centralism) which hinders, and ultimately destroys, the participation that **real** socialism needs.

That centralism works in this way should come as no surprise. After all, it based on centralising power at the top of an organisation and, consequently, into a few hands. It was for this precise reason that **every** ruling class in history has utilised centralisation against the masses. As we indicated in [section B.2.5](#), centralisation has always been the tool of minority classes to disempower the masses. In the American and French revolutions, centralisation of state power was the means used to destroy the revolution, to take it out off the hands of the masses and concentrate it into the hands of a minority. In France:

"From the moment the bourgeoisie set themselves against the popular stream they were in need of a weapon that could enable them to resist pressure from the bras nus [working people]; they forced one by strengthening the central power . . . [This was] the formation of the state machinery through which the bourgeoisie was going to enslave the proletariat. Here is the centralised state, with its bureaucracy and police . . . [it was] a conscious attempt to reduce . . . the power of the people." [Daniel Guerin, **Class Struggle in the First French Republic**, p. 176]

The reason is not hard to understand -- mass participation and class society do not go together. Thus, *"the move towards bourgeois dictatorship"* saw *"the strengthening of the central power against the masses."* [Guerin, **Op. Cit.**, pp. 177-8] *"To attack the central power,"* argued Kropotkin, *"to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more."* [**Words of a Rebel**, p. 143]

Can we expect a similar concentration of the central power under the Bolsheviks to have a different impact? And, as discussed in appendix ["What happened during the Russian Revolution?"](#) we find a similar marginalisation of the working class from its own revolution. Rather than being actively participating in the transformation of society, they were transformed into spectators who simply were expected to implement the decisions made by the Bolsheviks on their behalf. Bolshevik centralisation quickly ensured the disempowerment of working class people. Unsurprisingly enough, given its role in class society and in bourgeois revolutions.

In this section of the FAQ, we will indicate why this process happened, why Bolshevik centralisation undermined the socialist content of the revolution in favour of new forms of oppression and exploitation.

Therefore, anarchists argue, centralism cannot help but generate minority rule, not a classless society. Representative, and so centralised, democracy, argued Malatesta, "*substitutes the will of a few for that of all . . . and in the name of a fictitious collective interest, rides roughshod over every real interests, and by means of elections and the vote, disregards the wishes of each and everyone.*" [**Life and Ideas**, p. 147]

This is rooted in the nature of the system, for democracy does not mean, in practice, "*rule by all the people.*" Rather, as Malatesta pointed out, it "*would be closer to the truth to say 'government of the majority of the people.'*" And even this is false, as "*it is never the case that the representatives of the majority of the people are in the same mind on all questions; it is therefore necessary to have recourse again to the majority system and thus we will get closer still to the truth with 'government of the majority of the elected by the majority of the electors.'*" This, obviously, "*is already beginning to bear a strong resemblance to minority government.*" And so, "*it is easy to understand what has already been proven by universal historical experience: even in the most democratic of democracies it is always a small minority that rules and imposes its will and interests by force.*" And so centralism turns democracy into little more than picking masters. Therefore, anarchists argue, "*those who really want 'government of the people' . . . must abolish government.*" [**The Anarchist Revolution**, p. 78]

The Russian Revolution is a striking confirmation of this libertarian analysis. By applying centralism, the Bolsheviks disempowered the masses and concentrated power into the hands of the party leadership. This places power in a distinct social class and subject to the pervasive effects of their concrete social circumstances within their institutional position. As Bakunin predicted with amazing accuracy:

"The falsehood of the representative system rests upon the fiction that the executive power and the legislative chamber issuing from popular elections must, or even can for that matter, represent the will of the people . . . the instinctive aims of those who govern . . . are, because of their exceptional position diametrically opposed to the instinctive popular aspirations. Whatever their democratic sentiments and intentions may be, viewing society from the high position in which they find themselves, they cannot consider this society in any other way but that in which a schoolmaster views the pupils. And there can be no equality between the schoolmaster and the pupils. . . Whoever says political power says domination. And where domination exists, a more or less considerable section of the population is bound to be dominated by others. . . those who do the dominating necessarily must repress and consequently oppress those who are subject to the domination . . . [This] explains why and how men who were democrats and rebels of the reddest variety when they were a part of the mass of governed people, became exceedingly moderate when they rose to power. Usually these backslidings are attributed to treason. That, however, is an erroneous idea; they have for their main cause the change of position and perspective . . . if there should be established tomorrow a government . . . made up

exclusively of workers, those . . . staunch democrats and Socialists, will become determined aristocrats, bold or timid worshippers of the principle of authority, and will also become oppressors and exploiters." [The Political Philosophy of Bakunin, p. 218]

However, due to the inefficiencies of centralised bodies, this is not the end of the process. Around the new ruling bodies inevitably springs up officialdom. This is because a centralised body does not know what is happening in the grassroots. Therefore it needs a bureaucracy to gather and process that information and to implement its decisions. In the words of Bakunin:

"where is the head, however brilliant it may be, or if one wishes to speak of a collective dictatorship, were it formed of many hundreds of individuals endowed with superior faculties, where are those brains powerful enough and wide-ranging enough to embrace the infinite multiplicity and diversity of the real interests, aspirations, wishes and needs whose sum total constitutes the collective will of a people, and to invent a social organisation which can satisfy everybody? This organisation will never be anything but a Procrustean bed which the more or less obvious violence of the State will be able to force unhappy society to lie down on. . . Such a system . . . would lead inevitably to the creation of a new State, and consequently to the formation of a governmental aristocracy, that is, an entire class of people, having nothing in common with the mass of people . . . [and would] exploit the people and subject them." [Michael Bakunin: Selected Writings, pp. 204-6]

As the bureaucracy is permanent and controls information and resources, it soon becomes the main source of power in the state. The transformation of the bureaucracy from servant to the master soon results. The "official" government is soon controlled by it, shaping its activities in line with its interests. Being highly centralised, popular control is even more limited than government control -- people would simply not know where real power lay, which officials to replace or even what was going on within the distant bureaucracy. Moreover, if the people did manage to replace the corrupt people, the newcomers would be subject to the same institutional pressures that corrupted the previous members and so the process would start again (assuming they did not come under the immediate influence of those who remained in the bureaucracy). Consequently, a new bureaucratic class develops around the centralised bodies created by the governing party. This body would soon become riddled with personal influences and favours, so ensuring that members could be sheltered from popular control. As Malatesta argued, they *"would use every means available to those in power to have their friends elected as the successors who would then in turn support and protect them. And thus government would be passed to and fro in the same hands, and democracy, which is the alleged government of all, would end up, as usual, in an oligarchy, which is the government of a few, the government of a class."* [Anarchy, p. 34]

This state bureaucracy, of course, need not be dictatorial nor the regime it rules/administers be totalitarian (for example, bourgeois states combine bureaucracy with many real and important liberties). However, such a regime is still a class one and socialism would still not exist -- as proven by the state bureaucracies and nationalised property within bourgeois society.

So the danger to liberty of combining political **and** economic power into one set of hands (the state's) is obvious. As Kropotkin argued:

*"the state was, and continues to be, the chief instrument for permitting the few to monopolise the land, and the capitalists to appropriate for themselves a quite disproportionate share of the yearly accumulated surplus of production. Consequently, while combating the present monopolisation of land, and capitalism altogether, the anarchists combat with the same energy the state, as the main support of that system. Not this or that special form, but the state altogether . . . The state organisation, having always been, both in ancient and modern history . . . the instrument for establishing monopolies in favour of the ruling minorities, cannot be made to work for the destruction of these monopolies. The anarchists consider, therefore, that to hand over to the state all the main sources of economical life -- the land, the mines, the railways, banking, insurance, and so on - as also the management of all the main branches of industry, in addition to all the functions already accumulated in its hands (education, state-supported religions, defence of the territory, etc.), would mean to create a new instrument of tyranny. State capitalism would only increase the powers of bureaucracy and capitalism. True progress lies in the direction of decentralisation, both **territorial** and **functional**, in the development of the spirit of local and personal initiative, and of free federation from the simple to the compound, **in lieu** of the present hierarchy from the centre to the periphery."* [Kropotkin's Revolutionary Pamphlets, p. 286]

Thus we have the basic argument **why** centralism will result in the continuation of class society. Does the Bolshevik experience contradict this analysis? Essentially, it confirms to Kropotkin's predictions on the uselessness of "revolutionary" government:

"Instead of acting for themselves, instead of marching forward, instead of advancing in the direction of the new order of things, the people confiding in their governors, entrusted to them the charge of taking initiative. This was the first consequence of the inevitable result of elections. . . Shut up in the city hall, charged to proceed after the forms established by the preceding governments, these ardent revolutionists, these reformers found themselves smitten with incapacity and sterility. . . but it was not the men who were the cause for this failure -- it was the system.. .

"The will of the bulk of the nation once expressed, the rest would submit to it with a good grace, but this is not how things are done. The revolution bursts out long before a general understanding has come, and those who have a clear idea of what should be done the next day are only a very small minority. The great mass of the people have as yet only a general idea of the end which they wish realised, without knowing much how to advance towards that end, and without having much confidence in the direction to follow. The practical solution will not be found, will not be made clear until the change will have already begun. It will be the product of the revolution itself, of the people in action, -- or

else it will be nothing, incapable of finding solutions which can only spring from the life of the people. . . The government becomes a parliament with all the vices of a middle-class parliament. Far from being a 'revolutionary' government it becomes the greatest obstacle to the revolution and at last the people find themselves compelled to put it out of the way, to dismiss those that but yesterday they acclaimed as their children.

"But it is not so easy to do so. The new government which has hastened to organise a new administration in order to extend it's domination and make itself obeyed does not understand giving up so easily. Jealous of maintaining it's power, it clings to it with all the energy of an institution which has yet had time to fall into senile decay. It decides to oppose force with force, and there is only one means then to dislodge it, namely, to take up arms, to make another revolution in order to dismiss those in whom the people had placed all their hopes." [Op. Cit., pp. 240-2]

By the spring and summer of 1918, the Bolshevik party had consolidated its power. It had created a new state, marked as all states are by the concentration of power in a few hands and bureaucracy. Effective power became concentrated into the hands of the executive committees of the soviets from top to bottom. Faced with rejection at soviet election after soviet election, the Bolsheviks simply disbanded them and gerrymandered the rest. At the summit of the new state, a similar process was at work. The soviets had little real power, which was centralised in Lenin's new government. This is discussed in more detail in [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)". Thus centralisation quickly displaced popular power and participation. As predicted by Russia anarchists in November 1917:

*"Once their power is consolidated and 'legalised', the Bolsheviks -- who are Social Democrats, that is, men of centralist and authoritarian action -- will begin to rearrange the life of the country and of the people by governmental and dictatorial methods, imposed by the centre. The[y] . . . will dictate the will of the party to all Russia, and command the whole nation. Your Soviets and your other local organisations will become little by little, simply executive organs of the will of the central government. In the place of healthy, constructive work by the labouring masses, in place of free unification from the bottom, we will see the installation of an authoritarian and statist apparatus which would act from above and set about wiping out everything that stood in its way with an iron hand. The Soviets and other organisations will have to obey and do its will. That will be called 'discipline.'" [quoted by Voline, **The Unknown Revolution**, p. 235]*

From top to bottom, the new party in power systematically undermined the influence and power of the soviets they claimed to be ensuring the power of. This process had begun, it should be stressed **before** the start of the civil war in May, 1918. Thus Leninist Tony Cliff is wrong to state that it was "*under the iron pressure of the civil war*" which forced the Bolshevik leaders "*to move, as the price of survival, to a one-party system.*" [**Revolution Besieged**, p. 163] From the summer of 1918 (i.e. before the civil war even started), the Bolsheviks had turned from the first of Kropotkin's "revolutionary" governments

(representative government) to the other, dictatorship, with sadly predictable results.

So far, the anarchist predictions on the nature of centralised revolutionary governments had been confirmed. Being placed in a new social position and, therefore, different social relationships, produced a dramatic revision on the perspectives of the Bolsheviks. They went from being in favour of party power to being in favour of party dictatorship. They acted to ensure their power by making accountability and recall difficult, if not impossible, and simply ignored any election results which did not favour them.

What of the second prediction of anarchism, namely that centralisation will recreate bureaucracy? That, too, was confirmed. After all, some means were required to gather, collate and provide information by which the central bodies made their decisions. Thus a necessary side-effect of Bolshevik centralism was bureaucracy, which, as is well known, ultimately fused with the party and replaced Leninism with Stalinism. The rise of a state bureaucracy started immediately with the seizure of power by the Bolsheviks. Instead of the state starting to "*wither away*" from the start it grew:

"The old state's political apparatus was 'smashed,' but in its place a new bureaucratic and centralised system emerged with extraordinary rapidity. After the transfer of government to Moscow in March 1918 it continued to expand . . . As the functions of the state expanded so did the bureaucracy, and by August 1918 nearly a third of Moscow's working population were employed in offices [147,134 employed in state institutions and 83,886 in local ones. This was 13.7% of the total adult population and 29.6% of the independent population of 846,095]. The great increase in the number of employees . . . took place in early to mid-1918 and, thereafter, despite many campaigns to reduce their number, they remained a steady proportion of the falling population . . . At first the problem was dismissed by arguments that the impressive participation of the working class in state structures was evidence that there was no 'bureaucratism' in the bureaucracy. According to the industrial census of 31 August 1918, out of 123,578 workers in Moscow, only 4,191 (3.4 percent) were involved in some sort of public organisation . . . Class composition is a dubious criterion of the level of bureaucratism. Working class participation in state structures did not ensure an organisation against bureaucratism, and this was nowhere more true than in the new organisations that regulated the economic life of the country." [Richard Sakwa, "*The Commune State in Moscow in 1918*," pp. 429-449, **Slavic Review**, vol. 46, no. 3/4, pp. 437-8]

The "bureaucracy grew by leaps and bounds. Control over the new bureaucracy constantly diminished, partly because no genuine opposition existed. The alienation between 'people' and 'officials,' which the soviet system was supposed to remove, was back again. Beginning in 1918, complaints about 'bureaucratic excesses,' lack of contact with voters, and new proletarian bureaucrats grew louder and louder." [Oskar Anweiler, **The Soviets**, p. 242]

Overtime, this permanent collection of bodies would become the real power in the state, with the party

members nominally in charge really under the control of an unelected and uncontrolled officialdom. This was recognised by Lenin in the last years of his life. As he noted in 1922:

"Let us look at Moscow . . . Who is leading whom? The 4,700 responsible Communists the mass of bureaucrats, or the other way round? I do not believe that you can say that the Communists are leading this mass. To put it honestly, they are not the leaders, but the led." [quoted by Chris Harman, **Bureaucracy and Revolution in Eastern Europe**, p. 13]

By the end of 1920, there were five times more state officials than industrial workers. 5, 880,000 were members of the state bureaucracy. However, the bureaucracy had existed since the start. As noted above, the 231,000 people employed in offices in Moscow in August 1918 represented 30 per cent of the workforce there. *"By 1920 the general number of office workers . . . still represented about a third of those employed in the city."* In November, 1920, they were 200 000 office workers in Moscow, compared to 231 000 in August, 1918. By July, 1921 (in spite of a plan to transfer 10,000 away) their numbers had increased to 228,000 and by October 1922, to 243,000. [Richard Sakwa, **Soviet Communists in Power**, p. 192, p. 191 and p. 193]

This makes perfect sense as *"on coming to power the Bolsheviks smashed the old state but rapidly created their own apparatus to wage the political and economic offensive against the bourgeois and capitalism. As the functions of the state expanded, so did the bureaucracy . . . following the revolution the process of institutional proliferation reached unprecedented heights."* [Op. Cit., p. 191] And with bureaucracy came the abuse of it simply because it held **real** power:

"The prevalence of bureaucracy, of committees and commissions . . . permitted, and indeed encouraged, endless permutations of corrupt practices. These raged from the style of living of communist functionaries to bribe-taking by officials. With the power of allocation of scare resources, such as housing, there was an inordinate potential for corruption." [Op. Cit., p. 193]

The growth in **power** of the bureaucracy should not, therefore, come as a major surprise given that had existed from the start in sizeable numbers. However, for the Bolsheviks *"the development of a bureaucracy"* was a puzzle, *"whose emergence and properties mystified them."* However, it should be noted that, *"[f]or the Bolsheviks, bureaucratism signified the escape of this bureaucracy from the will of the party as it took on a life of its own."* [Sakwa, **Op. Cit.**, p. 182 and p. 190] This was the key. They did not object the usurpation of power by the party (indeed they placed party dictatorship at the core of their politics and universalised it to a general principle for **all** "socialist" revolutions). Nor did they object to the centralisation of power and activity (and so the bureaucratisation of life). They only objected to it when the bureaucracy was not doing what the party wanted it to. Indeed, this was the basic argument of Trotsky against Stalinism (see [section 3](#) of the appendix on ["Were any of the Bolshevik oppositions a real alternative?"](#)).

Faced with this bureaucracy, the Bolsheviks tried to combat it (unsuccessfully) and explain it. As the

failed to achieve the latter, they failed in the former. Given the Bolshevik fixation for all things centralised, they simply added to the problem rather than solve it. Thus we find that "*[o]n the eve of the VIII Party Congress Lenin had argued that centralisation was the only way to combat bureaucratism.*" [Sakwa, **Op. Cit.**, p. 196]

Unsurprisingly, Lenin's "anti-bureaucratic" policies in the last years of his life were "*organisational ones. He purposes the formation of the Workers' and Peasants' Inspection to correct bureaucratic deformations in the party and state -- and this body falls under Stalin's control and becomes highly bureaucratic in its own right. Lenin then suggests that the size of the Workers' and Peasants' Inspection be reduced and that it be merged with the Control Commission. He advocates enlarging the Central Committee. Thus it rolls along; this body to be enlarged, this one to be merged with another, still a third to be modified or abolished. The strange ballet of organisational forms continues up to his very death, as though the problem could be resolved by organisational means.*" [Murray Bookchin, **Post-Scarcity Anarchism**, p. 205]

Failing to understand the links between centralism and bureaucracy, Lenin had to find another source for the bureaucracy. He found one. He "*argued that the low cultural level of the working class prevented mass involvement in management and this led to bureaucratism . . . the new state could only rely on a minuscule layer of workers while the rest were backward because of the low cultural level of the country.*" However, such an explanation is by no means convincing: "*Such culturalist assertions, which could neither be proved or disproved but which were politically highly effective in explaining the gulf, served to blur the political and structural causes of the problem. The working class was thus held responsible for the failings of the bureaucracy. At the end of the civil war the theme of the backwardness of the proletariat was given greater elaboration in Lenin's theory of the declassing of the proletariat.*" [Sakwa, **Op. Cit.**, p. 195] Given that the bureaucracy had existed from the start, it is hard to say that a more "*cultured*" working class would have been in a better position to control the officials of a highly centralised state bureaucracy. Given the problems workers in "developed" nations have in controlling their (centralised) union bureaucracies, Lenin's explanation seems simply inadequate and, ultimately, self-serving.

Nor was this centralism particularly efficient. You need only read Goldman's or Berkman's accounts of their time in Bolshevik Russia to see how inefficient and wasteful centralisation and its resultant bureaucracy was in practice (see **My Disillusionment in Russia** and **The Bolshevik Myth**, respectively). This can be traced, in part, to the centralised economic structures favoured by the Bolsheviks. Rejecting the alternative vision of socialism advocated and, in part created, by the factory committees (and supported wholeheartedly by the Russian Anarchists at the time), the Bolsheviks basically took over and used the "*state capitalist*" organs created under Tsarism as the basis of their "socialism" (see [section 5](#)). As Lenin promised **before** seizing power:

"Forced syndicalisation -- that is, forced fusion into unions [i.e. trusts] under the control of the State -- this is what capitalism has prepared for us -- this is what the Banker State has realised in Germany -- this is what will be completely realisable in Russia by the

Soviets, by the dictatorship of the proletariat." [**Will the Bolsheviks Maintain Power?**, p. 53]

In practice, Lenin's centralised vision soon proved to be a disaster (see [section 11](#) of the appendix "[What happened during the Russian Revolution?](#)" for details). It was highly inefficient and simply spawned a vast bureaucracy. There was an alternative, as we discuss in [section 12](#) of the appendix "[What happened during the Russian Revolution?](#)", the only reason that industry did not totally collapse in Russia during the early months of the revolution was the activity of the factory committees. However, such activity was not part of the Bolshevik vision of centralised socialism and so the factory committees were **not** encouraged. At the very moment when mass participation and initiative is required (i.e. during a revolution) the Bolsheviks favoured a system which killed it. As Kropotkin argued a few years later:

"production and exchange represented an undertaking so complicated that the plans of the state socialists, which lead to a party directorship, would prove to be absolutely ineffective as soon as they were applied to life. No government would be able to organise production if the workers themselves through their unions did not do it in each branch of industry; for in all production there arise daily thousands of difficulties which no government can solve or foresee . . . Only the efforts of thousands of intelligences working on the problems can co-operate in the development of a new social system and find the best solutions for the thousands of local needs." [**Kropotkin's Revolutionary Pamphlets**, pp. 76-7]

No system is perfect. Any system will take time to develop fully. Of course the factory committees made mistakes and, sometimes, things were pretty chaotic with different factories competing for scarce resources. But that does not prove that factory committees and their federations were not the most efficient way of running things under the circumstances. Unless, of course, you share the Bolsheviks a dogmatic belief that central planning is always more efficient. Moreover, attacks on the factory committees for lack of co-ordination by pro-Leninists seem less than sincere, given the utter lack of encouragement (and, often, actual barriers) the Bolsheviks placed in the way of the creation of federations of factory committees (see [section 9](#) of the appendix "[What happened during the Russian Revolution?](#)" for further details).

Lastly, Bolshevik centralism (as well as being extremely inefficient) also ensured that the control of production and the subsequent surplus would be in the hands of the state and, so, class society would continue. In Russia, capitalism became state capitalism under Lenin and Trotsky (see sections [5](#) and [6](#) for more discussion of this).

So Bolshevik support for centralised power ensured that minority power replaced popular power, which, in turn, necessitated bureaucracy to maintain it. Bolshevism retained statist and capitalist social relations and, as such, could not develop socialist ones which, by their very nature, imply egalitarianism in terms of social influence and power (i.e. the abolition of concentrated power, both economic and political). Ironically, by being centralists, the Bolsheviks systematically eliminated mass participation and ensured

the replacement of popular power with party power. This saw the rebirth of non-socialist social relationships within society, so ensuring the defeat of the socialist tendencies and institutions which had started to grow during 1917.

It cannot be said that this centralism was a product of the civil war. As best it could be argued that the civil war extenuated an existing centralist spirit into ultra-centralism, but it did not create it. After all, Lenin was stressing that the Bolsheviks were "*convinced centralists . . . by their programme and the tactics of the whole of their party*" in 1917. Ironically, he never realised (nor much cared, after the seizure of power) that this position precluded his call for "*the deepening and extension of democracy in the administration of a State of the of the proletarian type.*" [**Can the Bolsheviks Maintain Power?**, p. 74 and p. 55] Given that centralism exists to ensure minority rule, we should not be to surprised that party power replaced popular participation and self-government quickly after the October Revolution. Which it did. Writing in September 1918, a Russian anarchist portrays the results of Bolshevik ideology in practice:

"Within the framework of this dictatorship [of the proletariat] . . . we can see that the centralisation of power has begun to crystallise and grow firm, that the apparatus of the state is being consolidated by the ownership of property and even by an anti-socialist morality. Instead of hundreds of thousands of property owners there is now a single owner served by a whole bureaucratic system and a new 'statised' morality.

"The proletariat is gradually being enserfed by the state. The people are being transformed into servants over whom there has risen a new class of administrators -- a new class . . . Isn't this merely a new class system looming on the revolutionary horizon . . .

"The resemblance is all too striking . . . And if the elements of class inequality are as yet indistinct, it is only a matter of time before privileges will pass to the administrators. We do not mean to say . . . that the Bolshevik party set out to create a new class system. But we do say that even the best intentions and aspirations must inevitably be smashed against the evils inherent in any system of centralised power. The separation of management from labour, the division between administrators and workers flows logically from, centralisation. It cannot be otherwise . . . we are presently moving not towards socialism but towards state capitalism.

"Will state capitalism lead us to the gates of socialism? Of this we see not the slightest evidence . . . Arrayed against socialism are . . . thousands of administrators. And if the workers . . . should become a powerful revolutionary force, then it is hardly necessary to point out that the class of administrators, wielding the state apparatus, will be a far from weak opponent. The single owner and state capitalism form a new dam before the waves of our social revolution. . .

"Is it at all possible to conduct the social revolution through a centralised authority? Not even a Solomon could direct the revolutionary struggle or the economy from one centre . . ." [M. Sergven, cited by Paul Avrich, **Anarchists in the Russian Revolution**, pp. 123-5]

Subsequent developments proved this argument correct. Working class revolts were crushed by the state and a new class society developed. little wonder, then, Alexander Berkman's summary of what he saw first hand in Bolshevik Russia a few years later:

*"Mechanical centralisation, run mad, is paralysing the industrial and economic activities of the country. Initiative is frowned upon, free effort systematically discouraged. The great masses are deprived of the opportunity to shape the policies of the Revolution, or take part in the administration of the affairs of the country. The government is monopolising every avenue of life; the Revolution is divorced from the people. A bureaucratic machine is created that is appalling in its parasitism, inefficiency and corruption. In Moscow alone this new class of **sovbers** (Soviet bureaucrats) exceeds, in 1920, the total of office holders throughout the whole of Russia under the Tsar in 1914 . . . The Bolshevik economic policies, effectively aided by this bureaucracy, completely disorganise the already crippled industrial life of the country. Lenin, Zinoviev, and other Communist leaders thunder philippics against the new Soviet bourgeoisie, - and issue ever new decrees that strengthen and augment its numbers and influence."* [**The Russian Tragedy**, p. 26]

Bakunin would not have been remotely surprised. As such, the Bolshevik revolution provided a good example to support Malatesta's argument that *"if . . . one means government action when one talks of social action, then this is still the resultant of individual forces, but only of those individuals who form the government . . . it follows. . . that far from resulting in an increase in the productive, organising and protective forces in society, it would greatly reduce them, limiting initiative to a few, and giving them the right to do everything without, of course, being able to provide them with the gift of being all-knowing."* [**Anarchy**, pp. 36-7]

By confusing *"state action"* with collective working class action, the Bolsheviks effectively eliminated the latter in favour of the former. The usurpation of all aspects of life by the centralised bodies created by the Bolsheviks left workers with no choice but to act as isolated individuals. Can it be surprising, then, that Bolshevik policies aided the atomisation of the working class by replacing collective organisation and action by state bureaucracy? The potential for collective action **was** there. You need only look at the strikes and protests directed **against** the Bolsheviks to see that was the case (see [section 5](#) of the appendix on ["What caused the degeneration of the Russian Revolution?"](#) for details). Ironically, Bolshevik policies and ideology ensured that the collective effort and action of workers was directed not at solving the revolution's problems but resisting Bolshevik tyranny.

That centralism concentrates power in a few hands can be seen even in Leninist accounts of the Russian revolution. To take one example, Tony Cliff may assert that the *"mistakes of the masses were themselves*

creative" but when push comes to shove, he (like Lenin) simply does not allow the masses to make such mistakes and, consequently, learn from them. Thus he defends Lenin's economic policies of "*state capitalism*" and "*one-man management*" (and in the process misleadingly suggests that these were **new** ideas on Lenin's part, imposed by objective factors, rather than, as Lenin acknowledged, what he had advocated all along -- see [section 5](#)). Thus we discover that the collapse of industry (which had started in the start of 1917) meant that "[d]rastic measures had to be taken." But never fear, "*Lenin was not one to shirk responsibility, however unpleasant the task.*" He called for "*state capitalism*," and there "*were more difficult decisions to be accepted. To save industry from complete collapse, Lenin argued for the need to impose one-man management.*" So much for the creative self-activity of the masses, which was quickly dumped -- precisely at the time when it was most desperately needed. And it is nice to know that in a workers' state it is not the workers who decide things. Rather it is Lenin (or his modern equivalent, like Cliff) who would have the task of not shirking from the responsibility of deciding which drastic measures are required. [**Op. Cit.**, p. 21, p. 71 and p. 73] So much for "workers' power"!

Ultimately, centralism is designed to exclude the mass participation anarchists have long argued is required by a social revolution. It helped to undermine what Kropotkin considered the key to the success of a social revolution -- "*the people becom[ing] masters of their destiny.*" [**Op. Cit.**, p. 133] In his words:

*"We understand the revolution as a widespread popular movement, during which in every town and village within the region of revolt, the masses will have to take it upon themselves **the work of construction upon communistic bases**, without awaiting any orders and directions from above . . . As to representative government, whether self-appointed or elected . . . , we place in it no hopes whatever. We know beforehand that it will be able to do nothing to accomplish the revolution as long as the people themselves do not accomplish the change by working out on the spot the necessary new institutions . . . nowhere and never in history do we find that people carried into government by a revolutionary wave, have proved equal to the occasion.*

"In the task of reconstructing society on new principles, separate men . . . are sure to fail. The collective spirit of the masses is necessary for this purpose . . . a socialist government . . . would be absolutely powerless without the activity of the people themselves, and that, necessarily, they would soon begin to act fatally as a bridle upon the revolution." [**Op. Cit.**, pp. 188-190]

The Bolshevik revolution and its mania for centralism proved him right. The use of centralisation helped ensure that workers' lost any meaningful say in their revolution and helped alienate them from it. Instead of the mass participation of all, the Bolsheviks ensured the top-down rule of a few. Unsurprisingly, as mass participation is what centralism was designed to exclude. Wishful thinking on behalf of the Bolshevik leaders (and their later-day followers) could not (and can not) overcome the structural imperatives of centralisation and its role in society. Nor could it stop the creation of a bureaucracy around these new centralised institutions.

8 How did the aim for party power undermine the revolution?

As well as a passion for centralisation and state capitalism, Bolshevism had another aim which helped undermine the revolution. This was the goal of party power (see [section 5](#) of the appendix "[What happened during the Russian Revolution?](#)" for details). Given this, namely that the Bolsheviks had, from the start, aimed for party power it should not come as too surprising that Bolshevik dictatorship quickly replaced soviet democracy.

Given this obvious fact, it seems strange for modern day Leninists to blame the civil war for the Bolsheviks substituting their rule for the masses. After all, when the Bolshevik Party took power in October 1917, it did "substitute" itself for the working class and did so deliberately and knowingly. As we note in [section 2](#), this usurpation of power by a minority was perfectly acceptable within the Marxist theory of the state, a theory which aided this process no end.

Thus the Bolshevik party would be in power, with the "*conscious workers*" ruling over the rest. The question instantly arises of what happens if the masses turn against the party. If the Bolsheviks embody "*the power of the proletariat*," what happens if the proletariat reject the party? The undermining of soviet power by party power and the destruction of soviet democracy in the spring and summer of 1918 answers that specific question (see [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)"). This should have come as no surprise, given the stated aim (and implementation) of party power plus the Bolshevik identification of party power with workers' power. It is not a great step to party dictatorship **over** the proletariat from these premises (particularly if we include the underlying assumptions of vanguardism -- see [section H.5.3](#)). A step, we must stress, that the Bolsheviks quickly took when faced with working class rejection in the soviet elections of spring and summer of 1918.

Nor was this destruction of soviet democracy by party power just the result of specific conditions in 1917-8. This perspective had been in Russian Marxist circles well before the revolution. As we discuss in [section H.5](#), vanguardism implies party power (see, as noted, [section H.5.3](#) in particular). The ideas of Lenin's **What is to be Done?** give the ideological justification for party dictatorship over the masses. Once in power, the logic of vanguardism came into its own, allowing the most disgraceful repression of working class freedoms to be justified in terms of "Soviet Power" and other euphemisms for the party.

The identification of workers' power with party power has deeply undemocratic results, as the experience of the Bolshevik proves. However, these results were actually articulated in Russian socialist circles before hand. At the divisive 1903 congress of the Russian Social Democrats, which saw the split into two factions (Bolshevik and Menshevism) Plekhanov, the father of Russian Marxism, argued as follows:

"Every particular democratic principle must be considered not in itself, abstractly, . . . the success of the revolution is the highest law. And if, for the success of the revolution's

*success, we need temporarily to restrict the functioning of a particular democratic principle, then it would be criminal to refrain from imposing that restriction. . . And we must take the same attitude where the question of the length of parliaments is concerned. If, in an outburst of revolutionary enthusiasm, the people elect a very good parliament . . . it would suit us to try and make that a **long Parliament**; but if the elections turned out badly for us, we should have to try and disperse the resulting parliament not after two years but, if possible, after two weeks."* [RSDLP, **Minutes of the Second Congress of the RSDLP**, p. 220]

Another delegate argued that "*[t]here is not a single one among the principles of democracy which we ought not to subordinate **to the interests of our Party** . . . we must consider democratic principles exclusively from the standpoint of the most rapid achievement of that aim [i.e. revolution], from the standpoint of the interests of our Party. If any particular demand is against our interests, we must not include it."* To which, Plekhanov replied, "*I fully associate myself with what Comrade Posadovksy has said."* [**Op. Cit.**, p. 219 and p. 220] Lenin "*agreed unreservedly with this subordination of democratic principles to party interests."* [Oskar Anweiler, **The Soviets**, p. 211]

Plekhanov at this time was linked with Lenin, although this association lasted less than a year. After that, he became associated with the Mensheviks (before his support for Russia in World War I saw him form his own faction). Needless to say, he was mightily annoyed when Lenin threw his words back in his face in 1918 when the Bolsheviks disbanded the Constituent Assembly. Yet while Plekhanov came to reject this position (perhaps because the elections had not "*turned out badly for*" his liking) it is obvious that the Bolsheviks embraced it and keenly applied it to elections to soviets and unions as well as Parliaments once in power (see [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)" for example). But, at the time, he sided with Lenin against the Mensheviks and it can be argued that the latter applied these teachings of that most respected pre-1914 Russian Marxist thinker.

This undemocratic perspective can also be seen when, in 1905, the St. Petersburg Bolsheviks, like most of the party, opposed the soviets. They argued that "*only a strong party along class lines can guide the proletarian political movement and preserve the integrity of its program, rather than a political mixture of this kind, an indeterminate and vacillating political organisation such as the workers council represents and cannot help but represent."* [quoted by Oskar Anweiler, **The Soviets**, p. 77] Thus the soviets could not reflect workers' interests because they were elected by the workers!

The Bolsheviks saw the soviets as a rival to their party and demanded it either accept their political program or simply become a trade-union like organisation. They feared that it pushed aside the party committee and thus led to the "*subordination of consciousness to spontaneity*" and under the label "*non-party*" allow "*the rotten goods of bourgeois ideology*" to be introduced among the workers. [quoted by Anweiler, **Op. Cit.**, p. 78 and p. 79] In this, the St. Petersburg Bolsheviks were simply following Lenin's **What is to be Done?**, in which Lenin had argued that the "*spontaneous development of the labour movement leads to it being subordinated to bourgeois ideology.*" [**Essential Works of Lenin**, p. 82] Lenin in 1905, to his credit, rejected these clear conclusions of his own theory and was more

supportive of the soviets than his followers (although *"he sided in principle with those who saw in the soviet the danger of amorphous nonpartisan organisation."* [Anweiler, **Op. Cit.**, p. 81]).

This perspective, however, is at the root of all Bolshevik justifications for party power after the October revolution. The logical result of this position can be found in the actions of the Bolsheviks in 1918 and onwards. For the Bolsheviks in power, the soviets were less than important. The key for them was to maintain Bolshevik party power and if soviet democracy was the price to pay, then they were more than willing to pay it. As such, Bolshevik attitudes in 1905 are significant:

*"Despite the failure of the Bolshevik assault on the non-partisanship of the [St.] Petersburg Soviet, which may be dismissed as a passing episode . . . the attempt . . . is of particular significance in understanding the Bolshevik's mentality, political ambitions and **modus operandi**. First, starting in [St.] Petersburg, the Bolshevik campaign was repeated in a number of provincial soviets such as Kostroma and Tver, and, possibly, Sormovo. Second, the assault reveals that from the outset the Bolsheviks were distrustful of, if not hostile towards the Soviets, to which they had at best an instrumental and always party-minded attitude. Finally, the attempt to bring the [St.] Petersburg Soviet to heel is an early and major example of Bolshevik take-over techniques hitherto practised within the narrow confines of the underground party and now extended to the larger arena of open mass organisations such as soviets, with the ultimate aim of controlling them and turning them into one-party organisations, or, failing that, of destroying them."* [Israel Getzler, *"The Bolshevik Onslaught on the Non-Party 'Political Profile' of the Petersburg Soviet of Workers' Deputies October-November 1905"*, **Revolutionary History**, pp. 123-146, vol. 5, no. 2, pp. 124-5]

The instrumentalist approach of the Bolsheviks post-1917 can be seen from their arguments and attitudes in 1905. On the day the Moscow soviet opened, a congress of the northern committees of the Social Democratic Party passed a resolution stating that a *"council of workers deputies should be established only in places where the party organisation has no other means of directing the proletariat's revolutionary action . . . The soviet of workers deputies must be a technical instrument of the party for the purpose of giving political leadership to the masses through the RSDWP [the Social-Democratic Party]. It is therefore imperative to gain control of the soviet and prevail upon it to recognise the program and political leadership of the RSDWP."* [quoted by Anweiler, **Op. Cit.**, p. 79]

This perspective that the party should be given precedence can be seen in Lenin's comment that while the Bolsheviks should *"go along with the unpoliticalised proletarians, but on no account and at no time should we forget that animosity among the proletariat toward the Social Democrats is a remnant of bourgeois attitudes . . . Participation in unaffiliated organisations can be permitted to socialists only as an exception . . . only if the independence of the workers party is guaranteed and if within unaffiliated organisations or soviets individual delegates or party groups are subject to unconditional control and guidance by the party executive."* [quoted by Anweiler, **Op. Cit.**, p. 81] These comments have clear links to Lenin's argument in 1920 that working class protest against the Bolsheviks showed that they had

become "*declassified*" (see [section 5](#) of the appendix on "[What caused the degeneration of the Russian Revolution?](#)"). It similarly allows soviets to be disbanded if Bolsheviks are not elected (which they were, see [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)"). It also ensures that Bolshevik representatives to the soviets are not delegates from the workplace, but rather a "transmission belt" (to use a phrase from the 1920s) for the decisions of the party leadership. In a nutshell, Bolshevik soviets would represent the party's central committee, not those who elected them. As Oskar Anweiler summarised:

*"The 'revolutionary genius' of the people, which Lenin had mentioned and which was present in the soviets, constantly harboured the danger of 'anarcho-syndicalist tendencies' that Lenin fought against all his life. He detected this danger early in the development of the soviets and hoped to subdue it by subordinating the soviets to the party. The drawback of the new 'soviet democracy' hailed by Lenin in 1906 is that he could envisage the soviets only as **controlled** organisations; for him they were the instruments by which the party controlled the working masses, rather than true forms of a workers democracy." [Op. Cit., p. 85]*

As we noted in [section H.3.11](#), Lenin had concluded in 1907 that while the party could "*utilise*" the soviets "*for the purpose of developing the Social-Democratic movement,*" the party "*must bear in mind that if Social-Democratic activities among the proletarian masses are properly, effectively and widely organised, such institutions may actually become superfluous.*" [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 210] Thus the means by which working class can manage their own affairs would become "*superfluous*" once the party was in power. As Samuel Farber argues, Lenin's position before 1917 was "*clearly implying that the party could normally fulfil its revolutionary role without the existence of broad class organisations . . . Consequently, Lenin's and the party's eventual endorsement of the soviets in 1905 seems to have been tactical in character. That is, the Bolshevik support for the soviets did not at the time signify a theoretical and/or principled commitment to these institutions as revolutionary organs to overthrow the old society, let alone as key structural ingredients of the post-revolutionary order. Furthermore, it is again revealing that from 1905 to 1917 the concept of soviets did not play an important role in the thinking of Lenin or of the Bolshevik Party . . . [T]hese strategies and tactics vis-a-vis the soviets . . . can be fairly seen as expressing a predisposition favouring the party and downgrading the soviets and other non-party class organisations, at least in relative terms.*" [**Before Stalinism**, p. 37] Such a perspective on the soviets can be seen once the party was in power when they quickly turned them, without concern, into mere fig-leaves for party power (see [section 6](#) of the appendix "[What happened during the Russian Revolution?](#)" for more details).

It cannot be mere coincidence that the ideas and rhetoric against the soviets in 1905 should resurface again once the Bolsheviks were in power. For example, in 1905, in St. Petersburg "*the Bolsheviks pressed on*" with their campaign and, "*according to the testimony of Vladimir Voitinskii, then a young Bolshevik agitator, the initial thrust of the Bolshevik 'plan' was to push the SRs [who were in a minority] out of the Soviet, while 'the final blow' would be directed against the Mensheviks. Voitinskii also recalled the heated argument advanced by the popular agitator Nikolai Krylenko ('Abram') for the*

'dispersal of the Soviet' should it reject the 'ultimatum' to declare its affiliation with the RSDP." [Getzler, **Op., Cit.**, pp. 127-8] This mirrored events in 1918. Then *"at the local political level"* Bolshevik majorities were attained (*"by means fair, foul and terrorist"*) *"in the plenary assemblies of the soviets, and with the barring of all those not 'completely dedicated to Soviet power' [i.e. Mensheviks and SRs] from the newly established network of soviet administrative departments and from the soviet militias. Soviets where Bolshevik majorities could not be achieved were simply disbanded."* A similar process occurred at the summit (see [section 7](#)). Thus *"the October revolution marked [the soviets] transformation from agents of democratisation into regional and local administrative organs of the centralised, one-party Soviet state."* [Israel Getzler, **Soviets as Agents of Democratisation**, p. 27 and pp. 26-7]

Can such an outcome really have **no** link at all with the Bolshevik position and practice in period before 1917 and, in particular, during the 1905 revolution? Obviously not. As such, we should not be too surprised or shocked when Lenin replied to a critic who assailed the "dictatorship of one party" in 1919 by clearly and unashamedly stating: *"Yes, the dictatorship of one party! We stand upon it and cannot depart from this ground, since this is the party which in the course of decades has won for itself the position of vanguard of the whole factory and industrial proletariat."* [quoted by E.H. Carr, **The Bolshevik Revolution**, vol. 1, p. 236] Or when he replied to a critic in 1920 that *"[h]e says we understand by the words dictatorship of proletariat what is actually the dictatorship of its determined and conscious minority. And that is the fact."* This *"minority . . . may be called a party,"* Lenin stressed. [quoted by Arthur Ransome, **The Crisis in Russia 1920**, p. 35]

This perspective can be traced back to the underlying ideology expounded by the Bolsheviks before and during 1917. For example, mere days after seizing power in the October Revolution Lenin was stressing that the Bolsheviks' *"present slogan is: No compromise, i.e. for a homogeneous Bolshevik government."* He did not hesitate to use the threat to *"appeal to the sailors"* against the other socialist parties, stating *"[i]f you get the majority, take power in the Central Executive Committee and carry one. But we will go to the sailors."* [quoted by Tony Cliff, **Lenin**, vol. 3, p. 26] Clearly soviet power was far from Lenin's mind, rejecting soviet democracy if need be in favour of party power. Strangely, Cliff (a supporter of Lenin) states that Lenin *"did not visualise one-party rule"* and that the *"first decrees and laws issued after the October revolution were full of repetitions of the word 'democracy.'" [Op. Cit., p. 161 and p. 146]* He goes on to quote Lenin stating that *"[a]s a democratic government we cannot ignore the decision of the masses of the people, even though we disagree with it."* Cliff strangely fails to mention that Lenin also applied this not only to the land decree (as Cliff notes) but also to the Constituent Assembly. *"And even if,"* Lenin continued, *"the peasants continue to follow the Socialist Revolutionaries, even if they give this party a majority in the Constituent Assembly, we shall still say -- what of it?"* [Lenin, **Collected Works**, vol. 26, pp. 260-1] But the Bolsheviks disbanded the Constituent Assembly after one session. The peasants had voted for the SRs and the Assembly went the same way as Lenin's promises. And if Lenin's promises of 1917 on the Assembly proved to be of little value, then why should his various comments to soviet democracy be considered any different? In a clash between soviet democracy and party power, the Bolsheviks consistently favoured the latter.

Thus Bolshevik ideology had consistently favoured party power and had a long term ideological

preference for it. Combine this aim of party power with a vanguardism position (see [section H.5](#)) and party dictatorship will soon result. Neil Harding summarises the issue well:

"There were a number of very basic axioms that lay at the very heart of the theory and practice of Leninism with regard to the party . . . It was the party that disposed of scientific or objective knowledge. Its analysis of the strivings of the proletariat was, therefore, privileged over the proletariat's own class goals and a single discernible class will was, similarly, axiomatic to both Marxism and Leninism. Both maintained that it was the communists who alone articulated these goals and this will -- that was the party's principal historical role.

*"At this point, Leninism (again faithful to the Marxist original) resorted to a little-noticed definitional conjuring trick -- one that proved to be of crucial importance for the mesmeric effect of the ideology. The trick was spectacularly simple and audacious -- the class was defined as class only to the extent that it conformed to the **party's** account of its objectives, and mobilised itself to fulfil them. . . . The messy, real proletarians -- the aggregation of wage workers with all their diverse projects and aspirations -- were to be judged by their progress towards a properly class existence by the party that had itself devised the criteria for the class existence." [Leninism, pp. 173-4]*

This authoritarian position, which allows "socialism" to be imposed by force upon the working class, lies at the core of Leninism. Ironically, while Bolshevism claims to be **the** party of the working class, representing it essentially or exclusively, they do so in the name of possessing a theory that, qua theory, can be the possession of intellectuals and, therefore, has to be "introduced" to the working class from outside (see [section H.5.1](#) for details).

This means that Bolshevism is rooted in the identification of "class consciousness" with supporting the party. Given the underlying premises of vanguardism, unsurprisingly the Bolsheviks took "class consciousness" to mean this. If the workers protested against the policies of the party, this represented a fall in class consciousness and, therefore, working class resistance placed "class" power in danger. If, on the other hand, the workers remained quiet and followed the party's decision then, obviously, they showed high levels of class consciousness. The net effect of this position was, of course, to justify party dictatorship. Which, of course, the Bolsheviks did create **and** justified ideologically.

Thus the Bolshevik aim for party power results in disempowering the working class in practice. Moreover, the assumptions of vanguardism ensure that only the party leadership is able to judge what is and is not in the interests of the working class. Any disagreement by elements of that class or the whole class itself can be dismissed as "wavering" and "vacillation." While this is perfectly acceptable within the Leninist "from above" perspective, from an anarchist "from below" perspective it means little more than pseudo-theoretical justification for party dictatorship **over** the proletariat and the ensuring that a socialist society will **never** be created. Ultimately, socialism without freedom is meaningless -- as the Bolshevik regime proved time and time again.

As such, to claim that the Bolsheviks did not aim to "substitute" party power for working class power seems inconsistent with both Bolshevik theory and practice. Lenin had been aiming for party power from the start, identifying it with working class power. As the party was the vanguard of the proletariat, it was duty bound to seize power and govern on behalf of the masses and, moreover, take any actions necessary to maintain the revolution -- even if these actions violated the basic principles required to have any form of meaningful workers' democracy and freedom. Thus the *"dictatorship of the proletariat"* had long become equated with party power and, once in power, it was only a matter of time before it became the *"dictatorship of the party."* And once this did occur, none of the leading Bolsheviks questioned it. The implications of these Bolshevik perspectives came clear after 1917, when the Bolsheviks raised the need for party dictatorship to an ideological truism.

Thus it seems strange to hear some Leninists complain that the rise of Stalinism can be explained by the rising "independence" of the state machine from the class (i.e. party) it claimed to be in service of. Needless to say, few Leninists ponder the links between the rising *"independence"* of the state machine from the proletariat (by which most, in fact, mean the *"vanguard"* of the proletariat, the party) and Bolshevik ideology. As noted in [section H.3.8](#), a key development in Bolshevik theory on the state was the perceived need for the vanguard to ignore the wishes of the class it claimed to represent and lead. For example, Victor Serge (writing in the 1920s) considered it a truism that the *"party of the proletariat must know, at hours of decision, how to break the resistance of the backward elements among the masses; it must know how to stand firm sometimes against the masses . . . it must know how to go against the current, and cause proletarian consciousness to prevail against lack of consciousness and against alien class influences."* [**Year One of the Russian Revolution**, p. 218]

The problem with this is that, by definition, **everyone** is backward in comparison to the vanguard party. Moreover, in Bolshevik ideology it is the party which determines what is and is not *"proletarian consciousness."* Thus we have the party ideologue presenting self-justifications for party power **over** the working class. Now, if the vanguard is to be able to ignore the masses then it must have power **over** them. Moreover, to be independent of the masses the machine it relies on to implement its power must also, by definition, be independent of the masses. Can we be surprised, therefore, with the rise of the "independent" state bureaucracy in such circumstances? If the state machine is to be independent of the masses then why should we expect it not to become independent of the vanguard? Surely it must be the case that we would be far more surprised if the state machine did **not** become "independent" of the ruling party?

Nor can it be said that the Bolsheviks learned from the experience of the Russian Revolution. This can be seen from Trotsky's 1937 comments that the *"proletariat can take power only through its vanguard. In itself the necessity for state power arises from the insufficient cultural level of the masses and their heterogeneity."* Thus *"state power"* is required **not** to defend the revolution against reaction but from the working class itself, who do not have a high enough *"cultural level"* to govern themselves. At best, their role is that of a passive supporter, for "[w]ithout the confidence of the class in the vanguard, without support of the vanguard by the class, there can be no talk of the conquest of power." While soviets *"are the only organised form of the tie between the vanguard and the class"* it does not mean that they are

organs of self-management. No, a *"revolutionary content can be given . . . only by the party. This is proved by the positive experience of the October Revolution and by the negative experience of other countries (Germany, Austria, finally, Spain)."* [**Stalinism and Bolshevism**]

Sadly, Trotsky failed to explicitly address the question of what happens when the *"masses"* stop having *"confidence in the vanguard"* and decides to support some other group. After all, if a *"revolutionary content"* can only be given by *"the party"* then if the masses reject the party then the soviets can no only be revolutionary. To save the revolution, it would be necessary to destroy the democracy and power of the soviets. Which is **exactly** what the Bolsheviks did do in 1918. By equating popular power with party power Bolshevism not only opens the door to party dictatorship, it invites it in, gives it some coffee and asks it to make itself a home! Nor can it be said that Trotsky ever appreciated Kropotkin's *"general observation"* that *"those who preach dictatorship do not in general perceive that in sustaining their prejudice they only prepare the way for those who later on will cut their throats."* [**Kropotkin's Revolutionary Pamphlets**, p. 244]

In summary, it cannot be a coincidence that once in power the Bolsheviks acted in ways which had clear links to the political ideology it had been advocating before hand. As such, the Bolshevik aim for party power helped undermine the real power of working class people during the Russian revolution. Rooted in a deeply anti-democratic political tradition, it was ideologically predisposed to substitute party power for soviet power and, finally, to create -- and justify -- the dictatorship **over** the proletariat. The civil war may have shaped certain aspects of these authoritarian tendencies but it did not create them.

What caused the degeneration of the Russian Revolution?

As is well known, the Russian Revolution failed. Rather than produce socialism, the Bolshevik revolution gave birth to an autocratic party dictatorship residing over a state capitalist economy. In turn, this regime gave rise to the horrors of Stalin's system. While Stalinism was denounced by all genuine socialists, a massive debate has existed within the Marxist movement over when, exactly, the Russian Revolution failed and why it did. Some argue around 1924, others say around 1928, some (libertarian Marxists) argue from the Bolshevik seizure of power. The reasons for the failure tend to be more readily agreed upon: isolation, the economic and social costs of civil war, the "backward" nature of Russian society and economy are usually listed as the key factors. Moreover, what the Stalinist regime was is also discussed heatedly in such circles. Some (orthodox Trotskyists) claiming it was a "*degenerated workers state*," others (such as the neo-Trotskyist UK SWP) that it was "*state capitalist*."

For anarchists, however, the failure of Bolshevism did not come as a surprise. In fact, just as with the reformist fate of the Social Democrats, the failure of the Russian Revolution provided empirical evidence for Bakunin's critique of Marx. As Emma Goldman recounts in her memoirs

"Professor Harold Laski . . . expressed the opinion that I ought to take some comfort in the vindication anarchism had received by the Bolsheviks. I agreed, adding that not only their regime, but their stepbrothers as well, the Socialists in power in other countries, had demonstrated the failure of the Marxian State better than any anarchist argument. Living proof was always more convincing than theory. Naturally I did not regret the Socialist failure but I could not rejoice in it in the face of the Russian tragedy." [Living My Life, vol. 2, p. 969]

Given that Leninists claim that the Russian revolution was a success (at least initially) and so proves the validity of their ideology, anarchists have a special duty to analysis and understand what went wrong. Simply put, if the Russian Revolution was a "success," Leninism does not need "failures"!

This section of the FAQ will discuss these explanations for the failure of Bolshevism. Simply put, anarchists are not convinced by Leninist explanations on why Bolshevism created a new class system, not socialism.

This subject is very important. Unless we learn the lessons of history we will be doomed to repeat them. Given the fact that many people who become interested in socialist ideas will come across the remnants of Leninist parties it is important that anarchists explains clearly and convincingly why the Russian Revolution failed and the role of Bolshevik ideology in that process. We need to account why a popular revolution became in a few short years a state capitalist party dictatorship. As Noam Chomsky put it:

*"In the stages leading up to the Bolshevik coup in October 1917, there **were** incipient socialist institutions developing in Russia -- workers' councils, collectives, things like that. And they survived to an extent once the Bolsheviks took over -- but not for very long; Lenin and Trotsky pretty much eliminated them as they consolidated their power. I mean, you can argue about the **justification** for eliminating them, but the fact is that the socialist initiatives were pretty quickly eliminated.*

*"Now, people who want to justify it say, 'The Bolsheviks had to do it' -- that's the standard justification: Lenin and Trotsky had to do it, because of the contingencies of the civil war, for survival, there wouldn't have been food otherwise, this and that. Well, obviously the question is, was that true. To answer that, you've got to look at the historical facts: I don't think it was true. In fact, I think the incipient socialist structures in Russia were dismantles **before** the really dire conditions arose . . . But reading their own writings, my feeling is that Lenin and Trotsky knew what they were doing, it was conscious and understandable." [Understanding Power, p. 226]*

As we discussed in the appendix on ["What happened during the Russian Revolution?"](#), Chomsky's feelings are more than supported by the historical record. The elimination of meaningful working class freedom and self-management started from the start and was firmly in place before the start of the civil war at the end of May, 1918. The civil war simply accelerated processes which had already started, strengthened policies that had already been applied. And it could be argued that rather than impose alien policies onto Bolshevism, the civil war simply brought the hidden (and not-so-hidden) state capitalist and authoritarian politics of Marxism and Leninism to the fore.

Which is why analysing the failure of the revolution is important. If the various arguments presented by Leninists on why Bolshevism failed (and, consequently, Stalinism developed) can be refuted, then we are left with the key issues of revolutionary politics -- whether Bolshevik politics had a decisive negative impact on the development of the Russian Revolution and, if so, there is an alternative to those politics. As regards the first issue, as we discussed in the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#), anarchists argue that this was the case. Bolshevik ideology itself played a key role in the degeneration of the revolution. And as regards the second one, anarchists can point to the example of the Makhnovists, which proves that alternative policies were possible and could be applied with radically different outcomes (see the appendix on ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#) for more on the Makhnovist movement).

This means that anarchists stress the interplay between the "objective factors" and the subjective one (i. e. party ideology). Faced with difficult circumstances, people and parties react in different ways. If they did not then it would imply what they thought has no impact at all on their actions. It also means that the politics of the Bolsheviks played no role in their decisions. As we discussed in the appendix on ["What happened during the Russian Revolution?"](#), this position simply cannot be maintained. Leninist ideology itself played a key role in the rise of Stalinism. A conclusion Leninists reject. They, of course, try to distance themselves from Stalinism, correctly arguing that it was a brutal and undemocratic system. The

problem is that it was Lenin and Trotsky rather than Stalin who first shot strikers, banned left papers, radical organisations and party factions, sent workers and revolutionaries to the gulags, advocated and introduced one-man management and piece-work in the workplace, eliminated democracy in the military and shut down soviets elected with the "wrong" (i.e. non-Bolshevik) delegates.

Many Leninists know nothing of these facts. Their parties simply do not tell them the whole story of when Lenin and Trotsky were in power. Others do know and attempt to justify these actions. When anarchists discuss why the Russian Revolution failed, these Leninists have basically one reply. They argue that anarchists never seem to consider the objective forces at play during the Russian revolution, namely the civil war, the legacy of World War One, the international armies of counter-revolution and economic disruption. These "*objective factors*" meant that the revolution was, basically, suffocated and where the overriding contribution to the rise of militarism and the crushing of democracy within the soviets.

For anarchists such "*objective factors*" do not (and must not) explain why the Russian Revolution failed. This is because, as we argue in the following sections, almost all revolutions will face the same, or similar, problems. Indeed, in sections [1](#) and [2](#) both anarchists like Kropotkin and Marxists like Lenin argued that this was the case. As we discussed in [section H.2.1](#), Leninists like to claim that they are "*realistic*" (unlike the "*utopian*" anarchists) and recognise civil war is inevitable in a revolution. As [section 3](#) indicates, any defence of Bolshevism based on blaming the impact of the civil war is both factually and logically flawed. As far as economic disruption goes, as we discuss in [section 4](#) this explanation of Bolshevik authoritarianism is unconvincing as **every** revolution will face this problem. Then [section 5](#) analyses the common Leninist argument that the revolution failed because the Russian working class became "*atomised*" or "*declassed*." As that section indicates, the Russian working class was more than capable of collective action throughout the 1918 to 1921 period (and beyond). The problem was that it was directed **against** the Bolshevik party. Finally, [section 6](#) indicates whether the Bolshevik leaders explained their actions in terms of the "objective factors" they faced.

It should be stressed that we are discussing these factors individually simply because it is easier to do so. In reality, it is less hard to do so. For example, civil war will, undoubtedly, mean economic disruption. Economic disruption will mean unemployment and that will affect the working class via unemployment and less goods available (for example). So just because we separate the specific issues for discussion purposes, it should not be taken to imply that we are not aware of their combined impact on the Russian Revolution.

Of course there is the slight possibility that the failure of Bolshevism can be explained **purely** in these terms. Perhaps a future revolution will be less destructive, less isolated, less resisted than the Russian (although, as we noted in the [section 2](#), leading Bolsheviks like Lenin, Trotsky and Bukharin doubted this). That **is** a possibility. However, should we embrace an ideology whose basic, underlying, argument is based on the hope that fate will be kinder to them this time? As Lenin argued against the Russian left-communists in early 1918:

"Yes, we shall see the world revolution, but for the time being it is a very good fairy-tale . . . But I ask, is it proper for a serious revolutionary to believe in fairy-tales? . . . [I]f you tell the people that civil war will break out in Germany and also guarantee that instead of a clash with imperialism we shall have a field revolution on a world-wide scale, the people will say you are deceiving them. In doing this you will be overcoming the difficulties with which history has confronted us only in your minds, by your wishes . . . You are staking everything on this card! If the revolution breaks out, everything is saved . . . But if it does not turn out as we desire, if it does not achieve victory tomorrow -- what then? Then the masses will say to you, you acted like gamblers -- you staked everything on a fortunate turn of events that did not take place . . ." [Collected Works, vol. 27, p. 102]

Anarchists have always recognised that a revolution would face problems and difficult "objective factors" and has developed our ideas accordingly. We argue that to blame "objective factors" on the failure of the Russian Revolution simply shows that believing in fairy-tales is sadly far too common on the "serious" Leninist "revolutionary" left. And as we discuss in the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the impact of Bolshevik ideology on the failure of the revolution was important and decisive. Even **if** the next revolution is less destructive, it cannot be argued that socialism will be the result if Bolshevik ideology is reapplied. And as Cornelius Castoriadis argues, *"this 'response' [of explaining the failure of the Russian Revolution on "objective factors"] teaches us nothing we could extend beyond the confines of the Russian situation in 1920. The sole conclusion to be drawn from this kind of 'analysis' is that revolutionaries should ardently hope that future revolutions break out in more advanced countries, that they should not remain isolated, and that civil wars should not in the least be devastating."* [**The Role of Bolshevik Ideology in the Birth of the Bureaucracy**, p. 92] While this may be sufficient for the followers of Bolshevism, it cannot be sufficient for anyone who wants to learn from history, not to repeat it.

Ultimately, if difficult times back in 1918-21 justified suppressing working class freedom and self-management, imprisoning and shooting anarchists and other socialists, implementing and glorifying party dictatorship, what might we expect in difficult times in the future? Simply put, if your defence of the Bolsheviks rests simply on "difficult circumstances" then it can only mean one thing, namely if "difficult circumstances" occur again we can expect the same outcome.

One last point. We should stress that libertarians do not think any future revolution will suffer as terrible conditions as that experienced by the Russian one. However, it might and we need to base our politics on the worse case possibility. That said, we argue that Bolshevik policies made things worse -- by centralising economic and political power, they automatically hindered the participation of working class people in the revolution, smothering any creative self-activity under the dead-weight of state officialdom. As a libertarian revolution would be based on maximising working class self-activity (at all levels, locally and upwards) we would argue that it would be better placed to respond to even the terrible conditions facing the Russian Revolution.

That is not all. As we argue in the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#) we are of the opinion that Bolshevism itself undermined the socialist potential of the revolution, irrespective of the actual circumstances involved (which, to some degree, will affect **any** revolution). For example, the Bolshevik preference for centralisation and nationalisation would negatively affect a revolution conducted in even the best circumstances, as would the seizure of state power rather than its destruction. As is clear from the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#), only the elimination of what makes Bolshevism Bolshevik would ensure that a revolution would be truly libertarian. So anarchists stress that rather than be forced upon them by "*objective factors*" many of these policies were, in fact, in line with pre-civil war Bolshevik ideas. The Bolshevik vision of socialism, in other words, ensured that they smothered the (libertarian) socialist tendencies and institutions that existed at the time. As Chomsky summarises, "*Lenin and Trotsky, shortly after seizing state power in 1917, moved to dismantle organs of popular control, including factory committees and Soviets, thus proceeding to deter and overcome socialist tendencies.*" [Deterring Democracy, p. 361] That they **thought** their system of state capitalism was a form of "socialism" is irrelevant -- they systematically combated (real) socialist tendencies in favour of state capitalist ones and did so knowingly and deliberately (see sections [H.3.1](#) and [H.3.13](#) on the differences between real socialism and Marxism in its Bolshevik mode and, of course, ["What happened during the Russian Revolution?"](#) on Bolshevik practice itself).

So it is important to stress that even **if** the Russian Revolution had occurred in better circumstances, it is unlikely that Bolshevism would have resulted in socialism rather than state capitalism. Certain Bolshevik principles ensure that any revolution lead by a vanguard party would not have succeeded. This can be seen from the experience of Bolshevism immediately after it seized power, before the start of the civil war and major economic collapse. In the circumstances of post-world war I Russia, these principles were attenuated but their application in even the best of situations would have undermined socialist tendencies in the revolution. Simply put, a statist revolution will have statist, not libertarian, ends.

The focusing on "objective factors" (particularly the civil war) has become the traditional excuse for people with a romantic attachment to Leninism but who are unwilling to make a stand over what the Bolsheviks actually did in power. This excuse is not viable if you seek to build a revolutionary movement today: you need to choose between the real path of Lenin and the real, anarchist, alternative. As Lenin constantly stressed, a revolution will be difficult -- fooling ourselves about what will happen now just undermines our chances of success in the future and ensure that history will repeat itself.

Essentially, the "objective factors" argument is not a defence of Leninism, but rather one that seeks to evade having to make such a defence. This is very typical of Leninist parties today. Revolutionary politics would be much better served by confronting this history and the politics behind it head on. Perhaps, if Leninists did do this, they would probably remain Leninists, but at least then their party members and those who read their publications would have an understanding of what this meant. And they would have to dump Lenin's **State and Revolution** into the same place Lenin himself did when in power -- into the rubbish bin -- and admit that democracy and Bolshevik revolution do not go together.

It is precisely these rationalisations for Bolshevism based on "objective factors" which this section of the FAQ discusses and refutes. However, it is important to stress that it was **not** a case of the Bolshevik regime wanting to introduce communism but, being isolated, ended up imposing state capitalism instead. Indeed, the idea that "objective factors" caused the degeneration of the revolution is only valid if and only if the Bolsheviks were implementing socialist policies during the period immediately after the October revolution. That was not the case. Rather than objective factors undermining socialist policies, the facts of the matter are that the Bolsheviks pursued a statist and (state) capitalist policy from the **start**. As we discuss in the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#) the likes of Lenin explicitly argued for these policies as essential for building socialism (or, at best, the preconditions of socialism) in Russia and Bolshevik practice flowed from these comments. As we discuss in more detail in the appendix on ["What happened during the Russian Revolution?"](#), the Bolsheviks happily introduced authoritarian and state capitalist policies **from the start**. Many of the policies denounced as "Stalinist" by Leninists were being advocated and implemented by Lenin in the spring of 1918, i.e. before the start of the civil war and massive economic chaos. In other words, the usual excuses for Bolshevik tyranny do not hold much water, both factually and logically -- as this section of the FAQ seeks to show.

And, ironically, the framework which Leninists use in this discussion shows the importance of Bolshevik ideology and the key role it played in the outcome of the revolution. After all, pro-Bolsheviks argue that the "*objective factors*" forced the **Bolsheviks** to act as they did. However, the proletariat is meant to be the "*ruling class*" in the "*dictatorship of the proletariat*." As such, to argue that the Bolsheviks were forced to act as they did due to circumstances means to implicitly acknowledge that the party held power in Russia, **not** the working class. That a ruling party could become a party dictatorship is not that unsurprising. Nor that **its** vision of what "socialism" was would be given preference over the desires of the working class in whose name it ruled.

Ultimately, the discussion on why the Bolshevik party failed shows the validity of Bakunin's critique of Marxism. As he put it:

"Nor can we comprehend talk of freedom of the proletariat or true deliverance of the masses within the State and by the State. State signifies domination, and all domination implies subjection of the masses, and as a result, their exploitation to the advantage of some governing minority.

"Not even as revolutionary transition will we countenance national Conventions, nor Constituent Assemblies, nor provisional governments, nor so called revolutionary dictatorships: because we are persuaded that revolution is sincere, honest and real only among the masses and that, whenever it is concentrated in the hands of a few governing individuals, it inevitably and immediately turns into reaction." [No Gods, No Masters, vol. 1, p. 160]

The degeneration of the Russian Revolution can be traced from when the Bolsheviks seized power **on behalf of** the Russian working class and peasantry. The state implies the delegation of power and initiative into the hands of a few leaders who form the "revolutionary government." Yet the power of any revolution, as Bakunin recognised, derives from the decentralisation of power, from the active participation of the masses in the collective social movement and the direct action it generates. As soon as this power passes out of the hands of the working class, the revolution is doomed: the counter-revolution has begun and it matters little that it is draped in a red flag. Hence anarchist opposition to the state.

Sadly, many socialists have failed to recognise this. Hopefully this section of our FAQ will show that the standard explanations of the failure of the Russian revolution are, at their base, superficial and will only ensure that history will repeat itself.

1 Do anarchists ignore the objective factors facing the Russian revolution?

It is often asserted by Leninists that anarchists simply ignore the "objective factors" facing the Bolsheviks when we discuss the degeneration of the Russian Revolution. Thus, according to this argument, anarchists present a basically idealistic analysis of the failure of Bolshevism, one not rooted in the material conditions facing (civil war, economic chaos, etc.) facing Lenin and Trotsky.

According to one Trotskyist, anarchists *"do not make the slightest attempt at a serious analysis of the situation"* and so *"other considerations, of a different, 'theoretical' nature, are to be found in their works."* Thus:

"Bureaucratic conceptions beget bureaucracy just as opium begets sleep by virtue of its sleep-inducing properties. Trotsky was wrong to explain the proliferation and rise of the bureaucracy on the basis of the country's backwardness, low cultural level, and the isolation of the revolution. No, what have rise to a social phenomenon like Stalinism was a conception or idea . . . it is ideas, or deviations from them, that determine the character of revolutions. The most simplistic kind of philosophical idealism has laid low historical materialism." [Pierre Frank, "Introduction," Lenin and Trotsky, **Kronstadt**, pp. 22-3]

Many other Trotskyists take a similar position (although most would include the impact of the Civil War on the rise of Bolshevik authoritarianism and the bureaucracy). Duncan Hallas, for example, argues that the account of the Bolshevik counter-revolution given in the Cohn-Bendit brothers' **Obsolete Communism** is marked by a *"complete omission of any consideration of the circumstances in which they [Bolshevik decisions] took place. The ravages of war and civil war, the ruin of Russian industry, the actual disintegration of the Russian working class: all of this, apparently, has no bearing on the outcome."* [**Towards a Revolutionary Socialist Party**, p. 41] Thus the *"degree to which workers can 'make their own history' depends on the weight of objective factors bearing down on them . . . To decide in any given circumstance the weight of the subjective and objective factors demands a concrete analysis*

of the balance of forces." The conditions in Russia meant that the "*subjective factor*" of Bolshevik ideology "*was reduced to a choice between capitulation to the Whites or defending the revolution with whatever means were at hands. Within these limits Bolshevik policy was decisive. But it could not wish away the limits and start with a clean sheet. It is a tribute to the power of the Bolsheviks' politics and organisation that they took the measures necessary and withstood the siege for so long.*" [John Rees, "*In Defence of October*," pp. 3-82, **International Socialism**, no. 52, p. 30]

So, it is argued, by ignoring the problems facing the Bolsheviks and concentrating on their **ideas**, anarchists fail to understand **why** the Bolsheviks acted as they did. Unsurprisingly anarchists are not impressed with this argument. This is for a simple reason. According to anarchist theory the "*objective factors*" facing the Bolsheviks are to be expected in **any** revolution. Indeed, the likes of Bakunin and Kropotkin predicted that a revolution would face the very "*objective factors*" which Leninists use to justify and rationalise Bolshevik actions (see [next section](#)). As such, to claim that anarchists ignore the "*objective factors*" facing the Bolsheviks during the Russian Revolution is simply a joke. How can anarchists be considered to ignore what they consider to be the inevitable results of a revolution? Moreover, these Bolshevik assertions ignore the fact that the anarchists who wrote extensively about their experiences in Russia never failed to note that difficult objective factors facing it. Alexander Berkman in **The Bolshevik Myth** paints a clear picture of the problems facing the revolution, as does Emma Goldman in her **My Disillusionment in Russia**. This is not to mention anarchists like Voline, Arshinov and Maximoff who took part in the Revolution, experiencing the "*objective factors*" first hand (and in the case of Voline and Arshinov, participating in the Makhnovist movement which, facing the same factors, managed **not** to act as the Bolsheviks did).

However, as the claim that anarchists ignore the "*objective circumstances*" facing the Bolsheviks is relatively common, it is important to refute it once and for all. This means that while we have discussed this issue in association with Leninist justifications for repressing the Kronstadt revolt (see [section 12](#) of the appendix "[What was the Kronstadt Rebellion?](#)"), it is worthwhile repeating them here. We are sorry for the duplication.

Anarchists take it for granted that, to quote Bakunin, revolutions "*are not child's play*" and that they mean "*war, and that implies the destruction of men and things.*" The "*Social Revolution must put an end to the old system of organisation based upon violence, giving full liberty to the masses, groups, communes, and associations, and likewise to individuals themselves, and destroying once and for all the historic cause of all violences, the power and existence of the State.*" This meant a revolution would be "*spontaneous, chaotic, and ruthless, always presupposes a vast destruction of property.*" [**The Political Philosophy of Bakunin**, p. 372, p. 373, p. 380] In other words:

"The way of the anarchist social revolution, which will come from the people themselves, is an elemental force sweeping away all obstacles. Later, from the depths of the popular soul, there will spontaneously emerge the new creative forms of life." [**Bakunin on Anarchism**, p. 325]

He took it for granted that counter-revolution would exist, arguing that it was necessary to "*constitute the federation of insurgent associations, communes and provinces . . . to organise a revolutionary force capable of defeating reaction*" and "*for the purpose of self-defence.*" [Selected Writings, p. 171]

It would, of course, be strange if this necessity for defence and reconstruction would have little impact on the economic conditions in the revolutionised society. The expropriation of the means of production and the land by a free federation of workers' associations would have an impact on the economy. Kropotkin built upon Bakunin's arguments, stressing that a **social** revolution would, by necessity, involve major difficulties and harsh objective circumstances. It is worth quoting one of his many discussions of this at length:

"Suppose we have entered a revolutionary period, with or without civil war -- it does not matter, -- a period when old institutions are falling into ruins and new ones are growing in their place. The movement may be limited to one State, or spread over the world, -- it will have nevertheless the same consequence: an immediate slackening of individual enterprise all over Europe. Capital will conceal itself, and hundreds of capitalists will prefer to abandon their undertakings and go to watering-places rather than abandon their unfixed capital in industrial production. And we know how a restriction of production in any one branch of industry affects many others, and these in turn spread wider and wider the area of depression.

*"Already, at this moment, millions of those who have created all riches suffer from want of what must be considered **necessaries** for the life of a civilised man. . . Let the slightest commotion be felt in the industrial world, and it will take the shape of a general stoppage of work. Let the first attempt at expropriation be made, and the capitalist production of our days will at once come to a stop, and millions and millions of 'unemployed' will join the ranks of those who are already unemployed now.*

*"More than that . . . The very first advance towards a Socialist society will imply a thorough reorganisation of industry as **to what we have to produce**. Socialism implies . . . a transformation of industry so that it may be adapted to the needs of the customer, not those of the profit-maker. Many a branch of industry must disappear, or limits its production; many a new one must develop. We are now producing a great deal for export. But the export trade will be the first to be reduced as soon as attempts at Social Revolution are made anywhere in Europe . . .*

*"All that **can** be, and **will** be reorganised in time -- not by the State, of course (why, then, not say by Providence?), but by the workers themselves. But, in the meantime, the worker . . . cannot wait for the gradual reorganisation of industry. . .*

*"The great problem of how to supply the wants of millions will thus start up at once in all its immensity. And the necessity of finding an **immediate solution** for it is the reason we*

consider that a step in the direction of [libertarian] Communism will be imposed on the revolted society -- not in the future, but as soon as it applies its crowbar to the first stones of the capitalist edifice." [Act for Yourselves, pp. 57-9]

As noted in [section 12](#) of the appendix on "[What was the Kronstadt Uprising?](#)", the perspective was at the core of Kropotkin's politics. His classic work **Conquest of Bread** was based on this clear understanding of the nature of a social revolution and the objective problems it will face. As he put it, while a *"political revolution can be accomplished without shaking the foundations of industry"* a revolution *"where the people lay hands upon property will inevitably paralyse exchange and production . . . This point cannot be too much insisted upon; the reorganisation of industry on a new basis . . . cannot be accomplished in a few days."* Indeed, he considered it essential to *"show how tremendous this problem is."* [**The Conquest of Bread**, pp. 72-3]

Therefore, *"[o]ne of the great difficulties in every Revolution is the feeding of the large towns."* This was because the *"large towns of modern times are centres of various industries that are developed chiefly for the sake of the rich or for the export trade"* and these *"two branches fail whenever any crisis occurs, and the question then arises of how these great urban agglomerations are to be fed."* This crisis, rather than making revolution impossible, spurred the creation of what Kropotkin terms *"the communist movement"* in which *"the Parisian proletariat had already formed a conception of its class interests and had found men to express them well."* [Kropotkin, **The Great French Revolution**, vol. II, p. 457 and p. 504]

As for self-defence, he reproached the authors of classic syndicalist utopia **How we shall bring about the Revolution** for *"considerably attenuat[ing] the resistance that the Social Revolution will probably meet with on its way."* He stressed that the *"check of the attempt at Revolution in Russia has shown us all the danger that may follow from an illusion of this kind."* ["preface," Emile Pataud and Emile Pouget, **How we shall bring about the Revolution**, p. xxxvi]

It must, therefore, be stressed that the very *"objective factors"* supporters of Bolshevism use to justify the actions of Lenin and Trotsky were predicted correctly by anarchists decades before hand. Indeed, rather than ignore them anarchists like Kropotkin based their political and social ideas on these difficulties. As such, it seems ironic for Leninists to attack anarchists for allegedly ignoring these factors. It is even more ironic as these very same Leninists are meant to know that **any** revolution will involve these exact same *"objective factors,"* something that Lenin and other leading Bolsheviks acknowledged (see [next section](#)).

Therefore, as noted, when anarchists like Emma Goldman and Alexander Berkman arrived in Russia they were aware of the problems it, like any revolution, would face. In the words of Berkman, *"what I saw and learned as in such crying contrast with my hopes and expectations as to shake the very foundation of my faith in the Bolsheviki. Not that I expected to find Russia a proletarian Eldorado. By no means. I knew how great the travail of a revolutionary period, how stupendous the difficulties to be overcome. Russia was besieged on numerous fronts; there was counter-revolution within and without; the blockade was starving the country and denying even medical aid to sick women and children. The*

people were exhausted by long war and civil strife; industry was disorganised, the railroads broken down. I fully realised the dire situation, with Russia shedding her blood on the alter of the Revolution." [The Bolshevik Myth, p. 329] Emma Goldman expressed similar opinions. [My Disillusionment in Russia, pp. xlvii-xlix]

Unsurprisingly, therefore this extremely realistic perspective can be found in their later works. Berkman, for example, stressed that *"when the social revolution had become thoroughly organised and production is functioning normally there will be enough for everybody. But in the first stages of the revolution, during the process of re-construction, we must take care to supply the people the best we can, and equally, which means rationing."* This was because the *"first effect of the revolution is reduced production."* This would be initially due to the general strike which is its *"starting point."* However, *"[w]hen the social revolution begins in any land, its foreign commerce stops: the importation of raw materials and finished products is suspended. The country may even be blockaded by the bourgeois governments."* In addition, he thought it important not to suppress *"small scale industries"* as they would be essential when *"a country in revolution is attacked by foreign governments, when it is blockaded and deprived of imports, when its large-scale industries threaten to break down or the railways do break down."* [ABC of Anarchism, p. 67, p. 74 p. 78-9 and p. 79]

He, of course, considered it essential that to counteract isolation workers must understand *"that their cause is international"* and that *"the organisation of labour"* must develop *"beyond national boundaries."* However, *"the probability is not to be discounted that the revolution may break out in one country sooner than in another"* and *"in such a case it would become imperative . . . not to wait for possible aid from outside, but immediately to exert all her energies to help herself supply the most essential needs of her people by her own efforts."* [Op. Cit., p. 78]

Emma Goldman, likewise, noted that it was *"a tragic fact that all revolutions have sprung from the loins of war. Instead of translating the revolution into social gains the people have usually been forced to defend themselves against warring parties."* "It seems," she noted, *"nothing great is born without pain and travail"* as well as *"the imperative necessity of defending the Revolution."* However, in spite of these inevitable difficulties she point to how the Spanish anarchists *"have shown the first example in history how Revolutions should be made"* by *"the constructive work"* of *"socialising of the land, the organisation of the industries."* [Vision on Fire, p. 218, p. 222 and p. 55-56]

These opinions were, as can be seen, to be expected from revolutionary anarchists schooled in the ideas of Bakunin and Kropotkin. Clearly, then, far from ignoring the *"objective factors"* facing the Bolsheviks, anarchists have based their politics around them. We have always argued that a social revolution would face isolation, economic disruption and civil war and have, for this reason, stressed the importance of mass participation in order to overcome them. As such, when Leninists argue that these inevitable *"objective factors"* caused the degeneration of Bolshevism, anarchists simply reply that if it cannot handle the inevitable then Bolshevism should be avoided. Just as we would avoid a submarine which worked perfectly well until it was placed in the sea or an umbrella which only kept you dry when it was not raining.

Moreover, what is to be made of this Leninist argument against anarchism? In fact, given the logic of their claims we have to argue we have to draw the conclusion that the Leninists seem to think a revolution **could** happen **without** civil war and economic disruption. As such it suggests that the Leninists have the "*utopian*" politics in this matter. After all, if they argue that civil war is inevitable then how can they blame the degeneration of the revolution on it? Simply put, if Bolshevism cannot handle the inevitable it should be avoided at all costs.

Ironically, as indicated in the [next section](#), we can find ample arguments to refute the Trotskyist case against the anarchist analysis in the works of leading Bolsheviks like Lenin, Trotsky and Bukharin. Indeed, their arguments provide a striking confirmation of the anarchist position as they, like Kropotkin, stress that difficult "*objective factors*" will face **every** revolution. This means to use these factors to justify Bolshevik authoritarianism simply results in proving that Bolshevism is simply non-viable or that a liberatory social revolution is, in fact, impossible (and, as a consequence, genuine socialism).

There are, of course, other reasons why the Leninist critique of the anarchist position is false. The first is theoretical. Simply put, the Leninist position is the crudest form of economic determinism. Ideas **do** matter and, as Marx himself stressed, can play a key in how a social process develops. As we discuss in the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", Marxist ideology played a key role in the degeneration of the revolution and in laying the groundwork for the rise of Stalinism.

Ultimately, any Leninist defence of Bolshevism based purely on stressing the "*objective factor*" implies that Bolshevik ideology played **no role** in the decisions made by the party leaders, that they simply operated on autopilot from October 1917 onwards. Yet, at the same time, they stress the importance of Leninist ideology in ensuring the "victory" of the revolution. They seek to have it both ways. However, as Samuel Farber puts it:

"determinism's characteristic and systemic failure is to understand that what the masses of people do and think politically is as much part of the process determining the outcome of history as are the objective obstacles that most definitely limit peoples' choices." [Before Stalinism, p. 198]

This is equally applicable when discussing the heads of a highly centralised state who have effectively expropriated political, economic and social power from the working class and are ruling in their name. Unsurprisingly, rather than just select policies at random the Bolshevik leadership pursued consistently before, during and after the civil war policies which reflected their ideology. Hence there was a preference in policies which centralised power in the hands of a few (politically **and** economically), that saw socialism as being defined by nationalisation rather than self-management, that stressed that role and power of the vanguard above that of the working class, that saw class consciousness as being determined by how much a worker agreed with the party leadership rather than whether it expressed the actual needs and interests of the class as a whole.

Then there is the empirical evidence against the Trotskyist explanation.

As we indicate in [section 3](#), soviet democracy and workers' power in the workplace was **not** undermined by the civil war. Rather, the process had began before the civil war started and, equally significantly, continued after its end in November 1920. Moreover, the "gains" of October Trotskyists claim that Stalinism destroyed were, in fact, long dead by 1921. Soviet democracy, working class freedom of speech, association and assembly, workers' self-management or control in the workplace, trade union freedom, the ability to strike, and a host of other, elementary, working class rights had been eliminated long before the end of the civil war (indeed, often before it started) and, moreover, the Bolsheviks did not lament this. Rather, *"there is no evidence indicating that Lenin or any mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [Samuel Farber, **Op. Cit.**, p. 44]

And then there is the example of the Makhnovist movement. Operating in the same "objective circumstances," facing the same "objective factors," the Makhnovists did **not** implement the same policies as the Bolsheviks. As we discussed in the appendix on ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#), rather than undermine soviet, soldier and workplace democracy and replace all with party dictatorship, the Makhnovists applied these as fully as they could. Now, if "objective factors" explain the actions of the Bolsheviks, then why did the Makhnovists not pursue identical policies?

Simply put, the idea that Bolshevik policies did not impact on the outcome of the revolution is a false assertion, as the Makhnovists show. Beliefs are utopian if subjective ideas are not grounded in objective reality. Anarchists hold that part of the subjective conditions required before socialism can exist is the existence of free exchange of ideas and working class democracy (i.e. self-management). To believe that revolution is possible without freedom, to believe those in power can, through their best and genuine intentions, impose socialism from above, as the Bolsheviks did, is indeed utopian. As the Bolsheviks proved. The Makhnovists shows that the received wisdom is that there was no alternative open to the Bolsheviks is false.

So while it cannot be denied that objective factors influenced how certain Bolshevik policies were shaped and applied, the inspiration of those policies came from Bolshevik ideology. An acorn will grow and develop depending on the climate and location it finds itself in, but regardless of the "objective factors" it will grow into an oak tree. Similarly with the Russian revolution. While the circumstances it faced influenced its growth, Bolshevik ideology could not help but produce an authoritarian regime with no relationship with **real** socialism.

In summary, anarchists do not ignore the objective factors facing the Bolsheviks during the revolution. As indicated, we predicted the problems they faced and developed our ideas to counter them. As the example of the Makhnovists showed, our ideas were more than adequate for the task. Unlike the Bolsheviks.

2 Can "*objective factors*" really explain the failure of Bolshevism?

As noted in the [previous section](#) Leninists tend to argue that anarchists downplay (at best) or ignore (at worse) the "*objective factors*" facing the Bolsheviks during the Russian Revolution. As noted in the same section, this argument is simple false. For anarchists have long expected the "*objective factors*" usually used to explain the degeneration of the revolution.

However, there is more to it than that. Leninists claim to be revolutionaries. They claim to know that revolutions face problems, the civil war is inevitable and so forth. It therefore strikes anarchists as being somewhat hypocritical for Leninists to blame these very same "*objective*" but allegedly inevitable factors for the failure of Bolshevism in Russia.

Ironically enough, Lenin and Trotsky agree with these anarchist arguments. Looking at Trotsky, he dismissed the CNT's leaderships' arguments in favour of collaborating with the bourgeois state:

"The leaders of the Spanish Federation of Labour (CNT) . . . became, in the critical hour, bourgeois ministers. They explained their open betrayal of the theory of anarchism by the pressure of 'exceptional circumstances.' But did not the leaders of the German social democracy invoke, in their time, the same excuse? Naturally, civil war is not a peaceful and ordinary but an 'exceptional circumstance.' Every serious revolutionary organisation, however, prepares precisely for 'exceptional circumstances' . . . We have not the slightest intention of blaming the anarchists for not having liquidated the state with the mere stroke of a pen. A revolutionary party, even having seized power (of which the anarchist leaders were incapable in spite of the heroism of the anarchist workers), is still by no means the sovereign ruler of society. But all the more severely do we blame the anarchist theory, which seemed to be wholly suitable for times of peace, but which had to be dropped rapidly as soon as the 'exceptional circumstances' of the... revolution had begun. In the old days there were certain generals - and probably are now - who considered that the most harmful thing for an army was war. Little better are those revolutionaries who complain that revolution destroys their doctrine." [Stalinism and Bolshevism]

Thus to argue that the "*exceptional circumstances*" caused by the civil war are the only root cause of the degeneration of the Russian Revolution is a damning indictment of Bolshevism. After all, Lenin did not argue in **State and Revolution** that the application of soviet democracy was dependent only in "*times of peace*." Rather, he stressed that they were for the "*exceptional circumstance*" of revolution and the civil war he considered its inevitable consequence. As such, we must note that Trotsky's followers do not apply this critique to their own politics, which are also a form of the "*exceptional circumstances*" excuse. Given how quickly Bolshevik "*principles*" (as expressed in **The State and Revolution**) were dropped, we can only assume that Bolshevik ideas are also suitable purely for "*times of peace*" as well. As such, we must note the irony of Leninist claims that "*objective circumstances*" explains the failure of the

Bolshevik revolution.

Saying that, we should not that Trotsky was not above using such arguments himself (making later-day Trotskyists at least ideologically consistent in their hypocrisy). In the same essay, for example, he justifies the prohibition of other Soviet parties in terms of a "measure of defence of the dictatorship in a backward and devastated country, surrounded by enemies on all sides." In other words, an appeal to the exceptional circumstances facing the Bolsheviks! Perhaps unsurprisingly, his followers have tended to stress this (contradictory) aspect of his argument rather than his comments that those *"who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat. The Bolshevik party achieved in the civil war the correct combination of military art and Marxist politics."* [Op. Cit.] Which, of course, suggests that the prohibition of other parties had little impact on levels of soviet "democracy" allowed under the Bolsheviks (see [section 6](#) of the appendix on ["What happened during the Russian Revolution?"](#) for more on this).

This dismissal of the *"exceptional circumstances"* argument did not originate with Trotsky. Lenin repeatedly stressed that any revolution would face civil war and economic disruption. In early January, 1918, he was pointing to *"the incredibly complications of war and economic ruin"* in Russia and noting that *"the fact that Soviet power has been established . . . is why civil war has acquired predominance in Russia at the present time."* [Collected Works, vol. 26, p. 453 and p. 459]

A few months later he states quite clearly that *"it will never be possible to build socialism at a time when everything is running smoothly and tranquilly; it will never be possible to realise socialism without the landowners and capitalists putting up a furious resistance."* He reiterated this point, acknowledging that *"the country is poor, the country is poverty-stricken, and it is impossible just now to satisfy all demands; that is why it is so difficult to build the new edifice in the midst of disruption. But those who believe that socialism can be built at a time of peace and tranquillity are profoundly mistake: it will be everywhere built at a time of disruption, at a time of famine. That is how it must be."* [Op. Cit., vol. 27, p. 520 and p. 517]

As regards civil war, he noted that *"not one of the great revolutions of history has take place"* without one and *"without which not a single serious Marxist has conceived the transition from capitalism to socialism."* Moreover, *"there can be no civil war -- the inevitable condition and concomitant of socialist revolution -- without disruption."* [Op. Cit., p. 496 and p. 497] He considered this disruption as being applicable to advanced capitalist nations as well:

"In Germany, state capitalism prevails, and therefore the revolution in Germany will be a hundred times more devastating and ruinous than in a petty-bourgeois country -- there, too, there will be gigantic difficulties and tremendous chaos and imbalance." [Op. Cit., vol. 28, p. 298]

And from June, 1918:

"We must be perfectly clear in our minds about the new disasters that civil war brings for every country. The more cultured a country is the more serious will be these disasters. Let us picture to ourselves a country possessing machinery and railways in which civil war is raging., and this civil war cuts off communication between the various parts of the country. Picture to yourselves the condition of regions which for decades have been accustomed to living by the interchange of manufactured goods and you will understand that every civil war brings forth disasters." [Op. Cit., vol. 27, p. 463]

As we discuss in [section 4](#), the economic state of Germany immediately after the end of the war suggests that Lenin had a point. Simply put, the German economy was in a serious state of devastation, a state equal to that of Russia during the equivalent period of its revolution. If economic conditions made party dictatorship inevitable in Bolshevik Russia (as pro-Leninists argue) it would mean that soviet democracy and revolution cannot go together.

Lenin reiterated this point again and again. He argued that *"we see famine not only in Russia, but in the most cultured, advanced countries, like Germany . . . it is spread over a longer period than in Russia, but it is famine nevertheless, still more severe and painful than here."* In fact, *"today even the richest countries are experiencing unprecedented food shortages and that the overwhelming majority of the working masses are suffering incredible torture."* [Op. Cit., vol. 27, p. 460 and p. 461]

Lenin, unlike many of his latter day followers, did not consider these grim objective conditions are making revolution impossible. Rather, for him, there was *"no other way out of this war"* which is causing the problems *"except revolution, except civil war . . . a war which always accompanies not only great revolutions but every serious revolution in history."* He continued by arguing that we *"must be perfectly clear in our minds about the new disasters that civil war brings for every country. The more cultured a country is the more serious will be these disasters. Let us picture to ourselves a country possessing machinery and railways in which civil war is raging, and this civil war cuts communication between the various parts of the country. Picture to yourselves the condition of regions which for decades have been accustomed to living by interchange of manufactured goods and you will understand that every civil war brings fresh disasters."* [Op. Cit., p. 463] The similarities to Kropotkin's arguments made three decades previously are clear (see [section 1](#) for details).

Indeed, he mocked those who would argue that revolution could occur with *"exceptional circumstances"*:

"A revolutionary would not 'agree' to a proletarian revolution only 'on the condition' that it proceeds easily and smoothly, that there is, from the outset, combined action on the part of proletarians of different countries, that there are guarantees against defeats, that the road of the revolution is broad, free and straight, that it will not be necessary during the march to victory to sustain the heaviest casualties, to 'bide one's time in a besieged fortress,' or to make one's way along extremely narrow, impassable, winding and dangerous mountain tracks. Such a person is no revolutionary." [Selected Works, vol. 2,

p. 709]

He then turned his fire on those who failed to recognise the problems facing a revolution and instead simply blamed the Bolsheviks:

"The revolution engendered by the war cannot avoid the terrible difficulties and suffering bequeathed it by the prolonged, ruinous, reactionary slaughter of the nations. To blame us for the 'destruction' of industry, or for the 'terror', is either hypocrisy or dull-witted pedantry; it reveals an inability to understand the basic conditions of the fierce class struggle, raised to the highest degree of intensity, that is called revolution." [Op. Cit., pp. 709-10]

Thus industrial collapse and terrible difficulties would face any revolution. It goes without saying that if it was *"hypocrisy"* to blame Bolshevik politics for these problems, it would be the same to blame these problems for Bolshevik politics. As Lenin noted, *"in revolutionary epochs the class struggle has always, inevitably, and in every country, assumed the form of **civil war**, and civil war is inconceivable without the severest destruction, terror and the restriction of formal democracy in the interests of this war."* Moreover, *"[w]e know that fierce resistance to the socialist revolution on the part of the bourgeoisie is inevitable in all countries, and that this resistance will **grow** with the growth of the revolution."* [Op. Cit., p. 710 and p. 712] To blame the inevitable problems of a revolution for the failings of Bolshevism suggests that Bolshevism is simply not suitable for revolutionary situations.

At the 1920 Comintern Congress Lenin lambasted a German socialist who argued against revolution because *"Germany was so weakened by the War"* that if it had been *"blockaded again the misery of the German masses would have been even more dreadful."* Dismissing this argument, Lenin argued as follows:

"A revolution . . . can be made only if it does not worsen the workers' conditions 'too much.' Is it permissible, in a communist party, to speak in a tone like this, I ask? This is the language of counter-revolution. The standard of living in Russia is undoubtedly lower than in Germany, and when we established the dictatorship, this led to the workers beginning to go more hungry and to their conditions becoming even worse. The workers' victory cannot be achieved without sacrificing, without a temporary deterioration of their conditions. . . If the German workers now want to work for the revolution, they must make sacrifices and not be afraid to do so . . . The labour aristocracy, which is afraid of sacrifices, afraid of 'too great' impoverishment during the revolutionary struggle, cannot belong to the party. Otherwise the dictatorship is impossible, especially in western European countries." [Proceedings and Documents of the Second Congress 1920, pp. 382-3]

In 1921 he repeated this, arguing that *"every revolution entails enormous sacrifice on the part of the class making it. . . The dictatorship of the proletariat in Russia has entailed for the ruling class -- the*

proletariat -- sacrifices, want and privation unprecedented in history, and the case will, in all probability, be the same in every other country." [Collected Works, vol. 32, p. 488] Thus Lenin is on record as saying these "objective factors" will always be the circumstances facing a socialist revolution. Indeed, in November 1922 he stated that "Soviet rule in Russia is celebrating its fifth anniversary, It is now sounder than ever." [Op. Cit., vol. 33, p. 417]

All of which must be deeply embarrassing to Leninists. After all, here is Lenin arguing that the factors Leninist's list as being responsible for the degeneration of the Russian Revolution were inevitable side effects of **any** revolution!

Nor was this perspective limited to Lenin. The inevitability of economic collapse being associated with a revolution was not lost on Trotsky either (see [section 12](#) of the appendix on "[What was the Kronstadt Rebellion?](#)"). Nikolai Bukharin even wrote the (infamous) **The Economics of the Transition Period** to make theoretical sense of (i.e. rationalise and justify) the party's changing policies and their social consequences since 1918 in terms of the inevitability of bad "objective factors" facing the revolution. While some Leninists like to paint Bukharin's book (like most Bolshevik ideas of the time) as "*making a virtue out of necessity*," Bukharin (like the rest of the Bolshevik leadership) did not. As one commentator notes, Bukharin "*believe[d] that he was formulating universal laws of proletarian revolution.*" [Stephan F. Cohen, **In Praise of War Communism: Bukharin's The Economics of the Transition Period**, p. 195]

Bukharin listed four "*real costs of revolution*," namely "*the physical destruction or deterioration of material and living elements of production, the atomisation of these elements and of sectors of the economy, and the need for unproductive consumption (civil war materials, etc.). These costs were interrelated and followed sequentially. Collectively they resulted in 'the curtailment of the process of reproduction' (and 'negative expanded reproduction') and Bukharin's main conclusion: 'the production "anarchy" . . . , "the revolutionary disintegration of industry," is an historically inevitable stage which no amount of lamentation will prevent.*" This was part of a general argument and his "*point was that great revolutions were always accompanied by destructive civil wars . . . But he was more intent on proving that a proletarian revolution resulted in an even greater temporary fall in production than did its bourgeois counterpart.*" To do this he formulated the "*costs of revolution*" as "*a law of revolution.*" [Op. Cit., pp. 195-6 and p. 195]

Cohen notes that while this "*may appear to have been an obvious point, but it apparently came as something of a revelation to many Bolsheviks. It directly opposed the prevailing Social Democratic assumption that the transition to socialism would be relatively painless . . . Profound or not, Bolsheviks generally came to accept the 'law' and to regard it as a significant discovery by Bukharin.*" [Op. Cit., p. 196] To quote Bukharin:

"during the transition period the labour apparatus of society inevitably disintegrates, that reorganisation presupposes disorganisation, and that there the temporary collapse of productive forces is a law inherent to revolution." [quoted by Cohen, Op. Cit., p. 196]

It would appear that this "*obvious point*" would **still** come "*as something of a revelation to many Bolsheviks*" today! Significantly, of course, Kropotkin had formulated this law decades previously! How the Bolsheviks sought to cope with this inevitable law is what signifies the difference between anarchism and Leninism. Simply put, Bukharin endorsed the coercive measures of war communism as the means to go forward to socialism. As Cohen summarises, "*force and coercion . . . were the means by which equilibrium was to be forged out of disequilibrium.*" [**Op. Cit.**, p. 198] Given that Bukharin argued that a workers' state, by definition, could not exploit the workers, he opened up the possibility for rationalising all sorts of abuses as well as condoning numerous evils because they were "*progressive.*" Nor was Bukharin alone in this, as Lenin and Trotsky came out with similar nonsense.

It should be noted that Lenin showed "*ecstatic praise for the most 'war communist' sections*" of Bukharin's work. "*Almost every passage,*" Cohen notes, "*on the role of the new state, statisation in general, militarisation and mobilisation met with 'very good,' often in three languages, . . . Most striking, Lenin's greatest enthusiasm was reserved for the chapter on the role of coercion . . . at the end [of which] he wrote, 'Now this chapter is superb!'*" [**Op. Cit.**, pp. 202-3] Compare this to Kropotkin's comment that the "*revolutionary tribunal and the guillotine could not make up for the lack of a constructive communist theory.*" [**The Great French Revolution**, vol. II, p. 519]

Ultimately, claims that "objective factors" caused the degeneration of the revolution are mostly attempts to let the Bolsheviks off the hook for Stalinism. This approach was started by Trotsky and continued to this day. Anarchists, unsurprisingly, do not think much of these explanations. For anarchists, the list of "objective factors" listed to explain the degeneration of the revolution are simply a list of factors **every** revolution would (and has) faced -- as Lenin, Bukharin and Trotsky all admitted at the time!

So we have the strange paradox of Leninists dismissing and ignoring the arguments of their ideological gurus. For Trotsky, just as for Lenin, it was a truism that revolutionary politics had to handle "*objective*" factors and "*exceptional circumstances.*" And for both, they thought they had during the Russian revolution. Yet for their followers, these explain the failure of Bolshevism. Tony Cliff, one of Trotsky's less orthodox followers, gives us a means of understanding this strange paradox. Discussing the **Platform of the United Opposition** he notes that it "*also suffered from the inheritance of the exceptional conditions of the civil war, when the one-party system was transformed from a necessity into a virtue.*" [**Trotsky**, vol. 3, pp. 248-9] Clearly, "*exceptional circumstances*" explain nothing and are simply an excuse for bad politics while "*exceptional conditions*" explain everything and defeat even the best politics!

As such, it seems to us extremely ironic that Leninists blame the civil war for the failure of the revolution as they continually raise the inevitability of civil war in a revolution to attack anarchism (see [section H.2.1](#) for an example). Did Lenin not explain in **State and Revolution** that his "*workers' state*" was designed to defend the revolution and suppress capitalist resistance? If it cannot do its proclaimed task then, clearly, it is a flawed theory. Ultimately, if "*civil war*" and the other factors listed by Leninists (but considered inevitable by Lenin) preclude the implementation of the radical democracy Lenin argued for in 1917 as the means to suppress the resistance of the capitalists then his followers should come

clean and say that that work has no bearing on their vision of revolution. Therefore, given that the usual argument for the *"dictatorship of the proletariat"* is that it is required to repress counter-revolution, it seems somewhat ironic that the event it was said to be designed for (i.e. revolution) should be responsible for its degeneration!

As such, anarchists tend to think these sorts of explanations of Bolshevik dictatorship are incredulous. After all, as **revolutionaries** the people who expound these *"explanations"* are meant to know that civil war, imperialist invasion and blockade, economic disruption, and a host of other *"extremely difficult circumstances"* are part and parcel of a revolution. They seem to be saying, "if only the ruling class had not acted as our political ideology predicts they would then the Bolshevik revolution would have been fine"! As Bertrand Russell argued after his trip to Soviet Russia, while since October 1917 *"the Soviet Government has been at war with almost all the world, and has at the same time to face civil war at home"* this was *"not to be regarded as accidental, or as a misfortune which could not be foreseen. According to Marxian theory, what has happened was bound to happen."* [**The Theory and Practice of Bolshevism**, p. 103]

In summary, anarchists are not at all convinced by the claims that *"objective factors"* can explain the failure of the Russian Revolution. After all, according to Lenin and Trotsky these factors were to be expected in **any** revolution -- civil war and invasion, economic collapse and so forth were not restricted to the Russian revolution. That is why they say they want a "dictatorship of the proletariat," to defend against counter-revolution (see [section H.3.8](#) on how, once in power, Lenin and Trotsky revised this position). Now, if Bolshevism cannot handle what it says is inevitable, then it should be avoided. To use an analogy:

Bolshevik: *"Join with us, we have a great umbrella which will keep us dry."*

Anarchist: *"Last time it was used, it did not work. We all got soaked!"*

Bolshevik: *"But what our anarchist friend fails to mention is that it was raining at the time!"*

Not very convincing! Yet, sadly, this is the logic of the common Leninist justification of Bolshevik authoritarianism during the Russian Revolution.

3 Can the civil war explain the failure of Bolshevism?

One of the most common assertions against the anarchists case against Bolshevism is that while we condemn the Bolsheviks, we fail to mention the civil war and the wars of intervention. Indeed, for most Leninists the civil war is usually considered the key event in the development of Bolshevism, explaining and justifying all anti-socialist acts conducted by them after they seized power.

For anarchists, such an argument is flawed on two levels, namely logical and factual. The logical flaw is that Leninist argue that civil war is inevitable after a revolution. They maintain, correctly, that it is unlikely that the ruling class will disappear without a fight. Then they turn round and complain that because the ruling class did what the Marxists predicted, the Russian Revolution failed! And they (incorrectly) harp on about anarchists ignoring civil war (see [section H.2.1](#)).

So, obviously, this line of defence is nonsense. If civil war is inevitable, then it cannot be used to justify the failure of the Bolshevism. Marxists simply want to have their cake and eat it to. You simply cannot argue that civil war is inevitable and then blame it for the failure of the Russian Revolution.

The other flaw in this defence of Bolshevism is the factual one, namely the awkward fact that Bolshevik authoritarianism started **before** the civil war broke out. Simply put, it is difficult to blame a course of actions on an event which had not started yet. Moreover, Bolshevik authoritarianism **increased** after the civil war finished. This, incidentally, caused anarchists like Alexander Berkman to re-evaluate their support for Bolshevism. As he put it, *"I would not concede the appalling truth. Still the hope persisted that the Bolsheviki, though absolutely wrong in principle and practice, yet grimly held on to **some** shreds of the revolutionary banner. 'Allied interference,' 'the blockade and civil war,' 'the necessity of the transitory stage' -- thus I sought to placate my outraged conscience . . . At last the fronts were liquidated, civil war ended, and the country at peace. But Communist policies did not change. On the contrary . . . The party groaned under the unbearable yoke of the Party dictatorship. . . . Then came Kronstadt and its simultaneous echoes throughout the land . . . Kronstadt was crushed as ruthlessly as Thiers and Gallifet slaughtered the Paris Communards. And with Kronstadt the entire country and its last hope. With it also my faith in the Bolsheviki."* [**The Bolshevik Myth**, p. 331]

If Berkman had been in Russia in 1918, he may have realised that the Bolshevik tyranny during the civil war (which climaxed, post civil war, with the attack on Kronstadt -- see the appendix on ["What was the Kronstadt Rebellion?"](#) for more on the Kronstadt rebellion) was not at odds with their pre-civil war activities to maintain their power. The simple fact is that Bolshevik authoritarianism was **not** caused by the pressures of the civil war, rather they started before then. All the civil war did was strengthen certain aspects of Bolshevik ideology and practice which had existed from the start (see the appendix on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#)).

While we discuss the Russian Revolution in more detail in the appendix on ["What happened during the Russian Revolution?"](#), it is useful to summarise the Bolshevik attacks on working class power and autonomy before the civil war broke out (i.e. before the end of May 1918).

The most important development during this period was the suppression of soviet democracy and basic freedoms. As we discuss in [section 6](#) of the appendix on ["What happened during the Russian Revolution?"](#), the Bolsheviks pursued a policy of systematically undermining soviet democracy from the moment they seized power. The first act was the creation of a Bolshevik government over the soviets, so marginalising the very organs they claimed ruled in Russia. The process was repeated in the local

soviets, with the executive committees holding real power while the plenary sessions become infrequent and of little consequence. Come the spring of 1918, faced with growing working class opposition they started to delay soviet elections. When finally forced to hold elections, the Bolsheviks responded in two ways to maintain their power. Either they gerrymandered the soviets, packing them with representatives of Bolshevik dominated organisation or they simply disbanded them by force if they lost the soviet elections (and repressed by force any protests against this). This was the situation at the grassroots. At the summit of the soviet system, the Bolsheviks simply marginalised the Central Executive Committee of the soviets. Real power was held by the Bolshevik government. The power of the soviets had simply become a fig-leaf for a "soviet power" -- the handful of Bolsheviks who made up the government and the party's central committee.

It should be stressed that the Bolshevik assault on the soviets occurred in March, April and May 1918. That is, **before** the Czech uprising and the onset of full-scale civil war. So, to generalise, it cannot be said that it was the Bolshevik party that alone whole-heartedly supported Soviet power. The facts are that the Bolsheviks only supported "*Soviet power*" when the soviets were Bolshevik. As recognised by the left-Menshevik Martov, who argued that the Bolsheviks loved Soviets only when they were "*in the hands of the Bolshevik party.*" [quoted by Getzler, **Martov**, p. 174] If the workers voted for others, "*soviet power*" was quickly replaced by party power (the real aim). The Bolsheviks had consolidated their position in early 1918, turning the Soviet State into a de facto one party state by gerrymandering and disbanding of soviets before the start of the Civil War.

Given this legacy of repression, Leninist Tony Cliff's assertion that it was only "*under the iron pressure of the civil war [that] the Bolshevik leaders were forced to move, as the price of survival, to a one-party system*" needs serious revising. Similarly, his comment that the "*civil war undermined the operation of the local soviets*" is equally inaccurate, as his is claim that "*for some time -- i.e. until the armed uprising of the Czechoslovak Legion -- the Mensheviks were not much hampered in their propaganda work.*" Simply put, Cliff's statement that "*it was about a year after the October Revolution before an actual monopoly of political power was held by one party*" is false. Such a monopoly existed **before** the start of the civil war, with extensive political repression existing **before** the uprising of the Czechoslovak Legion which began it. There was a **de facto** one-party state by the spring of 1918. [**Lenin**, vol. 3, p. 163, p. 150, p. 167 and p. 172]

The suppression of Soviet democracy reached it logical conclusion in 1921 when the Kronstadt soviet, heart of the 1917 revolution, was stormed by Bolshevik forces, its leaders executed or forced into exile and the rank and file imprisoned, and scattered all over the USSR. Soviet democracy was not just an issue of debate but one many workers died in fighting for. As can be seen, similar events to those at Kronstadt had occurred three years previously.

Before turning to other Bolshevik attacks on working class power and freedom, we need to address one issue. It will be proclaimed that the Mensheviks (and SRs) were "*counter-revolutionaries*" and so Bolshevik actions against them were justified. However, the Bolsheviks' started to suppress opposition soviets **before** the civil war broke out, so at the time neither group could be called "*counter-revolutionary*" in any meaningful sense of the word. The Civil War started on the 25th of May and the

SRs and Mensheviks were expelled from the Soviets on the 14th of June. While the Bolsheviks *"offered some formidable fictions to justify the expulsions"* there was *"of course no substance in the charge that the Mensheviks had been mixed in counter-revolutionary activities on the Don, in the Urals, in Siberia, with the Czechoslovaks, or that they had joined the worst Black Hundreds."* [Getzler, **Op. Cit.**, p. 181] The charge that the Mensheviks *"were active supporters of intervention and of counter-revolution"* was *"untrue . . . and the Communists, if they ever believed it, never succeeded in establishing it."* [Schapiro, **Op. Cit.**, p. 193] The Bolsheviks expelled the Mensheviks in the context of political losses before the Civil War. As Getzler notes the Bolsheviks *"drove them underground, just on the eve of the elections to the Fifth Congress of Soviets in which the Mensheviks were expected to make significant gains."* [**Op. Cit.**, p. 181]

Attacks on working class freedoms and democracy were not limited to the soviets. As well as the gerrymandering and disbanding of soviets, the Bolsheviks had already presented economic visions much at odds with what most people consider as fundamentally socialist. Lenin, in April 1918, was arguing for one-man management and *"[o]bedience, and unquestioning obedience at that, during work to the one-man decisions of Soviet directors, of the dictators elected or appointed by Soviet institutions, vested with dictatorial powers."* [**Six Theses on the Immediate Tasks of the Soviet Government**, p. 44] His support for a new form of wage slavery involved granting state appointed *"individual executives dictatorial powers (or 'unlimited' powers)."* Large-scale industry (*"the foundation of socialism"*) required *"thousands subordinating their will to the will of one,"* and so the revolution "demands" that *"the people unquestioningly obey the single will of the leaders of labour."* Lenin's *"superior forms of labour discipline"* were simply hyper-developed capitalist forms. The role of workers in production was the same, but with a novel twist, namely *"unquestioning obedience to the orders of individual representatives of the Soviet government during the work."* [Lenin, **Selected Writings**, vol. 2, p. 610, p. 611, p. 612]

This simply replaced private capitalism with **state** capitalism. *"In the shops where one-man management (Lenin's own preference) replaced collegial management,"* notes Diane Koenker, *"workers faced the same kinds of authoritarian management they thought existed only under capitalism."* [**Labour Relations in Socialist Russia**, p. 177] If, as many Leninists claim, one-man management was a key factor in the rise of Stalinism and/or *"state-capitalism"* in Russia, then, clearly, Lenin's input in these developments cannot be ignored. After advocating *"one-man management"* and *"state capitalism"* in early 1918, he remained a firm supporter of them. In the light of this it is bizarre that some later day Leninists claim that the Bolsheviks only introduced one-man management because of the Civil War. Clearly, this was **not** the case. It was **this** period (before the civil war) that saw Lenin advocate and start to take the control of the economy out of the hands of the workers and placed into the hands of the Bolshevik party and the state bureaucracy.

Needless to say, the Bolshevik undermining of the factory committee movement and, consequently, genuine worker's self-management of production in favour of state capitalism cannot be gone into great depth here (see the appendix on ["What happened during the Russian Revolution?"](http://www.geocities.com/CapitolHill/1931/append43.html), for a fuller discussion). Suffice to say, the factory committees were deliberately submerged in the trade unions and state control replaced workers' control. This involved practising one-man management and, as Lenin put

in at the start of May 1918, "*our task is to study the state capitalism of the Germans, to spare **no effort** in copying it and not to shrink from adopting **dictatorial** methods to hasten the copying of it.*" He stressed that this was no new idea, rather he "*gave it **before** the Bolsheviks seized power.*" [**Selected Writings**, vol. 2, p. 635 and p. 636]

It will be objected that Lenin advocated "*workers' control.*" This is true, but a "*workers' control*" of a **very** limited nature. As we discuss in [section H.3.14](#), rather than seeing "workers' control" as workers managing production directly, he always saw it in terms of workers' "*controlling*" those who did and his views on this matter were **radically** different to those of the factory committees. This is not all, as Lenin always placed his ideas in a statist context -- rather than base socialist reconstruction on working class self-organisation from below, the Bolsheviks started "*to build, from the top, its 'unified administration'*" based on central bodies created by the Tsarist government in 1915 and 1916. [Maurice Brinton, **The Bolsheviks and Workers' Control**, p. 36] The institutional framework of capitalism would be utilised as the principal (almost exclusive) instruments of "socialist" transformation. Lenin's support for "*one-man management*" must be seen in this context, namely his vision of "socialism."

Bolshevik advocating and implementing of "*one-man management*" was not limited to the workplace. On March 30th Trotsky, as Commissar of Military Affairs, set about reorganising the army. The death penalty for disobedience under fire was reintroduced, as was saluting officers, special forms of address, separate living quarters and privileges for officers. Officers were no longer elected. Trotsky made it clear: "*The elective basis is politically pointless and technically inexpedient and has already been set aside by decree.*" [quoted by Brinton, **Op. Cit.**, pp. 37-8] The soldiers were given no say in their fate, as per bourgeois armies.

Lenin's proposals also struck at the heart of workers' power in other ways. For example, he argued that "*we must raise the question of piece-work and apply it . . . in practice.*" [**The Immediate Tasks Of The Soviet Government**, p. 23] As Leninist Tony Cliff (of all people) noted, "*the employers have at their disposal a number of effective methods of disrupting th[e] unity [of workers as a class]. Once of the most important of these is the fostering of competition between workers by means of piece-work systems.*" He notes that these were used by the Nazis and the Stalinists "*for the same purpose.*" [**State Capitalism in Russia**, pp. 18-9] Obviously piece-work is different when Lenin introduces it!

Finally, there is the question of general political freedom. It goes without saying that the Bolsheviks suppressed freedom of the press (for left-wing opposition groups as well as capitalist ones). It was also in this time period that the Bolsheviks first used the secret police to attack opposition groups. Unsurprisingly, this was not directed against the right. The anarchists in Moscow were attacked on the night of April 11-12, with armed detachments of the Cheka raiding 26 anarchist centres, killing or wounding 40 and jailing 500. Shortly afterwards the Cheka carried out similar raids in Petrograd and in the provinces. In May **Burevestnik**, **Anarkhiia**, **Golos Truda** and other leading anarchist periodicals closed down. [Paul Avrich, **The Russian Anarchists**, pp. 184-5] It must surely be a coincidence that there had been a "*continued growth of anarchist influence among unskilled workers*" after the October revolution and, equally coincidentally, that "[b]y the spring of 1918, very little was heard from the

anarchists in Petrograd." [David Mandel, **The Petrograd Workers and the Soviet Seizure of Power**, p. 357]

All this **before** the Trotsky provoked revolt of the Czech legion at the end of May, 1918, and the consequent "democratic counter-revolution" in favour of the Constituent Assembly (which the right-Socialist Revolutionaries led). This, to repeat, was months before the rise of the White Armies and Allied intervention. In summary, it was **before** large-scale civil war took place, in an interval of relative peace, that we see the introduction of most of the measures Leninists now try and pretend were necessitated by the Civil War itself.

So if anarchists appear to "downplay" the effects of the civil war it is not because we ignore. We simply recognise that if you think it is inevitable, you cannot blame it for the actions of the Bolsheviks. Moreover, when the Bolsheviks eliminated military democracy, undermined the factory committees, started to disband soviets elected with the "wrong" majority, repress the anarchists and other left-wing opposition groups, and so on, **the civil war had not started yet**. So the rot had started before civil war (and consequent White Terror) and "imperialist intervention" started. Given that Lenin said that civil war was inevitable, blaming the inevitable (which had not even started yet!) for the failure of Bolshevism is **not** very convincing.

This factual problem with the "*civil war caused Bolshevik authoritarianism*" is the best answer to it. If the Bolsheviks pursued authoritarian policies before the civil war started, it is hard to justify their actions in terms of something that had not started yet. This explains why some Leninists have tried to muddy the waters somewhat by obscuring when the civil war started. For example, John Rees states that "*[m]ost historians treat the revolution and the civil war as separate processes*" yet "*[i]n reality they were one.*" He presents a catalogue of "*armed resistance to the revolution,*" including such "*precursors of civil war before the revolution*" as the suppression after the July days and the Kornilov revolt in 1917. [John Rees, "*In Defence of October,*" pp. 3-82, **International Socialism**, no. 52, p. 31-2]

Ironically, Rees fails to see how this blurring of when the civil war started actually **harms** Leninism. After all, most historians place the start of the civil war when the Czech legion revolted **because** it marked large-scale conflict between armies. It is one thing to say that authoritarianism was caused by large-scale conflict, another to say **any** form of conflict caused it. Simply put, if the Bolshevik state could not handle relatively minor forms of counter-revolution then where does that leave Lenin's **State and Revolution**? So while the period from October to May of 1918 was not trouble free, it was not one where the survival of the new regime looked to be seriously threatened as it was after that, particularly in 1919 and 1920. Thus "civil war" will be used, as it is commonly done, to refer to the period from the Czech revolt (late May 1918) to the final defeat of Wrangel (November 1920).

So, the period from October to May of 1918, while not trouble free, was not one where the survival of the new regime looked to be seriously threatened as it was to be in 1919 and 1920. This means attempts to push the start of the civil war back to October 1917 (or even earlier) simply weakens the Leninist argument. It still leaves the major problem for the "*blame it on the civil war*" Leninists, namely to

explain why the months **before** May of 1918 saw soviets being closed down, the start of the suppression of the factory committees, restrictions on freedom of speech and association, plus the repression of opposition groups (like the anarchists). Either any level of "civil war" makes Lenin's **State and Revolution** redundant or the source of Bolshevik authoritarianism must be found elsewhere.

That covers the period **before** the start of the civil war. we now turn to the period **after** it finished. Here we find the same problem, namely an **increase** of authoritarianism even after the proclaimed cause for it (civil war) had ended.

After the White General Wrangel was forced back into the Crimea, he had to evacuate his forces to Constantinople in November 1920. With this defeat the Russian civil war had come to an end. Those familiar with the history of the revolution will realise that it was some 4 months **later** that yet another massive strike wave occurred, the Kronstadt revolt took place and the 10th Party Congress banned the existence of factions within the Bolshevik party itself. The repression of the strikes and Kronstadt revolt effectively destroying hope for mass pressure for change from below and the latter closing off the very last "legal" door for those who opposed the regime from the left.

It could be argued that the Bolsheviks were still fighting peasant insurrections and strikes across the country, but this has everything to do with Bolshevik policies and could only be considered "*counter-revolutionary*" if you think the Bolsheviks had a monopoly of what socialism and revolution meant. In the case of the Makhnovists in the Ukraine, the Bolsheviks started that conflict by betraying them once Wrangel had been defeated. As such, any resistance to Bolshevik rule by the working class and peasantry of Russia indicated the lack of democracy within the country rather than some sort of "counter-revolutionary" conflict.

So even the end of the Civil War causes problems for this defence of the Bolsheviks. Simply put, with the defeat of the Whites it would be expected that some return to democratic norms would happen. It did not, in fact the reverse happened. Factions were banned, even the smallest forms of opposition was finally eliminated from both the party and society as a whole. Those opposition groups and parties which had been tolerated during the civil war were finally smashed. Popular revolts for reform, such as the Kronstadt rebellion and the strike wave which inspired it, were put down by force (see "[What was the Kronstadt Rebellion?](#)" on these events). No form of opposition was tolerated, no freedom allowed. If civil war **was** the cause of Bolshevik authoritarianism, it seems strange that it got worse after it was finished.

So, to conclude. Bolshevik authoritarianism did not begin with the start of the civil war. Anti-socialist policies were being implemented before it started. Similarly, these policies did not stop when the civil war ended, indeed the reverse happened. This, then, is the main factual problem with the "*blame the civil war*" approach. Much of the worst of the suppression of working class democracy either happened **before** the Civil War started or **after** it had finished.

As we discuss in "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the root

causes for Bolshevik authoritarian post-October was Bolshevik ideology combined with state power. After all, how "democratic" is it to give all power to the Bolshevik party central committee? Surely socialism involves more than voting for a new government? Is it not about mass participation, the kind of participation centralised government precludes and Bolshevism fears as being influenced by "*bourgeois ideology*"? In such circumstances, moving from party rule to party dictatorship is not such leap.

That "civil war" cannot explain what happened can be shown by a counter-example which effectively shows that civil war did not inevitably mean party dictatorship over a state capitalist economy (and protesting workers and peasants!). The Makhnovists (an anarchist influenced partisan army) managed to defend the revolution and encourage soviet democracy, freedom of speech, and so on, while doing so (see the appendix ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#) discusses the Makhnovists in some detail). In fact, the Bolsheviks tried to **ban** their soviet congresses. Which, of course, does not really fit in with the Bolsheviks being forced to be anti-democratic due to the pressures of civil war.

So, in summary, civil war and imperialist intervention cannot be blamed for Bolshevik authoritarianism simply because the latter had started before the former existed. Moreover, the example of the Makhnovists suggests that Bolshevik policies during the civil war were also not driven purely by the need for survival. As Kropotkin argued at the time, "*all foreign armed intervention necessarily strengthens the dictatorial tendencies of the government . . . The evils inherent in a party dictatorship have been accentuated by the conditions of war in which this party maintains its power. This state of war has been the pretext for strengthening dictatorial methods which centralise the control of every detail of life in the hands of the government, with the effect of stopping an immense part of the ordinary activity of the country. The evils natural to state communism have been increased ten-fold under the pretext that all our misery is due to foreign intervention.*" [Kropotkin's **Revolutionary Pamphlets**, p. 253]

In other words, while the civil war may have increased Bolshevik authoritarianism, it did not create it nor did it end with the ending of hostilities.

4 Did economic collapse and isolation destroy the revolution?

One of the most common explanations for the failure revolution is that the Bolsheviks faced a terrible economic conditions, which forced them to be less than democratic. Combined with the failure of the revolution to spread to more advanced countries, party dictatorship, it is argued, was inevitable. In the words of one Leninist:

"In a country where the working class was a minority of the population, where industry had been battered by years of war and in conditions of White and imperialist encirclement, the balance gradually tilted towards greater coercion. Each step of the way was forced on the Bolsheviks by dire and pressing necessities." [John Rees, "*In Defence of*

October," **International Socialism**, no. 52, p. 41]

He talks of "*economic devastation*" [p. 31] and quotes various sources, including Victor Serge. According to Serge, the "*decline in production was uninterrupted. It should be noted that this decline had already begun before the revolution. In 1916 the output of agricultural machinery, for example, was down by 80 per cent compared with 1913. The year 1917 had been marked by a particularly general, rapid and serious downturn. The production figures for the principal industries in 1913 and 1918 were, in millions of **poods**: coal, from 1,738 to 731 (42 per cent); iron ore, from 57, 887 to 1,686; cast-iron, from 256 to 31.5 (12.3 per cent); steel, from 259 to 24.5; rails, from 39.4 to 1.1. As a percentage of 1913 production, output of linen fell to 75 per cent, of sugar to 24 per cent, and tobacco to 19 per cent.*" Moreover, production continued "*to fall until the end of civil war . . . For 1920, the following indices are given as a percentage of output in 1913: coal, 27 per cent; cast iron, 2.4 per cent; linen textiles, 38 per cent.*" [**Year One of the Russian Revolution**, p. 352 and p. 425]

According to Tony Cliff (another of Rees's references), the war-damaged industry "*continued to run down*" in the spring of 1918: "*One of the causes of famine was the breakdown of transport . . . Industry was in a state of complete collapse. Not only was there no food to feed the factory workers; there was no raw material or fuel for industry . . . The collapse of industry meant unemployment for the workers.*" Cliff provides economic indexes. For large scale industry, taking 1913 as the base, 1917 saw production fall to 77%. In 1918, it was at 35% of the 1913 figure, 1919 it was 26% and 1920 was 18%. Productivity per worker also fell, from 85% in 1917, to 44% in 1918, 22% in 1919 and then 26% in 1920. [**Lenin**, vol. 3, pp. 67-9, p. 86 and p. 85]

In such circumstances, it is argued, how can you expect the Bolsheviks to subscribe to democratic and socialist norms? This meant that the success or failure of the revolution depended on whether the revolution spread to more advanced countries. Leninist Duncan Hallas argues that the "*failure of the German Revolution in 1918-19 . . . seems, in retrospect, to have been decisive . . . for only substantial economic aid from an advanced economy, in practice from a socialist Germany, could have reversed the disintegration of the Russian working class.*" ["Towards a revolutionary socialist party," pp. 38-55, **Party and Class**, Alex Callinicos (ed.), p. 44]

Anarchists are not convinced by these arguments. This is for two reasons.

Firstly, we are aware that revolutions are disruptive no matter where they occur (see [section 1](#)) Moreover, Leninists are meant to know this to. Simply put, there is a certain incredulous element to these arguments. After all, Lenin himself had argued that "*[e]very revolution . . . by its very nature implies a crisis, and a very deep crisis at that, both political and economic. This is irrespective of the crisis brought about by the war.*" [**Collected Works**, vol. 30, p. 341] Serge also considered crisis as inevitable, arguing that the "*conquest of production by the proletariat was in itself a stupendous victory, one which saved the revolution's life. Undoubtedly, so thorough a recasting of all the organs of production is impossible without a substantial decline in output; undoubtedly, too, a proletariat cannot labour and fight at the same time.*" [**Op. Cit.**, p. 361] As we discussed in detail in [section 2](#), this was a

common Bolshevik position at the time (which, in turn, belatedly echoed anarchist arguments -- see [section 1](#)). And if we look at other revolutions, we can say that this is the case.

Secondly, and more importantly, every revolution or near revolutionary situation has been accompanied by economic crisis. For example, as we will shortly prove, Germany itself was in a state of serious economic collapse in 1918 and 1919, a collapse which would have got worse if a Bolshevik-style revolution had occurred there. This means that **if** Bolshevik authoritarianism is blamed on the state of the economy, it is not hard to conclude that **every** Bolshevik-style revolution will suffer the same fate as the Russian one.

As we noted in [section 1](#), Kropotkin had argued from the 1880s that a revolution would be accompanied by economic disruption. Looking at subsequent revolutions, he has been vindicated time and time again. Every revolution has been marked by economic disruption and falling production. This suggests that the common Leninist idea that a successful revolution in, say, Germany would have ensured the success of the Russian Revolution is flawed. Looking at Europe during the period immediately after the first world war, we discover great economic hardship. To quote one Trotskyist editor:

"In the major imperialist countries of Europe, production still had not recovered from wartime destruction. A limited economic upswing in 1919 and early 1920 enabled many demobilised soldiers to find work, and unemployment fell somewhat. Nonetheless, in 'victorious' France overall production in 1920 was still only two-thirds its pre-war level. In Germany industrial production was little more than half its 1914 level, human consumption of grains was down 44 per cent, and the economy was gripped by spiralling inflation. Average per capita wages in Prague in 1920, adjusted for inflation, were just over one-third of pre-war levels." [John Riddell, "Introduction," **Proceedings and Documents of the Second Congress, 1920**, vol. I, p. 17]

Now, if economic collapse was responsible for Bolshevik authoritarianism and the subsequent failure of the revolution, it seems hard to understand why an expansion of the revolution into similarly crisis ridden countries would have had a major impact in the development of the revolution. Since most Leninists agree that the German Revolution, we will discuss this in more detail before going onto other revolutions.

By 1918, Germany was in a bad state. Victor Serge noted *"the famine and economic collapse which caused the final ruin of the Central Powers."* [**Op. Cit.**, p. 361] The semi-blockade of Germany during the war badly effected the economy, the *"dynamic growth"* of which before the war *"had been largely dependent on the country's involvement in the world market"*. The war *"proved catastrophic to those who had depended on the world market and had been involved in the production of consumer goods . . . Slowly but surely the country slithered into austerity and ultimately economic collapse."* Food production suffered, with *"overall food production declined further after poor harvests in 1916 and 1917. Thus grain production, already well below its prewar levels, slumped from 21.8 million to 14.9 million tons in those two years."* [V. R. Berghahn, **Modern Germany**, p. 47, pp. 47-8, p. 50]

The parallels with pre-revolution Russia are striking and it is hardly surprising that revolution did break out in Germany in November 1918. Workers' councils sprang up all across the country, inspired in part by the example of the Russian soviets (and what people **thought** was going on in Russia under the Bolsheviks). A Social-Democratic government was founded, which used the Free Corps (right-wing volunteer troops) to crush the revolution from January 1919 onwards. This meant that Germany in 1919 was marked by extensive civil war within the country. In January 1920, a state of siege was re-introduced across half the country.

This social turmoil was matched by economic turmoil. As in Russia, Germany faced massive economic problems, problems which the revolution inherited. Taking 1928 as the base year, the index of industrial production in Germany was slightly lower in 1913, namely 98 in 1913 to 100 in 1928. In other words, Germany effectively lost 15 years of economic activity. In 1917, the index was 63 and by 1918 (the year of the revolution), it was 61 (i.e. industrial production had dropped by nearly 40%). In 1919, it fell again to 37, rising to 54 in 1920 and 65 in 1921. Thus, in 1919, the *"industrial production reached an all-time low"* and it *"took until the late 1920s for [food] production to recover its 1912 level . . . In 1921 grain production was still . . . some 30 per cent below the 1912 figure."* Coal production was 69.1% of its 1913 level in 1920, falling to 32.8% in 1923. Iron production was 33.1% in 1920 and 25.6% in 1923. Steel production likewise fell to 48.5% in 1920 and fell again to 36% in 1923. [V. R. Berghahn, **Op. Cit.**, p. 258, pp. 67-8, p. 71 and p. 259]

Significantly, one of the first acts of the Bolshevik government towards the new German government was to *"the offer by the Soviet authorities of two trainloads of grain for the hungry German population. It was a symbolical gesture and, in view of desperate shortages in Russia itself, a generous one."* The offer, perhaps unsurprisingly, was rejected in favour of grain from America. [E.H. Carr, **The Bolshevik Revolution**, vol. 3, p. 106]

The similarities between Germany and Russia are clear. As noted above, in Russia, the index for large scale industry fell to 77 in 1917 from 100 in 1913, falling again to 35 in 1918, 26 in 1919 and 18 in 1920. [Tony Cliff, **Lenin**, vol. 3, p. 86] In other words, a fall of 23% between 1913 and 1917, 54.5% between 1917 and 1918, 25.7% in 1918 and 30.8% in 1919. A similar process occurred in Germany, where the fall production was 37.7% between 1913 and 1917, 8.2% between 1917 and 1918 and 33.9% between 1918 and 1919 (the year of revolution). While production did rise in 1920 by 45.9%, production was still around 45% less than before the war.

Thus, comparing the two countries we discover a similar picture of economic collapse. In the year the revolution started, production had fallen by 23% in Russia (from 1913 to 1917) and by 43% in Germany (from 1913 to 1918). Once revolution had effectively started, production fell even more. In Russia, it fell to 65% of its pre-war level in 1918, in Germany it fell to 62% of its pre-war level in 1919. Of course, in Germany revolution did not go as far as in Russia, and so production did rise somewhat in 1920 and afterwards. What is significant is that in 1923, production fell dramatically by 34% (from around 70% of its pre-war level to around 45% of that level). This economic collapse did not deter the Communists from trying to provoke a revolution in Germany that year, so suggesting that economic disruption played

no role in their evaluation of the success of a revolution.

This economic chaos in Germany is never mentioned by Leninists when they discuss the "*objective factors*" facing the Russian Revolution. However, once these facts are taken into account, the superficiality of the typical Leninist explanation for the degeneration of the revolution becomes obvious. The very problems which, it is claimed, forced the Bolsheviks to act as they did also were rampant in Germany. If economic collapse made socialism impossible in Russia, it would surely have had the same effect in Germany (and any social revolution would also have faced more disruption than actually faced post 1919 in Germany). This means, given that the economic collapse in both 1918/19 and 1923 was as bad as that facing Russia in 1918 and that the Bolsheviks had started to undermine soviet and military democracy along with workers' control by spring and summer of that year (see [section 5](#)), to blame Bolshevik actions on economic collapse would mean that any German revolution would have been subject to the same authoritarianism **if** the roots of Bolshevik authoritarianism were forced by economic events rather than a product of applying a specific political ideology via state power. Few Leninists draw this obvious conclusion from their own arguments although there is no reason for them not to.

So the German Revolution was facing the same problems the Russian one was. It seems unlikely, therefore, that a successful German revolution would have been that much aid to Russia. This means that when John Rees argues that giving machinery or goods to the peasants in return for grain instead of simply seizing it required "*revolution in Germany, or at least the revival of industry*" in Russia, he completely fails to indicate the troubles facing the German revolution. "*Without a successful German revolution,*" he writes, "*the Bolsheviks were thrown back into a bloody civil war with only limited resources. The revolution was under siege.*" [John Rees, "*In Defence of October,*" pp. 3-82, **International Socialism**, no. 52, p. 40 and p. 29] Yet given the state of the German economy at the time, it is hard to see how much help a successful German revolution would have been. As such, his belief that a successful German Revolution would have mitigated Bolshevik authoritarianism seems exactly that, a belief without any real evidence to support it (and let us not forget, Bolshevik authoritarianism had started before the civil war broke out -- see [section 3](#)). Moreover, **if** the pro-Bolshevik argument Rees is expounding **is** correct, then the German Revolution would have been subject to the same authoritarianism as befell the Bolshevik one simply because it was facing a similar economic crisis. Luckily, anarchists argue, that this need not be the case if libertarian principles are applied in a revolution:

"The first months of emancipation will inevitably increase consumption of goods and production will diminish. And, furthermore, any country achieving social revolution will be surrounded by a ring of neighbours either unfriendly or actually enemies . . . The demands upon products will increase while production decreases, and finally famine will come. There is only one way of avoiding it. We should understand that as soon as a revolutionary movement begins in any country the only possible way out will consist in the workingmen [and women] and peasants from the beginning taking the whole national economy into their hands and organising it themselves . . . But they will not be convinced of this necessity except when all responsibility for national economy, today in the hands of

a multitude of ministers and committees, is presented in a simple form to each village and city, in every factory and shop, as their own affair, and when they understand that they must direct it themselves." [Kropotkin's **Revolutionary Pamphlets**, pp. 77-8]

So, as regards the Russian and German revolution, Kropotkin's arguments were proven correct. The same can be said of other revolutions as well. Basing himself on the actual experiences of both the French Revolution and the Paris Commune, we can see why Kropotkin argued as he did. The Paris Commune, for example, was born after a four-month-long siege *"had left the capital in a state of economic collapse. The winter had been the severest in living memory. Food and fuel had been the main problems . . . Unemployment was widespread. Thousands of demobilised soldiers wandered loose in Paris and joined in the general hunt for food, shelter and warmth. For most working men the only source of income was the 1.50 francs daily pay of the National Guard, which in effect had become a form of unemployment pay."* The city was *"near starving"* and by March it was *"in a state of economic and political crisis."* [Stewart Edwards, *"Introduction," The Communards of Paris, 1871*, p. 23] Yet this economic collapse and isolation did not stop the commune from introducing and maintaining democratic forms of decision making, both political and economic. A similar process occurred during the French Revolution, where mass participation via the *"sections"* was not hindered by economic collapse. It was finally stopped by state action organised by the Jacobins to destroy popular participation and initiative (see Kropotkin's **The Great French Revolution** for details).

During the Spanish Revolution, *"overall Catalan production fell in the first year of war by 30 per cent, and in the cotton-working sector of the textile industry by twice as much. Overall unemployment (complete and partial) rose by nearly a quarter in the first year, and this despite the military mobilisation decreed in September 1936. The cost of living quadrupled in just over two years; wages . . . only doubled."* [Ronald Fraser, **Blood of Spain**, p. 234] Markets, both internally and externally, for goods and raw materials were disrupted, not to mention the foreign blockade and the difficulties imposed in trying to buy products from other countries. These difficulties came on top of problems caused by the great depression of the 1930s which affected Spain along with most other countries. Yet, democratic norms of economic and social decision making continued in spite of economic disruption. Ironically, given the subject of this discussion, it was only once the Stalinist counter-revolution got going were they fatally undermined or destroyed.

Thus economic disruption need not automatically imply authoritarian policies. And just as well, given the fact that revolution and economic disruption seem to go hand in hand.

Looking further afield, even **revolutionary** situations can be accompanied with economic collapse. For example, the Argentine revolt which started in 2001 took place in the face of massive economic collapse. The economy was a mess, with poverty and unemployment at disgusting levels. Four years of recession saw the poverty rate balloon from 31 to 53 percent of the population of 37 million, while unemployment climbed from 14 to 21.4 percent, according to official figures. Yet in the face of such economic problems, working class people acted collectively, forming popular assemblies and taking over workplaces.

The Great Depression of the 1930s in America saw a much deeper economic contradiction. Indeed, it was as bad as that associated with revolutionary Germany and Russia after the first world war. According to Howard Zinn, after the stock market crash in 1929 *"the economy was stunned, barely moving. Over five thousand banks closed and huge numbers of businesses, unable to get money, closed too. Those that continued laid off employees and cut the wages of those who remained, again and again. Industrial production fell by 50 percent, and by 1933 perhaps 15 million (no knew exactly) -- one-fourth or one-third of the labour force -- were out of work."* [**A People's History of the United States**, p. 378]

Specific industries were badly affected. For example, total GNP fell to 53.6% in 1933 compared to its 1929 value. The production of basic goods fell by much more. Iron and Steel saw a 59.3% decline, machinery a 61.6% decline and *"non-ferrous metals and products"* a 55.9% decline. Transport was also affected, with transportation equipment declining by 64.2% railroad car production dropping by 73.6% and locomotion production declining by 86.4%. Furniture production saw a decline of 57.9%. The workforce was equally affected, with unemployment reaching 25% in 1933. In Chicago 40% of the workforce was unemployed. Union membership, which had fallen from 5 million in 1920 to 3.4 million in 1929 fell to less than 3 million by 1933. [Lester V. Chandler, **America's Greatest Depression, 1929-1941**, p. 20, p. 23, p. 34, p. 45 and p. 228]

Yet in the face of this economic collapse, no Leninist proclaimed the impossibility of socialism. In fact, the reverse was the case. Similar arguments could apply to, say, post-world war two Europe, when economic collapse and war damage did not stop Trotskyists looking forward to, and seeking, revolutions there. Nor did the massive economic that occurred after the fall of Stalinism in Russia in the early 1990s deter Leninist calls for revolution. Indeed, you can rest assured that any drop in economic activity, no matter how large or small, will be accompanied by Leninist articles arguing for the immediate introduction of socialism. And this was the case in 1917 as well, when economic crisis had been a fact of Russian life throughout the year. Lenin, for example, argued at the end of September of that *"Russia is threatened with an inevitable catastrophe . . . A catastrophe of extraordinary dimensions, and a famine, are unavoidably threatening . . . Half a year of revolution has passed. The catastrophe has come still closer. Things have come to a state of mass unemployment. Think of it: the country is suffering from a lack of commodities."* [**The Threatening Catastrophe and how to Fight It**, p. 5] This did not stop him calling for revolution and seizing power. Nor did this crisis stop the creation of democratic working class organisations, such as soviets, trade unions and factory committees being formed. It did not stop mass collective action to combat those difficulties. It appears, therefore, that while the economic crisis of 1917 did not stop the development of socialist tendencies to combat it, the seizure of power by a socialist party did.

Given that no Leninist has argued that a revolution could take place in Germany after the war or in the USA during the darkest months of the Great Depression, the argument that the grim economic conditions facing Bolshevik Russia made soviet democracy impossible seem weak. By arguing that both Germany and the USA could create a viable socialist revolution in economic conditions just as bad as those facing Soviet Russia, the reasons why the Bolsheviks created a party dictatorship must be looked for elsewhere. Given this support for revolution in 1930s America and post-world war I and II Europe, you would have to conclude that, for Leninists, economic collapse only makes socialism impossible

once **they** are in power! Which is hardly convincing, or inspiring.

5 Was the Russian working class atomised or "declassified"?

A standard Leninist explanation for the dictatorship of the Bolshevik party (and subsequent rise of Stalinism) is based on the "atomisation" or "declassing" of the proletariat. John Rees summarises this argument as follows:

*"The civil war had reduced industry to rubble. The working class base of the workers' state, mobilises time and again to defeat the Whites, the rock on which Bolshevik power stood, had disintegrated. The Bolsheviks survived three years of civil war and wars in intervention, but only at the cost of reducing the working class to an atomised, individualised mass, a fraction of its former size, and no longer able to exercise the collective power that it had done in 1917 . . . The bureaucracy of the workers' state was left suspended in mid-air, its class base eroded and demoralised. Such conditions could not help but have an effect on the machinery of the state and organisation of the Bolshevik Party." ["In Defence of October," pp. 3-82, **International Socialism**, no. 52, p. 65]*

It is these objective factors which, it is argued, explain why the Bolshevik party substituted itself for the Russian working class. "Under such conditions," argues Tony Cliff, "the class base of the Bolshevik Party disintegrated -- not because of some mistakes in the policies of Bolshevism, not because of one or another conception of Bolshevism regarding the role of the party and its relation to the class -- but because of mightier historical factors. The working class had become declassified . . . Bolshevik 'substitutionism' . . . did not jump out of Lenin's head as Minerva out of Zeus's, but was born of the objective conditions of civil war in a peasant country, where a small working class, reduced in weight, became fragmented and dissolved into the peasant masses." [**Trotsky on Substitutionism**, pp. 62-3] In other words, because the working class was so decimated the replacement of class power by party power was inevitable.

Before discussing this argument, we should point out that this argument dates back to Lenin. For example, he argued in 1921 that the proletariat, "owning to the war and to the desperate poverty and ruin, has become declassified, i.e. dislodged from its class groove, and had ceased to exist as proletariat . . . the proletariat has disappeared." [**Collected Works**, vol. 33, p. 66] However, unlike his later-day followers, Lenin was sure that while it "would be absurd and ridiculous to deny that the fact that the proletariat is declassified is a handicap" it could still "fulfil its task of wining and holding state power." [**Op. Cit.**, vol. 32, p. 412] As we will see, the context in which Lenin started to make these arguments is important.

Anarchists do not find these arguments particularly convincing. This is for two reasons. Firstly, it seems incredulous to blame the civil war for the "substitution" of Bolshevik power for working class power as party power had been Lenin's stated aim in 1917 and October saw the seizure of power by the Bolsheviks, **not** the soviets. As we saw in [section 3](#), the Bolsheviks started to gerrymander and disband

soviets to remain in power **before** the civil war started. As such, to blame the civil war and the problems it caused for the usurpation of power by the Bolsheviks seems unconvincing. Simply put, the Bolsheviks had "*substituted*" itself for the proletariat from the start, from the day it seized power in the October revolution.

Secondly, the fact is the Russian working class was far from "*atomised*." Rather than being incapable of collective action, as Leninists assert, Russia's workers were more than capable of taking collective action throughout the civil war period. The problem is, of course, that any such collective action was directed **against** the Bolshevik party. This caused the party no end of problems. After all, if the working class **was** the ruling class under the Bolsheviks, then who was it striking against? Emma Goldman explains the issue well:

"In my early period the question of strikes had puzzled me a great deal. People had told me that the least attempt of that kind was crushed and the participants sent to prison. I had not believed it, and, as in all similar things, I turned to Zorin [a Bolshevik] for information. 'Strikes under the dictatorship of the proletariat!' he had proclaimed; 'there's no such thing.' He had even upbraided me for crediting such wild and impossible tales. Against whom, indeed, should the workers strike in Soviet Russia, he argued. Against themselves? They were the masters of the country, politically as well as industrially. To be sure, there were some among the toilers who were not yet fully class-conscious and aware of their own true interests. These were sometimes disgruntled, but they were elements incited by . . . self-seekers and enemies of the Revolution." [Living My Life, vol. 2, p. 872]

This, unfortunately, still seems to be the case in pro-Bolshevik accounts of the Revolution and its degeneration. After the Bolshevik seizure of power, the working class as an active agent almost immediately disappears from the accounts. This is unsurprising, as it does not bode well for maintaining the Bolshevik Myth to admit that workers were resisting the so-called "*proletarian dictatorship*" from the start. The notion that the working class had "*disappeared*" fits into this selective blindness well. Why discuss the actions of a class which did not exist? Thus we have a logical circle from which reality can be excluded: the working class is "*atomised*" and so cannot take industrial action, evidence of industrial action need not be looked for because the class is "*atomised*."

This can be seen from Lenin. For example, he proclaimed in October 1921 that "*the proletariat had disappeared*." Yet this non-existent class had, in early 1921, taken collective action which "*encompassed most of the country's industrial regions*." [J. Aves, **Workers Against Lenin**, p. 111] Significantly, the Communists (then and now) refused to call the movement a strike, preferring the word "*volynka*" which means "*go-slow*." The Menshevik leader Dan explained why: "*The Bolshevik press carefully tried, at first, to hush up the movement, then to hide its real size and character. Instead of calling the strike a strike, they thought up various new terms -- volynka, buza and so on.*" [quoted by Aves, **Op. Cit.**, p. 112] As Russian anarchist Ida Mett succinctly put it: "*And if the proletariat was that exhausted how come it was still capable of waging virtually total general strikes in the largest and most heavily industrialised cities?*" [Ida Mett, **The Kronstadt Rebellion**, p. 81]

The year after Lenin proclaimed the proletariat "*disappeared*" we discover similar evidence of working class collective action. Ironically, it is Leninist Tony Cliff who presents the evidence that "*the number of workers involved in labour conflicts was three and a half million, and in 1923, 1,592,800.*" Strikes in state-owned workplaces in 1922 involved 192,000 workers. [**State Capitalism in Russia**, p. 28] Given that Cliff states that in 1921 there was only "*one and a quarter million*" industrial workers "*proper*" (compared to over three million in 1917), this level of strikes is extremely large -- particular for members of a class which did not, according to Lenin which had "*disappeared*"!

Before providing more evidence for the existence of working class collective struggle throughout the period 1918 to 1923, it is necessary to place Lenin's comments on the "*declassing*" of the working class in context. Rather than being the result of a lack of industrial protest, Lenin's arguments were the product of its opposite -- the rise in collective struggle by the Russian working class. As one historian notes: "*As discontent amongst workers became more and more difficult to ignore, Lenin . . . began to argue that the consciousness of the working class had deteriorated . . . workers had become 'declassed.'*" "*Lenin's analysis,*" he continues, "*had a superficial logic but it was based on a false conception of working-class consciousness. There is little evidence to suggest that the demands that workers made at the end of 1920 . . . represented a fundamental change in aspirations since 1917 . . . [Moreover] an analysis of the industrial unrest in 1921 shows that long-standing workers were prominent in protest.*" [J. Aves, **Op. Cit.**, p. 90 and pp. 90-1]

Lenin's pessimistic analysis of 1921 is in sharp contrast to the optimistic mood of early 1920, reproduced by the defeat of the White armies, in Bolshevik ranks. For example, writing in May, 1920, Trotsky seemed oblivious to the "*atomisation*" of the Russian working class, arguing that "*in spite of political tortures, physical sufferings and horrors, the labouring masses are infinitely distinct from political decomposition, from moral collapse, or from apathy . . . Today, in all branches of industry, there is going on an energetic struggle for the establishment of strict labour discipline, and for the increase of the productivity of labour. The party organisations, the trade unions, the factory and workshop administrative committees, rival each one another in this respect, with the undivided support of the working class as a whole.*" Indeed, they "*concentrate their attention and will on collective problems*" ("*Thanks to a regime which . . . given their life a pursue*"!). Needless to say, the party had "*the undivided support of the public opinion of the working class as a whole.*" [**Terrorism and Communism**, p. 6]

The turn around in perspective after this period did not happen by accident, independently of the working class resistance to Bolshevik rule. After all, the defeat of the Whites in early of 1920 saw the Bolsheviks take "*victory as a sign of the correctness of its ideological approach and set about the task of reconstruction on the basis of an intensification of War Communism policies with redoubled determination.*" This led to "*an increase in industrial unrest in 1920,*" including "*serious strikes.*" The resistance was "*becoming increasingly politicised.*" Thus, the stage was set for Lenin's turn around and his talk of "*declassing.*" In early 1921 "*Lenin argued that workers, who were no more demoralised than they were in early 1920, had become 'declassed' in order to justify a political clamp-down.*" [J. Aves, **Op. Cit.**, p. 37, p. 80 and p. 18]

Other historians also note this context. For example, while the *"working class had decreased in size and changed in composition, . . . the protest movement from late 1920 made clear that it was not a negligible force and that in an inchoate way it retained a vision of socialism which was not identified entirely with Bolshevik power . . . Lenin's arguments on the declassing of the proletariat was more a way of avoiding this unpleasant truth than a real reflection of what remained, in Moscow at least, a substantial physical and ideological force."* [Richard Sakwa, *Soviet Communists in Power*, p. 261] In the words of Diane Koenker, *"[i]f Lenin's perceptions of the situation were at all representative, it appears that the Bolshevik party made deurbanisation and declassing the scapegoat for its political difficulties, when the party's own policies and its unwillingness to accept changing proletarian attitudes were also to blame."* Ironically, this was not the first time that the Bolsheviks had blamed its problems on the lack of a *"true"* proletariat and its replacement by *"petty-bourgeois"* elements, *"[t]his was the same argument used to explain the Bolsheviks' lack of success in the early months of 1917 -- that the cadres of conscious proletarians were diluted by non-proletarian elements."* [*Urbanisation and Deurbanisation in the Russian Revolution and Civil War*," pp. 424-450, **The Journal of Modern History**, vol. 57, no. 3, p. 449 and p. 428]

It should be noted that the *"declassing"* argument does have a superficial validity if you accept the logic of vanguardism. After all, if you accept the premise that the party alone represents socialist consciousness and that the working class, by its own efforts, can only reach a reformist level of political conscious (at best), then any deviation in working class support for the party obviously represents a drop in class consciousness or a *"declassing"* of the proletariat (see section H.5.1 -- ["Why are vanguard parties anti-socialist?"](#)). Thus working class protest against the party can be dismissed as evidence of *"declassing"* which has to be suppressed rather than what it really is, namely evidence of working class autonomy and collective struggle for what it considers **its** interests to be against a new master class. In fact, the *"declassing"* argument is related to the vanguardist position which, in turn, justifies the dictatorship of the party **over** the class (see section H.5.3 -- ["Why does vanguardism imply party power?"](#)).

So the *"declassing"* argument is not some neutral statement of fact. It was developed as a weapon on the class struggle, to justify Bolshevik repression of collective working class struggle. To justify the continuation of Bolshevik party dictatorship **over** the working class. This in turn explains why working class struggle during this period generally fails to get mentioned by later day Bolsheviks -- it simply undermines their justifications for Bolshevik dictatorship. After all, how can they say that the working class could not exercise *"collective power"* when it was conducting mass strikes throughout Russia during the period 1918 to 1923?

As such, it does not seem that strange that in most Leninist account of the revolution post-October rarely, if ever, mention what the working class was actually doing. We do get statistics on the drop of the numbers of industrial workers in the cities (usually Petrograd and Moscow), but any discussion on working class protest and strikes is generally, at best, mentioned in passing or, usually, ignored utterly. Given this was meant to be a *"proletarian"* dictatorship, it seems strange this silence. It could be argued

that this silence is due to the working class being decimated in number and/or "*declassed*" in terms of itself perspective. This, however, seems unlikely, as collective working class protest was common place in Bolshevik Russia. The silence can be better understood by the fact this protest was directed **against** the Bolsheviks.

Which shows the bankruptcy of what can be called the "*statistical tendency*" of analysing the Russian working class. While statistics can tell us how many workers remained in Russia in, say, 1921, it does not prove any idea of their combativeness or their ability to take collective decisions and action. If numbers alone indicated the ability of workers to take part in collective struggle, then the massive labour struggles in 1930s American would not have taken place. Millions had been made redundant. At the Ford Motor Company, 128,000 workers had been employed in the spring of 1929. There were only 37,000 by August of 1931 (only 29% of the 1929 figure). By the end of 1930, almost half of the 280,000 textile mill workers in New England were out of work. [Howard Zinn, **A People's History of the United States**, p. 378] Yet in the face of these massive redundancies, the workers organised themselves and fought back. As we will indicate, the reduction in the number of Russian workers did not restrict their ability to make collective decisions and act collectively on them -- Bolshevik repression **did**.

Moreover, while Leninists usually point to the fall in population in Petrograd and Moscow during the civil war, concentrating on these cities can be misleading. "*Using the Petrograd figures,*" notes Daniel R. Bower, "*historians have painted a lurid picture of flight from the cities. In 1918 alone the former capital lost 850,000 people and was by itself responsible for one-half of the total urban population decline of the Civil War years. If one sets aside aggregate figures to determine the trend characteristic of most cities, however, the experiences of Petrograd appears exception. Only a handful of cities . . . lost half their population between 1917 and 1920, and even Moscow, which declined by over 40 percent, was not typical of most towns in the northern, food-importing areas. A study of all cities . . . found that the average decline in the north (167 towns in all, excluding the capital cities) amounted to 24 percent between 1917 and 1920. Among the towns in the food-producing areas in the southern and eastern regions of the Russian Republic (a total of 128), the average decline came to only 14 percent.*" ["*The city in danger': The Civil War and the Russian Urban Population,*" **Party, State, and Society in the Russian Civil War**, Diane P. Koenker, William G. Rosenberg and Ronald Grigor Suny (eds.), p. 61] Does this mean that the possibility of soviet democracy declined less in these towns? Yet the Bolsheviks applied their dictatorships even there, suggesting that declining urban populations was not the source of their authoritarianism.

Equally, what are we to make of towns and cities which increased their populations? Some towns and cities actually grew in size. For example, Minsk, Samara, Khar'kov, Tiflis, Baku, Rostov-on-don, Tsaritsyn and Perm all grew in population (often by significant amounts) between 1910 and 1920 while other cities shrunk. [Diane Koenker, "*Urbanisation and Deurbanisation in the Russian Revolution and Civil War,*" pp. 424-450, **The Journal of Modern History**, vol. 57, no. 3, p. 425] Does that mention soviet democracy was possible in those towns but not in Petrograd or Moscow? Or does the fact that the industrial workforce grew by 14.8% between October 1920 and April 1921 mean that the possibility for soviet democracy also grew by a similar percentage? [J. Aves, **Workers Against Lenin**, p. 159]

Then there is the question of when the reduction of workers makes soviet democracy impossible. After all, between May 1917 and April 1918 the city of Moscow lost 300,000 of its two million inhabitants. Was soviet democracy impossible in April 1918 because of this? During the civil war, Moscow lost another 700,000 by 1920 (which is basically the same amount per year). [Diane Koenker, **Op. Cit.**, p. 424] When did this fall in population mean that soviet democracy was impossible? Simply put, comparing figures of one year to another simply fails to understand the dynamics at work, such as the impact of "*reasons of state*" and working class resistance to Bolshevik rule. It, in effect, turns the attention away from the state of working class autonomy and onto number crunching.

Ultimately, the question of whether the working class was too "*atomised*" to govern can only be answered by looking at the class struggle in Russia during this period, by looking at the strikes, demonstrations and protests that occurred. Something Leninists rarely do. Needless to say, certain strike waves just cannot be ignored. The most obvious case is in Petrograd just before the Kronstadt revolt in early 1921. After all, the strikes (and subsequent Bolshevik repression) inspired the sailors to revolt in solidarity with them. Faced with such events, the scale of the protest and Bolshevik repression is understated and the subject quickly changed. As we noted in [section 10](#) of the appendix on "[What was the Kronstadt Rebellion?](#)", John Rees states that Kronstadt was "*preceded by a wave of serious but quickly resolved strikes.*" [Rees, **Op. Cit.**, p. 61] Needless to say, he does not mention that the strikes were "*resolved*" by "*serious*" force. Nor does he explain how "*an atomised, individualised mass*" **could** conduct such "*serious*" strikes, strikes which required martial law to break. Little wonder, then, Rees does expound on the strikes and what they meant in terms of the revolution and his own argument.

Similarly, we find Victor Serge arguing that the "*working class often fretted and cursed; sometimes it lent an ear to the Menshevik agitators, as in the great strikes at Petrograd in the spring of 1919. But once the choice was posed as that between the dictatorship of the White Generals and the dictatorship of its own party -- and there was not and could not be any other choice -- every fit man . . . came to stand . . . before the windows of the local party offices.*" [**Year One of the Russian Revolution**, pp. 365-6] An exhausted and atomised working class capable of "*great strikes*"? That seems unlikely. Significantly, Serge does not mention the Bolshevik acts of repression used against the rebel workers (see below). This omission cannot help distort any conclusions to be drawn from his account.

Which, incidentally, shows that the civil war was not all bad news for the Bolsheviks. Faced with working class protest, they could play the "*White card*" -- unless the workers went back to work, the Whites would win. This explains why the strikes of early 1921 were larger than before and explains why they were so important. As the "*White card*" could no longer be played, the Bolshevik repression could not be excused in terms of the civil war. Indeed, given working class opposition to the party, it would be fair to say that civil war actually **helped** the Bolsheviks remain in power. Without the threat of the Whites, the working class would **not** have tolerated the Bolsheviks longer than the Autumn of 1918.

The fact is that working class collective struggle against the new regime and, consequently, Bolshevik repression, started before the outbreak of the civil war. It continued throughout the civil war period and reached a climax in the early months of 1921. Even the repression of the Kronstadt rebellion did not stop

it, with strikes continuing into 1923 (and, to a lesser degree, afterward). Indeed, the history of the "*workers' state*" is a history of the state repressing the revolt of the workers.

Needless to say, it would be impossible to give a full account of working class resistance to Bolshevism. All we can do here is give a flavour of what was happening and the sources for further information. What should be clear from our account is that the idea that the working class in this period was incapable of collective organisation and struggle is false. As such, the idea that Bolshevik "*substitutionism*" can be explained in such term is also false. In addition, it will become clear that Bolshevik repression explicitly aimed to break the ability of workers to organise and exercise collective power. As such, it seems hypocritical for modern-day Leninists to blame Bolshevik power on the "*atomisation*" of the working class when Bolshevik power was dependent on smashing working class collective organisation and resistance. Simply put, to remain in power Bolshevism, from the start, had to crush working class power. This is to be expected, given the centralised nature of the state and the assumptions of vanguardism. If you like, October 1917 did not see the end of "*dual power*." Rather the Bolshevik state replaced the bourgeois state and working class power (as expressed in its collective struggle) came into conflict with it.

This struggle of the "*workers' state*" against the workers started early in 1918. "*By the early summer of 1918,*" records one historian, "*there were widespread anti-Bolshevik protests. Armed clashes occurred in the factory districts of Petrograd and other industrial centres. Under the aegis of the Conference of Factory and Plant Representatives . . . a general strike was set for July 2.*" [William Rosenberg, "*Russian labour and Bolshevik Power,*" pp. 98-131, **The Workers' revolution in Russia**, 1917, Daniel H. Kaiser (ed.), p. 107] According to another historian, economic factors "*were soon to erode the standing of the Bolsheviks among Petrograd workers . . . These developments, in turn, led in short order to worker protests, which then precipitated violent repressions against hostile workers. Such treatment further intensified the disenchantment of significant segments of Petrograd labour with Bolshevik-dominated Soviet rule.*" [Alexander Rabinowitch, **Early Disenchantment with Bolshevik Rule**, p. 37]

The reasons for these protest movement were both political and economic. The deepening economic crisis combined with protests against Bolshevik authoritarianism to produce a wave of strikes aiming for political change. Feeling that the soviets were distant and unresponsive to their needs (with good reason, given Bolshevik postponement of soviet elections and gerrymandering of the soviets), workers turned to direct action and the initially Menshevik inspired "*Conference of Factory and Plant Representatives*" (also known as the "*Extraordinary Assembly of Delegates from Petrograd Factories and Plants*") to voice their concerns. At its peak, reports "*estimated that out of 146,000 workers still in Petrograd, as many as 100,000 supported the conference's goals.*" [Op. Cit., p. 127] The aim of the Conference (as per Menshevik policy) was to reform the existing system "*from within*" and, as such, the Conference operated openly. As Alexander Rabinowitch notes, "*[F]or the Soviet authorities in Petrograd, the rise of the Extraordinary Assembly of Delegates from Petrograd Factories and Plants was an ominous portent of worker defection.*" [Op. Cit., p. 37]

The first wave of outrage and protests occurred after Bolshevik Red Guards opened fire on a demonstration for the Constituent Assembly in early January (killing 21, according to Bolshevik

sources). This demonstration *"was notable as the first time workers came out actively against the new regime. More ominously, it was also the first time forces representing soviet power used violence against workers."* [David Mandel, **The Petrograd Workers and the Soviet Seizure of Power**, p. 355] It would not be the last -- indeed repression by the *"workers' state"* of working class protest became a recurring feature of Bolshevism.

By April *"it appeared that the government was now ready to go to whatever extremes it deemed necessary (including sanctioning the arrest and even shooting of workers) to quell labour unrest. This in turn led to intimidation, apathy, lethargy and passivity of other workers. In these circumstances, growth in support of the Assembly slowed down."* [Rabinowitch, **Op. Cit.**, p. 40] The Assembly aborted its plans for a May Day demonstration to protest the government's policies were cancelled because of workers did not respond to the appeals to demonstrate (in part because of *"Bolshevik threats against 'protesters'"* [**Op. Cit.**, pp. 40-1]).

This apathy did not last long. After early May events *"served to reinvigorate and temporarily radicalise the Assembly. These developments included yet another drastic drop in food supplies, the shooting of protesting housewives and workers in the Petrograd suburb of Kolpino, the arbitrary arrest and abuse of workers in another Petrograd suburb, Sestroresk, the closure of newspapers and the arrests of individuals who had denounced the Kolpino and Sestroresk events, the intensification of labour unrest and conflict with the authorities in the Obukhov plant and in other Petrograd factories and districts."* [**Op. Cit.**, p. 41]

So the next major protest wave occurred in early May, 1918, after armed guards opened fire on protesting workers in Kolpino -- *"while the incident was hardly the first of its kind, it triggered a massive wave of indignation."* Work temporarily stopped in a number of plants. Between Kolpino and early July, more than seventy incidents occurred in Petrograd, including strikes, demonstrations and anti-Bolshevik meetings. Many of these meetings *"were protests against some form of Bolshevik repression: shootings, incidents of 'terroristic activities,' and arrests."* In some forty incidents *"worker's protests focused on these issues, and the data is surely understate the actual number by a wide margin. There were as well some eighteen separate strikes or some other work stoppages with an explicitly anti-Bolshevik character."* [Rosenberg, **Op. Cit.**, p. 123 and pp. 123-4] Then, *"[a]t the very end of May and the beginning of June, when a wave of strikes to protest at bread shortages broke out in the Nevskii district, a majority of Assembly delegates . . . resolved to call on striking Nevskii district workers to return to work and continue preparation for a general city-wide strike."* [Rabinowitch, **Op. Cit.**, p. 42] Unfortunately, for the Assembly postponing the strikes until a *"better time"* rather than encouraging them gave the authorities time to prepare.

Things came to a head during and after the soviet elections in June. On June 20th the Obukhov works issued an appeal to the Conference of Factory and Plant Representatives *"to declare a one-day strike of protest on June 25th"* against Bolshevik reprisals for the assassination of a leading Bolshevik. *"The Bolsheviks responded by 'invading' the whole Nevskii district with troops and shutting down Obukhov completely. Meetings everywhere were forbidden."* The workers were not intimidated and *"[i]n scores of additional factories and shops protests mounted and rapidly spread along the railroads."* At the June

26th "extraordinary session" of the Conference a general strike was declared for July 2nd. Faced with this, the Bolsheviks set up "machine guns . . . at main points throughout the Petrograd and Moscow railroad junctions, and elsewhere in both cities as well. Controls were tightened in factories. Meetings were forcefully dispersed." [Rosenberg, **Op. Cit.**, pp. 126-7 and p. 127] In other words, "as a result of extreme government intimidation, the response to the Assembly's strike call on 2 July was negligible." [Rabinowitch, **Op. Cit.**, p. 42] This repression was not trivial:

"Among other things, all newspapers were forced to print on their front pages Petrograd soviet resolutions condemning the Assembly as part of the domestic and foreign counter-revolution. Factories participating in the strike were warned that they would be shut down and individual strikers were threatened with the loss of work -- threats that were subsequently made good. Printing plants suspected of opposition sympathies were sealed, the offices of hostile trade unions were raided, martial law declared on rail lines, and armed strike-breaking patrols with authority to take whatever action was necessary to prevent work stoppages were formed and put on 24-hour duty at key points throughout Petrograd." [**Op. Cit.**, p. 45]

Needless to say, "the Petrograd authorities drew on the dubious mandate provided by the stacked soviet elections to justify banning the Extraordinary Assembly." [**Op. Cit.**, p. 42] While the Bolsheviks had won around 50% of workplace votes, as we note in [section 6](#) of the appendix on "[What happened during the Russian Revolution?](#)" they had gerrymandered the soviet making the election results irrelevant. The fact the civil war had started undoubtedly aided the Bolsheviks during this election and the fact that the Mensheviks and SRs had campaigned on a platform to win the soviet elections as the means of replacing soviet democracy by the Constituent Assembly. Many workers still viewed the soviets as **their** organisations and aimed for a functioning soviet system rather than its end.

The Bolsheviks turned on the Conference, both locally and nationally, and arrested its leading activists, so decapitating the only independent working class organisation left in Russia. As Rabinowitch argues, "the Soviet authorities were profoundly worried by the threat posed by the Assembly and fully aware if their growing isolation from workers (their only real social base) . . . Petrograd Bolsheviks developed a siege mentality and a corresponding disposition to consider any action -- from suppression of the opposition press and manipulation of elections to terror even against workers -- to be justified in the struggle to retain power until the start of the imminent world revolution." [**Op. Cit.**, pp. 43-4]

Similar events happened in other cities. As we discuss in [section 6](#) of the appendix on "[What happened during the Russian Revolution?](#)", the Bolsheviks had disbanded soviets elected with non-Bolshevik majorities all across Russia and suppressed the resulting working class protest. In Moscow, workers also organised a "Conference" movement and "[r]esentment against the Bolsheviks was expressed through strikes and disturbances, which the authorities treated as arising from supply difficulties, from 'lack of consciousness,' and because of the 'criminal demagoguery' of certain elements. Lack of support for current Bolshevik practices was treated as the absence of worker consciousness altogether, but the causes of the unrest was more complicated. In 1917 political issues gradually came to be perceived through the lens

of party affiliation, but by mid-1918 party consciousness was reversed and a general consciousness of workers' needs restored. By July 1918 the protest movement had lost its momentum in the face of severe repression and was engulfed by the civil war." In the light of the fate of workers' protest, the May 16th resolution by the Bogatyr' Chemical Plant calling (among other things) for "*freedom of speech and meeting, and an end to the shooting of citizens and workers*" seems to the point. Unsurprisingly, "[f]aced with political opposition within the soviets and worker dissatisfaction in the factories Bolshevik power increasingly came to reply on the party apparatus itself." [Richard Sakwa, "*The Commune State in Moscow in 1918*," pp. 429-449, **Slavic Review**, vol. 46, no. 3/4, p. 442-3, p. 442 and p. 443]

Repression occurred elsewhere: "*In June 1918 workers in Tula protested a cut in rations by boycotting the local soviet. The regime declared martial law and arrested the protestors. Strikes followed and were suppressed by violence. In Sormovo, when a Menshevik-Social Revolutionary newspaper was closed, 5,000 workers went on strike. Again firearms were used to break the strike.*" Other techniques were used to break resistance. For example, the regime often threatened rebellious factories with a lock out, which involved numerous layoffs, new rules of discipline, purges of workers' organisations and the introduction of piece work. [Thomas F. Remington, **Building Socialism in Bolshevik Russia**, p. 105 and p. 107]

Rather than the Civil War disrupting the relationship between the vanguard party and the class it claimed to lead, it was in fact the Bolsheviks who did so in face of rising working class dissent and disillusionment in the spring of 1918. In fact, "*after the initial weeks of 'triumph' . . . Bolshevik labour relations after October*" changed and "*soon lead to open conflict, repression, and the consolidation of Bolshevik dictatorship over the proletariat in place of proletarian dictatorship itself.*" [Rosenberg, **Op. Cit.**, p. 117]

Given this, the outbreak of the civil war consolidated workers support for the Bolsheviks and saved it from even more damaging workers' unrest. As Thomas F. Remington puts it:

"At various times groups of workers rebelled against Bolshevik rule But for the most part, forced to choose between 'their' regime and the unknown horrors of a White dictatorship, most willingly defended the Bolshevik cause. The effect of this dilemma may be seen in the periodic swings in the workers' political temper. When Soviet rule stood in peril, the war simulated a spirit of solidarity and spared the regime the defection of its proletarian base. During lulls in the fighting, strikes and demonstrations broke out." [**Op. Cit.**, p. 101]

Which, as we will discuss, explains the increased repression in 1921 and onwards. Without the Whites, the Bolsheviks had to enforce their rule directly onto workers who did not want it. Ironically, the Whites **helped** the Bolsheviks remain in power. Without the start of the civil war, labour protest would have either ended Bolshevik rule or exposed it as a dictatorial regime.

This process of workers protest and state repression continued in 1919 and subsequent years. It followed a cyclical pattern. There was a "*new outbreak of strikes in March 1919 after the collapse of Germany*

*and the Bolshevik re-conquest of the Ukraine. The pattern of repression was also repeated. A strike at a galosh factory in early 1919 was followed by the closing of the factory, the firing of a number of workers, and the supervised re-election of its factory committee. The Soviet garrison at Astrakhan mutinied after its bread ration was cut. A strike among the city's workers followed in support. A meeting of 10,000 Astrakhan workers was suddenly surrounded by loyal troops, who fired on the crowd with machine guns and hand grenades, killing 2,000. Another 2,000, taken prisoner, were subsequently executed. In Tula, when strikes at the defence factories stopped production for five days, the government responded by distributing more grain and arresting the strike organisers . . . strikes at Putilov again broke out, at first related to the food crisis . . . The government treated the strike as an act of counter-revolution and responded with a substantial political purge and re-organisation. An official investigation . . . concluded that many shop committees were led by [Left] Social Revolutionaries . . . These committees were abolished and management representatives were appointed in their stead." [Remington, **Op. Cit.**, pp. 109-10]*

The strikes in Petrograd centred around the Putilov shows the response of the authorities to the "atomised" workers who were taking collective action. *"In March fifteen factories struck together (roughly 35,000 workers were involved) . . . workers at Putilov assembled and sent a delegation to the works committee . . . and put forward a number of demands . . . On 12 March Putilov stopped work. Its workers called to others to join them, and some of them came out in a demonstration where they were fired upon by Cheka troops. Strikes then broke out at fourteen other enterprises . . . On Sunday 16 March an appeal was made to the Putilovtsy to return to normal working the following day or . . . the sailors and soldiers would be brought in. After a poor showing on the Monday, the sailor went in, and 120 workers were arrested; the sailors remained until the 21st and by the 22nd normal work had been resumed."* In July strikes broke out again in response to the cancellation of holidays which involved 25,000 workers in 31 strikes. [Mary McAuley, **Bread and Justice**, pp. 251-253 and p. 254]

In the Moscow area, while it is *"impossible to say what proportion of workers were involved in the various disturbances,"* following the lull after the defeat of the workers' conference movement in mid-1918 *"each wave of unrest was more powerful than the last, culminating in the mass movement from late 1920."* For example, at the end of June 1919, *"a Moscow committee of defence (KOM) was formed to deal with the rising tide of disturbances . . . KOM concentrated emergency power in its hands, overriding the Moscow Soviet, and demanding obedience from the population. The disturbances died down under the pressure of repression."* [Richard Sakwa, **Soviet Communists in Power**, p. 94 and pp. 94-5]

Vladimir Brovkin summarises the data he provides in his essay *"Workers' Unrest and the Bolshevik Response in 1919"* (reproduced along with data from other years in his book **Behind the Front Lines of the Civil War**) as follows:

"Data on one strike in one city may be dismissed as incidental. When, however, evidence is available from various sources on simultaneous independent strikes in different cities and overall picture begins to emerge . . . Workers' unrest took place in Russia's biggest and most important industrial centres: Moscow, Petrograd, Tver', Tula, Briansk, and

Sormovo. Strikes affected the largest industries . . . Workers' demands reflected their grievances . . . The greatest diversity was in workers' explicitly political demands or expression of political opinion . . . all workers' resolutions demanded free and fair elections to the soviets . . . some workers . . . demanded the Constituent Assembly . . .

"The strikes of 1919 . . . fill an important gap in the development of the popular movement between October 1917 and February 1921. On the one hand, they should be seen as antecedents of similar strikes in February 1921, which forced the Communists to abandon war communism. In the capitals, workers, just as the Kronstadt sailors had, still wanted fairly elected soviets and not a party dictatorship. On the other hand, the strikes continued the protests that had begun in the summer of 1918. The variety of behavioural patterns displayed during the strikes points to a profound continuity. . .

"In all known cases the Bolsheviks' initial response to strikes was to ban public meetings and rallies . . . In several cities . . . the authorities confiscated strikers' food rations in order to suppress the strike. In at least five cities . . . the Bolsheviks occupied the striking plant and dismissed the strikers en masse . . . In all known cases the Bolsheviks arrested strikers . . . In Petrograd, Briansk, and Astrakhan' the Bolsheviks executed striking workers." [Slavic Review, vol. 49, no. 3, pp. 370-2]

Nor was this collective struggle stop in 1919 -- *"strike action remained endemic in the first nine months of 1920"* and *"in the first six months of 1920 strikes had occurred in seventy-seven per cent of middle-sized and large works."* For the Petrograd province, soviet figures state that in 1919 there were 52 strikes with 65,625 participants and in 1920 73 strikes with 85,645, both high figures as according to one set of figures, which are by no means the lowest, there were 109,100 workers there. *"Strikes in 1920,"* recounts Aves, *"were frequently a direct protest against the intensification of War Communist labour policies, the militarisation of labour, the implementation of one-man management and the struggle against absenteeism, as well as food supply difficulties. The Communist Party press carried numerous articles attacking the slogan of 'free labour.'"* [J. Aves, **Workers Against Lenin**, p. 69 and p. 74]

The spring of 1920 *"saw discontent on the railways all over the country."* This continued throughout the year. For example, the Aleksansrovskii locomotive works at the end of August, workers sent three representatives to the works commissar who had them arrested. Three days later, the workers stopped work and demanded their release. The authorities locked the workers out of the works and a guard of 70 sailors were placed outside the enterprise. The Cheka arrested the workers' soviet delegates (who were from the SR (Minority) list) as well as thirty workers. *"The opportunity was taken to carry out a general round-up"* and arrests were made at other works. After the arrests, *"a meeting was held to elect new soviet delegates but the workers refused to co-operate and a further 150 were arrested and exiled to Murmansk or transferred to other workshops."* [Aves, **Op. Cit.**, p. 44 and pp. 46-7]

Strikes occurred in other places, such as Tula were the workforce *"contained a high proportion of skilled, long-standing, hereditary workers."* The *"all-out strike"* started at the start of June and on 8 June

the local newspaper published a declaration from the Tula soviet threatening the strikers with *"the most repressive measures, including the application of the highest measure of punishment"* (i.e. executions). The following day the city was declared to be under a *"state of siege"* by the local military authorities. The strikers lost ration cards and by 11 June there had been a return to work. Twenty-three workers were sentenced to a forced labour camp until the end of the war. However, the *"combined impact of these measures did not prevent further unrest and the workers put forward new demands."* On 19 June, the soviet approved *"a programme for the suppression of counter-revolution"* and *"the transfer of Tula to the position of an armed camp."* The Tula strike *"highlights the way in which workers, particularly skilled workers who were products of long-standing shop-floor subcultures and hierarchies, retained the capability as well as the will to defend their interests."* [Aves, **Op. Cit.**, p. 50-55]

While strike activity *"was most common in Petrograd, where there had been 2.5 strikers for every workman,"* the figure for Moscow was 1.75 and 1.5 in Kazan. In early March *"a wave of strikes hit the Volga town of Samara"* when a strike by printers in spread to other enterprises. *"Strike action in Moscow did not just include traditionally militant male metal workers."* Textile workers, tram workers and printers all took strike action. [Aves, **Op. Cit.**, p. 69, p. 72 and pp. 77-8]

Thus strike action was a constant feature of civil war Bolshevik Russia. Rather than being an *"atomised"* mass, the workers repeatedly organised themselves, made their demands and took collective action to achieve them. In response, the Bolshevik regime used state repression to break this collective activity. As such, **if** the rise of Stalinism can, as modern-day Leninists argue, be explained by the *"atomisation"* of the working class during the civil war then the Bolshevik regime and its repression should be credited with ensuring this happened.

The end of the civil war did not see the end of working class protest. Quite the reverse. In February and March 1921 *"industrial unrest broke out in a nation-wide wave of discontent . . . General strikes, or very widespread unrest, hit Petrograd, Moscow, Saratov and Ekaterinoslavl."* Only one major industrial region was unaffected. As noted above, the Bolsheviks refused to call this movement a strike wave, preferring the term **volynka** (which means "go-slow"), yet *"the continued use of the term can be justified not to hide its significance but to show that workers' protest consisted not just of strikes but also of factory occupations, 'Italian strikes,' demonstrations, mass meetings, the beating up of communists and so on."* [Aves, **Op. Cit.**, p. 109 and p. 112]

In Petrograd in the beginning of February *"strikes were becoming an everyday occurrence"* and by *"the third week of February the situation rapidly deteriorated."* The city was rocked by strikes, meetings and demonstrations. In response to the general strike the Bolsheviks replied with a *"military clamp-down, mass arrests and other coercive measures, such as the closure of enterprises, the purging of the workforce and stopping of rations which accompanied them."* As we discuss in ["What was the Kronstadt Rebellion?"](#), these strikes produced the Kronstadt revolt (and, as noted in [section 10](#) of that appendix, the Bolshevik repression ensured the Petrograd workers did not act with the sailors). [Aves, **Op. Cit.**, p. 113, p. 120]

A similar process of workers revolt and state repression occurred in Moscow at the same time. There *"industrial unrest"* also *"turned into open confrontation and protest spilled on to the streets."* Meetings were held, followed by demonstrations and strikes. Over the next few days strikes spread to other districts. Workers demanded now elections to the soviets be held. Striking railway workers sent emissaries along the railway to spread the strike and strikes spread to outside Moscow city itself and into the surrounding provinces. Unsurprisingly, Moscow and Moscow province were put under martial law and SR and menshevik leaders were arrested. [Aves, **Op. Cit.**, p. 130 pp. 139-144] However, *"military units called in"* against striking workers *"refused to open fire, and they were replaced by the armed communist detachments"* who did. *"The following day several factories went on strike"* and troops *"disarmed and locked in as a precaution"* by the government against possible fraternising. On February 23rd, *"Moscow was placed under martial law with a 24-hour watch on factories by the communist detachments and trustworthy army units."* [Richard Sakwa, **Soviet Communists in Power**, p. 94 and pp. 94-5 and p. 245] The mixture of (economic) concessions and coercion broke the will of the strikers.

Strikes and protests occurred all across Russia at this time (see Aves, **Op. Cit.**). In Saratov, the strike started on March 3 when railroad shop workers did not return to their benches and instead rallied to discuss an anticipated further reduction in food rations. *"Led by a former Communist, the railroad workers debated resolutions recently carried by the Moscow proletariat . . . The next day the strike spread to the metallurgical plants and to most other large factories, as Saratov workers elected representatives to an independent commission charged with evaluating the functioning of all economic organs. When it convened, the body called for the re-election of the soviets and immediate release of political prisoners."* The ration cut *"represent[ed] the catalyst, but not the cause, of the labour unrest."* While *"the turmoil touched all strata of the proletariat, male and female alike, the initiative for the disturbances came from the skilled stratum that the Communists normally deemed the most conscious."* The Communists shut down the commission and they *"expected workers to protest the dissolution of their elected representatives"* and so they *"set up a Provincial Revolutionary Committee . . . which introduced martial law both in the city and the garrison. It arrested the ringleaders of the workers' movement . . . the police crackdown depressed the workers' movement and the activities of the rival socialist parties."* The Cheka sentenced 219 people to death. [Donald J. Raleigh, **Experiencing Russia's Civil War**, p. 379, p. 387, p. 388, pp. 388-9]

A similar *"little Kronstadt"* broke out in the Ukrainian town of Ekaterinoslavl at the end of May. The workers there *"clearly had strong traditions of organisation"* and elected a strike committee of fifteen which *"put out a series of political ultimatums that were very similar in content to the demands of the Kronstadt rebels."* On 1 June, *"by a pre-arranged signal"* workers went on strike throughout the town, with workers joining a meeting of the railway workers. The local Communist Party leader was instructed *"to put down the rebellion without mercy . . . Use Budennyi's cavalry."* The strikers prepared a train and its driver instructed to spread the strike throughout the network. Telegraph operators were told to send messages throughout the Soviet Republic calling for *"free soviets"* and soon an area up to fifty miles around the town was affected. The Communists used the Cheka to crush the movement, carrying out mass arrests and shooting 15 workers (and dumping their bodies in the River Dnepr). [Aves, **Op. Cit.**, pp. 171-3]

So faced with an *"atomised"* working class during the period of 1918 and 1921, the Bolsheviks had to respond with martial law, mass arrests and shootings:

"It is not possible to estimate with any degree of accuracy how many workers were shot by the Cheka during 1918-1921 for participation in labour protest. However, an examination of individual cases suggests that shootings were employed to inspire terror and were not simply used in the occasional extreme case." [Aves, **Op. Cit.**, p. 35]

Post-Kronstadt, similar Bolshevik responses to labour unrest continued. The economic crisis of 1921 which accompanied the introduction of the NEP saw unemployment rise yet *"[d]espite the heavy toll of redundancies, the ability to organise strikes did not disappear. Strike statistics for 1921 continue to provide only a very rough indicator of the true scale of industrial unrest and appear not to include the first half of the year."* The spring of 1922 saw Soviet Russia *"hit by a new strike wave"* and the strikes *"continued to reflect enterprise traditions."* That year saw 538 strikes with 197,022 participants recorded. [Aves, **Op. Cit.**, p. 183 and p. 184]

The following year saw more strikes: *"In July 1923 more than 100 enterprises employing a total of some 50,000 people were on strike. In August figures totalled some 140 enterprises and 80,00 workers. In September and November the strike wave continued unabated."* As in the civil war, the managers shut down plants, fired the workers and rehired them on an individual basis. In this way, trouble-makers were dismissed and *"order"* restored. *"The pattern of workers' action and Bolshevik reaction played itself out frequently in dozens of other strikes. The Bolsheviks acted with the explicit purpose of rooting out the possibility of further protest. They tried to condition workers that labour protest was futile."* The GPU *"used force to disperse workers demonstrating with the arrested strike leaders."* [Vladimir Brovkin, **Russia After Lenin**, p. 174, pp. 174-5 and p. 175]

In Moscow, for example, *"[b]etween 1921 and 1926, all branches of industry and transport . . . experienced wildcat strikes or other spontaneous labour disturbances. Strike waves peaked in the winter of 1920-21 . . . and in the summer and fall of 1922 and 1923 . . . during July-December 1922, for example, 65 strikes and 209 other industrial disturbances were recorded in Moscow's state enterprises."* Metalworkers were arguably the most active sector at this time while *"a number of large strikes"* took place in the textile industry (where *"strikes were sometimes co-ordinated by spontaneously organised strike committees or 'parallel' factory committees"*). And in spite of repression, *"politicisation continued to characterise many labour struggles"* and, as before, *"spontaneous labour activism hindered not only the party's economic program but also the political and social stabilisation of the factories."* [John B. Hatch, **Labour Conflict in Moscow, 1921-1925**, p. 62, p. 63, p. 65, pp. 66-7 and p. 67]

Given this collective rebellion all across the industrial centres of Russia throughout the Civil War and after, it hard to take seriously claims that Bolshevik authoritarian was the product of an *"atomisation"* or *"declassing"* of the working class or that it had ceased to exist in any meaningful sense. Clearly it had and was capable of collective action and organisation -- until it was repressed by the Bolsheviks and even then it keep returning. This implies that a key factor in rise of Bolshevik authoritarian was political

-- the simple fact that the workers would not vote Bolshevik in free soviet and union elections and so they were not allowed to. As one Soviet Historian put it, *"taking the account of the mood of the workers, the demand for free elections to the soviets [raised in early 1921] meant the implementation in practice of the infamous slogan of soviets without communists,"* although there is little evidence that the strikers actually raised that *"infamous"* slogan. [quoted by Aves, **Op. Cit.**, p. 123] It should also be noted that Bolshevik orthodoxy at the time stressed the necessity of Party dictatorship **over** the workers (see [section H.1.2](#) for details).

Nor can it be said that this struggle can be blamed on *"declassed"* elements within the working class itself. In her study of this question, Diane Koenker notes that 90% of the change in the number of workers in Moscow *"is accounted for by men. Working women did not leave the city,"* their numbers dropping from 90,000 in 1918 to 80,000 in 1920. Why these 80,000 women workers should be denied a say in their own revolution is not clear, given the arguments of the pro-Bolshevik left. After all, the same workers remained in roughly the same numbers. Looking at the male worker population, their numbers fell from 215,000 to 124,000 during the same period. However, *"the skilled workers whose class consciousness and revolutionary zeal had helped win the October revolution did not entirely disappear, and the women who remained were likely to be family members of these veterans of 1917."* It was *"the loss of young activists rather than all skilled and class conscious urban workers that caused the level of Bolshevik support to decline during the civil war."* Indeed *"the workers who remained in the city were among the most urbanised elements."* In summary, *"the deurbanisation of those years represented a change in quantity but not entirely in quality in the cities. The proletariat declined in the city, but it did not wither away . . . a core of the city's working class remained."* [**Op. Cit.**, p. 440, p. 442, p. 447 and p. 449]

As Russian anarchist Ida Mett argued decades before in relation to the strikes in early 1921:

"The population was drifting away from the capital. All who had relatives in the country had rejoined them. The authentic proletariat remained till the end, having the most slender connections with the countryside.

"This fact must be emphasised, in order to nail the official lies seeking to attribute the Petrograd strikes that were soon to break out to peasant elements, 'insufficiently steeled in proletarian ideas.' The real situation was the very opposite. A few workers were seeking refuge in the countryside. The bulk remained. There was certainly no exodus of peasants into the starving towns! . . . It was the famous Petrograd proletariat, the proletariat which had played such a leading role in both previous revolutions, that was finally to resort to the classical weapon of the class struggle: the strike." [**The Kronstadt Uprising**, p. 36]

In terms of struggle, links between the events in 1917 and those during the civil war also exist. For example Jonathan Aves writes that there were *"distinct elements of continuity between the industrial unrest in 1920 and 1917. This is not surprising since the form of industrial unrest in 1920, as in the pre-revolutionary period and in 1917, was closely bound up with enterprise traditions and shop-floor sub-*

cultures. The size of the Russian industrial workforce had declined steeply during the Civil War but where enterprises stayed open . . . their traditions of industrial unrest in 1920 shows that such sub-cultures were still capable of providing the leaders and shared values on which resistance to labour policies based on coercion and Communist Party enthusiasm could be organised. As might be anticipated, the leaders of unrest were often to be found amongst the skilled male workers who enjoyed positions of authority in the informal shop-floor hierarchies." Moreover, "despite intense repression, small groups of politicised activists were also important in initiating protest and some enterprises developed traditions of opposition to the communists." [Op. Cit., p. 39]

Looking at the strike wave of early 1921 in Petrograd, the "*strongest reason for accepting the idea that it was established workers who were behind the **volynka** [i.e. the strike wave] is the form and course of protest. Traditions of protest reaching back through the spring of 1918 to 1917 and beyond were an important factor in the organisation of the **volynka**. . . . There was also a degree of organisation . . . which belies the impression of a spontaneous outburst.*" [Aves, **Op. Cit.**, p. 126]

Clearly, then, the idea that the Russian working class was atomised or declassed cannot be defended given this series of struggles and state repression. In fact, as noted, the notion that the workers were "*declassed*" was used to justify state repression of collective working class struggle. "*The thought oppressed me,*" wrote Emma Goldman, "*that what [the Bolsheviks] called 'defence of the Revolution' was really only the defence of [their] party in power.*" [**My Disillusionment in Russia**, p. 57] She was right -- the class struggle in Bolshevik Russia did not stop, it continued except the ruling class had changed from bourgeoisie to Bolshevik dictatorship.

Faced with this collective resistance to Bolshevism, the Leninist could argue that while the working class was capable of collective decision making and action, the nature of that action was suspect. This argument rests on the premise that the "*advanced*" workers (i.e. party members) left the workplace for the front or for government posts, leaving the "*backward*" workers behind. This argument is often used, particularly in regard to the Kronstadt revolt of 1921 (see [section 8](#) of the appendix on "[What was the Kronstadt Rebellion?](#)").

Of course, this argument raises more problems than it solves. In **any** revolution the "*most politically consciousness*" tend to volunteer to go to the front first and, of course, tend to be elected as delegates to committees of various kinds (local, regional and national). There is little that can be done about it. Needless to say, if "*soviet democracy*" depends on the "*advanced*" workers being there in order for it to work, then it suggests that the commitment to democracy is lacking in those who argue along these lines. It suggests that if the "*backward*" masses reject the "*advanced*" ones then the latter have the right, even the duty, to impose their will on the former. And it also begs the question of who determines what constitutes "*backward*" -- if it means "*does not support the party*" then it becomes little more than a rationale for party dictatorship (as it did under Lenin and Trotsky).

Writing in 1938, Trotsky inadvertently exposes the logic of this position. Asserting that a "*revolution is 'made' directly by a **minority**,*" he argued that the "*success*" of a revolution is "*possible*" when "*this*

*minority finds more or less support, or at least friendly neutrality, on the part of the majority." So what happens if the majority expresses opposition to the party? Unfortunately Trotsky does not raise this question, but he does answer it indirectly. As we discuss in [section 15](#) of the appendix on "[What was the Kronstadt Rebellion?](#)", Trotsky argues that "to free the soviets from the leadership [sic!] of the Bolsheviks would have meant within a short time to demolish the soviets themselves. The experience of the Russian soviets during the period of Menshevik and SR domination and, even more clearly, the experience of the German and Austrian soviets under the domination of the Social Democrats, proved this. Social Revolutionary-anarchist soviets could only serve as a bridge from the proletarian dictatorship. They could play no other role, regardless of the 'ideas' of their participants." [Lenin and Trotsky, **Kronstadt**, p. 85 and p. 90]*

Thus to let the working masses (the "majority") have free soviet elections and reject the vanguard (the "minority") would mean the end of soviet power. Thus allowing the proletariat a say in progress of the revolution means the end of the "proletarian dictatorship"! Which, of course, is interesting logic. The authoritarian core of the Bolshevik vision of revolution is thus exposed.

Victor Serge also presents an insight into the Bolshevik perspective on the revolution. He states that "[a] gitation conducted by the SRs and Mensheviks called demonstrations in the streets and prepared for a general strike. The demands were: free trade, wage increases, payment of wages one, two or three months in advance and 'democracy.' The intention was to incite the working class itself against the revolution." Which only makes sense once you realise that by "the revolution" Serge simply meant "the Bolsheviks" and the obvious truth that the working class was **not** managing the revolution at all, was **not**, in any sense, "in power." "The best elements among the workers," explains Serge, "were away fighting; those in the factories were precisely the less energetic, less revolutionary sections, along with the petty folk, yesterday's small shopkeepers and artisans, who had come there to find refuge. This proletariat of the reserve often allowed itself to fall under the sway of Menshevik propaganda." [**Year One of the Russian Revolution**, p. 229]

Given that Serge is discussing the period **before** the Czechoslovak revolt, a greater indictment of Bolshevism cannot be found. After all, what does "workers' democracy" mean unless the proletariat can vote for its own delegates? Little wonder Daniel Guerin described Serge's book as "largely a justification of the liquidation of the soviets by Bolshevism." [**Anarchism**, p. 97] After all, what point is there having genuine soviet elections if the "less revolutionary sections" (i.e. Trotsky's "majority") will not vote for the vanguard? And can socialism exist without democracy? Can we expect an unaccountable vanguard to govern in the interests of anyone but its own? Of course not!

Thus the Bolsheviks did not solve the answer the questions Malatesta raised in 1891, namely "if you consider these worthy electors as unable to look after their own interests themselves, how is it that they will know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing the election of a genius from the votes of a mass of fools?" [**Anarchy**, p. 53]

Given this, is it surprising that the Bolsheviks revised the Marxist theory of the state to justify elite rule? As discussed in [section H.3.8](#), once in power Lenin and Trotsky stressed that the "workers' state" had to be independent of the working class in order to overcome the "wavering" and "vacillation of the masses themselves." Or, to quote Serge, the "*party of the proletariat must know, at hours of decision, how to break the resistance of the backward elements among the masses; it must know how to stand firm sometimes against the masses . . . it must know how to go against the current, and cause proletarian consciousness to prevail against lack of consciousness and against alien class influences.*" [Op. Cit., p. 218] Of course, by definition, **every** group is "backward" compared to the vanguard and so Serge's argument amounts to little more than a justification for party dictatorship **over** the proletariat.

The reason why such a system would not result in socialism does not take long to discover. For anarchists, freedom is not just a goal, a noble end to be achieved, but rather a necessary part of the process of creating socialism. Eliminate freedom (and, as a necessary result, workplace and community self-management) and the end result will be anything **but** socialism. Ultimately, as Malatesta argued, "*the only way that the masses can raise themselves*" is by freedom "*for it is only through freedom that one educates oneself to be free.*" [Op. Cit., p. 52] Ironically, by using state repression to combat "backward" elements, the Bolsheviks ensured that they stayed that way and, more importantly, disempowered the **whole** working class so ensuring that Bolshevik dictatorship came into constant conflict with it and its continuing struggle for autonomy. Rather than base itself on the creative powers of the masses, Bolshevism crushed it as a threat to its power and so ensured that the economic and social problems affecting Russia increased.

And need it be pointed out that "low" culture and/or "backward" social life have been used by numerous imperialist and authoritarian states to justify their rule over a given population? It matters little whether the population are of the same nationality of the rulers or from a subjugated people, the arguments and the logic are the same. Whether dressed up in racist or classist clothing, the same elitist pedigree lies behind the pro-Bolshevik argument that democracy would have brought "chaos" or "capitalist restoration." The implicit assumption that working class people are not fit for self-government is clear from these rationales. Equally obvious is the idea that the party knows better than working class people what is best for them.

Sounding like Bolshevik Henry Kissingers, the Leninists argue that Lenin and Trotsky had to enforce their dictatorship **over** the proletariat to stop a "capitalist restoration" (Kissinger was the US state's liaison with the Chilean military when it helped their coup in 1973 and infamously stated that the country should not be allowed to turn communist due to the stupidity of its own people). Needless to say, anarchists argue that even if the Bolshevik regime had not already need capitalist (specifically, **state** capitalist) this logic simply represents an elitist position based on "*socialism from above.*" Yes, soviet democracy **may** have resulted in the return of (private) capitalism but by maintaining party dictatorship the possibility of socialism was automatically nullified. Simply put, the pro-Leninist argument implies that socialism can be implemented from above as long as the right people are in power. The authoritarian core of Leninism is exposed by these arguments and the repression of working class revolt which they justified.

Given this, it seems incredulous for Leninists like Chris Harman to argue that it was the "*decimation of the working class*" which caused (by "*necessity*") the "*Soviet institutions*" to take "*on a life independently of the class they had arisen from. Those workers and peasants who fought the Civil War could not govern themselves collectively from their places in the factories.*" [**How the revolution was lost**] Given that this "*independent*" life is required to allow the party to "*go against the current,*" Harman simply fails to understand the dynamics of the revolution, the position of the vanguard and the resistance of the working class subject to it. Moreover, the reason **why** the "*workers and peasants*" could not govern themselves collectively was because the party had seized power for itself and systematically destroyed soviet, workplace and military democracy to remain there. Then there is the way the Bolsheviks reacted to such collective unrest. Simply put, they sought to break the workers as a collective force. The use of lockouts, re-registration was typical, as was the arresting of "*ringleaders.*" It seems ironic, therefore, to blame "*objective factors*" for the "*atomisation*" of the working class when, in fact, this was a key aim of Bolshevik repression of labour protest.

Little wonder, then, that the role of the masses in the Russian Revolution after October 1917 is rarely discussed by pro-Bolshevik writers. Indeed, the conclusion to be reached is simply that their role is to support the party, get it into power and then do what it tells them. Unfortunately for the Bolsheviks, the Russian working class refused to do this. Instead they practised collective struggle in defence of their economic **and** political interests, struggle which inevitably brought them into conflict both with the "*workers' state*" and their role in Bolshevik ideology. Faced with this collective action, the Bolshevik leaders (starting with Lenin) started to talk about the "*declassing*" of the proletariat to justify their repression of (and power **over**) the working class. Ironically, it was the aim of Bolshevik repression to "*atomise*" the working class as, fundamentally, their rule depended on it. While Bolshevik repression did, in the end, win out it cannot be said that the working class in Russia did not resist the usurpation of power by the Bolshevik party. As such, rather than "*atomisation*" or "*declassing*" being the cause for Bolshevik power and repression, it was, in fact, one of **results** of them.

6 Did the Bolsheviks blame "*objective factors*" for their actions?

In a word, no. At the time of the revolution and for some period afterwards, the idea that "*objective factors*" were responsible for their policies was one which few, if any, Bolshevik leaders expressed. As we discussed in [section 2](#), Bolsheviks like Lenin, Trotsky and Bukharin argued that **any** revolution would face civil war and economic crisis. Lenin **did** talk about the "*declassing*" of the proletariat from 1920 onwards, but that did not seem to affect the proletarian and socialist character of his regime (as we noted in [section 5](#), Lenin's argument was developed in the context of **increasing** working class collective action, **not** its absence).

This is not to say that the Bolshevik leaders were 100% happy with the state of their revolution. Lenin, for example, expressed concern about the rising bureaucratic deformations he saw in the soviet state (particularly after the end of the civil war). Yet Lenin, while concerned about the bureaucracy, was not

concerned about the Party's monopoly of power. Unsurprisingly, he fought the bureaucracy by "top-down" and, ironically, bureaucratic methods, the only ones left to him. A similar position was held by Trotsky, who was quite explicit in supporting the party dictatorship throughout the 1920s (and, indeed, the 1930s). Needless to say, both failed to understand how bureaucracy arises and how it could be effectively fought.

This position started to change, however, as the 1920s drew on and Trotsky was increasingly sidelined from power. Then, faced with the rise of Stalinism, Trotsky had to find a theory which allowed him to explain the degeneration of the revolution and, at the same time, absolve Bolshevik ideology (and his own actions and ideas!) from all responsibility for it. He did so by invoking the objective factors facing the revolution. Since then, his various followers have utilised this argument, with various changes in emphasis, to attack Stalinism while defending Bolshevism.

The problem with this type of argument is that all the major evils usually associated with Stalinism already existed under Lenin and Trotsky. Party dictatorship, one-man management, repression of opposition groups and working class protest, state bureaucracy and so on all existed before Stalin manoeuvred himself into absolute power. And with the exception of state bureaucracy, none of the mainstream Bolshevik leaders found anything to complain about. Indeed, the reverse. Whether it is Lenin or Trotsky, the sad fact of the matter is that a party dictatorship presiding over an essentially state capitalism economy was not considered a bad thing. Which, of course, causes problems for those who seek to distance Lenin and Trotsky from Stalinism and claim that Bolshevism is fundamentally "*democratic*" in nature.

The knots Leninists get into to do this can be ludicrous. A particularly crazy example of this can be seen from the UK's Socialist Workers' Party. For John Rees, it is a truism that "*it was overwhelmingly the force of circumstance which obliged the Bolsheviks to retreat so far from their own goals. They travelled this route in opposition to their own theory, not because of it -- no matter what rhetorical justifications were given at the time.*" ["*In Defence of October,*" pp. 3-82, **International Socialism**, no. 52, p. 70]

However, this sort of position has little substance to it. It is both logically and factually flawed. Logically, it simply makes little sense as anything but an attempt to narrow political discussion and whitewash Bolshevik practice and politics. Rees, in effect, is saying that not only are we **not** to judge the Bolsheviks by their actions, we must also discount what they said -- unless it was something modern day Leninists approve of! Given that Leninists constantly quote from Lenin's (and Trotsky's) post-1918 works, it seems strange that they try to stop others so doing! Strange, but not surprising, given their task is to perpetuate the Bolshevik Myth. Where that leaves revolutionary politics is left unsaid, but it seems to involve worshipping at the shrine of October and treating as a heretic anyone who dares suggest we analysis it in any depth and perhaps learn lessons from it and the Bolshevism that dominated it.

Of course Rees' comments are little more than assertions. Given that he dismisses the idea that we can actually take what any Bolshevik says at face value, we are left with little more than a mind reading operation in trying to find out what the likes of Lenin and Trotsky "*really*" thought. Perhaps the root

explanation of Rees' position is the awkward fact that there are no quotes from any of the leading Bolsheviks which support it? After all, if they were quotes from the hallowed texts expounding the position Rees says the Bolshevik leaders *"really"* held then he would have provided them. The simple fact is that Lenin and Trotsky, like all the Bolshevik leaders, considered a one-party dictatorship ruling over a state capitalist economy as some form of *"socialism."* That was certainly Trotsky's position and he was **not** shy in expressing. But, of course, we can dismiss this simply as *"rhetorical justifications"* rather than an expression of *"their own theory"*! We will never know, as they never expressed *"their own theory"* and instead made do with the *"rhetorical justifications"* Rees is at such pains for us to ignore!

Which shows that a major problem in discussing the failure of the Russian Revolution is the attitude of modern day Leninists. Rees presents us with another example when he asserts that *"what is required of historians, particularly Marxists, is to separate phrase from substance."* The Bolsheviks, Rees argues, were *"inclined to make a virtue of necessity, to claim that the harsh measures of the civil war were the epitome of socialism."* Thus the Bolsheviks cannot be blamed either for what they did or what they said. Indeed, he states that non-Leninists *"take Lenin or Trotsky's shouts of command in the midst of battle and portray them as considered analyses of events."* [Op. Cit., p. 46]

This argument is simply incredulous. After all, neither Lenin nor Trotsky could be said to be anything **but** political activists who took the time to consider events and analyse them in detail. Moreover, they defended their arguments in terms of Marxism. Would Rees consider Lenin's **State and Revolution** as an unimportant work? After all, this was produced in the midst of the events of 1917, in often difficult circumstances. If so, then why not his other, less appealing, political proclamations (never mind actions)? Moreover, looking at some of the works produced in this period it is clear that they are anything **but** *"shouts of command in the midst of battle."* Trotsky's **Terrorism and Communism** is a substantial book, for example It was not an ad hoc comment made during a conference or *"in the midst of battle."* Quite the reverse, it was a detailed, substantial and thought-out reply to the criticism by the influential German social democrat Karl Kaustky (and, before Lenin, the most internationally respected Marxist thinker). Indeed, Trotsky explicitly asks the question *"[i]s there still theoretical necessity to justify revolutionary terrorism?"* and answers yes, his *"book must serve the ends of an irreconcilable struggle against the cowardice, half-measures, and hypocrisy of Kautskianism in all countries."* [**Terrorism and Communism**, p. 9 and p. 10]

Therefore, on the face of it, Rees's comments are hard to take seriously. It is even harder to take when it becomes clear that Rees does not apply his comments consistently or logically. He does not object to quoting Lenin and Trotsky during this period when they say something he **approves** of, regardless of how well it fits into their actions. It would be no exaggeration to say that his *"argument"* is simply an attempt to narrow the area of debate, marking off limits any comments by his heroes which would place his ideology in a bad light. It is hardly convincing, particularly when their *"good"* quotes are so at odds with their practice and their *"bad"* quotes so in line with them. And as Marx argued, we should judge people by what they do, **not** by what they say. This seems a basic principle of scientific analysis and it is significant, if not surprising, that Leninists like Rees want to reject it.

Ultimately, the theoretical problem with this position is that it denies the importance of implementing

ideas. After all, even if it were true that the *"theory"* of Bolshevism was different to its practice and the justifications for that practice, it would leave us with the conclusion that this *"theory"* was not sufficient when faced with the rigours of reality. In other words, that it is impractical. A conclusion that Leninists do not want to draw, hence the stress on *"objective factors"* to explain the failure of Bolshevism. As Marx said, judge people by what they do, not what they say (unless, of course, as with the Bolsheviks post-October, what they said reflects what they did!)

Similarly, there seems to be an idealist tint to Leninist accounts of the Russian Revolution. After all, they seem to think that the Lenin of 1921 was, essentially, the same person as the Lenin of 1917! That seems to violate the basic ideas of materialism. As Herbert Read points out, *"the phrase 'the dictatorship of the proletariat' . . . became fatal through the interventions of two political expedients -- the identification of the proletariat with the Bolshevik Party, and the use of the State as an instrument of revolution. Expedients and compromises may have been necessary for the defeat of the reactionary forces; but there is no doubt whatsoever that what took place was a progressive brutalisation of Lenin's own mind under the corrupting influence of the exercise of power."* [**A One-Man Manifesto**, p. 51] It seems common sense that if a political strategy exposes its followers to the corrupting effects of power we should factor this into any evaluation of it. Sadly, Leninists fail to do this -- even worse, they attempt to whitewash the post-October Lenin (and Trotsky) by excluding the "bad" quotes which reflect their practice, a practice which they are at pains to downplay (or ignore)!

Then, of course, there is the attitude of the Bolshevik leaders themselves to these so-called *"shouts of command in the midst of battle."* Rather than dismiss them as irrelevant, they continued to subscribe to them years later. For example, Trotsky was still in favour of party dictatorship in the late 1930s (see [section H.1.2](#)). Looking at his justly infamous **Terrorism and Communism**, we discover Trotsky in the 1930s reiterating his support for his arguments of 1920. His preface to the 1936 French edition sees him state that it was *"devoted to a clarification of the methods of the proletariat's revolutionary policy in our epoch."* He concluded as follows: *"Victory is conceivable only on the basis of Bolshevik methods, to the defence of which the present work is devoted."* The previous year, in his introduction to the second English edition, he was equally unrepentant. *"The British proletariat,"* he argued, *"will enter upon a period of political crisis and theoretical criticism . . . The teachings of Marx and Lenin for the first time will find the masses as their audience. Such being the case, it may be also that the present book will turn out to be not without its use."* He dismissed the *"consoling illusion"* that *"the arguments of this book [were] true for backward Russia"* but *"utterly without application to advanced lands."* The *"wave of Fascist or militarised police dictatorships"* in the 1920s and 1930s was the reason. It seems ironic that Trotsky's self-proclaimed followers are now repeating the arguments of what he termed *"incurable Fabians."* [**Terrorism and Communism**, p. xix, p. xxxv, p. xlvi and p. xxxix]

Rather than distance himself from the authoritarian and state capitalist policies modern day Leninists claim were thrust upon an unwilling Bolshevik party by *"objective factors,"* Trotsky defends them! Moreover, as we noted in [section 12](#) of the appendix on ["What was the Kronstadt Rebellion?"](#), Trotsky himself argues that these *"objective factors"* would face **every** revolution. As it is, he argues that it was only the *"slow development of the revolution in the West"* which stopped *"a direct passage from military*

Communism to a Socialistic system of production." Rather than admit to "illusions" caused by the "iron necessity" of wiling the civil war, he talks about "those economic hopes which were bound up with the development of the world revolution." He even links Bolshevik practice with Stalinism, noting that the "idea of five-year plans was not only formulated in that period [1918-1920], but in some economic departments it was also technically worked out." [Op. Cit., p. xliii]

Even his essay outlining what he considers the differences between Stalinism and Bolshevism does not see him fundamentally distancing himself from the positions modern day Leninists like to explain by "objective factors." He stated that the "Bolshevik party achieved in the civil war the correct combination of military art and Marxist politics." What did that involve? Immediately before making that claim he argued that the "Bolshevik party has shown the entire world how to carry out armed insurrection and the seizure of power. Those who propose the abstraction of the Soviets from the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." Thus the "party dictatorship" is seen as being an example of "Marxist politics" being successfully applied and not something to be opposed. Moreover, "the Bolshevik party was able to carry on its magnificent 'practical' work only because it illuminated all its steps with theory." [Stalinism and Bolshevism] Clearly, rather than denounce the power of the party as being against Bolshevik theory, as Rees claims, for Trotsky it represented its application. While he excuses some Bolshevik actions (such as the banning of opposition groups) as a product of "objective factors," he clearly sees the degeneration of the revolution coming **after** the civil war and its "correct combination" of "Marxist politics" and "military art," which included "party dictatorship" over the soviets.

This lack of distancing is to be expected. After, the idea that "objective factors" caused the degeneration of the Russian Revolution was first developed by Trotsky to explain, after his fall from power) the rise of Stalinism. While **he** was head of the Soviet state no such "objective" factors seemed to be required to "explain" the party dictatorship over the working class. Indeed, quite the reverse. As he argued in 1923 "[i]f there is one question which basically not only does not require revision but does not so much as admit the thought of revision, it is the question of the dictatorship of the Party." [Leon Trotsky Speaks, p. 158]

Trotsky was just stating mainstream Bolshevik ideology, echoing a statement made in March 1923 by the Central Committee (of which he and Lenin were members) to mark the 25th anniversary of the founding of the Communist Party. It sums up the lessons gained from the revolution and states that "the party of the Bolsheviks proved able to stand out fearlessly against the vacillations within its own class, vacillations which, with the slightest weakness in the vanguard, could turn into an unprecedented defeat for the proletariat." Vacillations, of course, are expressed by workers' democracy. Little wonder the statement rejects it: "The dictatorship of the working class finds its expression in the dictatorship of the party." ["To the Workers of the USSR" in G. Zinoviev, **History of the Bolshevik Party**, p. 213, p. 214] It should be noted that Trotsky had made identical comments before and immediately after the civil war -- as well as long after (see [section H.3.8](#) for details).

So, as with all the leading Bolsheviks, he considered the party dictatorship as an inevitable result of any proletarian revolution. Moreover, he did not question the social relationships within production either. One-man management held no fears for him and he called the state capitalist regime under himself and Lenin as "*socialist*" and defended it as such. He was fully supportive of one-man management. Writing in 1923, he argued that the "*system of actual one-man management must be applied in the organisation of industry from top to bottom. For leading economic organs of industry to really direct industry and to bear responsibility for its fate, it is essential for them to have authority over the selection of functionaries and their transfer and removal.*" These economic organs must "*in actual practice have full freedom of selection and appointment.*" [quoted by Robert V. Daniels, **A Documentary History of Communism**, vol. 1, p. 237]

All of these post-civil war opinions of course, fit in well with his civil war opinions on the matter. Which, incidentally, explains why, to quote a Leninist, Trotsky "*continued to his death to harbour the illusion that somehow, despite the lack of workers' democracy, Russia was a 'workers' state.'*" Simply put, there had been no workers' democracy under Lenin and Trotsky and he considered that regime a "*workers' state.*" The question arises why Harman thinks Lenin's Russia was some kind of "workers' state" if workers' democracy is the criteria by which such things are to be judged. But, then again, he thinks Trotsky's **Left Opposition** "*framed a policy along [the] lines*" of "*returning to genuine workers' democracy*"! [Chris Harman, **Bureaucracy and Revolution in Eastern Europe**, p. 20 and p. 19]

Now, it seems strange that rather than present what he "*really*" thought, Trotsky expounded what presumably is the **opposite** of it. Surely the simplistic conclusion to draw is that Trotsky said what he really did think and that this was identical to his so-called "*shouts of command*" made during the civil war? But, of course, all these comments can be dismissed as "*rhetorical justifications*" and not reflective of Trotsky's real "*theory.*" Or can they? Ultimately, either you subscribe to the idea that Lenin and Trotsky were able to express their ideas themselves or you subscribe to the notion that they hid their "*real*" politics and only modern-day Leninists can determine what they, in fact, "*really*" meant to say and what they "really" stood for. And as for all those "awkward" quotes which express the **opposite** of the divined true faith, well, they can be ignored.

Which is, of course, hardly a convincing position to take. Particularly as Lenin and Trotsky were hardly shy in justifying their authoritarian policies and expressing a distinct lack of concern over the fate of any **meaningful** working class conquest of the revolution like, say, soviet democracy. As Samuel Farber notes that "*there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921.*" [**Before Stalinism**, p. 44]

The sad fact is that the inter-party conflicts of the 1920s were **not** about "*workers' democracy,*" rather party democracy. The Bolsheviks simply relabelled "*party democracy*" as "*workers' democracy.*" Little wonder in 1925 that Max Eastman, one of Trotsky's main supporters at the time, stated "*this programme of democracy within the party [was] called 'Workers' Democracy' by Lenin*" and that "*Trotsky merely revived this original plea.*" [**Since Lenin Died**, p. 35] Trotsky held this position throughout the 1920s

and 1930s. As we noted in [section 13](#) of the appendix on "[What was the Kronstadt Rebellion?](#)", the 1927 **Platform of the Opposition** restated its belief in party dictatorship and argued that Stalin was undermining it in favour of rule by the bureaucracy. Ironically, Trotskyists in soviet prisons in the early 1930s "*continued to consider that 'Freedom to choose one's party -- that is Menshevism'*" and this was their "*final verdict.*" [Ante Ciliga, **The Russian Enigma**, p. 280] No wonder they seemed surprised to be there!

Trotsky's issue with Stalinism was not based on **real** socialist principles, such as meaningful working class freedoms and power. Rather it was a case of "*the political centre of gravity ha[ving] shifted from the proletarian vanguard to the bureaucracy*" and this caused "*the party*" to change "*its social structure as well as in its ideology.*" [**Stalinism and Bolshevism**] The party dictatorship had been replaced by the dictatorship of the state bureaucracy, in other words. Once this happened, Trotsky sought to explain it. As analysing the impact of Bolshevik ideology and practice were, by definition, out of the question, that left the various objective factors Trotsky turned to to explain developments after 1923. Now the concern for "*objective factors*" appeared, to explain Stalinism while keeping true to Bolshevik ideology **and** practice.

So, in summary, the leading Bolsheviks did not view "objective factors" as explaining the failure of the revolution. Indeed, until Trotsky was squeezed out of power they did not think that the revolution **had** failed. Party dictatorship and one-man management were **not** considered as expressions of a failed revolution, rather a successful one. Trotsky's issue with Stalinism was simply that the bureaucracy had replaced the "*the proletarian vanguard*" (i.e. himself and his followers) as the dominant force in the Soviet State and it had started to use the techniques of political repression developed against opposition parties and groups against him. The idea that "objective factors" caused the failure of the revolution was not used until the late 1920s and even then not used to explain the party dictatorship but rather the usurpation of **its** power by the bureaucracy.

Why does the Makhnovist movement show there is an alternative to Bolshevism?

The key Leninist defence of the actions of the Bolsheviks in the Russian revolution is that they had no other choice. Complaints against the Bolshevik attacks on the gains of the revolution and the pro-revolutionary Left in Russia are met with a mantra involving the white terror, the primitive state of Russia and the reactionary peasantry, the invading imperialist armies (although the actual number can, and does, vary depending on who you are talking to) and other such "*forces of nature*" which we are to believe could only be met by a centralised authoritarian regime that would flinch at nothing in order to survive.

However, this is not the case. This is for three reasons.

Firstly, there is the slight problem that many of the attacks on the revolution (disbanding soviets, undermining the factory committees, repressing socialists and anarchists, and so on) started **before** the start of the civil war. As such, it's difficult to blame the degeneration of the revolution on an event which had yet to happen (see [section 3](#) of the appendix "[What caused the degeneration of the Russian Revolution?](#)" for details).

Secondly, Leninists like to portray their ideology as "realistic," that it recognises the problems facing a revolution and can provide the necessary solutions. Some even claim, flying in the face of the facts, that anarchists think the ruling class will just "*disappear*" (see [section H.2.1](#)) or that we think "*full-blown*" communism will appear "*overnight*" (see [section H.2.5](#)). Only Bolshevism, it is claimed, recognises that civil war is inevitable during a revolution and only it provides the necessary solution, namely a "*workers state*." Lenin himself argued that "[n]ot a single great revolution in history has escaped civil war. No one who does not live in a shell could imagine that civil war is conceivable without exceptionally complicated circumstances." [**Will the Bolsheviks Maintain Power?**, p. 81] As such, it's incredulous that modern day followers of Lenin blame the degeneration of the Russian Revolution on the very factors (civil war and exceptional circumstances) that they claim to recognise as inevitable!

Thirdly, and even more embarrassingly for the Leninists, numerous examples exist both from revolutionary Russia at the time and from earlier and later revolutions that suggest far from Bolshevik tactics being the most efficient way of defending the revolution other methods existed which looked to the massive creative energies of the working masses unleashed by the revolution.

During the Russian Revolution the biggest example of this is found in South-Eastern Ukraine. For much of the Civil War this area operated without a centralised state apparatus of the Bolshevik type and was, instead, based on the anarchist idea of Free Soviets. There "*the insurgents raised the black flag of anarchism and set forth on the anti-authoritarian road of the free organisation of the*

workers." [Arshinov, **The History of the Makhnovist Movement**, p. 50] The space in which this happened was created by a partisan force that instead of using the "efficiency" of executions for desertion, tsarist officers appointed over the rank and file soldiers' wishes and saluting so loved by the Bolsheviks instead operated as a volunteer army with elected officers and voluntary discipline. This movement was the Makhnovists, named after its leader, the Ukrainian anarchist Nestor Makhno. The Black Flag which floated over the lead wagon of the Insurgent Army was inscribed with the slogans "*Liberty or Death*" and "*The Land to the Peasants, the Factories to the Workers.*" These slogans summarised what the Makhnovist were fighting for -- a libertarian socialist society. At its height in the autumn of 1919, the Makhnovists numbered around 40,000 and its extended area of influence corresponded to nearly one third of the Ukrainian Soviet Republic, comprising a population of over seven million.

It is this that explains the importance of the Makhnovists. As historian Christopher Reed notes, the "*Bolsheviks' main claim to legitimacy rested on the argument that they were the only ones capable of preventing a similar disaster [counter-revolution] for the workers and peasants of Russia and that their harsh methods were necessary in the face of a ruthless and unrelenting enemy.*" However, Reed argues that "*the Makhno movement in the Ukraine suggests that there was more than one way to fight against the counter-revolution.*" [**From Tsar to Soviets**, pp. 258-9] This is why the Makhnovist movement is so important, why it shows that there was, and is, an alternative to the ideas of Bolshevism. Here we have a mass movement operating in the same "*exceptional circumstances*" as the Bolsheviks which did **not** implement the same policies. Indeed, rather than suppress soviet, workplace and military democracy in favour of centralised, top-down party power and modify their political line to justify their implementation of party dictatorship, the Makhnovists did all they could to implement and encourage working-class self-government.

As such, it is difficult to blame the development of Bolshevik policies towards state-capitalist and party-dictatorship directions on the problems caused during the revolution when the Makhnovists, facing similar conditions, did all they could to protect working-class autonomy and freedom. Indeed, it could be argued that the problems facing the Makhnovists were greater in many ways. The Ukraine probably saw more fighting in the Russian Civil War than any other area. Unlike the Bolsheviks, the Makhnovists lost the centre of their movement and had to re-liberate it. To do so they fought the Austrian and German armies, Ukrainian Nationalists, Bolsheviks and the White Armies of Denikin and then Wrangel. There were smaller skirmishes involving Cossacks returning to the Don and independent "*Green*" bands. The anarchists fought all these various armies over the four years their movement was in existence. This war was not only bloody but saw constant shifts of fronts, advances and retreats and changes from near conventional war to mobile partisan war. The consequences of this was that no area of the territory was a safe "*rear*" area for any period of time and so little constructive activity was possible. [Section 4](#) presents a summary of the military campaigns of these years. A brief idea of the depth of fighting in these years can be seen by considering the town at the centre of the Makhnovists, Hulyai Pole which changed hands no less than 16 times in the period from 1917-1921.

Clearly, in terms of conflict (and the resulting disruption caused by it), the Makhnovists did not have the relative peace the Bolsheviks had (who never once lost their main bases of Petrograd or Moscow,

although they came close). As such, the problems used to justify the repressive and dictatorial policies of the Bolsheviks also apply to the Makhnovists. Despite this, the activity of the Makhnovists in the Ukraine demonstrated that an alternative to the supposedly necessary methods of the Bolsheviks did exist. Where the Bolsheviks suppressed freedom of speech, assembly and press, the Makhnovists encouraged it. Where the Bolsheviks turned the soviets into mere cyphers of their government and undermined soviet power, the Makhnovists encouraged working-class participation and free soviets. As we discuss in [section 7](#), the Makhnovists applied their ideas of working class self-management whenever and wherever they could.

Sadly, the Makhnovist movement is a relatively unknown event during the revolution. There are few non-anarchist accounts of it and the few histories which do mention it often simply slander it. However, as the Cohn-Bendit brothers correctly argue, the movement, *"better perhaps than any other movement, shows that the Russian Revolution could have been a great liberating force."* Equally, the reason why it has been almost totally ignored (or slandered, when mentioned) by Stalinist and Trotskyist writers is simple: *"It shows the Bolsheviks stifling workers and peasants with lies and calumnies, and then crushing them in a bloody massacre."* [Daniel and Gabriel Cohn-Bendit, **Obsolete Communism: The Left-Wing Alternative**, p. 200]

This section of our FAQ will indicate the nature and history of this important social movement. As we will prove, *"the Makhnovshchina . . . was a true popular movement of peasants and workers, and . . . its essential goal was to establish the freedom of workers by means of revolutionary self-activity on the part of the masses."* [Arshinov, **The History of the Makhnovist Movement**, p. 209] They achieved this goal in extremely difficult circumstances and resisted all attempts to limit the freedom of the working class, no matter where it came from. As Makhno himself once noted:

"Our practice in the Ukraine showed clearly that the peasant problem had very different solutions from those imposed by Bolshevism. If our experience had spread to the rest of Russia, a pernicious division between country and city would not have been created. Years of famine would have been avoided and useless struggles between peasant and workers. And what is more important, the revolution would have grown and developed along very different lines . . . We were all fighters and workers. The popular assembly made the decisions. In military life it was the War Committee composed of delegates of all the guerrilla detachments which acted. To sum up, everyone took part in the collective work, to prevent the birth of a managing class which would monopolise power. And we were successful. Because we had succeeded and gave lie to Bolshevik bureaucratic practices, Trotsky, betraying the treaty between the Ukraine and the Bolshevik authorities, sent the Red Army to fight us. Bolshevism triumphed militarily over the Ukraine and at Kronstadt, but revolutionary history will acclaim us one day and condemn the victors as counter-revolutionary grave-diggers of the Russian Revolution." [quoted by Abel Paz, **Durruti: The People Armed**, p. 88-9]

Two distinct aspects of the anarchist movement existed in the Ukraine at this time, a political and non-

military structure called the Nabat (Alarm) federation which operated through the soviets and collectives and a military command structure usually known after its commander Nestor Makhno as the *Makhnovshchina* (which means the "*Makhno movement*") although its proper name was the *Revolutionary Insurgent Army of the Ukraine*. This section of the FAQ will cover both, although the Makhnovshchina will be the main focus.

For more information on the Makhnovist movement, consult the following books. Anarchist accounts of the movement can be found in Peter Arshinov's excellent **The History of the Makhnovist Movement** and Voline's **The Unknown Revolution** (Voline's work is based on extensive quotes from Arshinov's work, but does contain useful additional material). For non-anarchist accounts, Michael Malet's **Nestor Makhno in the Russian Revolution** is essential reading as it contains useful information on both the history of the movement, its social basis and political ideas. Malet considers his work as a supplement to Michael Palij's **The Anarchism of Nestor Makhno, 1918-1921** which is primarily a military account of the movement but which does cover some of its social and political aspects. Unfortunately, both books are rare. Paul Avrich's **The Russian Anarchists** contains a short account of the movement and his **Anarchist Portraits** has a chapter on Nestor Makhno. Makhnovist source material is included in Avrich's **The Anarchists in the Russian Revolution**. Daniel Guerin includes a section on Makhno and the Makhnovist Movement in volume 2 of **No Gods, No Masters**. As well as extracts from Arshinov's book, it has various manifestos from the movement as well as Makhno's account of his meeting with Lenin. Christopher Read's **From Tsar to Soviets** has an excellent section on the Makhnovists. Serge Cipko presents an excellent overview of works on the Makhnovists in his "*Nestor Makhno: A Mini-Historiography of the Anarchist Revolution in Ukraine, 1917-1921*" (**The Raven**, no. 13). Alexander Skirda presents an overview of perestroika soviet accounts of Makhno in his essay "*The Rehabilitation of Makhno*" (**The Raven**, no. 8). Skirda's biography **Nestor Makhno: Le Cosaque de l'anarchie** is by far the best account of the movement available.

Lastly, a few words on names. There is a large variation on the spelling of names within the source material. For example, Makhno's home town has been translated as Gulyai Pole, Gulyai Polye Hulyai-Pole and Hulyai Pole. Similarly, with other place names. The bandit Grigor'ev has been also translated as Hryhor'iv and Hryhoriyiv. We generally take Michael Malet's translations of names as a basis (i.e. we use Hulyai Pole and Hryhoriyiv, for example).

1 Who was Nestor Makhno?

The Makhnovist movement was named after Nestor Makhno, a Ukrainian anarchist who played a key role in the movement from the start. Indeed, Makhnovshchina literally means "*Makhno movement*" and his name is forever linked with the revolution in the South-East of the Ukraine. So who was Makhno?

Nestor Ivanovich Makhno was born on the 27th of October, 1889 in Hulyai Pole, which is situated in Katerynoslav province, in the south east of the Ukraine between the Dnieper River and the Sea of Azov. While it seems to be conventional for many historians to call Hulyai Pole a "village," it was in fact a town with a population of about 30,000 and boasted several factories and schools.

Makhno was the son of a poor peasant family. His father died when he was ten months old, leaving him and his four brothers in the care of their mother. Due to the extreme poverty of his family, he had to start work as a shepherd at the age of seven. At eight he started to attend the Second Hulyai Pole primary school in winter and worked for local landlords during the summer. He left school when he was twelve and took up full-time employment as a farmhand on the estates of nobles and on the farms of the German colonist **kulaks**. At the age of seventeen, he started to work in Hulyai Pole itself, first as an apprentice painter, then as an unskilled worker in a local iron foundry and, finally, as a founder in the same establishment.

It was when he was working in the iron foundry that he became involved in revolutionary politics. In the stormy years following the 1905 revolution, Makhno got involved in revolutionary politics. This decision was based on his experiences of injustice at work and seeing the terror of the Russian regime during the 1905 events (in Hulyai Pole there had been no serious disorder, yet the regime sent a detachment of mounted police to suppress gatherings and meetings in the town, terrorising the population by whipping those caught in the streets and beating prisoners with rifle butts). In 1906, Makhno decided to join the anarchist group in Hulyai Pole (which had been formed the previous year and consisted mainly of sons of poorer peasants).

At the end of 1906 and in 1907, Makhno was arrested and accused of political assassinations, but was released due to lack of evidence. In 1908, due to the denunciation of a police spy within the anarchist group, he was arrested and put in jail. In March, 1910, Makhno and thirteen others were tried by a military court and sentenced to death by hanging. Due to his youth and the efforts of his mother, the death penalty was commuted to life imprisonment with hard labour. He served his time at the Butyrki prison in Moscow, resisting the prison authorities by every means available to him. Due to this resistance, he spent much of his time in chains or in damp and freezing confinement. This experience ensured that Makhno developed an intense hatred of prisons (later, during the revolution, his first act in entering a town or city was to release all prisoners and destroy the prison).

It was during his time in Butyrki that Makhno met Peter Arshinov, a fellow anarchist prisoner and later activist and historian of the Makhnovist movement. Arshinov was born in 1887 in the Ukrainian industrial town of Katerinoslav. His father was a factory worker and he was a metal worker. Originally a Bolshevik, he had become an anarchist in 1906, taking a leading part in organising factory workers and actions against the regime. In 1907 he was arrested and sentenced to death, escaping to Western Europe. In 1909, he returned to Russia and was again arrested and again escaped. In 1910, he was arrested and placed in the Butyrki prison where he met Makhno. The two anarchists established a close personal and political friendship, with Arshinov helping Makhno develop and deepen his anarchist ideas.

On March 2nd, 1917, after eight years and eight months in prison, Makhno was released along with all other political prisoners as a result of the February Revolution. After spending three weeks in Moscow with the Moscow anarchists, Makhno returned to Hulyai Pole. As the only political prisoner who was returned to his family by the revolution, Makhno became very well-respected in his home town. After years of imprisonment, suffering but learning, Makhno was no longer an inexperienced young activist,

but a tested anarchist militant with both a powerful will and strong ideas about social conflict and revolutionary politics. Ideas which he immediately set about applying.

Once home in Hulyai Pole, Makhno immediately devoted himself to revolutionary work. Unsurprisingly, the remaining members of the anarchist group, as well as many peasants, came to visit him. After discussing ideas with them, Makhno proposed beginning organisational work immediately in order to strengthen links between the peasants in Hulyai Pole and its region with the anarchist group. On March 28-29, a Peasant Union was created with Makhno as its chairman. Subsequently, he organised similar unions in other villages and towns in the area. Makhno also played a large part in a successful strike by wood and metal workers at a factory owned by his old boss (this defeat led to the other bosses capitulating to the workers as well). At the same time, peasants refused to pay their rent to the landlords. [Michael Malet, **Nestor Makhno in the Russian Civil War**, p. 4] Regional assemblies of peasants were called, both at Hulyai Pole and elsewhere, and on August 5-7, the provincial congress at Katerinoslav decided to reorganise the Peasant Unions into Soviets of Peasants' and Workers' Deputies.

In this way, "*Makhno and his associates brought socio-political issues into the daily life of the people, who in turn supported his efforts, hoping to expedite the expropriation of large estates.*" [Michael Palij, **The Anarchism of Nestor Makhno**, p. 71] In Hulyai Pole, the revolution was moving faster than elsewhere (for example, while the Aleksandrovsok soviet supported the actions of the Provisional Government during the July days in Petrograd, a meeting in Hulyai Pole saluted the rebellious soldiers and workers). Peasants were drawn to Hulyai Pole for advice and help from the neighbouring **volosts** (administrative districts). The peasantry wanted to seize the land of the large landowners and the kulaks (rich peasants). Makhno presented this demand at the first sessions of the regional Soviet, which were held in Hulyai Pole. In August, Makhno called all the local landlords and rich peasants (kulaks) together and all documents concerning ownership (of land, livestock and equipment) were taken from them. An inventory of this property was taken and reported to the session of the local soviet and then at a regional meeting. It was agreed that all land, livestock and equipment was to be divided equally, the division to include the former owners. This was the core of the agrarian program of the movement, namely the liquidation of the property of the landowners and kulaks. No-one could own more land than they could work with their own labour. All this was in flat defiance to the Provisional Government which was insisting that all such questions be left to the Constituent Assembly. Free communes were also created on ex-landlord estates.

Unsurprisingly, the implementation of these decisions was delayed because of the opposition of the landlords and kulaks, who organised themselves and appealed to the provisional authorities. When General Kornilov tried to march on Petrograd and take power, the Hulyai Pole soviet took the initiative and formed a local "*Committee for the Salvation of the Revolution*" headed by Makhno. The real aim was to disarm the potential local enemy -- the landlords, bourgeoisie, and kulaks -- as well as to expropriate their ownership of the people's wealth: the land, factories, plants, printing shops, theatres and so on. On 25 September a volost congress of Soviets and peasant organisations in Hulyai Pole proclaimed the confiscation of the landowners' land and its transformation into social property. Raids on the estates of landlords and rich peasants, including German colonists, began and the expropriation of the expropriators began.

Makhno's activities came to a halt the following spring when Lenin's government signed the Treaty of Brest-Litovsk. This treaty gave sizeable parts of the Russian Empire, including the Ukraine, to Germany and Austria in return for peace. The Treaty also saw the invasion of the Ukraine by large numbers of German and Austrian troops, who conquered the entire country in less than three months. Makhno succeeded in forming several military units, consisting of 1700 men, but could not stop Hulyai Pole being taken. After an anarchist congress at the end of April in Taganrog, it was decided to organise small combat units of five to ten peasants and workers, to collect arms from the enemy and to prepare for a general peasant uprising against the Austro-German troops and, finally, to send a small group to Soviet Russia to see at first hand what was happening there to both the revolution and to the anarchists under Bolshevik rule. Makhno was part of that group.

By June, Makhno had arrived in Moscow. He immediately visited a number of Russian anarchists (including his old friend Peter Arshinov). The anarchist movement in Moscow was cowed, due to a Cheka raid in April which broke the backbone of the movement, so ending a political threat to the Bolsheviks from the left. To Makhno, coming from an area where freedom of speech and organisation was taken for granted, the low level of activity came as a shock. He regarded Moscow as the capital of the *"paper revolution,"* whose red tape and meaninglessness had affected even the anarchists. Makhno also visited Peter Kropotkin, asking his advice on revolutionary work and the situation in the Ukraine. To Makhno, *"Moscow appeared as 'the capital of the Paper Revolution,' a vast factory turning out empty resolutions and slogans while one political party, by means of force and fraud, elevated itself into the position of a ruling class."* [David Footman, **Op. Cit.**, p. 252]

While in Moscow, Makhno met with Lenin. This meeting came about by chance. Visiting the Kremlin to obtain a permit for free board and lodging, he met the chairman of the All-Russian Central Executive Committee of the Soviets, Jakov M. Sverdlov, who arranged for Makhno to meet Lenin. Lenin asked Makhno, *"How did the peasants of your region understand the slogan ALL POWER TO THE SOVIETS IN THE VILLAGES?"* Makhno states that Lenin *"was astonished"* at his reply:

"The peasants understood this slogan in their own way. According to their interpretation, all power, in all areas of life, must be identified with the consciousness and will of the working people. The peasants understand that the soviets of workers and peasants of village, country and district are neither more nor less than the means of revolutionary organisation and economic self-management of working people in the struggle against the bourgeoisie and its lackeys, the Right socialists and their coalition government."

To this Lenin replied: *"Well, then, the peasants of your region are infected with anarchism!"* [Nestor Makhno, **My Visit to the Kremlin**, p. 18] Later in the interview, Lenin stated: *"Do the anarchists ever recognise their lack of realism in present-day life? Why, they don't even think of it."* Makhno replied:

"But I must tell you, comrade Lenin, that your assertion that the anarchists don't understand 'the present' realistically, that they have no real connection with it and so

forth, is fundamentally mistaken. The anarchist-communists in the Ukraine . . . the anarchist-communists, I say, have already given many proofs that they are firmly planted in 'the present.' The whole struggle of the revolutionary Ukrainian countryside against the Central Rada has been carried out under the ideological guidance of the anarchist-communists and also in part by the Socialist Revolutionaries . . . Your Bolsheviks have scarcely any presence in our villages. Where they have penetrated, their influence is minimal. Almost all the communes or peasant associations in the Ukraine were formed at the instigation of the anarchist-communists. The armed struggle of the working people against the counter-revolution in general and the Austro-German invasion in particular has been undertaken with the ideological and organic guidance of the anarchist-communists exclusively.

"Certainly it is not in your party's interest to give us credit for all this, but these are the facts and you can't dispute them. You know perfectly well, I assume, the effective force and the fighting capacity of the free, revolutionary forces of the Ukraine. It is not without reason that you have evoked the courage with which they have heroically defended the common revolutionary conquests. Among them, at least one half have fought under the anarchist banner. . .

"All this shows how mistaken you are, comrade Lenin, in alleging that we, the anarchist-communists, don't have our feet on the ground, that our attitude towards 'the present' is deplorable and that we are too fond of dreaming about the future. What I have said to you in the course of this interview cannot be questioned because it is the truth. The account which I have made to you contradicts the conclusions you expressed about us. Everyone can see we are firmly planted in 'the present,' that we are working and searching for the means to bring about the future we desire, and that we are in fact dealing very seriously with this problem."

Lenin replied: *"Perhaps I am mistaken."* [Makhno, **Op. Cit.**, pp. 24-5]

The Bolsheviks helped Makhno to return to the Ukraine. The trip was accomplished with great difficulty. Once Makhno was almost killed. He was arrested by Austro-German troops and was carrying libertarian pamphlets at the time. A Jewish inhabitant of Hulyai Pole, who had know Makhno for some time, succeeded in saving him by paying a considerable sum of money for his liberation. Once back in Hulyai-Pole, he started to organise resistance to the occupying forces of the Austro-Germans and their puppet regime led by Hetman Skoropadsky. With the resistance, the Makhno movement can be said to have arisen (see [section 3](#) on way it was named after Makhno). From July 1918 to August 1921, Makhno led the struggle for working class freedom against all oppressors, whether Bolshevik, White or Nationalist. During the course of this struggle, he proved himself to be *"a guerrilla leader of quite outstanding ability."* [David Footman, **Civil War in Russia**, p. 245] The military history of this movement is discussed in [section 4](#), while other aspects of the movement are discussed in other sections.

After the defeat of the Makhnovist movement in 1921, Makhno was exiled in Western Europe. In 1925 he ended up in Paris, where he lived for the rest of his life. While there, he remained active in the anarchist movement, with the pen replacing the sabre (to use Alexander Skirda's colourful expression). Makhno contributed articles to various anarchist journals and in particular to **Delo Truda**, an anarchist-communist paper started in Paris by Peter Arshinov (many of these articles have been published in the book **The Struggle Against the State and Other Essays**). He remained active in the anarchist movement to the end.

In Paris, Makhno met the famous Spanish anarchists Buenaventura Durruti and Francisco Ascaso in 1927. He argued that in Spain "*conditions for a revolution with a strong anarchist content are better than in Russia*" because not only was there "*a proletariat and a peasantry with a revolutionary tradition whose political maturity is shown in its reactions,*" the Spanish anarchists had "*a sense of organisation which we lacked in Russia. It is organisation which assures the success in depth of all revolutions.*" Makhno recounted the activities of the Hulyai Pole anarchist group and the events in revolutionary Ukraine:

"Our agrarian commune was at once the economic and political vital centre of our social system. These communities were not based on individual egoism but rested on principles of communal, local and regional solidarity. In the same way that the members of a community felt solidarity among themselves, the communities were federated with each other . . . It is said against our system that in the Ukraine, that it was able to last because it was based only on peasant foundations. It isn't true. Our communities were mixed, agricultural-industrial, and, even, some of them were only industrial. We were all fighters and workers. The popular assembly made the decisions. In military life it was the War Committee composed of delegates of all the guerrilla detachments which acted. To sum up, everyone took part in the collective work, to prevent the birth of a managing class which would monopolise power. And we were successful." [quoted by Abel Paz, **Durruti: The People Armed**, p. 88-9]

As can be seen from the social revolution in Aragon, Durruti took Makhno's advice seriously (see [section I.8](#) for more on the Spanish Revolution). Unsurprisingly, in 1936 a number of veterans of Makhno's Insurgent Army went to fight in the Durruti column. Sadly, Makhno's death in 1934 prevented his own concluding statement to the two Spaniards: "*Makhno has never refused to fight. If I am alive when you start your struggle, I will be with you.*" [quoted by Paz, **Op. Cit.**, p. 90]

Makhno's most famous activity in exile was his association with, and defence of, the **Organisational Platform of the Libertarian Communists** (known as the "*Platform*"). As discussed in [section J.3.3](#), the Platform was an attempt to analyse what had gone wrong in the Russian Revolution and suggested a much tighter anarchist organisation in future. This idea provoked intense debate after its publication, with the majority of anarchists rejecting it (for Makhno's discussion with Malatesta on this issue, see **The Anarchist Revolution** published by Freedom Press). This debate often resulted in bitter polemics and left Makhno somewhat isolated as some of his friends, like Voline, opposed the Platform. However,

he remained an anarchist to his death in 1934.

Makhno died on the morning of July 25th and was cremated three days later and his ashes placed in an urn within Pere Lachaise, the cemetery of the Paris Commune. Five hundred Russian, French, Spanish and Italian comrades attended the funeral, at which the French anarchist Benar and Voline spoke (Voline used the occasion to refute Bolshevik allegations of anti-Semitism). Makhno's wife, Halyna, was too overcome to speak.

So ended the life of one great fighters for working-class freedom. Little wonder Durruti's words to Makhno:

"We have come to salute you, the symbol of all those revolutionaries who struggled for the realisation of Anarchist ideas in Russia. We also come to pay our respects to the rich experience of the Ukraine." [quoted by Abel Paz, **Op. Cit.**, p. 88]

For fuller details of Makhno's life, see the accounts by Peter Arshinov (**The History of the Makhnovist Movement**), Paul Avrich ("*Nestor Makhno: The Man and the Myth*," in **Anarchist Portraits**), Michael Paliy, (**The Anarchism of Nestor Makhno**) and Michael Malet (**Nestor Makhno in the Russian Revolution**).

2 Why was the movement named after Makhno?

Officially, the Makhnovist movement was called the **Revolutionary Insurrectionary Army of the Ukraine**. In practice, it was usually called the "*Makhno movement*" ("*Makhnovshchina*" in Russian) or the Makhnovists. Unsurprisingly, Trotsky placed great significance on this:

*"The anti-popular character of the Makhno movement is most clearly revealed in the fact that the army of Hulyai Pole is actually called 'Makhno's Army'. **There, armed men are united not around a programme, not around an ideological banner, but around a man.**"* [**The Makhno Movement**]

Ignoring the irony of a self-proclaimed Marxist (and later Leninist and founder of Trotskyism!) making such a comment, we can only indicate why the Makhnovists called themselves by that name:

"Because, first, in the terrible days of reaction in the Ukraine, we saw in our ranks an unfailing friend and leader, MAKHNO, whose voice of protest against any kind of coercion of the working people rang out in all the Ukraine, calling for a battle against all oppressors, pillagers and political charlatans who betray us; and who is now marching together with us in our common ranks unwavering toward the final goal: liberation of the working people from any kind of oppression." [contained in Arshinov, **Op. Cit.**, p. 272]

The two of the anarchists who took part in the movement and later wrote its history concur. Voline argues that the reason why the movement was known as the "*Makhnovist movement*" was because the "*most important role in this work of unification [of the peasant masses] and in the general development of the revolutionary insurrection in the southern Ukraine was performed by the detachment of partisans guided by a peasant native to the region: Nestor Makhno.*" [**The Unknown Revolution**, p. 551] "*From the first days of the movement,*" Arshinov notes, "*up to its culminating point, when the peasants vanquished the landowners, Makhno played a preponderant and central role to such an extent that the whole insurgent region and the most heroic moments of the struggle are linked to his name. Later, when the insurrection had triumphed completely over the Skoropadsky counter-revolution and the region was threatened by Denikin, Makhno became the rallying point for millions of peasants in several regions.*" [**Op. Cit.**, p. 50]

It must be stressed that Nestor Makhno was not the boss of the Makhnovists. He was not their ruler or general. As such, the fact that the Makhnovists were (unofficially) named after Makhno does not imply that it was his personal fiefdom, nor that those involved followed him as an individual. Rather, the movement was named after him because he was universally respected within it as a leading militant. This fact also explains why Makhno was nicknamed "*Batko*" (see [next section](#)).

This can be seen from how the movement was organised and was run. As we discuss in [section 5](#), it was organised in a fundamentally democratic way, by means of mass assemblies of insurgents, elected officers, regular insurgent, peasant and worker congresses and an elected "*Revolutionary Military Soviet.*" The driving force in the Makhnovist movement was not, therefore, Makhno but rather the anarchist ideas of self-management. As Trotsky himself was aware, the Makhnovists were influenced by anarchist ideas:

"Makhno and his companions-in-arms are not non-party people at all. They are all of the Anarchist persuasion, and send out circulars and letters summoning Anarchists to Hulyai Pole so as to organise their own Anarchist power there." [Trotsky, **Op. Cit.**]

As part of this support for anarchist theory, the Makhnovists organised insurgent, peasant and worker conferences to discuss key issues in the revolution and the activities of the Makhno movement itself. Three such conferences had been before Trotsky wrote his diatribe **The Makhno Movement** on June 2nd, 1919. A fourth one was called for June 15th, which Trotsky promptly banned (on pain of death) on June 4th (see [section 13](#) for full details). Unlike the Bolshevik dictatorship, the Makhnovists took every possibility of ensuring the participation of the working people they were fighting for in the revolution. The calling of congresses by the Makhnovists shows clearly that the movement did not, as Trotsky asserted, follow a man, but rather ideas.

As Voline argued, "*the movement would have existed without Makhno, since the living forces, the living masses who created and developed the movement, and who brought Makhno forward merely as their talented military leader, would have existed without Makhno.*" Ultimately, the term "*Makhnovshchina*" is used "*to describe a unique, completely original and independent revolutionary movement of the*

working class which gradually becomes conscious of itself and steps out on the broad arena of historical activity." ["preface," Arshinov, **Op. Cit.**, p. 19]

3 Why was Makhno called "**Batko**"?

Nestor Makhno was often called in the movement "*Batko*", which is Ukrainian for "*father*." Peter Arshinov explains how and in what circumstances Makhno was given this name:

*"It was . . . in September 1918, that Makhno received the nickname **Batko** -- general leader of the revolutionary insurrection in the Ukraine. This took place in the following circumstances. Local **pomeshchiks** [landed gentry] in the major centres, the **kulaks** [rich peasants], and the German authorities [the Ukraine being occupied by them at the time], decided to eliminate Makhno and his detachment [of partisans] at any cost. The **pomeshchiks** created a special volunteer detachment consisting of their own sons and those of **kulaks** for the decisive struggle against Makhno. On the 30th of September this detachment, with the help of the Austro-Germans, cornered Makhno in the region of Bol'shaya Mihhailovka, setting up strong military posts on all roads. At this time Makhno found himself with only 30 partisans and one machine gun. He was forced to make a fighting retreat, manoeuvring in the midst of numerous enemy forces. Arriving in the forest of Dibrivki, Makhno found himself in an extremely difficult situation. The paths of retreat were occupied by the enemy. It was impossible for the detachment to break through, and escaping individually was beneath their revolutionary dignity. No-one in the detachment would agree to abandon their leader so as to save himself. After some reflection, two days later, Makhno decided to return to the village of Bol'shaya Mikhailovka (Dibrivki). Leaving the forest the partisans met peasants who came to warn them that there were large enemy forces in Dibrivki and that they should make haste to go elsewhere. This information did not stop Makhno and his partisans . . . [and] they set out for Bol'shaya Mikhailovka. They approached the village guardedly. Makhno himself and a few of his comrades went on reconnaissance and saw a large enemy camp on the church square, dozens of machine guns, hundreds of saddle horses, and groups of cavalry. Peasants informed them that a battalion of Austrians and a special **pomeshchik** detachment were in the village. Retreat was impossible. Then Makhno, with his usual stubbornness and determination, said to his companions: 'Well, my friends! We should all be ready to die on this spot . . .' The movement was ominous, the men were firm and full of enthusiasm. All 30 saw only one path before them -- the path toward the enemy, who had about a thousand well-armed men, and they all realised that this meant certain death for them. All were moved, but none lost courage.*

"It was at this moment that one of the partisans, Shchus', turned to Makhno and said:

*"From now on you will be **Batko** to all of us, and we vow to die with you in the ranks of the insurgents.'*

*"Then the whole detachment swore never to abandon the insurgent ranks, and to consider Makhno the general **Batko** of the entire revolutionary insurrection. Then they prepared to attack. Shchus' with five to seven men was assigned to attack the flank of the enemy. Makhno with the others attacked from the front. With a ferocious 'Hurrah!' the partisans threw themselves headlong against the enemy, smiting the very centre with sabres, rifles and revolvers. The attack had a shattering effect. The enemy, who were expecting nothing of the kind, were bowled over and began to flee in panic, saving themselves in groups and individually, abandoning arms, machine guns and horses. Without leaving them time to come to themselves, to become aware of the number of attacking forces, and to pass to a counter-attack, the insurgents chased them in separate groups, cutting them down in full gallop. A part of the **pomeshchik** detachment fled to the Volchya River, where they were drowned by peasants who had joined the battle. The enemy's defeat was complete.*

*"Local peasants and detachments of revolutionary insurgents came from all directions to triumphantly acclaim the heroes. They unanimously agreed to consider Makhno as **Batko** of the entire revolutionary insurrection in the Ukraine." [Arshinov, **Op. Cit.**, pp. 59-60]*

This was how Makhno acquired the nickname "*Batko*," which stuck to him thereafter.

It should be stressed that "*Batko*" was a nickname and did not signify any form of autocratic or hierarchical position within the movement:

*"During the civil war, it signified the leadership and control of a specific area and its population in both civil and military fields. The central point of the use of the word, rather than 'leader' or 'dictator' is that the leadership is usually based on respect, as in Makhno's case, and always on intimate knowledge of the home territory." [Michael Malet, **Op. Cit.**, p. 17]*

That this was a nickname can be seen from the fact that "[a]fter 1920 he was usually called 'Malyi' ('Shorty'), a nickname referring to his short stature, which was introduced by chance by one of the insurgents." [Peter Arshinov, **Op. Cit.**, p. 226] To attach significance to the fact that the peasants called Makhno "*Batko*" (as the Bolsheviks did) simply signifies an ignorance of the Makhnovist movement and its social environment.

4 Can you give a short overview of the Makhnovist movement?

This section of the FAQ gives a short overview of the Makhnovists from July 1918 (when Makhno returned to the Ukraine) and August 1921, when it was finally defeated by Bolshevik armed force. It will be primarily a military history, with the socio-political aspects of the movement discussed in sections [6](#) (its theory) and [7](#) (its practice). For details of the rise of influence of Makhno after his release from prison in 1917, see [section 1](#).

The history of the Makhno movement can be broken up into roughly four periods -- from July 1918 to February 1919, then the rest of 1919, then January to October 1920 and, finally, from October 1920 to August 1921. This section will give an overview of each period in turn.

By the time Makhno arrived back in the Ukraine in July, 1918, opposition to the German-backed Hetman's regime was mounting and was frequently met with brutal repression, including reprisal executions. Makhno was forced to live underground and on the move, secretly meeting with others, with the Austrians always close behind. Voline recounts Makhno's activities at this time:

"Back in Hulyai Pole, Makhno came to the decision to die or obtain victory for the peasants . . . He did not delay starting his mission openly among the great masses of peasants, speaking at improvised meetings, writing and distributing letters and tracts. By pen and mouth, he called on the peasants for a decisive struggle against the power of Skoropadsky and the landlords. He declared tirelessly that the workers should now take their fates into their own hands and not let their freedom to act be taken from them . . .

"Besides his appeals, Makhno proceeded immediately to direct action. His first concern was to form a revolutionary military unit, sufficiently strong to guarantee freedom of propaganda and action in the villages and towns and at the same time to begin guerrilla operations. This unit was quickly organised . . .

"His first unit undertook two urgent tasks, namely, pursuing energetically the work of propaganda and organisation among the peasants and carrying out a stubborn armed struggle against all their enemies. The guiding principle of this merciless struggle was as follows. No lord who persecuted the peasants, no policeman of the Hetman, no Russian or German officer who was an implacable enemy of the peasants, deserved any pity; he must be destroyed. All who participated in the oppression of the poor peasants and workers, all who sought to suppress their rights, to exploit their labour, should be executed.

"Within two or three weeks, the unit had already become the terror, not only of the local bourgeoisie, but also of the Austro-German authorities." [The Unknown Revolution, p. 558]

The night of 26 September saw Hulyai Pole briefly liberated from Hetman and Austrian troops by the actions of Makhno's troops in association with local people. On the retreat from this Makhno's small band grew when he met the partisan troops headed by Schus. When the Austrians cornered them, they launched a surprise counter attack and routed the opposition. This became known as the battle of Dibrivki and it is from this date, 5 October 1918 that Makhno is given the nickname 'Batko', meaning "father" (see [section 3](#) for details). For the next two months already-existing partisan groups sought out and joined the growing army.

In this period, Makhno, with portable printing equipment, was raiding the occupying garrisons and troop trains in the Southern Ukraine. Normal practice was to execute the officers and free the troops. In this period the moral of the occupying troops had crumbled and revolutionary propaganda had made inroads into many units. This was also affecting the nationalist troops and on 20 November the first nationalist unit defected to the Makhnovists. This encouraged them to return to Hulyai Pole on 27 December and there the insurrectionary Staff was formed, this body was to lead the army in the coming years and consisted initially of four old and trusted friends and three political comrades. The Makhnovist presence allowed the setting up of a local soviet and the re-opening of the anarchist clubs. German forces started pulling back to the major cities and on December 14 the Hetman fled Kiyiv. In the resulting vacuum, the Makhnovists rapidly expanded taking in most of the South East Ukraine and setting up fronts against local whites. The Ukrainian nationalists had taken power in the rest of the Ukraine under Petliura and on the 15th December the Makhnovists agreed to make common cause with them against the Whites. In return for arms and ammunition they allowed the nationalists to mobilise in the Makhnovist area (while engaging in propaganda directed at the mobilised troops on their way by train to Katerynoslav).

This was a temporary and pragmatic arrangement directed against the greater enemy of the Whites. However, the nationalists were no friends of working-class autonomy. The nationalists banned elections to the Katerynoslav soviet on 6th of December and the provincial soviet at Kharkiv met with a similar fate on the 22nd. [Malet, **Op. Cit.**, p. 22] At the same time as their agreement with the nationalists, the Makhnovists had set up links with Bolshevik partisans to the south and before dawn on the 26th the Bolshevik and Makhnovist forces launched a joint attack on the nationalists at Katerynoslav. The city was taken but held only briefly when a nationalist attack on the 29th drove out all the insurgent forces with heavy losses. In the south, White reinforcements led to the insurgents being pushed North and losing Hulyai Pole.

1919 opened with the Makhnovists organising a congress of front- unit delegates to discuss the progress of the struggle. Over forty delegates attended and a committee of five was elected, along with an operational staff to take charge of the southern front and its rear. It was agreed that local soviets were to be supported in every way, with no military violence directed towards them permitted. [Malet, **Op. Cit.**, p. 25]

By the end of January, white reinforcements were landing in the ports of the south. On January 22nd, a worker, peasant and insurgent congress was held at Velyka Mykhailivka. A resolution was passed urging an end to conflict between Makhnovists, Nationalists and Bolsheviks. An alliance was signed between the Makhnovists and the Bolsheviks in early February. This agreement ensured that the Partisan units entered the Red Army as distinct formations, with their internal organisation (including the election of commanders) intact, and the Red Army in the area formed a brigade to be known as "*the third Transdnieper Batko Makhno brigade*" with Makhno as commander. The Whites were repulsed and Hulyai Pole retaken and the front pushed some distance eastwards.

Thus the military situation had improved by the time of the second worker, peasant and insurgent congress held at Hulyai Pole on February 12th. This congress set up a "*Revolutionary Military Soviet*" to co-ordinate civilian affairs and execute its decisions. The congress resolved that "*the land belongs to*

nobody" and should be cultivated without the use of hired labour. It also accepted a resolution opposing anti-Jewish pogroms. Also passed was a resolution which sharply attacked the Bolsheviks, caused by their behaviour since their arrival in the Ukraine. [Palij, **Op. Cit.**, pp. 154-5] A report by the commander of the 2nd Red Army, Skatchco, indicates the nature of this behaviour:

"Little local Chekas are undertaking a relentless campaign against the Makhnovists, even when they are shedding their blood at the front. They are hunting them down from the rear and persecuting them solely for belonging to the Makhnovist movement . . . It cannot continue like this: the activity of the local Chekas is deliberately ruining the front, reducing all military successes to nothing, and contributing to the creation of a counter-revolution that neither Denikin nor Krasnov [Hetman of the Don Cossacks] could have achieved. . ." [quoted by Alexander Skirda, **The Rehabilitation of Makhno**, p. 346]

Unsurprisingly, the peasants reacted strongly to the Bolshevik regime. Their *"agricultural policy and terrorism"* ensured that *"by the middle of 1919, all peasants, rich and poor, distrusted the Bolsheviks."* [Palij, **Op. Cit.**, p. 156] In April alone, there were 93 separate armed rebellions against the Bolsheviks in the Ukraine. The *"more oppressive the Bolshevik policy, the more the peasants supported Makhno. Consequently, the Bolsheviks began to organise more systematically against the Makhno movement, both as an ideology and as a social movement."* [Palij, **Op. Cit.**, p. 157]

In mid-March the Red Army attacked eastwards. In the course of this Dybenko, commander of the Trandneiper division, recommended one of Makhno's commanders for a medal. Then the Makhnovists attacked the Donbas (east) to relieve the pressure on the Soviet 8th Army caused by a White advance. They took Mariupol following a White incursion at the beginning of April. A White counter-offensive resulted in the Red 9th division panicking, allowing the Whites into Makhno's rear. Red Commander Dybenko refused orders to come to the Makhnovists aid as he was more interested in the Crimea (south). [Malet, **Op. Cit.**, p. 31]

This period saw the most sustained freedom for the region around Hulyai Pole. It had been free of enemy occupation since January, allowing constructive activity to restart. The inhabitants of the free region *"created new forms of social organisation: free workers' communes and Soviets."* [Voline, **Op. Cit.**, p. 574] The Revolutionary Military Soviet (RMS) called a third regional worker, peasant and insurgent congresses had on April 10th to review progress and to look forward. This was the largest congress to date, with delegates from 72 volosts containing two million people. The Bolshevik military commander Dybenko tried to ban it. The Makhnovists, needless to say, ignored him and the RMS made a famous reply to his arrogance (see [section 13](#) for more details).

It was during this period (late 1918 and early 1919), that the *Nabat* anarchist federation was organised. *"Anarchist influence was reported from Aleksandrovsk and other centres,"* notes David Footman, *"Anarchists were holding a conference in Kursk at about the same time and in one of their resolutions it was stated that 'the Ukrainian Revolution will have great chances of rapidly becoming Anarchist in its ideas.' The position called for renewed Bolshevik measures against the Anarchists. Nabat, the main*

Anarchist newspaper in the Ukraine, was suppressed, and its editorial board dispersed under threat of arrest." [Op. Cit., p. 270] Daniel Guerin has reproduced two documents from the Nabat federation in volume II of his **No Gods, No Masters**.

The anarchist influence in and around Hulyai Pole also worried the Bolsheviks. They started a slander campaign against the Makhnovists, to the alarm of Antonov, the overall front commander, who replied in response to an article in Kharkiv Izvestiya:

"The article is the most perverted fiction and does not in the least correspond to the existing situation. The insurgents fighting the whites are on a level with the Red Army men, but are in a far worse condition for supplies." [quoted by Malet, **Op. Cit.**, p. 33]

In a postscript, Antonov added that the press campaign had certainly helped turn Makhno anti-Soviet (i. e. anti-Bolshevik, as Makhno supported free soviets).

At the beginning of May, another partisan commander, Hryhoriyiv, revolted against the Bolsheviks in the central Ukraine. Hryhoriyiv, like the Makhnovists, had joined with the Bolsheviks when they had re-entered the Ukraine, however his social and political background was totally different. Hryhoriyiv was a former Tsarist officer, who had commanded numerous troops under the Petliurist authority and joined the Bolsheviks once that that regime's armed forces had disintegrated. Arshinov notes that he had *"never been a revolutionary"* and that there had been a *"great deal of adventurism in his joining the ranks of the Petliurists and then the ranks of the Red Army."* His temperament was mixed, consisting of *"a certain amount of sympathy for oppressed peasants, authoritarianism, the extravagance of a Cossack chieftain, nationalist sentiments and anti-Semitism."* [Op. Cit., p. 110]

Hryhoriyov started his revolt by issuing a Universal, or declaration to the Ukrainian people, which contained a virulent attack on the Bolsheviks as well as one explicit anti-Semitic reference, but without mention of Makhno. The height of the revolt was his appearance in the suburbs of Katerynoslav, which he was stopped from taking. He started a pogrom in Yelyzavethrad which claimed three thousand victims.

Once the Makhnovists had been informed of this rebellion, an enlarged staff and RMS meeting was held. A telegram was sent to the soldiers at the front urging them to hold the front and another to the Bolsheviks with a similar message. A few days latter, when more information had been received, a proclamation was issued against Hyyhoriyiv attacking him for seeking to impose a new authority on the working class, for encouraging toiling people to attack each other, and for inciting pogroms. [Arshinov, **Op. Cit.**, p. 112 and pp. 114-7]

While it took a fortnight for Red forces to contain Hryhoriyiv without trouble, this involved using all available reserves of all three Ukrainian armies. This left none for Makhno's hard-pressed forces at the front. In addition, Dybenko withdrew a front-line regiment from Makhno for use against the revolt and diverted reinforcements from the Crimea which were intended for Makhno. Despite this Makhnos forces

(now numbering 20,000) were ordered to resume the attack on the whites. This was due to *"unremitting pressure from Moscow to take Taganrog and Rostov."* [Malet, **Op. Cit.**, p. 36] The Makhnovist advance stopped due to the non-fulfilment of an urgent order for ammunition.

On the 19th of May, a White counter-attack not only stopped the advance of the Red Army, it forced the 9th division (and then the Makhnovists) to retreat. On the 29th, the Whites launched a further offensive against the northern Donbas, opening a gap between the 13th and 8th Red Armies. Due to the gravity of the situation, the RSV summoned a fourth congress for June 15th. Trotsky not only banned this congress but took the lead in slandering the Makhnovists and calling for their elimination (see [section 13](#) for details). As well as *"this deliberately false agitational campaign, the [Bolshevik] blockade of the region was carried to the limit . . . The provisioning of shells, cartridges and other indispensable equipment which was used by daily at the front, ceased completely."* [Arshinov, **Op. Cit.**, p. 118] Palij confirms this, noting that *"the supplies of arms and other war material to Makhno was stopped, thus weakening the Makhno forces vis-a-vis the Denikin troops."* [**Op. Cit.**, p. 175] David Footman also notes that the Bolshevik *"hold-back of supplies for the Insurgents developed into a blockade of the area. Makhnovite units at the front ran short of ammunition."* He also mentions that *"[i]n the latter part of May the Cheka sent over two agents to assassinate Makhno."* [**Civil War in Russia**, p. 271]

Needless to say, Trotsky blamed this White success to the Makhnovists, arguing it was retreating constantly before even the slightest attack by the Whites. However, this was not the case. Analysing these events in July 1919, Antonov (the commander of the Southern Front before Trotsky replaced him) wrote:

"Above all, the facts witness that the affirmations about the weakness of the most contaminated region -- that from Hulyai Pole to Berdiansk -- are without foundation . . . It is not because we ourselves have been better organised militarily, but because those troops were directly defending their native place . . . Makhno stayed at the front, in spite of the flight of the neighbouring 9th division, following by the whole of the 13th army . . . The reasons for the defeat on the southern front do not rest at all in the existence of 'Ukrainian partisans' . . . above all it must be attributed to the machinery of the southern front, in not keeping its fighting spirit and reinforcing its revolutionary discipline." [quoted by Alexander Skirda, **The Rehabilitation of Makhno**, p. 348]

This, incidentally, tallies with Arshinov's account that *"hordes of Cossacks had overrun the region, **not through the insurrectionary front but from the left flank where the Red Army was stationed."*** [**Op. Cit.**, p. 126] For what it is worth, General Denikin himself concurs with this account of events, noting that by the 4th of June his forces *"repulsed the routed and demoralised contingents of the Eight and Thirteenth Soviet Armies . . . The resistance of the Thirteenth Army being completely broken."* He notes that an attempt by the Fourteenth Army (which Makhno's troops were part of) to attack on the flank came to nothing. He only mentions Makhno when he recounts that *"General Shkuro's division routed Makhno at Hulyai Pole."* [**The White Armies**, p. 272] With Whites broken through on their flank and with limited ammunition and other supplies (thanks to the Bolsheviks), the Makhnovists had no choice

but to retreat.

It was around this time that Trotsky, in a public meeting in Kharkov, "*announced that it were better to permit the Whites to remain in the Ukraine than to suffer Makhno. The presence of the Whites, he said, would influence the Ukrainian peasantry in favour of the Soviet Government, whereas Makhno and his povstantsi, would never make peace with the Bolsheviks; they would attempt to possess themselves of some territory and to practise their ideas, which would be a constant menace to the Communist Government.*" [Emma Goldman, **My Disillusionment in Russia**, p. 63]

Due to this Bolshevik betrayal, the Makhnovist sector was in very grave danger. At Hulyai Pole, a peasant regiment was scraped together in 24 hours in an attempt to save the town. It encountered White Cossacks ten miles away from the town and was mown down. The Whites entered Hulyai Pole the next day (June 6th) and gave it a good going over. On the same day, the Bolsheviks issued an order for Makhno's arrest. Makhno was warned and put in his resignation, arguing that it was "*an inviolable right of the workers and peasants, a right won by the revolution, to call congresses on their own account, to discuss their affairs.*" Combined with the "*hostile attitude*" of the Bolshevik authorities towards him, which would lead "*unavoidably to the creation of a special internal front,*" Makhno believed it was his duty to do what he could to avert it, and so he left his post. [quoted by Arshinov, **Op. Cit.**, p. 129] While Makhno escaped, his staff was not so lucky. Five of them were arrested the same day and shot as a result of Trotsky's order to ban the fourth congress.

Leaving his troops in the frontline, Makhno left with a small cavalry detachment. While leaving the rest under Red command, Makhno made a secret agreement with his regimental commanders to await a message from him to leave the Red Army and join up against with the partisans. On the 9th and 10th of June, Hulyai Pole was retaken by Bolshevik forces, who took the opportunity to attack and sack the Makhnovist communes. [Arshinov, **Op. Cit.**, p. 86f]

After intense fighting, the Whites finally split the Southern Front into three on June 21st. Needless to say, Trotsky and the Bolsheviks blamed this on the partisan forces (even stating that they had "*opened the front*" to the Whites). This was nonsense, as noted above.

After leaving the front, Makhno took refuge in the Chorno-Znamenski forest before continuing the retreat north and skirmishing with Red Army units. This brought him into the territory held by Hryhoriyiv and this, in turn, meant they had to proceed carefully. While the Makhnovists had made a public denunciation of Hryhoriyiv, Makhno was approaching the centre of Hryhoriyov's remaining influence. Surrounded by enemies, Makhno had little choice but to begin discussions with Hryhoriyiv. This was problematic to say the least. Hryhoriyiv's revolt had been tinged with anti-Semitism and had seen at least one major pogrom. Being faced with Hryhoriyov's anti-Semitism and his proposal for an alliance with the Whites against the Reds led the Makhnovists to plot his downfall at a meeting planned for the 27th July.

This meeting had originally been called to discuss the current tasks of the insurgents in the Ukraine and

was attended by nearly 20,000 insurgents and local peasants. Hryhoriyiv spoke first, arguing that the most urgent task was to chase out the Bolsheviks and that they should ally themselves with any anti-Red forces available (a clear reference to the Whites under Denikin). The Makhnovist Chubenko spoke next, declaring that the *"struggle against the Bolsheviks could be revolutionary only if it were carried out in the name of the social revolution. An alliance with the worst enemies of the people -- with generals -- could only be a counter-revolutionary and criminal adventure."* Following him, Makhno *"demanded before the entire congress"* that Hryhoriyiv *"immediately answer for the appalling pogrom of Jews he had organised in Elisavetgrad in May, 1919, as well as other anti-Semitic actions."* [Arshinov, **Op. Cit.**, p. 136]

Seeing that things were going badly, Hryhoriyiv went for his revolver, but was shot by a Makhnovist. Makhno finished him off. Makhnovist guards disarmed the leading Hryhoriyivists. Then Makhno, Chubenko and others justified the killing before the mass meeting, which approved the act passing a resolution that stated that Hryhoriyiv's death was *"an historical and necessary fact, for his policy, acts and aims were counter-revolutionary and mainly directed to helping Denikin and other counter-revolutionaries, as is proved by his Jewish pogroms."* [quoted by Malet, **Op. Cit.**, p. 42] The troops under Hryhoriyiv became part of the general Insurrectionary Army.

At the end of July, Makhno recalled the troops he had earlier left in the Red Army and by mid-August the forces met up, becoming an army of some 15,000. At Mykolaiv, the Red Army units were defecting to Makhno in large numbers due in part to the feeling that the Red Army were abandoning the defence of the Ukraine. This was the start of Denikin's massive push north and Petliura's push east. By the end of August, Makhno felt strong enough to go on the offensive against the Whites. Superior White forces pushed the Makhnovists further and further west, away from their home region. *"Denikin,"* in Voline's words, *"not only made war on the army as such, but also on the whole peasant population. In addition to the usual persecutions and beatings, the villages he occupied were burnt and wrecked. The greater part of the peasants' dwellings were looted and wrecked. Hundreds of peasants were shot. The women maltreated, and nearly all the Jewish women . . . were raped."* This repression *"obliged the inhabitants of the villages threatened by the approach of the Denikinists to abandon their hearths and flee. Thus the Makhnovist army was joined and followed in their retreat by thousands of peasant families in flight from their homes with their livestock and belongings. It was a veritable migration. An enormous mass of men, women and children trailed after the army in its slow retreat towards the west, a retreat which gradually extended over hundreds of kilometres."* [**Op. Cit.**, p. 607]

Meeting the Nationalists in mid-September, it was agreed on both sides that fighting would only aid the Whites and so the Makhnovists entered a non-aggression pact with Petliura. This enabled them to offload over 1,000 wounded. The Makhnovists continued their propaganda campaign against the Nationalists, however. By the 24th of September, intelligence reports suggested that White forces had appeared to the west of their current position (i.e. where the Nationalists were). The Makhnovists concluded that the only way this could have happened was if the Nationalists had allowed the Whites to cross their territory (the Nationalists disputed this, pointing to the fighting that had started two days before between them and the Whites).

This meant that the Makhnovists were forced to fight the numerically superior Whites. After two days of desperate fighting, the Whites were routed and two regiments were destroyed at the battle of Peregonovka village. Makhno's forces then conducted an incredibly rapid advance in three directions helped by their mobile cart-transported infantry, in three days smashing three reserve regiments and at the greatest point advancing 235 miles east. On the 6th October a drive to the south started which took key White ports and captured a huge quantity of equipment including 600 trucks of British-supplied ammunition and an aeroplane. This was disastrous for Denikin whose forces had reached the northernmost point on their advance on Moscow, for these ports were key for his supply routes. The advance continued, cutting the railway route and so stopping all shells reaching Denikin's Moscow front.

Denikin was forced to send some of his best troops from the Moscow front to drive back the Makhnovists and British boats were sent to towns on the coast where Makhno might retreat through. The key city of Katerinoslav was taken with the aid of a workers' uprising on November 9th and held for a month before the advancing Whites and a typhoid epidemic which was to devastate the Makhnovista ranks by the end of the year forced them out of the city. In December, the Red Army advance made possible by Makhno's devastation of Denikin's supply lines continued.

Thus Voline:

"It is necessary to emphasise here the historic fact that the honour of having annihilated the Denikinist counter-revolution in the autumn of 1919, belongs entirely to the Makhnovist Insurrectionary Army. If the insurgents had not won the decisive victory of Peregonovka, and had not continued to sap the bases in Denikin's rear, destroying his supply service for artillery, food and ammunition, the Whites would probably have entered Moscow in December 1919 at the latest." [Op. Cit., p. 625]

In December the Red Army advance made possible by Makhno's devastation of Denikin's supply lines continued. By early January the Reds had split White forces into three and their troops had reached Katerynoslav. The attitude of the Bolsheviks to the Makhnovists had already been decided. On December 12th, 1919, Trotsky stated that when the two forces met, the Bolsheviks had "*an order . . . from which we must not retreat one single step.*" While we discuss this secret order in more depth in [section 13](#), we will note here that it gave partisans the option of becoming "*fully subordinate to [Bolshevik] command*" or "*be subjected to ruthless punishment.*" [How the Revolution Armed, vol. II., pp. 110-1 and p. 442] Another secret order to the 45th division issued on January 4th instructed them to "*annihilate Makhnovist bands*" and "*disarm the population.*" The 41st was sent "*into reserve*" to the Hulyai Pole region. This was "*five days before Makhno was outlawed, and shows that the Bolshevik command had a clear view of Makhno's future, even if the latter did not.*" [Malet, Op. Cit., p. 54]

Unaware of this, the Makhnovista put out propaganda leaflets directed at the Red Army rank and file, appealing to them as comrades. At Aleksandrovsk on December 5th talks occurred between a representative of the Makhnovists and the commander of the 45th division's 1st brigade. These broke down when Makhno was ordered to the Polish front, which the Makhnovists refused. On January 9th,

Yegorov, commander of the Red Army southern front, used this pretext to outlaw Makhno. This outlawing was engineered deliberately by the Bolsheviks:

"The author of the order realised at that time there was no real war between the Poles and the Bolsheviks at that time and he also knew that Makhno would not abandon his region . . . Uborevich [the author] explained that 'an appropriate reaction by Makhno to this order would give us the chance to have accurate grounds for our next steps' . . . [He] concluded: 'The order is a certain political manoeuvre and, at the very least, we expect positive results from Makhno's realisation of this.'" [Palij, **Op. Cit.**, p. 210]

In addition, war with Poland did not break out until the end of April, over three months later.

Needless to say, the Makhnovists **did** realise the political motivations behind the order. As Arshinov notes, *"[s]ending the insurrectionary army to the Polish front meant removing from the Ukraine the main nerve centre of the revolutionary insurrection. This was precisely what the Bolsheviks wanted: they would then be absolute masters of the rebellious region, and the Makhnovists were perfectly aware of this."* Moreover, the Makhnovists considered the move *"physically impossible"* as *"half the men, the entire staff and the commander himself were in hospital with typhus."* [**Op. Cit.**, p. 163]

This was the signal for nine months of bitter fighting between the Red Army and the Makhnovists. Military events in this period are confused, with the Red Army claiming victory again and again, only for the Makhnovists to appear somewhere else. Hulyai Pole changed hands on a couple of occasions. The Bolsheviks did not use local troops in this campaign, due to fear of fraternisation. In addition, they used *"new tactics,"* and *"attacked not only Makhno's partisans, but also the villages and towns in which the population was sympathetic toward Makhno. They shot ordinary soldiers as well as their commanders, destroying their houses, confiscating their properties and persecuting their families. Moreover the Bolsheviks conducted mass arrests of innocent peasants who were suspected of collaborating in some way with the partisans. It is impossible to determine the casualties involved."* They also set up *"Committees of the Poor"* as part of the Bolshevik administrative apparatus, which acted as *"informers helping the Bolshevik secret police in its persecution of the partisans, their families and supporters, even to the extent of hunting down and executing wounded partisans."* [Palij, **Op. Cit.**, pp. 212-3]

In addition to this suffering, the Bolshevik decision to attack Makhno rather than push into the Crimea was also to prolong the civil war by nine more months. The Whites re-organised themselves under General Wrangel, who began a limited offensive in June. Indeed, the Bolshevik *"policy of terror and exploitation turned almost all segments of Ukrainian society against the Bolsheviks, substantially strengthened the Makhno movement, and consequently facilitated the advance of the reorganised anti-Bolshevik force of General Wrangel from the Crimea into South Ukraine, the Makhno region."* [Palij, **Op. Cit.**, p. 214]

It was widely believed on the White side that Makhno was ready to co-operate with them and, desperate

for men, Wrangel decided to appeal to the Makhnovists for an alliance. Their response was simple and direct, they decided to immediately execute his delegate and publish both his letter and a response in the Makhnovist paper "*The Road to Freedom.*" [Malet, **Op. Cit.**, p. 60] Of course, this did not stop the Bolsheviks later claiming such an alliance existed!

Ironically enough, at a general assembly of insurgents, it was decided that "*the destruction of Wrangel*" would "*eliminate a threat to the revolution*" and so free "*all of Russia*" from "*the counter-revolutionary barrage.*" The mass of workers and peasants "*urgently needed an end to all those wars*" and so they proposed "*to the Communists that hostilities between them and the Makhnovists be suspended in order that they might wipe out Wrangel. In July and August, 1920, telegrams to this effect were sent to Moscow and Kharkov.*" There was no reply and the Bolsheviks "*continued their war against the Makhnovists, and they also continued their previous campaign of lies and calumnies against them.*" [Arshinov, **Op. Cit.**, p. 176]

In July and August the Makhnovists went on the offensive, raiding the Bolsheviks in three provinces and attacking the Red Army infrastructure. Wrangel began another offensive in September, driving the Red Army back again and again and threatening the Makhnovist area. Faced with Wrangel's success, the Bolsheviks started to rethink their position on Makhno, although on the 24th of September the Bolshevik commander-in-chief Kamenev was still declaring the need for "*the final liquidation of the Makhno band.*" [Malet, **Op. Cit.**, p. 62] A few days later, the Bolsheviks changed their mind and negotiations began.

So, by October 1920, the success of the Wrangel offensive was again forcing the Bolsheviks and Makhnovists to put aside their differences and take on the common enemy. A deal was reached and on October 2nd, Frunze, the new Red Army commander of the Southern Front, ordered a cessation of hostilities against the Makhnovists. A statement from the Soviet of the Revolutionary Insurgent Army of the Ukraine (Makhnovists) explained the treaty as necessitated by the White offensive but also representing a victory over the "*high-handed communists and commissars*" in forcing them to recognise the "*free insurrection.*" [Malet, **Op. Cit.**, p. 64]

The agreement was signed between October 10th and 15th. It consisted of two parts, a Political and a Military agreement (see [section 13](#) for full details). The Political agreement simply gave the Makhnovists and anarchists the rights they should have had according to the Soviet Constitution. The Military agreement resulted in the Makhnovists becoming part of the Red Army, keeping their established internal structure and, significantly, stopped them from accepting into their ranks any Red Army detachments or deserters therefrom. According to Bolshevik sources, "*there was never the slightest intention on the Bolshevik side of keeping to the agreement once its military value had passed.*" [David Footman, **Op. Cit.**, p. 296]

Even before the agreement came into effect, the Makhnovists were fighting alongside the Bolsheviks and between October 4 and 17, Hulyai Pole was retaken by the Aleksandrovska group, which included 10,000 Makhnovists. On October 22, Aleksandrovska was taken with 4,000 white prisoners and from

then to early November the Makhnovists cut through Wrangel's rear, hoping to cut off his retreat by seizing the Crimean passes. The Whites fought a skilful rearguard which together with the new White fortifications on the peninsula held up the advance. But by the 11th, his hold in the Crimea gone, Wrangel had no choice but to order a general retreat to the ports and an evacuation. Even the Bolsheviks had to acknowledge that the *"Makhnovist units fulfilled their military tasks with no less heroism than the Red Army units."* [quoted by Malet, **Op. Cit.**, p. 69]

On hearing this success on 16th November, the reaction of the Makhnovista still at Hulyai Pole was cynical but realistic: *"It's the end of the agreement. I'll bet you anything that the Bolsheviks will be on us within the week."* [quoted by Malet, **Op. Cit.**, p. 70] They were not wrong. Already Frunze, the Red Army commander, had ordered two entire cavalry armies to concentrate near Hulyai Pole at the same time as he ordered the Makhnovist forces to the Caucasus Front! By 24th November Frunze was preparing for the treachery to come, in Order 00149 (which was not sent to the Makhnovist units) saying if they had not departed to the Caucasus front by the 26th *"the Red regiments of the front, who have now finished with Wrangel, will start speaking a different language to these Makhnovist youths."* [quoted by Malet, **Op. Cit.**, p. 71]

Of course this treachery went right to the top, just before the 26th *"deadline"* (which Makhno, not having seen the orders, was unaware of), Lenin urged Rakovski, head of the Ukrainian government to *"[k]eep a close watch on all anarchists and prepare documents of a criminal nature as soon as possible, on the basis of which charges can be preferred against them."* [quoted by Malet, **Op. Cit.**, p. 71] Indeed, it later appeared the treachery had been prepared from at least 14th or 16th November, as prisoners captured later stated they had received undated anti-Makhnovist proclamations on that date. [Malet, **Ibid.**]

At 3am on the 26th the attacks on the Makhnovists started. Alongside this one of the Makhnovist commanders was lured to a meeting by the Bolsheviks, seized and shot. Some Makhnovist forces managed to break through the encircling Bolsheviks but only after taking heavy losses -- of the 2,000-4,000 cavalry at Simferopol, only 250 escaped. By the 1st December, Rakovski reported the imminent demise of the Makhnovists to the Kharkiv soviet only to have to eat his words when Makhno routed the 42nd division on the 6th, retaking Hulyai Pole and 6,000 prisoners, of whom 2,000 joined his forces. [Malet, **Op. Cit.**, p. 72] Simultaneously with the attack on the Makhnovists, the Bolsheviks rounded up all known anarchists in the Ukraine (many of whom were in Kharkiv waiting for a legally organised **Nabat** conference to begin).

In the resulting struggle between the two forces, as Palij notes, the *"support of the population was a significant advantage to Makhno, for they supplied the partisans with needed material, including horses and food, while the Red troops operated among a foreign and hostile people."* The Bolsheviks found that the peasants not only refused to supply them with goods, they also refused to answer their questions or, at best, gave answers which were vague and confusing. *"In contrast to the Bolsheviks, Makhno partisans received detailed, accurate information from the population at all times."* [Palij, **Op. Cit.**, pp. 236-7]

Frunze brought in extra forces and ordered both the *"annihilation of the Makhnovists"* and total disarming of the region. Plagued by desertions, it was also ordered that all Makhnovist prisoners were to be shot, to discourage the local population and Red Army soldiers thinking of joining them. There is also evidence of unrest in the Azov fleet, with acts of sabotage being carried out by sailors to prevent their weapons being used against the Makhnovists. [Malet, **Op. Cit.**, p. 73] While it was common practice for the Bolsheviks to shoot all Makhnovist prisoners, the *"existence of roundup detachments at the end of 1920, whose task was to re-collect prisoners freed by the Makhnovists"* shows that the Makhnovists did not reciprocate in kind. [Malet **Op. Cit.**, p. 129]

At the end of 1920, the Makhnovists had ten to fifteen thousand troops and the *"growing strength of the Makhno army and its successes caused serious concern in the Bolshevik regime, so it was decided to increase the number of troops opposing Makhno."* [Palij, **Op. Cit.**, p. 237] All the pressure exerted by the Bolsheviks was paying off. Although Makhno repeatedly broke through numerous mass encirclements and picked up deserters from the Red Army, his forces were being eroded by the far greater numbers employed against them. In addition, *"the Red command worked out new plans to fight Makhno by stationing whole regiments, primarily cavalry, in the occupied villages, to terrorise the peasants and prevent them from supporting Makhno. . . Also the Cheka punitive units were constantly trailing the partisans, executing Makhno's sympathisers and the partisans' families."* [Palij, **Op. Cit.**, p. 238] In spite of the difficult conditions, Makhno was still able to attract some Red Army soldiers and even whole units to his side. For example, *"when the partisans were fighting Budenny's Fourth Cavalry Division, their First Brigade, commanded by Maslak, joined Makhno."* [Palij, **Op. Cit.**, p. 239]

Makhno was forced to leave his home areas of operations and flee east, then west again. By early January his forces had fought 24 battles in 24 days. This pattern continued throughout March and April into May. In June, the Bolsheviks changed their strategy to one of predicting where Makhno was heading and garrisoning troops in that area. In one battle on 15 June, Frunze himself was almost captured. Despite this, the insurgents were very weak and their peasant base was exhausted by years of war and civil war. In the most sympathetic areas, Red Army troops were garrisoned on the peasants. Thus Palij:

"[T]hrough combat losses, hardship, and sickness, the number of Makhno partisans was diminishing and they were cut off from their main sources of recruits and supplies. The Ukrainian peasants were tried of the endless terror caused by successive occupation of village after village by the Red troops and the Cheka. The continuous fighting and requisitions were leaving the peasants with little food and horses for the partisans. They could not live in a state of permanent revolution. Moreover, there was extreme drought and consequently a bad harvest in Ukraine, especially in the region of the Makhno movement." [**Op. Cit.**, pp. 240-1]

The state terrorism and the summer drought caused Makhno to give up the struggle in mid-August and instead fight his way to the Dniester with the last of his forces and cross into Romania on August 26. Some of his forces which stayed behind were still active for a short time. In November 1921 the Cheka seized 20 machine guns and 2,833 rifles in the new Zaporizhya province alone.

For more details of the history of the movement, Michael Malet's **Nestor Makhno in the Russian Revolution** is an excellent summary. Michael Palij's **The Anarchism of Nestor Makhno** is also worth consulting, as are the anarchist histories of Voline and Arshinov.

5 How were the Makhnovists organised?

Being influenced by anarchist ideas, the Makhnovists were organised along libertarian lines. This meant that in both civilian and military areas, self-management was practised. This section discusses the military organisation, while the next discusses the social aspect of the movement.

By practising self-management, the Makhnovists offered a completely different model of military organisation to that of both the Red Army and traditional military forces. While the army structure changed depending on its circumstances, the core ideas remained. These were as follows:

"The Makhnovist insurrectionary army was organised according to three fundamental principles: voluntary enlistment, the electoral principle, and self-discipline.

*"**Voluntary enlistment** meant that the army was composed only of revolutionary fighters who entered it of their own free will.*

*"**The electoral principle** meant that the commanders of all units of the army, including the staff, as well as all the men who held other positions in the army, were either elected or accepted by the insurgents of the unit in question or by the whole army.*

*"**Self-discipline** meant that all the rules of discipline were drawn up by commissions of insurgents, then approved by general assemblies of the various units; once approved, they were rigorously observed on the individual responsibility of each insurgent and each commander." [Op. Cit., p. 96]*

Voline paints a similar picture. He also notes that the electoral principle was sometimes violated and commanders appointed *"in urgent situations by the commander himself,"* although such people had to be *"accepted without reservation"* by *"the insurgents of the unit in question or by the whole army."* [Op. Cit., p. 584]

Thus the Makhnovist army, bar some deviation provoked by circumstances, was a fundamentally democratic organisation. The guerrillas elected the officers of their detachments, and, at mass assemblies and congresses, decided policy and discipline for the army. In the words of historian Michael Palij:

"As the Makhno army gradually grew, it assumed a more regular army organisation. Each tactical unit was composed of three subordinate units: a division consisted of three

brigades; a brigade, of three regiments; a regiment, of three battalions. Theoretically commanders were elected; in practice, however, the top commanders were usually carefully selected by Makhno from among his close friends. As a rule, they were all equal and if several units fought together the top commanders commanded jointly. The army was nominally headed by a Revolutionary Military Council of about ten to twenty members . . . Like the commanders, the council members were elected, but some were appointed by Makhno . . . There also was an elected cultural section in the army. Its aim was to conduct political and ideological propaganda among the partisans and peasants." [Palij, **Op. Cit.**, pp. 108-9]

The Revolutionary Military Council was elected and directly accountable to the regional workers, peasants and insurgent congresses. It was designed to co-ordinate the local soviets and execute the decisions of the regional congresses.

Hence Voline:

*"This council embraced the whole free region. It was supposed to carry out all the economic, political, social and military decisions made at the congress. It was thus, in a certain sense, the supreme executive of the whole movement. **But it was not at all an authoritarian organ.** Only strictly executive functions were assigned to it. It confined itself to carrying out the instructions and decisions of the congress. At any moment, it could be dissolved by the congress and cease to exist."* [**Op. Cit.**, p. 577]

As such, when Palij notes that this council "*had no decisive voice in the army's actions,*" he misses the point of the council. [Palij, **Ibid.**] It did not determine the military affairs of the army, but rather the interaction of the military and civilians and made sure that the decisions of congresses were executed. Thus the whole army was nominally under the control of the regional congresses of workers, peasants and insurgents. At these congresses, delegates of the toiling people decided upon the policy to be pursued by the Makhnovist Army. The Revolutionary Military Soviet existed to oversee that decisions were implemented, not to determine the military activities of the troops.

It should also be noted that women not only supported the Makhnovists, they also "*fought alongside the men.*" [Arshinov, **Op. Cit.**, p. 145] However, "*the participation of women in the movement (by all accounts, quite substantial)*" needs "*further investigation.*" [Serge Cipko, "*Nestor Makhno: A Mini-Historiography of the Anarchist Revolution in Ukraine, 1917-1921,*" pp. 57-75, **The Raven**, no. 13, p. 75]

At its height, the army was made up of infantry, cavalry, artillery, machine-gun units, and special branches, including an intelligence service. As the success of partisan warfare depends upon mobility, the army gradually mounted its infantry in light carts (called "*tachanka*") during 1918-19. As Michael Malet notes, this was a "*novel tactic*" and Makhno "*could be described as the inventor of the motorised division before the car came into general use.*" [**Op. Cit.**, p. 85] The tachanka was used to transport as

many troops as possible, giving the Makhnovists mobile infantry which could keep up with the cavalry. In addition, a machine-gun was sometimes mounted in the rear (in autumn 1919, the 1st machine-gun regiment consisted of 120 guns, all mounted on tachanki).

For the most part the Makhnovist army was a volunteer army, unlike all others operating in the Russian Civil War. However, at times of crisis attempts were made to mobilise troops. For example, the Second regional congress agreed that a "*general voluntary and equalitarian mobilisation*" should take place. This meant that this appeal, "*sanctioned by the moral authority of the congress, emphasised the need for fresh troops in the insurrectionary army, no-one was compelled to enlist.*" [Voline, **Op. Cit.**, p. 577] The Congress itself passed a resolution after a long and passionate debate that stated it "*rejected 'compulsory' mobilisation, opting for an 'obligatory' one; that is, each peasant who is able to carry arms, should recognise his obligation to enlist in the ranks of the partisans and to defend the interests of the entire toiling people of Ukraine.*" [quoted by Palij, **Op. Cit.**, p. 155] There were far more volunteers than arms, the opposite of what occurred to both the Reds and Whites during the Civil War. [Malet, **Op. Cit.**, p. 106]

The third Congress decided to conduct a voluntary mobilisation all those born between 1889 and 1898. This congress told them to assemble at certain points, organise themselves and elect their officers. Another mobilisation decided at the Aleksandrovska congress never took place. How far the Makhnovists were forced to conscript troops is still a matter of debate. Paul Avrich, for example, states that "*voluntary mobilisation*" in reality "*meant outright conscription, as all able-bodied men were required to serve.*" [**Op. Cit.**, p. 114] On the other side, surviving leaflets from 1920 "*are in the nature of appeals to join up, not instructions.*" [Malet, **Op. Cit.**, p. 105] Trotsky, ironically, noted that "*Makhno does not have general mobilisations, and indeed these would be impossible, as he lacks the necessary apparatus.*" [quoted by Malet, **Op. Cit.**, p. 106] It is probably right to say that the Congresses desired that every able-bodied man join the Makhnovist army, but they simply did not have the means to enforce that desire and that the Makhnovists tried their best to avoid conscription by appealing to the peasants' revolutionary conscience, with some success.

As well as the military organisation, there was also an explicitly anarchist federation operating in the Ukraine at the same time. The first conference to organise a "*Confederation of Anarchist Organisations of the Ukraine*" was held between November 12th to 16th, 1918. The new federation was named "*Nabat*" (Alarm) and had a six-person Secretariat. Kharkiv was chosen as its headquarters, while it had groups in other major Ukrainian cities (including Kyiv, Odessa and Katerynoslav). The final organisation of the Nabat was accomplished at a conference held in April 2-7, 1919. The federation aimed to form a "*united anarchism*" and guaranteed a substantial degree of autonomy for every participating group and individual. A number of newspapers appeared in a Ukrainian towns and cities (mostly entitled **Nabat**), as did leaflets and pamphlets. There was a main weekly paper (called **Nabat**) which was concerned largely with anarchist theory. This completed the Makhnovist papers **Road to Freedom** (which was often daily, sometimes weekly and dealt with libertarian ideas, everyday problems and information on partisan activities) and **The Makhnovist Voice** (which dealt primarily with the interests, problems, and tasks of the Makhnovist movement and its army). The Nabat organisation was also published a pamphlet dealing with the Makhnovist movement's problems, the economic

organisation of the region, the free soviets, the social basis of the society that was to be built, and the problem of defence.

Unsurprisingly, the Nabat federation and the Makhnovists worked together closely, with Nabat members worked in the army (particularly its cultural section). Some of its members were also elected to the Makhnovist Revolutionary Military Soviet. It should be noted that the Nabat federation gained a number of experienced anarchists from Soviet Russia, who fled to the Ukraine to escape Bolshevik repression. The Nabat shared the fortunes of the Makhno movement. It carried on its work freely as long as the region was controlled by the Makhnovist Army, but when Bolshevik or White forces prevailed, the anarchists were forced underground. The movement was finally crushed in November 1920, when the Bolsheviks betrayed the Makhnovists.

As can be seen, the Makhnovists implemented to a large degree the anarchist idea of self-managed, horizontally federated associations (when possible, of course). Both the two major organisational layers to the Makhnovist structure (the army and the congresses) were federated horizontally and the "top" structure was essentially a mass peasant, worker and guerrilla decision-making coalition. In other words, the masses took decisions at the "top" level that the Revolutionary Military Soviet and the Makhnovist army were bound to follow. The army was answerable to the local Soviets and to the congresses of soviets and, as we discuss in [section 7](#), the Makhnovists called working-people and insurgent congresses whenever they could.

The Makhnovist movement was, fundamentally, a working class movement. It was *"one of the very few revolutionary movements to be led and controlled throughout by members of 'the toiling masses.'" [David Footman, Op. Cit., p. 245]* It applied its principles of working class autonomy and self-organisation as far as it could. Unlike the Red Army, it was predominantly organised from the bottom up, rejecting the use of Tsarist officers, appointed commanders, and other "top-down" ways of the Red Army (see [section 14](#) for further discussion of the differences between the two forces).

The Makhnovist army was not by any means a perfect model of anarchist military organisation. However, compared to the Red Army, its violations of principle are small and hardly detract from their accomplishment of applying anarchist ideas in often extremely difficult circumstances.

6 Did the Makhnovists have a constructive social programme?

Yes, they did. The Makhnovists spent a great deal of energy and effort in developing, propagating and explaining their ideas on how a free society should be created and run. As Michael Malet noted, the *"leading Makhnovists had definite ideas about the ideal form of social organisation."* [**Nestor Makhno in the Russian Civil War**, p. 107] Moreover, as we discuss in the [next section](#), they also successfully applied these ideas when and where they could.

So what was their social programme? Being anarchists, it comprised two parts, namely political and

economic aspects. The Makhnovists aimed for a true social revolution in which the working classes (both urban and rural) could actively manage their own affairs and society. As such, their social programme reflected the fact that oppression has its roots in both political and economic power and so aimed at eliminating both the state and private property. As the core of their social ideas was the simple principle of working-class autonomy, the idea that the liberation of working-class people must be the task of the working-class people themselves. This vision is at the heart of anarchism and was expressed most elegantly by Makhno:

"Conquer or die -- such is the dilemma that faces the Ukrainian peasants and workers at this historic moment . . . But we will not conquer in order to repeat the errors of the past years, the error of putting our fate into the hands of new masters; we will conquer in order to take our destinies into our own hands, to conduct our lives according to our own will and our own conception of the truth." [quoted by Peter Arshinov, **The History of the Makhnovist Movement**, p. 58]

As such, the Makhnovists were extremely hostile to the idea of state power, recognising it simply as a means by which the majority are ruled by the few. Equally, they were opposed to wage slavery (to private or state bosses), recognising that as long as the workers do not manage their own work, they can never be free. As they put it, their goals could only be achieved by an *"implacable revolution and consistent struggle against all lies, arbitrariness and coercion, wherever they come from, a struggle to the death, a struggle for free speech, for the righteous cause, a struggle with weapons in hand. Only through the abolition of all rulers, through the destruction of the whole foundation of their lies, in state affairs as well as in political and economic affairs. And only through the social revolution can the genuine Worker-Peasant soviet system be realised and can we arrive at SOCIALISM."* [contained in Arshinov, **Op. Cit.**, p. 273] They, like other anarchists and the Kronstadt rebels, termed this programme of working class self-management the *"third revolution."*

We will discuss the political aspect of the Makhnovist programme first, then its economic one. However, the Makhnovists considered (correctly) that both aspects could not be separated. As they put it: *"We will not lay down our arms until we have wiped out once and for all every political and economic oppression and until genuine equality and brotherhood is established in the land."* [contained in Arshinov, **Op. Cit.**, p. 281] We split the aspects simply to aid the presentation of their ideas.

At the core of their ideas was what they termed the *"Free Soviet System"* (or *"free soviets"* for short). It was this system which would allow the working class to create and run a new society. As they put it:

"[The] Makhnovists realise that the working people are no longer a flock of sheep to be ordered about by anyone. We consider the working people capable of building, on their own and without parties, commissars or generals, their own FREE SOVIET SYSTEM, in which those who are elected to the Soviet will not, as now [under the Bolsheviks], command and order us, but on the contrary, will be only the executors of the decisions made in our own workers' gatherings and conferences." [contained in Peter Arshinov, **Op.**

Cit., pp. 280-1]

Thus the key idea advocated by the leading Makhnovista for social organisation and decision-making was the *"free toilers' soviet of peasant and worker organisations."* This meant they were to be independent of all central authority and composed of those who worked, and not political parties. They were to federate on a local, then regional and then national level, and power within the federation was to be horizontal and not vertical. [Michael Malet, **Op. Cit.**, p. 107] Such a system was in opposition to the Bolshevik practice of Soviets defined and dominated by political parties with a vertical decision-making structure that reached its highest point in the Bolshevik Central Committee.

Thus, for the Makhnovists, the soviet system would be a "bottom-up" system, one designed not to empower a few party leaders at the centre but rather a means by which working people could manage their own affairs. As he put it, the *"soviet system is not the power of the social-democratic Communist-Bolsheviks who now call themselves a soviet power; rather it is the supreme form of non-authoritarian anti-state socialism, which expresses itself in the organisation of a free, happy and independent system of social life for the working people."* This would be based on the *"principles of solidarity, friendship and equality."* This meant that in the Makhnovist system of free soviets, the *"working people themselves must freely choose their own soviets, which will carry out the will and desires of the working people themselves, that is to say, ADMINISTRATIVE, not ruling soviets."* [contained in Arshinov, **Op. Cit.**, pp. 272-3]

As David Footman summarises, Makhno's *"ultimate aims were simple. All instruments of government were to be destroyed. All political parties were to be opposed, as all of them were working for some or other form of new government in which the party members would assume the role of a ruling class. All social and economic affairs were to be settled in friendly discussion between freely elected representatives of the toiling masses."* [**Op. Cit.**, p. 247]

Hence the Makhnovist social organisation was a federation of self-managed workers' and peasants' councils (soviets), which would *"be only the executors of the decisions made in our workers' gatherings and conferences."* [contained in Arshinov, **Op. Cit.**, p. 281] In other words, an anarchist system based on mass assemblies and decision-making from the bottom up.

Economically, as is to be expected, the Makhnovists opposed private property, capitalism and wage-slavery. Their economic ideas were summarised in a Makhnovist declaration as follows:

"The lands of the service gentry, of the monasteries, of the princes and other enemies of the toiling masses, with all their livestock and goods, are passed on to the use of those peasants who support themselves solely through their own labour. This transfer will be carried out in an orderly fashion determined in common at peasant assemblies, which must remember in this matter not only each of their own personal interests, but also bear in mind the common interest of all the oppressed, working peasantry."

"Factories, workshops, mines and other tools and means of production become the property of the working class as a whole, which will run all enterprises themselves, through their trade unions, getting production under way and striving to tie together all industry in the country in a single, unitary organisation." [contained in Arshinov, **Op. Cit.**, p. 266]

They continually stressed that the *"land, the factories, the workshops, the mines, the railroads and the other wealth of the people must belong to the working people themselves, to those who work in them, that is to say, they must be socialised."* This meant a system of use-rights, as *"the land, the mines, the factories, the workshops, the railroads, and so on, will belong neither to individuals nor to the government, but solely to those who work with them."* [**Op. Cit.**, p. 273 and p. 281]

In industry, such a system clearly implied a system of worker's self-management within a system of federated factory committees or union branches. On the land, it meant the end of landlordism, with peasants being entitled to as much land and equipment as they could cultivate without the use of hired labour. As a Makhnovist congress in 1919 resolved:

"The land question should be decided on a Ukraine-wide scale at an all-Ukrainian congress of peasants on the following basis: in the interests of socialism and the struggle against the bourgeoisie, all land should be transferred to the hands of the toiling peasants. According to the principle that 'the land belongs to nobody' and can be used only by those who care about it, who cultivate it, the land should be transferred to the toiling peasantry of Ukraine for their use without pay according to the norm of equal distribution." [quoted by Palij, **Op. Cit.**, p. 155]

In addition to advocating the abolition of private property in land and the end of wage labour by distributing land to those who worked it, the Makhnovists also supported the forming of *"free"* or *"working"* communes. Like their policy of land distribution, it also aimed to benefit the poorer peasants and rural wage labourers. The *"free commune"* was a voluntary association of rural workers who took over an expropriated estate and managed the land in common. The commune was managed by a general meeting of all its members and based on the liberty, equality and solidarity of its members.

Clearly, in terms of their economic policies, the Makhnovists proposed a clear and viable alternative to both rural and urban capitalism, namely workers' self-management. Industry and land would be socialised, with the actual management of production resting in the hands of the workers themselves and co-ordinated by federated workers' organisations. On the land, they proposed the creation of voluntary communes which would enable the benefits of co-operative labour to be applied. Like their political ideas, their economic ideas were designed to ensure the freedom of working people and the end of hierarchy in all aspects of society.

In summary, the Makhnovist had a constructive social ideas which aimed to ensure the total economic and political emancipation of the working people. Their vision of a free society was based on a

federation of free, self-managed soviets, the socialisation of the means of life and workers' self-management of production by a federation of labour unions or factory committees. As the black flags they carried into battle read, "*liberty or death*" and "*the land to the peasants, the factories to the workers.*"

7 Did they apply their ideas in practice?

Yes, the Makhnovists consistently applied their political and social ideas when they had the opportunity to do so. Unlike the Bolsheviks, who quickly turned away from their stated aims of soviet democracy and workers' control in favour of dictatorship by the Bolshevik party, the Makhnovists did all in their power to encourage, create and defend working-class freedom and self-management (see [section 14](#) for further discussion). In the words of historian Christopher Reed:

"there can be no question that the anarchists did everything they could to free the peasants and workers and give them the opportunity to develop their own forms of collective control over land and factories . . . [T]he Ukrainian anarchists fought under the slogan of land to the peasants, factories to the workers and power to the soviets. Wherever they had influence they supported the setting up of communes and soviets. They introduced safeguards intended to protect direct self-government from organised interference . . . They conducted relentless class war against landlords, officers, factory owners and the commercial classes could expect short shrift from Makhno and his men, especially if they had taken up arms against the people or, like the Whites . . ., had been responsible for looting, pogroms and vicious reprisals against unarmed peasants on a colossal scale." [From **Tsar to Soviets**, p. 263]

As we discussed in the [last section](#), the core ideas which inspired the Makhnovists were working-class self-determination and self-management. They aimed at the creation of a "*free soviet system*" and the end of capitalism by rural and industrial self-management. It is to the credit of the Makhnovists that they applied these ideas in practice rather than talking about high principles and doing the exact opposite.

In practice, of course, the war left little room for much construction work. As Voline pointed out, one of the key disadvantages of the movement was the "*almost continual necessity of fighting and defending itself against all kinds of enemies, without being able to concentrate on peaceful and truly positive works.*" [The **Unknown Revolution**, p. 571] However, in the disruption of the Civil War the Makhnovists applied their ideas when and where they could.

Within the army, as we discussed in [section 5](#), the insurgent troops elected their own commanders and had regular mass assemblies to discuss policy and the agreed norms of conduct within it. In civilian matters, the Makhnovists **from the start** encouraged working-class self-organisation and self-government. By late 1917, in the area around Hulyai Pole "*the toiling masses proceeded . . . to consolidate their revolution. The little factories functioned . . . under the control of the workers. The estates were split up . . . among the peasants . . . a certain number of agricultural communes were*

formed." [David Footman, **Op. Cit.**, p. 248]

The aim of the Makhnovists was to *"transfer all the lands owned by the gentry, monasteries, and the state into the hands of peasants or to organise, if they wished, peasant communes."* [Palij, **Op. Cit.**, p. 70] This policy was introduced from the start, and by the autumn of 1917, all land, equipment and livestock around Hulyai Pole had been expropriated from the gentry and kulaks and placed in the hands of working peasants. Land reform had been achieved by the direct action of the peasantry.

However, *"many of the peasants understood that the task was not finished, that it was not enough to appropriate a plot of land and be content with it. From the hardships of their lives they learned that enemies were watching from all sides, and that they must stick together. In several places there were attempts to organise social life communally."* [Arshinov, **Op. Cit.**, p. 86]

In line with social anarchist theory, the Makhnovists also tried to introduce collective forms of farming. These experiments in collective working and living were called *"free communes."* Despite the difficult military situation communes were established, principally near Hulyai Pole, in the autumn of 1917. This activity was resumed in February to March of 1918. They re-appeared in early 1919, once the threat of counter-revolution had been (temporarily) defeated.

There were four of these communes within five miles of Hulyai Pole itself and many more further afield. According to Makhno, these agricultural communes *"were in most cases organised by peasants, though sometimes their composition was a mixture of peasants and workmen [sic!]. Their organisation was based on equality and solidarity of the members. All members of these communes -- both men and women -- applied themselves willingly to their tasks, whether in the field or the household."* Unlike many communes, people were given the personal space they desired, so *"any members of the commune who wanted to cook separately for themselves and their children, or to take food from the communal kitchens and eat it in their own quarters, met with no objection from the other members."* The management of each commune *"was conducted by a general meeting of all its members."* In addition, the communes decided to introducing anarchist schooling based on the ideas of Francisco Ferrer (see [section J.5.13](#) for details). Makhno himself worked on one for two days a week for a period. [Makhno, quoted by Paul Avrich, **Anarchists in the Russian Revolution**, pp. 131]

They were set up on the former estates of landlords, and consisted of around 10 families or 100 to 300 people and although each had peasant anarchist members not all the members were anarchists. Makhno worked on Commune No. 1, which was on the estate of former landlord Klassen. When re-founded in 1919 this commune was named after Rosa Luxemburg, the Marxist revolutionary who had recently been murdered in the German revolution. It was a success, for by the spring sowing it had grown from nine families to 285 members working 340 acres of land. The communes represented a way that poor and middle peasants could pool resources to work estates that they could not have worked otherwise and, as Michael Malet points out, *"they were organised from the bottom up, not the top down."* [**Op. Cit.**, p. 121]

However, as Makhno himself acknowledged, while the *"majority of the toiling population saw in the organisation of rural communes the healthy germ of a new social life"* which could provide a *"model of a free and communal form of life,"* the *"mass of people did not go over to it."* They cited as their reasons *"the advance of the German and Austrian armies, their own lack of organisation, and their inability to defend this order against the new 'revolutionary' [Bolshevik] and counter-revolutionary authorities. For this reason the toiling population of the district limited their revolutionary activity to supporting in every way those bold springs."* [Makhno, quoted by Avrigh, **Op. Cit.**, p. 132] Given that the communes were finally destroyed by White and Red forces in June 1919, their caution was justified. After this, peace did not return long enough for the experiment to be restarted.

As Michael Malet argues:

"Very few peasant movements in history have been able to show in practice the sort of society and type of landholding they would like to see. The Makhnovist movement is proof that peasant revolutionaries can put forward positive, practical ideas." [**Op. Cit.**, p. 121]

The Makhnovist experiments, it should be noted, have strong similarities to the rural revolution during the Spanish Revolution of 1936 (see sections [I.8.5](#) and [I.8.6](#) for more details).

As well as implementing their economic ideas on workers' self-management, land reform and free communes, the Makhnovists also organised regional congresses as well as local soviets. Most of the activity happened in and around Hulyai Pole, the focal point of the movement. This was in accord with their vision of a *"free soviet system."* Needless to say, the congresses could only be called during periods of relative calm (i.e. the Makhnovist home area was not occupied by hostile forces) and so congresses of insurgents, peasants and workers were called in early 1919 and another in October of that year. The actual dates of the regional congresses were:

23 January 1919 at Velyka Mykhailivka

12 February 1919 at Hulyai Pole

10 April 1919 at Hulyai Pole

20 October 1919 at Aleksandrovsk

A congress for the fifteenth of June 1919 never met because Trotsky unilaterally banned it, under pain of death to anyone even **discussing** it, never mind calling for it or attending as a delegate. Unlike the third congress, which ignored a similar ban by Dybenko, the fourth congress could not go ahead due to the treacherous attack by the Red Army that preceded it. Four Makhnovist commanders were executed by the Red Army for advertising this congress. Another congress planned for Aleksandrovsk in November 1920 was also prevented by Bolshevik betrayal, namely the attack after Wrangel had been defeated. [Malet, **Op. Cit.**, p. 108] See [section 13](#) for further details.

The reason for these regional congresses was simple, to co-ordinate the revolution. *"It was indispensable,"* Arshinov notes, *"to establish institutions which unified first a district composed of various villages, and then the districts and departments which composed the liberated region. It was indispensable to find general solutions for problems common to the entire region. It was indispensable to create organs suitable for these tasks. And the peasants did not fail to create them. These organs were the regional congresses of peasants and workers."* [Op. Cit., pp. 87-8] These congresses *"were composed of delegates of peasants, workers and of the insurgent army, and were intended to clarify and record the decisions of the toiling masses and to be regarded as the supreme authority for the liberated area."* [David Footman, Op. Cit., p. 266]

The first congress, which was the smallest, discussed the strengthening of the front, the adoption of a common nomenclature for popular organisations (soviets and the like) and to send a delegation to convince the draftees in the Nationalist forces to return home. It was also decided to organise a second congress. The second congress was larger, having 245 delegates from 350 districts. This congress *"was strongly anti-Bolshevik and favoured a democratic socio-political way of life."* [Palij, Op. Cit., p. 153] One delegate made the issue clear:

"No party has a right to usurp governmental power into its own hands . . . We want life, all problems, to be decided locally, not by order from any authority above; and all peasants and workers should decide their own fate, while those elected should only carry out the toilers' wish." [quoted by Palij, Op. Cit., p. 154]

A general resolution was passed, which acknowledged the fact that the Bolshevik party was *"demanding a monopoly of the Revolution."* It also stated:

"With deep regret the Congress must also declare that apart from external enemies a perhaps even greater danger, arising from its internal shortcomings, threatens the Revolution of the Russian and Ukrainian peasants and workers. The Soviet Governments of Russia and of the Ukraine, by their orders and decrees, are making efforts to deprive local soviets of peasants and workers' deputies of their freedom and autonomy." [quoted by Footman, Op. Cit., p. 267]

As noted in [section 5](#), the congress also decided to issue an *"obligatory"* mobilisation to gather troops for the Army. It also accepted a resolution on land reform, stating that the land *"belongs to nobody"* and could be used by anyone as long as they did not use wage labour (see [section 6](#) for the full resolution). The congress accepted a resolution against plunder, violence, and anti-Jewish pogroms, recognising it as an attempt by the Tsarist government to *"turn the attention of all toiling people away from the real reason for their poverty,"* namely the Tsarist regime's oppression. [quoted by Palij, Op. Cit., p. 155]

The second congress also elected the Revolutionary Military Soviet of Peasants, Workers and Insurgents, which had *"no powers to initiate policy but designed merely to implement the decisions of*

the periodic congresses." [Footman, **Op. Cit.**, p. 267]

The third congress was the largest and most representative, with delegates from 72 volosts (in which two million people lived). This congress aimed to "*clarify the situation and to consider the prospects for the future of the region.*" It decided to conduct a voluntary mobilisation of men to fight the Whites and "*rejected, with the approval of both rich and poor peasants, the Bolshevik expropriations.*" [Palij, **Op. Cit.**, p. 158] Toward the end of the congress, it received a telegram from the Bolshevik commander Dybenko calling it "*counter-revolutionary,*" its organisers "*outlaws*" and dissolving it by his order. The congress immediately voted an indignant resolution in reply. This corrected Dybenko's factual mistakes on who called it, informed him why it was called, gave him a history lesson on the Makhnovist region and asked him:

"Can there exist laws made by a few people who call themselves revolutionaries which permit them to outlaw a whole people who are more revolutionary than they are themselves? . . .

"Is it permissible, is it admissible, that they should come to the country to establish laws of violence, to subjugate a people who have just overthrown all lawmakers and all laws?"

"Does there exist a law according to which a revolutionary has the right to apply the most severe penalties to a revolutionary mass, of which he calls himself the defender, simply because this mass has taken the good things which the revolution promised them, freedom and equality, without his permission?"

"Should the mass of revolutionary people perhaps be silent when such a revolutionary takes away the freedom which they have just conquered?"

"Do the laws of the revolution order the shooting of a delegate because he believes he ought to carry out the mandate given him by the revolutionary mass which elected him?"

"Whose interests should the revolutionary defend; those of the Party or those of the people who set the revolution in motion with their blood?" [quoted by Arshinov, **Op. Cit.**, p. 103]

As we discuss in [section 13](#), Trotsky's order to ban the fourth congress indicates that such laws do exist, with the "*entire peasant and labouring population are declared guilty of high treason if they dare participate in their own free congress.*" [Arshinov, **Op. Cit.**, p. 123]

The last congress was held between 20th and 26th of October in Aleksandrovsk. One delegate was to be elected per 3000 people and one delegate per military unit. This gave 270 mostly peasant delegates. Only 18 were workers, of which 6 were Mensheviks, who walked out after Makhno called them "*lapdogs of the bourgeoisie*" during the discussion on "*free socio-economic organisations*"! [Malet, **Op. Cit.**, p. 109] The congress passed a number of resolutions, concentrating on the care of the wounded and

the poorest part of the population, a voluntary mobilisation, voluntary peasant contributions to feed the army and forced levies on the bourgeoisie.

According to Voline, the chairman, Makhnovist ideas were freely discussed:

"The idea of free Soviets, genuinely functioning in the interests of the working population; the question of direct relationships between peasants and city workers, based on mutual exchange of the products of their labour; the launching of a libertarian and egalitarian social organisation in the cities and the country; all these question were seriously and closely studied by the delegates themselves, with the assistance and co-operation of qualified comrades." [Op. Cit., p. 640]

He notes that the congress *"decided that the workers, without any authority, would organise their economic, political and administrative life for themselves, by means of their own abilities, and through their own direct organs, united on a federative basis."* [Op. Cit., p. 641]

It is significant to note that the congress also discussed the activities of the Makhnovists within the city itself. One delegate raised the issue of the activities of the Kontrrazvedka, the Makhnovist *"counter-intelligence"* section. As noted in [section 5](#), the Makhnovists, like all the armies in the Russian Civil War, had its intelligence service. It combined a number of functions, such as military reconnaissance, arrest and holding of prisoners, counter-insurgency (*"Originally it had a punitive function, but because of improper treatment of prisoners of war, it was deprived of its punitive function."* [Palij, Op. Cit., p. 300]). The delegate stated that this *"counter-espionage service"* was engaged in *"arbitrary acts and uncontrolled actions -- of which some are very serious, rather like the Bolshevik Cheka."* [quoted by Voline, Op. Cit., p. 643] Immediately a commission of several delegates was created to investigate the situation. Voline argues that *"[s]uch an initiative on the part of workers' delegates would not have been possible under the Bolshevik regime. It was by activity of this kind that the congress gave a preview of the way in which a society should function from the beginning if it is based on a desire for progress and self-realisation."* [Voline, **Ibid.**] Sadly, the commission could not complete its work due to the city being evacuated soon after the congress.

Another incident shows that under the Makhnovists the civilian population was in control. A delegate noted that Klein, the Makhnovist military commander in the city, had become publicly and riotously drunk after issuing proclamations against drunkenness. Klein was called before the congress, which accepted his apology and his request to be sent to the front, away from the boredom of desk work which had driven him to drink! This, according to Voline, showed that the workers and their congress were the masters and the army its servant. [Voline, **Op. Cit.**, pp. 645-7]

Outside of the congresses the work of local Soviets was to be co-ordinated through the Revolutionary Military Soviet (RMS), the first RMS was set up by the 2nd congress and consisted of one delegate for each of the 32 volsts the Makhnovista had liberated. The RMS was to be answerable to the congresses and limited to implementing their decisions but the difficult military situation meant this seldom

happened. When it did (the 3rd Congress) the Congress had no problems with its actions in the previous period. After the Aleksandrovsk congress, the RMS consisted of 22 delegates including three known Bolsheviks and four known Makhnovists, the Bolsheviks considered the remaining delegates "*anarchists or anarchist sympathisers*".

The military chaos of 1920 saw the RMS dissolved and replaced by the Soviet of Revolutionary Insurgents of the Ukraine, which consisted of seven members elected by the insurgent army. Its secretary was a left Socialist Revolutionary. The RMS in addition to making decisions between Congresses carried out propaganda work including the editing of the Makhnovist paper "*The Road to Freedom*" and collected and distributed money.

Lastly, we must discuss what happened when the Makhnovists applied their ideas in any cities they liberated as this gives a clear idea of the way they applied their ideas in practice. Anarchist participant Yossif the Emigrant stated that it was "*Makhno's custom upon taking a city or town to call the people together and announce to them that henceforth they are free to organise their lives as they think best for themselves. He always proclaims complete freedom of speech and press; he does not fill the prisons or begin executions, as the Communists do.*" He stressed it was "*the expression of the toilers themselves*" and "*the first great mass movement that by its own efforts seeks to free itself from government and establish economic self-determination. In that sense it is thoroughly Anarchistic.*" [Alexander Berkman, **The Bolshevik Myth**, pp. 193-5]

Arshinov paints a similar picture:

"As soon as they entered a city, they declared that they did not represent any kind of authority, that their armed forces obliged no one to any sort of obligation and had no other aim than to protect the freedom of the working people. The freedom of the peasants and the workers, said the Makhnovists, resides in the peasants and workers themselves and may not be restricted. In all fields of their lives it is up to the workers and peasants themselves to construct whatever they consider necessary. As for the Makhnovists -- they can only assist them with advice, by putting at their disposal the intellectual or military forces they need, but under no circumstances can the Makhnovists prescribe for them in any manner." [Arshinov, **Op. Cit.**, p. 148]

In addition, the Makhnovists "*fully applied the revolutionary principles of freedom of speech, of thought, of the press, and of political association. In all cities and towns occupied by the Makhnovists, they began by lifting all the prohibitions and repealing all the restrictions imposed on the press and on political organisations by one or another power.*" Indeed, the "*only restriction that the Makhnovists considered necessary to impose on the Bolsheviks, the left Socialist-Revolutionaries and other statists was a prohibition on the formation of those 'revolutionary committees' which sought to impose a dictatorship over the people.*" They also took the opportunity to destroy every prison they got their hands on, believing that free people "*have no use for prisons*" which are "*always built only to subjugate the people, the workers and peasants.*" [**Op. Cit.**, p. 153, p. 154 and p. 153]

The Makhnovists encouraged self-management. Looking at Aleksandrovsk:

"They immediately invited the working population to participate in a general conference of the workers of the city. When the conference met, a detailed report was given on the military situation in the region and it was proposed that the workers organise the life of the city and the functioning of the factories with their own forces and their own organisations, basing themselves on the principles of labour and equality. The workers enthusiastically acclaimed all these suggestions; but they hesitated to carry them out, troubled by their novelty, and troubled mainly by the nearness of the front, which made them fear that the situation of the town was uncertain and unstable. The first conference was followed by a second. The problems of organising life according to principles of self-management by workers were examined and discussed with animation by the masses of workers, who all welcomed these ideas with the greatest enthusiasm, but who only with difficulty succeeded in giving them concrete forms. Railroad workers took the first step in this direction. They formed a committee charged with organising the railway network of the region . . . From this point, the proletariat of Aleksandrovsk began to turn systematically to the problem of creating organs of self-management." [Op. Cit., p. 149]

Unfortunately, the Makhnovists occupied only two cities (Alexandrovsk for four weeks and Katerinoslav for two periods of one and five weeks respectively). As a rule the Makhnovist rank and file had little or no experience of life in the cities and this placed severe limits on their ability to understand the specific problems of the workers there. In addition, the cities did not have a large anarchist movement, meaning that the Mensheviks and Bolsheviks had more support than they did. Both parties were, at best, neutral to the Makhnovists and anarchists, so making it likely that they would influence the city workers against the movement. As Voline noted, the *"absence of a vigorous organised workers' movement which could support the peasant insurgents"* was a disadvantage. [Op. Cit., p. 571]

There were minor successes in both cities. In Alexandrovsk, some trains were got running and a few factories reopened. In Katerinoslav (where the city was under a state of siege and constant bombardment by the Whites), the tobacco workers won a collective agreement that had long been refused and the bakers set themselves to preparing the socialisation of their industry and drawing up plans to feed both the army and the civilian population. Unsurprisingly, the bakers had long been under anarcho-syndicalist influence. [Malet, Op. Cit., p. 124]

Clearly, whenever they could, the Makhnovists practised their stated goals of working-class self-management and supported the organisational structures to ensure the control of and participation in the social revolution by the toiling masses. Equally, when they liberated towns and cities they did not impose their own power upon the working-class population but rather urged it to organise itself by setting up soviets, unions and other forms of working-class power. They urged workers to organise self-management of industry. True to the anarchist vision of a free society, they advocated and practised freedom of assembly, speech and organisation. In the words of historian Christopher Reed:

"Makhno's Insurgent Army . . . was the quintessence of a self-administered, people's revolutionary army. It arose from the peasants, it was composed of peasants, it handed power to the peasants. It encouraged the growth of communes, co-operatives and soviets but distrusted all permanent elites attempting to take hold within them. It would be foolish to think that Makhno was supported by every peasant or that he and his followers could not, on occasions, direct their cruelty towards dissidents within their own ranks, but, on the whole, the movement perhaps erred on the side of being too self-effacing, of handing too much authority to the population at key moments." [From **Tsar to Soviets**, p. 260]

As such, Makhnovist practice matched its theory. This can be said of few social movements and it is to their credit that this is the case.

8 Weren't the Makhnovists just Kulaks?

According to Trotsky (and, of course, repeated by his followers), *"Makhno created a cavalry of peasants who supplied their own horses. These were not the downtrodden village poor whom the October revolution first awakened, but the strong and well-fed peasants who were afraid of losing what they had. The anarchist ideas of Makhno (ignoring of the state, non-recognition of the central power) corresponded to the spirit of this kulak cavalry as nothing else could."* He argued that the Makhnovist struggle was not the anarchist struggle against the state and capitalism, but rather *"a struggle of the infuriated petty property owner against the proletarian dictatorship."* The Makhno movement, he stressed, was just an example of the *"convulsions of the peasant petty bourgeoisie which desired, of course, to liberate itself from capital but at the same time did not consent to subordinate itself to the dictatorship of the proletariat."* [Lenin and Trotsky, **Kronstadt**, p. 80, p. 89 and pp. 89-90]

Unfortunately for those who use this kind of argument against the Makhnovists, it fails to stand up to any kind of scrutiny. Ignoring the sophistry of equating the Bolshevik party's dictatorship with the "dictatorship of the proletariat," we can easily refute Trotsky's somewhat spurious argument concerning the background of the Makhnovists.

Firstly, however, we should clarify what is meant by the term *"kulak."* According to one set of Trotskyist editors, it was *"popularly used to refer to well-to-do peasants who owned land and hired poor peasants to work it."* ["glossary," Lenin and Trotsky, **Kronstadt**, p. 146] The term itself derives from the Russian for *"fist,"* with appropriate overtones of grasping and meanness. In other words, a rural small-scale capitalist (employer of wage labour and often the renter of land and loaner of money as well) rather than a well-off peasant as such. Trotsky, however, muddies the water considerably by talking about the *"peasant petty bourgeoisie"* as well. Given that a peasant is *"petty"* (i.e. petit) bourgeois (i.e. own and use their own means of production), Trotsky is blurring the lines between rural capitalist (kulak) and the middle peasantry, as occurred so often under Bolshevik rule.

Secondly, we could just point to the eyewitness accounts of the anarchists Arshinov and Voline. Both stress that the Makhno movement was a mass revolutionary movement of the peasant and working poor

in the Southern Ukraine. Arshinov states that after Denikin's troops had been broken in 1919, the Makhnovists *"literally swept through villages, towns and cities like an enormous broom"* and the *"returned pomeshchiks [landlords], the kulaks, the police, the priests"* were destroyed, so refuting the *"the myth spread by the Bolsheviks about the so-called kulak character of the Makhnovshchina."* Ironically, he states that *"wherever the Makhnovist movement developed, the kulaks sought the protection of the Soviet authorities, and found it there."* [Op. Cit., p. 145] Yossif the Emigrant, another anarchist active in the movement, told anarchist Alexander Berkman that while there was a *"kulak"* element within it, *"the great majority are not of that type."* [quoted by Berkman, **The Bolshevik Myth**, p. 187] According to Gallina Makhno (Makhno's wife), when entering a town or village it was *"always Makhno's practice to compel the rich peasants, the kulaki, to give up their surplus wealth, which was then divided among the poor, Makhno keeping a share for his army. Then he would call a meeting of the villagers, address them on the purposes of the povstantsi [partisan] movement, and distribute his literature."* [Emma Goldman, **My Disillusionment in Russia**, p. 149]

However, this would be replying to Trotsky's assertions with testimony which was obviously pro-Makhnovist. As such, we need to do more than this, we need to refute Trotsky's assertions in depth, drawing on as many non-anarchist sources and facts as possible.

The key to refuting Trotsky's argument that the Makhnovists were just kulaks is to understand the nature of rural life before and during 1917. Michael Malet estimates that in 1917, the peasantry could be divided into three broad categories. About 40 percent could no longer make a living off their land or had none, another 40 per cent who could make ends meet, except in a bad year, and 20 per cent who were relatively well off, with a fraction at the very top who were very well off. [Op. Cit., p. 117] Assuming that *"kulak"* simply meant *"rich"* or *"well-off"* peasant, then Trotsky is arguing that the Makhnovist movement represented and was based on this top 20 per cent. However, if we take the term *"kulak"* to mean *"small rural capitalist"* (i.e. employer of wage labour) then this figure would be substantially smaller as few within this group would employ hired labour or rent land. In fact, the percentage of peasant households in Russia employing permanent wage-labour was 3.3% in 1917, falling to 1% in 1920. [Teodor Shanin, **The Awkward Class**, p. 171]

In 1917, the peasants all across the Russian Empire took back the land stolen by the landlords. This led to two developments. Firstly, there was a *"powerful levelling effect"* in rural life. [Shanin, Op. Cit., p. 159] Secondly, the peasants would only support those who supported their aspirations for land reform (which was why the Bolsheviks effectively stole the Socialist-Revolutionary land policy in 1917). The Ukraine was no different. In 1917 the class structure in the countryside changed when the Hulyai Pole peasants were amongst the first to seize the landlords' land. In August 1917 Makhno assembled all the landed gentry (*"pomeshchiks"*) of the region *"and made them give him all the documents relating to lands and buildings."* After making an exact inventory of all this property and presenting a report to the local and then district congress of soviets, he *"proceeded to equalise the rights of the pomeshchiks and kulaks with those of the poor peasant labourers in regard to the use of the land . . . the congress decided to let the pomeshchiks and kulaks have a share of the land, as well as tools and livestock, equal to that of the labourers."* Several other peasant congresses nearby followed this example and adopted the same measure. [Peter Arshinov, Op. Cit., pp. 53-4]

Most of this land, tools and livestock was distributed to poor peasants, the rest was used to set up voluntary communes where the peasants themselves (and not the state) self-managed the land. Thus the peasants' *"economic conditions in the region of the Makhno movement were greatly improved at the expense of the landlords, the church, monasteries, and the richest peasants."* [Palij, **Op. Cit.**, p. 214] This redistribution was based on the principle that every peasant was entitled to as much land as their family could cultivate without the use of hired labour. The abolition of wage labour in the countryside was also the method the anarchists were to use in Spain to divide up the land some 20 years later.

We should also note that the Makhnovist policy of land reform based on the abolition of wage labour was, as we noted in [section 7](#), the position agreed at the second regional congress called in 1919. The Makhnovists specifically argued with regards to the kulaks:

"We are sure that . . . the kulak elements of the village will be pushed to one side by the very course of events. The toiling peasantry will itself turn effortlessly on the kulaks, first by adopting the kulak's surplus land for general use, then naturally drawing the kulak elements into the social organisation." [cited by Michael Malet, **Op. Cit.**, pp. 118-9]

As such, when Trotsky talks about the *"downtrodden village poor whom the October revolution first awakened,"* he is wrong. In the area around Hulyai Pole it was **not** the October revolution which *"first awakened"* them into action, it was the activities of Makhno and the anarchists during the summer and autumn of 1917 which had done that (or, more correctly, it was their activities which aided this process as the poor peasants and landless workers needed no encouragement to expropriate the landlords).

Needless to say, this land redistribution reinforced Makhno's popularity with the people and was essential for the army's later popularity and its ability to depend on the peasants for support. However, the landlords and richer kulaks did not appreciate it and, unsurprisingly, tried to crush the movement when they could. Once the Austro-Germans invaded, the local rich took the opportunity to roll back the social revolution and the local **pomeshchiks** and **kulaks** formed a *"special volunteer detachment"* to fight Makhno once he had returned from exile in July 1918. [Arshinov, **Op. Cit.**, p. 59]

This system of land reform did not seek to divide the village. Indeed, the Makhnovist approach is sometimes called the *"united village"* theory. Rather than provoke unnecessary and damaging conflict behind the frontlines, land reform would be placed in the hands of the village community, which would ensure that even the kulaks would have a fair stake in the post-revolutionary society as everyone would have as much land as they could till without using hired labour. The Bolshevik policy, as we will see, aimed at artificially imposing "class conflict" upon the villages from without and was a disaster as it was totally alien to the actual socio-economic situation. Unsurprisingly, peasant communities **as a whole** rose up against the Bolsheviks all across Russia.

As such, the claim that the Makhnovists were simply *"kulaks"* is false as it fails to, firstly, acknowledge the actual pre-revolutionary composition of the peasantry and, secondly, to understand the social-

revolution that had happened in the region of Hulyai Pole in 1917 and, thirdly, totally ignores the actual Makhnovist position on land reform. As Michael Malet argues, the Bolsheviks *"totally misconstrued the nature of the Makhno movement. It was not a movement of kulaks, but of the broad mass of the peasants, especially the poor and middle peasants."* [Op. Cit., p. 122]

This was sometimes acknowledged by Bolsheviks themselves. Iakovlev acknowledged in 1920 that in 1919 Makhno *"was a real peasant idol, an expression of all peasant spontaneity against . . . Communists in the cities and simultaneously against city capitalists and landowners. In the Makhno movement it is difficult to distinguish where the poor peasant begins [and] the 'kulak' ends. It was a spontaneous peasant movement . . . In the village we had no foothold, there was not one element with which we could join that would be our ally in the struggle against the bandits [sic!]"* [quoted by Palij, Op. Cit., p. 157]

According to a Soviet author present at the Makhnovist regional congresses on January 23 and February 12: *"In 1919 when I asked the chairman of the two Congresses (a Jewish farmer) whether the 'kulaks' were allowed to participate in the Congress, he angrily responded: 'When will you finally stop talking about kulaks? Now we have no kulaks among us: everybody is tilling as much land as he wishes and as much as he can.'" [quoted by Palij, Op. Cit., p. 293]*

According to Christian Rakovskii, the Bolshevik ruler of Ukraine, *"three-fourths of the membership of the [partisan] bands were poor peasants."* He presented a highly original and inventive explanation of this fact by arguing that *"rich peasants stayed in the village and paid poor ones to fight. Poor peasants were the hired army of the kulaks."* [Vladimir N. Brovkin, **Behind the Front the Lines of the Civil War**, p. 112 and p. 328]

Even Trotsky (himself the son of a rich peasant!) let the cat out of the bag in 1919:

"The liquidation of Makhno does not mean the end of the Makhnovschyna, which has its roots in the ignorant popular masses." [quoted by Malet, Op. Cit., p. 122]

Ultimately, all sources (including Bolshevik ones) accept that in the autumn of 1919 (at the very least) Makhno's support was overwhelming and came from all sections of the population.

Even ignoring the fact there was a social revolution and the eye-witness Bolshevik accounts (including Trotsky's!) which contradict Trotsky's assertions, Trotsky can be faulted for other reasons.

The most important issue is simply that the Makhnovist movement could not have survived four years if (at best) 20 per cent of the population supported it. As Christopher Reed notes, when the Makhnovists were *"in retreat they would abandon their weapons and merge with the local population. The fact that they were able to succeed shows how closely they were linked with the ordinary peasants because such tactics made Makhno's men very vulnerable to informers. There were very few examples of betrayal."* [Op. Cit., p. 260] If Makhno's social base was as weak as claimed there would have been no

need for the Bolsheviks to enter into alliances with him, particularly in the autumn of 1920 when the Makhnovists held no significant liberated area. Even after the defeat of Wrangel and the subsequent Bolshevik betrayal and repression, Makhno's mass base allowed him to remain active for months. Indeed, it was only when the peasants themselves had become exhausted in 1921 due to worsening economic conditions and state repression, were the Makhnovists finally forced into exile.

In the attempt to *"eradicate his influence in the countryside"* the Bolsheviks *"by weight of numbers and consistent ruthlessness they achieved a partial success."* This was achieved by state terrorism:

*"On the occupation of a village by the Red Army the **Cheka** would hunt out and hang all active Makhnovist supporters; an amenable Soviet would be set up; officials would be appointed or imported to organise the poor peasants . . . and three or four Red militia men left as armed support for the new village bosses."* [David Footman, **Op. Cit.**, p. 292]

Moreover, in these *"military operations the Bolsheviks shot all prisoners. The Makhnovists shot all captured officers unless the Red rank and file strongly interceded for them. The rank and file were usually sent home, though a number volunteered for service with the Insurgents. Red Army reports complain of poor morale . . . The Reds used a number of Lettish and Chinese troops to decrease the risk of fraternisation."* [Footman, **Op. Cit.**, p. 293] If the Makhnovists were made up of kulaks, why would the Bolsheviks fear fraternisation? Equally, if the Makhnovists were "kulaks" then how could they have such an impact on Red Army troops (who were mostly poor peasants)? After all, Trotsky had been complaining that "Makhnovism" had been infecting nearby Red Army troops and in August 1919 was arguing that it was *"still a poison which has infected backward units in the Ukrainian army."* In December 1919, he noted that *"disintegration takes place in unstable units of our army when they came into contact with Makhno's forces."* It seems unlikely that a movement made up of "kulaks" could have such an impact. Moreover, as Trotsky noted, not all Makhnovists were anarchists, *"some of them wrongly regard themselves as Communists."* Again, why would people who regarded themselves as Communists join a movement of "kulaks"? [**How the Revolution Armed**, vol. II, p. 367, p. 110 and p. 137]

In addition, it seems highly unlikely (to say the least!) that a movement which is alleged to be either made up of or supported by the kulaks could have had a land policy which emphasised and implemented an equal share for the poorest peasantry, not just of land but also of live and dead stock as well as opposing the hiring of labour. This fact is reinforced when we look at the peasant reaction to the Bolshevik (and, presumably, anti-kulak and pro-"downtrodden village poor") land policy. Simply put, their policies resulted in massive peasant unrest directed against the Bolsheviks.

The Bolshevik land decrees of the 5th and 11th of February, 1919, stated that large landlord holdings would become state farms and all stock was to be taken over by the Ministry of Agriculture, with only between one third and one half of the land being reserved for poor peasants. This was *"largely irrelevant, since the peasantry had expected, and in some cases already controlled, all of it. To them, the government was taking away their land, and not seizing it from the landlords, then keeping some of it*

and handing the rest over to its rightful owners." [Malet, **Op. Cit.**, p. 134] Thus the land was to expropriated by the state, **not** by the peasants. The result of this policy soon became clear:

"The Bolsheviks expropriation policy was countervailed by the peasants' resistance based upon their assumption that 'the land belongs to nobody . . . it can be used only by those who care about it, who cultivate it.' Thus the peasants maintained that all the property of the former landlords was now by right their own. This attitude was shared not only by the rich and middle peasants but also the poor and landless, for they all wished to be independent farmers. The poorer the areas, the more dissatisfied were the peasants with the Bolshevik decrees.

"Thus Communist agricultural policy and terrorism brought about a strong reaction against the new Bolshevik regime. By the middle of 1919, all peasants, rich and poor, distrusted the Bolsheviks." [Palij, **Op. Cit.**, p. 156]

The Bolshevik inspired Poor Peasant Committees were *"associated with this disastrous policy, were discredited, and their reintroduction would need the aid of troops."* [Malet, **Op. Cit.**, p. 135] The Makhnovists, in contrast, did not impose themselves onto the villages, nor did they attempt to tell the peasants what to do and how to divide the land. Rather they advocated the formation of Free Soviets through which these decisions could be made. This, along with their support for land reform, helped win them mass support.

After evacuating the Ukraine in mid-1919 due to the success of Denikin's counter-revolution, the Ukrainian Communists took time to mull over what had happened. The Central Committee's November 1919 resolution on the Ukraine *"gave top priority to the middle peasant -- so often and so conveniently lumped in together with the kulak and dealt with accordingly -- the transfer of landlord land to the poor peasants with only minimum exceptions for state farms."* These points were the basis of the new Ukrainian land law of 5th of February, 1920. [Malet, **Op. Cit.**, p. 135] This new law reflected long standing Makhnovist theory **and** practice. Therefore, the changing nature of Bolshevik land policy in the Ukraine indicates that Trotsky's claims are false. The very fact that the Bolsheviks had to adjust their policies in line with Makhnovist theory indicates that the later appealed to the middle and poor peasants.

Equally, it seems strange that the *"kulaks"* who apparently dominated the movement should have let themselves be led by poor peasants and workers. Voline presents a list of some of the participants of the movement and the vast majority are either peasants or workers. [**Op. Cit.**, pp. 688-91] As historian Michael Palij notes, *"[a]lmost to a man, they [the Makhnovist leadership] were of poor peasant origin, with little formal education."* [**Op. Cit.**, p. 254] Exceptions to the general rule were usually workers. Most were Anarchists or Socialist-Revolutionaries. [Palij, **Op. Cit.**, pp. 254-62]

Of course, it can be argued that the leadership of a movement need not come from the class which it claims to lead. The leadership of the Bolsheviks, for example, had very few actual proletarians within it. However, it seems unlikely that a class would select as its leaders members of the population it

oppressed! Equally, it seems as unlikely that poor peasants and workers would let themselves lead a movement of kulaks, whose aims would be alien to theirs. After all, poor peasants would seek land reform while kulaks would view this as a threat to their social position. As can be seen from the Makhnovist land policy, they argued for (and implemented) radical land reform, placing the land into the hands of peasants who worked the land without hiring labour (see [section 7](#))

As regards Trotsky's argument that the Makhnovists had to be kulaks because they originally formed a cavalry unit, it is easy to refute. Makhno himself was the son of poor peasants, an agricultural labourer and a worker in a factory. He was able to ride a horse, so why could other poor peasants not do so? Ultimately, it simply shows that Trotsky knew very little of Ukrainian peasant life and society.

Given that the Bolshevik government was meant to be a "worker-peasant" power, it seems strange that Trotsky dismisses the concerns of the peasantry so. He should have remembered that peasant uprisings against the Bolshevik government occurred constantly under the Bolsheviks, forcing them (eventually) to, first, recognise the false nature of their peasant policies in 1919 and, second, to introduce the NEP in 1921. As such, it seems somewhat ironic for Trotsky to attack the Makhnovists for not following flawed Bolshevik ideology as regards the peasantry!

The Bolsheviks, as Marxists, saw the peasants as "petit bourgeoisie" and uninterested in the revolution except as a means to grab their own plot of land. Their idea of land collectivisation was limited to state ownership. The initial Bolshevik land strategy can be summed up as mobilising the poor peasantry against the rest on the one hand and mobilising the city worker against the peasants (through forced grain confiscation on the other). The lack of knowledge of peasant life was the basis of this policy, which was abandoned in 1919 when it was soon proven to be totally wrong. Rather than see wealth extremes rise, the 1917 revolution saw a general levelling.

As regards the peasantry, here as elsewhere the Bolsheviks claimed their strategy was the objectively necessary (only possible) one in the circumstances. And here again the Makhnovists demonstrate this to be false, as the Bolsheviks themselves acknowledged in practice by changing their agricultural policies and bringing them closer to the Makhnovist position.

Clearly, both factually and logically, Trotsky's arguments are false. Ultimately, like most Bolsheviks, Trotsky uses the term "*kulak*" as a meaningless term of abuse, with no relation to the actual class structure of peasant life. It simply means a peasant opposed to the Bolsheviks rather than an actual social strata. Essentially, he is using the standard Leninist technique of specifying a person's class (or ideas) based on whether they subscribe to (or simply follow without question) Leninist ideology (see [section H.2.12](#) for further discussion of this). This explains why the Makhnovists went from being heroic revolutionaries to kulak bandits (and back again!) depending on whether their activity coincided with the needs of Bolshevik power or not. Expediency is not a sound base to build a critique, particularly one based simply on assertions like Trotsky's.

9 Were the Makhnovists anti-Semitic and pogromists?

No, they were not. Anyone who claims that the Makhnovist movement was anti-Semitic or conducted pogroms against Jews simply shows ignorance or a desire to deceive. As we will show, the Makhnovists were both theoretically and practically opposed to anti-Semitism and pogroms.

Unsurprisingly, many Leninists slander the Makhnovists on this score. Trotsky, for example, asserted in 1937 that Makhno's followers expressed "*a militant anti-Semitism.*" [Lenin and Trotsky, **Kronstadt**, p. 80] Needless to say, the Trotskyist editors of the book in question did not indicate that Trotsky was wrong in the accusation. In this way a slander goes unchecked and becomes "accepted" as being true. As the charge of "*militant anti-Semitism*" is a serious one, so it is essential that we (unlike Trotsky) provide evidence to refute it.

To do so we will present a chronological overview of the evidence against it. This will, to some degree, result in some duplication as well as lengthy quotations, however it is unavoidable. We are sorry to labour this point, but this allegation is sadly commonplace and it is essential to refute it fully.

Unsurprisingly, Arshinov's 1923 account of the movement takes on the allegations that the Makhnovists were anti-Semitic. He presents extensive evidence to show that the Makhnovists opposed anti-Semitism and pogroms. It is worth quoting him at length:

"In the Russian press as well as abroad, the Makhnovshchina was often pictured as a very restricted guerrilla movement, foreign to ideas of brotherhood and international solidarity, and even tainted with anti-Semitism. Nothing could be more criminal than such slanders. In order to shed light on this question, we will cite here certain documented facts which relate to this subject.

"An important role was played in the Makhnovist army by revolutionaries of Jewish origin, many of whom had been sentenced to forced labour for participation in the 1905 revolution, or else had been obliged to emigrate to Western Europe or America. Among others, we can mention:

*"**Kogan** -- vice-president of the central organ of the movement, the Regional Revolutionary Military Council of Hulyai Pole. Kogan was a worker who, for reasons of principle, had left his factory well before the revolution of 1917, and had gone to do agricultural work in a poor Jewish agricultural colony. Wounded at the battle of Peregonovka, near Uman, against the Denikinists, he was seized by them at the hospital at Uman where he was being treated, and, according to witnesses, the Denikinists killed him with sabres.*

*"**L. Zin'kovsky (Zadov)** -- head of the army's counter espionage section, and later commander of a special cavalry regiment. A worker who before the 1917 revolution was condemned to ten years of forced labour for political activities. One of the most active*

militants of the revolutionary insurrection.

"Elena Keller -- secretary of the army's cultural and educational section. A worker who took part in the syndicalist movement in America. One of the organisers of the 'Nabat' Confederation.

"Iosif Emigrant (Gotman) -- Member of the army's cultural and educational section. A worker who took an active part in the Ukrainian anarchist movement. One of the organisers of the 'Nabat' Confederation, and later a member of its secretariat.

"Ya. Alyi (Sukhovol'sky) -- worker, and member of the army's cultural and educational section. In the Tsarist period he was condemned to forced labor for political activity. One of the organisers of the 'Nabat' Confederation and a member of its secretariat.

"We could add many more names to the long list of Jewish revolutionaries who took part in different areas of the Makhnovist movement, but we will not do this, because it would endanger their security.

"At the heart of the revolutionary insurrection, the Jewish working population was among brothers. The Jewish agricultural colonies scattered throughout the districts of Mariupol, Berdyansk, Aleksandrovsk and elsewhere, actively participated in the regional assemblies of peasants, workers and insurgents; they sent delegates there, and also to the regional Revolutionary Military Council.

"Following certain anti-Semitic incidents which occurred in the region in February, 1919, Makhno proposed to all the Jewish colonies that they organise their self-defence and he furnished the necessary guns and ammunition to all these colonies. At the same time Makhno organised a series of meetings in the region where he appealed to the masses to struggle against anti-Semitism.

"The Jewish working population, in turn, expressed profound solidarity and revolutionary brotherhood toward the revolutionary insurrection. In answer to the call made by the Revolutionary Military Council to furnish voluntary combatants to the Makhnovist insurgent army, the Jewish colonies sent from their midst a large number of volunteers.

"In the army of the Makhnovist insurgents there was an exclusively Jewish artillery battery which was covered by an infantry detachment, also made up of Jews. This battery, commanded by the Jewish insurgent Shneider, heroically defended Hulyai Pole from Denikin's troops in June, 1919, and the entire battery perished there, down to the last man and the last shell.

"In the extremely rapid succession of events after the uprising of 1918-19, there were

obviously individuals who were hostile to Jews, but these individuals were not the products of the insurrection; they were products of Russian life. These individuals did not have any importance in the movement as a whole. If people of this type took part in acts directed against Jews, they were quickly and severely punished by the revolutionary insurgents.

"We described earlier the speed and determination with which the Makhnovists executed Hryhoriyiv and his staff, and we mentioned that one of the main reasons for this execution was their participation in pogroms of Jews.

"We can mention other events of this nature with which we are familiar.

"On May 12, 1919, several Jewish families - 20 people in all - were killed in the Jewish agricultural colony of Gor'kaya, near Aleksandrovsk. The Makhnovist staff immediately set up a special commission to investigate this event. This commission discovered that the murders had been committed by seven peasants of the neighbouring village of Uspenovka. These peasants were not part of the insurrectionary army. However, the Makhnovists felt it was impossible to leave this crime unpunished, and they shot the murderers. It was later established that this event and other attempts of this nature had been carried out at the instigation of Denikin's agents, who had managed to infiltrate the region and had sought by these means to prepare an atmosphere favourable for the entry of Denikin's troops into the Ukraine.

"On May 4th or 5th, 1919, Makhno and a few commanders hurriedly left the front and went to Hulyai Pole, where they were awaited by the Extraordinary Plenipotentiary of the Republic, L. Kamenev, who had arrived from Khar'kov with other representatives of the Soviet government. At the Verkhni Tokmak station, Makhno saw a poster with the words: 'Death to Jews, Save the Revolution, Long Live Batko Makhno.'

"Who put up that poster?' Makhno asked.

"He learned that the poster had been put up by an insurgent whom Makhno knew personally, a soldier who had taken part in the battle against Denikin's troops, a person who was in general decent. He presented himself immediately and was shot on the spot.

"Makhno continued the journey to Hulyai Pole. During the rest of the day and during his negotiations with the Plenipotentiary of the Republic, he could not free himself from the influence of this event. He realised that the insurgent had been cruelly dealt with, but he also knew that in conditions of war and in view of Denikin's advance, such posters could represent an enormous danger for the Jewish population and for the entire revolution if one did not oppose them quickly and resolutely.

"When the insurrectionary army retreated toward Uman in the summer of 1919, there were several cases when insurgents plundered Jewish homes. When the insurrectionary army examined these cases, it was learned that one group of four or five men was involved in all these incidents -- men who had earlier belonged to Hryhoriyiv's detachments and who had been incorporated into the Makhnovist army after Hryhoriyiv was shot. This group was disarmed and discharged immediately. Following this, all the combatants who had served under Hryhoriyiv were discharged from the Makhnovist army as an unreliable element whose re-education was not possible in view of the unfavorable conditions and the lack of time. Thus we see how the Makhnovists viewed anti-Semitism. Outbursts of anti-Semitism in various parts of the Ukraine had no relation to the Makhnovshchina.

"Wherever the Jewish population was in contact with the Makhnovists, it found in them its best protectors against anti-Semitic incidents. The Jewish population of Hulyai Pole, Aleksandrovsk, Berdyansk, Mariupol, as well as all the Jewish agricultural colonies scattered throughout the Donets region, can themselves corroborate the fact that they always found the Makhnovists to be true revolutionary friends, and that due to the severe and decisive measures of the Makhno visits, the anti-Semitic leanings of the counter-revolutionary forces in this region were promptly squashed.

*"Anti-Semitism exists in Russia as well as in many other countries. In Russia, and to some extent in the Ukraine, it is not a result of the revolutionary epoch or of the insurrectionary movement, but is on the contrary a vestige of the past. The Makhnovists always fought it resolutely in words as well as deeds. During the entire period of the movement, they issued numerous publications calling on the masses to struggle against this evil. It can firmly be stated that in the struggle against anti-Semitism in the Ukraine and beyond its borders, their accomplishment was enormous." [Arshinov, **Op. Cit.**, pp. 211-215]*

Arshinov then goes on to quote an appeal published by Makhnovists together with anarchists referring to an anti-Semitic incident which took place in the spring of 1919. It is called **WORKERS, PEASANTS AND INSURGENTS FOR THE OPPRESSED, AGAINST THE OPPRESSORS -- ALWAYS!:**

"During the painful days of reaction, when the situation of the Ukrainian peasants was especially difficult and seemed hopeless, you were the first to rise as fearless and unconquerable fighters for the great cause of the liberation of the working masses. . . This was the most beautiful and joyful moment in the history of our revolution. You marched against the enemy with weapons in your hands as conscious revolutionaries, guided by the great idea of freedom and equality. . . But harmful and criminal elements succeeded in insinuating themselves into your ranks. And the revolutionary songs, songs of brotherhood and of the approaching liberation of the workers, began to be disrupted by the harrowing cries of poor Jews who were being tormented to death. . . On the clear and splendid foundation of the revolution appeared indelible dark blots caused by the parched blood of poor Jewish martyrs who now, as before, continue to be innocent victims of the criminal reaction, of the class struggle . . . Shameful acts are being carried out. Anti-Semitic

pogroms are taking place.

"Peasants, workers and insurgents! You know that the workers of all nationalities -- Russians, Jews, Poles, Germans, Armenians, etc. -- are equally imprisoned in the abyss of poverty. You know that thousands of Jewish girls, daughters of the people, are sold and dishonoured by capital, the same as women of other nationalities. You know how many honest and valiant revolutionary Jewish fighters have given their lives for freedom in Russia during our whole liberation movement. . . The revolution and the honour of workers obliges all of us to declare as loudly as possible that we make war on the same enemies: on capital and authority, which oppress all workers equally, whether they be Russian, Polish, Jewish, etc. We must proclaim everywhere that our enemies are exploiters and oppressors of various nationalities: the Russian manufacturer, the German iron magnate, the Jewish banker, the Polish aristocrat . . . The bourgeoisie of all countries and all nationalities is united in a bitter struggle against the revolution, against the labouring masses of the whole world and of all nationalities.

"Peasants, workers and insurgents! At this moment when the international enemy -- the bourgeoisie of all countries -- hurries to the Russian revolution to create nationalist hatred among the mass of workers in order to distort the revolution and to shake the very foundation of our class struggle - the solidarity and unity of all workers -- you must move against conscious and unconscious counter-revolutionaries who endanger the emancipation of the working people from capital and authority. Your revolutionary duty is to stifle all nationalist persecution by dealing ruthlessly with all instigators of anti-Semitic pogroms.

"The path toward the emancipation of the workers can be reached by the union of all the workers of the world." [quoted by Arshinov, **Op. Cit.**, 215-7]

Arshinov also quotes an order issued by Makhno to *"all revolutionary insurgents without exception"* which states, in part, that the *"goal of our revolutionary army, and of every insurgent participating in it, is an honourable struggle for the full liberation of the Ukrainian workers from all oppression."* This was *"why every insurgent should constantly keep in mind that there is no place among us for those who, under the cover of the revolutionary insurrection, seek to satisfy their desires for personal profit, violence and plunder at the expense of the peaceful Jewish population."* [quoted by Arshinov, **Op. Cit.**, pp. 217-8]

Unsurprisingly, as an anarchist, Makhno presents a class analysis of the problem of racism, arguing as follows:

"Every revolutionary insurgent should remember that his personal enemies as well as the enemies of all the people are the rich bourgeoisie, regardless of whether they be Russian, or Jewish, or Ukrainian. The enemies of the working people are also those who protect

the unjust bourgeois regime, i.e., the Soviet Commissars, the members of repressive expeditionary corps, the Extraordinary Commissions which go through the cities and villages torturing the working people who refuse to submit to their arbitrary dictatorship. Every insurgent should arrest and send to the army staff all representatives of such expeditionary corps, Extraordinary Commissions and other institutions which oppress and subjugate the people; if they resist, they should be shot on the spot. As for any violence done to peaceful workers of whatever nationality - such acts are unworthy of any revolutionary insurgent, and the perpetrator of such acts will be punished by death." [quoted by Arshinov, **Op. Cit.**, p. 218]

It should also be noted that the chairmen of three Makhnovist regional congresses were Jewish. The first and second congresses had a Jewish chairman [Palij, **Op. Cit.**, p. 293], while Voline was the chair for the fourth one held at Aleksandrovsk. Similarly, one of the heads of the army's counter-espionage section was Jewish. [Arshinov, **Op. Cit.**, p. 212] Little wonder both Arshinov and Voline stress that an important role was played by Jews within the movement.

The Jewish American anarchists Alexander Berkman and Emma Goldman were also in Russia and the Ukraine during the revolution. Between 1920 and 1921, they were in contact with anarchists involved with the Makhnovists and were concerned to verify what they had heard about the movement from Bolshevik and other sources. Berkman recounts meeting the Jewish anarchist Yossif the Emigrant (shot by the Bolsheviks in late 1920). Yossif stated that *"Nestor is merciless toward those guilty of Jew-baiting. Most of you have read his numerous proclamations against pogroms, and you know how severely he punishes such things."* He stressed that any stories of atrocities and pogroms committed by the Makhnovists were *"lies wilfully spread by the Bolsheviks" who "hate Nestor worse than they do Wrangel."* For Yossif, *"Makhno represents the real spirit of October."* [quoted by Berkman, **Op. Cit.**, pp. 187-9] He also notes that Gallina Makhno, Nestor's wife, would *"slightly raise her voice in indignation when reports of Jew-baiting by povstantsi [partisans] were mentioned. These stories were deliberately spread by the Bolsheviks, she averred. No-one could be more severe in punishing such excesses than Nestor. Some of his best comrades are Jews; there are a number of them in the Revolutionary Soviet and in other branches of the army. Few men are so loved and respected by the povstantsi as Yossif the Emigrant, who is a Jew, and Makhno's best friend."* [Berkman, **Op. Cit.**, pp. 238-9] Both Goldman and Berkman became friends with Makhno during his exile in Paris.

After his exile, Makhno himself spent time refuting allegations of anti-Semitism. Two articles on this subject are contained in **The Struggle Against the State and other Essays**, a collection of Makhno's exile writings. In the article *"The Makhnovshchina and Anti-Semitism"* he recounts various examples of the *"uncompromising line on the anti-Semitism of pogromists"* which the Makhnovists took *"throughout its entire existence."* This was *"because it was a genuinely revolutionary toilers' movement in the Ukraine."* He stressed that *"[a]t no time did the movement make it its business to carry out pogroms against Jews nor did it ever encourage any."* [**The Struggle Against the State and Other Essays**, p. 38 and p. 34] He wrote another article (called *"To the Jews of All Countries"*):

"In my first 'Appeal to Jews, published in the French libertarian newspaper, Le

Libertaire, I asked Jews in general, which is to say the bourgeois and the socialist ones as well as the 'anarchist' ones like Yanovsky, who have all spoken of me as a pogromist against Jews and labelled as anti-Semitic the liberation movement of the Ukrainian peasants and workers of which I was the leader, to detail to me the specific facts instead of blathering vacuously away: just where and just when did I or the aforementioned movement perpetrate such acts? . . . Thus far, no such evidence advanced by Jews has come to my attention. The only thing that has appeared thus far in the press generally, certain Jewish anarchist organs included, regarding myself and the insurgent movement I led, has been the product of the most shameless lies and of the vulgarity of certain political mavericks and their hirelings." [Op. Cit., p. 28]

It should be noted that Yanovsky, editor of the Yiddish language anarchist paper **Freie Arbeiter Stimme** later admitted that Makhno was right. Yanovsky originally believed the charges of anti-Semitism made against Makhno, going so far as ignoring Makhno's appeal to him out of hand. However, by the time of Makhno's death in 1934, Yanovsky had learned the truth:

"So strongly biased was I against him [Makhno] at that time I did not think it necessary to find out whether my serious accusation was founded on any real facts during the period of his great fight for real freedom in Russia. Now I know that my accusations of anti-Semitism against Makhno were built entirely on the lies of the Bolsheviks and to the rest of their crimes must be added this great crime of killing his greatness and the purity of this fighter for freedom."

Due to this, he could not forgive himself for "*so misjudg[ing] a man merely on the basis of calumny by his bitter enemies who more than once shamefully betrayed him, and against whom he fought so heroically.*" He also notes that it had "*become known to me that a great many Jewish comrades were heart and soul with Makhno and the whole Makhno movement. Amongst them was one whom I knew well personally, Joseph Zutman of Detroit, and I know that he would not have had anything to do with persons, or a movement, which possessed the slightest leaning towards anti-Semitism.*" ["appendix," **My Visit to the Kremlin**, pp. 36-7]

However, by far the best source to refute claims of anti-Semitism the work of the Jewish anarchist Voline. He summarises the extensive evidence against such claims:

"We could cover dozens of pages with extensive and irrefutable proofs of the falseness of these assertions. We could mention articles and proclamations by Makhno and the Council of Revolutionary Insurgents denouncing anti-Semitism. We could tell of spontaneous acts by Makhno himself and other insurgents against the slightest manifestation of the anti-Semitic spirit on the part of a few isolated and misguided unfortunates in the army and the population. . . One of the reasons for the execution of Grigoriev by the Makhnovists was his anti-Semitism and the immense pogrom he organised at Elizabethgrad . . ."

"We could cite a whole series of similar facts, but we do not find it necessary . . . and will content ourselves with mentioning briefly the following essential facts:

"1. A fairly important part in the Makhnovist movement was played by revolutionists of Jewish origin.

"2. Several members of the Education and Propaganda Commission were Jewish.

"3. Besides many Jewish combatants in various units of the army, there was a battery composed entirely of Jewish artillery men and a Jewish infantry unit.

"4. Jewish colonies in the Ukraine furnished many volunteers to the Insurrectionary Army.

"5. In general the Jewish population, which was very numerous in the Ukraine, took an active part in all the activities of the movement. The Jewish agricultural colonies which were scattered throughout the districts of Mariupol, Berdiansk, Alexandrovsk, etc., participated in the regional assemblies of workers, peasants and partisans; they sent their delegates to the regional Revolutionary Military Council.

"6. Rich and reactionary Jews certainly had to suffer from the Makhnovist army, not as Jews, but just in the same way as non-Jewish counter-revolutionaries." [The Unknown Revolution, pp. 967-8]

However, it could be claimed that these accounts are from anarchists and so are biased. Ignoring the question of why so many Jewish anarchists should defend Makhno if he was, in fact, a pogromist or anti-Semite, we can turn to non-anarchist sources for confirmation of the fact that Makhno and the Makhnovist movement were not anti-Semites.

First, we turn to Voline, who quotes the eminent Jewish writer and historian M. Tcherikover about the question of the Makhnovists and anti-Semitism. Tcherikover had, for a number of years, had specialised in research on the persecutions of the Jews in Russia. The Jewish historian states *"with certainty that, on the whole, the behaviour of Makhno's army cannot be compared with that of the other armies which were operating in Russian during the events 1917-21. Two facts I can certify absolutely explicitly.*

*"1. It is undeniable that, of all these armies, including the Red Army, the Makhnovists behaved best with regard the civil population in general and the Jewish population in particular. I have numerous testimonies to this. The proportion of **justified** complaints against the Makhnovist army, in comparison with the others, is negligible.*

"2. Do not speak of pogroms alleged to have been organised by Makhno himself. That is a slander or an error. Nothing of the sort occurred. As for the Makhnovist Army, I have had hints and precise

*denunciations on this subject. But, up to the present, every time I have tried to check the facts, I have been obliged to declare that on the day in question no Makhnovist unit could have been at the place indicated, the whole army being far away from there. Upon examining the evidence closely, I established this fact, every time, with absolute certainty, at the place and on the date of the pogrom, no **Makhnovist** unit was operating or even located in the vicinity. **Not once** have I been able to prove the existence of a Makhnovist unit at the place a pogrom against the Jews took place. Consequently, the pogroms in question could not have been the work of the Makhnovists."* [quoted by Voline, **Op. Cit.**, p. 699]

This conclusion is confirmed by later historians. Paul Avrich notes that "*[c]harges of Jew-baiting and of anti-Jewish pogroms have come from every quarter, left, right, and centre. Without exception, however, they are based on hearsay, rumour, or intentional slander, and remain undocumented and unproved.*" He adds that the "*Soviet propaganda machine was at particular pains to malign Makhno as a bandit and pogromist.*" Wishing to verify the conclusions of Tcherikover proved by Voline, Avrich examined several hundred photographs in the Tcherikover Collection, housed in the YIVO Library in New York and depicting anti-Jewish atrocities in the Ukraine during the Civil War. He found that "*only one [was] labelled as being the work of the Makhnovists, though even here neither Makhno himself nor any of his recognisable subordinates are to be seen, nor is there any indication that Makhno had authorised the raid or, indeed, that the band involved was in fact affiliated with his Insurgent Army.*" Avrich then states that "*there is evidence that Makhno did all in his power to counteract anti-Semitic tendencies among his followers*" and that "*a considerable number of Jews took part in the Makhnovist movement.*" He also points out that the Jewish anarchists Alexander Berkman, Emma Goldman, Sholem Schwartzbard, Voline, Senya Fleshin, and Mollie Steimer did not criticise Makhno as an anti-Semite, they also "*defended him against the campaign of slander that persisted from all sides.*" [**Anarchist Portraits**, pp. 122-3] It should be noted that Schwartzbard assassinated the Nationalist leader Petliura in 1926 because he considered him responsible for pogroms conducted by Nationalist troops during the civil war. He shot Petliura the day after he, Makhno and Berkman had seen him at a Russian restaurant in Paris. [Malet, **Op. Cit.**, p. 189]

Michael Malet, in his account of the Makhnovists, states that "*there is overwhelming evidence that Makhno himself was not anti-Semitic.*" [**Op. Cit.**, p. 168] He indicates that in the period January to September 1919, the Central Committee of Zionist Organisations in Russia listed the Nationalists as creating 15,000 victims of pogroms, then the Denikinists with 9,500 followed by Hryhoriyiv, Sokolovsky, Struk, Yatsenko and Soviet troops (500 victims). Makhno is not mentioned. Of the pogroms listed, almost all took place on the western Ukraine, where the local otamany (warlords) and the Nationalists were strong. Very few took place where Makhno's influence predominated, the nearest being in Katerinoslav town and Kherson province; none in the provinces of Katerinoslav or Tavria. It should also be noted that the period of January to June of that year was one of stability within the Makhnovist region, so allowing them the space to apply their ideas. Malet summarises:

"Even granted the lower level of Jewish involvement in left-bank trade, the almost total lack of anti-Semitic manifestations would show that Makhno's appeals, at a time when anti-Semitism was fast becoming fashionable, did not go unheeded by the population.

There were a number of Jewish colonies in the south-east Ukraine." [Op. Cit., p. 169]

Unsurprisingly, Malet notes that apart from certain personal considerations (such as his friendship with a number of Jews, including Voline and Yossif the Emigrant), *"the basis of Makhno's hostility to anti-Semitism was his anarchism. Anarchism has always been an international creed, explicitly condemning all forms of racial hatred as incompatible with the freedom of individuals and the society of equals."* And like other serious historians, he points to *"the continual participation in the movement of both intellectual Jews from outside, and Jews from the local colonies"* as *"further proof . . . of the low level of anti-Semitism within the Makhnovshchina."* [Op. Cit., p. 171 and pp. 171-2]

Anarchist Serge Cipko summarises the literature by stating that the *"scholarly literature that discusses Makhno's relationships with the Jewish population is of the same opinion [that the Makhnovists were not anti-Semitic] and concur that unlike the Whites, Bolsheviks and other competing groups in Ukraine during the Revolution, the Makhnovists did not engage in pogroms."* ["Nestor Makhno: A Mini-Historiography of the Anarchist Revolution in Ukraine, 1917-1921," pp. 57-75, **The Raven**, no. 13, p. 62]

Historian Christopher Reed concurs, noting that *"Makhno actively opposed anti-Semitism . . . Not surprisingly, many Jews held prominent positions in the Insurgent movement and Jewish farmers and villagers staunchly supported Makhno in the face of the unrestrained anti-Semitism of Ukrainian nationalists like Grigoriev and of the Great Russian chauvinists like the Whites."* [Op. Cit., pp. 263-4] Arthur E. Adams states that *"Makhno protected Jews and in fact had many serving on his own staff."* [Bolsheviks in the Ukraine, p. 402]

We apologise again for labouring this point, but the lie that Makhno and the Makhnovists were anti-Semitic is relatively commonplace and needs to be refuted. As noted, Trotskyists repeat Trotsky's false assertions without correction. Other repeat the lie from other sources. It was essential, therefore, to spend time making the facts available and to nail the lie of Makhnovist anti-Semitism once and for all!

10 Did the Makhnovists hate the city and city workers?

For some reason the Makhnovists have been portrayed as being against the city and even history as such. This assertion is false, although sometimes made. For example, historian Bruce Lincoln states that Makhno *"had studied the anarchist writings of Bakunin, whose condemnation of cities and large-scale industries fit so well with the anti-urban, anti-industrial feelings of the Ukrainian peasants, and his program was precisely the sort that struck responsive chords in peasant hearts."* [Red Victory, p. 325] Lincoln fails to present any evidence for this claim. This is unsurprising as it is doubtful that Makhno read such condemnations in Bakunin as they do not, in fact, exist. Similarly, the Makhnovist *"program"* (like anarchism in general) was not *"anti-urban"* or *"anti-industrial."*

However, Lincoln's inventions are mild compared to Trotsky's. According to Trotsky, *"the followers of Makhno"* were marked by *"hatred for the city and the city worker."* He later gives some more concrete

examples of this "*hostility to the city*" which, as with the general peasant revolt, also "*nourished the movement of Makhno, who seized and looted trains marked for the factories, the plants, and the Red Army; tore up railway tracks, shot Communists, etc.*" [Lenin and Trotsky, **Kronstadt**, p. 80 and p. 89]

Unsurprisingly, Trotsky simply shows his ignorance of the Makhno movement by these statements. To refute Trotsky's claim we can simply point to how the Makhnovists acted once they occupied a city. As we discuss in [section 7](#), the first thing the Makhnovists did was to call a conference of workers and urge them to organise their own affairs directly, using their own class organs of self-management (soviets, unions, etc.). Hardly the activity of a group of people who allegedly "*hated*" city workers!

We can also point to the fact that the Makhnovists arranged direct exchanges of goods between the towns and country. In early 1918, for example, corn was shipped directly to a Moscow factory in return for textiles (without state interference). In 1919, 1500 tons of grain (and a small amount of coal) was sent by train to Petrograd and Moscow where the commander of the train was to exchange it again for textiles. The initiative in both cases came from the Hulyai Pole peasants. Again, hardly the work of city-hating peasants.

Peter Arshinov indicates the underlying theory behind the Makhnovists as regards the relations between city and country:

"The Makhnovshchina . . . understands that the victory and consolidation of the revolution . . . cannot be realised without a close alliance between the working classes of the cities and those of the countryside. The peasants understand that without urban workers and powerful industrial enterprises they will be deprived of most of the benefits which the social revolution makes possible. Furthermore, they consider the urban workers to be their brothers, members of the same family of workers.

"There can be no doubt that, at the moment of the victory of the social revolution, the peasants will give their entire support to the workers. This will be voluntary and truly revolutionary support given directly to the urban proletariat. In the present-day situation [under the Bolsheviks], the bread taken by force from the peasants nourishes mainly the enormous governmental machine. The peasants see and understand perfectly that this expensive bureaucratic machine is not in any way needed by them or by the workers, and that in relation to the workers it plays the same role as that of a prison administration toward the inmates. This is why the peasants do not have the slightest desire to give their bread voluntarily to the State. This is why they are so hostile in their relations with the contemporary tax collectors -- the commissars and the various supply organs of the State.

*"But the peasants always try to enter into **direct** relations with the urban workers. The question was raised more than once at peasant congresses, and the peasants always resolved it in a revolutionary and positive manner."* [Op. Cit., p. 258]

Simply put, Trotsky misinterprets hostility to the repressive policies of the Bolshevik dictatorship with hostility to the city.

Moreover, ignoring the **actual** relationships of the Makhnovists with the city workers, we can fault Trotsky's arguments without recourse to such minor things as facts. This is because every one of his "examples" of "*hatred for the city and the city worker*" can be explained by more common sense arguments.

As regards the destruction of trains and railway tracks, a far simpler and more plausible explanation can be found than Trotsky's "*hostility to the city.*" This is the fact that a civil war was taking place. Both the Reds and Whites used armoured trains to move troops and as bases of operations. To destroy the means by which your enemy attacks you is common sense! Equally, in the chaotic times of the war, resources were often in low supply and in order to survive the Makhnovists had to "*loot*" trains (needless to say, Trotsky does not explain how the Makhnovists knew the trains were "*marked for the factories.*"). It should be noted that the Bolsheviks "*looted*" the countryside, can we surmise that the Bolsheviks simply expressed "*hostility to the village*"?

As regards the shooting of Communists, a far simpler and more plausible explanation also exists. Rather than show "*hostility to the city,*" it shows "*hostility*" to the Communist Party, its policies and its authoritarian ideas. Given that the Bolsheviks had betrayed the Makhnovists on **three** occasions (see [section 13](#)) and attacked them, "*hostility*" to Communists seems a sensible position to take! Equally, the first Bolshevik attack on the Makhnovists occurred in mid-1919, when the Bolsheviks began justifying their party dictatorship as essential for the success of the revolution. The other two occurred in 1920, when the Bolsheviks were announcing to the whole world at the Communist International (to quote Zinoviev) that "*the dictatorship of the proletariat is at the same time the dictatorship of the Communist Party.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 152] Given this, perhaps the fact that the Makhnovists shot Communists can be explained in terms of defence against Bolshevik betrayal and opposition to the dictatorship of the Communist Party rather than "*hostility to the city.*" Needless to say, the Communists shot Makhnovists and anarchists. What does that suggest a "*hostility*" to by the Bolsheviks? Working-class autonomy and freedom?

Clearly, Trotsky was clutching at straws in his smearing of the Makhnovist movement as haters of the city worker. The "*hostility*" Trotsky speaks of can be far more easily explained in terms of the necessities imposed upon the Makhnovists by the civil war and the betrayals of the Bolsheviks. As such, it would be fairer to state that the Makhnovists showed "*hostility*" or "*hatred*" to the city or city workers only if you equate both with the Bolshevik party dictatorship. In other words, the Makhnovists showed "*hostility*" to the new ruling class of the Communist Party hierarchy.

All this does not mean that there were not misunderstandings between the Makhno movement, a predominantly rural movement, and the workers in the cities. Far from it. Equally, it can be said that the Makhnovists did not understand the workings of an urban economy and society as well as they understood their own. However, they made no attempt to **impose** their world-view on the city workers

(unlike the Bolsheviks, who did so on both urban and rural workers). However, ignorance of the city and its resulting misunderstandings do not constitute *"hostility"* or *"hatred."*

Moreover, where these misunderstandings developed show that the claims that the Makhnovists hated the city workers are simply false. Simply put, the misunderstanding occurred when the Makhnovists had liberated cities from the Whites. As we discussed in [section 7](#), the first thing the Makhnovists did was to call a conference of workers' delegates to discuss the current situation and to urge them to form soviets, unions and co-operatives in order to manage their own affairs. This hardly shows *"hatred"* of the city worker. In contrast, the first thing the Bolsheviks did in taking a city was to form a *"revolutionary committee"* to govern the town and implement Bolshevik policy.

This, needless to say, shows a distinct *"hostility"* to the city workers on the part of the Bolsheviks. Equally, the Bolshevik advocacy of party dictatorship to overcome the *"wavering"* of the working class. In the words of Trotsky himself (in 1921):

"The Workers' Opposition has come out with dangerous slogans, making a fetish of democratic principles! They place the workers' right to elect representatives above the Party, as if the party were not entitled to assert its dictatorship even if that dictatorship temporarily clashed with the passing moods of the workers' democracy. It is necessary to create amongst us the awareness of the revolutionary birthright of the party, which is obliged to maintain its dictatorship, regardless of temporary wavering even in the working classes. This awareness is for us the indispensable element. The dictatorship does not base itself at every given moment on the formal principle of a workers' democracy." [quoted by Samuel Farber, **Before Stalinism**, p. 209]

Opposing workers' democracy because working people could make decisions that the party thought were wrong shows a deep *"hostility"* to the **real** city workers and their liberty and equality. Equally, Bolshevik repression of workers' strikes, freedom of speech, assembly, organisation and self-determination shows far more *"hostility"* to the city worker than a few Makhnovist misunderstandings!

All in all, any claim that the Makhnovists *"hated"* city workers is simply false. While some Makhnovists may not have liked the city nor really understood the complexities of an urban economy, they did recognise the importance of encouraging working-class autonomy and self-organisation within them and building links between the rural and urban toilers. While the lack of a large-scale anarcho-syndicalist movement hindered any positive construction, the Makhnovists at least tried to promote urban self-management. Given Bolshevik authoritarianism and its various rationalisations, it would be fairer to say that it was the Bolsheviks who expressed *"hostility"* to the city workers by imposing their dictatorship upon them rather than supporting working-class self-management as the Makhnovists did!

11 Were the Makhnovists nationalists?

Some books on the Makhnovist movement try to present the Makhnovists as being Ukrainian

nationalists. A few discuss the matter in order, perhaps, to increase the respectability of the Makhnovist movement by associating it with a more "serious" and "respectable" political theory than anarchism, namely "Nationalism." Those who seriously investigate the issue come to the same conclusion, namely that neither Makhno nor the Makhnovist movement was nationalist (see, for example, Frank Sysyn's essay **Nestor Makhno and the Ukrainian Revolution** which discusses this issue).

Therefore, any claims that the Makhnovists were nationalists are incorrect. The Makhnovist movement was first and foremost an internationalist movement of working people. This is to be expected as anarchists have long argued that nationalism is a cross-class movement which aims to maintain the existing class system but without foreign domination (see [section D.6](#) for details). As such, the Makhnovists were well aware that nationalism could not solve the social question and would simply replace a Russian ruling class and state with a Ukrainian one.

This meant that the aims of the Makhnovists went further than simply national liberation or self-determination. Anarchists, rather, aim for working-class self-liberation and self-determination, both as individuals and as groups, as well as politically, economically and socially. To quote Makhno's wire to Lenin in December 1918, the Makhnovist *"aims are known and clear to all. They are fighting against the authority of all political governments and for liberty and independence of the working people."* [quoted by Palič, **Op. Cit.**, p. 80]

From this class and anti-hierarchical perspective, it is not unsurprising that the Makhnovists were not nationalists. They did not seek Ukrainian independence but rather working-class autonomy. This, of necessity, meant they opposed all those who aimed to govern and/or exploit the working class. Hence Arshinov:

"Composed of the poorest peasants, who were united by the fact that they all worked with their own hands, the Makhnovist movement was founded on the deep feeling of fraternity which characterises only the most oppressed. During its entire history it did not for an instant appeal to national sentiments. The whole struggle of the Makhnovists against the Bolsheviks was conducted solely in the name of the rights and interests of the workers. Denikin's troops, the Austro-Germans, Petliura, the French troops in Berdyansk, Wrangel -- were all treated by the Makhnovists as enemies of the workers. Each one of these invasions represented for them essentially a threat to the workers, and the Makhnovists had no interest in the national flag under which they marched." [**Op. Cit.**, p. 210]

He stressed that *"national prejudices had no place in the Makhnovshchina. There was also no place in the movement for religious prejudices . . . Among modern social movements, the Makhnovshchina was one of the few in which an individual had absolutely no interest in his own or his neighbour's religion or nationality, in which he respected only the labour and the freedom of the worker."* [**Op. Cit.**, p. 211]

The Makhnovists made their position on nationalism clear in the 'Declaration' published by the Revolutionary Military Council of the army in October, 1919:

*"When speaking of Ukrainian independence, we do not mean national independence in Petliura's sense but the social independence of workers and peasants. We declare that Ukrainian, and all other, working people have the right to self-determination not as an 'independent nation' but as 'independent workers'" [quoted by Arshinov, **Op. Cit.**, p. 210]*

In other words, the Makhnovists *"declared, that in their option **Petlurovtchina** [the Petliura movement, Petliura being the leader of the Nationalists] was a bourgeois nationalist movement whose road was entirely different from that of the revolutionary peasants, that the Ukraine should be organised on a basis of free labour and the independence of the peasants and the workers . . . and that nothing but struggle was possible between the **Makhnovitchina** , the movement of the workers, and the **Petlurovtchina** , the movement of the bourgeoisie."* [Voline, **Op. Cit.**, p. 572]

This does not mean that anarchists are indifferent to cultural and national domination and oppression. Far from it! As we discussed in sections [D.6](#) and [D.7](#), anarchists are against foreign domination and cultural imperialism, believing that every community or national group has the right to be itself and develop as it sees fit. This means that anarchists seek to transform national liberation struggles into **human** liberation struggles, turning any struggle against foreign oppression and domination into a struggle against **all** forms of oppression and domination.

This means that the Makhnovists, like anarchists in general, seek to encourage local culture and language while opposed nationalism. As Frank Sysyn argues, it *"would be a mistake . . . to label the Makhnivtzi as 'anti-Ukrainian.' Although they opposed the political goals of most 'svidomi ukraintsi' (nationally conscious Ukrainians), they accepted the existence of a Ukrainian nation and used the terms 'Ukraine' and 'Ukrainian.'"* [**Nestor Makhno and the Ukrainian Revolution**, p. 288] It should be noted that opponents of Ukrainian independence generally called it the *"south of Russia"* or *"Little Russia."*

Thus an opposition to nationalism did not imply a rejection or blindness to foreign domination and free cultural expression. On the question of the language to be taught in schools, the Cultural-Educational Section of the Makhnovist Insurgent Army wrote the following in October, 1919:

"The cultural-educational section of the Makhnovist army constantly receives questions from school teachers asking about the language in which instruction should be given in the schools, now that Denikin's troops have been expelled.

"The revolutionary insurgents, holding to the principles of true socialism, cannot in any field or by any measure do violence to the natural desires and needs of the Ukrainian people. This is why the question of the language to be taught in the schools cannot be solved by our army, but can only be decided by the people themselves, by parents, teachers and students

"It goes without saying that all the orders of Denikin's so-called 'Special Bureau' as well as General Mai-Maevsky's order No. 22, which forbids the use of the mother tongue in the schools, are null and void, having been forcibly imposed on the schools.

"In the interest of the greatest intellectual development of the people, the language of instruction should be that toward which the local population naturally tends, and this is why the population, the students, the teachers and the parents, and not authorities or the army, should freely and independently resolve this question." [quoted by Arshinov, **Op. Cit.**, pp. 210-1]

They also printed a Ukrainian version of their paper ("*The Road to Freedom*").

Clearly their opposition to Ukrainian nationalism did not mean that the Makhnovists were indifferent to imperialism and foreign political or cultural domination. This explains why Makhno criticised his enemies for anti-Ukrainian actions and language. Michael Malet summarises, for the Makhnovists *"Ukrainian culture was welcome, but political nationalism was highly suspect."* [**Op. Cit.**, p. 143]

Given anarchist support for federal organisation from below upwards, working-class self-determination and autonomy, plus a healthy respect for local culture, it is easy to see why some historians have fostered a nationalist perspective onto the Makhnovists where none existed. This means that when they agitated with the slogan *"All to whom freedom and independence are dear should stay in the Ukraine and fight the Denikinists,"* it should be noted that *"[n]owhere . . . nationalism openly advocated, and the line of argument put forward can more easily be interpreted as libertarian and, above all, anti-White."* [Malet, **Op. Cit.**, p. 146]

In 1928, Makhno wrote a rebuttal to a Soviet historian's claim that Makhno became a Ukrainian Nationalist during the 1920-21 period. He *"totally dismissed the charges"* and argued that the historian *"distorted anarchism's espousal of local autonomy so as to create trumped-up charges of nationalism."* As Sysyn argues, while Makhno *"never became a nationalist, he did to a degree become a Ukrainian anarchist."* [**Op. Cit.**, p. 292 and p. 303]

Thus while neither Makhno nor the movement were nationalists, they were not blind to national and cultural oppression. They considered nationalism as too narrow a goal to satisfy the **social** aspirations of the working classes. As Makhno argued in exile, the Ukrainian toilers had *"asserted their rights to use their own language and their entitlement to their own culture, which had been regarded before the revolution as anathema. They also asserted their right to conform in their lives to their own way of life and specific customs."* However, *"[i]n the aim of building an independent Ukrainian State, certain statist gentlemen would dearly love to arrogate to themselves all natural manifestations of Ukrainian reality."* Yet the *"healthy instincts of the Ukrainian toilers and their baleful life under the Bolshevik yoke has not made them oblivious of the State danger in general"* and so they *"shun the chauvinist trend and do not mix it up with their social aspirations, rather seeking their own road to emancipation."* [**The Struggle Against the State and Other Essays**, pp. 24-5]

In summary, the Makhnovists were opposed to nationalism but supported culture diversity and self-determination within a free federation of toilers communes and councils. They did not limit their aims to national liberation, but rather sought the self-liberation of the working classes from every oppression -- foreign or domestic, economic or political, cultural or social.

12 Did the Makhnovists support the Whites?

No, they did not. However, black propaganda by the Bolsheviks stated they did. Victor Serge wrote about the "*strenuous calumnies put out by the Communist Party*" against him "*which went so far as to accuse him of signing pacts with the Whites at the very moment when he was engaged in a life-and-death struggle against them.*" [**Memoirs of a Revolutionary**, p. 122]

According to Arshinov, "*Soviet newspapers spread the false news of an alliance between Makhno and Wrangel*" and in the summer of 1920, a representative of the Kharkov government "*declared at the Plenary Session of the Ekaterinoslav Soviet, that Soviet authorities had written proof of the alliance between Makhno and Wrangel. This was obviously an intentional lie.*" Wrangel, perhaps believing these lies had some basis, sent a messenger to Makhno in July, 1920. "*Wrangel's messenger was immediately executed*" and the "*entire incident was reported in the Makhnovist press. All this was perfectly clear to the Bolsheviks. They nevertheless continued to trumpet the alliance between Makhno and Wrangel. It was only after a military-political agreement had been concluded between the Makhnovists and the Soviet power that the Soviet Commissariat of War announced that there had never been an alliance between Makhno and Wrangel, that earlier Soviet assertions to this effect were an error.*" [**Op. Cit.**, pp. 173-5]

Needless to say, while the Bolsheviks spread the rumour to discredit Makhno, the Whites spread it to win the confidence of the peasants. Thus when Trotsky stated that Wrangel had "*united with the Ukrainian partisan Makhno,*" he was aiding the efforts of Wrangel to learn from previous White mistakes and build some kind of popular base. [quoted by Palij, **Op. Cit.**, p. 220] By October, Trotsky had retracted this statement:

"Wrangel really tried to come into direct contact with Makhno's men and dispatched to Makhno's headquarters two representatives for negotiations . . . [However] Makhno's men not only did not enter into negotiations with the representatives of Wrangel, but publicly hanged them as soon as they arrived at the headquarters." [quoted by Palij, **Ibid.**]

Trotsky, of course, still tried to blacken the Makhnovists. In the same article he argued that "*[u]ndoubtedly Makhno actually co-operated with Wrangel, and also with the Polish *szlachta*, as he fought with them against the Red Army. However, there was no formal alliance between them. All the documents mentioning a formal alliance were fabricated by Wrangel . . . All this fabrication was made to deceive the protectors of Makhno, the French, and other imperialists.*" [quoted by Palij, **Op. Cit.**, p. 225]

It is hard to know where to start in this amazing piece of political story-telling. As we discuss in more detail in [section 13](#), the Makhnovists were fighting the Red Army from January to September 1920 because the Bolsheviks had engineered their outlawing! As historian David Footman points out, the attempt by the Bolsheviks to transfer Makhno to Polish front was done for political reasons:

*"it is admitted on the Soviet side that this order was primarily 'dictated by the necessity' of liquidating **Makhnovshchina** as an independent movement. Only when he was far removed from his home country would it be possible to counteract his influence" [Op. Cit., p. 291]*

Indeed, it could be argued that by attacking Makhno in January helped the Whites to regroup under Wrangel and return later in the year. Equally, it seems like a bad joke for Trotsky to blame the victim of Bolshevik intrigues for defending themselves. And the idea that Makhno had "*protectors*" in any imperialist nation is a joke, which deserves only laughter as a response!

It should be noted that it is "*agreed that the initiative for joint action against Wrangel came from the Makhnovites.*" This was ignored by the Bolsheviks until after "*Wrangel started his big offensive*" in September 1920 [Footman, **Op. Cit.**, p. 294 and p. 295]

So while the Bolsheviks claimed that the Makhnovists had made a pact with General Wrangel, the facts are that Makhnovists fought the Whites with all their energy. Indeed, they considered the Whites so great a threat to the revolution they even agreed to pursue a pact with the Bolsheviks, who had betrayed them twice already and had subjected both them and the peasantry to repression. As such, it could be argued that the Bolsheviks were the only counter-revolutionaries the Makhnovists can be accurately accused of collaborating with.

Every historian who has studied the movement has refuted claims that the Makhnovist movement made any alliance with the counter-revolutionary White forces. For example, Michael Palij notes that Denikin "*was the main enemy that Makhno fought, stubbornly and uncompromising, from the end of 1918 to the end of 1919. Its social and anti-Ukrainian policies greatly antagonised all segments of Ukrainian society. The result of this was an increased resistance to the Volunteer Army and its regime and a substantial strengthening of the Makhno movement.*" He also notes that after several months of "*hard fighting*" Denikin's troops "*came to regard Makhno's army as their most formidable enemy.*" Makhno's conflict with Wrangel was equally as fierce and "*[a]lthough Makhno had fought both the Bolsheviks and Wrangel, his contribution to the final defeat of the latter was essential, as is proved by the efforts of both sides to have him as an ally.*" [**Op. Cit.**, p. 177, p. 202 and p. 228] According to Footman, Makhno "*remained to the end the implacable enemy of the Whites.*" [**Op. Cit.**, p. 295] Malet just states the obvious: "*The Makhnovists were totally opposed to the Whites.*" [**Op. Cit.**, p. 140]

We will leave the last word to the considered judgement of the White General Denikin who, in exile, stated that the Makhno movement was "*the most antagonistic to the idea of the White movement.*" [quoted by Malet, **Op. Cit.**, p. 140]

In summary, the Makhnovists fought the White counter-revolution with all their might, playing a key role in the struggle and defeat of both Denikin and Wrangel. Anyone who claims that they worked with the Whites is either ignorant or a liar.

13 What was the relationship of the Bolsheviks to the movement?

The Makhnovists worked with the Bolsheviks in three periods. The first (and longest) was against Denikin after the Red Army had entered the Ukraine after the withdrawal of the Austro-Germans. The second was an informal agreement for a short period after Denikin had been defeated. The third was a formal political and military agreement between October and November 1920 in the struggle against Wrangel. Each period of co-operation ended with Bolshevik betrayal and conflict between the two forces.

As such, the relationship of the Bolsheviks to the Makhnovists was one of, at best, hostile co-operation against a common enemy. Usually, it was one of conflict. This was due, fundamentally, to two different concepts of social revolution. While the Makhnovists, as anarchists, believed in working-class self-management and autonomy, the Bolsheviks believed that only a centralised state structure (headed by themselves) could ensure the success of the revolution. By equating working-class power with Bolshevik party government (and from 1919 onwards, with the dictatorship of the Bolshevik party), they could not help viewing the Makhnovist movement as a threat to their power (see [section 14](#) for a discussion of the political differences and the evolving nature of the Bolshevik's conception of party rule).

Such a perspective ensured that they could only co-operate during periods when the White threat seemed most dangerous. As soon as the threat was defeated or they felt strong enough, the Bolsheviks turned on their former allies instantly. This section discusses each of the Bolshevik betrayals and the subsequent conflicts. As such, it is naturally broken up into three parts, reflecting each of the betrayals and their aftermath.

Michael Malet sums up the usual Bolshevik-Makhnovist relationship by arguing that it *"will be apparent that the aim of the Soviet government from the spring of 1919 onwards was to destroy the Makhnovists as an independent force, preferably killing Makhno himself in the process . . . Given the disastrous nature of Bolshevik land policy . . . this was not only unsurprisingly, it was inevitable."* He also adds that the *"fact that Makhno had a socio-political philosophy to back up his arguments only made the Bolsheviks more determined to break his hold over the south-east Ukraine, as soon as they realised that Nestor would not surrender that hold voluntarily."* [**Op. Cit.**, p. 128 and p. 129]

The first betrayal occurred in June 1919. The Makhnovists had been integrated with the Red Army in late January 1919, retaining their internal organisation (including the election of commanders) and their black flags. With the Red Army they fought against Denikin's Volunteer Army. Before the arrival of

Red forces in their region and the subsequent pact, the Makhnovists had organised a successful regional insurgent, peasant and worker congress which had agreed to call a second for February 12th. This second congress set up a Revolutionary Military Soviet to implement the decisions of this and following congresses. This congress (see [section 7](#)) passed an anti-Bolshevik resolution, which urged *"the peasants and workers to watch vigilantly the actions of the Bolshevik regime that cause a real danger to the worker-peasant revolution."* Such actions included the monopolisation of the revolution, centralising power and overriding local soviets, repressing anarchists and Left Socialist Revolutionaries and *"stifling any manifestation of revolutionary expression."* [quoted by Palij, **Op. Cit.**, p. 154]

This change from the recent welcome was simply the behaviour of the Bolsheviks since their arrival. The (unelected) Ukrainian Bolshevik government had tried to apply the same tactics as its Russian equivalent, particularly as regards the peasants. In addition, the Bolshevik land policy (as indicated in [section 8](#)) was a complete disaster, alien to the ideas and needs of the peasants and, combined with grain requisitioning, alienating them.

The third congress was held on the 10th of April. By this time, Communist agricultural policy and terrorism had alienated all the peasantry, who *"rich and poor alike"* were *"united in their opposition"* to the Bolsheviks. [Footman, **Op. Cit.**, p. 269] Indeed, the *"poorer the areas, the more dissatisfied were the peasants with the Bolshevik decrees."* [Palij, **Op. Cit.**, p. 156] As we indicated in [section 7](#), the third congress was informed that it was *"counter-revolutionary"* and banned by the Bolshevik commander Dybenko, provoking a famous reply which stressed the right of a revolutionary people to apply the gains of that revolution when they see fit. It is worth re-quoting the relevant section:

"Can there exist laws made by a few people who call themselves revolutionaries which permit them to outlaw a whole people who are more revolutionary than they are themselves? . . .

"Is it permissible, is it admissible, that they should come to the country to establish laws of violence, to subjugate a people who have just overthrown all lawmakers and all laws?"

"Does there exist a law according to which a revolutionary has the right to apply the most severe penalties to a revolutionary mass, of which he calls himself the defender, simply because this mass has taken the good things which the revolution promised them, freedom and equality, without his permission?"

"Should the mass of revolutionary people perhaps be silent when such a revolutionary takes away the freedom which they have just conquered?"

"Do the laws of the revolution order the shooting of a delegate because he believes he ought to carry out the mandate given him by the revolutionary mass which elected him?"

"Whose interests should the revolutionary defend; those of the Party or those of the people"

who set the revolution in motion with their blood?" [quoted by Arshinov, **Op. Cit.**, p. 103]

After the 3rd congress, the Bolsheviks started to turn against Makhno:

"It was now that favourable mention of Makhno ceased to appear in the Soviet Press; an increasingly critical note became apparent. Supplies failed to get through to Makhnovite units and areas." [Footman, **Op. Cit.**, p. 271]

Lenin himself advised local Bolshevik leaders on Makhno, stating in early May that *"temporarily, while Rostov is not yet captured, it is necessary to be diplomatic."* [quoted by Arthur E. Adams, **Bolsheviks in the Ukraine**, pp. 352-3] Thus, as long as the Bolsheviks needed cannon fodder, Makhno was to be tolerated. Things changed when Trotsky arrived. On May 17th he promised a *"radical and merciless liquidation of partisanshchina [the partisan movement], independence, hooliganism, and leftism."* [quoted by Adams, **Op. Cit.**, p. 360] According to one historian, Trotsky *"favoured a thoroughgoing annihilation of the partisan's ideological leaders as well as men like Hryhoriyov who wielded political power."* [Adams, **Op. Cit.**, p. 360] Unsurprisingly, given Trotsky's stated mission, Bolshevik hostility towards the Makhnovists became more than mere words. It took the form of both direct and indirect aggression. *"In the latter part of May,"* states Footman, *"the Cheka sent over two agents to assassinate Makhno."* Around the same time, the Red *"hold-back of supplies for the Insurgents developed into a blockade of the area. Makhnovite units at the front ran short of ammunition."* [**Op. Cit.**, p. 271 and p. 272] This, obviously, had a negative impact the Makhnovists' ability to fight the Whites.

Due to the gravity of the military and political situations both at and behind the front, the Makhnovist Revolutionary Military Soviet decided to call an extraordinary congress of peasants, workers, insurgents and Red soldiers. This congress was to determine the immediate tasks and the practical measures to be taken by the workers to remedy the mortal danger represented by the Whites. On May 31st, a call was sent out which stated, in part, *"that only the working masses themselves can find a solution [to the current problem], and not individuals or parties."* The congress would be based as follows: *"elections of delegates of peasants and workers will take place at general assemblies of villages, towns, factories and workshops."* [quoted by Arshinov, **Op. Cit.**, p. 121]

The Bolshevik reply came quickly, with Trotsky issuing his infamous Order no. 1824 on June 4th:

"This Congress is directed squarely against the Soviet Power in the Ukraine and against the organisation of the southern front, where Makhno's brigade is stationed. This congress can have no other result then to excite some new disgraceful revolt like that of Grigor'ev, and to open the front to the Whites, before whom Makhno's brigade can only retreat incessantly on account of the incompetence, criminal designs and treason of its commanders."

"1. By the present order this congress is forbidden, and will in no circumstances be

allowed to take place.

"2. All the peasant and working class population shall be warned. orally and in writing, that participation in the said congress will be considered an act of high treason against the Soviet Republic and the Soviet front.

"3. All delegates to the said Congress shall be arrested immediately and brought before the Revolutionary Military Tribunal of the 14th, formerly 2nd, Army of the Ukraine.

"4. The persons spreading the call of Makhno and the Hulyai Pole Executive Committee to the Congress shall likewise be arrested.

*"5. The present order shall have the force of law as soon as it is telegraphed. It should be widely distributed, displayed in all public places, and sent to the representatives of the executive committees of towns and villages, as well as to all the representatives of Soviet authority, and to commanders and commissars of military units." [quoted by Arshinov, **Op. Cit.**, pp. 122-3]*

Arshinov argues that this *"document is truly classic"* and *"[w]hoever studies the Russian revolution should learn it by heart."* He compares Trotsky's order to the reply the Makhnovists had sent to the Bolsheviks' attempt to ban the third congress. Clearly, Order No. 1824 shows that laws did exist *"made by a few people who call themselves revolutionaries which permit them to outlaw a whole people who are more revolutionary than they are themselves"*! Equally, the order shows that *"a revolutionary has the right to apply the most severe penalties to a revolutionary mass . . . simply because this mass has taken the good things which the revolution has promised them, freedom and equality, without his permission"*! Little wonder Arshinov states that this order meant that the *"entire peasant and labouring population are declared guilty of high treason if they dare to participate in their own free congress."* [**Op. Cit.**, p. 123]

According to Voline, in Alexandrovsk *"all workers meetings planned for the purpose of discussing the call of the Council and the agenda of the Congress were forbidden under pain of death. Those which were organised in ignorance of the order were dispersed by armed force. In other cities and towns, the Bolsheviks acted in the same way. As for the peasants in the villages, they were treated with still less ceremony; in many places militants and even peasants 'suspected of acting in favour of the insurgents and the Congress' were seized and executed after a semblance of a trial. Many peasants carrying the call were arrested, 'tried' and shot, before they could even find out about Order No. 1824."* [**Op. Cit.**, pp. 599-600]

As Arshinov summarises:

"This entire document represents such a crying usurpation of the rights of the workers that it is pointless to comment further on it." [**Op. Cit.**, p. 124]

Trotsky continued his usurpation of the rights of the workers in a later order on the congress. In this, Trotsky called this openly announced workers, peasant and insurgent congress a "*conspiracy against Soviet power*" and a "*congress of Anarchist-kulaks delegates for struggle against the Red Army and the Soviet power*" (which explains why the congress organisers had asked that hotbed of kulakism, the Red Army troops, to send delegates!). Trotsky indicated the fate of those workers and peasants who dared participate in their own revolution: "*There can be only one penalty for these individuals: shooting.*" [**How the Revolution Armed**, vol. II, p. 293]

Trotsky also ordered the arrest of Makhno, who escaped but who ordered his troops to remain under Bolshevik command to ensure that the front against Denikin was maintained. However, five members of his staff were shot for having distributed literature concerning the banned fourth congress. This order was the first step in the Bolshevik attempt to "*liquidate the Makhnovist movement.*" This campaign saw Bolshevik regiments invade the insurgent area, shooting militants on the spot and destroying the free communes and other Makhnovist organisations. [Arshinov, **Op. Cit.**, p. 121] It should be noted that during the Spanish Revolution, the Stalinists acted in the same way, attacking rural collectives while the anarchist troops fought against Franco at the front.

Thus the participating event for the break between the Makhnovists and Bolsheviks was Trotsky's banning of the fourth regional congress. However, this was preceded by an intense press campaign against the Makhnovists as well as holding back of essential supplies from the frontline troops. Clearly the Bolsheviks considered that the soviet system was threatened if soviet conferences were called and that the "dictatorship of the proletariat" was undermined if the proletariat took part in the revolutionary process!

With the Makhnovist front weakened, they could not hold against Denikin's attacks, particularly when Red Army troops retreated on their flank. Thus, the front which the Makhnovists themselves had formed and held for more than six months was finally broken. [Arshinov, **Op. Cit.**, p. 124] The Red Army was split into three and the Whites entered the Ukraine, which the Bolsheviks promptly abandoned to its fate. The Makhnovists, drawing stray Red Army and other forces to it, continued to fight the Whites, ultimately inflicting a decisive defeat on them at Peregonovka, subsequently destroying their supply lines and ensuring Denikin's defeat (see [section 4](#)).

The Red Army re-entered the Ukraine at the end of 1919. Bolshevik plans with regard to the Makhnovists had already been decided in a secret order written by Trotsky on December 11th. Red Army troops had to "*be protected against infection by guerrilla-ism and Makhnovism*" by various means, including "*extensive agitation*" which used "*examples from the past to show the treacherous role played by the Makhnovites.*" A "*considerable number of agents*" would be sent "*ahead*" of the main forces to "*join the guerrilla detachments*" and would agitate against "*guerrilla-ism.*" Once partisan forces meet with Red Army troops, the former "*ceases to be a military unit after it has appeared on our side of the line . . . From that moment it becomes merely material for processing, and for that purpose is to be sent to our rear.*" To "*secure complete subordination of the detachments,*" the Red forces "*must make use of the agents previously set to these detachments.*" The aim, simply put, was to ensure that the

partisans became *"fully subordinate to our command."* If the partisans who had been fighting for revolution and against the Whites opposed becoming *"material for processing"* (i.e. cannon fodder), *"refuses to submit to orders, displays unruliness and self-will,"* then it *"must be subjected to ruthless punishment."* Recognising the organic links the partisans had with the peasants, Trotsky argues that *"in the Ukraine, guerrilla detachments appear and disappear with ease, dissolving themselves into the mass of the armed peasant population"* and so *"a fundamental condition for the success against guerrilla-ism is unconditional disarmament of the rural population, without exception."* [Trotsky, **How the Revolution Armed**, vol. II, pp. 440-2] As events would show, the Bolsheviks implemented Trotsky's order to the letter.

On December 24th, Makhno's troops met with the Bolshevik 14th army and its commander *"admitted Makhno's service in defeating Denikin."* However, while *"the Bolsheviks fraternised with the Makhno troops . . . they distrusted Makhno, fearing the popularity he had gained as a result of his successful fighting against Denikin."* The Bolsheviks had *"no intention of tolerating Makhno's independent policy, but hoped first to destroy his army by removing it from its own base. With this in mind, on January 8th, 1920, the Revolutionary Military Council of the Fourteenth Army ordered Makhno to move to the Polish Front . . . The author of the order realised that there was no real war between the Poles and the Bolsheviks at the time and he also knew that Makhno would not abandon his region. . . . Uborevich [the author] explained that 'an appropriate reaction by Makhno to this order would give us the chance to have accurate grounds for our next steps' . . . [He] concluded: 'The order is a certain political manoeuvre and, at the very least, we expect positive results from Makhno's realisation of this.'"* [Palij, **Op. Cit.**, p. 209 and p. 210] As can be seen, these actions fit perfectly with Trotsky's secret order and with Bolshevik desire for a monopoly of power for itself (see [next section](#)).

As expected, the Makhnovists refused to leave their territory. They realised the political motivations behind the order. As Arshinov notes, *"[s]ending the insurrectionary army to the Polish front meant removing from the Ukraine the main nerve centre of the revolutionary insurrection. This was precisely what the Bolsheviks wanted: they would then be absolute masters of the rebellious region, and the Makhnovists were perfectly aware of this."* [**Op. Cit.**, p. 163] As well as political objections, the Makhnovists listed practical reasons for not going. Firstly, *"the Insurrectionary Army was subordinate neither to the 14th Corps nor to any other unit of the Red Army. The Red commander had no authority to give orders to the Insurrectionary Army."* Secondly, *"it was materially impossible to carry it out, since half the men, as well as nearly all the commanders and staff, and Makhno himself, were sick [with typhus]."* Thirdly, *"the fighting qualities and revolutionary usefulness of the Insurrectionary Army were certainly much greater on their own ground."* [Voline, **Op. Cit.**, pp. 650-1]

The Bolsheviks refused to discuss the issue and on the 14th of January, they declared the Makhnovists outlawed. They then *"made a great effort to destroy"* Makhno. [Palij, **Op. Cit.**, p. 210] In summary, the Bolsheviks **started** the conflict in order to eliminate opposition to their power. This led to nine months of bitter fighting between the Red Army and the Makhnovists. To prevent fraternisation, the Bolsheviks did not use local troops and instead imported Latvian, Estonian and Chinese troops. They also used other *"new tactics,"* and *"attacked not only Makhno's partisans, but also the villages and towns in which the population was sympathetic toward Makhno. They shot ordinary soldiers as well as their commanders,*

*destroying their houses, confiscating their properties and persecuting their families. Moreover the Bolsheviks conducted mass arrests of innocent peasants who were suspected of collaborating in some way with the partisans. It is impossible to determine the casualties involved." They also set up "Committees of the Poor" as part of the Bolshevik administrative apparatus, which acted as "informers helping the Bolshevik secret police in its persecution of the partisans, their families and supporters, even to the extent of hunting down and executing wounded partisans." [Palij, **Op. Cit.**, pp. 212-3]*

This conflict undoubtedly gave time for the Whites to reorganise themselves and encouraged the Poles to invade the Ukraine, so prolonging the Civil War. The Makhnovists were threatened by both the Bolsheviks **and** Wrangel. By mid-1920, Wrangel appeared to be gaining the upper hand and the Makhnovists *"could not remain indifferent to Wrangel's advance . . . Everything done to destroy him would in the last analysis benefit the revolution."* This led the Makhnovists to consider allying with the Bolsheviks as *"the difference between the Communists and Wrangel was that the Communists had the support of the masses with faith in the revolution. It is true that these masses were cynically misled by the Communists, who exploited the revolutionary enthusiasm of the workers in the interests of Bolshevik power."* With this in mind, the Makhnovists agreed at a mass assembly to make an alliance with the Bolsheviks against Wrangel as this would eliminate the White threat and end the civil war. [Arshinov, **Op. Cit.**, p. 176]

The Bolsheviks ignored the Makhnovist offer using mid-September, when *"Wrangel's success caused the Bolsheviks leaders to reconsider."* [Palij, **Op. Cit.**, p. 223] Sometime between the 10th and 15th of October the final agreement was signed:

"Part I -- Political Agreement.

"1. Immediate release of all Makhnovists and anarchists imprisoned or in exile in the territories of the Soviet Republic; cessation of all persecutions of Makhnovists or anarchists, except those who carry on armed conflict against the Soviet Government.

"2. Complete freedom in all forms of public expression and propaganda for all Makhnovists and anarchists, for their principles and ideas, in speech and the press, with the exception of anything that might call for the violent overthrow of the Soviet Government, and on condition that the requirements of military censorship be respected. For all kinds of publications, the Makhnovists and anarchists, as revolutionary organisations recognised by the Soviet Government may make use of the technical apparatus of the Soviet State, while naturally submitting to the technical rules for publication.

"3. Free participation in elections to the Soviets; and the right of Makhnovists and anarchists to be elected thereto. Free participation in the organisation of the forthcoming Fifth Pan-Ukrainian Congress of Soviets . . .

"Part II -- Military Agreement.

"1. The Ukrainian Revolutionary Insurrectionary Army (Makhnovist) will join the armed forces of the Republic as a partisan army, subordinate, in regard to operations, to the supreme command of the Red Army; it will retain its established internal structure, and does not have to adopt the bases and principles of the regular Red Army.

"2. When crossing Soviet territory at the front, or going between fronts, the Insurrectionary Army will not accept into its ranks neither any detachments of, nor deserters from, the Red Army . . .

"3. For the purpose of destroying the common enemy -- the White Army -- the Ukrainian Revolutionary Insurrectionary Army (Makhnovists) will inform the working masses that collaborate with it the agreement that has been concluded; it will call upon the people to cease all military actions hostile to the Soviet power; and for its part, the Soviet power will immediately publish the clauses of the agreement.

*"4. The families of combatants of the Makhnovist Revolutionary Insurrectionary Army living in the territory of the Soviet Republic shall enjoy the same rights as those of soldiers of the Red Army . . ." [quoted by Arshinov, **Op. Cit.**, p. 178]*

This agreement was agreed by both sides, although the Bolsheviks immediately broke it by publishing the military agreement first, followed by the political agreement a week later, so obscuring the real meaning of the pact. As it stands, the political clause simply gave anarchists and Makhnovists the rights they should have already had, according to the constitution of the Soviet state. This shows how far the Bolsheviks had applied that constitution.

The agreement is highly significant as in itself it disproves many of the Bolsheviks slanders about the Makhnovists and it proves the suppression of the anarchist press to have been on political grounds.

However, the Makhnovists desired to add a fourth clause to the Political Agreement:

*"Since one of the essential principles of the Makhnovist movement is the struggle for the self-management of the workers, the Insurrectionary Army (Makhnovist) believes it should insist on the following fourth point of the political agreement: in the region where the Makhnovist Army is operating, the population of workers and peasants will create its own institutions of economic and political self-management; these institutions will be autonomous and joined in federation, by means of agreement, with the government organs of the Soviet Republic," [quoted by Arshinov, **Op. Cit.**, pp. 179-80]*

Unsurprisingly, the Bolsheviks refused to ratify this clause. As one Bolshevik historian pointed out, the *"fourth point was fundamental to both sides, it meant the system of free Soviets, which was in total*

opposition to the idea of the dictatorship of the proletariat." [quoted by Malet, **Op. Cit.**, p. 108] As we discuss in the [next section](#), the Bolsheviks had equated the "*dictatorship of the proletariat*" with the dictatorship of their party and so working-class self-management could not be allowed. It should be noted that this fourth clause was the cause of Lenin and Trotsky's toying with the idea of allowing the Makhnovists south-eastern Ukraine as an anarchist experiment (as mentioned by both Victor Serge and Trotsky in later years).

Once Wrangel had been defeated by Makhnovist and Red Army units, the Bolsheviks turned on the movement. Makhno had "*assumed that the coming conflict with the Bolsheviks could be limited to the realm of ideas, feeling that the strong revolutionary ideas and feelings of the peasants, together with their distrust of the foreign invaders, were the best guarantees for the movement's territory. Moreover, Makhno believed that the Bolsheviks would not attack his movement immediately. A respite of some three months would have allowed him to consolidate his power [sic!] and to win over much of the Bolshevik rank and file.*" [Palij, **Op. Cit.**, p. 231] From the wording of the second clause of the military agreement (namely, to refuse Red Army deserters or units), it is clear that the Bolsheviks were aware of the appeal of Makhnovist politics on the Red Army soldiers. As soon as Wrangel was defeated, the Red Army attacked. Makhnovist commanders were invited to meetings, arrested and then shot. The Red Army surrounded Makhnovist units and attacked them. At the same time, anarchists were arrested all across the Ukraine. Hulyai Pole itself was attacked (Makhno, despite overwhelming odds, broke out). [Malet, **Op. Cit.**, pp. 71-2]

In the words of Makhno:

"In this difficult and responsible revolutionary position the Makhno movement made one great mistake: alliance with the Bolsheviks against a common enemy, Wrangel and the Entente. In the period of this alliance that was morally right and of practical value for the revolution, the Makhno movement mistook Bolshevik revolutionism and failed to secure itself in advance against betrayal. The Bolsheviks and their experts treacherously circumvented it." [quoted by Palij, **Op. Cit.**, p. 234]

While the Bolsheviks continuously proclaimed the final defeat of the Makhnovists, they held out for nearly a year before being forced to leave the Ukraine in August 1921. Indeed, by the end of 1920 his troops number ten to fifteen thousand men and the "*growing strength of the Makhno army and its successes caused serious concern in the Bolshevik regime.*" More Red troops were deployed, "*stationing whole regiments, primarily cavalry, in the occupied villages to terrorise the peasants and prevent them from supporting Makhno. . . Cheka punitive units were constantly trailing the partisans, executing Makhno's sympathisers and the partisans' families.*" [Palij, **Op. Cit.**, p. 237 and p. 238] Combined with this state terrorism, economic conditions in the villages got worse. The countryside was exhausted and 1921 was a famine year. With his rural base itself barely surviving, the Makhnovists could not survive long.

It should be noted that during the periods after the Bolsheviks had turned on the Makhnovists, the latter

appealed to rank-and-file Red Army troops not to attack them. As one of their leaflets put it: "*Down with fratricidal war among the working people!*" They urged the Red Army troops (with some success) to rebel against the commissars and appointed officers and join with the Makhnovists, who would "*greet [them] as our own brothers and together we will create a free and just life for workers and peasants and will struggle against all tyrants and oppressors of the working people.*" [contained in Arshinov, **Op. Cit.**, p. 276 and p. 283]

Even after the defeat of the Makhnovists, the Bolsheviks did not stop their campaign of lies. For example, Trotsky reported to the Ninth Congress of Soviets on December 26th, 1921, that the Makhnovists were "*in Romania,*" where Makhno had "*received a friendly welcome*" and was "*liv[ing] comfortably in Bucharest.*" The Makhnovists had picked Romania because it was, like Poland, "*a country where they . . . felt secure*" due to the way they treated "*Russian counter-revolutionary bands.*" [**How the Revolution Armed**, vol. IV, p. 404] In reality, the "*Romanian authorities put Makhno, his wife, and his followers in an internment camp.*" The Bolsheviks were not unaware of this, as they "*sent a series of sharp diplomatic notes demanding Makhno's extradition.*" They expelled Makhno and his wife to Poland on April 11, 1922. The Poles also interned them and, again, the Bolsheviks demanded Makhno's extradition "*on the ground that he was a criminal and not entitled to political asylum.*" [Palij, **Op. Cit.**, p. 242] Trotsky's lies come as no surprise, given his and his party's track record on slandering anarchists.

As can be seen, the relationship of the Makhnovists to the Bolsheviks was one of constant betrayal of the former by the latter. Moreover, the Bolsheviks took every opportunity to slander the Makhnovists, with Trotsky going so far as to report Makhno was living well while he was rotting in a capitalist prison. This is to be expected, as the aims of the two groups were at such odds. As we discuss in the [next section](#), while the Makhnovists did whatever they could to encourage working-class self-management and freedom, the Bolsheviks had evolved from advocating the government of their party as the expression of "the dictatorship of the proletariat" to stating that only the dictatorship of their party could ensure the success of a social revolution and so **was** "the dictatorship of the proletariat." As the Makhnovist movement shows, if need be, the party would happily exercise its dictatorship **over** the proletariat (and peasantry) if that was needed to retain its power.

14 How did the Makhnovists and Bolsheviks differ?

Like chalk and cheese.

Whereas the Bolsheviks talked about soviet democracy while exercising a party dictatorship, the Makhnovists not only talked about "*free soviets,*" they also encouraged them with all their ability. Similarly, while Lenin stated that free speech was "*a bourgeois notion*" and that there could be "*no free speech in a revolutionary period,*" the Makhnovists proclaimed free speech for working people. [Lenin quoted by Goldman, **My Disillusionment in Russia**, p. 33] While the Bolsheviks ended up arguing for the necessity of party dictatorship during a revolution, the Makhnovists introduced free soviets and organised peasant, worker and insurgent congresses to conduct the revolution.

We have discussed the Makhnovist ideas in both theory and practice in sections [5](#), [6](#) and [7](#). In spite of the chaos and difficulties imposed upon the movement by having to fight the counter-revolution, the Makhnovists applied their ideals constantly. The Makhnovists were a mass movement and its constructive efforts showed that there was an alternative route the Russian revolution could have followed other than the authoritarian dictatorship that Leninists, then and now, claimed was inevitable if the revolution was to be saved.

To see why, we must compare Bolshevik ideology and practice to that of the Makhnovists in three key areas. Firstly, on how a revolution should be defended. Secondly, on the role of the soviets and party in the revolution. Thirdly, on the question of working-class freedom.

Early in 1918, after the signing of the Brest-Litovsk Treaty the Bolsheviks re-introduced Tsarist officers into the army alongside bourgeois military discipline. As Maurice Brinton correctly summarises:

"Trotsky, appointed Commissar of Military Affairs after Brest-Litovsk, had rapidly been reorganising the Red Army. The death penalty for disobedience under fire had been restored. So, more gradually, had saluting, special forms of address, separate living quarters and other privileges for officers. Democratic forms of organisation, including the election of officers, had been quickly dispensed with." [**The Bolsheviks and Workers' Control**, p. 37]

Officers were appointed rather than elected. They argued this had to be done to win the war. The *"principle of election,"* stated Trotsky, *"is politically purposeless and technically inexpedient and has been, in practice, abolished by decree."* Thus the election of officers and the creation of soldiers' committees was abolished from the top, replaced by appointed officers. Trotsky's rationale for this was simply that *"political power is in the hands of the same working class from whose ranks the Army is recruited."* In other words, the Bolshevik Party held power as power was actually held by it, **not** the working class. Trotsky tried to answer the obvious objection:

*"Once we have established the Soviet regime, that is a system under which the government is headed by persons who have been directly elected by the Soviets of Workers', Peasants' and Soldiers' Deputies, there can be no antagonism between the government and the mass of the workers, just as there is no antagonism between the administration of the union and the general assembly of its members, and, therefore, there cannot be any grounds for fearing the **appointment** of members of the commanding staff by the organs of the Soviet Power."* [**Work, Discipline, Order**]

He repeated this argument in his 1919 diatribe against the Makhnovists:

"The Makhnovites shout raucously: 'Down with appointed commanders!' This they do only so as to delude the ignorant element among their own soldiers. One can speak of

'appointed' persons only under the bourgeois order, when Tsarist officials or bourgeois ministers appointed at their own discretion commanders who kept the soldier masses subject to the bourgeois classes. Today there is no authority in Russia but that which is elected by the whole working class and working peasantry. It follows that commanders appointed by the central Soviet Government are installed in their positions by the will of the working millions. But the Makhnovite commanders reflect the interests of a minute group of Anarchists who rely on the kulaks and the ignorant." [The Makhno Movement]

Of course, most workers are well aware that the administration of a trade union usually works against them during periods of struggle. Indeed, so are most Trotskyists as they often denounce the betrayals by that administration. Thus Trotsky's own analogy indicates the fallacy of his argument. Equally, it was not *"the will of the working millions"* which appointed anyone, it was a handful of leaders of the Bolshevik party (which had manipulated the soviets to remain in power). Needless to say, this was a vast change from Lenin's comments in **State and Revolution** opposing appointment and calling for election of **all** officials!

Moreover, the explanation that *"the ignorant"* were to blame for Makhnovist opposition to appointed officers had a long legacy with Trotsky. In April 1918, when justifying Bolshevik introduction of appointed officers, he had argued that the *"Soviet government is the same as the committee of a trade union. It is elected by the workers and peasants and you can at the All-Russian Congress of Soviets, at any moment you like, dismiss that government and appoint another. But once you have appointed it, you must give it the right to choose the technical specialists."* He stressed that this applied *"in military affairs, in particular."* Using the trade union analogy, he argued that the workers had *"entrusted us [the Bolshevik leaders] with the direction of the union"* and this meant that the Bolshevik leaders, not the workers, should decide things as *"we are better able to judge in the matter"* than them! The workers role was stated clearly: *"if our way of conducting the business is bad, then throw us out and elect another committee!"* [Leon Trotsky Speaks, p. 113] In other words, like any bureaucrat, for Trotsky working-class participation in the affairs of the revolution was seen as irrelevant: the masses had voted and their role was now that of obeying those who *"are better able to judge."*

Using an argument the Tsar could have been proud of, Trotsky defended the elimination of soldier democracy:

"How could soldiers who have just entered the army choose the chiefs! Have they any vote to go by? They have none. And therefore elections are impossible." [Ibid.]

Equally, how could workers and peasants who have just entered political or economic struggle in 1917 choose the chiefs? Had they any vote to go by? They had none. And therefore political and workplace elections are impossible. Unsurprisingly, Trotsky soon ended up applying this logic to politics as well, defending (like all the leaders of Bolshevism) the dictatorship of the party **over** working class. How could the *"ignorant"* workers be expected to elect the best *"chiefs"* never mind manage their own affairs!

Ironically, in 1936 the Stalinist Communist Party in Spain was to make very similar arguments about the need for a regular army and army discipline to win the war. As Aileen O'Carroll in her essay "*Freedom and Revolution*" argues:

"The conventional army structure evolved when feudal kings or capitalist governments required the working class to fight its wars for them. These had to be authoritarian institutions, because although propaganda and jingoism can play a part initially in encouraging enlistment, the horrors of war soon expose the futility of nationalism. A large part of military organisation is aimed at ensuring that soldiers remain fighting for causes they do not necessarily believe in. Military discipline attempts to create an unthinking, unquestioning body of soldiers, as fearful of their own side as of the other." [Red & Black Revolution, no. 1]

In short in both Russia and Spain the Bolsheviks wanted an army that would obey them regardless of whether the individual soldiers felt they were doing the correct thing, indeed who would obey through fear of their officers even when they knew what they were doing was wrong. Such a body would be essential for enforcing minority rule over the wishes of the workers. Would a self-managed army be inclined to repress workers' and peasants' strikes and protests? Of course not.

The Makhnovists show that another kind of revolutionary army was possible in the Russian Revolution and that the "*ignorant*" masses could choose their own officers. In other words, the latter-day justifications of the followers of Bolshevism are wrong when they assert that the creation of the top-down, hierarchical Red Army was a result of the "*contradiction between the political consciousness and circumstantial coercion*" and "*a retreat*" because "*officers were appointed and not elected,*" it was a conscript army and "*severe military discipline.*" [John Rees, "*In Defence of October*", **International Socialism**, no. 52, pp. 3-82, p. 46] As can be seen, Trotsky did not consider it as a "*retreat*" or caused by "*circumstances.*" Equally, the Makhnovists managed to organise themselves relatively democratically in the circumstances created by the same civil war.

As such, the differences between the Makhnovists and the Bolsheviks as regards the internal organisation of a revolutionary army are clear. The Bolsheviks applied top-down, bourgeois methods of internal organisation and discipline. The Makhnovists applied democratic internal organisation and discipline as far as possible.

From our discussion of the Bolshevik justifications for its system of appointed officers in the Red Army, it will come as no surprise that as regards the relationship of the soviets to the revolutionary organisation (party) the Makhnovists and Bolsheviks were (again) miles apart. While we discuss this in greater detail in [section 14](#) of the appendix "[What happened during the Russian Revolution?](#)", we will give a flavour of Bolshevik ideology on this subject here.

From the start, Lenin identified soviet (or working class) power with the power of their own party. In October 1917, Lenin was equating party and class: "*the power of the Bolsheviks -- that is, the power of*

the proletariat." [**Will the Bolsheviks Maintain Power?**, p. 102] After the October Revolution, the Bolsheviks were clear that the soviets would not have "*all power.*" Rather, the first act of soviet sovereignty was to alienate it into the hands of a Bolshevik government. In response to a few leading Bolsheviks who called for a coalition government, the Bolshevik Central Committee stated that it was "*impossible to refuse a purely Bolshevik government without treason to the slogan of the power of the Soviets, since a majority at the Second All-Russian Congress of Soviets . . . handed power over to this government.*" [quoted by Robery V. Daniels, **A Documentary History of Communism**, vol. 1, pp. 127-8] How can the "*power of the Soviets*" exist when said soviets immediately "*handed power*" over to another body? Thus the only "*power*" the soviets had was simply the "*power*" to determine who actually held political power.

The question of who held power, the soviets or the party, came into focus when the soviet elections resulted in non-Bolshevik majorities being elected. After the initial honeymoon period, soviet elections started to go badly for the Bolsheviks. Ever since taking power in 1917, the Bolsheviks had become increasingly alienated from the working class. The spring and summer of 1918 saw "*great Bolshevik losses in the soviet elections*" in all provincial city elections that data is available for. The Mensheviks were the main beneficiaries of these election swings (Socialist Revolutionaries also gained) The Bolsheviks forcibly disbanded such soviets. They continually postponed elections and "*pack[ed] local soviets once they could no longer count on an electoral majority*" by giving representation to the organisations they dominated which made workplace elections meaningless. [Samuel Farber, **Before Stalinism**, pp. 22-4 and p. 33] In Petrograd, such packing swamped the actual number of workplace delegates, transforming the soviets and making elections irrelevant. Of the 700-plus deputies to the "new" soviet, over half were elected by Bolshevik dominated organisations so ensuring a solid Bolshevik majority even before the factory voting began.

Thus, the regime remained "soviet" in name only. Faced with a defeat in the soviets, the Bolsheviks simply abolished them or changed them to ensure their position. This process, it should be noted, started **before** the outbreak of Civil War in late May 1918, implying that Bolshevik authoritarianism cannot be explained as reactions to difficult objective circumstances.

Unsurprisingly, Bolshevik ideology started to adjust to the position the party found itself in. As Samuel Farber argues, in the "*period of March to June 1918, Lenin began to make frequent distinctions **within** the working class, singling out workers who could still be trusted, denouncing workers whom he accused of abandoning the working class and deserting to the side of the bourgeoisie, and complaining about how the working class had become 'infected with the disease of petty-bourgeois disintegration.'*" [**Op. Cit.**, p. 25] Combined with the vision of "working-class" or "soviet" power expressed by the power of his party, this laid the foundations for what came next. In 1919 Lenin fully and explicitly argued that the "dictatorship of the proletariat" was, in fact, the dictatorship of the Bolshevik party:

"we are reproached with having established a dictatorship of one party . . . we say, 'Yes, it is a dictatorship of one party! This is what we stand for and we shall not shift from that position . . .'" [**Collected Works**, vol. 29, p. 535]

This quickly become Bolshevik orthodoxy. Trotsky argued in his infamous work **Terrorism and Communism** that there was "*no substitution at all*" when "*the power of the party*" replaces "*the power of the working class*." Zinoviev argued this point at the Second Congress of the Communist International. As he put it:

"Today, people like Kautsky come along and say that in Russia you do not have the dictatorship of the working class but the dictatorship of the party. They think this is a reproach against us. Not in the least! We have a dictatorship of the working class and that is precisely why we also have a dictatorship of the Communist Party. The dictatorship of the Communist Party is only a function, an attribute, an expression of the dictatorship of the working class . . . [T]he dictatorship of the proletariat is at the same time the dictatorship of the Communist Party." [**Proceedings and Documents of the Second Congress, 1920**, vol. 1, pp. 151-2]

Neither Lenin nor Trotsky disagreed. By the end of the civil war, Lenin was arguing that "*the dictatorship of the proletariat cannot be exercised through an organisation embracing the whole of the class, because in all capitalist countries (and not only over here, in one of the most backward) the proletariat is still so divided, so degraded, and so corrupted in parts . . . that an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship. It can be exercised only by a vanguard . . . the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation.*" [**Collected Works**, vol. 32, p. 21]

This places the Bolshevik betrayals of the Makhnovists in 1919 and 1920 into **political** context. It also explains the Bolshevik opposition to the proposed fourth clause of the 1920 political and military agreement (see [last section](#)). Simply put, at the time (and long afterwards) the Bolsheviks equated the revolution with their own power. As such, Makhnovist calls for soviet self-management threatened the "dictatorship of the proletariat" (i.e. dictatorship of the party) by encouraging working people to participate in the revolution and giving the radically false idea that working-class power could be exercised by working people and their own class organisations.

Lenin, Trotsky and Zinoviev held this position until their deaths. Trotsky, for example, was arguing in 1923 that "*[i]f there is one question which basically not only does not require revision but does not so much as admit the thought of revision, it is the question of the dictatorship of the Party, and its leadership in all spheres of our work.*" [**Leon Trotsky Speaks**, p. 158] Even after the rise of Stalinism, he was still arguing for the "*objective necessity*" of the "*revolutionary dictatorship of a proletarian party*" in 1937. He stressed that the "*revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution . . . Abstractly speaking, it would be very well if the party dictatorship could be replaced by the 'dictatorship' of the whole toiling people without any party, but this presupposes such a high level of political development among the masses that it can never be achieved under capitalist conditions.*" [Trotsky, **Writings 1936-37**, pp. 513-4]

This suggests that the later Trotskyist argument that the Bolsheviks were forced by "*objective factors*" to

replace the dictatorship of the proletariat by that of the party is false. At the time, and afterwards, the Bolsheviks did not argue in these terms. The end of soviet democracy was not considered a problem or a retreat for the revolution. The opposite was the case, with the elimination of democracy being raised to an ideological truism to be applied everywhere. Equally, the fact that the Makhnovists did all they could to promote soviet self-management and actually called regional congresses of workers, peasants and insurgents suggests that "*objective factors*" simply cannot explain Bolshevik actions. Simply put, like the Bolshevik betrayals of the Makhnovists, the Bolshevik elimination of soviet democracy by party dictatorship can only be fully understood by looking at Bolshevik ideology.

Little wonder the Makhnovists argued as followed:

"Since the arrival of the Bolsheviks the dictatorship of their party has been established here. As a party of statist, the Bolshevik Party everywhere has set up state organs for the purpose of governing the revolutionary people. Everything has to be submitted to their authority and take place under their vigilant eye. All opposition, protest, or even independent initiative has been stifled by their Extraordinary Commissions [the secret police, the Cheka]. Furthermore, all these institutions are composed of people who are removed from labour and from revolution. In other words, what has been created is a situation in which the labouring and revolutionary people have fallen under the surveillance and rule of people who are alien to the working classes, people who are inclined to exercise arbitrariness and violence over the workers. Such is the dictatorship of the Bolshevik-Communist Party . . .

"We again remind the working people that they will liberate themselves from oppression, misery and violence only through their own efforts. No change in power will help them in this. Only by means of their own free worker-peasant organisations can the workers reach the summit of the social revolution -- complete freedom and real equality." [quoted by Arshinov, **Op. Cit.** pp. 116-7]

Which brings us to the next issue, namely working-class freedom. For anarchists, the key point of a revolution is to increase working-class freedom. It means the end of hierarchy and the direct participation in the revolution by the working classes themselves. As Bakunin put it, "*revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction.*" [**Michael Bakunin: Selected Writings**, p. 237] For this reason, the Makhnovists (like Bakunin) argued for a revolutionary society based on free federations of worker and peasant organisations (free soviets).

This means that actions which consolidated rule by a few cannot be revolutionary, even if the few are made up of the most revolutionary of the revolutionaries. Thus working class power cannot be equated to the power of a political party, no matter how "*socialist*" or "*revolutionary*" its ideas or rhetoric. This means that Bolshevik restrictions on working class freedom (of speech, assembly, press, organisation) struck at the heart of the revolution. It did not signify the defence of the revolution, but rather its defeat.

Ultimately, as Emma Goldman quickly recognised, what the Bolsheviks called "*defence of the Revolution*" was "*really only the defence of [the] party in power.*" [**My Disillusionment in Russia**, p. 57]

Anarchists had long argued that, to quote Goldman again, there is "*no greater fallacy than the belief that aims and purposes are one thing, while methods and tactics are another. This conception is a potent menace to social regeneration. All human experience teaches that methods and means cannot be separated from the ultimate aim. The means employed become, through individual practice, part and parcel of the final purpose; they influence it, modify it, and presently the aims and means become identical.*" [**Op. Cit.**, p. 260] The evolution of Bolshevik practice and theory reinforces this argument. The means used had an impact on the course of events, which in turn shaped the next set of means and the ideology used to justify it.

This explains the Makhnovist and Bolshevik differences in relationship to working-class freedom. For anarchists, only freedom or the struggle for freedom can teach people to be free (and so is genuinely revolutionary). This explains why the Makhnovists not only proclaimed freedom of election, speech, press, assembly and organisation for working people, which was an essential revolutionary position, they also implemented it (see [section 7](#)). The Bolsheviks did the reverse, clamping down on the opposition at every occasion (including workers' strikes and protests). For the Makhnovists, working-class freedom was the key gain of the revolution, and so had to be introduced, practised and defended. Hence Makhno:

"I consider it an inviolable right of the workers and peasants, a right won by the revolution, to call congresses on their own account, to discuss their affairs. That is why the prohibitions of such congresses, and the declaration proclaiming them illegal . . . , represent a direct and insolent violation of the rights of the workers." [quoted by Arshinov, **Op. Cit.**, p. 129]

For the Bolsheviks, working-class freedom was something to fear. Back in 1903, Lenin laid the groundwork for this by arguing that the "*spontaneous development of the labour movement leads to it being subordinated to bourgeois ideology.*" He stressed that "*the working class, exclusively by their own effort, is able to develop only trade union consciousness . . . the theoretical doctrine of Social-Democracy arose quite independently of the spontaneous growth of the labour movement; it arose as a natural and inevitable outcome of ideas among the revolutionary socialist intelligentsia.*" This meant that "*Social Democratic [i.e. socialist] consciousness . . . could only be brought to them from without.*" [**Essential Works of Lenin**, p. 82 and pp. 74-5] Clearly, if the workers turned against the party, then the workers were "*being subordinated to bourgeois ideology.*" It was in their own interests, therefore, for the party to subordinate the workers and so soviet democracy became not an expression of working-class power but rather something which undermined it!

This perspective can be seen when the Makhnovists liberated cities. In Alexandrovsk and Katerinoslav, the Bolsheviks proposed to the Makhnovists spheres of action - their **Revkom** (Revolutionary

Committee) would handle political affairs and the Makhnovists military ones. Makhno advised them *"to go and take up some honest trade instead of seeking to impose their will on the workers."* Instead, the Makhnovists called upon *"the working population to participate in a general conference . . . and it was proposed that the workers organise the life of the city and the functioning of the factories with their own forced and their organisations."* [Arshinov **Op. Cit.**, p. 154 and p. 149] The differences between the Bolsheviks and Makhnovists could not be clearer.

Lastly, we should note that while Lenin and the leading Bolsheviks wholeheartedly opposed working-class economic self-management by factory committees and instead urged "efficient" top-down one-man management, the Makhnovists supported working-class self-management of production. Under the Bolsheviks, as Arshinov argued, the *"nationalisation of industry, [while] removing the workers from the hands of individual capitalists, delivered them to the yet more rapacious hands of a single, ever-present capitalist boss, the State. The relations between the workers and this new boss are the same as earlier relations between labour and capital, with the sole difference that the Communist boss, the State, not only exploits the workers, but also punishes them himself. . . . Wage labour has remained what it was before, except that it has taken on the character of an obligation to the State . . . It is clear that in all this we are dealing with a simple substitution of State capitalism for private capitalism."* [**Op. Cit.**, p. 71] The Makhnovist propaganda, in contrast, stressed the need for workers to socialise the means of production and place it under their direct management by their own class organs. In other words, the abolition of wage slavery by workers' self-management of production.

Unsurprisingly, the Makhnovists supported the Kronstadt rebellion (see the appendix ["What was the Kronstadt uprising?"](#) for more on Kronstadt). Indeed, there is significant overlap between the Kronstadt demands and the ideas of the Makhnovist movement. For example, the Makhnovist idea of free soviets is almost identical to the first three points of the Kronstadt programme and their land policy the same as point 11 of the Kronstadt demands. The Kronstadt rebels also raised the idea of *"free soviets"* and the *"third revolution,"* common Makhnovist slogans (see [section 3](#) of the appendix ["What was the Kronstadt uprising?"](#) for details). As one Bolshevik writer notes, it is *"characteristic that the anarchist-Makhnovists in the Ukraine reprinted the appeal of the Kronstadters, and in general did not hide their sympathy for them."* [quoted by Malet, **Op. Cit.**, p. 108] Voline also noted that the *"ideas and activities of the Makhnovist peasants were similar in all respects to those of the Kronstadt rebels in 1921."* [**Op. Cit.**, p. 575]

In summary, the major difference between the Makhnovists and the Bolsheviks is that the former stuck by and introduced their stated aims of *"soviet power"* and working-class freedom while the latter rejected them once they clashed with Bolshevik party policies.

15 How do the modern followers of Bolshevism slander the Makhnovists?

Many modern-day supporters of Bolshevism, on the rare occasions when they do mention the

Makhnovist movement, simply repeat the old Bolshevik (and Stalinist) slanders against them.

For example, this is what Joseph Seymour of the U.S. **Spartacus League** did. Their newspaper **Workers Vanguard** ran a series entitled "*Marxism vs. Anarchism*" and in part 7, during his discussion of the Russian Revolution, Seymour claimed:

"The most significant counter-revolutionary force under the banner of anarchism was the Ukrainian peasant-based army of Nestor Makhno, which carried out pogroms against Jewish communities and collaborated with White armies against the Bolsheviks." [**Workers Vanguard**, 8/30/1996, p. 7]

Seymour, needless to say, made these accusations without providing any documentation, and with good reason, for outside of Stalinist hagiographies, no evidence exists to support his claims. As we indicated in [section 9](#), the Makhnovists opposed anti-Semitism and did **not** conduct pogroms. Equally, [section 12](#) proves that the Makhnovists did **not** collaborate with the Whites in any way (although this did not stop the Bolshevik press deliberately spreading the lie that they had).

More recently, the UK Leninist **Revolutionary Communist Group** asserted in their paper that the Makhnovists "*joined with counter-revolutionary White and imperialist armies against socialist Russia. This band of brigands also carried out pogroms against Jewish communities in the Ukraine.*" [**Fight Racism! Fight Imperialism!**, issue no. 174, p. 12] No evidence for such a claim was presented in the original review article. When an anarchist pointed out their assertion was "*falling back on a long tradition of Stalinist lies*" and asked for "*any historical references*" to support it, the paper replied by stating that while there were "*several*" references, it would give two: "*E.H. Carr refers to it in his history of the civil war. Also the anarchist historian Paul Avrich mentions it in his work **The anarchists in the Russian Revolution.***" [**Op. Cit.**, no. 175, p. 15]

In reality, neither work says any such thing. Looking at the first (unnamed) one, assuming it is E.H. Carr's **The Bolshevik Revolution** there is no reference to pogroms carried out by the Makhnovists (looking in the index for "Makhno"). Which, perhaps, explains why the paper refused to provide a book title and page number. As far as the second reference goes, Avrich made no such claim in **The Anarchists in the Russian Revolution**. He **did** address the issue in his **Anarchist Portraits**, concluding such charges are false.

And the name of the original article? Ironically, it was entitled "*The anarchist school of falsification*"!

However, more sophisticated slanders, lies and distortions have been levelled at the Makhnovists by the supporters of Bolshevism. This is to be expected, as the experience of the Makhnovists effectively refute the claim that the Bolsheviks had no choice but to act as they did. It is hard to maintain a position that "objective conditions" made the Bolsheviks act as they did when another mass revolutionary army, operating in the same environment, did not act in the same way. This means that the Makhnovists are strong evidence that Bolshevik politics played a key role in the degeneration of the Russian Revolution.

Clearly such a conclusion is dangerous to Bolshevism and so the Makhnovist movement must be attacked, regardless of the facts.

A recent example of this is John Rees' essay "*In Defence of October*" (**International Socialism**, no. 52, pp. 3-82). Rees, a member of the UK Socialist Workers' Party (SWP) is at pains to downplay the role of Bolshevik ideology in the degeneration of the Russian Revolution. He argues that "objective factors" ensured that the Bolsheviks acted as they did. The "*subjective factor*" was simply a choice between defeat and defence against the Whites: "*Within these limits Bolshevik policy was decisive.*" [**Op. Cit.**, p. 30] This explains his attack on the Makhnovist movement. Faced with the same "*objective factors*" as the Bolsheviks, the Makhnovists did not act in the same way. As such, the "*subjective factor*" amounts to more than Rees' stark choice and so objective conditions cannot explain everything.

Clearly, then, the Makhnovists undermine his basic thesis. As such, we would expect a less than honest account of the movement and Rees does not disappoint. He talks about the "*muddled anarchism*" of Makhno, dismissing the whole movement as offering no alternative to Bolshevism and being without "*an articulated political programme.*" Ultimately, for Rees, Makhno's "*anarchism was a thin veneer on peasant rebellion*" and while "*on paper*" the Makhnovists "*appeared to have a more democratic programme*" there were "*frauds.*" [p. 57, p. 58, p. 61 and p. 70]

The reality of the situation is totally different. Ignoring the obvious contradiction (i.e. how can the Makhnovists have the appearance of a "*democratic programme*" and, simultaneously, not articulate it?) we shall analyse his account of the Makhnovist movement in order to show exactly how low the supporters of Bolshevism will go to distort the historical record for their own aims (see the appendix "[What was the Kronstadt uprising?](#)" for Rees's distortions about the Kronstadt revolt). Once the selective and edited quotations provided by Rees are corrected, the picture that clearly emerges is that rather than the Makhnovists being "*frauds,*" it is Rees' account which is the fraud (along with the political tradition which inspired it).

Rees presents two aspects of his critique of the Makhnovists. The first is a history of the movement and its relationships (or lack of them) with the Bolsheviks. The second is a discussion of the ideas which the Makhnovists tried to put into practice. Both aspects of his critique are extremely flawed. Indeed, the errors in his history of the movement are so fundamental (and, indeed, so at odds with his references) that it suggests that ideology overcame objectivity (to be polite). The best that can be said of his account is that at least he does not raise the totally discredited accusation that the Makhnovists were anti-Semitic or "*kulaks.*" However, he more than makes up for this by distorting the facts and references he uses (it would be no exaggeration to argue that the only information Rees gets correct about his sources is the page number).

Rees starts by setting the tone, stating that the "*methods used by Makhno and Antonov [a leader of the "Greens" in Tambov] in their fight against the Red Army often mirrored those used by the Whites.*" [**Op. Cit.**, p. 57] Strangely enough, while he lists some for Antonov, he fails to specify any against Makhno. However, the scene is set. His strongest piece of evidence as regards Makhno's "*methods*" against the

Red Army come from mid-1920 after, it should be noted, the Bolsheviks had engineered the outlawing of the Makhnovist movement and needlessly started the very conflict Rees uses as evidence against Makhno. In other words, he is attacking the Makhnovists for defending themselves against Bolshevik aggression!

He quotes reports from the Ukrainian Front to blacken the Makhnovists, using them to confirm the picture he extracts from *"the diary of Makhno's wife."* These entries, from early 1920, he claims *"betray the nature of the movement"* (i.e. after, as we shall see, the Bolsheviks had engineered the outlawing of the Makhnovists). [**Op. Cit.**, p. 58] The major problem for Rees' case is the fact that this diary is a fake and has been known to be a fake since Arshinov wrote his classic account of the Makhnovists in 1923:

*"After 1920, the Bolsheviks wrote a great deal about the personal defects of Makhno, basing their information on the diary of his so-called wife, a certain Fedora Gaenko But Makhno's wife is Galina Andreevna Kuz'menko. She has lived with him since 1918. She **never** kept, and therefore never lost, a diary. Thus the documentation of the Soviet authorities is based on a fabrication, and the picture these authorities draw from such a diary is an ordinary lie."* [Arshinov, **History of the Makhnovist Movement**, p. 226f]

Ironically enough, Rees implicitly acknowledges this by lamely admitting (in an end note) that *"Makhno seems to have had two 'wives'"* [**Op. Cit.**, p. 78] And we should note that the source Rees uses for the fake diary entries (W.H. Chamberlin's **The Russian Revolution**) uses as **his** source the very Bolshevik documentation that Arshinov quite correctly denounced over 70 years before Rees put pen to paper. Little wonder Michael Palij, in his detailed account of the movement (**The Anarchism of Nestor Makhno, 1918-1921**), fails to use it. So, in summary, a major part of his account is based on falsehoods, falsehoods exposed as such decades ago. This indicates well the quality of his case against the Makhnovist movement.

As regards the "evidence" he extracts from this fake diary and Red Army reports, it simply shows that Bolsheviks were shot by Makhno's troops and Red Army troops died in combat. This went both ways, of course. In *"military operations the Bolsheviks shot all prisoners. The Makhnovists shot all captured officers unless the Red rank and file strongly interceded for them. The rank and file were usually sent home, though a number volunteered for service with the Insurgents."* Equally, *"[o]n the occupation of a village by the Red Army the Cheka would hunt out and hang all active Makhnovite supporters; an amenable Soviet would be set up; officials would be appointed or imported to organise the poor peasants . . . and three or four Red militia men left as armed support for the new village bosses."* [David Footman, **Op. Cit.**, pp. 292-3] As such, Rees' account of Makhnovist "terror" against the Bolsheviks seems somewhat hypocritical. We can equally surmise that the methods used by the Bolsheviks against the Makhnovists also *"often mirrored those used by the Whites"*! And Rees lambastes socialist Samuel Farber for mentioning the *"Red Terror, but not the Green Terror"* in Farber's discussion of the Tambov revolt! All in all, pretty pathetic.

Rees' concern for the truth can be seen from the fact that he asserts that Makhno's *"rebellion"* was

"smaller" than the Tambov uprising and distinguished from it "only by the muddled anarchism of its leader." [Op. Cit., p. 58] In fact, the Makhnovist movement was the bigger of the two. As Michael Malet notes:

"The differences between them explain why the Makhnovshchina lasted over four years, the Antonovshchina less than one year. The initial area of the Makhno movement was larger, and later expanded, whereas the Antonov region was restricted to the southern half of one province throughout its existence. The Makhno movement became established earlier, and was well-known before its break with the soviet regime. A crucial factor was the period of peace between the Bolsheviks and Makhno during the first half of 1919, something Antonov never had. It allowed for political and social development as well as military build-up. It followed from this that Makhno attracted much more support, which was increased and deepened by the positive ideology of Makhno and the anarchists who came to help him. This was not a matter of being anti-State and anti-town -- all the Greens, including Antonov, shared this view in a less sophisticated form -- but a positive land policy and a realisation of the need to link up with the towns on a federal basis in the post-revolutionary society." [Op. Cit., p. 155]

Even in terms of troops, the Makhno movement was larger. The Antonov rebellion had "a peak of around 20,000" troops. [Read, Op. Cit., p. 268] Makhno, in comparison, had a peak of about 40,000 in late 1919 [Palij, Op. Cit., p. 112] (Read states a peak of around 30,000 [Op. Cit., p. 264]). Even by the end of 1920, a few months into the Tambov rebellion (it started in August of that year), the Makhnovists still had 10 to 15 thousand troops. [Palij, Op. Cit., p. 237]

In summary, the movement which lasted longer, covered a larger area and involved more troops is classed by Rees as the smaller of the two! Incredible -- but it does give a flavour of the scholarship involved in his essay. Perhaps by "smaller" Rees simply meant that Makhno was physically shorter than Antonov?

After getting such minor details as size wrong, Rees turns to the actual history of the movement. He looks at the relations between the Makhnovists and the Bolsheviks, accurately stating that they "were chequered." However, he is wrong when he tries to explain what happened by stating they "reflect[ed] the fast changing military situation in the Ukraine throughout the civil war." [Op. Cit., p. 58] In fact, as we will prove, the relationships between the two forces reflected the military situation refracted through the ideology and needs of Bolshevik power. To ignore the ideological factor in the Makhnovist-Bolshevik relationships cannot be justified as the military situation does **not** fully explain what happened.

The Makhnovists co-operated with the Red Army three times. Only two of these periods were formal alliances (the first and last). Discussing the first two pacts, Rees alleges that the Makhnovists broke with the Bolsheviks. The truth is the opposite -- the Bolsheviks turned on the Makhnovists and betrayed them in order to consolidate their power. These facts are hardly unknown to Rees as they are contained in the

very books he quotes from as evidence for his rewritten history.

The first pact between the Makhnovists and the Red Army ended June 1918. According to Rees, "[c]o-operation continued until June 1919 when the Insurgent Army broke from the Red Army" and quotes Michael Palij's book **The Anarchism of Nestor Makhno** as follows: "*as soon as Makhno left the front he and his associates began to organise new partisan detachments in the Bolsheviks' rear, which subsequently attacked strongholds, troops, police, trains and food collectors.*" [Op. Cit., p. 58] Rees is clearly implying that Makhno attacked the Bolsheviks, apparently for no reason. The truth is totally different. It is easy to show this -- all we need to do is look at the book he uses as evidence.

Rees quotes Palij on page 177. This page is from chapter 16, which is called "*The Bolsheviks Break with Makhno.*" As this was not enough of a clue, Palij presents some necessary background for this Bolshevik break. He notes that before the break, "*the Bolsheviks renewed their anti-Makhno propaganda. Trotsky, in particular, led a violent campaign against the Makhno movement.*" He also mentions that "[a]t the same time, the supplies of arms and other war materials to Makhno were stopped, thus weakening the Makhno forces vis-a-vis the Denikin troops." In this context, the Makhnovists Revolutionary Military Council "*decided to call a fourth congress of peasants, workers, and partisans*" for June 15th, 1919, which Trotsky promptly banned, warning the population that "*participation in the Congress shall be considered an act of state treason against the Soviet Republic and the front.*" [Op. Cit., p. 175 and p. 176]

The Bolsheviks had, of course, tried to ban the third congress in April but had been ignored. This time, they made sure that they were not. Makhno and his staff were not informed of Trotsky's dictatorial order and learned of it three days later. On June 9th, Makhno sent a telegram informing the Bolsheviks that he was leaving his post as leader of the Makhnovists. He "*handed over his command and left the front with a few of his close associates and a cavalry detachment*" while calling upon the partisans to "*remain at the front to hold off Denikin's forces.*" Trotsky ordered his arrest, but Makhno was warned in advance and escaped. On June 15-16th, members of Makhno's staff "*were captured and executed the next day.*" **Now** Palij recounts how "*[a]s soon as Makhno left the front he and his associates began to organise new partisan detachments in the Bolsheviks' rear, which subsequently attacked strongholds, troops, police, trains and food collectors.*" [Op. Cit., p. 177]

Palij "*subsequently*" refers to Makhno after Denikin's breakthrough and his occupation of the Ukraine. "*The oppressive policy of the Denikin regime,*" he notes, "*convinced the population that it was as bad as the Bolshevik regime, and brought a strong reaction that led able young men . . . to leave their homes and join Makhno and other partisan groups.*" [Op. Cit., p. 190] As Makhno put it, "*[w]hen the Red Army in south Ukraine began to retreat . . . as if to straighten the front line, but in reality to evacuate Ukraine . . . only then did my staff and I decide to act.*" [quoted by Palij, Op. Cit., p. 190] After trying to fight Denikin's troops, Makhno retreated and called upon his troops to leave the Red Army and rejoin the fight against Denikin. He "*sent agents amongst the Red troops*" to carry out propaganda urging them to stay and fight Denikin with the Makhnovists, which they did in large numbers. This propaganda was "*combined with sabotage.*" Between these two events, Makhno had entered the territory of pogromist warlord Hryhoryiv (which did **not** contain Red troops as they were in conflict) and assassinated him.

[Op. Cit., p. 191 and p. 173]

It should also be noted that Palij states that it was the Whites who "*were the main enemy that Makhno fought, stubbornly and uncompromisingly, from the end of 1918 to the end of 1919.*" [Op. Cit., p. 177]

Clearly, Rees's summary leaves a lot to be desired! Rather than Makhno attacking the Bolsheviks, it was they who broke with him -- as Palij, Rees's source, makes clear. Indeed, Makhno made no attempt to undermine the Red Army's campaign against Denikin (after all, that would have placed his troops and region in danger). Rather, he waited until the Bolsheviks showed that they would not defend the Ukraine against the Whites before he acted. As such, Rees misuses his source material and used Palij as evidence for a viewpoint which is the exact opposite of the one he recounts. The dishonesty is obvious. But, then again, it is understandable, as Trotsky banning a worker, peasant and partisan congress would hardly fit into Rees' attempt to portray the Bolsheviks as democratic socialists overcome by objective circumstances! Given that the Makhnovists had successfully held three such congresses to discuss the war against reaction, how could objective circumstances be blamed for the dictatorial actions of Trotsky and other leading Red Army officers in the Ukraine? Better not to mention this and instead rewrite history by making Makhno break with the Bolsheviks and attack them for no reason!

Rees moves onto the period of co-operation between the insurgents and the Bolsheviks. His version of what happened is that "*Denikin's advance against Makhno's territory in autumn 1919 quickly forced a renewal of the treaty with the Bolsheviks. Makhno harassed Denikin's troops from the rear, making their advance more difficult.*" [Op. Cit., p. 58]

A more accurate account of what happened would be that Makhno reorganised his troops after the Bolsheviks had retreated and evacuated the Ukraine. These troops included those that had been left in the Red Army in June, who now left to rejoin him (and brought a few Red Army units along too). After conducting quick and demoralising raids against Denikin's forces, the Makhnovists were forced to retreat to the West (followed by White forces). In late September, near Peregonovka, Makhno inflicted a major defeat against the following Whites and allowed the Makhnovists to attack across Denikin's supply lines (which stopped his attack on Moscow thus, ironically, saving the Bolshevik regime). Makhno's swift attack on the rear of the Whites ensured their defeat. As the correspondent of **Le Temps** observed:

"There is no doubt that Denikin's defeat is explained more by the uprising of the peasants who brandished Makhno's black flag, then by the success of Trotsky's regular army. The partisan bands of 'Batko' tipped the scales in favour of the Reds." [quoted by Palij, Op. Cit., p. 208]

Palij argues that it was the "*rapidly changing military situation [which] soon caused a change in the Bolsheviks' attitude toward Makhno.*" The two forces meet up on December 24th, 1919. However, "*[a]lthough the Bolsheviks fraternised with the Makhno troops and the commander even offered co-operation, they distrusted Makhno, fearing the popularity he had gained as a result of his successful*

fight against Denikin." [Op. Cit., p. 209] It should also be stressed that **no** formal treaty was signed.

Clearly, Rees' summary leaves a lot to be desired!

This is not the end of it. Rees even attempts to blame the Makhnovists for the attack of General Wrangel. He argues that *"by the end of 1919 the immediate White threat was removed. Makhno refused to move his troops to the Polish front to meet the imminent invasion and hostilities with the Red Army began again on an even more widespread scale."* [Op. Cit., p. 58]

This, needless to say, is a total distortion of the facts. Firstly, it should be noted that the *"imminent"* invasion by Poland Rees mentions did not, in fact, occur until *"the end of April"* (the 26th, to be precise). The break with Makhno occurred as a result of an order issued in early January (the 8th, to be precise). [Michael Palij, Op. Cit., p. 219 and p. 210] Clearly, the excuse of *"imminent"* invasion was a cover, as recognised by a source Rees himself uses, namely Palij's work:

"The author of the order realised at that time there was no real war between the Poles and the Bolsheviks at that time and he also knew that Makhno would not abandon his region . . . Uborevich [the author] explained that 'an appropriate reaction by Makhno to this order would give us the chance to have accurate grounds for our next steps' . . . [He] concluded: 'The order is a certain political manoeuvre and, at the very least, we expect positive results from Makhno's realisation of this.'" [Palij, Op. Cit., p. 210]

This is confirmed by Rees' other references. David Footman, whom Rees also uses for evidence against the Makhnovist movement, notes that while it was *"true there were military reasons for reinforcing"* the Polish frontier (although he also notes the significant fact that the war *"was not to break out for another four months"*), it was *"admitted on the Soviet side that this order was primarily 'dictated by the necessity' of liquidating Makhnovshchina as an independent movement. Only when he was far removed from his home country would it be possible to counteract his influence, and to split up and integrate his partisans into various Red Army formations."* He notes that there were *"other occasions (notably in Siberia) of the Soviet authorities solving the problem of difficult partisan leaders by sending them off to fight on distant fronts"* and, of course, that *"Makhno and his staff . . . were perfectly aware of the underlying Soviet motives."* Footman recounts how the Makhnovist staff sent a *"reasoned reply"* to the Bolsheviks, that there *"was no immediate response"* from them and in *"mid-January the Central Committee of the Ukrainian Communist Party declared Makhno and his force to be outside the law, and the Red Army attacked."* [The Russian Civil War, pp. 290-1]

In other words, according to the sources Rees himself selects, the Bolsheviks **started** the conflict in order to eliminate opposition to their power!

Needless to say, the Makhnovists **did** realise the political motivations behind the order. As Arshinov notes, *"[s]ending the insurrectionary army to the Polish front meant removing from the Ukraine the main nerve centre of the revolutionary insurrection. This was precisely what the Bolsheviks wanted: they*

would then be absolute masters of the rebellious region, and the Makhnovists were perfectly aware of this." In addition, "neither the 14th Corps nor any other unit of the Red Army had any ties with the Makhnovist army; least of all were they in a position to give orders to the insurrectionary army." Nor does Rees mention that the Makhnovists considered the move "physically impossible" as "half the men, the entire staff and the commander himself were in hospital with typhus." [Op. Cit., p. 163]

Consider what Rees is (distortedly) accounting. The beginning of 1920 was a time of peace. The Civil War looked like it was over. The White Generals had been defeated. Now the Bolsheviks turn on their allies after issuing an ultimatum which they knew would never be obeyed. Under the circumstances, a stupider decision cannot be easily found! Moreover, the very logic of the order was a joke. Would be it wise to leave the Ukraine undefended? Of course not and if Red Army units were to stay to defend the region, why not the Makhnovists who actually came from the area in question? Why provoke a conflict when it was possible to transfer Red Army units to the Polish front? Simply put, Rees presents a distorted picture of what was happening in the Ukraine at the time simply so he can whitewash the Bolshevik regime and blacken the Makhnovists. As he himself later notes, the Bolshevik-Makhnovist conflict gave the White General Wrangel the space required to restart the Civil War. Thus the Bolshevik decision to attack the Makhnovists helped prolong the Civil War -- the very factor Rees blames the degeneration of the Russian Revolution and Bolshevik ideology and practice on!

It is **now** that Rees presents his evidence of Makhnovist violence against the Bolsheviks (the Red Army reports and entries from the fake diary of Makhno's wife). Arguing that the entries from the fake diary "*betray the nature of the movement in this period,*" he tries to link them with Makhnovist theory. "*These actions,*" he argues, "*were consistent with an earlier resolution of the Insurgent Army which declared that it was 'the actions of the Bolshevik regime which cause a real danger to the worker-peasant revolution.'*" [Op. Cit., p. 59]

Firstly, given a true account of the second break between the Makhnovists and Bolsheviks, it would be fair to conclude that the resolution was, in fact, correct! However, such facts are not mentioned by Rees, so the reader is left in ignorance.

Secondly, to correct another of Rees' causal mistakes, it should be noted that this resolution was **not** passed by the Insurgent Army. Rather it was passed at the Second Regional Congress of Peasants, Workers and Insurgents held at Hulyai Pole on February 12th, 1919. This congress had 245 delegates, representing 350 districts and was one of four organised by the Makhnovists. Unsurprisingly, these regional congresses are not even mentioned by Rees in his account. This is for obvious reasons -- if the Makhnovists could organise congresses of workers, peasants and insurgents to discuss the progress of the revolution, then why could the Bolsheviks not manage it? Equally, to mention them would also mean mentioning that the Bolsheviks tried to ban one and succeeded in banning another.

Thirdly, the tone of the congress was anti-Bolshevik simply because the Ukraine had had a taste of Bolshevik rule. As Rees himself acknowledges in a roundabout way, the Bolsheviks had managed to alienate the peasantry by their agricultural policies.

Fourthly, the Bolsheviks had engineered the outlawing of the Makhnovists. Thus the actions of the Makhnovists were **not** "*consistent*" with the earlier resolution. They were, in fact, "*consistent*" with self-defence against a repressive state which had attacked them first!

Looking at the congress where the resolution was passed, we find that the list of "*real dangers*" was, quite simply, sensible and, in fact, in line with Leninist rhetoric. The resolution acknowledged the fact that the Bolshevik party was "*demanding a monopoly of the Revolution.*" As we discussed in [section 14](#), it was during this period that the Bolsheviks explicitly started to argue that the "dictatorship of the party" **was** the "dictatorship of the proletariat." The resolution also stated:

"With deep regret the Congress must also declare that apart from external enemies a perhaps even greater danger, arising from its internal shortcomings, threatens the Revolution of the Russian and Ukrainian peasants and workers. The Soviet Governments of Russia and of the Ukraine, by their orders and decrees, are making efforts to deprive local soviets of peasants and workers' deputies of their freedom and autonomy." [quoted by Footman, **Op. Cit.**, p. 267]

It also stated:

"the political commissars are watching each step of the local soviets and dealing ruthlessly with those friends of peasants and workers who act in defence of peoples' freedom from the agency of the central government . . . The Bolshevik regime arrested left Socialist Revolutionaries and anarchists, closing their newspapers, stifling any manifestation of revolutionary expression."

Delegates also complained that the Bolshevik government had not been elected, that it was "*imposing upon us its party dictatorship*" and "*attempting to introduce its Bolshevik monopoly over the soviets.*" [quoted by Palij, [**Op. Cit.**, p. 154]

The resolution noted that the current situation was "*characterised by the seizure of power by the political party of Communists-Bolsheviks who do not balk at anything in order to preserve and consolidate their political power by armed force acting from the centre. The party is conducting a criminal policy in regard to the social revolution and in regard to the labouring masses.*" To top it off, point number three read:

"We protest against the reactionary habits of Bolshevik rulers, commissars, and agents of the Cheka, who are shooting workers, peasants, and rebels, inventing all kinds of excuses . . . The Cheka which were supposed to struggle with counterrevolution . . . have turned in the Bolsheviks' hands into an instrument for the suppression of the will of the people. They have grown in some cases into detachments of several hundred armed men with a variety of arms. We demand that all these forces be dispatched to the front." [quoted by Vladimir N. Brovkin, **Behind the Front Lines of the Civil War**, pp.

109-10]

We should also point out that Rees selectively quotes the resolution to distort its meaning. The resolution, in fact, *"urges the peasants and workers to watch vigilantly the actions of the Bolshevik regime that cause a real danger to the worker-peasant revolution."* [quoted by Palij, **Op. Cit.**, p. 154] We have listed some of the actions of the Bolsheviks that the congress considered as a *"real danger."* Considering the truth of these complaints, only someone blinded by Bolshevik ideology would consider it strange that worker and peasant delegates should agree to *"watch vigilantly"* those actions of the Bolsheviks which were a *"real danger"* to their revolution!

Lenin (before taking power, of course) had argued that elections and recall to soviets were essential to ensure that the workers control the "workers' state" and that socialism required the elimination of *"special bodies of armed men"* by an armed population. To this day, his followers parrot his claims (while, simultaneously, justifying the exact opposite in Lenin's Russia). Now, is Rees **really** arguing that the Bolshevik monopoly of power, the creation of a secret police and the clamping down on working people's freedom were **not** dangers to the Russian Revolution and should not be watched *"vigilantly"*? If so, then his conception of revolution includes the strange notion that dictatorship by a party does not threaten a revolution! Then again, neither did the Bolsheviks (indeed, they thought calling worker, peasant and partisan congresses to discuss the development of the revolution as the real danger to it!). If not, then he cannot fault the regional congress resolution for pointing out the obvious. As such, Rees' misquoting of the resolution backfires on him.

Significantly, Rees fails to mention that during this period (the first half of 1920), the Bolsheviks *"shot ordinary soldiers as well as their commanders, destroying their houses, confiscating their properties, and persecuting their families. Moreover the Bolsheviks conducted mass arrests of innocent peasants who were suspected of collaborating in some way with the partisans. It is impossible to determine the casualties involved."* The hypocrisy is clear. While Rees presents information (some of it, we stress, from a fake source) on Makhnovist attacks against the Bolshevik dictatorship, he remains silent on the Bolshevik tactics, violence and state terrorism. Given that the Bolsheviks had attacked the Makhnovists, it seems strange that that Rees ignores the *"merciless methods"* of the Bolsheviks (to use Palij's phrase) and concentrates instead on the acts of self-defence forced onto the Makhnovists. Perhaps this is because it would provide too strong a *"flavour"* of the Bolshevik regime? [**Op. Cit.**, pp. 212-3 and p. 213]

Rees makes great play of the fact that White forces took advantage of the conflict between the Makhnovists and the Bolsheviks, as would be expected. However, it seems like an act of ideological faith to blame the victims of this conflict for it! In his attempts to demonise the Makhnovists, he argues that *"[i]n fact it was Makhno's actions against the Red Army which made 'a brief return of the Whites possible.'"* In defence of his claims, Rees quotes from W. Bruce Lincoln's **Red Victory**. However, looking at Lincoln's work we discover that Lincoln is well aware who is to blame for the return of the Whites. Unsurprisingly, it is **not** the Makhnovists:

"Once Trotsky's Red Army had crushed Iudenich and Kolchak and driven Deniken's forces

back upon their bases in the Crimea and the Kuban, it turned upon Makhno's partisan forces with a vengeance . . . [I]n mid-January 1920, after a typhus epidemic had decimated his forces, a re-established Central Committee of the Ukrainian Communist Party declared Makhno an outlaw. Yet the Bolsheviks could not free themselves from Makhno's grasp so easily, and it became one of the supreme ironies of the Russian Civil War that his attacks against the rear of the Red Army made it possible for the resurrected White armies . . . to return briefly to the southern Ukraine in 1920." [Red Victory, p. 327]

Ignoring the fact that Rees does not bother to give the correct quote (a problem that re-occurs frequently in his essay), it can be seen that he does paraphrase the last sentence of Lincoln's work correctly. Strange, then, that he ignores the rest of his account which clearly indicates that the Bolsheviks "*turned upon*" the Makhnovists and "*declared Makhno an outlaw.*" Obviously such trivial facts as the initial Bolshevik attacks against the Makhnovists are unimportant to understanding what actually happened in this period. Informing his readers that it was the Bolsheviks' betrayal of the Makhnovists which provoked the resistance that "*made it possible for . . . the White armies . . . to return briefly*" would confuse them with facts and so it goes unmentioned.

Lincoln, it must be stressed, concurs with Rees's other main sources (Palij and Footman) on the fact that the Bolsheviks betrayed the Makhnovists! Clearly, Rees has rewritten history and distorted **all** of his main references on the Makhnovist movement. After reading the same fact in three different sources, you would think that the Bolshevik betrayal of the Makhnovists which provoked their resistance against them would warrant **some** mention, but no! In true Stalinist fashion, Rees managed to turn a Bolshevik betrayal of the Makhnovists into a stick with which to beat them with! Truly amazing.

Simply put, if the Bolsheviks had not wanted to impose their rule over the Ukraine, then the conflict with the Makhnovists need not have taken place and Wrangel would not have been in a position to invade the Ukraine. Why did the Bolsheviks act in this way? There was no "*objective factor*" for this action and so we must turn to Bolshevik ideology.

As we proved in [section 14](#), Bolshevik ideology by this time identified Bolshevik party dictatorship as the only expression of "the dictatorship of the proletariat." Does Rees **really** believe that such perspectives had no impact on how the Bolsheviks acted during the Revolution? The betrayal of the Makhnovists can only be understood in terms of the "*subjective factor*" Rees seeks to ignore. If you think, as the Bolsheviks clearly did, that the dictatorship of the proletariat equalled the dictatorship of the party (and vice versa) then anything which threatened the rule of the party had to be destroyed. Whether this was soviet democracy or the Makhnovists did not matter. The Makhnovist idea of worker and peasant self-management, like soviet democracy, could not be reconciled with the Bolshevik ideology. As such, Bolshevik policy explains the betrayals of the Makhnovists.

Not satisfied with distorting his source material to present the Makhnovists as the guilty party in the return of Wrangel, he decides to blame the initial success of Wrangel on them as well. He quotes Michael Palij as follows: "*As Wrangel advanced . . . Makhno retreated north . . . leaving behind small*

partisan units in the villages and towns to carry out covert destruction of the Bolshevik administrative apparatus and supply bases." [Op. Cit., p. 59] He again sources Palij's work on the "effective" nature of these groups, stating that White Colonel Noga reported to headquarters that Makhno was critical to Wrangel's advance.

As regards the claims that Makhno was "critical" to Wrangel's advance, Colonel Noga actually states that it was "*peasant uprisings under Makhno and many other partisan detachments*" which gave "*the Reds no rest.*" [quoted by Palij, Op. Cit., p. 214] However, what Rees fails to mention is that Palij argues that it was the Bolshevik "*policy of terror and exploitation*" which had "*turned almost all segments of Ukrainian society against the Bolsheviks, substantially strengthened the Makhno movement, and consequently facilitated the advance of the reorganised anti-Bolshevik force of General Wrangel from the Crimea into South Ukraine, the Makhno region.*" [Palij, Op. Cit., p. 214] Again, Makhno is blamed for the inevitable results of Bolshevik policies and actions!

It should also be reported that Noga's comments are dated 25th March 1920, while Palij's summary of Makhno's activities retreating from Wrangel was about June 1920 -- 2 months later! As regards this advance by Wrangel, Palij argues that it was the "*outbreak of the Polish-Bolshevik war at the end of April*" which "*benefited Wrangel*" and "*enabled him to launch an offensive against the Bolsheviks in Tavriia on June 6th.*" Indeed, it was after a "*series of battles*" that Wrangel "*penetrated north, forcing a general Bolshevik retreat.*" Now, "*[a]s Wrangel advanced deeper into the Left Bank, Makhno retreated north to the Kharkiv region, leaving behind small partisan units in the villages and towns to carry on covert destruction of the Bolshevik administrative apparatus and supply bases.*" [Op. Cit., p. 219] Again, Rees' account has little bearing to reality or the source material he uses.

Rees continues to re-write history by arguing that "*Makhno did not fight with the Reds again until October 1920 when Wrangel advanced on Makhno's base.*" [Op. Cit., p. 59] In fact, it was the **Makhnovists** who contacted the Bolsheviks in July and August in 1920 with a view to suspending hostilities and co-operating in the fight against Wrangel. This decision was made at a mass assembly of insurgents. Sadly, the Bolsheviks made no response. Only in September, after Wrangel had occupied many towns, did the Bolsheviks enter into negotiations. [Arshinov, Op. Cit., pp. 176-7] This is confirmed by Footman, who states that it is "*agreed that the initiative for joint action against Wrangel came from the Makhnovists*" [Op. Cit., p. 294], as well as by Palij, who notes that "*Makhno was compelled to seek an understanding with the Bolsheviks*" but "*no reply was received.*" It was "*Wrangel's success [which] caused the Bolshevik leaders to reconsider Makhno's earlier proposal.*" [Op. Cit., pp. 222-3] Obviously indicating that the Makhnovists placed the struggle against the White counter-revolution above their own politics would place the Bolsheviks in a bad light, and so Rees fails to give the details behind the agreement of joint action against Wrangel.

As regards this third and final break, Rees states that it was ("*unsurprisingly*") a "*treaty of convenience on the part of both sides and as soon as Wrangel was defeated at the end of the year the Red Army fought Makhno until he have up the struggle.*" [Op. Cit., p. 59] Which, as far as it goes, is true. Makhno, however, "*assumed [that] the forthcoming conflict with the Bolsheviks could be limited to the realm of ideas*" and that they "*would not attack his movement immediately.*" [Palij, Op. Cit., p. 231] He was

wrong. Instead the Bolsheviks attacked the Makhnovists without warning and, unlike the other breaks, without pretext (although leaflets handed out to the Red Army stated that **Makhno** had "*violat[ed] the agreement*"! [Palij, **Op. Cit.**, p. 236]).

It would be a good idea to reproduce the agreement which the Bolsheviks ripped up. There were two parts, a military and a political one. The military one is pretty straight forward (although the clause on the Makhnovists refusing to accept Red Army detachments or deserters suggests that the Makhnovists' democratic army was seen by many Red Army soldiers as a better alternative to Trotsky's autocratic structure). The political agreement was as follows:

"1. Immediate release, and an end to the persecution of all Makhno men and anarchists in the territories of the Soviet Republics, except those who carry on armed resistance against Soviet authorities.

"2. Makhno men and anarchists were to have complete freedom of expression of their ideas and principles, by speech and the press, provided that nothing was expressed that tended to a violent overthrow of Soviet government, and on condition that military censorship be respected. . .

*"3. Makhno men and anarchists were to enjoy full rights of participation in elections to the soviets, including the right to be elected, and free participation in the organisation of the forthcoming Fifth All-Ukrainian Congress of Soviets . . ." [cited by Palij, **Op. Cit.**, p. 224]*

Needless to say, the Bolsheviks delayed the publication of the political agreement several until several days after the military one was published -- "*thus blurring its real meaning.*" [Palij, **Op. Cit.**, p. 225] Clearly, as it stands, the agreement just gave the Makhnovists and anarchists the rights they should have had according to the Soviet Constitution! Little wonder the Bolsheviks ignored it -- they also ignored their own constitution. However, it is the fourth point of the political agreement which gives the best insight into the nature of Bolshevism. This last point was never ratified by the Bolsheviks as it was "*absolutely unacceptable to the dictatorship of the proletariat.*" [quoted by Palij, **Ibid.**] This clause was:

*"One of the basic principles of the Makhno movement being the struggle for the self-administration of the toilers, the Partisan Army brings up a fourth point: in the region of the Makhno movement, the worker and peasant population is to organise and maintain its own free institutions for economic and political self-administration; this region is subsequently federated with Soviet republics by means of agreements freely negotiated with the appropriate Soviet governmental organ." [quoted by Palij, **Op. Cit.**, p. 224]*

Clearly, this idea of worker and peasant self-management, like soviet democracy, could not be reconciled with the Bolshevik support for party dictatorship as the expression of "*the dictatorship of the proletariat*" which had become a Bolshevik ideological truism by that time. Little wonder the

Bolsheviks failed to ratify the fourth clause and violated the other agreements. Simply put, a libertarian alternative to Bolshevism would give the Russian and Ukrainian working masses hope of freedom and make them harder to control. It is unsurprising that Rees fails to discuss the treaty -- it would, yet again, undermine his case that the Bolsheviks were forced by objective circumstances to be dictatorial.

And, of course, let us not forget the circumstances in which this betrayal took place. The country was, as Rees reminds us, in a state of economic disruption and collapse. Indeed, Rees blames the anti-working class and dictatorial actions and policies of the Bolsheviks on the chaos caused by the civil war. Yet here are the Bolsheviks prolonging this very Civil War by turning (yet again!) on their allies. After the defeat of the Whites, the Bolsheviks preferred to attack the Makhnovists rather than allow them the freedom they had been fighting for. Resources which could have been used to aid the economic rebuilding of Russia and the Ukraine were used to attack their former allies. The talents and energy of the Makhnovists were either killed or wasted in a pointless conflict. Should we be surprised? After all, the Bolsheviks had preferred to compound their foes during the Civil War (and, indirectly, aid the very Whites they were fighting) by betraying their Makhnovist allies on two previous occasions (once, because the Makhnovists had dared call a conference of working people to discuss the civil war being fought in their name). Clearly, Bolshevik politics and ideology played a key role in all these decisions. They were **not** driven by terrible objective circumstances (indeed, they made them worse).

Rees obviously distorted the truth about the first two agreements between the Makhnovists and the Bolsheviks. He portrayed the Makhnovists as the guilty party, "breaking" with the Bolsheviks when in fact it was (in both cases) the Bolsheviks who broke with and betrayed the Makhnovists. That explains why he fails to present any information on **why** the first break happened and why he distorts the events of the second. It cannot be said that he was unaware of these facts -- they are in the very books he himself references! As such, we have a clear and intended desire to deceive the reader. As regards the third agreement, while he makes no pretence that the Makhnovists were the guilty party however, he implies that the Bolsheviks had to act as they did before the Makhnovists turned on them. Little wonder, then, that he does not provide the details of the agreement made between the Bolsheviks and Makhnovists -- to do so would have been to expose the authoritarianism of the Bolsheviks. Simply put, Rees' distortions of the source material he uses comes as no surprise. It undermines his basic argument and so cannot be used in its original form. Hence the cherry-picking of quotations to support his case.

After distorting Makhnovist relations with the Bolsheviks, Rees moves on to distorting the socio-political ideas and practice of the Makhnovists. As would be expected from his hatchet-job on the military history of the movement, his account of its social ideas leaves much to be desired. However, both aspects of his critique have much in common. His account of its theoretical ideas and its attempts to apply them again abuse the source material in disgraceful ways.

For example, Rees states that under the Makhnovists "*[p]apers could be published, but the Bolshevik and Left Socialist Revolutionary press were not allowed to call for revolution*" and references Michael Palij's book. [Op. Cit., p. 60] Looking at the page in question, we discover a somewhat different account. According to Palij's work, what the Makhnovists **actually** "*prohibited*" was that these parties should "*propagate armed uprisings against the Makhnovist movement.*" A clear rewriting of the source

material and an indication of how low Leninists will sink. Significantly, Palij also notes that this "*freedom of speech, press, assembly and association*" was implemented "[i]n contrast to the Bolshevik regime" and its policy of crushing such liberties. [Op. Cit. pp. 152-3] Ironically, the military-political agreement of late 1920 between the Reds and Makhnovists included a similar clause, banning expression that "*tended to a violent overthrow of the Soviet government.*" [quoted by Palij, **Op. Cit.**, p. 224] Which means, to use Rees' distorted terminology, that the Bolsheviks banned calls for revolution!

However, this distortion of the source material **does** give us an insight into the mentality of Leninism. After all, according to Palij, when the Makhnovists entered a city or town they "*immediately announced to the population that the army did not intend to exercise political authority.*" The workers and peasants were to set up soviets "*that would carry out the will and orders of their constituents*" as well as "*organis[e] their own self-defence force against counter-revolution and banditry.*" These political changes were matched in the economic sphere as well, as the "*holdings of the landlords, the monasteries and the state, including all livestock and goods, were to be transferred to the peasants*" and "*all factories, plants, mines, and other means of production were to become property of all the workers under control of their professional unions.*" [Op. Cit., p. 151]

In such an environment, a call for "*revolution*" (or, more correctly, "*armed uprisings against the Makhno movement*") could only mean a Bolshevik coup to install a Bolshevik party dictatorship. As the Makhnovists were clearly defending working- class and peasant self-government, then a Bolshevik call for "*armed uprisings*" against them also meant the end of such free soviets and their replacement with party dictatorship. Little wonder Rees distorts his source! Arshinov makes the situation clear:

*"The only restriction that the Makhnovists considered necessary to impose on the Bolsheviks, the left Socialist Revolutionaries and other statists was a prohibition on the formation of those 'revolutionary committees' which sought to impose a dictatorship over the people. In Aleksandrovsk and Ekaterinoslav, right after the occupation of these cities by the Makhnovists, the Bolsheviks hastened to organise **Revkoms (Revolutionary Committees)** seeking to organise their political power and govern the population . . . Makhno advised them to go and take up some honest trade instead of seeking to impose their will on the workers . . . In this context the Makhnovists' attitude was completely justified and consistent. To protect the full freedom of speech, press, and organisation, they had to take measures against formations which sought to stifle this freedom, to suppress other organisations, and to impose their will and dictatorial authority on the workers."* [Op. Cit., p. 154]

Little wonder Rees distorts the issues and transforms a policy to defend the **real** revolution into one which banned a "*call for revolution*"! We should be grateful that he distorted the Makhnovist message for it allows us to indicate the dictatorial nature of the regime and politics Rees is defending.

All of which disproves Rees' assertion that "*the movement never had any real support from the working class. Neither was it particularly interested in developing a programme which would appeal to the*

workers." [Op. Cit., p. 59] Now, Rees had obviously read Palij's summary of Makhnovist ideas. Is he claiming that workers' self-management and the socialisation of the means of production do not "*appeal*" to workers? After all, most Leninists pay lip-service to these ideas. Is Rees arguing that the Bolshevik policies of the time (namely one-man management and the militarisation of labour) "*appealed*" to the workers more than workers' self-management of production? Equally, the Makhnovists argued that the workers should form their own free soviets which would "*carry out the will and orders of their constituents.*" [Palij, Op. Cit., p. 151] Is Rees **really** arguing that the Bolshevik policy of party dictatorship "*appealed*" to the workers more than soviet democracy? If so, then heaven help us if the SWP ever get into power!

Luckily, as Jonathan Aves' book **Workers Against Lenin** proves, this was not the case. Working-class resistance to Bolshevik policies was extremely widespread and was expressed by strikes. It should be noted that the wave of strikes all across Russia which preceded the Kronstadt revolt also raised the demand for soviet democracy. The call for "*free soviets*" was raised by the Kronstadt revolt itself and during the "mini-Kronstadt" in Katerinoslav in June 1921 where the demands of the workers "*were very similar in content with the resolutions of the Kronstadt rebels*" and telegraph operators sent "*messages throughout the Soviet Republic calling for 'free soviets.'*" [Jonathan Aves, **Workers Against Lenin**, p. 172 and p. 173]

Clearly, the Makhnovists **did** create a "*programme that would appeal to the workers.*" However, it is true that the Makhnovists did fail win over more than a minority of workers. This may have been due to the fact that the Makhnovists only freed two cities, both for short periods of time. As Paul Avrich notes, "he found little time to implement his economic programs." [**Anarchist Portraits**, p. 121] Given how Rees bends over backwards to justify Bolshevik policies in terms of "*objective factors,*" it is significant that in his discussion of the Makhnovists such "*objective factors*" as time fail to get a mention!

Thus Rees's attempt to paint the Makhnovists as anti-working class fails. While this is the core of his dismissal of them as a possible "*libertarian alternative to the Bolsheviks,*" the facts do not support his assertions. He gives the example of Makhno's advice to railway workers in Aleksandrovsik "*who had not been paid for many weeks*" that they should "*simply charge passengers a fair price and so generate their own wages.*" He states that this "*advice aimed at reproducing the petit-bourgeois patterns of the countryside.*" [Op. Cit., p. 59] Two points can be raised to this argument.

Firstly, we should highlight the Bolshevik (and so, presumably, "*proletarian*") patterns imposed on the railway workers. Trotsky simply "*plac[ed] the railwaymen and the personnel of the repair workshops under martial law*" and "*summarily ousted*" the leaders of the railwaymen's trade union when they objected." The Central Administrative Body of Railways (Tsektran) he created was run by him "*along strictly military and bureaucratic lines.*" In other words, he applied his ideas on the "*militarisation of labour*" in full. [M. Brinton, **The Bolsheviks and Workers' Control**, p. 67] Compared to the Bolshevik pattern, only an ideologue could suggest that Makhno's advice (and it was advice, not a decree imposed from above, as was Trotsky's) can be considered worse. Indeed, by being based on workers' self-management it was infinitely more socialist than the militarised Bolshevik state capitalist system.

Secondly, Rees fails to understand the nature of anarchism. Anarchism argues that it is up to working class people to organise their own activities. This meant that, ultimately, it was up to the railway workers **themselves** (in association with other workers) to organise their own work and industry. Rather than being imposed by a few leaders, **real** socialism can only come from below, built by working people, through their own efforts and own class organisations. Anarchists can suggest ideas and solutions, but ultimately its up to workers (and peasants) to organise their own affairs. Thus, rather than being a source of condemnation, Makhno's comments should be considered as praiseworthy as they were made in a spirit of equality and were based on encouraging workers' self-management.

Ultimately, the best reply to Rees is simply the fact that after holding a "*general conference of the workers of the city*" at which it was "*proposed that the workers organise the life of the city and the functioning of the factories with their own forces and their own organisations*" based on "*the principles of self-management,*" the "*[r]ailroad workers took the first step in this direction*" by "*form[ing] a committee charged with organising the railway network of the region.*" [Arshinov, **Op. Cit.**, p. 149]

Even more amazing (if that is possible) is Rees' account of the revolution in the countryside. Rees argues that the "*real basis of Makhno's support was not his anarchism, but his opposition to grain requisitioning and his determination not to disturb the peasant economy*" [**Op. Cit.**, p. 59] and quotes Palij as follows:

"Makhno had not put an end to the agricultural inequalities. His aim was to avoid conflicts with the villages and to maintain a sort of united front of the entire peasantry." [M. Palij, **Op. Cit.**, p. 214]

However, here is the actual context of the (corrected) quote:

"Peasants' economic conditions in the region of the Makhno movement were greatly improved at the expense of the estates of the landlords, the church, monasteries, and the richest peasants, but Makhno had not put an end to the agricultural inequalities. His aim was to avoid conflicts within the villages and to maintain a sort of united front of the entire peasantry." [M. Palij, **Op. Cit.**, p. 214]

Clearly, Rees has distorted the source material, conveniently missing out the information that Makhno had most definitely "disturbed" the peasant economy at the expense of the rich! And, we are sure that Rees would have a fit if it were suggested that the real basis of Bolshevik support was not their socialism, but their opposition to the war and the Whites!

Amazingly, Rees also somehow manages to forget to mention the peasant revolution which had started in 1917 in his attack against Makhno:

"Makhno and his associates brought socio-political issues into the daily life of the people, who in turn supported the expropriation of large estates . . . On the eve of open conflict

[in late 1917], Makhno assembled all the landowners and rich peasants (kulaks) of the area and took from them all official documents relating to their land, livestock, and equipment. Subsequently an inventory of this property was taken and reported to the people at the session of the local soviet, and then at the regional meeting, It was decided to allow the landlords to share the land, livestock, and tools equally with the peasants." [Palij, **Op. Cit.**, p. 71]

Obviously, Rees considers the expropriating of the landlords and kulaks as an act which "*did not disturb the age-old class structure of the countryside*"!

Let us not forget that the official Makhnovist position was that the "*holdings of the landlords, the monasteries, and the state, including all livestock and goods, were to be transferred to the peasants.*" [Palij, **Op. Cit.**, p. 151] At the second congress of workers, peasants and insurgents held in February, 1919, it was resolved that "*all land be transferred to the hands of toiling peasants . . . according to the norm of equal distribution.*" [quoted by Palij, **Op. Cit.**, p. 155] This meant that every peasant family had as much land as they could cultivate without the use of hired labour. The Makhnovists argued with regards to the kulaks:

"We are sure that . . . the kulak elements of the village will be pushed to one side by the very course of events. The toiling peasantry will itself turn effortlessly on the kulaks, first by adopting the kulak's surplus land for general use, then naturally drawing the kulak elements into the social organisation." [cited by Michael Malet, **Op. Cit.**, pp. 118-9]

Thus, just to stress the point, the Makhnovists **did** "*disturb*" the "*age-old class structure of the countryside.*"

Clearly, Rees is simply taking nonsense. When he states that Makhnovist land policies "*did not disturb the age-old class structure of the countryside,*" he is simply showing his utter and total disregard for the truth. As the Bolsheviks themselves found out, no mass movement could possibly exist among the peasants without having a positive and levelling land policy. The Makhnovists were no exception.

Rees then states that "*[i]n 1919 the local Bolshevik authorities made mistakes which played into Makhno's hands.*" Unsurprisingly enough, he argues that this was because they "*tried to carry through the socialisation of the land, rather than handing it over to the peasants.*" [**Op. Cit.**, p. 60] In fact, the Bolsheviks did **not** try to implement the "*socialisation*" of land. Rather, they tried to **nationalise** the land and place it under state control -- a radically different concept. Indeed, it was the Makhnovists who argued that the "*land, the factories, the workshops, the mines, the railroads and the other wealth of the people must belong to the working people themselves, to those who work in them, that is to say, they must be socialised.*" [contained in Arshinov, **Op. Cit.**, p. 273] The Bolsheviks, in contrast, initially "*decreed that all lands formerly belonging to the landlords should be expropriated and transformed into state farms.*" [Palij, **Op. Cit.**, p. 156] The peasants quite rightly thought that this just replaced one set of landlords with another, stealing the land which rightfully belonged to them.

After distorting the source material by selective quoting, Rees does it again when he argues that *"by the spring of 1920 they [the Bolsheviks] had reversed the policy towards the peasants and instituted Committees of Poor Peasants, these 'hurt Makhno . . . his heart hardened and he sometimes ordered executions.' This policy helped the Bolshevik ascendancy."* [Op. Cit., p. 60]

Rees quotes Palij as evidence. To refute his argument we need simply quote the same pages:

"Although they [the Bolsheviks] modified their agricultural policy by introducing on February 5, 1920, a new land law, distributing the former landlords', state and church lands among the peasants, they did not succeed in placating them because of the requisitions, which the peasants considered outright robbery . . . Subsequently the Bolsheviks decided to introduce class warfare into the villages. A decree was issued on May 19, 1920, establishing 'Committees of the Poor' . . . Authority in the villages was delegated to the committees, which assisted the Bolsheviks in seizing the surplus grain . . . The establishment of Committees of the Poor was painful to Makhno because they became not only part of the Bolshevik administrative apparatus the peasants opposed, but also informers helping the Bolshevik secret police in its persecution of the partisans, their families and supporters, even to the extent of hunting down and executing wounded partisans . . . Consequently, Makhno's 'heart hardened and he sometimes ordered executions where some generosity would have bestowed more credit upon him and his movement. That the Bolsheviks preceded him with the bad example was no excuse. For he claimed to be fighting for a better cause.' Although the committees in time gave the Bolsheviks a hold on every village, their abuse of power disorganised and slowed down agricultural life . . . This policy of terror and exploitation turned almost all segments of Ukrainian society against the Bolsheviks, substantially strengthened the Makhno movement, and consequently facilitated the advance of the reorganised anti-Bolshevik force of General Wrangel from the Crimea into South Ukraine, the Makhno region." [M. Palij, Op. Cit., pp. 213-4]

Amazing what a ". . ." can hide, is it not! Rees turns an account which clearly shows the Bolshevik policy was based on informers, secret police and the murder of rebels as well as being a total disaster into a victory. Moreover, he also transforms it so that the victims are portrayed as the villains. Words cannot do this re-writing of history justice. Yes, indeed, an organisation of informers to the secret police in every village can aid the "ascendancy" of a one-party dictatorship (aided, of course, by overwhelming military force), but it cannot aid the ascendancy of freedom, equality and socialism.

Given the actual record of the Bolsheviks' attempts to break up what they considered the "age-old class structure" of the villages with the "Committees of the Poor," it is clear why Rees distorts his source.

It does seem ironic that Rees attacks the Makhnovists for not pursuing Bolshevik peasant policies. Considering the absolute **failure** of those policies, the fact that Makhno did not follow them is hardly cause for condemnation! Indeed, given the numerous anti-Bolshevik uprisings and large-scale state

repression they provoked, attacking the Makhnovists for not pursuing such insane policies is equally insane. After all, who, in the middle of a Civil War, makes matters worse for themselves by creating more enemies? Only the insane -- or the Bolsheviks!

That Makhnovist land policy was correct and the Bolshevik one wrong can be seen from the fact that the latter changed their policies and brought them into line with the Makhnovist ones. As Palij notes, the Bolsheviks "*modified their agricultural policy by introducing on February 5, 1920, a new land law, distributing the formers landlords', state, and church lands among the peasants.*" This, of course, was a vindication of Makhnovist policy (which dated from 1917!). Makhno "*initiated the peasants' movement, confiscating and distributing landlords' land and goods*" (and, unlike the Bolsheviks, "*encouraging the workers to take over factories and workshops*"). As regards the Bolsheviks attempts to break up what they considered the "*age- old class structure*" of the villages with the "*Committees of the Poor,*" it was, as noted above, a complete disaster and counter-productive. [Op. Cit., p. 213 and p. 250] All in all, the Makhnovist policies were clearly the most successful as regards the peasantry. They broke up the class system in the countryside by expropriating the ruling class and did not create new conflicts by artificially imposing themselves onto the villages.

Lastly, we must also wonder just how sensible it is to "*disturb*" the economy that produces the food you eat. Given that Rees, in part, blames Bolshevik tyranny on the disruption of the economy, it seems incredible that he faults Makhno for not adding to the chaos by failing to "*disrupt the peasant economy*"! However, why let logic get in the way of a good rant!

As well as ignoring the wealth of information on Makhnovist land policy, Rees turns to their attempts to form free agrarian communes. He argues that Makhno's attempts "*to go beyond the traditional peasant economy were doomed*" and quotes Makhno's memoirs which state "*the mass of the people did not go over*" to his peasant communes, which only involved a few hundred families. [Op. Cit., p. 59]
