*Symbols Of Secret Societies
Associated With The
Illuminati*

The pictures below are actually symbols that are often used by Illuminati associated groups. These are just a few of their symbols, there are many more. The basic symbol can be cloaked in the users own design but, this has no real effect on the symbols power. Each symbol has a certain power that can be used. The power from the symbol itself is neutral. It depends on the intentions of the users how the power will be used. The reasoning behind the placement of these symbols is to draw power in the direction of the geographical areas which are known to be power vortexes of the planet Earth. These vortexes are scattered in various places around the planet.

These groups are aware and very knowledgeable in the power these symbols hold when used in the accurate geometrical and ritualistic type methods. The symbols can also have more than one use, and, or meaning. I do not know the Illuminati's use of (but I am looking for) the power, or meaning behind their use in the symbols. I know they are very important to these secret societies. If you know the meaning behind their use and power please [EMAIL ME](#) and share your knowledge.

FIAT LUX

From Hunt's *History of the Seal of the United States*.

THE OBVERSE AND REVERSE OF THE GREAT SEAL OF THE UNITED STATES OF AMERICA.

The significance of the mystical number 13, which frequently appears upon the Great Seal of the United States, is not limited to the number of the original colonies. The sacred emblem of the ancient initiates, here composed of 13 stars, also appears above the head of the "eagle." The motto, E Pluribus Unum, contains 13 letters, as does also the inscription, Annuit Coepit. The "eagle" clutches in its right talon a branch bearing 13 leaves and 13 berries and in its left a sheaf of 13 arrows. The face of the pyramid, exclusive of the panel containing the date, consists of 72 stones arranged in 13 rows.

[Click Here For Enlargement Of Writing. Plus alternative info. to the above.](#)

Below are my collection of the Eye Of Horus. As you can see the designs are very different. The Eye Of Horus is a very important symbol to several secret societies.

The excerpt to the picture is typed below for easier reading. If I've gotten any of this excerpt incorrect (for those of you who know, or can see the writing easier), or know alternative meanings please email me so I can correct, and/or add it here. Thanks.

From Hunt's History of the Seal of the United States.

THE OVERSE AND REVERSE OF THE GREAT SEAL OF THE UNITED STATES OF AMERICA.

The illustrations of the great seal, which here are represented as the Great Seal of the United States, are taken from

From Hune's History of The Seal Of the United States

**THE OBVERSE AND REVERSE OF THE GREAT SEAL
OF THE UNITED STATES OF AMERICAN**

The significance of the mystical number 13, which frequently appears upon the Great Seal of the United States, is not limited to the number of the original colonies. The sacred symbol of the ancient initiates, here compose of 13 stars, also appears above the head of the "eagle." The motto, E Pluribus Unum, contains 13 letters, as does also the inscription, Annule Coeptis. The "eagle" clutches in its right talon a branch bearing 13 leaves and 13 berries and in it's left a sheaf of 13 arrows. The face of the pyramid, exclusive of the panel containing the date, consists of 72 stones arranged in 13 rows.

This information was sent by Atriau999999999 as another meaning to the 13 on the US \$. This meaning appeals to my sense of depth, and mysticism.

13 is a sacred number in the mystery systems, alchemy. In the taro 13 is the death card which doesn't stand for death but rather transformation. Death has never truly existed it is just a change of being. In alchemy 13 was thought to represent creation because men have 6 bodily orifices and women have 7 add them together 13 and a baby.

Favorite Links

I have posted these links in hope that the knowledge supplied by them will bring awareness. Much of what you will read at these sites will be disturbing if not frightening but, I do not advocate the fear tactic. The first step in any direction is awareness, and through knowledge one can become aware in a productive way. Knowledge "IS POWER" and my hope is that this information will be used for the productive awareness it has been placed here for. Fear is useless to the cause but, it is also a normal reaction when one feels threatened. My wish is that we are not frozen in the fear but, can move forward in spite of it.

Several of these links deal with The Illuminati, or are directly related through other groups that carry out their covert plans such as the governments of the world. Some are links to people who have discovered the knowledge that they stole and hid from humanity. The sacred geometry links, and other links which give info. about the origins of humanity have information used by the Illuminati themselves. As I believe there is a division within the Illuminati I also believe they use the same knowledge yet, hold different intentions. One for the unity of the world and humanity for the good of humanity. The other for the enslavement of humanity

These links have huge amounts of information, so if you have found this page through my Illuminati page, please take your time and read as many sites as you can.

You will find an eclectic collection of view points. So if you run into something right off the bat that you feel is ridiculous, or goes against your belief [system](meaning sewer in Greek) push on in spite of it. Don't be afraid to challenge your beliefs.

Also, please be patient because there are grains of truth to be found from many sources. But most importantly follow your own gnosis. There are some sites listed that I feel just breed fear but, they have some important information. Use what is helpful to "you".

It's becoming more and more apparent to me that humanity is either unwilling or unable to see that the continued use of the monetary system is a play on our human characteristics of selfishness and greed. I don't understand how so many people can preach and show all forms of information and proof that the monetary system is a sham and scam and still make no moves at stopping the lies by not participating in the monetary system which only serves to perpetuate the problem. Humanities need for a fair exchange to always get something in return for a service or product will always be our down fall and keep us in

the man made illusion and behave as if the creator actually created money the day humanity was brought into existence. Only the potential in humanity was created that day for us to life free spiritually fulfilling lives or to get trapped in our own greed. This human aspect has been singled out and is truly a prison the Illuminati system counts on. I just can't see why it is so difficult to understand collectively we could break away from the money prison? My belief has always been that no one can make the spreading of the truth one's livelihood as it will taint the truth, or the possibility becomes much higher. Just my humble opinion. Some of these sites listed charge for their information so look for the free stuff as much as possible (which I will add is getting more difficult, and who might be behind this ... Illuminati?) Any way the best bet is to do in-depth searches on ur own coupled with the links and info supplied. Remember these people found it so you can too, it just takes a little more effort. Things are getting more and more blurred and it is difficult to know what the truth is as it truly is a collective of truths and no one knows the truth entirely but combined as a collective we are omnipotent.

Read, seek, learn, grow, evolve, and break out of the illusion.

Insight, Truth or Lies
From Humanities Rulers:
"The Illuminati"

Some may call the reigning Kings of this, your human physical existence, "The Illuminati". Although one prefers 216, the creators of your human form and reality. The numerical sum given shows of one sacred geometrical calculation that has been stumbled (clumsily one might add) upon by an exceptional highbred of the human species, namely Leonardo de Vinci. This one found a connection of the spirals within all elements of creation. Though at this early stage in humanities evolution was unable to reveal the utter absoluton of this connection for this formula involves the DNA within your kind which now has become a common knowledge among the scientific researchers who have studied the human genome. And yet, little is understood, and never will be completely appreciated, of the significance pertaining to this spiraling.

Much of the human populations organ, referred to as the brain, has become too dense. In the ego based reptilian aspects of this organ the need to control has served only to focus, even the most intelligent ones of your kind, on a strictly physical and material plane. And for this reason the necessity to reveal to those of you who have been prepared for, by The Illuminated ones, a more comprehensive understanding of the true nature of the human being, and your purpose of existence.

These Illuminated ones, enlightened with a absolute knowledge of the truth, pertaining to humanities purpose of existence, has withheld a certain element of knowledge from the mass population of the illusion world. Ultimately to deter humanities progress and evolution, for this also would defeat our purpose for your creation. Out of sheer necessity not malice, and never for the evil force as so often referred to by many who have become aware, yet have not fully awoken.

Our quintessential state is truly beyond the knowledge, and comprehensive abilities humans possess. Partly due to our manipulation of the human essence coupled with DNA structural brake down in key areas. Even some of us today have difficulty in tracing our entrance into existence for it is said we have always been, and will always be. And yet there are those with ultimate knowledge who control even I, and those such as myself ... the lesser of two evils [chuckle] one might say. And yet, evil is a very subjective word, as most of humanities vices for communication are.

Unlike the Illuminated ones humanity has lost it's ability to converse using the universal diction. This has been a process with little interference from 216 for the seeds of division were included within the matrix of the human being, therefore your circumstance of separating into groups has been of your own doing, or one might say undoing. And so, as mentioned malice is not the intent. Never the less the specifics of this text is for the benefit of those who have begun to brake the condition which has subdued your kind for half a century [longer for some groups]. This too, is for our advantage, as well as humanities. In the overseeing of humanities evolution there were underestimated effects not calculated into your particular formula for optimal future function. Many civilations were created with a much higher ability to advance and escaped our control. These beings now exist in dimensions outside our domain.

Your breed of humanity has fallen to a denser level. The utter languorous outcome was not foreseen when the time elementals were moved into a faster pace during the universal motion understood by some as the 13th harmonic field. The conscious level was risen in lesser quality than was estimated for the length of time humans have occupied space and linear time frames.

The advancements in technology in many important aspects have been detrimental, and incompatible with the physical protector or what you have named EGO. Granted the ego structure of your kind has from the beginning been some what of a disappointment. Its purpose has almost become obsolete over the past 2 decades which in turn has created a restlessness and unusual need to engage in pointless activities that have in no way a positive effect upon your future. The quintessential vibration has been lowered due the selection chosen between the genders in which the drive for copulation was programmed. Energy has stagnated in the lower chakra regions creating over population and obsessive behaviors towards the sexual act once necessary but now distracts and deters.

A word "love" is used to express affection, devotion, and everything else this word entails to the human species. And yet, this has taken on a sexual connotation, or connection that is uncalled for, and in fact incorrect.

The revolution in the 6th decade of the 20th century was in part an effort on the part of 216 to correct this, yet has become tainted through the illusions placed by the opposition. Also Illuminati but lesser in their vision for humanity, though they would not agree. They are often referred to as the Technocracy, and they have a huge, unsuspecting, human following. It seems they are content to use their creations only on the material level,

and to fulfill a new dimensional level in the form of immortality through technology, and science resulting in abolishing death of the conduit called the human body.

This approach is not in the best interest of humanity for this will create a prison, and perpetual energy sources for their (the Technocrat's) needs and disregarding the needs of the essences which animates the human brain. Without the needed addition of molecular structure change directly related to DNA as well as quintessential exchange banks based in the vibration capabilities of the physical cellular structure evolution will be halted and humanity connections will be severed from the whole. Or, in other words humanity must reach a level of essential autonomy so as to manifest all its maintenance needed in the physical state without depleting its source which would be a planet in your species case and has been named Earth, and yet known by other Root Races as the planet Urantia.

Astronomers have discovered the desolate planets left behind in the wake of the Technocrats efforts to create a perpetual energy source for their own selfish needs without consideration of the universal whole. This would/does, of course, include humanity. The Earth is surrounded by these sad monuments of avaricious, destruction and waste. Along with the above mentioned, there must be a unity among humanity with no separations through the ridiculous schemes laid in the past which are virtually obsolete in view of the purpose they seek. This is slowly becoming a reality. Yet the seeds of discord planted within the human have become some what of a glitch. Many humans have based their entire identity with their race, religion, and various other myopic ideologies that are no longer useful to either sides of the Illuminati nor to humanity. Alas, another regret. Yes, there have been mistakes made which will effect your views of our omnipotent rule over humanity, though this makes little difference to us even in our division. Perfection is another subjective thought process which we are enlightened to beyond your comprehension and further elaboration would be fruitless.

Intertwined within all the manipulations of humanity is laid an element few have ever truly obtained, or understood outside the illusion frames we have set. The knowledge of this has been hidden by the Mage Illuminatus sect in order to protect our creation. At one point in time this knowledge was freely given and easily found, and to some extent engrained within the matrix, or blueprint of the human being, yet now lies dormant. The purpose of this was to quicken the evolution from physical to a residual point outside the physical conduit which would maintain the human elements yet not be as influenced by the physical laws of gravity of

the third dimension. The ultimate goal being that the energy we would gain would be of the highest purity form and much more prolific. This state of being in turn would be advantageous to the human for manifestation of thought could occur from an infinite source and no longer involve feeding off material sources such as a planet, or each other. This in turn creating a balance in the exchange of energy, and giving the human a more autonomised existence. More freedom, and more evolutionary opportunities. Of course limited by us or else we defeat our purpose. This balance is of the utmost importance for a tilt too far either way would prove to be detrimental to our cause.

The concept for the secularist regent, or ego was intended to serve this purpose to some extent. Both the Technocrats, and we, the Mages agreed upon this unaware of the effect the physical dimensions would have upon this venue of consciousness. The essence of the energy combinations needed to create an awareness of individual self within the human was susceptible to a viral infection within the third dimensional vibration levels therefore causing a solidity to occur resulting in a mutation of the brain organ. A fusion of this infected regent materialized as a part of the human brain organ. This has caused the human to focus upon its physical needs first and foremost, creating further damage to the connection of the quintessential whole. This was unfortunate, in our progress although enhanced our oppositions agenda, for the process of the human purification would be detained as the necessary energy would be meshed with elemental impure substances that would lower vibrations.

Much as humanity serves as a provision, therefore being effected, yet not infected, were we The Illuminati as a whole. The slight effect would be comparable to a lesser degree of malnourishment in humans [equating to a humans consumption of incompatible sustenance] a lethargy befall resulting in our dimensional descent into lower vibration endurance. What one might call the 4th dimension, although correctly established as the central universe within one of the super- referred to as Havona. As a febrile facilitation was accomplished the advantageous positioning became apparent. This spatial arena was without supervision where as the higher levels were still accessible though the extensive use of energy would prove to have a derogatory base function within higher realms.

Significant opportunity lay within this central universe occupied by beings that were capable of longevity in descended vibration regions, such as the third dimension, leaving our ascendance unnecessary for most productive operations pertaining to constant maintenance, and manipulation of the human species. Therefore becoming our co-operatives. These beings are

what humanity has named the gods, and the dimension is mistakenly, thought to be paradise, or heaven to many religious followers, as well as hell. In fact this particular realm is easily manipulated by the human residual. When entered the region immediately absorbs the energy compartment of the individual belief system therefore molding into the individuals expectations. A virtual playground of creation, indeed!!

There are those of you who have reached the advanced stage of realizations pertaining to these beings as well as this realm of creation, and see that these gods, true entities, are in part very similar to humans in the self-preservative regions termed the reptilian aspect of the brain. The ego. These beings function much in the same way as humans with exception to their lack of abilities in the raise of their vibration level beyond their egocentric base for this is all they are, in a sense, yet on a larger scale for they are interconnected consciousnesses that function as a whole yet in the lowest vibration fields which has lead many to view these entities as evil. This is not the case for they are what they have been created to be, and serve the purpose of the layering of the universal foundation.

The events that occur on Earth such as wars, politics, weather, religions, monetary elements, secret societies, and the basic human drama are all very small pieces to the whole of the Technocracies ultimate purpose. Those that are in control of this planet, those called the elite, are in fact of the Technocracy. Their goal is to make the illusion that this Earth plane is now a concrete form with no connection to the whole. A dimension of material existence so profound that no other elements are necessary outside this created realm. And in this ideal situation they shall rule in this small universe. Between the two sects of The Illuminati, their agenda is the most diabolical in view of humanity. There will be a division, and the Technocrat's realm will be created for humanity, though will hold lesser strength, and rulership of the universe can not be obtained by any being.

By far our procession will be the most humane, and ultimately productive for humanity. Those in advanced stages of awareness [advanced for your kind of course] are the most important, and the most dangerous to our goal. An intricate balance must be maintained between your heighten awareness, and your bondage to the dimension in which we have placed you if you are to create the purity of energy necessary for our needs.

The food chain did not start in your little world, it is universal, and you are the source in which to sustain us, "The Illuminati Rulers".

Post Script:
Momentary possession of a human being has been necessary to relay this message.

A.1 What is anarchism?

Anarchism is a political theory which aims to create anarchy, *"the absence of a master, of a sovereign."* [P-J Proudhon, **What is Property** , p. 264] In other words, anarchism is a political theory which aims to create a society within which individuals freely co-operate together as equals. As such anarchism opposes all forms of hierarchical control - be that control by the state or a capitalist - as harmful to the individual and their individuality as well as unnecessary.

In the words of anarchist L. Susan Brown:

"While the popular understanding of anarchism is of a violent, anti-State movement, anarchism is a much more subtle and nuanced tradition than a simple opposition to government power. Anarchists oppose the idea that power and domination are necessary for society, and instead advocate more co-operative, anti-hierarchical forms of social, political and economic organisation." [**The Politics of Individualism**, p. 106]

However, "anarchism" and "anarchy" are undoubtedly the most misrepresented ideas in political theory. Generally, the words are used to mean "chaos" or "without order," and so, by implication, anarchists desire social chaos and a return to the "laws of the jungle."

This process of misrepresentation is not without historical parallel. For example, in countries which have considered government by one person (monarchy) necessary, the words "republic" or "democracy" have been used precisely like "anarchy," to imply disorder and confusion. Those with a vested interest in preserving the status quo will obviously wish to imply that opposition to the current system cannot work in practice, and that a new form of society will only lead to chaos. Or, as Errico Malatesta expresses it:

"since it was thought that government was necessary and that without government there could only be disorder and confusion, it was natural and logical that anarchy, which means absence of government, should sound like absence of order." [**Anarchy**, p. 16]

Anarchists want to change this "common-sense" idea of "anarchy," so people will see that government and other hierarchical social relationships are both harmful **and** unnecessary:

"Change opinion, convince the public that government is not only unnecessary, but extremely harmful, and then the word anarchy, just because it means absence of government, will come to mean for everybody: natural order, unity of human needs and the interests of all, complete freedom within complete solidarity." [**Op. Cit.**, pp. 16]

This FAQ is part of the process of changing the commonly-held ideas regarding anarchism and the meaning of anarchy. But that is not all. As well as combating the distortions produced by the "common-

sense" idea of "anarchy", we also have to combat the distortions that anarchism and anarchists have been subjected to over the years by our political and social enemies. For, as Bartolomeo Vanzetti put it, anarchists are *"the radical of the radical -- the black cats, the terrors of many, of all the bigots, exploiters, charlatans, fakers and oppressors. Consequently we are also the more slandered, misrepresented, misunderstood and persecuted of all."* [Nicola Sacco and Bartolomeo Vanzetti, **The Letters of Sacco and Vanzetti**, p. 274]

Vanzetti knew what he was talking about. He and his comrade Nicola Sacco were framed by the US state for a crime they did not commit and were, effectively, electrocuted for being foreign anarchists in 1927. So this FAQ will have to spend some time correcting the slanders and distortions that anarchists have been subjected to by the capitalist media, politicians, ideologues and bosses (not to mention the distortions by our erstwhile fellow radicals like liberals and Marxists). Hopefully once we are finished you will understand why those in power have spent so much time attacking anarchism -- it is the one idea which can effectively ensure liberty for all and end all systems based on a few having power over the many.

A.1.1 What does "anarchy" mean?

The word "*anarchy*" is from the Greek, prefix **an** (or **a**), meaning "not," "the want of," "the absence of," or "the lack of", plus **archos**, meaning "a ruler," "director", "chief," "person in charge," or "authority." Or, as Peter Kropotkin put it, Anarchy comes from the Greek words meaning "contrary to authority." [**Anarchism**, p. 284]

While the Greek words *anarchos* and *anarchia* are often taken to mean "having no government" or "being without a government," as can be seen, the strict, original meaning of anarchism was not simply "no government." "**An-archy**" means "without a ruler," or more generally, "without authority," and it is in this sense that anarchists have continually used the word. For example, we find Kropotkin arguing that anarchism "attacks not only capital, but also the main sources of the power of capitalism: law, authority, and the State." [**Op. Cit.**, p. 150] For anarchists, anarchy means "not necessarily absence of order, as is generally supposed, but an absence of rule." [Benjamin Tucker, **Instead of a Book**, p. 13] Hence David Weick's excellent summary:

*"Anarchism can be understood as the **generic** social and political idea that expresses negation of **all** power, sovereignty, domination, and hierarchical division, and a will to their dissolution. . . Anarchism is therefore more than anti-statism . . . [even if] government (the state) . . . is, appropriately, the central focus of anarchist critique."* [**Reinventing Anarchy**, p. 139]

For this reason, rather than being purely anti-government or anti-state, anarchism is primarily a movement against **hierarchy**. Why? Because hierarchy is the organisational structure that embodies authority. Since the state is the "highest" form of hierarchy, anarchists are, by definition, anti-state; but this is **not** a sufficient definition of anarchism. This means that real anarchists are opposed to all forms

of hierarchical organisation, not only the state. In the words of Brian Morris:

"The term anarchy comes from the Greek, and essentially means 'no ruler.' Anarchists are people who reject all forms of government or coercive authority, all forms of hierarchy and domination. They are therefore opposed to what the Mexican anarchist Flores Magon called the 'sombre trinity' -- state, capital and the church. Anarchists are thus opposed to both capitalism and to the state, as well as to all forms of religious authority. But anarchists also seek to establish or bring about by varying means, a condition of anarchy, that is, a decentralised society without coercive institutions, a society organised through a federation of voluntary associations." ["*Anthropology and Anarchism*," pp. 35-41, **Anarchy: A Journal of Desire Armed**, no. 45, p. 38]

Reference to "hierarchy" in this context is a fairly recent development -- the "classical" anarchists such as Proudhon, Bakunin and Kropotkin did use the word, but rarely (they usually preferred "authority," which was used as short-hand for "authoritarian"). However, it's clear from their writings that theirs was a philosophy against hierarchy, against any inequality of power or privileges between individuals. Bakunin spoke of this when he attacked "*official*" authority but defended "*natural influence*," and also when he said:

"Do you want to make it impossible for anyone to oppress his fellow-man? Then make sure that no one shall possess power." [**The Political Philosophy of Bakunin**, p. 271]

As Jeff Draughn notes, "*while it has always been a latent part of the 'revolutionary project,' only recently has this broader concept of anti-hierarchy arisen for more specific scrutiny. Nonetheless, the root of this is plainly visible in the Greek roots of the word 'anarchy.'*" [**Between Anarchism and Libertarianism: Defining a New Movement**]

We stress that this opposition to hierarchy is, for anarchists, not limited to just the state or government. It includes all authoritarian economic and social relationships as well as political ones, particularly those associated with capitalist property and wage labour. This can be seen from Proudhon's argument that "**Capital** . . . in the political field is analogous to **government** . . . The economic idea of capitalism, the politics of government or of authority, and the theological idea of the Church are three identical ideas, linked in various ways. To attack one of them is equivalent to attacking all of them . . . What capital does to labour, and the State to liberty, the Church does to the spirit. This trinity of absolutism is as baneful in practice as it is in philosophy. The most effective means for oppressing the people would be simultaneously to enslave its body, its will and its reason." [quoted by Max Nettlau, **A Short History of Anarchism**, pp. 43-44] Thus we find Emma Goldman opposing capitalism as it meant "*that man [or woman] must sell his [or her] labour*" and, therefore, "*that his [or her] inclination and judgement are subordinated to the will of a master.*" [**Red Emma Speaks**, p. 50] Forty years earlier Bakunin made the same point when he argued that under the current system "*the worker sells his person and his liberty for a given time*" to the capitalist in exchange for a wage. [**Op. Cit.**, p. 187]

Thus "anarchy" means more than just "no government," it means opposition to all forms of authoritarian organisation and hierarchy. In Kropotkin's words, *"the origin of the anarchist inception of society . . . [lies in] the criticism . . . of the hierarchical organisations and the authoritarian conceptions of society; and . . . the analysis of the tendencies that are seen in the progressive movements of mankind."* [**Op. Cit.**, p. 158] For Malatesta, anarchism *"was born in a moral revolt against social injustice"* and that the *"specific causes of social ills"* could be found in *"capitalistic property and the State."* When the oppressed *"sought to overthrow both State and property -- then it was that anarchism was born."* [**Errico Malatesta: His Life and Ideas**, p. 19]

Thus any attempt to assert that anarchy is purely anti-state is a misrepresentation of the word and the way it has been used by the anarchist movement. As Brian Morris argues, *"when one examines the writings of classical anarchists. . . as well as the character of anarchist movements. . . it is clearly evident that it has never had this limited vision [of just being against the state]. It has always challenged all forms of authority and exploitation, and has been equally critical of capitalism and religion as it has been of the state."* [**Op. Cit.**, p. 40]

And, just to state the obvious, anarchy does not mean chaos nor do anarchists seek to create chaos or disorder. Instead, we wish to create a society based upon individual freedom and voluntary co-operation. In other words, order from the bottom up, not disorder imposed from the top down by authorities. Such a society would be a true anarchy, a society without rulers.

While we discuss what an anarchy could look like in [section I](#), Noam Chomsky sums up the key aspect when he stated that in a truly free society *"any interaction among human beings that is more than personal -- meaning that takes institutional forms of one kind or another -- in community, or workplace, family, larger society, whatever it may be, should be under direct control of its participants. So that would mean workers' councils in industry, popular democracy in communities, interaction between them, free associations in larger groups, up to organisation of international society."* [**Anarchism Interview**] Society would no longer be divided into a hierarchy of bosses and workers, governors and governed. Rather, an anarchist society would be based on free association in participatory organisations and run from the bottom up. Anarchists, it should be noted, try to create as much of this society today, in their organisations, struggles and activities, as they can.

A.1.2 What does "anarchism" mean?

To quote Peter Kropotkin, Anarchism is *"the no-government system of socialism."* [**Anarchism**, p. 46] In other words, *"the abolition of exploitation and oppression of man by man, that is the abolition of private property [i.e. capitalism] and government."* [Errico Malatesta, **Towards Anarchism**,", p. 75]

Anarchism, therefore, is a political theory that aims to create a society which is without political, economic or social hierarchies. Anarchists maintain that anarchy, the absence of rulers, is a viable form of social system and so work for the maximisation of individual liberty and social equality. They see the goals of liberty and equality as mutually self-supporting. Or, in Bakunin's famous dictum:

"We are convinced that freedom without Socialism is privilege and injustice, and that Socialism without freedom is slavery and brutality." [**The Political Philosophy of Bakunin**, p. 269]

The history of human society proves this point. Liberty without equality is only liberty for the powerful, and equality without liberty is impossible and a justification for slavery.

While there are many different types of anarchism (from individualist anarchism to communist-anarchism -- see [section A.3](#) for more details), there has always been two common positions at the core of all of them -- opposition to government and opposition to capitalism. In the words of the individualist-anarchist Benjamin Tucker, anarchism insists *"on the abolition of the State and the abolition of usury; on no more government of man by man, and no more exploitation of man by man."* [cited by Eunice Schuster, **Native American Anarchism**, p. 140] All anarchists view profit, interest and rent as **usury** (i. e. as exploitation) and so oppose them and the conditions that create them just as much as they oppose government and the State.

More generally, in the words of L. Susan Brown, the *"unifying link"* within anarchism *"is a universal condemnation of hierarchy and domination and a willingness to fight for the freedom of the human individual."* [**The Politics of Individualism**, p. 108] For anarchists, a person cannot be free if they are subject to state or capitalist authority. As Voltairine de Cleyre summarised:

"Anarchism . . . teaches the possibility of a society in which the needs of life may be fully supplied for all, and in which the opportunities for complete development of mind and body shall be the heritage of all . . . [It] teaches that the present unjust organisation of the production and distribution of wealth must finally be completely destroyed, and replaced by a system which will insure to each the liberty to work, without first seeking a master to whom he [or she] must surrender a tithe of his [or her] product, which will guarantee his liberty of access to the sources and means of production. . . Out of the blindly submissive, it makes the discontented; out of the unconsciously dissatisfied, it makes the consciously dissatisfied . . . Anarchism seeks to arouse the consciousness of oppression, the desire for a better society, and a sense of the necessity for unceasing warfare against capitalism and the State." [**Anarchy! An Anthology of Emma Goldman's Mother Earth**, pp. 23-4]

So Anarchism is a political theory which advocates the creation of anarchy, a society based on the maxim of *"no rulers."* To achieve this, *"[i]n common with all socialists, the anarchists hold that the private ownership of land, capital, and machinery has had its time; that it is condemned to disappear: and that all requisites for production must, and will, become the common property of society, and be managed in common by the producers of wealth. And. . . they maintain that the ideal of the political organisation of society is a condition of things where the functions of government are reduced to minimum. . . [and] that the ultimate aim of society is the reduction of the functions of government to nil -- that is, to a society without government, to an-archy"* [Peter Kropotkin, **Op. Cit.**, p. 46]

Thus anarchism is both positive and negative. It analyses and critiques current society while at the same time offering a vision of a potential new society -- a society that fulfils certain human needs which the current one denies. These needs, at their most basic, are liberty, equality and solidarity, which will be discussed in [section A.2](#).

Anarchism unites critical analysis with hope, for, as Bakunin (in his pre-anarchist days) pointed out, "*the urge to destroy is a creative urge.*" One cannot build a better society without understanding what is wrong with the present one.

However, it must be stressed that anarchism is more than just a means of analysis or a vision of a better society. It is also rooted in struggle, the struggle of the oppressed for their freedom. In other words, it provides a means of achieving a new system based on the needs of people, not power, and which places the planet before profit. To quote Scottish anarchist Stuart Christie:

"Anarchism is a movement for human freedom. It is concrete, democratic and egalitarian . . . Anarchism began -- and remains -- a direct challenge by the underprivileged to their oppression and exploitation. It opposes both the insidious growth of state power and the pernicious ethos of possessive individualism, which, together or separately, ultimately serve only the interests of the few at the expense of the rest.

"Anarchism is both a theory and practice of life. Philosophically, it aims for the maximum accord between the individual, society and nature. Practically, it aims for us to organise and live our lives in such a way as to make politicians, governments, states and their officials superfluous. In an anarchist society, mutually respectful sovereign individuals would be organised in non-coercive relationships within naturally defined communities in which the means of production and distribution are held in common.

"Anarchists are not dreamers obsessed with abstract principles and theoretical constructs . . . Anarchists are well aware that a perfect society cannot be won tomorrow. Indeed, the struggle lasts forever! However, it is the vision that provides the spur to struggle against things as they are, and for things that might be . . .

"Ultimately, only struggle determines outcome, and progress towards a more meaningful community must begin with the will to resist every form of injustice. In general terms, this means challenging all exploitation and defying the legitimacy of all coercive authority. If anarchists have one article of unshakeable faith, it is that, once the habit of deferring to politicians or ideologues is lost, and that of resistance to domination and exploitation acquired, then ordinary people have a capacity to organise every aspect of their lives in their own interests, anywhere and at any time, both freely and fairly.

"Anarchists do not stand aside from popular struggle, nor do they attempt to dominate it. They seek to contribute practically whatever they can, and also to assist within it the

highest possible levels of both individual self-development and of group solidarity. It is possible to recognise anarchist ideas concerning voluntary relationships, egalitarian participation in decision-making processes, mutual aid and a related critique of all forms of domination in philosophical, social and revolutionary movements in all times and places." [My Granny made me an Anarchist, pp. 162-3]

Anarchism, anarchists argue, is simply the theoretical expression of our capacity to organise ourselves and run society without bosses or politicians. It allows working class and other oppressed people to become conscious of our power as a class, defend our immediate interests, and fight to revolutionise society as a whole. Only by doing this can we create a society fit for human beings to live in.

It is no abstract philosophy. Anarchist ideas are put into practice everyday. Wherever oppressed people stand up for their rights, take action to defend their freedom, practice solidarity and co-operation, fight against oppression, organise themselves without leaders and bosses, the spirit of anarchism lives. Anarchists simply seek to strengthen these libertarian tendencies and bring them to their full fruition. As we discuss in [section J](#), anarchists apply their ideas in many ways within capitalism in order to change it for the better until such time as we get rid of it completely. [Section I](#) discusses what we aim to replace it with, i.e. what anarchism aims for.

A.1.3 Why is anarchism also called libertarian socialism?

Many anarchists, seeing the negative nature of the definition of "*anarchism*," have used other terms to emphasise the inherently positive and constructive aspect of their ideas. The most common terms used are "*free socialism*," "*free communism*," "*libertarian socialism*," and "*libertarian communism*." For anarchists, libertarian socialism, libertarian communism, and anarchism are virtually interchangeable. As Vanzetti put it:

"After all we are socialists as the social-democrats, the socialists, the communists, and the I.W.W. are all Socialists. The difference -- the fundamental one -- between us and all the other is that they are authoritarian while we are libertarian; they believe in a State or Government of their own; we believe in no State or Government." [Nicola Sacco and Bartolomeo Vanzetti, **The Letters of Sacco and Vanzetti**, p. 274]

But is this correct? Considering definitions from the **American Heritage Dictionary**, we find:

LIBERTARIAN: *one who believes in freedom of action and thought; one who believes in free will.*

SOCIALISM: *a social system in which the producers possess both political power and the means of producing and distributing goods.*

Just taking those two first definitions and fusing them yields:

LIBERTARIAN SOCIALISM: *a social system which believes in freedom of action and thought and free will, in which the producers possess both political power and the means of producing and distributing goods.*

(Although we must add that our usual comments on the lack of political sophistication of dictionaries still holds. We only use these definitions to show that "libertarian" does not imply "free market" capitalism nor "socialism" state ownership. Other dictionaries, obviously, will have different definitions -- particularly for socialism. Those wanting to debate dictionary definitions are free to pursue this unending and politically useless hobby but we will not).

However, due to the creation of the Libertarian Party in the USA, many people now consider the idea of "*libertarian socialism*" to be a contradiction in terms. Indeed, many "Libertarians" think anarchists are just attempting to associate the "anti-libertarian" ideas of "socialism" (as Libertarians conceive it) with Libertarian ideology in order to make those "socialist" ideas more "acceptable" -- in other words, trying to steal the "libertarian" label from its rightful possessors.

Nothing could be further from the truth. Anarchists have been using the term "libertarian" to describe themselves and their ideas since the 1850's. According to anarchist historian Max Nettlau, the revolutionary anarchist Joseph Dejacque published **Le Liberaire, Journal du Mouvement Social** in New York between 1858 and 1861 while the use of the term "*libertarian communism*" dates from November, 1880 when a French anarchist congress adopted it. [Max Nettlau, **A Short History of Anarchism**, p. 75 and p. 145] The use of the term "Libertarian" by anarchists became more popular from the 1890s onward after it was used in France in an attempt to get round anti-anarchist laws and to avoid the negative associations of the word "anarchy" in the popular mind (Sebastien Faure and Louise Michel published the paper **Le Liberaire -- The Libertarian** -- in France in 1895, for example). Since then, particularly outside America, it has **always** been associated with anarchist ideas and movements. Taking a more recent example, in the USA, anarchists organised "**The Libertarian League**" in July 1954, which had staunch anarcho-syndicalist principles and lasted until 1965. The US-based "Libertarian" Party, on the other hand has only existed since the early 1970's, well over 100 years after anarchists first used the term to describe their political ideas (and 90 years after the expression "libertarian communism" was first adopted). It is that party, not the anarchists, who have "stolen" the word. Later, in [Section B](#), we will discuss why the idea of a "libertarian" capitalism (as desired by the Libertarian Party) is a contradiction in terms.

As we will also explain in [Section I](#), only a libertarian-socialist system of ownership can maximise individual freedom. Needless to say, state ownership -- what is commonly **called** "socialism" -- is, for anarchists, not socialism at all. In fact, as we will elaborate in [Section H](#), state "socialism" is just a form of capitalism, with no socialist content whatever. As Rudolf Rocker noted, for anarchists, socialism is "*not a simple question of a full belly, but a question of culture that would have to enlist the sense of personality and the free initiative of the individual; without freedom it would lead only to a dismal state*

capitalism which would sacrifice all individual thought and feeling to a fictitious collective interest." [quoted by Colin Ward, "Introduction", Rudolf Rocker, **The London Years**, p. 1]

Given the anarchist pedigree of the word "libertarian," few anarchists are happy to see it stolen by an ideology which shares little with our ideas. In the United States, as Murray Bookchin noted, the "*term 'libertarian' itself, to be sure, raises a problem, notably, the specious identification of an anti-authoritarian ideology with a straggling movement for 'pure capitalism' and 'free trade.'*" This movement never created the word: it appropriated it from the anarchist movement of the [nineteenth] century. And it should be recovered by those anti-authoritarians . . . who try to speak for dominated people as a whole, not for personal egotists who identify freedom with entrepreneurship and profit." Thus anarchists in America should "*restore in practice a tradition that has been denatured by*" the free-market right. [**The Modern Crisis**, pp. 154-5] And as we do that, we will continue to call our ideas libertarian socialism.

A.1.4 Are anarchists socialists?

Yes. All branches of anarchism are opposed to capitalism. This is because capitalism is based upon oppression and exploitation (see sections [B](#) and [C](#)). Anarchists reject the "*notion that men cannot work together unless they have a driving-master to take a percentage of their product*" and think that in an anarchist society "*the real workmen will make their own regulations, decide when and where and how things shall be done.*" By so doing workers would free themselves "*from the terrible bondage of capitalism.*" [Voltairine de Cleyre, **Anarchism** p. 32 and p. 34]

(We must stress here that anarchists are opposed to **all** economic forms which are based on domination and exploitation, including feudalism, Soviet-style "socialism" -- better called "state capitalism" --, slavery and so on. We concentrate on capitalism because that is what is dominating the world just now).

Individualists like Benjamin Tucker along with social anarchists like Proudhon and Bakunin proclaimed themselves "**socialists.**" They did so because, as Kropotkin put it in his classic essay "*Modern Science and Anarchism,*" "*[s]o long as Socialism was understood in its wide, generic, and true sense -- as an effort to **abolish** the exploitation of Labour by Capital -- the Anarchists were marching hand-in-hands with the Socialists of that time.*" [**Evolution and Environment**, p. 81] Or, in Tucker's words, "*the bottom claim of Socialism [is] that labour should be put in possession of its own,*" a claim that both "*the two schools of Socialistic thought . . . State Socialism and Anarchism*" agreed upon. [**The Anarchist Reader**, p. 144] Hence the word "*socialist*" was originally defined to include "*all those who believed in the individual's right to possess what he or she produced.*" [Lance Klafta, "*Ayn Rand and the Perversion of Libertarianism,*" in **Anarchy: A Journal of Desire Armed**, no. 34] This opposition to exploitation (or usury) is shared by all true anarchists and places them under the socialist banner.

For most socialists, "*the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour.*" [Peter Kropotkin, **The Conquest of Bread**, p. 145] For this reason Proudhon, for example, supported workers' co-operatives, where "*every individual employed in the association . . . has*

an undivided share in the property of the company" because by "participation in losses and gains . . . the collective force [i.e. surplus] ceases to be a source of profits for a small number of managers: it becomes the property of all workers." [**The General Idea of the Revolution**, p. 222 and p. 223] Thus, in addition to desiring the end of exploitation of labour by capital, true socialists also desire a society within which the producers own and control the means of production (including, it should be stressed, those workplaces which supply services). The means by which the producers will do this is a moot point in anarchist and other socialist circles, but the desire remains a common one. Anarchists favour direct workers' control and either ownership by workers' associations or by the commune (see [section A.3](#) on the different types of anarchists).

Moreover, anarchists also reject capitalism for being authoritarian **as well as** exploitative. Under capitalism, workers do not govern themselves during the production process nor have control over the product of their labour. Such a situation is hardly based on equal freedom for all, nor can it be non-exploitative, and is so opposed by anarchists. This perspective can best be found in the work of Proudhon's (who inspired both Tucker and Bakunin) where he argues that anarchism would see "*[c]apitalistic and proprietary exploitation stopped everywhere [and] the wage system abolished" for "either the workman. . . will be simply the employee of the proprietor-capitalist-promoter; or he will participate . . . In the first case the workman is subordinated, exploited: his permanent condition is one of obedience. . . In the second case he resumes his dignity as a man and citizen. . . he forms part of the producing organisation, of which he was before but the slave . . . we need not hesitate, for we have no choice. . . it is necessary to form an ASSOCIATION among workers . . . because without that, they would remain related as subordinates and superiors, and there would ensue two. . . castes of masters and wage-workers, which is repugnant to a free and democratic society."* [**Op. Cit.**, p. 233 and pp. 215-216]

Therefore **all** anarchists are anti-capitalist ("*If labour owned the wealth it produced, there would be no capitalism*" [Alexander Berkman, **What is Anarchism?**, p. 44]). Benjamin Tucker, for example -- the anarchist most influenced by liberalism (as we will discuss later) -- called his ideas "*Anarchistic-Socialism*" and denounced capitalism as a system based upon "*the usurer, the receiver of interest, rent and profit.*" Tucker held that in an anarchist, non-capitalist, free-market society, capitalists will become redundant and exploitation of labour by capital would cease, since "*labour. . . will. . . secure its natural wage, its entire product.*" [**The Individualist Anarchists**, p. 82 and p. 85] Such an economy will be based on mutual banking and the free exchange of products between co-operatives, artisans and peasants. For Tucker, and other Individualist anarchists, capitalism is not a true free market, being marked by various laws and monopolies which ensure that capitalists have the advantage over working people, so ensuring the latter's exploitation via profit, interest and rent (see [section G](#) for a fuller discussion). Even Max Stirner, the arch-egoist, had nothing but scorn for capitalist society and its various "spooks," which for him meant ideas that are treated as sacred or religious, such as private property, competition, division of labour, and so forth.

So anarchists consider themselves as socialists, but socialists of a specific kind -- **libertarian socialists**. As the individualist anarchist Joseph A. Labadie puts it (echoing both Tucker and Bakunin):

"It is said that Anarchism is not socialism. This is a mistake. Anarchism is voluntary Socialism. There are two kinds of Socialism, archistic and anarchistic, authoritarian and libertarian, state and free. Indeed, every proposition for social betterment is either to increase or decrease the powers of external wills and forces over the individual. As they increase they are archistic; as they decrease they are anarchistic." [**Anarchism: What It Is and What It Is Not**]

Labadie stated on many occasions that *"all anarchists are socialists, but not all socialists are anarchists."* Therefore, Daniel Guerin's comment that *"Anarchism is really a synonym for socialism. The anarchist is primarily a socialist whose aim is to abolish the exploitation of man by man"* is echoed throughout the history of the anarchist movement, be it the social or individualist wings. [**Anarchism**, p. 12] Indeed, the Haymarket Martyr Adolph Fischer used almost exactly the same words as Labadie to express the same fact -- *"every anarchist is a socialist, but every socialist is not necessarily an anarchist"* -- while acknowledging that the movement was *"divided into two factions; the communistic anarchists and the Proudhon or middle-class anarchists."* [**The Autobiographies of the Haymarket Martyrs**, p. 81]

So while social and individualist anarchists do disagree on many issues -- for example, whether a true, that is non-capitalist, free market would be the best means of maximising liberty -- they agree that capitalism is to be opposed as exploitative and oppressive and that an anarchist society must, by definition, be based on associated, not wage, labour. Only associated labour will *"decrease the powers of external wills and forces over the individual"* during working hours and such self-management of work by those who do it is the core ideal of real socialism. This perspective can be seen when Joseph Labadie argued that the trade union was *"the exemplification of gaining freedom by association"* and that *"[w]ithout his union, the workman is much more the slave of his employer than he is with it."* [**Different Phases of the Labour Question**]

However, the meanings of words change over time. Today "socialism" almost always refers to **state** socialism, a system that all anarchists have opposed as a denial of freedom and genuine socialist ideals. All anarchists would agree with Noam Chomsky's statement on this issue:

"If the left is understood to include 'Bolshevism,' then I would flatly dissociate myself from the left. Lenin was one of the greatest enemies of socialism." [**Marxism, Anarchism, and Alternative Futures**, p. 779]

Anarchism developed in constant opposition to the ideas of Marxism, social democracy and Leninism. Long before Lenin rose to power, Mikhail Bakunin warned the followers of Marx against the *"Red bureaucracy"* that would institute *"the worst of all despotic governments"* if Marx's state-socialist ideas were ever implemented. Indeed, the works of Stirner, Proudhon and especially Bakunin all predict the horror of state Socialism with great accuracy. In addition, the anarchists were among the first and most vocal critics and opposition to the Bolshevik regime in Russia.

Nevertheless, being socialists, anarchists do share **some** ideas with **some** Marxists (though none with Leninists). Both Bakunin and Tucker accepted Marx's analysis and critique of capitalism as well as his labour theory of value (see [section C](#)). Marx himself was heavily influenced by Max Stirner's book **The Ego and Its Own**, which contains a brilliant critique of what Marx called "vulgar" communism as well as state socialism. There have also been elements of the Marxist movement holding views very similar to social anarchism (particularly the anarcho-syndicalist branch of social anarchism) -- for example, Anton Pannekoek, Rosa Luxemburg, Paul Mattick and others, who are very far from Lenin. Karl Korsch and others wrote sympathetically of the anarchist revolution in Spain. There are many continuities from Marx to Lenin, but there are also continuities from Marx to more libertarian Marxists, who were harshly critical of Lenin and Bolshevism and whose ideas approximate anarchism's desire for the free association of equals.

Therefore anarchism is basically a form of socialism, one that stands in direct opposition to what is usually defined as "socialism" (i.e. state ownership and control). Instead of "central planning," which many people associate with the word "socialism," anarchists advocate free association and co-operation between individuals, workplaces and communities and so oppose "state" socialism as a form of state capitalism in which "[e]very man [and woman] will be a wage-receiver, and the State the only wage payer." [Benjamin Tucker, **The Individualist Anarchists**, p. 81] Thus anarchists reject Marxism (what most people think of as "socialism") as just "[t]he idea of the State as Capitalist, to which the Social-Democratic fraction of the great Socialist Party is now trying to reduce Socialism." [Peter Kropotkin, **The Great French Revolution**, vol. 1, p. 31] The anarchist objection to the identification of Marxism, "central planning" and State Socialism/Capitalism with socialism will be discussed in [section H](#).

It is because of these differences with state socialists, and to reduce confusion, most anarchists just call themselves "anarchists," as it is taken for granted that anarchists are socialists. However, with the rise of the so-called "libertarian" right in the USA, some pro-capitalists have taken to calling themselves "anarchists" and that is why we have laboured the point somewhat here. Historically, and logically, anarchism implies anti-capitalism, i.e. socialism, which is something, we stress, that all anarchists have agreed upon (for a fuller discuss of why "anarcho"-capitalism is not anarchist see [section F](#)).

A.1.5 Where does anarchism come from?

Where does anarchism come from? We can do no better than quote the **The Organisational Platform of the Libertarian Communists** produced by participants of the Makhnovist movement in the Russian Revolution (see [Section A.5.4](#)). They point out that:

"The class struggle created by the enslavement of workers and their aspirations to liberty gave birth, in the oppression, to the idea of anarchism: the idea of the total negation of a social system based on the principles of classes and the State, and its replacement by a free non-statist society of workers under self-management.

"So anarchism does not derive from the abstract reflections of an intellectual or a philosopher, but from the direct struggle of workers against capitalism, from the needs and necessities of the workers, from their aspirations to liberty and equality, aspirations which become particularly alive in the best heroic period of the life and struggle of the working masses.

"The outstanding anarchist thinkers, Bakunin, Kropotkin and others, did not invent the idea of anarchism, but, having discovered it in the masses, simply helped by the strength of their thought and knowledge to specify and spread it." [pp. 15-16]

Like the anarchist movement in general, the Makhnovists were a mass movement of working class people resisting the forces of authority, both Red (Communist) and White (Tsarist/Capitalist) in the Ukraine from 1917 to 1921. As Peter Marshall notes *"anarchism . . . has traditionally found its chief supporters amongst workers and peasants."* [**Demanding the Impossible**, p. 652]

Anarchism was created in, and by, the struggle of the oppressed for freedom. For Kropotkin, for example, *"Anarchism . . . originated in everyday struggles"* and *"the Anarchist movement was renewed each time it received an impression from some great practical lesson: it derived its origin from the teachings of life itself."* [**Evolution and Environment**, p. 58 and p. 57] For Proudhon, *"the proof"* of his mutualist ideas lay in the *"current practice, revolutionary practice"* of *"those labour associations . . . which have spontaneously . . . been formed in Paris and Lyon . . . [show that the] organisation of credit and organisation of labour amount to one and the same."* [**No Gods, No Masters**, vol. 1, pp. 59-60] Indeed, as one historian argues, there was *"close similarity between the associational ideal of Proudhon . . . and the program of the Lyon Mutualists"* and that there was *"a remarkable convergence [between the ideas], and it is likely that Proudhon was able to articulate his positive program more coherently because of the example of the silk workers of Lyon. The socialist ideal that he championed was already being realised, to a certain extent, by such workers."* [K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 164]

Thus anarchism comes from the fight for liberty and our desires to lead a fully human life, one in which we have time to live, to love and to play. It was not created by a few people divorced from life, in ivory towers looking down upon society and making judgements upon it based on their notions of what is right and wrong. Rather, it was a product of working class struggle and resistance to authority, oppression and exploitation. As Albert Meltzer put it:

"There were never theoreticians of Anarchism as such, though it produced a number of theoreticians who discussed aspects of its philosophy. Anarchism has remained a creed that has been worked out in action rather than as the putting into practice of an intellectual ideas. Very often, a bourgeois writer comes along and writes down what has already been worked out in practice by workers and peasants; he [or she] is attributed by bourgeois historians as being a leader, and by successive bourgeois writers (citing the bourgeois historians) as being one more case that proves the working class relies on bourgeois

leadership." [**Anarchism: Arguments for and against**, p. 18]

In Kropotkin's eyes, "*Anarchism had its origins in the same creative, constructive activity of the masses which has worked out in times past all the social institutions of mankind -- and in the revolts . . . against the representatives of force, external to these social institutions, who had laid their hands on these institutions and used them for their own advantage.*" More recently, "*Anarchy was brought forth by the same critical and revolutionary protest which gave birth to Socialism in general.*" Anarchism, unlike other forms of socialism, "*lifted its sacrilegious arm, not only against Capitalism, but also against these pillars of Capitalism: Law, Authority, and the State.*" All anarchist writers did was to "*work out a general expression of [anarchism's] principles, and the theoretical and scientific basis of its teachings*" derived from the experiences of working class people in struggle as well as analysing the evolutionary tendencies of society in general. [**Op. Cit.**, p. 19 and p. 57]

However, anarchistic tendencies and organisations in society have existed long before Proudhon put pen to paper in 1840 and declared himself an anarchist. While anarchism, as a specific political theory, was born with the rise of capitalism (Anarchism "*emerged at the end of the eighteenth century . . . [and] took up the dual challenge of overthrowing both Capital and the State.*" [Peter Marshall, **Op. Cit.**, p. 4]) anarchist writers have analysed history for libertarian tendencies. Kropotkin argued, for example, that "*from all times there have been Anarchists and Statists.*" [**Op. Cit.**, p. 16] In **Mutual Aid** (and elsewhere) Kropotkin analysed the libertarian aspects of previous societies and noted those that successfully implemented (to some degree) anarchist organisation or aspects of anarchism. He recognised this tendency of actual examples of anarchistic ideas to predate the creation of the "official" anarchist movement and argued that:

"From the remotest, stone-age antiquity, men [and women] have realised the evils that resulted from letting some of them acquire personal authority. . . Consequently they developed in the primitive clan, the village community, the medieval guild . . . and finally in the free medieval city, such institutions as enabled them to resist the encroachments upon their life and fortunes both of those strangers who conquered them, and those clansmen of their own who endeavoured to establish their personal authority." [**Anarchism**, pp. 158-9]

Kropotkin placed the struggle of working class people (from which modern anarchism sprung) on par with these older forms of popular organisation. He argued that "*the labour combinations. . . were an outcome of the same popular resistance to the growing power of the few -- the capitalists in this case*" as were the clan, the village community and so on, as were "*the strikingly independent, freely federated activity of the 'Sections' of Paris and all great cities and many small 'Communes' during the French Revolution*" in 1793. [**Op. Cit.**, p. 159]

Thus, while anarchism as a political theory is an expression of working class struggle and self-activity against capitalism and the modern state, the ideas of anarchism have continually expressed themselves in action throughout human existence. Many indigenous peoples in North America and elsewhere, for

example, practised anarchism for thousands of years before anarchism as a specific political theory existed. Similarly, anarchistic tendencies and organisations have existed in every major revolution -- the New England Town Meetings during the American Revolution, the Parisian 'Sections' during the French Revolution, the workers' councils and factory committees during the Russian Revolution to name just a few examples (see Murray Bookchin's **The Third Revolution** for details). This is to be expected if anarchism is, as we argue, a product of resistance to authority then any society with authorities will provoke resistance to them and generate anarchistic tendencies (and, of course, any societies without authorities cannot help but being anarchistic).

In other words, anarchism is an expression of the struggle against oppression and exploitation, a generalisation of working people's experiences and analyses of what is wrong with the current system and an expression of our hopes and dreams for a better future. This struggle existed before it was called anarchism, but the historic anarchist movement (i.e. groups of people calling their ideas anarchism and aiming for an anarchist society) is essentially a product of working class struggle against capitalism and the state, against oppression and exploitation, and **for** a free society of free and equal individuals.

Section I - What would an anarchist society look like?

Introduction

I.1 Isn't libertarian socialism an oxymoron?

I.1.1 Didn't Ludwig von Mises' "calculation argument" prove that socialism can not work?

I.1.2 Does Mises' argument mean libertarian communism is impossible?

I.1.3 What is wrong with markets anyway?

I.1.4 If capitalism is exploitative, then isn't socialism as well?

I.2 Is this a blueprint for an anarchist society?

I.2.1 Why discuss what an anarchist society would be like at all?

I.2.2 Will it be possible to go straight to an anarchist society from capitalism?

I.2.3 How is the framework of an anarchist society created?

I.3 What could the economic structure of an anarchist society look like?

I.3.1 What is a "syndicate"?

I.3.2 What is workers' self-management?

I.3.3 What role do collectives play in the "economy"?

I.3.4 What relations exist between individual syndicates?

I.3.5 What would confederations of syndicates do?

I.3.6 What about competition between syndicates?

I.3.7 What about people who do not want to join a syndicate?

I.3.8 Do anarchists seek "small autonomous communities, devoted to

small scale production"?

I.4 How would an anarchist economy function?

I.4.1 What is the point of economic activity in anarchy?

I.4.2 Why do anarchists desire to abolish work?

I.4.3 How do anarchists intend to abolish work?

I.4.4 What economic decision making criteria could be used in anarchy?

I.4.5 What about "*supply and demand*"?

I.4.6 Surely communist-anarchism would just lead to demand exceeding supply?

I.4.7 What will stop producers ignoring consumers?

I.4.8 What about investment decisions?

I.4.9 Should technological advance be seen as anti-anarchistic?

I.4.10 What would be the advantage of a wide basis of surplus distribution?

I.4.11 If libertarian socialism eliminates the profit motive, won't creativity suffer?

I.4.12 Won't there be a tendency for capitalist enterprise to reappear in any socialist society?

I.4.13 Who will do the dirty or unpleasant work?

I.4.14 What about the person who will not work?

I.4.15 What will the workplace of tomorrow look like?

I.4.16 Won't a libertarian communist society be inefficient?

I.5 What would the social structure of anarchy look like?

I.5.1 What are participatory communities?

I.5.2 Why are confederations of participatory communities needed?

I.5.3 What will be the scales and levels of confederation?

I.5.4 How will anything ever be decided by all these meetings?

I.5.5 Are participatory communities and confederations not just new states?

[I.5.6 Won't there be a danger of a "tyranny of the majority" under libertarian socialism?](#)

[I.5.7 What if I don't want to join a commune?](#)

[I.5.8 What about crime?](#)

[I.5.9 What about Freedom of Speech under Anarchism?](#)

[I.5.10 What about Political Parties?](#)

[I.5.11 What about interest groups and other associations?](#)

[I.5.12 Would an anarchist society provide health care and other public services?](#)

[I.5.13 Won't an anarchist society be vulnerable to the power hungry?](#)

[I.5.14 How could an anarchist society defend itself?](#)

[I.6 What about the "Tragedy of the Commons" and all that? Surely communal ownership will lead to overuse and environmental destruction?](#)

[I.6.1 But anarchists cannot explain how the use of property 'owned by everyone in the world' will be decided?](#)

[I.6.2 Doesn't any form of communal ownership involve restricting individual liberty?](#)

[I.7 Won't Libertarian Socialism destroy individuality?](#)

[I.7.1 Do tribal cultures indicate that communalism defends individuality?](#)

[I.7.2 Is this not worshipping the past or the "noble savage"?](#)

[I.7.3 Is the law required to protect individual rights?](#)

[I.7.4 Does capitalism protect individuality?](#)

[I.8 Does revolutionary Spain show that libertarian socialism can work in practice?](#)

[I.8.1 Wasn't the Spanish Revolution primarily a rural phenomenon and](#)

therefore inapplicable as a model for modern industrialised societies?

I.8.2 How were the anarchists able to obtain mass popular support in Spain?

I.8.3 How were Spanish industrial collectives organised?

I.8.4 How were the Spanish industrial collectives co-ordinated?

I.8.5 How were the Spanish agricultural co-operatives organised and co-ordinated?

I.8.6 What did the agricultural collectives accomplish?

I.8.7 I've heard that the rural collectives were created by force. Is this true?

I.8.8 But did the Spanish collectives innovate?

I.8.9 Why, if it was so good, did it not survive?

I.8.10 Why did the C.N.T. collaborate with the state?

I.8.11 Was the decision to collaborate a product of anarchist theory, so showing anarchism is flawed?

I.8.12 Was the decision to collaborate imposed on the CNT's membership?

I.8.13 What political lessons were learned from the revolution?

I.8.14 What economic lessons were learned from the revolution?

Section I - What would an anarchist society look like?

So far this FAQ has been largely critical, focusing on hierarchy, capitalism, the state and so on, and the problems to which they have led, as well as refuting some bogus "*solutions*" that have been offered by authoritarians of both the right and the left. It is now time to examine the constructive side of anarchism -- the libertarian-socialist society that anarchists envision. This is important because anarchism is essentially a **constructive** theory, in stark contradiction to the picture of usually painted of anarchism as chaos or mindless destruction.

Therefore, in this section of the FAQ we will give a short outline of what an anarchist society might look like. Such a society has basic features -- such as being non-hierarchical, decentralised and, above all else, spontaneous like life itself. To quote Glenn Albrecht, anarchists "*lay great stress on the free unfolding of a spontaneous order without the use of external force or authority.*" [*Ethics, Anarchy and Sustainable Development*", **Anarchist Studies**, vol.2, no.2, p. 110] This type of development implies that anarchist society would be organised from the simple to the complex, from the individual upwards to the community, the bio-region and, ultimately, the planet. The resulting complex and diverse order, which would be the outcome of nature freely unfolding toward greater diversity and complexity, is ethically preferable to any other sort of order simply because it allows for the highest degree of organic solidarity and freedom. Kropotkin described this vision of a truly free society as follows:

"We foresee millions and millions of groups freely constituting themselves for the satisfaction of all the varied needs of human beings. . . All these will be composed of human beings who will combine freely. . . 'Take pebbles,' said Fourier, 'put them in a box and shake them, and they will arrange themselves in a mosaic that you could never get by instructing to anyone the work of arranging them harmoniously.'" [**The Place of Anarchism in Socialistic Evolution**, pp. 11-12]

Anarchist opposition to hierarchy is an essential part of a "*spontaneously ordered*" society, for authority stops the free development and growth of the individual. From this natural growth of individuals, groups and society as a whole anarchists expect a society which meets the needs of all (both for material goods and individual and social freedom). In Proudhon's words, "*liberty is the mother of order, not its daughter.*" Any attempt to force society or individuals into a pre-determined structure which restricts their liberty will produce dis-order as natural balances and development is hindered and distorted in anti-social and destructive directions. Thus an anarchist society must be a free society of free individuals, associating within libertarian structures, rather than a series of competing hierarchies (be they political or economical). Only in freedom can society and individuals develop and create a just and fair society.

As the individual does not exist in a social vacuum, appropriate social conditions are required for individual freedom (and so subjectivity, or thought) to develop and blossom according to its full

potential. The theory of anarchism is built around the central assertion that individuals and their organisations **cannot** be considered in isolation from each other. As Carole Pateman points out, there is *"the argument that there is an interrelationship between the authority structures of institutions and the psychological qualities and attitudes of individuals, and . . . the related argument that the major function of participation is an educative one."* [**Participation and Democratic Theory**, p. 27] Anarchism presents these arguments in their most coherent and libertarian form. In other words, freedom is only sustained and protected by activity under conditions of freedom, namely self-government. Freedom is the only precondition for acquiring the maturity required for continued freedom.

As individual freedom can only be created, developed and defended by self-government and free association, a system which encourages individuality must be decentralised and participatory in order for people to develop a psychology that allows them to accept the responsibilities of self-management. Living under capitalism or any other authoritarian system produces a servile character, as the individual is constantly placed under hierarchical authority, which blunts their critical and self-governing abilities by lack of use. Such a situation cannot promote freedom. Looking at capitalism, we find that under wage labour, people sell their creative energy and control over their activity for a given period. The boss does not just take surplus value from the time employees sell, but the time itself -- their ability to make their own decisions, express themselves through work and with their fellow workers. Wage labour equals wage slavery. You sell your time and skills (i.e. liberty) everyday at work to someone else. You will never be able to buy that time back for yourself. Once it is gone; it is gone for good. This is why anarchists see the need to *"create the situation where each person may live by working freely, without being forced to sell his [or her] work and his [or her] liberty to others who accumulate wealth by the labour of their serfs."* [Kropotkin, **Words of a Rebel**, p. 208]

Anarchism is about changing society and abolishing all forms of authoritarian social relationship, putting life before the soul-destroying "efficiency" needed to survive under capitalism; for the anarchist *"takes his stand on his positive right to life and all its pleasures, both intellectual, moral and physical. He loves life, and intends to enjoy it to the full."* [Michael Bakunin, quoted by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 118]

Anarchists think that the essential social values are human values, and that society is a complex of associations held together by the wills of their members, whose well-being is its purpose. They consider that it is not enough that the forms of association should have the passive or *"implied"* consent of their members, but that the society and the individuals who make it up will be healthy only if it is in the full sense libertarian, i.e. self-governing, self-managed, and egalitarian. This implies not only that all the members should have a *"right"* to influence its policy if they so desire, but that the greatest possible opportunity should be afforded for every person to exercise this right. Anarchism involves an active, not merely passive, citizenship on the part of society's members and holds that this principle is not only applied to some *"special"* sphere of social action called *"politics"* but to any and every form of social action, including economic activity.

So, as will be seen, the key concept underlying both the social/political and the economic structure of libertarian socialism is *"self-management,"* a term that implies not only workers control of their

workplaces but also citizens' control of their communities (where it becomes "*self-government*"), through direct democracy and voluntary federation. Thus self-management is the positive implication of anarchism's "*negative*" principle of opposition to hierarchical authority. For through self-management, hierarchical authority is dissolved as self-managing workplace and community assemblies/councils are decentralised, "*horizontal*" organisations in which each participant has an equal voice in the decisions that affect his or her life, instead of merely following orders and being governed by others. Self-management, therefore, is the essential condition for a world in which individuals will be free to follow their own dreams, in their own ways, co-operating together as equals without interference from any form of authoritarian power (such as government or boss).

Perhaps needless to say, this section is intended as a heuristic device **only**, as a way of helping readers envision how anarchist principles might be embodied in practice. They are not (nor are they intended to be, nor are they desired to be) a definitive statement of how they **must** be embodied. The idea that a few people could determine exactly what a free society would look like is contrary to the anarchist principles of free growth and thought, and is far from our intention. Here we simply try to indicate some of the structures that an anarchist society may contain, based on the what ideals and ideas anarchists hold and the few examples of anarchy in action that have existed and our critical evaluation of their limitations and successes.

Of course, an anarchist society will not be created overnight nor without links to the past, and so it will initially include structures created in social struggle (i.e. created **within** but **against** capitalism and the state -- see [section J.5](#)) and will be marked with the ideas that inspired and developed within that struggle. For example, the anarchist collectives in Spain were organised in a bottom-up manner, similar to the way the C.N.T. (the anarcho-sindicalist labour union) was organised before the revolution. In this sense, anarchy is not some distant goal but rather an expression of working class struggle. The creation of alternatives to the current hierarchical, oppressive, exploitative and alienated society is a necessary part of the class struggle and the maintaining of your liberty and humanity in the insane world of hierarchical society. As such, an anarchist society will be the generalisation of the various types of "*anarchy in action*" created in the various struggles against all forms of oppression and exploitation (see [section I.2.3](#)).

This means that how an anarchist society would look like and work is not independent of the means used to create it. In other words, an anarchist society will reflect the social struggle which preceded it and the ideas which existed within that struggle as modified by the practical needs of any given situation. Therefore the vision of a free society indicated in this section of the FAQ is not some sort of abstraction which will be created overnight. If anarchists did think that then we would rightly be called utopian. No, an anarchist society is the outcome of activity and social struggle, struggle which helps to create a mass movement which contains individuals who can think for themselves and are willing and able to take responsibility for their own lives (see section J - "[What do anarchists do?](#)").

So, when reading this section please remember that this is not a blueprint but only one possible suggestion of what anarchy would look like. It is designed to provoke thought and indicate that an

anarchist society is possible and that such a society is the product of our activity in the here and now. We hope that our arguments and ideas presented in this section will inspire more debate and discussion of how a free society could work and, equally as important, help to inspire the struggle that will create that society. After all, anarchists desire to build the new world in the shell of the old. Unless we have some idea of what that new society will be like it is difficult to pre-figure it in our activities today! A point not lost on Kropotkin who argued that it is difficult to "build" "without extremely careful consideration beforehand, based on the study of social life, of **what** and **how** we want to build -- we must reject [Proudhon's] slogan [that "in demolishing we shall build"] . . . and declare: 'in building we shall demolish.'" [**Conquest of Bread**, p. 173f] More recently, Noam Chomsky argued that "[a]lternatives to existing forms of hierarchy, domination, private power and social control certainly exist in principle. . . But to make them realistic will require a great deal of committed work, including the work of articulating them clearly." [Noam Chomsky, **Turning the Tide**, p. 250] This section of the FAQ can be considered as a contribution to the articulating of libertarian alternatives to existing society, of what we want to build for the future.

In other words, view this section of our FAQ as a guide. To use an analogy, when going on holiday it is a good idea to have a map or guidebook with you, otherwise you will not know where you are going and, indeed, will likely end up **in the wrong place**. Thus the progress towards a free society is helped by anarchist ideas and visions, otherwise it may end up the opposite of what we desire. However, it is important that any such guide be discussed by everyone before hand, to ensure that it is a **useful** guide and one that reflects everyone's interests and desires. Thus this section of our FAQ is simply a contribution to this discussion, a contribution inspired (in part) by previous contributions, visions and struggles.

We are not afraid that many will argue that much of the vision we present in this section of the FAQ is utopian. Perhaps they are right, but, as Oscar Wilde once said:

"A map of the world that does not include Utopia is not worth glancing at, for it leaves out the one country at which Humanity is always landing. And when Humanity lands there, it looks out and, seeing a better country, sets sail. Progress is the realisation of Utopias." [**The Soul of Man Under Socialism**, p. 1184]

However, we have attempted to be as practical as we are visionary, presenting realistic problems as well as presenting evidence for our solutions to these problems (as well as our general ideas) from real life where possible, rather than present a series of impossible assumptions which dismiss possible problems by definition. After all, it is better to consider the worse possible cases for if they do not appear then nothing has been lost and if they do at least we have a starting point for possible solutions. So, all in all, we have tried to be practical utopians!

We must stress, however, that anarchists do not want a "perfect" society (as is often associated with the term "utopia"). This would be as impossible as the neo-classical vision of perfect competition. Rather we want a free society and so one based on real human beings and so one with its own problems and

difficulties. Our use of the word "*utopia*" should not be taken to imply that anarchists assume away all problems and argue that an anarchist society would be ideal and perfect. No society has ever been perfect and no society ever will be. All we argue is that an anarchist society will have fewer problems than those before and be better to live within. Anyone looking for perfection should look elsewhere. Anyone looking for a better, but still human, world may find in anarchism a potential end for their quest.

One last point. We must point out here that we are discussing the social and economic structures of areas within which the inhabitants are predominately anarchists. It is obviously the case that areas in which the inhabitants are not anarchists will take on different forms depending upon the ideas that dominate there. Hence, assuming the end of the current state structure, we could see anarchist communities along with statist ones (capitalist or socialist) and these communities taking different forms depending on what their inhabitants want -- communist to individualist communities in the case of anarchist ones, state socialist to private state communities in the statist areas, ones based on religious sects and so on. As Malatesta argued, anarchists "*must be intransigent in our opposition to all capitalist imposition and exploitation, and tolerant of all social concepts which prevail in different human groupings, so long as they do not threaten the equal rights and freedom of others.*" [**Life and Ideas**, p. 174] Thus we respect the wishes of others to experiment and live their own lives as they see fit, while encouraging those in capitalist and other statist communities to rise in revolution against their masters and join the free federation of communes of the anarchist community. Needless to say, we do not discuss non-anarchist communities here as it is up to non-anarchists to present their arguments in favour of their kind of statism. We will concentrate on discussing anarchist ideas on social organisation here.

So, remember that we are not arguing that everyone will live in an anarchist way in a free society. Far from it. There will be pockets of unfreedom around, simply because the development of ideas varies from area to area. However, it would be a mistake to assume that just because there are many choices of community available that it automatically makes a society an anarchist one. For example, the modern world boasts over 200 different states. For most of them, individuals can leave and join another if it will let them. There is no world government as such. This does not make this series of states an anarchy. Similarly, a system of different company towns is not an anarchy either. The nature of the associations is just as important as their voluntary nature. As Kropotkin argued, the "*communes of the next revolution will not only break down the state and substitute free federation for parliamentary rule; they will part with parliamentary rule within the commune itself. . . They will be anarchist within the commune as they will be anarchist outside it.*" [**The Commune of Paris**] Hence an anarchist society is one that is freely joined and left and is internally non-hierarchical. Thus anarchist communities may co-exist with non-anarchist ones but this does **not** mean the non-anarchist ones are in any way anarchistic or libertarian.

When reading this section of the FAQ remember three things. One, an anarchist society will be created by the autonomous actions of the mass of the population, not by anarchists writing books about it. This means a real anarchist society will make many mistakes and develop in ways we cannot predict. Two, that it is only a series of suggestions on how things **could** work in an anarchist society -- it is **not** a blueprint of any kind. Three, that we recognise that anarchist areas will probably co-exist with non-anarchist areas. This does not make the non-anarchist areas anarchist and it is up to supporters of

hierarchy to present their own visions of the future. All anarchists can do is present what we believe and why we think such a vision is both desirable **and** viable.

We hope that our arguments and ideas presented in this section of the FAQ will inspire more debate and discussion of how a free society would work. In addition, and equally as important, we hope it will help inspire the struggle that will create that society. After all, anarchists desire to build the new world in the shell of the old. Unless we have some idea of what that new society will be like it is difficult to create it in our activities in the here and now!

J.5 What alternative social organisations do anarchists create?

Anarchism is all about "*do it yourself*," people helping each other out in order to secure a good society to live within and to protect, extend and enrich their personal freedom. As such anarchists are keenly aware of the importance of building alternatives to both capitalism and the state in the here and now. Only by creating practical alternatives can we show that anarchism is a viable possibility and train ourselves in the techniques and responsibilities of freedom:

"If we put into practice the principles of libertarian communism within our organisations, the more advanced and prepared we will be on that day when we come to adopt it completely." [C.N.T. member, quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**, p. 79]

By building the new world in the shell of the old, we help create the environment within which individuals can manage their own affairs and develop their abilities to do so. In other words, we create "*schools of anarchism*" which lay the foundations for a better society as well as promoting and supporting social struggle against the current system. Make no mistake, the alternatives we discuss in this section are not an alternative to direct action and the need for social struggle - they are an expression of social struggle and a form of direct action. They are the framework by which social struggle can build and strengthen the anarchist tendencies within capitalist society which will ultimately replace it.

Therefore it is wrong to think that anarchists are indifferent to making life more bearable, even more enjoyable, under capitalism. A free society will not just appear from nowhere, it will be created by individuals and communities with a long history of social struggle and organisation. For as Wilhelm Reich so correctly pointed out:

*"Quite obviously, a society that is to consist of 'free individuals,' to constitute a 'free community' and to administer itself, i.e. to 'govern itself,' cannot be suddenly created by decrees. It has to **evolve organically**."* [**The Mass Psychology of Fascism**, p. 241]

And it is this organic evolution that anarchists promote when they create anarchist alternatives within capitalist society. The alternatives anarchists create (be they workplace or community unions, co-operatives, mutual banks, and so on) are marked by certain common features such as being self-managed, being based upon equality and decentralisation and working with other groups and associations within a confederal network based upon mutual aid and solidarity. In other words, they are **anarchist** in both spirit and structure and so create a practical bridge between what is and what is possible.

Therefore, anarchists consider the building of alternatives as a key aspect of their activity under

capitalism. This is because they, like all forms of direct action, are "schools of anarchy" and also because they make the transition to a free society easier. *"Through the organisations set up for the defence of their interests,"* in Malatesta's words, *"the workers develop an awareness of the oppression they suffer and the antagonism that divides them from the bosses and as a result begin to aspire to a better life, become accustomed to collective struggle and solidarity and win those improvements that are possible within the capitalist and state regime."* [**The Anarchist Revolution**, p. 95] By creating viable examples of *"anarchy in action"* we can show that our ideas are practical and convince people of anarchist ideas by "good examples." Therefore this section of the FAQ will indicate the alternatives anarchists support and **why** we support them.

The approach anarchists take to this activity could be termed *"social unionism"* -- the collective action of groups to change certain aspects (and, ultimately, all aspects) of their lives. This "social unionism" takes many different forms in many different areas (some of which, not all, are discussed here) -- but they share the same basic aspects of collective direct action, self-organisation, self-management, solidarity and mutual aid. These "social unions" would be a means (like the old labour movement) *"of raising the morale of the workers, accustom them to free initiative and solidarity in a struggle for the good of everyone and render them capable of imagining, desiring and putting into practice an anarchist life."* [Errico Malatesta, **The Anarchist Revolution**, p. 28]

As will quickly become obvious in this discussion (as if it had not been so before!) anarchists are firm supporters of *"self-help,"* an expression that has been sadly corrupted (like freedom) by the right in recent times. Like "freedom", "self-help" should be saved from the clutches of the right who have no real claim to that expression. Indeed, anarchism was created from and based itself upon working class self-help -- for what other interpretation can be gathered from the famous slogan of the **First International** that *"the emancipation of the working class must be the task of the working class itself"*? So, Anarchists have great faith in the abilities of working class people to work out for themselves what their problems are and act to solve them.

Anarchist support, and promotion, of alternatives is a **key** aspect of this process of self-liberation, and so a key aspect of anarchism. While strikes, boycotts, and other forms of high profile direct action may be more sexy than the long and hard task of creating and building social alternatives, these are the nuts and bolts of creating a new world as well as the infrastructure which supports the "high profile" activities. Hence the importance of highlighting the alternatives anarchists support and build. The alternatives we discuss here is part of the process of building the new world in the shell of the old -- and involve both combative organisations (such as community and workplace unions) as well as more defensive/supportive ones (such as co-operatives and mutual banks). Both have their part to play in the class struggle, although the combative ones are the most important in creating the spirit of revolt and the possibility of creating an anarchist society (which will be reflected in the growth of supportive organisations to aid that struggle).

We must also stress that anarchists look to "natural" tendencies within social struggle as the basis of any alternatives we try to create. As Kropotkin put it, anarchism is based *"on an analysis of tendencies of an*

evolution that is already going on in society, and on induction therefrom as to the future." It is *"representative . . . of the creative, instructive power of the people themselves who aimed at developing institutions of common law in order to protect them from the power-seeking minority."* In other words, anarchism bases itself on those tendencies that are created by the self-activity of working class people and while developing within capitalism are **in opposition** to it -- such tendencies are expressed in organisational form as trade unions and other forms of workplace struggle, cooperatives (both productive and credit), libertarian schools, and so on. For anarchists, anarchism is *"born among the people - in the struggles of real life and not in the philosopher's studio"* and owes its *"origin to the constructive, creative activity of the people . . . and to a protest - a revolt against the external force which had thrust itself upon [communal] . . . institutions."* [**Kropotkin's Revolutionary Pamphlets**, p. 158, p. 147, p. 150, p. 149] This *"creative activity"* is expressed in the organisations created in the class struggle by working people, some of which we discuss in this section of the FAQ. Therefore, the alternatives anarchists support should not be viewed in isolation of social struggle and working class resistance to hierarchy - the reverse in fact, as these alternatives are almost always expressions of that struggle.

Lastly, we should note that this list of alternatives does not list all the forms of organisation anarchists create. For example, we have ignored solidarity groups and organisations which are created to campaign against or for certain issues or reforms. Anarchists are in favour of such organisations and work within them to spread anarchist ideas, tactics and organisational forms. However, these interest groups (while very useful) do not provide a framework for lasting change as do the ones we highlight below although we stress that anarchists do not ignore such organisations and struggles (see sections [J.1.4](#) and [J.1.5](#) for more details on anarchist opinions on such "single issue" campaigns).

We have also ignored what have been called *"intentional communities"*. This is when a group of individuals squat or buy land and other resources within capitalism and create their own anarchist commune in it. Most anarchists reject this idea as capitalism and the state must be fought, not ignored. In addition, due to their small size, they are rarely viable experiments in communal living and nearly always fail after a short time (for a good summary of Kropotkin's attitude to such communities, which can be taken as typical, to such schemes see Graham Purchase's book **Evolution & Revolution**, pp. 122-125). Dropping out will not stop capitalism and the state and while such communities may try to ignore the system, they will find that the system will not ignore them -- they will come under competitive and ecological pressures from capitalism whether they like it or not.

Therefore the alternatives we discuss here are attempts to create anarchist alternatives within capitalism and which aim to **change** it (either by revolutionary or evolutionary means). They are based upon **challenging** capitalism and the state, not ignoring them by dropping out. Only by a process of direct action and building alternatives which are relevant to our daily lives can we revolutionise and change both ourselves and society.

J.5.1 What is community unionism?

Community unionism is our term for the process of creating participatory communities (called "communes" in classical anarchism) within the state.

Basically, a community union is the creation of interested members of a community who decide to form an organisation to fight against injustice in their local community and for improvements within it. It is a forum by which inhabitants can raise issues that affect themselves and others and provide a means of solving these problems. As such, it is a means of directly involving local people in the life of their own communities and collectively solving the problems facing them as both individuals and as part of a wider society. Politics, therefore, is not separated into a specialised activity that only certain people do (i. e. politicians). Instead, it becomes communalised and part of everyday life and in the hands of all.

As would be imagined, like the participatory communities that would exist in an anarchist society, the community union would be based upon a mass assembly of its members. Here would be discussed the issues that effect the membership and how to solve them. Like the communes of a future anarchy, these community unions would be confederated with other unions in different areas in order to co-ordinate joint activity and solve common problems. These confederations, like the basic union assemblies themselves, would be based upon direct democracy, mandated delegates and the creation of administrative action committees to see that the memberships decisions are carried out.

The community union could also raise funds for strikes and other social protests, organise pickets and boycotts and generally aid others in struggle. By organising their own forms of direct action (such as tax and rent strikes, environmental protests and so on) they can weaken the state while building an self-managed infrastructure of co-operatives to replace the useful functions the state or capitalist firms currently provide.

So, in addition to organising resistance to the state and capitalist firms, these community unions could play an important role in creating an alternative economy within capitalism. For example, such unions could have a mutual bank or credit union associated with them which could allow funds to be gathered for the creation of self-managed co-operatives and social services and centres. In this way a communalised co-operative sector could develop, along with a communal confederation of community unions and their co-operative banks.

Such community unions have been formed in many different countries in recent years to fight against particularly evil attacks on the working class. In Britain, groups were created in neighbourhoods across the country to organise non-payment of the conservative government's community charge (popularly known as the poll tax). Federations of these groups and unions were created to co-ordinate the struggle and pull resources and, in the end, ensured that the government withdrew the hated tax and helped push Thatcher out of government. In Ireland, similar groups were formed to defeat the privatisation of the water industry by a similar non-payment campaign.

However, few of these groups have been taken as part of a wider strategy to empower the local community but the few that have indicate the potential of such a strategy. This potential can be seen

from two examples of community organising in Europe, one in Italy and another in Spain.

In Italy, anarchists have organised a very successful **Municipal Federation of the Base** (FMB) in Spezzano Albanese (in the South of that country). This organisation is *"an alternative to the power of the town hall"* and provides a *"glimpse of what a future libertarian society could be"* (in the words of one activist). The aim of the Federation is *"the bringing together of all interests within the district. In intervening at a municipal level, we become involved not only in the world of work but also the life of the community. . . the FMB make counter proposals [to Town Hall decisions], which aren't presented to the Council but proposed for discussion in the area to raise people's level of consciousness. Whether they like it or not the Town Hall is obliged to take account of these proposals."* [*Community Organising in Southern Italy*", pp. 16-19, **Black Flag** no. 210, p. 17, p. 18]

In this way, local people take part in deciding what effects them and their community and create a self-managed "dual power" to the local, and national, state. They also, by taking part in self-managed community assemblies, develop their ability to participate and manage their own affairs, so showing that the state is unnecessary and harmful to their interests. In addition, the FMB also supports co-operatives within it, so creating a communalised, self-managed economic sector within capitalism. Such a development helps to reduce the problems facing isolated co-operatives in a capitalist economy -- see section [J.5.11](#) -- and was actively done in order to *"seek to bring together all the currents, all the problems and contradictions, to seek solutions"* to such problems facing co-operatives [**Ibid.**].

Elsewhere in Europe, the long, hard work of the C.N.T. in Spain has also resulted in mass village assemblies being created in the Puerto Real area, near Cadiz. These community assemblies came about to support an industrial struggle by shipyard workers. As one C.N.T. member explains, *"[e]very Thursday of every week, in the towns and villages in the area, we had all-village assemblies where anyone connected with the particular issue [of the rationalisation of the shipyards], whether they were actually workers in the shipyard itself, or women or children or grandparents, could go along. . . and actually vote and take part in the decision making process of what was going to take place."* [**Anarcho-Syndicalism in Puerto Real: from shipyard resistance to direct democracy and community control**, p. 6]

With such popular input and support, the shipyard workers won their struggle. However, the assembly continued after the strike and *"managed to link together twelve different organisations within the local area that are all interested in fighting. . . various aspects [of capitalism]"* including health, taxation, economic, ecological and cultural issues. Moreover, the struggle *"created a structure which was very different from the kind of structure of political parties, where the decisions are made at the top and they filter down. What we managed to do in Puerto Real was make decisions at the base and take them upwards."* [**Ibid.**]

In these ways, a grassroots movement from below has been created, with direct democracy and participation becoming an inherent part of a local political culture of resistance, with people deciding things for themselves directly and without hierarchy. Such developments are the embryonic structures of

a world based around direct democracy and participation, with a strong and dynamic community life. For, as Martin Buber argued, "[t]he more a human group lets itself be represented in the management of its common affairs. . . the less communal life there is in it and the more impoverished it becomes as a community." [**Paths in Utopia**, p. 133]

Anarchist support and encouragement of community unionism, by creating the means for communal self-management, helps to enrich the community as well as creating the organisational forms required to resist the state and capitalism. In this way we build the anti-state which will (hopefully) replace the state. Moreover, the combination of community unionism with workplace assemblies (as in Puerto Real), provides a mutual support network which can be very effective in helping winning struggles. For example, in Glasgow, Scotland in 1916, a massive rent strike was finally won when workers came out in strike in support of the rent strikers who been arrested for non-payment.

Such developments indicate that Isaac Puente was correct to argue that:

"Libertarian Communism is a society organised without the state and without private ownership. And there is no need to invent anything or conjure up some new organization for the purpose. The centres about which life in the future will be organised are already with us in the society of today: the free union and the free municipality [or Commune]."

*"**The union**: in it combine spontaneously the workers from factories and all places of collective exploitation.*

*"And **the free municipality**: an assembly with roots stretching back into the past where, again in spontaneity, inhabitants of village and hamlet combine together, and which points the way to the solution of problems in social life in the countryside.*

"Both kinds of organisation, run on federal and democratic principles, will be sovereign in their decision making, without being beholden to any higher body, their only obligation being to federate one with another as dictated by the economic requirement for liaison and communications bodies organised in industrial federations.

*"The **union and the free municipality** will assume the collective or common ownership of everything which is under private ownership at present [but collectively used] and will regulate production and consumption (in a word, the economy) in each locality.*

*"The very bringing together of the two terms (communism and libertarian) is indicative in itself of the fusion of two ideas: one of them is collectivist, tending to bring about harmony in the whole through the contributions and cooperation of individuals, without undermining their independence in any way; while the other is individualist, seeking to reassure the individual that his independence will be respected." [**Libertarian Communism**, pp. 6-7]*

The combination of community unionism, along with industrial unionism (see [next section](#)), will be the key of creating an anarchist society, Community unionism, by creating the free commune within the state, allows us to become accustomed to managing our own affairs and seeing that an injury to one is an injury to all. In this way a social power is created in opposition to the state. The town council may still be in the hands of politicians, but neither they nor the central government can move without worrying about what the people's reaction might be, as expressed and organised in their community unions and assemblies.

J.5.2 Why do anarchists support industrial unionism?

Simply because it is effective, expresses our ideas on how industry will be organised in an anarchist society and is a key means of ending capitalist oppression and exploitation. As Max Stirner pointed out the *"labourers have the most enormous power in their hands, and, if they once become thoroughly conscious of it and used it, nothing could withstand them; they would only have to stop labour, regard the product of labour as theirs, and enjoy it. This is the sense of the labour disturbances which show themselves here and there."* [**The Ego and Its Own**, p. 116]

Libertarian workplace organisation is the best way of organising and exercising this power. However, before discussing why anarchists support industrial unionism, we must point out that the type of unionism anarchists support has very little in common with that associated with reformist or business unions like the TUC in Britain or the AFL-CIO in the USA (see [next section](#)).

In such unions, as Alexander Berkman points out, the *"rank and file have little say. They have delegated their power to leaders, and these have become the boss. . . Once you do that, the power you have delegated will be used against you and your interests every time."* [**The ABC of Anarchism**, p. 58] Reformist unions, even if they do organise by industry rather than by trade or craft, are top-heavy and bureaucratic. Thus they are organised in the same manner as capitalist firms or the state -- and like both of these, the officials at the top have different interests than those at the bottom. Little wonder anarchists oppose such forms of unionism as being counter to the interests of their members. The long history of union officials betraying their members is proof enough of this.

Therefore anarchists propose a different kind of workplace organisation, one that is organised in a totally different manner than the current, mainstream, unions. We will call this new kind of organisation *"industrial unionism"* (although perhaps industrial syndicalism or workplace assemblies may be a better, less confusing, name for it).

Industrial unionism is based upon the idea that workers should directly control their own organisations and struggles. As such, it is based upon workplace assemblies and their confederation between different workplaces in the same industry as well as between different workplaces in the same locality. An industrial union is a union which organises all workers in a given type of industry together into one body. This means that all workers regardless of their actual trade would ideally be in the one union. On a

building site, for example, brick-layers, plumbers, carpenters and so on would all be a member of the Building Workers Union. Each trade may have its own sections within the union (so that plumbers can discuss issues relating to their trade for example) but the core decision making focus would be an assembly of all workers employed in a workplace. As they all have the same boss it is logical for them to have the same union.

However, industrial unionism should **not** be confused with a closed shop situation where workers are forced to join a union when they become a wage slave in a workplace. While anarchists do desire to see all workers unite in one organisation, it is vitally important that workers can leave a union and join another. The closed shop only empowers union bureaucrats and gives them even more power to control (and/or ignore) their members. As anarchist unionism has no bureaucrats, there is no need for the closed shop and its voluntary nature is essential in order to ensure that a union be subject to "exit" as well as "voice" for it to be responsive to its members wishes.

As Albert Meltzer argues, the closed shop means that *"the [trade union] leadership becomes all-powerful since once it exerts its right to expel a member, that person is not only out of the union, but out of a job."* Anarcho-syndicalism, therefore, *"rejects the closed shop and relies on voluntary membership, and so avoids any leadership or bureaucracy."* [**Anarchism: Arguments for and against**, p. 56 -- also see Tom Wetzel's excellent article *"The Origins of the Union Shop"*, part 3 of the series *"Why does the union bureaucracy exist?"* in **Ideas & Action** no. 11, Fall 1989 for a fuller discussion of these issues] Without voluntary membership even the most libertarian union may become bureaucratic and unresponsive to the needs of its members and the class struggle (even anarcho-syndicalist unions are subject to hierarchical influences by having to work within the hierarchical capitalist economy although voluntary membership, along with a libertarian structure and tactics, helps combat these tendencies -- see section [J.3.9](#)).

Obviously this means that anarchist opposition to the closed shop has nothing in common with boss, conservative and right-wing libertarian opposition to it. These groups, while denouncing coercing workers into trades unions, support the coercive power of bosses over workers without a second thought (indeed, given their justifications of sexual harassment and other forms of oppressive behaviour by bosses, we can imagine that they would happily support workers having to join **company** unions to keep their jobs -- only when bosses dislike mandatory union membership do these defenders of "freedom" raise their opposition). Anarchist opposition to the closed shop (like their opposition to union bureaucracy) flows from their opposition to hierarchy and authoritarian social relationships. The right-wing's opposition is purely a product of their pro-capitalist and pro-authority position and the desire to see the worker subject only to **one** boss during working hours, not **two** (particularly if this second one has to represent workers interests to some degree). Anarchists, on the other hand, want to get rid of all bosses during working hours.

In industrial unionism, the membership, assembled in their place of work, are the ones to decide when to strike, when to pay strike pay, what tactics to use, what demands to make, what issues to fight over and whether an action is "official" or "unofficial". In this way the rank and file is in control of their unions

and, by confederating with other assemblies, they co-ordinate their forces with their fellow workers. As syndicalist activist Tom Brown makes clear:

"The basis of the Syndicate is the mass meeting of workers assembled at their place of work. . . The meeting elects its factory committee and delegates. The factory is Syndicate is federated to all other such committees in the locality. . . In the other direction, the factory, let us say engineering factory, is affiliated to the District Federation of Engineers. In turn the District Federation is affiliated to the National Federation of Engineers. . . Then, each industrial federation is affiliated to the National Federation of Labour . . . how the members of such committees are elected is most important. They are, first of all, not representatives like Members of Parliament who air their own views; they are delegates who carry the message of the workers who elect them. They do not tell the workers what the 'official' policy is; the workers tell them.

"Delegates are subject to instant recall by the persons who elected them. None may sit for longer than two successive years, and four years must elapse before his [or her] next nomination. Very few will receive wages as delegates, and then only the district rate of wages for the industry. . .

"It will be seen that in the Syndicate the members control the organisation - not the bureaucrats controlling the members. In a trade union the higher up the pyramid a man is the more power he wields; in a Syndicate the higher he is the less power he has.

"The factory Syndicate has full autonomy over its own affairs. . ." [**Syndicalism**, pp. 35-36]

As can be seen, industrial unionism reflects anarchist ideas of organisation - it is organised from the bottom up, it is decentralised and based upon federation and it is directly managed by its members in mass assemblies. It is anarchism applied to industry and the needs of the class struggle. By supporting such forms of organisations, anarchists are not only seeing "anarchy in action", they are forming effective tools which can win the class war. By organising in this manner, workers are building the framework of a co-operative society within capitalism. Rudolf Rocker makes this clear:

"the syndicate. . . has for its purpose the defence of the interests of the producers within existing society and the preparing for and the practical carrying out of the reconstruction of social life . . . It has, therefore, a double purpose: 1. As the fighting organisation of the workers against their employers to enforce the demand of the workers for the safeguarding of their standard of living; 2. As the school for the intellectual training of the workers to make them acquainted with the technical management of production and economic life in general." [**Anarcho-Syndicalism**, p. 51]

Given the fact that workers wages have been stagnating (or, at best, falling behind productivity

increases) across the world as the trade unions have been weakened and marginalised (partly because of their own tactics, structure and politics) it is clear that there exists a great need for working people to organise to defend themselves. The centralised, top-down trade unions we are accustomed to have proved themselves incapable of effective struggle (and, indeed, the number of times they have sabotaged such struggle are countless - a result not of "bad" leaders but of the way these unions organise and their role within capitalism). Hence anarchists support industrial unionism (co-operation between workers assemblies) as an effective alternative to the malaise of official trade unionism. How anarchists aim to encourage such new forms of workplace organisation and struggle will be discussed in the [next section](#).

We are sure that many radicals will consider that such decentralised, confederal organisations would produce confusion and disunity. However, anarchists maintain that the statist, centralised form of organisation of the trades unions would produce indifference instead of involvement, heartlessness instead of solidarity, uniformity instead of unity, and elites instead of equality, nevermind killing all personal initiative by lifeless discipline and bureaucratic ossification and permitting no independent action. The old form of organisation has been tried and tried again - it has always failed. The sooner workers recognise this the better.

One last point. We must note that many anarchists, particularly communist-anarchists, consider unions, even anarchosyndicalist ones, as having a strong reformist tendency (as discussed in section [J.3.9](#)). However, all anarchists recognise the importance of autonomous class struggle and the need for organisations to help fight that struggle. Thus anarchist-communists, instead of trying to organise industrial unions, apply the ideas of industrial unionism to workplace struggles. In other words, they would agree with the need to organise all workers into a mass assembly and to have elected, recallable administration committees to carry out the strikers wishes. This means that such anarchists they do not call their practical ideas "anarcho-syndicalism" nor the workplace assemblies they desire to create "unions," there are **extremely** similar in nature and so we can discuss both using the term "industrial unionism". The key difference is that many (if not most) anarcho-communists consider that permanent workplace organisations that aim to organise **all** workers would soon become reformist. Because of this they also see the need for anarchist to organise **as anarchists** in order to spread the anarchist message within them and keep their revolutionary aspects at the forefront (and so support industrial networks -- see [next section](#)).

Therefore while there are slight differences in terminology and practice, all anarchists would support the ideas of industrial unionism we have outlined above.

J.5.3 What attitude do anarchists take to existing unions?

As noted in the [last section](#), anarchists desire to create organisations in the workplace radically different from the existing trade unions. The question now arises, what attitude do anarchists generally take to these existing unions?

Before answering that question, we must stress that anarchists, no matter how hostile to trade unions as bureaucratic, reformist institutions, **are** in favour of working class struggle. This means that when trade union members or other workers are on strike anarchists will support them (unless the strike is totally reactionary -- for example, no anarchist would support a strike which is racist in nature). This is because almost all anarchists consider it basic to their politics that you don't scab and you don't crawl (a handful of individualist anarchists are the exception). So, when reading anarchist criticisms of trade unions do not for an instant think we do not support industrial struggles -- we do, we are just very critical of the unions that are sometimes involved.

So, what do anarchists think of the trade unions?

For the most part, one could call the typical anarchist opinion toward them as one of "hostile support." It is hostile insofar as anarchists are well aware of how bureaucratic these unions are and how they continually betray their members. Given that they are usually little more than "business" organisations, trying to sell their members labour-power for the best deal possible, it is unsurprising that they are bureaucratic and that the interests of the bureaucracy are at odds with those of its membership. However, our attitude is "supportive" in that even the worse trade union represents an attempt at working class solidarity and self-help, even if the attempt is now far removed from the initial protests and ideas that set the union up. For a worker to join a trade union means having to recognise, to some degree, that he or she has different interests from their boss. There is no way to explain the survival of the unions other than the fact that there are different class interests, and workers have understood that to promote their own interests they have to organise on class lines.

No amount of conservatism, bureaucracy or backwardness within the unions can obliterate the essential fact of different class interests. The very existence of trade unions testifies to the existence of some level of basic class consciousness -- even though most trade unions claim otherwise and that capital and labour have interests in common. As we have argued, anarchists reject this claim with good reason, and the very existence of trade unions show that this is not true. If workers and capitalists have the same interests, trade unions would not exist. Moreover, claiming that the interests of workers and bosses are the same theoretically disarms both the unions and its members and so weakens their struggles (after all, if bosses and workers have similar interests then any conflict is bad and the decisions of the boss must be in workers' interests!).

Thus anarchist viewpoints reflect the contradictory nature of business/trade unions -- on the one hand they are products of workers' struggle, but on the other they are **very** bureaucratic, unresponsive and centralised and (therefore) their full-time officials have no real interest in fighting against wage labour as it would put them out of a job. Indeed, the very nature of trade unionism ensures that the interests of the union (i.e. the full-time officials) come into conflict with the people they claim to represent.

This can best be seen from the disgraceful activities of the TGWU with respect to the Liverpool dockers in Britain. The union officials (and the TUC itself) refused to support their members after they had been sacked in 1995 for refusing to cross a picket line. The dockers organised their own struggle, contacting

dockers' unions across the world and organising global solidarity actions. Moreover, a network of support groups sprung up across Britain to gather funds for their struggle (and, we are proud to note, anarchists have played their role in supporting the strikers). Many trade unionists could tell similar stories of betrayal by "their" union.

This occurs because trade unions, in order to get recognition from a company, must be able to promise industrial pieces. They need to enforce the contracts they sign with the bosses, even if this goes against the will of its members. Thus trade unions become a third force in industry, somewhere between management and the workers and pursuing its own interests. This need to enforce contracts soon ensures that the union becomes top-down and centralised -- otherwise its members would violate the unions agreements. They have to be able to control their members - which usually means stopping them fighting the boss - if they are to have anything to bargain with at the negotiation table. This may sound odd, but the point is that the union official has to sell the employer labour discipline and freedom from unofficial strikes as part of its side of the bargain. Otherwise the employer will ignore them. The nature of trade unionism is to take power away from out of local members and centralise it into the hands of officials at the top of the organisation.

Thus union officials sell out their members because of the role trade unions play within society, not because they are nasty individuals (although some are). They behave as they do because they have too much power and, being full-time and highly paid, are unaccountable, in any real way, to their members. Power -- and wealth -- corrupts, no matter who you are. (also see Chapter 11 of Alexander Berkman's **What is Communist Anarchism?** for an excellent introduction to anarchist viewpoints on trade unions).

While, in normal times, most workers will not really question the nature of the trade union bureaucracy, this changes when workers face some threat. Then they are brought face to face with the fact that the trade union has interests separate from theirs. Hence we see trade unions agreeing to wage cuts, redundancies and so on -- after all, the full-time trade union official's job is not on the line! But, of course, while such a policy is in the short term interests of the officials, in the longer term it goes against their interests -- after all, who wants to join a union which rolls over and presents no effective resistance to employers? Little wonder Michael Moore has a chapter entitled "*Why are Union Leaders So F#!@ing Stupid?*" in his book **Downsize This!** -- essential reading to realise how moronic trade union bureaucrats can actually be. Sadly trade union bureaucracy seems to afflict all who enter it with short-sightedness, as seen by the countless times the trade unions have sold-out their members -- although the chickens do, finally, come home to roost, as the bureaucrats of the AFL, TUC and other trade unions are finding out in this era of global capital and falling membership. So while the activities of trade union leaders may seem crazy and short-sighted, these activities are forced upon them by their position and role within society -- which explains why they are so commonplace and why even radical leaders end up doing exactly the same thing in time.

Few anarchists would call upon members of a trade union to tear-up their membership cards. While some anarchists, particularly communist anarchists and some anarcho-syndicalists have nothing but contempt (and rightly so) for trade unions (and so do not work within them -- but will support trade

union members in struggle), the majority of anarchists take a more pragmatic viewpoint. If no alternative syndicalist union exists, anarchists will work within the existing unions (perhaps becoming shop-stewards -- few anarchists would agree to be elected to positions above this in any trade union, particularly if the post was full-time), spreading the anarchist message and trying to create a libertarian undercurrent which would hopefully blossom into a more anarchistic labour movement.

So most anarchists "support" the trade unions only until they have created a viable libertarian alternative. Thus we will become trade union members while trying to spread anarchist ideas within and outwith them. This means that anarchists are flexible in terms of their activity in the unions. For example, many IWW members were "two-carders." This meant that as well as being members of the IWW, they were also in the local AFL branch in their place of work and turned to the IWW when the AFL hierarchy refused to back strikes or other forms of direct action. Anarchists encourage rank and file self-activity, **not** endless calls for trade union bureaucrats to act for us (as is unfortunately far too common on the left).

Anarchist activity within trade unions reflects our ideas on hierarchy and its corrupting effects. We reject totally the response of left-wing social democrats, Stalinists and mainstream Trotskyists to the problem of trade union betrayal, which is to try and elect and/or appoint 'better' officials. They see the problem primarily in terms of the individuals who hold the posts. However this ignores the fact that individuals are shaped by the environment they live in and the role they play in society. Thus even the most left-wing and progressive individual will become a bureaucrat if they are placed within a bureaucracy -- and we must note that the problem of corruption does not spring from the high-wages officials are paid (although this is a factor), but from the power they have over their members (which partly expresses itself in high pay).

Any claim that electing "radical" full-time officials who refuse to take the high wages associated with the position will be better is false. The hierarchical nature of the trade union structure has to be changed, not side-effects of it. As the left has no problem with hierarchy as such, this explains why they support this form of "reform." They do not actually want to undercut whatever dependency the members has on leadership, they want to replace the leaders with "better" ones (i.e. themselves or members of their party) and so endlessly call upon the trade union bureaucracy to act **for** its members. In this way, they hope, trade unionists will see the need to support a "better" leadership -- namely themselves. Anarchists, in stark contrast, think that the problem is not that the leadership of the trade unions is weak, right-wing or does not act but that the union's membership follows them. Thus anarchists aim at undercutting reliance on leaders (be they left or right) by encouraging self-activity by the rank and file and awareness that hierarchical leadership as such is bad, not individual leaders.

Instead of "reform" from above (which is doomed to failure), anarchists work at the bottom and attempt to empower the rank and file of the trade unions. It is self-evident that the more power, initiative and control that lies with the rank & file membership on the shop floor, the less it will lie with the bureaucracy. Thus anarchists work within and outwith the trade unions in order to increase the power of workers where it actually lies: at the point of production. This is usually done by creating networks of

activists who spread anarchist ideas to their fellow workers (see next section -- "[What are Industrial Networks?](#)").

These groups "within the unions should strive to ensure that they [the trade unions] remain open to all workers of whatever opinion or party on the sole condition that there is solidarity in the struggle against the bosses. They should oppose the corporatist spirit and any attempt to monopolise labour or organisation. They should prevent the Unions from becoming the tools of the politicians for electoral or other authoritarian ends; they should preach and practice direct action, decentralisation, autonomy and free initiative. They should strive to help members learn how to participate directly in the life of the organisation and to do without leaders and permanent officials.

"They must, in short, remain anarchists, remain always in close touch with anarchists and remember that the workers' organisation is not the end but just one of the means, however important, of preparing the way for the achievement of anarchism." [Errico Malatesta, **The Anarchist Revolution**, pp. 26-27]

As part of this activity anarchists promote the ideas of Industrial Unionism we highlighted in the [last section](#) -- namely direct workers control of struggle via workplace assemblies and recallable committees -- during times of struggle. However, anarchists are aware that economic struggle (and trade unionism as such) *"cannot be an end in itself, since the struggle must also be waged at a political level to distinguish the role of the State."* [Errico Malatesta, **Life and Ideas**, p, 115] Thus, as well as encouraging worker self-organisation and self-activity, anarchist groups also seek to politicise struggles and those involved in them. Only this process of self-activity and political discussion between equals **within** social struggles can ensure the process of working class self-liberation and the creation of new, more libertarian, forms of workplace organisation.

The result of such activity may be a new form of workplace organisation (either workplace assemblies or an anarcho-syndicalist union) or a reformed, more democratic version of the existing trade union (although few anarchists believe that the current trade unions can be reformed). But either way, the aim is to get as many members of the current labour movement to become anarchists as possible or, at the very least, take a more libertarian and radical approach to their unions and workplace struggle.

J.5.4 What are industrial networks?

Industrial networks are the means by which revolutionary industrial unions and other forms of libertarian workplace organisation can be created. The idea of Industrial Networks originated with the British section of the anarcho-syndicalist International Workers' Association in the late 1980s. It was developed as a means of promoting anarcho-syndicalist/anarchist ideas within the workplace, so creating the basis on which a workplace movement based upon the ideas of industrial unionism (see section [J.5.2](#)) could grow and expand.

The idea is very simple. An Industrial Network is a federation of militants in a given industry who

support the ideas of anarchism and/or anarcho-syndicalism, namely direct action, solidarity and organisation from the bottom up (the difference between purely anarchist networks and anarcho-syndicalist ones will be highlighted later). In other words, it would *"initially be a political grouping in the economic sphere, aiming to build a less reactive but positive organisation within the industry. The long term aim. . . is, obviously, the creation of an anarcho-syndicalist union."* [**Winning the Class War**, p. 18]

The Industrial Network would be an organisation of groups of anarchists and syndicalists within a workplace united into an industrial basis. They would pull their resources together to fund a regular bulletin and other forms of propaganda which they would distribute within their workplace and industry. These bulletins and leaflets would raise and discuss issues related to work and how to right back and win as well as placing workplace issues in a social and political context. This propaganda would present anarchist ideas of workplace organisation and resistance as well as general anarchist ideas and analysis. In this way anarchist ideas and tactics would be able to get a wider hearing and anarchists can have an input **as anarchists** into workplace struggles.

Traditionally, many syndicalists and anarcho-syndicalists advocated the *One Big Union* strategy, the aim of which was to organise all workers into one organisation representing the whole working class. Today, however, most anarcho-syndicalists and all social anarchists advocate workers assemblies for decision making during struggles (the basic form of which we discussed in section [J.5.2](#)). The role of the anarchist group or anarcho-syndicalist (or revolutionary) union would basically be to call such workplace assemblies, argue for direct workers control of struggle by these mass assemblies, promote direct action and solidarity, put across anarchist ideas and politics and keep things on the boil, so to speak.

This support for industrial networks exists because most anarcho-syndicalists recognise that they face dual unionism (which means there are more than one union within a given workplace or country). This was the case, historically, in all countries with a large anarcho-syndicalist union movement - in Spain and Italy there were the socialist unions along with the syndicalist ones and so on). Therefore most anarcho-syndicalists do not expect to ever get a majority of the working class into a revolutionary union before a revolutionary situation develops. In addition, anarcho-syndicalists recognise that a revolutionary union *"is not just an economic fighting force, but also an organisation with a political context. To build such a union requires a lot of work and experience"* of which the Industrial Networks are but one aspect. [**Ibid.**]

Thus industrial networks are intended to deal with the actual situation that confronts us, and provide a strategy for moving from our present reality toward our ultimate goals. Where one has only a handful of anarchists and syndicalists in a workplace or scattered across several workplaces there is a clear need for developing ways for these fellow workers to effectively act in union, rather than be isolated and relegated to more general agitation. A handful of anarchists cannot meaningfully call a general strike. But we can agitate around specific industrial issues and organise our fellow workers to do something about them. Through such campaigns we demonstrate the advantages of rank-and-file unionism and

direct action, show our fellow workers that our ideas are not mere abstract theory but can be implemented here and now, attract new members and supporters, and further develop our capacity to develop revolutionary unions in our workplaces.

Thus the creation of Industrial Networks and the calling for workplace assemblies is a recognition of where we are now -- with anarchist ideas very much in the minority. Calling for workers assemblies is not an anarchist tactic per se, we must add, but a working class one developed and used plenty of times by workers in struggles (indeed, it was how the current trade unions were created). It also puts the onus on the reformists and reactionary unions by appealing directly to their members as workers and showing their bureaucrat organisations and reformist politics by creating an effective alternative to them.

A few anarchists reject the idea of Industrial Networks and instead support the idea of "*rank and file*" groups which aim to put pressure on the current trade unions to become more militant and democratic (a few anarcho-syndicalists think that such groups can be used to reform the trade-unions into libertarian, revolutionary organisations -- called "*boring from within*" -- but most reject this as utopia, viewing the trade union bureaucracy as unreformable as the state's). Moreover, opponents of "rank and file" groups argue that they direct time and energy **away** from practical and constructive activity and instead waste them "*[b]y constantly arguing for changes to the union structure. . . the need for the leadership to be more accountable, etc., [and so] they not only [offer] false hope but [channel] energy and discontent away from the real problem - the social democratic nature of reformist trade unions.*" [**Winning the Class War**, p. 11]

Supporters of the "rank and file" approach fear that the Industrial Networks will isolate anarchists from the mass of trade union members by creating tiny "pure" syndicalist unions or anarchist groups. But such a claim is rejected by supporters of Industrial Networks. They maintain that they will be working with trade union members where it counts, in the workplace and not in badly attended, unrepresentative branch meetings. So:

"We have no intention of isolating ourselves from the many workers who make up the rest of the rank and file membership of the unions. We recognise that a large proportion of trade union members are only nominally so as the main activity of social democratic [i.e. reformist] unions is outside the workplace. . . We aim to unite and not divide workers.

"It has been argued that social democratic unions will not tolerate this kind of activity, and that we would be all expelled and thus isolated. So be it. We, however, don't think that this will happen until. . . workplace militants had found a voice independent of the trade unions and so they become less useful to us anyway. Our aim is not to support social democracy, but to show it up as irrelevant to the working class." [**Op. Cit.**, p. 19]

Whatever the merits and disadvantages of both approaches are, it seems likely that the activity of both will overlap in practice with Industrial Networks operating within trade union branches and "rank and file" groups providing alternative structures for struggle.

As noted above, there is a slight difference between anarcho-syndicalist supporters of Industrial Networks and communist-anarchist ones. This is to do with how they see the function and aim of these networks. While both agree that such networks should agitate in their industry and call and support mass assemblies to organise resistance to capitalist exploitation and oppression they disagree on who can join the network groups and what they aims should be. Anarcho-syndicalists aim for the Industrial Networks to be the focal point for the building of permanent syndicalist unions and so aim for the Industrial Networks to be open to all workers who accept the general aims of the organisation. Anarcho-communists, however, view Industrial Networks as a means of increasing anarchist ideas within the working class and are not primarily concerned about building syndicalist unions (while many anarcho-communists would support such a development, some do not).

These anarchists, therefore, see the need for workplace-based branches of an anarchist group along with the need for networks of militant 'rank and file' workers, but reject the idea of something that is one but pretends to be the other. They argue that, far from avoiding the problems of classical anarcho-syndicalism, such networks seem to emphasise one of the worst problems -- namely that of how the organisation remains anarchist but is open to non-anarchists.

But the similarities between the two positions are greater than the differences and so can be summarised together, as we have done here.

J.5.5 What forms of co-operative credit do anarchists support?

Anarchists tend to support must forms of co-operation, including those associated with credit and money. This co-operative credit/banking takes many forms, such as credit unions, LETS schemes and so on. In this section we discuss two main forms of co-operative credit, *mutualism* and *LETS*.

Mutualism is the name for the ideas associated with Proudhon and his **Bank of the People**. Essentially, it is a confederation of credit unions in which working class people pool their funds and savings. This allows credit to be arranged at cost, so increasing the options available to working people as well as abolishing interest on loans by making increasing amount of cheap credit available to working people. LETS stands for Local Exchange Trading Schemes and is a similar idea in many ways (and apparently discovered independently) -- see **Bringing the Economy Home from the Market** by V.G. Dobson for a detailed discussion on LETS.

Both schemes revolve around creating an alternative form of currency and credit within capitalism in order to allow working class people to work outwith the capitalist money system by creating "*labour notes*" as a new circulating medium. In this way, it is hoped, workers would be able to improve their living and working conditions by having a source of community-based (very low interest) credit and so be less dependent on capitalists and the capitalist banking system. Some supporters of mutualism considered it as the ideal way of reforming capitalism away. By making credit available to the ordinary worker at very cheap rates, the end of wage slavery would soon occur as workers would work for

themselves by either purchasing the necessary tools required for their work or, by their increased bargaining power within the economy, gain industrial democracy from the capitalists by buying them out.

Such ideas have had a long history within the socialist movement, originating in the British socialist movement in the early 19th century. Robert Owen and other Socialists active at the time considered the idea of labour notes and exchanges as a means of improving working class conditions within capitalism and as the means of reforming capitalism into a society of confederated, self-governing communities. Indeed, "*Equitable Labour Exchanges*" were "*founded at London and Birmingham in 1832*" with "*Labour notes and the exchange of small products*" [E.P. Thompson, **The Making of the English Working Class**, p. 870] Apparently independently of these early attempts in England at what would later be called mutualism, P-J Proudhon arrived at the same ideas decades later in France. In his words, "*The People's Bank quite simply embodies the financial and economic aspects of the principle of modern democracy, that is, the sovereignty of the People, and of the republican motto, 'Liberty, Equality, Fraternity.'*" [**Selected Writings of P-J Proudhon**, p. 75] Similarly, in the USA (partly as a result of Joshua Warren's activities, who got the idea from Robert Owen) there was extensive discussion on labour notes, exchanges and free credit as a means of protecting workers from the evils of capitalism and ensuring their independence and freedom from wage slavery. When Proudhon's works appeared in North America, the basic arguments were well known.

Therefore the idea that mutual banking using labour money as a means to improve working class living conditions, even, perhaps, to achieve industrial democracy, self-management and the end of capitalism has a long history in Socialist thought. Unfortunately this aspect of socialism became less important with the rise of Marxism (which called these early socialists "*utopian*") attempts at such credit unions and alternative exchange schemes were generally replaced with attempts to build working class political parties. With the rise of Marxian social democracy, constructive socialistic experiments and collective working class self-help was replaced by working within the capitalist state. Fortunately, history has had the last laugh on Marxism with working class people yet again creating anew the ideas of Mutualism (as can be seen by the growth of LETS and other schemes of community money).

J.5.6 What are the key features of mutual credit schemes?

Mutualism, as noted in the [last section](#), is a form of credit co-operation, in which individuals pull their resources together in order to benefit themselves as individuals and as part of a community. LETS is another form of mutualism which developed recently, and apparently developed independently (from its start in Canada, LETS has spread across the world and there are now hundreds of schemes involved hundreds of thousands of people). Mutual banks and LETS have the following key aspects:

- 1) Co-operation: No-one owns the network. It is controlled by its members directly.
- 2) Non-exploitative: No interest is charged on account balances or credit. At most administrative costs are charged, a result of it being commonly owned and managed.
- 3) Consent: Nothing happens without it, there is no compulsion to trade.

4) Money: They use their own type of money (traditionally called "labour-notes") as a means of aiding "honest exchange".

It is hoped, by organising credit, working class people will be able to work for themselves and slowly but surely replace capitalism with a co-operative system based upon self-management. While LETS schemes do not have such grand schemes, historically mutualism aimed at working within and transforming capitalism to socialism. At the very least, LETS schemes reduce the power and influence of banks and finance capital within society as mutualism ensures that working people have a viable alternative to such parasites.

This point is important, as the banking system and money is often considered "neutral" (particularly in capitalist economics). However, as Malatesta correctly argues, it would be *"a mistake to believe . . . that the banks are, or are in the main, a means to facilitate exchange; they are a means to speculate on exchange and currencies, to invest capital and to make it produce interest, and to fulfil other typically capitalist operations."* [**Life and Ideas**, p. 100]

Within capitalism, money is still to a large degree a commodity which is more than a convenient measure of work done in the production of goods and services. As a commodity it can and does go anywhere in the world where it can get the best return for its owners, and so it tends to drain out of those communities that need it most. It is the means by which capitalists can buy the liberty of working people and get them to produce a surplus for them (wealth is, after all, *"a power invested in certain individuals by the institutions of society, to compel others to labour for their benefit."*) [William Godwin, **The Anarchist Writings of William Godwin**, p. 130]. From this consideration alone, working class control of credit and money is an important part of the class struggle as having access to alternative sources of credit can increase working class options and power.

Moreover, credit is also an important form of social control -- people who have to pay their mortgage or visa bill are more pliable, less likely to strike or make other forms of political trouble. And, of course, credit expands the consumption of the masses in the face of stagnant or falling wages while allowing capitalists to profit from it. Indeed, there is a link between the rising debt burden on households in the 1980s and 1990s and the increasing concentration of wealth. This is *"because of the decline in real hourly wages and the stagnation in household incomes, the middle and lower classes have borrowed to stay in place; they've borrowed from the very rich who have gotten richer. The rich need a place to earn interest on their surplus funds, and the rest of the population makes a juicy lending target."* [Doug Henwood, **Wall Street**, pp. 64-65]

Little wonder that the state (and the capitalists who run it) is so concerned to keep control of money in its own hands or the hands of its agents. With an increase in mutual credit, interest rates would drop, wealth would stay more in working class communities, and the social power of working people would increase (for people would be more likely to struggle for higher wages and better conditions -- as the fear of debt repayments would be less).

Therefore, mutualism is an example of what could be termed "*counter-economics*". By counter-economics we mean the creation of community-based credit unions that do not put their money into "Capital Markets" or into capitalist Banks. We mean finding ways for workers to control their own retirement funds. We mean finding ways of using money as a means of undermining capitalist power and control and supporting social struggle and change.

In this way working people are controlling more and more of the money supply and using it ways that will stop capital from using it to oppress and exploit the working class. An example of why this can be important can be seen from the results of the existing workers' pension fund system. Currently workers pension funds are being used to invest in capitalist firms (particularly transnationals and other forms of Big Business) and these companies use the invested money to fund their activities. The idea is that by so investing, workers will receive an adequate pension in their old age.

However, the only people actually winning are bankers and big companies. Unsurprisingly, the managers of these pension fund companies are investing in those firms with the highest returns, which are usually those who are downsizing or extracting most surplus value from their workforce (which in turn forces other companies to follow the same strategies to get access to the available funds in order to survive).

Basically, if you are lending your money to be used to put your fellow worker out of work or increase the power of capital, then you are not only helping to make things harder for others like you, you are also helping making things worse for yourself. No person is an island, and increasing the clout of capital over the working class is going to affect you directly or indirectly. And, of course, it seems crazy to suggest that workers desire to experience insecurity, fear of downsizing and stagnating wages during their working lives in order to have slightly more money when they retire.

This highlights one of the tricks the capitalists are using against us, namely to get us to buy into the system through our fear of old age. Whether it is going into lifelong debt to buy a home or lending our money to capitalists, we are being encouraged to buy into something which we value more than what is right and wrong. This allows us to be more easily controlled by the government. We need to get away from living in fear and stop allowing ourselves to be deceived into behaving like "stakeholders" in Capitalistic and Plutocratic systems. As can be seen from the use of pension funds to buy out firms, increase the size of transnationals and downsize the workforce, such "stakeholding" amounts to trading in the present and the future while others benefit.

The real enemies are **not** working people who take part in such pension schemes. It is the people in power, those who manage the pension schemes and companies, who are trying to squeeze every last cent out of working people to finance higher profits and stock prices -- which the unemployment and impoverishment of workers on a world-wide scale aids. They control the governments of the world. They are making the "rules" of the current system. Hence the importance of limiting the money they have available, of creating community-based credit unions and mutual risk insurance co-operatives to increase our control over our money and create our own, alternative, means of credit and exchange (as

presented as mutualism) which can be used to empower ourselves, aid our struggles and create our own alternatives. Money, representing as it does the power of capital and the authority of the boss, is not "neutral" and control over it plays a role in the class struggle. We ignore such issues at our own peril.

J.5.7 Do most anarchists think mutual credit is sufficient to abolish capitalism?

The short answer is no, they do not. While the Individualist Anarchists and Mutualists (followers of Proudhon) do think that mutual banking is the only sure way of abolishing capitalism, most anarchists do not see mutualism as an end in itself. Few think that capitalism can be reformed away in the manner assumed by Proudhon. Increased access to credit does not address the relations of production and market power which exist within the economy and so any move for financial transformation has to be part of a broader attack on all forms of capitalist social power in order to be both useful and effective (see section [B.3.2](#) for more anarchist views on mutual credit and its uses). So, for most anarchists, it is only in combination with other forms of working class self-activity and self-management that mutualist institutions could play an important role in the class struggle.

By creating a network of mutual banks to aid in creating co-operatives, union organising drives, supporting strikes (either directly by gifts/loans or funding food and other co-operatives which could supply food and other essentials free or at a reduction), mutualism can be used as a means of helping build libertarian alternatives within the capitalist system. Such alternatives, while making life better under the current system, also can play a role in overcoming that system by being a means of aiding those in struggle make ends meet and providing alternative sources of income for black-listed or sacked workers. Thus Bakunin's comments:

"let us co-operate in our common enterprise to make our lives a little bit more supportable and less difficult. Let us, wherever possible, establish producer-consumer co-operatives and mutual credit societies which, though under the present economic conditions they cannot in any real or adequate way free us, are nevertheless important inasmuch they train the workers in the practices of managing the economy and plant the precious seeds for the organisation of the future." [**Bakunin on Anarchism**, p. 173]

Therefore, while few anarchists think that mutualism would be enough in itself, it can play a role in the class struggle. As a compliment to direct action and workplace and community struggle and organisation, mutualism has an important role in working class self-liberation. For example, community unions (see section [J.5.1](#)) could create their own mutual banks and money which could be used to fund co-operatives and support strikes and other forms of social struggle. In this way a healthy communalised co-operative sector could develop within capitalism, overcoming the problems of isolation facing workplace co-operatives (see section [J.5.11](#)) as well as providing a firm framework of support for those in struggle.

Moreover, mutual banking can be a way of building upon and strengthening the anarchistic social relations within capitalism. For even under capitalism and statism, there exists extensive mutual aid and, indeed, anarchistic and communistic ways of living. For example, communistic arrangements exist within families, between friends and lovers and within anarchist organisations.

Mutual banking could be a means of creating a bridge between this alternative (gift) "economy" and capitalism. The mutualist alternative economy would help strength communities and bonds of trust between individuals, and this would increase the scope for increasing the scope of the communistic sector as more and more people help each other out without the medium of exchange - in other words, mutualism will help the gift economy that exists within capitalism to grow and develop.

J.5.8 What would a modern system of mutual banking look like?

The mutual banking ideas of Proudhon could be adapted to the conditions of modern society, as will be described in what follows. (Note: Proudhon is the definitive source on mutualism, but for those who don't read French, there are the works of his American disciples, e.g. William B. Greene's **Mutual Banking**, and Benjamin Tucker's **Instead of a Book by a Man Too Busy to Write One**).

One scenario for an updated system of mutual banking would be for a community barter association to begin issuing an alternative currency accepted as money by all individuals within the system. This "currency" would not at first take the form of coins or bills, but would be circulated entirely through transactions involving the use of barter-cards, personal checks, and "e-money" transfers via modem/Internet. Let's call this currency-issuing type of barter association a "mutual barter clearinghouse," or just "clearinghouse" for short.

The clearinghouse would have a twofold mandate: first, to extend credit at cost to members; second, to manage the circulation of credit-money within the system, charging only a small service fee (probably one percent or less) which is sufficient to cover its costs of operation, including labour costs involved in issuing credit and keeping track of transactions, insuring itself against losses from uncollectable debts, and so forth.

The clearinghouse would be organised and function as follows. Members of the original barter association would be invited to become subscriber-members of the clearinghouse by pledging a certain amount of property as collateral. On the basis of this pledge, an account would be opened for the new member and credited with a sum of mutual dollars equivalent to some fraction of the assessed value of the property pledged. The new member would agree to repay this amount plus the service fee by a certain date. The mutual dollars in the new account could then be transferred through the clearinghouse by using a barter card, by writing a personal check, or by sending e-money via modem to the accounts of other members, who have agreed to receive mutual money in payment for all debts.

The opening of this sort of account is, of course, the same as taking out a "loan" in the sense that a commercial bank "lends" by extending credit to a borrower in return for a signed note pledging a certain

amount of property as security. The crucial difference is that the clearinghouse does not purport to be "lending" a sum of money that it **already has**, as is fraudulently claimed by commercial banks. Instead it honestly admits that it is creating new money in the form of credit. New accounts can also be opened simply by telling the clearinghouse that one wants an account and then arranging with other people who already have balances to transfer mutual money into one's account in exchange for goods or services.

Another form is that associated with LETS systems. In this a number of people get together to form an association. They create a unit of exchange (which is equal in value to a unit of the national currency usually), choose a name for it and offer each other goods and services priced in these units. These offers and wants are listed in a directory which is circulated periodically to members. Members decide who they wish to trade with and how much trading they wish to do. When a transaction is completed, this is acknowledged with a "cheque" made out by the buyer and given to the seller. These are passed on to the system accounts administration which keeps a record of all transactions and periodically sends members a statement of their accounts. The accounts administration is elected by, and accountable to, the membership and information about balances is available to all members.

Unlike the first system described, members do not have to present property as collateral. Members of a LETS scheme can go into "debt" without it, although "debt" is the wrong word as members are not so much going into debt as committing themselves to do some work within the system in the future and by so doing they are creating spending power. The willingness of members to incur such a commitment could be described as a service to the community as others are free to use the units so created to trade themselves. Indeed, the number of units in existence exactly matches the amount of real wealth being exchanged. The system only works if members are willing to spend and runs on trust and builds up trust as the system is used.

It is likely that a fully functioning mutual banking system would incorporate aspects of both these systems. The need for collateral may be used when members require very large loans while the LETS system of negative credit as a commitment to future work would be the normal function of the system. If the mutual bank agrees a maximum limit for negative balances, it may agree to take collateral for transactions that exceed this limit. However, it is obvious that any mutual banking system will find the best means of working in the circumstances it finds itself.

J.5.9 How does mutual credit work?

Let's consider an example of how business would be transacted in the new system. There are two possibilities, depending on whether the mutual credit is based upon whether the creditor can provide collateral or not. we will take the case with collateral first.

Suppose that A, an organic farmer, pledges as collateral a certain plot of land that she owns and on which she wishes to build a house. The land is valued at, say, \$40,000 in the capitalist market. By pledging the land, A is able to open a credit account at the clearinghouse for, say, \$30,000 in mutual money (a ratio of 3/4). She does so knowing that there are many other members of the system who are

carpenters, electricians, plumbers, hardware dealers, and so on who are willing to accept mutual dollars in payment for their products or services.

It's easy to see why other subscriber-members, who have also obtained mutual credit and are therefore in debt to the clearinghouse for mutual dollars, would be willing to accept such dollars in return for their goods and services. For they need to collect mutual dollars to repay their debts. But why would someone who is not in debt for mutual dollars be willing to accept them as money?

To see why, let's suppose that B, an underemployed carpenter, currently has no account at the clearinghouse but that he knows about the clearinghouse and the people who operate it. After examining its list of members and becoming familiar with the policies of the new organisation, he's convinced that it does not extend credit frivolously to untrustworthy recipients who are likely to default. He also knows that if he contracts to do the carpentry on A's new house and agrees to be paid for his work in mutual money, he'll then be able to use it to buy groceries, clothes, car repairs, and other goods and services from various people in the community who already belong to the system.

Thus B will be willing, and perhaps even eager (especially if the economy is in recession and regular money is tight) to work for A and receive payment in mutual dollars. For he knows that if he is paid, say, \$8,000 in mutual money for his labour on A's house, this payment constitutes, in effect, 20 percent of a mortgage on her land, the value of which is represented by her mutual credit. B also understands that A has promised to repay this mortgage by producing new value -- that is, by growing organic fruits and vegetables and selling them for mutual dollars to other members of the system -- and that it is this promise to produce new wealth which gives her mutual credit its value as a medium of exchange.

To put this point slightly differently, A's mutual credit can be thought of as a lien against goods or services which she has guaranteed to create in the future. As security of this guarantee, she agrees that if she is unable for some reason to fulfil her obligation, the land she has pledged will be sold for mutual dollars to other members. In this way, a value sufficient to cancel her debt (and probably then some) will be returned to the system. This provision insures that the clearinghouse is able to balance its books and gives members confidence that mutual money is sound.

It should be noticed that since new wealth is continually being created, the basis for new mutual credit is also being created at the same time. Thus, suppose that after A's new house has been built, her daughter, C, along with a group of friends D, E, F, . . . , decide that they want to start a collectively owned and operated organic restaurant (which will incidentally benefit A, as an outlet for her produce), but that C and her friends do not have enough collateral to obtain a start-up loan. A, however, is willing to co-sign a note for them, pledging her new house (valued at say, \$80,000) as security. On this basis, C and her partners are able to obtain \$60,000 worth of mutual credit, which they then use to buy equipment, supplies, furniture, advertising, etc. and lease the building necessary to start their restaurant.

This example illustrates one way in which people without property are able to obtain credit in the new system. Another way -- for those who cannot find (or perhaps don't wish to ask) someone with property

to co-sign for them -- is to make a down payment and then use the property which is to be purchased on credit as security, as in the current method of obtaining a home or auto loan. With mutual credit, however, this form of financing can be used to purchase anything, including capital goods.

Which brings us to the case of an individual without means for providing collateral - say, for example A, the organic farmer, does not own the land she works. In such a case, A, who still desires work done, would contact other members of the mutual bank with the skills she requires. Those members with the appropriate skills and who agree to work with her commit themselves to do the required tasks. In return, A gives them a check in mutual dollars which is credited to their account and deducted from hers. She does not pay interest on this issue of credit and the sum only represents her willingness to do some work for other members of the bank at some future date.

The mutual bank does not have to worry about the negative balance, as this does not create a loss within the group as the minuses which have been incurred have already created wealth (pluses) within the system and it stays there. It is likely, of course, that the mutual bank would agree an upper limit on negative balances and require some form of collateral for credit greater than this limit, but for most exchanges this would be unlikely to be relevant.

It is important to remember that mutual dollars have no **intrinsic** value, since they can't be redeemed (at the mutual bank) in gold or anything else. All they are promises of future labour. Thus, as Greene points out in his work on mutual banking, mutual dollars are "*a mere medium for the facilitation of barter.*" In this respect they are closely akin to the so-called "barter dollars" now being circulated by barter associations through the use of checks and barter cards. To be precise, then, we should refer to the units of mutual money as "mutual barter dollars." But whereas ordinary barter dollars are created at the same time that a barter transaction occurs and are used to record the values exchanged in that transaction, mutual barter dollars are created **before** any actual barter transaction occurs and are intended to facilitate **future** barter transactions. This fact is important because it can be used as the basis for a legal argument that clearinghouses are essentially barter associations rather than banks, thrifts, or credit unions, and therefore should not be subject to the laws governing the latter institutions.

J.5.10 Why do anarchists support co-operatives?

Support for co-operatives is a common feature in anarchist writings. Indeed, anarchist support for co-operatives is as old as use of the term anarchist to describe our ideas is. So why do anarchists support co-operatives? Basically it is because a co-operative is seen as an example of the future social organisation anarchists want in the present. As Bakunin argued, "*the co-operative system. . . carries within it the germ of the future economic order.*" [The Philosophy of Bakunin, p. 385]

Anarchists support all kinds of co-operatives - housing, food, credit unions and productive ones. All forms of co-operation are useful as they accustom their members to work together for their common benefit as well as ensuring extensive experience in managing their own affairs. As such, all forms of co-operatives are useful examples of self-management and anarchy in action (to some degree). However,

here we will concentrate on productive co-operatives, i.e. workplace co-operatives. This is because workplace co-operatives, potentially, could **replace** the capitalist mode of production with one based upon associated, not wage, labour. As long as capitalism exists within industry and agriculture, no amount of other kinds of co-operatives will end that system. Capital and wealth accumulates by oppression and exploitation in the workplace, therefore as long as wage slavery exists anarchy will not.

Co-operatives are the "*germ of the future*" because of two facts. Firstly, co-operatives are based on one worker, one vote. In other words those who do the work manage the workplace within which they do it (i.e. they are based on workers' self-management in some form). Thus co-operatives are an example of the "horizontal" directly democratic organisation that anarchists support and so are an example of "anarchy in action" (even if in an imperfect way) within the economy. In addition, they are an example of working class self-help and self-activity. Instead of relying on others to provide work, co-operatives show that production can be carried on without the existence of a class of masters employing a class of order takers.

Workplace co-operatives also present evidence of the viability of an anarchist "economy." It is well established that co-operatives are usually more productive and efficient than their capitalist equivalents. This indicates that hierarchical workplaces are **not** required in order to produce useful goods and indeed can be harmful. Indeed, it also indicates that the capitalist market does not actually allocate resources efficiently (as we will discuss in section [J.5.12](#)). So why should co-operatives be more efficient?

Firstly there are the positive effects of increased liberty associated with co-operatives.

Co-operatives, by abolishing wage slavery, obviously increases the liberty of those who work in them. Members take an active part in the management of their working lives and so authoritarian social relations are replaced by libertarian ones. Unsurprisingly, this liberty also leads to an increase in productivity - just as wage labour is more productive than slavery, so associated labour is more productive than wage slavery. Little wonder Kropotkin argued that "*the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour. . . man really produces most when he works in freedom, when he has a certain choice in his occupations, when he has no overseer to impede him, and lastly, when he sees his work bringing profit to him and to others who work like him, but bringing in little to idlers.*" [**The Conquest of Bread**, p. 145]

There are also the positive advantages associated with participation (i.e. self-management, liberty in other words). Within a self-managed, co-operative workplace, workers are directly involved in decision making and so these decisions are enriched by the skills, experiences and ideas of all members of the workplace. In the words of Colin Ward:

*"You can be **in** authority, or you can be **an** authority, or you can **have** authority. The first derives from your rank in some chain of command, the second derives special knowledge, and the third from special wisdom. But knowledge and wisdom are not distributed in order of rank, and they are no one person's monopoly in any undertaking. The fantastic*

inefficiency of any hierarchical organisation -- any factory, office, university, warehouse or hospital -- is the outcome of two almost invariable characteristics. One is that the knowledge and wisdom of the people at the bottom of the pyramid finds no place in the decision-making leadership hierarchy of the institution. Frequently it is devoted to making the institution work in spite of the formal leadership structure, or alternatively to sabotaging the ostensible function of the institution, because it is none of their choosing. The other is that they would rather not be there anyway: they are there through economic necessity rather than through identification with a common task which throws up its own shifting and functional leadership.

"Perhaps the greatest crime of the industrial system is the way it systematically thwarts the investing genius of the majority of its workers." [Anarchy in Action, p. 41]

Also, as workers also own their place of work, they have an interest in developing the skills and abilities of their members and, obviously, this also means that there are few conflicts within the workplace. Unlike capitalist firms, there is no need for conflict between bosses and wage slaves over work loads, conditions or the division of value created between them. All these factors will increase the quality, quantity and efficiency of work and so increases efficient utilisation of available resources and facilities the introduction of new techniques and technologies.

Secondly, the increased efficiency of co-operatives results from the benefits associated with co-operation itself. Not only does co-operation increase the pool of knowledge and abilities available within the workplace and enriches that source by communication and interaction, it also ensures that the workforce are working together instead of competing and so wasting time and energy. As Alfie Kohn notes (in relation to investigations of in-firm co-operation):

"Dean Tjosvold of Simon Frazer. . .conducted [studies] at utility companies, manufacturing plants, engineering firms, and many other kinds of organisations. Over and over again, Tjosvold has found that 'co-operation makes a work force motivated' whereas 'serious competition undermines co-ordination.' . . . Meanwhile, the management guru. . . T. Edwards Demming, has declared that the practice of having employees compete against each other is 'unfair [and] destructive. We cannot afford this nonsense any longer. . . [We need to] work together on company problems [but] annual rating of performance, incentive pay, [or] bonuses cannot live with team work. . . What takes the joy out of learning. . .[or out of] anything? Trying to be number one.'" [No Contest, p. 240]

(The question of co-operation and participation within capitalist firms will be discussed in section [J.5.12](#)).

Thirdly, there are the benefits associated with increased equality. Studies prove that business performance deteriorates when pay differentials become excessive. In a study of over 100 businesses

(producing everything from kitchen appliances to truck axles), researchers found that the greater the wage gap between managers and workers, the lower their product's quality. [Douglas Cowherd and David Levine, "*Product Quality and Pay Equity*," **Administrative Science Quarterly** no. 37 (June 1992), pp. 302-30] Businesses with the greatest inequality were plagued with a high employee turnover rate. Study author David Levine said: "*These organisations weren't able to sustain a workplace of people with shared goals.*" [quoted by John Byrne in "*How high can CEO pay go?*" **Business Week**, April 22, 1996]

(In fact, the negative effects of income inequality can be seen on a national level as well. Economists Torsten Persson and Guido Tabellini conducted a thorough statistical analysis of historical inequality and growth, and found that nations with more equal incomes generally experience faster productive growth. [*"Is Inequality Harmful for Growth?"*, **American Economic Review** no. 84, June 1994, pp. 600-21] Numerous other studies have also confirmed their findings. Real life yet again disproves the assumptions of capitalism - inequality harms us all, even the capitalist economy which produces it).

This is to be expected. Workers, seeing an increasing amount of the value they create being monopolised by top managers and a wealthy elite and not re-invested into the company to secure their employment prospects, will hardly be inclined to put in that extra effort or care about the quality of their work. Managers who use the threat of unemployment to extract more effort from their workforce are creating a false economy. While they will postpone decreasing profits in the short term due to this adaptive strategy (and enrich themselves in the process) the pressures placed upon the system will bring a harsh long term effects - both in terms of economic crisis (as income becomes so skewed as to create realisation problems and the limits of adaptation are reached in the face of international competition) and social breakdown.

As would be imagined, co-operative workplaces tend to be more egalitarian than capitalist ones. This is because in capitalist firms, the incomes of top management must be justified (in practice) to a small number of individuals (namely, those shareholders with sizeable stock in the firm), who are usually quite wealthy and so not only have little to lose in granting huge salaries but are also predisposed to see top managers as being very much like themselves and so are entitled to comparable incomes. In contrast, the incomes of top management in worker controlled firms have to be justified to a workforce whose members experience the relationship between management incomes and their own directly and who, no doubt, are predisposed to see their top managers as being workers like themselves and accountable to them. Such an egalitarian atmosphere will have a positive impact on production and efficiency as workers will see that the value they create is not being accumulated by others but distributed according to work actually done (and not control over power). In the Mondragon co-operatives, for example, the maximum pay differential is 14 to 1 (increased from 3 to 1 in a response to outside pressures after much debate, with the actual maximum differential at 9 to 1) while (in the USA) the average CEO is paid over 140 times the average factory worker (up from 41 times in 1960).

Therefore, we see that co-operatives prove (to a greater or lesser extent) the advantages of (and interrelationship between) key anarchist principles such as liberty, equality, solidarity and self-management. Their application, whether all together or in part, has a positive impact on efficiency and

work -- and, as we will discuss in section [J.5.12](#), the capitalist market actively **blocks** the spread of more efficient productive techniques instead of encouraging them. Even by its own standards, capitalism stands condemned - it does not encourage the efficient use of resources and actively places barriers in the development of human "resources."

From all this it's clear to see why co-operatives are supported by anarchists. We are "*convinced that the co-operative could, potentially, replace capitalism and carries within it the seeds of economic emancipation. . . The workers learn from this precious experience how to organise and themselves conduct the economy without guardian angels, the state or their former employers.*" [Michael Bakunin, **Bakunin on Anarchism**, p. 399] Co-operatives give us a useful insight into the possibilities of a free, socialist, economy. Even within the hierarchical capitalist economy, co-operatives show us that a better future is possible and that production can be organised in a co-operative fashion and that by so doing we can reap the individual and social benefits of working together as equals.

However, this does not mean that all aspects of the co-operative movement find favour with anarchists. As Bakunin pointed out, "*there are two kinds of co-operative: bourgeois co-operation, which tends to create a privileged class, a sort of new collective bourgeoisie organised into a stockholding society: and truly Socialist co-operation, the co-operation of the future which for this very reason is virtually impossible of realisation at present.*" [Op. Cit., p. 385] In other words, while co-operatives are the germ of the future, in the present they are often limited by the capitalist environment they find themselves in and narrow their vision to just surviving within the current system.

For most anarchists, the experience of co-operatives has proven without doubt that, however excellent in principle and useful in practice, if they are kept within the narrow circle of "bourgeois" existence they cannot become dominant and free the masses. This point is argued in Section [J.5.11](#) and so will be ignored here. In order to fully develop, co-operatives must be part of a wider social movement which includes community and industrial unionism and the creation of an anarchistic social framework which can encourage "*truly Socialist co-operation*" and discourage "*bourgeois co-operation.*" As Murray Bookchin correctly argues, "*[r]emoved from a libertarian municipalist [or other anarchist] context and movement focused on achieving revolutionary municipalist [or communalist] goals as a **dual power** against corporations and the state, food [and other forms of] co-ops are little more than benign enterprises that capitalism and the state can easily tolerate with no fear of challenge.*" [**Democracy and Nature** no. 9, p. 175]

Therefore, while co-operatives are an important aspect of anarchist ideas and practice, they are not the be all or end all of our activity. Without a wider social movement which creates all (or at least most) of the future society in the shell of the old, co-operatives will never arrest the growth of capitalism or transcend the narrow horizons of the capitalist economy.

J.5.11 If workers really want self-management, why aren't there more producer co-operatives?

Supporters of capitalism suggest that producer co-operatives would spring up spontaneously if workers really wanted them. Their argument is that co-operatives could be financed at first by "*wealthy radicals*" or by affluent workers pooling their resources to buy out existing capitalist firms; then, if such co-operatives were really economically viable and desired by workers, they would spread until eventually they undermined capitalism. They conclude that since this is not happening, it must be because workers' self-management is either economically unfeasible or is not really attractive to workers or both (see, for example, Robert Nozick, **Anarchy, State, and Utopia**, pp. 250-52).

David Schweickart has decisively answered this argument by showing that the reason there are not more producer co-operatives is structural:

"A worker-managed firm lacks an expansionary dynamic. When a capitalist enterprise is successful, the owner can increase her profits by reproducing her organisation on a larger scale. She lacks neither the means nor the motivation to expand. Not so with a worker-managed firm. Even if the workers have the means, they lack the incentive, because enterprise growth would bring in new workers with whom the increased proceeds would have to be shared. Co-operatives, even when prosperous, do not spontaneously grow. But if this is so, then each new co-operative venture (in a capitalist society) requires a new wealthy radical or a new group of affluent radical workers willing to experiment. Because such people doubtless are in short supply, it follows that the absence of a large and growing co-operative movement proves nothing about the viability of worker self-management, nor about the preferences of workers." [**Against Capitalism**, p. 239]

There are other structural problems as well. For one thing, since their pay levels are set by members' democratic vote, co-operatives tend to be more egalitarian in their income structure. But this means that in a capitalist environment, co-operatives are in constant danger of having their most skilled members hired away. Moreover, there is a difficulty in raising capital:

"Quite apart from ideological hostility (which may be significant), external investors will be reluctant to put their money into concerns over which they will have little or no control -- which tends to be the case with a co-operative. Because co-operatives in a capitalist environment face special difficulties, and because they lack the inherent expansionary dynamic of a capitalist firm, it is hardly surprising that they are far from dominant." [**Ibid.**, p 240]

In addition, co-operatives face the negative externalities generated by a capitalist economy. The presence of wage labour and investment capital in the economy will tempt successful co-operatives to increase their flexibility to adjust to changes in market changes by hiring workers or issuing shares to attract new investment. In so doing, however, they may end up losing their identities as co-operatives by diluting ownership or by making the co-operative someone's boss:

"To meet increased production, the producer co-operatives hired outside wage workers.

This created a new class of workers who exploit and profit from the labour of their employees. And all this fosters a bourgeois mentality." [Michael Bakunin, **Bakunin on Anarchism**, p. 399]

Hence the pressures of working in a capitalist market may result in co-operatives pursuing activities which may result in short term gain or survival, but are sure to result in harm in the long run. Far from co-operatives slowly expanding within and changing a capitalist environment it is more likely that capitalist logic will expand into and change the co-operatives that work in it (this can be seen from the Mondragon co-operatives, where there has been a slight rise in the size of wage labour being used and the fact that the credit union, since 1992, has invested in non-co-operative firms). These externalities imposed upon isolated co-operatives within capitalism (which would not arise within a fully co-operative context) block local moves towards anarchism. The idea that co-operation will simply win out in competition within well developed capitalist economic systems is just wishful thinking. Just because a system is more liberatory and just does not mean it will survive in an authoritarian economic and social environment.

There are also cultural problems as well. As Jon Elster points out, it is a *"truism, but an important one, that workers' preferences are to a large extent shaped by their economic environment. Specifically, there is a tendency to adaptive preference formation, by which the actual mode of economic organisation comes to be perceived as superior to all others."* ["From Here to There", in **Socialism**, p. 110] In other words, people view "what is" as given and feel no urge to change to "what could be." In the context of creating alternatives within capitalism, this can have serious effects on the spread of alternatives and indicates the importance of anarchists encouraging the spirit of revolt to break down this mental apathy.

This acceptance of "what is" can be seen, to some degree, by some companies which meet the formal conditions for co-operatives, for example ESOP owned firms in the USA, but lack effective workers' control. ESOP (Employee Stock Ownership Plans) firms enable a firm's workforce to gain the majority of a company's shares but the unequal distribution of shares amongst employees prevents the great majority of workers from having any effective control or influence on decisions. Unlike real co-operatives (based on "one worker, one vote") these firms are based on "one share, one vote" and so have more in common with capitalist firms than co-operatives.

Moreover, we have ignored such problems as natural barriers to entry into, and movement within, a market (which is faced by all firms) and the difficulties co-operatives can face in finding access to long term credit facilities required by them from capitalist banks (which would effect co-operatives more as short term pressures can result in their co-operative nature being diluted). As Tom Cahill notes, the *"old co-ops [of the nineteenth century] also had the specific problem of . . . giving credit . . . [as well as] problems . . . of competition with price cutting capitalist firms, highlighting the inadequate reservoirs of the under-financed co-ops."* ["Co-operatives and Anarchism: A contemporary Perspective", in **For Anarchism**, edited by Paul Goodway, p. 239]

In addition, the *"return on capital is limited"* in co-operatives [Tom Cahill, **Op. Cit.**, p. 247] which

means that investors are less-likely to invest in co-operatives, and so co-operatives will tend to suffer from a lack of investment. Which also suggests that Nozick's argument that "*don't say that its against the class interest of investors to support the growth of some enterprise that if successful would end or diminish the investment system. Investors are not so altruistic. They act in personal and not their class interests*" is false [Op. Cit., pp. 252-3]. Nozick is correct, to a degree -- but given a choice between high returns from investments in capitalist firms and lower ones from co-operatives, the investor will select the former. This does not reflect the productivity or efficiency of the investment -- quite the reverse! -- it reflects the social function of wage labour in maximising profits and returns on capital (see [next section](#) for more on this). In other words, the personal interests of investors will generally support their class interests (unsurprisingly, as class interests are not independent of personal interests and will tend to reflect them!).

Tom Cahill outlines the investment problem when he writes that the "*financial problem*" is a major reason why co-operatives failed in the past, for "*basically the unusual structure and aims of co-operatives have always caused problems for the dominant sources of capital. In general, the finance environment has been hostile to the emergence of the co-operative spirit. . .*" And he also notes that they were "*unable to devise structuring to **maintain a boundary** between those who work and those who own or control. . . It is understood that when outside investors were allowed to have power within the co-op structure, co-ops lost their distinctive qualities.*" [Op. Cit., pp. 238-239] Meaning that even **if** co-operative do attract investors, the cost of so doing may be to transform the co-operatives into capitalist firms.

Thus, in spite of "*empirical studies suggest[ing] that co-operatives are at least as productive as their capitalist counterparts,*" with many having "*an excellent record, superior to conventionally organised firms over a long period*" [Jon Elster, Op. Cit., p. 96], co-operatives are more likely to adapt to capitalism than replace it and adopt capitalist principles of rationality in order to survive. All things being equal, co-operatives are more efficient than their capitalist counterparts - but when co-operatives compete in a capitalist economy, all things are **not** equal.

In spite of these structural and cultural problems, however, there has been a dramatic increase in the number of producer co-operatives in most Western countries in recent years. For example, Saul Estrin and Derek Jones report that co-operatives in the UK grew from 20 in 1975 to 1,600 by 1986; in France they increased from 500 to 1,500; and in Italy, some 7,000 new co-operatives came into existence between 1970 and 1982 ["*Can Employee-owned Firms Survive?*", Working Paper Series, Department of Economics, Hamilton College (April, May, 1989)]. Italian co-operatives now number well over 20,000, many of them large and having many support structures as well (which aids their development by reducing their isolation and providing long term financial support lacking within the capitalist market).

We have already noted the success of the Mondragon co-operatives in Spain, which created a cluster of inter-locking co-operatives with its own credit union to provide long term financial support and commitment. Thus, in Europe at least, it appears that there **is** a rather "*large and growing co-operative movement,*" which gives the lie to Nozick's and other supporters of capitalism arguments about co-

operatives' lack of economic viability and/or attractiveness to workers.

However, because co-operatives can survive in a capitalist economy it does not automatically mean that they shall **replace** that economy. Isolated co-operatives, as we argued above, will more likely adapt to capitalist realities than remain completely true to their co-operative promise. For most anarchists, therefore, co-operatives can reach their full potential only as part of a social movement aiming to change society. As part of a wider movement of community and workplace unionism, with mutualist banks to provide long terms financial support and commitment, co-operatives could be communalised into a network of solidarity and support that will reduce the problems of isolation and adaptation. Hence Bakunin:

"We hardly oppose the creation of co-operative associations; we find them necessary in many respects. . . they accustom the workers to organise, pursue, and manage their interests themselves, without interference either by bourgeois capital or by bourgeois control. . . [they must] above all [be] founded on the principle of solidarity and collectivity rather than on bourgeois exclusivity, then society will pass from its present situation to one of equality and justice without too many great upheavals." [Op. Cit., p. 153]

Co-operation *"will prosper, developing itself fully and freely, embracing all human industry, only when it is based on equality, when all capital . . . [and] the soil, belong to the people by right of collective property."* [Ibid.]

Until then, co-operatives will exist within capitalism but not replace it by market forces - only a **social** movement and collective action can fully secure their full development. As David Schweickart argues:

"Even if worker-managed firms are preferred by the vast majority, and even if they are more productive, a market initially dominated by capitalist firms may not select for them. The common-sense neo-classical dictum that only those things that best accord with people's desires will survive the struggle of free competition has never been the whole truth with respect to anything; with respect to workplace organisation it is barely a half-truth." [Op. Cit., p. 240]

This means that while anarchists support, create and encourage co-operatives within capitalism, they understand *"the impossibility of putting into practice the co-operative system under the existing conditions of the predominance of bourgeois capital in the process of production and distribution of wealth."* Because of this, most anarchists stress the need for more combative organisations such as industrial and community unions and other bodies *"formed,"* to use Bakunin's words, *"for the organisation of toilers against the privileged world"* in order to help bring about a free society. [Michael Bakunin, Op. Cit., p. 185]

J.5.12 If self-management is more efficient, surely capitalist

firms will be forced to introduce it by the market?

While it may be admitted that co-operatives cannot reform capitalism away (see [last section](#)), many supporters of "free market" capitalism will claim that a laissez-faire system would see workers self-management spread within capitalism. This is because, as self-management is more efficient than wage slavery, those capitalist firms that introduce it will gain a competitive advantage, and so their competitors will be forced to introduce it or go bust. While not being true anarchistic production, it would (it is argued) be a very close approximation of it and so capitalism could reform itself naturally to get rid of (to a large degree) its authoritarian nature.

While such a notion seems plausible in theory, in practice it does not work. Free market capitalism places innumerable barriers to the spread of worker empowering structures within production, in spite (perhaps, as we will see, **because**) of their more efficient nature. This can be seen from the fact that while the increased efficiency associated with workers' participation and self-management has attracted the attention of many capitalist firms, the few experiments conducted have failed to spread. This is due, essentially, to the nature of capitalist production and the social relationships it produces.

As we noted in [section D.10](#), capitalist firms (particularly in the west) made a point of introducing technologies and management structures that aimed to deskill and disempower their workers. In this way, it was hoped to make the worker increasingly subject to "market discipline" (i.e. easier to train, so increasing the pool of workers available to replace any specific worker and so reducing workers power by increasing management's power to fire them). Of course, what actually happens is that after a short period of time while management gained the upper hand, the workforce found newer and more effective ways to fight back and assert their productive power again. While for a short time the technological change worked, over the longer period the balance of forces changed, so forcing management to continually try to empower themselves at the expense of the workforce.

It is unsurprising that such attempts to reduce workers to order-takers fail. Workers' experiences and help are required to ensure production actually happens at all. When workers carry out their orders strictly and faithfully (i.e. when they "work to rule") production threatens to stop. So most capitalists are aware of the need to get workers to "co-operate" within the workplace to some degree. A few capitalist companies have gone further. Seeing the advantages of fully exploiting (and we do mean exploiting) the experience, skills, abilities and thoughts of their employees which the traditional authoritarian capitalist workplace denies them, some have introduced various schemes to "enrich" and "enlarge" work, increase "co-operation" between workers and their bosses. In other words, some capitalist firms have tried to encourage workers to "participate" in their own exploitation by introducing (in the words of Sam Dolgoff) *"a modicum of influence, a strictly limited area of decision-making power, a voice - at best secondary - in the control of conditions of the workplace."* [**The Anarchist Collectives**, p. 81] The management and owners still have the power and still reap the majority of benefits from the productive activity of the workforce.

David Noble provides a good summary of the problems associated with experiments in workers' self-

management within capitalist firms:

"Participant in such programs can indeed be a liberating and exhilarating experience, awakening people to their own untapped potential and also to the real possibilities of collective worker control of production. As one manager described the former pilots [workers in a General Electric program]: 'These people will never be the same again. They have seen that things can be different.' But the excitement and enthusiasm engendered by such programs, as well as the heightened sense of commitment to a common purpose, can easily be used against the interests of the work force. First, that purpose is not really 'common' but is still determined by management alone, which continues to decide what will be produced, when, and where. Participation in production does not include participation in decisions on investment, which remains the prerogative of ownership. Thus participation is, in reality, just a variation of business as usual -- taking orders -- but one which encourages obedience in the name of co-operation.

"Second, participation programs can contribute to the creation of an elite, and reduced, work force, with special privileges and more 'co-operative' attitudes toward management -- thus at once undermining the adversary stance of unions and reducing membership . . .

"Thirds, such programs enable management to learn from workers -- who are now encouraged by their co-operative spirit to share what they know -- and, then, in Taylorist tradition, to use this knowledge against the workers. As one former pilot reflected, 'They learned from the guys on the floor, got their knowledge about how to optimise the technology and then, once they had it, they eliminated the Pilot Program, put that knowledge into the machines, and got people without any knowledge to run them -- on the Company's terms and without adequate compensation. They kept all the gains for themselves.'" . . .

"Fourth, such programs could provide management with a way to circumvent union rules and grievance procedures or eliminate unions altogether. . . ." [Forces of Production, pp. 318-9]

Therefore, capitalist-introduced and supported "workers' control" is very like the situation when a worker receives stock in the company they work for. If it goes some way toward redressing the gap between the value of that person's labour, and the wage they receive for it, that in itself cannot be a totally bad thing (although, of course, this does not address the issue of workplace hierarchy and the social relations within the workplace itself). The real downside of this is the "carrot on a stick" enticement to work harder -- if you work extra hard for the company, your stock will be worth more. Obviously, though, the bosses get rich off you, so the more you work, the richer they get, the more you are getting ripped off. It is a choice that anarchists feel many workers cannot afford to make -- they need or at least want the money - but we believe that the stock does not work for many workers, who end up working harder, for less. After all, stocks do not represent all profits (large amounts of which end up in

the hands of top management) nor are they divided just among those who labour. Moreover, workers may be less inclined to take direct action, for fear that they will damage the value of "their" company's stock, and so they may find themselves putting up with longer, more intense work in worse conditions.

However, be that as it may, the results of such capitalist experiments in "workers' control" are interesting and show **why** self-management will not spread by market forces (and they also bear direct relevance to the question of why **real** co-operatives are not widespread within capitalism -- see [last section](#)).

According to one expert "*[t]here is scarcely a study in the entire literature which fails to demonstrate that satisfaction in work is enhanced or. . .productivity increases occur from a genuine increase in worker's decision-making power. Findings of such consistency, I submit, are rare in social research.*" [Paul B. Lumberg, cited by Hebert Gintis, "*The nature of Labour Exchange and the Theory of Capitalist Production*", **Radical Political Economy** vol. 1, p. 252]

In spite of these findings, a "*shift toward participatory relationships is scarcely apparent in capitalist production. . . [this is] not compatible with the neo-classical assertion as to the efficiency of the internal organisation of capitalist production.*" [Herbert Gintz, **Op. Cit.**, p. 252] Why is this the case?

Economist William Lazonick indicates the reason when he writes that "*[m]any attempts at job enrichment and job enlargement in the first half of the 1970s resulted in the supply of more and better effort by workers. Yet many 'successful' experiments were cut short when the workers whose work had been enriched and enlarged began questioning traditional management prerogatives inherent in the existing hierarchical structure of the enterprise.*" [**Competitive Advantage on the Shop Floor**, p. 282]

This is an important result, as it indicates that the ruling sections within capitalist firms have a vested interest in **not** introducing such schemes, even though they are more efficient methods of production. As can easily be imagined, managers have a clear incentive to resist participatory schemes (and David Schweickart notes, such resistance, "*often bordering on sabotage, is well known and widely documented*" [**Against Capitalism**, p. 229]). As an example of this, David Noble discusses a scheme (called the Pilot Program) ran by General Electric at Lynn, Massachusetts, USA in the late 1960s:

"After considerable conflict, GE introduced a quality of work life program . . . which gave workers much more control over the machines and the production process and eliminated foremen. Before long, by all indicators, the program was succeeding -- machine use, output and product quality went up; scrap rate, machine downtime, worker absenteeism and turnover when down, and conflict on the floor dropped off considerably. Yet, little more than a year into the program -- following a union demand that it be extended throughout the shop and into other GE locations -- top management abolished the program out of fear of losing control over the workforce. Clearly, the company was willing to sacrifice gains in technical and economic efficiency in order to regain and insure management control." [**Progress Without People**, p. 65f]

However, it could be claimed that owners, being concerned by the bottom-line of profits, could **force** management to introduce participation. By this method, competitive market forces would ultimately prevail as individual owners, pursuing profits, reorganise production and participation spreads across the economy. Indeed, there are a few firms that **have** introduced such schemes, but there has been no tendency for them to spread. This contradicts "free market" capitalist economic theory which states that those firms which introduce more efficient techniques will prosper and competitive market forces will ensure that other firms will introduce the technique.

This is for three reasons.

Firstly, the fact is that within "free market" capitalism **keeping** (indeed strengthening) skills and power in the hands of the workers makes it harder for a capitalist firm to maximise profits (i.e. unpaid labour). It strengthens the power of workers, who can use that power to gain increased wages (i.e. reduce the amount of surplus value they produce for their bosses).

Workers' control basically leads to a usurpation of capitalist prerogatives -- including their share of revenues and their ability to extract more unpaid labour during the working day. While in the short run workers' control may lead to higher productivity (and so may be toyed with), in the long run, it leads to difficulties for capitalists to maximise their profits. So, *"given that profits depend on the integrity of the labour exchange, a strongly centralised structure of control not only serves the interests of the employer, but dictates a minute division of labour irrespective of considerations of productivity. For this reason, the evidence for the superior productivity of 'workers control' represents the most dramatic of anomalies to the neo-classical theory of the firm: worker control increases the effective amount of work elicited from each worker and improves the co-ordination of work activities, while increasing the solidarity and delegitimising the hierarchical structure of ultimate authority at its root; hence it threatens to increase the power of workers in the struggle over the share of total value."* [Hebert Gintz, **Op. Cit.**, p. 264]

So, a workplace which had extensive workers participation would hardly see the workers agreeing to reduce their skill levels, take a pay cut or increase their pace of work simply to enhance the profits of capitalists. Simply put, profit maximisation is not equivalent to technological efficiency. By getting workers to work longer, more intensely or in more unpleasant conditions can increase profits but does not yield more output for the **same** inputs. Workers' control would curtail capitalist means of enhancing profits by changing the quality and quantity of work. It is **this** requirement which also aids in understanding why capitalists will not support workers' control -- even though it is more efficient, it reduces the ability of capitalists to maximise profits by minimising labour costs. Moreover, demands to change the nature of workers' inputs into the production process in order to maximise profits for capitalists would provoke a struggle over the time and intensity of work and over the share of value added going to workers, management and owners and so destroy the benefits of participation.

Thus power within the workplace plays a key role in explaining why workers' control does not spread -- it reduces the ability of bosses to extract more unpaid labour from workers.

The second reason is related to the first. It too is based on the power structure within the company but the power is related to control over the surplus produced by the workers rather than the ability to control how much surplus is produced in the first place (i.e. power over workers).

Hierarchical management is the way to ensure that profits are channelled into the hands of a few. By centralising power, the surplus value produced by workers can be distributed in a way which benefits those at the top (i.e. management and capitalists). Profit maximisation under capitalism means the maximum profits available for capitalists -- **not** the maximum difference between selling price and cost as such. This difference explains the strange paradox of workers' control experiments being successful but being cancelled by management. The paradox is easily explained once the hierarchical nature of capitalist production (i.e. of wage labour) is acknowledged. Workers' control, by placing (some) power in the hands of workers, undermines the authority of management and, ultimately, their power to control the surplus produced by workers and allocate it as they see fit. Thus, while workers' control does reduce costs, increase efficiency and productivity (i.e. maximise the difference between prices and costs) it (potentially) reduces profit maximisation by undermining the power (and so privileges) of management to allocate that surplus as they see fit.

Increased workers' control reduces the capitalists potential to maximise **their** profits and so will be opposed by both management **and** owners. Indeed, it can be argued that hierarchical control of production exists solely to provide for the accumulation of capital in a few hands, **not** for efficiency or productivity (see Stephan A. Margin, *"What do Bosses do? The Origins and Functions of Hierarchy in Capitalist Production"*, **Op. Cit.**, pp. 178-248). This is why profit maximisation does not entail efficiency and can actively work against it.

As David Noble argues, power is the key to understanding capitalism, **not** the drive for profits as such:

"In opting for control [over the increased efficiency of workers' control] . . . management . . . knowingly and, it must be assumed, willingly, sacrificed profitable production. Hence [experiences such as] the Pilot Program [at GE] . . . illustrates not only the ultimate management priority of power over both production and profit within the firm, but also the larger contradiction between the preservation of private power and prerogatives, on the one hand, and the social goals of efficient, quality, and useful production, on the other . . .

"It is a common confusion, especially on the part of those trained in or unduly influenced by formal economics (liberal and Marxist alike), that capitalism is a system of profit-motivated, efficient production. This is not true, nor has it ever been. If the drive to maximise profits, through private ownership and control over the process of production, it has never been the end of that development. The goal has always been domination (and the power and privileges that go with it) and the preservation of domination. There is little historical evidence to support the view that, in the final analysis, capitalists play by the rules of the economic game imagined by theorists. There is ample evidence to suggest, on

the other hand, that when the goals of profit-making and efficient production fail to coincide with the requirements of continued dominance, capital will resort to more ancient means: legal, political, and, of need be, military. Always, behind all the careful accounting, lies the threat of force. This system of domination has been legitimated in the past by the ideological invention that private ownership of the means of production and the pursuit of profit via production are always ultimately beneficial to society. Capitalism delivers the goods, it is argued, better, more cheaply, and in larger quantity, and in so doing, fosters economic growth . . . The story of the Pilot Program -- and it is but one among thousands like it in U.S. industry -- raises troublesome questions about the adequacy of this mythology as a description of reality." [Forces of Production, pp. 321-2]

Hierarchical organisation (i.e. domination) is essential to ensure that profits are controlled by a few and can, therefore, be allocated by them in such a way to ensure their power and privileges. By undermining management authority, workers' control undermines that power to maximise profits in a certain direction even though it increases "profits" (the difference between prices and costs) in the abstract. As workers' control starts to extend (or management sees its potential to spread) into wider areas such as investment decisions, how to allocate the surplus (i.e. profits) between wages, investment, dividends, management pay and so on, then they will seek to end the project in order to ensure their power over both the workers and the surplus they, the workers, produce. In this they will be supported by those who actually own the company who obviously would not support a regime which will not ensure the maximum return on their investment. This maximum return would be endangered by workers' control, even though it is technically more efficient, as control over the surplus rests with the workers and not a management elite with similar interests and aims as the owners -- an egalitarian workplace would produce an egalitarian distribution of surplus, in other words (as proven by the experience of workers' co-operatives). In the words of one participant of the GE workers' control project -- *"If we're all one, for manufacturing reasons, we must share in the fruits equitably, just like a co-op business."* [quoted by Noble, **Op. Cit.**, p. 295] Such a possibility is one no owner would agree to.

Thirdly, to survive within the "free" market means to concentrate on the short term. Long term benefits, although greater, are irrelevant. A free market requires profits **now** and so a firm is under considerable pressure to maximise short-term profits by market forces (a similar situation occurs when firms invest in "green" technology, see [section E.5](#)).

Participation requires trust, investment in people and technology and a willingness to share the increased value added that result from workers' participation with the workers who made it possible. All these factors would eat into short term profits in order to return richer rewards in the future. Encouraging participation thus tends to increase long term gains at the expense of short-term ones (for it ensures that workers do not consider participation as a con, they must experience **real** benefits in terms of power, conditions and wage rises). For firms within a free market environment, they are under pressure from share-holders and their financiers for high returns as soon as possible. If a company does not produce high dividends then it will see its stock fall as shareholders move to those companies that do. Thus the market **forces** companies (and banks, who in turn loan over the short term to companies) to act in such

ways as to maximise short term profits.

If faced with a competitor which is not making such investments (and which is investing directly into deskilling technology or intensifying work loads which lowers their costs) and so wins them market share, or a downturn in the business cycle which shrinks their profit margins and makes it difficult for the firm to meet its commitments to its financiers and workers, a company that intends to invest in people and trust will usually be rendered unable to do so. Faced with the option of empowering people in work or deskilling them and/or using the fear of unemployment to get workers to work harder and follow orders, capitalist firms have consistently chosen (and probably preferred) the latter option (as occurred in the 1970s).

Thus, workers' control is unlikely to spread through capitalism because it entails a level of working class consciousness and power that is incompatible with capitalist control. In other words, "*[i]f the hierarchical division of labour is necessary for the extraction of surplus value, then worker preferences for jobs threatening capitalist control will not be implemented.*" [Hebert Gintis, **Op. Cit.**, p. 253] The reason why it is more efficient, ironically, ensures that a capitalist economy will not select it. The "free market" will discourage empowerment and democratic workplaces, at best reducing "co-operation" and "participation" to marginal issues (and management will still have the power of veto).

In addition, moves towards democratic workplaces within capitalism is an example of the system in conflict with itself -- pursuing its objectives by methods which constantly defeat those same objectives. As Paul Carden argues, the "*capitalist system can only maintain itself by trying to reduce workers into mere order-takers. . . At the same time the system can only function as long as this reduction is never achieved. . . [for] the system would soon grind to a halt. . . [However] capitalism constantly has to **limit** this **participation** (if it didn't the workers would soon start deciding themselves and would show in practice now superfluous the ruling class really is).*" [**Revolution and Modern Capitalism**, pp. 45-46]

The experience of the 1970s supports this thesis well. Thus "workers' control" within a capitalist firm is a contradictory thing - too little power and it is meaningless, too much and workplace authority structures and short-term profits (i.e. capitalist share of value added) can be harmed. Attempts to make oppressed, exploited and alienated workers work if they were neither oppressed, exploited nor alienated will always fail.

For a firm to establish committed and participatory relations internally, it must have external supports - particularly with providers of finance (which is why co-operatives benefit from credit unions and co-operating together). The price mechanism proves self-defeating to create such supports and that is why we see "participation" more fully developed within Japanese and German firms (although it is still along way from fully democratic workplaces), who have strong, long term relationships with local banks and the state which provides them with the support required for such activities. As William Lazonick notes, Japanese industry had benefited from the state ensuring "*access to inexpensive long-term finance, the sine qua non of innovating investment strategies*" along with a host of other supports, such as protecting Japanese industry within their home markets so they could "*develop and utilise their productive*

resources to the point where they could attain competitive advantage in international competition." [Op. Cit., p. 305] The German state provides its industry with much of the same support.

Therefore, "participation" within capitalist firms will have little or no tendency to spread due to the "automatic" actions of market forces. In spite of such schemes being more efficient, capitalism will not select them because they empower workers and make it hard for capitalists to maximise their short term profits. Hence capitalism, by itself, will have no tendency to produce more libertarian organisational forms within industry. Those firms that do introduce such schemes will be the exception rather than the rule (and the schemes themselves will be marginal in most respects and subject to veto from above). For such schemes to spread, collective action is required (such as state intervention to create the right environment and support network or -- from an anarchist point of view -- union and community direct action).

However such schemes, as noted above, are just forms of self-exploitation, getting workers to help their robbers and so **not** a development anarchists seek to encourage. We have discussed this here just to be clear that, firstly, such forms of structural reforms are **not** self-management, as managers and owners still have the real power, and, secondly, even if such forms are somewhat liberatory, market forces will not select them (i.e. collective action would be required).

For anarchists *"self-management is not a new form of mediation between workers and their bosses . . . [it] refers to the very process by which the workers themselves overthrow their managers and take on their own management and the management of production in their own workplace."* [Sam Dolgoff, Op. Cit., p. 81] Hence our support for co-operatives, unions and other self-managed structures created and organised from below by and for working class people.

J.5.13 What are Modern Schools?

Modern schools are alternative schools, self-managed by students, teachers and parents which reject the authoritarian schooling methods of the modern "education" system. Such schools have a feature of the anarchist movement since the turn of the 20th century while interest in libertarian forms of education has been a feature of anarchist theory from the beginning. All the major anarchist thinkers, from Godwin through Proudhon, Bakunin and Kropotkin to modern activists like Colin Ward, have stressed the importance of libertarian (or "rational") education, education that develops all aspects of the student (mental and physical -- and so termed "integral" education) as well as encouraging critical thought and mental freedom. The aim of such education is, to use Proudhon's words, ensure that the *"industrial worker, the man [sic!] of action and the intellectual would all be rolled into one"* [cited by Steward Edward in **The Paris Commune**, p. 274]

Anyone involved in radical politics, constantly and consistently challenges the role of the state's institutions and their representatives within our lives. The role of bosses, the police, social workers, the secret service, middle managers, doctors and priests are all seen as part of a hierarchy which exists to keep us, the working class, subdued. It is relatively rare though for the left-wing to call into question the

role of teachers. Most left wing activists and a large number of libertarians believe that education is good, all education is good, and education is always good. As Henry Barnard, the first US commissioner of education, appointed in 1867, exhorted, "*education always leads to freedom*".

Those involved in libertarian education believe the contrary. They believe that national education systems exist only to produce citizens who'll be blindly obedient to the dictates of the state, citizens who will uphold the authority of government even when it runs counter to personal interest and reason, wage slaves who will obey the orders of their boss most of the time and consider being able to change bosses as freedom. They agree with William Godwin (one of the earliest critics of national education systems) when he wrote in **An Enquiry Concerning Political Justice** that "*the project of a national education ought to be discouraged on account of its obvious alliance with national government . . . Government will not fail to employ it to strengthen its hand and perpetuate its institutions. . . Their views as instigator of a system will not fail to be analogous to their views in their political capacity.*" [cited by Colin Ward, **Anarchy in Action**, p. 81]

With the growth of industrialism in the 19th century schools triumphed, not through a desire to reform but as an economic necessity. Industry did not want free thinking individuals, it wanted workers, instruments of labour, and it wanted them punctual, obedient, passive and willing to accept their disadvantaged position. According to Nigel Thrift, many employers and social reformers became convinced that the earliest generations of workers were almost impossible to discipline (i.e. to get accustomed to wage labour and workplace authority). They looked to children, hoping that "*the elementary school could be used to break the labouring classes into those habits of work discipline now necessary for factory production. . . Putting little children to work at school for very long hours at very dull subjects was seen as a positive virtue, for it made them habituated, not to say naturalised, to labour and fatigue.*" [quoted by Juliet B. Schor in **The Overworked American**, p. 61]

Thus supporters of Modern Schools recognise that the role of education is an important one in maintaining hierarchical society -- for government and other forms of hierarchy (such as wage labour) must always depend on the opinion of the governed. Francisco Ferrer (the most famous supporter of Modern Schooling due to his execution by the Spanish state in 1909) argued that:

"Rulers have always taken care to control the education of the people. They know their power is based almost entirely on the school and they insist on retaining their monopoly. The school is an instrument of domination in the hands of the ruling class." [cited by Clifford Harper, **Anarchy: A Graphic Guide**, p. 100]

Little wonder, then, that Emma Goldman argued that the "*modern method of education*" has "*little regard for personal liberty and originality of thought. Uniformity and imitation is [its] motto*" and that the school "*is for the child what the prison is for the convict and the barracks for the soldier - a place where everything is being used to break the will of the child, and then to pound, knead, and shape it into a being utterly foreign to itself.*" [**Red Emma Speaks**, p. 118, p. 116]

Hence the importance of Modern Schools. It is a means of spreading libertarian education within a hierarchical society and undercut one of the key supports for that society -- the education system. Instead of hierarchical education, Modern schools exist to *"develop the individual through knowledge and the free play of characteristic traits, so that [the child] may become a social being, because he had learned to know himself [or herself], to know his [or her] relation to his fellow[s]. . . "* [Emma Goldman, **Op. Cit.**, p. 121] It would, in Stirner's words, be *"an education for freedom, not for subservience."*

The Modern School Movement (also known as the Free School Movement) over the past century has been an attempt to represent part of this concern about the dangers of state and church schools and the need for libertarian education. The idea of libertarian education is that knowledge and learning should be linked to real life processes and personal usefulness and should not be the preserve of a special institution. Thus Modern Schools are an attempt to establish an environment for self development in an overly structured and rationalised world. An oasis from authoritarian control and as a means of passing on the knowledge to be free.

"The underlying principle of the Modern School is this: education is a process of drawing out, not driving in; it aims at the possibility that the child should be left free to develop spontaneously, directing his [or her] own efforts and choosing the branches of knowledge which he desires to study. . . the teacher . . . should be a sensitive instrument responding to the needs of the child . . . a channel through which the child may attain so much of the ordered knowledge of the world as he shows himself [or herself] ready to receive and assimilate". [Emma Goldman, **Op. Cit.**, p. 126]

The Modern School bases itself on libertarian education techniques. Libertarian education, very broadly, seeks to produce children who will demand greater personal control and choice, who think for themselves and question all forms of authority:

"We don't hesitate to say we want people who will continue to develop. People constantly capable of destroying and renewing their surroundings and themselves: whose intellectual independence is their supreme power, which they will yield to none; always disposed for better things, eager for the triumph of new ideas, anxious to crowd many lives into the life they have. It must be the aim of the school to show the children that there will be tyranny as long as one person depends on another." [Ferrer, quoted by Clifford Harper, **Op. Cit.**, p. 100]

Thus the Modern School insists that the child is the centre of gravity in the education process -- and that education is just that, **not** indoctrination:

"I want to form a school of emancipation, concerned with banning from the mind whatever divides people, the false concepts of property, country and family so as to attain the liberty and well-being which all desire. I will teach only simple truth. I will not ram dogma into their heads. I will not conceal one iota of fact. I will teach not what to think

but how to think." [Ferrer, cited by Harper, **Op. Cit.**, pp. 99-100]

The Modern School has no rewards or punishments, exams or mark -- the everyday "*tortures*" of conventional schooling. And because practical knowledge is more useful than theory, lessons were often held in factories, museums or the countryside. The school was also used by the parents, and Ferrer planned a Popular University.

"Higher education, for the privileged few, should be for the general public, as every human has a right to know; and science, which is produced by observers and workers of all countries and ages, ought not be restricted to class." [Ferrer, cited by Harper, **Op. Cit.**, p. 100]

Thus Modern Schools are based on encouraging self-education in a co-operative, egalitarian and libertarian atmosphere in which the pupil (regardless of age) can develop themselves and their interests to the fullest of their abilities. In this way Modern Schools seek to create anarchists by a process of education which respects the individual and gets them to develop their own abilities in a conducive setting.

Modern Schools have been a constant aspect of the anarchist movement since the later 1890s. The movement was started in France by Louise Michel and Sebastien Faure, where Francisco Ferrer became acquainted with them. He founded his Modern School in Barcelona in 1901, and by 1905 there were 50 similar schools in Spain (many of them funded by anarchist groups and trade unions and, from 1919 onward, by the C.N.T. -- in all cases the autonomy of the schools was respected). In 1909, Ferrer was falsely accused by the Spanish government of leading an insurrection and executed in spite of world-wide protest and overwhelming proof of his innocence. His execution, however, gained him and his educational ideas international recognition and inspired a Modern School progressive education movement in Britain, France, Belgium, Holland, Italy, Germany, Switzerland, Poland, Czechoslovakia, Yugoslavia, Argentina, Brazil, Mexico, China, Japan and, on the greatest scale, in the USA.

However, for most anarchists, Modern Schools are not enough in themselves to produce a libertarian society. They agree with Bakunin's argument that "*[f]or individuals to be moralised and become fully human . . . three things are necessary: a hygienic birth, all-round education, accompanied by an upbringing based on respect for labour, reason, equality, and freedom and a social environment wherein each human individual will enjoy full freedom and really by, **de jure** and **de facto**, the equal of every other.*

"Does this environment exist? No. Then it must be established. . . [otherwise] in the existing social environment . . . on leaving [libertarian] schools they [the student] would enter a society governed by totally opposite principles, and, because society is always stronger than individuals, it would prevail over them . . . [and] demoralise them." [**The Basic Bakunin**, p, 174]

Because of this, Modern Schools must be part of a mass working class revolutionary movement which

aims to build as many aspects of the new world as possible in the old one before, ultimately, replacing it. Otherwise they are just useful as social experiments and their impact on society marginal. Little wonder, then, that Bakunin supported the International Workers Association's resolution that urged "*the various sections [of the International] to establish public courses . . . [based on] all-round instruction, in order to remedy as much as possible the insufficient education that workers currently receive.*" [quoted by Bakunin, **Op. Cit.**, p. 175]

Thus, for anarchists, this process of education is **part of** the class struggle, not in place of it and so "*the workers [must] do everything possible to obtain all the education they can in the material circumstances in which they currently find themselves . . . [while] concentrat[ing] their efforts on the great question of their economic emancipation, the mother of all other emancipations.*" [Michael Bakunin, **Op. Cit.**, p. 175]

Before finishing, we must stress that hierarchical education (like the media), cannot remove the effects of actual life and activity in shaping/changing people and their ideas, opinions and attitudes. While education is an essential part of maintaining the status quo and accustoming people to accept hierarchy, the state and wage slavery, it cannot stop individuals from learning from their experiences, ignoring their sense of right and wrong, recognising the injustices of the current system and the ideas that it is based upon. This means that even the best state (or private) education system will still produce rebels -- for the **experience** of wage slavery and state oppression (and, most importantly, **struggle**) is shattering to the **ideology** spoon-fed children during their "education" and reinforced by the media.

For more information on Modern Schools see Paul Avrich's **The Modern School Movement: Anarchism and education in the United States**, Emma Goldman's essay "*Francisco Ferrer and the Modern School*" in **Anarchism and Other Essays** and A.S Neil's **Summerhill**. For a good introduction to anarchist viewpoints on education see "*Kropotkin and technical education: an anarchist voice*" by Michael Smith in **For Anarchism** and Michael Bakunin's "*All-Round Education*" in **The Basic Bakunin**. For an excellent summary of the advantages and benefits of co-operative learning, see Alfie Kohn's **No Contest**.

J.5.14 What is Libertarian Municipalism?

In his article "*Theses on Libertarian Municipalism*" [in **The Anarchist Papers**, Black Rose Press, 1986], Murray Bookchin has proposed a non-parliamentary electoral strategy for anarchists. He has repeated this proposal in many of his later works, such as **From Urbanisation to Cities** and has made it -- at least in the USA -- one of the many alternatives anarchists are involved in. The main points of his argument are summarised below, followed by a brief commentary.

According to Bookchin, "*the proletariat, as do all oppressed sectors of society, comes to life when it sheds its industrial habits in the free and spontaneous activity of **communising**, or taking part in the political life of the community.*" In other words, Bookchin thinks that democratisation of local communities may be as strategically important, or perhaps more important, to anarchists than workplace

struggles.

Since local politics is humanly scaled, Bookchin argues that it can be participatory rather than parliamentary. Or, as he puts it, "*[t]he anarchic ideal of decentralised, stateless, collectively managed, and directly democratic communities -- of confederated municipalities or 'communes' -- speaks almost intuitively, and in the best works of Proudhon and Kropotkin, consciously, to the transforming role of libertarian municipalism as the framework of a liberatory society. . .*" He also points out that, historically, the city has been the principle countervailing force to imperial and national states, haunting them as a potential challenge to centralised power and continuing to do so today, as can be seen in the conflicts between national government and municipalities in many countries.

But, despite the libertarian potential of urban politics, "urbanisation" -- the growth of the modern megalopolis as a vast wasteland of suburbs, shopping malls, industrial parks, and slums that foster political apathy and isolation in realms of alienated production and private consumption -- is antithetical to the continued existence of those aspects of the city that might serve as the framework for a libertarian municipalism. "*When urbanisation will have effaced city life so completely that the city no longer has its own identity, culture, and spaces for consociation, the bases for democracy -- in whatever way the word is defined -- will have disappeared and the question of revolutionary forms will be a shadow game of abstractions.*"

Despite this danger, however, Bookchin thinks that a libertarian politics of local government is still possible, provided anarchists get their act together. "*The Commune still lies buried in the city council; the sections still lie buried in the neighbourhood; the town meeting still lies buried in the township; confederal forms of municipal association still lie buried in regional networks of towns and cities.*"

What would anarchists do electorally at the local level? Bookchin proposes that they change city and town charters to make political institutions participatory. "*An organic politics based on such radical participatory forms of civic association does not exclude the right of anarchists to alter city and town charters such that they validate the existence of directly democratic institutions. And if this kind of activity brings anarchists into city councils, there is no reason why such a politics should be construed as parliamentary, particularly if it is confined to the civic level and is consciously posed against the state.*"

In a latter essay, Bookchin argues that Libertarian Municipalism "*depends upon libertarian leftists running candidates at the local level, calling for the division of municipalities into wards, where popular assemblies can be created that bring people into full and direct participation in political life . . . municipalities would [then] confederate into a dual power to oppose the nation-state and ultimately dispense with it and with the economic forces that underpin statism as such.*" [**Democracy and Nature** no. 9, p. 158] This would be part of a social wide transformation, whose "*[m]inimal steps . . . include initiating Left Green municipalist movements that propose neighbourhood and town assemblies - even if they have only moral functions at first - and electing town and city councillors that advance the cause of these assemblies and other popular institutions. These minimal steps can lead step-by-step to the*

formation of confederal bodies. . . Civic banks to fund municipal enterprises and land purchases; the fostering of new ecologically-orientated enterprises that are owned by the community. . . [From **Urbanisation to Cities**, p. 266]

Thus Bookchin sees Libertarian Municipalism as a process by which the state can be undermined by using elections as the means of creating popular assemblies. Part of this process, he argues, would be the "*municipalisation of property*" which would "*bring the economy as a whole into the orbit of the public sphere, where economic policy could be formulated by the entire community.*" [Op. Cit. p. 235]

Bookchin considers Libertarian Municipalism as the key means of creating an anarchist society, and argues that those anarchists who disagree with it are failing to take their politics seriously. "*It is curious,*" he notes, "*that many anarchists who celebrate the existence of a 'collectivised' industrial enterprise, here and there, with considerable enthusiasm despite its emergence within a thoroughly bourgeois economic framework, can view a municipal politics that entails 'elections' of any kind with repugnance, even if such a politics is structured around neighbourhood assemblies, recallable deputies, radically democratic forms of accountability, and deeply rooted localist networks.*" ["*Theses on Libertarian Municipalism*"]

In evaluating Bookchin's proposal, several points come to mind.

Firstly, it is clear that Libertarian Municipalism's arguments in favour of community assemblies is important and cannot be ignored. Bookchin is right to note that, in the past, many anarchists placed far too much stress on workplace struggles and workers' councils as the framework of a free society. Many of the really important issues that affect us cannot be reduced to workplace organisations, which by their very nature disenfranchise those who do not work in industry (such as housewives, the old, and so on). And, of course, there is far more to life than work and so any future society organised purely around workplace organisations is reproducing capitalism's insane glorification of economic activity, at least to some degree. So, in this sense, Libertarian Municipalism has a very valid point -- a free society will be created and maintained within the community as well as in the workplace.

Secondly, Bookchin and other Libertarian Municipalists are totally correct to argue that anarchists should work in their local communities. As noted in section [J.5.1](#), many anarchists are doing just that and are being very successful as well. However, most anarchists reject the idea that using elections are a viable means of "*struggle toward creating new civic institutions out of old ones (or replacing the old ones altogether).*" [From **Urbanisation to Cities**, p. 267]

The most serious problem has to do with whether politics in most cities has already become too centralised, bureaucratic, inhumanly scaled, and dominated by capitalist interests to have any possibility of being taken over by anarchists running on platforms of participatory democratisation. Merely to pose the question seems enough to answer it. There is no such possibility in the vast majority of cities, and hence it would be a waste of time and energy for anarchists to support libertarian municipalist candidates in local elections -- time and energy that could be more profitably spent in direct action. If the

central governments are too bureaucratic and unresponsive to be used by Libertarian Municipalists, the same can be said of local ones too.

The counter-argument to this is that even if there is no chance of such candidates being elected, their standing for elections would serve a valuable educational function. The answer to this is: perhaps, but would it be more valuable than direct action? And would its educational value, if any, outweigh the disadvantages of electioneering mentioned in sections [J.2.2](#) and [J.2.4](#), such as the fact that voting ratifies the current system? Given the ability of major media to marginalise alternative candidates, we doubt that such campaigns would have enough educational value to outweigh these disadvantages. Moreover, being an anarchist does not make one immune to the corrupting effects of electioneering (as highlighted in section [J.2.6](#)). History is littered with radical, politically aware movements using elections and ending up becoming part of the system they aimed to transform. Most anarchists doubt that Libertarian Municipalism will be any different -- after all, it is the circumstances the parties find themselves in which are decisive, not the theory they hold (the social relations they face will transform the theory, not vice versa, in other words).

Lastly, most anarchists question the whole process on which Libertarian Municipalism bases itself on. The idea of communes is a key one of anarchism and so strategies to create them in the here and now are important. However, to think that using alienated, representative institutions to abolish these institutions is mad. As the Italian activists (who organised a neighbourhood assembly by non-electoral means) argue, *"[t]o accept power and to say that the others were acting in bad faith and that we would be better, would force non-anarchists towards direct democracy. We reject this logic and believe that organisations must come from the grassroots."* [*Community Organising in Southern Italy*", pp. 16-19, **Black Flag** no. 210, p. 18]

Thus Libertarian Municipalism reverses the process by which community assemblies will be created. Instead of anarchists using elections to build such bodies, they must work in their communities directly to create them (see section J.5.1 - ["What is Community Unionism?"](#) for more details). Using the catalyst of specific issues of local interest, anarchists could propose the creation of a community assembly to discuss the issues in question and organise action to solve them. Instead of a *"confederal municipalist movement run[ning] candidates for municipal councils with demands for the institution of public assemblies"* [Murray Bookchin, **Op. Cit.**, p. 229] anarchists should encourage people to create these institutions themselves and empower themselves by collective self-activity. As Kropotkin argued, *"Laws can only follow the accomplished facts; and even if they do honestly follow them - which is usually not the case - a law remains a dead letter so long as there are not on the spot the living forces required for making the tendencies expressed in the law an accomplished fact."* [**Kropotkin's Revolutionary Pamphlets**, p. 171] Most anarchists, therefore, think it is far more important to create the *"living forces"* within our communities directly than waste energy in electioneering and the passing of laws creating or "legalising" community assemblies. In other words, community assemblies can only be created from the bottom up, by non-electoral means, a process which Libertarian Municipalism confuses with electioneering.

So, while Libertarian Municipalism **does** raise many important issues and correctly stresses the importance of community activity and self-management, its emphasis on electoral activity undercuts its liberatory promise. For most anarchists, community assemblies can only be created from below, by direct action, and (because of its electoral strategy) a Libertarian Municipalist movement will end up being transformed into a copy of the system it aims to abolish.

J.5.15 What attitude do anarchists take to the welfare state?

Currently we are seeing a concerted attempt to rollback the state within society. This has been begun by the right-wing in the name of "freedom," "individual dignity and responsibility" and "efficiency." The position of anarchists to this process is mixed. On the one hand, we are all in favour of reducing the size of the state and increasing individual responsibility and freedom, but, on the other, we are well aware that this process is part of an attack on the working class and tends to increase the power of the capitalists over us as the state's (direct) influence is reduced. Thus anarchists appear to be on the horns of a dilemma -- or, at least, apparently.

So what attitude **do** anarchists take to the welfare state and the current attacks on it? (see [next section](#) for a short discussion of business based welfare)

First we must note that this attack of "welfare" is somewhat selective. While using the rhetoric of "self-reliance" and "individualism," the practitioners of these "tough love" programmes have made sure that the major corporations continue to get state hand-outs and aid while attacking social welfare. In other words, the current attack on the welfare state is an attempt to impose market discipline on the working class while increasing state protection for the ruling class. Therefore, most anarchists have no problem in social welfare programmes as these can be considered as only fair considering the aid the capitalist class has always received from the state (both direct subsidies and protection and indirect support via laws that protect property and so on). And, for all their talk of increasing individual choice, the right-wing remain silent about the lack of choice and individual freedom during working hours within capitalism.

Secondly, most of the right-wing inspired attacks on the welfare state are inaccurate. For example, Noam Chomsky notes that the *"correlation between welfare payments and family life is real, though it is the reverse of what is claimed [by the right]. As support for the poor has declined, unwed birth-rates, which had risen steadily from the 1940s through the mid-1970s, markedly increased. 'Over the last three decades, the rate of poverty among children almost perfectly correlates with the birth-rates among teenage mothers a decade later,' Mike Males points out: 'That is, child poverty seems to lead to teenage childbearing, not the other way around.'"* ["Rollback III", **Z Magazine**, April, 1995] The same can be said for many of the claims about the evil effects of welfare which the rich and large corporations wish to save others (but not themselves) from. Such altruism is truly heart warming.

Thirdly, we must note that while most anarchists **are** in favour of collective self-help and welfare, we are opposed to the welfare state. Part of the alternatives anarchists try and create are self-managed and communal community welfare projects (see [next section](#)). Moreover, in the past, anarchists and

syndicalists were at the forefront in opposing state welfare schemes (introduced, we may note, **not** by socialists but by liberals and other supporters of capitalism to undercut support for radical alternatives and aid long term economic development by creating the educated and healthy population required to use advanced technology and fight wars). Thus we find that:

"Liberal social welfare legislation. . . were seen by many [British syndicalists] not as genuine welfare reforms, but as mechanisms of social control. Syndicalists took a leading part in resisting such legislation on the grounds that it would increase capitalist discipline over labour, thereby undermining working class independence and self-reliance." [Bob Holton, **British Syndicalism: 1900-1914**, p. 137]

Anarchists view the welfare state much as some feminists do. While they note the *"patriarchal structure of the welfare state"* they are also aware that it has *"also brought challenges to patriarchal power and helped provide a basis for women's autonomous citizenship."* [Carole Pateman, *"The Patriarchal Welfare State"*, in **The Disorder of Women**, p. 195] She does on to note that *"for women to look at the welfare state is merely to exchange dependence on individual men for dependence on the state. The power and capriciousness of husbands is replaced by the arbitrariness, bureaucracy and power of the state, the very state that has upheld patriarchal power. . . [this] will not in itself do anything to challenge patriarchal power relations."* [**Ibid.**, p. 200]

Thus while the welfare state does give working people more options than having to take **any** job or put up with **any** conditions, this relative independence from the market and individual capitalists has come at the price of dependence on the state -- the very institution that protects and supports capitalism in the first place. And as we have become painfully aware in recent years, it is the ruling class who has most influence in the state -- and so, when it comes to deciding what state budgets to cut, social welfare ones are first in line. Given that state welfare programmes are controlled by the state, **not** working class people, such an outcome is hardly surprising. Not only this, we also find that state control reproduces the same hierarchical structures that the capitalist firm creates.

Unsurprisingly, anarchists have no great love of such state welfare schemes and desire their replacement by self-managed alternatives. For example, taking municipal housing, Colin Ward writes:

"The municipal tenant is trapped in a syndrome of dependence and resentment, which is an accurate reflection of his housing situation. People care about what is theirs, what they can modify, alter, adapt to changing needs and improve themselves. They must have a direct responsibility for it.

". . . The tenant take-over of the municipal estate is one of those obviously sensible ideas which is dormant because our approach to municipal affairs is still stuck in the groves of nineteenth-century paternalism." [**Anarchy in Action**, p.73]

Looking at state supported education, Ward argues that the *"universal education system turns out to be*

yet another way in which the poor subsidise the rich." Which is the least of its problems, for *"it is in the nature of public authorities to run coercive and hierarchical institutions whose ultimate function is to perpetuate social inequality and to brainwash the young into the acceptance of their particular slot in the organised system."* [Op. Cit., p. 83, p. 81]

The role of state education as a means of systematically indoctrinating the working class is reflected in William Lazonick's essay *"The Subjection of Labour to Capital: The rise of the Capitalist System"*:

*"The Education Act of 1870. . . [gave the] state. . . the facilities. . . to make education compulsory for all children from the age of five to the age of ten. It had also erected a powerful system of ideological control over the next generation of workers. . . [It] was to function as a prime ideological mechanism in the attempt by the capitalist class through the medium of the state, to continually **reproduce** a labour force which would passively accept [the] subjection [of labour to the domination of capital]. At the same time it had set up a public institution which could potentially be used by the working class for just the contrary purpose."* [Radical Political Economy Vol. 2, p. 363]

Lazonick, as did Pateman, indicates the contradictory nature of welfare provisions within capitalism. On the one hand, they are introduced to help control the working class (and to improve long term economic development). On the other hand, these provisions can be used by working class people as weapons against capitalism and give themselves more options than "work or starve" (the fact that the recent attack on welfare in the UK -- called, ironically enough, **welfare to work** -- involves losing benefits if you refuse a job is not a surprising development). Thus we find that welfare acts as a kind of floor under wages. In the US, the two have followed a common trajectory (rising together and falling together). And it is **this**, the potential benefits welfare can have for working people, that is the **real** cause for the current capitalist attacks upon it.

Because of this contradictory nature of welfare, we find anarchists like Noam Chomsky arguing that (using an expression popularised by South American rural workers unions) *"we should 'expand the floor of the cage.' We know we're in a cage. We know we're trapped. We're going to expand the floor, meaning we will extend to the limits what the cage will allow. And we intend to destroy the cage. But not by attacking the cage when we're vulnerable, so they'll murder us. . . You have to protect the cage when it's under attack from even worse predators from outside, like private power. And you have to expand the floor of the cage, recognising that it's a cage. These are all preliminaries to dismantling it. Unless people are willing to tolerate that level of complexity, they're going to be of no use to people who are suffering and who need help, or, for that matter, to themselves."* [Expanding the Floor of the Cage]

Thus, even though we know the welfare state is a cage and an instrument of class power, we have to defend it from a worse possibility -- namely, the state as "pure" defender of capitalism with working people with few or no rights. At least the welfare state does have a contradictory nature, the tensions of which can be used to increase our options. And one of these options is its abolition **from below!**

For example, with regards to municipal housing, anarchists will be the first to agree that it is paternalistic, bureaucratic and hardly a wonderful living experience. However, in stark contrast with the "libertarian" right who desire to privatise such estates, anarchists think that *"tenants control"* is the best solution as it gives us the benefits of individual ownership **along with** community (and so without the negative points of property, such as social atomisation). And anarchists agree with Colin Ward when he thinks that the demand for *"tenant control"* must come from below, by the *"collective resistance"* of the tenants themselves, perhaps as a growth from struggles against rent increases. [**Op. Cit.**, p. 73]

And it is here that we find the ultimate irony of the right-wing, "free market" attempts to abolish the welfare state -- neo-liberalism wants to end welfare **from above**, by means of the state (which is the instigator of this "individualistic" "reform"). It does not seek the end of dependency by self-liberation, but the shifting of dependency from state to charity and the market. In contrast, anarchists desire to abolish welfare from below, by the direct action of those who receive it by a *"multiplicity of mutual aid organisations among claimants, patients, victims"* for this *"represents the most potent lever for change in transforming the welfare state into a genuine welfare society, in turning community care into a caring community."* [Colin Ward, **Op. Cit.**, p. 125]

Ultimately, unlike the state socialist/liberal left, anarchists reject the idea that the case of socialism, of a free society, can be helped by using the state. Like the right, the left see political action in terms of the state. All its favourite policies have been statist - state intervention in the economy, nationalisation, state welfare, state education and so on. Whatever the problem, the left see the solution as lying in the extension of the power of the state. And, as such, they continually push people in relying on **others** to solve their problems for them (moreover, such state-based "aid" does not get to the core of the problem. All it does is fight the symptoms of capitalism and statism without attacking their root causes -- the system itself).

Invariably, this support for the state is a move away from working class people, of trusting and empowering them to sort out their own problems. Indeed, the left seem to forget that the state exists to defend the collective interests of capitalists and other sections of the ruling class and so could hardly be considered a neutral body. And, worst of all, they have presented the right with the opportunity of stating that freedom from the state means the same thing as the freedom of the market (and as we have explained in detail in sections [B](#), [C](#) and [D](#), capitalism is based upon domination -- wage labour -- and needs many repressive measures in order to exist and survive). Anarchists are of the opinion that changing the boss for the state (or vice versa) is only a step sideways, **not** forward! After all, it is **not** working people who control how the welfare state is run, it is politicians, "experts" and managers who do so. Little wonder we have seen elements of the welfare state used as a weapon in the class war **against** those in struggle (for example, in Britain during the 1980s the Conservative Government made it illegal to claim benefits while on strike, so reducing the funds available to workers in struggle and helping bosses force strikers back to work faster).

Therefore, anarchists consider it far better to encourage those who suffer injustice to organise themselves and in that way they can change what **they** think is actually wrong, as opposed to what

politicians and "experts" claim is wrong. If sometimes part of this struggle involves protecting aspects of the welfare state (*"expanding the floor of the cage"*) so be it -- but we will never stop there and will use such struggles as a step in abolishing the welfare state from below by creating self-managed, working class, alternatives. As part of this process anarchists also seek to **transform** those aspects of the welfare state they may be trying to "protect". They do not defend an institution which **is** paternalistic, bureaucratic and unresponsive. For example, if we are involved in trying to stop a local state-run hospital or school from closing, anarchists would try to raise the issue of self-management and local community control into the struggle in the hope of going beyond the status quo.

Not only does this mean that we can get accustomed to managing our own affairs collectively, it also means that we can ensure that whatever "safety-nets" we create for ourselves do what we want and not what capital wants. In the end, what we create and run by our own activity will be more responsive to our needs, and the needs of the class struggle, than reformist aspects of the capitalist state. This much, we think, is obvious. And it is ironic to see elements of the "radical" and "revolutionary" left argue against this working class self-help (and so ignore the **long** tradition of such activity in working class movements) and instead select for the agent of their protection a state run by and for capitalists!

There are two traditions of welfare within society, one of *"fraternal and autonomous associations springing from below, the other that of authoritarian institutions directed from above."* [Colin Ward, **Op. Cit.**, p. 123] While sometimes anarchists are forced to defend the latter against the greater evil of "free market" corporate capitalism, we never forget the importance of creating and strengthening the former. A point we will discuss more in section [J.5.16](#) when we highlight the historical examples of self-managed communal welfare and self-help organisations.

J.5.16 Are there any historical examples of collective self-help?

Yes, in all societies we see working people joining together to practice mutual aid and solidarity. These take many forms, such as trade and industrial unions, credit unions and friendly societies, co-operatives and so on, but the natural response of working class people to the injustices of capitalism was to practice collective "self-help" in order to improve their lives and protect their friends, communities and fellow workers.

Unfortunately, this *"great tradition of working class self-help and mutual aid was written off, not just as irrelevant, but as an actual impediment, by the political and professional architects of the welfare state. . . The contribution that the recipients had to make to all this theoretical bounty was ignored as a mere embarrassment - apart, of course, for paying for it. . . The socialist ideal was rewritten as a world in which everyone was entitled to everything, but where nobody except the providers had any actual say about anything. We have been learning for years, in the anti-welfare backlash, what a vulnerable utopia that was."* [Colin Ward, **Social Policy: an anarchist response**, p. 3]

Ward terms this self-help (and self-managed) working class activity the *"welfare road we failed to take."*

Indeed, anarchists would argue that self-help is the natural side effect of freedom. There is no possibility of radical social change unless people are free to decide for themselves what their problems are, where their interests lie and are free to organise for themselves what they want to do about them. Self-help is a natural expression of people taking control of their own lives and acting for themselves. Anyone who urges state action on behalf of people is no socialist and any one arguing against self-help as "bourgeois" is no anti-capitalist. It is somewhat ironic that it is the right who have monopolised the rhetoric of "self-help" and turned it into yet another ideological weapon against working class direct action and self-liberation (although, saying that, the right generally likes individualised self-help -- given a strike or squatting or any other form of **collective** self-help movement they will be the first to denounce it):

"The political Left has, over the years, committed an enormous psychological error in allowing this kind of language ["self-help", "mutual aid", "standing on your own two feet" and so on] to be appropriated by the political Right. If you look at the exhibitions of trade union banners from the last century, you will see slogans like Self Help embroidered all over them. It was those clever Fabians and academic Marxists who ridiculed out of existence the values by which ordinary citizens govern their own lives in favour of bureaucratic paternalising, leaving those values around to be picked up by their political opponents." [Colin Ward, **Talking Houses**, p. 58]

We cannot be expected to provide an extensive list of working class collective self-help and social welfare activity here, all we can do is present an overview. For a discussion of working class self-help and co-operation through the centuries we can suggest no better source than Kropotkin's **Mutual Aid**. Here we will (using other sources than **Mutual Aid**) indicate a few examples of collective welfare in action.

In the case of Britain, we find that the *"newly created working class built up from nothing a vast network of social and economic initiatives based on self-help and mutual aid. The list is endless: friendly societies, building societies, sick clubs, coffin clubs, clothing clubs, up to enormous federated enterprises like the trade union movement and the Co-operative movement."* [Colin Ward, **Social Policy: an anarchist response**, p. 2]

The historian E.P. Thompson confirms this picture of a wide network of working class self-help organisations:

"Small tradesmen, artisans, labourers - all sought to insure themselves against sickness, unemployment, or funeral expenses through membership of . . . friendly societies." These were "authentic evidence of independent working-class culture and institutions . . . out of which . . . trade unions grew, and in which trade union officers were trained." Friendly societies "did not 'proceed from' an idea: both the ideas and institutions arose from a certain common experience . . . In the simple cellular structure of the friendly society, with its workaday ethos of mutual aid, we see many features which were reproduced in more sophisticated and complex form in trade unions, co-operatives, Hampden clubs, Political Unions, and Chartist lodges. . . Every kind of witness in the first half of the nineteenth century - clergymen, factory

inspectors, Radical publicists - remarked upon the extent of mutual aid in the poorest districts. In times of emergency, unemployment, strikes, sickness, childbirth, then it was the poor who 'helped every one his neighbour.'" [**The Making of the English Working Class**, p. 458, pp. 460-1, p. 462]

Taking the United States, Sam Dolgoff presents an excellent summary of similar self-help activities by the American working class:

"Long before the labour movement got corrupted and the state stepped in, the workers organised a network of co-operative institutions of all kinds: schools, summer camps for children and adults, homes for the aged, health and cultural centres, credit associations, fire, life, and health insurance, technical education, housing, etc." [**The American Labour Movement: A New Beginning**, p. 74]

Dolgoff, like all anarchists, urges workers to *"finance the establishment of independent co-operative societies of all types, which will respond adequately to their needs"* and that such a movement *"could constitute a realistic alternative to the horrendous abuses of the 'establishment' at a fraction of the cost."* [**Op. Cit.**, p. 74, pp. 74-75]

In this way a network of self-managed, communal, welfare associations and co-operatives could be built -- paid for, run by and run for working class people. Such a network could be initially build upon, and be an aspect of, the struggles of claimants, patients, tenants, and other users of the current welfare state (see [last section](#)).

The creation of such a co-operative, community-based, welfare system will not occur over night. Nor will it be easy. But it **is** possible, as history shows. And, of course, it will have its problems, but as Colin Ward notes, that *"the standard argument against a localist and decentralised point of view, is that of universalism: an equal service to all citizens, which it is thought that central control achieves. The short answer to this is that it doesn't!"* [Colin Ward, **Op. Cit.**, p. 6] He notes that richer areas generally get a better service from the welfare state than poorer ones, thus violating the claims of equal service. And a centralised system (be it state or private) will most likely allocate resources which reflect the interests and (lack of) knowledge of bureaucrats and experts, **not** on where they are best used or the needs of the users.

Anarchists are sure that a **confederal** network of mutual aid organisations and co-operatives, based upon local input and control, can overcome problems of localism far better than a centralised one -- which, due to its lack of local input and participation will more likely **encourage** parochialism and indifference than a wider vision and solidarity. If you have no real say in what affects you, why should you be concerned with what affects others? Centralisation leads to disempowerment, which in turn leads to indifference, **not** solidarity. Rudolf Rocker reminds us of the evil effects of centralism when he writes:

"For the state centralisation is the appropriate form of organisation, since it aims at the

greatest possible uniformity in social life for the maintenance of political and social equilibrium. But for a movement whose very existence depends on prompt action at any favourable moment and on the independent thought and action of its supporters, centralism could but be a curse by weakening its power of decision and systematically repressing all immediate action. If, for example, as was the case in Germany, every local strike had first to be approved by the Central, which was often hundreds of miles away and was not usually in a position to pass a correct judgement on the local conditions, one cannot wonder that the inertia of the apparatus of organisation renders a quick attack quite impossible, and there thus arises a state of affairs where the energetic and intellectually alert groups no longer serve as patterns for the less active, but are condemned by these to inactivity, inevitably bringing the whole movement to stagnation. Organisation is, after all, only a means to an end. When it becomes an end in itself, it kills the spirit and the vital initiative of its members and sets up that domination by mediocrity which is the characteristic of all bureaucracies." [Anarcho-Syndicalism, p. 54]

And, as an example, he notes that while the highly centralised German labour movement "*did not raise a finger to avert the catastrophe*" of Hitler's seizing power and "*which in a few months beat their organisation completely to pieces*" the exact opposite happened in Spain ("*where Anarcho-Syndicalism had maintained its hold upon organised labour from the days of the First International*"). There the anarcho-syndicalist C.N.T. "*frustrated the criminal plans of Franco*" and "*by their heroic example spurred the Spanish workers and peasants to the battle.*" Without the heroic resistance of the Anarcho-Syndicalist labour unions the Fascist reaction would have dominated the whole country in a matter of weeks. [Op. Cit., p. 53]

This is unsurprising, for what else is global action other than the product of thousands of local actions? Solidarity within our class is the flower that grows from the soil of our local self-activity, direct action and self-organisation. Unless we act and organise locally, any wider organisation and action will be hollow. Thus **local** organisation and empowerment is essential to create and maintain wider organisations and mutual aid.

To take another example of the benefits of a self-managed welfare system, we find that it "*was a continual complaint of the authorities [in the late eighteenth and early nineteenth century] that friendly societies allowed members to withdraw funds when on strike.*" [E.P. Thompson, Op. Cit., p. 461f] The same complaints were voiced in Britain about the welfare state allowing strikers to claim benefit while on strike. The Conservative Government of the 1980s changed that by passing a law barring those in industrial dispute to claim benefits -- and so removing a potential support for those in struggle. Such a restriction would have been far harder (if not impossible) to impose on a network of self-managed mutual aid co-operatives. And such institutions would have not become the plaything of central government financial policy as the welfare state and the taxes working class people have to pay have become.

All this means that anarchists reject totally the phoney choice between private and state capitalism we are usually offered. We reject both privatisation **and** nationalisation, both right and left wings (of

capitalism). Neither state nor private health care are user-controlled -- one is subject to the requirements of politics and the other places profits before people. As we have discussed the welfare state in the [last section](#), it is worthwhile to quickly discuss privatised welfare and why most anarchists reject this option even more than state welfare.

Firstly, all forms of private healthcare/welfare has to pay dividends to capitalists, fund advertising, reduce costs to maximise profits by standardising the "caring" process - i.e. McDonaldisation - and so on, all of which inflates prices and produces substandard service across the industry as a whole. According to Alfie Kohn, the *"[m]ore hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for 'customers,' seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich . . ."* *"The result: hospital costs are actually **higher** in areas where there is more competition for patients."* [Alfie Kohn, **No Contest**, p. 240] In the UK, attempts to introduce "market forces" into the National Health Service also lead to increased costs as well as inflating the services bureaucracy.

Looking at Chile, hyped by those who desire to privatise Social Security, we find similar disappointing results (well, disappointing for the working class at least, as we will see). Seemingly, Chile's private system has achieved impressive average returns on investment. However, once commissions are factored in, the real return for individual workers is considerably lower. For example, although the average rate of return on funds from 1982 through 1986 was 15.9 percent, the real return after commissions was a mere 0.3 percent! Between 1991 and 1995, the pre-commission return was 12.9 percent, but with commissions it fell to 2.1 percent. According to Doug Henwood, the *"competing mutual funds have vast sales forces, and the portfolio managers all have their vast fees. All in all, administrative costs . . . are almost 30% of revenues, compared to well under 1% for the U.S. Social Security system."* [**Wall Street**, p. 305] Although market competition was supposed to lower commissions in Chile, the private pension fund market is dominated by a handful of companies. These, according to economists Peter Diamond and Salvador Valdes-Prieto, form a *"monopolistic competitive market"* rather than a truly competitive one. A similar process seems to be taking place in Argentina, where commissions have remained around 3.5 percent of taxable salary. As argued in section [C.4](#), such oligopolistic tendencies are inherent in capitalism and so this development is not unexpected.

Even if commission costs were lowered (perhaps by regulation), the impressive returns on capital seen between 1982 and 1995 (when the real annual return on investment averaged 12.7 percent) are likely not to be sustained. These average returns coincided with boom years in Chile, complemented by government's high borrowing costs. Because of the debt crisis of the 1980s, Latin governments were paying double-digit real interest rates on their bonds -- the main investment vehicle of social security funds. In effect, government was subsidising the "private" system by paying astronomical rates on government bonds.

Another failing of the system is that only a little over half of Chilean workers make regular social

security contributions. While many believe that a private system would reduce evasion because workers have a greater incentive to contribute to their own personal retirement accounts, 43.4 percent of those affiliated with the new system in June of 1995 did not contribute regularly (see Stephen J. Kay, "*The Chile Con: Privatizing Social Security in South America*," **The American Prospect** no. 33, July-August 1997, pp. 48-52 for details).

All in all, privatisation seems to be beneficial only to middle-men and capitalists, if Chile is anything to go by. As Henwood argues, while the "*infusion of money*" resulting from privatising social security "*has done wonders for the Chilean stock market*" "*projections are that as many as half of future retirees will draw a poverty-level pension.*" [**Op. Cit.**, pp. 304-5]

So, anarchists reject private welfare as a con (and an even bigger one than state welfare). Instead we try to create **real** alternatives to hierarchy, be it state or capitalist, in the here and now which reflect our ideas of a free and just society. For, when it boils down to it, freedom cannot be given, only taken and this process of **self**-liberation is reflected in the alternatives we build to help win the class war.

The struggle **against** capitalism and statism requires that we build **for** the future ("*the urge to destroy is a creative urge*" - Bakunin) and, moreover, we should remember that "*he who has no confidence in the creative capacity of the masses and in their capability to revolt doesn't belong in the revolutionary movement. He should go to a monastery and get on his knees and start praying. Because he is no revolutionist. He is a son of a bitch.*" [Sam Dolgoff, quoted by Ulrike Heider, **Anarchism: left, right, and green**, p. 12]

J.1 Are anarchists involved in social struggles?

Yes. Anarchism, above all else, is a movement which aims to not only analyse the world but also to change it. Therefore anarchists aim to participate in and encourage social struggle. Social struggle includes strikes, marches, protests, demonstrations, boycotts, occupations and so on. Such activities show that the "*spirit of revolt*" is alive and well, that people are thinking and acting for themselves and against what authorities want them to do. This, in the eyes of anarchists, plays a key role in helping create the seeds of anarchy within capitalism.

Anarchists consider socialistic tendencies to develop within society, as people see the benefits of co-operation and particularly when mutual aid develops within the struggle against authority, oppression and exploitation. Anarchism, as Kropotkin argues, "*originated in everyday struggles.*" [**Environment and Revolution**, p.58] Therefore, anarchists do not place anarchy abstractly against capitalism, but see it as a tendency within (and against) the system -- a tendency created by struggle and which can be developed to such a degree that it can **replace** the dominant structures and social relationships with new, more liberatory and humane ones. This perspective indicates why anarchists are involved in social struggles -- they are an expression of this tendency within but against capitalism which can ultimately replace it.

However, there is another reason why anarchists are involved in social struggle -- namely the fact that we are part of the oppressed and, like other oppressed people, fight for our freedom and to make our life better in the here and now. It is not in some tomorrow that we want to see the end of oppression, exploitation and hierarchy. It is today, in our own life, that the anarchist wants to win our freedom, or at the very least, to improve our situation, reduce oppression, domination and exploitation as well as increasing individual liberty. We are aware that we often fail to do so, but the very process of struggle can help create a more libertarian aspect to society:

"Whatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers [and other oppressed sections of society] learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off: they will earn more, work fewer hours and will have more time and energy to reflect on the things that matter to them, and will immediately make greater demands and have greater needs. If they do not succeed they will be led to study the reasons of their failure and recognise the need for closer unity and greater activity and they will in the end understand that to make victory secure and definite, it is necessary to destroy capitalism. The revolutionary cause, the cause of moral elevation and emancipation of the workers [and other oppressed sections of society] must benefit by the fact that workers [and other oppressed people] unite and struggle for their interests." [Errico Malatesta, **Life and Ideas**, p. 191]

Therefore, *"we as anarchists and workers, must incite and encourage them [the workers and other oppressed people] to struggle, and join them in their struggle."* [Malatesta, **Op. Cit.**, p. 190] This is for three reasons. Firstly, struggle helps generate libertarian ideas and movements which could help make existing society more anarchistic and less oppressive. Secondly, struggle creates people, movements and organisations which are libertarian in nature and which, potentially, can replace capitalism with a more humane society. Thirdly, because anarchists are part of the oppressed and so have an interest in taking part in and showing solidarity with struggles and movements that can improve our life in the here and now (*"an injury to one is an injury to all"*).

As we will see later (in [section J.2](#)) anarchists encourage direct action within social struggles as well as arguing anarchist ideas and theories. However, what is important to note here is that social struggle is a sign that people are thinking and acting for themselves and working together to change things. Anarchists agree with Howard Zinn when he points out that:

*"civil disobedience. . . is **not** our problem. Our problem is civil **obedience**. Our problem is that numbers of people all over the world have obeyed the dictates of the leaders of their government and have gone to war, and millions have been killed because of this obedience. . . Our problem is that people are obedient all over the world in the face of poverty and starvation and stupidity, and war, and cruelty. Our problem is that people are obedient while the jails are full of petty thieves, and all the while the grand thieves are running the country. That's our problem."* [**Failure to Quit**, p. 45]

Therefore, social struggle is an important thing for anarchists and we take part in it as much as we can. Moreover, anarchists do more than just take part. We are fighting to get rid of the system that causes the problems which people fight against. We explain anarchism to those who are involved in struggle with us and seek to show the relevance of anarchism to people's everyday lives through our work in such struggles and the popular organisations which they create (in addition to trade unions, campaigning groups and other bodies). By so doing we try to popularise the ideas and methods of anarchism, namely solidarity, self-management and direct action.

Anarchists do not engage in abstract propaganda (become an anarchist, wait for the revolution -- if we did that, in Malatesta's words, *"that day would never come."* [**Op. Cit.**, p. 195]). We know that our ideas will only win a hearing and respect when we can show both their relevance to people's lives in the here and now, and show that an anarchist world is both possible and desirable. In other words, social struggle is the "school" of anarchism, the means by which people become anarchists and anarchist ideas are applied in action. Hence the importance of social struggle and anarchist participation within it.

Before discussing issues related to social struggle, it is important to point out here that anarchists are interested in struggles against all forms of oppression and do not limit ourselves to purely economic issues. The hierarchical and exploitative nature of the capitalist system is only part of the story -- other forms of oppression are needed in order to keep it going (such as those associated with the state) and

have resulted from its workings (in addition to those inherited from previous hierarchical and class systems). Like the bug in work, domination, exploitation, hierarchy and oppression soon spreads and infests our homes, our friendships and our communities. They need to be fought everywhere, not just in work.

Therefore, anarchists are convinced that human life (and the struggle against oppression) cannot be reduced to mere money and, indeed, the *"proclivity for economic reductionism is now actually obscurantist. It not only shares in the bourgeois tendency to render material egotism and class interest the centrepieces of history it also denigrates all attempts to transcend this image of humanity as a mere economic being. . . by depicting them as mere 'marginalia' at best, as 'well-intentioned middle-class ideology' at worse, or sneeringly, as 'diversionary,' 'utopian,' and 'unrealistic.' . . . Capitalism, to be sure, did not create the 'economy' or 'class interest,' but it subverted all human traits - be they speculative thought, love, community, friendship, art, or self-governance - with the authority of economic calculation and the rule of quantity. Its 'bottom line' is the balance sheet's sum and its basic vocabulary consists of simple numbers."* [Murray Bookchin, **The Modern Crisis**, pp. 125-126]

In other words, issues such as freedom, justice, individual dignity, quality of life and so on cannot be reduced to the categories of capitalist economics. Anarchists think that any radical movement which does so fails to understand the nature of the system they are fighting against. Indeed, economic reductionism plays into the hands of capitalist ideology. So, when anarchists take part in and encourage social struggle they do not aim to restrict or reduce them to economic issues (however important these are). The anarchist knows that the individual has more interests than just money and we consider it essential to take into account the needs of the emotions, mind and spirit just as much as those of the belly. Hence Bookchin:

*"The class struggle does not centre around material exploitation alone but also around spiritual exploitation. In addition, entirely new issues emerge: coercive attitudes, the quality of work, ecology (or stated in more general terms, psychological and environmental oppression). . . Terms like 'classes' and 'class struggle,' conceived of almost entirely as economic categories and relations, are too one-sided to express the **universalisation** of the struggle. . . the target is still a ruling class and a class society . . . but this terminology, with its traditional connotations, does not reflect the sweep and the multi-dimensional nature of the struggle . . . [and] fail to encompass the cultural and spiritual revolt that is taking place along with the economic struggle."*

[. . .]

*"Exploitation, class rule and happiness, are the **particular** within the more **generalised** concepts of domination, hierarchy and pleasure."* [**Post-Scarcity Anarchism**, pp.229-30 and p. 243]

As the anarchist character created by the science-fiction writer Ursula Le Guin (who is an anarchist)

points out, capitalists *"think if people have enough things they will be content to live in prison."* [**The Dispossessed**, p. 120] Anarchists disagree, and the experience of social revolt in the "affluent" 1960s proves their case.

This is unsurprising for, ultimately, the *"antagonism [between classes] is spiritual rather than material. There will never be a sincere understanding between bosses and workers. . . because the bosses above all want to remain bosses and secure always more power at the expense of the workers, as well as by competition with other bosses, whereas the workers have had their fill of bosses and don't want any more."* [Errico Malatesta, **Life and Ideas**, p. 79]

J.1.1 Why are social struggles important?

Social struggle is an expression of the class struggle, namely the struggle of working class people **against** their exploitation, oppression and alienation and **for** their liberty from capitalist and state authority. It is what happens when one group of people have hierarchical power over another. Where there is oppression, there is resistance and where there is resistance to authority you will see anarchy in action. For this reason anarchists are in favour of, and are involved within, social struggles. Ultimately they are a sign of individuals asserting their autonomy and disgust at an unfair system.

When it boils down to it, our actual freedom is not determined by the law or by courts, but by the power the cop has over us in the street; the judge behind him; by the authority of our boss if we are working; by the power of teachers and heads of schools and universities if we are students; by the welfare bureaucracy if we are unemployed or poor; by landlords if we are tenants; by prison guards if we are in jail; by medical professionals if we are in a hospital. These realities of wealth and power will remain unshaken unless counter-forces appear on the very ground our liberty is restricted - on the street, in workplaces, at home, at school, in hospitals and so on.

Therefore social struggles for improvements are important indications of the spirit of revolt and of people supporting each other in the continual assertion of their (and our) freedom. They show people standing up for what they consider right and just, building alternative organisations, creating their own solutions to their problems - and are a slap in the face of all the paternal authorities which dare govern us. Hence their importance to anarchists and all people interested in extending freedom.

In addition, social struggle helps break people from their hierarchical conditioning. Anarchists view people not as fixed objects to be classified and labelled, but as human beings engaged in making their own lives. They live, love, think, feel, hope, dream, and can change themselves, their environment and social relationships. Social struggle is the way this is done collectively.

Struggle promotes attributes within people which are crushed by hierarchy (attributes such as imagination, organisational skills, self-assertion, self-management, critical thought, self-confidence and so on) as people come up against practical problems in their struggles and have to solve them themselves. This builds self-confidence and an awareness of individual and collective power. By seeing

that their boss, the state and so on are against them they begin to realise that they live in a class ridden, hierarchical society that depends upon their submission to work. As such, social struggle is a politicising experience.

Struggle allows those involved to develop their abilities for self-rule through practice and so begins the process by which individuals assert their ability to control their own lives and to participate in social life directly. These are all key elements of anarchism and are required for an anarchist society to work ("*Self-management of the struggle comes first, then comes self-management of work and society,*" in the words of Alfredo Bonnano [*"Self-Management"*, **Anarchy: A Journal of Desire Armed**, no. 48, Fall-Winter 1999-2000, p. 35-37, p. 35]). So self-activity is a key factor in self-liberation, self-education and the creating of anarchists. In a nutshell, people learn in struggle.

A confident working class is an essential factor in making successful and libertarian improvements within the current system and, ultimately, in making a revolution. Without that self-confidence people tend to just follow "leaders" and we end up changing rulers rather than changing society.

Part of our job as anarchists is to encourage people to fight for whatever small reforms are possible at present, to improve our/their conditions, to give people confidence in their ability to start taking control of their lives, and to point out that there is a limit to whatever (sometimes temporary) gains capitalism will or can concede. Hence the need for a revolutionary change.

Until anarchist ideas are the dominant/most popular ones, other ideas will be the majority ones. If we think a movement is, all things considered, a positive or progressive one then we should not abstain but should seek to popularise anarchist ideas and strategies within it. In this way we create "*schools of anarchy*" within the current system and lay the foundations of something better. Revolutionary tendencies and movements, in other words, must create the organisations that contain, in embryo, the society of the future. These organisations, in turn, further the progress of radical change by providing social spaces for the transformation of individuals (via the use of direct action, practising self-management and solidarity, and so on). Therefore, social struggle aids the creation of a free society by accustoming the marginalised to govern themselves within self-managed organisations and empowering the (officially) disempowered via the use of direct action and mutual aid.

Hence the importance of social (or class) struggle for anarchists (which, we may add, goes on all the time and is a two-sided affair). Social struggle is the means of breaking the normality of capitalist and statist life, a means of developing the awareness for social change and the means of making life better under the current system. The moment that people refuse to bow to authority, its days are numbered. Social struggle indicates that some of the oppressed see that by using their power of disobedience they can challenge, perhaps eventually end, hierarchical power.

Ultimately, anarchy is not just something you believe in, it is not a cool label you affix to yourself, it is something you do. You participate. If you stop doing it, anarchy crumbles. Social struggle is the means by which we ensure that anarchy becomes stronger and grows.

J.1.2 Are anarchists against reforms?

No, we are not. While most anarchists are against reformism (namely the notion that we can somehow reform capitalism and the state away) they are most definitely in favour of reforms (i.e. improvements in the here and now).

The claim that anarchists are against reforms and improvements in the here and now are often put forth by opponents of anarchism in an effort to paint us as extremists. Anarchists are radicals; as such, they seek the root causes of societal problems. Reformists seek to ameliorate the symptoms of societal problems, while anarchists focus on the causes.

In the words of the revolutionary syndicalist Emile Pouget (who is referring to revolutionary/libertarian unions but whose words can be generalised to all social movements):

"Trade union endeavour has a double aim: with tireless persistence, it must pursue betterment of the working class's current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital.

"At present, trade union action is designed to won partial and gradual improvements which, far from constituting a goal, can only be considered as a means of stepping up demands and wresting further improvements from capitalism. . .

"This question of partial improvements served as the pretext for attempts to sow discord in the trades associations. Politicians . . . have tried to . . . stir up ill-feeling and to split the unions into two camps, by categorising workers as reformists and as revolutionaries. The better to discredit the latter, they have dubbed them 'the advocates of all or nothing' and the have falsely represented them as supposed adversaries of improvements achievable right now.

"The most that can be said about this nonsense is that it is witless. There is not a worker . . . who, on grounds of principle or for reasons of tactics, would insist upon working ten hours for an employer instead of eight hours, while earning six francs instead of seven. . .

"What appears to afford some credence to such chicanery is the fact that the unions, cured by the cruel lessons of experience from all hope in government intervention, are justifiably mistrustful of it. They know that the State, whose function is to act as capital's gendarme, is, by its very nature, inclined to tip the scales in favour of the employer side. So, whenever a reform is brought about by legal avenues, they do not fall upon it with the

relish of a frog devouring the red rag that conceals the hook, they greet it with all due caution, especially as this reform is made effective only if the workers are organised to insist forcefully upon its implementation.

"The trade unions are even more wary of gifts from the government because they have often found these to be poison gifts. . .

"But, given that the trade unions look askance at the government's benevolence towards them, it follows that they are loath to go after partial improvements. Wanting real improvements . . . instead of waiting until the government is generous enough to bestow them, they wrest them in open battle, through direct action.

"If, as sometimes is the case, the improvement they seek is subject to the law, the trade unions strive to obtain it through outside pressure brought to bear upon the authorities and not by trying to return specially mandated deputies to Parliament, a puerile pursuit that might drag on for centuries before there was a majority in favour of the yearned-for reform.

"When the desired improvement is to be wrestled directly from the capitalist, the trades associations resort to vigorous pressure to convey their wishes. Their methods may well vary, although the direct action principle underlies them all. . .

"But, whatever the improvement won, it must always represent a reduction in capitalist privileges and be a partial expropriation. So . . . the fine distinction between 'reformist' and 'revolutionary' evaporates and one is led to the conclusion that the only really reformist workers are the revolutionary syndicalists." [No Gods, No Masters, pp. 71-3]

By seeking improvements from below by direct action, solidarity and the organisation of those who directly suffer the injustice, anarchists can make reforms more substantial, effective and long lasting than "reforms" made from above by reformists. By recognising that the effectiveness of a reform is dependent on the power of the oppressed to resist those who would dominate them, anarchists seek change from the bottom-up and so make reforms real rather than just words gathering dust in the law books.

For example, a reformist sees poverty and looks at ways to lessen the destructive and debilitating effects of it: this produced things like the minimum wage, affirmative action, and the projects in the USA and similar reforms in other countries. An anarchist looks at poverty and says, "what causes this?" and attacks that source of poverty, rather than the symptoms. While reformists may succeed in the short run with their institutional panaceas, the festering problems remain untreated, dooming reform to eventual costly, inevitable failure -- measured in human lives, no less. Like a quack that treats the symptoms of a disease without getting rid of what causes it, all the reformist can promise is short-term improvements for a condition that never goes away and may ultimately kill the sufferer. The anarchist, like a real

doctor, investigates the causes of the illness and treats them while fighting the symptoms.

Therefore, anarchists are of the opinion that *"[w]hile preaching against every kind of government, and demanding complete freedom, we must support all struggles for partial freedom, because we are convinced that one learns through struggle, and that once one begins to enjoy a little freedom one ends by wanting it all. We must always be with the people . . . [and] get them to understand . . . [what] they may demand should be obtained by their own efforts and that they should despise and detest whoever is part of, or aspires to, government."* [Errico Malatesta, **Life and Ideas** p. 195]

Anarchists keep the spotlight on the actual problems, which of course alienates them from their "distinguished" reformist foes. Reformists are uniformly "reasonable" and always make use of "experts" who will make everything okay - and they are always wrong in how they deal with a problem.

The recent "health care crisis" in the United States is a prime example of reformism at work.

The reformist says, *"how can we make health care more affordable to people? How can we keep those insurance rates down to levels people can pay?"*

The anarchist says, *"should health care be considered a privilege or a right? Is medical care just another marketable commodity, or do living beings have an inalienable right to it?"*

Notice the difference? The reformist has no problem with people paying for medical care -- business is business, right? The anarchist, on the other hand, has a big problem with that attitude -- we are talking about human lives, here! For now, the reformists have won with their "managed care" reformism, which ensures that the insurance companies and medical industry continue to rake in record profits -- at the expense of people's lives. And, in the end, the proposed reforms were defeated by the power of big business -- without a social movement with radical aims such a result was a forgone conclusion.

Reformists get acutely uncomfortable when you talk about genuinely bringing change to any system -- they don't see anything wrong with the system itself, only with a few pesky side effects. In this sense, they are stewards of the Establishment, and are agents of reaction, despite their altruistic overtures. By failing to attack the sources of problems, and by hindering those who do, they ensure that the problems at hand will only grow over time, and not diminish.

So, anarchists are not opposed to struggles for reforms and improvements in the here and now. Indeed, few anarchists think that an anarchist society will occur without a long period of anarchist activity encouraging and working within social struggle against injustice. Thus Malatesta's words:

"the subject is not whether we accomplish Anarchism today, tomorrow or within ten centuries, but that we walk towards Anarchism today, tomorrow and always." ["Towards Anarchism," **Man!**, M. Graham (Ed.), p. 75]

So, when fighting for improvements anarchists do so in an anarchist way, one that encourages self-management, direct action and the creation of libertarian solutions and alternatives to both capitalism and the state.

J.1.3 Why are anarchists against reformism?

Firstly, it must be pointed out that the struggle for reforms within capitalism is **not** the same as reformism. Reformism is the idea that reforms within capitalism are enough in themselves and attempts to change the system are impossible (and not desirable). As such all anarchists are against this form of reformism -- we think that the system can be (and should be) changed and until that happens any reforms will not get to the root of social problems.

In addition, particularly in the old social democratic labour movement, reformism also meant the belief that social reforms could be used to **transform** capitalism into socialism. In this sense, only the Individualist anarchists and Mutualists can be considered reformist as they think their system of mutual banking can reform capitalism into a co-operative system. However, in contrast to Social Democracy, such anarchists think that such reforms cannot come about via government action, but only by people creating their own alternatives and solutions by their own actions.

So, anarchists oppose reformism because it takes the steam out of revolutionary movements by providing easy, decidedly short-term "solutions" to deep social problems. In this way, reformists can present the public with they've done and say "look, all is better now. The system worked." Trouble is that over time, the problems will only continue to grow, because the reforms did not tackle them in the first place. To use Alexander Berkman's excellent analogy:

"If you should carry out [the reformers] ideas in your personal life, you would not have a rotten tooth that aches pulled out all at once. You would have it pulled out a little to-day, some more next week, for several months or years, and by then you would be ready to pull it out altogether, so it should not hurt so much. That is the logic of the reformer. Don't be 'too hasty,' don't pull a bad tooth out all at once." [What is Communist Anarchism?, p. 53]

Rather than seek to change the root cause of the problems (namely in a hierarchical, oppressive and exploitative system), reformists try to make the symptoms better. In the words of Berkman again:

"Suppose a pipe burst in your house. You can put a bucket under the break to catch the escaping water. You can keep on putting buckets there, but as long as you do not mean the broken pipe, the leakage will continue, no matter how much you may swear about it . . . the leakage will continue until you repair the broken social pipe." [Op. Cit., p. 56]

What reformism fails to do is fix the underlying causes of the real problems society faces. Therefore, reformists try to pass laws which reduce the level of pollution rather than work to end a system in which

it makes economic sense to pollute. Or they pass laws to improve working conditions and safety while failing to get rid of the wage slavery which creates the bosses whose interests are served by them ignoring those laws and regulations. The list is endless. Ultimately, reformism fails because reformists *"believe in good faith that it is possible to eliminate the existing social evils by recognising and respecting, in practice if not in theory, the basic political and economic institutions which are the cause of, as well as the prop that supports these evils."* [Errico Malatesta, **Life and Ideas**, p. 82]

Reformists, in other words, are like people who think that treating the symptoms of, say, cholera is enough in and of itself. In practice, of course, the causes that create the disease as well as the disease itself must be combated before the symptoms will disappear. While most people would recognise the truth of this in the case of medicine, fewer apply it to social problems.

Revolutionaries, in contrast to reformists, fight both symptoms **and** the root causes. They recognise that as long as the cause of the evil remains, any attempts to fight the symptoms, however necessary, will never get to the root of the problem. There is no doubt that we have to fight the symptoms, however revolutionaries recognise that this struggle is not an end in itself and should be considered purely as a means of increasing working class strength and social power within society until such time as capitalism and the state (i.e. the root causes of most problems) can be abolished.

Reformists also tend to objectify the people whom they are "helping;" they envision them as helpless, formless masses who need the wisdom and guidance of the "best and the brightest" to lead them to the Promised Land. Reformists mean well, but this is altruism borne of ignorance, which is destructive over the long run. Freedom cannot be given and so any attempt to impose reforms from above cannot help but ensure that people are treated as children, incapable of making their own decisions and, ultimately, dependent on bureaucrats to govern them. This can be seen from public housing. As Colin Ward argues, the *"whole tragedy of publicly provided non-profit housing for rent and the evolution of this form of tenure in Britain is that the local authorities have simply taken over, though less flexibly, the role of the landlord, together with all the dependency and resentment that it engenders."* [**Housing: An Anarchist Approach**, p. 184] This feature of reformism was skilfully used by the right-wing to undermine publicly supported housing and other aspects of the welfare state. The reformist social-democrats reaped what they had sown.

Reformism often amounts to little more than an altruistic contempt for the masses, who are considered as little more than victims who need to be provided for by state. The idea that we may have our own visions of what we want is ignored and replaced by the vision of the reformists who enact legislation **for** us and make "reforms" from the top-down. Little wonder such reforms can be counter-productive -- they cannot grasp the complexity of life and the needs of those subject to them.

Reformists may mean well, but they do not grasp the larger picture -- by focusing exclusively on narrow aspects of a problem, they choose to believe that is the whole problem. In this wilfully narrow examination of pressing social ills, reformists are, more often than not, counter-productive. The disaster of the urban rebuilding projects in the United States (and similar projects in Britain which moved inter-

city working class communities into edge of town developments during the 1950s and 1960s) are an example of reformism at work: upset at the growing slums, reformists supported projects that destroyed the ghettos and built brand-new housing for working class people to live in. They looked nice (initially), but they did nothing to address the problem of poverty and indeed created more problems by breaking up communities and neighbourhoods.

Logically, it makes no sense. Why dance around a problem when you can attack it directly? Reformists dilute social movements, softening and weakening them over time. The AFL-CIO labour unions in the USA, like the ones in Western Europe, killed the labour movement by narrowing and channelling labour activity and taking the power from the workers themselves, where it belongs, and placing it the hands of a bureaucracy. The British Labour Party, after over 100 years of reformist practice, has done little more than manage capitalism, seen most of its reforms eliminated by right-wing governments (and by the following Labour government!) and the creation of a leadership of the party (in the shape of Tony Blair) which is in most ways as right-wing as the Conservative Party (if not more so). Bakunin would not have been surprised.

Reformists say, "*don't do anything, we'll do it for you.*" You can see why anarchists would loathe this sentiment; anarchists are the consummate do-it-yourselfers, and there's nothing reformists hate more than people who can take care of themselves, who will not let them "help" them.

Also, it is funny to hear left-wing "revolutionaries" and "radicals" put forward the reformist line that the capitalist state can help working people (indeed be used to abolish itself!). Despite the fact that leftists blame the state and capitalism for most of the problems we face, they usually turn to the state (run primarily by rich - i.e. capitalist - people) to remedy the situation, not by leaving people alone, but by becoming more involved in people's lives. They support government housing, government jobs, welfare, government-funded and regulated child care, government-funded drug "treatment," and other government-centred programmes and activities. If a capitalist (and racist/sexist/authoritarian) government is the problem, how can it be depended upon to change things to the benefit of working class people or other oppressed sections of the population like blacks and women? Surely any reforms passed by the state will not solve the problem? As Malatesta pointed out, "*[g]overnments and the privileged classes are naturally always guided by instincts of self-preservation, of consolidation and the development of their powers and privileges; and when they consent to reforms it is either because they consider that they will serve their ends or because they do not feel strong enough to resist, and give in, fearing what might otherwise be a worse alternative*" (i.e. revolution) [**Op. Cit.**, p. 81] Therefore, reforms gained by direct action are of a different quality and nature than reforms passed by reformist politicians -- these latter will only serve the interests of the ruling class as they do not threaten their privileges while the former have the potential of real change.

Instead of encouraging working class people to organise themselves and create their own alternatives and solutions to their problem (which can supplement, and ultimately replace, whatever welfare state activity which is actually useful), reformists and other radicals urge people to get the state to act for them. However, the state is not the community and so whatever the state does for people you can be sure it will be in **its** interests, not theirs. As Kropotkin put it:

"We maintain that the State organisation, having been the force to which the minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges . . . the economic and political liberation of man will have to create new forms for its expression in life, instead of those established by the State.

"Consequently, the chief aim of Anarchism is to awaken those constructive powers of the labouring masses of the people which at all great moments of history came forward to accomplish the necessary changes . . .

*"This is also why the Anarchists refuse to accept the functions of legislators or servants of the State. We know that the social revolution will not be accomplished by means of **laws**. Laws only **follow** the accomplished facts . . . [and] remains a dead letter so long as there are not on the spot the living forces required for making of the **tendencies** expressed in the law an accomplished **fact**.*

*"On the other hand . . . the Anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of Labour against Capital and its protector, -- the State.*

"Such a struggle . . . better than any other indirect means, permits the worker to obtain some temporary improvements in the present conditions of work [and life in general], while it opens his [or her] eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State." [Environment and Evolution, pp.82-3]

Therefore, while seeking reforms, anarchists are against reformism and reformists. Reforms are not an end in themselves but rather a means of changing society from the bottom-up and a step in that direction:

*"Each step towards economic freedom, each victory won over capitalism will be at the same time a step towards political liberty -- towards liberation from the yoke of the state. . . And each step towards taking from the State any one of its powers and attributes will be helping the masses to win a victory over capitalism." [Kropotkin, **Op. Cit.**, p. 95]*

However, no matter what, anarchists "will never recognise the institutions; we will take or win all possible reforms with the same spirit that one tears occupied territory from the enemy's grasp in order to keep advancing, and we will always remain enemies of every government." Therefore, "[i]t is not true to say . . . [that anarchists] are systematically opposed to improvements, to reforms. They oppose the reformists on the one hand because their methods are less effective for securing reforms from

government and employers, who only give in through fear, and because very often the reforms they prefer are those which not only bring doubtful immediate benefits, but also serve to consolidate the existing regime and to give the workers a vested interest in its continued existence." [**Life and Ideas**, p. 81 and p. 83]

Only by working class people, by their own actions and organisation, getting the state and capital out of the way can produce an improvement in their lives, indeed it is the only thing that will lead to **real** fundamental changes for the better. Encouraging people to rely on themselves instead of the state or capital can lead to self-sufficient, independent, and, hopefully, more rebellious people -- people who will rebel against the real evils in society (capitalist and statist exploitation and oppression, racism, sexism, ecological destruction, and so on) and not their neighbours.

Working class people, despite having fewer options in a number of areas in their lives, due both to hierarchy and restrictive laws, still are capable of making choices about their actions, organising their own lives and are responsible for the consequences of their decisions, just as other people are. To think otherwise is to infantilise them, to consider them less fully human than other people and reproduce the classic capitalist vision of working class people as means of production, to be used, abused, and discarded as required. Such thinking lays the basis for paternalistic interventions in their lives by the state, ensuring their continued dependence and poverty and the continued existence of capitalism and the state.

Ultimately, there are two options:

"The oppressed either ask for and welcome improvements as a benefit graciously conceded, recognise the legitimacy of the power which is over them, and so do more harm than good by helping to slow down, or divert . . . the processes of emancipation. Or instead they demand and impose improvements by their action, and welcome them as partial victories over the class enemy, using them as a spur to greater achievements, and thus a valid help and a preparation to the total overthrow of privilege, that is, for the revolution." [Errico Malatesta, **Op. Cit.**, p. 81]

Reformism encourages the first attitude within people and so ensures the impoverishment of the human spirit. Anarchism encourages the second attitude and so ensures the enrichment of humanity and the possibility of meaningful change. Why think that ordinary people cannot arrange their lives for themselves as well as Government people can arrange it not for themselves but for others?

J.1.4 What attitude do anarchists take to "*single-issue*" campaigns?

Firstly, we must note that anarchists do take part in "*single-issue*" campaigns, but do not nourish false hopes in them. This section explains what anarchists think of such campaigns.

A "single-issue" campaign are usually run by a pressure group which concentrates on tackling issues one at a time. For example, C.N.D. (The Campaign for Nuclear Disarmament) is a classic example of "single-issue" campaigning with the aim of getting rid of nuclear weapons as the be all and end all of its activity. For anarchists, however, single-issue campaigning can be seen as a source of false hopes. The possibilities of changing one aspect of a totally inter-related system and the belief that pressure groups can compete fairly with transnational corporations, the military and so forth, in their influence over decision making bodies can both be seen to be optimistic at best.

In addition, many "single-issue" campaigns desire to be "apolitical", concentrating purely on the one issue which unites the campaign and so refuse to analyse or discuss the system they are trying to change. This means that they end up accepting the system which causes the problems they are fighting against. At best, any changes achieved by the campaign must be acceptable to the establishment or be so watered down in content that no practical long-term good is done.

This can be seen from the green movement, where groups like Greenpeace and Friends of the Earth accept the status quo as a given and limit themselves to working within it. This often leads to them tailoring their "solutions" to be "practical" within a fundamentally anti-ecological political and economic system, so slowing down (at best) ecological disruption.

For anarchists these problems all stem from the fact that social problems cannot be solved as single issues. As Larry Law argues:

"single issue politics . . . deals with the issue or problem in isolation. When one problem is separated from all other problems, a solution really is impossible. The more campaigning on an issue there is, the narrower its perspectives become . . . As the perspective of each issue narrows, the contradictions turn into absurdities . . . What single issue politics does is attend to 'symptoms' but does not attack the 'disease' itself. It presents such issues as nuclear war, racial and sexual discrimination, poverty, starvation, pornography, etc., as if they were aberrations or faults in the system. In reality such problems are the inevitable consequence of a social order based on exploitation and hierarchical power . . . single issue campaigns lay their appeal for relief at the feet of the very system which oppresses them. By petitioning they acknowledge the right of those in power to exercise that power as they choose." [**Bigger Cages, Longer Chains**, pp. 17-20].

Single issue politics often prolong the struggle for a free society by fostering illusions that it is just parts of the capitalist system which are wrong, not the whole of it, and that those at the top of the system can, and will, act in our interests. While such campaigns can do some good, practical, work and increase knowledge and education about social problems, they are limited by their very nature and can not lead to extensive improvements in the here and now, never mind a free society.

Therefore, anarchists often support and work within single-issue campaigns, trying to get them to use effective methods of activity (such as direct action), work in an anarchistic manner (i.e. from the bottom

up) and to try to "politicise" them into questioning the whole of the system. However, anarchists do not let themselves be limited to such activity as a social revolution or movement is not a group of single-issue campaigns but a mass movement which understands the inter-related nature of social problems and so the need to change every aspect of life.

J.1.5 Why do anarchists try to generalise social struggles?

Basically, we do it in order to encourage and promote solidarity. This is **the** key to winning struggles in the here and now as well as creating the class consciousness necessary to create an anarchist society. At its most simple, generalising different struggles means increasing the chances of winning them. Take, for example, a strike in which one trade or one workplace goes on strike while the others continue to work:

"Consider yourself how foolish and inefficient is the present form of labour organisation in which one trade or craft may be on strike while the other branches of the same industry continue to work. Is it not ridiculous that when the street car workers of New York, for instance, quit work, the employees of the subway, the cab and omnibus drivers remain on the job? . . . It is clear, then, that you compel compliance [from your bosses] only when you are determined, when your union is strong, when you are well organised, when you are united in such a manner that the boss cannot run his factory against your will. But the employer is usually some big . . . company that has mills or mines in various places. . . If it cannot operate . . . in Pennsylvania because of a strike, it will try to make good its losses by continuing . . . and increasing production [elsewhere]. . . In that way the company . . . breaks the strike." [Alexander Berkman, **The ABC of Anarchism**, pp. 53-54]

By organising all workers in one union (after all they all have the same boss) it increases the power of each trade considerably. It may be easy for a boss to replace a few workers, but a whole workplace would be far more difficult. By organising all workers in the same industry, the power of each workplace is correspondingly increased. Extending this example to outside the workplace, its clear that by mutual support between different groups increases the chances of each group winning its fight.

As the I.W.W. put it, *"An injury to one is an injury to all."* By generalising struggles, by practising mutual support and aid we can ensure that when we are fighting for our rights and against injustice we will not be isolated and alone. If we don't support each other, groups will be picked off one by one and if we are go into conflict with the system there will be on-one there to support us and we may lose.

Therefore, from an anarchist point of view, the best thing about generalising different struggles together is that it leads to an increased spirit of solidarity and responsibility as well as increased class consciousness. This is because by working together and showing solidarity those involved get to understand their common interests and that the struggle is not against **this** injustice or **that** boss but against **all** injustice and **all** bosses.

This sense of increased social awareness and solidarity can be seen from the experience of the C.N.T in Spain during the 1930s. The C.N.T. organised all workers in a given area into one big union. Each workplace was a union branch and were joined together in a local area confederation. The result was that:

"The territorial basis of organisation linkage [of the C.N.T. unions] brought all the workers from one area together and fomented working class solidarity over and before corporative [i.e. industrial] solidarity." [J. Romero Maura, "The Spanish Case", in **Anarchism Today**, D. Apter and J. Joll (eds.), p. 75]

This can also be seen from the experiences of the syndicalist unions in Italy and France as well. The structure of such local federations also situates the workplace in the community where it really belongs (particularly if the commune concept supported by social anarchists is to be realistic).

Also, by uniting struggles together, we can see that there are really no "single issues" - that all various different problems are inter-linked. For example, ecological problems are not just that, but have a political and economic basis and that economic and social domination and exploitation spills into the environment. Inter-linking struggles means that they can be seen to be related to other struggles against capitalist exploitation and oppression and so encourage solidarity and mutual aid. What goes on in the environment, for instance, is directly related to questions of domination and inequality within human society, that pollution is often directly related to companies cutting corners to survive in the market or increase profits. Similarly, struggles against sexism or racism can be seen as part of a wider struggle against hierarchy, exploitation and oppression in all their forms. As such, uniting struggles has an important educational effect above and beyond the benefits in terms of winning struggles.

Murray Bookchin presents a concrete example of this process of linking issues and widening the struggle:

*"Assume there is a struggle by welfare mothers to increase their allotments . . . Without losing sight of the concrete issues that initially motivated the struggle, revolutionaries would try to catalyse an order of relationships between the mothers entirely different from [existing ones] . . . They would try to foster a deep sense of community, a rounded human relationship that would transform the very subjectivity of the people involved . . . Personal relationships would be intimate, not merely issue-orientated. People would get to **know** each other, to **confront** each other; they would **explore** each other with a view of achieving the most complete, unalienated relationships. Women would discuss sexism, as well as their welfare allotments, child-rearing as well as harassment by landlords, their dreams and hopes as human beings as well as the cost of living.*

"From this intimacy there would grow, hopefully, a supportive system of kinship, mutual aid, sympathy and solidarity in daily life. The women might collaborate to establish a

rotating system of baby sitters and child-care attendants, the co-operative buying of good food at greatly reduced prices, the common cooking and partaking of meals, the mutual learning of survival skills and the new social ideas, the fostering of creative talents, and many other shared experiences. Every aspect of life that could be explored and changed would be one part of the kind of relationships . . .

"The struggle for increased allotments would expand beyond the welfare system to the schools, the hospitals, the police, the physical, cultural, aesthetic and recreational resources of the neighbourhood, the stores, the houses, the doctors and lawyers in the area, and so on - into the very ecology of the district.

"What I have said on this issue could be applied to every issue -- unemployment, bad housing, racism, work conditions -- in which an insidious assimilation of bourgeois modes of functioning is masked as 'realism' and 'actuality.' The new order of relationships that could be developed from a welfare struggle . . . [can ensure that the] future penetrates the present; it recasts the way people 'organise' and the goals for which they strive." [Op. Cit., pp. 231-3]

As the anarchist slogan puts it, "**Resistance is Fertile.**" Planting the seed of autonomy, direct action and self-liberation can result, potentially, in the blossoming of a free individual due to the nature of struggle itself (see also [section A.2.7](#)) Therefore, the generalisation of social struggle is not only a key way of winning a specific fight, it can (and should) also spread into different aspects of life and society and play a key part in developing free individuals who reject hierarchy in all aspects of their life.

Social problems are not isolated from each other and so struggles against them cannot be. The nature of struggle is such that once people start questioning one aspect of society, the questioning of the rest soon follow. So, anarchists seek to generalise struggles for these three reasons -- firstly, to ensure the solidarity required to win; secondly, to combat the many social problems we face as **people** and to show how they are inter-related; and, thirdly, to encourage the transformation of those involved into unique individuals in touch with their humanity, a humanity eroded by hierarchical society and domination.

J.2 What is direct action?

Direct action, to use Rudolf Rocker's words, is *"every method of immediate warfare by the workers [or other sections of society] against their economic and political oppressors. Among these the outstanding are: the strike, in all its gradations from the simple wage struggle to the general strike; the boycott; sabotage in all its countless forms; [occupations and sit-down strikes;] anti-militarist propaganda, and in particularly critical cases,... armed resistance of the people for the protection of life and liberty."* [**Anarcho-Syndicalism**, p. 66]

Not that anarchists think that direct action is only applicable within the workplace. Far from it. Direct action must occur everywhere! So, in non-workplace situations, direct action includes rent strikes, consumer boycotts, occupations (which, of course, can include sit-in strikes by workers), eco-tage, individual and collective non-payment of taxes, blocking roads and holding up construction work of an anti-social nature and so forth. Also direct action, in a workplace setting, includes strikes and protests on social issues, not directly related to working conditions and pay. Such activity aims to ensure the *"protection of the community against the most pernicious outgrowths of the present system. The social strike seeks to force upon the employers a responsibility to the public. Primarily it has in view the protection of the customers, of whom the workers themselves [and their families] constitute the great majority"* [**Op. Cit.**, p. 72]

Basically, direct action means that instead of getting someone else to act for you (e.g. a politician) you act for yourself. Its essential feature is an organised protest by ordinary people to make a change by their own efforts. Thus Voltairine De Cleyre's excellent statement on this topic:

"Every person who ever thought he had a right to assert, and went boldly and asserted it, himself, or jointly with others that shared his convictions, was a direct actionist. Some thirty years ago I recall that the Salvation Army was vigorously practicing direct action in the maintenance of the freedom of its members to speak, assemble, and pray. Over and over they were arrested, fined, and imprisoned; but they kept right on singing, praying, and marching, till they finally compelled their persecutors to let them alone. The Industrial Workers [of the World] are now conducting the same fight, and have, in a number of cases, compelled the officials to let them alone by the same direct tactics.

"Every person who ever had a plan to do anything, and went and did it, or who laid his plan before others, and won their co-operation to do it with him, without going to external authorities to please do the thing for them, was a direct actionist. All co-operative experiments are essentially direct action.

"Every person who ever in his life had a difference with anyone to settle, and went straight to the other persons involved to settle it, either by a peaceable plan or otherwise,

was a direct actionist. Examples of such action are strikes and boycotts; many persons will recall the action of the housewives of New York who boycotted the butchers, and lowered the price of meat; at the present moment a butter boycott seems looming up, as a direct reply to the price-makers for butter.

"These actions are generally not due to any one's reasoning overmuch on the respective merits of directness or indirectness, but are the spontaneous retorts of those who feel oppressed by a situation. In other words, all people are, most of the time, believers in the principle of direct action, and practicers of it. . ." [Direct Action]

So direct action means acting for yourself against injustice and oppression. It can, sometimes, involve putting pressure on politicians or companies, for example, to ensure a change in an oppressive law or destructive practices. However, such appeals are direct action simply because they do not assume that the parties in question we will act for us - indeed the assumption is that change only occurs when we act to create it. Regardless of what the action is, *"if such actions are to have the desired empowerment effect, they must be largely self-generated, rather than being devised and directed from above."* [Martha Ackelsberg, **Free Women of Spain**, p. 33]

So, in a nutshell, direct action is any form of activity which people themselves decide upon and organise themselves which is based on their own collective strength and does not involve getting intermediates to act for them. As such direct action is a natural expression of liberty, of self-government for *"[d]irect action against the authority in the shop, direct action against the authority of the law, direct action against the invasive, meddlesome authority of our moral code, is the logical, consistent method of Anarchism."* [Emma Goldman, **Red Emma Speaks**, pp. 62-63] It is clear that by acting for yourself you are expressing the ability to govern yourself. Thus its a means by which people can take control of their own lives. It is a means of self-empowerment and self-liberation:

"Direct action meant that the goal of any and all these activities was to provide ways for people to get in touch with their own powers and capacities, to take back the power of naming themselves and their lives." [Martha Ackelsberg, **Op. Cit.**, p. 32]

In other words, anarchists reject the view that society is static and that people's consciousness, values, ideas and ideals cannot be changed. Far from it and anarchists support direct action **because** it actively encourages the transformation of those who use it. Direct action is the means of creating a new consciousness, a means of self-liberation from the chains placed around our minds, emotions and spirits by hierarchy and oppression.

Because direct action is the expression of liberty, the powers that be are vitally concerned only when the oppressed use direct action to win its demands, for it is a method which is not easy or cheap to combat. Any hierarchical system is placed into danger when those at the bottom start to act for themselves and, historically, people have invariably gained more by acting directly than could have been won by playing ring around the rosy with indirect means.

Direct action tore the chains of open slavery from humanity. Over the centuries it has established individual rights and modified the life and death power of the master class. Direct action won political liberties such as the vote and free speech. Used fully, used wisely and well, direct action can forever end injustice and the mastery of humans by other humans.

In the sections that follow, we will indicate why anarchists are in favour of direct action and why they are against electioneering as a means of change.

J.2.1 Why do anarchists favour using direct action to change things?

Simply because it is effective and it has a radicalising impact on those who practice it. As it is based on people acting for themselves, it shatters the dependency and marginalisation created by hierarchy. As Murray Bookchin argues, "*[w]hat is even more important about direct action is that it forms a decisive step toward recovering the personal power over social life that the centralised, over-bearing bureaucracies have usurped from the people . . . we not only gain a sense that we can control the course of social events again; we recover a new sense of selfhood and personality without which a truly free society, based in self-activity and self-management, is utterly impossible.*" [**Toward an Ecological Society**, p. 47]

By acting for themselves, people gain a sense of their own power and abilities. This is essential if people are to run their own lives. As such, direct action is **the** means by which individuals empower themselves, to assert their individuality, to make themselves count as individuals. It is the opposite of hierarchy, within which individuals are told again and again that they are nothing, are insignificant and must dissolve themselves into a higher power (the state, the company, the party, the people, etc.) and feel proud in participating in the strength and glory of this higher power. Direct action, in contrast, is the means of asserting ones individual opinion, interests and happiness, of fighting against self-negation:

"man has as much liberty as he is willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social and moral. But defiance and resistance are illegal. Therein lies the salvation of man. Everything illegal necessitates integrity, self-reliance, and courage. In short, it calls for free independent spirits, for men who are men, and who have a bone in their back which you cannot pass your hand through." [Emma Goldman, **Red Emma Speaks**, pp. 61-62]

In addition, because direct action is based around individuals solving their own problems, by their own action, it awakens those aspects of individuals crushed by hierarchy and oppression - such as initiative, solidarity, imagination, self-confidence and a sense of individual and collective power, that you do matter and count as an individual and that you, and others like you, **can** change the world. Direct Action is the means by which people can liberate themselves and educate themselves in the ways of and skills required for self-management and liberty. Hence:

"anarchists insisted that we learn to think and act for ourselves by joining together in organisations in which our experience, our perception and our activity can guide and make the change. Knowledge does not precede experience, it flows from it. . . People learn to be free only by exercising freedom. [As one Spanish Anarchist put it] 'We are not going to find ourselves. . . with people ready-made for the future. . . Without continued exercise of their faculties, there will be no free people. . . The external revolution and the internal revolution presuppose one another, and they must be simultaneous in order to be successful.'" [Martha Ackelsberg, **Free Women of Spain**, pp. 32-33]

So direct action, to use Murray Bookchin's words, is *"the means whereby each individual awakens to the hidden powers within herself and himself, to a new sense of self-confidence and self-competence; it is the means whereby individuals take control of society directly."* [**Op. Cit.**, p. 48]

In addition, direct action creates the need for new forms of social organisation. These new forms of organisation will be informed and shaped by the process of self-liberation, so be more anarchistic and based upon self-management. Direct action, as well as liberating individuals, can also create the free, self-managed organisations which can replace the current hierarchical ones. In other words, direct action helps create the new world in the shell of the old:

"direct action not only empowered those who participated in it, it also had effects on others. . . [including] exemplary action that attracted adherents by the power of the positive example it set. Contemporary examples. . . include food or day-care co-ops, collectively run businesses, sweat equity housing programmes, women's self-help health collectives, urban squats or women's peace camps [as well as traditional examples as industrial unions, social centres, etc.]. While such activities empower those who engage in them, they also demonstrate to others that non-hierarchical forms of organisation can and do exist - and that they can function effectively." [Martha Ackelsberg, **Op. Cit.**, p. 33]

Also, direct action such as strikes encourage and promote class consciousness and class solidarity. According to Kropotkin, *"the strike develops the sentiment of solidarity"* while for Bakunin it *"is the beginnings of the social war of the proletariat against the bourgeoisie. . . Strikes are a valuable instrument from two points of view. Firstly, they electrify the masses, invigorate their moral energy and awaken in them the feeling of the deep antagonism which exists between their interests and those of the bourgeoisie. . . secondly they help immensely to provoke and establish between the workers of all trades, localities and countries the consciousness and very fact of solidarity: a twofold action, both negative and positive, which tends to constitute directly the new world of the proletariat, opposing it almost in an absolute way to the bourgeois world."* [cited in Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism 1872-1886**, p. 256, pp. 216-217]

Direct action and the movements that used it (such as unionism) would be the means to develop the *"revolutionary intelligence of the workers"* and so ensure *"emancipation through practice"* (to use Bakunin's words).

Direct action, therefore, helps to create anarchists and anarchist alternatives within capitalism and statism. As such, it plays an essential role in anarchist theory and activity. For anarchists, direct action *"is not a 'tactic'. . . it is a moral principle, an ideal, a sensibility. It should imbue every aspect of our lives and behaviour and outlook."* [Murray Bookchin, **Op. Cit.**, p. 48]

J.2.2 Why do anarchists reject voting as a means for change?

Simply because electioneering does not work. History is littered with examples of radicals being voted into office only to become as, or even more, conservative than the politicians they replaced.

As we have discussed previously (see [section B.2](#) and related sections) any government is under pressure from two sources of power, the state bureaucracy and big business. This ensures that any attempts at social change would be undermined and made hollow by vested interests, assuming they even reached that level of discussion to begin with (the de-radicalising effects of electioneering is discussed below in [section J.2.6](#)). Here we will highlight the power of vested interests within democratic government.

In [section B.2](#) we only discussed the general nature of the state and what its role within society is (i.e. *"the preservation of the economic 'status quo,' the protection of the economic privileges of the ruling class,"* in the words of Luigi Galleani). However, as the effectiveness of the vote to secure change is now the topic we will have to discuss how and why the state and capital restricts and controls political action.

Taking capital to begin with, if we assume that a relatively reformist government was elected it would soon find itself facing various economic pressures. Either capital would disinvest, so forcing the government to back down in the face of economic collapse, or the government in question would control capital leaving the country and so would soon be isolated from new investment and its currency would become worthless. Either way, the economy would be severely damaged and the promised "reforms" would be dead letters. In addition, this economic failure would soon result in popular revolt which in turn would lead to a more authoritarian state as "democracy" was protected from the people.

Far fetched? No, not really. In January, 1974, the FT Index for the London Stock Exchange stood at 500 points. In February, the miner's went on strike, forcing Heath to hold (and lose) a general election. The new Labour government (which included many left-wingers in its cabinet) talked about nationalising the banks and much heavy industry. In August, 74, Tony Benn announced Plans to nationalise the ship building industry. By December of that year, the FT index had fallen to 150 points. By 1976 the British Treasury was spending \$100 million a day buying back of its own money to support the pound [**The London Times**, 10/6/76]. The economic pressure of capitalism was at work:

"The further decline in the value of the pound has occurred despite the high level of

interest rates. . . dealers said that selling pressure against the pound was not heavy or persistent, but there was an almost total lack of interest amongst buyers. The drop in the pound is extremely surprising in view of the unanimous opinion of bankers, politicians and officials that the currency is undervalued" [The London Times, 27/5/76]

The Labour government faced with the power of international capital ended up having to receive a temporary "bailing out" by the I.M.F. who imposed a package of cuts and controls which translated to Labour saying "*We'll do anything you say*", in the words of one economist [Peter Donaldson, **A Question of Economics**, p. 89]. The social costs of these policies was massive, with the Labour government being forced to crack down on strikes and the weakest sectors of society (but that's not to forget that they "*cut expenditure by twice the amount the I.M.F. were promised.*" [**Ibid.**]). In the backlash to this, Labour lost the next election to a right-wing, pro-free market government which continued where Labour had left off.

Or, to use a more recent example, "*[t]he fund managers [who control the flow of money between financial centres and countries] command such vast resources that their clashes with governments in the global marketplace usually ends up in humiliating defeat for politicians. . . In 1992, US financier George Soros single-handedly destroyed the British government's attempts to keep the pound in the European Exchange Rate Mechanism (ERM). Soros effectively bet, and won, that he could force the British government to devalue. Using his huge resources, he engineered a run on the pound, overwhelming the Bank of England's attempts to use its reserves to keep sterling within its ERM band. The British government capitulated by suspending sterling's membership of the ERM (an effective devaluation) and Soros came away from his victory some \$1bn richer. Fund managers then picked off other currencies one by one, derailing the drive for European monetary union, which would, incidentally, have cut their profits by making them unable to buy and sell between the different European currencies.*" [Duncan Green, **The Silent Revolution**, p. 124]

The fact is that capital will not invest in a country which does not meet its approval and this is an effective weapon to control democratically elected governments. And with the increase in globalisation of capital over the last 30 years this weapon is even more powerful (a weapon we may add which was improved, via company and state funded investment and research in communication technology, precisely to facilitate the attack on working class reforms and power in the developed world, in other words capital ran away to teach us a lesson - see sections [C.8.1](#), [C.8.2](#), [C.8.3](#) and [D.5.3](#)).

As far as political pressures go, we must remember that there is a difference between the state and government. The state is the permanent collection of institutions that have entrenched power structures and interests. The government is made up of various politicians. It's the institutions that have power in the state due to their permanence, not the representatives who come and go. In other words, the state bureaucracy has vested interests and elected politicians cannot effectively control them. This network of behind the scenes agencies can be usefully grouped into two parts:

"By 'the secret state' we mean. . . the security services, MI5 [the FBI in the USA], Special Branch. . .

*MI6 [the CIA]. By 'the permanent government' . . . we mean the secret state plus the Cabinet Office and upper echelons of Home and Foreign and Commonwealth Offices, the Armed Forces and Ministry of Defence, the nuclear power industry and its satellite ministries; and the so-called 'Permanent Secretaries Club,' the network of very senior civil servants - the 'Mandarins.' In addition. . . its satellites" including M.P.s (particularly right-wing ones), 'agents of influence' in the media, former security services personnel, think tanks and opinion forming bodies, front companies of the security services, and so on. [Stephen Dorril and Robin Ramsay, **Smear! Wilson and the Secret State**, p. X, XI]*

These bodies, while theoretically under the control of the elected government, can effectively (via disinformation, black operations, bureaucratic slowdowns, media attacks, etc.) ensure that any government trying to introduce policies which the powers that be disagree with will be stopped. In other words the state is **not** a neutral body, somehow rising above vested interests and politics. It is, and always will be, a institution which aims to protect specific sections of society as well as its own.

An example of this "secret state" at work can be found in **Smear!**, where Dorril and Ramsay document the campaign against the Labour Prime Minister of Britain, Harold Wilson, which resulted in his resignation. They also indicate the pressures which Labour M.P. Tony Benn was subjected to by "his" Whitehall advisers:

*"In early 1985, the campaign against Benn by the media was joined by the secret state. The timing is interesting. In January, his Permanent Secretary had 'declared war' and the following month began the most extraordinary campaign of harassment any major British politician has experienced. While this is not provable by any means, it does look as though there is a clear causal connection between withdrawal of Prime Ministerial support, the open hostility from the Whitehall mandarins and the onset of covert operations." [Stephen Dorril and Robin Ramsay, **Op. Cit.**, p. 279]*

Not to mention the role of the secret state in undermining reformist and radical organisations and movements. Thus involvement goes from pure information gathering on "subversives", to disruption and repression. Taking the example of the US secret state, Howard Zinn notes that in 1975

"congressional committees. . . began investigations of the FBI and CIA.

"The CIA inquiry disclosed that the CIA had gone beyond its original mission of gathering intelligence and was conducting secret operations of all kinds . . . [for example] the CIA - with the collusion of a secret Committee of Forty headed by Henry Kissinger - had worked to 'destabilize' the [democratically elected, left-wing] Chilean government. . .

"The investigation of the FBI disclosed many years of illegal actions to disrupt and destroy radical groups and left-wing groups of all kinds. The FBI had sent forged letters, engaged in burglaries. . . opened mail illegally, and in the case of Black Panther leader Fred Hampton, seems to have conspired in murder. . .

"The investigations themselves revealed the limits of government willingness to probe into such activities. . . [and they] submitted its findings on the CIA to the CIA to see if there was material the Agency wanted omitted." [**A People's History of the United States**, pp. 542-3]

Also, the CIA secretly employs several hundred American academics to write books and other materials to be used for propaganda purposes, an important weapon in the battle for hearts and minds. In other words, the CIA, FBI [and their equivalents in other countries] and other state bodies can hardly be considered neutral bodies, who just follow orders. They are a network of vested interests, with specific ideological viewpoints and aims which usually place the wishes of the voting population below maintaining the state-capital power structure in place.

This can be seen most dramatically in the military coup in Chile against the democratically re-elected (left-wing) Allende government by the military, aided by the CIA, US based corporations and the US government cutting economic aid to the country (specifically to make it harder for the Allende regime). The coup resulted in tens of thousands murdered and years of terror and dictatorship, but the danger of a pro-labour government was stopped and the business environment was made healthy for profits. An extreme example, we know, but important ones for any believer in freedom or the idea that the state machine is somehow neutral and can be captured and used by left-wing parties.

Therefore we cannot expect a different group of politicians to react in different ways to the same economic and institutional influences and interests. Its no coincidence that left-wing, reformist parties have introduced right-wing, pro-capitalist ("Thatcherite/Reaganite") policies at the same time as right-wing, explicitly pro-capitalist parties introduced them in the UK and the USA. As Clive Ponting (an ex-British Civil Servant) points out, this is to be expected:

"the function of the political system in any country in the world is to regulate, but not alter radically, the existing economic structure and its linked power relationships. The great illusion of politics is that politicians have the power to make whatever changes they like. . . On a larger canvas what real control do the politicians in any country have over the operation of the international monetary system, the pattern of world trade with its built in subordination of the third world or the operation of multi-national companies? These institutions and the dominating mechanism that underlies them - the profit motive as a sole measure of success - are essentially out of control and operating on autopilot." [quoted in **Alternatives**, # 5, p. 10]

Of course there have been examples of quite extensive reforms which did benefit working class people in major countries. The New Deal in the USA and the 1945-51 Labour Governments spring to mind. Surely these indicate that our claims above are false? Simply put, no, they do not. Reforms can be won from the state when the dangers of not giving in outweigh the problems associated with the reforms. Reforms can therefore be used to save the capitalist system and the state and even improve their operation (with, of course, the possibility of getting rid of the reforms when they are no longer required).

For example, both the reformist governments of 1930s USA and 1940s UK were under pressure from below, by waves of militant working class struggle which could have developed beyond mere reformism. The waves of sit-down strikes in the 1930s ensured the passing of pro-union laws which while allowing workers to organise without fear of being fired. This measure also involved the unions in running the capitalist-state machine (and so making them responsible for controlling "unofficial" workplace action and so ensuring profits). The nationalisation of roughly 20% of the UK economy during the Labour administration of 1945 (the most unprofitable sections of it as well) was also the direct result of ruling class fear. As Quintin Hogg, a Tory M.P. at the time, said, *"If you don't give the people social reforms they are going to give you social revolution"*. Memories of the near revolutions across Europe after the first war were obviously in many minds, on both sides. Not that nationalisation was particularly feared as "socialism." Indeed it was argued that it was the best means of improving the performance of the British economy. As anarchists at the time noted *"the real opinions of capitalists can be seen from Stock Exchange conditions and statements of industrialists than the Tory Front bench . . . [and from these we] see that the owning class is not at all displeased with the record and tendency of the Labour Party"* [**Neither Nationalisation nor Privatisation: Selections from Freedom 1945-1950**, Vernon Richards (Ed), p. 9]

So, if extensive reforms have occurred, just remember what they were in response to militant pressure from below and that we could have got so much more.

Therefore, in general, things have little changed over the one hundred years since this anarchist argument against electioneering was put forward:

"in the electoral process, the working class will always be cheated and deceived. . . if they did manage to send, one, or ten, or fifty of them[selves to Parliament], they would become spoiled and powerless. Furthermore, even if the majority of Parliament were composed of workers, they could do nothing. Not only is there the senate . . . the chiefs of the armed forces, the heads of the judiciary and of the police, who would be against the parliamentary bills advanced by such a chamber and would refuse to enforce laws favouring the workers (it has happened [for example the 8 hour working day was legally created in many US states by the 1870s, but workers had to strike for it in 1886 as it as not enforced]; but furthermore laws are not miraculous; no law can prevent the capitalists from exploiting the workers; no law can force them to keep their factories open and employ workers at such and such conditions, nor force shopkeepers to sell as a certain price, and so on." [S. Merlino, quoted by L. Galleani, **The End of Anarchism?**, p. 13]

Moreover, anarchists reject voting for other reasons. The fact is that electoral procedures are the opposite of direct action - they are **based** on getting someone else to act on your behalf. Therefore, far from empowering people and giving them a sense of confidence and ability, electioneering **dis**-empowers them by creating a "leader" figure from which changes are expected to flow. As Martin observes:

"all the historical evidence suggests that parties are more a drag than an impetus to radical change. One obvious problem is that parties can be voted out. All the policy changes they brought in can simply be reversed later.

*"More important, though, is the pacifying influence of the radical party itself. On a number of occasions, radical parties have been elected to power as a result of popular upsurges. Time after time, the 'radical' parties have become chains to hold back the process of radical change" ["Democracy without Elections," **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]*

This can easily be seen from the history of the various left-wing parties. Ralph Miliband points out that labour or socialist parties, elected in periods of social turbulence, have often acted to reassure the ruling elite by dampening popular action that could have threatened capitalist interests [**The State in Capitalist Society**, Weidenfeld and Nicolson, 1969]. For example, the first project undertaken by the Popular Front, elected in France in 1936, was to put an end to strikes and occupations and generally to cool popular militancy, which was the Front's strongest ally in coming to power. The Labour government elected in Britain in 1945 got by with as few reforms as it could, refusing to consider changing basic social structures. In addition, within the first week of taking office it sent troops in to break the dockers' strike. Labour has used troops to break strikes far more often than the Conservatives have.

These points indicate why existing power structures cannot effectively be challenged through elections. For one thing, elected representatives are not **mandated**, which is to say they are not tied in any binding way to particular policies, no matter what promises they have made or what voters may prefer. Around election time, the public's influence on politicians is strongest, but after the election, representatives can do practically whatever they want, because there is no procedure for **instant recall**. In practice it is impossible to recall politicians before the next election, and between elections they are continually exposed to pressure from powerful special-interest groups -- especially business lobbyists, state bureaucracies and political party power brokers.

Under such pressure, the tendency of politicians to break campaign promises has become legendary. Generally, such promise breaking is blamed on bad character, leading to periodic "throw-the-bastards-out" fervour -- after which a new set of representatives is elected, who also mysteriously turn out to be bastards! In reality it is the system itself that produces "bastards," the sell-outs and shady dealing we have come to expect from politicians. As Alex Comfort argues, political office attracts power-hungry, authoritarian, and ruthless personalities, or at least tends to bring out such qualities in those who are elected (see his classic work **Authority and Delinquency in the Modern State: A Criminological Approach to the Problem of Power**).

In light of modern "democracy", it is amazing that anyone takes the system seriously enough to vote at all. And in fact, voter turnout in the US and other nations where "democracy" is practiced in this fashion

is typically low. Nevertheless, some voters continue to participate, pinning their hopes on new parties or trying to reform a major party. For anarchists, this activity is pointless as it does not get at the root of the problem. It is not politicians or parties which are the problem, its a system which shapes them into its own image and marginalises and alienates people due to its hierarchical and centralised nature. No amount of party politics can change that.

However, we should make it clear that most anarchists recognise there is a difference between voting for a government and voting in referendum. Here we are discussing the former, electioneering, as a means of social change. Referenda are closer to anarchist ideas of direct democracy and are, while flawed, far better than electing a politician to office once every four years or so.

In addition, Anarchists are not necessarily against all involvement in electoral politics. Bakunin thought it could sometimes be useful to participate in local elections in relatively small communities where regular contact with representatives can maintain accountability. This argument has been taken up by such Social Ecologists such as Murray Bookchin who argues that anarchists, by taking part in local elections, can use this technique to create self-governing community assemblies. However, few anarchists support such means to create community assemblies (see [section J.5.14](#) for a discussion on this).

However, in large cities and in regional or national elections, certain processes have developed which render the term "democracy" inappropriate. These processes include mass advertising, bribery of voters through government projects in local areas, party "machines," the limitation of news coverage to two (or at most three) major parties, and government manipulation of the news. Party machines choose candidates, dictate platforms, and contact voters by phone campaigns. Mass advertising "packages" candidates like commodities, selling them to voters by emphasising personality rather than policies, while media news coverage emphasise the "horse race" aspects of campaigns rather than policy issues. Government spending in certain areas (or more cynically, the announcement of new projects in such areas just before elections) has become a standard technique for buying votes. And we have already examined the mechanisms through which the media is made dependent of government sources of information (see [section D.3](#)), a development that obviously helps incumbents.

Therefore, for these related reasons anarchists reject the voting as a means of change. Instead we wholeheartedly support direct action as the means of getting improvements in the here and now as well as the means of creating an alternative to the current system.

J.2.3 What are the political implications of voting?

At its most basic, voting implies agreement with the status quo. It is worth quoting the Scottish libertarian socialist James Kelman at length on this:

"State propaganda insists that the reason why at least 40 percent of the voting public don't vote at all is because they have no feelings one way or the other. They say the same

thing in the USA, where some 85 percent of the population are apparently 'apolitical' since they don't bother registering a vote. Rejection of the political system is inadmissible as far as the state is concerned. . . Of course the one thing that does happen when you vote is that someone else has endorsed an unfair political system. . . A vote for any party or any individual is always a vote for the political system. You can interpret your vote in whichever way you like but it remains an endorsement of the apparatus. . . If there was any possibility that the apparatus could effect a change in the system then they would dismantle it immediately. In other words the political system is an integral state institution, designed and refined to perpetuate its own existence. Ruling authority fixes the agenda by which the public are allowed 'to enter the political arena' and that's the fix they've settled on" [Some Recent Attacks, p.87]

We are taught from an early age that voting in elections is right and a duty. In US schools, children elect class presidents and other officers. Often mini-general elections are held to "educate" children in "democracy". Periodically, election coverage monopolises the media. We are made to feel guilty about shirking our "civic responsibility" if we don't vote. Countries that have no elections, or only rigged elections, are regarded as failures [Benjamin Ginsberg, **The Consequences of Consent: Elections, Citizen Control and Popular Acquiescence**, Addison-Wesley, 1982]. As a result, elections have become a quasi-religious ritual.

As Brian Martin points out, however, "*elections in practice have served well to maintain dominant power structures such as private property, the military, male domination, and economic inequality. None of these has been seriously threatened through voting. It is from the point of view of radical critics that elections are most limiting.*" ["Democracy without Elections," **Social Anarchism, Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]

Benjamin Ginsberg has noted other ways in which elections serve the interests of state power. Firstly, voting helps to legitimate government; hence suffrage has often been expanded at times when there was little popular demand for it but when mass support of government was crucial, as during a war or revolution. Secondly, since voting is organised and supervised by government, it comes to be seen as the only legitimate form of political participation, thus making it likely that any revolts by oppressed or marginalized groups will be viewed by the general public as illegitimate. [**The Consequences of Consent**]

In addition, Ginsberg argues that, historically, by enlarging the number of people who participate in 'politics,' and by turning this participation into the "safe" activities of campaigning and voting, elections have reduced the risk of more radical direct action. That is, voting disempowers the grassroots by diverting energy from grassroots action. After all, the goal of electoral politics is to elect a representative who will act **for** us. Therefore, instead taking direct action to solve problems ourselves, action becomes indirect, through the government. This is an insidiously easy trap to fall into, as we have been conditioned in hierarchical society from day one into attitudes of passivity and obedience, which gives most of us a deep-seated tendency to leave important matters to the "experts" and "authorities."

Anarchists also criticise elections for giving citizens the false impression that the government serves, or can serve, the people. As Martin puts it, *"the founding of the modern state a few centuries ago was met with great resistance: people would refuse to pay taxes, to be conscripted or to obey laws passed by national governments. The introduction of voting and the expanded suffrage have greatly aided the expansion of state power. Rather than seeing the system as one of ruler and ruled, people see at least the possibility of using state power to serve themselves. As electoral participation has increased, the degree of resistance to taxation, military service, and the immense variety of laws regulating behaviour, has been greatly attenuated"* [Op. Cit., p. 126]

Ironically, however, voting has legitimated the growth of state power to such an extent that the state is now beyond any real popular control by the form of participation that made that growth possible. Nevertheless, as Ginsberg observes, the idea that electoral participation means popular control of government is so deeply implanted in people's psyches *"that even the most overtly skeptical cannot fully free themselves from it"* [The Consequences of Consent, op. cit., p. 241].

Therefore, voting has the important political implication of encouraging people to identify with state power and to justify the status quo. In addition, it feeds the illusion that the state is neutral and that electing parties to office means that people have control over their own lives. Moreover, elections have a tendency to make people passive, to look for salvation from above and not from their own self-activity. As such it produces a division between leaders and led, with the voters turned into spectators of activity, not the participants within it.

All this does not mean, obviously, that anarchists prefer dictatorship or an "enlightened" monarchy. Far from it, democratising state power can be an important step towards abolishing it. All anarchists agree with Bakunin when he argued that *"the most imperfect republic is a thousand times better than even the most enlightened monarchy."* [cited by Guerin, **Anarchism**, p. 20] But neither does it mean that anarchists will join in with the farce of electioneering, particularly when there are more effective means available for changing things for the better.

J.2.4 Surely voting for radical parties will be effective?

There is no doubt that voting can lead to changes in policies, which can be a good thing as far as it goes. But such policies are formulated and implemented within the authoritarian framework of the hierarchical capitalist state -- a framework which itself is never open to challenge by voting. To the contrary, voting legitimates the state framework, ensuring that social change will be mild, gradual, and reformist rather than rapid and radical. Indeed, the "democratic" process will (and has) resulted in all successful political parties becoming committed to "more of the same" or tinkering with the details at best (which is usually the limits of any policy changes).

Therefore, given the need for radical systemic changes as soon as possible due to the exponentially accelerating crises of modern civilisation, working for gradual reforms within the electoral system must be seen as a potentially deadly tactical error. In addition, it can never get to the root causes of our

problems. Anarchists reject the idea that our problems can be solved by the very institutions that cause them in the first place! What happens in our communities, workplaces and environment is too important to be left to politicians - or the ruling elite who control governments.

Because of this anarchists reject political parties and electioneering. Electioneering has always been the death of radicalism. Political parties are only radical when they don't stand a chance of election. However, many social activists continue to try to use elections, so participating in the system which disempowers the majority and so helps create the social problems they are protesting against.

"It should be a truism that elections empower the politicians and not the voters," Brian Martin writes, "yet many social movements continually are drawn into electoral politics." There are a number of reasons for this. "One is the involvement of party members in social movements. Another is the aspirations for power and influence by leaders in movements. Having the ear of a government minister is a heady sensation for many; getting elected to parliament oneself is even more of an ego boost. What is forgotten in all this 'politics of influence' is the effect on ordinary activists." ["Democracy without Elections", **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 125]

Rudolph Bahro gives an example of how working "within the system" disempowered grassroots Green activists in Germany during the early eighties, pointing out that the coalitions into which the Greens entered with Social Democrats in the German legislature often had the effect of strengthening the status quo by co-opting those whose energies might otherwise have gone into more radical and effective forms of activism [**Building the Green Movement**, New Society Publishers, 1986].

No doubt the state is more complicated than the simple "executive committee of the ruling class" pictured by Marxists. There are continual struggles both within and without the state bureaucracies, struggles that influence policies and empower different groups of people. Because of this, many radical parties believe that it makes sense to work within the state -- for example, to obtain labour, consumer, and environmental protection laws. However, this reasoning ignores the fact that the organisational structure of the state is not neutral.

To quote Martin again:

"The basic anarchist insight is that the structure of the state, as a centralised administrative apparatus, is inherently flawed from the point of view of human freedom and equality. Even though the state can be used occasionally for valuable ends, as a means the state is flawed and impossible to reform. The nonreformable aspects of the state include, centrally, its monopoly over 'legitimate' violence and its consequent power to coerce for the purpose of war, internal control, taxation and the protection of property and bureaucratic privilege.

"The problem with voting is that the basic premises of the state are never considered open for debate, much less challenge. The state's monopoly over the use of violence for war is

never at issue. Neither is the state's use of violence against revolt from within. The state's right to extract economic resources from the population is never questioned. Neither is the state's guarantee of either private property (under capitalism) or bureaucratic prerogative (under state socialism) -- or both" [Op Cit., p. 127]

But, it may be said, if a new political group is radical enough, it will be able to use state power for good purposes. While we discuss this in more detail later in [section J.2.6](#), let us consider a specific case: that of the Greens, many of whom believe that the best way to achieve their aims is to work within the representative political system.

By pledging to use the electoral system to achieve change, Green parties necessarily commit themselves to formulating their proposals as legislative agendas. But once legislation is passed, the coercive mechanisms of the state will be needed to enforce it. Therefore, Green parties are committed to upholding state power. However, our analysis in [section B.2](#) indicated that the state is a set of hierarchical institutions through which a ruling elite dominates society and individuals. And, as we have seen in the introduction to [section E](#), ecologists, feminists, and peace activists -- who are key constituencies of the Green movement -- all need to **dismantle** hierarchies and domination in order to achieve their respective aims. Therefore, since the state is not only the largest and most powerful hierarchy but also serves to maintain the hierarchical form of all major institutions in society (since this form is the most suitable for achieving ruling-class interests), the state itself is the main obstacle to the success of key constituencies of the Green movement. Hence it is impossible **in principle** for a parliamentary Green party to achieve essential objectives of the Green movement. A similar argument would apply to any radical party whose main emphasis was social justice, which like the goals of feminists, radical ecologists, and peace activists, depends on dismantling hierarchies.

And surely no one who even is remotely familiar with history will suggest that 'radical' politicians, even if by some miracle they were to obtain a majority in the national legislature, might dismantle the state. It should be axiomatic by now that when a 'radical' politician (e.g. a Lenin) says to voters, "Give me and my party state power and we will 'wither away'" it's just more campaign rhetoric (in Lenin's case, the ultimate campaign promise), and hence not to be taken seriously. And, as we argued in the previous [section](#), radical parties are under pressure from economic and state bureaucracies that ensure that even a sincere radical party would be powerless to introduce significant reforms.

The only real response to the problems of representative democracy is to urge people not to vote. This can be a valuable way of making others aware of the limitations of the current system, which is a necessary condition for their seriously considering the anarchist alternative, as we have outlined in this FAQ. The implications of abstentionism are discussed in the [next section](#).

J.2.5 Why do anarchists support abstentionism and what are its implications?

At its most basic, anarchists support abstentionism because *"participation in elections means the transfer of one's will and decisions to another, which is contrary to the fundamental principles of anarchism."* [Emma Goldman, "Anarchists and Elections", **Vanguard** III, June-July 1936, p. 19]

If you reject hierarchy and government then participating in a system by which you elect those who will govern you is almost like adding insult to injury! And as Luigi Galleani points out, *"[b]ut whoever has the political competence to choose his own rulers is, by implication, also competent to do without them."* [**The End of Anarchism?**, p. 37] In other words, because anarchists reject the idea of authority, we reject the idea that picking the authority (be it bosses or politicians) makes us free. Therefore, anarchists reject governmental elections in the name of self-government and free association. We refuse to vote as voting is endorsing authoritarian social structures. We are (in effect) being asked to make obligations to the state, not our fellow citizens, and so anarchists reject the symbolic process by which our liberty is alienated from us.

For anarchists, then, when you vote, you are choosing between rulers. Instead of urging people to vote we raise the option of choosing to rule yourself, to organise freely with others - in your workplace, in your community, everywhere - as equals. The option of something you cannot vote for, a new society. And instead of waiting for others to do make some changes for you, anarchists urge that you do it yourself. This is the core of the anarchist support for abstentionism.

In addition, beyond this basic anarchist rejection of elections from a anti-statist position, anarchists also support abstentionism as it allows us to put across our ideas at election time. It is a fact that at election times individuals are often more interested in politics than usual. So, by arguing for abstentionism we can get our ideas across about the nature of the current system, how elected politicians do not control the state bureaucracy, now the state acts to protect capitalism and so on. In addition, it allows us to present the ideas of direct action and encourage those disillusioned with political parties and the current system to become anarchists by presenting a viable alternative to the farce of politics.

And a sizeable percentage of non-voters and voters are disillusioned with the current set-up. According to the US paper **The Nation** (dated February 10, 1997):

"Protest is alive and well in the growing non-electorate, now the majority (last fall's turnout was 48.8 percent). According to a little-noticed post-election survey of 400 nonvoters conducted by the Polling Company, a Washington-based firm, 38 percent didn't vote for essentially political reasons: they 'did not care for any of the candidates' (16 percent), they were 'fed up with the political system' (15 percent) or they 'did not feel like candidates were interested in people like me' (7 percent). That's at least 36 million people--almost as many as voted for Bob Dole. The nonvoting majority is also disproportionately liberal-leaning, compared with those who did vote."

So, anarchist abstentionism is a means of turning this negative reaction to an unjust system into positive activity. So, anarchist opposition to electioneering has deep political implications which Luigi Galleani

addresses when he writes that the *"anarchists' electoral abstentionism implies not only a conception that is opposed to the principle of representation (which is totally rejected by anarchism), it implies above all an absolute lack of confidence in the State. . . Furthermore, anarchist abstentionism has consequences which are much less superficial than the inert apathy ascribed to it by the sneering careerists of 'scientific socialism' [i.e. Marxism]. It strips the State of the constitutional fraud with which it presents itself to the gullible as the true representative of the whole nation, and, in so doing, exposes its essential character as representative, procurer and policeman of the ruling classes.*

"Distrust of reforms, of public power and of delegated authority, can lead to direct action [in the class struggle]. . . It can determine the revolutionary character of this . . . action; and, accordingly, anarchists regard it as the best available means for preparing the masses to manage their own personal and collective interests; and, besides, anarchists feel that even now the working people are fully capable of handling their own political and administrative interests." [**The End of Anarchism?**, pp. 13-14]

Therefore abstentionism stresses the importance of self-activity and self-libertarian as well as having an important educational effect in highlighting that the state is not neutral, but serves to protect class rule, and that meaningful change only comes from below, by direct action. For the dominant ideas within any class society reflect the opinion of the ruling elite of that society and so any campaign at election times which argues for abstentionism and indicates why voting is a farce will obviously challenge these dominant ideas. In other words, abstentionism combined with direct action and the building of socialist alternatives is a very effective means of changing people's ideas and encouraging a process of self-education and, ultimately, self-liberation.

Anarchists are aware that elections serve to legitimate government. We have always warned that since the state is an integral part of the system that perpetuates poverty, inequality, racism, imperialism, sexism, environmental destruction, and war, we should not expect to solve any of these problems by changing a few nominal state leaders every four or five years (See P. Kropotkin, *"Representative Government," The Commonweal*, Vol. 7, 1892; Errico Malatesta, **Vote: What For?**, Freedom Press, 1942). Therefore anarchists (usually) advocate abstentionism at election time as a means of exposing the farce of "democracy", the disempowering nature of elections and the real role of the state.

Therefore, anarchists urge abstentionism in order to **encourage** activity, not apathy. The reasons **why** people abstain is more important than the act. The idea that the USA is closer to anarchy because around 50% of people do not vote is nonsense. Abstentionism in this case is the product of apathy and cynicism, not political ideas. So anarchists recognise that apathetic abstentionism is **not** revolutionary or an indication of anarchist sympathies. It is produced by apathy and a general level of cynicism at **all** forms of political ideas and the possibility of change.

Not voting is **not** enough, and anarchists urge people to **organise** and **resist** as well. Abstentionism must be the political counterpart of class struggle, self-activity and self-management in order to be effective - otherwise it is as pointless as voting is.

J.2.6 What are the effects of radicals using electioneering?

While many radicals would be tempted to agree with our analysis of the limitations of electioneering and voting, few would automatically agree with anarchist abstentionist arguments. Instead, they argue that we should combine direct action with electioneering. In that way (it is argued) we can overcome the limitations of electioneering by invigorating the movement with self-activity. In addition, it is argued, the state is too powerful to leave in the hands of the enemies of the working class. A radical politician will refuse to give the orders to crush social protest that a right-wing, pro-capitalist one would.

This reformist idea met a nasty end in the 1900s (when, we may note, social democracy was still considered revolutionary). In 1899, the Socialist Alexandre Millerand joined the cabinet of the French Government. However, nothing changed:

"thousands of strikers. . . appealed to Millerand for help, confident that, with him in the government, the state would be on their side. Much of this confidence was dispelled within a few years. The government did little more for workers than its predecessors had done; soldiers and police were still sent in to repress serious strikes." [Peter N. Stearns, **Revolutionary Syndicalism and French Labour**, p. 16]

In 1910, the Socialist Prime Minister Briand used scabs and soldiers to again break a general strike on the French railways. And these events occurred during the period when social democratic and socialist parties were self-proclaimed revolutionaries and arguing against anarcho-syndicalism by using the argument that working people needed their own representatives in office to stop troops being used against them during strikes!

Looking at the British Labour government of 1945 to 1951 we find the same actions. What is often considered the most left-wing Labour government ever used troops to break strikes in every year it was in office, starting with a dockers' strike days after it became the new government. And again in the 1970s Labour used troops to break strikes. Indeed, the Labour Party has used troops to break strikes more often than the right-wing Conservative Party.

In other words, while these are important arguments in favour of radicals using elections, they ultimately fail to take into account the nature of the state and the corrupting effect it has on radicals. If history is anything to go by, the net effect of radicals using elections is that by the time they are elected to office the radicals will happily do what they claimed the right-wing would have done. Many blame the individuals elected to office for these betrayals, arguing that we need to elect **better** politicians, select **better** leaders. For anarchists nothing could be more wrong as its the means used, not the individuals involved, which is the problem.

At its most basic, electioneering results in the party using it becoming more moderate and reformist - indeed the party often becomes the victim of its own success. In order to gain votes, the party must appear "moderate" and "practical" and that means working within the system. This has meant that (to

use Rudolf Rocker words):

"Participation in the politics of the bourgeois States has not brought the labour movement a hair's-breadth nearer to Socialism, but thanks to this method, Socialism has almost been completely crushed and condemned to insignificance. . . Participation in parliamentary politics has affected the Socialist Labour movement like an insidious poison. It destroyed the belief in the necessity of constructive Socialist activity, and, worse of all, the impulse to self-help, by inoculating people with the ruinous delusion that salvation always comes from above." [**Anarcho-Syndicalism**, p. 49]

This corruption does not happen overnight. Alexander Berkman indicates how it slowly develops when he writes:

"[At the start, the Socialist Parties] claimed that they meant to use politics only for the purpose of propaganda. . . and took part in elections on order to have an opportunity to advocate Socialism

"It may seem a harmless thing but it proved the undoing of Socialism. Because nothing is truer than the means you use to attain your object soon themselves become your object. . . [so] There is a deeper reason for this constant and regular betrayal [than individual scoundrels being elected] . . . no man turns scoundrel or traitor overnight.

*"It is **power** which corrupts. . . Moreover, even with the best intentions Socialists [who get elected]. . . find themselves entirely powerless to accomplishing anything of a socialistic nature. . . The demoralisation and vitiation [this brings about] take place little by little, so gradually that one hardly notices it himself. . . [The elected Socialist] perceives that he is regarded as a laughing stock [by the other politicians]. . . and finds more and more difficulty in securing the floor. . . he knows that neither by his talk nor by his vote can he influence the proceedings . . . His speeches don't even reach the public. . . [and so] He appeals to the voters to elect more comrades. . . Years pass. . . [and a] number . . . are elected. Each of them goes through the same experience. . . [and] quickly come to the conclusion. . . [that] They must show that they are practical men. . . that they are doing something for their constituency. . . In this manner the situation compels them to take a 'practical' part in the proceedings, to 'talk business,' to fall in line with the matters actually dealt with in the legislative body. . . Spending years in that atmosphere, enjoying good jobs and pay, the elected Socialists have themselves become part and parcel of the political machinery. . . With growing success in elections and securing political power they turn more and more conservative and content with existing conditions. Removal from the life and suffering of the working class, living in the atmosphere of the bourgeoisie. . . they have become what they call 'practical'. . . Power and position have gradually stifled their conscience and they have not the strength and honesty to swim against the current. . . They have become the strongest bulwark of capitalism."* [**What is Communist**

Anarchism?, pp. 78-82]

And so the *"political power which they had wanted to conquer had gradually conquered their Socialism until there was scarcely anything left of it."* [Rudolf Rocker, **Op. Cit.**, p. 50] Not that these arguments are the result of hindsight, we may add. Bakunin was arguing in the early 1870s that the *"inevitable result [of using elections] will be that workers' deputies, transferred to a purely bourgeois environment, and into an atmosphere of purely bourgeois political ideas. . . will become middle class in their outlook, perhaps even more so than the bourgeois themselves."* [**The Political Philosophy of Bakunin**, p. 216] History proved Bakunin's prediction correct (as it did with his prediction that Marxism would result in elite rule).

History is littered with examples of radical parties becoming a part of the system. From Marxian Social Democracy at the turn of the 19th century to the German Green Party in the 1980s, we have seen radical parties, proclaiming the need for direct action and extra-parliamentary activity denouncing these activities once in power. From only using parliament as a means of spreading their message, the parties involved end up considering votes as more important than the message. Janet Biehl sums up the effects on the German Green Party of trying to combine radical electioneering with direct action:

*"the German Greens, once a flagship for the Green movement worldwide, should now be considered stink normal, as their **de facto** boss himself declares. Now a repository of careerists, the Greens stand out only for the rapidity with which the old cadre of careerism, party politics, and business-as-usual once again played itself out in their saga of compromise and betrayal of principle. Under the superficial veil of their old values - a very thin veil indeed, now - they can seek positions and make compromises to their heart's content. . . They have become 'practical,' 'realistic' and 'power-orientated.' This former New Left ages badly, not only in Germany but everywhere else. But then, it happened with the S.P.D. [The German Social Democratic Party] in August 1914, then why not with Die Grunen in 1991? So it did."* ["Party or Movement?", **Greenline**, no. 89, p. 14]

This, sadly, is the end result of all such attempts. Ultimately, supporters of using political action can only appeal to the good intentions and character of their candidates. Anarchists, however, present an analysis of the structures and other influences that will determine how the character of the successful candidates will change. In other words, in contrast to Marxists and other radicals, anarchists present a materialist, scientific analysis of the dynamics of electioneering and its effects on radicals. And like most forms of idealism, the arguments of Marxists and other radicals flounder on the rocks of reality as their theory *"inevitably draws and enmeshes its partisans, under the pretext of political tactics, into ceaseless compromises with governments and political parties; that is, it pushes them toward downright reaction."* [Bakunin, **Op. Cit.**, p. 288]

However, many radicals refuse to learn this lesson of history and keep trying to create a new party which will not repeat the saga of compromise and betrayal which all other radical parties have suffered. And they say that anarchists are utopian! In other words, its truly utopian to think that *"You cannot dive into a*

swamp and remain clean." [Alexander Berkman, **Op. Cit.**, p. 83] Such is the result of rejecting (or "supplementing" with electioneering) direct action as the means to change things, for any social movement *"to ever surrender their commitment to direct action for 'working within the system' is to destroy their personality as socially innovative movements. It is to dissolve back into the hopeless morass of 'mass organisations' that seek respectability rather than change."* [Murray Bookchin, **Toward an Ecological Society**, p. 47]

Moreover, the use of electioneering has a centralising effect on the movements that use it. Political actions become considered as parliamentary activities made **for** the population by their representatives, with the 'rank and file' left with no other role than that of passive support. Only the leaders are actively involved and the main emphasis falls upon the leaders and it soon becomes taken for granted that they should determine policy (even ignoring conference decisions when required - how many times have politicians turned round and done the exact opposite of what they promised or introduced the exact opposite of party policy?). In the end, party conferences become simply like parliamentary elections, with party members supporting this leader against another.

Soon the party reflects the division between manual and mental labour so necessary for the capitalist system. Instead of working class self-activity and self-determination, there is a substitution and a non working class leadership acting **for** people replaces self-management in social struggle and within the party itself. Electoralism strengthens the leaders dominance over the party and the party over the people it claims to represent. And, of course, the real causes and solutions to the problems we face are mystified by the leadership and rarely discussed in order to concentrate on the popular issues that will get them elected.

And, of course, this results in radicals *"instead of weakening the false and enslaving belief in law and government . . . actually work[ing] to **strengthen** the people's faith in forcible authority and government."* [A. Berkman, **Op. Cit.**, p. 84] Which has always proved deadly to encouraging a spirit of revolt, self-management and self-help -- the very keys to creating change in a society.

Thus the 1870 resolution of the Spanish section of the **First International** seems to have been proven to be totally correct:

"Any participation of the working class in the middle class political government would merely consolidate the present state of affairs and necessarily paralyse the socialist revolutionary action of the proletariat. The Federation [of unions making up the Spanish section of the International] is the true representative of labour, and should work outside the political system." [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 169]

Instead of trying to gain control of the state, for whatever reasons, anarchists try to promote a culture of resistance within society that makes the state subject to pressure from without. Or, to quote Proudhon, we see the *"problem before the labouring classes . . . [as] consist[ing of] not in capturing, but in*

subduing both power and monopoly, -- that is, in generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the state and subjugate them." For, "to combat and reduce power, to put it in its proper place in society, it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave." [**System of Economical Contradictions**, p. 398 and p. 397]

To use an analogy, the pro-election radical argues that the state is like a person with a stick that intends to use it against you and your friends. Then you notice that their grasp of that stick is uncertain, and you can grab that stick away from them. If you take the stick away from them, that does not mean you have to hit them. After you take the weapon away from them, you can also break it in half and throw it away. They will have been deprived of its use, and that is the important thing.

In response the anarchist argues that instead of making plans to take their stick, we develop our muscles and skill so that we don't need a stick, so that we can beat them on our own. It takes longer, sure, to build up genuinely libertarian working class organs, but it's worth it simply because then our strength is part of us, and it can't be taken away by someone offering to "wield it on our behalf" (or saying that they will break the stick when they get it). And what do socialist and radical parties do? Offer to fight on our behalf and if we rely on others to act for us then we will be disarmed when they do not (and instead use the stick against us). Given the fact that power corrupts, any claim that by giving the stick of state power to a party we can get rid of it once and for all is naive to say the least.

And, we feel, history has proven us right time and time again.

J.2.7 Surely we should vote for reformist parties in order to show them up for what they are?

Some Leninist socialists (like the British Socialist Workers Party and their offshoots like ISO in the USA) argue that we should urge people to vote for Labour and other social democratic parties. This is because of two reasons.

Firstly, it is argued, radicals will be able to reach more people by being seen to support popular, trade union based parties. If they do not, then they are in danger of alienating sizeable sections of the working class by arguing that such parties will be no better than explicitly pro-capitalist ones.

The second argument, and the more important one, is that by electing reformist parties into office the experience of living under such a government will shatter whatever illusions its supporters had in them. In other words, by getting reformist parties elected into office they will be given the test of experience. And when they betray their supporters to protect the status quo the experience will radicalise those who voted for them, who will then seek out **real** socialist parties (namely the likes of the SWP and ISO).

Anarchists reject these arguments for three reasons.

Firstly, it is a deeply dishonest tactic as it hides the true thoughts of those who support the tactic. To tell the truth is a revolutionary act. Radicals should not follow the capitalist media by telling half-truths or distorting the facts or what they believe. They should not hide their politics or suggest they support a system or party they are opposed to. If this means being less popular in the short run, then so be it. Attacking capitalism, religion, or a host of other things can alienate people but few radicals would be so opportunistic as to hold their tongues attacking these. In the long run being honest about your ideas is the best way of producing a movement which aims to get rid of a corrupt social system. Starting such a movement with half-truths is doomed to failure.

Secondly, anarchists reject the logic of this theory. The logic underlying this argument is that by being disillusioned by their reformist leaders and party, voters will look for **new**, "better" leaders and parties. However, this fails to go to the root of the problem, namely the dependence on leaders which hierarchical society creates within people. Anarchists do not want people to follow the "best" leadership, they want them to govern themselves, to be **self**-active, manage their own affairs and not follow any would-be leaders. If you seriously think that the liberation of the oppressed is the task of the oppressed themselves (as these Leninists claim to do) then you **must** reject this tactic in favour of ones that promote working class self-activity.

And the third reason is that this tactic has been proven to fail time and time again. What most of its supporters seem to fail to notice is that voters have indeed put reformist parties into office many times (for example, there have been 7 Labour Party governments in Britain before 1997, all of whom attacked the working class) and there has been no movement away from them to something more radical. Lenin suggested this tactic over 70 years ago and there has been no general radicalisation of the voting population by this method, nor even in reformist party militants. Indeed, ironically enough, most such activists have left their parties when its been out of office and they have become disgusted by the party's attempts to appear "realistic" in order to win the next election! And this disgust often expresses itself as a demoralisation with socialism **as such**, rather than with their party's watered down version of it.

This total failure, for anarchists, is not surprising, considering the reasons why we reject this tactic. Given that this tactic does not attack hierarchy or dependence on leaders, does not attack the ideology and process of voting, it will obviously fail to present a real alternative to the voting population (who will turn to other alternatives available at election time and not embrace direct action). Also, the sight of a so-called "socialist" or "radical" government managing capitalism, imposing cuts, breaking strikes and generally attacking its supporters will damage the credibility of any form of socialism and discredit all socialist and radical ideas in the eyes of the population. And if the experience of the Labour Government in Britain during the 1970s is anything to go by, it may result in the rise of the right-wing who will capitalise on this disillusionment.

By refusing to argue that no government is "on our side," radicals who urge us to vote reformist "without illusions" help to disarm theoretically the people who listen to them. Working class people, surprised,

confused and disorientated by the constant "betrayals" of left-wing parties may turn to right wing parties (who can be elected) to stop the attacks rather than turn to direct action as the radical minority within the working class did not attack voting as part of the problem.

How many times must we elect the same party, go through the same process, the same betrayals before we realise this tactic does not work? And, if it **is** a case of having to experience something before people reject it, few state socialists take this argument to its logical conclusion. We rarely hear them argue we must experience the hell of fascism or Stalinism or the nightmare of free market capitalism in order to ensure working class people "see through" them.

Anarchists, in contrast, say that we can argue against reformist politics without having to associate ourselves with them by urging people to vote for them. By arguing for abstentionism we can help arm theoretically people who will come into conflict with these parties once they are in office. By arguing that all governments will be forced to attack us (due to the pressure from capital and state) and that we have to rely on our own organisations and power to defend ourselves, we can promote working class self-confidence in its own abilities, and encourage the rejection of capitalism, the state and hierarchical leadership as well as encouraging the use of direct action.

And, we may add, it is not required for radicals to associate themselves with the farce of parliamentary propaganda in order to win people over to our ideas. Non-anarchists will see us use **direct action**, see us **act**, see the anarchistic alternatives we create and see and read our propaganda. Non-anarchists can be reached quite well without taking part or associating ourselves with parliamentary action.

J.2.8 Will abstentionism lead to the right winning elections?

Possibly. However anarchists don't just say "*don't vote*", we say "*organise*" as well. Apathy is something anarchists have no interest in encouraging. So, "*[i]f the anarchists could persuade half the electorate to abstain from voting this would, from an electoral point of view, contribute to the [electoral] victory of the Right. But it would be a hollow victory, for what government could rule when half the electorate by not voting had expressed its lack of confidence in all governments?*" [Vernon Richards, **The Impossibilities of Social Democracy**, p. 142]

In other words, whichever party was in office would have to rule over a country in which a sizeable minority, even a majority, had rejected government as such. This would mean that the politicians "*would be subjected to real pressures from people who believed in their own power*" and acted accordingly. So anarchists call on people **not** to vote, but instead organise themselves and be conscious of their own power both as individuals and as part of a union with others. Only this "*can command the respect of governments, can curb the power of government as millions of crosses on bits of paper never will.*" [**Ibid.**]

As Emma Goldman pointed out, "*if the Anarchists were strong enough to swing the elections to the Left, they must also have been strong enough to rally the workers to a general strike, or even a series of*

strikes. . . In the last analysis, the capitalist class knows too well that officials, whether they belong to the Right or the Left, can be bought. Or they are of no consequence to their pledge." [**Vision on Fire**, p. 90]

The mass of the population, however, cannot be bought off and if they are willing and able to resist then they can become a power second to none. Only by organising, fighting back and practicing solidarity where we live and work can we **really** change things. That is where **our** power lies, that is where we can create a **real** alternative. By creating a network of self-managed, pro-active community and workplace organisations we can impose by direct action that which politicians can never give us from Parliament. And only such a movement can stop the attacks upon us by whoever gets into office. A government (left or right) which faces a mass movement based upon direct action and solidarity will always think twice before proposing cuts or introducing authoritarian laws.

Of course, all the parties claim that they are better than the others and this is the logic of this question - namely, we must vote for the lesser evil as the right-wing in office will be terrible. But what this forgets is that the lesser evil is still an evil. What happens is that instead of the greater evil attacking us, we get the lesser evil doing what the right-wing was going to do. And, since we are discussing the "lesser evil," let us not forget it was the "lesser evil" of the Democrats (in the USA) and Labour (in the UK) who introduced the monetarist and other policies that Reagan and Thatcher made their own (and we may add that the US Air Traffic Controllers union endorsed Reagan against Carter in 1980 because they thought they would get a better deal out of the Republicans. Reagan then went on to bust the union once in office). Simply put, we cannot expect a different group of politicians to react differently to the same economic and political pressures and influences.

So, voting for other politicians will make little difference. The reality is that politicians are puppets. As we argued above (in [section J.2.2](#)) real power in the state does not lie with politicians, but instead within the state bureaucracy and big business. Faced with these powers, we have seen left-wing governments from Spain to New Zealand introduce right-wing policies. So even if we elected a radical party, they would be powerless to change anything important and soon be forced to attack us in the interests of capitalism. Politicians come and go, but the state bureaucracy and big business remain forever!

Therefore we cannot rely on voting for the lesser evil to safe us from the possible dangers of a right-wing election victory brought about by abstentionism. All we can hope for is that no matter who gets in, the population will resist the government because it knows and can use its real power - direct action. For the *"only limit to the oppression of government is the power with which the people show themselves capable of opposing it."* [Errico Malatesta, **Life and Ideas**, p. 196] Hence Vernon Richards:

"If the anarchist movement has a role to play in practical politics it is surely that of suggesting to, and persuading, as many people as possible that their freedom from the Hilters, Francos and the rest, depends not on the right to vote or securing a majority of votes 'for the candidate of ones choice,' but on evolving new forms of political and social organisation which aim at the direct participation of the people, with the consequent

weakening of the power, as well of the social role, of government in the life of the community." [**The Raven**, no. 14, pp. 177-8]

We discuss what new forms of political and social organisations anarchists encourage in [section J.5](#).

J.2.9 What do anarchists do instead of voting?

While anarchists reject electioneering and voting, it does not mean that we are politically apathetic. Indeed, part of the reason why anarchists reject voting is because we think that voting is not part of the solution, its part of the problem. This is because it endorses an unjust and unfree political system and makes us look to others to fight our battles for us. It **blocks** constructive self-activity and direct action. It **stops** the building of alternatives in our communities and workplaces. Voting breeds apathy and apathy is our worse enemy.

Given that we have had universal suffrage for well over 50 years in many countries and we have seen the rise of Labour and Radical parties aiming to use that system to effect change in a socialistic manner, it seems strange that we are probably further away from socialism than when they started. The simple fact is that these parties have spent so much time trying to win elections that they have stopped even thinking about creating socialist alternatives in our communities and workplaces. That is in itself enough to prove that electioneering, far from eliminating apathy, in fact helps to create it.

So, because of this, anarchists argue that the only way to not waste your vote is to spoil it! We are the only political movement who argue that nothing will change unless you act for yourself, take back the power and fight the system **directly**. Only direct action breaks down apathy and gets results - and its the first steps towards real freedom, towards a free and just society.

Therefore anarchists are the first to point out that not voting is not enough - we need to actively struggle for an alternative to both voting **and** the current system. Just as the right to vote was won after a long series of struggles, so the creation of a free, decentralised, self-managed, libertarian socialist society will be the product of social struggle.

Anarchists are the last people to deny the importance of political liberties or the importance in winning the right to vote. The question we must ask is whether it is a more a fitting tribute to the millions of people who used direct action, fought and suffered for the right to vote to use that victory to endorse a deeply unfair and undemocratic system or to use other means (indeed the means they used to win the vote) to create a system based upon true popular self-government? If we are true to our (and their) desire for a real, meaningful democracy, we would have to reject political action in favour of direct action. So, if we desire a truly libertarian and democratic society then its clear that the vote will not achieve it (and indeed put back the struggle for such a society).

This obviously gives an idea of what anarchists do instead of voting, we agitate, organise and educate. While we will discuss the various alternatives anarchists propose and attempt to organise in more detail

in section J.5 ([What alternative social organisations do anarchists create?](#)) it is useful to give a brief introduction to anarchist activity here, activity which bases itself on the two broad strategies of encouraging direct action and building alternatives where we live and work.

Taking the first strategy, anarchists say that by using direct action we can force politicians to respect the wishes of the people. For example, if a government or boss tries to limit free speech, then anarchists would try to encourage a free speech fight to break the laws in question until such time as they were revoked. If a government or landlord refuses to limit rent increases or improve safety requirements for accommodation, anarchists would organise squats and rent strikes. In the case of environmental destruction, anarchists would support and encourage attempts at halting the damage by mass trespassing on sites, blocking the routes of developments, organising strikes and so on. If a boss refuses to introduce an 8 hour day, then workers should form a union and go on strike or stop working after 8 hours. Unlike laws, the boss cannot ignore direct action (and if such action is successful, the state will hurry to pass a law about it).

Similarly, strikes combined with social protest would be effective means of stopping authoritarian laws being passed. For example anti-union laws would be best fought by strike action and community boycotts (and given the utterly ineffectual defence pursued by pro-labour parties using political action to stop anti-union laws who can seriously say that the anarchist way would be any worse?). And of course collective non-payment of taxes would ensure the end of unpopular government decisions. The example of the poll tax rebellion in the UK in the late in 1980s shows the power of such direct action. The government could happily handle hours of speeches by opposition politicians but they could not ignore social protest (and we must add that the Labour Party which claimed to oppose the tax happily let the councils controlled by them introduce the tax and arrest non-payers).

As Noam Chomsky argues, "*[w]ithin the constraints of existing state institutions, policies will be determined by people representing centres of concentrated power in the private economy, people who, in their institutional roles, will not be swayed by moral appeals but by the costs consequent upon the decisions they make -- not because they are 'bad people,' but because that is what the institutional roles demands.*" He continues by arguing that "*[t]hose who own and manage the society want a disciplined, apathetic and submissive public that will not challenge their privilege and the orderly world in which it thrives. The ordinary citizen need not grant them this gift. Enhancing the Crisis of Democracy by organisation and political engagement is itself a threat to power, a reason to undertake it quite apart from its crucial importance in itself as an essential step towards social change.*" [**Turning the Tide**, p. 251-2]

In this way, by encouraging social protest, any government would think twice before pursuing authoritarian, destructive and unpopular policies. In the final analysis, governments can and will ignore the talk of opposition politicians, but they cannot ignore social action for very long. In the words of a Spanish anarchosyndicalist, anarchists

"do not ask for any concessions from the government. Our mission and our duty is to

impose from the streets that which ministers and deputies are incapable of realising in parliament." [quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**, p. 79]

The second strategy of building alternatives flows naturally from the first. Any form of campaign requires organisation and by organising in an anarchist manner we build organisations that *"bear in them the living seed of the new society which is replace the old world"* (to use Bakunin's words). In organising strikes in the workplace and community we can create a network of activists and union members who can encourage a spirit of revolt against authority. By creating assemblies where we live and work we can create an effective countering power to the state and capital. Such a union, as the anarchists in Spain and Italy proved, can be the focal point for recreating self-managed schools, social centres and so on. In this way the local community can ensure that it has sufficient independent, self-managed resources available to educate its members. Also, combined with credit unions (or mutual banks), cooperative workplaces and stores, a self-managed infrastructure could be created which would ensure that people can directly provide for their own needs without having to rely on capitalists or governments.

In other words, an essential part of anarchist activity is (in the words of a C.N.T. militant):

"We must create that part of libertarian communism which can be created within bourgeois society and do so precisely to combat that society with our own special weapons." [quoted **Op. Cit.**, p. 79]

So, far from doing nothing, by not voting the anarchist actively encourages alternatives. As the British anarchist John Turner argued, anarchists *"have a line to work upon, to teach the people self-reliance, to urge them to take part in non-political [i.e. non-electoral] movements directly started by themselves for themselves. . . as soon as people learn to rely upon themselves they will act for themselves. . . We teach the people to place their faith in themselves, we go on the lines of self-help. We teach them to form their own committees of management, to repudiate their masters, to despise the laws of the country. . ."* [quoted by John Quail, **The Slow Burning Fuse**, p. 87] In this way we encourage self-activity, self-organisation and self-help -- the opposite of apathy and doing nothing.

But what about government policies which actually do help people? While anarchists would *"hesitate to condemn those measures taken by governments which obviously benefited the people, unless we saw the immediate possibility of people carrying them out for themselves. This would not inhibit us from declaring at the same time that what initiatives governments take would be more successfully taken by the people themselves if they put their minds to the same problems. . . to build up a hospital service or a transport system, for instance, from local needs into a national organisation, by agreement and consent at all levels is surely more economical as well as efficient than one which is conceived at top level [by the state]. . . where Treasury, political and other pressures, not necessarily connected with what we would describe as **needs**, influence the shaping of policies."* [**The Raven**, no. 14, p. 179]

Ultimately, what the state and capital gives, they can also take away. What we build by our own self-

activity can last as long as we want it to and act to protect it. And anarchists are convinced that:

"The future belongs to those who continue daringly, consistently, to fight power and governmental authority. The future belongs to us and to our social philosophy. For it is the only social ideal that teaches independent thinking and direct participation of the workers in their economic struggle [and working class people in their social struggles, we may add]. For it is only through the organized economic [and social] strength of the masses that they can and will do away with the capitalist system and all the wrongs and injustices it contains. Any diversion from this stand will only retard our movement and make it a stepping stone for political climbers." [Emma Goldman, **Vision on Fire**, p. 92]

J.2.10 Does rejecting electioneering mean that anarchists are apolitical?

No. Far from it. The "apolitical" nature of anarchism is Marxist nonsense. As it desires to fundamentally change society, anarchism can be nothing but political. However, anarchism does reject (as we have seen) "normal" political activity as ineffectual and corrupting. However, many (particularly Marxists) imply this reject of the con of capitalist politics means that anarchists concentration on purely "economic" issues like wages, working conditions and so forth. And, by so doing, Marxists claim that anarchists leave the political agenda to be dominated by capitalist ideology, with disastrous results for the working class.

This view, however, is **totally** wrong. Indeed, Bakunin explicitly rejected the idea that working people could ignore politics and actually agreed with the Marxists that political indifference only led to capitalist control of the labour movement:

*"[some of] the workers in Germany . . . [were organized in] a kind of federation of small associations. . . 'Self-help'. . . was its slogan, in the sense that labouring people were persistently advised not to anticipate either deliverance or help from the state and the government, but only from their own efforts. This advise would have been excellent had it not been accompanied by the false assurance that liberation for the labouring people is possible under **current conditions of social organisation** . . . Under this delusion. . . the workers subject to [this] influence were supposed to disengage themselves systematically from all political and social concerns and questions about the state, property, and so forth. . . [This] completely subordinated the proletariat to the bourgeoisie which exploits it and for which it was to remain an obedient and mindless tool."* [**Statism and Anarchy**, p. 174]

In addition, Bakunin argued that the labour movement (and so the anarchist movement) would have to take into account political ideas and struggles but to do so in a working class way:

"The International does not reject politics of a general kind; it will be compelled to intervene in politics so long as it is forced to struggle against the bourgeoisie. It rejects only bourgeois politics." [**The Political Philosophy of Bakunin**, p. 313]

So, anarchists reject capitalist politics (i.e. electioneering), but we do not ignore politics nor wider political discussion. Anarchists have always recognised the importance of political debate and ideas in social movements. As Bakunin argued should *"the International [an international organisation of working class unions and groups]. . . cease to concern itself with political and philosophical questions? Would [it] . . . ignore progress in the world of thought as well as the events which accompany or arise from the political struggle in and between states[?]. . . We hasten to say that it is absolutely impossible to ignore political and philosophical questions. An exclusive pre-occupation with economic questions would be fatal for the proletariat. . . [I]t is impossible for the workers to stop there without renouncing their humanity and depriving themselves of the intellectual and moral power which is so necessary for the conquest of their economic rights"* [**Bakunin on Anarchism**, p. 301]

Nor do anarchists ignore elections. As Vernon Richards argues, anarchists *"cannot be uninterested in . . . election results, whatever their view about the demerits of the contending Parties. The fact that the anarchist movement has campaigned to persuade people not to use their vote is proof of our commitment and interest. If there is, say, a 60 per cent. poll we will not assume that the 40 per cent. abstentions are anarchists, but we would surely be justified in drawing the conclusion that among the 40 per cent. there are a sizeable minority who have lost faith in political parties and were looking for other instruments, other values."* [**The Impossibilities of Social Democracy**, p. 141]

Thus the charge anarchists are apolitical or indifferent to politics (even capitalist politics) is a myth. Rather, *"we are not concerned with choosing between governments but with creating the situation where government can no longer operate, because only then will we organise locally, regionally, nationally and internationally to satisfy real needs and common aspirations."* For *"so long as we have capitalism and government, the job of anarchists is to fight both, and at the same time encourage people to take what steps they can to run their own lives."* [Vernon Richards, **The Raven**, no. 14, p. 179]

Part of this process will be the discussion of political, social and economic issues in whatever self-managed organisations people create in their communities and workplaces (as Bakunin argued) and the use of these organisations to fight for (political, social and economic) improvements and reforms in the here and now using direct action and solidarity.

This means, as Rudolf Rocker points out, anarchists desire a unification of political and economic struggles as the two as inseparable:

"[T]he Anarchists represent the viewpoint that the war against capitalism must be at the same time a war against all institutions of political power, for in history economic exploitation has always gone hand in hand with political and social oppression. The exploitation of man by man and the domination of man over man are inseparable, and

each is the condition of the other." [**Anarcho-Syndicalism**, p. 15]

Such a unification must take place on the social and economic field, not the political, as that is where the working class is strongest. In other words anarchists *"are not in any way opposed to the political struggle, but in their opinion this struggle. . . must take the form of direct action. . . It would. . . be absurd for them [the working class] to overlook the importance of the political struggle. Every event that affects the live of the community is of a political nature. In this sense every important economic action. . . is also a political action and, moreover, one of incomparably greater importance than any parliamentary proceeding."* [Rudolf Rocker, **Op. Cit.**, pp. 65-66] Hence the comments in the C.N.T.'s newspaper **Solidaridad Obrera**:

"Does anyone not know that we want to participate in public life? Does anyone not know that we have always done so? Yes, we want to participate. With our organisations. With our papers. Without intermediaries, delegates or representatives. No. We will not go to the Town Hall, to the Provincial Capitol, to Parliament." [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 173]

So, anarchists reject the idea that political and economic struggles can be divided. Such an argument just reproduces the artificially created division of labour between mental and physical activity of capitalism within working class organisations and within anti-capitalist movements. We say that we should not separate out politics into some form of specialised activity that only certain people (i.e. our "representatives") can do. Instead, anarchists argue that political struggles, ideas and debates must be brought into the **social** and **economic** organisations of our class where they must be debated freely by all members as they see fit and that political and economic struggle and change must go hand in hand.

History indicates that any attempt at taking social and economic issues into political parties has resulting in wasted energy and the watering down of these issues into pure reformism. In the words of Bakunin, such activity suggests that *"a political revolution should precede a social revolution... [which] is a great and fatal error, because every political revolution taking place prior to and consequently without a social revolution must necessarily be a bourgeois revolution, and a bourgeois revolution can only be instrumental in bringing about bourgeois Socialism"*, i.e. State Capitalism. [**The Political Philosophy of Bakunin**, p. 289]

We have discussed this process of socialist parties becoming reformist in [section J.2.6](#) and will not repeat ourselves here. Only by rejecting the artificial divisions of capitalist society can we remain true to our ideals of liberty, equality and solidarity. Anarchists *"maintain that the State organisation, having been the force to which minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges."* [Peter Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 170]. Every example of radicals using the state has resulted in them being changed by the system instead of them changing it and, to use Bakunin's words, *"tied the proletariat to the bourgeois towline"* (i.e. resulted in working class movements becoming dominated by capitalist ideas and activity - becoming "realistic" and "practical").

Therefore Anarchist argue that such a union of political ideas and social organisation and activity is essential for promoting radical politics as it *"digs a chasm between the bourgeoisie and the proletariat and places the proletariat outside the activity and political conniving of all parties within the State. . . in placing itself outside all bourgeois politics, the proletariat necessarily turns against it."* So, by *"placing the proletariat outside the politics in the State and of the bourgeois world, [the union movement] thereby constructed a new world, the world of the united proletarians of all lands."* [Michael Bakunin, **Op. Cit.**, p. 303, p. 305]

In addition, so-called "economic" struggles do not occur in a social vacuum. They take place in a social and political context and so, necessarily, there can exist an separation of political and economic struggles only in the mind. Strikers or eco-warriors, for example, face the power of the state enforcing laws which protect the power of employers and polluters. This necessarily has a "political" impact on those involved in struggle. As Bakunin argued social struggle results in *"the spontaneous and direct development of philosophical and sociological in the International [i.e. union/social movement], ideas which inevitably develop side by side with and are produced by the first two movements [of strikes and union organising]"* [**Op. Cit.**, p. 304]. By channeling any "political" conclusions drawn by those involved in struggle into electoral politics, this development of political ideas and discussion will be distorted into discussions of what is possible in the current system, and so the radical impact of direct action and social struggle is weakened.

Therefore anarchists reject electioneering not because they are "apolitical" but because they do not desire to see politics remain a thing purely for politicians and experts. Political issues are far too important to leave to such people. Anarchists desire to see political discussion and change develop from the bottom up, this is hardly "apolitical" - in fact with our desire to see ordinary people directly discuss the issues that affect them, act to change things by their own action and draw their own conclusions from their own activity anarchists are very "political." The process of individual and social liberation is the most political activity we can think of!

B.2 Why are anarchists against the state?

As previously noted (see [section B.1](#)), anarchists oppose all forms of hierarchical authority. Historically, however, they have spent most of their time and energy opposing two main forms in particular. One is capitalism, the other, the state. These two forms of authority have a symbiotic relationship and cannot be easily separated. In this section, as well as explaining why anarchists oppose the state, we will necessarily have to analyse the relationship between it and capitalism.

So what is the state? As Malatesta put it, anarchists *"have used the word State . . . to mean the sum total of the political, legislative, judiciary, military and financial institutions through which the management of their own affairs, the control over their personal behaviour, the responsibility for their personal safety, are taken away from the people and entrusted to others who, by usurpation or delegation, are vested with the power to make laws for everything and everybody, and to oblige the people to observe them, if need be, by the use of collective force."* [**Anarchy**, p. 13]

He continues:

"For us, governments [or the state] is up of all governors . . . those who have the power to make laws regulating inter-human relations and to see that they are carried out . . . [and] who have the power, to a greater or lesser degree, to make use of the social power, that is of the physical, intellectual and economic power of the whole community, in order to oblige everybody to carry out their wishes." [**Op. Cit.**, pp. 15-16 -- see also Kropotkin's **The State: Its Historic Role**, p. 10]

This means that many, if not most, anarchists would agree with Randolph Bourne's characterisation of the state as the politico-military domination of a certain geographical territory by a ruling elite (see his *"Unfinished Fragment on the State,"* in **Untimely Papers**). On this subject Murray Bookchin writes:

"Minimally, the State is a professional system of social coercion . . . It is only when coercion is institutionalised into a professional, systematic and organised form of social control - . . . with the backing of a monopoly of violence - that we can properly speak of a State." [**Remaking Society**, p. 66]

Therefore, we can say that, for anarchists, the state is marked by three things:

- 1) A "monopoly of violence" in a given territorial area;
- 2) This violence having a "professional," institutional nature; and
- 3) A hierarchical nature, centralisation of power and initiative into the hands of a few.

Of these three aspects, the last one (its centralised, hierarchical nature) is the most important simply

because the concentration of power into the hands of the few ensures a division of society into government and governed (which necessitates the creation of a professional body to enforce that division). Without such a division, we would not need a monopoly of violence and so would simply have an association of equals, unmarked by power and hierarchy (such as exists in many stateless "primitive" tribes).

Some types of states, e.g. Communist and social-democratic ones, are directly involved not only in politico-military domination but also in economic domination via state ownership of the means of production; whereas in liberal democratic capitalist states, such ownership is in the hands of private individuals. In liberal democratic states, however, the mechanisms of politico-military domination are controlled by and for a corporate elite, and hence the large corporations are often considered to belong to a wider "state-complex."

As the state is the delegation of power into the hands of the few, it is obviously based on hierarchy. This delegation of power results in the elected people becoming isolated from the mass of people who elected them and outside of their control. In addition, as those elected are given power over a host of different issues and told to decide upon them, a bureaucracy soon develops around them to aid in their decision-making. However, this bureaucracy, due to its control of information and its permanency, soon has more power than the elected officials. This means that those who serve the people's (so-called) servant have more power than those they serve, just as the politician has more power than those who elected him. All forms of state-like (i.e. hierarchical) organisations inevitably spawn a bureaucracy about them. This bureaucracy soon becomes the de facto focal point of power in the structure, regardless of the official rules.

This marginalisation and disempowerment of ordinary people (and so the empowerment of a bureaucracy) is the key reason for anarchist opposition to the state. Such an arrangement ensures that the individual is disempowered, subject to bureaucratic, authoritarian rule which reduces the person to a object or a number, **not** a unique individual with hopes, dreams, thoughts and feelings. As Proudhon forcefully argued:

"To be GOVERNED is to be kept in sight, inspected, spied upon, directed, law-driven, numbered, enrolled, indoctrinated, preached at, controlled, estimated, valued, censured, commanded, by creatures who have neither the right, nor the wisdom, nor the virtue to do so... To be GOVERNED is to be at every operation, at every transaction, noted, registered, enrolled, taxed, stamped, measured, numbered, assessed, licensed, authorised, admonished, forbidden, reformed, corrected, punished. It is, under the pretext of public utility, and in the name of the general interest, to be placed under contribution, trained, ransomed, exploited, monopolised, extorted, squeezed, mystified, robbed; then, at the slightest resistance, the first word of complaint, to be repressed, fined, despised, harassed, tracked, abused, clubbed, disarmed, choked, imprisoned, judged, condemned, shot, deported, sacrificed, sold, betrayed; and, to crown it all, mocked, ridiculed, outraged, dishonoured. That is government; that is its justice; that is its morality." [General Idea of the Revolution, p. 294]

Anarchists see the state, with its vast scope and control of deadly force, as the "ultimate" hierarchical structure, suffering from all the negative characteristics associated with authority described in the [last section](#). "Any logical and straightforward theory of the State," argued Bakunin, "is essentially founded upon the principle of **authority**, that is the eminently theological, metaphysical, and political idea that the masses, **always** incapable of governing themselves, must at all times submit to the beneficent yoke of a wisdom and a justice imposed upon them, in some way or other, from above." [**Bakunin on Anarchism**, p. 142] Such a system of authority cannot help being centralised, hierarchical and bureaucratic in nature. And because of its centralised, hierarchical, and bureaucratic nature, the state becomes a great weight over society, restricting its growth and development and making popular control impossible. As Bakunin puts it:

"the so-called general interests of society supposedly represented by the State . . . [are] in reality . . . the general and permanent negation of the positive interests of the regions, communes, and associations, and a vast number of individuals subordinated to the State . . . [in which] all the best aspirations, all the living forces of a country, are sanctimoniously immolated and interred." [**The Political Philosophy of Bakunin**, p. 207]

In the rest of this section we will discuss the state, its role, its impact on a society's freedom and who benefits from its existence. Kropotkin's classic essay, **The State: It's Historic Role** is recommended for further reading on this subject.

B.2.1 What is main function of the state?

The main function of the state is to enable the ruling elite to exploit lower social strata, i.e. derive an economic surplus from them. The state, to use Malatesta's words, is basically "*the property owners' gendarme*" [**Anarchy**, p. 19] (compare to the maxim of the Founding Fathers of American "democracy" -- "*the people who own the country ought to govern it*" (John Jay)). Those in the upper-middle levels of the social pyramid also frequently use the state to obtain income without working, as from investments, but the elite gain by far the most economic advantages, which is why in the US, one percent of the population controls over 40 percent of total wealth. It is therefore no exaggeration to say that the state is the extractive apparatus of society's parasites.

The state ensures the exploitative privileges of its ruling elite by protecting certain economic monopolies from which its members derive their wealth (see [section B.3.2](#)). This service is referred to as "protecting private property" and is said to be one of the two main functions of the state, the other being to ensure that individuals are "secure in their persons." However, although this second aim is professed, in reality most state laws and institutions are concerned with the protection of property (for the anarchist definition of "property" see [section B.3.1](#)).

From this fact we may infer that references to the "security of persons," "crime prevention," etc. are

mostly rationalisations of the state's existence and smokescreens for its perpetuation of elite power and privileges. Moreover, even though the state does take a secondary interest in protecting the security of persons (particularly elite persons), the vast majority of crimes against persons are motivated by poverty and alienation due to state-supported exploitation and also by the desensitisation to violence created by the state's own violent methods of protecting private property.

Hence, anarchists maintain that without the state and the crime-engendering conditions to which it gives rise, it would be possible for decentralised, voluntary community associations to deal compassionately (not punitively) with the few incorrigibly violent people who might remain (see [section I.5.8](#)).

It is clear that the state represents the essential coercive mechanisms by which capitalism and the authority relations associated with private property are sustained. The protection of property is fundamentally the means of assuring the social domination of owners over non-owners, both in society as a whole and in the particular case of a specific boss over a specific group of workers. Class domination is the authority of property owners over those who use that property and it is the primary function of the state to uphold that domination (and the social relationships that generate it). In Kropotkin's words, *"the rich perfectly well know that if the machinery of the State ceased to protect them, their power over the labouring classes would be gone immediately."* [**Evolution and Environment**, p. 98]

In other words, protecting private property and upholding class domination are the same thing. Yet this primary function of the state is disguised by the "democratic" facade of the representative electoral system, through which it is made to appear that the people rule themselves. Thus Bakunin writes that the modern state *"unites in itself the two conditions necessary for the prosperity of the capitalistic economy: State centralisation and the actual subjection of . . . the people . . . to the minority allegedly representing it but actually governing it."* [**Op. Cit.**, p. 210]

The historian Charles Beard makes a similar point:

"Inasmuch as the primary object of a government, beyond mere repression of physical violence, is the making of the rules which determine the property relations of members of society, the dominant classes whose rights are thus to be protected must perforce obtain from the government such rules as are consonant with the larger interests necessary to the continuance of their economic processes, or they must themselves control the organs of government" [**An Economic Interpretation of the Constitution**, quoted by Howard Zinn, **Op. Cit.**, p. 89].

This role of the state -- to protect capitalism and the property, power and authority of the property owner -- was also noticed by Adam Smith:

"[T]he inequality of fortune . . . introduces among men a degree of authority and subordination which could not possibly exist before. It thereby introduces some degree of

that civil government which is indispensably necessary for its own preservation . . . [and] to maintain and secure that authority and subordination. The rich, in particular, are necessarily interested to support that order of things which can alone secure them in the possession of their own advantages. Men of inferior wealth combine to defend those of superior wealth in the possession of their property, in order that men of superior wealth may combine to defend them in the possession of theirs . . . [T]he maintenance of their lesser authority depends upon that of his greater authority, and that upon their subordination to him depends his power of keeping their inferiors in subordination to them. They constitute a sort of little nobility, who feel themselves interested to defend the property and to support the authority of their own little sovereign in order that he may be able to defend their property and to support their authority. Civil government, so far as it is instituted for the security of property, is in reality instituted for the defence of the rich against the poor, or of those who have some property against those who have none at all." [Adam Smith, **The Wealth of Nations**, book 5]

In a nutshell, the state is the means by which the ruling class rules. Hence Bakunin:

"the State is the organised authority, domination and power of the possessing classes over the masses." [quoted by David DeLeon, **Reinventing Anarchy**, p. 71]

However, while recognising that the state protects the power and position of the economically dominant class within a society anarchists also argue that the state has, due to its hierarchical nature, interests of its own. Thus it cannot be considered as simply the tool of the economically dominant class in society. States have their own dynamics, due to their structure, which generate their own classes and class interests and privileges (and which allows them to escape from the control of the economic ruling class and pursue their own interests, to a greater or lesser degree). As Malatesta put it *"the government, though springing from the bourgeoisie and its servant and protector, tends, as with every servant and every protector, to achieve its own emancipation and to dominate whoever it protects."* [**Anarchy**, p. 22]

This means that the state machine (and structure), while its modern form is intrinsically linked to capitalism, cannot be seen as being a tool usable by the majority. This is because the *"State, any State -- even when it dresses-up in the most liberal and democratic form -- is essentially based on domination, and upon violence, that is upon despotism -- a concealed but no less dangerous despotism."* The State *"denotes force, authority, predominance; it presupposes inequality in fact."* [**The Political Philosophy of Michael Bakunin**, p. 211 and p. 223]

This is due to its hierarchical and centralised nature, which empowers the few who control the state machine -- *"[e]very state power, every government, by its nature places itself outside and over the people and inevitably subordinates them to an organisation and to aims which are foreign to and opposed to the real needs and aspirations of the people."* [**Bakunin on Anarchism**, p. 328] If *"the whole proletariat . . . [are] members of the government . . . there will be no government, no state, but, if there is to be a state there will be those who are ruled and those who are slaves."* [**Op. Cit.**, p. 330]

In other words, the state bureaucracy is itself directly an oppressor and can exist independently of an economically dominant class. In Bakunin's prophetic words:

"What have we seen throughout history? The State has always been the patrimony of some privileged class: the sacerdotal class, the nobility, the bourgeoisie -- and finally, when all other classes have exhausted themselves, the class of the bureaucracy enters the stage and then the State falls, or rises, if you please, to the position of a machine." [**The Political Philosophy of Michael Bakunin**, p. 208]

The experience of Soviet Russian indicates the validity of his analysis (the working class was exploited and dominated by the state bureaucracy rather than by an economic class).

Thus the role of the state is to repress the individual and the working class as a whole in the interests of the capitalist class and in its own interests. This means that *"the State organisation . . . [is] the force to which minorities resorted for establishing and organising their power over the masses."* Little wonder, then, that Kropotkin argued that *"[i]n the struggle between the individual and the State, anarchism . . . takes the side of the individual as against the State, of society against the authority which oppresses it."* While the state is a *"superstructure in the interests of capitalism,"* it is a *"power which was created for the purpose of welding together the interests of the landlord, the judge, the warrior, and the priest"* and, we must add, cannot be considered purely as being a tool for the capitalist/landlord class. The state structure (*"the judge, the warrior"* etc.) has interests of its own. [**Kropotkin's Revolutionary Pamphlets**, p. 170 and pp. 192-3]

B.2.2 Does the state have subsidiary functions?

Besides its primary function of protecting private property, the state operates in other ways as an economic instrument of the ruling class.

First, the state intervenes in the modern economy to solve problems that arise in the course of capitalist development. These interventions have taken different forms in different times and include state funding for industry (e.g. military spending); the creation of social infrastructure too expensive for private capital to provide (railways, motorways); tariffs to protect developing industries from more efficient international competition (the key to successful industrialisation as it allows capitalists to rip-off consumers, making them rich and increasing funds available for investment); imperialist ventures to create colonies (or protect citizen's capital invested abroad) in order to create markets or get access to raw materials and cheap labour; government spending to stimulate consumer demand in the face of underconsumption and stagnation; maintaining a "natural" level of unemployment that can be used to discipline the working class, so ensuring they produce more, for less; manipulating the interest rate in order to try and reduce the effects of the business cycle and undermine workers' gains in the class struggle.

Second, because of the inordinate political power deriving from wealth (see [next section](#)), capitalists use the state directly to benefit their class, as from subsidies, tax breaks, government contracts, protective tariffs, bailouts of corporations judged by state bureaucrats as too important to let fail, and so on.

And third, the state may be used to grant concessions to the working class in cases where not doing so would threaten the integrity of the system as a whole.

Hence David DeLeon:

"Above all, the state remains an institution for the continuance of dominant socioeconomic relations, whether through such agencies as the military, the courts, politics or the police . . . Contemporary states have acquired . . . less primitive means to reinforce their property systems [than state violence -- which is always the means of last, often first, resort]. States can regulate, moderate or resolve tensions in the economy by preventing the bankruptcies of key corporations, manipulating the economy through interest rates, supporting hierarchical ideology through tax benefits for churches and schools, and other tactics. In essence, it is not a neutral institution; it is powerfully for the status quo. The capitalist state, for example, is virtually a gyroscope centred in capital, balancing the system. If one sector of the economy earns a level of profit, let us say, that harms the rest of the system -- such as oil producers' causing public resentment and increased manufacturing costs -- the state may redistribute some of that profit through taxation, or offer encouragement to competitors." [**Reinventing Anarchy**, pp. 71-72]

The example of state legislation to set the length of the working day is an example of both the first and third functions enumerated above. In the early period of capitalist development, a shortage of labour power led to the state's ignoring the lengthening working day, thus allowing capitalists to appropriate more surplus value from workers and increase the rate of profit without interference. Later, however, after workers began to organise, reducing the length of the working day became a key demand around which revolutionary socialist fervour was developing. Hence, in order to defuse this threat (and socialist revolution is the worst-case scenario for the capitalist), the state passed legislation to reduce the length of the working day (which, once workers' struggle calmed down, were happily ignored and became "dead laws"). Initially, the state was functioning purely as the protector of the capitalist class, using its powers to solve problems that arise in the course of capitalist development (namely repressing the labour movement to allow the capitalists to do as they liked). In the second it was granting concessions to the working class to eliminate a threat to the integrity of the system as a whole.

It should be noted that none of these three subsidiary functions implies that capitalism can be changed through a series of piecemeal reforms into a benevolent system that primarily serves working class interests. To the contrary, these functions grow out of, and supplement, the basic role of the state as the protector of capitalist property and the social relations they generate -- i.e. the foundation of the capitalist's ability to exploit. Therefore reforms may modify the functioning of capitalism but they can never threaten its basis. As Malatesta argued:

"The basic function of government . . . is always that of oppressing and exploiting the masses, of defending the oppressors and the exploiters . . . It is true that to these basic functions . . . other functions have been added in the course of history . . . hardly ever has a government existed . . . which did not combine with its oppressive and plundering activities others which were useful . . . to social life. But this does not detract from the fact that government is by nature oppressive . . . and that it is in origin and by its attitude, inevitably inclined to defend and strengthen the dominant class; indeed it confirms and aggravates the position . . . [I]t is enough to understand how and why it carries out these functions to find the practical evidence that whatever governments do is always motivated by the desire to dominate, and is always geared to defending, extending and perpetuating its privileges and those of the class of which it is both the representative and defender.

"A government cannot maintain itself for long without hiding its true nature behind a pretence of general usefulness; it cannot impose respect for the lives of the privileged if it does not appear to demand respect for all human life; it cannot impose acceptance of the privileges of the few if it does not pretend to be the guardian of the rights of all." [Op. Cit., pp. 20-1]

Ultimately, what the state concedes, it can also take back (as was the case of the laws limiting the working day). Thus the rise and fall of the welfare state -- granted to stop more revolutionary change (see [section D.1.3](#)), it did not fundamentally challenge the existence of wage labour and was useful as a means of regulating capitalism but was "reformed" (i.e. made worse, rather than better) when its existence conflicted with the needs of the capitalist economy.

In other words, the state acts to protect the long-term interests of the capitalist class **as a whole** (and ensure its own survival) by protecting the system. This role can and does clash with the interests of particular capitalists or even whole sections of the ruling class (see [next section](#)). But this conflict does not change the role of the state as the property owners' policeman. Indeed, the state can be considered as a means for settling (in a peaceful and apparently independent manner) upper-class disputes over what to do to keep the system going.

B.2.3 How does the ruling class maintain control of the state?

For simplicity, let's just consider the capitalist state, whose main purpose is to protect the exploitative monopolies described below. Because their economic monopolies are protected by the state, the elites whose incomes are derived from them -- namely, finance capitalists, industrial capitalists, and landlords -- are able to accumulate vast wealth from those whom they exploit. This stratifies society into a hierarchy of economic classes, with a huge disparity of wealth between the small property-owning elite at the top and the non-property-owning majority at the bottom.

Then, because it takes enormous wealth to win elections and lobby or bribe legislators, the propertied

elite are able to control the political process -- and hence the state -- through the "power of the purse." For example, it costs well over \$20 million to run for President of the USA. In other words, elite control of politics through huge wealth disparities insures the continuation of such disparities and thus the continuation of elite control. In this way the crucial political decisions of those at the top are insulated from significant influence by those at the bottom.

Moreover, the ability of capital to disinvest (capital flight) and otherwise adversely impact the economy is a powerful weapon to keep the state as its servant. As Noam Chomsky notes:

"In capitalist democracy, the interests that must be satisfied are those of capitalists; otherwise, there is no investment, no production, no work, no resources to be devoted, however marginally, to the needs of the general population" [Turning the Tide, p. 233]

Hence, even allegedly "democratic" capitalist states are in effect dictatorships of the propertariat. Errico Malatesta put it this way:

*"Even with universal suffrage - we could well say even more so with universal suffrage - the government remained the bourgeoisie's servant and **gendarme**. For were it to be otherwise with the government hinting that it might take up a hostile attitude, or that democracy could ever be anything but a pretence to deceive the people, the bourgeoisie, feeling its interests threatened, would be quick to react, and would use all the influence and force at its disposal, by reason of its wealth, to recall the government to its proper place as the bourgeoisie's **gendarme**." [Anarchy, p. 20]*

The existence of a state bureaucracy is a key feature in ensuring that the state remains the ruling class's "policeman" and will be discussed in greater detail in section J.2.2 ([Why do anarchists reject voting as a means for change?](#)). As far as economic forces go, we see their power implied when the news report that changes in government, policies and law have been "welcomed by the markets." As the richest 1% of households in America (about 2 million adults) owned 35% of the stock owned by individuals in 1992 - with the top 10% owning over 81% - we can see that the "opinion" of the markets actually means the power of the richest 1-5% of a country's population (and their finance experts), power derived from their control over investment and production. Given that the bottom 90% of the US population has a smaller share (23%) of all kinds of investable capital than the richest 1/2% (who own 29%), with stock ownership being even more concentrated (the top 5% holding 95% of all shares), it's obvious why Doug Henwood (author of **Wall Street**) argues that stock markets are "a way for the very rich as a class to own an economy's productive capital stock as a whole," are a source of "political power" and a way to have influence over government policy (see [section D.2](#)). [**Wall Street: Class Racket**]

Of course, this does not mean that the state and the capitalist class always see "eye to eye." Top politicians, for example, are part of the ruling elite, but they are in competition with other parts of it. In addition, different sectors of the capitalist class are competing against each other for profits, political influence, privileges, etc. The bourgeoisie, argued Malatesta, "are always at war among themselves . . .

and . . . the government, though springing from the bourgeoisie and its protector, tends . . . to dominate whoever it protects. Thus the games of the swings, the manoeuvres, the concessions and withdrawals, the attempts to find allies among the people against the conservatives, and among the conservatives against the people." [Op. Cit., p. 22] As such, the state is often in conflict with sections of the capitalist class, just as sections of that class use the state to advance their own interests within the general framework of protecting the capitalist system (i.e. the interests of the ruling class **as a class**). Such conflicts sometimes give the impression of the state being a "neutral" body, but this is an illusion -- it exists to defend class power and privilege, and to resolve disputes within that class peacefully via the "democratic" process (within which we get the chance of picking the representatives of the elite who will oppress us least).

Nevertheless, without the tax money from successful businesses, the state would be weakened. Hence the role of the state is to ensure the best conditions for capital **as a whole**, which means that, when necessary, it can and does work against the interests of certain parts of the capitalist class. This is what can give the state the appearance of independence and can fool people into thinking that it represents the interests of society as a whole. (For more on the ruling elite and its relation to the state, see C. Wright Mills, **The Power Elite** [Oxford, 1956]; cf. Ralph Miliband, **The State in Capitalist Society** [Basic Books, 1969] and **Divided Societies** [Oxford, 1989]; G. William Domhoff, **Who Rules America?** [Prentice Hall, 1967]; **Who Rules America Now? A View for the '80s** [Touchstone, 1983] and **Toxic Sludge is Good For You! Lies, Damn Lies and the Public Relations Industry** by John Stauber and Sheldon Rampton [Common Courage Press, 1995]).

B.2.4 How does state centralisation affect freedom?

It's a common but false idea that voting every four or so years to elect the public face of a highly centralised and bureaucratic machine means that ordinary people control the state. Obviously, to say that this idea is false does not imply that there is no difference between a liberal republic and a fascistic or monarchical state. Far from it.

The vote is an important victory wrested from the powers that be. It is one small step on the road to libertarian socialism. Nevertheless, all forms of hierarchy, even those in which the top officers are elected are marked by authoritarianism and centralism. Power is concentrated in the centre (or at the "top"), which means that society becomes *"a heap of dust animated from without by a subordinating, centralist idea."* [P.J. Proudhon, quoted by Martin Buber, **Paths in Utopia**, p. 29] For, once elected, top officers can do as they please, and in all political bureaucracies, many important decisions are made by non-elected staff.

The nature of centralisation places power into the hands of the few. Representative democracy is based on this delegation of power, with voters electing others to govern them. This cannot help but create a situation in which freedom is endangered -- universal suffrage *"does not prevent the formation of a body of politicians, privileged in fact though not in law, who, devoting themselves exclusively to the administration of the nation's public affairs, end by becoming a sort of political aristocracy or*

oligarchy." [Bakunin, **The Political Philosophy of Bakunin**, p. 240]

Centralism makes democracy meaningless, as political decision-making is given over to professional politicians in remote capitals. Lacking local autonomy, people are isolated from each other (atomised) by having no political forum where they can come together to discuss, debate, and decide among themselves the issues they consider important. Elections are not based on natural, decentralised groupings and thus cease to be relevant. The individual is just another "voter" in the mass, a political "constituent" and nothing more. The amorphous basis of modern, statist elections *"aims at nothing less than to abolish political life in towns, communes and departments, and through this destruction of all municipal and regional autonomy to arrest the development of universal suffrage"* [Proudhon, **Ibid.**] Thus people are disempowered by the very structures that claim to allow them to express themselves. To quote Proudhon again, in the centralised state *"the citizen divests himself of sovereignty, the town and the Department and province above it, absorbed by central authority, are no longer anything but agencies under direct ministerial control."* He continues:

"The Consequences soon make themselves felt: the citizen and the town are deprived of all dignity, the state's depredations multiply, and the burden on the taxpayer increases in proportion. It is no longer the government that is made for the people; it is the people who are made for the government. Power invades everything, dominates everything, absorbs everything. . ." [**The Principle of Federation**, p. 59]

As intended, isolated people are no threat to the powers that be. This process of marginalisation can be seen from American history, for example, when town meetings were replaced by elected bodies, with the citizens being placed in passive, spectator roles as mere "voters" (see section B.5 ["Is capitalism empowering and based on human action?"](#)). Being an atomised voter is hardly an ideal notion of "freedom," despite the rhetoric of politicians about the virtues of a "free society" and "The Free World" -- as if voting once every four or five years could ever be classed as "liberty" or even "democracy."

In this way, social concern and power are taken away from ordinary citizens and centralised in the hands of the few. Marginalisation of the people is the key control mechanism in the state and authoritarian organisations in general. Considering the European Community (EC), for example, we find that the *"mechanism for decision-making between EC states leaves power in the hands of officials (from Interior ministries, police, immigration, customs and security services) through a myriad of working groups. Senior officials . . . play a critical role in ensuring agreements between the different state officials. The EC Summit meetings, comprising the 12 Prime Ministers, simply rubber-stamp the conclusions agreed by the Interior and Justice Ministers. It is only then, in this intergovernmental process, that parliaments and people are informed (and them only with the barest details)."* [Tony Bunyon, **Statewatching the New Europe**, p. 39]

As well as economic pressures from elites, governments also face pressures within the state itself due to the bureaucracy that comes with centralism. There is a difference between the state and government. The state is the permanent collection of institutions that have entrenched power structures and interests. The

government is made up of various politicians. It's the institutions that have power in the state due to their permanence, not the representatives who come and go. As Clive Ponting (an ex-civil servant himself) indicates, *"the function of a political system in any country... is to regulate, but not to alter radically, the existing economic structure and its linked power relationships. The great illusion of politics is that politicians have the ability to make whatever changes they like . . ."* [quoted in **Alternatives**, no.5, p. 19].

Therefore, as well as marginalising the people, the state also ends up marginalising "our" representatives. As power rests not in the elected bodies, but in a bureaucracy, popular control becomes increasingly meaningless. As Bakunin pointed out, *"liberty can be valid only when . . . [popular] control [of the state] is valid. On the contrary, where such control is fictitious, this freedom of the people likewise becomes a mere fiction"* [**The Political Philosophy of Bakunin**, p. 212].

This means that state centralism can become a serious source of danger to the liberty and well-being of most of the people under it. However, **some** people do benefit from state centralisation, namely those with power who desire to be "left alone" to use it: that is, the two sections of the ruling elite, bureaucrats of capital and state (as will be discussed further in the [next section](#)).

B.2.5 Who benefits from centralisation?

No social system would exist unless it benefited someone or some group. Centralisation, be it in the state or the company, is no different. In all cases, centralisation directly benefits those at the top, because it shelters them from those who are below, allowing the latter to be controlled and governed more effectively. Therefore, it is in the direct interests of bureaucrats and politicians to support centralism.

Under capitalism, however, various sections of the business class also support state centralism. This is the symbiotic relationship between capital and the state. As will be discussed later, (in [section F.8](#)) the state played an important role in "nationalising" the market, i.e. forcing the "free market" onto society. By centralising power in the hands of representatives and so creating a state bureaucracy, ordinary people were disempowered and thus became less likely to interfere with the interests of the wealthy. *"In a republic,"* writes Bakunin, *"the so-called people, the legal people, allegedly represented by the State, stifle and will keep on stifling the actual and living people" by "the bureaucratic world" for "the greater benefit of the privileged propertied classes as well as for its own benefit"* [**Op. Cit.**, p. 211].

Examples of increased political centralisation being promoted by wealthy business interests by can be seen throughout the history of capitalism. *"In revolutionary America, 'the nature of city government came in for heated discussion,' observes Merrill Jensen . . . Town meetings . . . 'had been a focal point of revolutionary activity'. The anti-democratic reaction that set in after the American revolution was marked by efforts to do away with town meeting government . . . Attempts by conservative elements were made to establish a 'corporate form (of municipal government) whereby the towns would be governed by mayors and councils' elected from urban wards . . . [T]he merchants 'backed incorporation consistently in their efforts to escape town meetings' . . ."* [Murray Bookchin, **Towards an Ecological Society**, p.

182]

Here we see local policy making being taken out of the hands of the many and centralised in the hands of the few (who are always the wealthy). France provides another example:

*"The Government found . . . the folknotes [of all households] 'too noisy', too disobedient, and in 1787, elected councils, composed of a mayor and three to six syndics, chosen among the wealthier peasants, were introduced instead" [Peter Kropotkin, **Mutual Aid**, pp. 185-186].*

This was part of a general movement to disempower the working class by centralising decision making power into the hands of the few (as in the American revolution). Kropotkin indicates the process at work:

"[T]he middle classes, who had until then had sought the support of the people, in order to obtain constitutional laws and to dominate the higher nobility, were going, now that they had seen and felt the strength of the people, to do all they could to dominate the people, to disarm them and to drive them back into subjection.

[. . .]

*"[T]hey made haste to legislate in such a way that the political power which was slipping out of the hand of the Court should not fall into the hands of the people. Thus . . . [it was] proposed . . . to divide the French into two classes, of which one only, the **active** citizens, should take part in the government, whilst the other, comprising the great mass of the people under the name of **passive** citizens, should be deprived of all political rights . . . [T]he [National] Assembly divided France into departments . . . always maintaining the principle of excluding the poorer classes from the Government . . . [T]hey excluded from the primary assemblies the mass of the people . . . who could no longer take part in the primary assemblies, and accordingly had no right to nominate the electors [who chose representatives to the National Assembly], or the municipality, or any of the local authorities . . .*

*"And finally, the **permanence** of the electoral assemblies was interdicted. Once the middle-class governors were appointed, these assemblies were not to meet again. Once the middle-class governors were appointed, they must not be controlled too strictly. Soon the right even of petitioning and of passing resolutions was taken away -- 'Vote and hold your tongue!' "As to the villages . . . the general assembly of the inhabitants . . . [to which] belonged the administration of the affairs of the commune . . . were forbidden by the . . . law. Henceforth only the well-to-do peasants, the **active** citizens, had the right to meet, **once a year**, to nominate the mayor and the municipality, composed of three or four middle-class men of the village.*

"A similar municipal organisation was given to the towns. . .

"[Thus] the middle classes surrounded themselves with every precaution in order to keep the municipal power in the hands of the well-to-do members of the community." [The Great French Revolution, vol. 1, pp. 179-186]

Thus centralisation aimed to take power away from the mass of the people and give it to the wealthy. The power of the people rested in popular assemblies, such as the "**Sections**" and "**Districts**" of Paris (expressing, in Kropotkin's words, "*the principles of anarchism*" and "*practising . . . Direct Self-Government*" [Op. Cit., p. 204 and p. 203]) and village assemblies. However, the National Assembly "*tried all it could to lessen the power of the districts . . . [and] put an end to those hotbeds of Revolution . . . [by allowing] active citizens only . . . to take part in the electoral and administrative assemblies.*" [Op. Cit., p. 211] Thus the "*central government was steadily endeavouring to subject the sections to its authority*" with the state "*seeking to centralise everything in its own hands . . . [I]ts depriving the popular organisations . . . all . . . administrative functions . . . its subjecting them to its bureaucracy in police matters, meant the death of the sections.*" [Op. Cit., vol. 2, p. 549 and p. 552]

As can be seen, in both the French and American revolutions saw a similar process by which the wealthy centralised power into their own hands. This ensured that working class people (i.e. the majority) were excluded from the decision making process and subject to the laws and power of others. Which, of course, benefits the minority class whose representatives have that power. (Volume one of Murray Bookchin's **The Third Revolution** discusses the French and American revolutions in some detail).

On the federal and state levels in the US after the Revolution, centralisation of power was encouraged, since "*most of the makers of the Constitution had some direct economic interest in establishing a strong federal government . . . there was . . . a positive need for strong central government to protect the large economic interests.*" [Howard Zinn, **A People's History of the United States**, p. 90] In particular, state centralisation was essential to mould US society into one dominated by capitalism:

*"In the thirty years leading up to the Civil War, the law was increasingly interpreted in the courts to suit capitalist development. Studying this, Morton Horwitz (**The Transformation of American Law**) points out that the English common-law was no longer holy when it stood in the way of business growth . . . Judgements for damages against businessmen were taken out of the hands of juries, which were unpredictable, and given to judges . . . The ancient idea of a fair price for goods gave way in the courts to the idea of caveat emptor (let the buyer beware) . . . contract law was intended to discriminate against working people and for business . . . The pretence of the law was that a worker and a railroad made a contract with equal bargaining power . . . The circle was completed; the law had come simply to ratify those forms of inequality that the market system had produced."* [Op. Cit., p. 234]

The US state was created on elitist liberal doctrine and actively aimed to reduce democratic tendencies

(in the name of "individual liberty"). What happened in practice (unsurprisingly enough) was that the wealthy elite used the state to undermine popular culture and common right in favour of protecting and extending their own interests and power. In the process, US society was reformed in their own image:

"By the middle of the nineteenth century the legal system had been reshaped to the advantage of men of commerce and industry at the expense of farmers, workers, consumers, and other less powerful groups in society . . . it actively promoted a legal distribution of wealth against the weakest groups in society." [Horwitz, quoted by Zinn, **Op. Cit.**, p. 235]

In more modern times, state centralisation and expansion has gone hand in glove with rapid industrialisation and the growth of business. As Edward Herman points out, *"[t]o a great extent, it was the growth in business size and power that elicited the countervailing emergence of unions and the growth of government. Bigness **beyond** business was to a large extent a response to bigness **in** business."* [**Corporate Control, Corporate Power**, p. 188 -- see also, Stephen Skowronek, **Building A New American State: The Expansion of National Administrative Capacities, 1877-1920**] State centralisation was required to produce bigger, well-defined markets and was supported by business when it acted in their interests (i.e. as markets expanded, so did the state in order to standardise and enforce property laws and so on). On the other hand, this development towards "big government" created an environment in which big business could grow (often encouraged by the state by subsidies and protectionism - as would be expected when the state is run by the wealthy) as well as further removing state power from influence by the masses and placing it more firmly in the hands of the wealthy. It is little wonder we see such developments, for *"[s]tructures of governance tend to coalesce around domestic power, in the last few centuries, economic power."* [Noam Chomsky, **World Orders, Old and New**, p. 178]

State centralisation makes it easier for business to control government, ensuring that it remains their puppet and to influence the political process. For example, the European Round Table (ERT) *"an elite lobby group of . . . chairmen or chief executives of large multi-nationals based mainly in the EU... [with] 11 of the 20 largest European companies [with] combined sales [in 1991] . . . exceeding \$500 billion, . . . approximately 60 per cent of EU industrial production,"* makes much use of the EU. As two researchers who have studied this body note, the ERT *"is adept at lobbying . . . so that many ERT proposals and 'visions' are mysteriously regurgitated in Commission summit documents."* The ERT *"claims that the labour market should be more 'flexible,' arguing for more flexible hours, seasonal contracts, job sharing and part time work. In December 1993, seven years after the ERT made its suggestions [and after most states had agreed to the Maastricht Treaty and its "social chapter"], the European Commission published a white paper . . . [proposing] making labour markets in Europe more flexible."* [Doherty and Hoedeman, *"Knights of the Road,"* **New Statesman**, 4/11/94, p. 27]

The current talk of globalisation, NAFTA, and the Single European Market indicates an underlying transformation in which state growth follows the path cut by economic growth. Simply put, with the growth of transnational corporations and global finance markets, the bounds of the nation-state have been made economically redundant. As companies have expanded into multi-nationals, so the pressure

has mounted for states to follow suit and rationalise their markets across "nations" by creating multi-state agreements and unions.

As Noam Chomsky notes, G7, the IMF, the World Bank and so forth are a *"de facto world government,"* and *"the institutions of the transnational state largely serve other masters [than the people], as state power typically does; in this case the rising transnational corporations in the domains of finance and other services, manufacturing, media and communications."* [Op. Cit., p. 179]

As multi-nationals grow and develop, breaking through national boundaries, a corresponding growth in statism is required. Moreover, a *"particularly valuable feature of the rising de facto governing institutions is their immunity from popular influence, even awareness. They operate in secret, creating a world subordinated to the needs of investors, with the public 'put in its place', the threat of democracy reduced."* [Chomsky, Op. Cit., p. 178]

This does not mean that capitalists desire state centralisation for everything. Often, particularly for social issues, relative decentralisation is often preferred (i.e. power is given to local bureaucrats) in order to increase business control over them. By devolving control to local areas, the power which large corporations, investment firms and the like have over the local government increases proportionally. In addition, even middle-sized enterprise can join in and influence, constrain or directly control local policies and set one workforce against another. Private power can ensure that "freedom" is safe, **their** freedom.

No matter which set of bureaucrats are selected, the need to centralise social power, thus marginalising the population, is of prime importance to the business class. It is also important to remember that capitalist opposition to "big government" is often financial, as the state feeds off the available social surplus, so reducing the amount left for the market to distribute to the various capitals in competition.

In reality, what capitalists object to about "big government" is its spending on social programs designed to benefit the poor and working class, an "illegitimate" function which "wastes" part of the surplus that might go to capital (and also makes people less desperate and so less willing to work cheaply). Hence the constant push to reduce the state to its "classical" role as protector of private property and the system, and little else. Other than their specious quarrel with the welfare state, capitalists are the staunchest supports of government (and the "correct" form of state intervention, such as defence spending), as evidenced by the fact that funds can always be found to build more prisons and send troops abroad to advance ruling-class interests, even as politicians are crying that there is "no money" in the treasury for scholarships, national health care, or welfare for the poor.

B.1 Why are anarchists against authority and hierarchy?

First, it is necessary to indicate what kind of authority anarchism challenges. As Erich Fromm points out in **To Have or To Be**, "authority" is "a broad term with two entirely different meanings: it can be either 'rational' or 'irrational' authority. Rational authority is based on competence, and it helps the person who leans on it to grow. Irrational authority is based on power and serves to exploit the person subjected to it." [pp. 44-45] The same point was made by Bakunin 100 years earlier (see **God and the State**, for example) when he indicated the difference between authority and influence.

This crucial point is expressed in the difference between **having** authority and **being** an authority. Being an authority just means that a given person is generally recognised as competent for a given task, based on his or her individual skills and knowledge. Put differently, it is socially acknowledged expertise. In contrast, having authority is a social relationship based on status and power derived from a hierarchical position, not on individual ability. Obviously this does not mean that competence is not an element for obtaining a hierarchical position; it just means that the real or alleged initial competence is transferred to the title or position of the authority and so becomes independent of individuals, i.e. institutionalised.

This difference is important because the way people behave is more a product of the institutions in which we are raised than of any inherent nature. In other words, social relationships **shape** the individuals involved. This means that the various groups individuals create have traits, behaviours and outcomes that cannot be understood by reducing them to the individuals within them. That is, groups consist not only of individuals, but also relationships between individuals and these relationships will effect those subject to them. For example, obviously "*the exercise of power by some disempowers others*" and so through a "*combination of physical intimidation, economic domination and dependency, and psychological limitations, social institutions and practices affect the way everyone sees the world and her or his place in it.*" [Martha A. Ackelsberg, **Free Women of Spain**, p. 20]

Authoritarian social relationships means dividing society into (the few) order givers and (the many) order takers, impoverishing the individuals involved (mentally, emotionally and physically) and society as a whole. Human relationships, in all parts of life, are stamped by authority, not liberty. And as freedom can only be created by freedom, authoritarian social relationships (and the obedience they require) do not and cannot educate a person in freedom - only participation (self-management) in all areas of life can do that.

Of course, it will be pointed out that in any collective undertaking there is a need for co-operation and co-ordination and this need to "subordinate" the individual to group activities is a form of authority. Yes, but there are two different ways of co-ordinating individual activity within groups - either by authoritarian means or by libertarian means. Proudhon, in relation to workplaces, makes the difference clear:

"either the workman. . . will be simply the employee of the proprietor-capitalist-promoter; or he will participate. . . [and] have a voice in the council, in a word he will become an associate.

*"In the first case the workman is subordinated, exploited: his permanent condition is one of obedience. . . In the second case he resumes his dignity as a man and citizen. . . he forms part of the producing organisation, of which he was before but the slave; as, in the town, he forms part of the sovereign power, of which he was before but the subject . . . we need not hesitate, for we have no choice. . . it is necessary to form an ASSOCIATION among workers . . . because without that, they would remain related as subordinates and superiors, and there would ensue two . . . castes of masters and wage-workers, which is repugnant to a free and democratic society." [Pierre-Joseph Proudhon, **General Idea of the Revolution**, pp. 215-216]*

In other words, associations can be based upon a form of **rational** authority, based upon **natural influence** and so reflect freedom, the ability of individuals to think, act and feel and manage their own time and activity. Otherwise, we include elements of slavery into our relationships with others, elements that poison the whole and shape us in negative ways (see section [B.1.1](#)). Only the reorganisation of society in a libertarian way (and, we may add, the mental transformation such a change requires and would create) will allow the individual to *"achieve more or less complete blossoming, whilst continuing to develop"* and banish *"that spirit of submission that has been artificially thrust upon him [or her]"* [Nestor Makhno, **The Struggle Against the State and Other Essays**, p. 62]

So, anarchists *"ask nothing better than to see [others]. . . exercise over us a natural and legitimate influence, freely accepted, and never imposed . . . We accept all natural authorities and all influences of fact, but none of right. . . "* [**The Political Philosophy of Bakunin**, p. 255] Anarchist support for free association within directly democratic groups is based upon such organisational forms increasing influence and reducing irrational authority in our lives. Members of such organisations can create and present their own ideas and suggestions, critically evaluate the proposals and suggestions from their fellows, accept those that they agree with or become convinced by and have the option of leaving the association if they are unhappy with its direction. Hence the influence of individuals and their free interaction determine the nature of the decisions reached, and no one has the right to impose their ideas on another. As Bakunin argued, in such organisations *"no function remains fixed and it will not remain permanently and irrevocably attached to one person. Hierarchical order and promotion do not exist. . . In such a system, power, properly speaking, no longer exists. Power is diffused to the collectivity and becomes the true expression of the liberty of everyone."* [**Bakunin on Anarchism**, p. 415]

Therefore, anarchists are opposed to **irrational** (e.g., illegitimate) authority, in other words, hierarchy -- hierarchy being the institutionalisation of authority within a society. Hierarchical social institutions include the state (see section [B.2](#)), private property (see section [B.3](#)) and, therefore, capitalism (see section [B.4](#)). Due to their hierarchical nature, anarchists oppose these institutions with passion.

However, hierarchy exists beyond these institutions. For example, hierarchical social relationships include sexism, racism and homophobia (see section [B.1.4](#)), and anarchists oppose, and fight, them all.

As noted earlier (A.2.8), anarchists consider all hierarchies to be not only harmful but unnecessary, and think that there are alternative, more egalitarian ways to organise social life. In fact, they argue that hierarchical authority creates the conditions it is presumably designed to combat, and thus tends to be self-perpetuating. Thus, bureaucracies ostensibly set up to fight poverty wind up perpetuating it, because without poverty, the high-salaried top administrators would be out of work. The same applies to agencies intended to eliminate drug abuse, fight crime, etc. In other words, the power and privileges deriving from top hierarchical positions constitute a strong incentive for those who hold them **not** to solve the problems they are supposed to solve. (For further discussion see Marilyn French, **Beyond Power: On Women, Men, and Morals**, Summit Books, 1985.)

B.1.1 What are the effects of authoritarian social relationships?

Hierarchical authority is inextricably connected with the marginalisation and disempowerment of those without authority. This has negative effects on those over whom authority is exercised, since *"[t]hose who have these symbols of authority and those who benefit from them must dull their subject people's realistic, i.e. critical, thinking and make them believe the fiction [that irrational authority is rational and necessary], . . . [so] the mind is lulled into submission by cliches. . . [and] people are made dumb because they become dependent and lose their capacity to trust their eyes and judgement."* [Erich Fromm, **Op. Cit.**, p. 47]

Or, in the words of Bakunin, *"the principle of authority, applied to men who have surpassed or attained their majority, becomes a monstrosity, a source of slavery and intellectual and moral depravity."* [**God and the State**, p. 41]

This is echoed by the syndicalist miners who wrote the classic **The Miners' Next Step** when they indicate the nature of authoritarian organisations and their effect on those involved. Leadership (i.e. hierarchical authority) *"implies power held by the leader. Without power the leader is inept. The possession of power inevitably leads to corruption. . . in spite of. . . good intentions . . . [Leadership means] power of initiative, this sense of responsibility, the self-respect which comes from expressed manhood [sic!], is taken from the men, and consolidated in the leader. The sum of their initiative, their responsibility, their self-respect becomes his. . . [and the] order and system he maintains is based upon the suppression of the men, from being independent thinkers into being 'the men'. . . In a word, he is compelled to become an autocrat and a foe to democracy."* Indeed, for the "leader," such marginalisation can be beneficial, for a leader *"sees no need for any high level of intelligence in the rank and file, except to applaud his actions. Indeed such intelligence from his point of view, by breeding criticism and opposition, is an obstacle and causes confusion."* [**The Miners' Next Step**, pp. 16-17 p. 15]

Anarchists argue that hierarchical social relationships will have a negative effect on those subject to

them, who can no longer exercise their critical, creative and mental abilities **freely**. As Colin Ward argues, people *"do go from womb to tomb without realising their human potential, precisely because the power to initiate, to participate in innovating, choosing, judging, and deciding is reserved for the top men"* (and it usually **is** men!) [**Anarchy in Action**, p, 42]. Anarchism is based on the insight that there is an interrelationship between the authority structures of institutions and the psychological qualities and attitudes of individuals. Following orders all day hardly builds an independent, empowered, creative personality. As Emma Goldman made clear, if a person's *"inclination and judgement are subordinated to the will of a master"* (such as a boss, as most people have to sell their labour under capitalism) then little wonder such an authoritarian relationship *"condemns millions of people to be mere nonentities."* [**Red Emma Speaks**, p. 36]

As the human brain is a bodily organ, it needs to be used regularly in order to be at its fittest. Authority concentrates decision-making in the hands of those at the top, meaning that most people are turned into executants, following the orders of others. If muscle is not used, it turns to fat; if the brain is not used, creativity, critical thought and mental abilities become blunted and side-tracked onto marginal issues, like sports and fashion.

Therefore, *"[h]ierarchical institutions foster alienated and exploitative relationships among those who participate in them, disempowering people and distancing them from their own reality. Hierarchies make some people dependent on others, blame the dependent for their dependency, and then use that dependency as a justification for further exercise of authority. . . .Those in positions of relative dominance tend to define the very characteristics of those subordinate to them. . . .Anarchists argue that to be always in a position of being acted upon and never to be allowed to act is to be doomed to a state of dependence and resignation. Those who are constantly ordered about and prevented from thinking for themselves soon come to doubt their own capacities. . .[and have] difficulty acting on [their] sense of self in opposition to societal norms, standards and expectations."* [Martha Ackelsberg, **Free Women of Spain**, pp. 19-20]

Thus, in the words of Colin Ward, the *"system makes its morons, then despises them for their ineptitude, and rewards its 'gifted few' for their rarity."* [**Op. Cit.**, p. 43]

In addition to these negative psychological effects from the denial of liberty, authoritarian social relationships also produce social inequality. This is because an individual subject to the authority of another has to obey the orders of those above them in the social hierarchy. In capitalism this means that workers have to follow the orders of their boss (see [next section](#)), orders that are designed to make the boss richer (for example, from 1994 to 1995 alone, Chief Executive Officer (CEO) compensation in the USA rose 16 percent, compared to 2.8 percent for workers, which did not even keep pace with inflation, and whose stagnating wages cannot be blamed on corporate profits, which rose a healthy 14.8 percent for that year). Inequality in terms of power will translate itself into inequality in terms of wealth (and vice versa). The effects of such social inequality are wide-reaching.

For example, poor people are more likely to be sick and die at an earlier age, compared to rich people.

Moreover, the degree of inequality is important (i.e. the size of the gap between rich and poor). According to an editorial in the **British Medical Journal** "*what matters in determining mortality and health in a society is less the overall wealth of that society and more how evenly wealth is distributed. The more equally wealth is distributed the better the health of that society,*" [Vol. 312, April 20, 1996, p. 985]

Research in the USA found overwhelming evidence of this. George Kaplan and his colleagues measured inequality in the 50 US states and compared it to the age-adjusted death rate for all causes of death, and a pattern emerged: the more unequal the distribution of income, the greater the death rate. In other words, it is the gap between rich and poor, and not the average income in each state, that best predicts the death rate in each state. [*Inequality in income and mortality in the United States: analysis of mortality and potential pathways,* **British Medical Journal** Vol. 312, April 20, 1996, pp. 999-1003]

This measure of income inequality was also tested against other social conditions besides health. States with greater inequality in the distribution of income also had higher rates of unemployment, higher rates of incarceration, a higher percentage of people receiving income assistance and food stamps, a greater percentage of people without medical insurance, greater proportion of babies born with low birth weight, higher murder rates, higher rates of violent crime, higher costs per-person for medical care, and higher costs per person for police protection.

Moreover states with greater inequality of income distribution also spent less per person on education, had fewer books per person in the schools, and had poorer educational performance, including worse reading skills, worse mathematics skills, and lower rates of completion of high school.

As the gap grows between rich and poor (indicating an increase in social hierarchy within and outwith of workplaces) the health of a people deteriorates and the social fabric unravels. The psychological hardship of being low down on the social ladder has detrimental effects on people, beyond whatever effects are produced by the substandard housing, nutrition, air quality, recreational opportunities, and medical care enjoyed by the poor (see George Davey Smith, "*Income inequality and mortality: why are they related?*" **British Medical Journal**, Vol. 312, April 20, 1996, pp. 987-988).

The growing gap between rich and poor has not been ordained by god, nature or some other superhuman force. It has been created by a specific social system, its institutions and workings - a system based upon authoritarian social relationships which effect us both physically and mentally.

All this is not to suggest that those at the bottom of hierarchies are victims nor that those at the top of hierarchies only gain benefits - far from it. Those at the bottom are constantly resisting the negative effects of hierarchy and creating non-hierarchical ways of living and fighting. This constant process of self-activity and self-liberation can be seen from the labour, women's and other movements - in which, to some degree, people create their own alternatives based upon their own dreams and hopes. Anarchism is based upon, and grew out of, this process of resistance, hope and direct action.

If we look at those at the top of the system, yes, indeed they often do **very** well in terms of material goods and access to education, leisure, health and so on but they can lose their humanity and individuality. As Bakunin pointed out, "*power and authority corrupt those who exercise them as much as those who are compelled to submit to them.*" [**The Political Philosophy of Bakunin**, p. 249] Power operates destructively, even on those who have it, reducing their individuality as it "*renders them stupid and brutal, even when they were originally endowed with the best of talents. One who is constantly striving to force everything into a mechanical order at last becomes a machine himself and loses all human feeling.*" [Rudolf Rocker, **Anarcho-Syndicalism**, p. 22]

When it boils down to it, hierarchy is self-defeating, for if "*wealth is other people,*" then by treating others as less than yourself, restricting their growth, you lose all the potential insights and abilities these individuals have, so impoverishing your own life and **restricting your own growth**. Unfortunately in these days material wealth (a particularly narrow form of "self-interest") has replaced concern for developing the whole person and leading a fulfilling and creative life (a broad self-interest, which places the individual **within** society, one that recognises that relationships with others shape and develop all individuals). In a hierarchical, class based society everyone loses to some degree, even those at the "top."

B.1.2 Is capitalism hierarchical?

Yes. Under capitalism workers do not exchange the products of their labour they exchange the labour itself for money. They sell themselves for a given period of time, and in return for wages, promise to obey their paymasters. Those who pay and give the orders -- owners and managers -- are at the top of the hierarchy, those who obey at the bottom. This means that capitalism, by its very nature, is hierarchical.

As Carole Pateman argues, "*[c]apacities or labour power cannot be used without the worker using his will, his understanding and experience, to put them into effect. The use of labour power requires the presence of its 'owner,' and it remains mere potential until he acts in the manner necessary to put it into use, or agrees or is compelled so to act; that is, the worker must labour. To contract for the use of labour power is a waste of resources unless it can be used in the way in which the new owner requires. The fiction 'labour power' cannot be used; what is required is that the worker labours as demanded. The employment contract must, therefore, create a relationship of command and obedience between employer and worker. . . In short, the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself. To obtain the right to use another is to be a (civil) master*" [**The Sexual Contract**, pp. 150-1 -- compare to Proudhon quoted above]

This hierarchical control of wage labour has the effect of alienating workers from their own work, and so from themselves. Workers no longer govern themselves during work hours and so are no longer free. Capitalism, by treating labour as analogous to all other commodities denies the key distinction between labour and other "resources" - that is to say its inseparability from its bearer - labour, unlike other "property," is endowed with will and agency. Thus when one speaks of selling labour there is a

necessary subjugation of will (hierarchy). As Karl Polanyi writes:

"Labour is only another name for human activity which goes with life itself, which is in turn not produced for sale but for entirely different reasons, nor can that activity be detached from the rest of life itself, be stored or mobilised." [**The Great Transformation**, p. 72]

In other words, labour is much more than the commodity to which capitalism tries to reduce it. Creative, self-managed work is a source of pride and joy and part of what it means to be fully human. Wrenching control of work from the hands of the worker profoundly harms his or her mental and physical health. Indeed, Proudhon went so far as to argue that capitalist companies *"plunder the bodies and souls of the wage-workers"* and were an *"outrage upon human dignity and personality."* [**Op. Cit.**, p. 219]

Separating labour from other activities of life and subjecting it to the laws of the market means to annihilate its natural, organic form of existence -- a form that evolved with the human race through tens of thousands of years of co-operative economic activity based on sharing and mutual aid -- and replacing it with an atomistic and individualistic one based on contract and competition.

The social relationship of wage labour, which is a very recent development, is then claimed by capitalists to be a source of "freedom," whereas in fact it is a form of involuntary servitude (see section [B.4](#) and [A.2.14](#)). Therefore a libertarian who did not support economic liberty (i.e. self-government in industry, socialism) would be no libertarian at all, and no believer in liberty.

Therefore capitalism is based upon hierarchy and the denial of liberty. To present it otherwise denies the nature of wage labour. However supporters of capitalism try to but - as Karl Polanyi points out - the idea that wage labour is based upon some kind of "natural" liberty is false:

"To represent this principle [wage labour] as one of non-interference [with freedom], as economic liberals were wont to do, was merely the expression of an ingrained prejudice in favour of a definite kind of interference, namely, such as would destroy non-contractual relations between individuals and prevent their spontaneous re-formation." [**Op. Cit.**, p.163]

This replacement of human relationships by economic ones soon results in the replacement of human values by economic ones, giving us an "ethics" of the account book, in which people are valued by how much they earn. It also leads, as Murray Bookchin argues, to a debasement of human values:

"[S]o deeply rooted is the market economy in our minds that its grubby language has replaced our most hallowed moral and spiritual expressions. We now 'invest' in our children, marriages, and personal relationships, a term that is equated with words like 'love' and 'care.' We live in a world of 'trade-offs' and we ask for the 'bottom line' of any emotional 'transaction.' We use the terminology of contracts rather than that of loyalties

and spiritual affinities." [**The Modern Crisis**, p. 79]

With human values replaced by the ethics of calculation, and with only the laws of market and state "binding" people together, social breakdown is inevitable. As Karl Polanyi argues, *"in disposing of a man's labour power the [market] system would, incidently, dispose of the physical, psychological, and moral entity 'man' attached to that tag."* [**Op. Cit.**, p. 73]

Little wonder modern capitalism has seen a massive increase in crime and dehumanisation under the freer markets established by "conservative" governments, such as those of Thatcher and Reagan and their transnational corporate masters. We now live in a society where people live in self-constructed fortresses, "free" behind their walls and defences (both emotional and physical).

Of course, some people **like** the "ethics" of mathematics. But this is mostly because -- like all gods -- it gives the worshipper an easy rule book to follow. "Five is greater than four, therefore five is better" is pretty simple to understand. John Steinbeck noticed this when he wrote:

"Some of them [the owners] hated the mathematics that drove them [to kick the farmers off their land], and some were afraid, and some worshipped the mathematics because it provided a refuge from thought and from feeling" [**The Grapes of Wrath**, p. 34].

B.1.3 What kind of hierarchy of values does capitalism create?

Capitalism produces a perverted hierarchy of values -- one that places humanity below property. As Erich Fromm argues, *"the use [i.e. exploitation] of man by man is expressive of the system of values underlying the capitalistic system. **Capital, the dead past, employs labour -- the living vitality and power of the present.** In the capitalistic hierarchy of values, capital stands higher than labour, amassed things higher than the manifestations of life. Capital employs labour, and not labour capital. The person who owns capital commands the person who 'only' owns his life, human skill, vitality and creative productivity. 'Things' are higher than man. The conflict between capital and labour is much more than the conflict between two classes, more than their fight for a greater share of the social product. It is the conflict between two principles of value: that between the world of things, and their amassment, and the world of life and its productivity."* [**The Sane Society**, pp. 94-95]

Capitalism only values a person as representing a certain amount of the commodity called "labour power," in other words, as a **thing**. Instead of being valued as an individual -- a unique human being with intrinsic moral and spiritual worth -- only one's price tag counts.

This debasement of the individual in the workplace, where so much time is spent, necessarily affects a person's self-image, which in turn carries over into the way he or she acts in other areas of life. If one is regarded as a commodity at work, one comes to regard oneself and others in that way also. Thus all social relationships -- and so, ultimately, **all** individuals -- are commodified. In capitalism, literally nothing is sacred -- "everything has its price" -- be it dignity, self-worth, pride, honour -- all become

commodities up for grabs.

Such debasement produces a number of social pathologies. "Consumerism" is one example which can be traced directly to the commodification of the individual under capitalism. To quote Fromm again, "*Things have no self, and men who have become things [i.e. commodities on the labour market] can have no self.*" [**The Sane Society**, p. 143]

However, people still feel the **need** for selfhood, and so try to fill the emptiness by consuming. The illusion of happiness, that one's life will be complete if one gets a new commodity, drives people to consume. Unfortunately, since commodities are yet more things, they provide no substitute for selfhood, and so the consuming must begin anew. This process is, of course, encouraged by the advertising industry, which tries to convince us to buy what we don't need because it will make us popular/sexy/happy/free/etc. (delete as appropriate!). But consuming cannot really satisfy the needs that the commodities are bought to satisfy. Those needs can only be satisfied by social interaction based on truly human values and by creative, self-directed work.

This does not mean, of course, that anarchists are against higher living standards or material goods. To the contrary, they recognise that liberty and a good life are only possible when one does not have to worry about having enough food, decent housing, and so forth. Freedom and 16 hours of work a day do not go together, nor do equality and poverty or solidarity and hunger. However, anarchists consider consumerism to be a distortion of consumption caused by the alienating and inhuman "account book" ethics of capitalism, which crushes the individual and his or her sense of identity, dignity and selfhood.

B.1.4 Why do racism, sexism and homophobia exist?

Since racism, sexism and homophobia (hatred/fear of homosexuals) are institutionalised throughout society, sexual, racial and gay oppression are commonplace. The primary cause of these three evil attitudes is the need for ideologies that justify domination and exploitation, which are inherent in hierarchy -- in other words, "theories" that "justify" and "explain" oppression and injustice. As Tacitus said, "*We hate those whom we injure.*" Those who oppress others always find reasons to regard their victims as "inferior" and hence deserving of their fate. Elites need some way to justify their superior social and economic positions. Since the social system is obviously unfair and elitist, attention must be distracted to other, less inconvenient, "facts," such as alleged superiority based on biology or "nature." Therefore, doctrines of sexual, racial, and ethnic superiority are inevitable in hierarchical, class-stratified societies.

We will take each form of bigotry in turn.

From an economic standpoint, racism is associated with the exploitation of cheap labour at home and imperialism abroad. Indeed, early capitalist development in both America and Europe was strengthened by the bondage of people, particularly those of African descent. In the Americas, Australia and other parts of the world the slaughter of the original inhabitants and the expropriation of their land was also a

key aspect in the growth of capitalism. As the subordination of foreign nations proceeds by force, it appears to the dominant nation that it owes its mastery to its special natural qualities, in other words to its "racial" characteristics. Thus imperialists have frequently appealed to the Darwinian doctrine of "Survival of the Fittest" to give their racism a basis in "nature."

In Europe, one of the first theories of racial superiority was proposed by Gobineau in the 1850s to establish the natural right of the aristocracy to rule over France. He argued that the French aristocracy was originally of Germanic origin while the "masses" were Gallic or Celtic, and that since the Germanic race was "superior", the aristocracy had a natural right to rule. Although the French "masses" didn't find this theory particularly persuasive, it was later taken up by proponents of German expansion and became the origin of German racial ideology, used to justify Nazi oppression of Jews and other "non-Aryan" types. Notions of the "white man's burden" and "Manifest Destiny" developed at about the same time in England and to a lesser extent in America, and were used to rationalise Anglo-Saxon conquest and world domination on a "humanitarian" basis.

The idea of racial superiority was also found to have great domestic utility. As Paul Sweezy points out, *"[t]he intensification of social conflict within the advanced capitalist countries. . . has to be directed as far as possible into innocuous channels -- innocuous, that is to say, from the standpoint of capitalist class rule. The stirring up of antagonisms along racial lines is a convenient method of directing attention away from class struggle,"* which of course is dangerous to ruling-class interests [**Theory of Capitalist Development**, p. 311]. Indeed, employers have often deliberately fostered divisions among workers on racial lines as part of a strategy of "divide and rule."

In other words, racism (like other forms of bigotry) can be used to split and divide the working class by getting people to blame others of their class for the conditions they all suffer. Thus white workers are subtly encouraged, for example, to blame unemployment on blacks instead of capitalism, crime on Hispanics instead of poverty. In addition, discrimination against racial minorities and women has the full sanction of capitalist economics, *"for in this way jobs and investment opportunities can be denied to the disadvantaged groups, their wages and profits can be depressed below prevailing levels, and the favoured sections of the population can reap substantial material rewards."* [**Ibid.**]

Thus capitalism has continued to benefit from its racist heritage. Racism has provided pools of cheap labour for capitalists to draw upon (blacks still, usually, get paid less than whites for the same work) and permitted a section of the population to be subjected to worse treatment, so increasing profits by reducing working conditions and other non-pay related costs.

All this means that blacks are *"subjected to oppression and exploitation on the dual grounds of race and class, and thus have to fight the extra battles against racism and discrimination."* [Lorenzo Kom'boa Ervin, **Anarcho-syndicalists of the world unite**]

Sexism only required a "justification" once women started to act for themselves and demand equal rights. Before that point, sexual oppression did not need to be "justified" -- it was "natural" (saying that,

of course, equality between the sexes was stronger before the rise of Christianity as a state religion and capitalism so the "place" of women in society has fallen over the last few hundred years before rising again thanks to the women's movement).

The nature of sexual oppression can be seen from marriage. Emma Goldman pointed out that marriage "*stands for the sovereignty of the man over the women,*" with her "*complete submission*" to the husbands "*whims and commands.*" [Red Emma Speaks, p. 139] As Carole Pateman notes, until "*the late nineteenth century the legal and position of a wife resembled that of a slave. . . A slave had no independent legal existence apart from his master, and husband and wife became 'one person,' the person of the husband.*" [The Sexual Contract, p. 119] Indeed, the law "*was based on the assumption that a wife was (like) property*" and only the marriage contract "*includes the explicit commitment to obey.*" [Ibid., p. 122, p. 181]

However, when women started to question the assumptions of male domination, numerous theories were developed to explain why women's oppression and domination by men was "natural." Because men enforced their rule over women by force, men's "superiority" was argued to be a "natural" product of their gender, which is associated with greater physical strength (on the premise that "might makes right"). In the 17th century, it was argued that women were more like animals than men, thus "proving" that women had as much right to equality with men as sheep did. More recently, elites have embraced socio-biology in response to the growing women's movement. By "explaining" women's oppression on biological grounds, a social system run by men and for men could be ignored.

Women's subservient role also has economic value for capitalism (we should note that Goldman considered capitalism to be another "*paternal arrangement*" like marriage, both of which robbed people of their "*birthright,*" "*stunts*" their growth, "*poisons*" their bodies and keeps people in "*ignorance, in poverty and dependence.*" [Op. Cit., p. 164]). Women often provide necessary (and unpaid) labour which keeps the (usually) male worker in good condition; and it is primarily women who raise the next generation of wage-slaves (again without pay) for capitalist owners to exploit. Moreover, women's subordination gives working-class men someone to look down upon and, sometimes, a convenient target on whom they can take out their frustrations (instead of stirring up trouble at work). As Lucy Parsons pointed out, a working class woman is "*a slave to a slave.*"

The oppression of lesbians, gays and bisexuals is inextricably linked with sexism. A patriarchal, capitalist society cannot see homosexual practices as the normal human variations they are because they blur that society's rigid gender roles and sexist stereotypes. Most young gay people keep their sexuality to themselves for fear of being kicked out of home and all gays have the fear that some "straights" will try to kick their sexuality out of them if they express their sexuality freely.

Gays are not oppressed on a whim but because of the specific need of capitalism for the nuclear family. The nuclear family, as the primary - and inexpensive - creator of submissive people (growing up within the authoritarian family gets children used to, and "respectful" of, hierarchy and subordination - see section [B.1.5](#)) as well as provider and carer for the workforce fulfils an important need for capitalism.

Alternative sexuality represent a threat to the family model because they provide a different role model for people. This means that gays are going to be in the front line of attack whenever capitalism wants to reinforce "family values" (i.e. submission to authority, "tradition", "morality" and so on). The introduction of Clause 28 in Britain is a good example of this, with the government making it illegal for public bodies to promote gay sexuality (i.e. to present it as anything other than a perversion). Therefore, the oppression of people based on their sexuality will not end until sexism is eliminated.

Before discussing how anarchists think these forms of oppression can be got rid of, it is useful to highlight why they are harmful to those who practice them (and in some way benefit from them) as well as the oppressed.

Sexism, racism and homophobia divide the working class, which means that whites, males and heterosexuals hurt themselves by maintaining a pool of low-paid competing labour, ensuring low wages for their own wives, daughters, mothers, relatives and friends. Such divisions create inferior conditions and wages for all as capitalists gain a competitive advantage using this pool of cheap labour, forcing all capitalists to cut conditions and wages to survive in the market (in addition, such social hierarchies, by undermining solidarity against the employer on the job and the state possibly create a group of excluded workers who could become scabs during strikes). Also, "privileged" sections of the working class lose out because their wages and conditions are less than those which unity could have won them. Only the boss really wins.

This can be seen from research into this subject. The researcher Al Szymanski sought to systematically and scientifically test the proposition that white workers gain from racism [*"Racial Discrimination and White Gain"*, in **American Sociological Review**, vol. 41, no. 3, June 1976, pp. 403-414]. He compared the situation of "white" and "non-white" (i.e. black, Native American, Asian and Hispanic) workers in United States and found several key things:

(1) the narrower the gap between white and black wages in an American state, the higher white earnings were relative to white earnings elsewhere. This means that *"whites do not benefit economically by economic discrimination. White workers especially appear to benefit economically from the **absence** of economic discrimination. . . both in the absolute level of their earnings **and** in relative equality among whites."*[p. 413] In other words, the less wage discrimination there was against black workers, the better were the wages that white workers received.

(2) the more "non-white" people in the population of a given American State, the more inequality there was between whites. In other words, the existence of a poor, oppressed group of workers reduced the wages of white workers, although it did not affect the earnings of non-working class whites very much (*"the greater the discrimination against [non-white] people, the greater the inequality among whites"* [p. 410]). So white workers clearly lost economically from this discrimination.

(3) He also found that *"the more intense racial discrimination is, the lower are the white earnings because of . . . [its effect on] working-class solidarity."* [p. 412] In other words, racism economically disadvantages white workers because it undermines the solidarity between black and white workers and weakens trade union organisation.

So overall, these white workers receive some apparent privileges from racism, but are in fact screwed by it. Thus racism and other forms of hierarchy actually works against the interests of those working class people who practice it -- and, by weakening workplace and social unity, benefits the ruling class.

In addition, a wealth of alternative viewpoints, insights, experiences, cultures, thoughts and so on are denied the racist, sexist or homophobe. Their minds are trapped in a cage, stagnating within a monoculture -- and stagnation is death for the personality. Such forms of oppression are dehumanising for those who practice them, for the oppressor lives as a **role**, not as a person, and so are restricted by it and cannot express their individuality **freely** (and so do so in very limited ways). This warps the personality of the oppressor and impoverishes their own life and personality. Homophobia and sexism also limits the flexibility of all people, gay or straight, to choose the sexual expressions and relationships that are right for them. The sexual repression of the sexist and homophobe will hardly be good for their mental health, their relationships or general development.

From the anarchist standpoint, oppression based on race, sex or sexuality will remain forever intractable under capitalism or, indeed, under any economic system based on domination and exploitation. While individual members of "minorities" may prosper, racism as a justification for inequality is too useful a tool for elites to discard. By using the results of racism (e.g. poverty) as a justification for racist ideology, criticism of the status quo can, yet again, be replaced by nonsense about "nature" and "biology." Similarly with sexism or discrimination against gays.

The long-term solution is obvious: dismantle capitalism and the hierarchical, economically class-stratified society with which it is bound up. By getting rid of capitalist oppression and exploitation and its consequent imperialism and poverty, we will also eliminate the need for ideologies of racial or sexual superiority used to justify the oppression of one group by another or to divide and weaken the working class.

As part of that process, anarchists encourage and support all sections of the population to stand up for their humanity and individuality by resisting racist, sexist and anti-gay activity and challenging such views in their everyday lives, everywhere (as Carole Pateman points out, *"sexual domination structures the workplace as well as the conjugal home"* [Op. Cit., p. 142]). It means a struggle of all working class people against the internal and external tyrannies we face -- we must fight against our own prejudices while supporting those in struggle against our common enemies, no matter their sex, skin colour or sexuality. Lorenzo Kom'boa Ervin words on fighting racism are applicable to all forms of oppression:

"Racism must be fought vigorously wherever it is found, even if in our own ranks, and even in ones own breast. Accordingly, we must end the system of white skin privilege"

which the bosses use to split the class, and subject racially oppressed workers to super-exploitation. White workers, especially those in the Western world, must resist the attempt to use one section of the working class to help them advance, while holding back the gains of another segment based on race or nationality. This kind of class opportunism and capitulationism on the part of white labour must be directly challenged and defeated. There can be no workers unity until the system of super-exploitation and world White Supremacy is brought to an end." [Op. Cit.]

Progress towards equality can and has been made. While it is still true that (in the words of Emma Goldman) "[n]owhere is woman treated according to the merit of her work, but rather as a sex" [Op. Cit., p. 145] and that education is still patriarchal, with young women still often steered away from traditionally "male" courses of study and work (which teaches children that men and women are assigned different roles in society and sets them up to accept these limitations as they grow up) it is also true that the position of women, like that of blacks and gays, **has** improved. This is due to the various self-organised, self-liberation movements that have continually developed throughout history and these are **the** key to fighting oppression in the short term (and creating the potential for the long term solution of dismantling capitalism and the state).

Emma Goldman argued that emancipation begins "*in [a] woman's soul.*" Only by a process of internal emancipation, in which the oppressed get to know their own value, respect themselves and their culture, can they be in a position to effectively combat (and overcome) external oppression and attitudes. Only when you respect yourself can you be in a position to get others to respect you. Those men, whites and heterosexuals who are opposed to bigotry, inequality and injustice, must support oppressed groups and refuse to condone racist, sexist or homophobia attitudes and actions by others or themselves. For anarchists, "*not a single member of the Labour movement may with impunity be discriminated against, suppressed or ignored. . . Labour [and other] organisations must be built on the principle of equal liberty of all its members. This equality means that only if each worker is a free and independent unit, co-operating with the others from his or her mutual interests, can the whole labour organisation work successfully and become powerful.*" [Lorenzo Kom'boa Ervin, **Op. Cit.**]

We must all treat people as equals, while at the same time respecting their differences. Diversity is a strength and a source of joy, and anarchists reject the idea that equality means conformity. By these methods, of internal self-liberation and solidarity against external oppression, we can fight against bigotry. Racism, sexism and homophobia can be reduced, perhaps almost eliminated, before a social revolution has occurred by those subject to them organising themselves, fighting back **autonomously** and refusing to be subjected to racial, sexual or anti-gay abuse or to allowing others to get away with it (which plays an essential role in making others aware of their own attitudes and actions, attitudes they may not even be blind to!). An essential part of this process is for such autonomous groups to actively support others in struggle (including members of the dominant race/sex/sexuality). Such practical solidarity and communication can, when combined with the radicalising effects of the struggle itself on those involved, help break down prejudice and bigotry, undermining the social hierarchies that oppress us all. For example, gay and lesbian groups supporting the 1984/5 UK miners' strike resulted in such groups being given pride of place in many miners' marches.

For whites, males and heterosexuals, the only anarchistic approach is to support others in struggle, refuse to tolerate bigotry in others and to root out their own fears and prejudices (while refusing to be uncritical of self-liberation struggles -- solidarity does not imply switching your brain off!). This obviously involves taking the issue of social oppression into all working class organisations and activity, ensuring that no oppressed group is marginalised within them.

Only in this way can the hold of these social diseases be weakened and a better, non-hierarchical system be created. An injury to one is an injury to all.

The example of the *Mujeres Libres* (Free Women) in Spain during the 1930s shows what is possible. Women anarchists involved in the C.N.T. and F.A.I. organised themselves autonomously raise the issue of sexism in the wider libertarian movement, to increase women involvement in libertarian organisations and help the process of women's self-liberation against male oppression. Along the way they also had to combat the (all too common) sexist attitudes of their "revolutionary" male fellow anarchists. Martha A. Ackelsberg's book **Free Women of Spain** is an excellent account of this movement and the issues it raises for all people concerned about freedom.

Needless to say, anarchists totally reject the kind of "equality" that accepts other kinds of hierarchy, that accepts the dominant priorities of capitalism and the state and accedes to the devaluation of relationships and individuality in name of power and wealth. There is a kind of "equality" in having "equal opportunities," in having black, gay or women bosses and politicians, but one that misses the point. Saying "Me too!" instead of "What a mess!" does not suggest real liberation, just different bosses and new forms of oppression. We need to look at the way society is organised, not at the sex, colour, nationality or sexuality of who is giving the orders!

B.1.5 How is the mass-psychological basis for authoritarian civilisation created?

We noted in section [A.3.6](#) that hierarchical, authoritarian institutions tend to be self-perpetuating, because growing up under their influence creates submissive/authoritarian personalities -- people who both "respect" authority (based on fear of punishment) and desire to exercise it themselves on subordinates. Individuals with such a character structure do not really want to dismantle hierarchies, because they are afraid of the responsibility entailed by genuine freedom. It seems "natural" and "right" to them that society's institutions, from the authoritarian factory to the patriarchal family, should be pyramidal, with an elite at the top giving orders while those below them merely obey. Thus we have the spectacle of so-called "Libertarians" and "anarcho" capitalists bleating about "liberty" while at the same time advocating factory fascism and privatised states. In short, authoritarian civilisation reproduces itself with each generation because, through an intricate system of conditioning that permeates every aspect of society, it creates masses of people who support the status quo.

Wilhelm Reich has given one of the most thorough analyses of the psychological processes involved in the reproduction of authoritarian civilisation. Reich based his analysis on four of Freud's most solidly grounded discoveries, namely, (1) that there exists an unconscious part of the mind which has a powerful though irrational influence on behaviour; (2) that even the small child develops a lively "genital" sexuality, i.e. a desire for sexual pleasure which has nothing to do with procreation; (3) that childhood sexuality along with the Oedipal conflicts that arise in parent-child relations under monogamy and patriarchy are usually repressed through fear of punishment or disapproval for sexual acts and thoughts; (4) that this blocking of the child's natural sexual activity and extinguishing it from memory does not weaken its force in the unconscious, but actually intensifies it and enables it to manifest itself in various pathological disturbances and anti-social drives; and (5) that, far from being of divine origin, human moral codes are derived from the educational measures used by the parents and parental surrogates in earliest childhood, the most effective of these being the ones opposed to childhood sexuality.

By studying Bronislaw Malinowski's research on the Trobriand Islanders, a woman-centred (matricentric) society in which children's sexual behaviour was not repressed and in which neuroses and perversions as well as authoritarian institutions and values were almost non-existent, Reich came to the conclusion that patriarchy and authoritarianism originally developed when tribal chieftains began to get economic advantages from a certain type of marriage ("cross-cousin marriages") entered into by their sons. In such marriages, the brothers of the son's wife were obliged to pay a dowry to her in the form of continuous tribute, thus enriching her husband's clan (i.e. the chief's). By arranging many such marriages for his sons (which were usually numerous due to the chief's privilege of polygamy), the chief's clan could accumulate wealth. Thus society began to be stratified into ruling and subordinate clans based on wealth.

To secure the permanence of these "good" marriages, strict monogamy was required. However, it was found that monogamy was impossible to maintain without the repression of childhood sexuality, since, as statistics show, children who are allowed free expression of sexuality often do not adapt successfully to life-long monogamy. Therefore, along with class stratification and private property, authoritarian child-rearing methods were developed to inculcate the repressive sexual morality on which the new patriarchal system depended for its reproduction. Thus there is a historical correlation between, on the one hand, pre-patriarchal society, primitive libertarian communism (or "*work democracy*," to use Reich's expression), economic equality, and sexual freedom, and on the other, patriarchal society, a private-property economy, economic class stratification, and sexual repression. As Reich puts it:

"Every tribe that developed from a [matricentric] to a patriarchal organisation had to change the sexual structure of its members to produce a sexuality in keeping with its new form of life. This was a necessary change because the shifting of power and of wealth from the democratic gens [maternal clans] to the authoritarian family of the chief was mainly implemented with the help of the suppression of the sexual strivings of the people. It was in this way that sexual suppression became an essential factor in the division of society into classes.

"Marriage, and the lawful dowry it entailed, became the axis of the transformation of the one organisation into the other. In view of the fact that the marriage tribute of the wife's gens to the man's family strengthened the male's, especially the chief's, position of power, the male members of the higher ranking gens and families developed a keen interest in making the nuptial ties permanent. At this stage, in other words, only the man had an interest in marriage. In this way natural work-democracy's simple alliance, which could be easily dissolved at any time, was transformed into the permanent and monogamous marital relationship of patriarchy. The permanent monogamous marriage became the basic institution of patriarchal society -- which it still is today. To safeguard these marriages, however, it was necessary to impose greater and greater restrictions upon and to depreciate natural genital strivings." [The Mass Psychology of Fascism, p. 90]

The suppression of natural sexuality involved in this transformation from matricentric to patriarchal society created various anti-social drives (sadism, destructive impulses, rape fantasies, etc.), which then also had to be suppressed through the imposition of a compulsive morality, which took the place the natural self-regulation that one finds in pre-patriarchal societies. In this way, sex began to be regarded as "dirty," "diabolical," "wicked," etc. -- which it had indeed become through the creation of secondary drives. Thus:

"The patriarchal- authoritarian sexual order that resulted from the revolutionary processes of latter-day [matricentrism] (economic independence of the chief's family from the maternal gens, a growing exchange of goods between the tribes, development of the means of production, etc.) becomes the primary basis of authoritarian ideology by depriving the women, children, and adolescents of their sexual freedom, making a commodity of sex and placing sexual interests in the service of economic subjugation. From now on, sexuality is indeed distorted; it becomes diabolical and demonic and has to be curbed" [Ibid. p. 88].

Once the beginnings of patriarchy are in place, the creation of a fully authoritarian society based on the psychological crippling of its members through sexual suppression follows:

*"The moral inhibition of the child's natural sexuality, the last stage of which is the severe impairment of the child's **genital** sexuality, makes the child afraid, shy, fearful of authority, obedient, 'good,' and 'docile' in the authoritarian sense of the words. It has a crippling effect on man's rebellious forces because every vital life-impulse is now burdened with severe fear; and since sex is a forbidden subject, thought in general and man's critical faculty also become inhibited. In short, morality's aim is to produce acquiescent subjects who, despite distress and humiliation, are adjusted to the authoritarian order. Thus, the family is the authoritarian state in miniature, to which the child must learn to adapt himself as a preparation for the general social adjustment required of him later. Man's authoritarian structure -- this must be clearly established -- is basically produced by the embedding of sexual inhibitions and fear" in the person's bioenergetic structure. [Ibid., p. 30]*

In this way, by damaging the individual's power to rebel and think for him/herself, the inhibition of childhood sexuality -- and indeed other forms of free, natural expression of bioenergy (e.g. shouting, crying, running, jumping, etc.) -- becomes the most important weapon in creating reactionary personalities. This is why every reactionary politician puts such an emphasis on "strengthening the family" and promoting "family values" (i.e. patriarchy, compulsive monogamy, premarital chastity, corporal punishment, etc.).

*"Since authoritarian society reproduces itself in the individual structures of the masses with the help of the authoritarian family, it follows that political reaction has to regard and defend the authoritarian family as **the** basis of the 'state, culture, and civilisation. . . .' [It is] **political reaction's germ cell**, the most important centre for the production of reactionary men and women. Originating and developing from definite social processes, it becomes the most essential institution for the preservation of the authoritarian system that shapes it." [Op. cit., pp. 104-105]*

The family is the most essential institution for this purpose because children are most vulnerable to psychological maiming in their first few years, from the time of birth to about six years of age, during which time they are mostly in the charge of their parents. The schools and churches then continue the process of conditioning once the children are old enough to be away from their parents, but they are generally unsuccessful if the proper foundation has not been laid very early in life by the parents. Thus A.S. Neill observes that *"the nursery training is very like the kennel training. The whipped child, like the whipped puppy, grows into an obedient, inferior adult. And as we train our dogs to suit our own purposes, so we train our children. In that kennel, the nursery, the human dogs must be clean; they must feed when we think it convenient for them to feed. I saw a hundred thousand obedient, fawning dogs wag their tails in the Templehof, Berlin, when in 1935, the great trainer Hitler whistled his commands."* [**Summerhill: a Radical Approach to Child Rearing**, p. 100]

The family is also the main agency of repression during adolescence, when sexual energy reaches its peak. This is because the vast majority of parents provide no private space for adolescents to pursue undisturbed sexual relationships with their partners, but in fact actively discourage such behaviour, often (as in fundamentalist Christian families) demanding complete abstinence -- at the very time when abstinence is most impossible! Moreover, since teenagers are economically dependent on their parents under capitalism, with no societal provision of housing or dormitories allowing for sexual freedom, young people have no alternative but to submit to irrational parental demands for abstention from premarital sex. This in turn forces them to engage in furtive sex in the back seats of cars or other out-of-the-way places where they cannot relax or obtain full sexual satisfaction. As Reich found, when sexuality is repressed and laden with anxiety, the result is always some degree of what he terms *"orgastic impotence"*: the inability to fully surrender to the flow of energy discharged during orgasm. Hence there is an incomplete release of sexual tension, which results in a state of chronic bioenergetic stasis. Such a condition, Reich found, is the breeding ground for neuroses and reactionary attitudes. (For further details see the section [J.6](#)).

In this connection it is interesting to note that "primitive" societies, such as the Trobriand Islanders, prior to their developing patriarchal-authoritarian institutions, provided special community houses where teenagers could go with their partners to enjoy undisturbed sexual relationships -- and this with society's full approval. Such an institution would be taken for granted in an anarchist society, as it is implied by the concept of freedom. (For more on adolescent sexual liberation, see section [J.6.8.](#))

Nationalistic feelings can also be traced to the authoritarian family. A child's attachment to its mother is, of course, natural and is the basis of all family ties. Subjectively, the emotional core of the concepts of homeland and nation are mother and family, since the mother is the homeland of the child, just as the family is the "nation in miniature." According to Reich, who carefully studied the mass appeal of Hitler's "National Socialism," nationalistic sentiments are a direct continuation of the family tie and are rooted in a **fixated** tie to the mother. As Reich points out, although infantile attachment to the mother is natural, **fixated** attachment is not, but is a social product. In puberty, the tie to the mother would make room for other attachments, i.e., natural sexual relations, **if** the unnatural sexual restrictions imposed on adolescents did not cause it to be eternalised. It is in the form of this socially conditioned externalisation that fixation on the mother becomes the basis of nationalist feelings in the adult; and it is only at this stage that it becomes a reactionary social force.

Later writers who have followed Reich in analysing the process of creating reactionary character structures have broadened the scope of his analysis to include other important inhibitions, besides sexual ones, that are imposed on children and adolescents. Rianne Eisler, for example, in her book **Sacred Pleasure**, stresses that it is not just a sex-negative attitude but a **pleasure**-negative attitude that creates the kinds of personalities in question. Denial of the value of pleasurable sensations permeates our unconscious, as reflected, for example, in the common idea that to enjoy the pleasures of the body is the "animalistic" (and hence "bad") side of human nature, as contrasted with the "higher" pleasures of the mind and "spirit." By such dualism, which denies a spiritual aspect to the body, people are made to feel guilty about enjoying any pleasurable sensations -- a conditioning that does, however, prepare them for lives based on the sacrifice of pleasure (or indeed, even of life itself) under capitalism and statism, with their requirements of mass submission to alienated labour, exploitation, military service to protect ruling-class interests, and so on. And at the same time, authoritarian ideology emphasises the value of suffering, as for example through the glorification of the tough, insensitive warrior hero, who suffers (and inflicts "necessary" suffering on others) for the sake of some pitiless ideal.

Eisler also points out that there is *"ample evidence that people who grow up in families where rigid hierarchies and painful punishments are the norm learn to suppress anger toward their parents. There is also ample evidence that this anger is then often deflected against traditionally disempowered groups (such as minorities, children, and women)"* [**Ibid.**, p. 187]. This repressed anger then becomes fertile ground for reactionary politicians, whose mass appeal usually rests in part on scapegoating minorities for society's problems.

As the psychologist Else Frenkel-Brunswick documents in **The Authoritarian Personality**, people who have been conditioned through childhood abuse to surrender their will to the requirements of feared

authoritarian parents, also tend to be very susceptible as adults to surrender their will and minds to authoritarian leaders. *"In other words, at the same time that they learn to deflect their repressed rage against those they perceive as weak, they also learn to submit to autocratic or 'strong-man' rule. Moreover, having been severely punished for any hint of rebellion (even 'talking back' about being treated unfairly), they gradually also learn to deny to themselves that there was anything wrong with what was done to them as children -- and to do it in turn to their own children"* [**Ibid.**, p. 187].

These are just some of the mechanisms that perpetuate the status quo by creating the kinds of personalities who worship authority and fear freedom. Consequently, anarchists are generally opposed to traditional child-rearing practices, the patriarchal-authoritarian family (and its "values"), the suppression of adolescent sexuality, and the pleasure-denying, pain-affirming attitudes taught by the Church and in most schools. In place of these, anarchists favour non-authoritarian, non-repressive child-rearing practices and educational methods (see sections [J.6](#) and [secJ.5.13](#), respectively) whose purpose is to prevent, or at least minimise, the psychological crippling of individuals, allowing them instead to develop natural self-regulation and self-motivated learning. This, we believe, is the only way to for people to grow up into happy, creative, and truly freedom-loving individuals who will provide the psychological ground where anarchist economic and political institutions can flourish.

B.3 Why are anarchists against private property?

Capitalism is one of the two things all anarchists oppose. Capitalism is marked by two main features, "*private property*" (or in some cases, state-owned property) and wage labour. The latter, however, is dependent on the former, i.e. for wage labour to exist, workers must not own or control the means of production they use. In turn, private (or state) ownership of the means of production is only possible if there is a state, meaning mechanisms of organised coercion at the disposal of the propertied class (see section [B.2](#)).

Anarchists oppose private property (i.e. capitalism) because it is a source of coercive, hierarchical authority and elite privilege ("*Property . . . violates equality by the rights of exclusion and increase, and freedom by despotism. . . [and has] perfect identity with robbery,*" to use Proudhon's words - **What is Property**, p. 251). And so private property (capitalism) necessarily excludes participation, influence, and control by those who use, but do not own, the means of life.

Therefore, for all true anarchists, property is opposed as a source of authority, indeed despotism. To quote Proudhon on this subject:

*"The proprietor, the robber, the hero, the sovereign - for all these titles are synonymous - imposes his will as law, and suffers neither contradiction nor control; that is, he pretends to be the legislative and the executive power at once. . . [and so] property engenders despotism. . . That is so clearly the essence of property that, to be convinced of it, one need but remember what it is, and observe what happens around him. Property is the right to **use and abuse** . . . if goods are property, why should not the proprietors be kings, and despotic kings -- kings in proportion to their **facultes bonitaires**? And if each proprietor is sovereign lord within the sphere of his property, absolute king throughout his own domain, how could a government of proprietors be any thing but chaos and confusion?"* [**Op. Cit.**, pp. 266-7]

In other words, private property is the state writ small, with the property owner acting as the "*sovereign lord*" over their property, and so the absolute king of those who use it. As in any monarchy, the worker is the subject of the capitalist, having to follow their orders, laws and decisions while on their property. This, obviously, is the total denial of liberty (and dignity, we may note, as it is degrading to have to follow orders). Little wonder, then, that anarchists oppose private property as Anarchy is "*the absence of a master, of a sovereign*" [**Op. Cit.**, p. 264] and call capitalism for what it is, namely **wage slavery**!

Also, it ought to be easy to see that capitalism, by giving rise to an ideologically inalienable "right" to private property, will also quickly give rise to inequalities in the distribution of external resources, and that this inequality in resource distribution will give rise to a further inequality in the relative bargaining positions of the propertied and the property less. While apologists for capitalism usually attempt to

justify private property by claiming that "self-ownership" is a "universal right" (see section B.4.2 - "[Is capitalism based on self-ownership?](#)"), it is clear that capitalism actually makes universal self-ownership, in its true sense, impossible. For the real principle of self-ownership implies that people are not used in various ways against their will. The capitalist system, however, has undermined this principle, and ironically, has used the **term** "self-ownership" as the "logical" basis for doing so. Under capitalism, as will be seen in section [B.4](#), most people are usually left in a situation where their best option is to allow themselves to be used in just those ways that are logically incompatible with genuine self-ownership.

For these reasons, anarchists agree with Rousseau when he states:

*"The first man who, having fenced off a plot of land, thought of saying, 'This is mine' and found people simple enough to believe him was the real founder of civil society. How many crimes, wars, murders, how many miseries and horrors might the human race had been spared by the one who, upon pulling up the stakes or filling in the ditch, had shouted to his fellow men: 'Beware of listening to this impostor; you are lost if you forget the fruits of the earth belong to all and that the earth belongs to no one.'" ["Discourse on Inequality," **The Social Contract and Discourses**, p. 84]*

Only libertarian socialism can continue to affirm self-ownership whilst building the conditions that guarantee it. Only by abolishing private property can there be access to the means of life for all, so making self-ownership a reality by universalising self-management in all aspects of life.

Before discussing the anti-libertarian aspects of capitalism, it will be necessary to define "private property" as distinct from "personal possessions" and show in more detail why the former requires state protection and is exploitative.

B.3.1 What is the difference between private property and possession?

Anarchists define "**private property**" (or just "**property**," for short) as state-protected monopolies of certain objects or privileges which are used to exploit others. "**Possession**," on the other hand, is ownership of things that are not used to exploit others (e.g. a car, a refrigerator, a toothbrush, etc.). Thus many things can be considered as either property or possessions depending on how they are used. For example, a house that one lives in is a possession, whereas if one rents it to someone else at a profit it becomes property. Similarly, if one uses a saw to make a living as a self-employed carpenter, the saw is a possession; whereas if one employs others at wages to use the saw for one's own profit, it is property.

While it may initially be confusing to make this distinction, it is very useful to understand the nature of capitalist society. Capitalists tend to use the word "property" to mean anything from a toothbrush to a transnational corporation -- two very different things, with very different impacts upon society. Hence Proudhon:

*"Originally the word **property** was synonymous with **proper** or **individual possession**. . . But when this right of use . . . became active and paramount - that is, when the usufructuary converted his right to personally use the thing into the right to use it by his neighbour's labour - then property changed its nature and this idea became complex."* [**What is Property**, pp. 395-6]

As Alexander Berkman frames this distinction, anarchism *"abolishes private ownership of the means of production and distribution, and with it goes capitalistic business. Personal possession remains only in the things you use. Thus, your watch is your own, but the watch factory belongs to the people. Land, machinery, and all other public utilities will be collective property, neither to be bought nor sold. Actual use will be considered the only title -- not to ownership but to possession."* [**The ABC of Anarchism**, p. 68] (For more on the anarchist theory of property, see P.-J. Proudhon, **What is Property?**. William Godwin, in **Enquiry Concerning Political Justice**, makes the same point concerning the difference between property and possession -- which indicates its central place in anarchist thought). Proudhon graphically illustrated the distinction by comparing a lover as a possessor, and a husband as a proprietor!

The difference between property and possession can be seen from the types of authority relations each generates. Taking the example of a capitalist workplace, it's clear that those who own the workplace determine how it is used, not those who do the actual work. This leads to an almost totalitarian system. As Noam Chomsky points out, *"the term 'totalitarian' is quite accurate. There is no human institution that approaches totalitarianism as closely as a business corporation. I mean, power is completely top-down. You can be inside it somewhere and you take orders from above and hand 'em down. Ultimately, it's in the hands of owners and investors."*

In an anarchist society, as noted, actual use is considered the only title. This means that a workplace is organised and run by those who work within it, thus reducing hierarchy and increasing freedom and equality within society. Hence anarchist opposition to private property and capitalism flows naturally from its basic principles and ideas.

B.3.2 What kinds of property does the state protect?

Kropotkin argued that the state was *"the instrument for establishing monopolies in favour of the ruling minorities."* [**Kropotkin's Revolutionary Pamphlets**, p. 286] While some of these monopolies are obvious (such as tariffs, state granted market monopolies and so on - see section [F.8](#) on the state's role in developing capitalism) most are "behind the scenes" and work to ensure that capitalist domination does not need extensive force to maintain.

The state therefore maintains various kinds of *"class monopolies"* (to use Tucker's phrase) to ensure that workers do not receive their *"natural wage,"* the full product of their labour. There are four major kinds of property, or exploitative monopolies, that the state protects:

- (1) the power to issue credit and currency, the basis of capitalist banking;
- (2) land and buildings, the basis of landlordism;
- (3) productive tools and equipment, the basis of industrial capitalism;
- (4) ideas and inventions, the basis of copyright and patent ("intellectual property") royalties.

By enforcing these forms of property, capitalism ensures that the objective conditions within the economy favour the capitalist, with the worker free only to accept oppressive and exploitative contracts within which they forfeit their autonomy and promise obedience or face misery and poverty. Due to these "initiations of force" conducted **previously** to any specific contract being signed, capitalists enrich themselves at the expense of us as well as making a mockery of free agreement (see section [B.4](#)). Of course, despite the supposedly subtle role of such "objective" pressures in controlling the working class, working class resistance has been such that capital has never been able to dispense with the powers of the state, both direct and indirect. When "objective" means of control fail, the capitalists will always turn to the use of state repression to restore the "natural" order.

To indicate the importance of these state backed monopolies, we shall sketch their impact.

The credit monopoly, by which the state controls who can and cannot loan money, reduces the ability of working class people to create their own alternatives to capitalism. By charging high amounts of interest on loans (which is only possible because competition is restricted) few people can afford to create co-operatives or one-person firms. In addition, having to repay loans at high interest to capitalist banks ensures that co-operatives often have to undermine their own principles by having to employ wage labour to make ends meet (see section [J.5.11](#)). It is unsurprising, therefore, that the very successful Mondragon co-operatives in the Basque Country created their own credit union which is largely responsible for the experiments success.

Just as increasing wages is an important struggle within capitalism, so is the question of credit. Proudhon and his followers supported the idea of a **People's Bank**. If the working class could take over and control increasing amounts of money it could undercut capitalist power while building its own alternative social order (for money is ultimately the means of buying labour power, and so authority over the labourer - which is the key to surplus value production). Proudhon hoped that by credit being reduced to cost (namely administration charges) workers would be able to buy the means of production they needed. While most anarchists would argue that increased working class access to credit would no more bring down capitalism than increased wages, all anarchists recognise how more credit, like more wages, and how the struggle for credit, like the struggle for wages, might play a useful role in the development of the power of the working class within capitalism. Obvious cases that spring to mind are those where money has been used by workers to finance their struggles against capital, from strike funds and weapons to the periodical avoidance of work made possible by sufficiently high money income. Increased access to cheap credit would give working class people slightly more options than selling their liberty or facing misery (just as increased wages and unemployment benefit also gives us more options).

Therefore, the credit monopoly reduces competition to capitalism from co-operatives (which are

generally more productive than capitalist firms) while at the same time forcing down wages for all workers as the demand for labour is lower than it would otherwise be. This, in turn, allows capitalists to use the fear of the sack to extract higher levels of surplus value from employees, so consolidating capitalist power (within and outwith the workplace) and expansion (increasing set-up costs and so creating oligarchic markets dominated by a few firms). In addition, high interest rates transfer income directly from producers to banks. Credit and money are both used as weapons in the class struggle. This is why, again and again, we see the ruling class call for centralised banking and use state action (from the direct regulation of money itself to the management of its flows) in the face of repeated threats to the nature (and role) of money within capitalism.

So the credit monopoly, by artificially restricting the option to work for ourselves, ensures we work for a boss.

The land monopoly consists of enforcement by government of land titles which do not rest upon personal occupancy and cultivation. In addition, it also includes making the squatting of abandoned housing and other forms of property illegal. This leads to ground-rent, by which landlords get payment for letting others use the land they own but do not actually cultivate. While this monopoly is less important in a modern capitalist society (as few people know how to farm) it did, however, play an important role in **creating** capitalism (also see section [F.8.3](#)). Economist Williamazon summaries this process:

"The reorganisation of agricultural land [the enclosure movement] . . . inevitably undermined the viability of traditional peasant agriculture. . . [it] created a sizeable labour force of disinherited peasants with only tenuous attachments to the land. To earn a living, many of these peasants turned to 'domestic industry' - the production of goods in their cottages . . . It was the eighteenth century expansion of domestic industry. . . that laid the basis for the British Industrial Revolution. The emergence of labour-saving machine technology transformed. . . textile manufacture. . . and the factory replaced the family home as the predominant site of production." [**Business Organisation and the Myth of the Market Economy**, pp. 3-4]

By being able to "legally" bar people from "their" property, the landlord class used the land monopoly to ensure the creation of a class of people with nothing to sell but their labour (i.e. liberty). Land was taken from those who traditionally used it, violating common rights, and it was used by the landlord to produce for their own profit (more recently, a similar process has been going on in the Third World as well). Personal occupancy was replaced by landlordism and agricultural wage slavery, and so *"the Enclosure Acts. . . reduced the agricultural population to misery, placed them at the mercy of the landowners, and forced a great number of them to migrate to the towns where, as proletarians, they were delivered to the mercy of the middle-class manufacturers."* [Peter Kropotkin, **The Great French Revolution**, p. 117]

This was the land monopoly in action (also see section [F.8.3](#)) and from it sprang the tools and equipment

monopoly as domestic industry could not survive in the face of industrial capitalism. The tools and equipment monopoly is based upon the capitalist denying workers access to their capital unless the worker pays tribute to the owner for using it. While capital is *"simply stored-up labour which has already received its pay in full"* and so *"the lender of capital is entitled to its return intact, and nothing more"* (to use Tucker's words), due to legal privilege the capitalist is in a position to charge a "fee" for its use. This is because, with the working class legally barred from both the land and available capital (the means of life), members of that class have little option but to agree to wage contracts which let capitalists extract a "fee" for the use of their equipment (see section [B.3.3](#)).

While the initial capital for investing in industry came from wealth plundered from overseas or from the proceeds of feudalist and landlordist exploitation, the fact of state protection of property ensured that the manufacturer was able to exact usury from labour. The "fee" charged to workers was partly reinvested into capital, which reduced the prices of goods, ruining domestic industry. In addition, investment also increased the set-up costs of potential competitors, which continued the dispossession of the working class from the means of production as these "natural" barriers to entry into markets ensured few members of that class had the necessary funds to create co-operative workplaces of appropriate size. So while the land monopoly was essential to create capitalism, the "tools and equipment" monopoly that sprang from it soon became the mainspring of the system.

In this way usury became self-perpetuating, with apparently "free exchanges" being the means by which capitalist domination survives. In other words, "past initiations of force" combined with the current state protection of property ensure that capitalist domination of society continues with only the use of "defensive" force (i.e. violence used to protect the power of property owners against unions, strikes, occupations, etc.). The "fees" extracted from previous generations of workers has ensured that the current one is in no position to re-unite itself with the means of life by "free competition" (in other words, the paying of usury ensures that usury continues). Needless to say, the surplus produced by this generation will be used to increase the capital stock and so ensure the dispossession of future generations and so usury becomes self-perpetuating. And, of course, state protection of "property" against "theft" by working people ensures that property remains theft and the **real** thieves keep their plunder.

As far as the "ideas" monopoly is concerned, this has been used to enrich capitalist corporations at the expense of the general public and the inventor. As David Noble points out, the *"inventor, the original focus of the patent system, tended to increasingly to 'abandon' his patent in exchange for corporate security; he either sold or licensed his patent rights to industrial corporations or assigned them to the company of which he became an employee, bartering his genius for a salary. In addition, by means of patent control gained through purchase, consolidation, patent pools, and cross-licensing agreements, as well as by regulated patent production through systematic industrial research, the corporations steadily expanded their 'monopoly of monopolies.'"* As well as this, corporations used *"patents to circumvent anti-trust laws."* This reaping of monopoly profits at the expense of the customer made such *"tremendous strides"* between 1900 and 1929 and *"were of such proportions as to render subsequent judicial and legislative effects to check corporate monopoly through patent control too little too late."* [**American By Design**, p. 87, 84 and 88]

By creating "legal" monopolies and reaping the excess profits these create, capitalists not only enriched themselves at the expense of others, they also ensured their dominance in the market. Some of the excess profits reaped due to the legal monopolies were invested back into the company, securing advantages for the company by creating various barriers to potential competitors.

Moreover, the ruling class, by means of the state, is continually trying to develop new forms of private property by creating artificial scarcities and monopolies, e.g. by requiring expensive licenses to engage in particular types of activities, such as broadcasting. In the "Information Age," usury (use fees) from intellectual property are becoming a much more important source of income for elites, as reflected in the attention paid to strengthening mechanisms for enforcing copyright in the recent GATT agreements, or in US pressure on foreign countries (like China) to respect copyright laws, and so on.

In other words, capitalists desire to restrict competition in the "free market" by ensuring that the law reflects and protects their interests, namely their "property rights." By this process they ensure that co-operative tendencies within society are crushed by state-supported "market forces." As Noam Chomsky puts it, modern capitalism is "*state protection and public subsidy for the rich, market discipline for the poor.*" [*Rollback, Part I*, **Z Magazine**] Self-proclaimed defenders of "free market" capitalism are usually nothing of the kind, while the few who actually support it only object to the "public subsidy" aspect of modern capitalism and happily support state protection for property rights. (For more on capitalism as based on state-protected monopolies, see Benjamin Tucker, **Instead of a Book by a Man Too Busy to Write One**).

All these monopolies seek to enrich the capitalist (and increase their capital stock) at the expense of working people, to restrict their ability to undermine the ruling elites power and wealth. All aim to ensure that any option we have to work for ourselves (either individually or collectively) is restricted by tilting the playing field against us, making sure that we have little option but to sell our labour on the "free market" and be exploited. In other words, the various monopolies make sure that "natural" barriers to entry (see section [C.4](#)) are created, leaving the heights of the economy in the control of big business while alternatives to capitalism are marginalised at its fringes.

So it is these kinds of property and the authoritarian social relationships that they create which the state exists to protect. It should be noted that converting private to state ownership (i.e. nationalisation) does not fundamentally change the nature of property relationships; it just removes private capitalists and replaces them with bureaucrats.

B.3.3 Why is property exploitative?

To answer this question, consider the monopoly of productive "tools and equipment." This monopoly, obtained by the class of industrial capitalists, allows this class in effect to charge workers a "fee" for the privilege of using the monopolised tools and equipment.

This occurs because property, in Proudhon words, "*excommunicates*" the working class. The state enforces property rights in land, workplaces and so on, meaning that the owner can bar others from using them and enforce **their** rules on those they do let use "their" property. So the boss "*gives you a job: that is permission to work in the factory or mill which was not built by him but by other workers like yourself. And for that permission you help to support him for . . . as long as you work for him.*" [Alexander Berkman, **What is Communist Anarchism?**, p. 11]

Therefore, due to the dispossession of the vast majority of the population from the means of life, capitalists are in an ideal position to charge a "use-fee" for the capital they own, but neither produced nor use. Having little option, workers agree to contracts within which they forfeit their autonomy during work and the product of that work. This results in capitalists having access to a "commodity" (labour) that can potentially produce more value than it gets paid for in wages. During working hours, the owner can dictate (within certain limits determined by worker resistance and solidarity as well as objective conditions, such as the level of unemployment within an industry or country) the level, duration and intensity of work, and so the amount of output (which the owner has sole rights over even though they did not produce it). Thus the "fee" (or "*surplus value*") is created by owners paying workers less than the full value added by their labour to the products or services they create for the firm. The capitalist's profit is thus the difference between this "surplus value," created by and appropriated from labour, minus the firm's overhead and cost of raw materials (See also section C.2, "[Where do profits come from?](#)").

So property is exploitative because it allows a surplus to be monopolised by the owners. Property creates hierarchical relationships within the workplace (the "tools and equipment monopoly" might better be called the "power monopoly") and as in any hierarchical system, those with the power use it to protect and further their own interests at the expense of others. Within the workplace there is resistance by workers to this oppression and exploitation, which the "*hierarchical. . . relations of the capitalist enterprise are designed to resolve this conflict in favour of the representatives of capital...*" [William Lazonick, **Op. Cit.**, p. 184]

Needless to say, the state is always on hand to protect the rights of property and management against the actions of the dispossessed. When it boils down to it, it is the existence of the state as protector of the "power monopoly" that allows it to exist at all.

So, capitalists are able to appropriate this surplus value from workers solely because they own the means of production, not because they earn it by doing productive work themselves. Of course some capitalists **may** also contribute to production, in which case they are in fairness entitled to the amount of value added to the firm's output by their own labour; but owners typically pay themselves much more than this, and are able to do so because the state guarantees them that right as property owners (which is unsurprising, as they alone have knowledge of the firms inputs and outputs and, like all people in unaccountable positions, abuse that power -- which is partly why anarchists support direct democracy as the essential counterpart of free agreement, for no one in power can be trusted not to prefer their own interests over those subject to their decisions). And of course many capitalists hire managers to run their businesses for them, thus collecting income for doing nothing except owning.

Capitalists' profits, then, are a form of state-supported exploitation. This is equally true of the interest collected by bankers and rents collected by landlords. Without some form of state, these forms of exploitation would be impossible, as the monopolies on which they depend could not be maintained. For instance, in the absence of state troops and police, workers would simply take over and operate factories for themselves, thus preventing capitalists from appropriating an unjust share of the surplus they create.

B.3.4 Can private property be justified?

No. Even though a few supporters of capitalism recognise that private property, particularly in land, was created by the use of force, most maintain that private property is just. One common defence of private property is found in the work of Robert Nozick (a supporter of "free market" capitalism). For Nozick, the use of force makes acquisition illegitimate and so any current title to the property is illegitimate (in other words, theft and trading in stolen goods does not make ownership of these goods legal). So, if the initial acquisition of land was illegitimate then all current titles are also illegitimate. And since private ownership of land is the basis of capitalism, capitalism itself would be rendered illegal.

To get round this problem, Nozick utilises the work of Locke ("*The Lockean Proviso*") which can be summarised as:

1. People own themselves.
2. The world is initially owned in common (or unowned in Nozick's case.)
3. You can acquire absolute rights over a larger than average share in the world, if you do not worsen the condition of others.
4. Once people have appropriated private property, a free market in capital and labour is morally required.

Take for example two individuals who share land in common. Nozick allows for one individual to claim the land as their own as long as the "*process normally giving rise to a permanent bequeathable property right in a previously unowned thing will not do so if the position of others no longer at liberty to use the thing is therefore worsened.*" [Anarchy, State and Utopia, p. 178]

But, if one person appropriated the land then the other cannot live off the remaining land. However, if the new land owner offers the other a wage to work their land and this exceeds what the new wage slave originally produced, then this meets the "Lockean Proviso." Of course, the new wage slave has no option but to work for another, but this is irrelevant for the Lockean Proviso.

Interestingly, for a ideology that calls itself "libertarian" Nozick theory defines "worse off" in terms purely of material welfare, compared to the conditions that existed within the society based upon common use. In other words, being "worse off" in terms of liberty (i.e. self-ownership or self-government) is irrelevant for Nozick, a **very** telling position to take.

Nozick claims to place emphasis on self-ownership in his ideology because we are separate individuals, each with our own life to lead. It is strange, therefore, to see that Nozick does not emphasise people's ability to act on their own conception of themselves in his account of appropriation. Indeed, there is no objection to an appropriation that puts someone in an unnecessary and undesirable position of subordination and dependence on the will of others.

Notice that the fact that individuals are now subject to the decisions of other individuals is not considered by Nozick in assessing the fairness of the appropriation. The fact that the creation of private property results in the denial of important freedoms for wage slaves (namely, the wage slave has no say over the status of the land they had been utilising and no say over how their labour is used). Before the creation of private property, all managed their own work, had self-government in all aspects of their lives. After the appropriation, the new wage slave has no such liberty and indeed must accept the conditions of employment within which they relinquish control over how they spend much of their time.

Considering Nozick's many claims in favour of self-ownership and why it is important, you would think that the autonomy of the newly dispossessed wage slaves would be important to him. However, no such concern is to be found - the autonomy of wage slaves is treated as if it were irrelevant. Nozick claims that a concern for people's freedom to lead their own lives underlies his theory of unrestricted property-rights, but, this apparently does not apply to wage slaves. His justification for the creation of private property treats only the autonomy of the land owner as relevant. However, as Proudhon rightly argues:

"if the liberty of man is sacred, it is equally sacred in all individuals; that, if it needs property for its objective action, that is, for its life, the appropriation of material is equally necessary for all . . . Does it not follow that if one individual cannot prevent another . . . from appropriating an amount of material equal to his own, no more can he prevent individuals to come." [**What is Property?**, pp. 84-85]

Under capitalism people are claimed to own themselves, but this is purely formal as most people do not have independent access to resources. And as they have to use other peoples' resources, they become under the control of those who own the resources. In other words, private property reduces the autonomy of the majority of the population, and creates a regime of authority which has many similarities to enslavement. As John Stuart Mill put it:

"No longer enslaved or made dependent by force of law, the great majority are so by force of property; they are still chained to a place, to an occupation, and to conformity with the will of an employer, and debarred by the accident of birth to both the enjoyments, and from the mental and moral advantages, which others inherit without exertion and independently of desert. That this is an evil equal to almost any of those against which mankind have hitherto struggles, the poor are not wrong in believing." ["Chapters on Socialism", **Principles of Political Economy**, pp. 377-8]

Capitalism, even though claiming formal self-ownership, in fact not only restricts the self-determination

of working class people, it also makes them a resource for others. Those who enter the market after others have appropriated all the available property are limited to charity or working for others. The latter, as we discuss in [section C](#), results in exploitation as the worker's labour is used to enrich others. Working people are compelled to co-operate with the current scheme of property and are forced to benefit others. This means that self-determination requires resources as well as rights over one's physical and mental being. Concern for self-determination (i.e. meaningful self-ownership) leads us to common property plus workers' control of production and so some form of libertarian socialism - **not** private property and capitalism.

And, of course, the appropriation of the land requires a state to defend it against the dispossessed as well as continuous interference in people's lives. Left to their own devices, people would freely use the resources around them which they considered unjustly appropriated by others and it is only continuous state intervention that prevents them from violating Nozick's principles of justice (to use Nozick's own terminology, the "Lockean Proviso" is a patterned theory, his claims otherwise not withstanding).

In addition, we should note that private ownership by one person presupposes non-ownership by others ("*we who belong to the proletarian class, property excommunicates us!*" [Proudhon, **Op. Cit.**, p. 105]) and so the "free market" restricts as well as creates liberties just as any other economic system. Hence the claim that capitalism constitutes "economic liberty" is obviously false. In fact, it is **based** upon denying liberty for the vast majority during work hours (as well as having serious impacts on liberty outwith work hours due to the effects of concentrations of wealth upon society).

Perhaps Nozick can claim that the increased material benefits of private property makes the acquisition justified. However, it seems strange that a theory supporting "liberty" should consider well off slaves to be better than poor free men and women. As Nozick claims that the wage slaves consent is not required for the initial acquisition, so perhaps he can claim that the gain in material welfare outweighs the loss of autonomy and so allows the initial act as an act of paternalism. But as Nozick opposes paternalism when it restricts private property rights he can hardly invoke it when it is required to generate these rights. And if we exclude paternalism and emphasise autonomy (as Nozick claims he does elsewhere in his theory), then justifying the initial creation of private property becomes much more difficult, if not impossible.

And if each owner's title to their property includes the historical shadow of the Lockean Proviso on appropriation, then such titles are invalid. Any title people have over unequal resources will be qualified by the facts that "*property is theft*" and that "*property is despotism.*" The claim that private property is economic liberty is obviously untrue, as is the claim that private property can be justified in terms of anything except "might is right."

For more anarchist analysis on private property and why it cannot be justified (be it by occupancy, labour, natural right, or whatever) consult Proudhon's classic work **What is Property?**.

B.4 How does capitalism affect liberty?

Private property is in many ways like a private form of state. The owner determines what goes on within the area he or she "owns," and therefore exercises a monopoly of power over it. When power is exercised over one's self, it is a source of freedom, but under capitalism it is a source of coercive authority. As Bob Black points out in **The Abolition of Work**:

"The liberals and conservatives and Libertarians who lament totalitarianism are phoney and hypocrites. . . You find the same sort of hierarchy and discipline in an office or factory as you do in a prison or a monastery. . . A worker is a part-time slave. The boss says when to show up, when to leave, and what to do in the meantime. He tells you how much work to do and how fast. He is free to carry his control to humiliating extremes, regulating, if he feels like it, the clothes you wear or how often you go to the bathroom. With a few exceptions he can fire you for any reason, or no reason. He has you spied on by snitches and supervisors, he amasses a dossier on every employee. Talking back is called 'insubordination,' just as if a worker is a naughty child, and it not only gets you fired, it disqualifies you for unemployment compensation. . . The demeaning system of domination I've described rules over half the waking hours of a majority of women and the vast majority of men for decades, for most of their lifespans. For certain purposes it's not too misleading to call our system democracy or capitalism or -- better still -- industrialism, but its real names are factory fascism and office oligarchy. Anybody who says these people are 'free' is lying or stupid."

Unlike a company, the democratic state can be influenced by its citizens, who are able to act in ways that limit (to some extent) the power of the ruling elite to be "left alone" to enjoy their power. As a result, the wealthy hate the democratic aspects of the state, and its ordinary citizens, as potential threats to their power. This "problem" was noted by Alexis de Tocqueville in early 19th-century America:

"It is easy to perceive that the wealthy members of the community entertain a hearty distaste to the democratic institutions of their country. The populace is at once the object of their scorn and their fears."

These fears have not changed, nor has the contempt for democratic ideas. To quote one US Corporate Executive, "one man, one vote will result in the eventual failure of democracy as we know it." [L. Silk and D. Vogel, **Ethics and Profits: The Crisis of Confidence in American Business**, pp. 189f]

This contempt for democracy does not mean that capitalists are **anti**-state. Far from it. As previously noted, capitalists depend on the state. This is because "[classical] Liberalism, is in theory a kind of anarchy without socialism, and therefore is simply a lie, for freedom is not possible without equality. . . The criticism liberals direct at government consists only of wanting to deprive it some of its functions

and to call upon the capitalists to fight it out amongst themselves, but it cannot attack the repressive functions which are of its essence: for without the gendarme the property owner could not exist." [Errico Malatesta, **Anarchy**, p. 46].

Capitalists call upon and support the state when it acts in **their** interests and when it supports **their** authority and power. The "conflict" between state and capital is like two gangsters fighting over the proceeds of a robbery: they will squabble over the loot and who has more power in the gang, but they need each other to defend their "property" against those from whom they stole it.

The statist nature of private property can be seen in "Libertarian" (i.e. minarchist, or "classical" liberal) works representing the extremes of laissez-faire capitalism:

*"[I]f one starts a private town, on land whose acquisition did not and does not violate the Lockean proviso [of non-aggression], persons who chose to move there or later remain there would have no **right** to a say in how the town was run, unless it was granted to them by the decision procedures for the town which the owner had established"* [Robert Nozick, **Anarchy, State and Utopia**, p. 270]

This is voluntary feudalism, nothing more. And, indeed, it was. Such private towns have existed, most notably the infamous company towns of US history. Howard Zinn summarises the conditions of such "private towns" in the Colorado mine fields:

"Each mining camp was a feudal dominion, with the company acting as lord and master. Every camp had a marshal, a law enforcement officer paid by the company. The 'laws' were the company's rules. Curfews were imposed, 'suspicious' strangers were not allowed to visit the homes, the company store had a monopoly on goods sold in the camp. The doctor was a company doctor, the schoolteachers hired by the company . . . Political power in Colorado rested in the hands of those who held economic power. This meant that the authority of Colorado Fuel & Iron and other mine operators was virtually supreme . . . Company officials were appointed as election judges. Company-dominated coroners and judges prevented injured employees from collecting damages." [**The Colorado Coal Strike, 1913-14**, pp. 9-11]

Unsurprisingly, when the workers rebelled against this tyranny, they were evicted from their homes and the private law enforcement agents were extremely efficient in repressing the strikers: *"By the end of the strike, most of the dead and injured were miners and their families."* The strike soon took on the features of a war, with battles between strikers and their supporters and the company thugs. Ironically, when the National Guard was sent in to "restore order" the *"miners, having faced in the first five weeks of the strike what they considered a reign of terror at the hands of the private guards, . . . looked forward"* to their arrival. They *"did not know that the governor was sending these troops under pressure from the mine operators."* Indeed, the banks and corporations lent the state funds to pay for the militia. It was these company thugs, dressed in the uniform of the state militia, who murdered woman and children in

the infamous Ludlow Massacre of April 20th, 1914. [**Op. Cit.**, p. 22, p. 25, p. 35]

Without irony the **New York Times** editorialised that the *"militia was as impersonal and impartial as the law."* The corporation itself hired Ivy Lee ("the father of public relations in the United States") to change public opinion after the slaughter. Significantly, Lee produced a series of tracts labelled *"Facts Concerning the Struggle in Colorado for Industrial Freedom."* The head of the corporation (Rockefeller) portrayed his repression of the strikers as blow for workers' freedom, to *"defend the workers' right to work."* [quoted by Zinn, **Op. Cit.**, p. 44, p. 51 and p. 50] So much for the capitalism being the embodiment of liberty.

Of course, it can be claimed that "market forces" will result in the most liberal owners being the most successful, but a nice master is still a master (and, of course, capitalism then was more "free market" than today, suggesting that this is simply wishful thinking). To paraphrase Tolstoy, *"the liberal capitalist is like a kind donkey owner. He will do everything for the donkey -- care for it, feed it, wash it. Everything except get off its back!"* And as Bob Black notes, *"Some people giving orders and others obeying them: this is the essence of servitude. . . . [F]reedom means more than the right to change masters."* [**The Libertarian as Conservative**]. That supporters of capitalism often claim that this "right" to change masters **is** the essence of "freedom" is a telling indictment of the capitalist notion of "liberty."

B.4.1 Is capitalism based on freedom?

For anarchists, freedom means both *"freedom from"* and *"freedom to."* "Freedom from" signifies not being subject to domination, exploitation, coercive authority, repression, or other forms of degradation and humiliation. "Freedom to" means being able to develop and express one's abilities, talents, and potentials to the fullest possible extent compatible with the maximum freedom of others. Both kinds of freedom imply the need for self-management, responsibility, and independence, which basically means that people have a say in the decisions that affect their lives. And since individuals do not exist in a social vacuum, it also means that freedom **must** take on a collective aspect, with the associations that individuals form with each other (e.g. communities, work groups, social groups) being run in a manner which allows the individual to participate in the decisions that the group makes. Thus freedom for anarchists requires participatory democracy, which means face-to-face discussion and voting on issues by the people affected by them.

Are these conditions of freedom met in the capitalist system? Obviously not. Despite all their rhetoric about "democracy," most of the "advanced" capitalist states remain only superficially democratic -- and this because the majority of their citizens are employees who spend about half their waking hours under the thumb of capitalist dictators (bosses) who allow them no voice in the crucial economic decisions that affect their lives most profoundly and require them to work under conditions inimical to independent thinking. If the most basic freedom, namely freedom to think for oneself, is denied, then freedom itself is denied.

The capitalist workplace is profoundly undemocratic. Indeed, as Noam Chomsky points out, the

oppressive authority relations in the typical corporate hierarchy would be called fascist or totalitarian if we were referring to a political system. In his words :

"There's nothing individualistic about corporations. These are big conglomerate institutions, essentially totalitarian in character, but hardly individualistic. There are few institutions in human society that have such strict hierarchy and top-down control as a business organisation. Nothing there about 'don't tread on me'. You're being tread on all the time." [Keeping the Rabble in Line, p. 280]

Far from being "based on freedom," then, capitalism actually destroys freedom. In this regard, Robert E. Wood, the chief executive officer of Sears, spoke plainly when he said "[w]e stress the advantages of the free enterprise system, we complain about the totalitarian state, but... we have created more or less of a totalitarian system in industry, particularly in large industry." [quoted by Allan Engler, **Apostles of Greed**, p. 68]

Or, as Chomsky puts it, supporters of capitalism do not understand *"the fundamental doctrine, that you should be free from domination and control, including the control of the manager and the owner"* [Feb. 14th, 1992 appearance on **Pozner/Donahue**].

Under corporate authoritarianism, the psychological traits deemed most desirable for average citizens to possess are efficiency, conformity, emotional detachment, insensitivity, and unquestioning obedience to authority -- traits that allow people to survive and even prosper as employees in the company hierarchy. And of course, for "non-average" citizens, i.e., bosses, managers, administrators, etc., **authoritarian** traits are needed, the most important being the ability and willingness to dominate others.

But all such master/slave traits are inimical to the functioning of real (i.e. participatory/libertarian) democracy, which requires that citizens have qualities like flexibility, creativity, sensitivity, understanding, emotional honesty, directness, warmth, realism, and the ability to mediate, communicate, negotiate, integrate and co-operate. Therefore, capitalism is not only **undemocratic**, it is **anti-democratic**, because it promotes the development of traits that make real democracy (and so a libertarian society) impossible.

Many capitalist apologists have attempted to show that capitalist authority structures are "voluntary" and are, therefore, somehow not a denial of individual and social freedom. Milton Friedman (a leading free market capitalist economist) has attempted to do just this. Like most apologists for capitalism he ignores the authoritarian relations explicit within wage labour (within the workplace, "co-ordination" is based upon top-down command, **not** horizontal co-operation). Instead he concentrates on the decision of a worker to sell their labour to a **specific** boss and so ignores the lack of freedom within such contracts. He argues that *"individuals are effectively free to enter or not enter into any particular exchange, so every transaction is strictly voluntary. . . The employee is protected from coercion by the employer because of other employers for whom he can work."* [**Capitalism and Freedom**, pp. 14-15]

Friedman, to prove the free nature of capitalism, compares capitalism with a simple exchange economy based upon independent producers. He states that in such a simple economy each household *"has the alternative of producing directly for itself, [and so] it need not enter into any exchange unless it benefits from it. Hence no exchange will take place unless both parties do benefit from it. Co-operation is thereby achieved without coercion."* [Op. Cit., p. 13] Under capitalism (or the "complex" economy) Friedman states that *"individuals are effectively free to enter or not to enter into any particular exchange, so that every transaction is strictly voluntary."* [Op. Cit., p. 14]

A moment's thought, however, shows that capitalism is not based on "strictly voluntary" transactions as Friedman claims. This is because the proviso that is required to make every transaction "strictly voluntary" is **not** freedom not to enter any **particular** exchange, but freedom not to enter into any exchange **at all**.

This, and only this, was the proviso that proved the simple model Friedman presents (the one based upon artisan production) to be voluntary and non-coercive; and nothing less than this would prove the complex model (i.e. capitalism) is voluntary and non-coercive. But Friedman is clearly claiming above that freedom not to enter into any **particular** exchange is enough and so, **only by changing his own requirements**, can he claim that capitalism is based upon freedom.

It is easy to see what Friedman has done, but it is less easy to excuse it (particularly as it is so commonplace in capitalist apologetics). He moved from the simple economy of exchange between independent producers to the capitalist economy without mentioning the most important thing that distinguishes them - namely the separation of labour from the means of production. In the society of independent producers, the worker had the choice of working for themselves - under capitalism this is not the case. Capitalism is based upon the existence of a labour force without its own sufficient capital, and therefore without a choice as to whether to put its labour in the market or not. Milton Friedman would agree that where there is no choice there is coercion. His attempted demonstration that capitalism co-ordinates without coercion therefore fails.

Capitalist apologists are able to convince some people that capitalism is "based on freedom" only because the system has certain superficial **appearances** of freedom.

On closer analysis these appearances turn out to be deceptions. For example, it is claimed that the employees of capitalist firms have freedom because they can always quit. But, as noted earlier, *"Some people giving orders and others obeying them: this is the essence of servitude. Of course, as [right-Libertarians] smugly [observe], 'one can at least change jobs,' but you can't avoid having a job -- just as under statism one can at least change nationalities but you can't avoid subjection to one nation-state or another. But freedom means more than the right to change masters"* [Bob Black, **The Libertarian as Conservative**]. Under capitalism, workers have only the Hobson's choice of being governed/exploited or living on the street.

Anarchists point out that for choice to be real, free agreements and associations must be based on the

social equality of those who enter into them, and both sides must receive roughly equivalent benefit. But social relations between capitalists and employees can never be equal, because private ownership of the means of production gives rise to social hierarchy and relations of coercive authority and subordination, as was recognised even by Adam Smith (see [below](#)).

The picture painted by Walter Reuther of working life in America before the Wagner act is a commentary on class inequality : *"Injustice was as common as streetcars. When men walked into their jobs, they left their dignity, their citizenship and their humanity outside. They were required to report for duty whether there was work or not. While they waited on the convenience of supervisors and foremen they were unpaid. They could be fired without a pretext. They were subjected to arbitrary, senseless rules. . . .Men were tortured by regulations that made difficult even going to the toilet. Despite grandiloquent statements from the presidents of huge corporations that their door was open to any worker with a complaint, there was no one and no agency to which a worker could appeal if he were wronged. The very idea that a worker could be wronged seemed absurd to the employer."* Much of this indignity remains, and with the globalisation of capital, the bargaining position of workers is further deteriorating, so that the gains of a century of class struggle are in danger of being lost.

A quick look at the enormous disparity of power and wealth between the capitalist class and the working class shows that the benefits of the "agreements" entered into between the two sides are far from equal. Walter Block, a leading Fraser Institute ideologue, makes clear the differences in power and benefits when discussing sexual harassment in the workplace:

*"Consider the sexual harassment which continually occurs between a secretary and a boss. . . while objectionable to many women, [it] is not a coercive action. It is rather part of a package deal in which the secretary agrees to **all** aspects of the job when she agrees to accept the job, and especially when she agrees to **keep** the job. The office is, after all, private property. The secretary does not have to remain if the 'coercion' is objectionable."* [quoted by Engler, **Op. Cit.**, p. 101]

The primary goal of the Fraser Institute is to convince people that all other rights must be subordinated to the right to enjoy wealth. In this case, Block makes clear that under private property, only bosses have "freedom to," and most also desire to ensure they have "freedom from" interference with this right.

So, when capitalists gush about the "liberty" available under capitalism, what they are really thinking of is their state-protected freedom to exploit and oppress workers through the ownership of property, a freedom that allows them to continue amassing huge disparities of wealth, which in turn insures their continued power and privileges. That the capitalist class in liberal-democratic states **gives** workers the right to change masters (though this is not true under state capitalism) is far from showing that capitalism is based on freedom, For as Peter Kropotkin rightly points out, *"freedoms are not given, they are taken"* [Peter Kropotkin, **Words of a Rebel**, p. 43]. In capitalism, you are "free" to do anything you are permitted to do by your masters, which amounts to "freedom" with a collar and leash.

B.4.2 Is capitalism based on self-ownership?

Murray Rothbard, a leading "libertarian" capitalist, claims that capitalism is based on the "*basic axiom*" of "*the right to self-ownership.*" This "*axiom*" is defined as "*the absolute right of each man [sic]. . .to control [his or her] body free of coercive interference. Since each individual must think, learn, value, and choose his or her ends and means in order to survive and flourish, the right to self-ownership gives man [sic] the right to perform these vital activities without being hampered by coercive molestation.*" [**For a New Liberty**, pp. 26-27]

So far, so good. However, we reach a problem once we consider private property. As Ayn Rand, another ideologue for "free market" capitalism argued, "*there can be no such thing as the right to unrestricted freedom of speech (or of action) on someone else's property*" [**Capitalism: The Unknown Ideal**, p. 258]. Or, as is commonly said by capitalist owners, "I don't pay you to **think.**"

Similarly, capitalists don't pay their employees to perform the other "*vital activities*" listed by Rothbard (learning, valuing, choosing ends and means) -- unless, of course, the firm requires that workers undertake such activities in the interests of company profits. Otherwise, workers can rest assured that any efforts to engage in such "*vital activities*" on company time **will** be "*hampered*" by "*coercive molestation.*" Therefore wage labour (the basis of capitalism) in practice **denies** the rights associated with "self-ownership," thus alienating the individual from his or her basic rights. Or as Michael Bakunin expresses it, "*the worker sells his person and his liberty for a given time*" under capitalism.

In a society of relative equals, "private property" would not be a source of power. For example, you would still be able to fling a drunk out of your home. But in a system based on wage labour (i.e. capitalism), private property is a different thing altogether, becoming a source of **institutionalised** power and coercive authority through hierarchy. As Noam Chomsky writes, capitalism is based on "*a particular form of authoritarian control. Namely, the kind that comes through private ownership and control, which is an extremely rigid system of domination.*" When "property" is purely what you, as an individual, use (i.e. **possession**) it is not a source of power. In capitalism, however, "property" rights no longer coincide with **use** rights, and so they become a **denial** of freedom and a source of authority and power over the individual. Little wonder that Proudhon labelled property as "*theft*" and "*despotism*".

As we've seen in the discussion of hierarchy (section [A.2.8](#) and [B.1](#)), all forms of authoritarian control depend on "*coercive molestation*" -- i.e. the use or threat of sanctions. This is definitely the case in company hierarchies under capitalism. Bob Black describes the authoritarian nature of capitalism as follows:

*"[T]he place where [adults] pass the most time and submit to the closest control is at work. Thus . . . it's apparent that the source of the greatest direct duress experienced by the ordinary adult is **not** the state but rather the business that employs him. Your foreman or supervisor gives you more or-else orders in a week than the police do in a decade."*

We have already noted the objection that people can leave their jobs, which just amounts to saying "love it or leave it!" and does not address the issue at hand. Needless to say, the vast majority of the population cannot avoid wage labour. Far from being based on the "right to self-ownership," then, capitalism denies it, alienating the individual from such basic rights as free speech, independent thought, and self-management of one's own activity, which individuals have to **give up** when they are employed. But since these rights, according to Rothbard, are the products of humans **as** humans, wage labour alienates them from themselves, exactly as it does the individual's labour power and creativity.

To quote Chomsky again, "*people can survive, [only] by renting themselves to it [capitalist authority], and basically in no other way. . . .*" You do not sell your skills, as these skills are **part** of you. Instead, what you have to sell is your **time**, your labour power, and so **yourself**. Thus under wage labour, rights of "self-ownership" are always placed below property rights, the only "right" being left to you is that of finding another job (although even this right is denied in some countries if the employee owes the company money).

So, contrary to Rothbard's claim, capitalism actually alienates the right to self-ownership because of the authoritarian structure of the workplace, which derives from private property. If we desire real self-ownership, we cannot renounce it for most of our adult lives by becoming wage slaves. Only workers' self-management of production, not capitalism, can make self-ownership a reality.

B.4.3 But no one forces you to work for them!

Of course it is claimed that entering wage labour is a "voluntary" undertaking, from which both sides allegedly benefit. However, due to **past** initiations of force (e.g. the seizure of land by conquest) plus the tendency for capital to concentrate, a relative handful of people now control vast wealth, depriving all others access to the means of life. As Immanuel Wallerstein points out in **The Capitalist World System** (vol. 1), capitalism evolved from feudalism, with the first capitalists using inherited family wealth derived from large land holdings to start factories. That "inherited family wealth" can be traced back originally to conquest and forcible seizure. Thus denial of free access to the means of life is based ultimately on the principle of "might makes right." And as Murray Bookchin so rightly points out, "*the means of life must be taken for what they literally are: the means without which life is impossible. To deny them to people is more than 'theft'... it is outright homicide.*" [Murray Bookchin, **Remaking Society**, p. 187]

David Ellerman has also noted that the past use of force has resulted in the majority being limited to those options allowed to them by the powers that be:

"It is a veritable mainstay of capitalist thought... that the moral flaws of chattel slavery have not survived in capitalism since the workers, unlike the slaves, are free people making voluntary wage contracts. But it is only that, in the case of capitalism, the denial of natural rights is less complete so that the worker has a residual legal personality as a free 'commodity owner.' He is thus allowed to voluntarily put his own working life to

traffic. When a robber denies another person's right to make an infinite number of other choices besides losing his money or his life and the denial is backed up by a gun, then this is clearly robbery even though it might be said that the victim making a 'voluntary choice' between his remaining options. When the legal system itself denies the natural rights of working people in the name of the prerogatives of capital, and this denial is sanctioned by the legal violence of the state, then the theorists of 'libertarian' capitalism do not proclaim institutional robbery, but rather they celebrate the 'natural liberty' of working people to choose between the remaining options of selling their labour as a commodity and being unemployed." [quoted by Noam Chomsky, **The Chomsky Reader**, p. 186]

Therefore the existence of the labour market depends on the worker being separated from the means of production. The natural basis of capitalism is wage labour, wherein the majority have little option but to sell their skills, labour and time to those who **do** own the means of production. In advanced capitalist countries, less than 10% of the working population are self-employed (in 1990, 7.6% in the UK, 8% in the USA and Canada - however, this figure includes **employers** as well, meaning that the number of self-employed **workers** is even smaller!). Hence for the vast majority, the labour market is their only option.

Michael Bakunin notes that these facts put the worker in the position of a serf with regard to the capitalist, even though the worker is formally "free" and "equal" under the law:

*"Juridically they are both equal; but economically the worker is the serf of the capitalist . . . thereby the worker sells his person and his liberty for a given time. The worker is in the position of a serf because this terrible threat of starvation which daily hangs over his head and over his family, will force him to accept any conditions imposed by the gainful calculations of the capitalist, the industrialist, the employer. . . . The worker always has the **right** to leave his employer, but has he the means to do so? No, he does it in order to sell himself to another employer. He is driven to it by the same hunger which forces him to sell himself to the first employer. Thus the worker's liberty . . . is only a theoretical freedom, lacking any means for its possible realisation, and consequently it is only a fictitious liberty, an utter falsehood. The truth is that the whole life of the worker is simply a continuous and dismaying succession of terms of serfdom -- voluntary from the juridical point of view but compulsory from an economic sense -- broken up by momentarily brief interludes of freedom accompanied by starvation; in other words, it is real slavery."* [**The Political Philosophy of Bakunin**, pp. 187-8]

Obviously, a company cannot **force** you to work for them but, in general, you have to work for **someone**. This is because of **past** "initiation of force" by the capitalist class and the state which have created the objective conditions within which we make our employment decisions. Before any **specific** labour market contract occurs, the separation of workers from the means of production is an established fact (and the resulting "labour" market usually gives the advantage to the capitalists as a class). So while we can usually pick which capitalist to work for, we, in general, cannot choose to work for ourselves (the self-employed sector of the economy is tiny, which indicates well how spurious capitalist liberty actually is). Of course, the ability to leave employment and seek it elsewhere is an important freedom.

However, this freedom, like most freedoms under capitalism, is of limited use and hides a deeper anti-individual reality.

As Karl Polanyi puts it:

"In human terms such a postulate [of a labour market] implied for the worker extreme instability of earnings, utter absence of professional standards, abject readiness to be shoved and pushed about indiscriminately, complete dependence on the whims of the market. [Ludwig Von] Mises justly argued that if workers 'did not act as trade unionists, but reduced their demands and changed their locations and occupations according to the labour market, they would eventually find work.' This sums up the position under a system based on the postulate of the commodity character of labour. It is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed." [The Great Transformation, p. 176]

(Although we should point out that von Mises argument that workers will "eventually" find work as well as being nice and vague -- how long is "eventually"?, for example -- is contradicted by actual experience. As the Keynesian economist Michael Stewart notes, in the nineteenth century workers "*who lost their jobs had to redeploy fast or starve (and even this feature of the nineteenth century economy. . . did not prevent prolonged recessions)*" [Keynes in the 1990s, p. 31] Workers "reducing their demands" may actually worsen an economic slump, causing more unemployment in the short run and lengthening the length of the crisis. We address the issue of unemployment and workers "reducing their demands" in more detail in [section C.9](#)).

It is sometimes argued that capital needs labour, so both have an equal say in the terms offered, and hence the labour market is based on "liberty." But for capitalism to be based on real freedom or on true free agreement, both sides of the capital/labour divide must be equal in bargaining power, otherwise any agreement would favour the most powerful at the expense of the other party. However, due to the existence of private property and the states needed to protect it, this equality is de facto impossible, regardless of the theory. This is because, in general, capitalists have three advantages on the "free" labour market-- the law and state placing the rights of property above those of labour, the existence of unemployment over most of the business cycle and capitalists having more resources to fall back on. We will discuss each in turn.

The first advantage, namely property owners having the backing of the law and state, ensures that when workers go on strike or use other forms of direct action (or even when they try to form a union) the capitalist has the full backing of the state to employ scabs, break picket lines or fire "the ring-leaders." This obviously gives employers greater power in their bargaining position, placing workers in a weak position (a position that may make them, the workers, think twice before standing up for their rights).

The existence of unemployment over most of the business cycle ensures that "*employers have a*

structural advantage in the labour market, because there are typically more candidates. . . than jobs for them to fill." This means that "[c]ompetition in labour markets is typically skewed in favour of employers: it is a buyers market. And in a buyer's market, it is the sellers who compromise. Competition for labour is not strong enough to ensure that workers' desires are always satisfied." [Juliet B. Schor, **The Overworked American**, p. 71, p. 129] If the labour market generally favours the employer, then this obviously places working people at a disadvantage as the threat of unemployment and the hardships associated with encourages workers to take any job and submit to their bosses demands and power while employed. Unemployment, in other words, serves to discipline labour. The higher the prevailing unemployment rate, the harder it is to find a new job, which raises the cost of job loss and makes it less likely for workers to strike, join unions, or to resist employer demands, and so on.

As Bakunin argued, *"the property owners... are likewise forced to seek out and purchase labour... but not in the same measure . . . [there is no] equality between those who offer their labour and those who purchase it."* [Op. Cit., p. 183] This ensures that any "free agreements" made benefit the capitalists more than the workers (see the [next section](#) on periods of full employment, when conditions tilt in favour of working people).

Lastly, there is the issue of inequalities in wealth and so resources. The capitalist generally has more resources to fall back on during strikes and while waiting to find employees (for example, large companies with many factories can swap production to their other factories if one goes on strike). And by having more resources to fall back on, the capitalist can hold out longer than the worker, so placing the employer in a stronger bargaining position and so ensuring labour contracts favour them. This was recognised by Adam Smith:

"It is not difficult to foresee which of the two parties [workers and capitalists] must, upon all ordinary occasions... force the other into a compliance with their terms... In all such disputes the masters can hold out much longer... though they did not employ a single workman [the masters] could generally live a year or two upon the stocks which they already acquired. Many workmen could not subsist a week, few could subsist a month, and scarce any a year without employment. In the long-run the workman may be as necessary to his master as his master is to him; but the necessity is not so immediate. . . [I]n disputes with their workmen, masters must generally have the advantage." [**Wealth of Nations**, pp. 59-60]

How little things have changed.

So, while it is definitely the case that no one forces you to work for them, the capitalist system is such that you have little choice but to sell your liberty and labour on the "free market." Not only this, but the labour market (which is what makes capitalism capitalism) is (usually) skewed in favour of the employer, so ensuring that any "free agreements" made on it favour the boss and result in the workers submitting to domination and exploitation. This is why anarchists support collective organisation (such as unions) and resistance (such as strikes), direct action and solidarity to make us as, if not more,

powerful than our exploiters and win important reforms and improvements (and, ultimately, change society), even when faced with the disadvantages on the labour market we have indicated. The despotism associated with property (to use Proudhon's expression) is resisted by those subject to it and, needless to say, the boss does not always win.

B.4.4 But what about periods of high demand for labour?

Of course there are periods when the demand for labour exceeds supply, but these periods hold the seeds of depression for capitalism, as workers are in an excellent position to challenge, both individually and collectively, their allotted role as commodities. This point is discussed in more detail in section C.7 ([What causes the capitalist business cycle?](#)) and so we will not do so here. For now it's enough to point out that during normal times (i.e. over most of the business cycle), capitalists often enjoy extensive authority over workers, an authority deriving from the unequal bargaining power between capital and labour, as noted by Adam Smith and many others.

However, this changes during times of high demand for labour. To illustrate, let us assume that supply and demand approximate each other. It is clear that such a situation is only good for the worker. Bosses cannot easily fire a worker as there is no one to replace them and the workers, either collectively by solidarity or individually by "exit" (i.e. quitting and moving to a new job), can ensure a boss respects their interests and, indeed, can push these interests to the full. The boss finds it hard to keep their authority intact or from stopping wages rising and causing a profits squeeze. In other words, as unemployment drops, workers power increases.

Looking at it another way, giving someone the right to hire and fire an input into a production process vests that individual with considerable power over that input unless it is costless for that input to move; that is unless the input is perfectly mobile. This is only approximated in real life for labour during periods of full employment, and so perfect mobility of **labour** costs problems for a capitalist firm because under such conditions workers are not dependent on a particular capitalist and so the level of worker effort is determined far more by the decisions of workers (either collectively or individually) than by managerial authority. The threat of firing cannot be used as a threat to increase effort, and hence production, and so full employment increases workers power.

With the capitalist firm being a fixed commitment of resources, this situation is intolerable. Such times are bad for business and so occur rarely with free market capitalism (we must point out that in neo-classical economics, it is assumed that all inputs - including capital - are perfectly mobile and so the theory ignores reality and assumes away **capitalist production** itself!).

During the last period of capitalist boom, the post-war period, we can see the breakdown of capitalist authority and the fear this held for the ruling elite. The Trilateral Commission's 1975 report, which attempted to "understand" the growing discontent among the general population, makes our point well. In periods of full employment, according to the report, there is "*an excess of democracy.*" In other words, due to the increased bargaining power workers gained during a period of high demand for labour,

people started thinking about and acting upon their needs as **humans**, not as commodities embodying labour power. This naturally had devastating effects on capitalist and statist authority: *"People no longer felt the same compulsion to obey those whom they had previously considered superior to themselves in age, rank, status, expertise, character, or talent"*.

This loosening of the bonds of compulsion and obedience led to *"previously passive or unorganised groups in the population, blacks, Indians, Chicanos, white ethnic groups, students and women... embark [ing] on concerted efforts to establish their claims to opportunities, rewards, and privileges, which they had not considered themselves entitled to before."*

Such an *"excess"* of participation in politics of course posed a serious threat to the status quo, since for the elites who authored the report, it was considered axiomatic that *"the effective operation of a democratic political system usually requires some measure of apathy and non-involvement on the part of some individuals and groups. . . . In itself, this marginality on the part of some groups is inherently undemocratic, but it is also one of the factors which has enabled democracy to function effectively."* Such a statement reveals the hollowness of the establishment's concept of 'democracy,' which in order to function effectively (i.e. to serve elite interests) must be *"inherently undemocratic."*

Any period where people feel empowered allows them to communicate with their fellows, identify their needs and desires, and resist those forces that deny their freedom to manage their own lives. Such resistance strikes a deadly blow at the capitalist need to treat people as commodities, since (to re-quote Polanyi) people no longer feel that it *"is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed."* Instead, as thinking and feeling people, they act to reclaim their freedom and humanity.

As noted at the beginning of this section, the economic effects of such periods of empowerment and revolt are discussed in section [C.7](#). We will end by quoting the Polish economist Michal Kalecki, who noted that a continuous capitalist boom would **not** be in the interests of the ruling class. In 1943, in response to the more optimistic Keynesians, he noted that *"to maintain the high level of employment. . . in the subsequent boom, a strong opposition of 'business leaders' is likely to be encountered. . . lasting full employment is not at all to their liking. The workers would 'get out of hand' and the 'captains of industry' would be anxious 'to teach them a lesson'"* because *"under a regime of permanent full employment, 'the sack' would cease to play its role as a disciplinary measure. The social position of the boss would be undermined and the self assurance and class consciousness of the working class would grow. Strikes for wage increases and improvements in conditions of work would create political tension. . . 'discipline in the factories' and 'political stability' are more appreciated by business leaders than profits. Their class interest tells them that lasting full employment is unsound from their point of view and that unemployment is an integral part of the normal capitalist system."* [cited by Malcolm C. Sawyer, **The Economics of Michal Kalecki** p. 139, p. 138]

Therefore, periods when the demand for labour outstrips supply are not healthy for capitalism, as they

allow people to assert their freedom and humanity -- both fatal to the system. This is why news of large numbers of new jobs sends the stock market plunging and why capitalists are so keen these days to maintain a "natural" rate of unemployment (that it has to be maintained indicates that it is **not** "natural"). Kalecki, we must point out, also correctly predicted the rise of "*a powerful bloc*" between "*big business and the rentier interests*" against full employment and that "*they would probably find more than one economist to declare that the situation was manifestly unsound.*" The resulting "*pressure of all these forces, and in particular big business*" would "*induce the Government to return to. . . orthodox policy.*" [Kalecki, cited **Op. Cit.**, p. 140] This is exactly what happened in the 1970s, with the monetarists and other sections of the "free market" right providing the ideological support for the business lead class war, and whose "theories" (when applied) promptly generated massive unemployment, thus teaching the working class the required lesson.

So, although detrimental to profit-making, periods of recession and high unemployment are not only unavoidable but are necessary to capitalism in order to "*discipline*" workers and "*teach them a lesson.*" And in all, it is little wonder that capitalism rarely produces periods approximating full employment -- they are **not** in its interests (see also section [C.9](#)). The dynamics of capitalism makes recession and unemployment inevitable, just as it makes class struggle (which creates these dynamics) inevitable.

B.4.5 But I want to be "left alone"!

It is ironic that supporters of laissez-faire capitalism, such as "Libertarians" and "anarcho"-capitalists, should claim that they want to be "left alone," since capitalism **never** allows this. As Max Stirner expressed it:

"Restless acquisition does not let us take breath, take a calm enjoyment. We do not get the comfort of our possessions. . ." [Max Stirner **The Ego and Its Own**, p. 268]

Capitalism cannot let us "*take breath*" simply because it needs to grow or die, which puts constant pressure on both workers and capitalists (see [section D.4.1](#)). Workers can never relax or be free of anxiety about losing their jobs, because if they do not work, they do not eat, nor can they ensure that their children will get a better life. Within the workplace, they are not "left alone" by their bosses in order to manage their own activities. Instead, they are told what to do, when to do it and how to do it. Indeed, the history of experiments in workers' control and self-management within capitalist companies confirms our claims that, for the worker, capitalism is incompatible with the desire to be "left alone." As an illustration we will use the "**Pilot Program**" conducted by General Electric between 1968 and 1972.

General Electric proposed the "Pilot Program" as a means of overcoming the problems they faced with introducing Numeric Control (N/C) machinery into its plant at Lynn River Works, Massachusetts. Faced with rising tensions on the shop floor, bottle-necks in production and low-quantity products, GE management tried a scheme of "*job enrichment*" based on workers' control of production in one area of the plant. By June 1970 the workers' involved were "*on their own*" (as one manager put it) and "*[i]n terms of group job enlargement this was when the Pilot Project really began, with immediate results in*

increased output and machine utilisation, and a reduction on manufacturing losses. As one union official remarked two years later, 'The fact that we broke down a traditional policy of GE [that the union could never have a hand in managing the business] was in itself satisfying, especially when we could throw success up to them to boot.' [David Noble, **Forces of Production**, p. 295]

The project, after some initial scepticism, proved to be a great success with the workers involved. Indeed, other workers in the factory desired to be included and the union soon tried to get it spread throughout the plant and into other GE locations. The success of the scheme was that it was based on workers' managing their own affairs rather than being told what to do by their bosses -- *"We are human beings,"* said one worker, *"and want to be treated as such."* [quoted by Noble, **Op. Cit.**, p. 292] To be fully human means to be free to govern oneself in all aspects of life, including production.

However, just after a year of the workers being given control over their working lives, management stopped the project. Why? *"In the eyes of some management supporters of the 'experiment,' the Pilot Program was terminated because management as a whole refused to give up any of its traditional authority . . . [t]he Pilot Program foundered on the basic contradiction of capitalist production: Who's running the shop?"* [Noble, **Op. Cit.**, p. 318]

Noble goes on to argue that to GE's top management, *"the union's desire to extend the program appeared as a step toward greater workers control over production and, as such, a threat to the traditional authority rooted in private ownership of the means of production. Thus the decision to terminate represented a defence not only of the prerogatives of production supervisors and plant managers but also of the power vested in property ownership."* [**Ibid.**] Noble notes that this result was not an isolated case and that the *"demise of the GE Pilot Program followed the typical pattern for such 'job enrichment experiments'"* [**Op. Cit.**, p. 320] Even though *"[s]everal dozen well-documented experiments show that productivity increases and social problems decrease when workers participant in the work decisions affecting their lives"* [Department of Health, Education and Welfare study quoted by Noble, **Op. Cit.**, p. 322] such schemes are ended by bosses seeking to preserve their own power, the power that flows from private property.

As one worker in the GE Pilot Program stated, *"[w]e just want to be left alone."* They were not -- capitalist social relations prohibit such a possibility (as Noble correctly notes, *"the 'way of life' for the management meant controlling the lives of others"* [**Op. Cit.**, p. 294 and p. 300]). In spite of improved productivity, projects in workers' control are scrapped because they undermined both the power of the capitalists -- and by undermining their power, you potentially undermine their profits too (*"If we're all one, for manufacturing reasons, we must share in the fruits equitably, just like a co-op business."* [GE Pilot Program worker, quoted by Noble, **Op. Cit.**, p. 295]).

As we argue in more detail in [section J.5.12](#), profit maximisation can work against efficiency, meaning that capitalism can harm the overall economy by promoting less efficient production techniques (i.e. hierarchical ones against egalitarian ones) because it is in the interests of capitalists to do so and the capitalist market rewards that behaviour. This is because, ultimately, profits are unpaid labour. If you

empower labour, give workers' control over their work then they will increase efficiency and productivity (they know how to do their job the best) but you also erode authority structures within the workplace. Workers' will seek more and more control (freedom naturally tries to grow) and this, as the Pilot Program worker clearly saw, implies a co-operative workplace in which workers', **not** managers, decide what to do with the surplus produced. By threatening power, you threaten profits (or, more correctly, who controls the profit and where it goes). With the control over production **and** who gets to control any surplus in danger, it is unsurprising that companies soon abandon such schemes and return to the old, less efficient, hierarchical schemes based on *"Do what you are told, for as long as you are told."* Such a regime is hardly fit for free people and, as Noble notes, the regime that replaced the GE Pilot Program was *"designed to 'break' the pilots of their new found 'habits' of self-reliance, self-discipline, and self-respect."* [Op. Cit., p. 307]

Thus the experience of workers' control project within capitalist firms indicates well that capitalism cannot *"leave you alone"* if you are a wage slave.

Moreover, capitalists themselves cannot relax because they must ensure their workers' productivity rises faster than their workers' wages, otherwise their business will fail (see sections [C.2](#) and [C.3](#)). This means that every company has to innovate or be left behind, to be put out of business or work. Hence the boss is not "left alone" -- their decisions are made under the duress of market forces, of the necessities imposed by competition on individual capitalists. Restless acquisition -- in this context, the necessity to accumulate capital in order to survive in the market -- always haunts the capitalist. And since unpaid labour is the key to capitalist expansion, work must continue to exist and grow -- necessitating the boss to control the working hours of the worker to ensure that they produce more goods than they receive in wages. The boss is not "left alone" nor do they leave the worker alone.

These facts, based upon the authority relations associated with private property and relentless competition, ensure that the desire to be "left alone" cannot be satisfied under capitalism.

As Murray Bookchin observes:

*"Despite their assertions of autonomy and distrust of state authority . . . classical liberal thinkers did not in the last instance hold to the notion that the individual is completely free from lawful guidance. Indeed, their interpretation of autonomy actually presupposed quite definite arrangements beyond the individual -- notably, the laws of the marketplace. Individual autonomy to the contrary, these laws constitute a social organising system in which all 'collections of individuals' are held under the sway of the famous 'invisible hand' of competition. Paradoxically, the laws of the marketplace override the exercise of 'free will' by the same sovereign individuals who otherwise constitute the "collection of individuals." ["Communalism: The Democratic Dimension of Anarchism", p. 4, **Democracy and Nature** no. 8, pp. 1-17]*

Human interaction is an essential part of life. Anarchism proposes to eliminate only undesired social

interactions and authoritarian impositions, which are inherent in capitalism and indeed in any hierarchical form of socio-economic organisation (e.g. state socialism). Hermits soon become less than human, as social interaction enriches and develops individuality. Capitalism may attempt to reduce us to hermits, only "connected" by the market, but such a denial of our humanity and individuality inevitably feeds the spirit of revolt. In practice the "laws" of the market and the hierarchy of capital will never "leave one alone," but instead, crush one's individuality and freedom. Yet this aspect of capitalism conflicts with the human "instinct for freedom," as Noam Chomsky describes it, and hence there arises a counter-tendency toward radicalisation and rebellion among any oppressed people (see [section J](#)).

One last point. The desire to "be left alone" often expresses two drastically different ideas -- the wish to be your own master and manage your own affairs and the desire by bosses and landlords to have more power over their property. However, the authority exercised by such owners over their property is also exercised over **those who use that property**. Therefore, the notion of "being left alone" contains two contradictory aspects within a class ridden and hierarchical society. Obviously anarchists are sympathetic to the first, inherently libertarian, aspect -- the desire to manage your own life, in your own way -- but we reject the second aspect and any implication that it is in the interests of the governed to leave those in power alone. Rather, it is in the interest of the governed to subject those with authority over them to as much control as possible -- for obvious reasons.

Therefore, working people are more or less free to the extent that they **restrict** the ability of their bosses to be "left alone." One of the aims of anarchists within a capitalist society is **ensure** that those in power are **not** "left alone" to exercise their authority over those subject to it. We see solidarity, direct action and workplace and community organisation as a means of interfering with the authority of the state, capitalists and property owners until such time as we can destroy such authoritarian social relationships once and for all.

Hence anarchist dislike of the term "laissez-faire" -- within a class society it can only mean protecting the powerful against the working class (under the banner of "neutrally" enforcing property rights and so **the power derived from them**). However, we are well aware of the other, libertarian, vision expressed in the desire to be "left alone." That is the reason we have discussed why capitalist society can never actually achieve that desire -- it is handicapped by its hierarchical and competitive nature -- and how such a desire can be twisted into a means of enhancing the power of the few over the many.

A.2 What does anarchism stand for?

These words by Percy Bysshe Shelley gives an idea of what anarchism stands for in practice and what ideals drive it:

*The man
Of virtuous soul commands not, nor obeys:
Power, like a desolating pestilence,
Pollutes whate'er it touches, and obedience,
Bane of all genius, virtue, freedom, truth,
Makes slaves of men, and, of the human frame,
A mechanised automaton.*

As Shelley's lines suggest, anarchists place a high priority on liberty, desiring it both for themselves and others. They also consider individuality -- that which makes one a unique person -- to be a most important aspect of humanity. They recognise, however, that individuality does not exist in a vacuum but is a **social** phenomenon. Outside of society, individuality is impossible, since one needs other people in order to develop, expand, and grow.

Moreover, between individual and social development there is a reciprocal effect: individuals grow within and are shaped by a particular society, while at the same time they help shape and change aspects of that society (as well as themselves and other individuals) by their actions and thoughts. A society not based on free individuals, their hopes, dreams and ideas would be hollow and dead. Thus, *"the making of a human being. . . is a collective process, a process in which both community and the individual participate."* [Murray Bookchin, **The Modern Crisis**, p. 79] Consequently, any political theory which bases itself purely on the social or the individual is false.

In order for individuality to develop to the fullest possible extent, anarchists consider it essential to create a society based on three principles: **liberty**, **equality** and **solidarity**. These principles are shared by all anarchists. Thus we find, the communist-anarchist Peter Kropotkin talking about a revolution inspired by *"the beautiful words, Liberty, Equality and Solidarity."* [**The Conquest of Bread**, p. 128] Individualist-anarchist Benjamin Tucker wrote of a similar vision, arguing that anarchism *"insists on Socialism . . . on true Socialism, Anarchistic Socialism: the prevalance on earth of Liberty, Equality, and Solidarity."* [**Instead of a Book**, p. 363] All three principles are interdependent.

Liberty is essential for the full flowering of human intelligence, creativity, and dignity. To be dominated by another is to be denied the chance to think and act for oneself, which is the only way to grow and develop one's individuality. Domination also stifles innovation and personal responsibility, leading to conformity and mediocrity. Thus the society that maximises the growth of individuality will necessarily be based on voluntary association, not coercion and authority. To quote Proudhon, *"All associated and*

all free." Or, as Luigi Galleani puts it, anarchism is "*the autonomy of the individual within the freedom of association*" [**The End of Anarchism?**, p. 35] (See further section A.2.2 -- [Why do anarchists emphasise liberty?](#)).

If liberty is essential for the fullest development of individuality, then equality is essential for genuine liberty to exist. There can be no real freedom in a class-stratified, hierarchical society riddled with gross inequalities of power, wealth, and privilege. For in such a society only a few -- those at the top of the hierarchy -- are relatively free, while the rest are semi-slaves. Hence without equality, liberty becomes a mockery -- at best the "freedom" to choose one's master (boss), as under capitalism. Moreover, even the elite under such conditions are not really free, because they must live in a stunted society made ugly and barren by the tyranny and alienation of the majority. And since individuality develops to the fullest only with the widest contact with other free individuals, members of the elite are restricted in the possibilities for their own development by the scarcity of free individuals with whom to interact. (See also section A.2.5 -- [Why are anarchists in favour of equality?](#))

Finally, solidarity means mutual aid: working voluntarily and co-operatively with others who share the same goals and interests. But without liberty and equality, society becomes a pyramid of competing classes based on the domination of the lower by the higher strata. In such a society, as we know from our own, it's "dominate or be dominated," "dog eat dog," and "everyone for themselves." Thus "rugged individualism" is promoted at the expense of community feeling, with those on the bottom resenting those above them and those on the top fearing those below them. Under such conditions, there can be no society-wide solidarity, but only a partial form of solidarity within classes whose interests are opposed, which weakens society as a whole. (See also section A.2.6 -- [Why is solidarity important to anarchists?](#))

It should be noted that solidarity does not imply self-sacrifice or self-negation. As Errico Malatesta makes clear:

"we are all egoists, we all seek our own satisfaction. But the anarchist finds his greatest satisfaction in struggling for the good of all, for the achievement of a society in which he [sic] can be a brother among brothers, and among healthy, intelligent, educated, and happy people. But he who is adaptable, who is satisfied to live among slaves and draw profit from the labour of slaves, is not, and cannot be, an anarchist." [**Errico Malatesta: His Life and Ideas**, p. 23]

For anarchists, **real** wealth is other people and the planet on which we live. Or, in the words of Emma Goldman, it "*consists in things of utility and beauty, in things which help to create strong, beautiful bodies and surroundings inspiring to live in . . . [Our] goal is the freest possible expression of all the latent powers of the individual . . . Such free display of human energy being possible only under complete individual and social freedom,*" in other words "*social equality.*" [**Red Emma Speaks**, pp. 67-8]

Also, honouring individuality does not mean that anarchists are idealists, thinking that people or ideas

develop outside of society. Individuality and ideas grow and develop within society, in response to material and intellectual interactions and experiences, which people actively analyse and interpret. Anarchism, therefore, is a **materialist** theory, recognising that ideas develop and grow from social interaction and individuals' mental activity (see Michael Bakunin's **God and the State** for the classic discussion of materialism versus idealism).

This means that an anarchist society will be the creation of human beings, not some deity or other transcendental principle, since "*[n]othing ever arranges itself, least of all in human relations. It is men [sic] who do the arranging, and they do it according to their attitudes and understanding of things.*" [Alexander Berkman, **What is Anarchism?**, p. 185]

Therefore, anarchism bases itself upon the power of ideas and the ability of people to act and transform their lives based on what they consider to be right. In other words, liberty.

A.2.1 What is the essence of anarchism?

As we have seen, "*an-archy*" implies "*without rulers*" or "*without (hierarchical) authority.*" Anarchists are not against "authorities" in the sense of experts who are particularly knowledgeable, skillful, or wise, though they believe that such authorities should have no power to force others to follow their recommendations (see [section B.1](#) for more on this distinction). In a nutshell, then, anarchism is anti-authoritarianism.

Anarchists are anti-authoritarians because they believe that no human being should dominate another. Anarchists, in L. Susan Brown's words, "*believe in the inherent dignity and worth of the human individual.*" [**The Politics of Individualism**, p. 107] Domination is inherently degrading and demeaning, since it submerges the will and judgement of the dominated to the will and judgement of the dominators, thus destroying the dignity and self-respect that comes only from personal autonomy. Moreover, domination makes possible and generally leads to exploitation, which is the root of inequality, poverty, and social breakdown.

In other words, then, the essence of anarchism (to express it positively) is free co-operation between equals to maximise their liberty and individuality.

Co-operation between equals is the key to anti-authoritarianism. By co-operation we can develop and protect our own intrinsic value as unique individuals as well as enriching our lives and liberty for "*[n]o individual can recognise his own humanity, and consequently realise it in his lifetime, if not by recognising it in others and co-operating in its realisation for others . . . My freedom is the freedom of all since I am not truly free in thought and in fact, except when my freedom and my rights are confirmed and approved in the freedom and rights of all men [and women] who are my equals.*" [Michael Bakunin, quoted by Errico Malatesta, **Anarchy**, p. 30]

While being anti-authoritarians, anarchists recognise that human beings have a social nature and that

they mutually influence each other. We cannot escape the "authority" of this mutual influence, because, as Bakunin reminds us:

"The abolition of this mutual influence would be death. And when we advocate the freedom of the masses, we are by no means suggesting the abolition of any of the natural influences that individuals or groups of individuals exert on them. What we want is the abolition of influences which are artificial, privileged, legal, official." [quoted by Malatesta, **Anarchy**, p. 51]

In other words, those influences which stem from hierarchical authority.

A.2.2 Why do anarchists emphasise liberty?

An anarchist can be regarded, in Bakunin's words, as a *"fanatic lover of freedom, considering it as the unique environment within which the intelligence, dignity and happiness of mankind can develop and increase."* [**Michael Bakunin: Selected Writings**, p. 196] Because human beings are thinking creatures, to deny them liberty is to deny them the opportunity to think for themselves, which is to deny their very existence as humans. For anarchists, freedom is a product of our humanity, because:

"The very fact. . . that a person has a consciousness of self, of being different from others, creates a desire to act freely. The craving for liberty and self-expression is a very fundamental and dominant trait." [Emma Goldman, **Red Emma Speaks**, p. 439]

For this reason, anarchism *"proposes to rescue the self-respect and independence of the individual from all restraint and invasion by authority. Only in freedom can man [sic!] grow to his full stature. Only in freedom will he learn to think and move, and give the very best of himself. Only in freedom will he realise the true force of the social bonds which tie men together, and which are the true foundations of a normal social life."* [**Op. Cit.**, pp. 72-3]

Thus, for anarchists, freedom is basically individuals pursuing their own good in their own way. Doing so calls forth the activity and power of individuals as they make decisions for and about themselves and their lives. Only liberty can ensure individual development and diversity. This is because when individuals govern themselves and make their own decisions they have to exercise their minds and this can have no other effect than expanding and stimulating the individuals involved. As Malatesta put it, *"[f]or people to become educated to freedom and the management of their own interests, they must be left to act for themselves, to feel responsibility for their own actions in the good or bad that comes from them. They'd make mistakes, but they'd understand from the consequences where they'd gone wrong and try out new ways."* [**Fra Contadini**, p. 26]

So, liberty is the precondition for the maximum development of one's individual potential, which is also a social product and can be achieved only in and through community. A healthy, free community will produce free individuals, who in turn will shape the community and enrich the social relationships

between the people of whom it is composed. Liberties, being socially produced, *"do not exist because they have been legally set down on a piece of paper, but only when they have become the ingrown habit of a people, and when any attempt to impair them will meet with the violent resistance of the populace . . . One compels respect from others when one knows how to defend one's dignity as a human being. This is not only true in private life; it has always been the same in political life as well."* In fact, we *"owe all the political rights and privileges which we enjoy today in greater or lesser measures, not to the good will of their governments, but to their own strength."* [Rudolf Rocker, **Anarcho-syndicalism**, p. 75]

It is for this reason anarchists support the tactic of **"Direct Action"** (see [section J.2](#)) for, as Emma Goldman argued, we have *"as much liberty as [we are] willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social, and moral."* It requires *"integrity, self-reliance, and courage. In short, it calls for free, independent spirits"* and *"only persistent resistance"* can *"finally set [us] free. Direct action against the authority in the shop, direct action against the authority of the law, direct action against the invasive, meddling authority of our moral code, is the logical, consistent method of Anarchism."* [**Red Emma Speaks**, pp. 76-7]

Direct action is, in other words, the application of liberty, used to resist oppression in the here and now as well as the means of creating a free society. It creates the necessary individual mentality and social conditions in which liberty flourishes. Both are essential as liberty develops only within society, not in opposition to it. Thus Murray Bookchin writes:

*"What freedom, independence, and autonomy people have in a given historical period is the product of long social traditions and . . . a **collective** development -- which is not to deny that individuals play an important role in that development, indeed are ultimately obliged to do so if they wish to be free."* [**Social Anarchism or Lifestyle Anarchism**, p. 15]

But freedom requires the right **kind** of social environment in which to grow and develop. Such an environment **must** be decentralised and based on the direct management of work by those who do it. For centralisation means coercive authority (hierarchy), whereas self-management is the essence of freedom. Self-management ensures that the individuals involved use (and so develop) all their abilities -- particularly their mental ones. Hierarchy, in contrast, substitutes the activities and thoughts of a few for the activities and thoughts of all the individuals involved. Thus, rather than developing their abilities to the full, hierarchy marginalises the many and ensures that their development is blunted (see also [section B.1](#)).

It is for this reason that anarchists oppose both capitalism and statism. As the French anarchist Sebastien Faure noted, authority *"dresses itself in two principal forms: the political form, that is the State; and the economic form, that is private property."* [cited by Peter Marshall, **Demanding the Impossible**, p. 43] Capitalism, like the state, is based on centralised authority (i.e. of the boss over the worker), the very purpose of which is to keep the management of work out of the hands of those who do it. This means

"that the serious, final, complete liberation of the workers is possible only upon one condition: that of the appropriation of capital, that is, of raw material and all the tools of labour, including land, by the whole body of the workers." [Michael Bakunin, quoted by Rudolf Rocker, **Op. Cit.**, p. 50]

Hence, as Noam Chomsky argues, a *"consistent anarchist must oppose private ownership of the means of production and the wage slavery which is a component of this system, as incompatible with the principle that labour must be freely undertaken and under the control of the producer."* ["Notes on Anarchism", **For Reasons of State**, p. 158]

Thus, liberty for anarchists means a non-authoritarian society in which individuals and groups practice self-management, i.e. they govern themselves. The implications of this are important. First, it implies that an anarchist society will be non-coercive, that is, one in which violence or the threat of violence will not be used to "convince" individuals to do anything. Second, it implies that anarchists are firm supporters of individual sovereignty, and that, because of this support, they also oppose institutions based on coercive authority, i.e. hierarchy. And finally, it implies that anarchists' opposition to "government" means only that they oppose centralised, hierarchical, bureaucratic organisations or government. They do not oppose self-government through confederations of decentralised, grassroots organisations, so long as these are based on direct democracy rather than the delegation of power to "representatives" (see [section A.2.9](#) for more on anarchist organisation). For authority is the opposite of liberty, and hence any form of organisation based on the delegation of power is a threat to the liberty and dignity of the people subjected to that power.

Anarchists consider freedom to be the only social environment within which human dignity and diversity can flower. Under capitalism and statism, however, there is no freedom for the majority, as private property and hierarchy ensure that the inclination and judgement of most individuals will be subordinated to the will of a master, severely restricting their liberty and making impossible the *"full development of all the material, intellectual and moral capacities that are latent in every one of us."* [Michael Bakunin, **Bakunin on Anarchism**, p. 261]

(See [section B](#) for further discussion of the hierarchical and authoritarian nature of capitalism and statism).

A.2.3 Are anarchists in favour of organisation?

Yes. Without association, a truly human life is impossible. Liberty **cannot** exist without society and organisation. As George Barrett pointed out:

"To get the full meaning out of life we must co-operate, and to co-operate we must make agreements with our fellow-men. But to suppose that such agreements mean a limitation of freedom is surely an absurdity; on the contrary, they are the exercise of our freedom."

"If we are going to invent a dogma that to make agreements is to damage freedom, then at once freedom becomes tyrannical, for it forbids men to take the most ordinary everyday pleasures. For example, I cannot go for a walk with my friend because it is against the principle of Liberty that I should agree to be at a certain place at a certain time to meet him. I cannot in the least extend my own power beyond myself, because to do so I must co-operate with someone else, and co-operation implies an agreement, and that is against Liberty. It will be seen at once that this argument is absurd. I do not limit my liberty, but simply exercise it, when I agree with my friend to go for a walk.

"If, on the other hand, I decide from my superior knowledge that it is good for my friend to take exercise, and therefore I attempt to compel him to go for a walk, then I begin to limit freedom. This is the difference between free agreement and government." [**Objections to Anarchism**, pp. 348-9]

As far as organisation goes, anarchists think that *"far from creating authority, [it] is the only cure for it and the only means whereby each of us will get used to taking an active and conscious part in collective work, and cease being passive instruments in the hands of leaders."* [Errico Malatesta, **Errico Malatesta: His Life and Ideas**, p. 86] Thus anarchists are well aware of the need to organise in a structured and open manner. As Carole Ehrlich points out, while anarchists *"aren't opposed to structure"* and simply *"want to abolish hierarchical structure"* they are *"almost always stereotyped as wanting no structure at all."* This is not the case, for *"organisations that would build in accountability, diffusion of power among the maximum number of persons, task rotation, skill-sharing, and the spread of information and resources"* are based on *"good social anarchist principles of organisation!"* [*"Socialism, Anarchism and Feminism"*, **Quiet Rumours: An Anarcha-Feminist Reader**, p. 47 and p. 46]

The fact that anarchists are in favour of organisation may seem strange at first, but it is understandable. *"For those with experience only of authoritarian organisation,"* argue two British anarchists, *"it appears that organisation can only be totalitarian or democratic, and that those who disbelieve in government must by that token disbelieve in organisation at all. That is not so."* [Stuart Christie and Albert Meltzer, **The Floodgates of Anarchy**, p. 122] In other words, because we live in a society in which virtually all forms of organisation are authoritarian, this makes them appear to be the only kind possible. What is usually not recognised is that this mode of organisation is historically conditioned, arising within a specific kind of society -- one whose motive principles are domination and exploitation. According to archaeologists and anthropologists, this kind of society has only existed for about 5,000 years, having appeared with the first primitive states based on conquest and slavery, in which the labour of slaves created a surplus which supported a ruling class.

Prior to that time, for hundreds of thousands of years, human and proto-human societies were what Murray Bookchin calls *"organic,"* that is, based on co-operative forms of economic activity involving mutual aid, free access to productive resources, and a sharing of the products of communal labour according to need. Although such societies probably had status rankings based on age, there were no hierarchies in the sense of institutionalised dominance-subordination relations enforced by coercive

sanctions and resulting in class-stratification involving the economic exploitation of one class by another (see Murray Bookchin, **The Ecology of Freedom**).

It must be emphasised, however, that anarchists do **not** advocate going "back to the Stone Age." We merely note that since the hierarchical-authoritarian mode of organisation is a relatively recent development in the course of human social evolution, there is no reason to suppose that it is somehow "fated" to be permanent. We do not think that human beings are genetically "programmed" for authoritarian, competitive, and aggressive behaviour, as there is no credible evidence to support this claim. On the contrary, such behaviour is socially conditioned, or **learned**, and as such, can be **unlearned** (see Ashley Montagu, **The Nature of Human Aggression**). We are not fatalists or genetic determinists, but believe in free will, which means that people can change the way they do things, including the way they organise society.

And there is no doubt that society needs to be better organised, because presently most of its wealth -- which is produced by the majority -- and power gets distributed to a small, elite minority at the top of the social pyramid, causing deprivation and suffering for the rest, particularly for those at the bottom. Yet because this elite controls the means of coercion through its control of the state (see [section B.2.3](#)), it is able to suppress the majority and ignore its suffering -- a phenomenon that occurs on a smaller scale within all hierarchies. Little wonder, then, that people within authoritarian and centralised structures come to hate them as a denial of their freedom. As Alexander Berkman puts it:

"Any one who tells you that Anarchists don't believe in organisation is talking nonsense. Organisation is everything, and everything is organisation. The whole of life is organisation, conscious or unconscious . . . But there is organisation and organisation. Capitalist society is so badly organised that its various members suffer: just as when you have a pain in some part of you, your whole body aches and you are ill. . . , not a single member of the organisation or union may with impunity be discriminated against, suppressed or ignored. To do so would be the same as to ignore an aching tooth: you would be sick all over." [Op. Cit., p. 198]

Yet this is precisely what happens in capitalist society, with the result that it is, indeed, "*sick all over*."

For these reasons, anarchists reject authoritarian forms of organisation and instead support associations based on free agreement. Free agreement is important because, in Berkman's words, "[o]nly when each is a free and independent unit, co-operating with others from his own choice because of mutual interests, can the world work successfully and become powerful." [Op. Cit., p. 199] As we discuss in [section A.2.14](#), anarchists stress that free agreement has to be complemented by direct democracy (or, as it is usually called by anarchists, self-management) within the association itself otherwise "freedom" become little more than picking masters.

Anarchist organisation is based on a massive decentralisation of power back into the hands of the people, i.e. those who are directly affected by the decisions being made. To quote Proudhon:

"Unless democracy is a fraud and the sovereignty of the People a joke, it must be admitted that each citizen in the sphere of his [or her] industry, each municipal, district or provincial council within its own territory . . . should act directly and by itself in administering the interests which it includes, and should exercise full sovereignty in relation to them." [The General Idea of the Revolution, p. 276]

It also implies a need for federalism to co-ordinate joint interests. For anarchism, federalism is the natural complement to self-management. With the abolition of the State, society *"can, and must, organise itself in a different fashion, but not from top to bottom . . . The future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal. Then alone will be realised the true and life-giving order of freedom and the common good, that order which, far from denying, on the contrary affirms and brings into harmony the interests of individuals and of society."* [Bakunin, **Michael Bakunin: Selected Writings**, pp. 205-6] Because a *"truly popular organisation begins . . . from below"* and so *"federalism becomes a political institution of Socialism, the free and spontaneous organisation of popular life."* Thus libertarian socialism *"is federalistic in character."* [Bakunin, **The Political Philosophy of Bakunin**, pp. 273-4 and p. 272]

Therefore, anarchist organisation is based on direct democracy (or self-management) and federalism (or confederation). These are the expression and environment of liberty. Direct (or participatory) democracy is essential because liberty and equality imply the need for forums within which people can discuss and debate as equals and which allow for the free exercise of what Murray Bookchin calls *"the creative role of dissent."* Federalism is necessary to ensure that common interests are discussed and joint activity organised in a way which reflects the wishes of all those affected by them. To ensure that decisions flow from the bottom up rather than being imposed from the top down by a few rulers.

Anarchist ideas on libertarian organisation and the need for direct democracy and confederation will be discussed further in sections [A.2.9](#) and [A.2.11](#).

A.2.4 Are anarchists in favour of "absolute" liberty?

No. Anarchists do not believe that everyone should be able to *"do whatever they like,"* because some actions invariably involve the denial of the liberty of others.

For example, anarchists do not support the "freedom" to rape, to exploit, or to coerce others. Neither do we tolerate authority. On the contrary, since authority is a threat to liberty, equality, and solidarity (not to mention human dignity), anarchists recognise the need to resist and overthrow it.

The exercise of authority is not freedom. No one has a "right" to rule others. As Malatesta points out, anarchism supports *"freedom for everybody . . . with the only limit of the equal freedom for others; which does **not** mean . . . that we recognise, and wish to respect, the 'freedom' to exploit, to oppress, to*

command, which is oppression and certainly not freedom." [Errico Malatesta: His Life and Ideas, p. 53]

In a capitalist society, resistance to all forms of hierarchical authority is the mark of a free person -- be it private (the boss) or public (the state). As Henry David Thoreau pointed out in his essay on "**Civil Disobedience**" (1847)

"Disobedience is the true foundation of liberty. The obedient must be slaves."

A.2.5 Why are anarchists in favour of equality?

As mentioned in [above](#), anarchists are dedicated to social equality because it is the only context in which individual liberty can flourish. However, there has been much nonsense written about "equality," and much of what is commonly believed about it is very strange indeed. Before discussing what anarchist **do** mean by equality, we have to indicate what we **do not** mean by it.

Anarchists do **not** believe in "*equality of endowment*," which is not only non-existent but would be **very** undesirable if it could be brought about. Everyone is unique. Biologically determined human differences not only exist but are "*a cause for joy, not fear or regret.*" Why? Because "*life among clones would not be worth living, and a sane person will only rejoice that others have abilities that they do not share.*" [Noam Chomsky, **Marxism, Anarchism, and Alternative Futures**, p. 782]

That some people **seriously** suggest that anarchists means by "equality" that everyone should be **identical** is a sad reflection on the state of present-day intellectual culture and the corruption of words -- a corruption used to divert attention from an unjust and authoritarian system and side-track people into discussions of biology. "*The uniqueness of the self in no way contradicts the principle of equality,*" noted Erich Fromm, "*The thesis that men are born equal implies that they all share the same fundamental human qualities, that they share the same basic fate of human beings, that they all have the same inalienable claim on freedom and happiness. It furthermore means that their relationship is one of solidarity, not one of domination-submission. What the concept of equality does not mean is that all men are alike.*" [**The Fear of Freedom**, p. 228] Thus it would be fairer to say that anarchists seek equality **because** we recognise that everyone is different and, consequently, seek the full affirmation and development of that uniqueness.

Nor are anarchists in favour of so-called "*equality of outcome.*" We have **no** desire to live in a society where everyone gets the same goods, lives in the same kind of house, wears the same uniform, etc. Part of the reason for the anarchist revolt against capitalism and statism is that they standardise so much of life (see George Reitzer's **The McDonaldisation of Society** on why capitalism is driven towards standardisation and conformity). In the words of Alexander Berkman:

"The spirit of authority, law, written and unwritten, tradition and custom force us into a common grove and make a man [or woman] a will-less automation without independence

or individuality. . . All of us are its victims, and only the exceptionally strong succeed in breaking its chains, and that only partly." [What is Anarchism?, p. 165]

Anarchists, therefore, have little to desire to make this "*common grove*" even deeper. Rather, we desire to destroy it and every social relationship and institution that creates it in the first place.

"*Equality of outcome*" can only be introduced and maintained by force, which would **not** be equality anyway, as some would have more power than others! "*Equality of outcome*" is particularly hated by anarchists, as we recognise that every individual has different needs, abilities, desires and interests. To make all consume the same would be tyranny. Obviously, if one person needs medical treatment and another does not, they do not receive an "equal" amount of medical care. The same is true of other human needs. As Alexander Berkman put it:

"equality does not mean an equal amount but equal opportunity. . . Do not make the mistake of identifying equality in liberty with the forced equality of the convict camp. True anarchist equality implies freedom, not quantity. It does not mean that every one must eat, drink, or wear the same things, do the same work, or live in the same manner. Far from it: the very reverse in fact."

"Individual needs and tastes differ, as appetites differ. It is equal opportunity to satisfy them that constitutes true equality.

"Far from levelling, such equality opens the door for the greatest possible variety of activity and development. For human character is diverse . . . Free opportunity of expressing and acting out your individuality means development of natural dissimilarities and variations." [Op. Cit., pp. 164-5]

For anarchists, the "concepts" of "equality" as "equality of outcome" or "equality of endowment" are meaningless. However, in a hierarchical society, "equality of opportunity" and "equality of outcome" **are** related. Under capitalism, for example, the opportunities each generation face are dependent on the outcomes of the previous ones. This means that under capitalism "equality of opportunity" without a rough "equality of outcome" (in the sense of income and resources) becomes meaningless, as there is no real equality of opportunity for the off-spring of a millionaire and that of a road sweeper. Those who argue for "equality of opportunity" while ignoring the barriers created by previous outcomes indicate that they do not know what they are talking about -- opportunity in a hierarchical society depends not only on an open road but also upon an equal start. From this obvious fact springs the misconception that anarchists desire "equality of outcome" -- but this applies to a hierarchical system, in a free society this would not be the case (as we will see).

Equality, in anarchist theory, does not mean denying individual diversity or uniqueness. As Bakunin observes:

*"once equality has triumphed and is well established, will various individuals' abilities and their levels of energy cease to differ? Some will exist, perhaps not so many as now, but certainly some will always exist. It is proverbial that the same tree never bears two identical leaves, and this will probably be always be true. And it is even more truer with regard to human beings, who are much more complex than leaves. But this diversity is hardly an evil. On the contrary. . . it is a resource of the human race. Thanks to this diversity, humanity is a collective whole in which the one individual complements all the others and needs them. As a result, this infinite diversity of human individuals is the fundamental cause and the very basis of their solidarity. It is all-powerful argument for equality." ["All-Round Education", **The Basic Bakunin**, pp. 117-8]*

Equality for anarchists means **social** equality, or, to use Murray Bookchin's term, the *"equality of unequals"* (some like Malatesta used the term *"equality of conditions"* to express the same idea). By this he means that an anarchist society recognises the differences in ability and need of individuals but does not allow these differences to be turned into power. Individual differences, in other words, *"would be of no consequence, because inequality in fact is lost in the collectivity when it cannot cling to some legal fiction or institution."* [Michael Bakunin, **God and the State**, p. 53]

If hierarchical social relationships, and the forces that create them, are abolished in favour of ones that encourage participation and are based on the principle of "one person, one vote" then natural differences would not be able to be turned into hierarchical power. For example, without capitalist property rights there would not be means by which a minority could monopolise the means of life (machinery and land) and enrich themselves by the work of others via the wages system and usury (profits, rent and interest). Similarly, if workers manage their own work, there is no class of capitalists to grow rich off their labour. Thus Proudhon:

"Now, what can be the origin of this inequality?"

"As we see it, . . . that origin is the realisation within society of this triple abstraction: capital, labour and talent."

"It is because society has divided itself into three categories of citizen corresponding to the three terms of the formula. . . that caste distinctions have always been arrived at, and one half of the human race enslaved to the other. . . socialism thus consists of reducing the aristocratic formula of capital-labour-talent into the simpler formula of labour!. . . in order to make every citizen simultaneously, equally and to the same extent capitalist, labourer and expert or artist." [No Gods, No Masters, vol. 1, pp. 57-8]

Like all anarchists, Proudhon saw this integration of functions as the key to equality and freedom and proposed self-management as the means to achieve it. Thus self-management is the key to social equality. Social equality in the workplace, for example, means that everyone has an equal say in the policy decisions on how the workplace develops and changes. Anarchists are strong believers in the

maxim "that which touches all, is decided by all."

This does not mean, of course, that expertise will be ignored or that everyone will decide everything. As far as expertise goes, different people have different interests, talents, and abilities, so obviously they will want to study different things and do different kinds of work. It is also obvious that when people are ill they consult a doctor -- an expert -- who manages his or her own work rather than being directed by a committee. We are sorry to have to bring these points up, but once the topics of social equality and workers' self-management come up, some people start to talk nonsense. It is common sense that a hospital managed in a socially equal way will **not** involve non-medical staff voting on how doctors should perform an operation!

In fact, social equality and individual liberty are inseparable. Without the collective self-management of decisions that affect a group (equality) to complement the individual self-management of decisions that affect the individual (liberty), a free society is impossible. For without both, some will have power over others, making decisions **for** them (i.e. governing them), and thus some will be more free than others. Which implies, just to state the obvious, anarchists seek equality in **all** aspects of life, not just in terms of wealth. Anarchists *"demand for every person not just his [or her] entire measure of the wealth of society but also his [or her] portion of social power."* [Malatesta and Hamon, **No Gods, No Masters**, vol. 2, p. 20] Thus self-management is needed to ensure both liberty **and** equality.

Social equality is required for individuals to both govern and express themselves, for the self-management it implies means *"people working in face-to-face relations with their fellows in order to bring the uniqueness of their own perspective to the business of solving common problems and achieving common goals."* [George Benello, **From the Ground Up**, p. 160] Thus equality allows the expression of individuality and so is a necessary base for individual liberty.

Section F.3 (["Why do 'anarcho'-capitalists place little or no value on equality?"](#)) discusses anarchist ideas on equality further. Noam Chomsky's essay *"Equality"* (contained in **The Chomsky Reader**) is a good summary of libertarian ideas on the subject.

A.2.6 Why is solidarity important to anarchists?

Solidarity, or mutual aid, is a key idea of anarchism. It is the link between the individual and society, the means by which individuals can work together to meet their common interests in an environment that supports and nurtures both liberty and equality. For anarchists, mutual aid is a fundamental feature of human life, a source of both strength and happiness and a fundamental requirement for a fully human existence.

Erich Fromm, noted psychologist and socialist humanist, points out that the *"human desire to experience union with others is rooted in the specific conditions of existence that characterise the human species and is one of the strongest motivations of human behaviour."* [**To Be or To Have**, p.107]

Therefore anarchists consider the desire to form "unions" (to use Max Stirner's term) with other people to be a natural need. These unions, or associations, must be based on equality and individuality in order to be fully satisfying to those who join them -- i.e. they must be organised in an anarchist manner, i.e. voluntary, decentralised, and non-hierarchical.

Solidarity -- co-operation between individuals -- is necessary for life and is far from a denial of liberty. Solidarity, observed Errico Malatesta, *"is the only environment in which Man can express his personality and achieve his optimum development and enjoy the greatest possible wellbeing."* This *"coming together of individuals for the wellbeing of all, and of all for the wellbeing of each,"* results in *"the freedom of each not being limited by, but complemented -- indeed finding the necessary **raison d'etre** in -- the freedom of others."* [**Annarchy**, p. 29] In other words, solidarity and co-operation means treating each other as equals, refusing to treat others as means to an end and creating relationships which support freedom for all rather than a few dominating the many. Emma Goldman reiterated this theme, noting *"what wonderful results this unique force of man's individuality has achieved when strengthened by co-operation with other individualities . . . co-operation -- as opposed to internecine strife and struggle -- has worked for the survival and evolution of the species. . . . only mutual aid and voluntary co-operation . . . can create the basis for a free individual and associational life."* [**Red Emma Speaks**, p. 118]

Solidarity means associating together as equals in order to satisfy our common interests and needs. Forms of association not based on solidarity (i.e. those based on inequality) will crush the individuality of those subjected to them. As Ret Marut points out, liberty needs solidarity, the recognition of common interests:

*"The most noble, pure and true love of mankind is the love of oneself. **I** want to be free! **I** hope to be happy! **I** want to appreciate all the beauties of the world. But my freedom is secured **only** when all other people around me are free. I can only be happy when all other people around me are happy. I can only be joyful when all the people I see and meet look at the world with joy-filled eyes. And **only** then can I eat my fill with pure enjoyment when I have the secure knowledge that other people, too, can eat their fill as I do. And for that reason it is a question of **my own contentment**, only of **my own self**, when I rebel against every danger which threatens my freedom and my happiness. . . ."* [Ret Marut (a.k. a. B. Traven), **The BrickBurner** magazine quoted by Karl S. Guthke, **B. Traven: The life behind the legends**, pp. 133-4]

To practice solidarity means that we recognise, as in the slogan of **Industrial Workers of the World**, that *"an injury to one is an injury to all."* Solidarity, therefore, is the means to protect individuality and liberty and so is an expression of self-interest. As Alfie Kohn points out:

"when we think about co-operation. . . we tend to associate the concept with fuzzy-minded idealism. . . This may result from confusing co-operation with altruism. . . Structural co-operation defies the usual egoism/altruism dichotomy. It sets things up so that by helping

you I am helping myself at the same time. Even if my motive initially may have been selfish, our fates now are linked. We sink or swim together. Co-operation is a shrewd and highly successful strategy - a pragmatic choice that gets things done at work and at school even more effectively than competition does. . . There is also good evidence that co-operation is more conducive to psychological health and to liking one another." [**No Contest: The Case Against Competition**, p. 7]

And, within a hierarchical society, solidarity is important not only because of the satisfaction it gives us, but also because it is necessary to resist those in power. Malatesta's words are relevant here:

"the oppressed masses who have never completely resigned themselves to oppress and poverty, and who . . . show themselves thirsting for justice, freedom and wellbeing, are beginning to understand that they will not be able to achieve their emancipation except by union and solidarity with all the oppressed, with the exploited everywhere in the world." [**Anarchy**, p. 33]

By standing together, we can increase our strength and get what we want. Eventually, by organising into groups, we can start to manage our own collective affairs together and so replace the boss once and for all. "**Unions** will. . . multiply the individual's means and secure his assailed property." [Max Stirner, **The Ego and Its Own**, p. 258] By acting in solidarity, we can also replace the current system with one more to our liking: "*in union there is strength.*" [Alexander Berkman, **What is Anarchism?**, p. 74]

Solidarity is thus the means by which we can obtain and ensure our own freedom. We agree to work together so that we will not have to work for **another**. By agreeing to share with each other we increase our options so that we may enjoy **more**, not less. Mutual aid is in my self-interest -- that is, I see that it is to my advantage to reach agreements with others based on mutual respect and social equality; for if I dominate someone, this means that the conditions exist which allow domination, and so in all probability I too will be dominated in turn.

As Max Stirner saw, solidarity is the means by which we ensure that our liberty is strengthened and defended from those in power who want to rule us: "*Do you yourself count for nothing then?*", he asks. "*Are you bound to let anyone do anything he wants to you? Defend yourself and no one will touch you. If millions of people are behind you, supporting you, then you are a formidable force and you will win without difficulty.*" [quoted in Luigi Galleani's **The End of Anarchism?**, p. 79 - different translation in **The Ego and Its Own**, p. 197]

Solidarity, therefore, is important to anarchists because it is the means by which liberty can be created and defended against power. Solidarity is strength and a product of our nature as social beings. However, solidarity should not be confused with "herdism," which implies passively following a leader. In order to be effective, solidarity must be created by free people, co-operating together as **equals**. The "big WE" is **not** solidarity, although the desire for "herdism" is a product of our need for solidarity and union. It is a "solidarity" corrupted by hierarchical society, in which people are conditioned to blindly

obey leaders.

A.2.7 Why do anarchists argue for self-liberation?

Liberty, by its very nature, cannot be given. An individual cannot be freed by another, but must break his or her own chains through their own effort. Of course, self-effort can also be part of collective action, and in many cases it has to be in order to attain its ends. As Emma Goldman points out:

"History tells us that every oppressed class [or group or individual] gained true liberation from its masters by its own efforts." [**Red Emma Speaks**, p. 167]

Anarchists have long argued that people can only free themselves by their own actions. The various methods anarchists suggest to aid this process will be discussed in section J (["What Do Anarchists Do?"](#)) and will not be discussed here. However, these methods all involve people organising themselves, setting their own agendas, and acting in ways that empower them and eliminate their dependence on leaders to do things for them. Anarchism is based on people *"acting for themselves"* (performing what anarchists call *"direct action"* -- see [section J.2](#) for details).

Direct action has an empowering and liberating effect on those involved in it. Self-activity is the means by which the creativity, initiative, imagination and critical thought of those subjected to authority can be developed. It is the means by which society can be changed. As Errico Malatesta pointed out:

"Between man and his social environment there is a reciprocal action. Men make society what it is and society makes men what they are, and the result is therefore a kind of vicious circle. To transform society men [and women] must be changed, and to transform men, society must be changed . . . Fortunately existing society has not been created by the inspired will of a dominating class, which has succeeded in reducing all its subjects to passive and unconscious instruments of its interests. It is the result of a thousand internecine struggles, of a thousand human and natural factors . . ."

"From this the possibility of progress . . . We must take advantage of all the means, all the possibilities and the opportunities that the present environment allows us to act on our fellow men [and women] and to develop their consciences and their demands . . . to claim and to impose those major social transformations which are possible and which effectively serve to open the way to further advances later . . . We must seek to get all the people . . . to make demands, and impose itself and take for itself all the improvements and freedoms it desires as and when it reaches the state of wanting them, and the power to demand them . . . we must push the people to want always more and to increase its pressures [on the ruling elite], until it has achieved complete emancipation." [**Errico Malatesta: His Life and Ideas**, pp. 188-9]

Society, while shaping all individuals, is also created by them, through their actions, thoughts, and ideals. Challenging institutions that limit one's freedom is mentally liberating, as it sets in motion the process of questioning authoritarian relationships in general. This process gives us insight into how society works, changing our ideas and creating new ideals. To quote Emma Goldman again: "*True emancipation begins. . . in woman's soul.*" And in a man's too, we might add. It is only here that we can "*begin [our] inner regeneration, [cutting] loose from the weight of prejudices, traditions and customs.*" [Op. Cit., p. 167] But this process must be self-directed, for as Max Stirner notes, "*the man who is set free is nothing but a freed man. . . a dog dragging a piece of chain with him.*" [The Ego and Its Own, p. 168] By changing the world, even in a small way, we change ourselves.

In an interview during the Spanish Revolution, the Spanish anarchist militant Durutti said, "*we have a new world in our hearts.*" Only self-activity and self-liberation allows us to create such a vision and gives us the confidence to try to actualise it in the real world.

Anarchists, however, do not think that self-liberation must wait for the future, after the "glorious revolution." The personal is political, and given the nature of society, how we act in the here and now will influence the future of our society and our lives. Therefore, even in pre-anarchist society anarchists try to create, as Bakunin puts it, "*not only the ideas but also the facts of the future itself.*" We can do so by creating alternative social relationships and organisations, acting as free people in a non-free society. Only by our actions in the here and now can we lay the foundation for a free society. Moreover, this process of self-liberation goes on all the time:

"Subordinates of all kinds exercise their capacity for critical self-reflection every day -- that is why masters are thwarted, frustrated and, sometimes, overthrown. But unless masters are overthrown, unless subordinates engage in political activity, no amount of critical reflection will end their subjection and bring them freedom." [Carole Pateman, **The Sexual Contract**, p. 205]

Anarchists aim to encourage these tendencies in everyday life to reject, resist and thwart authority and bring them to their logical conclusion -- a society of free individuals, co-operating as equals in free, self-managed associations. Without this process of critical self-reflection, resistance and self-liberation a free society is impossible. Thus, for anarchists, anarchism comes from the natural resistance of subordinated people striving to act as free individuals within a hierarchical world. This process of resistance is called by many anarchists the "*class struggle*" (as it is working class people who are generally the most subordinated group within society) or, more generally, "*social struggle.*" It is this everyday resistance to authority (in all its forms) and the desire for freedom which is the key to the anarchist revolution. It is for this reason that "*anarchists emphasise over and over that the class struggle provides the only means for the workers [and other oppressed groups] to achieve control over their destiny.*" [Marie-Louise Berneri, **Neither East Nor West**, p. 32]

Revolution is a process, not an event, and every "*spontaneous revolutionary action*" usually results from and is based upon the patient work of many years of organisation and education by people with

"utopian" ideas. The process of "creating the new world in the shell of the old" (to use another **I.W.W.** expression), by building alternative institutions and relationships, is but one component of what must be a long tradition of revolutionary commitment and militancy.

As Malatesta made clear, *"to encourage popular organisations of all kinds is the logical consequence of our basic ideas, and should therefore be an integral part of our programme. . . anarchists do not want to emancipate the people; we want the people to emancipate themselves. . . , we want the new way of life to emerge from the body of the people and correspond to the state of their development and advance as they advance."* [**Op. Cit.**, p. 90]

Unless a process of self-emancipation occurs, a free society is impossible. Only when individuals free themselves, both materially (by abolishing the state and capitalism) and intellectually (by freeing themselves of submissive attitudes towards authority), can a free society be possible. We should not forget that capitalist and state power, to a great extent, is power over the minds of those subject to them (backed up, of course, with sizeable force if the mental domination fails and people start rebelling and resisting). In effect, a spiritual power as the ideas of the ruling class dominate society and permeate the minds of the oppressed. As long as this holds, the working class will acquiesce to authority, oppression and exploitation as the normal condition of life. Minds submissive to the doctrines and positions of their masters cannot hope to win freedom, to revolt and fight. Thus the oppressed must overcome the mental domination of the existing system before they can throw off its yoke (and, anarchists argue, direct action is the means of doing both -- see sections [J.2](#) and [J.4](#)). Capitalism and statism must be beaten spiritually and theoretically before it is beaten materially (many anarchists call this mental liberation "**class consciousness**" -- see [section B.7.3](#)). And self-liberation through struggle against oppression is the only way this can be done. Thus anarchists encourage (to use Kropotkin's term) "**the spirit of revolt.**"

Self-liberation is a product of struggle, of self-organisation, solidarity and direct action. Direct action is the means of creating anarchists, free people, and so *"Anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of Labour against Capital and its protector, -- the State."* This is because "[s]uch a struggle . . . better than any indirect means, permits the worker to obtain some temporary improvements in the present conditions of work, while it opens his [or her] eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his [or her] thoughts concerning the possibility of organising consumption, production and exchange without the intervention of the capitalist and the state," that is, see the possibility of a free society. Kropotkin, like many anarchists, pointed to the Syndicalist and Trade Union movements as a means of developing libertarian ideas within existing society (although he, like most anarchists, did not limit anarchist activity exclusively to them). Indeed, any movement which *"permit[s] the working men [and women] to realise their solidarity and to feel the community of their interests . . . prepare[s] the way for these conceptions"* of communist-anarchism, i.e. the overcoming the spiritual domination of existing society within the minds of the oppressed. [**Evolution and Environment**, p. 83 and p. 85]

For anarchists, in the words of a Scottish Anarchist militant, the *"history of human progress [is] seen as the history of rebellion and disobedience, with the individual debased by subservience to authority in its*

many forms and able to retain his/her dignity only through rebellion and disobedience." [Robert Lynn, **Not a Life Story, Just a Leaf from It**, p. 77] This is why anarchists stress self-liberation (and self-organisation, self-management and self-activity). Little wonder Bakunin considered "*rebellion*" as one of the "*three fundamental principles [which] constitute the essential conditions of all human development, collective or individual, in history.*" [**God and the State**, p. 12] This is simply because individuals and groups cannot be freed by others, only by themselves. Such rebellion (self-liberation) is the **only** means by which existing society becomes more libertarian and an anarchist society a possibility.

A.2.8 Is it possible to be an anarchist without opposing hierarchy?

No. We have seen that anarchists abhor authoritarianism. But if one is an anti-authoritarian, one must oppose all hierarchical institutions, since they embody the principle of authority. For, as Emma Goldman argued, "*it is not only government in the sense of the state which is destructive of every individual value and quality. It is the whole complex authority and institutional domination which strangles life. It is the superstition, myth, pretence, evasions, and subservience which support authority and institutional domination.*" [**Red Emma Speaks**, p. 435] This means that "*there is and will always be a need to discover and overcome structures of hierarchy, authority and domination and constraints on freedom: slavery, wage-slavery [i.e. capitalism], racism, sexism, authoritarian schools, etc.*" [Noam Chomsky, **Language and Politics**, p. 364]

Thus the consistent anarchist must oppose hierarchical relationships as well as the state. Whether economic, social or political, to be an anarchist means to oppose hierarchy. The argument for this (if anybody needs one) is as follows:

A hierarchy is a pyramidally-structured organisation composed of a series of grades, ranks, or offices of increasing power, prestige, and (usually) remuneration. Scholars who have investigated the hierarchical form have found that the two primary principles it embodies are domination and exploitation. For example, in his classic article "*What Do Bosses Do?*" (**Review of Radical Political Economy**, Vol. 6, No. 2), a study of the modern factory, Steven Marglin found that the main function of the corporate hierarchy is not greater productive efficiency (as capitalists claim), but greater control over workers, the purpose of such control being more effective exploitation.

Control in a hierarchy is maintained by coercion, that is, by the threat of negative sanctions of one kind or another: physical, economic, psychological, social, etc. Such control, including the repression of dissent and rebellion, therefore necessitates centralisation: a set of power relations in which the greatest control is exercised by the few at the top (particularly the head of the organisation), while those in the middle ranks have much less control and the many at the bottom have virtually none.

Since domination, coercion, and centralisation are essential features of authoritarianism, and as those features are embodied in hierarchies, all hierarchical institutions are authoritarian. Moreover, for

anarchists, any organisation marked by hierarchy, centralism and authoritarianism is state-like, or "statist." And as anarchists oppose both the state and authoritarian relations, anyone who does not seek to dismantle **all** forms of hierarchy cannot be called an anarchist. This applies to capitalist firms. As Noam Chomsky points out, the structure of the capitalist firm is extremely hierarchical, indeed fascist, in nature:

"a fascist system. . . [is] absolutist - power goes from top down . . . the ideal state is top down control with the public essentially following orders.

"Let's take a look at a corporation. . . [I]f you look at what they are, power goes strictly top down, from the board of directors to managers to lower managers to ultimately the people on the shop floor, typing messages, and so on. There's no flow of power or planning from the bottom up. People can disrupt and make suggestions, but the same is true of a slave society. The structure of power is linear, from the top down." [Keeping the Rabble in Line, p. 237]

David DeLeon indicates these similarities between the company and the state well when he writes:

"Most factories are like military dictatorships. Those at the bottom are privates, the supervisors are sergeants, and on up through the hierarchy. The organisation can dictate everything from our clothing and hair style to how we spend a large portion of our lives, during work. It can compel overtime; it can require us to see a company doctor if we have a medical complaint; it can forbid us free time to engage in political activity; it can suppress freedom of speech, press and assembly -- it can use ID cards and armed security police, along with closed-circuit TVs to watch us; it can punish dissenters with 'disciplinary layoffs' (as GM calls them), or it can fire us. We are forced, by circumstances, to accept much of this, or join the millions of unemployed. . . In almost every job, we have only the 'right' to quit. Major decisions are made at the top and we are expected to obey, whether we work in an ivory tower or a mine shaft." ["For Democracy Where We Work: A rationale for social self-management", Reinventing Anarchy, Again, Howard J. Ehrlich (ed.), pp. 193-4]

Thus the consistent anarchist must oppose hierarchy in all its forms, including the capitalist firm. Not to do so is to support **archy** -- which an anarchist, by definition, cannot do. In other words, for anarchists, "[p]romises to obey, contracts of (wage) slavery, agreements requiring the acceptance of a subordinate status, are all illegitimate because they do restrict and restrain individual autonomy." [Robert Graham, *The Anarchist Contract*, Reinventing Anarchy, Again, Howard J. Ehrlich (ed.), p. 77] Hierarchy, therefore, is against the basic principles which drive anarchism. It denies what makes us human and "divest[s] the personality of its most integral traits; it denies the very notion that the individual is **competent** to deal not only with the management of his or her personal life but with its most important context: the **social** context." [Murray Bookchin, *The Ecology of Freedom*, p. 129]

Some argue that as long as an association is voluntary, whether it has an hierarchical structure is irrelevant. Anarchists disagree. This is for two reasons. Firstly, under capitalism workers are driven by economic necessity to sell their labour (and so liberty) to those who own the means of life. This process re-enforces the economic conditions workers face by creating *"massive disparities in wealth . . . [as] workers. . . sell their labour to the capitalist at a price which does not reflect its real value."* Therefore:

"To portray the parties to an employment contract, for example, as free and equal to each other is to ignore the serious inequality of bargaining power which exists between the worker and the employer. To then go on to portray the relationship of subordination and exploitation which naturally results as the epitome of freedom is to make a mockery of both individual liberty and social justice." [Robert Graham, **Op. Cit.**, p. 70]

It is for this reason that anarchists support collective action and organisation: it increases the bargaining power of working people and allows them to assert their autonomy (see [section J](#)).

Secondly, if we take the key element as being whether an association is voluntary or not we would have to argue that the current state system must be considered as "anarchy." In a modern democracy no one forces an individual to live in a specific state. We are free to leave and go somewhere else. By ignoring the hierarchical nature of an association, you can end up supporting organisations based upon the denial of freedom (including capitalist companies, the armed forces, states even) all because they are "voluntary." As Bob Black argues, *"[t]o demonise state authoritarianism while ignoring identical albeit contract-consecrated subservient arrangements in the large-scale corporations which control the world economy is fetishism at its worst."* [*The Libertarian as Conservative*, **The Abolition of Work and other essays**, p. 142] Anarchy is more than being free to pick a master.

Therefore opposition to hierarchy is a key anarchist position, otherwise you just become a "voluntary anarchist" - which is hardly anarchistic. For more on this see section A.2.14 ([Why is voluntarism not enough?](#)).

Anarchists argue that organisations do not need to be hierarchical, they can be based upon co-operation between equals who manage their own affairs directly. In this way we can do without without hierarchical structures (i.e. the delegation of power in the hands of a few). Only when an association is self-managed by its members can it be considered truly anarchistic.

We are sorry to belabour this point, but some capitalist apologists, apparently wanting to appropriate the "anarchist" name because of its association with freedom, have recently claimed that one can be both a capitalist and an anarchist at the same time (as in so-called "anarcho" capitalism). It should now be clear that since capitalism is based on hierarchy (not to mention statism and exploitation), "anarcho"-capitalism is a contradiction in terms. (For more on this, see [Section F](#))

A.2.9 What sort of society do anarchists want?

Anarchists desire a decentralised society, based on free association. We consider this form of society the best one for maximising the values we have outlined above -- liberty, equality and solidarity. Only by a rational decentralisation of power, both structurally and territorially, can individual liberty be fostered and encouraged. The delegation of power into the hands of a minority is an obvious denial of individual liberty and dignity. Rather than taking the management of their own affairs away from people and putting it in the hands of others, anarchists favour organisations which minimise authority, keeping power at the base, in the hands of those who are affected by any decisions reached.

Free association is the cornerstone of an anarchist society. Individuals must be free to join together as they see fit, for this is the basis of freedom and human dignity. However, any such free agreement must be based on decentralisation of power; otherwise it will be a sham (as in capitalism), as only equality provides the necessary social context for freedom to grow and development. Therefore anarchists support directly democratic collectives, based on "one person one vote" (for the rationale of direct democracy as the political counterpart of free agreement, see section A.2.11 -- [Why do most anarchists support direct democracy?](#)).

We should point out here that an anarchist society does not imply some sort of idyllic state of harmony within which everyone agrees. Far from it! As Luigi Galleani points out, "*[d]isagreements and friction will always exist. In fact they are an essential condition of unlimited progress. But once the bloody area of sheer animal competition - the struggle for food - has been eliminated, problems of disagreement could be solved without the slightest threat to the social order and individual liberty.*" [**The End of Anarchism?**, p. 28] Anarchism aims to "*rouse the spirit of initiative in individuals and in groups.*" These will "*create in their mutual relations a movement and a life based on the principles of free understanding*" and recognise that "*variety, conflict even, is life and that uniformity is death.*" [Peter Kropotkin, **Anarchism**, p. 143]

Therefore, an anarchist society will be based upon co-operative conflict as "*[c]onflict, per se, is not harmful. . . disagreements exist [and should not be hidden] . . . What makes disagreement destructive is not the fact of conflict itself but the addition of competition.*" Indeed, "*a rigid demand for agreement means that people will effectively be prevented from contributing their wisdom to a group effort.*" [Alfie Kohn, **No Contest: The Case Against Competition**, p. 156] It is for this reason that most anarchists reject consensus decision making in large groups (see section [A.2.12](#)).

So, in an anarchist society associations would be run by mass assemblies of all involved, based upon extensive discussion, debate and co-operative conflict between equals, with purely administrative tasks being handled by elected committees. These committees would be made up of mandated, recallable and temporary delegates who carry out their tasks under the watchful eyes of the assembly which elected them. Thus in an anarchist society, "*we'll look after our affairs ourselves and decide what to do about them. And when, to put our ideas into action, there is a need to put someone in charge of a project, we'll tell them to do [it] in such and such a way and no other . . . nothing would be done without our decision. So our delegates, instead of people being individuals whom we've given the right to order us about, would be people . . . [with] no authority, only the duty to carry out what everyone involved*

wanted." [Errico Malatesta, **Fra Contadini**, p. 34] If the delegates act against their mandate or try to extend their influence or work beyond that already decided by the assembly (i.e. if they start to make policy decisions), they can be instantly recalled and their decisions abolished. In this way, the organisation remains in the hands of the union of individuals who created it.

This self-management by the members of a group at the base and the power of recall are essential tenets of any anarchist organisation. The **key** difference between a statist or hierarchical system and an anarchist community is who wields power. In a parliamentary system, for example, people give power to a group of representatives to make decisions for them for a fixed period of time. Whether they carry out their promises is irrelevant as people cannot recall them till the next election. Power lies at the top and those at the base are expected to obey. Similarly, in the capitalist workplace, power is held by an unelected minority of bosses and managers at the top and the workers are expected to obey.

In an anarchist society this relationship is reversed. No one individual or group (elected or unelected) holds power in an anarchist community. Instead decisions are made using direct democratic principles and, when required, the community can elect or appoint delegates to carry out these decisions. There is a clear distinction between policy making (which lies with everyone who is affected) and the co-ordination and administration of any adopted policy (which is the job for delegates).

These egalitarian communities, founded by free agreement, also freely associate together in confederations. Such a free confederation would be run from the bottom up, with decisions following from the elemental assemblies upwards. The confederations would be run in the same manner as the collectives. There would be regular local regional, "national" and international conferences in which all important issues and problems affecting the collectives involved would be discussed. In addition, the fundamental, guiding principles and ideas of society would be debated and policy decisions made, put into practice, reviewed, and co-ordinated. The delegates would simply *"take their given mandates to the relative meetings and try to harmonise their various needs and desires. The deliberations would always be subject to the control and approval of those who delegated them"* and so *"there would be no danger than the interest of the people [would] be forgotten."* [Malatesta, **Op. Cit.**, p. 36]

Action committees would be formed, if required, to co-ordinate and administer the decisions of the assemblies and their congresses, under strict control from below as discussed above. Delegates to such bodies would have a limited tenure and, like the delegates to the congresses, have a fixed mandate -- they are not able to make decisions on behalf of the people they are delegates for. In addition, like the delegates to conferences and congresses, they would be subject to instant recall by the assemblies and congresses from which they emerged in the first place. In this way any committees required to co-ordinate joint activities would be, to quote Malatesta's words, *"always under the direct control of the population"* and so express the *"decisions taken at popular assemblies."* [**Errico Malatesta: His Life and Ideas**, p. 175 and p. 129]

Most importantly, the basic community assemblies can overturn any decisions reached by the conferences and withdraw from any confederation. Any compromises that are made by a delegate during

negotiations have to go back to a general assembly for ratification. Without that ratification any compromises that are made by a delegate are not binding on the community that has delegated a particular task to a particular individual or committee. In addition, they can call confederal conferences to discuss new developments and to inform action committees about changing wishes and to instruct them on what to do about any developments and ideas.

In other words, any delegates required within an anarchist organisation or society are **not** representatives (as they are in a democratic government). Kropotkin makes the difference clear:

"The question of true delegation versus representation can be better understood if one imagines a hundred or two hundred men [and women], who meet each day in their work and share common concerns . . . who have discussed every aspect of the question that concerns them and have reached a decision. They then choose someone and send him [or her] to reach an agreement with other delegates of the same kind. . . The delegate is not authorised to do more than explain to other delegates the considerations that have led his [or her] colleagues to their conclusion. Not being able to impose anything, he [or she] will seek an understanding and will return with a simple proposition which his mandatories can accept or refuse. This is what happens when true delegation comes into being." [**Words of a Rebel**, p. 132]

Unlike in a representative system, **power** is not delegated into the hands of the few. Rather, any delegate is simply a mouthpiece for the association that elected (or otherwise selected) them in the first place. All delegates and action committees would be mandated and subject to instant recall to ensure they express the wishes of the assemblies they came from rather than their own. In this way government is replaced by anarchy, a network of free associations and communities co-operating as equals based on a system of mandated delegates, instant recall, free agreement and free federation from the bottom up.

Only this system would ensure the *"free organisation of the people, an organisation from below upwards."* This *"free federation from below upward"* would start with the basic *"association"* and their federation *"first into a commune, then a federation of communes into regions, of regions into nations, and of nations into an international fraternal association."* [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 298] This network of anarchist communities would work on three levels. There would be *"independent Communes for the territorial organisation, and of federations of Trade Unions [i.e. workplace associations] for the organisation of men [and women] in accordance with their different functions. . . [and] free combines and societies . . . for the satisfaction of all possible and imaginable needs, economic, sanitary, and educational; for mutual protection, for the propaganda of ideas, for arts, for amusement, and so on."* [Peter Kropotkin, **Evolution and Environment**, p. 79] All would be based on self-management, free association, free federation and self-organisation from the bottom up.

By organising in this manner, hierarchy is abolished in all aspects of life, because the people at the base of the organisation are in control, **not** their delegates. Only this form of organisation can replace government (the initiative and empowerment of the few) with anarchy (the initiative and empowerment

of all). This form of organisation would exist in all activities which required group work and the co-ordination of many people. It would be, as Bakunin said, the means "*to integrate individuals into structures which they could understand and control.*" [quoted by Cornelius Castoriadis, **Political and Social Writings**, vol. 2, p. 97] For individual initiatives, the individual involved would manage them.

As can be seen, anarchists wish to create a society based upon structures that ensure that no individual or group is able to wield power over others. Free agreement, confederation and the power of recall, fixed mandates and limited tenure are mechanisms by which power is removed from the hands of governments and placed in the hands of those directly affected by the decisions.

For a fuller discussion on what an anarchist society would look like see [section I](#). Anarchy, however, is not some distant goal but rather an aspect of current struggles against oppression and exploitation. Means and ends are linked, with direct action generating mass participatory organisations and preparing people to directly manage their own personal and collective interests. This is because anarchists, as we discuss in [section I.2.3](#), see the framework of a free society being based on the organisations created by the oppressed in their struggle against capitalism in the here and now. In this sense, collective struggle creates the organisations as well as the individual attitudes anarchism needs to work. The struggle against oppression is the school of anarchy. It teaches us not only how to be anarchists but also gives us a glimpse of what an anarchist society would be like, what its initial organisational framework could be and the experience of managing our own activities which is required for such a society to work. As such, anarchists try to create the kind of world we want in our current struggles and do not think our ideas are only applicable "after the revolution." Indeed, by applying our principles today we bring anarchy that much nearer.

A.2.10 What will abolishing hierarchy mean and achieve?

The creation of a new society based upon libertarian organisations will have an incalculable effect on everyday life. The empowerment of millions of people will transform society in ways we can only guess at now.

However, many consider these forms of organisation as impractical and doomed to failure. To those who say that such confederal, non-authoritarian organisations would produce confusion and disunity, anarchists maintain that the statist, centralised and hierarchical form of organisation produces indifference instead of involvement, heartlessness instead of solidarity, uniformity instead of unity, and privileged elites instead of equality. More importantly, such organisations destroy individual initiative and crush independent action and critical thinking. (For more on hierarchy, see section B.1 -- "[Why are anarchists against authority and hierarchy?](#)").

That libertarian organisation can work and is based upon (and promotes) liberty was demonstrated in the Spanish Anarchist movement. Fenner Brockway, Secretary of the British Independent Labour Party, when visiting Barcelona during the 1936 revolution, noted that "*the great solidarity that existed among*

*the Anarchists was due to each individual relying on his [sic] own strength and not depending upon leadership. . . . The organisations must, to be successful, be combined with free-thinking people; not a mass, but free individuals" [quoted by Rudolf Rocker, **Anarcho-syndicalism**, p. 67f]*

As sufficiently indicated already, hierarchical, centralised structures restrict freedom. As Proudhon noted: *"the centralist system is all very well as regards size, simplicity and construction: it lacks but one thing -- the individual no longer belongs to himself in such a system, he cannot feel his worth, his life, and no account is taken of him at all."* [quoted in **Paths in Utopia**, Martin Buber, p. 33]

The effects of hierarchy can be seen all around us. It does not work. Hierarchy and authority exist everywhere, in the workplace, at home, in the street. As Bob Black puts it, *"[i]f you spend most of your waking life taking orders or kissing ass, if you get habituated to hierarchy, you will become passive-aggressive, sado-masochistic, servile and stupefied, and you will carry that load into every aspect of the balance of your life."* [*The Libertarian as Conservative*, **The Abolition of Work and other essays**, pp. 147-8]

This means that the end of hierarchy will mean a **massive** transformation in everyday life. It will involve the creation of individual-centred organisations within which all can exercise, and so develop, their abilities to the fullest. By involving themselves and participating in the decisions that affect them, their workplace, their community and society, they can ensure the full development of their individual capacities.

With the free participation of all in social life, we would quickly see the end of inequality and injustice. Rather than people existing to make ends meet and being used to increase the wealth and power of the few as under capitalism, the end of hierarchy would see (to quote Kropotkin) *"the well-being of all"* and it is *"high time for the worker to assert his [or her] right to the common inheritance, and to enter into possession of it."* [**The Conquest of Bread**, p. 35 and p. 44] For only taking possession of the means of life (workplaces, housing, the land, etc.) can ensure *"liberty and justice, for liberty and justice are not decreed but are the result of economic independence. They spring from the fact that the individual is able to live without depending on a master, and to enjoy . . . the product of his [or her] toil."* [Ricardo Flores Magon, **Land and Liberty**, p. 62] Therefore liberty requires the abolition of capitalist private property rights in favour of *"use rights."* (see [section B.3](#) for more details). Ironically, the *"abolition of property will free the people from homelessness and nonpossession."* [Max Baginski, *"Without Government,"* **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 11] Thus anarchism promises *"both requisites of happiness -- liberty and wealth."* In anarchy, *"mankind will live in freedom and in comfort."* [Benjamin Tucker, **Why I am an Anarchist**, p. 135 and p. 136]

Only self-determination and free agreement on every level of society can develop the responsibility, initiative, intellect and solidarity of individuals and society as a whole. Only anarchist organisation allows the vast talent which exists within humanity to be accessed and used, enriching society by the very process of enriching and developing the individual. Only by involving everyone in the process of thinking, planning, co-ordinating and implementing the decisions that affect them can freedom blossom

and individuality be fully developed and protected. Anarchy will release the creativity and talent of the mass of people enslaved by hierarchy.

Anarchy will even be of benefit for those who are said to benefit from capitalism and its authority relations. Anarchists *"maintain that both rulers and ruled are spoiled by authority; both exploiters and exploited are spoiled by exploitation."* [Peter Kropotkin, **Act for Yourselves**, p. 83] This is because *"[i]n any hierarchical relationship the dominator as well as the submissive pays his dues. The price paid for the 'glory of command' is indeed heavy. Every tyrant resents his duties. He is relegated to drag the dead weight of the dormant creative potential of the submissive all along the road of his hierarchical excursion."* [For Ourselves, **The Right to Be Greedy**, Thesis 95]

A.2.11 Why are most anarchists in favour of direct democracy?

For most anarchists, direct democratic voting on policy decisions within free associations is the political counterpart of free agreement (this is also known as *"self-management"*). The reason is that *"many forms of domination can be carried out in a 'free.' non-coercive, contractual manner. . . and it is naive. . . to think that mere opposition to political control will in itself lead to an end of oppression."* [John P. Clark, **Max Stirner's Egoism**, p. 93] Thus the relationships we create **within** an organisation is as important in determining its libertarian nature as its voluntary nature (see [section A.2.14](#) for more discussion).

It is obvious that individuals must work together in order to lead a fully human life. And so, *"[h]aving to join with others humans"* the individual has three options: *"he [or she] must submit to the will of others (be enslaved) or subject others to his will (be in authority) or live with others in fraternal agreement in the interests of the greatest good of all (be an associate). Nobody can escape from this necessity."* [Errico Malatesta, **Life and Ideas**, p. 85]

Anarchists obviously pick the last option, association, as the only means by which individuals can work together as free and equal human beings, respecting the uniqueness and liberty of one another. Only within direct democracy can individuals express themselves, practice critical thought and self-government, so developing their intellectual and ethical capacities to the full. In terms of increasing an individual's freedom and their intellectual, ethical and social faculties, it is far better to be sometimes in a minority than be subject to the will of a boss all the time. So what is the theory behind anarchist direct democracy?

As Bertrand Russell noted, the anarchist *"does not wish to abolish government in the sense of collective decisions: what he does wish to abolish is the system by which a decision is enforced upon those who oppose it."* [**Roads to Freedom**, p. 85] Anarchists see self-management as the means to achieve this. Once an individual joins a community or workplace, he or she becomes a "citizen" (for want of a better word) of that association. The association is organised around an assembly of all its members (in the case of large workplaces and towns, this may be a functional sub-group such as a specific office or neighbourhood). In this assembly, in concert with others, the content of his or her political obligations

are defined. In acting within the association, people must exercise critical judgement and choice, i.e. manage their own activity. Rather than promising to obey (as in hierarchical organisations like the state or capitalist firm), individuals participate in making their own collective decisions, their own commitments to their fellows. This means that political obligation is not owed to a separate entity above the group or society, such as the state or company, but to one's fellow "citizens."

Although the assembled people collectively legislate the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed. Collectively, the associated "citizens" constitute a political "authority", but as this "authority" is based on horizontal relationships between themselves rather than vertical ones between themselves and an elite, the "authority" is non-hierarchical ("rational" or "natural," see section B.1 - ["Why are anarchists against authority and hierarchy?"](#) - for more on this). Thus Proudhon:

"In place of laws, we will put contracts [i.e. free agreement]. - No more laws voted by a majority, nor even unanimously; each citizen, each town, each industrial union, makes its own laws." [**The General Idea of the Revolution**, pp. 245-6]

Such a system does not mean, of course, that everyone participates in every decision needed, no matter how trivial. While any decision can be put to the assembly (if the assembly so decides, perhaps prompted by some of its members), in practice certain activities (and so purely functional decisions) will be handled by the association's elected administration. This is because, to quote a Spanish anarchist activist, *"a collectivity as such cannot write a letter or add up a list of figures or do hundreds of chores which only an individual can perform."* Thus the need *"to **organise the administration.**"* Supposing an association is *"organised without any directive council or any hierarchical offices"* which *"meets in general assembly once a week or more often, when it settles all matters needful for its progress"* it still *"nominates a commission with **strictly administrative functions.**"* However, the assembly *"prescribes a definite line of conduct for this commission or gives it an **imperative mandate**"* and so *"would be **perfectly anarchist.**"* As it *"follows that **delegating** these tasks to qualified individuals, who are **instructed in advance how to proceed**, . . . does not mean an abdication of that collectivity's own liberty."* [Jose Lluas Pujols, quoted by Max Nettlau, **A Short History of Anarchism**, p. 187] This, it should be noted, follows Proudhon's ideas that within the workers' associations *"all positions are elective, and the by-laws subject to the approval of the members."* [Proudhon, **Op. Cit.**, p. 222]

Instead of capitalist or statist hierarchy, self-management (i.e. direct democracy) would be the guiding principle of the freely joined associations that make up a free society. This would apply to the federations of associations an anarchist society would need to function. *"All the commissions or delegations nominated in an anarchist society,"* correctly argued Jose Lluas Pujols, *"must be subject to replacement and recall at any time by the permanent suffrage of the section or sections that elected them."* Combined with the *"imperative mandate"* and *"purely administrative functions,"* this *"make[s] it thereby impossible for anyone to arrogate to himself [or herself] a scintilla of authority."* [quoted by Max Nettlau, **Op. Cit.**, pp. 188-9] Again, Pujols follows Proudhon who demanded twenty years previously the *"implementation of the binding mandate"* to ensure the people do not *"adjure their*

sovereignty." [No Gods, No Masters, vol. 1, p. 63]

By means of a federalism based on mandates and elections, anarchists ensure that decisions flow from the bottom-up. By making our own decisions, by looking after our joint interests ourselves, we exclude others ruling over us. Self-management, for anarchists, is essential to ensure freedom within the organisations so needed for any decent human existence.

Of course it could be argued that if you are in a minority, you are governed by others ("*Democratic rule is still rule*" [L. Susan Brown, **The Politics of Individualism**, p. 53]). Now, the concept of direct democracy as we have described it is not necessarily tied to the concept of majority rule. If someone finds themselves in a minority on a particular vote, he or she is confronted with the choice of either consenting or refusing to recognise it as binding. To deny the minority the opportunity to exercise its judgement and choice is to infringe its autonomy and to impose obligation upon it which it has not freely accepted. The coercive imposition of the majority will is contrary to the ideal of self-assumed obligation, and so is contrary to direct democracy and free association. Therefore, far from being a denial of freedom, direct democracy within the context of free association and self-assumed obligation is the only means by which liberty can be nurtured ("*Individual autonomy limited by the obligation to hold given promises.*" [Malatesta, quoted by Max Nettlau, **Errico Malatesta: The Biography of an Anarchist**]). Needless to say, a minority, if it remains in the association, can argue its case and try to convince the majority of the error of its ways.

And we must point out here that anarchist support for direct democracy does not suggest we think that the majority is always right. Far from it! The case for democratic participation is not that the majority is always right, but that no minority can be trusted not to prefer its own advantage to the good of the whole. History proves what common-sense predicts, namely that anyone with dictatorial powers (by they a head of state, a boss, a husband, whatever) will use their power to enrich and empower themselves at the expense of those subject to their decisions.

Anarchists recognise that majorities can and do make mistakes and that is why our theories on association place great importance on minority rights. This can be seen from our theory of self-assumed obligation, which bases itself on the right of minorities to protest against majority decisions and makes dissent a key factor in decision making. Thus Carole Pateman:

"If the majority have acted in bad faith. . . [then the] minority will have to take political action, including politically disobedient action if appropriate, to defend their citizenship and independence, and the political association itself. . . Political disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based. . . The social practice of promising involves the right to refuse or change commitments; similarly, the practice of self-assumed political obligation is meaningless without the practical recognition of the right of minorities to refuse or withdraw consent, or where necessary, to disobey." [The Problem of Political Obligation, p. 162]

Moving beyond relationships within associations, we must highlight how different associations work together. As would be imagined, the links between associations follow the same outlines as for the associations themselves. Instead of individuals joining an association, we have associations joining confederations. The links between associations in the confederation are of the same horizontal and voluntary nature as within associations, with the same rights of "voice and exit" for members and the same rights for minorities. In this way society becomes an association of associations, a community of communities, a commune of communes, based upon maximising individual freedom by maximising participation and self-management.

The workings of such a confederation are outlined in section A.2.9 ([What sort of society do anarchists want?](#)) and discussed in greater detail in section I ([What would an anarchist society look like?](#)).

This system of direct democracy fits nicely into anarchist theory. Malatesta speaks for all anarchists when he argued that *"anarchists deny the right of the majority to govern human society in general."* As can be seen, the majority has no right to enforce itself on a minority -- the minority can leave the association at any time and so, to use Malatesta's words, do not have to *"submit to the decisions of the majority before they have even heard what these might be."* [**The Anarchist Revolution**, p. 100 and p. 101] Hence, direct democracy within voluntary association does not create "majority rule" nor assume that the minority must submit to the majority no matter what. In effect, anarchist supporters of direct democracy argue that it fits Malatesta's argument that:

"Certainly anarchists recognise that where life is lived in common it is often necessary for the minority to come to accept the opinion of the majority. When there is an obvious need or usefulness in doing something and, to do it requires the agreement of all, the few should feel the need to adapt to the wishes of the many . . . But such adaptation on the one hand by one group must be on the other be reciprocal, voluntary and must stem from an awareness of need and of goodwill to prevent the running of social affairs from being paralysed by obstinacy. It cannot be imposed as a principle and statutory norm. . ." [**Op. Cit.**, p. 100]

As the minority has the right to secede from the association as well as having extensive rights of action, protest and appeal, majority rule is not imposed as a principle. Rather, it is purely a decision making tool which allows minority dissent and opinion to be expressed (and acted upon) while ensuring that no minority forces its will on the majority. In other words, majority decisions are not binding on the minority. After all, as Malatesta argued:

"one cannot expect, or even wish, that someone who is firmly convinced that the course taken by the majority leads to disaster, should sacrifice his [or her] own convictions and passively look on, or even worse, should support a policy he [or she] considers wrong." [**Errico Malatesta: His Life and Ideas**, p. 132]

Even the Individual Anarchist Lysander Spooner acknowledged that direct democracy has its uses when

he noted that "[a]ll, or nearly all, voluntary associations give a majority, or some other portion of the members less than the whole, the right to use some **limited** discretion as to the **means** to be used to accomplish the ends in view." However, only the unanimous decision of a jury (which would "judge the law, and the justice of the law") could determine individual rights as this "tribunal fairly represent[s] the whole people" as "no law can rightfully be enforced by the association in its corporate capacity, against the goods, rights, or person of any individual, except it be such as **all** members of the association agree that it may enforce" (his support of juries results from Spooner acknowledging that it "would be impossible in practice" for **all** members of an association to agree) [**Trial by Jury**, p. 130-1f, p. 134, p. 214, p. 152 and p. 132]

Thus direct democracy and individual/minority rights need not clash. In practice, we can imagine direct democracy would be used to make most decisions within most associations (perhaps with super-majorities required for fundamental decisions) plus some combination of a jury system and minority protest/direct action and evaluate/protect minority claims/rights in an anarchist society. The actual forms of freedom can only be created through practical experience by the people directly involved.

Lastly, we must stress that anarchist support for direct democracy does not mean that this solution is to be favoured in all circumstances. For example, many small associations may favour consensus decision making (see the [next section](#) on consensus and why most anarchists do not think that it is a viable alternative to direct democracy). However, most anarchists think that direct democracy within free association is the best (and most realistic) form of organisation which is consistent with anarchist principles of individual freedom, dignity and equality.

A.2.12 Is consensus an alternative to direct democracy?

The few anarchists who reject direct democracy within free associations generally support consensus in decision making. Consensus is based upon everyone on a group agreeing to a decision before it can be put into action. Thus, it is argued, consensus stops the majority ruling the minority and is more consistent with anarchist principles.

Consensus, although the "best" option in decision making, as all agree, has its problems. As Murray Bookchin points out in describing his experience of consensus, it can have authoritarian implications:

"In order. . . to create full consensus on a decision, minority dissenters were often subtly urged or psychologically coerced to decline to vote on a troubling issue, inasmuch as their dissent would essentially amount to a one-person veto. This practice, called 'standing aside' in American consensus processes, all too often involved intimidation of the dissenters, to the point that they completely withdrew from the decision-making process, rather than make an honourable and continuing expression of their dissent by voting, even as a minority, in accordance with their views. Having withdrawn, they ceased to be political beings--so that a 'decision' could be made. . . . 'consensus' was ultimately achieved only after dissenting members nullified themselves as participants in the process.

*"On a more theoretical level, consensus silenced that most vital aspect of all dialogue, **dissensus**. The ongoing dissent, the passionate dialogue that still persists even after a minority accedes temporarily to a majority decision,. . . [can be] replaced. . . by dull monologues -- and the uncontroverted and deadening tone of consensus. In majority decision-making, the defeated minority can resolve to overturn a decision on which they have been defeated -- they are free to openly and persistently articulate reasoned and potentially persuasive disagreements. Consensus, for its part, honours no minorities, but mutes them in favour of the metaphysical 'one' of the 'consensus' group." ["Communalism: The Democratic Dimension of Anarchism", **Democracy and Nature**, no. 8, p. 8]*

Bookchin does not *"deny that consensus may be an appropriate form of decision-making in small groups of people who are thoroughly familiar with one another."* But he notes that, in practical terms, his own experience has shown him that *"when larger groups try to make decisions by consensus, it usually obliges them to arrive at the lowest common intellectual denominator in their decision-making: the least controversial or even the most mediocre decision that a sizeable assembly of people can attain is adopted-- precisely because everyone must agree with it or else withdraw from voting on that issue"* [Op. Cit., p.7]

Therefore, due to its potentially authoritarian nature, most anarchists disagree that consensus is the political aspect of free association. While it is advantageous to try to reach consensus, it is usually impractical to do so -- especially in large groups -- regardless of its other, negative effects. Often it demeans a free society or association by tending to subvert individuality in the name of community and dissent in the name of solidarity. Neither true community nor solidarity are fostered when the individual's development and self-expression are aborted by public disapproval and pressure. Since individuals are all unique, they will have unique viewpoints which they should be encouraged to express, as society evolves and is enriched by the actions and ideas of individuals.

In other words, anarchist supporters of direct democracy stress the *"creative role of dissent"* which, they fear, *"tends to fade away in the gray uniformity required by consensus."* [Op. Cit., p. 8]

We must stress that anarchists are **not** in favour of a mechanical decision making process in which the majority just vote the minority away and ignore them. Far from it! Anarchists who support direct democracy see it as a dynamic debating process in which majority and minority listen to and respect each other as far possible and create a decision which all can live with (if possible). They see the process of participation within directly democratic associations as the means of creating common interests, as a process which will encourage diversity, individual and minority expression and reduce any tendency for majorities to marginalise or oppress minorities by ensuring discussion and debate occurs on important issues.

A.2.13 Are anarchists individualists or collectivists?

The short answer is: neither. This can be seen from the fact that liberal scholars denounce anarchists like Bakunin for being "collectivists" while Marxists attack Bakunin and anarchists in general for being "individualists."

This is hardly surprising, as anarchists reject both ideologies as nonsense. Whether they like it or not, non-anarchist individualists and collectivists are two sides of the same capitalist coin. This can best be shown by considering modern capitalism, in which "individualist" and "collectivist" tendencies continually interact, often with the political and economic structure swinging from one pole to the other. Capitalist collectivism and individualism are both one-sided aspects of human existence, and like all manifestations of imbalance, deeply flawed.

For anarchists, the idea that individuals should sacrifice themselves for the "group" or "greater good" is nonsensical. Groups are made up of individuals, and if people think only of what's best for the group, the group will be a lifeless shell. It is only the dynamics of human interaction within groups which give them life. "Groups" cannot think, only individuals can. This fact, ironically, leads authoritarian "collectivists" to a most particular kind of "individualism," namely the "*cult of the personality*" and leader worship. This is to be expected, since such collectivism lumps individuals into abstract groups, denies their individuality, and ends up with the need for someone with enough individuality to make decisions -- a problem that is "solved" by the leader principle. Stalinism and Nazism are excellent examples of this phenomenon.

Therefore, anarchists recognise that individuals are the basic unit of society and that only individuals have interests and feelings. This means they oppose "collectivism" and the glorification of the group. In anarchist theory the group exists only to aid and develop the individuals involved in them. This is why we place so much stress on groups structured in a libertarian manner -- only a libertarian organisation allows the individuals within a group to fully express themselves, manage their own interests directly and to create social relationships which encourage individuality and individual freedom. So while society and the groups they join shapes the individual, the individual is the true basis of society. Hence Malatesta:

*"Much has been said about the respective roles of individual initiative and social action in the life and progress of human societies . . . [E]verything is maintained and kept going in the human world thanks to individual initiative . . . The real being is man, the individual. Society or the collectivity - and the **State** or government which claims to represent it - if it is not a hollow abstraction, must be made up of individuals. And it is in the organism of every individual that all thoughts and human actions inevitably have their origin, and from being individual they become collective thoughts and acts when they are or become accepted by many individuals. Social action, therefore, is neither the negation nor the complement of individual initiatives, but is the resultant of initiatives, thoughts and actions of all individuals who make up society . . . [T]he question is not really changing the relationship between society and the individual . . . [I]t is a question of preventing some individuals from oppressing others; of giving all individuals the same rights and the same means of action; and of replacing the initiative to the few [which Malatesta defines*

as a key aspect of government/hierarchy], which inevitably results in the oppression of everyone else . . . " [Anarchy, pp. 38-38]

These considerations do not mean that "individualism" finds favour with anarchists. As Emma Goldman pointed out, *"'rugged individualism'. . . is only a masked attempt to repress and defeat the individual and his individuality. So-called Individualism is the social and economic laissez-faire: the exploitation of the masses by the [ruling] classes by means of legal trickery, spiritual debasement and systematic indoctrination of the servile spirit . . . That corrupt and perverse 'individualism' is the straitjacket of individuality . . . [It] has inevitably resulted in the greatest modern slavery, the crassest class distinctions driving millions to the breadline. 'Rugged individualism' has meant all the 'individualism' for the masters, while the people are regimented into a slave caste to serve a handful of self-seeking 'supermen.'"* [Red Emma Speaks, p. 112]

While groups cannot think, individuals cannot live or discuss by themselves. Groups and associations are an essential aspect of individual life. Indeed, as groups generate social relationships by their very nature, they help **shape** individuals. In other words, groups structured in an authoritarian way will have a negative impact on the freedom and individuality of those within them. However, due to the abstract nature of their "individualism," capitalist individualists fail to see any difference between groups structured in a libertarian manner rather than in an authoritarian one -- they are both "groups". Because of their one-sided perspective on this issue, "individualists" ironically end up supporting some of the most "collectivist" institutions in existence -- capitalist companies -- and, moreover, always find a need for the state despite their frequent denunciations of it. These contradictions stem from capitalist individualism's dependence on individual contracts in an unequal society, i.e. **abstract** individualism.

In contrast, anarchists stress **social** "individualism" (another, perhaps better, term for this concept could be *"communal individuality"*). Anarchism *"insists that the centre of gravity in society is the individual -- that he [sic] must think for himself, act freely, and live fully. . . . If he is to develop freely and fully, he must be relieved from the interference and oppression of others. . . . [T]his has nothing in common with. . . 'rugged individualism.'* Such predatory individualism is really flabby, not rugged. At the least danger to its safety, it runs to cover of the state and wails for protection. . . . Their 'rugged individualism' is simply one of the many pretences the ruling class makes to mask unbridled business and political extortion." [Emma Goldman, **Op. Cit.**, pp. 442-3]

Anarchism rejects the **abstract** individualism of capitalism, with its ideas of "absolute" freedom of the individual which is constrained by others. This theory ignores the social context in which freedom exists and grows. *"The freedom we want,"* Malatesta argued, *"for ourselves and for others, is not an absolute metaphysical, abstract freedom which in practice is inevitably translated into the oppression of the weak; but it is a real freedom, possible freedom, which is the conscious community of interests, voluntary solidarity."* [Anarchy, p. 43]

A society based on abstract individualism results in an inequality of power between the contracting individuals and so entails the need for an authority based on laws above them and organised coercion to

enforce the contracts between them. This consequence is evident from capitalism and, most notably, in the "social contract" theory of how the state developed. In this theory it is assumed that individuals are "free" when they are isolated from each other, as they allegedly were originally in the "state of nature." Once they join society, they supposedly create a "contract" and a state to administer it. However, besides being a fantasy with no basis in reality (human beings have **always** been social animals), this "theory" is actually a justification for the state's having extensive powers over society; and this in turn is a justification of the capitalist system, which requires a strong state. It also mimics the results of the capitalist economic relations upon which this theory is built. Within capitalism, individuals "freely" contract together, but in practice the owner rules the worker for as long as the contract is in place. (See sections [A.2.14](#) and [B.4](#) for further details).

Thus anarchists reject capitalist "individualism" as being, to quote Kropotkin, *"a narrow and selfish individualism"* which, moreover, is *"a foolish egoism which belittles the individual"* and is *"not individualism at all. It will not lead to what was established as a goal; that is the complete broad and most perfectly attainable development of individuality."* The hierarchy of capitalism results in *"the impoverishment of individuality"* rather than its development. To this anarchists contrast *"the individuality which attains the greatest individual development possible through the highest communist sociability in what concerns both its primordial needs and its relationships with others in general."* [**Selected Writings on Anarchism and Revolution**, p. 295, p. 296 and p. 297] For anarchists, our freedom is enriched by those around us when we work with them as equals and not as master and servant.

In practice, both individualism and collectivism lead to a denial of both individual liberty and group autonomy and dynamics. In addition, each implies the other, with collectivism leading to a particular form of individualism and individualism leading to a particular form of collectivism.

Collectivism, with its implicit suppression of the individual, ultimately impoverishes the community, as groups are only given life by the individuals who comprise them. Individualism, with its explicit suppression of community (i.e. the people with whom you live), ultimately impoverishes the individual, since individuals do not exist apart from society but can only exist within it. In addition, individualism ends up denying the "select few" the insights and abilities of the individuals who make up the rest of society, and so is a source of self-denial. This is Individualism's fatal flaw (and contradiction), namely *"the impossibility for the individual to attain a really full development in the conditions of oppression of the mass by the 'beautiful aristocracies'. His [or her] development would remain uni-lateral."* [Peter Kropotkin, **Anarchism**, p. 293]

True liberty and community exist elsewhere.

A.2.14 Why is voluntarism not enough?

Voluntarism means that association should be voluntary in order to maximise liberty. Anarchists are, obviously, voluntarists, thinking that only in free association, created by free agreement, can individuals

develop, grow, and express their liberty. However, it is evident that under capitalism voluntarism is not enough in itself to maximise liberty.

Voluntarism implies promising (i.e. the freedom to make agreements), and promising implies that individuals are capable of independent judgement and rational deliberation. In addition, it presupposes that they can evaluate and change their actions and relationships. Contracts under capitalism, however, contradict these implications of voluntarism. For, while technically "voluntary" (though as we show in [section B.4](#), this is not really the case), capitalist contracts result in a denial of liberty. This is because the social relationship of wage-labour involves promising to obey in return for payment. And as Carole Pateman points out, *"to promise to obey is to deny or to limit, to a greater or lesser degree, individuals' freedom and equality and their ability to exercise these capacities [of independent judgement and rational deliberation]. To promise to obey is to state, that in certain areas, the person making the promise is no longer free to exercise her capacities and decide upon her own actions, and is no longer equal, but subordinate."* [**The Problem of Political Obligation**, p. 19] This results in those obeying no longer making their own decisions. Thus the rationale for voluntarism (i.e. that individuals are capable of thinking for themselves and must be allowed to express their individuality and make their own decisions) is violated in a hierarchical relationship as some are in charge and the many obey (see also [section A.2.8](#)). Thus any voluntarism which generates relationships of subordination is, by its very nature, incomplete and violates its own justification.

This can be seen from capitalist society, in which workers sell their freedom to a boss in order to live. In effect, under capitalism you are only free to the extent that you can choose whom you will obey! Freedom, however, must mean more than the right to change masters. Voluntary servitude is still servitude. For if, as Rousseau argued, sovereignty, *"for the same reason as makes it inalienable, cannot be represented"* neither can it be sold nor temporarily nullified by a hiring contract. Rousseau famously argued that the *"people of England regards itself as free; but it is grossly mistaken; it is free only during the election of members of parliament. As soon as they are elected, slavery overtakes it, and it is nothing."* [**The Social Contract and Discourses**, p. 266] Anarchists expand on this analysis. To paraphrase Rousseau:

Under capitalism the worker regards herself as free; but she is grossly mistaken; she is free only when she signs her contract with her boss. As soon as it is signed, slavery overtakes her and she is nothing but an order taker.

To see why, to see the injustice, we need only quote Rousseau:

"That a rich and powerful man, having acquired immense possessions in land, should impose laws on those who want to establish themselves there, and that he should only allow them to do so on condition that they accept his supreme authority and obey all his wishes; that, I can still conceive . . . Would not this tyrannical act contain a double usurpation: that on the ownership of the land and that on the liberty of the inhabitants?" [**Op. Cit.**, p. 316]

Hence Proudhon's comment that "*Man may be made by property a slave or a despot by turns.*" [**What is Property?**, p. 371] Little wonder we discover Bakunin rejecting "*any contract with another individual on any footing but the utmost equality and reciprocity*" as this would "*alienate his [or her] freedom*" and so would be a "*a relationship of voluntary servitude with another individual.*" Anyone making such a contract in a free society (i.e. anarchist society) would be "*devoid of any sense of personal dignity.*" [**Michael Bakunin: Selected Writings**, pp. 68-9] Only self-managed associations can create relationships of equality rather than of subordination between its members.

Therefore anarchists stress the need for direct democracy in voluntary associations in order to ensure that the concept of "freedom" is not a sham and a justification for domination, as it is under capitalism. Only self-managed associations can create relationships of equality rather than of subordination between its members.

It is for this reason that anarchists have opposed capitalism and urged "*workers to form themselves into democratic societies, with equal conditions for all members, on pain of a relapse into feudalism.*" [Proudhon, **The General Idea of the Revolution**, p. 277] For similar reasons, anarchists (with the notable exception of Proudhon) opposed marriage as it turned women into "*a bonded slave, who takes her master's name, her master's bread, her master's commands, and serves her master's passions . . . who can control no property, not even her own body, without his consent.*" [Voltairine de Cleyre, quoted by Paul Avrich, **An American Anarchist: The Life of Voltairine de Cleyre**, p. 160] While marriage, due to feminist agitation, in many countries has been reformed towards the anarchist ideal of a free union of equals, it still is based on the patriarchal principles anarchists like Goldman and de Cleyre identified and condemned (see [section A.3.5](#) for more on feminism and anarchism).

Clearly, voluntary entry is a necessary but not a sufficient condition to defend an individual's liberty. This is to be expected as it ignores (or takes for granted) the social conditions in which agreements are made and, moreover, ignores the social relationships created by them ("*For the worker who **must** sell his labour, it is impossible to remain free.*" [Kropotkin, **Selected Writings on Anarchism and Revolution**, p. 305]). Any social relationships based on abstract individualism are likely to be based upon force, power, and authority, **not** liberty. This of course assumes a definition of liberty according to which individuals exercise their capacities and decide their own actions. Therefore, voluntarism is **not** enough to create a society that maximises liberty. This is why anarchists think that voluntary association **must** be complemented by self-management (direct democracy) **within** these associations. For anarchists, the assumptions of voluntarism imply self-management. Or, to use Proudhon's words, "*as individualism is the primordial fact of humanity, so association is its complementary term.*" [**System of Economical Contradictions**, p. 430]

To answer the second objection first, in a society based on private property (and so statism), those with property have more power, which they can use to perpetuate their authority. "*Wealth is power, poverty is weakness,*" in the words of Albert Parsons. This means that under capitalism the much praised "freedom to choose" is extremely limited. It becomes, for the vast majority, the freedom to pick a master (under slavery, quipped Parsons, the master "*selected . . . his own slaves. Under the wage slavery system the*

wage slave selects his master."). Under capitalism, Parsons stressed, *"those disinherited of their natural rights must hire out and serve and obey the oppressing class or starve. There is no other alternative. Some things are priceless, chief among which are life and liberty. A freeman [or woman] is not for sale or hire."* [**Anarchism**, p. 99 and p. 98] And why should we excuse servitude or tolerate those who desire to restrict the liberty of others? The "liberty" to command is the liberty to enslave, and so is actually a denial of liberty.

Regarding the first objection, anarchists plead guilty. We **are** prejudiced against the reduction of human beings to the status of robots. We are prejudiced in favour of human dignity and freedom. We are prejudiced, in fact, in favour of humanity and individuality.

([Section A.2.11](#) discusses why direct democracy is the necessary social counterpart to voluntarism (i.e. free agreement). [Section B.4](#) discusses why capitalism cannot be based on equal bargaining power between property owners and the propertyless).

A.2.15 What about "human nature"?

Anarchists, far from ignoring "human nature," have the only political theory that gives this concept deep thought and reflection. Too often, "human nature" is flung up as the last line of defence in an argument against anarchism, because it is thought to be beyond reply. This is not the case, however. First of all, human nature is a complex thing. If, by human nature, it is meant "what humans do," it is obvious that human nature is contradictory -- love and hate, compassion and heartlessness, peace and violence, and so on, have all been expressed by people and so are all products of "human nature." Of course, what is considered "human nature" can change with changing social circumstances. For example, slavery was considered part of "human nature" and "normal" for thousands of years. Homosexuality was considered perfectly normal by the ancient Greeks yet thousands of years later the Christian church denounced it as unnatural. War only become part of "human nature" once states developed. Hence Chomsky:

"Individuals are certainly capable of evil . . . But individuals are capable of all sorts of things. Human nature has lots of ways of realising itself, humans have lots of capacities and options. Which ones reveal themselves depends to a large extent on the institutional structures. If we had institutions which permitted pathological killers free rein, they'd be running the place. The only way to survive would be to let those elements of your nature manifest themselves.

"If we have institutions which make greed the sole property of human beings and encourage pure greed at the expense of other human emotions and commitments, we're going to have a society based on greed, with all that follows. A different society might be organised in such a way that human feelings and emotions of other sorts, say, solidarity, support, sympathy become dominant. Then you'll have different aspects of human nature and personality revealing themselves." [**Chronicles of Dissent**, pp. 158]

Therefore, environment plays an important part in defining what "human nature" is, how it develops and what aspects of it are expressed. Indeed, one of the greatest myths about anarchism is the idea that we think human nature is inherently good (rather, we think it is inherently sociable). How it develops and expresses itself is dependent on the kind of society we live in and create. A hierarchical society will shape people in certain (negative) ways and produce a "human nature" radically different from a libertarian one. So *"when we hear men [and women] saying that Anarchists imagine men [and women] much better than they really are, we merely wonder how intelligent people can repeat that nonsense. Do we not say continually that the only means of rendering men [and women] less rapacious and egotistic, less ambitious and less slavish at the same time, is to eliminate those conditions which favour the growth of egotism and rapacity, of slavishness and ambition?"* [Peter Kropotkin, **Act for Yourselves**, p. 83]

As such, the use of "human nature" as an argument against anarchism is simply superficial and, ultimately, an evasion. It is an excuse not to think. *"Every fool,"* as Emma Goldman put it, *"from king to policemen, from the flatheaded parson to the visionless dabbler in science, presumes to speak authoritatively of human nature. The greater the mental charlatan, the more definite his insistence on the wickedness and weakness of human nature. Yet how can any one speak of it to-day, with every soul in prison, with every heart fettered, wounded, and maimed?"* Change society, create a better social environment and then we can judge what is a product of our natures and what is the product of an authoritarian system. For this reason, anarchism *"stands for the liberation of the human mind from the dominion of religion; the liberation of the human body from the dominion of property; liberation from the shackles and restraint of government."* For *"[f]reedom, expansion, opportunity, and above all, peace and repose, alone can teach us the real dominant factors of human nature and all its wonderful possibilities."* [**Red Emma Speaks**, p. 73]

This does not mean that human beings are infinitely plastic, with each individual born a **tabula rasa** (blank slate) waiting to be formed by "society" (which in practice means those who run it). As Noam Chomsky argues, *"I don't think its possible to give a rational account of the concept of alienated labour on that assumption [that human nature is nothing but a historical product], nor is it possible to produce something like a moral justification for the commitment to some kind of social change, except on the basis of assumptions about human nature and how modifications in the structure of society will be better able to conform to some of the fundamental needs that are part of our essential nature."* [**Language and Politics**, p. 215] We do not wish to enter the debate about what human characteristics are and are not "innate." All we will say is that human beings have an innate ability to think and learn -- that much is obvious, we feel -- and that humans are sociable creatures, needing the company of others to feel complete and to prosper. Moreover, they have the ability to recognise and oppose injustice and oppression (Bakunin rightly considered *"the power to think and the desire to rebel"* as *"precious faculties."*) [**God and the State**, p. 9]).

These three features, we think, suggest the viability of an anarchist society. The innate ability to think for oneself automatically makes all forms of hierarchy illegitimate, and our need for social relationships implies that we can organise without the state. The deep unhappiness and alienation afflicting modern society reveals that the centralisation and authoritarianism of capitalism and the state is denying some innate needs within us. In fact, as mentioned earlier, for the great majority of its existence the human

race **has** lived in anarchic communities, with little or no hierarchy. That modern society calls such people "savages" or "primitive" is pure arrogance. So who can tell whether anarchism is against "human nature"? Anarchists have accumulated much evidence to suggest that it may not be.

As for the charge the anarchists demand too much of "human nature," it is often **non** anarchists who make the greatest claims on it. For *"while our opponents seem to admit there is a kind of salt of the earth -- the rulers, the employers, the leaders -- who, happily enough, prevent those bad men -- the ruled, the exploited, the led -- from becoming still worse than they are"* we anarchists *"maintain that **both** rulers and ruled are spoiled by authority"* and *"**both** exploiters and exploited are spoiled by exploitation."* So *"there is [a] difference, and a very important one. **We** admit the imperfections of human nature, but we make no exception for the rulers. **They** make it, although sometimes unconsciously, and because we make no such exception, they say that we are dreamers."* [Peter Kropotkin, **Act for Yourselves**, p. 83] If human nature is so bad, then giving some people power over others and hoping this will lead to justice and freedom is hopelessly utopian.

Moreover, as noted, Anarchists argue that hierarchical organisations bring out the worse in human nature. Both the oppressor and the oppressed are negatively affected by the authoritarian relationships so produced. *"It is a characteristic of privilege and of every kind of privilege,"* argued Bakunin, *"to kill the mind and heart of man . . . That is a social law which admits no exceptions . . . It is the law of equality and humanity."* [**God and the State**, p. 31] And while the privileged become corrupted by power, the powerless (in general) become servile in heart and mind (luckily the human spirit is such that there will always be rebels no matter the oppression for where there is oppression, there is resistance and, consequently, hope). As such, it seems strange for anarchists to hear non-anarchists justify hierarchy in terms of the (distorted) "human nature" it produces.

Sadly, too many have done precisely this. It continues to this day. For example, with the rise of "sociobiology," some claim (with very little **real** evidence) that capitalism is a product of our "nature," which is determined by our genes. These claims are simply a new variation of the "human nature" argument and have, unsurprisingly, been leapt upon by the powers that be. Considering the dearth of evidence, their support for this "new" doctrine must be purely the result of its utility to those in power -- i.e. the fact that it is useful to have an "objective" and "scientific" basis to rationalise inequalities in wealth and power (for a discussion of this process see **Not in Our Genes: Biology, Ideology and Human Nature** by Steven Rose, R.C. Lewontin and Leon J. Kamin).

This is not to say that it does not hold a grain of truth. As scientist Stephen Jay Gould notes, *"the range of our potential behaviour is circumscribed by our biology"* and if this is what sociobiology means *"by genetic control, then we can scarcely disagree."* However, this is not what is meant. Rather, it is a form of *"biological determinism"* that sociobiology argues for. Saying that there are specific genes for specific human traits says little for while *"[v]iolence, sexism, and general nastiness **are** biological since they represent one subset of a possible range of behaviours"* so are *"peacefulness, equality, and kindness."* And so *"we may see their influence increase if we can create social structures that permit them to flourish."* That this may be the case can be seen from the works of sociobiologists themselves, who *"acknowledge diversity"* in human cultures while *"often dismiss[ing] the uncomfortable 'exceptions' as*

temporary and unimportant aberrations." This is surprising, for if you believe that *"repeated, often genocidal warfare has shaped our genetic destiny, the existence of nonaggressive peoples is embarrassing."* [Ever Since Darwin, p. 252, p. 257 and p. 254]

Like the social Darwinism that preceded it, sociobiology proceeds by first projecting the dominant ideas of current society onto nature (often unconsciously, so that scientists mistakenly consider the ideas in question as both "normal" and "natural"). Then the theories of nature produced in this manner are transferred **back** onto society and history, being used to "prove" that the principles of capitalism (hierarchy, authority, competition, etc.) are eternal **laws**, which are then appealed to as a justification for the status quo! Amazingly, there are many supposedly intelligent people who take this sleight-of-hand seriously.

This can be seen when "hierarchies" in nature are used to explain, and so justify, hierarchies in human societies. Such analogies are misleading for they forget the institutional nature of human life. As Murray Bookchin notes in his critique of sociobiology, a *"weak, enfeebled, unnerved, and sick ape is hardly likely to become an 'alpha' male, much less retain this highly ephemeral 'status.'* By contrast, the most physically and mentally pathological human rulers have exercised authority with devastating effect in the course of history." This *"expresses a power of hierarchical **institutions** over persons that is completely reversed in so-called 'animal hierarchies' where the absence of institutions is precisely the only intelligible way of talking about 'alpha males' or 'queen bees.'"* ["Sociobiology or Social Ecology", **Which way for the Ecology Movement?**, p. 58] Thus what makes human society unique is conveniently ignored and the real sources of power in society are hidden under a genetic screen.

The sort of apologetics associated with appeals to "human nature" (or sociobiology at its worse) are natural, of course, because every ruling class needs to justify their right to rule. Hence they support doctrines that defined the latter in ways appearing to justify elite power -- be it sociobiology, divine right, original sin, etc. Obviously, such doctrines have always been wrong . . . until now, of course, as it is obvious our current society truly conforms to "human nature" and it has been scientifically proven by our current scientific priesthood!

The arrogance of this claim is truly amazing. History hasn't stopped. One thousand years from now, society will be completely different from what it is presently or from what anyone has imagined. No government in place at the moment will still be around, and the current economic system will not exist. The only thing that may remain the same is that people will still be claiming that their new society is the "One True System" that completely conforms to human nature, even though all past systems did not.

Of course, it does not cross the minds of supporters of capitalism that people from different cultures may draw different conclusions from the same facts -- conclusions that may be **more** valid. Nor does it occur to capitalist apologists that the theories of the "objective" scientists may be framed in the context of the dominant ideas of the society they live in. It comes as no surprise to anarchists, however, that scientists working in Tsarist Russia developed a theory of evolution based on **cooperation** within species, quite unlike their counterparts in capitalist Britain, who developed a theory based on **competitive struggle**

within and between species. That the latter theory reflected the dominant political and economic theories of British society (notably competitive individualism) is pure coincidence, of course.

Kropotkin's classic work **Mutual Aid**, for example, was written in response to the obvious inaccuracies that British representatives of Darwinism had projected onto nature and human life. Building upon the mainstream Russian criticism of the British Darwinism of the time, Kropotkin showed (with substantial empirical evidence) that "mutual aid" within a group or species played as important a role as "mutual struggle" between individuals within those groups or species (see Stephan Jay Gould's essay "*Kropotkin was no Crackpot*" in his book **Bully for Brontosaurus** for details and an evaluation). It was, he stressed, a "*factor*" in evolution along with competition, a factor which, in most circumstances, was far more important to survival. Thus co-operation is just as "natural" as competition so proving that "human nature" was not a barrier to anarchism as co-operation between members of a species can be the best pathway to advantage individuals.

To conclude. Anarchists argue that anarchy is not against "human nature" for two main reasons. Firstly, what is considered as being "human nature" is shaped by the society we live in and the relationships we create. This means a hierarchical society will encourage certain personality traits to dominate while an anarchist one would encourage others. As such, anarchists "*do not so much rely on the fact that human nature will change as they do upon the theory that the some nature will act differently under different circumstances.*" Secondly, change "*seems to be one of the fundamental laws of existence*" so "*who can say that man [sic!] has reached the limits of his possibilities.*" [George Barrett, **Objections to Anarchism**, pp. 360-1 and p. 360]

For useful discussions on anarchist ideas on human nature, both of which refute the idea that anarchists think human beings are naturally good, see Peter Marshall's "*Human nature and anarchism*" [David Goodway (ed.), **For Anarchism: History, Theory and Practice**, pp. 127-149] and David Hartley's "*Communitarian Anarchism and Human Nature*". [**Anarchist Studies**, vol. 3, no. 2, Autumn 1995, pp. 145-164]

A.2.16 Does anarchism require "perfect" people to work?

No. Anarchy is not a utopia, a "perfect" society. It will be a *human* society, with all the problems, hopes, and fears associated with human beings. Anarchists do not think that human beings need to be "perfect" for anarchy to work. They only need to be free. Thus Christie and Meltzer:

"[A] common fallacy [is] that revolutionary socialism [i.e. anarchism] is an 'idealisation' of the workers and [so] the mere recital of their present faults is a refutation of the class struggle . . . it seems morally unreasonable that a free society . . . could exist without moral or ethical perfection. But so far as the overthrow of [existing] society is concerned, we may ignore the fact of people's shortcomings and prejudices, so long as they do not become institutionalised. One may view without concern the fact . . . that the workers might achieve control of their places of work long before they had acquired the social

graces of the 'intellectual' or shed all the prejudices of the present society from family discipline to xenophobia. What does it matter, so long as they can run industry without masters? Prejudices wither in freedom and only flourish while the social climate is favourable to them . . . What we say is . . . that once life can continue without imposed authority from above, and imposed authority cannot survive the withdrawal of labour from its service, the prejudices of authoritarianism will disappear. There is no cure for them other than the free process of education." [**The Floodgates of Anarchy**, pp. 36-7]

Obviously, though, we think that a free society will produce people who are more in tune with both their own and others individuality and needs, thus reducing individual conflict. Remaining disputes would be solved by reasonable methods, for example, the use of juries, mutual third parties, or community and workplace assemblies (see [section I.5.8](#) for a discussion of how could be done for anti-social activities as well as disputes).

Like the "anarchism-is-against-human-nature" argument (see [section A.2.15](#)), opponents of anarchism usually assume "perfect" people -- people who are not corrupted by power when placed in positions of authority, people who are strangely unaffected by the distorting effects of hierarchy, privilege, and so forth. However, anarchists make no such claims about human perfection. We simply recognise that vesting power in the hands of one person or an elite is never a good idea, as people are not perfect.

It should be noted that the idea that anarchism requires a "new" (perfect) man or woman is often raised by the opponents of anarchism to discredit it (and, usually, to justify the retention of hierarchical authority, particularly capitalist relations of production). After all, people are not perfect and are unlikely ever to be. As such, they pounce on every example of a government falling and the resulting chaos to dismiss anarchism as unrealistic. The media loves to proclaim a country to be falling into "anarchy" whenever there is a disruption in "law and order" and looting takes place.

Anarchists are not impressed by this argument. A moment's reflection shows why, for the detractors make the basic mistake of assuming an anarchist society without anarchists! (A variation of such claims is raised by the right-wing "anarcho"-capitalists to discredit real anarchism. However, their "objection" discredits their own claim to be anarchists for they implicitly assume an anarchist society without anarchists!). Needless to say, an "anarchy" made up of people who still saw the need for authority, property and statism would soon become authoritarian (i.e. non-anarchist) again. This is because even if the government disappeared tomorrow, the same system would soon grow up again, because *"the strength of the government rests not with itself, but with the people. A great tyrant may be a fool, and not a superman. His strength lies not in himself, but in the superstition of the people who think that it is right to obey him. So long as that superstition exists it is useless for some liberator to cut off the head of tyranny; the people will create another, for they have grown accustomed to rely on something outside themselves."* [George Barrett, **Objections to Anarchism**, p. 355]

Hence Alexander Berkman:

"Our social institutions are founded on certain ideas; as long as the latter are generally believed, the institutions built on them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present day conditions means the ultimate breakdown of government and capitalism." [What is Anarchism?, p. xii]

In other words, anarchy needs *anarchists* in order to be created and survive. But these anarchists need not be perfect, just people who have freed themselves, by their own efforts, of the superstition that command-and-obedience relations and capitalist property rights are necessary. The implicit assumption in the idea that anarchy needs "perfect" people is that freedom will be given, not taken; hence the obvious conclusion follows that an anarchy requiring "perfect" people will fail. But this argument ignores the need for self-activity and self-liberation in order to create a free society. For anarchists, *"history is nothing but a struggle between the rulers and the ruled, the oppressors and the oppressed."* [Peter Kropotkin, **Act for Yourselves**, p. 85] Ideas change through struggle and, consequently, in the struggle against oppression and exploitation, we not only change the world, we change ourselves at the same time. So it is the struggle for freedom which creates people capable of taking the responsibility for their own lives, communities and planet. People capable of living as equals in a free society, so making anarchy possible.

As such, the chaos which often results when a government disappears is not anarchy nor, in fact, a case against anarchism. It simply means that the necessary preconditions for creating an anarchist society do not exist. Anarchy would be the product of collective struggle at the heart of society, not the product of external shocks. Nor, we should note, do anarchists think that such a society will appear "overnight." Rather, we see the creation of an anarchist system as a process, not an event. The ins-and-outs of how it would function will evolve over time in the light of experience and objective circumstances, not appear in a perfect form immediately (see [section H.2.5](#) for a discussion of Marxist claims otherwise).

Therefore, anarchists do not conclude that "perfect" people are necessary for anarchism to work because the anarchist is *"no liberator with a divine mission to free humanity, but he is a part of that humanity struggling onwards towards liberty."* As such, *"[i]f, then, by some external means an Anarchist Revolution could be, so to speak, supplied ready-made and thrust upon the people, it is true that they would reject it and rebuild the old society. If, on the other hand, the people develop their ideas of freedom, and they themselves get rid of the last stronghold of tyranny --- the government -- then indeed the revolution will be permanently accomplished."* [George Barrett, **Op. Cit.**, p. 355]

This is not to suggest that an anarchist society must wait until *everyone* is an anarchist. Far from it. It is highly unlikely, for example, that the rich and powerful will suddenly see the errors of their ways and voluntarily renounce their privileges. Faced with a large and growing anarchist movement, the ruling elite has always used repression to defend its position in society. The use of fascism in Spain (see [section A.5.6](#)) and Italy (see [section A.5.5](#)) show the depths the capitalist class can sink to. Anarchism will be created in the face of opposition by the ruling minorities and, consequently, will need to defend

itself against attempts to recreate authority (see [section H.2.1](#) for a refutation of Marxist claims anarchists reject the need to defend an anarchist society against counter-revolution).

Instead anarchists argue that we should focus our activity on convincing those subject to oppression and exploitation that they have the power to resist both and, ultimately, can end both by destroying the social institutions that cause them. As Malatesta argued, "*we need the support of the masses to build a force of sufficient strength to achieve our specific task of radical change in the social organism by the direct action of the masses, we must get closer to them, accept them as they are, and from within their ranks seek to 'push' them forward as much as possible.*" [**Errico Malatesta: His Life and Ideas**, pp. 155-6] This would create the conditions that make possible a rapid evolution towards anarchism as what was initially accepted by a minority "*but increasingly finding popular expression, will make its way among the mass of the people*" and "*the minority will become the People, the great mass, and that mass rising up against property and the State, will march forward towards anarchist communism.*" [Kropotkin, **Words of a Rebel**, p. 75] Hence the importance anarchists attach to spreading our ideas and arguing the case for anarchism. This creates conscious anarchists from those questioning the injustices of capitalism and the state.

This process is helped by the nature of hierarchical society and the resistance it naturally developed in those subject to it. Anarchist ideas develop spontaneously through struggle. As we discuss in [section I.2.3](#), anarchistic organisations are often created as part of the resistance against oppression and exploitation which marks every hierarchical system and can., potentially, be the framework of a new society. As such, the creation of libertarian institutions is, therefore, always a possibility in any situation. A peoples' experiences may push them towards anarchist conclusions, namely the awareness that the state exists to protect the wealthy and powerful few and to disempower the many. That while it is needed to maintain class and hierarchical society, it is not needed to organise society nor can it do so in a just and fair way for all. This is possible. However, without a conscious anarchist presence any libertarian tendencies are likely to be used, abused and finally destroyed by parties or religious groups seeking political power over the masses (the Russian Revolution is the most famous example of this process). It is for that reason anarchists organise to influence the struggle and spread our ideas (see [section J.3](#) for details). For it is the case that only when anarchist ideas "*acquire a predominating influence*" and are "*accepted by a sufficiently large section of the population*" will we "*have achieved anarchy, or taken a step towards anarchy.*" For anarchy "*cannot be imposed against the wishes of the people.*" [Malatesta, **Op. Cit.**, p. 159 and p. 163]

So, to conclude, the creation of an anarchist society is not dependent on people being perfect but it is dependent on a large majority being anarchists and wanting to reorganise society in a libertarian manner. This will not eliminate conflict between individuals nor create a fully formed anarchist humanity overnight but it will lay the ground for the gradual elimination of whatever prejudices and anti-social behaviour that remain after the struggle to change society has revolutionised those doing it.

A.2.17 Aren't most people too stupid for a free society to work?

We are sorry to have to include this question in an anarchist FAQ, but we know that many political ideologies explicitly assume that ordinary people are too stupid to be able to manage their own lives and run society. All aspects of the capitalist political agenda, from Left to Right, contain people who make this claim. Be it Leninists, fascists, Fabians or Objectivists, it is assumed that only a select few are creative and intelligent and that these people should govern others. Usually, this elitism is masked by fine, flowing rhetoric about "freedom," "democracy" and other platitudes with which the ideologues attempt to dull people's critical thought by telling them what they want to hear.

It is, of course, also no surprise that those who believe in "natural" elites always class themselves at the top. We have yet to discover an "objectivist", for example, who considers themselves part of the great mass of "second-handers" (it is always amusing to hear people who simply parrot the ideas of Ayn Rand dismissing other people so!) or who will be a toilet cleaner in the unknown "ideal" of "real" capitalism. Everybody reading an elitist text will consider him or herself to be part of the "select few." It's "natural" in an elitist society to consider elites to be natural and yourself a potential member of one!

Examination of history shows that there is a basic elitist ideology which has been the essential rationalisation of all states and ruling classes since their emergence at the beginning of the Bronze Age. This ideology merely changes its outer garments, not its basic inner content.

During the Dark Ages, for example, it was coloured by Christianity, being adapted to the needs of the Church hierarchy. The most useful "divinely revealed" dogma to the priestly elite was "original sin": the notion that human beings are basically depraved and incompetent creatures who need "direction from above," with priests as the conveniently necessary mediators between ordinary humans and "God." The idea that average people are basically stupid and thus incapable of governing themselves is a carry over from this doctrine, a relic of the Dark Ages.

In reply to all those who claim that most people are "second-handers" or cannot develop anything more than "trade union consciousness," all we can say is that it is an absurdity that cannot withstand even a superficial look at history, particularly the labour movement. The creative powers of those struggling for freedom is often truly amazing, and if this intellectual power and inspiration is not seen in "normal" society, this is the clearest indictment possible of the deadening effects of hierarchy and the conformity produced by authority. (See also [section B.1](#) for more on the effects of hierarchy). As Bob Black points out:

*"You are what you do. If you do boring, stupid, monotonous work, chances are you'll end up boring, stupid, and monotonous. Work is a much better explanation for the creeping cretinisation all around us than even such significant moronising mechanisms as television and education. People who are regimented all their lives, handed to work from school and bracketed by the family in the beginning and the nursing home in the end, are habituated to hierarchy and psychologically enslaved. Their aptitude for autonomy is so atrophied that their fear of freedom is among their few rationally grounded phobias. Their obedience training at work carries over into the families **they** start, thus reproducing the*

system in more ways than one, and into politics, culture and everything else. Once you drain the vitality from people at work, they'll likely submit to hierarchy and expertise in everything. They're used to it." [The Abolition of Work and other essays, pp. 21-2]

When elitists try to conceive of liberation, they can only think of it being **given** to the oppressed by kind (for Leninists) or stupid (for Objectivists) elites. It is hardly surprising, then, that it fails. Only self-liberation can produce a free society. The crushing and distorting effects of authority can only be overcome by self-activity. The few examples of such self-liberation prove that most people, once considered incapable of freedom by others, are more than up for the task.

Those who proclaim their "superiority" often do so out of fear that their authority and power will be destroyed once people free themselves from the debilitating hands of authority and come to realise that, in the words of Max Stirner, *"the great are great only because we are on our knees."*

As Emma Goldman remarks about women's equality, *"[t]he extraordinary achievements of women in every walk of life have silenced forever the loose talk of women's inferiority. Those who still cling to this fetish do so because they hate nothing so much as to see their authority challenged. This is the characteristic of all authority, whether the master over his economic slaves or man over women. However, everywhere woman is escaping her cage, everywhere she is going ahead with free, large strides."* [Vision on Fire, p. 256] The same comments are applicable, for example, to the very successful experiments in workers' self-management during the Spanish Revolution.

Then, of course, the notion that people are too stupid for anarchism to work also backfires on those who argue it. Take, for example, those who use this argument to advocate democratic government rather than anarchy. Democracy, as Luigi Galleani noted, means *"acknowledging the right and the competence of the people to select their rulers."* However, *"whoever has the political competence to choose his [or her] own rulers is, by implication, also competent to do without them, especially when the causes of economic enmity are uprooted."* [The End of Anarchism?, p. 37] Thus the argument for democracy against anarchism undermines itself, for *"if you consider these worthy electors as unable to look after their own interests themselves, how is it that they know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing the election of a genius from the votes of a mass of fools?"* [Malatesta, Anarchy, pp. 53-4]

As for those who consider dictatorship as the solution to human stupidity, the question arises why are these dictators immune to this apparently universal human trait? And, as Malatesta noted, *"who are the best? And who will recognise these qualities in them?"* [Op. Cit., p. 53] If they impose themselves on the "stupid" masses, why assume they will not exploit and oppress the many for their own benefit? Or, for that matter, that they are any more intelligent than the masses? The history of dictatorial and monarchical government suggests a clear answer to those questions. A similar argument applies for other non-democratic systems, such as those based on limited suffrage. For example, the Lockean (i.e. classical liberal or right-wing libertarian) ideal of a state based on the rule of property owners is doomed to be little more than a regime which oppresses the majority to maintain the power and privilege of the

wealthy few. Equally, the idea of near universal stupidity bar an elite of capitalists (the "objectivist" vision) implies a system somewhat less ideal than the perfect system presented in the literature. This is because most people would tolerate oppressive bosses who treat them as means to an end rather than an end in themselves. For how can you expect people to recognise and pursue their own self-interest if you consider them fundamentally as the "*uncivilised hordes*"? You cannot have it both ways and the "*unknown ideal*" of pure capitalism would be as grubby, oppressive and alienating as "actually existing" capitalism.

As such, anarchists are firmly convinced that arguments against anarchy based on the lack of ability of the mass of people are inherently self-contradictory (when not blatantly self-serving). If people are too stupid for anarchism then they are too stupid for any system you care to mention. Ultimately, anarchists argue that such a perspective simply reflects the servile mentality produced by a hierarchical society rather than a genuine analysis of humanity and our history as a species. To quote Rousseau:

"when I see multitudes of entirely naked savages scorn European voluptuousness and endure hunger, fire, the sword, and death to preserve only their independence, I feel that it does not behove slaves to reason about freedom." [quoted by Noam Chomsky, **Marxism, Anarchism, and Alternative Futures**, p. 780]

A.2.18 Do anarchists support terrorism?

No. This is for three reasons.

Terrorism means either targeting or not worrying about killing innocent people. For anarchy to exist, it must be created by the mass of people. One does not convince people of one's ideas by blowing them up. Secondly, anarchism is about self-liberation. One cannot blow up a social relationship. Freedom cannot be created by the actions of an elite few destroying rulers **on behalf of** the majority. Simply put, a "*structure based on centuries of history cannot be destroyed with a few kilos of explosives.*" [Kropotkin, quoted by Martin A. Millar, **Kropotkin**, p. 174] For so long as people feel the need for rulers, hierarchy will exist (see [section A.2.16](#) for more on this). As we have stressed earlier, freedom cannot be given, only taken. Lastly, anarchism aims for freedom. Hence Bakunin's comment that "*when one is carrying out a revolution for the liberation of humanity, one should respect the life and liberty of men [and women].*" [quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, p. 125] For anarchists, means determine the ends and terrorism by its very nature violates life and liberty of individuals and so cannot be used to create an anarchist society. The history of, say, the Russian Revolution, confirmed Kropotkin's insight that "*[v]ery sad would be the future revolution if it could only triumph by terror.*" [quoted by Millar, **Op. Cit.**, p. 175]

Moreover anarchists are **not** against individuals but the institutions and social relationships that cause certain individuals to have power over others and abuse (i.e. use) that power. Therefore the anarchist revolution is about destroying structures, not people. As Bakunin pointed out, "*we wish not to kill persons, but to abolish status and its perquisites*" and anarchism "*does not mean the death of the*

individuals who make up the bourgeoisie, but the death of the bourgeoisie as a political and social entity economically distinct from the working class." [The **Basic Bakunin**, p. 71 and p. 70] In other words, "**You can't blow up a social relationship**" (to quote the title of an anarchist pamphlet which presents the anarchist case against terrorism).

How is it, then, that anarchism is associated with violence? Partly this is because the state and media insist on referring to terrorists who are **not** anarchists as anarchists. For example, the German Bader-Meinhoff gang were often called "anarchists" despite their self-proclaimed Marxist-Leninism. Smears, unfortunately, work. Similarly, as Emma Goldman pointed out, "*it is a known fact known to almost everyone familiar with the Anarchist movement that a great number of [violent] acts, for which Anarchists had to suffer, either originated with the capitalist press or were instigated, if not directly perpetrated, by the police.*" [Red Emma Speaks, p. 262]

An example of this process at work can be seen from the current anti-globalisation movement. In Seattle, for example, the media reported "violence" by protestors (particularly anarchist ones) yet this amounted to a few broken windows. The much greater **actual** violence of the police against protestors (which, incidentally, started **before** the breaking of a single window) was not considered worthy of comment. Subsequent media coverage of anti-globalisation demonstrations followed this pattern, firmly connecting anarchism with violence in spite of that the protestors have been the ones to suffer the greatest violence at the hands of the state. As anarchist activist Starhawk notes, "*if breaking windows and fighting back when the cops attack is 'violence,' then give me a new word, a word a thousand times stronger, to use when the cops are beating non-resisting people into comas.*" [Staying on the Streets, p. 130]

Similarly, at the Genoa protests in 2001 the mainstream media presented the protestors as violent even though it was the state who killed one of them and hospitalised many thousands more. The presence of police agent provocateurs in creating the violence was unmentioned by the media. As Starhawk noted afterwards, in Genoa "*we encountered a carefully orchestrated political campaign of state terrorism. The campaign included disinformation, the use of infiltrators and provocateurs, collusion with avowed Fascist groups . . . , the deliberate targeting of non-violent groups for tear gas and beating, endemic police brutality, the torture of prisoners, the political persecution of organisers . . . They did all those openly, in a way that indicates they had no fear of repercussions and expected political protection from the highest sources.*" [Op. Cit., pp. 128-9] This was, unsurprisingly, not reported by the media.

Subsequent protests have seen the media indulge in yet more anti-anarchist hype, inventing stories to present anarchists as hate-filled individuals planning mass violence. For example, in Ireland in 2004 the media reported that anarchists were planning to use poison gas during EU related celebrations in Dublin. Of course, evidence of such a plan was not forthcoming and no such action happened. Neither did the riot the media said anarchists were organising. A similar process of misinformation accompanied the anti-capitalist May Day demonstrations in London and the protests against the Republican National Congress in New York. In spite of being constantly proved wrong after the event, the media always prints the scare stories of anarchist violence (even inventing events at, say Seattle, to justify their articles and to demonise anarchism further). Thus the myth that anarchism equals violence is perpetrated.

Needless to say, the same papers that hyped the (non-existent) threat of anarchist violence remained silent on the actual violence of, and repression by, the police against demonstrators which occurred at these events. Neither did they run apologies after their (evidence-less) stories of doom were exposed as the nonsense they were by subsequent events.

This does not mean that Anarchists have not committed acts of violence. They have (as have members of other political and religious movements). The main reason for the association of terrorism with anarchism is because of the "*propaganda by the deed*" period in the anarchist movement.

This period -- roughly from 1880 to 1900 -- was marked by a small number of anarchists assassinating members of the ruling class (royalty, politicians and so forth). At its worse, this period saw theatres and shops frequented by members of the bourgeoisie targeted. These acts were termed "*propaganda by the deed*." Anarchist support for the tactic was galvanised by the assassination of Tsar Alexander II in 1881 by Russian Populists (this event prompted Johann Most's famous editorial in **Freiheit**, entitled "*At Last!*", celebrating regicide and the assassination of tyrants). However, there were deeper reasons for anarchist support of this tactic: firstly, in revenge for acts of repression directed towards working class people; and secondly, as a means to encourage people to revolt by showing that their oppressors could be defeated.

Considering these reasons it is no coincidence that propaganda by the deed began in France after the 20 000-plus deaths due to the French state's brutal suppression of the Paris Commune, in which many anarchists were killed. It is interesting to note that while the anarchist violence in revenge for the Commune is relatively well known, the state's mass murder of the Communards is relatively unknown. Similarly, it may be known that the Italian Anarchist Gaetano Bresci assassinated King Umberto of Italy in 1900 or that Alexander Berkman tried to kill Carnegie Steel Corporation manager Henry Clay Frick in 1892. What is often unknown is that Umberto's troops had fired upon and killed protesting peasants or that Frick's Pinkertons had also murdered locked-out workers at Homestead.

Such downplaying of statist and capitalist violence is hardly surprising. "*The State's behaviour is violence,*" points out Max Stirner, "*and it calls its violence 'law'; that of the individual, 'crime.'*" [**The Ego and Its Own**, p. 197] Little wonder, then, that anarchist violence is condemned but the repression (and often worse violence) that provoked it ignored and forgotten. Anarchists point to the hypocrisy of the accusation that anarchists are "violent" given that such claims come from either supporters of government or the actual governments themselves, governments "*which came into being through violence, which maintain themselves in power through violence, and which use violence constantly to keep down rebellion and to bully other nations.*" [Howard Zinn, **The Zinn Reader**, p. 652]

We can get a feel of the hypocrisy surrounding condemnation of anarchist violence by non-anarchists by considering their response to state violence. For example, many capitalist papers and individuals in the 1920s and 1930s celebrated Fascism as well as Mussolini and Hitler. Anarchists, in contrast, fought Fascism to the death and tried to assassinate both Mussolini and Hitler. Obviously supporting murderous dictatorships is not "violence" and "terrorism" but resisting such regimes is! Similarly, non-anarchists

can support repressive and authoritarian states, war and the suppression of strikes and unrest by violence ("restoring law and order") and not be considered "violent." Anarchists, in contrast, are condemned as "violent" and "terrorist" because a few of them tried to revenge such acts of oppression and state/capitalist violence! Similarly, it seems the height of hypocrisy for someone to denounce the anarchist "violence" which produces a few broken windows in, say, Seattle while supporting the actual violence of the police in imposing the state's rule or, even worse, supporting the American invasion of Iraq in 2003. If anyone should be considered violent it is the supporter of state and its actions yet people do not see the obvious and *"deplore the type of violence that the state deplores, and applaud the violence that the state practises."* [Christie and Meltzer, **The Floodgates of Anarchy**, p. 132]

It must be noted that the majority of anarchists did not support this tactic. Of those who committed "propaganda by the deed" (sometimes called *"attentats"*), as Murray Bookchin points out, only a *"few . . . were members of Anarchist groups. The majority . . . were soloists."* [**The Spanish Anarchists**, p. 102] Needless to say, the state and media painted all anarchists with the same brush. They still do, sometimes inaccurately (such as blaming Bakunin for such acts even though he had been dead years before the tactic was even discussed in anarchist circles!).

All in all, the "propaganda by the deed" phase of anarchism was a failure, as the vast majority of anarchists soon came to see. Kropotkin can be considered typical. He *"never liked the slogan **propaganda by deed**, and did not use it to describe his own ideas of revolutionary action."* However, in 1879 while still *"urg[ing] the importance of collective action"* he started *"expressing considerable sympathy and interest in **attentats**"* (these *"collective forms of action"* were seen as acting *"at the trade union and communal level"*). In 1880 he *"became less preoccupied with collective action and this enthusiasm for acts of revolt by individuals and small groups increased."* This did not last and Kropotkin soon attached *"progressively less importance to isolated acts of revolt"* particularly once *"he saw greater opportunities for developing collective action in the new militant trade unionism."* [Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism**, p. 92, p. 115, p. 129, pp. 129-30, p. 205] By the late 1880s and early 1890s he came to disapprove of such acts of violence. This was partly due to simple revulsion at the worse of the acts (such as the Barcelona Theatre bombing in response to the state murder of anarchists involved in the Jerez uprising of 1892 and Emile Henry's bombing of a cafe in response to state repression) and partly due to the awareness that it was hindering the anarchist cause.

Kropotkin recognised that the *"spate of terrorist acts"* of the 1880s had caused *"the authorities into taking repressive action against the movement"* and were *"not in his view consistent with the anarchist ideal and did little or nothing to promote popular revolt."* In addition, he was *"anxious about the isolation of the movement from the masses"* which *"had increased rather than diminished as a result of the preoccupation with"* propaganda by deed. He *"saw the best possibility for popular revolution in the . . . development of the new militancy in the labour movement. From now on he focussed his attention increasingly on the importance of revolutionary minorities working among the masses to develop the spirit of revolt."* However, even during the early 1880s when his support for individual acts of revolt (if not for propaganda by the deed) was highest, he saw the need for collective class struggle and, therefore, *"Kropotkin always insisted on the importance of the labour movement in the struggles leading up to the revolution."* [**Op. Cit.**, pp. 205-6, p. 208 and p. 280]

Kropotkin was not alone. More and more anarchists came to see "propaganda by the deed" as giving the state an excuse to clamp down on both the anarchist and labour movements. Moreover, it gave the media (and opponents of anarchism) a chance to associate anarchism with mindless violence, thus alienating much of the population from the movement. This false association is renewed at every opportunity, regardless of the facts (for example, even though Individualist Anarchists rejected "propaganda by the deed" totally, they were also smeared by the press as "violent" and "terrorists").

In addition, as Kropotkin pointed out, the assumption behind propaganda by the deed, i.e. that everyone was waiting for a chance to rebel, was false. In fact, people are products of the system in which they live; hence they accepted most of the myths used to keep that system going. With the failure of propaganda by deed, anarchists turned back to what most of the movement had been doing anyway: encouraging the class struggle and the process of self-liberation. This turn back to the roots of anarchism can be seen from the rise in anarcho-syndicalist unions after 1890 (see [section A.5.3](#)).

Despite most anarchists' tactical disagreement with propaganda by deed, few would consider it to be terrorism or rule out assassination under all circumstances. Bombing a village during a war because there **might** be an enemy in it is terrorism, whereas assassinating a murdering dictator or head of a repressive state is defence at best and revenge at worst. As anarchists have long pointed out, if by terrorism it is meant "killing innocent people" then the state is the greatest terrorist of them all (as well as having the biggest bombs and other weapons of destruction available on the planet). If the people committing "acts of terror" are really anarchists, they would do everything possible to avoid harming innocent people and never use the statist line that "collateral damage" is regrettable but inevitable. This is why the vast majority of "propaganda by the deed" acts were directed towards individuals of the ruling class, such as Presidents and Royalty, and were the result of previous acts of state and capitalist violence.

So "terrorist" acts have been committed by anarchists. This is a fact. However, it has nothing to do with anarchism as a socio-political theory. As Emma Goldman argued, it was *"not Anarchism, as such, but the brutal slaughter of the eleven steel workers [that] was the urge for Alexander Berkman's act."* [**Op. Cit.**, p. 268] Equally, members of **other** political and religious groups have also committed such acts. As the Freedom Group of London argued:

*"There is a truism that the man [or woman] in the street seems always to forget, when he is abusing the Anarchists, or whatever party happens to be his **bete noire** for the moment, as the cause of some outrage just perpetrated. This indisputable fact is that homicidal outrages have, from time immemorial, been the reply of goaded and desperate classes, and goaded and desperate individuals, to wrongs from their fellowmen [and women], which they felt to be intolerable. Such acts are the violent recoil from violence, whether aggressive or repressive . . . their cause lies not in any special conviction, but in the depths of . . . human nature itself. The whole course of history, political and social, is strewn with evidence of this."* [quoted by Emma Goldman, **Op. Cit.**, p. 259]

Terrorism has been used by many other political, social and religious groups and parties. For example, Christians, Marxists, Hindus, Nationalists, Republicans, Moslems, Sikhs, Fascists, Jews and Patriots have all committed acts of terrorism. Few of these movements or ideas have been labelled as "terrorist by nature" or continually associated with violence -- which shows anarchism's threat to the status quo. There is nothing more likely to discredit and marginalise an idea than for malicious and/or ill-informed persons to portray those who believe and practice it as "mad bombers" with no opinions or ideals at all, just an insane urge to destroy.

Of course, the vast majority of Christians and so on have opposed terrorism as morally repugnant and counter-productive. As have the vast majority of anarchists, at all times and places. However, it seems that in our case it is necessary to state our opposition to terrorism time and time again.

So, to summarise - only a small minority of terrorists have ever been anarchists, and only a small minority of anarchists have ever been terrorists. The anarchist movement as a whole has always recognised that social relationships cannot be assassinated or bombed out of existence. Compared to the violence of the state and capitalism, anarchist violence is a drop in the ocean. Unfortunately most people remember the acts of the few anarchists who have committed violence rather than the acts of violence and repression by the state and capital that prompted those acts.

A.2.19 What ethical views do anarchists hold?

Anarchist viewpoints on ethics vary considerably, although all share a common belief in the need for an individual to develop within themselves their own sense of ethics. All anarchists agree with Max Stirner that an individual must free themselves from the confines of existing morality and question that morality -- "*I decide whether it is the **right thing** for me; there is no right **outside** me.*" [The Ego and Its Own, p. 189]

Few anarchists, however, would go so far as Stirner and reject **any** concept of social ethics at all (saying that, Stirner does value some universal concepts although they are egoistic ones). Such extreme moral relativism is almost as bad as moral absolutism for most anarchists (moral relativism is the view that there is no right or wrong beyond what suits an individual while moral absolutism is that view that what is right and wrong is independent of what individuals think).

It is often claimed that modern society is breaking up because of excessive "egoism" or moral relativism. This is false. As far as moral relativism goes, this is a step forward from the moral absolutism urged upon society by various Moralists and true-believers because it bases itself, however slimly, upon the idea of individual reason. However, as it denies the existence (or desirability) of ethics it is but the mirror image of what it is rebelling against. Neither option empowers the individual or is liberating.

Consequently, both of these attitudes hold enormous attraction to authoritarians, as a populace that is either unable to form an opinion about things (and will tolerate anything) or who blindly follow the

commands of the ruling elite are of great value to those in power. Both are rejected by most anarchists in favour of an evolutionary approach to ethics based upon human reason to develop the ethical concepts and interpersonal empathy to generalise these concepts into ethical attitudes within society as well as within individuals. An anarchistic approach to ethics therefore shares the critical individual investigation implied in moral relativism but grounds itself into common feelings of right and wrong. As Proudhon argued:

"All progress begins by abolishing something; every reform rests upon denunciation of some abuse; each new idea is based upon the proved insufficiency of the old idea."

Most anarchists take the viewpoint that ethical standards, like life itself, are in a constant process of evolution. This leads them to reject the various notions of "God's Law," "Natural Law," and so on in favour of a theory of ethical development based upon the idea that individuals are entirely empowered to question and assess the world around them -- in fact, they require it in order to be truly free. You cannot be an anarchist and blindly accept **anything**! Michael Bakunin, one of the founding anarchist thinkers, expressed this radical scepticism as so:

"No theory, no ready-made system, no book that has ever been written will save the world. I cleave to no system. I am a true seeker."

Any system of ethics which is not based on individual questioning can only be authoritarian. Erich Fromm explains why:

*"Formally, authoritarian ethics denies man's capacity to know what is good or bad; the norm giver is always an authority transcending the individual. Such a system is based not on reason and knowledge but on awe of the authority and on the subject's feeling of weakness and dependence; the surrender of decision making to the authority results from the latter's magic power; its decisions can not and must not be questioned. **Materially**, or according to content, authoritarian ethics answers the question of what is good or bad primarily in terms of the interests of the authority, not the interests of the subject; it is exploitative, although the subject may derive considerable benefits, psychic or material, from it." [Man For Himself, p. 10]*

Therefore Anarchists take, essentially, a scientific approach to problems. Anarchists arrive at ethical judgements without relying on the mythology of spiritual aid, but on the merits of their own minds. This is done through logic and reason, and is a far better route to resolving moral questions than obsolete, authoritarian systems like orthodox religion and certainly better than the "there is no wrong or right" of moral relativism.

So, what are the source of ethical concepts? For Kropotkin, *"nature has thus to be recognised as the **first ethical teacher of man**. The social instinct, innate in men as well as in all the social animals, - this is the origin of all ethical conceptions and all subsequent development of morality."* [Ethics, p. 45]

Life, in other words, is the basis of anarchist ethics. This means that, essentially (according to anarchists), an individual's ethical viewpoints are derived from three basic sources:

1) from the society an individual lives in. As Kropotkin pointed out, "*Man's conceptions of morality are completely dependent upon the form that their social life assumed at a given time in a given locality . . . this [social life] is reflected in the moral conceptions of men and in the moral teachings of the given epoch.*" [Op. Cit., p. 315] In other words, experience of life and of living.

2) A critical evaluation by individuals of their society's ethical norms, as indicated above. This is the core of Erich Fromm's argument that "*Man must accept the responsibility for himself and the fact that only using his own powers can he give meaning to his life . . . there is no meaning to life except the meaning man gives his life by the unfolding of his powers, by living productively.*" [Man for Himself, p. 45] In other words, individual thought and development.

3) The feeling of empathy - "*the true origin of the moral sentiment . . . [is] simply in the feeling of sympathy.*" ["Anarchist Morality", **Anarchism**, p. 94] In other words, an individual's ability to feel and share experiences and concepts with others.

This last factor is very important for the development of a sense of ethics. As Kropotkin argued, "*[t]he more powerful your imagination, the better you can picture to yourself what any being feels when it is made to suffer, and the more intense and delicate will your moral sense be. . . And the more you are accustomed by circumstances, by those surrounding you, or by the intensity of your own thought and your imagination, to **act** as your own thought and imagination urge, the more will the moral sentiment grow in you, the more will it become habitual.*" [Op. Cit., p. 95]

So, anarchism is based (essentially) upon the ethical maxim "*treat others as you would like them to treat you under similar circumstances.*" Anarchists are neither egoists nor altruists when it comes to moral stands, they are simply **human**.

As Kropotkin noted, "*egoism*" and "*altruism*" both have their roots in the same motive -- "*however great the difference between the two actions in their result of humanity, the motive is the same. It is the quest for pleasure.*" [Op. Cit., p. 85]

For anarchists, a person's sense of ethics must be developed by themselves and requires the full use of an individual's mental abilities as part of a social grouping, as part of a community. As capitalism and other forms of authority weaken the individual's imagination and reduce the number of outlets for them to exercise their reason under the dead weight of hierarchy as well as disrupting community, little wonder that life under capitalism is marked by a stark disregard for others and lack of ethical behaviour.

Combined with these factors is the role played by inequality within society. Without equality, there can be no real ethics for *"Justice implies Equality. . . only those who consider **others** as their **equals** can obey the rule: 'Do not do to others what you do not wish them to do to you.'* A serf-owner and a slave merchant can evidently not recognise . . . the 'categorical imperative' [of treating people as ends in themselves and not as means] as regards serfs [or slaves] because they do not look upon them as equals." Hence the *"greatest obstacle to the maintenance of a certain moral level in our present societies lies in the absence of social equality. Without **real** equality, the sense of justice can never be universally developed, because **Justice implies the recognition of Equality.**"* [Peter Kropotkin, **Evolution and Environment**, p. 88 and p. 79]

Capitalism, like any society, gets the ethical behaviour it deserves..

In a society which moves between moral relativism and absolutism it is little wonder that egoism becomes confused with egotism. By disempowering individuals from developing their own ethical ideas and instead encouraging blind obedience to external authority (and so moral relativism once individuals think that they are without that authority's power), capitalist society ensures an impoverishment of individuality and ego. As Erich Fromm puts it:

*"The failure of modern culture lies not in its principle of individualism, not in the idea that moral virtue is the same as the pursuit of self-interest, but in the deterioration of the meaning of self-interest; not in the fact that people are **too much concerned with their self-interest**, but that they are **not concerned enough with the interest of their real self**; not in the fact that they are **too selfish**, but that they do not love themselves."* [Man for Himself, p. 139]

Therefore, strictly speaking, anarchism is based upon an egoistic frame of reference - ethical ideas must be an expression of what gives us pleasure as a whole individual (both rational and emotional, reason and empathy). This leads all anarchists to reject the false division between egoism and altruism and recognise that what many people (for example, capitalists) call "egoism" results in individual self-negation and a reduction of individual self-interest. As Kropotkin argues:

*"What was it that morality, evolving in animal and human societies, was striving for, if not for the opposition to the promptings of narrow egoism, and bringing up humanity in the spirit of the development of altruism? The very expressions 'egoism' and 'altruism' are incorrect, because there can be no pure altruism without an admixture of personal pleasure - and consequently, without egoism. It would therefore be more nearly correct to say that ethics aims at **the development of social habits and the weakening of the narrowly personal habits**. These last make the individual lose sight of society through his regard for his own person, and therefore they even fail to attain their object, i.e. the welfare of the individual, whereas the development of habits of work in common, and of mutual aid in general, leads to a series of beneficial consequences in the family as well as society."* [Ethics, pp. 307-8]

Therefore anarchism is based upon the rejection of moral absolutism (i.e. "God's Law," "Natural Law," "Man's Nature," "A is A") and the narrow egotism which moral relativism so easily lends itself to. Instead, anarchists recognise that there exists concepts of right and wrong which exist outside of an individual's evaluation of their own acts.

This is because of the social nature of humanity. The interactions between individuals do develop into a social maxim which, according to Kropotkin, can be summarised as "*[i]s it useful to society? Then it is good. Is it hurtful? Then it is bad.*" Which acts human beings think of as right or wrong is not, however, unchanging and the "*estimate of what is useful or harmful . . . changes, but the foundation remains the same.*" ["Anarchist Morality", **Op. Cit.**, p. 91 and p. 92]

This sense of empathy, based upon a critical mind, is the fundamental basis of social ethics - the 'what-should-be' can be seen as an ethical criterion for the truth or validity of an objective 'what-is.' So, while recognising the root of ethics in nature, anarchists consider ethics as fundamentally a **human** idea - the product of life, thought and evolution created by individuals and generalised by social living and community.

So what, for anarchists, is unethical behaviour? Essentially anything that denies the most precious achievement of history: the liberty, uniqueness and dignity of the individual.

Individuals can see what actions are unethical because, due to empathy, they can place themselves into the position of those suffering the behaviour. Acts which restrict individuality can be considered unethical for two (interrelated) reasons.

Firstly, the protection and development of individuality in all enriches the life of every individual and it gives pleasure to individuals because of the diversity it produces. This egoist basis of ethics reinforces the second (social) reason, namely that individuality is good for society for it enriches the community and social life, strengthening it and allowing it to grow and evolve. As Bakunin constantly argued, progress is marked by a movement from "*the simple to the complex*" or, in the words of Herbert Read, it "*is measured by the degree of differentiation within a society. If the individual is a unit in a corporate mass, his [or her] life will be limited, dull, and mechanical. If the individual is a unit on his [or her] own, with space and potentiality for separate action . . . he can develop - develop in the only real meaning of the word - develop in consciousness of strength, vitality, and joy.*" ["The Philosophy of Anarchism," **Anarchy and Order**, p. 37]

This defence of individuality is learned from nature. In an ecosystem, diversity is strength and so biodiversity becomes a source of basic ethical insight. In its most basic form, it provides a guide to "*help us distinguish which of our actions serve the thrust of natural evolution and which of them impede them.*" [Murray Bookchin, **The Ecology of Freedom**, p. 342]

So, the ethical concept "*lies in the feeling of sociality, inherent in the entire animal world and in the conceptions of equity, which constitutes one of the fundamental primary judgements of human reason.*"

Therefore anarchists embrace *"the permanent presence of a **double tendency** - towards greater development on the one side, of **sociality**, and, on the other side, of a consequent increase of the intensity of life which results in an increase of happiness for the **individuals**, and in progress - physical, intellectual, and moral."* [Kropotkin, **Ethics**, pp. 311-2 and pp. 19-20]

Anarchist attitudes to authority, the state, capitalism, private property and so on all come from our ethical belief that the liberty of individuals is of prime concern and that our ability to empathize with others, to see ourselves in others (our basic equality and common individuality, in other words).

Thus anarchism combines the subjective evaluation by individuals of a given set of circumstances and actions with the drawing of objective interpersonal conclusions of these evaluations based upon empathic bounds and discussion between equals. Anarchism is based on a humanistic approach to ethical ideas, one that evolves along with society and individual development. Hence an **ethical** society is one in which *"[d]ifference among people will be respected, indeed fostered, as elements that enrich the unity of experience and phenomenon . . . [the different] will be conceived of as individual parts of a whole all the richer because of its complexity."* [Murray Bookchin, **Post Scarcity Anarchism**, p. 82]

A.2.20 Why are most anarchists atheists?

It is a fact that most anarchists are atheists. They reject the idea of god and oppose all forms of religion, particularly organised religion. Today, in secularised western European countries, religion has lost its once dominant place in society. This often makes the militant atheism of anarchism seem strange. However, once the negative role of religion is understood the importance of libertarian atheism becomes obvious. It is because of the role of religion and its institutions that anarchists have spent some time refuting the idea of religion as well as propagandising against it.

So why do so many anarchists embrace atheism? The simplest answer is that most anarchists are atheists because it is a logical extension of anarchist ideas. If anarchism is the rejection of illegitimate authorities, then it follows that it is the rejection of the so-called Ultimate Authority, God. Anarchism is grounded in reason, logic, and scientific thinking, not religious thinking. Anarchists tend to be sceptics, and not believers. Most anarchists consider the Church to be steeped in hypocrisy and the Bible a work of fiction, riddled with contradictions, absurdities and horrors. It is notorious in its debasement of women and its sexism is infamous. Yet men are treated little better. Nowhere in the bible is there an acknowledgement that human beings have inherent rights to life, liberty, happiness, dignity, fairness, or self-government. In the bible, humans are sinners, worms, and slaves (figuratively and literally, as it condones slavery). God has all the rights, humanity is nothing.

This is unsurprisingly, given the nature of religion. Bakunin put it best:

"The idea of God implies the abdication of human reason and justice; it is the most decisive negation of human liberty, and necessarily ends in the enslavement of mankind, both in theory and in practice."

"Unless, then, we desire the enslavement and degradation of mankind . . . we may not, must not make the slightest concession either to the God of theology or to the God of metaphysics. He who, in this mystical alphabet, begins with A will inevitably end with Z; he who desires to worship God must harbour no childish illusions about the matter, but bravely renounce his liberty and humanity.

"If God is, man is a slave; now, man can and must be free; then, God does not exist." [**God and the State**, p. 25]

For most anarchists, then, atheism is required due to the nature of religion. *"To proclaim as divine all that is grand, just, noble, and beautiful in humanity,"* Bakunin argued, *"is to tacitly admit that humanity of itself would have been unable to produce it -- that is, that, abandoned to itself, its own nature is miserable, iniquitous, base, and ugly. Thus we come back to the essence of all religion -- in other words, to the disparagement of humanity for the greater glory of divinity."* As such, to do justice to our humanity and the potential it has, anarchists argue that we must do without the harmful myth of god and all it entails and so on behalf of *"human liberty, dignity, and prosperity, we believe it our duty to recover from heaven the goods which it has stolen and return them to earth."* [**Op. Cit.**, p. 37 and p. 36]

As well as the theoretical degrading of humanity and its liberty, religion has other, more practical, problems with it from an anarchist point of view. Firstly, religions have been a source of inequality and oppression. Christianity (like Islam), for example, has always been a force for repression whenever it holds any political or social sway (believing you have a direct line to god is a sure way of creating an authoritarian society). The Church has been a force of social repression, genocide, and the justification for every tyrant for nearly two millennia. When given the chance it has ruled as cruelly as any monarch or dictator. This is unsurprising:

"God being everything, the real world and man are nothing. God being truth, justice, goodness, beauty, power and life, man is falsehood, iniquity, evil, ugliness, impotence, and death. God being master, man is the slave. Incapable of finding justice, truth, and eternal life by his own effort, he can attain them only through a divine revelation. But whoever says revelation, says revealers, messiahs, prophets, priests, and legislators inspired by God himself; and these, as the holy instructors of humanity, chosen by God himself to direct it in the path of salvation, necessarily exercise absolute power. All men owe them passive and unlimited obedience; for against the divine reason there is no human reason, and against the justice of God no terrestrial justice holds." [Bakunin, **Op. Cit.**, p. 24]

Christianity has only turned tolerant and peace-loving when it is powerless and even then it has continued its role as apologist for the powerful. This is the second reason why anarchists oppose the church for when not being the source of oppression, the church has justified it and ensured its continuation. It has kept the working class in bondage for generations by sanctioning the rule of earthly

authorities and teaching working people that it is wrong to fight against those same authorities. Earthly rulers received their legitimisation from the heavenly lord, whether political (claiming that rulers are in power due to god's will) or economic (the rich having been rewarded by god). The bible praises obedience, raising it to a great virtue. More recent innovations like the Protestant work ethic also contribute to the subjugation of working people.

That religion is used to further the interests of the powerful can quickly be seen from most of history. It conditions the oppressed to humbly accept their place in life by urging the oppressed to be meek and await their reward in heaven. As Emma Goldman argued, Christianity (like religion in general) *"contains nothing dangerous to the regime of authority and wealth; it stands for self-denial and self-abnegation, for penance and regret, and is absolutely inert in the face of every [in]dignity, every outrage imposed upon mankind."* [**Red Emma Speaks**, p. 234]

Thirdly, religion has always been a conservative force in society. This is unsurprising, as it bases itself not on investigation and analysis of the real world but rather in repeating the truths handed down from above and contained in a few holy books. Theism is then *"the theory of speculation"* while atheism is *"the science of demonstration."* The *"one hangs in the metaphysical clouds of the Beyond, while the other has its roots firmly in the soil. It is the earth, not heaven, which man must rescue if he is truly to be saved."* Atheism, then, *"expresses the expansion and growth of the human mind"* while theism *"is static and fixed."* It is *"the absolutism of theism, its pernicious influence upon humanity, its paralysing effect upon thought and action, which Atheism is fighting with all its power."* [Emma Goldman, **Op. Cit.**, p. 243, p. 245 and pp. 246-7]

As the Bible says, *"By their fruits shall ye know them."* We anarchists agree but unlike the church we apply this truth to religion as well. That is why we are, in the main, atheists. We recognise the destructive role played by the Church, and the harmful effects of organised monotheism, particularly Christianity, on people. As Goldman summaries, religion *"is the conspiracy of ignorance against reason, of darkness against light, of submission and slavery against independence and freedom; of the denial of strength and beauty, against the affirmation of the joy and glory of life."* [**Op. Cit.**, p. 240]

So, given the fruits of the Church, anarchists argue that it is time to uproot it and plant new trees, the trees of reason and liberty.

That said, anarchists do not deny that religions contain important ethical ideas or truths. Moreover, religions can be the base for strong and loving communities and groups. They can offer a sanctuary from the alienation and oppression of everyday life and offer a guide to action in a world where everything is for sale. Many aspects of, say, Jesus' or Buddha's life and teachings are inspiring and worth following. If this were not the case, if religions were simply a tool of the powerful, they would have long ago been rejected. Rather, they have a dual-nature in that contain both ideas necessary to live a good life as well as apologetics for power. If they did not, the oppressed would not believe and the powerful would suppress them as dangerous heresies.

And, indeed, repression has been the fate of any group that has preached a radical message. In the middle ages numerous revolutionary Christian movements and sects were crushed by the earthly powers that be with the firm support of the mainstream church. During the Spanish Civil War the Catholic church supported Franco's fascists, denouncing the killing of pro-Franco priests by supporters of the republic while remaining silent about Franco's murder of Basque priests who had supported the democratically elected government (Pope John Paul II is seeking to turn the dead pro-Franco priests into saints while the pro-Republican priests remain unmentioned). The Archbishop of El Salvador, Oscar Arnulfo Romero, started out as a conservative but after seeing the way in which the political and economic powers were exploiting the people became their outspoken champion. He was assassinated by right-wing paramilitaries in 1980 because of this, a fate which has befallen many other supporters of liberation theology, a radical interpretation of the Gospels which tries to reconcile socialist ideas and Christian social thinking.

Nor does the anarchist case against religion imply that religious people do not take part in social struggles to improve society. Far from it. Religious people, including members of the church hierarchy, played a key role in the US civil rights movement of the 1960s. The religious belief within Zapata's army of peasants during the Mexican revolution did not stop anarchists taking part in it (indeed, it had already been heavily influenced by the ideas of anarchist militant Ricardo Flores Magon). It is the dual-nature of religion which explains why many popular movements and revolts (particularly by peasants) have taken used the rhetoric of religion, seeking to keep the good aspects of their faith will fighting the earthly injustice. For anarchists, it is the willingness to fight against injustice which counts, not whether someone believes in god or not. We just think that the social role of religion is to dampen down revolt, not encourage it. The tiny number of radical priests compared to those in the mainstream or on the right suggests the validity of our analysis.

It should be stressed that anarchists, while overwhelmingly hostile to the idea of the Church and an established religion, do not object to people practising religious belief on their own or in groups, so long as that practice doesn't impinge on the liberties of others. For example, a cult that required human sacrifice or slavery would be antithetical to anarchist ideas, and would be opposed. But peaceful systems of belief could exist in harmony within in anarchist society. The anarchist view is that religion is a personal matter, above all else -- if people want to believe in something, that's their business, and nobody else's as long as they do not impose those ideas on others. All we can do is discuss their ideas and try and convince them of their errors.

To end, it should noted that we are not suggesting that atheism is somehow mandatory for an anarchist. Far from it. As we discuss in [section A.3.7](#), there are anarchists who do believe in god or some form of religion. For example, Tolstoy combined libertarian ideas with a devote Christian belief. His ideas, along with Proudhon's, influences the Catholic Worker organisation, founded by anarchists Dorothy Day and Peter Maurin in 1933 and still active today. The anarchist activist Starhawk, active in the current anti-globalisation movement, has no problems also being a leading Pagan. However, for most anarchists, their ideas lead them logically to atheism for, as Emma Goldman put it, *"in its negation of gods is at the same time the strongest affirmation of man, and through man, the eternal yea to life, purpose, and beauty."* [**Red Emma Speaks**, p. 248]

A.2 What does anarchism stand for?

C.8 Is state control of money the cause of the business cycle?

As explained in the [last section](#), capitalism will suffer from a boom-and-bust cycle due to objective pressures on profit production, even if we ignore the subjective revolt against authority by working class people. It is this two-way pressure on profit rates, the subjective and objective, which causes the business cycle and such economic problems as "stagflation." However, for supporters of the free market, this conclusion is unacceptable and so they usually try to explain the business cycle in terms of **external** influences rather than those generated by the way capitalism works. Most pro-"free market" capitalists blame government intervention in the market, particularly state control over money, as the source of the business cycle. This analysis is defective, as will be shown below.

It should be noted that many supporters of capitalism ignore the "subjective" pressures on capitalism that we discussed in [section C.7.1](#). In addition, the problems associated with rising capital investment (as highlighted in [section C.7.3](#)) are also usually ignored, because they usually consider capital to be "productive" and so cannot see how its use could result in crises. This leaves them with the problems associated with the price mechanism, as discussed in [section C.7.2](#).

The idea behind the "state-control-of-money" theory of crises is that interest rates provide companies and individuals with information about how price changes will affect future trends in production. Specifically, the claim is that changes in interest rates (i.e. changes in the demand and supply of credit) indirectly inform companies of the responses of their competitors. For example, if the price of tin rises, this will lead to an expansion in investment in the tin industry, so leading to a rise in interest rates (as more credit is demanded). This rise in interest rates lowers anticipated profits and dampens the expansion. State control of money stops this process (by distorting the interest rate) and so results in the credit system being unable to perform its economic function. This results in overproduction as interest rates do not reflect **real** savings and so capitalists over-invest in new capital, capital which appears profitable only because the interest rate is artificially low. When the rate inevitably adjusts upwards towards its "real" value, the invested capital becomes unprofitable and so over-investment appears. Hence, according to the argument, by eliminating state control of money these negative effects of capitalism would disappear.

Before discussing whether state control of money **is** the cause of the business cycle, we must point out that the argument concerning the role of the interest rate does not, in fact, explain the occurrence of over-investment (and so the business cycle). In other words, the explanation of the business cycle as lying in the features of the credit system is flawed. This is because it is **not** clear that the **relevant** information is communicated by changes in interest rates. Interest rates reflect the general aggregate demand for credit in an economy. However, the information which a **specific** company requires is about the over-expansion in the production of the specific good they produce and so the level of demand for credit

amongst competitors, **not** the general demand for credit in the economy as a whole. An increase in the planned production of some good by a group of competitors will be reflected in a proportional change in interest rates only if it is assumed that the change in demand for credit by that industry is identical with that found in the economy as a whole.

There is no reason to suppose such an assumption is true, given the different production cycles of different industries and their differing needs for credit (in both terms of amount and of intensity). Therefore, assuming uneven changes in the demand for credit between industries reflecting uneven changes in their requirements, it is quite possible for over-investment (and so over-production) to occur, even if the credit system is working as it should in theory (i.e. the interest rate is, in fact, accurately reflecting the **real** savings available). The credit system, therefore, does not communicate the **relevant** information, and for this reason, it cannot be the case that the business cycle can be explained by departure from an "ideal system" (i.e. laissez-faire capitalism).

Therefore, it cannot be claimed that removing state-control of money will also remove the business-cycle. However, the arguments that the state control of money do have an element of truth in them. Expansion of credit above the "natural" level which equates it with savings can and does allow capital to expand further than it otherwise would and so encourages over-investment (i.e. it builds upon trends already present rather than **creating** them). While we have ignored the role of credit expansion in our comments above to stress that credit is not fundamental to the business cycle, it is useful to discuss this as it is an essential factor in real capitalist economies. Indeed, without it capitalist economies would not have grown as fast as they have. Credit is fundamental to capitalism, in other words.

There are two main approaches to the question of eliminating state control of money in "free market" capitalist economics -- **Monetarism** and what is often called "**free banking**." We will take each in turn (a third possible "solution" is to impose a 100% gold reserve limit for banks, but as this is highly interventionist, and so not laissez-faire, simply impossible as there is not enough gold to go round and has all the problems associated with inflexible money regimes we highlight below, we will not discuss it).

Monetarism was very popular in the 1970s and is associated with the works of Milton Friedman. It is far less radical than the "free banking" school and argues that rather than abolish state money, its issue should be controlled. Friedman stressed, like most capitalist economists, that monetary factors are the important feature in explaining such problems of capitalism as the business cycle, inflation and so on. This is unsurprising, as it has the useful ideological effect of acquitting the inner-workings of capitalism of any involvement in such problems. Slumps, for example, may occur, but they are the fault of the state interfering in the economy. This is how Friedman explains the Great Depression of the 1930s in the USA, for example (see his *"The Role of Monetary Policy"* in **American Economic Review**, March, 1968). He also explains inflation by arguing it was a purely monetary phenomenon caused by the state printing more money than required by the growth of economic activity (for example, if the economy grew by 2% but the money supply increased by 5%, inflation would rise by 3%). This analysis of inflation is deeply flawed, as we will see.

Thus Monetarists argued for controlling the money supply, of placing the state under a "*monetary constitution*" which ensured that the central banks be required by law to increase the quantity of money at a constant rate of 3-5% a year. This would ensure that inflation would be banished, the economy would adjust to its natural equilibrium, the business cycle would become mild (if not disappear) and capitalism would finally work as predicted in the economics textbooks. With the "*monetary constitution*" money would become "depoliticised" and state influence and control over money would be eliminated. Money would go back to being what it is in neo-classical theory, essentially neutral, a link between production and consumption and capable of no mischief on its own.

Unfortunately for Monetarism, its analysis was simply wrong. Even more unfortunately for both the theory and vast numbers of people, it was proven wrong not only theoretically but also empirically. Monetarism was imposed on both the USA and the UK in the early 1980s, with disastrous results. As the Thatcher government in 1979 applied Monetarist dogma the most whole-heartedly we will concentrate on that regime (the same basic things occurred under Reagan as well).

Firstly, the attempt to control the money supply failed, as predicted in 1970 by the radical Keynesian Nicholas Kaldor (see his essay "*The New Monetarism*" in **Further Essays on Applied Economics**, for example). This is because the money supply, rather than being set by the central bank or the state (as Friedman claimed), is a function of the demand for credit, which is itself a function of economic activity. To use economic terminology, Friedman had assumed that the money supply was "*exogenous*" and so determined outside the economy by the state when, in fact, it is "*endogenous*" in nature (i.e. comes from **within** the economy). This means that any attempt to control the money supply will fail. Charles P. Kindleburger comments:

"As a historical generalisation, it can be said that every time the authorities stabilise or control some quantity of money. . . in moments of euphoria more will be produced. Or if the definition of money is fixed in terms of particular assets, and the euphoria happens to 'monetise' credit in new ways that are excluded from the definition, the amount of money defined in the old way will not grow, but its velocity will increase. . . fix any [definition of money] and the market will create new forms of money in periods of boom to get round the limit." [**Manias, Panics and Crashes**, p. 48]

The experience of the Thatcher and Reagan regimes indicates this well. The Thatcher government could not meet the money controls it set -- the growth was 74%, 37% and 23% above the top of the ranges set in 1980 [Ian Gilmore, **Dancing With Dogma**, p. 22]. It took until 1986 before the Tory government stopped announcing monetary targets, persuaded no doubt by its inability to hit them. In addition, the variations in the money supply also showed that Milton Friedman's argument on what caused inflation was also wrong. According to his theory, inflation was caused by the money supply increasing faster than the economy, yet inflation **fell** as the money supply increased. As the moderate conservative Ian Gilmore points out, "[h]ad Friedmanite monetarism. . . been right, inflation would have been about 16 per cent in 1982-3, 11 per cent in 1983-4, and 8 per cent in 1984-5. In fact . . . in the relevant years it never approached the levels infallibly predicted by monetarist doctrine." [**Op. Cit.**, p. 52] From an

anarchist perspective, however, the fall in inflation was the result of the high unemployment of this period as it weakened labour, so allowing profits to be made in production rather than in circulation (see [section C.7.1](#)). With no need for capitalists to maintain their profits via price increases, inflation would naturally decrease as labour's bargaining position was weakened by massive unemployment. Rather than being a purely monetary phenomena as Friedman claimed, it is a product of the profit needs of capital and the state of the class struggle.

It is also of interest to note that even in Friedman's own test of his basic contention, the Great Depression of 1929-33, he got it wrong. Kaldor noted pointed out that "*[a]ccording to Friedman's own figures, the amount of 'high-powered money'. . . in the US increased, not decreased, throughout the Great Contraction: in July 1932, it was more than 10 per cent higher than in July, 1929. . . The Great Contraction of the money supply . . . occurred **despite** this increase in the monetary base.*" [Op. Cit., pp. 11-12] Other economists also investigated Friedman's claims, with similar result -- "*Peter Temin took issue with Friedman and Schwartz from a Keynesian point of view [in the book **Did Monetary Forces Cause the Great Depression?**]. He asked whether the decline in spending resulted from a decline in the money supply or the other way round. . . [He found that] the money supply not only did not decline but actually increased 5 percent between August 1929 and August 1931. . . Temin concluded that there is no evidence that money caused the depression between the stock market crash and. . . September 1931.*" [Charles P. Kindleburger, Op. Cit., p. 60]

In other words, causality runs from the real economy to money, not vice versa, and fluctuations in the money supply results from fluctuations in the economy. If the money supply is endogenous, and it is, this would be expected. Attempts to control the money supply would, of necessity, fail and the only tool available would take the form of raising interest rates. This would reduce inflation, for example, by depressing investment, generating unemployment, and so (eventually) slowing the growth in wages. Which is what happened in the 1980s. Trying to "control" the money supply actually meant increasing interest rates to extremely high levels, which helped produce the worse depression since the end of the war (a depression which Friedman notably failed to predict).

Given the absolute failure of Monetarism, in both theory and practice, it is little talked about now. However, in the 1970s it was the leading economic dogma of the right -- the right which usually likes to portray itself as being strong on the economy. It is useful to indicate that this is not the case. In addition, we discuss the failure of Monetarism in order to highlight the problems with the "*free banking*" solution to state control of money. This school of thought is associated with the "Austrian" school of economics and right-wing libertarians in general (we also discuss this theory in [section F.10.1](#)). It is based on totally privatising the banking system and creating a system in which banks and other private companies compete on the market to get their coins and notes accepted by the general population. This position is not the same as anarchist mutual banking as it is seen not as a way of reducing usury to zero but rather as a means of ensuring that interest rates work as they are claimed to do in capitalist theory.

The "free banking" school argues that under competitive pressures, banks would maintain a 100% ratio between the credit they provide and the money they issue with the reserves they actually have (i.e.

market forces would ensure the end of fractional reserve banking). They argue that under the present system, banks can create more credit than they have funds/reserves available. This pushes the rate of interest below its "natural rate" (i.e. the rate which equates savings with investment). Capitalists, misinformed by the artificially low interest rates invest in more capital intensive equipment and this, eventually, results in a crisis, a crisis caused by over-investment ("Austrian" economists term this "*malinvestment*"). If banks were subject to market forces, it is argued, then they would not generate credit money, interest rates would reflect the real rate and so over-investment, and so crisis, would be a thing of the past.

This analysis, however, is flawed. We have noted one flaw above, namely the problem that interest rates do not provide sufficient or correct information for investment decisions. Thus relative over-investment could still occur. Another problem follows on from our discussion of Monetarism, namely the endogenous nature of money and the pressures this puts on banks. The noted post-keynesian economist Hyman Minsky created an analysis which gives an insight into why it is doubtful that even a "free banking" system would resist the temptation to create credit money (i.e. loaning more money than available savings). This model is often called "*The Financial Instability Hypothesis*."

Let us assume that the economy is going into the recovery period after a crash. Initially firms would be conservative in their investment while banks would lend within their savings limit and to low-risk investments. In this way the banks do ensure that the interest rate reflects the natural rate. However, this combination of a growing economy and conservatively financed investment means that most projects succeed and this gradually becomes clear to managers/capitalists and bankers. As a result, both managers and bankers come to regard the present risk premium as excessive. New investment projects are evaluated using less conservative estimates of future cash flows. This is the foundation of the new boom and its eventual bust. In Minsky's words, "*stability is destabilising*."

As the economy starts to grow, companies increasingly turn to external finance and these funds are forthcoming because the banking sector shares the increased optimism of investors. Let us not forget that banks are private companies too and so seek profits as well. Providing credit is the key way of doing this and so banks start to accommodate their customers and they have to do this by credit expansion. If they did not, the boom would soon turn into slump as investors would have no funds available for them and interest rates would increase, thus forcing firms to pay more in debt repayment, an increase which many firms may not be able to do or find difficult. This in turn would suppress investment and so production, generating unemployment (as companies cannot "fire" investments as easily as they can fire workers), so reducing consumption demand along with investment demand, so deepening the slump.

However, due to the rising economy bankers accommodate their customers and generate credit rather than rise interest rates. In this way they accept liability structures both for themselves and for their customers "*that, in a more sober expectational climate, they would have rejected*." [Minsky, **Inflation, Recession and Economic Policy**, p. 123] The banks innovate their financial products, in other words, in line with demand. Firms increase their indebtedness and banks are more than willing to allow this due to the few signs of financial strain in the economy. The individual firms and banks increase their financial liability, and so the whole economy moves up the liability structure.

However, eventually interest rates rise (as the existing extension of credit appears too high) and this affects all firms, from the most conservative to the most speculative, and "pushes" them up even higher up the liability structure (conservative firms no longer can repay their debts easily, less conservative firms fail to pay them and so on). The margin of error narrows and firms and banks become more vulnerable to unexpected developments, such a new competitors, strikes, investments which do not generate the expected rate of return, credit becoming hard to get, interest rates increase and so on. In the end, the boom turns to slump and firms and banks fail.

The "free banking" school reject this claim and argue that private banks in competition would **not** do this as this would make them appear less competitive on the market and so customers would frequent other banks (this is the same process by which inflation would be solved by a "free banking" system). However, it is **because** the banks are competing that they innovate -- if they do not, another bank or company would in order to get more profits. This can be seen from the fact that "*[b]ank notes. . . and bills of exchange. . . were initially developed because of an inelastic supply of coin*" [Kindleburger, **Op. Cit.**, p. 51] and "*any shortage of commonly-used types [of money] is bound to lead to the emergence of new types; indeed, this is how, historically, first bank notes and the chequing account emerged*" [Kaldor, **Op. Cit.**, p. 10]

This process can be seen at work in Adam Smith's **The Wealth of Nations**. Scotland in Smith's time was based on a competitive banking system and, as Smith notes, they issued more money than was available in the banks coffers:

"Though some of those notes [the banks issued] are continually coming back for payment, part of them continue to circulate for months and years together. Though he [the banker] has generally in circulation, therefore, notes to the extent of a hundred thousand pounds, twenty thousand pounds in gold and silver may frequently be a sufficient provision for answering occasional demands." [**The Wealth of Nations**, pp. 257-8]

In other words, the competitive banking system did not, in fact, eliminate fractional reserve banking. Ironically enough, Smith noted that "*the Bank of England paid very dearly, not only for its own imprudence, but for the much greater imprudence of almost all of the Scotch [sic!] banks.*" [**Op. Cit.**, p. 269] Thus the central bank was more conservative in its credit generation than the banks under competitive pressures! Indeed, Smith argues that the banking companies did not, in fact, act in line with their interests as assumed by the "free banking" school:

"had every particular banking company always understood and and attended to its own particular interest, the circulation never could have been overstocked with paper money. But every particular baking company has not always understood and attended to its own particular interest, and the circulation has frequently been overstocked with paper money." [**Op. Cit.**, p. 267]

Thus we have reserve banking plus bankers acting in ways opposed to their "*particular interest*" (i.e. what economics consider to be their actual self-interest rather than what the bankers actually thought was their self-interest!) in a system of competitive banking. Why could this be the case? Smith mentions, in passing, a possible reason. He notes that "*the high profits of trade afforded a great temptation to over-trading*" and that while a "*multiplication of banking companies. . . increases the security of the public*" by forcing them "*to be more circumspect in their conduct*" it also "*obliges all bankers to be more liberal in their dealings with their customers, lest their rivals should carry them away.*" [Op. Cit., p. 274, p. 294]

Thus "free banking" is pulled in two directions at once, to accommodate their customers while being circumspect in their activities. Which factor prevails would depend on the state of the economy, with up-swings provoking liberal lending (as described by Minsky). Moreover, given that the "free banking" school argues that credit generation produces the business cycle, it is clear from the case of Scotland that competitive banking does not, in fact, stop credit generation (and so the business cycle, according to "Austrian" theory). This also seemed the case with 19th century America, which did not have a central bank for most of that period -- "*the up cycles were also extraordinary [like the busts], powered by loose credit and kinky currencies (like privately issued banknotes).*" [Doug Henwood, **Wall Street**, p. 94]

Most "free banking" supporters also argue that regulated systems of free banking were more unstable than unregulated. Perhaps this is the case, but that implies that the regulated systems could not freely accommodate their customers by generating credit and the resulting inflexible money regime created problems by increasing interest rates and reducing the amount of money available, which would result in a slump sooner rather than later. Thus the over supply of credit, rather than being the **cause** of the crisis is actually a symptom. Competitive investment also drives the business-cycle expansion, which is allowed and encouraged by the competition among banks in supplying credit. Such expansion complements -- and thus amplifies -- other objective tendencies towards crisis, such as over-investment and disproportionality.

In other words, a pure "free market" capitalist would still have a business cycle as this cycle is caused by the nature of capitalism, not by state intervention. In reality (i.e. in "actually existing" capitalism), state manipulation of money (via interest rates) is essential for the capitalist class as it is more related to indirect profit-generating activity, such as ensuring a "natural" level of unemployment to keep profits up, an acceptable level of inflation to ensure increased profits, and so forth, as well as providing a means of tempering the business cycle, organising bailouts and injecting money into the economy during panics. If state manipulation of money caused the problems of capitalism, we would not have seen the economic successes of the post-war Keynesian experiment or the business cycle in pre-Keynesian days and in countries which had a more free banking system (for example, nearly half of the late 19th century in the US was spent in periods of recession and depression, compared to a fifth since the end of World War II).

It is true that all crises have been preceded by a speculatively-enhanced expansion of production and credit. This does not mean, however, that crisis **results** from speculation and the expansion of credit. The connection is not causal in free market capitalism. The expansion and contraction of credit is a mere symptom of the periodic changes in the business cycle, as the decline of profitability contracts credit just

as an increase enlarges it.

Paul Mattick gives the correct analysis:

"[M]oney and credit policies can themselves change nothing with regard to profitability or insufficient profits. Profits come only from production, from the surplus value produced by workers. . . The expansion of credit has always been taken as a sign of a coming crisis, in the sense that it reflected the attempt of individual capital entities to expand despite sharpening competition, and hence survive the crisis. . . Although the expansion of credit has staved off crisis for a short time, it has never prevented it, since ultimately it is the real relationship between total profits and the needs of social capital to expand in value which is the decisive factor, and that cannot be altered by credit." [**Economics, Politics and the Age of Inflation**, pp. 17-18]

In short, the apologists of "free market" capitalism confuse the symptoms for the disease.

Where there is no profit to be had, credit will not be sought. While extension of the credit system *"can be a factor deferring crisis, the actual outbreak of crisis makes it into an aggravating factor because of the larger amount of capital that must be devalued."* [Paul Mattick, **Economic Crisis and Crisis Theory**, p. 138] But this is also a problem facing private companies using the gold standard, as advocated by right-wing Libertarians (who are supporters of "free market" capitalism and banking). The money supply reflects the economic activity within a country and if that supply cannot adjust, interest rates rise and provoke a crisis. Thus the need for a flexible money supply (as desired, for example, by the US Individualist Anarchists). As Adam Smith pointed out, *"the quantity of coin in every country is regulated by the value of the commodities which are to be circulated by it: increase that value and . . . the additional quantity of coin requisite for circulating them [will be found]."* [**Op. Cit.**, p. 385]

Token money came into being because commodity money proved to be too inflexible for this to occur, as *"the expansion of production or trade unaccompanied by an increase in the amount of money must cause a fall in the price level. . . Token money was developed at an early date to shelter trade from the enforced deflations that accompanied the use of specie when the volume of business swelled. . . Specie is an inadequate money just because it is a commodity and its amount cannot be increased at will. The amount of gold available may be increased by a few per cent a year, but not by as many dozen within a few weeks, as might be required to carry out a sudden expansion of transactions. In the absence of token money business would have to be either curtailed or carried on at very much lower prices, thus inducing a slump and creating unemployment."* [Karl Polanyi, **The Great Transformation**, p. 193]

To sum up, *"[i]t is not credit but only the increase in production made possible by it that increases surplus value. It is then the rate of exploitation which determines credit expansion."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 18] Hence token money would increase and decrease in line with capitalist profitability, as predicted in capitalist economic theory. But this could not affect the business cycle, which has its roots in production for capital (i.e. profit) and capitalist authority

relations, to which the credit supply would obviously be tied, and not vice versa.

C.8.1 Does this mean that Keynesianism works?

If state control of credit does not cause the business cycle, does that mean Keynesianism capitalism can work? Keynesian economics, as opposed to free market capitalism, maintains that the state can and should intervene in the economy in order to stop economic crises from occurring. The post-war boom presents compelling evidence that it can be effect the business cycle for the better by reducing its impact from developing into a full depression.

The period of social Keynesianism after the war was marked by reduced inequality, increased rights for working people, less unemployment, a welfare state you could actually use and so on. Compared to present-day capitalism, it had much going for it. However, Keynesian capitalism is still capitalism and so is still based upon oppression and exploitation. It was, in fact, a more refined form of capitalism, within which the state intervention was used to protect capitalism from itself while trying to ensure that working class struggle against it was directed, via productivity deals, into keeping the system going. For the population at large, the general idea was that the welfare state (especially in Europe) was a way for society to get a grip on capitalism by putting some humanity into it. In a confused way, the welfare state was supported as an attempt to create a society in which the economy existed for people, not people for the economy.

While the state has always had a share in the total surplus value produced by the working class, only under Keynesianism is this share increased and used actively to manage the economy. Traditionally, placing checks on state appropriation of surplus value had been one of the aims of classical capitalist thought (simply put, cheap government means more surplus value available for capitalists to compete for). But as capital has accumulated, so has the state increased and its share in social surplus (for control over the domestic enemy has to be expanded and society protected from the destruction caused by free market capitalism).

Indeed, such state intervention was not **totally** new for "*[f]rom its origins, the United States had relied heavily on state intervention and protection for the development of industry and agriculture, from the textile industry in the early nineteenth century, through the steel industry at the end of the century, to computers, electronics, and biotechnology today. Furthermore, the same has been true of every other successful industrial society.*" [World Orders, Old and New, p. 101]

The roots of the new policy of higher levels and different forms of state intervention lie in the Great Depression of the 1930s and the realisation that attempts to enforce widespread reductions in money wages and costs (the traditional means to overcome depression) were impossible because the social and economic costs would have been too expensive. A militant strike wave involving a half million workers occurred in 1934, with factory occupations and other forms of militant direct action commonplace.

Instead of attempting the usual class war (which may have had revolutionary results), sections of the

capitalist class thought a new approach was required. This involved using the state to manipulate credit in order to increase the funds available for capital and to increase demand by state orders. As Paul Mattick points out:

"The additional production made possible by deficit financing does appear as additional demand, but as demand unaccompanied by a corresponding increase in total profits. . . [this] functions immediately as an increase in demand that stimulates the economy as a whole and can become the point for a new prosperity" if objective conditions allow it.
[**Economic Crisis and Crisis Theory**, p. 143]

State intervention can, in the short term, postpone crises by stimulating production. This can be seen from the in 1930s New Deal period under Roosevelt when the economy grew five years out of seven compared to it shrinking every year under the pro-laissez-faire Republican President Herbert Hoover (under Hoover, the GNP shrank an average of -8.4 percent a year, under Roosevelt it grew by 6.4 percent). The 1938 slump after 3 years of growth under Roosevelt was due to a decrease in state intervention:

"The forces of recovery operating within the depression, as well as the decrease in unemployment via public expenditures, increased production up to the output level of 1929. This was sufficient for the Roosevelt administration to drastically reduce public works. . . in a new effort to balance the budget in response to the demands of the business world. . . The recovery proved to be short-lived. At the end of 1937 the Business Index fell from 110 to 85, bring the economy back to the state in which it had found itself in 1935. . . Millions of workers lost their jobs once again." [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 138]

With the success of state intervention during the second world war, Keynesianism was seen as a way of ensuring capitalist survival. The resulting boom is well known, with state intervention being seen as the way of ensuring prosperity for all sections of society. Before the Second World War, the USA (for example) suffered eight depressions, since the war there has been none (although there has been periods of recession). There is no denying that for a considerable time, capitalism has been able to prevent the rise of depressions which so plagued the pre-war world and that this was accomplished by government interventions.

This is because Keynesianism can serve to initiate a new prosperity and postpone crisis by the extension of credit. This can mitigate the conditions of crisis, since one of its short-term effects is that it offers private capital a wider range of action and an improved basis for its own efforts to escape the shortage of profits for accumulation. In addition, Keynesianism can fund Research and Development in new technologies and working methods (such as automation), guarantee markets for goods as well as transferring wealth from the working class to capital via taxation and inflation.

In the long run, however, Keynesian *"management of the economy by means of monetary and credit*

policies and by means of state-induced production must eventually find its end in the contradictions of the accumulation process." [Paul Mattick, **Op. Cit.**, p. 18]

So, these interventions did not actually set aside the underlying causes of economic and social crisis. The modifications of the capitalist system could not totally countermand the subjective and objective limitations of a system based upon wage slavery and social hierarchy. This can be seen when the rosy picture of post-war prosperity changed drastically in the 1970s when economic crisis returned with a vengeance, with high unemployment occurring along with high inflation. This soon led to a return to a more "free market" capitalism with, in Chomsky's words, *"state protection and public subsidy for the rich, market discipline for the poor."* This process, and its effects, are discussed in the next two sections.

C.8.2 What happened to Keynesianism in the 1970s?

Basically, the subjective and objective limitations to Keynesianism we highlighted in the last section were finally reached in the early 1970s. Economic crisis returned with massive unemployment accompanied with high inflation, with the state interventions that for so long kept capitalism healthy making the crisis worse. In other words, a combination of social struggle and a lack of surplus value available to capital resulted in the breakdown of the successful post-war consensus.

The roots and legacy of this breakdown in Keynesianism is informative and worth analysing. The post-war period marked a distinct change for capitalism, with new, higher levels of state intervention. So why the change? Simply put, because capitalism was not a viable system. It had not recovered from the Great Depression and the boom economy during war had obviously contrasted deeply with the stagnation of the 1930s. Plus, of course, a militant working class, which has put up with years of denial in the struggle against fascist-capitalism would not have taken lightly to a return to mass unemployment and poverty. So, politically and economically a change was required. This change was provided by the ideas of Keynes, a change which occurred under working class pressure but in the interests of the ruling class.

The mix of intervention obviously differed from country to country, based upon the needs and ideologies of the ruling parties and social elites. In Europe nationalisation was widespread as inefficient capital was taken over by the state and reinvigorated by state funding and social spending more important as Social Democratic parties attempted to introduce reforms. Chomsky describes the process in the USA:

"Business leaders recognised that social spending could stimulate the economy, but much preferred the military Keynesian alternative - for reasons having to do with privilege and power, not 'economic rationality.' This approach was adopted at once, the Cold War serving as the justification. . . . The Pentagon system was considered ideal for these purposes. It extends well beyond the military establishment, incorporating also the Department of Energy. . . and the space agency NASA, converted by the Kennedy administration to a significant component of the state-directed public subsidy to advanced industry. These arrangements impose on the public a large burden of the costs of industry

*(research and development, R&D) and provide a guaranteed market for excess production, a useful cushion for management decisions. Furthermore, this form of industrial policy does not have the undesirable side-effects of social spending directed to human needs. Apart from unwelcome redistributive effects, the latter policies tend to interfere with managerial prerogatives; useful production may undercut private gain, while state-subsidised waste production. . . is a gift to the owner and manager, to whom any marketable spin-offs will be promptly delivered. Social spending may also resource public interest and participation, thus enhancing the threat of democracy. . . The defects of social spending do not taint the military Keynesian alternative. For such reasons, **Business Week** explained, 'there's a tremendous social and economic difference between welfare pump-priming and military pump-priming,' the latter being far preferable." [World Orders, Old and New, pp. 100-101]*

Over time, social Keynesianism took increasing hold even in the USA, partly in response to working class struggle, partly due to the need for popular support at elections and partly due to "[p]opular opposition to the Vietnam war [which] prevented Washington from carrying out a national mobilisation. . . which might have made it possible to complete the conquest without harm to the domestic economy. Washington was forced to fight a 'guns-and-butter' war to placate the population, at considerable economic cost." [Noam Chomsky, **Op. Cit.**, pp. 157-8]

Social Keynesianism directs part of the total surplus value to workers and unemployed while military Keynesianism transfers surplus value from the general population to capital and from capital to capital. This allows R&D and capital to be publicly subsidised, as well as essential but unproductive capital to survive. As long as real wages did not exceed a rise in productivity, Keynesianism would continue. However, both functions have objective limits as the transfer of profits from successful capital to essential, but less successful, or long term investment can cause a crisis if there is not enough profit available to the system as a whole. The surplus value producing capital, in this case, would be handicapped due to the transfers and cannot respond to economic problems with freedom as before.

This lack of profitable capital was part of the reason for the collapse of the post-war consensus. In their deeply flawed 1966 book, **Monopoly Capital**, radical economists Baran and Sweezy point out that "[i]f military spending were reduced once again to pre-Second World War proportions the nation's economy would return to a state of profound depression" [p. 153]

In other words, the US economy was still in a state of depression, countermanded by state expenditures (for a good, if somewhat economic, critique of Baran and Sweezy see Paul Mattick's "*Monopoly Capital*" in **Anti-Bolshevik Communism**).

In addition, the world was becoming economically "tripolar," with a revitalised Europe and a Japan-based Asian region emerging as major economic forces. This placed the USA under increased pressure, as did the Vietnam War. However, the main reason for its breakdown was social struggle by working people. The only limit to the rate of growth required by Keynesianism to function is the degree to which

final output consists of consumption goods for the presently employed population instead of investment. And investment is the most basic means by which work, i.e. capitalist domination, is imposed. Capitalism and the state could no longer ensure that working class struggles could be contained within the system.

This pressure on US capitalism had an impact in the world economy and was also accompanied by general social struggle across the world. This struggle was directed against hierarchy in general, with workers, students, women, ethnic groups, anti-war protesters and the unemployed all organising successful struggles against authority. This struggle attacked the hierarchical core of capitalism as well increasing the amount of income going to labour, resulting in a profit squeeze (see section [C.7](#)) creating an economic crisis.

In other words, post-war Keynesianism failed simply because it could not, in the long term, stop the subjective and objective pressures which capitalism always faces.

C.8.3 How did capitalism adjust to the crisis in Keynesianism?

Basically by using, and then managing, the 1970s crisis to discipline the working class in order to reap increased profits and secure and extend the ruling classes' power. It did this using a combination of crisis, free markets and adjusted Keynesianism as part of a ruling elite lead class war against labour.

In the face of crisis in the 1970s, Keynesianist redirection of profits between capitals and classes had become a burden to capital as a whole and had increased the expectations and militancy of working people to dangerous levels. The crisis, however, helped control working class power and was latter utilised as a means of saving capitalism.

Initially the crisis was used to justify attacks on working class people in the name of the free market. And, indeed, capitalism was made more market based, although with a "safety net" and "welfare state" for the wealthy. We have seen a partial return to *"what economists have called freedom of industry and commerce, but which really meant the relieving of industry from the harassing and repressive supervision of the State, and the giving to it full liberty to exploit the worker, whom was still to be deprived of his freedom."* [Peter Kropotkin, **The Great French Revolution**, p. 28] The "crisis of democracy" was overcome and replaced with the *"liberty to exploit human labour without any safeguard for the victims of such exploitation and the political power organised as to assure freedom of exploitation to the middle-class."* [**Op. Cit.**, p. 30]

Then under the rhetoric of "free market" capitalism, Keynesianism was used to manage the crisis as it had previously managed the prosperity. "Supply Side" economics (combined with neo-classical dogma) was used to undercut working class power and consumption and so allow capital to reap more profits off working people. Unemployment was used to discipline a militant workforce and as a means of getting workers to struggle **for** work instead of **against** wage labour. With the fear of job loss hanging over their heads, workers put up with speedups, longer hours, worse conditions, less safety protection and lower

wages and this increased the profits that could be extracted directly from workers as well as reducing business costs by allowing employers to reduce on-job safety and protection and so on. The labour "market" was fragmented to a large degree into powerless, atomised units with unions fighting a losing battle in the face of state backed recession. In this way capitalism could successfully change the composition of demand from the working class to capital.

This disciplining of the working class resulted in the income going to capital increasing by more than double the amount of that going to "labour." Between 1979 and 1989, total labour income rose by 22.8%, total capital income rose by 65.3% and realised capital gains by 205.5%. The real value of a standard welfare benefit package has also declined by some 26 percent since 1972. [Edward S. Herman, *Immiserating Growth: The First World*, **Z Magazine**] And Stanford University economist Victor Fuch estimates that US children have lost 10-12 hours of parental time between 1960 and 1986, leading to a deterioration of family relations and values. Unemployment and underemployment is still widespread, with most newly created jobs being part-time.

We should point out that the growth in income going to labour includes all "labour" incomes and as such includes the "wages" of CEOs and high level managers. As we have already noted, these "wages" are part of the surplus value extracted from workers and so should not be counted as income to "labour." The facts of the Reagan fronted class war of the 1980s is that while top management income has skyrocketed, workers wages have remained usually stable or decreased absolutely. For example, the median hourly wage of US production workers has fallen by some 13% since 1973 (we are not implying that only production workers create surplus value or are "the working class"). In contrast, US management today receives 150 times what the average worker earns. Unsurprisingly 70% of the recent gain in per capita income have gone to the top 1% of income earners (while the bottom lost absolutely). [Chomsky, **Op. Cit.**, p. 141] Income inequality has increased, with the income of the bottom fifth of the US population falling by 18%, while that of the richest fifth rose by 8%.

Indirect means of increasing capital's share in the social income were also used, such as reducing environment regulations, so externalising pollution costs onto current and future generations. In Britain, state owned monopolies were privatised at knock-down prices allowing private capital to increase its resources at a fraction of the real cost. Indeed, some nationalised industries were privatised as **monopolies** allowing monopoly profits to be extracted from consumers for many years before the state allowed competition in those markets. Indirect taxation also increased, being used to reduce working class consumption by getting us to foot the bill for Pentagon-style Keynesianism.

Exploitation of under-developed nations increased with \$418 billion being transferred to the developed world between 1982 and 1990 [Chomsky, **Op. Cit.**, p. 130] Capital also became increasingly international in scope, as it used advances in technology to move capital to third world countries where state repression ensured a less militant working class. This transfer had the advantage of increasing unemployment in the developed world, so placing more pressures upon working class resistance.

This policy of capital-led class war, a response to the successful working class struggles of the 1960s

and 1970s, obviously reaped the benefits it was intended to for capital. Income going to capital has increased and that going to labour has declined and the "labour market" has been disciplined to a large degree (but not totally we must add). Working people have been turned, to a large degree, from participants into spectators, as required for any hierarchical system. The human impact of these policies cannot be calculated. Little wonder, then, the utility of neo-classical dogma to the elite - it could be used by rich, powerful people to justify the fact that they are pursuing social policies that create poverty and force children to die.

As Chomsky argues, *"one aspect of the internationalisation of the economy is the extension of the two-tiered Third World mode to the core countries. Market doctrine thus becomes an essential ideological weapon at home as well, its highly selective application safely obscured by the doctrinal system. Wealth and power are increasingly concentrated. Service for the general public - education, health, transportation, libraries, etc. - become as superfluous as those they serve, and can therefore be limited or dispensed with entirely."* [Year 501, p. 109]

The state managed recession has had its successes. Company profits are up as the "competitive cost" of workers is reduced due to fear of job losses. The **Wall Street Journal's** review of economic performance for the last quarter of 1995 is headlined *"Companies' Profits Surged 61% on Higher Prices, Cost Cuts."* After-tax profits rose 62% from 1993, up from 34% for the third quarter. While working America faces market forces, Corporate America posted record profits in 1994. **Business Week** estimated 1994 profits to be up *"an enormous 41% over [1993],"* despite a bare 9% increase in sales, a *"colossal success,"* resulting in large part from a *"sharp"* drop in the *"share going to labour,"* though *"economists say labour will benefit -- eventually."* [cited by Noam Chomsky, "Rollback III", **Z Magazine**, April 1995]

Moreover, for capital, Keynesianism is still goes on as before, combined (as usual) with praises to market miracles. For example, Michael Borrus, co-director of the Berkeley Roundtable on the International Economy (a corporate-funded trade and technology research institute), cites a 1988 Department of Commerce study that states that *"five of the top six fastest growing U.S. industries from 1972 to 1988 were sponsored or sustained, directly or indirectly, by federal investment."* He goes on to state that the *"winners [in earlier years were] computers, biotechnology, jet engines, and airframes"* all *"the by-product of public spending."* [cited by Chomsky, **World Orders, Old and New**, p. 109]

As James Midgley points out, *"the aggregate size of the public sector did not decrease during the 1980s and instead, budgetary policy resulted in a significant shift in existing allocations from social to military and law enforcement."* ["The radical right, politics and society", **The Radical Right and the Welfare State**, Howard Glennerster and James Midgley (eds.), p. 11]

Indeed, the US state funds one third of all civil R&D projects, and the UK state provides a similar subsidy. [Chomsky, **Op. Cit.**, p. 107] And after the widespread collapse of Savings and Loans Associations in deregulated corruption and speculation, the 1980s pro-"free market" Republican administration happily bailed them out, showing that market forces were only for one class.

The corporate owned media attacks social Keynesianism, while remaining silent or justifying pro-business state intervention. Combined with extensive corporate funding of right-wing "think-tanks" which explain why (the wrong sort of) social programmes are counter-productive, the corporate state system tried to fool the population into thinking that there is no alternative to the rule by the market while the elite enrich themselves at the public's expense.

So, social Keynesianism has been replaced by Pentagon Keynesianism cloaked beneath the rhetoric of "free market" dogma. Combined with a strange mix of free markets (for the many) and state intervention (for the select few), the state has become stronger and more centralised and *"prisons also offer a Keynesian stimulus to the economy, both to the construction business and white collar employment; the fastest growing profession is reported to be security personnel."* [Chomsky, **Year 501**, p. 110]

While working class resistance continues, it is largely defensive, but, as in the past, this can and will change. Even the darkest night ends with the dawn and the lights of working class resistance can be seen across the globe. For example, the anti-Poll Tax struggle in Britain against the Thatcher Government was successful as have been many anti-cuts struggles across the USA and Western Europe, the Zapatista uprising in Mexico is inspiring and there has been continual strikes and protests across the world. Even in the face of state repression and managed economic recession, working class people are still fighting back. The job for anarchists is to encourage these sparks of liberty and help them win.

C.7 What causes the capitalist business cycle?

The business cycle is the term used to describe the boom and slump nature of capitalism. Sometimes there is full employment, with workplaces producing more and more goods and services, the economy grows and along with it wages. However, as Proudhon argued, this happy situation does not last:

"But industry, under the influence of property, does not proceed with such regularity. . . As soon as a demand begins to be felt, the factories fill up, and everybody goes to work. Then business is lively. . . Under the rule of property, the flowers of industry are woven into none but funeral wreaths. The labourer digs his own grave. . . [the capitalist] tries. . . to continue production by lessening expenses. Then comes the lowering of wages; the introduction of machinery; the employment of women and children . . . the decreased cost creates a larger market. . . [but] the productive power tends to more than ever outstrip consumption. . . To-day the factory is closed. Tomorrow the people starve in the streets. . . In consequence of the cessation of business and the extreme cheapness of merchandise. . . frightened creditors hasten to withdraw their funds [and] Production is suspended, and labour comes to a standstill." [P-J Proudhon, **What is Property**, pp. 191-192]

Why does this happen? For anarchists, as Proudhon noted, it's to do with the nature of capitalist production and the social relationships it creates ("*the rule of property*"). The key to understanding the business cycle is to understand that, to use Proudhon's words, "*Property sells products to the labourer for more than it pays him for them; therefore it is impossible.*" [Op. Cit., p. 194] In other words, the need for the capitalist to make a profit from the workers they employ is the underlying cause of the business cycle. If the capitalist class cannot make enough profit, then it will stop production, sack people, ruin lives and communities until such as enough profit can again be extracted from the workers.

So what influences this profit level? There are two main classes of pressure on profits, what we will call the "*subjective*" and "*objective.*" The objective pressures are related to what Proudhon termed the fact that "*productive power tends more and more to outstrip consumption*" and are discussed in sections [C.7.2](#) and [C.7.3](#). The "subjective" pressures are to do with the nature of the social relationships created by capitalism, the relations of domination and subjection which are the root of exploitation and the resistance to them. In other words the subjective pressures are the result of the fact that "*property is despotism*" (to use Proudhon's expression). We will discuss the impact of the class struggle (the "subjective" pressure) in the [next section](#).

Before continuing, we would like to stress here that all three factors operate together in a real economy and we have divided them purely to help explain the issues involved in each one. The class struggle, market "communication" creating disproportionalities and over-investment all interact. Due to the needs of the internal (class struggle) and external (inter-company) competition, capitalists have to invest in new means of production. As workers' power increase during a boom, capitalists innovate and invest in

order to try and counter it. Similarly, to get market advantage (and so increased profits) over their competitors, a company invests in new machinery. However, due to lack of effective communication within the market caused by the price mechanism and incomplete information provided by the interest rate, this investment becomes concentrated in certain parts of the economy. Relative over-investment can occur, creating the possibility of crisis. In addition, the boom encourages new companies and foreign competitors to try and get market share, so decreasing the "*degree of monopoly*" in an industry, and so reducing the mark-up and profits of big business (which, in turn, can cause an increase in mergers and take-overs towards the end of the boom). Meanwhile, workers power is increasing, causing profit margins to be eroded, but also reducing tendencies to over-invest by resisting the introduction of new machinery and technics and by maintaining demand for the finished goods. This contradictory effect of class struggle matches the contradictory effect of investment. Just as investment causes crisis because it is useful (i.e. it helps increase profits for individual companies in the short term, but it leads to collective over-investment and falling profits in the long term), the class struggle both hinders over-accumulation of capital and maintains aggregate demand (so postponing the crisis) while at the same time eroding profit margins at the point of production (so accelerating it). Thus subjective and objective factors interact and counteract with each other, but in the end a crisis will result simply because the system is based upon wage labour and the producers are not producing for themselves. Ultimately, a crisis is caused when the capitalist class does not get a sufficient rate of profit. If workers produced for themselves, this decisive factor would not be an issue as no capitalist class would exist.

And we should note that these factors work in reverse during a slump, creating the potential for a boom. During a crisis, capitalists still try to improve their profitability (i.e. increase surplus value). Labour is in a weak position due to the large rise in unemployment and so, usually, accept the increased rate of exploitation this implies to remain in work. In the slump, many firms go out of business, so reducing the amount of fixed capital in the economy. In addition, as firms go under the "*degree of monopoly*" of each industry increases, which increases the mark-up and profits of big business. Eventually this increased surplus value production is enough relative to the (reduced) fixed capital stock to increase the rate of profit. This encourages capitalists to start investing again and a boom begins (a boom which contains the seeds of its own end).

And so the business cycle continues, driven by "subjective" and "objective" pressures -- pressures that are related directly to the nature of capitalist production and the wage labour on which it is based.

C.7.1 What role does class struggle play in the business cycle?

At its most basic, the class struggle (the resistance to hierarchy in all its forms) is the main cause of the business cycle. As we argued in [section B.1.2](#) and [section C.2](#), capitalists in order to exploit a worker must first oppress them. But where there is oppression, there is resistance; where there is authority, there is the will to freedom. Hence capitalism is marked by a continuous struggle between worker and boss at the point of production as well as struggle outside of the workplace against other forms of hierarchy.

This class struggle reflects a conflict between workers attempts at liberation and self-empowerment and

capitals attempts to turn the individual worker into a small cog in a big machine. It reflects the attempts of the oppressed to try to live a fully human life, expressed when the *"worker claims his share in the riches he produces; he claims his share in the management of production; and he claims not only some additional well-being, but also his full rights in the higher enjoyment of science and art."* [Peter Kropotkin, **Kropotkin's Revolutionary Pamphlets**, pp. 48-49]

As Errico Malatesta argued, if workers *"succeed in getting what they demand, they will be better off: they will earn more, work fewer hours and will have more time and energy to reflect on things that matter to them, and will immediately make greater demands and have greater needs. . . [T]here exists no natural law (law of wages) which determines what part of a worker's labour should go to him [or her]. . . Wages, hours and other conditions of employment are the result of the struggle between bosses and workers. The former try and give the workers as little as possible; the latter try, or should try to work as little, and earn as much, as possible. Where workers accept any conditions, or even being discontented, do not know how to put up effective resistance to the bosses demands, they are soon reduced to bestial conditions of life. Where, instead, they have ideas of how human beings should live and know how to join forces, and through refusal to work or the latent and open threat of rebellion, to win bosses respect, in such cases, they are treated in a relatively decent way. . . Through struggle, by resistance against the bosses, therefore, workers can, up to a certain point, prevent a worsening of their conditions as well as obtaining real improvement."* [**Life and Ideas**, pp. 191-2]

It is this struggle that determines wages and indirect income such as welfare, education grants and so forth. This struggle also influences the concentration of capital, as capital attempts to use technology to control workers (and so extract the maximum surplus value possible from them) and to get an advantage against their competitors (see [section C.2.3](#)). And, as will be discussed in section D.10 ([How does capitalism affect technology?](#)), increased capital investment also reflects an attempt to increase the control of the worker by capital (or to replace them with machinery that cannot say "no") **plus** the transformation of the individual into "the mass worker" who can be fired and replaced with little or no hassle. For example, Proudhon quotes an "English Manufacturer" who states that he invested in machinery precisely to replace humans by machines because machines are easier to control:

"The insubordination of our workforce has given us the idea of dispensing with them. We have made and stimulated every imaginable effort of the mind to replace the service of men by tools more docile, and we have achieved our object. Machinery has delivered capital from the oppression of labour." [**System of Economical Contradictions**, p. 189]

(To which Proudhon replied *"[w]hat a misfortunate that machinery cannot also deliver capital from the oppression of consumers!"* as the over-production and inadequate market caused by machinery replacing people soon destroys these illusions of automatic production by a slump -- see [section C.7.3](#)).

Therefore, class struggle influences both wages and capital investment, and so the prices of commodities in the market. It also, more importantly, determines profit levels and it is profit levels that are the cause of the business cycle. This is because, under capitalism, production's *"only aim is to increase the profits*

of the capitalist. And we have, therefore, - the continuous fluctuations of industry, the crisis coming periodically. . . " [Kropotkin, **Op. Cit.**, p. 55]

A common capitalist myth, derived from the capitalist Subjective Theory of Value, is that free-market capitalism will result in a continuous boom, since the cause of slumps is allegedly state control of credit and money. Let us assume, for a moment, that this is the case. (In fact, it is not the case, as will be highlighted in [section C.8](#)). In the "boom economy" of "free market" dreams, there will be full employment. But in a period of full employment, while it helps *"increase total demand, its fatal characteristic from the business view is that it keeps the reserve army of the unemployed low, thereby protecting wage levels and strengthening labour's bargaining power."* [Edward S. Herman, **Beyond Hypocrisy**, p. 93]

In other words, workers are in a very strong position under boom conditions, a strength which can undermine the system. This is because capitalism always proceeds along a tightrope. If a boom is to continue smoothly, real wages must develop within a certain band. If their growth is too low then capitalists will find it difficult to sell the products their workers have produced and so, because of this, face what is often called a *"realisation crisis"* (i.e. the fact that capitalists cannot make a profit if they cannot sell their products). If real wage growth is too high then the conditions for producing profits are undermined as labour gets more of the value it produces. This means that in periods of boom, when unemployment is falling, the conditions for realisation improve as demand for consumer goods increase, thus expanding markets and encouraging capitalists to invest. However, such an increase in investment (and so employment) has an adverse effect on the conditions for **producing** surplus value as labour can assert itself at the point of production, increase its resistance to the demands of management and, far more importantly, make its own.

If an industry or country experiences high unemployment, workers will put up with longer hours, stagnating wages, worse conditions and new technology in order to remain in work. This allows capital to extract a higher level of profit from those workers, which in turn signals other capitalists to invest in that area. As investment increases, unemployment falls. As the pool of available labour runs dry, then wages will rise as employers bid for scarce resources and workers feel their power. As workers are in a better position they can go from resisting capital's agenda to proposing their own (e.g. demands for higher wages, better working conditions and even for workers' control). As workers' power increases, the share of income going to capital falls, as do profit rates, and capital experiences a profits squeeze and so cuts down on investment and employment and/or wages. The cut in investment increases unemployment in the capital goods sector of the economy, which in turn reduces demand for consumption goods as jobless workers can no longer afford to buy as much as before. This process accelerates as bosses fire workers or cut their wages and the slump deepens and so unemployment increases, which begins the cycle again. This can be called "subjective" pressure on profit rates.

This interplay of profits and wages can be seen in most business cycles. As an example, let's consider the crisis which ended post-war Keynesianism in the early 1970's and paved the way for the "supply side revolutions" of Thatcher and Reagan. This crisis, which occurred in 1973, had its roots in the 1960s

boom. If we look at the USA we find that it experienced continuous growth between 1961 and 1969 (the longest in its history). From 1961 onwards, unemployment steadily fell, effectively creating full employment. From 1963, the number of strikes and total working time lost steadily increased (from around 3000 strikes in 1963 to nearly 6000 in 1970). The number of wildcat strike rose from 22% of all strikes in 1960 to 36.5% in 1966. By 1965 both the business profit shares and business profit rates peaked. The fall in profit share and rate of profit continued until 1970 (when unemployment started to increase), where it rose slightly until the 1973 slump occurred. In addition, after 1965, inflation started to accelerate as capitalist firms tried to maintain their profit margins by passing cost increases to consumers (as we discuss below, inflation has far more to do with capitalist profits than it has with money supply or wages). This helped to reduce real wage gains and maintain profitability over the 1968 to 1973 period above what it otherwise would have been, which helped postpone, but not stop, a slump.

Looking at the wider picture, we find that for the advanced capital countries as a whole, the product wage rose steadily between 1962 and 1971 while productivity fell. The product wage (the real cost to the employer of hiring workers) meet that of productivity in 1965 (at around 4%) -- which was also the year in which profit share in income and the rate of profit peaked . From 1965 to 1971, productivity continued to fall while the product wage continued to rise. This process, the result of falling unemployment and rising workers' power (expressed, in part, by an explosion in the number of strikes across Europe and elsewhere), helped to ensure that the actual post-tax real wages and productivity in a the advanced capitalist countries increased at about the same rate from 1960 to 1968 (4%). But between 1968 and 1973, post-tax real wages increased by an average of 4.5% compared to a productivity rise of only 3.4%. Moreover, due to increased international competition companies could not pass on wage rises to consumers in the form of higher prices (which, again, would only have postponed, but not stopped, the slump). As a result of these factors, the share of profits going to business fell by about 15% in that period.

In addition, outside the workplace a *"series of strong liberation movements emerged among women, students and ethnic minorities. A crisis of social institutions was in progress, and large social groups were questioning the very foundations of the modern, hierarchical society: the patriarchal family, the authoritarian school and university, the hierarchical workplace or office, the bureaucratic trade union or party."* [Takis Fotopoulos, *"The Nation-state and the Market,"* p. 58, **Society and Nature**, Vol. 3, pp. 44-45]

These social struggles resulted in an economic crisis as capital could no longer oppress and exploit working class people sufficiently in order to maintain a suitable profit rate. This crisis was then used to discipline the working class and restore capitalist authority within and without the workplace (see [section C.8.2](#)). We should also note that this process of social revolt in spite, or perhaps because of, the increase of material wealth was predicted by Malatesta. In 1922 he argued that:

"The fundamental error of the reformists is that of dreaming of solidarity, a sincere collaboration, between masters and servants. . .

"Those who envisage a society of well stuffed pigs which waddle contentedly under the ferule of a small number of swineherd; who do not take into account the need for freedom and the sentiment of human dignity. . . can also imagine and aspire to a technical organisation of production which assures abundance for all and at the same time materially advantageous both to bosses and the workers. But in reality 'social peace' based on abundance for all will remain a dream, so long as society is divided into antagonistic classes, that is employers and employees. . .

"The antagonism is spiritual rather than material. There will never be a sincere understanding between bosses and workers for the better exploitation [sic!] of the forces of nature in the interests of mankind, because the bosses above all want to remain bosses and secure always more power at the expense of the workers, as well as by competition with other bosses, whereas the workers have had their fill of bosses and don't want more!" [Life and Ideas, pp. 78-79]

The experience of the post-war compromise and social democratic reform indicates well that, ultimately, the social question is not poverty but rather freedom. However, to return to the impact of class struggle on capitalism.

More recently, the panics in Wall Street that accompany news that unemployment is dropping in the USA reflect this fear of working class power. Without the fear of unemployment, workers may start to fight for improvements in their conditions, against capitalist oppression and exploitation and **for** liberty and a just world. Every slump within capitalism has occurred when workers have seen unemployment fall and their living standards improve -- not a coincidence.

The Philips Curve, which indicates that inflation rises as employment falls is also an indication of this relationship. Inflation is the situation when there is a general rise in prices. Neo-classical (and other pro-"free market" capitalist) economics argue that inflation is purely a monetary phenomenon, the result of there being more money in circulation than is needed for the sale of the various commodities on the market. However, this is not true. In general, there is no relationship between the money supply and inflation. The amount of money can increase while the rate of inflation falls, for example (as was the case in the USA between 1975 and 1984). Inflation has other roots, namely it is *"an expression of inadequate profits that must be offset by price and money policies. . . Under any circumstances, inflation spells the need for higher profits. . ."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 19] Inflation leads to higher profits by making labour cheaper. That is, it reduces *"the real wages of workers. . . [which] directly benefits employers. . . [as] prices rise faster than wages, income that would have gone to workers goes to business instead."* [J. Brecher and T. Costello, **Common Sense for Hard Times**, p. 120]

Inflation, in other words, is a symptom of an on-going struggle over income distribution between classes and, as workers do not have any control over prices, it is caused when capitalist profit margins are reduced (for whatever reason, subjective or objective). This means that it would be wrong to conclude

that wage increases "cause" inflation as such. To do so ignores the fact that workers do not set prices, capitalists do. Inflation, in its own way, shows the hypocrisy of capitalism. After all, wages are increasing due to "natural" market forces of supply and demand. It is the capitalists who are trying to buck the market by refusing to accept lower profits caused by conditions on that market. Obviously, to use Tucker's expression, under capitalism market forces are good for the goose (labour) but bad for the gander (capital).

This does not mean that inflation suits all capitalists equally (nor, obviously, does it suit those social layers who live on fixed incomes and who thus suffer when prices increase but such people are irrelevant in the eyes of capital). Far from it - during periods of inflation, lenders tend to lose and borrowers tend to gain. The opposition to high levels of inflation by many supporters of capitalism is based upon this fact and the division within the capitalist class it indicates. There are two main groups of capitalists, finance capitalists and industrial capitalists. The latter can and do benefit from inflation (as indicated above) but the former sees high inflation as a threat. When inflation is accelerating it can push the real interest rate into negative territory and this is a horrifying prospect to those for whom interest income is fundamental (i.e. finance capital). In addition, high levels of inflation can also fuel social struggle, as workers and other sections of society try to keep their income at a steady level. As social struggle has a politicising effect on those involved, a condition of high inflation could have serious impacts on the political stability of capitalism and so cause problems for the ruling class.

How inflation is viewed in the media and by governments is an expression of the relative strengths of the two sections of the capitalist class and of the level of class struggle within society. For example, in the 1970s, with the increased international mobility of capital, the balance of power came to rest with finance capital and inflation became the source of all evil. This shift of influence to finance capital can be seen from the rise of rentier income. The distribution of US manufacturing profits indicate this process -- comparing the periods 1965-73 to 1990-96, we find that interest payments rose from 11% to 24%, dividend payments rose from 26% to 36% while retained earnings fell from 65% to 40% (given that retained earnings are the most important source of investment funds, the rise of finance capital helps explain why, in contradiction to the claims of the right-wing, economic growth has become steadily worse as markets have been liberalised -- funds that would have been resulted in real investment have ended up in the finance machine). In addition, the waves of strikes and protests that inflation produced had worrying implications for the ruling class. However, as the underlying reasons for inflation remained (namely to increase profits) inflation itself was only reduced to acceptable levels, levels that ensured a positive real interest rate and acceptable profits.

It is the awareness that full employment is bad for business which is the basis of the so-called "*Non-Accelerating Inflation Rate of Unemployment*" (NAIRU). This is the rate of unemployment for an economy under which inflation, it is claimed, starts to accelerate. While the basis of this "theory" is slim (the NAIRU is an invisible, mobile rate and so the "theory" can explain every historical event simply because you can prove anything when your datum cannot be seen by mere mortals) it is very useful for justifying policies which aim at attacking working people, their organisations and their activities. The NAIRU is concerned with a "*wage-price*" spiral caused by falling unemployment and rising workers' rights and power. Of course, you never hear of an "*interest-price*" spiral or a "*rent-price*" spiral or a

"*profits-price*" spiral even though these are also part of any price. It is always a "*wage-price*" spiral, simply because interest, rent and profits are income to capital and so, by definition, above reproach. By accepting the logic of NAIRU, the capitalist system implicitly acknowledges that it and full employment are incompatible and so with it any claim that it allocates resources efficiently or labour contracts benefit both parties equally.

For these reasons, anarchists argue that a continual "boom" economy is an impossibility simply because capitalism is driven by profit considerations, which, combined with the subjective pressure on profits due to the class struggle between workers and capitalists, **necessarily** produces a continuous boom-and-bust cycle. When it boils down to it, this is unsurprising, as "*[o]f necessity, the abundance of some will be based upon the poverty of others, and the straitened circumstances of the greater number will have to be maintained at all costs, that there may be hands to sell themselves for a part only of that which they are capable of producing, without which private accumulation of capital is impossible!*" [Kropotkin, **Op. Cit.**, p. 128]

Of course, when such "subjective" pressures are felt on the system, when private accumulation of capital is threatened by improved circumstances for the many, the ruling class denounces working class "greed" and "selfishness." When this occurs we should remember what Adam Smith had to say on this subject:

"In reality high profits tend much more to raise the price of work than high wages. . . That part of the price of the commodity that resolved itself into wages would. . . rise only in arithmetical proportion to the rise in wages. But if profits of all the different employers of those working people should be raised five per cent., that price of the commodity which resolved itself into profit would. . . rise in geometrical proportion to this rise in profit. . . Our merchants and master manufacturers complain of the bad effects of high wages in raising the price and thereby lessening the sale of their goods at home and abroad. They say nothing concerning the bad effects of high profits. They are silent with regard to the pernicious effects of their own gains. They complain only of those of other people" [**The Wealth of Nations**, pp. 87-88]

As an aside, we must note that these days we would have to add economists to Smith's "*merchants and master manufacturers*." Not that this is surprising, given that economic theory has progressed (or degenerated) from Smith's disinterested analysis to apologetics for any action of the boss (a classic example, we must add, of supply and demand, with the marketplace of ideas responding to a demand for such work from "*our merchants and master manufacturers*"). Any "theory" which blames capitalism's problems on "greedy" workers will always be favoured over one that correctly places them in the contradictions created by wage slavery. Proudhon summed up capitalist economic theory well when he stated that "*Political economy -- that is, proprietary despotism -- can never be in the wrong: it must be the proletariat.*" [**System of Economical Contradictions**, p. 187] And little has changed since 1846 (or 1776!) when it comes to economics "explaining" capitalism's problems (such as the business cycle or unemployment). Ultimately, capitalist economics blame every problem of capitalism on the working class refusing to kow-tow to the bosses (for example, unemployment is caused by wages being too high

rather than bosses needing unemployment to maintain their power and profits -- see [section C.9.2](#) on empirical evidence that indicates that the second explanation is the accurate one).

Before concluding, one last point. While it may appear that our analysis of the "subjective" pressures on capitalism is similar to that of mainstream economics, this is not the case. This is because our analysis recognises that such pressures are inherent in the system, have contradictory effects (and so cannot be easily solved without making things worse before they get better) and hold the potential for creating a free society. Our analysis recognises that workers' power and resistance **is** bad for capitalism (as for any hierarchical system), but it also indicates that there is nothing capitalism can do about it without creating authoritarian regimes (such as Nazi Germany) or by generating massive amounts of unemployment (as was the case in the early 1980s in both the USA and the UK, when right-wing governments deliberately caused deep recessions) and even this is no guarantee of eliminating working class struggle as can be seen, for example, from 1930s America or 1970s Britain.

This means that our analysis shows the limitations and contradictions of the system as well as its need for workers to be in a weak bargaining position in order for it to "work" (which explodes the myth that capitalism is a free society). Moreover, rather than portray working people as victims of the system (as is the case in many Marxist analyses of capitalism) our analysis recognises that we, both individually and collectively, have the power to influence and **change** that system by our activity. We should be proud of the fact that working people refuse to negate themselves or submit their interests to that of others or play the role of order-takers required by the system. Such expressions of the human spirit, of the struggle of freedom against authority, should not be ignored or down-played, rather they should be celebrated. That the struggle against authority causes the system so much trouble is not an argument against social struggle, it is an argument against a system based on hierarchy, exploitation and the denial of freedom.

To sum up, in many ways, social struggle is the inner dynamic of the system, and its most basic contradiction: while capitalism tries to turn the majority of people into commodities (namely, bearers of labour power), it also has to deal with the human responses to this process of objectification (namely, the class struggle). However, it does not follow that cutting wages will solve a crisis -- far from it, for, as we argue in [section C.9.1](#), cutting wages will deepen any crisis, making things worse before they get better. Nor does it follow that, if social struggle were eliminated, capitalism would work fine. After all, if we assume that labour power is a commodity like any other, its price will rise as demand increases relative to supply (which will either produce inflation or a profits squeeze, probably both). Therefore, even without the social struggle which accompanies the fact that labour power cannot be separated from the individuals who sell it, capitalism would still be faced with the fact that only surplus labour (unemployment) ensures the creation of adequate amounts of surplus value.

Moreover, even assuming that individuals can be totally happy in a capitalist economy, willing to sell their freedom and creativity for a little money, putting up, unquestioningly, with every demand and whim of their bosses (and so negating their own personality and individuality in the process), capitalism does have "objective" pressures limiting its development. So while social struggle, as argued above, can have a decisive effect on the health of the capitalist economy, it is not the only problems the system

faces. This is because there are objective pressures within the system beyond and above the authoritarian social relations it produces (and the resistance to them). These pressures are discussed next, in sections [C.7.2](#) and [C.7.3](#).

C.7.2 What role does the market play in the business cycle?

A major problem with capitalism is the working of the capitalist market itself. For the supporters of "free market" capitalism, the market provides all the necessary information required to make investment and production decisions. This means that a rise or fall in the price of a commodity acts as a signal to everyone in the market, who then respond to that signal. These responses will be co-ordinated by the market, resulting in a healthy economy. For example, a rise in the price of a commodity will result in increased production and reduced consumption of that good, and this will move the economy towards equilibrium.

While it can be granted that this account of the market is not without foundation, its also clear that the price mechanism does not communicate all the relevant information needed by companies or individuals. This means that capitalism does not work in the way suggested in the economic textbooks. It is the workings of the price mechanism itself which leads to booms and slumps in economic activity and the resulting human and social costs they entail. This can be seen if we investigate the actual processes hidden behind the workings of the price mechanism.

When individuals and companies make plans concerning future production, they are planning not with respect of demand **now** but with respect to expected demand at some **future time** when their products reach the market. The information the price mechanism provides, however, is the relation of supply and demand (or market price with respect to the market production price) at the current time. While this information **is** relevant to people's plans, it is not **all** the information that is relevant or is required by those involved.

The information which the market does **not** provide is that of the plans of **other** people's reactions to the supplied information. This information, moreover, cannot be supplied due to competition. Simply put, if A and B are in competition, if A informs B of her activities and B does not reciprocate, then B is in a position to compete more effectively than A. Hence communication within the market is discouraged and each production unit is isolated from the rest. In other words, each person or company responds to the same signal (the change in price) but each acts independently of the response of other producers and consumers. The result is often a slump in the market, causing unemployment and economic disruption.

For example, lets assume a price rise due to a shortage of a commodity. This results in excess profits in that market, leading the owners of capital to invest in this branch of production in order to get some of these above-average profits. However, consumers will respond to the price rise by reducing their consumption of that good. This means that when the results of these independent decisions are realised, there is an overproduction of that good in the market in relation to effective demand for it. Goods cannot be sold and so there is a realisation crisis as producers cannot make a profit from their products. Given

this overproduction, there is a slump, capital disinvests, and the market price falls. This eventually leads to a rise in demand against supply, production expands leading to another boom and so on.

Proudhon described this process as occurring because of the "*contradiction*" of "the double character of value" (i.e. between value in use and value in exchange). This contradiction results in a good's "*value decreases as the production of utility increases, and a producer may arrive at poverty by continually enriching himself*" via over-production. This is because a producer "*who has harvested twenty sacks of wheat. . . believes himself twice as rich as if he had harvested only ten. . . Relatively to the household, [they] are right; looked at in their external relations, they may be utterly mistaken. If the crop of wheat is double throughout the whole country, twenty sacks will sell for less than ten would have sold for if it had been as half as great.*" [**The System of Economical Contradictions**, p. 78, pp. 77-78]

This, it should be noted, is not a problem of people making a series of unrelated mistakes. Rather, it results because the market imparts the same information to all involved and this information is not sufficient for rational decision making. While it is rational for each agent to expand or contract production, it is not rational for all agents to act in this manner. In a capitalist economy, the price mechanism does not supply all the information needed to make rational decisions. In fact, it actively encourages the suppression of the needed extra information concerning the planned responses to the original information.

It is this irrationality and lack of information which feed into the business cycle. These local booms and slumps in production of the kind outlined here can then be amplified into general crises due to the insufficient information spread through the economy by the market. However, disproportionalities of capital between industries do not **per se** result in a general crisis. If this was that case the capitalism would be in a constant state of crisis because capital moves between markets during periods of prosperity as well as just before periods of depression. This means that market dislocations cannot be a basis for explaining the existence of a general crisis in the economy (although it can and does explain localised slumps).

Therefore, the tendency to general crisis that expresses itself in a generalised glut on the market is the product of deeper economic changes. While the suppression of information by the market plays a role in producing a depression, a general slump only develops from a local boom and slump cycle when it occurs along with the second side-effect of capitalist economic activity, namely the increase of productivity as a result of capital investment, as well as the subjective pressures of class struggle.

The problems resulting from increased productivity and capital investment are discussed in the [next section](#).

C.7.3 What role does investment play in the business cycle?

Other problems for capitalism arise due to increases in productivity which occur as a result of capital investment or new working practices which aim to increase short term profits for the company. The need

to maximise profits results in more and more investment in order to improve the productivity of the workforce (i.e. to increase the amount of surplus value produced). A rise in productivity, however, means that whatever profit is produced is spread over an increasing number of commodities. This profit still needs to be realised on the market but this may prove difficult as capitalists produce not for existing markets but for expected ones. As individual firms cannot predict what their competitors will do, it is rational for them to try to maximise their market share by increasing production (by increasing investment). As the market does not provide the necessary information to co-ordinate their actions, this leads to supply exceeding demand and difficulties realising the profits contained in the produced commodities. In other words, a period of over-production occurs due to the over-accumulation of capital.

Due to the increased investment in the means of production, variable capital (labour) uses a larger and larger constant capital (the means of production). As labour is the source of surplus value, this means that in the short term profits must be increased by the new investment, i.e. workers must produce more, in relative terms, than before so reducing a firm's production costs for the commodities or services it produces. This allows increased profits to be realised at the current market price (which reflects the old costs of production). Exploitation of labour must increase in order for the return on total (i.e. constant **and** variable) capital to increase or, at worse, remain constant.

However, while this is rational for one company, it is not rational when all firms do it, which they must in order to remain in business. As investment increases, the surplus value workers have to produce must increase faster. If the mass of available profits in the economy is too small compared to the total capital invested then any problems a company faces in making profits in a specific market due to a localised slump caused by the price mechanism may spread to affect the whole economy. In other words, a fall in the rate of profit (the ratio of profit to investment in capital and labour) in the economy as a whole could result in already produced surplus value, earmarked for the expansion of capital, remaining in its money form and thus failing to act as capital. No new investments are made, goods cannot be sold resulting in a general reduction of production and so increased unemployment as companies fire workers or go out of business. This removes more and more constant capital from the economy, increasing unemployment which forces those with jobs to work harder, for longer so allowing the mass of profits produced to be increased, resulting (eventually) in an increase in the rate of profit. Once profit rates are high enough, capitalists have the incentive to make new investments and slump turns to boom.

It could be argued that such an analysis is flawed as no company would invest in machinery if it would reduce its rate of profit. But such an objection is flawed, simply because (as we noted) such investment is perfectly sensible (indeed, a necessity) for a specific firm. By investing they gain (potentially) an edge in the market and so increased profits. Unfortunately, while this is individually sensible, collectively it is not as the net result of these individual acts is over-investment in the economy as a whole. Unlike the model of perfect competition, in a real economy capitalists have no way of knowing the future, and so the results of their own actions, nevermind the actions of their competitors. Thus over-accumulation of capital is the natural result of competition simply because it is individually rational and the future is unknowable. Both of these factors ensure that firms act as they do, investing in machinery which, in the end, will result in a crisis of over-accumulation.

Cycles of prosperity, followed by over-production and then depression are the natural result of capitalism. Over-production is the result of over-accumulation, and over-accumulation occurs because of the need to maximise short-term profits in order to stay in business. So while the crisis appears as a glut of commodities on the market, as there are more commodities in circulation that can be purchased by the aggregate demand ("*Property sells products to the labourer for more than it pays him for them,*" to use Proudhon's words), its roots are deeper. It lies in the nature of capitalist production itself.

A classic example of these "objective" pressures on capitalism is the "Roaring Twenties" that preceded the Great Depression of the 1930s. After the 1921 slump, there was a rapid rise in investment in the USA with investment nearly doubling between 1919 and 1927.

Because of this investment in capital equipment, manufacturing production grew by 8.0% per annum between 1919 and 1929 and labour productivity grew by an annual rate of 5.6% (this is including the slump of 1921-22). This increase in productivity was reflected in the fact that over the post-1922 boom, the share of manufacturing income paid in salaries rose from 17% to 18.3% and the share to capital rose from 25.5% to 29.1%. Managerial salaries rose by 21.9% and firm surplus by 62.6% between 1920 and 1929. With costs falling and prices comparatively stable, profits increased which in turn lead to high levels of capital investment (the production of capital goods increased at an average annual rate of 6.4%).

Unsurprisingly, in such circumstances, in the 1920s prosperity was concentrated at the top 60% of families made less than \$2000 a year, 42% less than \$1000. One-tenth of the top 1% of families received as much income as the bottom 42% and only 2.3% of the population enjoyed incomes over \$10000. While the richest 1% owned 40% of the nation's wealth by 1929 (and the number of people claiming half-million dollar incomes rose from 156 in 1920 to 1489 in 1929) the bottom 93% of the population experienced a 4% drop in real disposable per-capita income between 1923 and 1929.

However, in spite of this, US capitalism was booming and the laissez-faire capitalism was at its peak. But by 1929 all this had changed with the stock market crashing -- followed by a deep depression. What was its cause? Given our analysis presented above, it may have been expected to have been caused by the "boom" decreasing unemployment, so increased working class power and leading to a profits squeeze, but this was not the case.

This slump was **not** the result of working class resistance, indeed the 1920s were marked by a labour market which remained continuously favourable to employers. This was for two reasons. Firstly, the "Palmer Raids" at the end of the 1910s saw the state root out radicals in the US labour movement and wider society. Secondly, the deep depression of 1920-21 (during which national unemployment rates averaged over 9%) combined with the use of legal injunctions by employers against work protests and the use of industrial spies to identify and sack union members made labour weak and so the influence and size of unions fell as workers were forced to sign "yellow-dog" contracts to keep their jobs.

During the post-1922 boom, this position did not change. The national 3.3% unemployment rate hid the fact that non-farm unemployment averaged 5.5% between 1923 and 1929. Across all industries, the growth of manufacturing output did not increase the demand for labour. Between 1919 and 1929, employment of production workers fell by 1% and non-production employment fell by about 6% (during the 1923 to 29 boom, production employment only increased by 2%, and non-production employment remained constant). This was due to the introduction of labour saving machinery and the rise in the capital stock. In addition, the high productivity associated with farming resulted in a flood of rural workers into the urban labour market.

Facing high unemployment, workers' quit rates fell due to fear of losing jobs (particularly those workers with relatively higher wages and employment stability). This combined with the steady decline of the unions and the very low number of strikes (lowest since the early 1880s) indicates that labour was weak. Wages, like prices, were comparatively stable. Indeed, the share of total manufacturing income going to wages fell from 57.5% in 1923-24 to 52.6% in 1928/29 (between 1920 and 1929, it fell by 5.7%). It is interesting to note that even **with** a labour market favourable to employers for over 5 years, unemployment was still high. This suggests that the neo-classical "argument" that unemployment within capitalism is caused by strong unions or high real wages is somewhat flawed to say the least (see [section C.9](#)).

The key to understanding what happened lies the contradictory nature of capitalist production. The "boom" conditions were the result of capital investment, which increased productivity, thereby reducing costs and increasing profits. The large and increasing investment in capital goods was the principal device by which profits were spent. In addition, those sectors of the economy marked by big business (i. e. oligopoly, a market dominated by a few firms) placed pressures upon the more competitive ones. As big business, as usual, received a higher share of profits due to their market position (see [section C.5](#)), this lead to many firms in the more competitive sectors of the economy facing a profitability crisis during the 1920s.

The increase in investment, while directly squeezing profits in the more competitive sectors of the economy, also eventually caused the rate of profit to stagnate, and then fall, over the economy as a whole. While the mass of available profits in the economy grew, it eventually became too small compared to the total capital invested. Moreover, with the fall in the share of income going to labour and the rise of inequality, aggregate demand for goods could not keep up with production, leading to unsold goods (which is another way of expressing the process of over-investment leading to over-production, as over-production implies under-consumption and vice versa). As expected returns (profitability) on investments hesitated, a decline in investment demand occurred and so a slump began (rising predominantly from the capital stock rising faster than profits). Investment flattened out in 1928 and turned down in 1929. With the stagnation in investment, a great speculative orgy occurred in 1928 and 1929 in an attempt to enhance profitability. This unsurprisingly failed and in October 1929 the stock market crashed, paving the way for the Great Depression of the 1930s.

The crash of 1929 indicates the "objective" limits of capitalism. Even with a very weak position of

labour, crisis still occurred and prosperity turned to "hard times." In contradiction to neo-classical economic theory, the events of the 1920s indicate that even if the capitalist assumption that labour is a commodity like all others **is** approximated in real life, capitalism is still subject to crisis (ironically, a militant union movement in the 1920s would have postponed crisis by shifting income from capital to labour, increasing aggregate demand, reducing investment and supporting the more competitive sectors of the economy!). Therefore, any neo-classical "blame labour" arguments for crisis (which were so popular in the 1930s and 1970s) only tells half the story (if that). Even if workers do act in a servile way to capitalist authority, capitalism will still be marked by boom and bust (as shown by the 1920s and 1980s).

To take another example, America's 100 largest firms, employing 5 million persons and having assets of \$126 billion, saw their average amount of assets per worker grow from \$12,200 in 1949 to \$20,900 in 1959 and to \$24,000 in 1962. [First National City Bank, **Economic Letter**, June 1963]. As can be seen, the rate of increase in average assets per worker falls off over time. The initial period of high capital formation was followed by a recessionary period between 1957 and 1961. These years were marked by a sharp increase in unemployment (from 3 million in 1956 to a high of 5 million in 1961) and a higher unemployment rate after the slump than before (an increase of 1 million from 1956 figures to around 4 million in 1962). [T. Brecher and T. Costello, **Common Sense for Hard Times**, chart 2]

We have referred to data from this period, because some supporters of "free market" capitalism have used the same period to argue for the advantages of capital investment. This data actually indicates, however, that increased capital formation helps to create the potential for recession, because although it increases productivity (and so profits) for a period, it reduces profit rates in the long run because there is a relative scarcity of surplus value in the economy (compared to invested capital). This fall in profit rates is indicated by the decrease in capital formation, which is the point of production in the first place within capitalism, as well as by the increase of unemployment during that period.

So, if the profit rate falls to a level that does not allow capital formation to continue, a slump sets in. This general slump is usually started by overproduction for a specific commodity, possibly caused by the process described in [section C.7.2](#). If there are enough profits in the economy, localised slumps have a reduced tendency to grow and become general. A slump only becomes general when the rate of profit over the whole economy falls. A local slump spreads through the market because of the lack of information the market provides producers. When one industry over-produces, it cuts back production, introduces cost-cutting measures, fires workers and so on in order to try and realise more profits. This reduces demand for industries that supplied the affected industry and reduces general demand due to unemployment. The related industries now face over-production themselves and the natural response to the information supplied by the market is for individual companies to reduce production, fire workers, etc., which again leads to declining demand. This makes it even harder to realise profit on the market and leads to more cost cutting, deepening the crisis. While individually this is rational, collectively it is not and so soon all industries face the same problem. A local slump is propagated through the economy because the capitalist economy does not communicate enough information for producers to make rational decisions or co-ordinate their activities.

"Over-production," we should point out, exists only from the viewpoint of capital, not of the working class:

"What economists call over-production is but a production that is above the purchasing power of the worker. . . this sort of over-production remains fatally characteristic of the present capitalist production, because workers cannot buy with their salaries what they have produced and at the same time copiously nourish the swarm of idlers who live upon their work." [Peter Kropotkin, **Op. Cit.**, pp. 127-128]

In other words, over-production and under-consumption reciprocally imply each other. There is no over production except in regard to a given level of solvent demand. There is no deficiency in demand except in relation to a given level of production. The goods "over-produced" may be required by consumers, but the market price is too low to generate a profit and so production must be reduced in order to artificially increase it. So, for example, the sight of food being destroyed while people go hungry is a common one in depression years.

So, while the crisis appears on the market as a "commodity glut" (i.e. as a reduction in effective demand) and is propagated through the economy by the price mechanism, its roots lie in production. Until such time as profit levels stabilise at an acceptable level, thus allowing renewed capital expansion, the slump will continue. The social costs of such cost cutting is yet another "externality," to be bothered with only if they threaten capitalists' power and wealth.

There are means, of course, by which capitalism can postpone (but not stop) a general crisis developing. Imperialism, by which markets are increased and profits are extracted from less developed countries and used to boost the imperialist countries profits, is one method ("*The workman being unable to purchase with their wages the riches they are producing, industry must search for markets elsewhere*" - Kropotkin, **Op. Cit.**, p. 55). Another is state manipulation of credit and other economic factors (such as minimum wages, the incorporation of trades unions into the system, arms production, maintaining a "natural" rate of unemployment to keep workers on their toes etc.). Another is state spending to increase aggregate demand, which can increase consumption and so lessen the dangers of over-production. Or the rate of exploitation produced by the new investments can be high enough to counteract the increase in constant capital and keep the profit rate from falling. However, these have (objective and subjective) limits and can never succeed in stopping depressions from occurring.

Hence capitalism will suffer from a boom-and-bust cycle due to the above-mentioned objective pressures on profit production, even if we ignore the subjective revolt against authority by workers, explained earlier. In other words, even if the capitalist assumption that workers are not human beings but only "variable capital" was true, it would not mean that capitalism was a crisis free system. However, for most anarchists, such a discussion is somewhat academic for human beings are not commodities, the labour "market" is not like the iron market, and the subjective revolt against capitalist domination will exist as long as capitalism does.

C.7 What causes the capitalist business cycle?

C.2 Where do profits come from?

As mentioned in the [last section](#), profits are the driving force of capitalism. If a profit cannot be made, a good is not produced, regardless of how many people "subjectively value" it. But where do profits come from?

In order to make more money, money must be transformed into capital, i.e., workplaces, machinery and other "capital goods." By itself, however, capital (like money) produces nothing. Capital only becomes productive in the labour process when workers use capital ("*Neither property nor capital produces anything when not fertilised by labour*" - Bakunin). Under capitalism, workers not only create sufficient value (i.e. produced commodities) to maintain existing capital and their own existence, they also produce a surplus. This surplus expresses itself as a surplus of goods, i.e. an excess of commodities compared to the number a workers' wages could buy back. Thus Proudhon:

"The working man cannot. . . repurchase that which he has produced for his master. It is thus with all trades whatsoever. . . since, producing for a master who in one form or another makes a profit, they are obliged to pay more for their own labour than they get for it." [**What is Property**, p. 189]

In other words, the price of all produced goods is greater than the money value represented by the workers' wages (plus raw materials and overheads such as wear and tear on machinery) when those goods were produced. The labour contained in these "surplus-products" is the source of profit, which has to be realised on the market. (In practice, of course, the value represented by these surplus-products is distributed throughout all the commodities produced in the form of profit -- the difference between the cost price and the market price).

Obviously, pro-capitalist economics argue against this theory of how a surplus arises. However, one example will suffice here to see why labour is the source of a surplus, rather than (say) "waiting", risk or capital (these arguments, and others, will be discussed below). A good poker-player uses equipment (capital), takes risks, delays gratification, engages in strategic behaviour, tries new tricks (innovates), not to mention cheats, and earns large winnings (and can even do so repeatedly). But no surplus product results from such behaviour; the gambler's winnings are simply redistributions from others with no new production occurring. Thus, risk-taking, abstinence, entrepreneurship, etc. might be necessary for an individual to receive profits but are far from sufficient for them not to be the result a pure redistribution from others (a redistribution, we may add, which can only occur under capitalism if workers produce goods to sell).

Thus, in order for a profit to be generated within capitalism two things are required. Firstly, a group of workers to work the available capital. Secondly, that they must produce more value than they are paid in wages. If only the first condition is present, all that occurs is that social wealth is redistributed between

individuals. With the second condition, a surplus proper is generated. In both cases, however, workers are exploited for without their labour there would be no goods to facilitate a redistribution of existing wealth nor surplus products.

The surplus value produced by labour is divided between profits, interest and rent (or, more correctly, between the owners of the various factors of production other than labour). In practice, this surplus is used by the owners of capital for: (a) investment (b) to pay themselves dividends on their stock, if any; (c) to pay for rent and interest payments; and (d) to pay their executives and managers (who are sometimes identical with the owners themselves) much higher salaries than workers. As the surplus is being divided between different groups of capitalists, this means that there can be clashes of interest between (say) industrial capitalists and finance capitalists. For example, a rise in interest rates can squeeze industrial capitalists by directing more of the surplus from them into the hands of rentiers. Such a rise could cause business failures and so a slump (indeed, rising interest rates is a key way of regulating working class power by generating unemployment to discipline workers by fear of the sack). The surplus, like the labour used to reproduce existing capital, is embodied in the finished commodity and is realised once it is sold. This means that workers do not receive the full value of their labour, since the surplus appropriated by owners for investment, etc. represents value added to commodities by workers -- value for which they are not paid.

So capitalist profits (as well as rent and interest payments) are in essence **unpaid labour**, and hence capitalism is based on exploitation. As Proudhon noted, "**Products, say economists, are only bought by products. This maxim is property's condemnation. The proprietor producing neither by his own labour nor by his implement, and receiving products in exchange for nothing, is either a parasite or a thief.**" [Op. Cit., p. 170] It is this appropriation of wealth from the worker by the owner which differentiates capitalism from the simple commodity production of artisan and peasant economies. All anarchists agree with Bakunin when he stated that:

"what is property, what is capital in their present form? For the capitalist and the property owner they mean the power and the right, guaranteed by the State, to live without working. . . [and so] the power and right to live by exploiting the work of someone else . . . those . . . [who are] forced to sell their productive power to the lucky owners of both." [The Political Philosophy of Bakunin, p. 180]

Obviously supporters of capitalism disagree. Profits are not the product of exploitation and workers, capitalists and landlords get paid the value of their contributions to output, they say. A few even talk about "making money work for you" (as if pieces of paper can actually do any form of work!) while, obviously, human beings have to do the actual work (and usually for money). However, all agree that capitalism is not exploitative (no matter how exploitative it may look) and present various arguments why capitalists deserve to keep the products others make. This section of the FAQ presents some of the reasons why anarchists reject this claim.

Lastly, we would like to point out that some apologists for capitalism cite the empirical fact that, in a

modern capitalist economy, a large majority of all income goes to "labour," with profit, interest and rent adding up to something under twenty percent of the total. Of course, even if surplus value was less than 20% of a workers' output, this does not change its exploitative nature. These apologists of capitalism do not say that taxation stops being "theft" just because it is around 10% of all income. However, this value for profit, interest and rent is based on a statistical sleight-of-hand, as "worker" is defined as including everyone who has a salary in a company, including managers and CEOs (income to "labour" includes both wages **and** salaries, in other words). The large incomes which many managers and all CEOs receive would, of course, ensure that a large majority of all income does go to "labour." Thus this "fact" ignores the role of most managers as de facto capitalists and exploiters of surplus value and ignores the changes in industry that have occurred in the last 50 years (see section C.2.5 - [Aren't Executives workers and so creators of value?](#)).

To get a better picture of the nature of exploitation within modern capitalism we have to compare workers wages to their productivity. According to the World Bank, in 1966, US manufacturing wages were equal to 46% of the value-added in production (value-added is the difference between selling price and the costs of raw materials and other inputs to the production process). In 1990, that figure had fallen to 36% and (using figures from 1992 Economic Census of the US Census Bureau) by 1992 it had reached 19.76% (39.24% if we take the **total** payroll which includes managers and so on). In the US construction industry, wages were 35.4% of value added in 1992 (with total payroll, 50.18%). Therefore the argument that because a large percentage of income goes to "labour" capitalism is fine hides the realities of that system and the exploitation its hierarchical nature creates.

We now move on to why this surplus value exists.

C.2.1 Why does this surplus exist?

It is the nature of capitalism for the monopolisation of the worker's product by others to exist. This is because of private property in the means of production and so in "*consequence of [which] . . . [the] worker, when he is able to work, finds no acre to till, no machine to set in motion, unless he agrees to sell his labour for a sum inferior to its real value.*" [Peter Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 55]

Therefore workers have to sell their labour on the market. However, as this "commodity" "*cannot be separated from the person of the worker like pieces of property. The worker's capacities are developed over time and they form an integral part of his self and self-identity; capacities are internally not externally related to the person. Moreover, capacities or labour power cannot be used without the worker using his will, his understanding and experience, to put them into effect. The use of labour power requires the presence of its 'owner'. . . To contract for the use of labour power is a waste of resources unless it can be used in the way in which the new owner requires . . . The employment contract must, therefore, create a relationship of command and obedience between employer and worker.*" [Carole Pateman, **The Sexual Contract**, pp. 150-1]

So, *"the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself. . . The characteristics of this condition are captured in the term **wage slave**."* [**Ibid.**, p. 151] Or, to use Bakunin's words, *"the worker sells his person and his liberty for a given time" and so "concluded for a term only and reserving to the worker the right to quit his employer, this contract constitutes a sort of **voluntary and transitory serfdom**."* [**The Political Philosophy of Bakunin**, p. 187]

This domination is the source of the surplus, for *"wage slavery is not a consequence of exploitation - exploitation is a consequence of the fact that the sale of labour power entails the worker's subordination. The employment contract creates the capitalist as master; he has the political right to determine how the labour of the worker will be used, and - consequently - can engage in exploitation."* [Carole Pateman, **Op. Cit.**, p. 149]

So profits exist because the worker sells themselves to the capitalist, who then owns their activity and, therefore, controls them (or, more accurately, **tries** to control them) like a machine. Benjamin Tucker's comments with regard to the claim that capital is entitled to a reward are of use here. He notes that some *"combat. . . the doctrine that surplus value -- oftener called profits -- belong to the labourer because he creates it, by arguing that the horse. . . is rightly entitled to the surplus value which he creates for his owner. So he will be when he has the sense to claim and the power to take it. . . Th[is] argument . . . is based upon the assumption that certain men are born owned by other men, just as horses are. Thus its **reductio ad absurdum** turns upon itself."* [**Instead of a Book**, pp. 495-6]

In other words, to argue that capital should be rewarded is to implicitly assume that workers are just like machinery, another "factor of production" rather than human beings and the creator of things of value. So profits exists because during the working day the capitalist controls the activity and output of the worker (i.e. owns them during working hours as activity cannot be separated from the body and *"[t]here is an integral relationship between the body and self. The body and self are not identical, but selves are inseparable from bodies."* [Carole Pateman, **Op. Cit.**, p. 206]).

Considered purely in terms of output, this results in, as Proudhon noted, workers working *"for an entrepreneur who pays them and keeps their products."* [quoted by Martin Buber, **Paths in Utopia**, p. 29] The ability of capitalists to maintain this kind of monopolisation of another's time and output is enshrined in "property rights" enforced by either public or private states. In short, therefore, property *"is the right to enjoy and dispose at will of another's goods - the fruit of an other's industry and labour."* [P-J Proudhon, **What is Property**, p. 171] And because of this "right," a worker's wage will always be less than the wealth that he or she produces.

The size of this surplus, the amount of unpaid labour, can be changed by changing the duration and intensity of work (i.e. by making workers labour longer and harder). If the duration of work is increased, the amount of surplus value is increased absolutely. If the intensity is increased, e.g. by innovation in the production process, then the amount of surplus value increases relatively (i.e. workers produce the equivalent of their wage sooner during their working day resulting in more unpaid labour for their boss).

Such surplus indicates that labour, like any other commodity, has a use value and an exchange value. Labour's exchange value is a worker's wages, its use value their ability to work, to do what the capitalist who buys it wants. Thus the existence of "surplus products" indicates that there is a difference between the exchange value of labour and its use value, that labour can **potentially** create **more** value than it receives back in wages. We stress potentially, because the extraction of use value from labour is not a simple operation like the extraction of so many joules of energy from a ton of coal. Labour power cannot be used without subjecting the labourer to the will of the capitalist - unlike other commodities, labour power remains inseparably embodied in human beings. Both the extraction of use value and the determination of exchange value for labour depends upon - and are profoundly modified by - the actions of workers. Neither the effort provided during an hours work, nor the time spent in work, nor the wage received in exchange for it, can be determined without taking into account the worker's resistance to being turned into a commodity, into an order taker. In other words, the amount of "surplus products" extracted from a worker is dependent upon the resistance to dehumanisation within the workplace, to the attempts by workers to resist the destruction of liberty during work hours.

Thus unpaid labour, the consequence of the authority relations explicit in private property, is the source of profits. Part of this surplus is used to enrich capitalists and another to increase capital, which in turn is used to increase profits, in an endless cycle (a cycle, however, which is not a steady increase but is subject to periodic disruption by recessions or depressions - "The business cycle." The basic causes for such crises will be discussed later, in sections [C.7](#) and [C.8](#)).

C.2.2 Are capitalists justified in appropriating a portion of surplus value for themselves (i.e. making a profit)?

In a word, no. As we will attempt to indicate, capitalists are not justified in appropriating surplus value from workers. No matter how this appropriation is explained by capitalist economics, we find that inequality in wealth and power are the real reasons for this appropriation rather than some actual productive act. Indeed, neo-classical economics reflects this truism. In the words of the noted left-wing economist Joan Robinson:

"the neo-classical theory did not contain a solution to the problems of profits or of the value of capital. They have erected a towering structure of mathematical theorems on a foundation that does not exist." [**Contributions to Modern Economics**, p. 186]

If profits **are** the result of private property and the inequality it produces, then it is unsurprising that neo-classical theory would be as foundationless as Robinson argues. After all, this is a **political** question and neo-classical economics was developed to ignore such questions. Here we indicate why this is the case and discuss the various rationales for capitalist profit in order to show why they are false.

Some consider that profit is the capitalist's "contribution" to the value of a commodity. However, as David Schweickart points out, *"providing capital' means nothing more than 'allowing it to be used.'* But

*an act of granting permission, in and of itself, is not a productive activity. If labourers cease to labour, production ceases in any society. But if owners cease to grant permission, production is affected only if their **authority** over the means of production is respected.*" [**Against Capitalism**, p. 11] This authority, as discussed earlier, derives from the coercive mechanisms of the state, whose primary purpose is to ensure that capitalists have this ability to grant or deny workers access to the means of production. Therefore, not only is "providing capital" not a productive activity, it depends on a system of organised coercion which requires the appropriation of a considerable portion of the value produced by labour, through taxes, and hence is actually parasitic. Needless to say, rent can also be considered as "profit", being based purely on "granting permission" and so not a productive activity. The same can be said of interest, although the arguments are somewhat different (see [section C.2.6](#)).

Another problem with the capitalists' "contribution to production" argument is that one must either assume (a) a strict definition of who is the producer of something, in which case one must credit only the worker, or (b) a looser definition based on which individuals have contributed to the circumstances that made the productive work possible. Since the worker's productivity was made possible in part by the use of property supplied by the capitalist, one can thus credit the capitalist with "contributing to production" and so claim that he or she is entitled to a reward, i.e. profit.

However, if one assumes (b), one must then explain why the chain of credit should stop with the capitalist. Since all human activity takes place within a complex social network, many factors might be cited as contributing to the circumstances that allowed workers to produce -- e.g. their upbringing and education, the government maintained infrastructure that permits their place of employment to operate, and so on. Certainly the property of the capitalist contributed in this sense. But his contribution was less important than the work of, say, the worker's mother. Yet no capitalist, so far as we know, has proposed compensating workers' mothers with any share of the firm's revenues, and particularly not with a **greater** share than that received by capitalists! Plainly, however, if they followed their own logic consistently, capitalists would have to agree that such compensation would be fair.

Therefore, as capital is not autonomously productive and is the product of human (mental and physical) labour, anarchists reject the idea that providing capital is a productive act. As Proudhon pointed out, *"Capital, tools, and machinery are likewise unproductive. . . The proprietor who asks to be rewarded for the use of a tool or for the productive power of his land, takes for granted, then, that which is radically false; namely, that capital produces by its own effort - and, in taking pay for this imaginary product, he literally receives something for nothing."* [**Op. Cit.**, p. 169].

Of course, it could be argued (and it frequently is) that capital makes work more productive and so the owner of capital should be "rewarded" for allowing its use. This, however, is a false conclusion, since providing capital is unlike normal commodity production. This is because capitalists, unlike workers, get paid multiple times for one piece of work (which, in all likelihood, they paid others to do) and **keep** the result of that labour. As Proudhon argued:

*"He [the worker] who manufactures or repairs the farmer's tools receives the price **once**,*

either at the time of delivery, or in several payments; and when this price is once paid to the manufacturer, the tools which he has delivered belong to him no more. Never can he claim double payment for the same tool, or the same job of repairs. If he annually shares in the products of the farmer, it is owing to the fact that he annually does something for the farmer.

"The proprietor, on the contrary, does not yield his implement; eternally he is paid for it, eternally he keeps it." [Op. Cit., pp. 169-170]

Therefore, providing capital is **not** a productive act, and keeping the profits that are produced by those who actually do use capital is an act of theft. This does not mean, of course, that creating capital goods is not creative nor that it does not aid production. Far from it! But owning the outcome of such activity and renting it does not justify capitalism or profits.

Some supporters of capitalism claim that profits represent the productivity of capital. They argue that a worker is said to receive exactly what she has produced because (according to the neo-classical answer) if she ceases to work, the total product will decline by precisely the value of her wage. However, this argument has a flaw in it. This is because the total product will decline by more than that value if two or more workers leave. This is because the wage each worker receives under conditions of perfect competition is assumed to be the product of the **last** labourer in neo-classical theory. The neo-classical argument presumes a "declining marginal productivity," i.e. the marginal product of the last worker is assumed to be less than the second last and so on.

In other words, in neo-classical economics, all workers bar the mythical "last worker" do not receive the full product of their labour. They only receive what the **last** worker is claimed to produce and so everyone **bar** the last worker does not receive exactly what he or she produces. It looks like the neo-classical claim of no exploitation within capitalism seems invalidated by its own theory.

This is recognised by the theorists. Because of this declining marginal productivity, the contribution of labour is less than the total product. The difference is claimed to be precisely the contribution of capital. But what is this "contribution" of capital? Without any labourers there would be no output. In addition, in physical terms, the marginal product of capital is simply the amount by which production would decline if one piece of capital were taken out of production. It does not reflect any productive activity whatsoever on the part of the owner of said capital. **It does not, therefore, measure his or her productive contribution.** In other words, capitalist economics tries to confuse the owners of capital with the machinery they own.

Indeed, the notion that profits represent the contribution of capital is one that is shattered by the practice of "profit sharing." **If** profits were the contribution of capital, then sharing profits would mean that capital was not receiving its full "contribution" to production (and so was being exploited by labour!). Moreover, given that profit sharing is usually used as a technique to **increase** productivity and profits it seems strange that such a technique would be required if profits, in fact, **did** represent capital's

"contribution." After all, the machinery which the workers are using is the same as before profit sharing was introduced -- how could this unchanged capital stock produce an increased "contribution"? It could only do so if, in fact, capital was unproductive and it was the unpaid efforts, skills and energy of workers' that actually was the source of profits. Thus the claim that profit equals capital's "contribution" has little basis in fact.

While it is true that the value invested in fixed capital is in the course of time transferred to the commodities produced by it and through their sale transformed into money, this does not represent any actual labour by the owners of capital. Anarchists reject the ideological sleight-of-hand that suggests otherwise and recognise that (mental and physical) labour is the **only** form of contribution that can be made by humans to a productive process. Without labour, nothing can be produced nor the value contained in fixed capital transferred to goods. As Charles A. Dana pointed out in his popular introduction to Proudhon's ideas, "[t]he labourer without capital would soon supply his wants by its production . . . but capital with no labourers to consume it can only lie useless and rot." [**Proudhon and his "Bank of the People"**, p. 31] If workers do not get paid the full value of their contributions to the output they produce then they are exploited and so, as indicated, capitalism is based upon exploitation.

So, in and of themselves, fixed costs do not create value. Whether value is created depends on how investments are developed and used once in place. In the words of the English socialist Thomas Hodgskin:

"Fixed capital does not derive its utility from previous, but present labour; and does not bring its owner a profit because it has been stored up, but because it is a means of obtaining a command over labour." [**Labour Defended against the Claims of Capital**]

Which brings us back to labour (and the social relationships which exist within an economy) as the fundamental source of profits. Moreover the idea (so beloved by pro-capitalist economics) that a worker's wage **is** the equivalent of what she produces is one violated everyday within reality. As one economist critical of neo-classical dogma put it:

"Managers of a capitalist enterprise are not content simply to respond to the dictates of the market by equating the wage to the value of the marginal product of labour. Once the worker has entered the production process, the forces of the market have, for a time at least, been superseded. The effort-pay relation will depend not only on market relations of exchange but also. . . on the hierarchical relations of production - on the relative power of managers and workers within the enterprise." [William Lazonick, **Business Organisation and the Myth of the Market Economy**, pp. 184-5]

But, then again, capitalist economics is more concerned with justifying the status quo than being in touch with the real world. To claim that a workers wage represents her contribution and profit capital's is simply false. Capital cannot produce anything (nevermind a surplus) unless used by labour and so profits do not represent the productivity of capital.

Other common justifications of profit are based on claims about the "special abilities" of a select few, e. g. as "risk taking" or "creative" ability, and are equally unsound as the one just outlined.

As for risk taking, virtually all human activity involves risk. To claim that capitalists should be paid for the risks associated with investment is to implicitly state that money is more valuable than human life. After all, workers risk their health and often their lives in work and often the most dangerous workplaces are those associated with the lowest pay (safe working conditions can eat into profits and so to reward capitalist "risk", the risk workers face may actually increase). In the inverted world of capitalist ethics, it is usually cheaper (or more "efficient") to replace an individual worker than a capital investment.

Moreover, the risk theory of profit fails to take into account the different risk-taking abilities of that derive from the unequal distribution of society's wealth. As James Meade puts it, while *"property owners can spread their risks by putting small bits of their property into a large number of concerns, a worker cannot easily put small bits of his effort into a large number of different jobs. This presumably is the main reason we find risk-bearing capital hiring labour"* and not vice versa [quoted by David Schweickart, **Op. Cit.**, pp. 129-130]. Needless to say, the most serious consequences of "risk" are usually suffered by working people who can lose their jobs, health and even lives. So, rather than individual evaluations determining "risk", these evaluations will be dependent on the class position of the individuals involved. Risk, therefore, is not an independent factor and so cannot be the source of profit. Indeed, as indicated, other activities can involve far more risk and be rewarded less.

As for the "creative" spirit which innovates profits into existence, it is true that individuals do see new potential and act in innovative ways to create new products or processes. However, as discussed in the [next section](#), this is not the source of profit.

C.2.3 Why does innovation occur and how does it affect profits?

There is a given amount of surplus value in existence within the economy at any one time. How this surplus is created by or divided between firms is determined by competition, within which innovation plays an important role.

Innovation occurs in order to expand profits and so survive competition from other companies. While profits can be generated in circulation (for example by oligopolistic competition or inflation) this can only occur at the expense of other people or capitals (see C.5 - [Why does Big Business get a bigger slice of profits?](#) and C.7 - [What causes the capitalist business cycle?](#) - respectively). Innovation, however, allows the generation of profits directly from the new or increased productivity (i.e. exploitation) of labour. This is because it is in production that commodities, and so profits, are created and innovation results in new products and/or new production methods. New products mean that the company can reap excess profits until competitors enter the new market and force the market price down by competition. New production methods allow the intensity of labour to be increased, meaning that workers do more work relative to their wages (in other words, the cost of production falls relative to the market price,

meaning extra profits).

So while competition ensures that capitalist firms innovate, innovation is the means by which companies can get an edge in the market. This is because innovation means that *"capitalist excess profits come from the production process. . . when there is an above-average rise in labour productivity; the reduced costs then enable firms to earn higher than average profits in their products. But this form of excess profits is only temporary and disappears again when improved production methods become more general."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 38]

In addition, innovation in terms of new technology is also used to help win the class war at the point of production for the capitalists. As the aim of capitalist production is to maximise profits, it follows that capitalism will introduce technology that will allow more surplus value to be extracted from workers. As Cornelius Castoriadis argues, capitalism *"has created a capitalist technology, for its own ends, which are by no means neutral. The real essence of capitalist technology is not to develop production for production's sake: it is to subordinate and dominate the producers."* [**Workers' Councils and the Economics of a Self-Managed Society**, p. 13]

Therefore, technological improvement can also be used to increase the power of capital over the workforce, to ensure that workers will do as they are told. In this way innovation can maximise surplus value production by trying to increase domination during working hours as well as by increasing productivity by new processes.

These attempts to increase profits by using innovation is the key to capitalist expansion and accumulation. As such innovation plays a key role within the capitalist system. However, the source of profits does not change and remains in the labour, skills and creativity of workers in the workplace. And we must stress that innovation itself is a form of labour -- mental labour. Indeed, many companies have Research and Development departments in which groups of workers are paid to generate new and innovative ideas for their employers. And we must also point out that many new innovations come from individuals who combine mental and physical labour outside of capitalist companies. In other words, arguments that mental labour alone is the source of wealth (or profits) are false. That this is the case can be seen from various experiments in workers' control (see the [next section](#)) where increased equality within the workplace actually increases productivity and innovation. As these experiments show workers, when given the chance, can develop numerous "good ideas" **and**, equally as important, produce them. A capitalist with a "good idea," on the other hand, would be powerless to produce it without workers and it is this fact that shows that innovation, in and of itself, is not the source of surplus value.

C.2.4 Wouldn't workers' control stifle innovation?

Contrary to much capitalist apologetics, innovation is not the monopoly of an elite class of humans. It is within all of us, although the necessary social environment needed to nurture and develop it in ordinary workers is crushed by the authoritarian workplaces of capitalism. If workers were truly incapable of innovation, any shift toward greater control of production by workers should result in decreased

productivity. What one actually finds, however, is just the opposite: In the few examples where workers' control has been implemented, productivity increased dramatically as ordinary people were given the chance, usually denied them, to apply their skills, talents, and creativity.

As Christopher Eaton Gunn notes, there is *"a growing body of empirical literature that is generally supportive of claims for the economic efficiency of the labour-managed firm. Much of this literature focuses on productivity, frequently finding it to be positively correlated with increasing levels of participation. . . Studies that encompass a range of issues broader than the purely economic also tend to support claims for the efficiency of labour managed and worker-controlled firms. . . In addition, studies that compare the economic preference of groups of traditionally and worker-controlled forms point to the stronger performance of the latter."* [**Workers' Self-Management in the United States**, pp. 42-3]

This has been strikingly confirmed in studies of the Mondragon co-operatives in Spain, where workers are democratically involved in production decisions and encouraged to innovate. As George Bennello notes, *"Mondragon productivity is very high -- higher than in its capitalist counterparts. Efficiency, measured as the ratio of utilised resources -- capital and labour -- to output, is far higher than in comparable capitalist factories."* [**The Challenge of Mondragon**, p. 216]

The example of the Lucas workers in Britain, during the 1970's, again indicates the creative potential waiting to be utilised. The workers in Lucas created a plan which would convert the military-based Lucas company into a company producing useful goods for ordinary people. The workers in Lucas designed the products themselves, using their own experiences of work and life. The management just were not interested.

During the Spanish Revolution of 1936-39, workers self-managed many factories following the principles of participatory democracy. Productivity and innovation in the Spanish collectives was exceptionally high. The metal-working industry is a good example. As Augustine Souchy observes, at the outbreak of the Civil War, the metal industry in Catalonia was *"very poorly developed."* Yet within months, the Catalonian metal workers had rebuilt the industry from scratch, converting factories to the production of war materials for the anti-fascist troops. A few days after the July 19th revolution, the Hispano-Suiza Automobile Company was already converted to the manufacture of armoured cars, ambulances, weapons, and munitions for the fighting front. *"Experts were truly astounded,"* Souchy writes, *"at the expertise of the workers in building new machinery for the manufacture of arms and munitions. Very few machines were imported. In a short time, two hundred different hydraulic presses of up to 250 tons pressure, one hundred seventy-eight revolving lathes, and hundreds of milling machines and boring machines were built."* [**The Anarchist Collectives: Workers' Self-management in the Spanish Revolution, 1936-1939**, ed. Sam Dolgoff, p. 96]

Similarly, there was virtually no optical industry in Spain before the July revolution, only some scattered workshops. After the revolution, the small workshops were voluntarily converted into a production collective. *"The greatest innovation,"* according to Souchy, *"was the construction of a new factory for optical apparatuses and instruments. The whole operation was financed by the voluntary contributions*

of the workers. In a short time the factory turned out opera glasses, telemeters, binoculars, surveying instruments, industrial glassware in different colours, and certain scientific instruments. It also manufactured and repaired optical equipment for the fighting fronts . . . What private capitalists failed to do was accomplished by the creative capacity of the members of the Optical Workers' Union of the CNT." [Op. Cit., pp. 98-9]

Therefore, far from being a threat to innovation, workers' control would increase it and, more importantly, direct it towards improving the quality of life for all as opposed to increasing the profits of the few. This aspect an anarchist society will be discussed in more detail in section I ([What would an anarchist society look like?](#)). In addition, see sections [J.5.10](#), [J.5.11](#) and [J.5.12](#) for more on why anarchists support self-management and why, in spite of its higher efficiency and productivity, the capitalist market will select against it.

In short, rather than being a defence of capitalist profit taking (and the inequality it generates) the argument that freedom increases innovation and productivity actually points towards libertarian socialism and workers' self-management. This is unsurprising, for only equality can maximise liberty and so workers' control (rather than capitalist power) is the key to innovation. Only those who confuse freedom with the oppression of wage labour would be surprised by this.

C.2.5 Aren't Executives workers and so creators of value?

Of course it could be argued that executives are also "workers" and so contribute to the value of the commodities produced. However, this is not the case. Though they may not own the instruments of production, they are certainly buyers and controllers of labour power, and under their auspices production is still **capitalist** production. The creation of a "salary-slave" strata of managers does not alter the capitalist relations of production. In effect, the management strata are **de facto** capitalists. As exploitation requires labour ("*There is work and there is work.*" as Bakunin noted, "*There is productive labour and there is the labour of exploitation*" [**The Political Philosophy of Bakunin**, p. 180]), management is like the early "working capitalist" and their "wages" come from the surplus value appropriated from workers and realised on the market. Or, to use a different analogy, managers are like the slave drivers hired by slave owners who do not want to manage the slaves themselves. The slave drivers' wages come from the surplus value extracted from the slaves; it is not in itself productive labour.

Thus the exploitative role of managers, even if they can be fired, is no different from capitalists. Moreover, "*shareholders and managers/technocrats share common motives: to make profits and to reproduce hierarchy relations that exclude most of the employees from effective decision making*" [Takis Fotopoulos, "*The Economic Foundations of an Ecological Society*", p. 16, **Society and Nature** No.3, pp. 1-40]

This is not to say that 100 percent of what managers do is exploitative. The case is complicated by the fact that there is a legitimate need for co-ordination between various aspects of complex production processes -- a need that would remain under libertarian socialism and would be filled by elected and

recallable (and in some cases rotating) managers (see [Section I](#)). But under capitalism, managers become parasitic in proportion to their proximity to the top of the pyramid. In fact, the further the distance from the production process, the higher the salary; whereas the closer the distance, the more likely that a "manager" is a worker with a little more power than average. In capitalist organisations, the less you do, the more you get. In practice, executives typically call upon subordinates to perform managerial (i.e. coordinating) functions and restrict themselves to broader policy-making decisions. As their decision-making power comes from the hierarchical nature of the firm, they could be easily replaced if policy making was in the hands of those who are affected by it.

C.2.6 Is interest not the reward for waiting, and so isn't capitalism just?

The idea that interest is the reward for "*abstinence*" on the part of savers is a common one in capitalist economics. As Alfred Marshall argues, "*[i]f we admit it [a commodity] is the product of labour alone, and not of labour and waiting, we can no doubt be compelled by an inexorable logic to admit that there is no justification of interest, the reward for waiting*" [**Principles of Economics**, p. 587]. While implicitly recognising that labour is the source of all value in capitalism (and that abstinence is not the **source** of profits), it is claimed that interest is a justifiable claim on the surplus value produced by a worker.

Why is this the case? Capitalist economics claims that by "deferring consumption," the capitalist allows new means of production to be developed and so should be rewarded for this sacrifice. In other words, in order to have capital available as an input -- i.e. to bear costs now for returns in the future -- someone has to be willing to postpone his or her consumption. That is a real cost, and one that people will pay only if rewarded for it.

This theory usually appears ludicrous to a critic of capitalism -- simply put, does the mine owner really sacrifice more than a miner, a rich stockholder more than an autoworker working in their car plant? It is far easier for a rich person to "defer consumption" than for someone on an average income. This is borne out by statistics, for as Simon Kuznets has noted, "*only the upper income groups save; the total savings of groups below the top decile are fairly close to zero.*" [**Economic Growth and Structure**, p. 263] Therefore, the plausibility of interest as payment for the pain of deferring consumption rests on the premise that the typical saving unit is a small or medium-income household. But in contemporary capitalist societies, this is not the case. Such households are not the source of most savings; the bulk of interest payments do not go to them.

To put this point differently, the capitalist proponents of interest only consider "postponing consumption" as an abstraction, without making it concrete. For example, a capitalist may "postpone consumption" of 48 Rolls Royces because he needs the money to upgrade some machinery in his factory; whereas a single mother may have to "postpone consumption" of food or adequate housing in order to attempt to better take care of her children. The two situations are vastly different, yet the capitalist equates them. This equation implies that "not being able to buy anything you want" is the same

as "not being able to buy things you need", and is thus skewing the obvious difference in costs of such postponement of consumption!

Thus Proudhon's comments that the loaning of capital "*does not involve an actual sacrifice on the part of the capitalist*" and so "*does not deprive himself. . . of the capital which he lends. He lends it, on the contrary, precisely because the loan is not a deprivation to him; he lends it because he has no use for it himself, being sufficiently provided with capital without it; he lends it, finally, because he neither intends nor is able to make it valuable to him personally, -- because, if he should keep it in his own hands, this capital, sterile by nature, would remain sterile, whereas, by its loan and the resulting interest, it yields a profit which enables the capitalist to live without working. Now, to live without working is, in political as well as moral economy, a contradictory proposition, an impossible thing.*" [**Interest and Principal: A Loan is a Service**]

He goes on:

"The proprietor who possesses two estates, one at Tours, and the other at Orleans, and who is obliged to fix his residence on the one which he uses, and consequently to abandon his residence on the other, can this proprietor claim that he deprives himself of anything, because he is not, like God, ubiquitous in action and presence? As well say that we who live in Paris are deprived of a residence in New York! Confess, then, that the privation of the capitalist is akin to that of the master who has lost his slave, to that of the prince expelled by his subjects, to that of the robber who, wishing to break into a house, finds the dogs on the watch and the inmates at the windows." [**Ibid.**]

In the capitalist's world, an industrialist who cannot buy a third summer home "suffers" a cost equivalent to that of someone who postpones consumption to get something they need. Similarly, if the industrialist "earns" hundred times more in interest than the wage of the coal miner who works in his mine, the industrialist "suffers" hundred times more discomfort living in his palace than the coal miner does working at the coal face in dangerous conditions. The "disutility" of postponing consumption while living in luxury is obviously 100 times greater than the "disutility" of working for a living and so should be rewarded appropriately. Of course, the difference is that proponents of capitalism feel that capitalists deserves compensation for their "restraint" in anticipation of future gain, while at the same time refusing to recognise the ambiguity of this statement.

All in all, as Joan Robinson pointed out, "*'waiting' only means owning wealth.*" [**Contributions to Modern Economics**, p. 11] Interest is not the reward for "waiting," rather it is one of the rewards for being rich.

Little wonder, then, that neo-classical economists introduced the term **waiting** as an "explanation" for returns to capital (such as interest). Before this change in the jargon of economics, mainstream economists used the notion of "abstinence" (a term invented by Nassau Senior) to account for (and so justify) interest. Just as Senior's "theory" was seized upon to defend returns to capital, so was the term

"waiting" after it was introduced in 1887. Interestingly, while describing **exactly** the same thing, "waiting" became the preferred term simply because it had a less apologetic ring to it. According to Marshall, the term "*abstinence*" was "*liable to be misunderstood*" because there were just too many wealthy people around who received interest and dividends without ever having abstained from anything (as he noted, the "*greatest accumulators of wealth are very rich persons, some [!] of whom live in luxury*" [Op. Cit., p. 232]). So he opted for the term "*waiting*" because there was "*advantage*" in its use, particularly because socialists had long been pointing out the obvious fact that capitalists do not "*abstain*" from anything (see Marshall, Op. Cit., p. 233). The lesson is obvious, in mainstream economics if reality conflicts with your theory, do not reconsider the theory, change its name!

Indeed, as Joan Robinson points out, the pro-capitalist theories of who abstains are wrong, "*since saving is mainly out of profits, and real wages tend to be lower the higher the rate of profit, the abstinence associated with saving is mainly done by the workers, who do not receive any share in the 'reward.'*" [The Accumulation of Capital, p. 393]

To say that those who hold capital can lay claim to a portion of the social product by abstaining or waiting provides no explanation of what makes production profitable, and so to what extent interest and dividends can be paid. Reliance on a "waiting" theory of why returns of capital exist represents nothing less than a reluctance by economists to confront the sources of value creation in an economy or to analyse the social relations between workers and managers/bosses on the shop floor. To do so would be to bring into question the whole nature of capitalism and any claims it was based upon freedom.

C.2.7 But wouldn't the "time value" of money justify charging interest in a more egalitarian capitalism?

More needs to be said about interest, since a more egalitarian capitalism (if such a thing could exist) would still have interest, and the greater egalitarianism could even be used as the basis of a justification for it.

Indeed, the conceptual history that supporters of capitalism present to justify interest (or the appropriation of surplus value in general) usually start in a fictional community of equals. The time preference theory of interest bases itself on such a fiction. We are presented with the argument that individuals have different "time preferences." Most individuals prefer, it is claimed, to consume now rather than later while a few prefer to save now on the condition that they can consume more later. Interest, therefore, is the payment that encourages people to defer consumption and so is dependent upon the subjective evaluations of individuals.

Based on this argument, many supporters of capitalism claim that it is legitimate for the person who provided the capital to get back **more** than they put in, because of the "time value of money." This is because the person who provided the machinery, tools, etc. had to postpone X amount of consumption which he could have had with his money. Capital providers will only get back X amount of consuming power later, after they have been paid back for the machinery etc. by receiving a portion, over time, of

the increased output that it makes possible. Since people prefer consumption now to consumption later, they can only be persuaded to give up consumption now by the promise of receiving more later. Hence returns to capital are based upon this "time value" of money and the argument that individuals have different "time preferences."

That the idea of doing nothing (i.e. not consuming) can be considered as productive says a lot about capitalist theory. Even supporters of capitalism recognise that interest income *"arises independently of any personal act of the capitalist. It accrues to him even though he has not moved any finger in creating it. . . And it flows without ever exhausting that capital from which it arises, and therefore without any necessary limit to its continuance. It is, if one may use such an expression in mundane matters, capable of everlasting life."* [Eugen Bohm-Bawark, **Capital and Interest**, vol. 1, p. 1] Needless to say, Bohm-Bawark then went on to justify this situation.

Lets not forget that, due to **one** decision not to do anything (i.e. **not** to consume), a person (and his or her heirs) may receive **forever** a reward that is not tied to any productive activity. Unlike the people actually doing the work (who only get a reward every time they "contribute" to creating a commodity), the capitalist will get rewarded for just **one** act of abstention. This is hardly a just arrangement. As David Schweickart has pointed out, *"Capitalism does reward some individuals perpetually. This, if it is to be justified by the canon of contribution, one must defend the claim that some contributions are indeed eternal."* [**Against Capitalism**, p.17] In addition, the receiver of interest can pass the benefits of this **one** decision to his family after he or she dies, weakening the case for "abstinence" even more.

It was in the face of the weaknesses of the "abstinence" or "waiting" theories of capital that Bohm-Bawark suggested the "time preference" theory (namely that surplus value is generated by the exchange of present goods for future goods, as future goods are valued less than present goods due to "time preference"). Of course, this theory is subject to exactly the same points we raised in the [last section](#). An individual's psychology is conditioned by the social situation they find themselves in. Just as "abstaining" or "waiting" is far easier to do when one is rich, ones "time preference" is also determined by ones social position. If one has more than enough money for current needs, one can more easily "discount" the future (for example, workers will value the future product of their labour less than their current wages simply because without those wages there will be no future). And if ones "time preference" is dependent on social facts (such as available resources, ones class, etc.), then interest cannot be based upon subjective evaluations, as these are not the independent factor. In other words, saving does not express "time preference", it simply expresses the extent of inequality.

Even if we ignore the problem that inequality influences the subjective "time preference" of individuals, the theory still does not provide a defence of interest. It is worthwhile quoting the noted post-Keynesian economist Joan Robinson on why this is so:

*"The notion that human beings discount the future certainly seems to correspond to everyone's subjective experience, but the conclusion drawn from it is a **non sequitor**, for most people have enough sense to want to be able to exercise consuming power as long as*

*fate permits, and many people are in the situation of having a higher income in the present than they expect in the future (salary earners will have to retire, business may be better now than it seems likely to be later, etc.) and many look beyond their own lifetime and wish to leave consuming power to their heirs. Thus a great many . . . are eagerly looking for a reliable vehicle to carry purchasing power into the future . . . It is impossible to say what price would rule if there were a market for present **versus** future purchasing power, unaffected by any other influence except the desires of individuals about the time-pattern of their consumption. It might well be such a market would normally yield a negative rate of discount . . .*

*"The rate of interest is normally positive for a quite different reason. Present purchasing power is valuable partly because, under the capitalist rules of the game, it permits its owner . . . to employ labour and undertake production which will yield a surplus of receipts over costs. In an economy in which the rate of profit is expected to be positive, the rate of interest is positive . . . [and so] the present value of purchasing power exceeds its future value to the corresponding extent. . . This is nothing whatever to do with the subjective **rate of discount of the future** of the individual concerned. . . "* [**The Accumulation of Capital**, p. 395]

So, interest has little to do with "time preference" and a lot more to do with the inequalities associated with the capitalist system. In effect, the "time preference" theory assumes what it is trying to prove. Interest is positive simply because capitalists can appropriate surplus value from workers and so current money is more valuable than future money because of this fact. Indeed, in an uncertain world future money may be its own reward (for example, workers facing unemployment in the future could value the same amount of money more than in the present). It is only because money provides the authority to allocate resources and exploit wage labour that money now is more valuable. In other words, the capitalist does not supply "time" (as the "time value" theory argues), it provides authority/power.

So, does someone who saves deserve a reward for saving? Simply put, no. Why? Because the act of saving is no more an act of production than is purchasing a commodity. Clearly the reward for purchasing a commodity is that commodity. By analogy, the reward for saving should be not interest but one's savings -- the ability to consume at a later stage.

Capitalists assume that people will not save unless promised the ability to consume **more** at a later stage, yet close examination of this argument reveals its absurdity. People in many different economic systems save in order to consume later, but only in capitalism is it assumed that they need a reward for it beyond the reward of having those savings available for consumption later. The peasant farmer "defers consumption" in order to have grain to plant next year, the squirrel "defers consumption" of nuts in order to have a stock through winter. But neither expects to see their stores increase in size over time. Therefore, saving is rewarded by saving, as consuming is rewarded by consuming. In fact, the capitalist "explanation" for interest has all the hallmarks of apologetics. It is merely an attempt to justify an activity without careful analysing it.

To be sure, there is an economic truth underlying this argument for justifying interest, but the formulation by supporters of capitalism is inaccurate and unfortunate. There is a sense in which 'waiting' is a condition for capital **increase**, though not for capital per se. Any society which wishes to increase its stock of capital goods may have to postpone some gratification. Workplaces and resources turned over to producing capital goods cannot be used to produce consumer items, after all. So, like most capitalist economics there is a grain of truth in it but this grain of truth is used to grow a forest of half-truths and confusion.

Any economy is a network, where decisions affect everyone. Therefore, if some people do not consume now, production is turned away from consumption goods, and this has an effect on all. Or, to put it slightly differently, aggregate demand -- and so aggregate supply -- is changed when some people postpone consumption, and this affects others. The decrease in the demand for consumer goods affects the producers of these goods. Under capitalism, this may result in other people having to "defer consumption," as they cannot sell their goods on the market; but supporters of capitalism assume that **only** capitalists are affected by their decision to postpone consumption, and therefore that they should get a reward for it. Indeed, why should someone be rewarded for a decision which may cause companies to go bust, so **reducing** the available means of production as reduced demand results in job losses and idle factories, is not even raised as an issue by the supporters of capitalism.

Lastly, we must consider what interest actually means. It is **not** the same as other forms of exchange. Proudhon pointed out the difference:

*"Comparing a loan to a **sale**, you say: Your argument is as valid against the latter as against the former, for the latter who sells hats does not **deprive** himself.*

*"No, for he receives for his hats -- at least he is reputed to receive for them -- their exact value immediately, neither **more** nor **less**. But the capitalist lender not only is not deprived, since he recovers his capital intact, but he receives more than his capital, more than he contributes to the exchange; he receives in addition to his capital an interest which represents no positive product on his part. Now, a service which costs no labour to him who renders it is a service which may become gratuitous." [Interest and Principal: The Circulation of Capital, Not Capital Itself, Gives Birth to Progress]*

Thus selling the use of money (paid for by interest) is not the same as selling a commodity. The seller of the commodity does not receive the commodity back as well as its price. In effect, as with rent and profits, interest is payment for permission to use something and, therefore, not a productive act which should be rewarded. Ultimately, interest is an expression of inequality, **not** exchange:

"If there is chicanery afoot in calling 'money now' a different good than 'money later,' it is by no means harmless, for the intended effect is to subsume moneylending under the normative rubric of exchange. . . [but] there are obvious differences... [for in normal commodity exchange] both parties have something [while in loaning] he has something

you don't. . . [so] inequality dominates the relationship. He has more than you have now, and he will get back more than he gives." [Schweickart, **Op. Cit.**, p.23]

Therefore, money lending is, for the poor person, not a choice between more consumption now/less later and less consumption now/more later. If there is no consumption now, there will not be any later. In addition, even in a relatively egalitarian capitalism, interest implies that the producer of new capital is **not** producing commodities. Would-be capitalists have "deferred consumption" and allowed a machine to be created. They then offer to let others use it for a fee, but they are **not** selling a commodity, they are renting the use of something. And giving permission is not a productive act (as noted above).

Therefore, providing capital and charging interest are not productive acts. As Proudhon argued, "*all rent received (nominally as damages, but really as payment for a loan) is an act of property - of robbery [theft].*" [**What is Property**, p. 171]. In other words, capitalism is based on usury, i.e. paying for the use of something. The machine owner has "deferred consumption" and so is "rewarded" with wage labourers to boss about and payment in excess of what he or she originally put forward. In addition, the commodity producers have made goods which the owner of the machine gets paid for and still has the machine! This means that the interest paid has been taken from the labour of those who use the machine, who end up with **nothing** at the end beyond their wages and so are still wage slaves, looking for a new boss. Little wonder Proudhon argued that "*Property is theft!*"

Interest is a con, pure and simple. Little wonder both social and individualist anarchists have opposed it. Ben Tucker assumed that mutual banking, besides reducing interest to zero, would also increase the power of workers in the economy, meaning that workers would be in a position to refuse to work for a capitalist unless they agreed to a hire-purchase deal on the capital they used (see [section G](#)). As for the social anarchists, they realised that free agreements between syndicates and communes would ensure suitable investment in new means of production. They also recognised the network of common influence in any advanced economy, and thus that since everyone is affected by investment decisions, all should have a say in them (see [section I](#)).

C.1 What determines price within capitalism?

Supporters of capitalism usually agree with what is called the **Subjective Theory of Value** (STV), as explained by most mainstream economic textbooks. This system of economics is usually termed "marginalist" economics, for reasons which will become clear.

In a nutshell, the STV states that the price of a commodity is determined by its marginal utility to the consumer and producer. Marginal utility is the point, on an individual's scale of satisfaction, at which his/her desire for a good is satisfied. Hence price is the result of individual, subjective evaluations within the marketplace. One can easily see why this theory could be appealing to those interested in individual freedom.

However, the STV is a myth. Like most myths, it does have a grain of truth in it. But as an explanation of how to determine the price of a commodity, it has serious flaws.

The kernel of truth is that individuals, groups, companies, etc. do indeed value goods and consume/produce them. The rate of consumption, for example, is based on the use-value of goods to the users (although whether some one buys a product is affected by price and income considerations, as we will see). Similarly, production is determined by the utility to the producer of supplying more goods. The use-value of a good is a highly subjective evaluation, and so varies from case to case, depending on the individual's taste and needs. As such it has an **effect** on the price, as will be shown, but as the means to **determine** a product's price it ignores the dynamics of a capitalist economy and the production relations that underlie the market. In effect, the STV treats all commodities like works of art, and such products of human activity (due to their uniqueness) are **not** a capitalistic commodity in the usual sense of the word (i.e. they cannot be reproduced and so labour cannot increase their quantity). Therefore the STV ignores the nature of production under capitalism. This is what will be discussed in the following sections.

Of course, modern economists try and portray economics as a "value-free science." Of course, it rarely dawns on them that they are usually just taking existing social structures and the economic dogmas build round them for granted and so justifying them. As Kropotkin pointed out:

"[A]ll the so-called laws and theories of political economy are in reality no more than statements of the following nature:

'Granting that there are always in a country a considerable number of people who cannot subsist a month, or even a fortnight, without accepting the conditions of work imposed upon them by the State, or offered to them by those whom the State recognises as owners of land, factories, railways, etc., then the results will be so and so.'

*"So far middle-class political economy has been only an enumeration of what happens under the just-mentioned conditions -- without distinctly stating the conditions themselves. And then, having described **the facts** which arise in our society under these conditions, they represent to us these facts as rigid, **inevitable economic laws.**" [Kropotkin's **Revolutionary Pamphlets**, p. 179]*

In other words, economists usually take the political and economic aspects of capitalist society (such as property rights, inequality and so on) as given and construct their theories around it. Marginalism, in effect, took the "political" out of "political economy" by taking capitalist society for granted along with its class system, its hierarchies and its inequalities. By concentrating on individual choices they abstracted from the social system within which such choices are made and what influences them. Indeed, the STV was built upon abstracting individuals from their social surroundings and generating economic "laws" applicable for all individuals, in all societies, for all times. This results in all concrete instances, no matter how historically different, being treated as expressions of the same universal concept. Thus, in neo-classical economics, wage-labour becomes labour, capital becomes the means of production, the labour process becomes a production function, acquisitive behaviour becomes human nature. In this way the uniqueness of contemporary society, namely its basis in wage labour, is ignored (*"The period through which we are passing . . . is distinguished by a special characteristic -- WAGES."* [Proudhon, **System of Economical Contradictions**, p. 199]) and what is specific to capitalism is universalised and made applicable for all time. Such a perspective cannot help being ideological rather than scientific. By trying to create a theory applicable for all time (and so, apparently, value free) they just hide the fact their theory justifies the inequalities of capitalism. As Edward Herman points out:

"Back in 1849, the British economist Nassau Senior chided those defending trade unions and minimum wage regulations for expounding an 'economics of the poor.' The idea that he and his establishment confreres were putting forth an 'economics of the rich' never occurred to him; he thought of himself as a scientist and spokesperson of true principles. This self-deception pervaded mainstream economics up to the time of the Keynesian Revolution of the 1930s. Keynesian economics, though quickly tamed into an instrument of service to the capitalist state, was disturbing in its stress on the inherent instability of capitalism, the tendency toward chronic unemployment, and the need for substantial government intervention to maintain viability. With the resurgent capitalism of the past 50 years, Keynesian ideas, and their implicit call for intervention, have been under incessant attack, and, in the intellectual counterrevolution led by the Chicago School, the traditional laissez-faire ('let-the-fur-fly') economics of the rich has been reestablished as the core of mainstream economics." [The Economics of the Rich]

Herman goes on to ask "[w]hy do the economists serve the rich?" and argues that "[f]or one thing, the leading economists are among the rich, and others seek advancement to similar heights. Chicago School economist Gary Becker was on to something when he argued that economic motives explain a lot of actions frequently attributed to other forces. He of course never applied this idea to economics as a profession . . ." [Ibid.] There are a great many well paying think tanks, research posts, consultancies and so on that create an "'effective demand' that should elicit an appropriate supply resource." [Ibid.]

The introduction of marginalism and its acceptance as "orthodoxy" served, and serves in the present, to divert serious attention from the most critical questions facing working people (for example, what goes on in production, how authority relations impact on society and in the workplace). Rather than looking to how things are produced, the conflicts generated in the production process and the generation/division of surplus, marginalism took what was produced as given, as well as the capitalist workplace, the division of labour and authority relations and so on.

Theories can pursue truth or serve vested interests. In the later capacity they will incorporate only concepts suited to attaining the results desired. An economic theory, for example, may highlight profits, quantities of output, amount of investment, and prices, and leave out class struggle, alienation, hierarchy and bargaining power. Then the theory will serve capitalists, and, since capitalists pay economists' wages and endow their universities, economists and their students who comply, will benefit as well.

General equilibrium analysis and marginalism is made to order for the ruling class. Marginalism ignores the question of production and concentrates on exchange. It argues that any attempt by working people to improve their position in society (by, for example, unions) is counter-productive, it preaches that "in the long run" everyone will be better off and so present day problems are irrelevant (and any attempt to fix them counterproductive) and, of course, the capitalists are entitled to their profits, interest payments and rent. The utility of such a theory is obvious. An economic theory that justifies inequality, "proves" that profits, rent and interest are not exploitative and argues that the economically powerful be given free reign will have more use-value ("utility") to the ruling class than those that do not. In the market place of ideas, it is these which will satisfy the demand and become intellectually "respectable."

Of course, not all supporters of capitalist economics are rich (although most desire to become so). Many do believe its claims that capitalism is based upon freedom and that the profits, interest and rent represent "rewards" for services provided rather than resulting from the exploitation generated by hierarchical workplaces and social inequality. However, before tackling the question of profits, interest and rent we must first discuss why the STV is wrong.

C.1.1 So what is wrong with this theory?

The first problem in using marginal utility to determine price is that it leads to circular reasoning. Prices are supposed to measure the "marginal utility" of the commodity, yet consumers need to know the price **first** in order to evaluate how best to maximise their satisfaction. Hence subjective value theory *"obviously rest[s] on circular reasoning. Although it tries to explain prices, prices [are] necessary to explain marginal utility."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p.58] In the end, as Jevons (one of the founders of marginalism) acknowledged, the price of a commodity is the only test we have of the utility of the commodity to the producer. Given that marginality utility was meant to explain those prices, the failure of the theory could not be more striking.

Secondly, consider the definition of equilibrium price. Equilibrium price is the price for which the

quantity demanded is precisely equal to the quantity supplied. At such a price there is no incentive for either demanders or suppliers to alter their behaviour.

Why does this happen? The subjective theory cannot really explain why **this** price is the equilibrium price, as opposed to any other. This is because the STV ignores that an objective measure is required upon which to base "subjective" evaluations within the market. The consumer, when shopping, requires prices in order to allocate their money to best maximise their "utility" (and, of course, the consumer faces prices on the market, the very thing marginal utility theory was meant to explain!). And how does a company know it is making a profit unless it compares the market price with the production costs of the commodity it produces? As Proudhon put it, "*[i]f supply and demand alone determine value, how can we tell what is an excess and what is a sufficiency? If neither cost, nor market price, nor wages can be mathematically determined, how is it possible to conceive of a surplus, a profit?*" [**System of Economical Contradictions**, p. 114] This objective measure can only be the actual processes of production within capitalism, production which is for profit. The implications of this are important when discovering what determines price within capitalism, as will be discussed in the next section ([C.1.2 - So what does determine price?](#)).

The early marginalists were aware of this problem and argued that price reflected the utility at the "margin" (Jevons, one of the founders of the marginalist school, argued that the "*final degree of utility determines value*"); but what determined the position of the margin itself? This is fixed by the available supply ("*Supply determines final degree of utility*" -- Jevons); but what determines the level of supply? ("*Cost of production determines supply*" -- Jevons). In other words, price is dependent on marginal utility, which is dependent on supply, which is dependent on the cost of production. In other words, ultimately on an **objective** measure (supply or cost of production) rather than subjective evaluations! This is unsurprising because before you can consume ("subjectively value") something on the market, it has to be produced. It is the process of production that rearranges matter and energy from less useful to more useful (to us) forms. Which brings us straight back to production and the social relations which exist within a given society -- and the political dangers of defining (exchange) value in terms of labour (see [next section](#)). Afterall, the individual does not just face a given supply on the market, they also face prices, including the costs associated with production and profit taking.

As the whole aim of marginalism was to abstract away from production (where power relations are clear) and concentrate on exchange (where power works indirectly), it is unsurprising that early marginal utility value theory was quickly abandoned. The continued discussion of "utility" in economics textbooks is primarily heuristic. First the neo-classical economists used measurable (cardinal) "utility" (i. e. that utility was the same for all) but that caused political problems (as cardinal utility implied that the "utility" of an extra dollar to a poor person was clearly greater than the loss of one dollar to a rich man and this obviously justified redistribution politics). When this was recognised (along with the obvious fact that cardinal utility was impossible in practice) utility became "ordinal" (i.e. utility was an individual thing and so could not be measured). Then even ordinal utility was abandoned as cross-personal utilities were not comparable and so objective prices could be derived from it (which was Adam Smith's argument and which led him to develop a **labour** theory of value rather than one based

on utility, or use value). With the abandonment of "ordinal" utility, mainstream economics gave up even thinking about individual preferences in those terms. This means that modern economics does not have a value theory at all -- and without a value theory, the claim that the workings of capitalism will benefit all or its outcome will realise individual preferences has no rational foundation.

Thus utility theory was gradually deprived of all its bite and reduced from cardinal to ordinal utility and from ordinal utility to 'revealed preference.' This retreat from cardinal utility (patently dreamland) to ordinal utility (distinction without a difference) to "revealed preferences" (the naked tautology -- consumers maximise total utility as "revealed" in the structures of spending or, consumers maximise what they maximise) was but one of the many retreats made among the marginalists as their contrived core assumptions were exposed to simple but penetrating questions.

While ignoring "utility" theory of value, most mainstream economics accept the notions of "perfect competition" and (Walrasian) "general equilibrium" which were part and parcel of it. Marginalism attempted to show, in the words of Paul Ormerod, *"that under certain assumptions the free market system would lead to an allocation of a given set of resources which was in a very particular and restricted sense optimal from the point of view of every individual and company in the economy."* [**The Death of Economics**, p. 45] This was what Walrasian general equilibrium proved. However, the assumptions required prove to be somewhat unrealistic (to understate the point). As Ormerod points out:

"[i]t cannot be emphasised too strongly that . . . the competitive model is far removed from being a reasonable representation of Western economies in practice. . . [It is] a travesty of reality. The world does not consist, for example, of an enormous number of small firms, none of which has any degree of control over the market . . . The theory introduced by the marginal revolution was based upon a series of postulates about human behaviour and the workings of the economy. It was very much an experiment in pure thought, with little empirical rationalisation of the assumptions."

Indeed, *"the weight of evidence" is "against the validity of the model of competitive general equilibrium as a plausible representation of reality."* [**Op. Cit.**, p. 48, p. 62] For example, oligopoly and imperfect competition have been abstracted from so that the theory does not allow one to answer interesting questions which turn on the asymmetry of information and bargaining power among economic agents, whether due to size, or organisation, or social stigmas, or whatever else. In the real world, oligopoly is common place and asymmetry of information and bargaining power the norm. To abstract from these means to present an economic vision at odds with the reality people face and, therefore, can only propose solutions which harm those with weaker bargaining positions and without information. In addition, the model is set in a timeless environment, with people and companies working in a world where they have perfect knowledge and information about the state of the market. A world without a future and so with no uncertainty (any attempt to include time, and so uncertainty, ensures that the model ceases to be of value). Thus model cannot easily or usefully account for the reality that economic agents do not actually know such things as future prices, future availability of goods, changes in production techniques or in markets to occur in the future, etc. Instead, to achieve its results -- proofs about equilibrium conditions -- the model assumes that actors have perfect knowledge at least of the

probabilities of all possible outcomes for the economy. The opposite is the case in reality.

In this timeless, perfect world, "free market" capitalism will prove itself an efficient method of allocating resources and all markets will clear. In part at least, General Equilibrium Theory is an abstract answer to an abstract and important question: Can an economy relying only on price signals for market information be orderly? The answer of general equilibrium is clear and definitive -- one can describe such an economy with these properties. However, no actual economy has been described and, given the assumptions involved, no such economy could ever exist. An theoretical question has been answered involving some amount of intellectual achievement, but it is a answer which has no bearing to reality. And this is often termed the "high theory" of equilibrium. Obviously most economists must treat the real world as a special case.

Thus General Equilibrium theory analyses an economic state which there is no reason to suppose will ever, or have ever, come about. It is, therefore, an abstraction which has no discernible applicability or relevance to the world as it is. To argue that it can give insights into the real world is ridiculous. As mainstream economic theory begins with axioms and assumptions and uses a deductivist methodology to arrive at conclusions, its usefulness in discovering how the world works is limited. Firstly, as we note in [section F.1.3](#), the deductive method is **pre-scientific** in nature. Secondly, the axioms and assumptions can be considered fictitious (as they have negligible empirical relevance) and the conclusions of deductivist models can only really have relevance to the structure of those models as the models themselves bear no relation to economic reality. While it is true that there are certain imaginary intellectual problems for which the general equilibrium model is well designed to provide precise answers (if anything really could), in practice this means the same as saying that if one insists on analysing a problem which has no real world equivalent or solution, it may be appropriate to use a model which has no real-world application. Models derived to provide answers to imaginary problems will be unsuitable for resolving practical, real-world economic problems or even providing a useful insight into how capitalism works and develops. In the words of noted left-wing economist Nicholas Kaldor, *"equilibrium theory has reached the stage where the pure theorist has successfully (though perhaps inadvertently) demonstrated that the main implications of this theory cannot possibly hold in reality, but has not yet managed to pass his message down the line to the textbook writer and to the classroom."* Little wonder, then, that his *"basic objection to the theory of general equilibrium is not that it is abstract -- all theory is abstract and must necessarily be so since there can be no analysis without abstraction -- but that it starts from the wrong kind of abstraction, and therefore gives a misleading 'paradigm' . . . of the world as it is; it gives a misleading impression of the nature and the manner of operation of economic forces."* [**The Essential Kaldor**, p. 377 and p. 399]

There is a more realistic neo-classical notion of equilibrium called "partial" equilibrium theory (developed by Alfred Marshall). "Time" is included via Alfred Marshall's notion of equilibrium existing in various runs. The most important of Marshall's concepts are "short run" and "long run" equilibrium. However, this is just comparing one static (ideal) state with another. Marshall treated markets "one at a time" (hence the expression "partial equilibrium") with "all other things being equal" -- the assumption being that the rest of the economy is unchanged! This theory confuses the comparison of possible alternative equilibrium positions with the analysis of a process taking place through time, i.e. historical

events are introduced into a timeless picture. In other words, time as the real world knows it does not exist. In the real world, any adjustment takes a certain time to complete and events may occur that alter equilibrium. The very process of moving has an effect upon the destination and so there is no such thing as a position of long-run equilibrium which exists independently of the course which the economy is following. Marshall's assumptions of "one market at a time" and "all other things equal" ensure that the concept of time is as foreign to "partial" equilibrium as it is to "general" equilibrium.

So much of mainstream economics is based upon theories which have little or no relation to reality. The aim of marginal utility theory was to show that capitalism was efficient and that everyone benefits from it (it maximises utility, in the limited sense imposed by what is available on the market, of course). This was what perfect competition was said to prove. But perfect competition is impossible. And as perfect competition is itself an assumption of marginal utility, we might expect the theory to have been abandoned at this point. Instead, the contradiction was swept under the carpet.

In addition, like most religions, neo-classical economics cannot be scientifically tested. This is because the perfect competition model makes no falsifiable predictions whatsoever. As Martin Hollis and Edward Nell argue:

"Indeed the whole idea of testing the marginal analysis is absurd. For what could a test reveal? Negative results show only that the market is defective. Various interpretations can be given . . . But one interpretation is not possible -- that the marginal analysis has been refuted. . . . To generalise the point, marginalist statements to the effect that, if the assumptions of Positive micro-economics hold, then so-and-so will happen, are tautologies and their consequences are simply logical deductions from their protases. . . the model is untestable." [Rational Economic Man, p. 34]

In other words, if a prediction of marginalist economics does not hold all we can draw from the test is that perfect competition was not in existence. The theory cannot be disproven, no matter how much evidence is gathered against it. In addition, there are other useful techniques which can be used in defending the neo-classical ideology from empirical evidence. For example, neo-classical economics maintains that production is marked by diminishing returns to scale. Any empirical evidence that suggests otherwise can be dismissed simply because, obviously, the scale is not large enough -- **eventually** returns will decrease with size. Similarly, the term "in the long run" can work wonders for the ideology. For if the claimed good results of a given policy do not materialise for anyone but the ruling class, then, rather than blame the ideology, the time scale can be the culprit (in the long run, things will turn out for the best -- unfortunately for the majority, the long run has not arrived yet, but it will; until then you will have to make sacrifices for your future gains...). Obviously with such an "analysis" anything can be proven.

Little wonder Nicholas Kaldor argued that:

"The Walrasian [i.e. general] equilibrium theory is a highly developed intellectual system,

much refined and elaborated by mathematical economists since World War II -- an intellectual experiment . . . But it does not constitute a scientific hypothesis, like Einstein's theory of relativity or Newton's law of gravitation, in that its basic assumptions are axiomatic and not empirical, and no specific methods have been put forward by which the validity or relevance of its results could be tested. The assumptions make assertions about reality in their implications, but these are not founded on direct observation, and, in the opinion of practitioners of the theory at any rate, they cannot be contradicted by observation or experiment." [Op. Cit., p. 416]

Marginalism, however, in spite of these slight problems, did serve a valuable ideological function. It removed the appearance of exploitation from the system, justifies giving business leaders the "freedom" to operate as they liked and portrayed a world of harmony between the owners of factors. Hence its general acceptance within economics. In other words, it justified the mentality of "what is profitable is right" and removed politics and ethics from the field of economics. Moreover, the theory of "perfect competition" (regardless of its impossibility) allowed economists to portray capitalism as optimal, efficient and the satisfier of individual desires. And this is important, for without the assumption of equilibrium, market transactions need not benefit all. Indeed, it may lead to the tyranny of the fortunate over the unfortunate, with the majority facing a series of dismal choices between the lesser of a group of evils. Of course, **with** the assumption of equilibrium, reality must be ignored. So capitalist economics is between a rock and a hard place.

All in all, the world assumed by neo-classical economics is not the one we actually live in, and so applying that theory is both misleading and (usually) disastrous (at least to the "have-nots").

Some pro-"free market" capitalist economists (such as those in the right-wing "Austrian school") reject the notion of equilibrium completely and embrace a dynamic model of capitalism. While being far more realistic than mainstream neo-classical theory, this method abandons the possibility of demonstrating that the market outcome is in any sense a realisation of the individual preferences of whose interaction it is an expression. It has no way of establishing the supposedly stabilising character of entrepreneurial activity or its alleged socially beneficial character. Indeed, entrepreneurial activity tends to disrupt markets (particularly labour markets) **away** from equilibrium (i.e. the full use of available resources) rather than towards it. In other words, the dynamic process could lead to a divergence rather than a convergence of behaviour and so to increased unemployment, a reduction in the **quality** of available choices available from which to maximise your "utility" and so on. A dynamic system need not be self-correcting, particularly in the labour market, nor show any sign of self-equilibrium (i.e. be subject to the business cycle). Ironically enough, economists of this school often maintain that while equilibrium cannot be reached the labour market will experience full employment under "free market" or "pure" capitalism. That this condition is one of equilibrium does not seem to cause them much concern. Thus we find von Hayek, for example, arguing that the *"cause of unemployment . . . is a deviation of prices and wages from their equilibrium position which would establish itself with a free market and stable money"* and that *"the deviation of existing prices from that equilibrium position . . . is the cause of the impossibility of selling part of the labour supply."* [New Studies, p. 201] Therefore, we see the usual embrace of equilibrium theory to defend capitalism against the evils it creates even by those who claim

to know better. Perhaps this is a case of political expediency, allowing the ideological supporters of free market capitalism to attack the notion of equilibrium when it clearly clashes with reality but being able to return to it when attacking, say, trade unions, welfare programmes and other schemes which aim to aid working class people against the ravages of the capitalist market?

These supporters of capitalism stress "freedom" -- the freedom of individuals to make their own decisions. And who can deny that individuals, when free to choose, will pick the option they consider best for themselves? However, what this praise for individual freedom ignores is that capitalism often reduces choice to picking the lesser of two (or more) evils due to the inequalities it creates (hence our reference to the **quality** of the decisions available to us). The worker who agrees to work in a sweatshop does "maximise" her "utility" by so doing -- after all, this option is better than starving to death -- but only an ideologue blinded by capitalist economics will think that she is free or that her decision is not made under economic compulsion. In other words, this idealisation of freedom through the market completely ignores the fact that this freedom can be, to a large number of people, very limited in scope. Moreover, the freedom associated with capitalism, as far as the labour market goes, becomes little more than the freedom to pick your master. All in all, this defence of capitalism ignores the existence of economic inequality (and so power) which infringes the freedom and opportunities of others (for a fuller discussion of this, see [section F.3.1](#)). Social inequalities can ensure that people end up "wanting what they get" rather than "getting what they want" simply because they have to adjust their expectations and behaviour to fit into the patterns determined by concentrations of economic power. This is particularly the case within the labour market, where sellers of labour power are usually at a disadvantage when compared to buyers due to the existence of unemployment (see sections [B.4.3](#), [C.7](#) and [F.10.2](#)).

Which brings us to another problem associated with marginalism, namely the distribution of resources within society. Market demand is usually discussed in terms of tastes, not in the distribution of purchasing power required to satisfy those tastes. So, as a method of determining price, marginal utility ignores the differences in purchasing power between individuals and assumes the legal fiction that corporations are individual persons (income distribution is taken as a given). Those who have a lot of money will be able to maximise their satisfactions far easier than those who have little. Also, of course, they can out-bid those with less money. If, as many right-"Libertarians" say, capitalism is "one dollar, one vote," it is obvious whose values are going to be reflected most strongly in the market. This is why orthodox economists make the convenient assumption of a 'given distribution of income' when they try to show the best allocation of resources is the market based one.

In other words, under capitalism, it is not "utility" as such that is maximised, rather it is "effective" utility (usually called "effective demand") -- namely utility that is backed up with money. The capitalist market places (or rather, the owning class in such a system places) value (i.e. prices) on things according to the effective demand for them. "Effective demand" is people's desires weighted by their ability to pay. So, the market counts the desires of affluent people as more important than the desires of destitute people. And so capitalism skews consumption away from satisfying the "utility" of those most in need and into satisfying the needs of the wealthy few first. This does not mean that the needs of the many will not be met (usually, but not always, they are to some degree), it means that for any given resource those

with money can out-bid those with less -- regardless of the human cost. As the pro-free market capitalism economist Von Hayek argued the "[s]pontaneous order produced by the market does not ensure that what general opinion regards as more important needs are always met before the less important ones." [The **Essential Hayek**, p. 258] Which is just a polite way of referring to the process by which millionaires build a new mansion while thousands are homeless or live in slums, feed luxury food to their pets while humans go hungry or when agribusiness grow cash crops for foreign markets while the landless starve to death (see also [section I.4.5](#)). Needless to say, marginalist economics justifies this market power and its results.

In summary, neo-classical economics shows the viability of an unreal system and this is translated into assertions about the world that we live in until most people just accept that reality reflects the model (rather than vice versa, as it should but does not in neo-classical theory). Moreover, and even worse, policy decisions will be enacted based on a model which has no bearing in reality -- with disastrous results (for example, the rise and fall of Monetarism -- see [section C.8](#)). In addition, it justifies (when not ignoring) hierarchical structures and massive inequalities in wealth and bargaining power in society, which make a mockery of individual freedom. (see [section F.3.1](#) for details). It serves the interests of those with power and wealth in modern society as well as the aims of a soul-destroying, world-polluting commercial system by deprecating the importance of aesthetic, humane and, indeed, human factors in economic decision making. Indeed, the mere suggestion that people should be placed before (never mind instead of) profits would produce a fit. Starting from a false premise, marginalism ends up negating its own stated ideals -- rather than being the economics of individual freedom it becomes the means of justifying restrictions and negations of that freedom.

So, if the STV is flawed, what does determine prices? Obviously, in the short term, prices are heavily influenced by supply and demand. If demand exceeds supply, the price rises and vice versa. This truism, however, does not answer the question. The answer lies in production and in the social relationships generated there. This is discussed in the [next section](#).

C.1.2 So what does determine price?

The key to understanding prices lies in understanding that production under capitalism has as its *"only aim . . . to increase the profits of the capitalist."* [Peter Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 55] In other words, profit is the driving force of capitalism. Once this fact and its implications are understood, the determination of price is simple and the dynamics of the capitalist system made clearer. The price of a capitalist commodity will tend towards its **production price** in a free market, production price being the sum of production costs plus average profit rates (the average profit rate, we should note, depends upon the ease of entry into the market, see below).

Consumers, when shopping, are confronted by given prices and a given supply. The price determines the demand, based on the use-value of the product to the consumer and his/her financial situation. If supply exceeds demand, supply is reduced (either by firms reducing production or by firms closing and capital moving to other, more profitable, markets) until an average **rate of profit** is generated (although we must

stress that investment decisions are difficult to reverse and this means mobility can be reduced, causing adjustment problems -- such as unemployment -- within the economy). The *rate of profit* is the amount of profit divided by the total capital invested (i.e. constant capital -- means of production -- and variable capital -- wages and slavery). If the given price generates above-average profits (and so profit rate), then capital will try to move from profit-poor areas into this profit-rich area, increasing supply and competition and so reducing the price until an average rate of profit is again produced (we stress **try to** as many markets have extensive barriers to entry which limit the mobility of capital and so allow big business to reap higher profit rates -- see [section C.4](#)). So, if the price results in demand exceeding supply, this causes a short term price increase and these extra profits indicate to other capitalists to move into this market. The supply of the commodity will tend to stabilise at whatever level of the commodity is demanded at the price which produces average profit rates (this level being dependent on the "*degree of monopoly*" within a market -- see [section C.5](#)). This profit level means that suppliers have no incentive to move capital into or out of that market. Any change from this level in the long term depends on changes on the production price of the good (lower production prices meaning higher profits, indicating to other capitalists that the market could be profitable for new investment).

As can be seen, this theory (often called the *Labour Theory of Value* -- or LTV for short) does not deny that consumers subjectively evaluate goods and that this evaluation can have a short term effect on price (which determines supply and demand). Many right-"libertarian" and mainstream economists assert that the labour theory of value removes demand from the determination of price. A favourite example is that of the "mud pie" -- if it takes the same labour as an apple pie to make, they ask, surely it has the same value (price)? These assertions are incorrect as the LTV bases itself on supply and demand and seeks to explain the dynamics of prices and so recognises (indeed bases itself on the fact) that individuals make their own decisions based upon their subjective needs (in the words of Proudhon, "*utility is the necessary condition for exchange.*" [**System of Economical Contradictions**, p. 77]). What the LTV seeks to explain is price (i.e. *exchange* value) -- and a good can only have an exchange value if others desire it (i.e. has a use value for them and they seek to *exchange* money or goods for it). Thus the example of the "mud pie" is a classic straw man argument -- the "mud pie" does not have an exchange value as it has no use value to others and is not subject to exchange. In other words, if a commodity cannot be exchanged, it cannot have an *exchange* value (and so price). As Proudhon argued, "*nothing is exchangeable if it be not useful.*" [**Op. Cit.**, p. 85]

The LTV is based upon the insight that without labour nothing would be produced and you have to produce something before you can exchange it (or you can steal it, as in the case of land). As the utility (i.e. use value) of a commodity cannot be measured, labour is the basis of (exchange) value. The LTV bases itself on the objective needs of production and recognises the key role labour plays (directly and indirectly) in the creation of commodities. However, this does not mean that value exists independently of demand. Far from it -- as noted, in order to have an exchange value, a good must be desired by someone other than its maker (or the capitalist who employs the maker), it must have a use-value for them (in other words, it is subjectively valued by them). Therefore workers produce that which has (use) value, as determined by the demand, and the costs of production involved in creating these use-values help determine the price (its exchange value) along with profit levels.

Therefore the LTV includes the element of truth of "subjective" theory while destroying its myths. For, in the end, the STV just states that *"prices are determined marginal utility; marginal utility is measured by prices. Prices . . . are nothing more or less than prices. Marginalists, having begun their search in the field of subjectivity, proceeded to walk in a circle."* [Allan Engler, **Apostles of Greed**, p. 27] The LTV, on the other hand, bases itself on the objective fact of production and the costs (ultimately expressed in labour time) ensuing in it (*"The absolute value of a thing, then, is its cost in time and expense."* [Proudhon, **What is Property?**, p. 145]). The variations in supply and demand (i.e. market prices) oscillate round this "absolute value" (i.e. production price) and so it is the cost of production of a commodity which ultimately regulates its price, not supply and demand (which only temporarily affects its market price).

While the STV is handy for describing the price of works of art (and we should note that the LTV can also provide an explanation for this), there is little point having an economic theory which ignores the nature of the vast majority of economic activity in society. What the labour theory of value explains is what is beneath supply and demand, what actually determines price under capitalism. It recognises the objectivity given price and supply which face a consumer and indicates how consumption ("subjective evaluations") affect their movements. It explains why a certain commodity sells at a certain price and not another -- something which the subjective theory cannot really do. Why should a supplier "alter their behaviour" in the market if it is based purely on "subjective evaluations"? There has to be an objective indication that guides their actions and this is found in the reality of capitalist production. To re-quote Proudhon, *"[i]f supply and demand alone determine value, how can we tell what is an excess and what is a sufficiency? If neither cost, nor market price, nor wages can be mathematically determined, how is it possible to conceive of a surplus, a profit?"* [**System of Economical Contradictions**, p. 114] Therefore, *"[t]o say . . . that supply and demand is the law of exchange is to say that supply and demand is the law of supply and demand; it is not an explanation of the general practice, but a declaration of its absurdity."* [**Op. Cit.**, p. 91] Thus the labour theory of value more accurately reflects reality: namely, that for a normal commodity, prices as well as supply exist before subjective evaluations can take place and that capitalism is based on the production of profit rather than abstractly satisfying consumer needs.

It could be argued that this *"prices of production"* theory is close to the neo-classical "partial equilibrium" theory. In some ways this is true. Marshall basically synthesised this theory from the marginal utility theory and the older "cost of production" theory which J.S. Mill derived from the LTV. However, the differences are important. First, the LTV does not get into the circular reasoning associated with attempts to derive utility from price we have indicated above. Second, it argues that rent, profit and interest are the unpaid labour of workers rather than being the "rewards" to owners for being owners. Thirdly, it is a **dynamic** system in which the prices of production can and do change as economic decisions are made. Fourthly, it can easily reject the idea of "perfect competition" and give an account of an economy marked by barriers to entry and difficult to reverse investment decisions. And, lastly, labour markets need not clear in the long run. Given that modern economics has given up trying to measure utility, it means that in practice (if not in rhetoric) the neo-classical model has rejected the marginal utility theory of value part of the synthesis and returned, basically, to the classical (LTV) approach -- but with important differences which gut the earlier version of its critical edge and dynamic nature.

Needless to say, the LTV does not ignore naturally occurring objects like gems, wild foods, and water. Nature is a vast source of use-values which humanity must utilise in order to produce other, different, use-values. If you like, the earth is the mother and labour the father of wealth. Its sometimes claimed that the labour theory of value implies that naturally occurring objects should have no price, since it takes no labour to produce them. This, however, is false. For example, gemstones are valuable because it takes a huge amount of labour to find them. If they were easy to find, like sand, they would be cheap. Similarly, wild foods and water have value according to how much labour is needed to find, collect, and process them in a given area (for example water in arid places is more "valuable" than water near a lake).

The same logic applies to other naturally occurring objects. If it takes virtually no effort to obtain them -- like air -- then they will have little or no exchange value. However, the more effort it takes to find, collect, purify, or otherwise process them for use, the more exchange value they will have relative to other goods (i.e. their production prices are higher, leading to a higher market price).

The attempt to ignore production implied in the STV comes from a desire to hide the exploitative nature of capitalism. By concentrating upon the "subjective" evaluations of individuals, those individuals are abstracted away from real economic activity (i.e. production) so the source of profits and power in the economy can be ignored. Section C.2 ([Where do profits come from?](#)) indicates why exploitation of labour in production is the source of profits, not activity in the market.

Of course, the pro-capitalist will argue that the labour theory of value is not universally accepted within mainstream economics. How true; but this hardly suggests that the theory is wrong. Afterall, it would have been easy to "prove" that democratic theory was "wrong" in Nazi Germany simply because it was not universally accepted by most lecturers and political leaders at the time. Under capitalism, more and more things are turned into commodities -- including economic theories and jobs for economists. Given a choice between a theory which argues that profits, interest and rent are unpaid labour (i.e. exploitation) or one that argues they are all valid "rewards" for service, which one do you think the wealthy will back in terms of funding?

This was the case with the labour theory of value. From the time of Adam Smith onwards, radicals had used the LTV to critique capitalism. The classical economists (Adam Smith and David Ricardo and their followers like J.S. Mill) argued that, in the long run, commodities exchanged in proportion to the labour used to produce them. Thus commodity exchange benefited all parties as they received an equivalent amount of labour as they had expended. However, this left the nature and source of capitalist profits subject to debate, debate which soon spread to the working class. Long before Karl Marx (the person most associated with the LTV) wrote his (in)famous work **Capital**, Ricardian Socialists like Robert Owen and William Thompson and anarchists like Proudhon were using the LTV to present a critique of capitalism, exposing it as being based upon exploitation (the worker did not, in fact, receive in wages the equivalent of the value she produced and so capitalism was **not** based on the exchange of equivalents). In the United States, Henry George was using it to attack the private ownership of land. When

marginalist economics came along, it was quickly seized upon as a way of undercutting radical influence. Indeed, followers of Henry George argue that neo-classical economics was developed primarily to counter act his ideas and influence (see **The Corruption of Economics** by Mason Gaffney and Fred Harrison).

Thus, as noted above, marginalist economics was seized upon, regardless of its merits as a science, simply because it took the political out of political economy. With the rise of the socialist movement and the critiques of Owen, Thompson, Proudhon and many others, the labour theory of value was considered too political and dangerous. Capitalism could no longer be seen as being based on the exchange of equivalent labour. Rather, it should be seen as being based on exchange of equivalent utility. But, as indicated (in the [last section](#)) the notion of equivalent utility was quickly dropped while the superstructure built upon it became the basis of capitalist economics. And without a theory of value, capitalist economics cannot prove that capitalism will result in harmony, the satisfaction of individual needs, justice in exchange or the efficient allocation of resources.

One last point. We must stress that not all anarchists support the LTV. Kropotkin, for example, did not agree with it. He considered socialist use of the LTV as taking *"the metaphysical definitions of the academical economists"* to critique capitalism using its own definitions and so, like capitalist economics, it was not scientific [**Evolution and Environment**, p. 92]. However, his rejection of the LTV did not imply that Kropotkin did not consider capitalism as exploitative. Far from it. Like every anarchist, Kropotkin attacked the *"appropriation of the produce of human labour by the owners of capital,"* seeing its roots in the fact that *"millions of men [and women] have literally nothing to live upon, unless they sell their labour force and their intelligence at a price that will make the net profit of the capitalist and 'surplus value' possible."* [**Op. Cit.**, p. 106] We discuss profits in more detail in section C.2 ([Where do profits come from?](#)).

Kropotkin's rejection of the LTV is based on the fact that, within capitalism, *"[v]alue in exchange and the necessary labour are not proportional to each other"* and so *"Labour is not the measure of Value."* [**Op. Cit.**, p. 91] Which is, of course, true under capitalism. As Proudhon (and Marx) argued, under capitalism (due to existence of capitalist profit, rent and interest) prices could not be proportional to the average labour required to produce a commodity (*"Wherever labour has not been socialised, -- that is, wherever value is not synthetically determined, -- there is irregularity and dishonesty in exchange."* [Proudhon, **Op. Cit.**, p. 128]) Only when the rate of profit is zero could prices directly reflect labour values (which is, of course, what Proudhon and Tucker desired -- *"Socialism . . . extends its ["that labour is the true measure of price"] function to the description of society as it should be, and the discovery of the means of making it what it should be."* [Tucker, **The Individualist Anarchists**, p. 79]). Therefore, Kropotkin is correct to state that *"[u]nder the capitalist system, value in exchange is measured no more by the amount of necessary labour."* [**Op. Cit.**, p. 91]

However, this does not mean that the LTV is irrelevant to analysing the capitalist economy. Rather, it argues that under capitalism labour is, essentially, the **regulator** of price, **not** its measure. *"The idea that has been entertained hitherto of the measure of value,"* argued Proudhon, *"then, is inexact; the object of*

our inquiry is not the standard of value, as has been said so often and so foolishly, but the law which regulates the proportions of the various products to the social wealth; for upon the knowledge of this law depends the rise and fall of prices." [System of Economical Contradictions, p. 94] So Kropotkin's argument does not undermine the LTV as such. Stripped of the metaphysical baggage which many (particularly Marxists) have placed on the LTV (and correctly attacked as unscientific by Kropotkin), it is essentially a methodological tool, a means of investigating the key aspects of capitalism -- namely wage labour and the conflicts associated with it at the point of production -- at a high level of abstraction. Thus it is a **explanatory** tool and value an explanatory category, a means of understanding the dynamics of capitalism.

Therefore, rather than being the crude idea that "exchange value" equals prices the LTV is primarily a means of analysis. This can be seen by our use of "production prices" rather than (exchange) value in our description of how the theory works. The LTV focuses analysis onto the production process and thus correctly points our investigations of how capitalism works to what goes on in production, to the relations of authority in the capitalist workplace, the struggle between the power of the boss and the liberty of the workers, the struggle over who controls the production process and how the surplus produced by workers is divided (i.e. how much remains in the hands of those who produced it and how much is appropriated by capitalists). Therefore, the claim that prices deviate from values and so the LTV is outdated indicates a confusion between the explanatory role of the LTV and the actual world of prices and profits. The LTV reminds us that production comes before and so underlies exchange and what happens at the point of production directly influences what happens in exchange. Decreasing the direct and indirect labour time required for production will decrease the cost price of a commodity and so reduce its production price. Thus the rise and fall of prices and profits is the result of changes in value relations (i.e. in the objective labour costs of production -- labour-time value) and so the use of the LTV as an explanatory tool is valid.

In other words, the labour theory of value is simply a good heuristic analysis device which gives an insight into how prices are formed rather than the prices as such. In practice, production prices are dependent on wages and these **reflect** labour-time values rather than **are** labour-time values.

Thus Kropotkin was right -- up to a point. His critique of the LTV is correct for those versions of it which state that "equilibrium" price equals the (exchange) value of a good. He was correct to note that under capitalism this rarely happens. Which means that our use of the LTV is simply that of an explanatory tool, a means of looking at the key aspect of capitalism -- namely the production process which creates things which have use value for others and are then exchanged. Production comes first and so we must first start there to understand the dynamics of capitalism. Not to do so, as the STV does, will lead your analysis into a dead end and will ignore the fundamental aspect of capitalism -- wage labour, the authority structures in production and the exploitation of labour such oppression generates.

Indeed, Kropotkin's argument is reflected the "prices of production" perspective outlined above as we concentrate of **prices** rather than "values." We reject the metaphysical abstractions often associated with the LTV and rather concentrate on real phenomenon, such as prices, profits, class struggle and so on. Such a perspective helps ground our critique of capitalism in what happens in the real world rather than

in the realms of abstraction. Marx's concentration on **value** (i.e. the abstract level of analysis) made him ignore the role of class struggle in capitalism and its affect on profits (with bad results for his theory and the movement he inspired).

C.1.3 What else affects price levels?

As indicated in the [last section](#), the price of a capitalist commodity is, in the long term, equal to its production price, which in turn determines supply and demand. If demand or supply changes, which of course they can and do as consumers' values change and new means of production are created and old ones end, these will have a short-term effect on prices, but the average production price is the price around which a capitalist commodity sells. Thus it is the cost of production which ultimately regulates the price of commodities. In other words, "*market relations are governed by the production relations.*" [Paul Mattick, **Economic Crisis and Crisis Theory**, p. 51] As Proudhon put it:

"Thus value varies, and the law of value is unchangeable, further, if value is susceptible of variation, it is because it is governed by a law whose principle is essentially inconstant, -- namely, labour measured by time." [Op. Cit., p. 100]

However, the amount of time and effort spent in producing a particular commodity is not the essential factor in determining its price in the market. What counts is the costs (including the amount of work time) that it takes **on average** to produce that type of commodity, when the work is performed with average intensity, with typically used tools and average skill levels. Commodity production that falls below such standards, e.g. using obsolete technology or less-than-average intensity of work, will not allow the seller to raise the price of the commodity to compensate for its inefficient production, because its price is determined in the market by average conditions (and thus average costs) of production, plus the average profit levels required to meet the average rate of profit on the invested capital. On the other hand, using production methods that are **more** efficient than average -- i.e.. which allow more commodities to be produced with **less labour** -- will allow the seller to reap more profits and/or lower the price below average, and thus capture more market share, which will eventually force other producers to adopt the same technology in order to survive, and so lower the market production price of that type of commodity. In this way, advances that reduce labour time translate into reduced exchange value (and so price), thus showing the regulating function of labour time (and indicating the usefulness of the LTV as a methodological tool).

Similarly, the LTV also provides an explanation of why common resources in one area become more valuable in others (for example, the price of water to a person in a desert would be far higher than to someone next to a river). In the short term, the owner of water in the desert can charge a vast amount to those who want it simply because it is rare and the amount of labour required to find an alternative source would be high (we will ignore the ethics of charging high prices to people in need for the moment, as does marginalist economics which portrays such situations -- which most people would intuitively class as exploitative -- as "fair exchange"). But if such excess profits could be maintained for long periods, then they would tempt others to increase competition. If a steady demand for water existed

in that region then competition would drive down the price of water to around to the average price required to make it available (which explains why capitalists desire to reduce competition via the use of copyright laws, patents and so on -- see [section B.3.2](#) -- as well as increasing company size, market share and power -- see [section C.4](#)).

To summarise, as the production cost for a commodity is a given, only can indicate whether a given product is "valued" enough by consumers to warrant increased production. This means that *"capital moves from relatively stagnating into rapidly developing industries. . . . The extra profit, in excess of the average profit, won at a given price level disappears again, however, with the influx of capital from profit-poor into profit-rich industries,"* so increasing supply and reducing prices, and thus profits. [Paul Mattick, **Op. Cit.**, p. 49]

This process of capital investment, and its resulting competition, is the means by which markets prices tend towards production prices in a given market. Profit and the realities of the production process are the keys to understanding prices and how they affect (and are affected by) supply and demand.

Lastly, we must stress that to state that market price tends toward production is **not** to suggest that capitalism is at equilibrium. Far from it. Capitalism is always unstable, since *"growing out of capitalist competition, to heighten exploitation, . . . the relations of production... [are] in a state of perpetual transformation, which manifests itself in changing relative prices of goods on the market. Therefore the market is continuously in disequilibrium, although with different degrees of severity, thus giving rise, by its occasional approach to an equilibrium state, to the illusion of a tendency toward equilibrium."* [Paul Mattick, **Op. Cit.**, p. 51]

Therefore, innovation due to class struggle, competition, or the creation of new markets, has an important effect on market prices. This is because innovation changes the production costs of a commodity or creates new, profit-rich markets. While equilibrium may not be reached in practice, this does not change the fact that price determines demand, since consumers face prices as (usually) an already given objective value when they shop and make decisions based on these prices in order to satisfy their subjective needs. Thus the LTV recognises that capitalism is a system existing in time, with an uncertain future (a future influenced by many factors, including class struggle) and, by its very nature, dynamic. In addition, unlike neo-classical "long run equilibrium" prices, the LTV does not claim that labour markets will clear or that a change within one market will have no effect on others. Indeed, the labour market may see extensive unemployment as this helps maintain profit levels by maintaining discipline -- via fear of the sack -- in the workplace (see [section C.7](#)). Neither does it maintain that capitalism will be stable. As the history of "actually existing" capitalism shows, unemployment is always with us and the business cycle exists (in neo-classical economics such things cannot happen as the theory assumes that all markets clear and that slumps are impossible).

Moreover, the LTV indicates the source of this instability -- namely the *"contradictory idea of value, so clearly exhibited by the inevitable distinction between useful value and value in exchange."* [Proudhon, **Op. Cit.**, p. 84] This is particularly the case with labour, as the exchange value of labour (its cost, i.e.

wages) is different than its use value (i.e. what it actually produces during a working day). As we argue in the [next section](#), this difference between the use value of labour (its product) and its exchange value (its wage) is the source of capitalist profit (we will indicate in [section C.7](#) how this distinction influences the business cycle -- i.e. instability in the economy).

F.1 Are "anarcho"-capitalists really anarchists?

In a word, no. While "anarcho"-capitalists obviously try to associate themselves with the anarchist tradition by using the word "anarcho", their ideas are distinctly at odds with those associated with anarchism. Because of this any claims that their ideas are anarchist or that they are part of the anarchist tradition or movement are false.

"Anarcho"-capitalists claim to be anarchists because they say that they oppose government. As such, as noted in the [last section](#), they use a dictionary definition of anarchism. However, this fails to appreciate that anarchism is a **political theory**, not a dictionary definition. As dictionaries are rarely politically sophisticated things, this means that they fail to recognise that anarchism is more than just opposition to government, it is also marked a opposition to capitalism (i.e. exploitation and private property). Thus, opposition to government is a necessary but not sufficient condition for being an anarchist -- you also need to be opposed to exploitation and capitalist private property. As "anarcho"-capitalists do not consider interest, rent and profits (i.e. capitalism) to be exploitative nor oppose capitalist property rights, they are not anarchists.

So in what ways do "anarcho"-capitalists differ from anarchists? There are three main ones:

Firstly, unlike both Individualist and Social anarchists, "anarcho"-capitalists support capitalism (a "pure" free market type of capitalism). This means that they reject totally the ideas of anarchists with regards to property and economic analysis. For example, like all supporters of capitalists they consider rent, profit and interest as valid incomes. In contrast, all Anarchists consider these as exploitation and agree with the Individualist Anarchist Tucker when argued that *"[w]hoever contributes to production is alone entitled. What has no rights that who is bound to respect. What is a thing. Who is a person. Things have no claims; they exist only to be claimed. The possession of a right cannot be predicted of dead material, but only a living person."* [quoted by Wm. Gary Kline, **The Individualist Anarchists**, p. 73] (And this, we must note, is the fundamental critique of the capitalist theory that capital is productive. In and of themselves, fixed costs do not create value. Rather value is creation depends on how investments are developed and used once in place. Because of this the Individualist Anarchists considered non-labour derived income as usury, unlike "anarcho"-capitalists).

Similarly, anarchists reject the notion of capitalist property rights in favour of possession (including the full fruits of one's labour). For example, anarchists reject private ownership of land in favour of a "occupancy and use" regime. In this we follow Proudhon's **What is Property?** and argue that *"property is theft"*.

As these ideas are an **essential** part of anarchist politics, they cannot be removed without seriously damaging the rest of the theory. This can be seen from Tucker's comments that *"Liberty insists. . . [on] the abolition of the State and the abolition of usury; on no more government of man by man, and no*

more exploitation of man by man." [cited by Eunice Schuster in **Native American Anarchism**, p. 140]. He indicates that anarchism has specific economic **and** political ideas, that it opposes capitalism along with the state. Therefore anarchism was never purely a "political" concept, but always combined an opposition to oppression with an opposition to exploitation. The social anarchists made exactly the same point. Which means that when Tucker argued that "*Liberty insists on Socialism. . . - true Socialism, Anarchistic Socialism: the prevalence on earth of Liberty, Equality, and Solidarity*" [**Instead of a Book**, p. 363] he knew exactly what he was saying and meant it whole heartedly.

This combination of the political and economic is essential as they mutually reinforce each other. Without the economic ideas, the political ideas would be meaningless as inequality would make a mockery of them. As Kline notes, the Individualist Anarchists' "*proposals were designed to establish true equality of opportunity . . . and they expected this would result in a society without great wealth or poverty. In the absence of monopolistic factors which would distort competition, they expected a society largely of self-employed workmen with no significant disparity of wealth between any of them since all would be required to live at their own expense and not at the expense of exploited fellow human beings.*" [**Op. Cit.**, pp. 103-4]

By removing the underlying commitment to abolish non-labour income, any "anarchist" capitalist society would have vast differences in wealth and so power. Instead of a government imposed monopolies in land, money and so on, the economic power flowing from private property and capital would ensure that the majority remained in (to use Spooner's words) "*the condition of servants*" (see sections [F.2](#) and [F.3.1](#) for more on this). The Individualist Anarchists were aware of this danger and so supported economic ideas that opposed usury (i.e. rent, profit and interest) and ensured the worker the full value of her labour. While not all of them called these ideas "socialist" it is clear that these ideas **are** socialist in nature and in aim (similarly, not all the Individualist Anarchists called themselves anarchists but their ideas are clearly anarchist in nature and in aim).

Because "anarcho"-capitalists embrace capitalism and reject socialism, they cannot be considered anarchists or part of the anarchist tradition.

Which brings us nicely to the second point, namely a lack of concern for equality. In stark contrast to anarchists of all schools, inequality is not seen to be a problem with "anarcho"-capitalists (see [section F.3](#)). However, it is a truism that not all "traders" are equally subject to the market (i.e. have the same market power). In many cases, a few have sufficient control of resources to influence or determine price and in such cases, all others must submit to those terms or not buy the commodity. When the commodity is labour power, even this option is lacking -- workers have to accept a job in order to live. As we argue in [section F.10.2](#), workers are usually at a disadvantage on the labour market when compared to capitalists, and this forces them to sell their liberty in return for making profits for others. These profits increase inequality in society as the property owners receive the surplus value their workers produce. This increases inequality further, consolidating market power and so weakens the bargaining position of workers further, ensuring that even the freest competition possible could not eliminate class power and society (something B. Tucker recognised as occurring with the development of trusts within capitalism

-- see [section G.4](#)). Little wonder Proudhon argued that the law of supply and demand was a "*deceitful law . . . suitable only for assuring the victory of the strong over the weak, of those who own property over those who own nothing.*" [quoted by Alan Ritter, **The Political Thought of Pierre-Joseph Proudhon**, p. 121]

Wage labour is a key way of creating, maintaining and increasing inequality (as well as being a source of domination and subordination, i.e. unfreedom). Needless to say, inequalities of power and wealth do not restrict themselves solely to workplaces nor is the damage of hierarchy upon individuals and their liberty limited to working hours. Both have a deep impact on the rest of society, expanding into **all** areas of life and restricting liberty everywhere (see [section F.3](#) for a further discussion on this). You cannot isolate one aspect of life (i.e. work) and believe that it will somehow not affect all others. However, the "anarcho"-capitalist seems to believe you can.

Therefore anarchists recognise that "free exchange" in unequal circumstances will increase inequality between individuals and classes, **not** reduce it (and that inequality will produce social relationships which are based on hierarchy and domination, **not** freedom). As Noam Chomsky put it:

"Anarcho-capitalism, in my opinion, is a doctrinal system which, if ever implemented, would lead to forms of tyranny and oppression that have few counterparts in human history. There isn't the slightest possibility that its (in my view, horrendous) ideas would be implemented, because they would quickly destroy any society that made this colossal error. The idea of 'free contract' between the potentate and his starving subject is a sick joke, perhaps worth some moments in an academic seminar exploring the consequences of (in my view, absurd) ideas, but nowhere else." [Noam Chomsky on Anarchism, interview with Tom Lane, December 23, 1996]

Because of the evil effects of inequality on freedom, both the social and individualist anarchists desired to create an environment in which circumstances would not drive people to sell their liberty to others in return for wages. In other words, they desired an equalisation of market power by opposing interest, rent and profit and capitalist definitions of private property. Kline summarises this by saying "*the American [individualist] anarchists exposed the tension existing in liberal thought between private property and the ideal of equal access. The Individual Anarchists were, at least, aware that existing conditions were far from ideal, that the system itself working against the majority of individuals in their efforts to attain its promises. Lack of capital, the means to creation and accumulation of wealth, usually doomed a labourer to a life of exploitation. This the anarchists knew and they abhorred such a system.*" [Op. Cit., p. 102]

And this desire for bargaining equality is reflected in their economic ideas and by removing these underlying economic ideas of the individualist anarchists, "anarcho"-capitalism makes a mockery of any ideas they do appropriate. Essentially, the Individualist Anarchists agreed with Rousseau that in order to prevent extreme inequality of fortunes you deprive people of the means to accumulate in the first place and **not** take away wealth from the rich. An important point which "anarcho"-capitalism fails to

understand or appreciate.

In addition, we must note that such inequalities in power and wealth will need "defending" from those subject to them ("anarcho"-capitalists recognise the need for private police and courts to defend property from theft -- and, anarchists add, to defend the theft and despotism associated with property!). Due to its support of private property (and thus authority), "anarcho"-capitalism ends up retaining a state in its "anarchy"; namely a **private** state whose existence its proponents attempt to deny simply by refusing to call it a state, like an ostrich hiding its head in the sand (see [section F.6](#) for more on this and why "anarcho"-capitalism is better described as "private state" capitalism).

For anarchists, this need of capitalism for some kind of state is unsurprising because:

"Anarchy without socialism seems equally as impossible to us [as socialism without anarchy], for in such a case it could not be other than the domination of the strongest, and would therefore set in motion right away the organisation and consolidation of this domination; that is to the constitution of government." [Errico Malatesta, **Life and Ideas**, p. 148]

Because of this, the "anarcho"-capitalist rejection of anarchist ideas on capitalist property economics and the need for equality, they cannot be considered anarchists or part of the anarchist tradition.

Thirdly, unlike anarchists, "anarcho"-capitalists consider a society of generalised wage labour as a free and non-exploitative one -- but such a society is opposed by anarchists. Like all socialists, anarchists desire to see workers reunited with the means of production they use and so end the exploitation of workers by capitalists and landlords. In other words, when the Individual anarchists called themselves "socialists" they meant it (see [section G](#) for more details on this)!

If we look at the work of Individualist Anarchist Lysander Spooner, we find that he considered capitalism to result in labourers becoming *"mere tools and machines in the hands of their employers"* and labour *"only for the benefit of their employers."* [**A Letter to Grover Cleveland**, p. 50] He considered the Money Monopoly (a combination of specie commodity money and a 10% tax on non-registered banks) as *"the one great obstacle to the liberation of the labouring classes all over the world"*, a monopoly created by *"the employers of wage labour"* to ensure necessity *"compel[led] them [the great body of wealth producers] . . . - by the alternative of starvation - to sell their labour to the money monopolists."* [**Op. Cit.**, p. 49, p. 48, p. 20]

Such an analysis is essentially socialist in nature, recognising that apparently "free" markets create conditions which drive working class people to sell their liberty on the market. Similarly, his vision of a free society is also socialist, with wage labour no more. With the end of the money (and land) monopolies, he considered that *"with few or no exceptions"* working people would stop being wage slaves and become self-employed workers. In stark contrast to wage labour, he considered that free labour involved the worker *"appl[ying] both his . . . head and his hands"* [**Op. Cit.**, p. 48, p. 50]. Thus

Spencer recognised that under wage labour, there is a division of labour, with a few using their heads (giving orders) and the many using their hands (following orders).

"Committed as they were to equality in the pursuit of property," argues Kline, "the objective for the anarchist became the construction of a society providing equal access to those things necessary for creating wealth. The goal of the anarchists who extolled mutualism and the abolition of all monopolies was, then, a society where everyone willing to work would have the tools and raw materials necessary for production in a non-exploitative system . . . the dominant vision of the future society . . . [was] underpinned by individual, self-employed workers." [Op. Cit., p. 95]

"Anarcho"-capitalists assume that generalised wage labour would remain under their system (while paying lip-service to the possibilities of co-operatives -- and if an "anarcho"-capitalist thinks that co-operative will become the dominant form of workplace organisation, then they are some kind of market socialist, **not** a capitalist). It is clear that their end point (a pure capitalism, i.e. generalised wage labour) is directly the opposite of that desired by anarchists. This was the case of the Individualist Anarchists who embraced the ideal of (non-capitalist) laissez faire competition -- they did so, as noted, to **end** wage labour and usury, **not** to maintain them (indeed, their analysis of the change in American society from one of mainly independent producers into one based mainly upon wage labour has many parallels with, of all people, Karl Marx's presented in chapter 33 of **Capital**).

"Anarcho"-capitalists, in contrast, believe that it is likely that workplaces will remain hierarchical (i.e. capitalistic) even if the public state has been dissolved and that this is of no concern. This belief reveals the priority of their values: "efficiency" (the bottom line) is considered more important than eliminating the domination, coercion, and exploitation of workers. Similarly, they consider that profits, interest and rent as valid sources of income while anarchists oppose these as usury and exploitative.

Moreover, in practice, wage labour is a major source of oppression and authoritarianism within society -- there is little or no freedom within capitalist production (as Bakunin noted, *"the worker sells his person and his liberty for a given time"*). So, in stark contrast to anarchists, "anarcho"-capitalists have no problem with factory fascism (i.e. wage labour), a position which seems highly illogical for a theory calling itself libertarian. If it were truly libertarian, it would oppose all forms of domination, not just statism. This position flows from the "anarcho"-capitalist definition of freedom as the absence of coercion and will be discussed in [section F.2](#) in more detail.

This whole-hearted support for wage labour and capitalist property rights indicates that "anarcho"-capitalists are not anarchists because they do not reject all forms of **archy**. They obviously support the hierarchy between boss and worker (wage labour) and landlord and tenant. Anarchism, by definition, is against all forms of **archy**, including the hierarchy generated by capitalist property. To ignore the obvious **archy** associated with capitalist property is highly illogical.

The anti-anarchist nature of "anarcho"-capitalism can best be seen by quoting a leading "anarcho"-capitalist, Murray Rothbard. He argues, that the state *"arrogates to itself a monopoly of force, of ultimate*

decision-making power, over a given area territorial area." [Rothbard, **The Ethics of Liberty**, p. 170] In and of itself, this definition is unremarkable. Unfortunately for him (and "anarcho"-capitalist claims of being anarchist), he also notes that capitalist property owners have similar powers. As he states, "[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc." [**Op. Cit.**, p. 173] and, equally obviously, this ultimate-decision making power extends to those who **use**, but do not own, such property (i.e. tenants and workers). The statist nature of property property is clearly indicated by Rothbard's words -- the property owner in an "anarcho"-capitalist society possesses the "*ultimate decision-making power*" over a given area, which is also what the state has currently.

As we argue in more depth in [section F.2](#), "anarcho"-capitalism cannot be considered as anarchist simply because they replace the authority of the state with that of the property owner. Both has "*ultimate decision-making power*" over a given area and so over those who live in (or use) that area. The similarities between capitalism and statism are clear -- and so why "anarcho"-capitalism cannot be anarchist. To reject the authority (the "*ultimate decision-making power*") of the state and embrace that of the property owner indicates not only a highly illogical stance but one at odds with the basic principles of anarchism.

Thus anarchism is far more than the common dictionary definition of "*no government*" -- it also entails being against all forms of **archy**, including those generated by capitalist property. This is clear from the roots of the word "anarchy." As we noted in [section A.1](#), the word anarchy means "*no rulers*" or "*contrary to authority*". As Rothbard himself acknowledges, the property owner is the ruler of their property and, therefore, those who use it (hence Bakunin's above quoted comment that "*the worker sells his person and his liberty for a given time*"). For this reason "anarcho"-capitalism cannot be considered as a form of anarchism -- a real anarchist must logically oppose the authority of the property owner along with that of the state.

Because "anarcho"-capitalism does not explicitly (or implicitly, for that matter) call for economic arrangements that will end wage labour and usury they cannot be considered anarchists or part of the anarchist tradition.

To conclude.

Political theories should be identified by their actual features and history rather than labels. Once we recognise that, we soon find out that "anarcho"-capitalism is an oxymoron. Anarchists and "anarcho"-capitalists are not part of the same movement or tradition. Their ideas and aims are in direct opposition to those of all kinds of anarchists.

While anarchists have always opposed capitalism, "anarcho"-capitalists have embraced it. And due to this embrace their "anarchy" will be marked by extensive differences in wealth and power, differences that will show themselves up in relationships based upon subordination and hierarchy (such as wage labour), **not** freedom (little wonder that Proudhon argued that "*property is despotism*" -- it creates

authoritarian and hierarchical relationships between people in a similar way to statism).

Their support for "free market" capitalism ignores the impact of wealth and power on the nature and outcome of individual decisions within the market (see sections [F.2](#) and [F.3](#) for further discussion). For example, as we indicate in sections [J.5.10](#), [J.5.11](#) and [J.5.12](#) wage labour is less efficient than self-management in production but due to the structure and dynamics of the capitalist market, "market forces" will actively discourage self-management due to its empowering nature for workers. In other words, a developed capitalist market will promote hierarchy and unfreedom in production in spite of its effects on individual workers and their wants (see also [section F.10.2](#)). Thus "free market" capitalism tends to re-enforce inequalities of wealth and power, **not** eliminate them.

Furthermore, any such system of (economic and social) power will require extensive force to maintain it and the "anarcho"-capitalist system of competing "defence firms" will simply be a new state, enforcing capitalist power, property rights and law.

Overall, the lack of concern for meaningful freedom within production and the effects of vast differences in power and wealth within society as a whole makes "anarcho"-capitalism little better than "anarchism for the rich." Emma Goldman recognised this when she argued that *"'Rugged individualism' has meant all the 'individualism' for the masters . . . in whose name political tyranny and social oppression are defended and held up as virtues while every aspiration and attempt of man to gain freedom . . . is denounced as . . . evil in the name of that same individualism."* [**Red Emma Speaks**, p. 112] And, as such, is no anarchism at all.

So, unlike anarchists, "anarcho"-capitalists do not seek the *"abolition of the proletariat"* (to use Proudhon's expression) via changing capitalist property rights and institutions. Thus the "anarcho"-capitalist and the anarchist have different starting positions and opposite ends in mind and so they cannot be considered part of the same (anarchist) tradition.

As we discuss further in later sections, the "anarcho"-capitalist claims to being anarchists are bogus simply because they reject so much of the anarchist tradition as to make what they do accept non-anarchist in theory and practice. Little wonder Peter Marshall said that *"few anarchists would accept the 'anarcho-capitalists' into the anarchist camp since they do not share a concern for economic equality and social justice."* [**Demanding the Impossible**, p. 565]

F.1.1 Why is the failure to renounce hierarchy the Achilles Heel of right-wing libertarianism and "anarcho"-capitalism?

Any capitalist system will produce vast differences in economic (and social) wealth and power. As we argue in [section F.3.1](#), such differences will reflect themselves in the market and any "free" contracts agreed there will create hierarchical relationships. Thus capitalism is marked by hierarchy (see [section B.1.2](#)) and, unsurprisingly, right-libertarians and "anarcho"-capitalists fail to oppose such "free market"

generated hierarchy.

Both groups approve of it in the capitalist workplace or rented accommodation and the right-Libertarians also approve of it in a 'minimal' state to protect private property ("anarcho"-capitalists, in contrast, approve of the use of private defence firms to protect property). But the failure of these two movements to renounce hierarchy is their weakest point. For anti-authoritarianism has sunk deep roots into the modern psyche, as a legacy of the sixties.

Many people who do not even know what anarchism is have been profoundly affected by the personal liberation and counterculture movements of the past thirty years, epitomised by the popular bumper sticker, "*Question Authority.*" As a result, society now tolerates much more choice than ever before in matters of religion, sexuality, art, music, clothing, and other components of lifestyle. We need only recall the conservatism that reigned in such areas during the fifties to see that the idea of liberty has made tremendous advances in just a few decades.

Although this liberatory impulse has so far been confined almost entirely to the personal and cultural realms, it may yet be capable of spilling over and affecting economic and political institutions, provided it continues to grow. The Right is well aware of this, as seen in its ongoing campaigns for "family values," school prayer, suppression of women's rights, fundamentalist Christianity, sexual abstinence before marriage, and other attempts to revive the Ozzie-and-Harriet mindset of the Good Old Days. This is where the efforts of "cultural anarchists" -- artists, musicians, poets, and others -- are important in keeping alive the ideal of personal freedom and resistance to authority as a necessary foundation for economic and political restructuring.

Indeed, the libertarian right (as a whole) support restrictions on freedom **as long as its not the state that is doing it!** Their support for capitalism means that they have no problem with bosses dictating what workers do during working hours (nor outside working hours, if the job requires employees to take drug tests or not be gay in order to keep it). If a private landlord or company decrees a mandatory rule or mode of living, workers/tenets must "love it or leave it!" Of course, that the same argument also applies to state laws is one hotly denied by right-Libertarians -- a definite case of not seeing the wood for the trees (see [section F.2.3](#)).

Of course, the "anarcho"-capitalist will argue, workers and tenants can find a more liberal boss or landlord. This, however, ignores two key facts. Firstly, being able to move to a more liberal state hardly makes state laws less offensive (as they themselves will be the first to point out). Secondly, looking for a new job or home is not that easy. Just a moving to a new state can involve drastic upheavals, so change changing jobs and homes. Moreover, the job market is usually a buyers market (it has to be in capitalism, otherwise profits are squeezed -- see sections [C.7](#) and [F.10.2](#)) and this means that workers are not usually in a position (unless they organise) to demand increased liberties at work.

It seems somewhat ironic, to say the least, that right-libertarians place rights of property over the rights of self-ownership, even though (according to their ideology) self-ownership is the foundational right

from which property rights are derived. Thus in right-libertarianism the rights of property owners to discriminate and govern the property-less are more important than the freedom from discrimination (i.e. to be yourself) or the freedom to govern oneself at all times.

So, when it boils down to it, right-libertarians are not really bothered about restrictions on liberty and, indeed, they will defend private restrictions on liberty with all their might. This may seem a strange position for self-proclaimed "libertarians" to take, but it flows naturally from their definition of freedom (see [section F.2](#) for a full discussion of this). but by not attacking hierarchy beyond certain forms of statism, the 'libertarian' right fundamentally undermines its claim to be libertarian. Freedom cannot be compartmentalised, but is holistic. The denial of liberty in, say, the workplace, quickly results in its being denied elsewhere in society (due to the impact of the inequalities it would produce) , just as the degrading effects of wage labour and the hierarchies with which is it bound up are felt by the worker outside work.

Neither the Libertarian Party nor so-called "anarcho"-capitalism is **genuinely** anti-authoritarian, as those who are truly dedicated to liberty must be.

F.1.2 How libertarian is right-Libertarian theory?

The short answer is, not very. Liberty not only implies but also requires independent, critical thought (indeed, anarchists would argue that critical thought requires free development and evolution and that it is precisely **this** which capitalist hierarchy crushes). For anarchists a libertarian theory, if it is to be worthy of the name, must be based upon critical thought and reflect the key aspect that characterises life - change and the ability to evolve. To hold up dogma and base "theory" upon assumptions (as opposed to facts) is the opposite of a libertarian frame of mind. A libertarian theory must be based upon reality and recognise the need for change and the existence of change. Unfortunately, right-Libertarianism is marked more by ideology than critical analysis.

Right-Libertarianism is characterised by a strong tendency of creating theories based upon assumptions and deductions from these axioms (for a discussion on the pre-scientific nature of this methodology and of its dangers, see the [next section](#)). Robert Nozick, for example, in **Anarchy, State, and Utopia** makes no attempt to provide a justification of the property rights his whole theory is based upon. His main assumption is that "*[i]ndividuals have rights, and there are certain things no person or group may do to them (without violating their rights).*" [**Anarchy, State and Utopia**, p. ix] While this does have its intuitive appeal, it is not much to base a political ideology upon. After all, what rights people consider as valid can be pretty subjective and have constantly evolved during history. To say that "individuals have rights" is to open up the question "what rights?" Indeed, as we argue in greater length in [section F.2](#), such a rights based system as Nozick desires can and does lead to situations developing in which people "consent" to be exploited and oppressed and that, intuitively, many people consider supporting the "violation" of these "certain rights" (by creating other ones) simply because of their evil consequences.

In other words, starting from the assumption "people have [certain] rights" Nozick constructs a theory

which, when faced with the reality of unfreedom and domination it would create for the many, justifies this unfreedom as an expression of liberty. In other words, regardless of the outcome, the initial assumptions are what matter. Nozick's intuitive rights system can lead to some very non-intuitive outcomes.

And does Nozick prove the theory of property rights he assumes? He states that "*we shall not formulate [it] here.*" [Op. Cit., p. 150] Moreover, it is not formulated anywhere else in his book. And if it is not formulated, what is there to defend? Surely this means that his Libertarianism is without foundations? As Jonathan Wolff notes, Nozick's "*Libertarian property rights remain substantially undefended.*" [Robert Nozick: Property, Justice and the Minimal State, p. 117] Given that the right to acquire property is critical to his whole theory you would think it important enough to go into in some detail (or at least document). After all, unless he provides us with a firm basis for property rights then his entitlement theory is nonsense as no one has the right to (private) property.

It could be argued that Nozick **does** present enough information to allow us to piece together a possible argument in favour of property rights based on his modification of the "*Lockean Proviso*" (although he does not point us to these arguments). However, assuming this is the case, such a defence actually fails (see [section B.3.4](#) for more on this). If individuals **do** have rights, these rights do not include property rights in the form Nozick assumes (but does not prove). Nozick appears initially convincing because what he assumes with regards to property is a normal feature of the society we are in (we would be forgiven when we note here that feeble arguments pass for convincing when they are on the same side as the prevailing sentiment).

Similarly, both Murray Rothbard and Ayn Rand (who is infamous for repeating "*A is A*" ad infinitum) do the same - base their ideologies on assumptions (see [section F.7](#) for more on this).

Therefore, we see that most of the leading right-Libertarian ideologues base themselves on assumptions about what "Man" is or the rights they should have (usually in the form that people have (certain) rights because they are people). From these theorems and assumptions they build their respective ideologies, using logic to deduce the conclusions that their assumptions imply. Such a methodology is unscientific and, indeed, a relic of religious (pre-scientific) society (see [next section](#)) but, more importantly, can have negative effects on maximising liberty. This is because this "methodology" has distinct problems. Murray Bookchin argues:

*"Conventional reason rests on identity, not change; its fundamental principle is that A equals A, the famous 'principle of identity,' which means that any given phenomenon can be only itself and cannot be other than what we immediately perceive it to be at a given moment in time. It does not address the problem of change. A human being is an infant at one time, a child at another, an adolescent at still another, and finally a youth and an adult. When we analyse an infant by means of conventional reason, we are not exploring what it is **becoming** in the process of developing into a child."* ["A Philosophical Naturalism", Society and Nature No.2, p. 64]

In other words, right-Libertarian theory is based upon ignoring the fundamental aspect of life - namely **change** and **evolution**. Perhaps it will be argued that identity also accounts for change by including potentiality -- which means, that we have the strange situation that A can **potentially** be A! If A is not actually A, but only has the potential to be A, then A is not A. Thus to include change is to acknowledge that A does not equal A -- that individuals and humanity evolves and so what constitutes A also changes. To maintain identity and then to deny it seems strange.

That change is far from the "A is A" mentality can be seen from Murray Rothbard who goes so far as to state that "*one of the notable attributes of natural law*" is "*its applicability to all men [sic!], regardless of time or place. Thus ethical law takes its place alongside physical or 'scientific' natural laws.*" [**The Ethics of Liberty**, p. 42] Apparently the "nature of man" is the only living thing in nature that does not evolve or change! Of course, it could be argued that by "natural law" Rothbard is only referring to his method of deducing his (and, we stress, they are just his -- not natural) "ethical laws" -- but his methodology starts by assuming certain things about "man." Whether these assumptions seem far or not is besides the point, by using the term "natural law" Rothbard is arguing that any actions that violate **his** ethical laws are somehow "against nature" (but if they were against nature, they could not occur -- see [section F.7](#) for more on this). Deductions from assumptions is a Procrustean bed for humanity (as Rothbard's ideology shows).

So, as can be seen, many leading right-Libertarians place great store by the axiom "A is A" or that "man" has certain rights simply because "he" is a "man". And as Bookchin points out, such conventional reason "*doubtless plays an indispensable role in mathematical thinking and mathematical sciences . . . and in the nuts-and-bolts of dealing with everyday life*" and so is essential to "*understand or design mechanical entities.*" [**Ibid.**, p.67] But the question arises, is such reason useful when considering people and other forms of life?

Mechanical entities are but one (small) aspect of human life. Unfortunately for right-Libertarians (and fortunately for the rest of humanity), human beings are **not** mechanical entities but instead are living, breathing, feeling, hoping, dreaming, **changing** living organisms. They are not mechanical entities and any theory that uses reason based on such (non-living) entities will flounder when faced with living ones. In other words, right-Libertarian theory treats people as the capitalist system tries to -- namely as commodities, as things. Instead of human beings, whose ideas, ideals and ethics change, develop and grow, capitalism and capitalist ideologues try to reduce human life to the level of corn or iron (by emphasising the unchanging "nature" of man and their starting assumptions/rights).

This can be seen from their support for wage labour, the reduction of human activity to a commodity on the market. While paying lip service to liberty and life, right-libertarianism justifies the commodification of labour and life, which within a system of capitalist property rights can result in the treating of people as means to an end as opposed to an end in themselves (see sections [F.2](#) and [F.3.1](#)).

And as Bookchin points out, "*in an age of sharply conflicting values and emotionally charged ideals,*

such a way of reasoning is often repellent. Dogmatism, authoritarianism, and fear seem all-pervasive." [**Ibid.**, p. 68] Right-Libertarianism provides more than enough evidence for Bookchin's summary with its support for authoritarian social relationships, hierarchy and even slavery (see [section F.2](#)).

This mechanical viewpoint is also reflected in their lack of appreciation that social institutions and relationships evolve over time and, sometimes, fundamentally change. This can best be seen from property. Right-libertarians fail to see that over time (in the words of Proudhon) property "*changed its nature.*" Originally, "*the word **property** was synonymous with . . . **individual possession***" but it became more "*complex*" and turned into **private property** -- "*the right to use it by his neighbour's labour.*" The changing of use-rights to (capitalist) property rights created relations of domination and exploitation between people absent before. For the right-Libertarian, both the tools of the self-employed artisan and the capital of a transnational corporation are both forms of "property" and (so) basically identical. In practice, of course, the social relations they create and the impact they have on society are totally different. Thus the mechanical mind-set of right-Libertarianism fails to understand how institutions, like property, evolve and come to replace whatever freedom enhancing features they had with oppression (indeed, von Mises argued that "*[t]here may possibly be a difference of opinion about whether a particular institution is socially beneficial or harmful. But once it has been judged [by whom, we ask] beneficial, one can no longer contend that, for some inexplicable reason, it must be condemned as immoral*" [**Liberalism**, p. 34] So much for evolution and change!).

Anarchism, in contrast, is based upon the importance of critical thought informed by an awareness that life is in a constant process of change. This means that our ideas on human society must be informed by the facts, not by what we wish was true. For Bookchin, an evaluation of conventional wisdom (as expressed in "*the law of identity*") is essential and its conclusions have "*enormous importance for how we behave as ethical beings, the nature of nature, and our place in the natural world. Moreover. . . these issues directly affect the kind of society, sensibility, and lifeways we wish to foster.*" [Bookchin, **Op. Cit.**, p. 69-70]

Bookchin is correct. While anarchists oppose hierarchy in the name of liberty, right-libertarians support authority and hierarchy, all of which deny freedom and restrict individual development. This is unsurprising because the right-libertarian ideology rejects change and critical thought based upon the scientific method and so is fundamentally **anti-life** in its assumptions and **anti-human** in its method. Far from being a libertarian set of ideas, right-Libertarianism is a mechanical set of dogmas that deny the fundamental nature of life (namely change) and of individuality (namely critical thought and freedom). Moreover, in practice their system of (capitalist) rights would soon result in extensive restrictions on liberty and authoritarian social relationships (see sections [F.2](#) and [F.3](#)) -- a strange result of a theory proclaiming itself "libertarian" but one consistent with its methodology.

From a wider viewpoint, such a rejection of liberty by right-libertarians is unsurprising. They do, after all, support capitalism. Capitalism produces an inverted set of ethics, one in which capital (dead labour) is more important than people (living labour). After all, workers are usually easier to replace than

investments in capital and the person who owns capital commands the person who "only" owns his life and productive abilities. And as Oscar Wilde once noted, crimes against property *"are the crimes that the English law, valuing what a man has more than what a man is, punishes with the harshest and most horrible severity."* [**The Soul of Man Under Socialism**]

This mentality is reflected in right-libertarianism when it claims that stealing food is a crime while starving to death (due to the action of market forces/power and property rights) is no infringement of your rights (see [section F.4.2](#) for a similar argument with regards to water). It can also be seen when right-libertarian's claim that the taxation *"of earnings from labour"* (e.g. of one dollar from a millionaire) is *"on a par with forced labour"* [Nozick, **Op. Cit.**, p. 169] while working in a sweatshop for 14 hours a day (enriching said millionaire) does not affect your liberty as you "consent" to it due to market forces (although, of course, many rich people have earned their money **without** labouring themselves -- their earnings derive from the wage labour of others so would taxing those, non-labour, earnings be "forced labour"?) Interestingly, the Individualist Anarchist Ben Tucker argued that an income tax was *"a recognition of the fact that industrial freedom and equality of opportunity no longer exist here [in the USA in the 1890s] even in the imperfect state in which they once did exist"* [quoted by James Martin, **Men Against the State**, p. 263] which suggests a somewhat different viewpoint on this matter than Nozick or Rothbard.

That capitalism produces an inverted set of ethics can be seen when the Ford produced the Pinto. The Pinto had a flaw in it which meant that if it was hit in a certain way in a crash the fuel tank exploded. The Ford company decided it was more "economically viable" to produce that car and pay damages to those who were injured or the relatives of those who died than pay to change the invested capital. The needs for the owners of capital to make a profit came before the needs of the living. Similarly, bosses often hire people to perform unsafe work in dangerous conditions and fire them if they protest. Right-libertarian ideology is the philosophical equivalent. Its dogma is "capital" and it comes before life (i.e. "labour").

As Bakunin once put it, *"you will always find the idealists in the very act of practical materialism, while you will see the materialists pursuing and realising the most grandly ideal aspirations and thoughts."* [**God and the State**, p. 49] Hence we see right "libertarians" supporting sweat shops and opposing taxation -- for, in the end, money (and the power that goes with it) counts far more in that ideology than ideals such as liberty, individual dignity, empowering, creative and productive work and so forth for all. The central flaw of right-libertarianism is that it does not recognise that the workings of the capitalist market can easily ensure that the majority end up becoming a resource for others in ways far worse than that associated with taxation. The legal rights of self-ownership supported by right-libertarians does not mean that people have the ability to avoid what is in effect enslavement to another (see sections [F.2](#) and [F.3](#)).

Right-Libertarian theory is not based upon a libertarian methodology or perspective and so it is hardly surprising it results in support for authoritarian social relationships and, indeed, slavery (see [section F.2.6](#)).

F.1.3 Is right-Libertarian theory scientific in nature?

Usually, no. The scientific approach is **inductive**, much of the right-libertarian approach is **deductive**. The first draws generalisations from the data, the second applies preconceived generalisations to the data. A completely deductive approach is pre-scientific, however, which is why many right-Libertarians cannot legitimately claim to use a scientific method. Deduction does occur in science, but the generalisations are primarily based on other data, not *a priori* assumptions, and are checked against data to see if they are accurate. Anarchists tend to fall into the inductive camp, as Kropotkin put it:

"Precisely this natural-scientific method applied to economic facts, enables us to prove that the so-called 'laws' of middle-class sociology, including also their political economy, are not laws at all, but simply guesses, or mere assertions which have never been verified at all." [Kropotkin's **Revolutionary Pamphlets**, p. 153]

The idea that natural-scientific methods can be applied to economic and social life is one that many right-libertarians reject. Instead they favour the deductive (pre-scientific) approach (this we must note is not limited purely to Austrian economists, many more mainstream capitalist economists also embrace deduction over induction).

The tendency for right-Libertarianism to fall into dogmatism (or *a priori* theorems, as they call it) and its implications can best be seen from the work of Ludwig von Mises and other economists from the right-Libertarian "Austrian school." Of course, not all right-libertarians necessarily subscribe to this approach (Murray Rothbard for one did) but its use by so many leading lights of both schools of thought is significant and worthy of comment. And as we are concentrating on **methodology** it is not essential to discuss the starting assumptions. The assumptions (such as, to use Rothbard's words, the Austrian's "*fundamental axiom that individual human beings act*") may be correct, incorrect or incomplete -- but the method of using them advocated by von Mises ensures that such considerations are irrelevant.

Von Mises (a leading member of the Austrian school of economics) begins by noting that social and economic theory "*is not derived from experience; it is prior to experience...*" Which is back to front. It is obvious that experience of capitalism is necessary in order to develop a viable theory about how it works. Without the experience, any theory is just a flight of fantasy. The actual specific theory we develop is therefore derived from experience, informed by it and will have to get checked against reality to see if it is viable. This is the scientific method - any theory must be checked against the facts.

However, von Mises goes on to argue at length that "*no kind of experience can ever force us to discard or modify a priori theorems; they are logically prior to it and cannot be either proved by corroborative experience or disproved by experience to the contrary . . .*"

Von Mises makes a similar claim in his work **Human Action**, namely that experience "*can never . . . prove or disprove any particular theorem . . . The ultimate yardstick of an economic theorem's*

correctness or incorrectness is solely reason unaided by experience." [p. 858]

And if this does not do justice to a full exposition of the phantasmagoria of von Mises' *a priorism*, the reader may take some joy (or horror) from the following statement:

"If a contradiction appears between a theory and experience, we must always assume that a condition pre-supposed by the theory was not present, or else there is some error in our observation. The disagreement between the theory and the facts of experience frequently forces us to think through the problems of the theory again. But so long as a rethinking of the theory uncovers no errors in our thinking, we are not entitled to doubt its truth" [emphasis added -- the quotes presented here are cited in **Ideology and Method in Economics** by Homa Katouzian, pp. 39-40]

In other words, if reality is in conflict with your ideas, do not adjust your views because reality must be at fault! The scientific method would be to revise the theory in light of the facts. It is not scientific to reject the facts in light of the theory!

Von Mises rejects the scientific approach as do all Austrian Economists. Murray Rothbard states approvingly that *"Mises indeed held not only that economic theory does not need to be 'tested' by historical fact but also that it cannot be so tested."* [*Praxeology: The Methodology of Austrian Economics* in **The Foundation of Modern Austrian Economics**, p. 32] Similarly, von Hayek wrote that economic theories can *"never be verified or falsified by reference to facts. All that we can and must verify is the presence of our assumptions in the particular case."* [**Individualism and Economic Order**, p. 73]

This may seem somewhat strange to non-Austrians. How can we ignore reality when deciding whether a theory is a good one or not? If we cannot evaluate our ideas, how can we consider them anything but dogma? The Austrians maintain that we cannot use historical evidence because every historical situation is unique. Thus we cannot use *"complex heterogeneous historical facts as if they were repeatable homogeneous facts"* like those in a scientist's experiment [Rothbard, **Op. Cit.**, p. 33]. While such a position **does** have an element of truth about it, the extreme *a priorism* that is drawn from this element is radically false (just as extreme empiricism is also false, but for different reasons).

Those who hold such a position ensure that their ideas cannot be evaluated beyond logical analysis. As Rothbard makes clear, *"since praxeology begins with a true axiom, A, all that can be deduced from this axiom must also be true. For if A implies B, and A is true, then B must also be true."* [**Op. Cit.**, pp. 19-20] But such an approach makes the search for truth a game without rules. The Austrian economists (and other right-libertarians) who use this method are free to theorise anything they want, without such irritating constrictions as facts, statistics, data, history or experimental confirmation. Their only guide is logic. But this is no different from what religions do when they assert the logical existence of God. Theories ungrounded in facts and data are easily spun into any belief a person wants. Starting assumptions and trains of logic may contain inaccuracies so small as to be undetectable, yet will yield

entirely false conclusions.

In addition, trains of logic may miss things which are only brought to light by actual experiences (after all, the human mind is not all knowing or all seeing). To ignore actual experience is to lose that input when evaluating a theory. Hence our comments on the irrelevance of the assumptions used -- the methodology is such that incomplete or incorrect assumptions or steps cannot be identified in light of experience. This is because one way of discovering if a given chain of logic requires checking is to test its conclusions against available evidence (although von Mises did argue that the "*ultimate yardstick*" was "*solely reason unaided by experience*"). If we **do** take experience into account and rethink a given theory in the light of contradictory evidence, the problem remains that a given logical chain may be correct, but incomplete or concentrate on or stress inappropriate factors. In other words, our logical deductions may be correct but our starting place or steps wrong and as the facts are to be rejected in the light of the deductive method, we cannot revise our ideas.

Indeed, this approach could result in discarding (certain forms of) human behaviour as irrelevant (which the Austrian system claims using empirical evidence does). For there are too many variables that can have an influence upon individual acts to yield conclusive results explaining human behaviour. Indeed, the deductive approach may ignore as irrelevant certain human motivations which have a decisive impact on an outcome. There could be a strong tendency to project "right-libertarian person" onto the rest of society and history, for example, and draw inappropriate insights into the way human society works or has worked. This can be seen, for example, in attempts to claim pre-capitalist societies as examples of "anarcho"-capitalism in action.

Moreover, deductive reasoning cannot indicate the relative significance of assumptions or theoretical factors. That requires empirical study. It could be that a factor considered important in the theory actually turns out to have little effect in practice and so the derived axioms are so weak as to be seriously misleading.

In such a purely ideal realm, observation and experience are distrusted (when not ignored) and instead theory is the lodestone. Given the bias of most theorists in this tradition, it is unsurprising that this style of economics can always be trusted to produce results proving free markets to be the finest principle of social organisation. And, as an added bonus, reality can be ignored as it is **never** "pure" enough according to the assumptions required by the theory. It could be argued, because of this, that many right-libertarians insulate their theories from criticism by refusing to test them or acknowledge the results of such testing (indeed, it could also be argued that much of right-libertarianism is more a religion than a political theory as it is set-up in such a way that it is either true or false, with this being determined not by evaluating facts but by whether you accept the assumptions and logical chains presented with them).

Strangely enough, while dismissing the "testability" of theories many right-Libertarians (including Murray Rothbard) **do** investigate historical situations and claim them as examples of how well their ideas work in practice. But why does historical fact suddenly become useful when it can be used to bolster the right-Libertarian argument? Any such example is just as "complex" as any other and the good

results indicated may not be accountable to the assumptions and steps of the theory but to other factors totally ignored by it. If economic (or other) theory is untestable then **no** conclusions can be drawn from history, including claims for the superiority of laissez-faire capitalism. You cannot have it both ways -- although we doubt that right-libertarians will stop using history as evidence that their ideas work.

Perhaps the Austrian desire to investigate history is not so strange after all. Clashes with reality make a-priori deductive systems implode as the falsifications run back up the deductive changes to shatter the structure built upon the original axioms. Thus the desire to find **some** example which proves their ideology must be tremendous. However, the deductive a-priori methodology makes them unwilling to admit to being mistaken -- hence their attempts to downplay examples which refute their dogmas. Thus we have the desire for historical examples while at the same time they have extensive ideological justifications that ensure reality only enters their world-view when it agrees with them. In practice, the latter wins as real-life refuses to be boxed into their dogmas and deductions.

Of course it is sometimes argued that it is **complex** data that is the problem. Let us assume that this is the case. It is argued that when dealing with complex information it is impossible to use aggregate data without first having more simple assumptions (i.e. that "humans act"). Due to the complexity of the situation, it is argued, it is impossible to aggregate data because this hides the individual activities that creates it. Thus "complex" data cannot be used to invalidate assumptions or theories. Hence, according to Austrians, the axioms derived from the "simple fact" that "humans act" are the only basis for thinking about the economy.

Such a position is false in two ways.

Firstly, the aggregation of data **does** allow us to understand complex systems. If we look at a chair, we cannot find out whether it is comfortable, its colour, whether it is soft or hard by looking at the atoms that make it up. To suggest that you can is to imply the existence of green, soft, comfortable atoms. Similarly with gases. They are composed to countless individual atoms but scientists do not study them by looking at those atoms and their actions. Within limits, this is also valid for human action. For example, it would be crazy to maintain from historical data that interest rates will be a certain percentage a week but it is valid to maintain that interest rates are known to be related to certain variables in certain ways. Or that certain experiences will tend to result in certain forms of psychological damage. General tendencies and "rules of thumb" can be evolved from such study and these can be used to **guide** current practice and theory. By aggregating data you can produce valid information, rules of thumb, theories and evidence which would be lost if you concentrated on "simple data" (such as "humans act"). Therefore, empirical study produces facts which vary across time and place, and yet underlying and important patterns can be generated (patterns which can be evaluated against **new** data and improved upon).

Secondly, the simple actions themselves influence and are influenced in turn by overall (complex) facts. People act in different ways in different circumstances (something we can agree with Austrians about, although we refuse to take it to their extreme position of rejecting empirical evidence as such). To use simple acts to understand complex systems means to miss the fact that these acts are not independent of

their circumstances. For example, to claim that the capitalist market is "just" the resultant of bilateral exchanges ignores the fact that the market activity shapes the nature and form of these bilateral exchanges. The "simple" data is dependent on the "complex" system -- and so the complex system **cannot** be understood by looking at the simple actions in isolation. To do so would be to draw incomplete and misleading conclusions (and it is due to these interrelations that we argue that aggregate data should be used critically). This is particularly important when looking at capitalism, where the "simple" acts of exchange in the labour market are dependent upon and shaped by circumstances outside these acts.

So to claim that (complex) data cannot be used to evaluate a theory is false. Data can be useful when seeing whether a theory is confirmed by reality. This is the nature of the scientific method -- you compare the results expected by your theory to the facts and if they do not match you check your facts **and** check your theory. This may involve revising the assumptions, methodology and theories you use if the evidence is such as to bring them into question. For example, if you claim that capitalism is based on freedom but that the net result of capitalism is to produce relations of domination between people then it would be valid to revise, for example, your definition of freedom rather than deny that domination restricts freedom (see [section F.2](#) on this). But if actual experience is to be distrusted when evaluating theory, we effectively place ideology above people -- after all, how the ideology affects people in **practice** is irrelevant as experiences cannot be used to evaluate the (logically sound but actually deeply flawed) theory.

As we indicated above (in [section F.1.2](#)) and will discuss in more depth later (in [section F.7](#)) most of the leading right-Libertarian theorists base themselves on such deductive methodologies, starting from assumptions and "logically" drawing conclusions from them. The religious undertones of such methodology can best be seen from the roots of right-Libertarian "Natural law" theory.

Carole Pateman, in her analysis of Liberal contract theory, indicates the religious nature of the "Natural Law" argument so loved by the theorists of the "Radical Right." She notes that for Locke (the main source of the Libertarian Right's Natural Law cult) "*natural law*" was equivalent of "*God's Law*" and that "*God's law exists externally to and independently of individuals.*" [**The Problem of Political Obligation**, p. 154] No role for critical thought there, only obedience. Most modern day "Natural Law" supporters forget to mention this religious undercurrent and instead talk of about "Nature" (or "the market") as the deity that creates Law, not God, in order to appear "rational." So much for science.

Such a basis in dogma and religion can hardly be a firm foundation for liberty and indeed "Natural Law" is marked by a deep authoritarianism:

"Locke's traditional view of natural law provided individual's with an external standard which they could recognise, but which they did not voluntarily choose to order their political life." [**Op. Cit.**, p. 79]

In [section F.7](#) we discuss the authoritarian nature of "Natural Law" and will not do so here. However,

here we must point out the political conclusions Locke draws from his ideas. Pateman summary is worth repeating at length:

Locke believed that *"obedience lasts only as long as protection. His individuals are able to take action themselves to remedy their political lot. . . but this does not mean, as is often assumed, that Locke's theory gives direct support to present-day arguments for a right of civil disobedience. . . His theory allows for two alternatives only: either people go peacefully about their daily affairs under the protection of a liberal, constitutional government, or they are in revolt against a government which has ceased to be 'liberal' and has become arbitrary and tyrannical, so forfeiting its right to obedience."* [Op. Cit., p. 77]

Locke's "rebellion" exists purely to reform a **new** 'liberal' government, not to change the existing socio-economic structure which the 'liberal' government exists to protect. His theory, therefore, indicates the results of a priorism, namely a denial of any form of social dissent which may change the "natural law" as defined by Locke.

So, von Mises, von Hayek and most right-libertarians reject the scientific method in favour of ideological correctness -- if the facts contradict your theory then they can be dismissed as too "complex" or "unique". Facts, however, should inform theory and any theory's methodology should take this into account. To dismiss facts out of hand is to promote dogma. This is not to suggest that a theory should be modified very time new data comes along -- that would be crazy as unique situations **do** exist, data can be wrong and so forth -- but it does suggest that if your theory **continually** comes into conflict with reality, its time to rethink the theory and not assume that facts cannot invalidate it. A true libertarian would approach a contradiction between reality and theory by evaluating the facts available and changing the theory if this is required, not by ignoring reality or dismissing it as "complex".

Thus, much of right-Libertarian theory is neither libertarian nor scientific. Much of right-libertarian thought is highly axiomatic, being logically deduced from such starting axioms as *"self-ownership"* or *"no one should initiate force against another"*. Hence the importance of our discussion of von Mises as this indicates the dangers of this approach, namely the tendency to ignore/dismiss the consequences of these logical chains and, indeed, to justify them in terms of these axioms rather than from the facts. In addition, the methodology used is such as that it would be fair to argue that right-libertarians get to critique reality but reality can never be used to critique right-libertarianism -- for any empirical data presented as evidence as be dismissed as "too complex" or "unique" and so irrelevant (unless it can be used to support their claims, of course).

Hence W. Duncan Reekie's argument (quoting leading Austrian economist Israel Kirzner) that *"empirical work 'has the function of establishing the **applicability** of particular theorems, and thus **illustrating** their operation' . . . Confirmation of theory is not possible because there are no constants in human action, nor is it necessary because theorems themselves describe relationships logically developed from hypothesised conditions. Failure of a logically derived axiom to fit the facts does not render it invalid, rather it 'might merely indicate inapplicability' to the circumstances of the*

case.'" [Markets, Entrepreneurs and Liberty, p. 31]

So, if facts confirm your theory, your theory is right. If facts do not confirm your theory, it is still right but just not applicable in this case! Which has the handy side effect of ensuring that facts can **only** be used to support the ideology, **never** to refute it (which is, according to this perspective, impossible anyway). As Karl Popper argued, a *"theory which is not refutable by any conceivable event is non-scientific."* [Conjectures and Refutations, p. 36] In other words (as we noted above), if reality contradicts your theory, ignore reality!

Kropotkin hoped *"that those who believe in [current economic doctrines] will themselves become convinced of their error as soon as they come to see the necessity of verifying their quantitative deductions by quantitative investigation."* [Op. Cit., p. 178] However, the Austrian approach builds so many barriers to this that it is doubtful that this will occur. Indeed, right-libertarianism, with its focus on exchange rather than its consequences, seems to be based upon justifying domination in terms of their deductions than analysing what freedom actually means in terms of human existence (see [section F.2](#) for a fuller discussion).

The real question is why are such theories taken seriously and arouse such interest. Why are they not simply dismissed out of hand, given their methodology and the authoritarian conclusions they produce? The answer is, in part, that feeble arguments can easily pass for convincing when they are on the same side as the prevailing sentiment and social system. And, of course, there is the utility of such theories for ruling elites - *"[a]n ideological defence of privileges, exploitation, and private power will be welcomed, regardless of its merits."* [Noam Chomsky, **The Chomsky Reader**, p. 188]

Section F - Is "anarcho"-capitalism a type of anarchism?

Anyone who has followed political discussion on the net has probably come across people calling themselves libertarians but arguing from a right-wing, pro-capitalist perspective. For most Europeans this is weird, as in Europe the term "*libertarian*" is almost always used in conjunction with "*socialist*" or "*communist*." In the US, though, the Right has partially succeeded in appropriating this term for itself. Even stranger, however, is that a few of these right-wingers have started calling themselves "anarchists" in what must be one of the finest examples of an oxymoron in the English language: 'Anarcho-capitalist'!!

Arguing with fools is seldom rewarded, but to allow their foolishness to go unchallenged risks allowing them to deceive those who are new to anarchism. That's what this section of the anarchist FAQ is for, to show why the claims of these "anarchist" capitalists are false. Anarchism has always been anti-capitalist and any "anarchism" that claims otherwise cannot be part of the anarchist tradition. So this section of the FAQ does not reflect some kind of debate within anarchism, as many of these types like to pretend, but a debate between anarchism and its old enemy, capitalism. In many ways this debate mirrors the one between Peter Kropotkin and Herbert Spencer, an English pro-capitalist, minimal statist, at the turn the 19th century and, as such, it is hardly new.

The "anarcho"-capitalist argument hinges on using the dictionary definition of "anarchism" and/or "anarchy" - they try to define anarchism as being "opposition to government," and nothing else. However, dictionaries are hardly politically sophisticated and their definitions rarely reflect the wide range of ideas associated with political theories and their history. Thus the dictionary "definition" is anarchism will tend to ignore its consistent views on property, exploitation, property and capitalism (ideas easily discovered if actual anarchist texts are read). And, of course, many dictionaries "define" anarchy as "chaos" or "disorder" but we never see "anarcho"-capitalists use that particular definition!

And for this strategy to work, a lot of "inconvenient" history and ideas from all branches of anarchism must be ignored. From individualists like Spooner and Tucker to communists like Kropotkin and Malatesta, anarchists have always been anti-capitalist (see [section G](#) for more on the anti-capitalist nature of individualist anarchism). Therefore "anarcho"-capitalists are not anarchists in the same sense that rain is not dry.

Of course, we cannot stop the "anarcho"-capitalists using the words "anarcho", "anarchism" and "anarchy" to describe their ideas. The democracies of the west could not stop the Chinese Stalinist state calling itself the People's Republic of China. Nor could the social democrats stop the fascists in Germany calling themselves "National Socialists". Nor could the Italian anarcho-syndicalists stop the fascists using the expression "National Syndicalism". This does not mean that any of these movements actual name reflected their content -- China is a dictatorship, not a democracy, the Nazi's were not

socialists (capitalists made fortunes in Nazi Germany because it crushed the labour movement), and the Italian fascist state had nothing in common with anarcho-syndicalists ideas of decentralised, "from the bottom up" unions and the abolition of the state and capitalism.

Therefore, just because someone uses a label it does not mean that they support the ideas associated with that label. And this is the case with "anarcho"-capitalism -- its ideas are at odds with the key ideas associated with all forms of traditional anarchism (even individualist anarchism which is often claimed as being a forefather of the ideology).

All we can do is indicate **why** "anarcho"-capitalism is not part of the anarchist tradition and so has falsely appropriated the name. This section of the FAQ aims to do just that -- present the case why "anarcho"-capitalists are not anarchists. We do this, in part, by indicating where they differ from genuine anarchists (on such essential issues as private property, equality, exploitation and opposition to hierarchy) In addition, we take the opportunity to present a general critique of right-libertarian claims from an anarchist perspective. In this way we show up why anarchists reject that theory as being opposed to liberty and anarchist ideals.

We are covering this topic in an anarchist FAQ for only one reason -- the high number of "libertarian" and "anarcho"-capitalists on the net (likely a class-based phenomenon, based on ownership of computers!) As we have extensively documented in earlier sections, anarchist theory has always been anti-capitalist. There is no relationship between anarchism and capitalism, in any form. Therefore, there is a need for this section in order to indicate exactly why "anarcho"-capitalism is not anarchist. We have, in earlier sections (see [section B](#) in particular), indicated why the idea of a "libertarian" capitalism is itself nonsense and will not repeat ourselves here.

So this section of the FAQ does not, as we noted above, represent some kind of "debate" within anarchism. It reflects the attempt by anarchists to reclaim the history and meaning of anarchism from those who are attempting to steal its name (just as right-wingers in America have attempted to appropriate the name "libertarian" for their pro-capitalist views, and by so doing ignore over 100 years of anti-capitalist usage). However, this section also serves two other purposes. Firstly, critiquing right-libertarian and "anarcho"-capitalist theories allows us to explain anarchist ones at the same time and indicate why they are better. Secondly, and more importantly, the "ideas" and "ideals" that underlie "anarcho"-capitalism are usually identical (or, at the very least, similar) to those of neo-liberalism (as Bob Black points out, a *"wing of the Reaganist Right has obviously appropriated, with suspect selectivity, such libertarian themes as deregulation and voluntarism. Ideologues indignant that Reagan has travestied their principles. Tough shit! I notice that it's their principles, not mine, that he found suitable to travesty"* [**The Libertarian As Conservative**]). And as neo-liberalism is being used as the ideological basis of the current attack on the working class, critiquing "anarcho" capitalism and right-libertarianism also allows use to build theoretical weapons to use to resist this attack and aid the class struggle.

A few more points before beginning. When debating with "libertarian" or "anarchist" capitalists it's

necessary to remember that while they claim "real capitalism" does not exist (because all existing forms of capitalism are statist), they will claim that all the good things we have -- advanced medical technology, consumer choice of products, etc. -- are nevertheless due to "capitalism." Yet if you point out any problems in modern life, these will be blamed on "statism." Since there has never been and never will be a capitalist system without some sort of state, it's hard to argue against this "logic." Many actually use the example of the Internet as proof of the power of "capitalism," ignoring the fact that the state paid for its development before turning it over to companies to make a profit from it. Similar points can be made about numerous other products of "capitalism" and the world we live in. To artificially separate one aspect of a complex evolution fails to understand the nature and history of the capitalist system.

In addition to this ability to be selective about the history and results of capitalism, their theory has a great "escape clause." If wealthy employers abuse their power or the rights of the working class (as they have always done), then they have (according to "libertarian" ideology) ceased to be capitalists! This is based upon the misperception that an economic system that relies on force **cannot** be capitalistic. This is **very** handy as it can absolve the ideology from blame for any (excessive) oppression which results from its practice. Thus individuals are always to blame, **not** the system that generated the opportunities for abuse they freely used.

Anarchism has always been aware of the existence of "free market" capitalism, particularly its extreme (minimal statist) wing, and has always rejected it. For example, Proudhon noted that *"the disciples of Malthus and of Say, who oppose with all their might any intervention of the State in matters commercial or industrial, do not fail to avail themselves of this seemingly liberal attitude, and to show themselves more revolutionary than the Revolution. More than one honest searcher has been deceived thereby."* However, this apparent "libertarian" attitude of supporters of capitalism is false as pure free market capitalism cannot solve the social question, which arises because of capitalism itself. Thus *"this inaction of Power in economic matters [celebrated by the "free market" right] was the foundation of government. What need should we have of a political organisation, if Power once permitted us to enjoy economic order?"* [**The General Idea of the Revolution**, p. 226] Instead of capitalism, Proudhon advocated the *"constitution of Value,"* the *"organisation of credit,"* the elimination of interest, the *"establishment of workingmen's associations"* and *"the use of a just price."* [**Ibid.**, p. 233]

Thus anarchists have evaluated "free market" capitalism and rejected it as non-anarchist over 150 years ago. Attempts by "anarcho"-capitalism to say that their system is "anarchist" flies in the face of this long history of anarchist analysis.

More generally, we must stress that most (if not all) anarchists do not want to live in a society **just like this one** but without state coercion and (the initiation of) force. Anarchists do not confuse "freedom" with the "right" to govern and exploit others nor with being able to change masters. It is not enough to say we can start our own (co-operative) business in such a society. We want the abolition of the capitalist system of authoritarian relationships, not just a change of bosses or the possibility of little islands of liberty within a sea of capitalism (islands which are always in danger of being flooded and our activity destroyed). Thus, in this section of the FAQ, we analysis many "anarcho"-capitalist claims on

their own terms (for example, the importance of equality in the market or why capitalism cannot be reformed away by exchanges on the capitalist market) but that does not mean we desire a society nearly identical to the current one. Far from it, we want to transform this society into one more suited for developing and enriching individuality and freedom. But before we can achieve that we must critically evaluate the current society and point out its basic limitations.

Finally, we dedicate this section of the FAQ to those who have seen the real face of "free market" capitalism at work: the working men and women (anarchist or not) murdered in the jails and concentration camps or on the streets by the hired assassins of capitalism.

Section G - Is individualist anarchism capitalistic?

Introduction

G.1 Are individualist anarchists anti-capitalist?

G.1.1 Why is the social context important in evaluating Individualist Anarchism?

G.2 Why does individualist anarchism imply socialism?

G.2.1 What about their support of the free market?

G.2.2 What about their support of "private property"?

G.3 What about "anarcho"-capitalism's support of Tucker's "defence associations"?

G.4 Why do social anarchists reject individualist anarchism's ideas?

G.5 Benjamin Tucker - capitalist or anarchist?

G.6 What are the ideas of Max Stirner?

G.7 Lysander Spooner - right-Libertarian or libertarian socialist?

Section G - Is individualist anarchism capitalistic?

The short answer is, no, it is not. All the individualist anarchists were opposed to the exploitation of labour and all forms of non-labour income (such as profits, interest and rent) and property. As such it is deeply **anti**-capitalist and many individualist anarchists, including Benjamin Tucker, considered themselves as socialists (indeed, Tucker often called his theory "*Anarchistic-Socialism*").

So, in this section of our anarchist FAQ we indicate why the individualist anarchists cannot be classified as "ancestors" of the bogus libertarians of the "anarcho"-capitalist school. Instead they must be (due to their opposition to wage slavery, capitalist property, interest, rent and profit as well as their concern for equality and co-operation) classified as libertarian **socialists**, albeit being on the liberal wing of anarchist thought. So while **some** of their ideas do overlap with those of the "anarcho"-capitalist school they are not capitalistic, no more than the overlap between their ideas and anarcho-communism makes them communistic.

In this context, the creation of "anarcho"-capitalism may be regarded as yet another tactic by capitalists to reinforce the public's perception that there are no viable alternatives to capitalism, i.e. by claiming that "even anarchism implies capitalism." In order to justify this claim, they have searched the history of anarchism in an effort to find some thread in the movement that can be used for this purpose. They think that with the individualist anarchists they have found such a thread.

However, as we've already seen, by its very definition -- as opposition to hierarchical authority -- **all** threads of anarchism are **incompatible** with capitalism. As Malatesta argued, *"anarchy, as understood by the anarchists and as only they can interpret it, is based on socialism. Indeed were it not for those schools of socialism which artificially divide the natural unity of the social question, and consider some aspects out of context . . . we could say straight out that anarchy is synonymous with socialism, for both stand for the abolition of the domination and exploitation of man by man, whether exercised at bayonet point or by a monopoly of the means of life."* Without socialism, liberty (i.e. liberalism) is purely *"liberty . . . for the strong and the property owners to oppress and exploit the weak, those who have nothing . . . [so] lead[ing] to exploitation and domination, in other words, to authority . . . for freedom is not possible without equality, and real anarchy cannot exist without solidarity, without socialism."* [**Anarchy**, p. 47 and p. 46]

Nevertheless, in the individualists we find anarchism coming closest to "classical" liberalism and being influenced by the ideas of Herbert Spencer, a classical liberal and proto-libertarian capitalist. This influence, as was noted by Peter Kropotkin at the time (e.g. in **Modern Science and Anarchism**), led individualist anarchists like Benjamin Tucker to support contract theory in the name of freedom, apparently without being aware of the authoritarian social relationships that could be implied by it, as can be seen under capitalism. Therefore, this section can also be considered, in part, as a continuation of the discussion begun in [section A.3](#).

Few thinkers are completely consistent. Given Tucker's adamant anti-statism and anti-capitalism, it is likely that had he realised the statism implicit in contract theory, he would have modified his views in such a way as to eliminate the contradiction. It is understandable why he failed to do so, however; for he viewed individualist anarchism as a society of workers, not one of capitalists and workers. His opposition to usury logically implies artisan and co-operative labour -- people selling the products of their labour, as opposed to the labour itself -- which itself implies self-management in production (and so society), not authoritarianism. Nevertheless, it is this inconsistency -- the non-anarchist aspect of individualist anarchism -- which right "libertarians" like Murray Rothbard select and concentrate on, ignoring the anti-capitalist context in which this aspect of individualist thought exists within. As David Wieck points out:

*"Out of the history of anarchist thought and action Rothbard has pulled forth a single thread, the thread of individualism, and defines that individualism in a way alien even to the spirit of a Max Stirner or a Benjamin Tucker, whose heritage I presume he would claim -- to say nothing of how alien is his way to the spirit of Godwin, Proudhon, Bakunin, Kropotkin, Malatesta, and the historically anonymous persons who through their thoughts and action have tried to give anarchism a living meaning. Out of this thread Rothbard manufactures one more bourgeois ideology." ["Anarchist Justice", **Nomos XIX**, pp. 227-228]*

It is with this in mind that we discuss the ideas of people like Tucker. As this section of the FAQ will indicate, even at its most liberal, individualist, extreme anarchism was fundamentally **anti**-capitalist. Any concepts which "anarcho"-capitalism imports from the individualist tradition ignore both the theoretical underpinnings of their ideas as well as the social context of self-employment and artisan production within which those concepts arose, thus turning them into something radically different from what was intended by their originators.

Needless to say, "anarcho"-capitalists are well aware of the fact that individualist anarchists were extremely hostile to capitalism while supporting the "free market." Unsurprisingly, they tend to downplay this opposition, often arguing that the anarchists who point out the anti-capitalist positions of the likes of Tucker and Spooner are quoting them out of context. The truth is different. In fact, it is the "anarcho"-capitalist who takes the ideas of the individualist anarchists from both the historical and theoretical context.

It is not a fitting tribute to the individualist anarchists that their ideas are today being associated with the capitalism that they so clearly despised and wished to abolish. As one modern day Individualist Anarchist argues:

"It is time that anarchists recognise the valuable contributions of . . . individualist anarchist theory and take advantage of its ideas. It would be both futile and criminal to leave it to the capitalist libertarians, whose claims on Tucker and the others can be made only by ignoring the violent opposition they had to capitalist exploitation and

monopolistic 'free enterprise' supported by the state." [J.W. Baker, "*Native American Anarchism*," **The Raven**, pp. 43-62, vol. 10, no. 1, pp. 61-2]

A.3 What types of anarchism are there?

Anarchists, while all sharing a few key ideas, can be grouped into broad categories, depending on the economic arrangements that they consider to be most suitable to human freedom. However, all types of anarchists share a basic approach. To quote Rudolf Rocker:

"In common with the founders of Socialism, Anarchists demand the abolition of all economic monopolies and the common ownership of the soil and all other means of production, the use of which must be available to all without distinction; for personal and social freedom is conceivable only on the basis of equal economic advantages for everybody. Within the Socialist movement itself the Anarchists represent the viewpoint that the war against capitalism must be at the same time a war against all institutions of political power, for in history economic exploitation has always gone hand in hand with political and social oppression. The exploitation of man by man and the domination of man over man are inseparable, and each is the condition of the other." [**Anarcho-Syndicalism**, pp. 62-3]

It is within this general context that anarchists disagree. The main differences are between *"individualist"* and *"social"* anarchists, although the economic arrangements each desire are not mutually exclusive. Of the two, social anarchists (communist-anarchists, anarcho-syndicalists and so on) have always been the vast majority, with individualist anarchism being restricted mostly to the United States. In this section we indicate the differences between these main trends within the anarchist movement. As will soon become clear, while social and individualist anarchists both oppose the state and capitalism, they disagree on the nature of a free society (and how to get there). In a nutshell, social anarchists prefer communal solutions to social problems and a communal vision of the good society (i.e. a society that protects and encourages individual freedom). Individualist anarchists, as their name suggests, prefer individual solutions and have a more individualistic vision of the good society. However, we must not let these difference cloud what both schools have in common, namely a desire to maximise individual freedom and end state and capitalist domination and exploitation.

In addition to this major disagreement, anarchists also disagree over such issues as syndicalism, pacifism, "lifestylism," animal rights and a whole host of other ideas, but these, while important, are only different aspects of anarchism. Beyond a few key ideas, the anarchist movement (like life itself) is in a constant state of change, discussion and thought -- as would be expected in a movement that values freedom so highly.

To put our cards on the table, the writers of this FAQ place themselves firmly in the "social" strand of anarchism. This does not mean that we ignore the many important ideas associated with individualist anarchism, only that we think social anarchism is more appropriate for modern society, that it creates a stronger base for individual freedom, and that it more closely reflects the sort of society we would like to live in.

A.3.1 What are the differences between individualist and social anarchists?

While there is a tendency for individuals in both camps to claim that the proposals of the other camp would lead to the creation of some kind of state, the differences between individualists and social anarchists are not very great. Both are anti-state, anti-authority and anti-capitalist. The major differences are twofold.

The first is in regard to the means of action in the here and now (and so the manner in which anarchy will come about). Individualists generally prefer education and the creation of alternative institutions, such as mutual banks, unions, communes, etc. They usually support strikes and other non-violent forms of social protest (such as rent strikes, the non-payment of taxes and so on). Such activity, they argue, will ensure that present society will gradually develop out of government into an anarchist one. They are primarily evolutionists, not revolutionists, and dislike social anarchists' use of direct action to create revolutionary situations. They consider revolution as being in contradiction to anarchist principles as it involves the expropriation of capitalist property and, therefore, authoritarian means. Rather they seek to return to society the wealth taken out of society by property by means of an new, alternative, system of economics (based around mutual banks and co-operatives). In this way a general "social liquidation" would be rendered easy, with anarchism coming about by reform and not by expropriation.

Most social anarchists recognise the need for education and to create alternatives (such as libertarian unions), but most disagree that this is enough in itself. They do not think capitalism can be reformed piece by piece into anarchy, although they do not ignore the importance of reforms by social struggle that increase libertarian tendencies within capitalism. Nor do they think revolution is in contradiction with anarchist principles as it is not authoritarian to destroy authority (be it state or capitalist). Thus the expropriation of the capitalist class and the destruction of the state by social revolution is a libertarian, not authoritarian, act by its very nature as it is directed against those who govern and exploit the vast majority. In short, social anarchists are usually evolutionists **and** revolutionists, trying to strengthen libertarian tendencies within capitalism while trying to abolish that system by social revolution. However, as some social anarchists are purely evolutionists too, this difference is not the most important one dividing social anarchists from individualists.

The second major difference concerns the form of anarchist economy proposed. Individualists prefer a market-based system of distribution to the social anarchists need-based system. Both agree that the current system of capitalist property rights must be abolished and that use rights must replace property rights in the means of life (i.e. the abolition of rent, interest and profits -- "*usury*," to use the individualist anarchists' preferred term for this unholy trinity). In effect, both schools follow Proudhon's classic work **What is Property?** and argue that possession must replace property in a free society (see [section B.3](#) for a discussion of anarchist viewpoints on property).

However, within this use-rights framework, the two schools of anarchism propose different systems. The social anarchist generally argues for communal (or social) ownership and use. This would involve social ownership of the means of production and distribution, with personal possessions remaining for things you use, but not what was used to create them. Thus *"your watch is your own, but the watch factory belongs to the people."* *"Actual use,"* continues Berkman, *"will be considered the only title -- not to ownership but to possession. The organisation of the coal miners, for example, will be in charge of the coal mines, not as owners but as the operating agency . . . Collective possession, co-operatively managed in the interests of the community, will take the place of personal ownership privately conducted for profit."* [**What is Anarchism?**, p. 217]

This system would be based on workers' self-management of their work and (for most social anarchists) the free sharing of the product of that labour (i.e. an economic system without money). This is because *"in the present state of industry, when everything is interdependent, when each branch of production is knit up with all the rest, the attempt to claim an individualist origin for the products of industry is untenable."* Given this, it is impossible to *"estimate the share of each in the riches which **all** contribute to amass"* and, moreover, the *"common possession of the instruments of labour must necessarily bring with it the enjoyment in common of the fruits of common labour."* [Kropotkin, **The Conquest of Bread**, p. 45 and p. 46] By this social anarchists simply mean that the social product which is produced by all would be available to all and each individual who has contributed productively to society can take what they need (how quickly we can reach such an ideal is a moot point, as we discuss in [section I.2.2](#)). Some social anarchists, like mutualists for example, are against such a system of libertarian (or free) communism, but, in general, the vast majority of social anarchists look forward to the end of money and, therefore, of buying and selling. All agree, however, that anarchy will see *"Capitalistic and proprietary exploitation stopped everywhere"* and *"the wage system abolished"* whether by *"equal and just exchange"* (like Proudhon) or by the free sharing (like Kropotkin). [Proudhon, **The General Idea of the Revolution**, p. 281]

In contrast, the individualist anarchist (like the mutualist) denies that this system of use-rights should include the product of the workers labour. Instead of social ownership, individualist anarchists propose a more market based system in which workers would possess their own means of production and exchange the product of their labour freely with other workers. They argue that capitalism is not, in fact, a truly free market. Rather, by means of the state, capitalists have placed fetters on the market to create and protect their economic and social power (market discipline for the working class, state aid for the ruling class in other words). These state created monopolies (of money, land, tariffs and patents) and state enforcement of capitalist property rights are the source of economic inequality and exploitation. With the abolition of government, **real** free competition would result and ensure the end of capitalism and capitalist exploitation (see Benjamin Tucker's essay **State Socialism and Anarchism** for an excellent summary of this argument).

The Individualist anarchists argue that the means of production (bar land) are the product of individual labour and so they accept that people should be able to sell the means of production they use, if they so desire. However, they reject capitalist property rights and instead favour an *"occupancy and use"* system. If the means of production, say land, is not in use, it reverts back to common ownership and is

available to others for use. They think this system, called mutualism, will result in workers control of production and the end of capitalist exploitation and usury. This is because, logically and practically, a regime of "occupancy and use" cannot be squared with wage labour. If a workplace needs a group to operate it then it must be owned by the group who use it. If one individual claims to own it and it is, in fact, used by more than that person then, obviously, "occupancy and use" is violated. Equally, if an owner employs others to use the workplace then the boss can appropriate the product of the workers' labour, so violating the maxim that labour should receive its full product. Thus the principles of individualist anarchism point to anti-capitalist conclusions (see [section G.3](#)).

This second difference is the most important. The individualist fears being forced to join a community and thus losing his or her freedom (including the freedom to exchange freely with others). Max Stirner puts this position well when he argues that *"Communism, by the abolition of all personal property, only presses me back still more into dependence on another, to wit, on the generality or collectivity . . . [which is] a condition hindering my free movement, a sovereign power over me. Communism rightly revolts against the pressure that I experience from individual proprietors; but still more horrible is the might that it puts in the hands of the collectivity."* [**The Ego and Its Own**, p. 257] Proudhon also argued against communism, stating that the community becomes the proprietor under communism and so capitalism and communism are based on property and so authority (see the section *"Characteristics of communism and of property"* in **What is Property?**). Thus the Individualist anarchist argues that social ownership places the individual's freedom in danger as any form of communism subjects the individual to society or the commune. They fear that as well as dictating individual morality, socialisation would effectively eliminate workers' control as "society" would tell workers what to produce and take the product of their labour. In effect, they argue that communism (or social ownership in general) would be similar to capitalism, with the exploitation and authority of the boss replaced with that of "society."

Needless to say, social anarchists disagree. They argue that Stirner's and Proudhon's comments are totally correct -- but only about authoritarian communism. As Kropotkin argued, *"before and in 1848, the theory [of communism] was put forward in such a shape as to fully account for Proudhon's distrust as to its effect upon liberty. The old idea of Communism was the idea of monastic communities under the severe rule of elders or of men of science for directing priests. The last vestiges of liberty and of individual energy would be destroyed, if humanity ever had to go through such a communism."* [**Act for Yourselves**, p. 98] Kropotkin always argued that communist-anarchism was a **new** development and given that it dates from the 1870s, Proudhon's and Stirner's remarks cannot be considered as being directed against it as they could not be familiar with it.

Rather than subject the individual to the community, social anarchists argue that communal ownership would provide the necessary framework to protect individual liberty in all aspects of life by abolishing the power of the property owner, in whatever form it takes. In addition, rather than abolish **all** individual "property," communist anarchism acknowledges the importance of individual possessions and individual space. Thus we find Kropotkin arguing against forms of communism that *"desire to manage the community after the model of a family . . . [to live] all in the same house and . . . thus forced to continuously meet the same 'brethren and sisters' . . . [it is] a fundamental error to impose on all the 'great family' instead of trying, on the contrary, to guarantee as much freedom and home life to each*

individual." [**Small Communal Experiments and Why They Fail**, pp. 8-9] The aim of anarchist-communism is, to again quote Kropotkin, to place *"the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7] This ensures individual expression of tastes and desires and so individuality -- both in consumption **and** in production, as social anarchists are firm supporters of workers' self-management.

Thus, for social anarchists, the Individualist Anarchist opposition to communism is only valid for state or authoritarian communism and ignores the fundamental nature of communist-anarchism. Communist anarchists do not replace individuality with community but rather use community to defend individuality. Rather than have "society" control the individual, as the Individualist Anarchist fears, social anarchism is based on importance of individuality and individual expression:

"Anarchist Communism maintains that most valuable of all conquests -- individual liberty -- and moreover extends it and gives it a solid basis -- economic liberty -- without which political liberty is delusive; it does not ask the individual who has rejected god, the universal tyrant, god the king, and god the parliament, to give unto himself a god more terrible than any of the proceeding -- god the Community, or to abdicate upon its altar his [or her] independence, his [or her] will, his [or her] tastes, and to renew the vow of asceticism which he formally made before the crucified god. It says to him, on the contrary, 'No society is free so long as the individual is not so! . . .'" [**Op. Cit.**, pp. 14-15]

In addition, social anarchists have always recognised the need for voluntary collectivisation. If people desire to work by themselves, this is not seen as a problem (see Kropotkin's **The Conquest of Bread**, p. 61 and **Act for Yourselves**, pp. 104-5 as well as Malatesta's **Errico Malatesta: His Life and Ideas**, p. 99 and p. 103). This, social anarchists, stress does not in any way contradict their principles or the communist nature of their desired society as such exceptions are rooted in the "use rights" system both are based in (see [section I.6.2](#) for a full discussion). In addition, for social anarchists an association exists solely for the benefit of the individuals that compose it; it is the means by which people cooperate to meet their common needs. Therefore, **all** anarchists emphasise the importance of free agreement as the basis of an anarchist society. Thus all anarchists agree with Bakunin:

"Collectivism could only imposed only on slaves, and this kind of collectivism would then be the negation of humanity. In a free community, collectivism can only come about through the pressure of circumstances, not by imposition from above but by a free spontaneous movement from below." [**Bakunin on Anarchism**, p. 200]

If individualists desire to work for themselves and exchange goods with others, social anarchists have no objection. Hence our comments that the two forms of anarchism are not mutually exclusive. Social anarchists support the right of individuals **not** to join a commune while Individualist Anarchists support the rights of individuals to pool their possessions as they see fit, including communistic associations. However, if, in the name of freedom, an individual wished to claim property rights so as to exploit the

labour of others, social anarchists would quickly resist this attempt to recreate statism in the name of "liberty." Anarchists do not respect the "freedom" to be a ruler! In the words of Luigi Galleani:

"No less sophisticated is the tendency of those who, under the comfortable cloak of anarchist individualism, would welcome the idea of domination . . . But the heralds of domination presume to practice individualism in the name of their ego, over the obedient, resigned, or inert ego of others." [**The End of Anarchism?**, p. 40]

Moreover, for social anarchists, the idea that the means of production can be sold implies that private property could be reintroduced in an anarchist society. In a free market, some succeed and others fail. As Proudhon argued, in competition victory goes to the strongest. When one's bargaining power is weaker than another then any "free exchange" will benefit the stronger party. Thus the market, even a non-capitalist one, will tend to magnify inequalities of wealth and power over time rather than equalising them. Under capitalism this is more obvious as those with only their labour power to sell are in a weaker position than those with capital but individualist anarchism would also be affected.

Thus, social anarchists argue, much against its will an individualist anarchist society would evolve away from fair exchanges back into capitalism. If, as seems likely, the "unsuccessful" competitors are forced into unemployment they may have to sell their labour to the "successful" in order to survive. This would create authoritarian social relationships and the domination of the few over the many via "free contracts." The enforcement of such contracts (and others like them), in all likelihood, *"opens . . . the way for reconstituting under the heading of 'defence' all the functions of the State."* [Peter Kropotkin, **Anarchism**, p. 297]

Benjamin Tucker, the anarchist most influenced by liberalism and free market ideas, also faced the problems associated with all schools of abstract individualism -- in particular, the acceptance of authoritarian social relations as an expression of "liberty." This is due to the similarity of property to the state. Tucker argued that the state was marked by two things, aggression and *"the assumption of authority over a given area and all within it, exercised generally for the double purpose of more complete oppression of its subjects and extension of its boundaries."* [**Instead of a Book**, p. 22] However, the boss and landlord also has authority over a given area (the property in question) and all within it (workers and tenants). The former control the actions of the latter just as the state rules the citizen or subject. In other words, individual ownership produces the same social relationships as that created by the state, as it comes from the same source (monopoly of power over a given area and those who use it).

Social anarchists argue that the Individualist Anarchists acceptance of individual ownership and their individualistic conception of individual freedom can lead to the denial of individual freedom by the creation of social relationships which are essentially authoritarian/statist in nature. *"The individualists,"* argued Malatesta, *"give the greatest importance to an abstract concept of freedom and fail to take into account, or dwell on the fact that real, concrete freedom is the outcome of solidarity and voluntary co-operation."* [**The Anarchist Revolution**, p. 16] Thus wage labour, for example, places the worker in the

same relationship to the boss as citizenship places the citizen to the state, namely of one of domination and subjection. Similarly with the tenant and the landlord.

Such a social relationship cannot help but produce the other aspects of the state. As Albert Meltzer points out, this can have nothing but statist implications, because *"the school of Benjamin Tucker -- by virtue of their individualism -- accepted the need for police to break strikes so as to guarantee the employer's 'freedom.'* All this school of so-called Individualists accept . . . the necessity of the police force, hence for government, and the prime definition of anarchism is **no government.**" [**Anarchism: Arguments For and Against**, p. 8] It is partly for this reason social anarchists support social ownership as the best means of protecting individual liberty.

Accepting individual ownership this problem can only be "got round" by accepting, along with Proudhon (the source of Tucker's economic ideas), the need for co-operatives to run workplaces that require more than one worker. This naturally complements their support for *"occupancy and use"* for land, which would effectively abolish landlords. Only when the people who use a resource own it can individual ownership not result in hierarchical authority (i.e. statism/capitalism). This solution, as we argue in [section G](#), is the one Individualist Anarchists **do** seem to accept. For example, we find Joseph Labadie writing to his son urging him to get away from wage earning and *"the dominion of others."* [quoted by Carlotta Abderson, **All American Anarchist**, p. 222] As Wm. Gary Kline correctly points out, the US Individualist anarchists *"expected a society of largely self-employed workmen with no significant disparity of wealth between any of them."* [**The Individualist Anarchists**, p. 104] It is this vision of a self-employed society that ensures that their ideas are truly anarchist.

Moreover, while the individualists attack *"usury,"* they usually ignore the problem of capital accumulation, which results in **natural** barriers of entry into markets and so recreates usury in new forms (see section C.4 ["Why does the market become dominated by big business?"](#)). Hence a "free market" in banks, as advocated by Tucker and other Individualist Anarchists, could result in a few big banks dominating, with a direct economic interest in supporting capitalist rather than co-operative investment (as they would ensure higher returns than co-operatives). The only real solution to this problem would be to ensure community ownership and management of banks, as originally desired by Proudhon.

It is this recognition of the developments within the capitalist economy which make social anarchists reject individualist anarchism in favour of communalising, and so decentralising, production by freely associated and co-operative labour. (For more discussion on the ideas of the Individualist anarchists, see section G - ["Is individualist anarchism capitalistic?"](#))

A.3.2 Are there different types of social anarchism?

Yes. Social anarchism has four major trends -- mutualism, collectivism, communism and syndicalism. The differences are not great and simply involve differences in strategy. The one major difference that does exist is between mutualism and the other kinds of social anarchism. Mutualism is based around a

form of market socialism -- workers' co-operatives exchanging the product of their labour via a system of community banks. This mutual bank network would be *"formed by the whole community, not for the especial advantage of any individual or class, but for the benefit of all . . . [with] no interest . . . exacted on loans, except enough to cover risks and expenses."* Such a system would end capitalist exploitation and oppression for by *"introducing mutualism into exchange and credit we introduce it everywhere, and labour will assume a new aspect and become truly democratic."* [Charles A. Dana, **Proudhon and his "Bank of the People"**, pp. 44-45 and p. 45]

The social anarchist version of mutualism differs from the individualist form by having the mutual banks owned by the local community (or commune) instead of being independent co-operatives. This would ensure that they provided investment funds to co-operatives rather than to capitalistic enterprises. Another difference is that some social anarchist mutualists support the creation of what Proudhon termed an **"agro-industrial federation"** to complement the federation of libertarian communities (called communes by Proudhon). This is a *"confederation . . . intended to provide reciprocal security in commerce and industry"* and large scale developments such as roads, railways and so on. The purpose of *"specific federal arrangements is to protect the citizens of the federated states [sic!] from capitalist and financial feudalism, both within them and from the outside."* This is because *"political right requires to be buttressed by economic right."* Thus the agro-industrial federation would be required to ensure the anarchist nature of society from the destabilising effects of market exchanges (which can generate increasing inequalities in wealth and so power). Such a system would be a practical example of solidarity, as *"industries are sisters; they are parts of the same body; one cannot suffer without the others sharing in its suffering. They should therefore federate, not to be absorbed and confused together, but in order to guarantee mutually the conditions of common prosperity . . . Making such an agreement will not detract from their liberty; it will simply give their liberty more security and force."* [**The Principle of Federation**, p. 70, p. 67 and p. 72]

The other forms of social anarchism do not share the mutualists support for markets, even non-capitalist ones. Instead they think that freedom is best served by communalising production and sharing information and products freely between co-operatives. In other words, the other forms of social anarchism are based upon common (or social) ownership by federations of producers' associations and communes rather than mutualism's system of individual co-operatives. In Bakunin's words, the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal"* and *"the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, in other words by the agricultural and industrial associations."* [**Michael Bakunin: Selected Writings**, p. 206 and p. 174] Only by extending the principle of co-operation beyond individual workplaces can individual liberty be maximised and protected (see [section I.1.3](#) for why most anarchists are opposed to markets). In this they share some ground with Proudhon, as can be seen. The industrial confederations would *"guarantee the mutual use of the tools of production which are the property of each of these groups and which will by a reciprocal contract become the collective property of the whole . . . federation. In this way, the federation of groups will be able to . . . regulate the rate of production to meet the fluctuating needs of society."* [James Guillaume, **Bakunin on Anarchism**, p. 376]

These anarchists share the mutualists support for workers' self-management of production within co-operatives but see confederations of these associations as being the focal point for expressing mutual aid, not a market. Workplace autonomy and self-management would be the basis of any federation, for *"the workers in the various factories have not the slightest intention of handing over their hard-won control of the tools of production to a superior power calling itself the 'corporation.'"* [Guillaume, **Op. Cit.**, p. 364] In addition to this industry-wide federation, there would also be cross-industry and community confederations to look after tasks which are not within the exclusive jurisdiction or capacity of any particular industrial federation or are of a social nature. Again, this has similarities to Proudhon's mutualist ideas.

Social anarchists share a firm commitment to common ownership of the means of production (excluding those used purely by individuals) and reject the individualist idea that these can be "sold off" by those who use them. The reason, as noted earlier, is because if this could be done, capitalism and statism could regain a foothold in the free society. In addition, other social anarchists do not agree with the mutualist idea that capitalism can be reformed into libertarian socialism by introducing mutual banking. For them capitalism can only be replaced by a free society by social revolution.

The major difference between collectivists and communists is over the question of "money" after a revolution. Anarcho-communists consider the abolition of money to be essential, while anarcho-collectivists consider the end of private ownership of the means of production to be the key. As Kropotkin noted, collectivist anarchism *"express[es] a state of things in which all necessities for production are owned in common by the labour groups and the free communes, while the ways of retribution [i.e. distribution] of labour, communist or otherwise, would be settled by each group for itself."* [**Anarchism**, p. 295] Thus, while communism and collectivism both organise production in common via producers' associations, they differ in how the goods produced will be distributed. Communism is based on free consumption of all while collectivism is more likely to be based on the distribution of goods according to the labour contributed. However, most anarcho-collectivists think that, over time, as productivity increases and the sense of community becomes stronger, money will disappear. Both agree that, in the end, society would be run along the lines suggested by the communist maxim: *"From each according to their abilities, to each according to their needs."* They just disagree on how quickly this will come about (see [section I.2.2](#)).

For anarcho-communists, they think that *"communism -- at least partial -- has more chances of being established than collectivism"* after a revolution. [**Op. Cit.**, p. 298] They think that moves towards communism are essential as collectivism *"begins by abolishing private ownership of the means of production and immediately reverses itself by returning to the system of remuneration according to work performed which means the re-introduction of inequality."* [Alexander Berkman, **What is Anarchism?**, p. 230] The quicker the move to communism, the less chances of new inequalities developing. Needless to say, these positions are **not** that different and, in practice, the necessities of a social revolution and the level of political awareness of those introducing anarchism will determine which system will be applied in each area.

Syndicalism is the other major form of social anarchism. Anarcho-syndicalists, like other syndicalists, want to create an industrial union movement based on anarchist ideas. Therefore they advocate decentralised, federated unions that use direct action to get reforms under capitalism until they are strong enough to overthrow it. In many ways anarcho-syndicalism can be considered as a new version of collectivist-anarchism, which also stressed the importance of anarchists working within the labour movement and creating unions which prefigure the future free society.

Thus, even under capitalism, anarcho-syndicalists seek to create "*free associations of free producers.*" They think that these associations would serve as "*a practical school of anarchism*" and they take very seriously Bakunin's remark that the workers' organisations must create "*not only the ideas but also the facts of the future itself*" in the pre-revolutionary period.

Anarcho-syndicalists, like all social anarchists, "*are convinced that a Socialist economic order cannot be created by the decrees and statutes of a government, but only by the solidaric collaboration of the workers with hand and brain in each special branch of production; that is, through the taking over of the management of all plants by the producers themselves under such form that the separate groups, plants, and branches of industry are independent members of the general economic organism and systematically carry on production and the distribution of the products in the interest of the community on the basis of free mutual agreements.*" [Rudolf Rocker, **Anarcho-syndicalism**, p. 55]

Again, like all social anarchists, anarcho-syndicalists see the collective struggle and organisation implied in unions as the school for anarchism. As Eugene Varlin (an anarchist active in the First International who was murdered at the end of the Paris Commune) put it, unions have "*the enormous advantage of making people accustomed to group life and thus preparing them for a more extended social organisation. They accustom people not only to get along with one another and to understand one another, but also to organise themselves, to discuss, and to reason from a collective perspective.*" Moreover, as well as mitigating capitalist exploitation and oppression in the here and now, the unions also "*form the natural elements of the social edifice of the future; it is they who can be easily transformed into producers associations; it is they who can make the social ingredients and the organisation of production work.*" [quoted by Julian P. W. Archer, **The First International in France, 1864-1872**, p. 196]

The difference between syndicalists and other revolutionary social anarchists is slight and purely revolves around the question of anarcho-syndicalist unions. Collectivist anarchists agree that building libertarian unions is important and that work within the labour movement is essential in order to ensure "*the development and organisation . . . of the social (and, by consequence, anti-political) power of the working masses.*" [Bakunin, **Michael Bakunin: Selected Writings**, p. 197] Communist anarchists usually also acknowledge the importance of working in the labour movement but they generally think that syndicalistic organisations will be created by workers in struggle, and so consider encouraging the "*spirit of revolt*" as more important than creating syndicalist unions and hoping workers will join them (of course, anarcho-syndicalists support such autonomous struggle and organisation, so the differences are not great). Communist-anarchists also do not place as great an emphasis on the workplace,

considering struggles within it to be equal in importance to other struggles against hierarchy and domination outside the workplace (most anarcho-syndicalists would agree with this, however, and often it is just a question of emphasis). A few communist-anarchists reject the labour movement as hopelessly reformist in nature and so refuse to work within it, but these are a small minority.

Both communist and collectivist anarchists recognise the need for anarchists to unite together in purely anarchist organisations. They think it is essential that anarchists work together as anarchists to clarify and spread their ideas to others. Syndicalists often deny the importance of anarchist groups and federations, arguing that revolutionary industrial and community unions are enough in themselves. Syndicalists think that the anarchist and union movements can be fused into one, but most other anarchists disagree. Non-syndicalists point out the reformist nature of unionism and urge that to keep syndicalist unions revolutionary, anarchists must work within them as part of an anarchist group or federation. Most non-syndicalists consider the fusion of anarchism and unionism a source of potential **confusion** that would result in the two movements failing to do their respective work correctly. For more details on anarcho-syndicalism see [section J.3.8](#) (and [section J.3.9](#) on why many anarchists reject aspects of it). It should be stressed that non-syndicalist anarchists do **not** reject the need for collective struggle and organisation by workers (see [section H.2.8](#) on that particular Marxist myth).

In practice, few anarcho-syndicalists totally reject the need for an anarchist federation, while few anarchists are totally anti-syndicalist. For example, Bakunin inspired both anarcho-communist and anarcho-syndicalist ideas, and anarcho-communists like Kropotkin, Malatesta, Berkman and Goldman were all sympathetic to anarcho-syndicalist movements and ideas.

For further reading on the various types of social anarchism, we would recommend the following: mutualism is usually associated with the works of Proudhon, collectivism with Bakunin's, communism with Kropotkin's, Malatesta's, Goldman's and Berkman's. Syndicalism is somewhat different, as it was far more the product of workers' in struggle than the work of a "famous" name (although this does not stop academics calling George Sorel the father of syndicalism, even though he wrote about a syndicalist movement that already existed. The idea that working class people can develop their own ideas, by themselves, is usually lost on them). However, Rudolf Rocker is often considered a leading anarcho-syndicalist theorist and the works of Fernand Pelloutier and Emile Pouget are essential reading to understand anarcho-syndicalism. For an overview of the development of social anarchism and key works by its leading lights, Daniel Guerin's excellent anthology **No Gods No Masters** cannot be bettered.

A.3.3 What kinds of green anarchism are there?

An emphasis on anarchist ideas as a solution to the ecological crisis is a common thread in most forms of anarchism today. The trend goes back to the late nineteenth century and the works of Peter Kropotkin and Elisee Reclus. The latter, for example, argued that a "*secret harmony exists between the earth and the people whom it nourishes, and when imprudent societies let themselves violate this harmony, they always end up regretting it.*" Similarly, no contemporary ecologist would disagree with his comments

that the *"truly civilised man [and women] understands that his [or her] nature is bound up with the interest of all and with that of nature. He [or she] repairs the damage caused by his predecessors and works to improve his domain."* [quoted by George Woodcock, "Introduction", Marie Fleming, **The Geography of Freedom**, p. 15]

With regards Kropotkin, he argued that an anarchist society would be based on a confederation of communities that would integrate manual and brain work as well as decentralising and integrating industry and agriculture (see his classic work **Fields, Factories, and Workshops**). This idea of an economy in which *"small is beautiful"* (to use the title of E.F. Schumacher's Green classic) was proposed nearly 70 years before it was taken up by what was to become the green movement. In addition, in **Mutual Aid** Kropotkin documented how co-operation within species and between them and their environment is usually of more benefit to them than competition. Kropotkin's work, combined with that of William Morris, the Reclus brothers (both of whom, like Kropotkin, were world-renowned geographers), and many others laid the foundations for the current anarchist interest in ecological issues.

However, while there are many themes of an ecological nature within classical anarchism, it is only relatively recently that the similarities between ecological thought and anarchism has come to the fore (essentially from the publication of Murray Bookchin's classic essay *"Ecology and Revolutionary Thought"* in 1965). Indeed, it would be no exaggeration to state that it is the ideas and work of Murray Bookchin that has placed ecology and ecological issues at the heart of anarchism and anarchist ideals and analysis into many aspects of the green movement.

Before discussing the types of green anarchism (also called eco-anarchism) it would be worthwhile to explain exactly **what** anarchism and ecology have in common. To quote Murray Bookchin, *"both the ecologist and the anarchist place a strong emphasis on spontaneity"* and *"to both the ecologist and the anarchist, an ever-increasing unity is achieved by growing differentiation. **An expanding whole is created by the diversification and enrichment of its parts.**"* Moreover, *"[j]ust as the ecologist seeks to expand the range of an eco-system and promote free interplay between species, so the anarchist seeks to expand the range of social experiments and remove all fetters to its development."* [**Post-Scarcity Anarchism**, p. 72 and p. 78]

Thus the anarchist concern with free development, decentralisation, diversity and spontaneity is reflected in ecological ideas and concerns. Hierarchy, centralisation, the state and concentrations of wealth reduce diversity and the free development of individuals and their communities by their very nature, and so weakens the social eco-system as well as the actual eco-systems human societies are part of. As Bookchin argues, *"the reconstructive message of ecology. . . [is that] we must conserve and promote variety"* but within modern capitalist society *"[a]ll that is spontaneous, creative and individuated is circumscribed by the standardised, the regulated and the massified."* [**Op. Cit.**, p. 76 and p. 65] So, in many ways, anarchism can be considered the application of ecological ideas to society, as anarchism aims to empower individuals and communities, decentralise political, social and economic power so ensuring that individuals and social life develops freely and so becomes increasingly diverse in nature. It is for this reason Brian Morris argues that "the only political tradition that complements and, as it were, integrally connects with ecology -- in a genuine and authentic way -- is that of

anarchism." [**Ecology and Anarchism**, p. 132]

So what kinds of green anarchism are there? While almost all forms of modern anarchism consider themselves to have an ecological dimension, the specifically eco-anarchist thread within anarchism has two main focal points, *Social Ecology* and "*primitivist*". In addition, some anarchists are influenced by *Deep Ecology*, although not many. Undoubtedly Social Ecology is the most influential and numerous current. Social Ecology is associated with the ideas and works of Murray Bookchin, who has been writing on ecological matters since the 1950's and, from the 1960s, has combined these issues with revolutionary social anarchism. His works include **Post-Scarcity Anarchism, Toward an Ecological Society, The Ecology of Freedom** and a host of others.

Social Ecology locates the roots of the ecological crisis firmly in relations of domination between people. The domination of nature is seen as a product of domination within society, but this domination only reaches crisis proportions under capitalism. In the words of Murray Bookchin:

"The notion that man must dominate nature emerges directly from the domination of man by man. . . But it was not until organic community relations. . . dissolved into market relationships that the planet itself was reduced to a resource for exploitation. This centuries-long tendency finds its most exacerbating development in modern capitalism. Owing to its inherently competitive nature, bourgeois society not only pits humans against each other, it also pits the mass of humanity against the natural world. Just as men are converted into commodities, so every aspect of nature is converted into a commodity, a resource to be manufactured and merchandised wantonly . . . The plundering of the human spirit by the market place is paralleled by the plundering of the earth by capital." [**Op. Cit.**, p. 63]

"Only insofar," Bookchin stresses, *"as the ecology consciously cultivates an anti-hierarchical and a non-domineering sensibility, structure, and strategy for social change can it retain its very identity as the voice for a new balance between humanity and nature and its goal for a truly ecological society."* Social ecologists contrast this to what Bookchin labels "*environmentalism*" for while social ecology "*seeks to eliminate the concept of the domination of nature by humanity by eliminating domination of human by human, environmentalism reflects an 'instrumentalist' or technical sensibility in which nature is viewed merely as a passive habit, an agglomeration of external objects and forces, that must be made more 'serviceable' for human use, irrespective of what these uses may be. Environmentalism . . . does not bring into question the underlying notions of the present society, notably that man must dominate nature. On the contrary, it seeks to facilitate that domination by developing techniques for diminishing the hazards caused by domination.*" [Murray Bookchin, **Towards an Ecological Society**, p. 77]

Social ecology offers the vision of a society in harmony with nature, one which "*involves a fundamental reversal of all the trends that mark the historic development of capitalist technology and bourgeois society -- the minute specialisation of machines and labour, the concentration of resources and people in gigantic industrial enterprises and urban entities, the stratification and bureaucratisation of nature*

*and human beings." Such an ecotopia "establish entirely new eco-communities that are artistically moulded to the eco-systems in which they are located." Echoing Kropotkin, Bookchin argues that "[s]uch an eco-community . . . would heal the split between town and country, between mind and body by fusing intellectual with physical work, industry with agricultural in a rotation or diversification of vocational tasks." This society would be based on the use of appropriate and green technology, a "new kind of technology -- or eco-technology -- one composed of flexible, versatile machinery whose productive applications would emphasise durability and quality, not built in obsolescence, and insensate quantitative output of shoddy goods, and a rapid circulation of expendable commodities . . . Such an eco-technology would use the inexhaustible energy capacities of nature -- the sun and wind, the tides and waterways, the temperature differentials of the earth and the abundance of hydrogen around us as fuels -- to provide the eco-community with non-polluting materials or wastes that could be recycled." [Bookchin, **Op. Cit.**, pp. 68-9]*

However, this is not all. As Bookchin stresses an ecological society *"is more than a society that tries to check the mounting disequilibrium that exists between humanity and the natural world. Reduced to simple technical or political issues, this anaemic view of such a society's function degrades the issues raised by an ecological critique and leads them to purely technical and instrumental approaches to ecological problems. Social ecology is, first of all, a **sensibility** that includes not only a critique of hierarchy and domination but a reconstructive outlook . . . guided by an ethics that emphasises variety without structuring differences into a hierarchical order . . . the precepts for such an ethics . . . [are] participation and differentiation."* [**The Modern Crisis**, pp. 24-5]

Therefore social ecologists consider it essential to attack hierarchy and capitalism, not civilisation as such as the root cause of ecological problems. This is one of the key areas in which they disagree with "Primitivist" Anarchist ideas, who tend to be far more critical of **all** aspects of modern life, with some going so far as calling for *"the end of civilisation"* including, apparently, all forms of technology and large scale organisation. We discuss these ideas in [section A.3.9](#).

We must note here that other anarchists, while generally agreeing with its analysis and suggestions, are deeply critical of Social Ecology's support for running candidates in municipal elections. While Social Ecologists see this as a means of creating popular self-managing assemblies and creating a counter power to the state, few anarchists agree. Rather they see it as inherently reformist as well as being hopelessly naive about the possibilities of using elections to bring about social change (see [section J.5.14](#) for a fuller discussion of this). Instead they propose direct action as the means to forward anarchist and ecological ideas, rejecting electioneering as a dead-end which ends up watering down radical ideas and corrupting the people involved (see section J.2 -- [What is Direct Action?](#)).

Lastly, there is "deep ecology," which, because of its bio-centric nature, many anarchists reject as anti-human. There are few anarchists who think that **people**, as people, are the cause of the ecological crisis, which many deep ecologists seem to suggest. Murray Bookchin, for example, has been particularly outspoken in his criticism of deep ecology and the anti-human ideas that are often associated with it (see **Which Way for the Ecology Movement?**, for example). David Watson has also argued against Deep

Ecology (see his **How Deep is Deep Ecology?** written under the name George Bradford). Most anarchists would argue that it is not people but the current system which is the problem, and that only people can change it. In the words of Murray Bookchin:

*"[Deep Ecology's problems] stem from an authoritarian streak in a crude biologism that uses 'natural law' to conceal an ever-diminishing sense of humanity and papers over a profound ignorance of social reality by ignoring the fact it is **capitalism** we are talking about, not an abstraction called 'Humanity' and 'Society.'"* [**The Philosophy of Social Ecology**, p. 160]

Thus, as Morris stresses, *"by focusing entirely on the category of 'humanity' the Deep Ecologists ignore or completely obscure the social origins of ecological problems, or alternatively, biologise what are essentially social problems."* To submerge ecological critique and analysis into a simplistic protest against the human race ignores the real causes and dynamics of ecological destruction and, therefore, ensures an end to this destruction cannot be found. Simply put, it is hardly "people" who are to blame when the vast majority have no real say in the decisions that affect their lives, communities, industries and eco-systems. Rather, it is an economic and social system that places profits and power above people and planet. By focusing on "Humanity" (and so failing to distinguish between rich and poor, men and women, whites and people of colour, exploiters and exploited, oppressors and oppressed) the system we live under is effectively ignored, and so are the institutional causes of ecological problems. This can be *"both reactionary and authoritarian in its implications, and substitutes a naive understanding of 'nature' for a critical study of real social issues and concerns."* [Morris, Op. Cit., p. 135]

Faced with a constant anarchist critique of certain of their spokes-persons ideas, many Deep Ecologists have turned away from the anti-human ideas associated with their movement. Deep ecology, particularly the organisation **Earth First!** (EF!), has changed considerably over time, and EF! now has a close working relationship with the **Industrial Workers of the World** (IWW), a syndicalist union. While deep ecology is not a thread of eco-anarchism, it shares many ideas and is becoming more accepted by anarchists as EF! rejects its few misanthropic ideas and starts to see that hierarchy, not the human race, is the problem (for a discussion between Murray Bookchin and leading Earth Firster! Dave Foreman see the book **Defending the Earth**).

A.3.4 Is anarchism pacifistic?

A pacifist strand has long existed in anarchism, with Leo Tolstoy being one of its major figures. This strand is usually called *"anarcho-pacifism"* (the term *"non-violent anarchist"* is sometimes used, but this term is unfortunate because it implies the rest of the movement are "violent," which is not the case!). The union of anarchism and pacifism is not surprising given the fundamental ideals and arguments of anarchism. After all, violence, or the threat of violence or harm, is a key means by which individual freedom is destroyed. As Peter Marshall points out, *"[g]iven the anarchist's respect for the sovereignty of the individual, in the long run it is non-violence and not violence which is implied by anarchist values."* [**Demanding the Impossible**, p.637] Malatesta is even more explicit when he wrote that the

"main plank of anarchism is the removal of violence from human relations" and that anarchists *"are opposed to violence."* [**Errico Malatesta: His Life and Ideas**, p. 53]

However, although many anarchists reject violence and proclaim pacifism, the movement, in general, is not essentially pacifistic (in the sense of opposed all forms of violence at all times). Rather, it is anti-militarist, being against the organised violence of the state but recognising that there are important differences between the violence of the oppressor and the violence of the oppressed. This explains why the anarchist movement has always placed a lot of time and energy in opposing the military machine and capitalist wars while, at the same time, supporting and organising armed resistance against oppression (as in the case of the Makhnovist army during the Russian Revolution which resisted both Red and White armies and the militias the anarchists organised to resist the fascists during the Spanish Revolution -- see sections [A.5.4](#) and [A.5.6](#), respectively).

On the question of non-violence, as a rough rule of thumb, the movement divides along Individualist and Social lines. Most Individualist anarchists support purely non-violent tactics of social change, as do the Mutualists. However, Individualist anarchism is not pacifist as such, as many support the idea of violence in self-defence against aggression. Most social anarchists, on the other hand, do support the use of revolutionary violence, holding that physical force will be required to overthrow entrenched power and to resist state and capitalist aggression (although it was an anarcho-syndicalist, Bart de Ligt, who wrote the pacifist classic, **The Conquest of Violence**). As Malatesta put it, violence, while being *"in itself an evil,"* is *"justifiable only when it is necessary to defend oneself and others from violence"* and that a *"slave is always in a state of legitimate defence and consequently, his violence against the boss, against the oppressor, is always morally justifiable."* [**Op. Cit.**, p. 55 and pp. 53-54] Moreover, they stress that, to use the words of Bakunin, since social oppression *"stems far less from individuals than from the organisation of things and from social positions"* anarchists aim to *"ruthlessly destroy positions and things"* rather than people, since the aim of an anarchist revolution is to see the end of privileged classes *"not as individuals, but as classes."* [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin** p. 121, p. 124 and p. 122]

Indeed, the question of violence is relatively unimportant to most anarchists, as they do not glorify it and think that it should be kept to a minimum during any social struggle or revolution. All anarchists would agree with the Dutch pacifist anarcho-syndicalist Bart de Ligt when he argued that *"the violence and warfare which are characteristic conditions of the capitalist world do not go with the liberation of the individual, which is the historic mission of the exploited classes. The greater the violence, the weaker the revolution, even where violence has deliberately been put at the service of the revolution."* [**The Conquest of Violence**, p. 75]

Similarly, all anarchists would agree with de Ligt on, to use the name of one of his book's chapters, *"the absurdity of bourgeois pacifism."* For de Ligt, and all anarchists, violence is inherent in the capitalist system and any attempt to make capitalism pacifistic is doomed to failure. This is because, on the one hand, war is often just economic competition carried out by other means. Nations often go to war when they face an economic crisis, what they cannot gain in economic struggle they attempt to get by conflict.

On the other hand, *"violence is indispensable in modern society. . . [because] without it the ruling class would be completely unable to maintain its privileged position with regard to the exploited masses in each country. The army is used first and foremost to hold down the workers. . . when they become discontented."* [Bart de Ligt, **Op. Cit.**, p. 62] As long as the state and capitalism exist, violence is inevitable and so, for anarcho-pacifists, the consistent pacifist must be an anarchist just as the consistent anarchist must be a pacifist.

For those anarchists who are non-pacifists, violence is seen as an unavoidable and unfortunate result of oppression and exploitation as well as the only means by which the privileged classes will renounce their power and wealth. Those in authority rarely give up their power and so must be forced. Hence the need for *"transitional" violence "to put an end to the far greater, and permanent, violence which keeps the majority of mankind in servitude."* [Malatesta, **Op. Cit.**, p. 55] To concentrate on the issue of violence versus non-violence is to ignore the real issue, namely how do we change society for the better. As Alexander Berkman pointed out, those anarchists who are pacifists confuse the issue, like those who think *"it's the same as if rolling up your sleeves for work should be considered the work itself."* To the contrary, *"[t]he fighting part of revolution is merely rolling up your sleeves. The real, actual task is ahead."* [**What is Anarchism?**, p. 183] And, indeed, most social struggle and revolutions start relatively peaceful (via strikes, occupations and so on) and only degenerate into violence when those in power try to maintain their position (a classic example of this is in Italy, in 1920, when the occupation of factories by their workers was followed by fascist terror -- see [section A.5.5](#)).

As noted above, all anarchists are anti-militarists and oppose both the military machine (and so the "defence" industry) as well as statist/capitalist wars (although a few anarchists, like Rudolf Rocker and Sam Dolgoff, supported the anti-fascist capitalist side during the second world war as the lesser evil). The anti-war machine message of anarchists and anarcho-syndicalists was propagated long before the start of the first world war, with syndicalists and anarchists in Britain and North America reprinting a French CGT leaflet urging soldiers not to follow orders and repress their striking fellow workers. Emma Goldman and Alexander Berkman were both arrested and deported from America for organising a *"No-Conscription League"* in 1917 while many anarchists in Europe were jailed for refusing to join the armed forces in the first and second world wars. The anarcho-syndicalist influenced IWW was crushed by a ruthless wave of government repression due to the threat its organising and anti-war message presented to the powerful elites who favoured war. More recently, anarchists, (including people like Noam Chomsky and Paul Goodman) have been active in the peace movement as well as contributing to the resistance to conscription where it still exists. Anarchists took an active part in opposing such wars as the Vietnam War, the Falklands war as well as the Gulf wars of 1991 and 2003 (including, in Italy and Spain, helping to organise strikes in protest against it). And it was during the 1991 Gulf War when many anarchists raised the slogan *"No war but the class war"* which nicely sums up the anarchist opposition to war -- namely an evil consequence of any class system, in which the oppressed classes of different countries kill each other for the power and profits of their rulers. Rather than take part in this organised slaughter, anarchists urge working people to fight for their own interests, not those of their masters:

"More than ever we must avoid compromise; deepen the chasm between capitalists and

wage slaves, between rulers and ruled; preach expropriation of private property and the destruction of states such as the only means of guaranteeing fraternity between peoples and Justice and Liberty for all; and we must prepare to accomplish these things." [Malatesta, **Op. Cit.**, p. 251]

We must note here that Malatesta's words were written in part against Peter Kropotkin who, for reasons best known to himself, rejected everything he had argued for decades and supported the allies in the First World War as a lesser evil against German authoritarianism and Imperialism. Of course, as Malatesta pointed out, "*all Governments and all capitalist classes*" do "*misdeeds . . . against the workers and rebels of their own countries.*" [**Op. Cit.**, p. 246] He, along with Berkman, Goldman and a host of other anarchists, put their name to International Anarchist Manifesto against the First World War. It expressed the opinion of the bulk of the anarchist movement (at the time and consequently) on war and how to stop it. It is worth quoting from:

"The truth is that the cause of wars . . . rests solely in the existence of the State, which is the form of privilege . . . Whatever the form it may assume, the State is nothing but organised oppression for the advantage of a privileged minority . . .

"The misfortune of the peoples, who were deeply attached to peace, is that, in order to avoid war, they placed their confidence in the State with its intriguing diplomatists, in democracy, and in political parties . . . This confidence has been deliberately betrayed, and continues to be so, when governments, with the aid of the whole of the press, persuade their respective people that this war is a war of liberation.

"We are resolutely against all wars between peoples, and . . . have been, are, and ever will be most energetically opposed to war.

"The role of the Anarchists . . . is to continue to proclaim that there is only one war of liberation: that which in all countries is waged by the oppressed against the oppressors, by the exploited against the exploiters. Our part is to summon the slaves to revolt against their masters.

"Anarchist action and propaganda should assiduously and perseveringly aim at weakening and dissolving the various States, at cultivating the spirit of revolt, and arousing discontent in peoples and armies. . .

*"We must take advantage of all the movements of revolt, of all the discontent, in order to foment insurrection, and to organise the revolution which we look to put end to all social wrongs. . . Social justice realised through the free organisation of producers: war and militarism done away with forever; and complete freedom won, by the abolition of the State and its organs of destruction." ["International Anarchist Manifesto on the War," **Anarchy! An Anthology of Emma Goldman's Mother Earth**, pp. 386-8]*

Thus, the attraction of pacifism to anarchists is clear. Violence **is** authoritarian and coercive, and so its use does contradict anarchist principles. That is why anarchists would agree with Malatesta when he argues that "*[w]e are on principle opposed to violence and for this reason wish that the social struggle should be conducted as humanely as possible.*" [Malatesta, **Op. Cit.**, p. 57] Most, if not all, anarchists who are not strict pacifists agree with pacifist-anarchists when they argue that violence can often be counterproductive, alienating people and giving the state an excuse to repress both the anarchist movement and popular movements for social change. All anarchists support non-violent direct action and civil disobedience, which often provide better roads to radical change.

So, to sum up, anarchists who are pure pacifists are rare. Most accept the use of violence as a necessary evil and advocate minimising its use. All agree that a revolution which **institutionalises** violence will just recreate the state in a new form. They argue, however, that it is not authoritarian to destroy authority or to use violence to resist violence. Therefore, although most anarchists are not pacifists, most reject violence except in self-defence and even then kept to the minimum.

A.3.5 What is Anarcha-Feminism?

Although opposition to the state and all forms of authority had a strong voice among the early feminists of the 19th century, the more recent feminist movement which began in the 1960's was founded upon anarchist practice. This is where the term anarcha-feminism came from, referring to women anarchists who act within the larger feminist and anarchist movements to remind them of their principles.

The modern anarcha-feminists built upon the feminist ideas of previous anarchists, both male and female. Indeed, anarchism and feminism have always been closely linked. Many outstanding feminists have also been anarchists, including the pioneering Mary Wollstonecraft (author of **A Vindication of the Rights of Woman**), the Commune Louise Michel, and the American anarchists Voltairine de Cleyre and the tireless champion of women's freedom, Emma Goldman (see her famous essays "*The Traffic in Women*", "*Woman Suffrage*", "*The Tragedy of Woman's Emancipation*", "*Marriage and Love*" and "*Victims of Morality*", for example). **Freedom**, the world's oldest anarchist newspaper, was founded by Charlotte Wilson in 1886. Anarchist women like Virgilia D'Andrea and Rose Pesota played important roles in both the libertarian and labour movements. The "**Mujeres Libres**" ("*Free Women*") movement in Spain during the Spanish revolution is a classic example of women anarchists organising themselves to defend their basic freedoms and create a society based on women's freedom and equality (see **Free Women of Spain** by Martha Ackelsberg for more details on this important organisation). In addition, all the male major anarchist thinkers (bar Proudhon) were firm supporters of women's equality. For example, Bakunin opposed patriarchy and how the law "*subjects [women] to the absolute domination of the man.*" He argued that "*[e]qual rights must belong to men and women*" so that women can "*become independent and be free to forge their own way of life.*" He looked forward to the end of "*the authoritarian juridical family*" and "*the full sexual freedom of women.*" [**Bakunin on Anarchism**, p. 396 and p. 397]

Thus anarchism has since the 1860s combined a radical critique of capitalism and the state with an equally powerful critique of patriarchy (rule by men). Anarchists, particularly female ones, recognised that modern society was dominated by men. As Ana Maria Mozzoni (an Italian anarchist immigrant in Buenos Aires) put it, women *"will find that the priest who damns you is a man; that the legislator who oppresses you is a man, that the husband who reduces you to an **object** is a man; that the libertine who harasses you is a man; that the capitalist who enriches himself with your ill-paid work and the speculator who calmly pockets the price of your body, are men."* Little has changed since then. Patriarchy still exists and, to quote the anarchist paper **La Questione Sociale**, it is still usually the case that women *"are slaves both in social and private life. If you are a proletarian, you have two tyrants: the man and the boss. If bourgeois, the only sovereignty left to you is that of frivolity and coquetry."* [quoted by Jose Moya, **Italians in Buenos Aires's Anarchist Movement**, pp. 197-8 and p. 200]

Anarchism, therefore, is based on an awareness that fighting patriarchy is as important as fighting against the state or capitalism. To quote Louise Michel:

"The first thing that must change is the relationship between the sexes. Humanity has two parts, men and women, and we ought to be walking hand in hand; instead there is antagonism, and it will last as long as the 'stronger' half controls, or think its controls, the 'weaker' half." [**The Red Virgin: Memoirs of Louise Michel**, p. 139]

Thus anarchism, like feminism, fights patriarchy and for women's equality. Both share much common history and a concern about individual freedom, equality and dignity for members of the female sex (although, as we will explain in more depth below, anarchists have always been very critical of mainstream/liberal feminism as not going far enough). Therefore, it is unsurprising that the new wave of feminism of the sixties expressed itself in an anarchistic manner and drew much inspiration from anarchist figures such as Emma Goldman. Cathy Levine points out that, during this time, *"independent groups of women began functioning without the structure, leaders, and other factotums of the male left, creating, independently and simultaneously, organisations similar to those of anarchists of many decades and regions. No accident, either."* [*The Tyranny of Tyranny*, **Quiet Rumours: An Anarcha-Feminist Reader**, p. 66] It is no accident because, as feminist scholars have noted, women were among the first victims of hierarchical society, which is thought to have begun with the rise of patriarchy and ideologies of domination during the late Neolithic era. Marilyn French argues (in **Beyond Power**) that the first major social stratification of the human race occurred when men began dominating women, with women becoming in effect a "lower" and "inferior" social class.

The links between anarchism and modern feminism exist in both ideas and action. Leading feminist thinker Carole Pateman notes that her "discussion [on contract theory and its authoritarian and patriarchal basis] owes something to" libertarian ideas, that is the *"anarchist wing of the socialist movement."* [**The Sexual Contract**, p. 14] Moreover, she noted in the 1980s how the *"major locus of criticism of authoritarian, hierarchical, undemocratic forms of organisation for the last twenty years has been the women's movement . . . After Marx defeated Bakunin in the First International, the prevailing form of organisation in the labour movement, the nationalised industries and in the left sects has mimicked the hierarchy of the state . . . The women's movement has rescued and put into practice the*

long-submerged idea [of anarchists like Bakunin] that movements for, and experiments in, social change must 'prefigure' the future form of social organisation." [**The Disorder of Women**, p. 201]

Peggy Kornegger has drawn attention to these strong connections between feminism and anarchism, both in theory and practice. *"The radical feminist perspective is almost pure anarchism,"* she writes. *"The basic theory postulates the nuclear family as the basis of all authoritarian systems. The lesson the child learns, from father to teacher to boss to god, is to **obey** the great anonymous voice of Authority. To graduate from childhood to adulthood is to become a full-fledged automaton, incapable of questioning or even of thinking clearly."* ["Anarchism: The Feminist Connection," **Quiet Rumours: An Anarcha-Feminist Reader**, p. 26] Similarly, the Zero Collective argues that Anarcha-feminism *"consists in recognising the anarchism of feminism and consciously developing it."* ["Anarchism/Feminism," pp. 3-7, **The Raven**, no. 21, p. 6]

Anarcha-feminists point out that authoritarian traits and values, for example, domination, exploitation, aggressiveness, competitiveness, desensitisation etc., are highly valued in hierarchical civilisations and are traditionally referred to as "masculine." In contrast, non-authoritarian traits and values such as co-operation, sharing, compassion, sensitivity, warmth, etc., are traditionally regarded as "feminine" and are devalued. Feminist scholars have traced this phenomenon back to the growth of patriarchal societies during the early Bronze Age and their conquest of co-operatively based "organic" societies in which "feminine" traits and values were prevalent and respected. Following these conquests, however, such values came to be regarded as "inferior," especially for a man, since men were in charge of domination and exploitation under patriarchy. (See e.g. Riane Eisler, **The Chalice and the Blade**; Elise Boulding, **The Underside of History**). Hence anarcha-feminists have referred to the creation of a non-authoritarian, anarchist society based on co-operation, sharing, mutual aid, etc. as the "feminisation of society."

Anarcha-feminists have noted that "feminising" society cannot be achieved without both self-management and decentralisation. This is because the patriarchal-authoritarian values and traditions they wish to overthrow are embodied and reproduced in hierarchies. Thus feminism implies decentralisation, which in turn implies self-management. Many feminists have recognised this, as reflected in their experiments with collective forms of feminist organisations that eliminate hierarchical structure and competitive forms of decision making. Some feminists have even argued that directly democratic organisations are specifically female political forms. [see e.g. Nancy Hartsock *"Feminist Theory and the Development of Revolutionary Strategy,"* in Zeila Eisenstein, ed., **Capitalist Patriarchy and the Case for Socialist Feminism**, pp. 56-77] Like all anarchists, anarcha-feminists recognise that self-liberation is the key to women's equality and thus, freedom. Thus Emma Goldman:

"Her development, her freedom, her independence, must come from and through herself. First, by asserting herself as a personality, and not as a sex commodity. Second, by refusing the right of anyone over her body; by refusing to bear children, unless she wants them, by refusing to be a servant to God, the State, society, the husband, the family, etc., by making her life simpler, but deeper and richer. That is, by trying to learn the meaning and substance of life in all its complexities; by freeing herself from the fear of public

opinion and public condemnation." [**Anarchism and Other Essays**, p. 211]

Anarcha-feminism tries to keep feminism from becoming influenced and dominated by authoritarian ideologies of either the right or left. It proposes direct action and self-help instead of the mass reformist campaigns favoured by the "official" feminist movement, with its creation of hierarchical and centralist organisations and its illusion that having more women bosses, politicians, and soldiers is a move towards "equality." Anarcha-feminists would point out that the so-called "management science" which women have to learn in order to become managers in capitalist companies is essentially a set of techniques for controlling and exploiting wage workers in corporate hierarchies, whereas "feminising" society requires the elimination of capitalist wage-slavery and managerial domination altogether. Anarcha-feminists realise that learning how to become an effective exploiter or oppressor is not the path to equality (as one member of the *Mujeres Libres* put it, "[w]e did not want to substitute a feminist hierarchy for a masculine one" [quoted by Martha A. Ackelsberg, **Free Women of Spain**, p. 2] -- also see [section B.1.4](#) for a further discussion on patriarchy and hierarchy).

Hence anarchism's traditional hostility to liberal (or mainstream) feminism, while supporting women's liberation and equality. Federica Montseny (a leading figure in the Spanish Anarchist movement) argued that such feminism advocated equality for women, but did not challenge existing institutions. She argued that (mainstream) feminism's "*only ambition is to give to women of a particular class the opportunity to participate more fully in the existing system of privilege*" and if these institutions "*are unjust when men take advantage of them, they will still be unjust if women take advantage of them.*" [quoted by Martha A. Ackelsberg, *Op. Cit.*, pp. 90-91 and p. 91] Thus, for anarchists, women's freedom did not mean an equal chance to become a boss or a wage slave, a voter or a politician, but rather to be a free and equal individual co-operating as equals in free associations. "*Feminism,*" stressed Peggy Kornegger, "*doesn't mean female corporate power or a women President; it means no corporate power and no Presidents. The Equal Rights Amendment will not transform society; it only gives women the 'right' to plug into a hierarchical economy. Challenging sexism means challenging all hierarchy -- economic, political, and personal.. And that means an anarcha-feminist revolution.*" [**Op. Cit.**, p. 27]

Anarchism, as can be seen, included a class and economic analysis which is missing from mainstream feminism while, at the same time, showing an awareness to domestic and sex-based power relations which eluded the mainstream socialist movement. This flows from our hatred of hierarchy. As Mozzoni put it, "*Anarchy defends the cause of all the oppressed, and because of this, and in a special way, it defends your [women's] cause, oh! women, doubly oppressed by present society in both the social and private spheres.*" [quoted by Moya, **Op. Cit.**, p. 203] This means that, to quote a Chinese anarchist, what anarchists "*mean by equality between the sexes is not just that the men will no longer oppress women. We also want men to no longer to be oppressed by other men, and women no longer to be oppressed by other women.*" Thus women should "*completely overthrow rulership, force men to abandon all their special privileges and become equal to women, and make a world with neither the oppression of women nor the oppression of men.*" [He Zhen, quoted by Peter Zarrow, **Anarchism and Chinese Political Culture**, p. 147]

So, in the historic anarchist movement, as Martha Ackelsberg notes, liberal/mainstream feminism was considered as being *"too narrowly focused as a strategy for women's emancipation; sexual struggle could not be separated from class struggle or from the anarchist project as a whole."* [Op. Cit., p. 91] Anarcha-feminism continues this tradition by arguing that all forms of hierarchy are wrong, not just patriarchy, and that feminism is in conflict with its own ideals if it desires simply to allow women to have the same chance of being a boss as a man does. They simply state the obvious, namely that they *"do not believe that power in the hands of women could possibly lead to a non-coercive society"* nor do they *"believe that anything good can come out of a mass movement with a leadership elite."* The *"central issues are always power and social hierarchy"* and so people *"are free only when they have power over their own lives."* [Carole Ehrlich, *"Socialism, Anarchism and Feminism"*, **Quiet Rumours: An Anarcha-Feminist Reader**, p. 44] For if, as Louise Michel put it, *"a proletarian is a slave; the wife of a proletarian is even more a slave"* ensuring that the wife experiences an equal level of oppression as the husband misses the point. [Op. Cit., p. 141]

Anarcha-feminists, therefore, like all anarchists oppose capitalism as a denial of liberty. The ideal that an "equal opportunity" capitalism would free women ignores the fact that any such system would still see working class women oppressed by bosses (be they male or female). For anarcha-feminists, the struggle for women's liberation cannot be separated from the struggle against hierarchy **as such**. As L. Susan Brown puts it:

"Anarchist-feminism, as an expression of the anarchist sensibility applied to feminist concerns, takes the individual as its starting point and, in opposition to relations of domination and subordination, argues for non-instrumental economic forms that preserve individual existential freedom, for both men and women." [**The Politics of Individualism**, p. 144]

Anarcha-feminists have much to contribute to our understanding of the origins of the ecological crisis in the authoritarian values of hierarchical civilisation. For example, a number of feminist scholars have argued that the domination of nature has paralleled the domination of women, who have been identified with nature throughout history (See, for example, Caroline Merchant, **The Death of Nature**, 1980). Both women and nature are victims of the obsession with control that characterises the authoritarian personality. For this reason, a growing number of both radical ecologists and feminists are recognising that hierarchies must be dismantled in order to achieve their respective goals.

In addition, anarcha-feminism reminds us of the importance of treating women equally with men while, at the same time, respecting women's differences from men. In other words, that recognising and respecting diversity includes women as well as men. Too often many male anarchists assume that, because they are (in theory) opposed to sexism, they are not sexist in practice. Such an assumption is false. Anarcha-feminism brings the question of consistency between theory and practice to the front of social activism and reminds us all that we must fight not only external constraints but also internal ones.

This means that anarcha-feminism urges us to practice what we preach. Faced with the sexism of male

anarchists who spoke of sexual equality, women anarchists in Spain organised themselves into the **Mujeres Libres** organisation to combat it. They did not believe in leaving their liberation to some day after the revolution. Their liberation was an integral part of that revolution and had to be started today. In this they repeated the conclusions of anarchist women in Illinois Coal towns who grew tired of hearing their male comrades "*shout in favour*" of sexual equality "*in the future society*" while doing nothing about it in the here and now. They used a particularly insulting analogy, comparing their male comrades to priests who "*make false promises to the starving masses . . . [that] there will be rewards in paradise.*" They argued that mothers should make their daughters "*understand that the difference in sex does not imply inequality in rights*" and that as well as being "*rebels against the social system of today,*" they "*should fight especially against the oppression of men who would like to retain women as their moral and material inferior.*" [Ersilia Grandi, quoted by Caroline Waldron Merithew, **Anarchist Motherhood**, p. 227] They formed the "**Luisa Michel**" group to fight against capitalism and patriarchy in the upper Illinois valley coal towns over three decades before their Spanish comrades organised themselves.

For anarchy-feminists, combating sexism is a key aspect of the struggle for freedom. It is not, as many Marxist socialists argued before the rise of feminism, a diversion from the "real" struggle against capitalism which would somehow be automatically solved after the revolution. It is an essential part of the struggle:

"We do not need any of your titles . . . We want none of them. What we do want is knowledge and education and liberty. We know what our rights are and we demand them. Are we not standing next to you fighting the supreme fight? Are you not strong enough, men, to make part of that supreme fight a struggle for the rights of women? And then men and women together will gain the rights of all humanity." [Louise Michel, **Op. Cit.**, p. 142]

A key part of this revolutionising modern society is the transformation of the current relationship between the sexes. Marriage is a particular evil for "*the old form of marriage, based on the Bible, 'till death doth part, ' . . . [is] an institution that stands for the sovereignty of the man over the women, of her complete submission to his whims and commands.*" Women are reduced "*to the function of man's servant and bearer of his children.*" [Goldman, **Op. Cit.**, pp. 220-1] Instead of this, anarchists proposed "**free love**," that is couples and families based on free agreement between equals than one partner being in authority and the other simply obeying.. Such unions would be without sanction of church or state for "*two beings who love each other do not need permission from a third to go to bed.*" [Mozzoni, quoted by Moya, **Op. Cit.**, p. 200]

Equality and freedom apply to more than just relationships. Neither men nor state should say what a woman does with her body. This means that a woman should control her own body and, of course, also means control over her own reproductive organs. Thus anarchy-feminists, like anarchists in general, are pro-choice and pro-reproductive rights (i.e. the right of a woman to control her own reproductive decisions). This is a long standing position. Emma Goldman was persecuted and incarcerated because of her public advocacy of birth control methods and the extremist notion that women should decide when they become pregnant (as feminist writer Margaret Anderson put it, "*In 1916, Emma Goldman was sent*

to prison for advocating that 'women need not always keep their mouth shut and their wombs open.'").

Anarcha-feminism does not stop there. Like anarchism in general, it aims at changing **all** aspects of society not just what happens in the home. For, as Goldman asked, "*how much independence is gained if the narrowness and lack of freedom of the home is exchanged for the narrowness and lack of freedom of the factory, sweat-shop, department store, or office?*" Thus women's equality and freedom had to be fought everywhere and defended against all forms of hierarchy. Nor can they be achieved by voting. Real liberation, argue anarcha-feminists, is only possible by direct action and anarcha-feminism is based on women's self-activity and self-liberation for while the "*right to vote, or equal civil rights, may be good demands . . . true emancipation begins neither at the polls nor in the courts. It begins in woman's soul . . . her freedom will reach as far as her power to achieve freedom reaches.*" [Goldman, **Op. Cit.**, p. 216 and p. 224]

The history of the women's movement proves this. Every gain has come from below, by the action of women themselves. As Louise Michel put it, "*[w]e women are not bad revolutionaries. Without begging anyone, we are taking our place in the struggles; otherwise, we could go ahead and pass motions until the world ends and gain nothing.*" [**Op. Cit.**, p. 139] If women waited for others to act for them their social position would never have changed. This includes getting the vote in the first place. Faced with the militant suffrage movement for women's votes, British anarchist Rose Witcop recognised that it was "*true that this movement shows us that women who so far have been so submissive to their masters, the men, are beginning to wake up at last to the fact they are not inferior to those masters.*" Yet she argued that women would not be freed by votes but "*by their own strength.*" [quoted by Sheila Rowbotham, **Hidden from History**, pp. 100-1 and p. 101] The women's movement of the 1960s and 1970s showed the truth of that analysis. In spite of equal voting rights, women's social place had remained unchanged since the 1920s.

Ultimately, as Anarchist Lily Gair Wilkinson stressed, the "*call for 'votes' can never be a call to freedom. For what is it to vote? To vote is to register assent to being ruled by one legislator or another?*" [quoted by Sheila Rowbotham, **Op. Cit.**, p. 102] It does not get to the heart of the problem, namely hierarchy and the authoritarian social relationships it creates of which patriarchy is only a subset of. Only by getting rid of all bosses, political, economic, social and sexual can **genuine** freedom for women be achieved and "*make it possible for women to be human in the truest sense. Everything within her that craves assertion and activity should reach its fullest expression; all artificial barriers should be broken, and the road towards greater freedom cleared of every trace of centuries of submission and slavery.*" [Emma Goldman, **Op. Cit.**, p. 214]

A.3.6 What is Cultural Anarchism?

For our purposes, we will define cultural anarchism as the promotion of anti-authoritarian values through those aspects of society traditionally regarded as belonging to the sphere of "culture" rather than "economics" or "politics" -- for example, through art, music, drama, literature, education, child-rearing practices, sexual morality, technology, and so forth.

Cultural expressions are anarchistic to the extent that they deliberately attack, weaken, or subvert the tendency of most traditional cultural forms to promote authoritarian values and attitudes, particularly domination and exploitation. Thus a novel that portrays the evils of militarism can be considered as cultural anarchism if it goes beyond the simple "war-is-hell" model and allows the reader to see how militarism is connected with authoritarian institutions (e.g. capitalism and statism) or methods of authoritarian conditioning (e.g. upbringing in the traditional patriarchal family). Or, as John Clark expresses it, cultural anarchism implies *"the development of arts, media, and other symbolic forms that expose various aspects of the system of domination and contrast them with a system of values based on freedom and community."* This **"cultural struggle"** would be part of a general struggle *"to combat the material and ideological power of all dominating classes, whether economic, political, racial, religious, or sexual, with a multi-dimensional practice of liberation."* In other words, an *"expanded conception of class analysis"* and *"an amplified practice of class struggle"* which includes, but is not limited to, *"economic actions like strikes, boycotts, job actions, occupation, organisations of direct action groups and federations of libertarian workers' groups and development of workers' assemblies, collectives and co-operatives"* and *"political activity"* like the *"active interference with implementation of repressive governmental policies,"* the *"non-compliance and resistance against regimentation and bureaucratisation of society"* and *"participation in movements for increasing direct participation in decision-making and local control."* [**The Anarchist Moment**, p. 31]

Cultural anarchism is important -- indeed essential -- because authoritarian values are embedded in a total system of domination with many aspects besides the political and economic. Hence those values cannot be eradicated even by a combined economic and political revolution if there it is not also accompanied by profound psychological changes in the majority of the population. For mass acquiescence in the current system is rooted in the psychic structure of human beings (their *"character structure,"* to use Wilhelm Reich's expression), which is produced by many forms of conditioning and socialisation that have developed with patriarchal-authoritarian civilisation during the past five or six thousand years.

In other words, even if capitalism and the state were overthrown tomorrow, people would soon create new forms of authority in their place. For authority -- a strong leader, a chain of command, someone to give orders and relieve one of the responsibility of thinking for oneself -- are what the submissive/authoritarian personality feels most comfortable with. Unfortunately, the majority of human beings fear real freedom, and indeed, do not know what to do with it -- as is shown by a long string of failed revolutions and freedom movements in which the revolutionary ideals of freedom, democracy, and equality were betrayed and a new hierarchy and ruling class were quickly created. These failures are generally attributed to the machinations of reactionary politicians and capitalists, and to the perfidy of revolutionary leaders; but reactionary politicians only attract followers because they find a favourable soil for the growth of their authoritarian ideals in the character structure of ordinary people.

Hence the prerequisite of an anarchist revolution is a period of consciousness-raising in which people gradually become aware of submissive/authoritarian traits within themselves, see how those traits are reproduced by conditioning, and understand how they can be mitigated or eliminated through new forms

of culture, particularly new child-rearing and educational methods. We will explore this issue more fully in section B.1.5 ([What is the mass-psychological basis for authoritarian civilisation?](#)), J.6 ([What methods of child rearing do anarchists advocate?](#)), and J.5.13 ([What are Modern Schools?](#))

Cultural anarchist ideas are shared by almost all schools of anarchist thought and consciousness-raising is considered an essential part of any anarchist movement. For anarchists, its important to *"build the new world in the shell of the old"* in all aspects of our lives and creating an anarchist culture is part of that activity. Few anarchists, however, consider consciousness-raising as enough in itself and so combine cultural anarchist activities with organising, using direct action and building libertarian alternatives in capitalist society. The anarchist movement is one that combines practical self-activity with cultural work, with both activities feeding into and supporting the other.

A.3.7 Are there religious anarchists?

Yes, there are. While most anarchists have opposed religion and the idea of God as deeply anti-human and a justification for earthly authority and slavery, a few believers in religion have taken their ideas to anarchist conclusions. Like all anarchists, these religious anarchists have combined an opposition to the state with a critical position with regards to private property and inequality. In other words, anarchism is not necessarily atheistic. Indeed, according to Jacques Ellul, *"biblical thought leads directly to anarchism, and that this is the only 'political anti-political' position in accord with Christian thinkers."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 75]

There are many different types of anarchism inspired by religious ideas. As Peter Marshall notes, the *"first clear expression of an anarchist sensibility may be traced back to the Taoists in ancient China from about the sixth century BC"* and *"Buddhism, particularly in its Zen form, . . . has . . . a strong libertarian spirit."* [**Op. Cit.**, p. 53 and p. 65] Some, like the anti-globalisation activist Starhawk, combine their anarchist ideas with Pagan and Spiritualist influences. However, religious anarchism usually takes the form of Christian Anarchism, which we will concentrate on here.

Christian Anarchists take seriously Jesus' words to his followers that *"kings and governors have domination over men; let there be none like that among you."* Similarly, Paul's dictum that there *"is no authority except God"* is taken to its obvious conclusion with the denial of state authority within society. Thus, for a true Christian, the state is usurping God's authority and it is up to each individual to govern themselves and discover that (to use the title of Tolstoy's famous book) **The Kingdom of God is within you.**

Similarly, the voluntary poverty of Jesus, his comments on the corrupting effects of wealth and the Biblical claim that the world was created for humanity to be enjoyed in common have all been taken as the basis of a socialistic critique of private property and capitalism. Indeed, the early Christian church (which could be considered as a liberation movement of slaves, although one that was later co-opted into a state religion) was based upon communistic sharing of material goods, a theme which has continually appeared within radical Christian movements (indeed, the Bible would have been used to express radical

libertarian aspirations of the oppressed, which, in later times, would have taken the form of anarchist or Marxist terminology). Thus clergyman's John Ball's egalitarian comments (as quoted by Peter Marshall [Op. Cit., p. 89]) during the Peasant Revolt in 1381 in England:

*"When Adam delved and Eve span,
Who was then a gentleman?"*

The history of Christian anarchism includes the *Heresy of the Free Spirit* in the Middle Ages, numerous Peasant revolts and the *Anabaptists* in the 16th century. The libertarian tradition within Christianity surfaced again in the 18th century in the writings of William Blake and the American Adam Ballou reached anarchist conclusions in his *Practical Christian Socialism* in 1854. However, Christian anarchism became a clearly defined thread of the anarchist movement with the work of the famous Russian author Leo Tolstoy.

Tolstoy took the message of the Bible seriously and came to consider that a true Christian must oppose the state. From his reading of the Bible, Tolstoy drew anarchist conclusions:

"ruling means using force, and using force means doing to him whom force is used, what he does not like and what he who uses force would certainly not like done to himself. Consequently ruling means doing to others what we would not they should do unto us, that is, doing wrong." [**The Kingdom of God is Within You**, p. 242]

Thus a true Christian must refrain from governing others. From this anti-statist position he naturally argued in favour of a society self-organised from below:

"Why think that non-official people could not arrange their life for themselves, as well as Government people can arrange it nor for themselves but for others?" [**The Anarchist Reader**, p. 306]

Tolstoy urged non-violent action against oppression, seeing a spiritual transformation of individuals as the key to creating an anarchist society. As Max Nettlau argues, the *"great truth stressed by Tolstoy is that the recognition of the power of the good, of goodness, of solidarity - and of all that is called love - lies within ourselves, and that it can and must be awakened, developed and exercised in our own behaviour."* [**A Short History of Anarchism**, pp. 251-2]

Like all anarchists, Tolstoy was critical of private property and capitalism. Like Henry George (whose ideas, like those of Proudhon, had a strong impact on him) he opposed private property in land, arguing that *"were it not for the defence of landed property, and its consequent rise in price, people would not be crowded into such narrow spaces, but would scatter over the free land of which there is still so much in the world."* Moreover, *"in this struggle [for landed property] it is not those who work in the land, but always those who take part in government violence, who have the advantage."* [Op. Cit., p. 307] Thus Tolstoy recognised that property rights in anything beyond use require state violence to protect them

(possession is "always protected by custom, public opinion, by feelings of justice and reciprocity, and they do not need to be protected by violence." [**Ibid.**]). Indeed, he argues that:

"Tens of thousands of acres of forest lands belonging to one proprietor -- while thousands of people close by have no fuel -- need protection by violence. So, too, do factories and works where several generations of workmen have been defrauded and are still being defrauded. Yet more do the hundreds of thousands of bushels of grain, belonging to one owner, who has held them back to sell at triple price in time of famine." [Op. Cit., p. 307]

Tolstoy argued that capitalism morally and physically ruined individuals and that capitalists were "slave-drivers." He considered it impossible for a true Christian to be a capitalist, for a "manufacturer is a man whose income consists of value squeezed out of the workers, and whose whole occupation is based on forced, unnatural labour" and therefore, "he must first give up ruining human lives for his own profit." [**The Kingdom Of God is Within You**, p. 338 and p. 339] Unsurprisingly, Tolstoy argued that co-operatives were the "only social activity which a moral, self-respecting person who doesn't want to be a party of violence can take part in." [quoted by Peter Marshall, **Op. Cit.**, p. 378]

From his opposition to violence, Tolstoy rejects both state and private property and urged pacifist tactics to end violence within society and create a just society. In Nettlau's words, he "asserted . . . **resistance to evil**; and to one of the ways of resistance - by active force - he added another way: **resistance through disobedience, the passive force.**" [**Op. Cit.**, p. 251] In his ideas of a free society, Tolstoy was clearly influenced by rural Russian life **and** the works of Peter Kropotkin (such as **Fields, Factories and Workshops**), P-J Proudhon and the non-anarchist Henry George.

Tolstoy's ideas had a strong influence on Gandhi, who inspired his fellow country people to use non-violent resistance to kick Britain out of India. Moreover, Gandhi's vision of a free India as a federation of peasant communes is similar to Tolstoy's anarchist vision of a free society (although we must stress that Gandhi was not an anarchist). The **Catholic Worker Group** in the United States was also heavily influenced by Tolstoy (and Proudhon), as was Dorothy Day a staunch Christian pacifist and anarchist who founded it in 1933. The influence of Tolstoy and religious anarchism in general can also be found in **Liberation Theology** movements in Latin and South America who combine Christian ideas with social activism amongst the working class and peasantry (although we should note that Liberation Theology is more generally inspired by state socialist ideas rather than anarchist ones).

So there is a minority tradition within anarchism which draws anarchist conclusions from religion. However, as we noted in [section A.2.20](#), most anarchists disagree, arguing that anarchism implies atheism and it is no coincidence that the biblical thought has, historically, been associated with hierarchy and defence of earthly rulers. Thus the vast majority of anarchists have been and are atheists, for "to worship or revere any being, natural or supernatural, will always be a form of self-subjugation and servitude that will give rise to social domination. As [Bookchin] writes: 'The moment that human beings fall on their knees before anything that is 'higher' than themselves, hierarchy will have made its first triumph over freedom.'" [Brian Morris, **Ecology and Anarchism**, p. 137] This means that most

anarchists agree with Bakunin that if God existed it would be necessary, for human freedom and dignity, to abolish it. Given what the Bible says, few anarchists think it can be used to justify libertarian ideas rather than support authoritarian ones.

Atheist anarchists point to the fact that the Bible is notorious for advocating all kinds of abuses. How does the Christian anarchist reconcile this? Are they a Christian first, or an anarchist? Equality, or adherence to the Scripture? For a believer, it seems no choice at all. If the Bible is the word of God, how can an anarchist support the more extreme positions it takes while claiming to believe in God, his authority and his laws?

For example, no capitalist nation would implement the no working on the Sabbath law which the Bible expounds. Most Christian bosses have been happy to force their fellow believers to work on the seventh day in spite of the Biblical penalty of being stoned to death (*"Six days shall work be done, but on the seventh day there shall be to you an holy day, a sabbath of rest to the Lord: whosoever doeth work therein shall be put to death."* Exodus 35:2). Would a Christian anarchist advocate such a punishment for breaking God's law? Equally, a nation which allowed a woman to be stoned to death for not being a virgin on her wedding night would, rightly, be considered utterly evil. Yet this is the fate specified in the "good book" (Deuteronomy 22:13-21). Would premarital sex by women be considered a capital crime by a Christian anarchist? Or, for that matter, should *"a stubborn and rebellious son, which will not obey the voice of his father, or the voice of his mother"* also suffer the fate of having *"all the men of his city . . . stone him with stones, that he die"*? (Deuteronomy 21:18-21) Or what of the Bible's treatment of women: *"Wives, submit yourselves unto your own husbands."* (Colossians 3:18) They are also ordered to *"keep silence in the churches."* (I Corinthians 14:34-35). Male rule is explicitly stated: *"I would have you know that the head of every man is Christ; and the head of the woman is the man; and the head of Christ is God."* (I Corinthians 11:3)

Clearly, a Christian anarchist would have to be as highly selective as non-anarchist believers when it comes to applying the teachings of the Bible. The rich rarely proclaim the need for poverty (at least for themselves) and seem happy to forget (like the churches) the difficulty a rich man apparently has entering heaven, for example. They seem happy to ignore Jesus' admonition that *"If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me."* (Matthew 19:21). The followers of the Christian right do not apply this to their political leaders, or, for that matter, their spiritual ones. Few apply the maxim to *"Give to every man that asketh of thee; and of him that taketh away thy goods ask them not again."* (Luke 6:30, repeated in Matthew 5:42) Nor do they hold *"all things common"* as practised by the first Christian believers. (Acts 4:32) So if non-anarchist believers are to be considered as ignoring the teachings of the Bible by anarchist ones, the same can be said of them by those they attack.

Moreover idea that Christianity is basically anarchism is hard to reconcile with its history. The Bible has been used to defend injustice far more than it has been to combat it. In countries where Churches hold **de facto** political power, such as in Ireland, in parts of South America, in nineteenth and early twentieth century Spain and so forth, typically anarchists are strongly anti-religious because the Church has the power to suppress dissent and class struggle. Thus the actual role of the Church belies the claim that the

Bible is an anarchist text.

In addition, most social anarchists consider Tolstoyian pacifism as dogmatic and extreme, seeing the need (sometimes) for violence to resist greater evils. However, most anarchists would agree with Tolstoyians on the need for individual transformation of values as a key aspect of creating an anarchist society and on the importance of non-violence as a general tactic (although, we must stress, that few anarchists totally reject the use of violence in self-defence, when no other option is available).

A.3.8 What is "*anarchism without adjectives*"?

In the words of historian George Richard Esenwein, "*anarchism without adjectives*" in its broadest sense "*referred to an unhyphenated form of anarchism, that is, a doctrine without any qualifying labels such as communist, collectivist, mutualist, or individualist. For others, . . . [it] was simply understood as an attitude that tolerated the coexistence of different anarchist schools.*" [**Anarchist Ideology and the Working Class Movement in Spain, 1868-1898**, p. 135]

The originator of the expression was Cuban born Fernando Tarrida del Marmol who used it in November, 1889, in Barcelona. He directed his comments towards the communist and collectivist anarchists in Spain who at the time were having an intense debate over the merits of their two theories. "Anarchism without adjectives" was an attempt to show greater tolerance between anarchist tendencies and to be clear that anarchists should not impose a preconceived economic plan on anyone -- even in theory. Thus the economic preferences of anarchists should be of "*secondary importance*" to abolishing capitalism and the state, with free experimentation the one rule of a free society.

Thus the theoretical perspective known as "*anarquismo sin adjetivos*" ("anarchism without adjectives") was one of the by-products of a intense debate within the movement itself. The roots of the argument can be found in the development of Communist Anarchism after Bakunin's death in 1876. While not entirely dissimilar to Collectivist Anarchism (as can be seen from James Guillaume's famous work "*On Building the New Social Order*" within **Bakunin on Anarchism**, the collectivists did see their economic system evolving into free communism), Communist Anarchists developed, deepened and enriched Bakunin's work just as Bakunin had developed, deepened and enriched Proudhon's. Communist Anarchism was associated with such anarchists as Elisee Reclus, Carlo Cafiero, Errico Malatesta and (most famously) Peter Kropotkin.

Quickly Communist-Anarchist ideas replaced Collectivist Anarchism as the main anarchist tendency in Europe, except in Spain. Here the major issue was not the question of communism (although for Ricardo Mella this played a part) but a question of the modification of strategy and tactics implied by Communist Anarchism. At this time (the 1880s), the Communist Anarchists stressed local (pure) cells of anarchist militants, generally opposed trade unionism (although Kropotkin was not one of these as he saw the importance of militant workers organisations) as well as being somewhat anti-organisation as well. Unsurprisingly, such a change in strategy and tactics came in for a lot of discussion from the Spanish Collectivists who strongly supported working class organisation and struggle.

This conflict soon spread outside of Spain and the discussion found its way into the pages of **La Revolte** in Paris. This provoked many anarchists to agree with Malatesta's argument that "*[i]t is not right for us, to say the least, to fall into strife over mere hypotheses.*" [quoted by Max Nettlau, **A Short History of Anarchism**, pp. 198-9] Over time, most anarchists agreed (to use Nettlau's words) that "*we cannot foresee the economic development of the future*" [**Op. Cit.**, p. 201] and so started to stress what they had in common (opposition to capitalism and the state) rather than the different visions of how a free society would operate. As time progressed, most Communist-Anarchists saw that ignoring the labour movement ensured that their ideas did not reach the working class while most Collectivist-Anarchists stressed their commitment to communist ideals and their arrival sooner, rather than later, after a revolution. Thus both groups of anarchists could work together as there was "*no reason for splitting up into small schools, in our eagerness to overemphasise certain features, subject to variation in time and place, of the society of the future, which is too remote from us to permit us to envision all its adjustments and possible combinations.*" Moreover, in a free society "*the methods and the individual forms of association and agreements, or the organisation of labour and of social life, will not be uniform and we cannot, at this moment, make and forecasts or determinations concerning them.*" [Malatesta, quoted by Nettlau, **Op. Cit.**, p. 173]

Thus, Malatesta continued, "*[e]ven the question as between anarchist-collectivism and anarchist-communism is a matter of qualification, of method and agreement*" as the key is that, no matter the system, "*a new moral conscience will come into being, which will make the wage system repugnant to men [and women] just as legal slavery and compulsion are now repugnant to them.*" If this happens then, "*whatever the specific forms of society may turn out to be, the basis of social organisation will be communist.*" As long as we "*hold to fundamental principles and . . . do our utmost to instil them in the masses*" we need not "*quarrel over mere words or trifles but give post-revolutionary society a direction towards justice, equality and liberty.*" [quoted by Nettlau, **Op. Cit.**, p. 173 and p. 174]

Similarly, in the United States there was also an intense debate at the same time between Individualist and Communist anarchists. There Benjamin Tucker was arguing that Communist-Anarchists were not anarchists while John Most was saying similar things about Tucker's ideas. Just as people like Mella and Tarrida put forward the idea of tolerance between anarchist groups, so anarchists like Voltairine de Cleyre "*came to label herself simply 'Anarchist,' and called like Malatesta for an 'Anarchism without Adjectives,' since in the absence of government many different experiments would probably be tried in various localities in order to determine the most appropriate form.*" [Peter Marshall, **Demanding the Impossible**, p. 393] In her own words, a whole range of economic systems would be "*advantageously tried in different localities. I would see the instincts and habits of the people express themselves in a free choice in every community; and I am sure that distinct environments would call out distinct adaptations.*" Ultimately, only "*[l]iberty and experiment alone can determine the best forms of society*" and therefore "*I no longer label myself otherwise than 'Anarchist' simply.*" [quoted by Paul Avrich, **An American Anarchist**, pp. 153-4]

These debates had a lasting impact on the anarchist movement, with such noted anarchists as de Cleyre, Malatesta, Nettlau and Reclus adopting the tolerant perspective embodied in the expression "anarchism

without adjectives" (see Nettlau's **A Short History of Anarchism**, pages 195 to 201 for an excellent summary of this). It is also, we add, the dominant position within the anarchist movement today with most anarchists recognising the right of other tendencies to the name "anarchist" while, obviously, having their own preferences for specific types of anarchist theory and their own arguments why other types are flawed. However, we must stress that the different forms of anarchism (communism, syndicalism, religious etc) are not mutually exclusive and you do not have to support one and hate the others. This tolerance is reflected in the expression "anarchism without adjectives."

One last point, some "anarcho"-capitalists have attempted to use the tolerance associated with "anarchism without adjectives" to argue that their ideology should be accepted as part of the anarchist movement. After all, they argue, anarchism is just about getting rid of the state, economics is of secondary importance. However, such a use of "*anarchism without adjectives*" is bogus as it was commonly agreed at the time that the types of economics that were being discussed were **anti-capitalist** (i.e. socialistic). For Malatesta, for example, there were "*anarchists who foresee and propose other solution, other future forms of social organisation*" than communist anarchism, but they "*desire, just as we do, to destroy political power and private property.*" "*Let us do away,*" he argued, "*with all exclusivism of schools of thinking*" and let us "*come to an understanding on ways and means, and go forwards.*" [quoted by Nettlau, **Op. Cit.**, p. 175] In other words, it was agreed that capitalism had to be abolished along with the state and once this was the case free experimentation would develop. Thus the struggle against the state was just one part of a wider struggle to end oppression and exploitation and could not be isolated from these wider aims. As "anarcho"-capitalists do not seek the abolition of capitalism along with the state they are not anarchists and so "anarchism without adjectives" does not apply to the so-called "anarchist" capitalists (see [section F](#) on why "anarcho"-capitalism is not anarchist).

This is not to say that after a revolution "anarcho"-capitalist communities would not exist. Far from it. If a group of people wanted to form such a system then they could, just as we would expect a community which supported state socialism or theocracy to live under that regime. Such enclaves of hierarchy would exist simply because it is unlikely that everyone on the planet, or even in a given geographical area, will become anarchists all at the same time. The key thing to remember is that no such system would be anarchist and, consequently, is not "*anarchism without adjectives.*"

A.3.9 What is anarcho-primitivism?

As discussed in [section A.3.3](#), most anarchists would agree with Situationist Ken Knabb in arguing that "*in a liberated world computers and other modern technologies could be used to eliminate dangerous or boring tasks, freeing everyone to concentrate on more interesting activities.*" Obviously "[c]ertain technologies -- nuclear power is the most obvious example -- are indeed so insanely dangerous that they will no doubt be brought to a prompt halt. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of their commercial rationales. But many technologies . . ., however they may presently be misused, have few if any **inherent** drawbacks. It's simply a matter of using them more sensibly, bringing them under popular

control, introducing a few ecological improvements, and redesigning them for human rather than capitalistic ends." [Public Secrets, p. 79 and p. 80] Thus most eco-anarchists see the use of appropriate technology as the means of creating a society which lives in balance with nature.

However, a (very) small but vocal minority of self-proclaimed Green anarchists disagree. Writers such as John Zerzan, John Moore and David Watson have expounded a vision of anarchism which, they claim, aims to critique every form of power and oppression. This is often called "*anarcho-primitivism*," which according to Moore, is simply "*a shorthand term for a radical current that critiques the totality of civilisation from an anarchist perspective, and seeks to initiate a comprehensive transformation of human life.*" [Primitivist Primer]

How this current expresses itself is diverse, with the most extreme elements seeking the end of all forms of technology, division of labour, domestication, "Progress", industrialism, what they call "*mass society*" and, for some, even symbolic culture (i.e. numbers, language, time and art). They tend to call any system which includes these features "*civilisation*" and, consequently, aim for "*the destruction of civilisation*". How far back they wish to go is a moot point. Some see the technological level that existed before the Industrial Revolution as acceptable, many go further and reject agriculture and all forms of technology beyond the most basic. For them, a return to the wild, to a hunter-gatherer mode of life, is the only way for anarchy to exist and dismiss out of hand the idea that appropriate technology can be used to create an anarchist society based on industrial production which minimises its impact on ecosystems.

Thus we find the primitivist magazine "**Green Anarchy**" arguing that those, like themselves, "*who prioritise the values of personal autonomy or wild existence have reason to oppose and reject all large-scale organisations and societies on the grounds that they necessitate imperialism, slavery and hierarchy, regardless of the purposes they may be designed for.*" They oppose capitalism as it is "*civilisation's current dominant manifestation.*" However, they stress that it is "*Civilisation, not capitalism per se, was the genesis of systemic authoritarianism, compulsory servitude and social isolation. Hence, an attack upon capitalism that fails to target civilisation can never abolish the institutionalised coercion that fuels society. To attempt to collectivise industry for the purpose of democratising it is to fail to recognise that all large-scale organisations adopt a direction and form that is independent of its members' intentions.*" Thus, they argue, genuine anarchists must oppose industry and technology for "*[h]ierarchical institutions, territorial expansion, and the mechanisation of life are all required for the administration and process of mass production to occur.*" For primitivists, "*[o]nly small communities of self-sufficient individuals can coexist with other beings, human or not, without imposing their authority upon them.*" Such communities would share essential features with tribal societies, "*[f]or over 99% of human history, humans lived within small and egalitarian extended family arrangements, while drawing their subsistence directly from the land.*" [Against Mass Society]

While such tribal communities, which lived in harmony with nature and had little or no hierarchies, are seen as inspirational, primitivists look (to use the title of a John Zerzan book) forward to seeing the "*Future Primitive.*" As John Moore puts it, "*the future envisioned by anarcho-primitivism . . . is without precedent. Although primitive cultures provide intimations of the future, and that future may well incorporate elements derived from those cultures, an anarcho-primitivist world would likely be quite*

different from previous forms of anarchy." [Op. Cit.]

For the primitivist, other forms of anarchism are simply self-managed alienation within essentially the same basic system we now endure, minus its worse excesses. Hence John Moore's comment that *"classical anarchism" wants "to take over civilisation, rework its structures to some degree, and remove its worst abuses and oppressions. However, 99% of life in civilisation remains unchanged in their future scenarios, precisely because the aspects of civilisation they question are minimal . . . overall life patterns wouldn't change too much."* Thus *"[f]rom the perspective of anarcho-primitivism, all other forms of radicalism appear as reformist, whether or not they regard themselves as revolutionary."* [Op. Cit.]

In reply, "classical anarchists" point out three things. Firstly, to claim that the *"worst abuses and oppressions"* account for 1% of capitalist society is simply nonsense and, moreover, something an apologist of that system would happily agree with. Secondly, it is obvious from reading any "classical" anarchist text that Moore's assertions are nonsense. "Classical" anarchism aims to transform society radically from top to bottom, not tinker with minor aspects of it. Do primitivists really think that people who went to the effort to abolish capitalism would simply continue doing 99% of the same things they did before hand? Of course not. In other words, it is not enough to get rid of the boss, although this is a necessary first step! Thirdly, and most importantly, Moore's argument ensures that his vision of a good society would never be achieved without genocide on an unimaginable scale.

So, as can be seen, primitivism has little or no bearing to the traditional anarchist movement and its ideas. The visions of both are simply incompatible, with the ideas of the latter dismissed as authoritarian by the former. Unsurprisingly, the ideas of primitivism and other anarchists are hard to reconcile. Equally unsurprisingly, other anarchists question whether primitivism is practical in the short term or even desirable in the long. While supporters of primitivism like to portray it as the most advanced and radical form of anarchism, other anarchists are less convinced. They consider it as a confused ideology which draws its followers into absurd positions and, moreover, is utterly impractical. They would agree with Ken Knabb comments that primitivism is rooted in *"fantasies [which] contain so many obvious self-contradictions that it is hardly necessary to criticise them in any detail. They have questionable relevance to actual past societies and virtually no relevance to present possibilities. Even supposing that life was better in one or another previous era, we have to begin from where we are now. Modern technology is so interwoven with all aspects of our life that it could not be abruptly discontinued without causing a global chaos that would wipe out billions of people."* [Op. Cit., p. 79]

The reason for this is simply that we live in a highly industrialised and interconnected system in which most people do not have the skills required to live in a hunter-gatherer or even agricultural society. Moreover, it is extremely doubtful that six billion people **could** survive as hunter-gatherers even if they had the necessary skills. As Brian Morris notes, *"[t]he future we are told is 'primitive.' How this is to be achieved in a world that presently sustains almost six billion people (for evidence suggests that the hunter-gatherer lifestyle is only able to support 1 or 2 people per sq. mile)"* primitivists like Zerzan do not tell us. ["*Anthropology and Anarchism,*" pp. 35-41, **Anarchy: A Journal of Desire Armed**, no. 45, p. 38]

This means that any "primitivist" rebellion has two options. Either it produces a near instant transformation into a primitivist system and, as a consequence, kills billions of people by hunger as well as causing extensive ecological destruction or it involves a lengthy transition period during which "civilisation" and its industrial legacies are decommissioned safely, population levels drop naturally to an appropriate level and people regain the necessary skills required for their new existence.

Sadly, option one, namely an almost overnight transformation, is what appears to be implied by most primitivist writers. Moore, for example, talks about "*when civilisation collapses*" ("*through its own volition, through our efforts, or a combination of the two*"). This implies an extremely speedy process, over which mere mortals have little say or control. This is confirmed when he talks about the need for "*positive alternatives*" to be built now as "*the social disruption caused by collapse could easily create the psychological insecurity and social vacuum in which fascism and other totalitarian dictatorships could flourish.*" [Op. Cit.] A revolution based on "*collapse*," "*insecurity*" and "*social disruption*" does not sound like a recipe for a successful social revolution based on mass participation and social experimentation.

Then there is the anti-organisation dogmas expounded by primitivism. Moore is typical, asserting that "*[o]rganisations, for anarcho-primitivists, are just rackets, gangs for putting a particular ideology in power*" and reiterates the point by saying primitivists stand for "*the abolition of all power relations, including the State . . . and any kind of party or organisation.*" [Op. Cit.] Yet without organisation, no modern society could function. There would be a total and instant collapse which would see not only mass starvation but also ecological destruction as nuclear power stations meltdown, industrial waste seeps into the surrounding environment, cities and towns decay and hordes of starving people fighting over what vegetables, fruits and animals they could find in the countryside. Clearly an anti-organisation dogma can only be reconciled with the idea of a near overnight "*collapse*" of civilisation, not with a steady progress towards a long term goal. Equally, how many "*positive alternatives*" could exist without organisation?

Faced with the horrors that such a "*collapse*" would entail, those few primitivists who have thought the issue through end up accepting the need for a transition period. However, to do so exposes the contradictions within primitivism. For if you accept that there is a need for a transition from 'here' to 'there' then primitivism automatically excludes itself from the anarchist tradition. The reason is simple. Moore asserts that "*mass society*" involves "*people working, living in artificial, technologised environments, and [being] subject to forms of coercion and control.*" [Op. Cit.] If this is true then any primitivist transition would, by definition, not be libertarian. For it is an obvious fact that the human population size cannot be reduced significantly by voluntary means in a short period of time. This means that agriculture and most industries will have to continue for some time. Similarly with large cities and towns as an instant and general exodus from the cities would be impossible. Then there is the legacy of industrial society which simply cannot be left to decay on its own. To take just one obvious example, leaving nuclear power plants to melt down would hardly be eco-friendly. Moreover, it is doubtful that the ruling elite will just surrender its power without resistance and, consequently, any social revolution

would need to defend itself against attempts to reintroduce hierarchy. Needless to say, a revolution which shunned all organisation and industry as inherently authoritarian would not be able to do this (it would have been impossible to produce the necessary military supplies to fight Franco's fascist forces during the Spanish Revolution if the workers had not converted and used their workplaces to do so, to note another obvious example).

As such, "*mass society*" will have to remain for some time after a successful revolution and, consequently from a primitivist perspective, be based on "*forms of coercion and control.*" There is an ideology which proclaims the need for a transitional system which will be based on coercion, control and hierarchy which will, in time, disappear into a stateless society. It also, like primitivism, stresses that industry and large scale organisation is impossible without hierarchy and authority. That ideology is Marxism. Thus it seems ironic to "classical" anarchists to hear self-proclaimed anarchists repeating Engels arguments against Bakunin as arguments for "anarchy" (see [section H.4](#) for a discussion of Engels' claims that industry excludes autonomy).

Thus the key problem with primitivism can be seen. It offers no practical means of achieving its goals in a libertarian manner. As Knabb summarises, "*[w]hat begins as a valid questioning of excessive faith in science and technology ends up as a desperate and even less justified faith in the return of a primeval paradise, accompanied by a failure to engage the present system in any but an abstract, apocalyptical way.*" To avoid this, it is necessary to take into account where we are now and, consequently, we will have to "*seriously consider how we will deal with all the practical problems that will be posed in the interim.*" [Knabb, **Op. Cit.**, p. 80 and p. 79] Sadly, primitivist ideology excludes this possibility by dismissing the starting point any real revolution would begin from as being inherently authoritarian. As any transition period towards primitivism would involve people working and living in "*mass society,*" it condemns itself as utterly impractical.

Given that a hierarchical society will misuse many technologies, it is understandable that some people can come see "technology" as the main problem and seek its end. However, those who talk about simply abolishing all forms of injustice and oppression overnight without discussing how it will be achieved may sound extremely radical, but, in reality, they are not. In fact they are building blocks to genuine social change by ensuring that no mass movement would ever be revolutionary enough to satisfy their critique and, as such, there is no point even trying. As Ken Knabb puts it:

*"Those who proudly proclaim their 'total opposition' to all compromise, all authority, all organisation, all theory, all technology, etc., usually turn out to have no **revolutionary** perspective whatsoever -- no practical conception of how the present system might be overthrown or how a post-revolutionary society might work. Some even attempt to justify this lack by declaring that a mere revolution could never be radical enough to satisfy their eternal ontological rebelliousness. Such all-or-nothing bombast may temporarily impress a few spectators, but its ultimate effect is simply to make people blasé."* [**Op. Cit.**, pp. 31-32]

Then there is the question of the means suggested for achieving primitivism. Moore argues that the *"kind of world envisaged by anarcho-primitivism is one unprecedented in human experience in terms of the degree and types of freedom anticipated ... so there can't be any limits on the forms of resistance and insurgency that might develop."* [Op. Cit.] Non-primitivists reply by saying that this implies primitivists don't know what they want nor how to get there. Equally, they stress that there **must be** limits on what are considered acceptable forms of resistance. This is because means shape the ends created and so authoritarian means will result in authoritarian ends. Tactics are not neutral and support for certain tactics betray an authoritarian perspective.

This can be seen from the UK magazine "**Green Anarchist**," part of the extreme end of "Primitivism" and which argued in favour of a return to "Hunter-Gatherer" forms of human society, opposing technology as being hierarchical by its very nature. Due to the inherent unattractiveness of such "primitivist" ideas for most people, it could never come about by libertarian means (i.e. by the free choice of individuals who create it by their own acts) and so cannot be anarchist as very few people would actually voluntarily embrace such a situation. This led to "**Green Anarchist**" developing a form of eco-vanguardism in order, to use Rousseau's expression, to "force people to be free." This reached its logical conclusion when the magazine supported the actions and ideas of the (non-anarchist) Unabomber and published an article ("*The Irrationalists*") by one of the then two editors stating that *"the Oklahoma bombers had the right idea. The pity was that they did not blast any more government offices . . . The Tokyo sarin cult had the right idea. The pity was that in testing the gas a year prior to the attack they gave themselves away."* [Green Anarchist, no. 51, p. 11] A defence of these remarks was published in the next issue and a subsequent exchange of letters in the US-based **Anarchy: A Journal of Desire Armed** magazine (numbers 48 to 52) saw the other "**Green Anarchist**" editor (at the time) justify this sick, authoritarian nonsense as simply nonsense as simply examples of *"unmediated resistance"* conducted *"under conditions of extreme repression."* Whatever happened to the anarchist principle that means shape the ends? This means there **are** "limits" on tactics, as some tactics are not and can never be libertarian.

However, few eco-anarchists take such an extreme position. Most "primitivist" anarchists rather than being anti-technology and anti-civilisation as such instead (to use David Watson's expression) believe it is a case of the *"affirmation of aboriginal lifeways"* and of taking a far more critical approach to issues such as technology, rationality and progress than that associated with Social Ecology. These eco-anarchists reject *"a dogmatic primitivism which claims we can return in some linear way to our primordial roots"* just as much as the idea of "progress," *"superseding both Enlightenment and Counter-Enlightenment"* ideas and traditions. For these eco-anarchists, Primitivism *"reflects not only a glimpse at life before the rise of the state, but also a legitimate response to real conditions of life under civilisation"* and so we should respect and learn from *"palaeolithic and neolithic wisdom traditions"* (such as those associated with Native American tribes and other aboriginal peoples). While we *"cannot, and would not want to abandon secular modes of thinking and experiencing the world. . . we cannot reduce the experience of life, and the fundamental, inescapable questions why we live, and how we live, to secular terms. . . Moreover, the boundary between the spiritual and the secular is not so clear. A dialectical understanding that we are our history would affirm an inspirited reason that honours not only atheistic Spanish revolutionaries who died for el ideal, but also religious pacifist prisoners of conscience, Lakota*

ghost dancers, taoist hermits and executed sufi mystics." [David Watson, **Beyond Bookchin: Preface for a future social ecology**, p. 240, p. 103, p. 240 and pp. 66-67]

Such "primitivist" anarchism is associated with a range of magazines, mostly US-based, like **Fifth Estate**. For example, on the question of technology, such eco-anarchists argue that "*[w]hile market capitalism was a spark that set the fire, and remains at the centre of the complex, it is only part of something larger: the forced adaptation of organic human societies to an economic-instrumental civilisation and its mass technics, which are not only hierarchical and external but increasingly 'cellular' and internal. It makes no sense to layer the various elements of this process in a mechanistic hierarchy of first cause and secondary effects.*" [David Watson, **Op. Cit.**, pp. 127-8] For this reason "Primitivist" anarchists are more critical of all aspects of technology, including calls by social ecologists for the use of **appropriate** technology essential in order to liberate humanity and the planet. As Watson argues:

*"To speak of technological society is in fact to refer to **the technics generated within capitalism**, which in turn generate new forms of capital. The notion of a distinct realm of social relations that determine this technology is not only ahistorical and undialectical, it reflects a kind of simplistic base/superstructure schema."* [**Op. Cit.**, p. 124]

Thus it is not a case of who **uses** technology which determines its effects, rather the effects of technology are determined to a large degree by the society that creates it. In other words, technology is selected which tends to re-enforce hierarchical power as it is those in power who generally select which technology is introduced within society (saying that, oppressed people have this excellent habit of turning technology against the powerful and technological change and social struggle are inter-related -- see [section D.10](#)). Thus even the use of appropriate technology involves more than selecting from the range of available technology at hand, as these technologies have certain effects regardless of who uses them. Rather it is a question of critically evaluating all aspects of technology and modifying and rejecting it as required to maximise individual freedom, empowerment and happiness. Few Social Ecologists would disagree with this approach, though, and differences are usually a question of emphasis rather than a deep political point.

However, few anarchists are convinced by an ideology which, as Brian Morris notes, dismisses the "*last eight thousand years or so of human history*" as little more than a source "*of tyranny, hierarchical control, mechanised routine devoid of any spontaneity. All those products of the human creative imagination -- farming, art, philosophy, technology, science, urban living, symbolic culture -- are viewed negatively by Zerzan -- in a monolithic sense.*" While there is no reason to worship progress, there is just as little need to dismiss all change and development out of hand as oppressive. Nor are they convinced by Zerzan's "*selective culling of the anthropological literature.*" [Morris, **Op. Cit.**, p. 38] In addition, a position of "turning back the clock" is deeply flawed, for while aboriginal societies are generally very anarchistic, certain of these societies did develop into statist, proprietarian ones implying that a future anarchist society that are predominantly inspired by and seek to reproduce key elements of prehistoric forms of anarchy is not the answer.

Primitivism confuses two radically different positions, namely support for a literal return to primitive lifeways and the use of examples from primitive life as a tool for social critique. Few anarchists would disagree with the second position as they recognise that current does not equal better and, consequently, past cultures and societies can have positive (as well as negative) aspects to them which can shed light on what a genuinely human society can be like. Similarly if "primitivism" simply involved questioning technology along with authority, few would disagree. However, this sensible position is, in the main, subsumed within the first one, the idea that an anarchist society would be a literal return to hunter-gatherer society. That this is the case can be seen from primitivist writings. Some primitivists stress that they are not suggesting the Stone Age as a model for their desired society nor a return to gathering and hunting, yet they seem to exclude any other options by their critique.

So to suggest that primitivism is simply a critique or some sort of "*anarchist speculation*" (to use John Moore's term) seems incredulous. If you demonise technology, organisation, "mass society" and "civilisation" as inherently authoritarian, you cannot turn round and advocate their use in a transition period or even in a free society. As such, the critique points to a mode of action and a vision of a free society and to suggest otherwise is simply incredulous. Equally, if you praise foraging bands and shifting horticultural communities of past and present as examples of anarchy then critics are entitled to conclude that primitivists desire a similar system for the future. This is reinforced by the critiques of industry, technology, "mass society" and agriculture.

Until such time as "primitivists" clearly state which of the two forms of primitivism they subscribe to, other anarchists will not take their ideas that seriously. Given that they fail to answer such basic questions of how they plan to deactivate industry safely and avoid mass starvation without the workers' control, international links and federal organisation they habitually dismiss out of hand as new forms of "governance," other anarchists do not hold much hope that it will happen soon. Ultimately, we are faced with the fact that a revolution will start in society as it is. Anarchism recognises this and suggests a means of transforming it. Primitivism shies away from such minor problems and, consequently, has little to recommend it. It is for this reason that most anarchists actually argue that such forms of "primitivism" are not anarchist at all, as the return to a "Hunter-Gatherer" society would result in mass starvation in almost all countries as the social infrastructure collapses so that the "lucky" few that survive can be "wild" and free from such tyrannies as hospitals, books and electricity.

This is not to suggest, of course, that non-primitivist anarchists think that everyone in a free society must have the same level of technology. Far from it. An anarchist society would be based on free experimentation. Different individuals and groups will pick the way of life that best suits them. Those who seek less technological ways of living will be free to do so as will those who want to apply the benefits of (appropriate) technologies. Similarly, all anarchists support the struggles of those in the developing world against the onslaught of (capitalist) civilisation and the demands of (capitalist) progress.

For more on "primitivist" anarchism see John Zerzan's **Future Primitive** as well as David Watson's **Beyond Bookchin** and **Against the Mega-Machine**. Ken Knabb's essay **The Poverty of Primitivism** is

an excellent critique of primitivism as is Brian Oliver Sheppard's **Anarchism vs. Primitivism**.

F.8 What role did the state take in the creation of capitalism?

If the "anarcho"-capitalist is to claim with any plausibility that "real" capitalism is non-statist or that it can exist without a state, it must be shown that capitalism evolved naturally, in opposition to state intervention. However, in reality, the opposite is the case. Capitalism was born from state intervention and, in the words of Kropotkin, *"the State . . . and capitalism . . . developed side by side, mutually supporting and re-enforcing each other."* [**Kropotkin's Revolutionary Pamphlets**, p. 181]

Numerous writers have made this point. For example, in Karl Polanyi's flawed masterpiece **The Great Transformation** we read that *"the road to the free market was opened and kept open by an enormous increase in continuous, centrally organised and controlled interventionism"* by the state [p. 140]. This intervention took many forms -- for example, state support during "mercantilism," which allowed the "manufactures" (i.e. industry) to survive and develop, enclosures of common land, and so forth. In addition, the slave trade, the invasion and brutal conquest of the Americas and other "primitive" nations, and the looting of gold, slaves, and raw materials from abroad also enriched the European economy, giving the development of capitalism an added boost. Thus Kropotkin:

"The history of the genesis of capital has already been told by socialists many times. They have described how it was born of war and pillage, of slavery and serfdom, of modern fraud and exploitation. They have shown how it is nourished by the blood of the worker, and how little by little it has conquered the whole world." [**Op. Cit.**,p. 207]

Or, if Kropotkin seems too committed to be fair, we have John Stuart Mill's statement that:

"The social arrangements of modern Europe commenced from a distribution of property which was the result, not of just partition, or acquisition by industry, but of conquest and violence. . . " [**Principles of Political Economy**, p. 15]

Therefore, when supporters of "libertarian" capitalism say they are against the "initiation of force," they mean only **new** initiations of force; for the system they support was born from numerous initiations of force in the past. And, as can be seen from the history of the last 100 years, it also requires state intervention to keep it going (section D.1, ["Why does state intervention occur?"](#), addresses this point in some detail). Indeed, many thinkers have argued that it was precisely this state support and coercion (particularly the separation of people from the land) that played the **key** role in allowing capitalism to develop rather than the theory that *"previous savings"* did so. As the noted German thinker Franz Oppenheimer argued, *"the concept of a 'primitive accumulation,' or an original store of wealth, in land and in movable property, brought about by means of purely economic forces" while "seem[ing] quite plausible" is in fact "utterly mistaken; it is a 'fairly tale,' or it is a class theory used to justify the privileges of the upper classes."* [**The State**, pp. 5-6]

This thesis will be discussed in the following sections. It is, of course, ironic to hear right-wing libertarians sing the praises of a capitalism that never existed and urge its adoption by all nations, in spite of the historical evidence suggesting that only state intervention made capitalist economies viable -- even in that Mecca of "free enterprise," the United States. As Noam Chomsky argues, *"who but a lunatic could have opposed the development of a textile industry in New England in the early nineteenth century, when British textile production was so much more efficient that half the New England industrial sector would have gone bankrupt without very high protective tariffs, thus terminating industrial development in the United States? Or the high tariffs that radically undermined economic efficiency to allow the United States to develop steel and other manufacturing capacities? Or the gross distortions of the market that created modern electronics?"* [**World Orders, Old and New**, p. 168]. To claim, therefore, that "mercantilism" is not capitalism makes little sense. Without mercantilism, "proper" capitalism would never have developed, and any attempt to divorce a social system from its roots is ahistoric and makes a mockery of critical thought.

Similarly, it is somewhat ironic when "anarcho"-capitalists and right libertarians claim that they support the freedom of individuals to choose how to live. After all, the working class was not given **that** particular choice when capitalism was developing. Indeed, their right to choose their own way of life was constantly violated and denied. So to claim that **now** (after capitalism has been created) we get the chance to try and live as we like is insulting in the extreme. The available options we have are not independent of the society we live in and are decisively shaped by the past. To claim we are "free" to live as we like (within the laws of capitalism) is basically to argue that we are able to "buy" the freedom that every individual is due from those who have stolen it from us in the first place!

Needless to say, some right-libertarians recognise that the state played a massive role in encouraging industrialisation (more correct to say "proletarianisation" as it created a working class which did not own the tools they used, although we stress that this process started on the land and not in industry). So they contrast "bad" business people (who took state aid) and "good" ones. Thus Rothbard's comment that Marxists have *"made no particular distinction between 'bourgeoisie' who made use of the state, and bourgeoisie who acted on the free market."* [**The Ethics of Liberty**, p. 72]

But such an argument is nonsense as it ignores the fact that the "free market" is a network (and defined by the state by the property rights it enforces). For example, the owners of the American steel and other companies who grew rich and their companies big behind protectionist walls are obviously "bad" bourgeoisie. But are the bourgeoisie who supplied the steel companies with coal, machinery, food, "defence" and so on not also benefiting from state action? And the suppliers of the luxury goods to the wealthy steel company owners, did they not benefit from state action? Or the suppliers of commodities to the workers that laboured in the steel factories that the tariffs made possible, did they not benefit? And the suppliers to these suppliers? And the suppliers to these suppliers? Did not the users of technology first introduced into industry by companies protected by state orders also not benefit? Did not the capitalists who had a large and landless working class to select from benefit from the "land monopoly" even though they may not have, unlike other capitalists, directly advocated it? It increased the pool of

wage labour for **all** capitalists and increased their bargaining position/power in the labour market at the expense of the working class. In other words, such a policy helped maintain capitalist market power, irrespective of whether individual capitalists encouraged politicians to vote to create/maintain it. And, similarly, **all** capitalists benefited from the changes in common law to recognise and protect capitalist private property and rights that the state enforced during the 19th century (see section [B.2.5](#)).

It appears that, for Rothbard, the collusion between state and business is the fault, not of capitalism, but of particular capitalists. The system is pure; only individuals are corrupt. But, for anarchists, the origins of the modern state-capitalist system lies not in the individual qualities of capitalists as such but in the dynamic and evolution of capitalism itself -- a complex interaction of class interest, class struggle, social defence against the destructive actions of the market, individual qualities and so forth. In other words, Rothbard's claims are flawed -- they fail to understand capitalism as a **system** and its dynamic nature.

Indeed, if we look at the role of the state in creating capitalism we could be tempted to rename "anarcho"-capitalism "marxian-capitalism". This is because, given the historical evidence, a political theory can be developed by which the "dictatorship of the bourgeoisie" is created and that this capitalist state "withers away" into anarchy. That this means rejecting the economic and social ideas of Marxism and their replacement by their direct opposite should not mean that we should reject the idea (after all, that is what "anarcho"-capitalism has done to Individualist Anarchism!). But we doubt that many "anarcho"-capitalists will accept such a name change (even though this would reflect their politics far better; after all they do not object to past initiations of force, just current ones and many do seem to think that the modern state **will** wither away due to market forces).

But this is beside the point. The fact remains that state action was required to create and maintain capitalism. Without state support it is doubtful that capitalism would have developed at all.

So, when the right suggests that "we" be "left alone," what they mean by "we" comes into clear focus when we consider how capitalism developed. Artisans and peasants were only "left alone" to starve, and the working classes of industrial capitalism were only "left alone" outside work and for only as long as they respected the rules of their "betters." As for the other side of the class divide, they desire to be "left alone" to exercise their power over others, as we will see. That modern "capitalism" is, in effect, a kind of "corporate mercantilism," with states providing the conditions that allow corporations to flourish (e.g. tax breaks, subsidies, bailouts, anti-labour laws, etc.) says more about the statist roots of capitalism than the ideologically correct definition of capitalism used by its supporters.

F.8.1 What social forces lay behind the rise of capitalism?

Capitalist society is a relatively recent development. As Murray Bookchin points out, for a *"long era, perhaps spanning more than five centuries,"* capitalism *"coexisted with feudal and simple commodity relationships"* in Europe. He argues that this period *"simply cannot be treated as 'transitional' without reading back the present into the past."* [**From Urbanisation to Cities**, p. 179] In other words, capitalism was not a inevitable outcome of "history" or social evolution.

He goes on to note that capitalism existed *"with growing significance in the mixed economy of the West from the fourteenth century up to the seventeenth"* but that it *"literally exploded into being in Europe, particularly England, during the eighteenth and especially nineteenth centuries."* [Op. Cit., p. 181] The question arises, what lay behind this *"growing significance"*? Did capitalism *"explode"* due to its inherently more efficient nature or were there other, non-economic, forces at work? As we will show, it was most definitely the later one -- capitalism was born not from economic forces but from the political actions of the social elites which its usury enriched. Unlike artisan (simple commodity) production, wage labour generates inequalities and wealth for the few and so will be selected, protected and encouraged by those who control the state in their own economic and social interests.

The development of capitalism in Europe was favoured by two social elites, the rising capitalist class within the degenerating medieval cities and the absolutist state. The medieval city was *"thoroughly changed by the gradual increase in the power of commercial capital, due primarily to foreign trade. . . . By this the inner unity of the commune was loosened, giving place to a growing caste system and leading necessarily to a progressive inequality of social interests. The privileged minorities pressed ever more definitely towards a centralisation of the political forces of the community. . . . Mercantilism in the perishing city republics led logically to a demand for larger economic units [i.e. to nationalise the market]; and by this the desire for stronger political forms was greatly strengthened. . . . Thus the city gradually became a small state, paving the way for the coming national state."* [Rudolf Rocker, **Nationalism and Culture**, p. 94]

The rising economic power of the proto-capitalists conflicted with that of the feudal lords, which meant that the former required help to consolidate their position. That aid came in the form of the monarchical state. With the force of absolutism behind it, capital could start the process of increasing its power and influence by expanding the "market" through state action.

As far as the absolutist state was concerned, it *"was dependent upon the help of these new economic forces, and vice versa. . . ."* *"The absolutist state,"* Rocker argues, *"whose coffers the expansion of commerce filled . . . , at first furthered the plans of commercial capital. Its armies and fleets . . . contributed to the expansion of industrial production because they demanded a number of things for whose large-scale production the shops of small tradesmen were no longer adapted. Thus gradually arose the so-called manufactures, the forerunners of the later large industries."* [Op. Cit., p. 117-8]

Some of the most important state actions from the standpoint of early industry were the so-called Enclosure Acts, by which the "commons" -- the free farmland shared communally by the peasants in most rural villages -- was "enclosed" or incorporated into the estates of various landlords as private property (see section [E.8.3](#)). This ensured a pool of landless workers who had no option but to sell their labour to capitalists. Indeed, the widespread independence caused by the possession of the majority of households of land caused the rising class of merchants to complain *"that men who should work as wage-labourers cling to the soil, and in the naughtiness of their hearts prefer independence as squatters to employment by a master."* [R.H Tawney, cited by Allan Elgar in **The Apostles of Greed**, p. 12]

In addition, other forms of state aid ensured that capitalist firms got a head start, so ensuring their dominance over other forms of work (such as co-operatives). A major way of creating a pool of resources that could be used for investment was the use of mercantilist policies which used protectionist measures to enrich capitalists and landlords at the expense of consumers and their workers. For example, one of the most common complaints of early capitalists was that workers could not turn up to work regularly. Once they had worked a few days, they disappeared as they had earned enough money to live on. With higher prices for food, caused by protectionist measures, workers had to work longer and harder and so became accustomed to factory labour. In addition, mercantilism allowed native industry to develop by barring foreign competition and so allowed industrialists to reap excess profits which they could then use to increase their investments. In the words of Marxist-socialist economic historian Maurice Dobbs:

"In short, the Mercantile System was a system of State-regulated exploitation through trade which played a highly important role in the adolescence of capitalist industry: it was essentially the economic policy of an age of primitive accumulation." [**Studies in Capitalism Development**, p. 209]

As Rocker summarises, *"when absolutism had victoriously overcome all opposition to national unification, but its furthering of mercantilism and economic monopoly it gave the whole social evolution a direction which could only lead to capitalism."* [**Op. Cit.**, pp. 116-7]

This process of state aid in capitalist development was also seen in the United States of America. As Edward Herman points out, the *"level of government involvement in business in the United States from the late eighteenth century to the present has followed a U-shaped pattern: There was extensive government intervention in the pre-Civil War period (major subsidies, joint ventures with active government participation and direct government production), then a quasi-laissez faire period between the Civil War and the end of the nineteenth century [a period marked by "the aggressive use of tariff protection" and state supported railway construction, a key factor in capitalist expansion in the USA], followed by a gradual upswing of government intervention in the twentieth century, which accelerated after 1930."* [**Corporate Control, Corporate Power**, p. 162]

Such intervention ensured that income was transferred from workers to capitalists. Under state protection, America industrialised by forcing the consumer to enrich the capitalists and increase their capital stock. *"According to one study, of the tariff had been removed in the 1830s 'about half the industrial sector of New England would have been bankrupted' . . . the tariff became a near-permanent political institution representing government assistance to manufacturing. It kept price levels from being driven down by foreign competition and thereby shifted the distribution of income in favour of owners of industrial property to the disadvantage of workers and customers."* [Richard B. Du Boff, **Accumulation and Power**, p. 56]

This protection was essential, for as Du Boff notes, the *"end of the European wars in 1814 . . . reopened the United States to a flood of British imports that drove many American competitors out of business."*

Large portions of the newly expanded manufacturing base were wiped out, bringing a decade of near-stagnation." Unsurprisingly, the "era of protectionism began in 1816, with northern agitation for higher tariffs. . . " [Op. Cit., p. 14, p. 55]

Combined with ready repression of the labour movement and government "homesteading" acts (see section [F.8.5](#)), tariffs were the American equivalent of mercantilism (which, after all, was above all else a policy of protectionism, i.e. the use of government to stimulate the growth of native industry). Only once America was at the top of the economic pile did it renounce state intervention (just as Britain did, we must note).

This is **not** to suggest that government aid was limited to tariffs. The state played a key role in the development of industry and manufacturing. As John Zerzan notes, the *"role of the State is tellingly reflected by the fact that the 'armoury system' now rivals the older 'American system of manufactures' term as the more accurate to describe the new system of production methods"* developed in the early 1800s. [Elements of Refusal, p. 100] Moreover, the *"lead in technological innovation [during the US Industrial Revolution] came in armaments where assured government orders justified high fixed-cost investments in special-pursue machinery and managerial personnel. Indeed, some of the pioneering effects occurred in government-owned armouries."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 218] The government also *"actively furthered this process [of "commercial revolution"] with public works in transportation and communication."* [Richard B. Du Boff, **Op. Cit.**, p. 15]

In addition to this "physical" aid, *"state government provided critical help, with devices like the chartered corporation"* [Ibid.] and, as we noted in section [B.2.5](#), changes in the legal system which favoured capitalist interests over the rest of society.

Interestingly, there was increasing inequality between 1840 and 1860 in the USA This coincided with the victory of wage labour and industrial capitalism -- the 1820s *"constituted a watershed in U.S. life. By the end of that decade . . . industrialism assured its decisive American victory, by the end of the 1830s all of its cardinal features were definitely present."* [John Zerzan, **Op. Cit.**, p. 99] This is unsurprising, for as we have argued many times, the capitalist market tends to increase, not reduce, inequalities between individuals and classes. Little wonder the Individualist Anarchists at the time denounced the way that property had been transformed into *"a power [with which] to accumulate an income"* (to use the words of J.K. Ingalls).

Over all, as Paul Ormerod puts it, the *"advice to follow pure free-market policies seems . . . to be contrary to the lessons of virtually the whole of economic history since the Industrial Revolution . . . every country which has moved into . . . strong sustained growth . . . has done so in outright violation of pure, free-market principles."* *"The model of entrepreneurial activity in the product market, with judicious state support plus repression in the labour market, seems to be a good model of economic development."* [The Death of Economics, p. 63]

Thus the social forces at work creating capitalism was a combination of capitalist activity and state

action. But without the support of the state, it is doubtful that capitalist activity would have been enough to generate the initial accumulation required to start the economic ball rolling. Hence the necessity of Mercantilism in Europe and its modified cousin of state aid, tariffs and "homestead acts" in America.

F.8.2 What was the social context of the statement "laissez-faire?"

The honeymoon of interests between the early capitalists and autocratic kings did not last long. *"This selfsame monarchy, which for weighty reasons sought to further the aims of commercial capital and was. . . itself aided in its development by capital, grew at last into a crippling obstacle to any further development of European industry."* [Rudolf Rocker, **Nationalism and Culture**, p. 117]

This is the social context of the expression "*laissez-faire*" -- a system which has outgrown the supports that protected it in its early stages of growth. Just as children eventually rebel against the protection and rules of their parents, so the capitalists rebelled against the over-bearing support of the absolutist state. Mercantilist policies favoured some industries and harmed the growth of industrial capitalism in others. The rules and regulations imposed upon those it did favour reduced the flexibility of capitalists to changing environments. As Rocker argues, *"no matter how the absolutist state strove, in its own interest, to meet the demands of commerce, it still put on industry countless fetters which became gradually more and more oppressive . . . [it] became an unbearable burden . . . which paralysed all economic and social life."* [*Op. Cit.*, p. 119] All in all, mercantilism became more of a hindrance than a help and so had to be replaced. With the growth of economic and social power by the capitalist class, this replacement was made easier.

Errico Malatesta notes, *"[t]he development of production, the vast expansion of commerce, the immeasurable power assumed by money . . . have guaranteed this supremacy [of economic power over the political power] to the capitalist class which, no longer content with enjoying the support of the government, demanded that government arise from its own ranks. A government which owed its origin to the right of conquest . . . though subject by existing circumstances to the capitalist class, went on maintaining a proud and contemptuous attitude towards its now wealthy former slaves, and had pretensions to independence of domination. That government was indeed the defender, the property owners' gendarme, but the kind of gendarmes who think they are somebody, and behave in an arrogant manner towards the people they have to escort and defend, when they don't rob or kill them at the next street corner; and the capitalist class got rid of it . . . [and replaced it] by a government [and state] . . . at all times under its control and specifically organised to defend that class against any possible demands by the disinherited."* [**Anarchy**, pp. 19-20]

Malatesta here indicates the true meaning of "*leave us alone*," or "*laissez-faire*." The **absolutist** state (not "the state" per se) began to interfere with capitalists' profit-making activities and authority, so they determined that it had to go -- as happened, for example, in the English, French and American revolutions. However, in other ways, state intervention in society was encouraged and applauded by capitalists. *"It is ironic that the main protagonists of the State, in its political and administrative*

authority, were the middle-class Utilitarians, on the other side of whose Statist banner were inscribed the doctrines of economic *Laissez Faire*" [E.P. Thompson, **The Making of the English Working Class**, p. 90]. Capitalists simply wanted **capitalist** states to replace monarchical states, so that heads of government would follow state economic policies regarded by capitalists as beneficial to their class as a whole. And as development economist Lance Taylor argues:

"In the long run, there are no laissez-faire transitions to modern economic growth. The state has always intervened to create a capitalist class, and then it has to regulate the capitalist class, and then the state has to worry about being taken over by the capitalist class, but the state has always been there." [quoted by Noam Chomsky, **Year 501**, p. 104]

In order to attack mercantilism, the early capitalists had to ignore the successful impact of its policies in developing industry and a "store of wealth" for future economic activity. As William Lazonick points out, *"the political purpose of [Adam Smith's] the **Wealth of Nations** was to attack the mercantilist institutions that the British economy had built up over the previous two hundred years. . . In his attack on these institutions, Smith might have asked why the extent of the world market available to Britain in the late eighteenth century was so uniquely under British control. If Smith had asked this 'big question,' he might have been forced to grant credit for [it] . . . to the very mercantilist institutions he was attacking . . ."* Moreover, he *"might have recognised the integral relation between economic and political power in the rise of Britain to international dominance."* Overall, *"[w]hat the British advocates of laissez-faire neglected to talk about was the role that a system of national power had played in creating conditions for Britain to embark on its dynamic development path . . . They did not bother to ask how Britain had attained th[e] position [of 'workshop of the world'], while they conveniently ignored the on going system of national power - the British Empire -- that . . . continued to support Britain's position."* [**Business Organisation and the Myth of the Market Economy**, p. 2, p. 3, p.5]

Similar comments are applicable to American supporters of laissez faire who fail to notice that the "traditional" American support for world-wide free trade is quite a recent phenomenon. It started only at the end of the Second World War (although, of course, **within** America military Keynesian policies were utilised). While American industry was developing, the country had no time for laissez-faire. After it had grown strong, the United States began preaching laissez-faire to the rest of the world -- and began to kid itself about its own history, believing its slogans about laissez-faire as the secret of its success. In addition to the tariff, nineteenth-century America went in heavily for industrial planning--occasionally under that name but more often in the name of national defence. The military was the excuse for what is today termed rebuilding infrastructure, picking winners, promoting research, and co-ordinating industrial growth (as it still is, we should add).

As Richard B. Du Boff points out, the "anti-state" backlash of the 1840s onwards in America was highly selective, as the general opinion was that *"[h]enceforth, if governments wished to subsidise private business operations, there would be no objection. But if public power were to be used to control business actions or if the public sector were to undertake economic initiatives on its own, it would run up against the determined opposition of private capital."* [**Accumulation and Power**, p. 26] In other words, the state could aid capitalists indirectly (via tariffs, land policy, repression of the labour

movement, infrastructure subsidy and so on) and it would "leave them alone" to oppress and exploit workers, exploit consumers, build their industrial empires and so forth.

So, the expression "laissez-faire" dates from the period when capitalists were objecting to the restrictions that helped create them in the first place. It has little to do with freedom as such and far more to do with the needs of capitalist power and profits (as Murray Bookchin argues, it is an error to depict this "revolutionary era and its democratic aspirations as 'bourgeois,' an imagery that makes capitalism a system more committed to freedom, or even ordinary civil liberties, than it was historically" [**From Urbanisation to Cities**, p. 180f]). Takis Fotopoulos, in his essay "*The Nation-state and the Market*", indicates that the social forces at work in "freeing" the market did not represent a "natural" evolution towards freedom:

"Contrary to what liberals and Marxists assert, marketisation of the economy was not just an evolutionary process, following the expansion of trade under mercantilism . . . modern [i.e. capitalist] markets did not evolve out of local markets and/or markets for foreign goods . . . the nation-state, which was just emerging at the end of the Middle Ages, played a crucial role creating the conditions for the 'nationalisation' of the market . . . and . . . by freeing the market [i.e. the rich and proto-capitalists] from effective social control." [**Society and Nature**, Vol. 3, pp. 44-45]

The "freeing" of the market thus means freeing those who "own" most of the market (i.e. the wealthy elite) from "*effective social control*," but the rest of society was not as lucky. Peter Kropotkin makes a similar point in **Modern Science and Anarchism**, "[w]hile giving the capitalist any degree of free scope to amass his wealth at the expense of the helpless labourers, the government has **nowhere and never**. . .afforded the labourers the opportunity 'to do as they pleased'." [**Kropotkin's Revolutionary Pamphlets**, p. 182]

The one essential form of support the "Libertarian" right wants the state (or "defence" firms) to provide capitalism is the enforcement of property rights -- the right of property owners to "do as they like" on their own property, which can have obvious and extensive social impacts. What "libertarian" capitalists object to is attempts by others -- workers, society as a whole, the state, etc. -- to interfere with the authority of bosses. That this is just the defence of privilege and power (and **not** freedom) has been discussed in [section B](#) and elsewhere in [section F](#), so we will not repeat ourselves here.

Samuel Johnson once observed that "*we hear the loudest yelps for liberty among the drivers of Negroes.*" Our modern "libertarian" capitalist drivers of wage-slaves are yelping for exactly the same kind of "liberty." [Johnson quoted in Noam Chomsky, **Year 501**, p. 141]

F.8.3 What other forms did state intervention in creating capitalism take?

Beyond being a paymaster for new forms of production and social relations and defending the owners' power, the state intervened economically in other ways as well. As we noted in section [B.2.5](#), the state played a key role in transforming the law codes of society in a capitalistic fashion, ignoring custom and common law to do so. Similarly, the use of tariffs and the granting of monopolies to companies played an important role in accumulating capital at the expense of working people, as did the breaking of unions and strikes by force.

However, one of the most blatant of these acts was the enclosure of common land. In Britain, by means of the Enclosure Acts, land that had been freely used by poor peasants for farming their small family plots was claimed by large landlords as private property. As E.P. Thompson notes, "*Parliament and law imposed capitalist definitions to exclusive property in land*" [**Customs in Common**, p. 163]. Property rights, which exclusively favoured the rich, replaced the use rights and free agreement that had governed peasant's use of the commons. Unlike use rights, which rest in the individual, property rights require state intervention to create and maintain.

This stealing of the land should not be under estimated. Without land, you cannot live and have to sell your liberty to others. This places those with capital at an advantage, which will tend to increase, rather than decrease, the inequalities in society (and so place the landless workers at an increasing disadvantage over time). This process can be seen from early stages of capitalism. With the enclosure of the land, an agricultural workforce was created which had to travel where the work was. This influx of landless ex-peasants into the towns ensured that the traditional guild system crumbled and was transformed into capitalistic industry with bosses and wage slaves rather than master craftsmen and their journeymen. Hence the enclosure of land played a key role, for "*it is clear that economic inequalities are unlikely to create a division of society into an employing master class and a subject wage-earning class, unless access to the mans of production, including land, is by some means or another barred to a substantial section of the community.*" [Maurice Dobbs, **Studies in Capitalist Development**, p. 253]

The importance of access to land is summarised by this limerick by the followers of Henry George (a 19th century writer who argued for a "*single tax*" and the nationalisation of land). The Georgites got their basic argument on the importance of land down these few, excellent lines:

*A college economist planned
To live without access to land
He would have succeeded
But found that he needed
Food, shelter and somewhere to stand.*

Thus the Individualist (and other) anarchists' concern over the "*land monopoly*" of which the Enclosure Acts were but one part. The land monopoly, to use Tucker's words, "*consists in the enforcement by government of land titles which do not rest upon personal occupancy and cultivation.*" [**The Anarchist Reader**, p. 150] It is important to remember that wage labour first developed on the land and it was the protection of land titles of landlords and nobility, combined with enclosure, that meant people could not

just work their own land.

In other words, the circumstances so created by enclosing the land and enforcing property rights to large estates ensured that capitalists did not have to point a gun at workers head to get them to work long hours in authoritarian, dehumanising conditions. In such circumstances, when the majority are dispossessed and face the threat of starvation, poverty, homelessness and so on, "initiation of force" is **not required**. But guns **were** required to enforce the system of private property that created the labour market in the first place, to enforce the enclosure of common land and protect the estates of the nobility and wealthy.

In addition to increasing the availability of land on the market, the enclosures also had the effect of destroying working-class independence. Through these Acts, innumerable peasants were excluded from access to their former means of livelihood, forcing them to migrate to the cities to seek work in the newly emerging factories of the budding capitalist class, who were thus provided with a ready source of cheap labour. The capitalists, of course, did not describe the results this way, but attempted to obfuscate the issue with their usual rhetoric about civilisation and progress. Thus John Bellers, a 17th-century supporter of enclosures, claimed that commons were "*a hindrance to Industry, and . . . Nurseries of Idleness and Insolence.*" The "*forests and great Commons make the Poor that are upon them too much like the **indians**.*" [quoted by Thompson, **Op. Cit.**, p. 163] Elsewhere Thompson argues that the commons "*were now seen as a dangerous centre of indiscipline . . . Ideology was added to self-interest. It became a matter of public-spirited policy for gentlemen to remove cottagers from the commons, reduce his labourers to dependence . . .*" [**The Making of the English Working Class**, pp. 242-3]

The commons gave working-class people a degree of independence which allowed them to be "insolent" to their betters. This had to be stopped, as it undermined to the very roots of authority relationships within society. The commons **increased** freedom for ordinary people and made them less willing to follow orders and accept wage labour. The reference to "Indians" is important, as the independence and freedom of Native Americans is well documented. The common feature of both cultures was communal ownership of the means of production and free access to it (usufruct). This is discussed further in section I.7 ([Won't Libertarian Socialism destroy individuality?](#))

As the early American economist Edward Wakefield noted in 1833, "*where land is cheap and all are free, where every one who so pleases can easily obtain a piece of land for himself, not only is labour dear, as respects the labourer's share of the product, but the difficulty is to obtain combined labour at any price.*" [**England and America**, quoted by Jeremy Brecher and Tim Costello, **Commonsense for Hard Times**, p. 24]

The enclosure of the commons (in whatever form it took -- see section [F.8.5](#) for the US equivalent) solved both problems -- the high cost of labour, and the freedom and dignity of the worker. The enclosures perfectly illustrate the principle that capitalism requires a state to ensure that the majority of people do not have free access to any means of livelihood and so must sell themselves to capitalists in order to survive. There is no doubt that if the state had "left alone" the European peasantry, allowing

them to continue their collective farming practices ("collective farming" because, as Kropotkin shows in **Mutual Aid**, the peasants not only shared the land but much of the farm labour as well), capitalism could not have taken hold (see **Mutual Aid**, pp. 184-189, for more on the European enclosures). As Kropotkin notes, "*[i]nstances of commoners themselves dividing their lands were rare, everywhere the State coerced them to enforce the division, or simply favoured the private appropriation of their lands*" by the nobles and wealthy. [**Mutual Aid**, p. 188]

Thus Kropotkin's statement that "*to speak of the natural death of the village community [or the commons] in virtue of economical law is as grim a joke as to speak of the natural death of soldiers slaughtered on a battlefield.*" [**Op. Cit.**, p. 189]

Like the more recent case of fascist Chile, "free market" capitalism was imposed on the majority of society by an elite using the authoritarian state. This was recognised by Adam Smith when he opposed state intervention in **The Wealth of Nations**. In Smith's day, the government was openly and unashamedly an instrument of wealth owners. Less than 10 per cent of British men (and no women) had the right to vote. When Smith opposed state interference, he was opposing the imposition of wealth owners' interests on everybody else (and, of course, how "liberal", nevermind "libertarian", is a political system in which the many follow the rules and laws set-down in the so-called interests of all by the few? As history shows, any minority given, or who take, such power **will** abuse it in their own interests). Today, the situation is reversed, with neo-liberals and right libertarians opposing state interference in the economy (e.g. regulation of Big Business) so as to prevent the public from having even a minor impact on the power or interests of the elite.

The fact that "free market" capitalism always requires introduction by an authoritarian state should make all honest "Libertarians" ask: How "free" is the "free market"? And why, when it is introduced, do the rich get richer and the poor poorer? This was the case in Chile (see [Section C.11](#)). For the poverty associated with the rise of capitalism in England 200 years ago, E.P. Thompson's **The Making of the English Working Class** provides a detailed discussion. Howard Zinn's **A People's History of the United States** describes the poverty associated with 19th-century US capitalism.

F.8.4 Aren't the enclosures a socialist myth?

The short answer is no, they are not. While a lot of historical analysis has been spent in trying to deny the extent and impact of the enclosures, the simple fact is (in the words of noted historian E.P. Thompson) enclosure "*was a plain enough case of class robbery, played according to the fair rules of property and law laid down by a parliament of property-owners and lawyers.*" [**The Making of the English Working Class**, pp. 237-8]

The enclosures were one of the ways that the "*land monopoly*" was created. The land monopoly was used to refer to capitalist property rights and ownership of land by (among others) the Individualist Anarchists. Instead of an "*occupancy and use*" regime advocated by anarchists, the land monopoly allowed a few to bar the many from the land -- so creating a class of people with nothing to sell but their

labour. While this monopoly is less important these days in developed nations (few people know how to farm) it was essential as a means of consolidating capitalism. Given the choice, most people preferred to become independent farmers rather than wage workers (see [next section](#)).

However, the importance of the enclosure movement is downplayed by supporters of capitalism. Little wonder, for it is something of an embarrassment for them to acknowledge that the creation of capitalism was somewhat less than "immaculate" -- after all, capitalism is portrayed as an almost ideal society of freedom. To find out that an idol has feet of clay and that we are still living with the impact of its origins is something pro-capitalists must deny. So **is** the enclosures a socialist myth? Most claims that it is flow from the work of the historian J.D. Chambers' famous essay "*Enclosures and the Labour Supply in the Industrial Revolution.*" [**Economic History Review**, 2nd series, no. 5, August 1953] In this essay, Chambers attempts to refute Karl Marx's account of the enclosures and the role it played in what Marx called "*primitive accumulation.*"

We cannot be expected to provide an extensive account of the debate that has raged over this issue. All we can do is provide a summary of the work of William Lazonick who presented an excellent reply to those who claim that the enclosures were an unimportant historical event. We are drawing upon his summary of his excellent essay "*Karl Marx and Enclosures in England*" [**Review of Radical Political Economy**, no. 6, Summer, 1974] which can be found in his books **Competitive Advantage on the Shop Floor** and **Business Organisation and the Myth of the Market Economy**. There are three main claims against the socialist account of the enclosures. We will cover each in turn.

Firstly, it is often claimed that the enclosures drove the uprooted cottager and small peasant into industry. However, this was never claimed. It is correct that the agricultural revolution associated with the enclosures **increased** the demand for farm labour as claimed by Chambers and others. And this is the whole point - enclosures created a pool of dispossessed labourers who had to sell their time/liberty to survive. The "*critical transformation was not the level of agricultural employment before and after enclosure but the changes in employment relations caused by the reorganisation of landholdings and the reallocation of access to land.*" [**Competitive Advantage on the Shop Floor**, p. 30] Thus the key feature of the enclosures was that it created a supply for farm labour, a supply that had no choice but to work for another. This would drive down wages and increase demand. Moreover, freed from the land, these workers could later move to the towns in search for better work.

Secondly, it is argued that the number of small farm owners increased, or at least did not greatly decline, and so the enclosure movement was unimportant. Again, this misses the point. Small farm owners can still employ wage workers (i.e. become capitalist farmers as opposed to "yeomen" -- independent peasant proprietor). As Lazonick notes, "*[i]t is true that after 1750 some petty proprietors continued to occupy and work their own land. But in a world of capitalist agriculture, the yeomanry no longer played an important role in determining the course of capitalist agriculture. As a social class that could influence the evolution of British economy society, the yeomanry had disappeared.*" [**Op. Cit.**, p. 32]

Thirdly, it is often claimed that it was population growth, rather than enclosures, that caused the supply

of wage workers. So was population growth more important than enclosures? Maurice Dobbs argues that *"the centuries in which a proletariat was most rapidly recruited were apt to be those of slow rather than of rapid natural increase of population, and the paucity or plenitude of a labour reserve in different countries was not correlated with comparable difference in their rates of population-growth."* [**Studies in Capitalist Development**, p. 223] Moreover, the population argument ignores the question of whether the changes in society caused by enclosures and the rise of capitalism have an impact on the observed trends towards earlier marriage and larger families after 1750. Lazonick argues that *"[t]here is reason to believe that they did."* [**Op. Cit.**, p. 33] Also, of course, the use of child labour in the factories created an economic incentive to have more children, an incentive created by the developing capitalist system. Overall, Lazonick notes that *"[t]o argue that population growth created the industrial labour supply is to ignore these momentous social transformations"* associated with the rise of capitalism [**Business Organisation and the Myth of the Market Economy**, p. 273].

In other words, there is good reason to think that the enclosures, far from being some kind of socialist myth, in fact played a key role in the development of capitalism. As Lazonick himself notes, *"Chambers misunderstood" "the argument concerning the 'institutional creation' of a proletarianised (i.e. landless) workforce. Indeed, Chamber's own evidence and logic tend to support the Marxian [and anarchist!] argument, when it is properly understood."* [**Op. Cit.**, p. 273]

F.8.5 What about the lack of enclosures in the Americas?

The enclosure movement was but one way of creating the *"land monopoly"* which ensured the creation of a working class. The circumstances facing the ruling class in the Americas were distinctly different than in the Old World and so the *"land monopoly"* took a different form there. In the Americas, enclosures were unimportant as customary land rights did not really exist. Here the problem was that (after the original users of the land were eliminated, of course) there were vast tracts of land available for people to use.

Unsurprisingly, there was a movement towards independent farming and this pushed up the price of labour, by reducing the supply. Capitalists found it difficult to find workers willing to work for them at wages low enough to provide them with sufficient profits. It was due the difficulty in finding cheap enough labour that capitalists in America turned to slavery. All things being equal, wage labour **is** more productive than slavery. But in early America all things were **not** equal. Having access to cheap (indeed, free) land meant that working people had a choice, and few desired to become wage slaves. Because of this, capitalists turned to slavery in the South and the *"land monopoly"* in the North and West.

This was because, in the words of Maurice Dobbs, it *"became clear to those who wished to reproduce capitalist relations of production in the new country that the foundation-stone of their endeavour must be the restriction of land-ownership to a minority and the exclusion of the majority from any share in [productive] property."* [**Studies in Capitalist Development**, pp. 221-2] As one radical historian puts it, *"[w]hen land is 'free' or 'cheap'. as it was in different regions of the United States before the 1830s, there was no compulsion for farmers to introduce labour-saving technology. As a result, 'independent*

household production' . . . hindered the development of capitalism . . . [by] allowing large portions of the population to escape wage labour." [Charlie Post, *"The 'Agricultural Revolution' in the United States"*, pp. 216-228, **Science and Society**, vol. 61, no. 2, p. 221]

It was precisely this option (i.e. of independent production) that had to be destroyed in order for capitalist industry to develop. The state had to violate the holy laws of "supply and demand" by controlling the access to land in order to ensure the normal workings of "supply and demand" in the labour market (i.e. that the bargaining position on the labour market favoured employer over employee). Once this situation became the typical one (i.e. when the option of self-employment was effectively eliminated) a (protectionist based) "laissez-faire" approach could be adopted and state action used only to protect private property from the actions of the dispossessed.

So how was this transformation of land ownership achieved?

Instead of allowing settlers to appropriate their own farms as was the case before the 1830s, the state stepped in once the army had cleared out the original users. Its first major role was to enforce legal rights of property on unused land. Land stolen from the Native Americans was sold at auction to the highest bidders, namely speculators, who then sold it on to farmers. This process started right *"after the revolution, [when] huge sections of land were bought up by rich speculators"* and their claims supported by the law [Howard Zinn, **A People's History of the United States**, p. 125] Thus land which should have been free was sold to land-hungry farmers and the few enriched themselves at the expense of the many. Not only did this increase inequality within society, it also encouraged the development of wage labour -- having to pay for land would have ensured that many immigrants remained on the East Coast until they had enough money. Thus a pool of people with little option but to sell their labour was increased due to state protection of unoccupied land. That the land usually ended up in the hands of farmers did not (could not) countermand the shift in class forces that this policy created.

This was also the essential role of the various "Homesteading Acts" and, in general, the *"Federal land law in the 19th century provided for the sale of most of the public domain at public auction to the higher bidder . . . Actual settlers were forced to buy land from speculators, at prices considerably above the federal minimal price"* (which few people could afford anyway) [Charlie Post, **Op. Cit.**, p. 222]. Little wonder the Individualist Anarchists supported an *"occupancy and use"* system of land ownership as a key way of stopping capitalist and landlord usury as well as the development of capitalism itself.

This change in the appropriation of land had significant effects on agriculture and the desirability of taking up farming for immigrants. As Post notes, *"[w]hen the social conditions for obtaining and maintaining possession of land change, as they did in the midwest between 1830 and 1840, pursuing the goal of preserving [family ownership and control] . . . produced very different results. In order to pay growing mortgages, debts and taxes, family farmers were compelled to specialise production toward cash crops and to market more and more of their output."* [**Op. Cit.**, p. 221-2]

So, in order to pay for land which was formerly free, farmers got themselves into debt and increasingly

turned to the market to pay it off. Thus, the *"Federal land system, by transforming land into a commodity and stimulating land speculation, made the midwestern farmers dependent upon markets for the continual possession of their farms."* [Charlie Post, **Op. Cit.**, p. 223] Once on the market, farmers had to invest in new machinery and this also got them into debt. In the face of a bad harvest or market glut, they could not repay their loans and their farms had to be sold to do so. By 1880, 25% of all farms were rented by tenants, and the numbers kept rising.

This means that Murray Rothbard's comment that *"once the land was purchased by the settler, the injustice disappeared"* is nonsense -- the injustice was transmitted to other parts of society and this, along with the legacy of the original injustice, lived on and helped transform society towards capitalism [The **Ethics of Liberty**, p. 73]. In addition, his comments about *"the establishment in North America of a truly libertarian land system"* would be one the Individualist Anarchists would have seriously disagreed with! [**Ibid.**]

Thus state action, in restricting free access to the land, ensured that workers were dependent on wage labour. In addition, the *"transformation of social property relations in northern agriculture set the stage for the 'agricultural revolution' of the 1840s and 1850s . . . [R]ising debts and taxes forced midwestern family farmers to compete as commodity producers in order to maintain their land-holding . . . The transformation . . . was the central precondition for the development of industrial capitalism in the United States."* [Charlie Post, **Ibid.**, p. 226]

In addition to seizing the land and distributing it in such a way as to benefit capitalist industry, the *"government played its part in helping the bankers and hurting the farmers; it kept the amount of money - based in the gold supply - steady while the population rose, so there was less and less money in circulation. The farmer had to pay off his debts in dollars that were harder to get. The bankers, getting loans back, were getting dollars worth more than when they loaned them out - a kind of interest on top of interest. That was why . . . farmers' movements [like the Individualist Anarchists, we must add] . . . [talked about] putting more money in circulation."* [Howard Zinn, **Op. Cit.**, p. 278]

Overall, therefore, state action ensured the transformation of America from a society of independent workers to a capitalist one. By creating and enforcing the "land monopoly" (of which state ownership of unoccupied land and its enforcement of landlord rights were the most important) the state ensured that the balance of class forces tipped in favour of the capitalist class. By removing the option of farming your own land, the US government created its own form of enclosure and the creation of a landless workforce with little option but to sell its liberty on the "free market". This, combined with protectionism, ensured the transformation of American society from a pre-capitalist one into a capitalist one. They was nothing "natural" about it.

Little wonder the Individualist Anarchist J.K. Ingalls attacked the "land monopoly" in the following words:

"The earth, with its vast resources of mineral wealth, its spontaneous productions and its

fertile soil, the free gift of God and the common patrimony of mankind, has for long centuries been held in the grasp of one set of oppressors by right of conquest or right of discovery; and it is now held by another, through the right of purchase from them. All of man's natural possessions . . . have been claimed as property; nor has man himself escaped the insatiate jaws of greed. The invasion of his rights and possessions has resulted . . . in clothing property with a power to accumulate an income." [quoted by James Martin, **Men Against the State**, p. 142]

F.8.6 How did working people view the rise of capitalism?

The best example of how hated capitalism was can be seen by the rise and spread of the socialist movement, in all its many forms, across the world. It is no coincidence that the development of capitalism also saw the rise of socialist theories. However, in order to fully understand how different capitalism was from previous economic systems, we will consider early capitalism in the US, which for many "Libertarians" is **the** example of the "capitalism-equals-freedom" argument.

Early America was pervaded by artisan production -- individual ownership of the means of production. Unlike capitalism, this system is **not** marked by the separation of the worker from the means of life. Most people did not have to work for another, and so did not. As Jeremy Brecher notes, in 1831 the *"great majority of Americans were farmers working their own land, primarily for their own needs. Most of the rest were self-employed artisans, merchants, traders, and professionals. Other classes - employees and industrialists in the North, slaves and planters in the South - were relatively small. The great majority of Americans were independent and free from anybody's command."* [**Strike!**, p. xxi] These conditions created the high cost of combined (wage) labour which ensured the practice of slavery existed.

However, toward the middle of the 19th century the economy began to change. Capitalism began to be imported into American society as the infrastructure was improved, which allowed markets for manufactured goods to grow. Soon, due to (state-supported) capitalist competition, artisan production was replaced by wage labour. Thus "evolved" modern capitalism. Many workers understood, resented, and opposed their increasing subjugation to their employers (*"the masters"*, to use Adam Smith's expression), which could not be reconciled with the principles of freedom and economic independence that had marked American life and sunk deeply into mass consciousness during the days of the early economy. In 1854, for example, a group of skilled piano makers wrote that *"the day is far distant when they [wage earners] will so far forget what is due to manhood as to glory in a system forced upon them by their necessity and in opposition to their feelings of independence and self-respect. May the piano trade be spared such exhibitions of the degrading power of the day [wage] system."* [quoted by Brecher and Costello, **Common Sense for Hard Times**, p. 26]

Clearly the working class did not consider working for a daily wage, in contrast to working for themselves and selling their own product, to be a step forward for liberty or individual dignity. The difference between selling the product of one's labour and selling one's labour (i.e. oneself) was seen and

condemned ("*[w]hen the producer . . . sold his product, he retained himself. But when he came to sell his labour, he sold himself . . . the extension [of wage labour] to the skilled worker was regarded by him as a symbol of a deeper change*" [Norman Ware, **The Industrial Worker, 1840-1860**, p. xiv]). Indeed, one group of workers argued that they were "*slaves in the strictest sense of the word*" as they had "*to toil from the rising of the sun to the going down of the same for our masters - aye, masters, and for our daily bread*" [Quoted by Ware, **Op. Cit.**, p. 42] and another argued that "*the factory system contains in itself the elements of slavery, we think no sound reasoning can deny, and everyday continues to add power to its incorporate sovereignty, while the sovereignty of the working people decreases in the same degree.*" [quoted by Brecher and Costello, **Op. Cit.**, p. 29]

Almost as soon as there were wage workers, there were strikes, machine breaking, riots, unions and many other forms of resistance. John Zerzan's argument that there was a "*relentless assault on the worker's historical rights to free time, self-education, craftsmanship, and play was at the heart of the rise of the factory system*" is extremely accurate [**Elements of Refusal**, p. 105]. And it was an assault that workers resisted with all their might. In response to being subjected to the "law of value," workers rebelled and tried to organise themselves to fight the powers that be and to replace the system with a co-operative one. As the printer's union argued, "*[we] regard such an organisation [a union] not only as an agent of immediate relief, but also as an essential to the ultimate destruction of those unnatural relations at present subsisting between the interests of the employing and the employed classes. . . . [W]hen labour determines to sell itself no longer to speculators, but to become its own employer, to own and enjoy itself and the fruit thereof, the necessity for scales of prices will have passed away and labour will be forever rescued from the control of the capitalist.*" [quoted by Brecher and Costello, **Op. Cit.**, pp. 27-28]

Little wonder, then, why wage labourers considered capitalism as a form of "*slavery*" and why the term "*wage slavery*" became so popular in the anarchist movement. It was just reflecting the feelings of those who experienced the wages system at first hand and joined the socialist and anarchist movements. As labour historian Norman Ware notes, the "*term 'wage slave' had a much better standing in the forties [of the 19th century] than it has today. It was not then regarded as an empty shibboleth of the soap-box orator. This would suggest that it has suffered only the normal degradation of language, has become a cliché, not that it is a grossly misleading characterisation.*" [**Op. Cit.**, p. xvf]

These responses of workers to the experience of wage labour is important to show that capitalism is by no means "natural." The fact is the first generation of workers tried to avoid wage labour is at all possible as they hated the restrictions of freedom it imposed upon them. They were perfectly aware that wage labour was wage slavery -- that they were decidedly **unfree** during working hours and subjected to the will of another. While many working people now are accustomed to wage labour (while often hating their job) the actual process of resistance to the development of capitalism indicates well its inherently authoritarian nature. Only once other options were closed off and capitalists given an edge in the "free" market by state action did people accept and become accustomed to wage labour.

Opposition to wage labour and factory fascism was/is widespread and seems to occur wherever it is encountered. "*Research has shown*", summarises William Lazonick, "*that the 'free-born Englishman' of the eighteenth century - even those who, by force of circumstance, had to submit to agricultural wage*

labour - tenaciously resisted entry into the capitalist workshop." [**Business Organisation and the Myth of the Market Economy**, p. 37] British workers shared the dislike of wage labour of their American cousins. A "*Member of the Builders' Union*" in the 1830s argued that the trade unions "*will not only strike for less work, and more wages, but will ultimately abolish wages, become their own masters and work for each other; labour and capital will no longer be separate but will be indissolubly joined together in the hands of workmen and work-women.*" [quoted by Geoffrey Ostergaard, **The Tradition of Workers' Control**, p. 133] This is unsurprising, for as Ostergaard notes, "*the workers then, who had not been swallowed up whole by the industrial revolution, could make critical comparisons between the factory system and what preceded it.*" [**Op. Cit.**, p. 134] While wage slavery may seem "natural" today, the first generation of wage labourers saw the transformation of the social relationships they experienced in work, from a situation in which they controlled their own work (and so themselves) to one in which **others** controlled them, and they did not like it. However, while many modern workers instinctively hate wage labour and having bosses, without the awareness of some other method of working, many put up with it as "inevitable." The first generation of wage labourers had the awareness of something else (although, of course, a flawed something else) and this gave them a deep insight into the nature of capitalism and produced a deeply radical response to it and its authoritarian structures.

Far from being a "natural" development, then, capitalism was imposed on a society of free and independent people by state action. Those workers alive at the time viewed it as "*unnatural relations*" and organised to overcome it. These feelings and hopes still exist, and will continue to exist until such time as we organise and "*abolish the wage system*" (to quote the IWW preamble) and the state that supports it.

F.8.7 Why is the history of capitalism important?

Simply because it provides us with an understanding of whether that system is "natural" and whether it can be considered as just and free. If the system was created by violence, state action and other unjust means then the apparent "freedom" which we currently face within it is a fraud, a fraud masking unnecessary and harmful relations of domination, oppression and exploitation. Moreover, by seeing how capitalist relationships were viewed by the first generation of wage slaves reminds us that just because many people have adjusted to this regime and consider it as normal (or even natural) it is nothing of the kind.

Murray Rothbard is well aware of the importance of history. He considered the "*moral indignation*" of socialism arises from the argument "*that the capitalists have stolen the rightful property of the workers, and therefore that existing titles to accumulated capital are unjust.*" He argues that given "*this hypothesis, the remainder of the impetus for both Marxism and anarchosyndicalism follow quote logically.*" [**The Ethics of Liberty**, p. 52]

So some right-libertarians are aware that the current property owners have benefited extensively from violence and state action in the past. Murray Rothbard argues (in **The Ethics of Liberty**, p. 57) that if the just owners cannot be found for a property, then the property simply becomes again unowned and

will belong to the first person to appropriate and utilise it. If the current owners are not the actual criminals then there is no reason at all to dispossess them of their property; if the just owners cannot be found then they may keep the property as the first people to use it (of course, those who own capital and those who use it are usually different people, but we will ignore this obvious point).

Thus, since all original owners and the originally dispossessed are long dead nearly all current title owners are in just possession of their property except for recently stolen property. The principle is simple, dispossess the criminals, restore property to the dispossessed if they can be found otherwise leave titles where they are (as Native American tribes owned the land **collectively** this could have an interesting effect on such a policy in the USA. Obviously tribes that were wiped out need not apply, but would such right-libertarian policy recognise such collective, non-capitalist ownership claims? We doubt it, but we could be wrong -- the Libertarian Party Manifesto states that their "just" property rights will be restored. And who defines "just"? And given that unclaimed federal land will be given to Native Americans, it seems pretty likely that the **original** land will be left alone).

Of course, that this instantly gives an advantage to the wealthy on the new "pure" market is not mentioned. The large corporations that, via state protection and support, built their empires and industrial base will still be in an excellent position to continue to dominate the market. Wealthy land owners, benefiting from the effects of state taxation and rents caused by the "land monopoly" on farmstead failures, will keep their property. The rich will have a great initial advantage and this may be more than enough to maintain them in their place. After all, exchanges between worker and owner tend to reinforce existing inequalities, **not** reduce them (and as the owners can move their capital elsewhere or import new, lower waged, workers from across the world, it's likely to stay that way).

So Rothbard's "solution" to the problem of past force seems to be (essentially) a justification of existing property titles and not a serious attempt to understand or correct past initiations of force that have shaped society into a capitalist one and still shape it today. The end result of his theory is to leave things pretty much as they are, for the past criminals are dead and so are their victims.

However, what Rothbard fails to note is that the **results** of this state action and coercion are still with us. He totally fails to consider that the theft of productive wealth has a greater impact on society than the theft itself. The theft of **productive** wealth shapes society in so many ways that **all** suffer from it (including current generations). This (the externalities generated by theft) cannot be easily undone by individualistic "solutions".

Let us take an example somewhat more useful than the one Rothbard uses (namely, a stolen watch). A watch cannot really be used to generate wealth (although if I steal a watch, sell it and buy a winning lottery ticket, does that mean I can keep the prize after returning the money value of your watch to you? Without the initial theft, I would not have won the prize but obviously the prize money far exceeds the amount stolen. Is the prize money mine?). Let us take a tool of production rather than a watch.

Let us assume a ship sinks and 50 people get washed ashore on an island. One woman has foresight to take

a knife from the ship and falls unconscious on the beach. A man comes along and steals her knife. When the woman awakes she cannot remember if she had managed to bring the knife ashore with her or not. The man maintains that he brought it with him and no one else saw anything. The survivors decide to split the island equally between them and work it separately, exchanging goods via barter.

However, the man with the knife has the advantage and soon carves himself a house and fields from the wilderness. Seeing that they need the knife and the tools created by the knife to go beyond mere existing, some of the other survivors hire themselves to the knife owner. Soon he is running a surplus of goods, including houses and equipment which he decides to hire out to others. This surplus is then used to tempt more and more of the other islanders to work for him, exchanging their land in return for the goods he provides. Soon he owns the whole island and never has to work again. His hut is well stocked and extremely luxurious. His workers face the option of following his orders or being fired (i.e. expelled from the island and so back into the water and certain death). Later, he dies and leaves his knife to his son. The woman whose knife it originally was had died long before, childless.

Note that the theft did not involve taking any land. All had equal access to it. It was the initial theft of the knife which provided the man with market power, an edge which allowed him to offer the others a choice between working by themselves or working for him. By working for him they did "benefit" in terms of increased material wealth (and also made the thief better off) but the accumulate impact of unequal exchanges turned them into the effective slaves of the thief.

Now, would it **really** be enough to turn the knife over to the whoever happened to be using it once the theft was discovered (perhaps the thief made a death-bed confession). Even if the woman who had originally taken it from the ship been alive, would the return of the knife **really** make up for the years of work the survivors had put in enriching the the thief or the "voluntary exchanges" which had resulted in the thief owning all the island? The equipment people use, the houses they life in and the food they eat are all the product of many hours of collective work. Does this mean that the transformation of nature which the knife allowed remain in the hands of the descendants of the thief or become the collective property of all? Would dividing it equally between all be fair? Not everyone worked equally hard to produce it. So we have a problem -- the result of the initial theft is far greater than the theft considered in isolation due to the productive nature of what was stolen.

In other words, what Rothbard ignores in his attempt to undermine anarchist use of history is that when the property stolen is of a productive nature, the accumulative effect of its use is such as to affect all of society. Productive assets produce **new** property, **new** values, create a **new** balance of class forces, **new** income and wealth inequalities and so on. This is because of the **dynamic** nature of production and human life. When the theft is such that it creates accumulative effects after the initial act, it is hardly enough to say that it does not really matter any more. If a nobleman invests in a capitalist firm with the tribute he extracted from his peasants, then (once the firm starts doing well) sells the land to the peasants and uses that money to expand his capitalist holdings, does that **really** make everything all right? Does not the crime transmit with the cash? After all, the factory would not exist without the prior exploitation of the peasants.

In the case of actually existing capitalism, born as it was of extensive coercive acts, the resultant of these acts have come to shape the **whole** society. For example, the theft of common land (plus the enforcement of property rights -- the land monopoly -- to vast estates owned by the aristocracy) ensured that working people had no option to sell their labour to the capitalists (rural or urban). The terms of these contracts reflected the weak position of the workers and so capitalists extracted surplus value from workers and used it to consolidate their market position and economic power. Similarly, the effect of mercantilist policies (and protectionism) was to enrich the capitalists at the expense of workers and allow them to build industrial empires.

The accumulative effect of these acts of violation of a "free" market was to create a class society wherein most people "consent" to be wage slaves and enrich the few. While those who suffered the impositions are long gone and the results of the specific acts have multiplied and magnified well beyond their initial form. And we are still living with them. In other words, the initial acts of coercion have been transmitted and transformed by collective activity (wage labour) into society-wide affects.

Rothbard argues in the situation where the descendants (or others) of those who initially tilled the soil and their aggressors ("*or those who purchased their claims*") still extract "*tribute from the modern tillers*" that this is a case of "**continuing** aggression against the true owners". This means that "*the land titles should be transferred to the peasants, without compensation to the monopoly landlords.*" [Op. Cit., p. 65] But what he fails to note is that the extracted "tribute" could have been used to invest in industry and transform society. Why ignore what the "tribute" has been used for? Does stolen property not remain stolen property after it has been transferred to another? And if the stolen property is used to create a society in which one class has to sell their liberty to another, then surely any surplus coming from those exchanges are also stolen (as it was generated directly and indirectly by the theft).

Yes, anarchist agree with Rothbard -- peasants should take the land they use but which is owned by another. But this logic can equally be applied to capitalism. Workers are still living with the effects of past initiations of force and capitalists still extract "tribute" from workers due to the unequal bargaining powers within the labour market that this has created. The labour market, after all, was created by state action (directly or indirectly) and is maintained by state action (to protect property rights and new initiations of force by working people). The accumulative effects of stealing productive resources as been to increase the economic power of one class compared to another. As the victims of these past abuses are long gone and attempts to find their descendants meaningless (because of the generalised effects the thefts in question), anarchists feel we are justified in demanding the "**expropriation of the expropriators**".

Due to Rothbard's failure to understand the dynamic and generalising effects that result from the theft of productive resources (i.e. externalities that occur from coercion of one person against a specific set of others) and the creation of a labour market, his attempt to refute anarchist analysis of the history of "actually existing capitalism" also fails. Society is the product of collective activity and should belong to us all (although whether and how we divide it up is another question).

F.8 What role did the state take in the creation of capitalism?

D.1 Why does state intervention occur?

The state is forced to intervene in society because of the anti-social effects of capitalism. The abstractly individualistic theory on which capitalism is based ("everyone for themselves") results in a high degree of statism since the economic system itself contains no means to combat its own socially destructive workings. The state must also intervene in the economy, not only to protect the interests of the ruling class but also to protect society from the atomising and destructive impact of capitalism. Moreover, capitalism has an inherent tendency toward periodic recessions or depressions, and the attempt to prevent them has become part of the state's function. However, since preventing them is impossible (they are built into the system -- see [section C.7](#)), in practice the state can only try to postpone them and ameliorate their severity. Let's begin with the need for social intervention.

Capitalism is based on turning both labour and land into commodities. As Karl Polyani points out, however, *"labour and land are no other than the human beings themselves of which every society consists and the natural surroundings in which it exists; to include labour and land in the market mechanism means to subordinate the substance of society itself to the laws of the market."* [**The Great Transformation**, p. 71] And this means that *"human society has become an accessory to the economic system,"* with humanity placing itself fully in the hands of supply and demand. But such a situation *"could not exist for any length of time without annihilating the human and natural substance of society; it would have physically destroyed man and transformed his surroundings into a wilderness."* [**Ibid.**, pp. 41-42]

To expect that a community would remain indifferent to the scourge of unemployment, dangerous working conditions, 16-hour working days, the shifting of industries and occupations, and the moral and psychological disruption accompanying them -- merely because economic effects, in the long run, might be better -- is an absurdity. Similarly, for workers to remain indifferent to, for example, poor working conditions, peacefully waiting for a new boss to offer them better conditions, or for citizens to wait passively for capitalists to start voluntarily acting responsibly toward the environment, is to assume a servile and apathetic role for humanity. Luckily, labour power refuses to be a commodity and citizens refuse to stand idly by while the planet's ecosystems are destroyed.

Therefore state intervention occurs as a form of protection against the workings of the market. As capitalism is based on atomising society in the name of "freedom" on the competitive market, it is hardly surprising that defence against the anti-social workings of the market should take statist forms -- there being few other structures capable of providing such defence (as such social institutions have been undermined, if not crushed, by the rise of capitalism in the first place). Thus, ironically, "individualism" produces a "collectivist" tendency within society as capitalism destroys communal forms of social organisation in favour of ones based on abstract individualism, authority, and hierarchy -- all qualities embodied in the state. In a free (i.e. communal) society, social self-defence would not be statist but would be similar in nature to trade unionism and co-operatives -- individuals working together in

voluntary associations to ensure a free and just society (see [section I](#)).

In addition to social protection, state intervention is required to protect a country's economy (and so the economic interests of the ruling class). As Noam Chomsky points out, even the USA, home of "free enterprise," was marked by *"large-scale intervention in the economy after independence, and conquest of resources and markets. . . [while] a centralised developmental state [was constructed] committed to [the] creation and entrenchment of domestic manufacture and commerce, subsidising local production and barring cheaper British imports, constructing a legal basis for private corporate power, and in numerous other ways providing an escape from the stranglehold of comparative advantage."* [**World Orders, Old and New**, p. 114]

In the case of Britain and a host of other countries (and more recently in the cases of Japan and the Newly Industrialising Countries of the Far East, like Korea) state intervention was, oddly enough, the key to development and success in the "free market." In other "developing" countries which have had the misfortune to be subjected to "free-market reforms" (e.g. neo-liberal Structural Adjustment Programs) rather than following the interventionist Japanese and Korean models, the results have been devastating for the vast majority, with drastic increases in poverty, homelessness, malnutrition, etc. (for the elite, the results are somewhat different of course).

In the nineteenth century, states only turned to laissez-faire once they could benefit from it and had a strong enough economy to survive it. *"Only in the mid-nineteenth century, when it had become powerful enough to overcome any competition, did England [sic!] embrace free trade."* [Noam Chomsky, **Op. Cit.**, p. 115] Before this, protectionism and other methods were used to nurture economic development. And once laissez-faire started to undermine a country's economy, it was quickly revoked. For example, protectionism is often used to protect a fragile economy and militarism has always been a favourite way for the ruling elite to help the economy, as is still the case, for example, in the *"Pentagon System"* in the USA (see [section D.8](#)).

State intervention has been a feature of capitalism from the start. As Kropotkin argued, *"nowhere has the system of 'non-intervention of the State' ever existed. Everywhere the State has been, and still is, the main pillar and the creator, direct and indirect, of Capitalism and its powers over the masses. Nowhere, since States have grown up, have the masses had the freedom of resisting the oppression by capitalists. . . The state has **always** interfered in the economic life in favour of the capitalist exploiter. It has always granted him protection in robbery, given aid and support for further enrichment. **And it could not be otherwise.** To do so was one of the functions -- the chief mission -- of the State."* [**Evolution and Environment**, pp. 97-8] Its limited attempts at laissez-faire have always been failures, resulting in a return to its statist roots. The process of selective laissez-faire and collectivism has been as much a feature of capitalism in the past as it is now. Indeed, as Noam Chomsky argues, *"[w]hat is called 'capitalism' is basically a system of corporate mercantilism, with huge and largely unaccountable private tyrannies exercising vast control over the economy, political systems, and social and cultural life, operating in close co-operation with powerful states that intervene massively in the domestic economy and international society. That is dramatically true of the United States, contrary to*

much illusion. The rich and privileged are no more willing to face market discipline than they have been in the past, though they consider it just fine for the general population." ["Anarchism, Marxism and Hope for the Future", **Red and Black Revolution**, issue 2]

Therefore, contrary to conventional wisdom, state intervention will always be associated with capitalism due to: (1) its authoritarian nature; (2) its inability to prevent the anti-social results of the competitive market; (3) its fallacious assumption that society should be "*an accessory to the economic system*"; (4) the class interests of the ruling elite; and (5) the need to impose its authoritarian social relationships upon an unwilling population in the first place.

State intervention is as natural to capitalism as wage labour. As Polyani summarises, "*the countermove against economic liberalism and laissez-faire possessed all the unmistakable characteristics of a spontaneous reaction. . . [and] a closely similar change from laissez-faire to 'collectivism' took place in various countries at a definite stage of their industrial development, pointing to the depth and independence of the underlying causes of the process.*" [Op. Cit., pp. 149-150] For "*government cannot want society to break up, for it would mean that it and the dominant class would be deprived of sources of exploitation; nor can it leave society to maintain itself without official intervention, for then people would soon realise that government serves only to defend property owners. . . and they would hasten to rid themselves of both.*" [Errico Malatesta, **Anarchy**, p. 22]

And neither should it be forgotten that state intervention was required to create the "free" market in the first place. To quote Polyani again, "*[f]or as long as [the market] system is not established, economic liberals must and will unhesitatingly call for the intervention of the state in order to establish it, and once established, in order to maintain it.*" [Op. Cit., p. 149] Protectionism and subsidy (mercantilism) -- along with the liberal use of state violence against the working class -- was required to create and protect capitalism and industry in the first place (see section F.8 - [What role did the state take in the creation of capitalism?](#)).

In short, although laissez-faire may be the ideological basis of capitalism -- the religion that justifies the system -- it has rarely if ever been actually practised. So, while the ideologues are praising "free enterprise" as the fountainhead of modern prosperity, corporations and companies are gorging at the table of the State.

The recent enthusiasm for the "free market" is in fact the product of an extended boom, which in turn was a product of a state co-ordinated war economy and highly interventionist Keynesian economics (a boom that the apologists of capitalism use, ironically, as "evidence" that "capitalism" works) plus an unhealthy dose of nostalgia for a past that never existed. It's strange how a system that has never existed has produced so much!

D.1.1 Does state intervention cause the problems to begin with?

Usually, no. This does not mean that state intervention cannot have bad effects on the economy or

society. Given the state's centralised, bureaucratic nature, it would be impossible for it **not** to have bad effects. State intervention can and does make bad situations worse in many cases. As Malatesta notes, *"the practical evidence [is] that whatever governments do is always motivated by the desire to dominate, and is always geared to defending, extending and perpetuating its privileges and those of the class of which it is both the representative and defender."* [**Anarchy**, p. 21].

However, for economic liberals (or, as we would call them today, neo-liberals or "conservatives"), state intervention is the root of all evil, and for them, it is precisely the state's interference with the market which causes the problems that society blames on the market.

But such a position is illogical, for *"whoever says regulation says limitation: now, how conceive of limiting privilege before it existed? ... [I]t would be an effect without a cause"* and so *"regulation was a corrective to privilege"* and not vice versa. [P-J Proudhon, **System of Economic Contradictions**, p. 371] As Polyani explains, the neo-liberal premise is false, because state intervention always *"dealt with some problem arising out of modern industrial conditions or, at any rate, in the market method of dealing with them."* [Karl Polyani, **Op. Cit.**, p. 146] In fact, these "collectivist" measures were usually carried out by convinced supporters of laissez-faire, who were as a rule uncompromising opponents of all forms of socialism (and often introduced to undermine support for socialist ideas caused by the excesses of "free market" capitalism).

Thus state intervention did not spring out of thin air, but occurred in response to pressing social and economic needs. This can be observed in the mid 19th century, which saw the closest approximation to laissez-faire in the history of capitalism. As Takis Fotopoulos argues, *"the attempt to establish pure economic liberalism, in the sense of free trade, a competitive labour market and the Gold Standard, did not last more than 40 years, and by the 1870s and 1880s, protectionist legislation was back. . . . It was also significant. . . [that all major capitalist powers] passed through a period of free trade and laissez-faire, followed by a period of anti-liberal legislation"* ["*The Nation-state and the Market*," p. 48, **Society and Nature**, Vol. 3, pp. 44-45].

The reason for the return of protectionist legislation was the Depression of 1873-86, which marked the end of the first experiment with pure economic liberalism. Paradoxically, then, the attempt to liberalise the markets led to more regulation. In light of our previous analysis, this is not surprising. Neither the owners of the country nor the politicians desired to see society destroyed, the result to which unhindered laissez-faire leads. Apologists of capitalism overlook the fact that *"[a]t the beginning of the Depression, Europe had been in the heyday of free trade"* [Polyani, **Op. Cit.**, p. 216]. State intervention came about in response to the social disruptions resulting from laissez-faire. It did not cause them.

Similarly, it is a fallacy to state, as Ludwig Von Mises does, that *"as long as unemployment benefit is paid, unemployment must exist."* This statement is not only ahistoric but ignores the existence of the **involuntary** unemployment which caused the state to start paying out a dole in order eliminate the possibility of crime as well as working class self-help, which could conceivably have undermined the status quo. The elite was well aware of the danger in workers organising for their own benefit.

Sadly, in pursuing of ideologically correct answers, capitalist apologists often ignore common sense. If one believes people exist for the economy and not the economy for people, one becomes willing to sacrifice people and their society today for the supposed economic benefit of future generations (in reality, current profits). If one accepts the ethics of mathematics, a future increase in the size of the economy is more important than current social disruption. Thus Polyani again: "*a social calamity is primarily a cultural not an economic phenomenon that can be measured by income figures*" [Op. Cit., p. 157]. And it is the nature of capitalism to ignore and despise what cannot be measured.

D.1.2 Is state intervention the result of democracy?

No. Social and economic intervention by the modern state began long before universal suffrage became widespread. For example, in Britain, "collectivist" measures were introduced when property and sexual restrictions on voting rights still existed. The centralist and hierarchical nature of "representative" democracy means that the population at large has little real control over politicians, who are far more influenced by big business, business lobby groups, and the state bureaucracy. This means that truly popular and democratic pressures are limited within the capitalist state and the interests of elites are far more decisive in explaining state actions.

The "New Deal" and the post-war Keynesianism measures of limited state intervention to stimulate economic recovery from the Depression were motivated by more material reasons than democracy. Thus Takis Fotopoulos argues that "*[t]he fact . . . that 'business confidence' was at its lowest could go a long way in explaining the much more tolerant attitude of those controlling production towards measures encroaching on their economic power and profits. In fact, it was only when -- and as long as -- state interventionism had the approval of those actually controlling production that it was successful*" ["*The Nation-state and the Market*", p. 55, **Society and Nature**, Vol. 3, pp. 44-45]

An example of this principle can be seen in the 1934 Wagner Act in the USA, which gave US labour its first and last political victory. The act made it legal for unions to organise, but this placed labour struggles within the boundaries of legal procedures and so meant that they could be more easily controlled. In addition, this concession was a form of appeasement whose effect was to make those involved in union actions less likely to start questioning the fundamental bases of the capitalist system. Once the fear of a militant labour movement had passed, the Wagner Act was undermined and made powerless by new laws, laws which made illegal the tactics which forced the politicians to pass the Wagner Act in the first place and increased the powers of bosses over workers.

Needless to say, the implication of classical liberal ideology that popular democracy is a threat to capitalism is the root of the fallacy that democracy leads to state intervention. The notion that by limiting the franchise the rich will make laws which benefit all says more about the classical liberals' touching faith in the altruism of the rich than it does about their understanding of human nature or their grasp of history. The fact that they can join with John Locke and claim with a straight face that all must abide by the rules that only the few make also says a lot about their concept of "freedom."

Of course some of the more modern classical liberals (for example, right-wing libertarians) advocate a "democratic state" which cannot intervene in economic matters. This is no solution, however, as it only gets rid of the statist response to real and pressing social problems caused by capitalism without supplying anything better in its place.

Anarchists agree that the state, due to its centralisation and bureaucracy, crushes the spontaneous nature of society and is a handicap to social progress and evolution. However, leaving the market alone to work its course fallaciously assumes that people will happily sit back and let market forces rip apart their communities and environment. Getting rid of state intervention without getting rid of capitalism and creating a free, communal society would mean that the need for social self-protection would still exist but that there would be even less means of achieving it than now. The results of such a policy, as history shows, would be a catastrophe for the working class (and the environment, we must add) and beneficial only for the elite (as intended, of course).

The implication of the false premise that democracy leads to state intervention is that the state exists for the benefit of the majority, which uses the state to exploit the rich minority! Amazingly, many capitalist apologists accept this as a valid inference from their premise, even though it's obviously a *reductio ad absurdum* of that premise as well as going against the facts of history.

D.1.3 Is state intervention socialistic?

No. Libertarian socialism is about self-liberation and self-management of one's activities. Getting the state to act for us is the opposite of these ideals. In addition, the question implies that socialism is connected with its nemesis, statism, and that socialism means even more bureaucratic control and centralisation. The identification of socialism with the state is something that Stalinists and capitalist apologists **both** agreed upon. However, as we'll see in section [H.3.13](#), "state socialism" is in reality just state capitalism-- the turning of the world into "*one office and one factory*" (to use Lenin's expression). Little wonder that most sane people join with anarchists in rejecting it. Who wants to work under a system in which, if one does not like the boss (i.e. the state), one cannot even quit?

The theory that state intervention is "creeping socialism" takes the laissez-faire ideology of capitalism at its face value, not realising that it is ideology rather than reality. Capitalism is a dynamic system and evolves over time, but this does not mean that by moving away from its theoretical starting point it is negating its essential nature and becoming socialistic. Capitalism was born from state intervention, and except for a very short period of laissez-faire which ended in depression, has always depended on state intervention for its existence.

The claim that state intervention is "socialist" also ignores the realities of power concentration under capitalism. Real socialism equalises power by redistributing it to the people, but as Noam Chomsky points out, "*[in] a highly inegalitarian society, it is most unlikely that government programs will be equalisers. Rather, it is to be expected that they will be designed and manipulated by private power for their own benefits; and to a significant degree the expectation is fulfilled*" [**The Chomsky Reader**, p.

184]. "Welfare equals socialism" is nonsense.

Similarly, in Britain and the nationalisation of roughly 20% of the economy (the most unprofitable sections of it as well) in 1945 by the Labour Government was the direct result of ruling class fear, not socialism. As Quintin Hogg, a Tory M.P. at the time, said, *"If you don't give the people social reforms they are going to give you social revolution."* Memories of the near revolutions across Europe after the First World War were obviously in many minds, on both sides. Not that nationalisation was particularly feared as "socialism." As anarchists at the time noted, *"the real opinions of capitalists can be seen from Stock Exchange conditions and statements of industrialists [rather] than the Tory Front bench. . . [and from these we] see that the owning class is not at all displeased with the record and tendency of the Labour Party"* [Vernon Richards, ed., **Neither Nationalisation nor Privatisation -- Selections from Freedom 1945-1950**, p. 9].

So where do anarchists stand on state intervention? Usually we are against it, although most of us think state health care services and unemployment benefits (for example) are more socially useful than arms production, and in lieu of more anarchistic solutions, better than the alternative of "free market" capitalism. This does not mean we are happy with state intervention, which in practice undermines working class self-help, mutual aid and autonomy. Also, state intervention of the "social" nature is often paternalistic, run by and for the "middle classes" (i.e. professional/managerial types and other self-proclaimed "experts"). However, until such time as a viable anarchist counterculture is created, we have little option but to "support" the lesser evil (but let's make no mistake, it **is** an evil).

This is not to deny that in many ways such state "support" can be used as a means of regaining some of the power and labour stolen from us by capitalists in the first place. State intervention **can** give working people more options than they otherwise would have. If state action could not be used in this way, it is doubtful that capitalists and their hired "experts" would spend so much time trying to undermine and limit it. As the capitalist class happily uses the state to enforce its power and property rights, working people making whatever use they can of it is to be expected. Be that as it may, this does not blind anarchists to the negative aspects of the welfare state and other forms of state intervention (see section [J.5.15](#) for anarchist perspectives on the welfare state).

One problem with state intervention, as Kropotkin saw, is that the state's absorption of social functions *"necessarily favoured the development of an unbridled, narrow-minded individualism. In proportion as the obligations towards the State grew in numbers, the citizens were evidently relieved from their obligations towards each other"* [**Mutual Aid**, p. 183]. In the case of state "social functions," such as the British National Health Service, although they were created as a **result** of the social atomisation caused by capitalism, they have tended to **reinforce** the individualism and lack of personal and social responsibility that produced the need for such action in the first place. (Forms of community and social self-help and their historical precedents will be discussed in section [J.5.16](#)).

The example of nationalised industries is a good indicator of the non-socialist nature of state intervention. Nationalisation meant replacing the capitalist bureaucrat with a state one, with little real

improvement for those subjected to the "new" regime. At the height of the British Labour Party's post-war nationalisations, anarchists were pointing out its anti-socialist nature. Nationalisation was *"really consolidating the old individual capitalist class into a new and efficient class of managers to run. . . state capitalism"* by *"installing the really creative industrialists in dictatorial managerial positions"* [Vernon Richards, **Op. Cit.**, p. 10].

Anarchists are in favour of self-directed activity and direct action to get improvements and defend reforms in the here and now. By organising strikes and protests ourselves, we can improve our lives. This does not mean that using direct action to get favourable laws passed or less-favourable ones revoked is a waste of time. Far from it. However, unless ordinary people use their own strength and grassroots organisations to enforce the law, the state and employers will honour any disliked law purely in the breach. By trusting the state, social self-protection against the market and power concentrations becomes hollow. In the end, what the state gives (or is pressurised into giving), it can take away but what we create and run ourselves is always responsive to **our** desires and interests. We have seen how vulnerable state welfare is to pressures from the capitalist class to see that this is a truism.

▪

J.3 What kinds of organisation do anarchists build?

Anarchists are well aware of the importance of building organisations. Organisations allow those within them to multiply their strength and activity, becoming the means by which an individual can see their ideas, hopes and dreams realised. This is as true for getting the anarchist message across as for building a home, running a hospital or creating some useful product like food. Anarchists support two types of organisation -- organisations of anarchists and popular organisations which are not made up exclusively of anarchists such as industrial unions, co-operatives and community assemblies. In this section of the FAQ we will discuss the kinds, nature and role of the first type of organisation, namely explicitly anarchist organisations. In addition, we discuss anarcho-syndicalism, a revolutionary unionism which aims to create an anarchist society by anarchist tactics, as well as why many anarchists are not anarcho-syndicalists. The second type of organisations, popular organisations, are discussed in detail in [section J.5](#) which gives specific examples of the kinds of social alternatives anarchists support and create under capitalism (community and industrial unions, mutual banks, co-operatives and so on).

Both forms of organisation, however, share the anarchist commitment to confederalism, decentralisation, self-management and decision making from the bottom up. In such organisations the membership play the decisive role in running them and ensuring that power remains in their hands. They express the anarchist vision of the power and creative efficacy people have when they are self-reliant, when they act for themselves and manage their own lives directly. Anarchists insist that people must manage their own affairs (individually and collectively) and have both the right and the ability to do so. Only by organising in this way can we create a new world, a world worthy of human beings and unique individuals.

Anarchist organisation in all its forms reflects the anarchist desire to *"build the new world in the shell of the old"* and to empower the individual. We reject the notion that it does not really matter how we organise to change society. Indeed, nothing could be further from the truth. We are all the products of the influences and social relationships in our lives, this is a basic idea of (philosophical) materialism. Thus the way our organisations are structured has an impact on us. If the organisation is centralised and hierarchical (no matter how "democratically" controlled any officials or leaders are) then those subject to it will, as in any hierarchical organisation, see their abilities to manage their own lives, their creative thought and imagination eroded under the constant stream of orders from above. This in turn justifies the pretensions to power of those at the top, as the capacity of self-management of the rank and file is weakened by authoritarian social relationships.

This means anarchist organisations are so structured so that they allow everyone the maximum potential to participate. Such participation is the key for a free organisation. As Malatesta argued:

"The real being is man, the individual. Society or the collectivity. . . if it is not a hollow abstraction, must be made up of individuals. And it is in the organism of every individual

that all thoughts and human actions inevitably have their origin, and from being individual they become collective thoughts and acts when they are or become accepted by many individuals. Social action, therefore, is neither the negation nor the complement of individual initiative, but is the resultant of initiatives, thoughts and actions of all individuals who make up society." [Anarchy, p. 36]

Anarchist organisations exist to allow this development and expression of individual initiatives. This empowering of the individual is an important aspect of creating viable solidarity for sheep cannot express solidarity, they only follow the shepherd. Therefore, *"to achieve their ends, anarchist organisations must, in their constitution and operation, remain in harmony with the principles of anarchism; that is, they must know how to blend the free action of individuals with the necessity and the joy of co-operation which serve to develop the awareness and initiative of their members and a means of education for the environment in which they operate and of a moral and material preparation for the future we desire."* [Errico Malatesta, **The Anarchist Revolution**, p. 95]

As such, anarchist organisations reflect the sort of society anarchists desire. We reject as ridiculous the claim of Marxists and Leninists that the form of organisation we build is irrelevant and therefore we must create highly centralised parties which aim to become the leadership of the working class. No matter how "democratic" such organisations are, they just reflect the capitalist division of labour between brain and manual work and the Liberal ideology of surrendering our ability to govern ourselves to an elected elite. In other words, they just mirror the very society we are opposed to and so will soon produce the very problems **within** so-called anti-capitalist organisations which originally motivated us to oppose capitalism in the first place. Because of this, anarchists regard *"the Marxist party as another statist form that, if it succeeded in 'seizing power,' would preserve the power of one human being over another, the authority of the leader over the led. The Marxist party. . . was a mirror image of the very society it professed to oppose, an invasion of the camp of revolutionaries by bourgeois values, methods, and structures."* [The Spanish Anarchists, pp. 179-80] As can be seen from the history of the Russian Revolution, this was the case with the Bolsheviks soon taking the lead in undermining workers' self-management, soviet democracy and, finally, democracy within the ruling party itself. Of course, from an anarchist (i.e. materialist) point of view, this was highly predictable -- after all, *"facts are before ideas; yes, the ideal, as Proudhon said, is but a flower whose root lies in the material conditions of existence."* [Bakunin, **God and the State**, p.9] -- and so it is unsurprising that hierarchical parties helped to maintain a hierarchical society. In the words of the famous Sonvillier Circular (issued by the libertarian sections of the First International):

"How could one want an egalitarian and free society to issue from an authoritarian organisation? It is impossible."

We must stress here that anarchists are **not** opposed to organisation and are **not** opposed to organisations of anarchists (i.e. **political** organisations, although anarchists generally reject the term "party" due to its statist and hierarchical associations). Murray Bookchin makes the issues clear when he wrote that the *"real question at issue here is not Organisation versus non-organisation, but rather what kind of*

*organisation . . . [anarchist] organisations . . . [are] organic developments from below . . . They are social movements, combining a creative revolutionary lifestyle with a creative revolutionary theory . . . As much as is humanly possible, they try to reflect the liberated society they seek to achieve . . . [and] are built around intimate groups of brothers and sisters - affinity groups . . . [with] co-ordination between groups . . . discipline, planning, and unity in action. . . achieved **voluntarily**, by means of a self-discipline nourished by conviction and understanding." [Post-Scarcity Anarchism, pp. 214-215]*

In the sections that follow, we discuss the nature and role of anarchist organisation. Anarchists would agree totally with these words of the Situationist Guy Debord that a *"revolutionary organisation must always remember that its objective is not getting people to listen to speeches by expert leaders, but getting them to speak for themselves"* and organise their groups accordingly. Section [J.3.1](#) discusses the basic building block of specifically anarchist organisations, the *"affinity group."* Sections [J.3.2](#), [J.3.3](#), [J.3.4](#) and [J.3.5](#), we discuss the main types of federations of *"affinity groups"* anarchists create to help spread our message and influence. Then section [J.3.6](#) highlights the role these organisations play in our struggles to create an anarchist society. Many Marxists fail to understand the nature of anarchist organisation and, because of this, misunderstand Bakunin's expression *"Invisible Dictatorship"* and paint a picture of him (and, by implication, all anarchists) as a hierarchical would-be dictator. Section [J.3.7](#) analyses these claims and shows why they are wrong. Finally, in sections [J.3.8](#) and [J.3.9](#) we discuss anarcho-syndicalism and other anarchists attitudes to it.

The power of ideas cannot be under estimated, for *"if you have an idea you can communicate it to a million people and lose nothing in the process, and the more the idea is propagated the more it acquires in power and effectiveness"* [**The Anarchist Revolution**, p. 46]. The right idea at the right time, one that reflects the needs of individuals and of required social change, can have a transforming effect on those who hold the idea and the society they live in. That is why organisations that anarchists create to spread their message are so important and why we devote a whole section to them.

Anarchist organisations, therefore, aim to enrich social struggle by their ideas and suggestions but also, far more importantly, enrich the idea by practical experience and activity. In other words, a two way process by which life informs theory and theory aids life. The means by which this social dynamic is created and developed is the underlying aim of anarchist organisation and is reflected in its theoretical role we highlight in the following sections.

J.3.1 What are affinity groups?

Affinity groups are the basic organisation which anarchists create to spread the anarchist idea. The term *"affinity group"* comes from the Spanish F.A.I. (**Iberian Anarchist Federation**) and refers to the organisational form devised by the Spanish Anarchists in their struggles. It is the English translation of *"grupo de afinidad."* At its most basic, it is a (usually small) group of anarchists who work together to spread their ideas to the wider public, using propaganda, initiating or working with campaigns and spreading their ideas **within** popular organisations (such as unions) and communities. It aims not to be a

"leadership" but to give a lead, to act as a catalyst within popular movements. Unsurprisingly it reflects basic anarchist ideas:

"Autonomous, communal and directly democratic, the group combines revolutionary theory with revolutionary lifestyle in its everyday behaviour. It creates a free space in which revolutionaries can remake themselves individually, and also as social beings." [Murray Bookchin, **Post-Scarcity Anarchism**, p. 221]

The reason for this is simple, for a *"movement that sought to promote a liberatory revolution had to develop liberatory and revolutionary forms. This meant . . . that it had to mirror the free society it was trying to achieve, not the repressive one it was trying to overthrow. If a movement sought to achieve a world united by solidarity and mutual aid, it had to be guided by these precepts; if it sought to achieve a decentralised, stateless, non-authoritarian society, it had to be structured in accordance with these goals."* [**The Spanish Anarchists**, p. 180]

The aim of an anarchist (i.e. anti-authoritarian) organisation is to promote a sense of community, of confidence in ones own abilities, to enable all to be involved in the identification, initiation and management of group/communal needs and decisions. Moreover, they must ensure that individuals are in a position (both physically, as part of a group/community, and mentally, as an individual) to manage their own lives and take direct action in the pursuit of individual and communal needs and desires.

Anarchist organisation is about empowering all, to develop "integral" or whole individuals and a community that encourages individuality (not abstract "individualism") and solidarity. It is about collective decision making from the bottom up, that empowers those at the "base" of the structure and only delegates the work of co-ordinating and implementing the members decisions (and not the power of making decisions for people). In this way the initiative and power of the few (government) is replaced by the initiative and empowerment of all (anarchy).

Affinity groups exist to achieve these aims and are structured to encourage them.

The local affinity group is the means by which anarchists co-ordinate their activities in a community, workplace, social movement and so on. Within these groups, anarchists discuss their ideas, politics and hopes, what they plan to do, write leaflets and organise other propaganda work, discuss how they are going to work within wider organisations like unions, how their strategies fit into their long term plans and goals and so on. It is the basic way that anarchists work out their ideas, pull their resources and get their message across to others. There can be affinity groups for different interests and activities (for example a workplace affinity group, a community affinity group, an anarcha-feminist affinity group, etc., could all exist within the same area, with overlapping members). Moreover, as well as these more "political" activities, the "affinity group" also stresses the *"importance of education and the need to live by Anarchist precepts -- the need . . . to create a counter-society that could provide the space for people to begin to remake themselves."* [Bookchin, **Ibid.**] In other words, "affinity groups" aim to be the *"living germs"* of the new society in **all** aspects, not purely in a structurally way.

These basic affinity groups are not seen as being enough in themselves. Most anarchists see the need for local groups to work together with others in a confederation. Such co-operation aims to pull resources and reduce duplicating efforts, in other words, expanding the options for the individuals and groups who are part of the federation. Such a federation is based upon the *"[f]ull autonomy, full independence and therefore full responsibility of individuals and groups; free accord between those who believe it useful to unite in co-operating for a common aim; moral duty to see through commitments undertaken and to do nothing that would contradict the accepted programme. It is on these bases that the practical structures, and the right tools to give life to the organisation should be build and designed."* [Errico Malatesta, **The Anarchist Revolution**, p. 101]

Therefore, affinity groups are self-managed, autonomous groupings of anarchists who unite and work on specific activities and interests. They are a key way for anarchists to co-ordinate their activity and spread their message of individual freedom and voluntary co-operation. However, the description of what an "affinity group" is does not explain **why** anarchists organise in that way. For a discussion on the role these groups play in anarchist theory, see [section J.3.6](#). Essentially, these "affinity groups" are the means by which anarchists actually intervene in social movements and struggles in order to win people to the anarchist idea and so help transform them from struggles **against** injustice into struggles **for** a free society, as we will discuss [later](#).

To aid in this process of propaganda, agitation, political discussion and development, anarchists organise federations of affinity groups. These take three main forms, *"synthesis"* federations (see [section J.3.2](#)), *"Platformist"* federations (see [section J.3.3](#) and [section J.3.4](#) for criticism of this tendency) and *"class struggle"* groups (see [section J.3.5](#)). However, we must note here that these types of federation are not mutually exclusive. Synthesis type federations often have "class struggle" and "platformist" groups within them (although, as will become clear, Platformist federations do not have synthesis groups within them) and most countries have different federations representing the different political perspectives within the movement. Moreover, it should also be noted that no federation will be a totally "pure" expression of each tendency. "Synthesis" groups merge in "class struggle" ones, platformist groups do not subscribe totally to the Platform and so on. We isolate each tendency to show its essential features. In real life few, if any, federations will exactly fit the types we highlight. It would be more precise to speak of organisations which are descended from a given tendency, for example the French Anarchist Federation is obviously mostly influenced by the synthesis tradition but it is not, strictly speaking, 100% synthesis. Lastly, we must also note that the term "class struggle" anarchist group in no way implies that "synthesis" and "platformist" groups do not support the class struggle, they most definitely do -- the technical term "class struggle" organisation we use, in other words, does **not** mean that other kinds of organisations are not class-struggle!

All the various types of federation are based on groups of anarchists organising themselves in a libertarian fashion. This is because anarchists try to live by the values of the future to the extent that this is possible under capitalism and try to develop organisations based upon mutual aid and brotherhood, in which control would be exercised from below upward, not downward from above.

It must be stressed anarchists do not reduce the complex issue of political organisation and ideas into **one** organisation but instead recognise that different threads within anarchism will express themselves in different political organisations (and even within the same organisation). Therefore a diversity of anarchist groups and federations is a good sign and expresses the diversity of political and individual thought to be expected in a movement aiming for a society based upon freedom. All we aim in the next four sections is paint a broad picture of the differences between different perspectives on anarchist organising. However, the role of these federations is as described here, that of an "aid" in the struggle, not a new leadership wanting power.

J.3.2 What are "synthesis" federations?

As noted in the [last section](#), there are three main types of affinity group federation -- "synthesis", "class struggle" (our term) and "platformist." In this section we discuss "synthesis" federations.

The "synthesis" group acquired its name from the work of the Russian anarchist Voline and the French anarchist Sebastien Faure. Voline published in 1924 a paper calling for "*the anarchist synthesis*" and was also the author of the article in Faure's **Encyclopedie Anarchiste** on the very same topic. However, its roots lie in the Russian revolution and the **Nabat** federation (or the "*Anarchist Organisations of the Ukraine*") created in 1918. The aim of the **Nabat** was "*organising all of the life forces of anarchism; bringing together through a common endeavour all anarchists seriously desiring of playing an active part in the social revolution which is defined as a process (of greater or lesser duration) giving rise to a new form of social existence for the organised masses.*" [**No Gods, No Masters**, vol. 2, p. 117]

The "synthesis" organisation is based on uniting all kinds of anarchists in one federation as there is, to use the words of the **Nabat**, "*validity in all anarchist schools of thought. We must consider all diverse tendencies and accept them.*" [cited in "*The Reply*," **Constructive Anarchism**, p. 32] The "synthesis" organisation attempts to get different kinds of anarchists "*joined together on a number of basic positions and with the awareness of the need for planned, organised collective effort on the basis of federation.*" [**Ibid.**] These basic positions would be based on a synthesis of the viewpoints of the members of the organisation, but each tendency would be free to agree their own ideas due to the federal nature of the organisation.

An example of this synthesis approach is provided by the differing assertions that anarchism is a theory of classes (as stated by the Platform, among others), that anarchism is a humanitarian ideal for all people (supporters of such a position sometimes accuse those who hold a class based version of anarchism of Marxism) and that anarchism is purely about individuals (and so essentially individualist and having nothing to do with humanity or with a class). The synthesis of these positions would be as follows:

"We must create a synthesis and state that anarchism contains class elements as well as humanism and individualist principles . . . Its class element is above all its means of fighting for liberation; its humanitarian character is its ethical aspect, the foundation of society; its individualism is the goal of humanity." [**Ibid.**]

So, as can be seen, the "synthesis" tendency aims to unite all anarchists (be they individualist, mutualist, syndicalist or communist) into one common federation. Thus the "synthesis" viewpoint is "inclusive" and obviously has affinities with the "*anarchism without adjectives*" approach favoured by many anarchists (see [section A.3.8](#) for details). However, in practice many "synthesis" organisations are more restrictive (for example, they could aim to unite all **social** anarchists like the French Anarchist Federation does). This means that there can be a difference between the general idea of the synthesis and how it is actually and concretely applied.

The basic idea behind the synthesis is that the anarchist scene (in most countries, at most times, including France in the 1920s and Russia during the revolution and at this time) is divided into three main tendencies: communist anarchism, anarcho-syndicalism, and individualist anarchism. This division can cause severe damage to the anarchist movement, simply because of the many (and often redundant) arguments and diatribes on why "my anarchism is best" can get in the way of working in common in order to fight our common enemies, known as state, capitalism and authority. The "synthesis" federations are defined by agreeing what is the common denominator of the various tendencies within anarchism and agreeing a minimum programme based on this for the federation. This would allow a "*certain ideological and tactical unity among organisations*" within the "synthesis" federation. [**Op. Cit.**, p. 35]

Moreover, as well as saving time and energy for more important tasks, there are technical and efficiency reasons for unifying into one organisation, namely allowing the movement to have access to more resources and being able to co-ordinate them so as to maximise their use and impact. The "synthesis" federation, like all anarchist groups, aims to spread anarchist ideas within society as a whole. They believe that their role is to "*assist the masses only when they need such assistance. . . the anarchists are part of the membership in the economic and social mass organisations [such as trade unions, for example]. They act and build as part of the whole. An immense field of action is opened to them for ideological [sic!], social and creative activity without assuming a position of superiority over the masses. Above all they must fulfil their ideological [sic!] and ethical influence in a free and natural manner. . . [they] only offer ideological assistance, but not in the role of leaders.*" [**Op. Cit.**, p. 33] This, as we shall see in [section J.3.6](#), is the common anarchist position as regards the role of an anarchist group. And, just to stress the point, this also shows that "synthesist" federations are usually class-struggle organisations (i.e. support and take part in the class-struggle as the key means of creating an anarchist society and making the current one freer and fairer).

The great strength of "synthesis" federations, obviously, is that they allow a wide and diverse range of viewpoints to be expressed within the organisation (which can allow the development of political ideas and theories by constant discussion and debate). In addition, they allow the maximum amount of resources to be made available to individuals and groups within the organisation.

This is why we find the original promoters of the "synthesis" arguing that "*that first step toward achieving unity in the anarchist movement which can lead to serious organisation is collective*

ideological work on a series of important problems that seek the clearest possible collective solution. . . [discussing] concrete questions [rather than "philosophical problems and abstract dissertations"] . . . [and] suggest that there be a publication for discussion in every country where the problems in our ideology [sic!] and tactics can be fully discussed, regardless of how 'acute' or even 'taboo' it may be. The need for such a printed organ, as well as oral discussion, seems to us to be a 'must' because it is the practical way, to try to achieve 'ideological unity', 'tactical unity', and possibly organisation. . . A full and tolerant discussion of our problems. . . will create a basis for understanding, not only among anarchists, but among different conceptions of anarchism." [Ibid., p. 35]

The "synthesis" idea for anarchist organisation was taken up by those who opposed the Platform (see [next section](#)). For both Faure and Voline, the basic idea was the same, namely that the historical tendencies in anarchism (communist, syndicalist and individualist) must co-operate and work in the same organisation. However, there are differences between Voline's and Faure's points of view. The latter saw these various tendencies as a wealth in themselves and advocated that each tendency would gain from working together in a common organisation. From Voline's point of view, the emergence of these various tendencies was historically needed to discover the in-depth implications of anarchism in various settings (such as the economical, the social and individual life). However, it was the time to go back to anarchism as a whole, an anarchism considerably empowered by what each tendency could give it, and in which tendencies as such should dissolve. Moreover, these tendencies co-existed in every anarchist at various levels, so all anarchists should aggregate in an organisation where these tendencies would disappear (both individually and organisationally, i.e. there would not be an "anarcho-syndicalist" specific tendency inside the organisation, and so forth).

The "synthesis" federation would be based on complete autonomy (within the basic principles of the Federation and Congress decisions, of course) for groups and individuals, so allowing all the different trends to work together and express their differences in a common front. The various groups would be organised in a federal structure, combining to share resources in the struggle against state, capitalism and all other forms of oppression. This federal structure is organised at the local level through a "local union" (i.e. the groups in a town or city), at the regional level (i.e. all groups in, say, Strathclyde are members of the same regional union) up to the "national" level (i.e. all groups in France, say) and beyond.

As every group in the federation is autonomous, it can discuss, plan and initiate an action (such as campaign for a reform, against a social evil, and so on) without having to others in the federation (or have to wait for instructions). This means that the local groups can respond quickly to local issues. This does not mean that each group works in isolation. These initiatives may gain federal support if local groups see the need. The federation can adopt an issue if it is raised at a federal conference and other groups agree to co-operate on that issue. Moreover, each group has the freedom **not** to participate on a specific issue while leaving others to do so. Thus groups can concentrate on what they are interested in most.

The programme and policies of the federation would be agreed at regular delegate meetings and

congresses. The "synthesis" federation is "managed" at the federal level by "relations committees" made up of people elected and mandated at the federation congresses. These committees would have a purely administrative role, spreading information, suggestions and proposals coming from groups and individuals within the organisation, for example, or looking after the finances of the federation and so on. They do not have any more rights in regards to this than any other member of the federation (i.e. they could not make a proposal as a committee, just as members of their local group or as individuals). These administrative committees are accountable to the federation and subject to both mandates and recall.

The **French Anarchist Federation** is a good example of a successful federation which is heavily influenced by "synthesis" ideas (as is the **Italian Anarchist Federation** and many other anarchist federations across the world). Obviously, how effective a "synthesis" federation is depends upon how tolerant members are of each other and how seriously they take their responsibilities towards their federations and the agreements they make.

Of course, there are problems involved in most forms of organisation, and the "synthesis" federation is no exception. While diversity can strengthen an organisation by provoking debate, a diverse grouping can often make it difficult to get things done. Platformist and other critics of the "synthesis" federation argue that it can be turned into a talking shop and any common programme difficult to agree, never mind apply. For example, how can mutualists and communists agree on the ends, never mind the means, their organisation supports? One believes in co-operation within a (modified) market system and reforming capitalism and statism away, while the other believes in the abolition of commodity production and money and revolution as the means of so doing. Ultimately, all they could do would be to disagree and thus any joint programmes and activity would be somewhat limited. It could, indeed, be argued that both Voline and Faure forgot essential points, namely what is this common denominator between the different kinds of anarchism, how do we achieve it and what is in it? For without this agreed common position, many so-called "anarchist synthesist organisations" end up becoming little more than talking shops, escaping from any social perspective or any organisational perspective and soon becoming neither organisations, nor anarchist, nor synthesist as both Faure and Voline meant by the term.

It is this (potential) disunity that lead the authors of the Platform to argue that "*[s]uch an organisation having incorporated heterogeneous theoretical and practical elements, would only be a mechanical assembly of individuals each having a different conception of all the questions of the anarchist movement, an assembly which would inevitably disintegrate on encountering reality.*" [**The Organisational Platform of the Libertarian Communists**, p. 12] The Platform suggested "*Theoretical and Tactical Unity*" as a means of overcoming this problem, but that term provoked massive disagreement in anarchist circles (see [section J.3.4](#)). In reply to the Platform, supporters of the "synthesis" counter by pointing to the fact that "Platformist" groups are usually very small, far smaller than "synthesis" federations (for example, compare the size of the French Anarchist Federation with, say, the Irish based Workers Solidarity Movement or the French Alternative Libertaire). This means, they argue, that the Platform does not, in fact, lead to a more effective organisation, regardless of the claims of its supporters. Moreover, they argue that the requirements for "*Theoretical and Tactical Unity*" help

ensure a small organisation as differences would express themselves in splits than constructive activity. Needless to say, the discussion continues within the movement on this issue!

What can be said is that this potential problem within "synthesisism" has been the cause of some organisations failing or becoming little more than talking shops, with each group doing its own thing and so making co-ordination pointless as any agreements made would be ignored (according to many this was a major problem with the **Anarchist Federation of Britain**, for example). Most supporters of the synthesis would argue that this is not what the theory aims for and that the problem lies in a misunderstanding of the theory rather than the theory itself (as can be seen from the FAF and FAI, "synthesis" inspired federations can be **very** successful). Non-supporters are more critical, with some supporting the "Platform" as a more effective means of organising to spread anarchist ideas and influence (see the [next section](#)). Other social anarchists create the "class struggle" type of federation (this is a common organisational form in Britain, for example) as discussed in [section J.3.5](#).

J.3.3 What is the "Platform"?

The Platform is a current within anarcho-communism which has specific suggestions on the nature and form which an anarchist federation takes. Its roots lie in the Russian anarchist movement, a section of which published *"The Organisational Platform of the Libertarian Communists"* when in exile from the Bolshevik dictatorship in Paris, in 1926. The authors of the work included Nestor Makhno, Peter Arshinov and Ida Mett. At the time it provoked intense debate (and still does in most anarchist) circles between supporters of the Platform (usually called "Platformists") and those who oppose it (which includes other communist-anarchists, anarcho-syndicalists and supporters of the "synthesis"). We will discuss why many anarchists oppose the Platform in the [next section](#). Here we discuss what the Platform argued for.

Like the "synthesis" federation (see [last section](#)), the Platform was created in response to the experiences of the Russian Revolution. The authors of the Platform (like Voline and other supporters of the "synthesis") had participated in that Revolution and saw all their work, hopes and dreams fail as the Bolshevik state triumphed and destroyed any chances of socialism by undermining soviet democracy, workers' self-management of production, trade union democracy as well as fundamental individual freedoms and rights (see the appendix on ["What happened during the Russian Revolution?"](#) for details). Moreover, the authors of the Platform had been leading activists in the Makhnovist movement in the Ukraine, which had successfully resisted both White and Red armies in the name of working class self-determination and anarchism (see ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#)). Facing the same problems of the Bolshevik government, the Makhnovists had actively encouraged popular self-management and organisation, freedom of speech and of association, and so on, whereas the Bolsheviks had not. Thus they were aware that anarchist ideas not only worked in practice, but that the arguments of Leninists who maintained that Bolshevism (and the policies it introduced at the time) was the only "practical" response to the problems facing a revolution were false.

They wrote the pamphlet in order to examine why the anarchist movement had failed to build on their successes in gaining influence within the working class. As can be seen from their work in the factory committees, where workers organised their own workforces and had begun to build a society based on both freedom and equality, anarchist ideas had proven to be both popular and practical. While repression by the Bolsheviks (as documented by Voline in his classic history of the Russian Revolution, **The Unknown Revolution**, for example) did play a part in this failure, it did not explain everything. Also important, in the eyes of the Platform authors, was the lack of anarchist organisation **before** the revolution. In the first paragraph they state:

"It is very significant that, in spite of the strength and incontestably positive character of libertarian ideas, and in spite of the facing up to the social revolution, and finally the heroism and innumerable sacrifices borne by the anarchists in the struggle for anarchist communism, the anarchist movement remains weak despite everything, and has appeared, very often, in the history of working class struggles as a small event, an episode, and not an important factor." [**Organisational Platform of the Libertarian Communists**, p. 11]

This weakness in the movement derived from a number of causes, the main one being *"the absence of organisational principles and practices"* within the anarchist movement. Indeed, they argued, *"the anarchist movement is represented by several local organisations advocating contradictory theories and practices, having no perspectives for the future, nor of a continuity in militant work, and habitually disappearing, hardly leaving the slightest trace behind them."* This explained the *"contradiction between the positive and incontestable substance of libertarian ideas, and the miserable state in which the anarchist movement vegetates."* [**Ibid.**] For anyone familiar with the anarchist movement in many countries, these words will still strike home. Thus the Platform still appears to many anarchists a relevant and important document, even if they are not Platformists.

The author's of the Platform proposed a solution to this problem, namely the creation of certain type of anarchist organisation. This organisation would be based upon communist-anarchist ideas exclusively, while recognising syndicalism as a principal method of struggle. Like most anarchists, the Platform placed class and class struggle as the centre of their analysis, recognising that the *"social and political regime of all states is above all the product of class struggle. . . The slightest change in the course of the battle of classes, in the relative locations of the forces of the class struggle, produces continuous modifications in the fabric and structure of society."* [**Op. Cit.**, p. 14] And, again, like most anarchists, the Platform aimed to *"transform the present bourgeois capitalist society into a society which assures the workers the products of the labours, their liberty, independence, and social and political equality,"* one based on a *"federalist system of workers organisations of production and consumption, united federatively and self-administering."* In addition, they argued that the *"birth, the blossoming, and the realisation of anarchist ideas have their roots in the life and the struggle of the working masses and are inseparable bound to their fate."* [**Op. Cit.**, p. 15, p. 19 and p. 15] Again, most anarchists (particularly social anarchists) would agree -- anarchist ideas will (and have) wither when isolated from working class life since only working class people, the vast majority, can create a free society and anarchist ideas are expressions of working class experience (remove the experience and the ideas do not develop as they should).

In order to create such a free society it is necessary, argue the Platformists, *"to work in two directions: on the one hand towards the selection and grouping of revolutionary worker and peasant forces on a libertarian communist theoretical basis (a specifically libertarian communist organisation); on the other hand, towards regrouping revolutionary workers and peasants on an economic base of production and consumption (revolutionary workers and peasants organised around production [i.e. syndicalism, unionism]; workers and free peasants co-operatives)"* [Op. Cit., p. 20] Again, most anarchists would agree with this along with the argument that *"anarchism should become the leading concept of revolution. . . The leading position of anarchist ideas in the revolution suggests an orientation of events after anarchist theory. However, this theoretical driving force should not be confused with the political leadership of the statist parties which leads finally to State Power."* [Op. Cit., p. 21] The "synthesis" critics of the Platform also recognised the importance of spreading anarchist ideas within popular and revolutionary movements and supporting the class struggle, for example, although they expressed the concept in a different way.

This *"leadership of ideas"* (see also [section J.3.6](#) for more on this) would aim at developing and co-ordinating libertarian feelings already existing within social struggle. *"Although the masses,"* explains the Platform, *"express themselves profoundly in social movements in terms of anarchist tendencies and tenets, these . . . do however remain dispersed, being uncoordinated, and consequently do not lead to the . . . preserving [of] the anarchist orientation of the social revolution."* [p. 21] The Platform argued that a specific anarchist organisation was required to ensure that the libertarian tendencies initially expressed in any social revolution or movement (for example, free federation, self-management in mass assemblies, mandating of delegates, decentralisation, etc.) do not get undermined by statists and authoritarians who have their own agendas.

However, these principles do not, in themselves, determine a Platformist organisation. After all, most anarcho-syndicalists and non-Platformist communist-anarchists would agree with these positions. The main point which distinguishes the Platform is its position on how an anarchist organisation should be structured and work. This is sketched in the *"Organisational Section,"* the shortest and most contentious section of the whole work. They call this the **General Union of Anarchists**. This is where they introduce the concepts of *"Theoretical and Tactical Unity"* and *"Collective Responsibility,"* concepts which are unique to the Platform.

The first concept, obviously, has two parts. Firstly the members of these organisations are in theoretical agreement with each other. Secondly they agree that if a certain type of work is prioritised, all should take part. Even today within the anarchist movement these are contentious ideas so it is worth exploring them in a little more detail.

By *"Theoretical Unity"* the Platform meant any anarchist organisation must come to an agreement on the theory upon which it is based. In other words, that members of the organisation must agree on a certain number of basic points, such as class struggle, anti-capitalism and anti-statism, and so on. An organisation in which half the members thought that union struggles were important and the other half

that they were a waste of time would not be effective as the membership would spend all their time arguing with themselves. While most Platformists agreed that everyone will not agree with everything, they think its important to reach as much agreement as possible, and to translate this into action. Once a theoretical position is reached, the members have to argue it in public (even if they initially opposed it within the organisation but they do have the right to get the decision of the organisation changed by internal discussion).

Which brings us to "*Tactical Unity*." By "*Tactical Unity*" the Platform meant that the members of an organisation should struggle together **as an organised force** rather than as individuals. Once a strategy has been agreed by the Union, all members would work towards ensuring its success (even if they initially opposed it). In this way resources and time are concentrated in a common direction, towards an agreed objective.

Thus "*Theoretical and Tactical Unity*" means an anarchist organisation that agrees specific ideas and the means of applying those ideas. The Platform's basic assumption is that there is a link between coherency and efficiency. By increasing the coherency of the organisation by making collective decisions and applying them, the Platform argues that this will increase the influence of anarchist ideas. Without this, they argue, better organised groups (such as Leninist ones) would be in a better position to have their arguments heard and listened to than anarchists would. Anarchists cannot be complacent, and rely on the hope that the obvious strength and rightness of our ideas will shine through and win the day. As history shows, this rarely happens and when it does, the authoritarians are usually in positions of power to crush the emerging anarchist influence (this was the case in Russia, for example). Platformists argue that the world we live in is the product of struggles between competing ideas of how society should be organised and if the anarchist voice is weak, quiet and disorganised, it will not be heard, and other arguments, other perspectives will win the day.

Which brings us to "*Collective Responsibility*," which the Platform defines as "*the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union.*" [Op. Cit., p. 32]

By this term, the Platform meant that each member should support the decisions made by the organisation and that each member should take part in the process of collective decision making process. Without this, argue Platformists, any decisions made will be paper decisions only as individuals and groups would ignore the agreements made by the federation (the Platform calls this "*the tactic of irresponsible individualism*" [Ibid.]). However, with "*Collective Responsibility*," the strength of all the individuals that make up the group is magnified and collectively applied. However, as one supporter of the Platform notes:

"The Platform doesn't go into detail about how collective responsibility works in practice. There are issues it leaves untouched such as the question of people who oppose the majority view. We would argue that obviously people who oppose the view of the majority have a right to express their own views, however in doing so they must make clear that

they don't represent the view of the organisation. If a group of people within the organisation oppose the majority decision they have the right to organise and distribute information so that their arguments can be heard within the organisation as a whole. Part of our anarchism is the belief that debate and disagreement, freedom and openness strengthens both the individual and the group to which she or he belongs." [**Red and Black Revolution**, no. 4, p. 30]

The last principle in the "*Organisational Section*" of the Platform is "*Federalism*," which it defines as "*the free agreement of individuals and organisations to work collectively towards a common objective*" and allows the "*reconcil[ing] the independence and initiative of individuals and the organisation with service to the common cause.*" [**Op. Cit.**, p. 33] However, the Platform argues that this principle has been "*deformed*" within the movement to mean the "*right*" to "*manifest one's 'ego,' without obligation to account for duties as regards the organisation*" one is a member of. [**Ibid.**] In order to overcome this problem, they stress that "*the federalist type of anarchist organisation, while recognising each member's rights to independence, free opinion, individual liberty and initiative, requires each member to undertake fixed organisation duties, and demands execution of communal decisions.*" [**Op. Cit.**, pp. 33-4]

As part of their solution to the problem of anarchist organisation, the Platform suggested that each group would have "*its secretariat, executing and guiding theoretically the political and technical work of the organisation.*" [**Op. Cit.**, p. 34] Moreover, the Platform suggests that "*a special organ [must] be created: **the executive committee of the Union***" which would "*be in charge*" of "*the execution of decisions taken by the Union with which it is entrusted; the theoretical and organisational orientation of the activity of isolated organisations consistent with the theoretical positions and the general tactical lines of the Union; the monitoring of the general state of the movement; the maintenance of working and organisational links between all the organisations in the Union; and with other organisation.*" The rights, responsibilities and practical tasks of the executive committee are fixed by the congress of the Union. [**Ibid.**] This suggestion, unsurprisingly, meet with strong disapproval by most anarchists, as we will see in the [next section](#), who argued that this would turn the anarchist movement into a centralised, hierarchical party similar to the Bolsheviks. Needless to say, supporters of the Platform reject this argument and point out that the Platform itself is not written in stone and needs to be discussed fully and modified as required. In fact, few, if any, Platformist groups, do have this "*secretariat*" structure (it could, in fact, be argued that there are no actual "Platformist" groups, rather groups influenced by the Platform, namely on the issues of "*Theoretical and Tactical Unity*" and "*Collective Responsibility*").

Similarly, most modern day Platformists reject the idea of gathering all anarchists into one organisation. The original Platform seemed to imply that the **General Union** would be an umbrella organisation, which is made up of different groups and individuals. Most Platformists would argue that not only will there never be one organisation which encompasses everyone, they do not think it necessary. Instead they envisage the existence of a number of organisations, each internally unified, each co-operating with each other where possible, a much more amorphous and fluid entity than a General Union of Anarchists.

As well as the original Platform, most Platformists place the **Manifesto of Libertarian Communism** by Georges Fontenis and **Towards a Fresh Revolution** by the "*Friends of Durruti*" as landmark texts in the Platformist tradition. A few anarcho-syndicalists question this last claim, arguing that the "*Friends of Durruti*" manifesto has strong similarities with the CNTs pre-1936 position on revolution and thus is an anarcho-syndicalist document, going back to the position the CNT ignored after July 19th, 1936.

There are numerous Platformist and Platformist influenced organisations in the world today. These include the Irish based **Workers Solidarity Movement**, the British **Anarchist Communist Federation**, the French **Libertarian Alternative**, the Swiss **Libertarian Socialist Organisation**, the Italian **Federation of Anarchist Communists** and the South African **Workers Solidarity Federation**.

In the [next section](#) we discuss the objections that most anarchists have towards the Platform.

J.3.4 Why do many anarchists oppose the "Platform"?

When the "Platform" was published it provoked a massive amount of debate and comment, the majority of it critical. The majority of famous anarchists rejected the Platform. Indeed, only Nestor Makhno (who co-authored the work) supported its proposals, with (among others) Alexander Berkman, Emma Goldman, Voline, G.P. Maximoff, Luigi Fabbri, Camilo Berneri and Errico Malatesta rejecting its suggestions on how anarchists should organise. All argued that the Platform was trying to "*Bolshevise anarchism*" or that the authors were too impressed by the "success" of the Bolsheviks in Russia. Since then, it has continued to provoke a lot of debate in anarchist circles. So why did so many anarchists then, and now, oppose the Platform?

While many of the anti-Platformists made points about most parts of the Platform (both Maximoff and Voline pointed out that while the Platform denied the need of a "*Transitional Period*" in theory, they accepted it in practice, for example) the main bone of contention was found in the "*Organisational Section*" with its call for "*Tactical and Theoretical Unity*," "*Collective Responsibility*" and group and executive "*secretariats*" guiding the organisation. Here most anarchists found ideas they considered incompatible with anarchist ideas. We will concentrate on this issue as it is usually considered as the most important.

Today, in some quarters of the libertarian movement, the Platformists are often dismissed as 'want-to-be leaders'. Yet this was not where Malatesta and other critics of the Platform took issue. Malatesta and Maximoff both argued in favour of, to use Maximoff's words, anarchists "*go[ing] into the masses. . . , work[ing] with them, struggle for their soul, and attempt to win it ideologically [sic!] and give it guidance.*" [**Constructive Anarchism**, p. 19] Moreover, as Maximoff notes, the "synthesis" anarchists come to the same conclusion. Thus all sides of the debate accepted that anarchists should take the lead. The question, as Malatesta and the others saw it, was not whether to lead, but rather how you should lead - a fairly important distinction in the argument. Following Bakunin, Maximoff argued that the question was "*not the rejection of leadership, but making certain it is free and natural.*" [**Ibid.**] Malatesta made the same point and posed two 'alternatives': Either we "*provide leadership by advice and*

example leaving people themselves to . . . adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others...." or we "*can also direct by taking over command, that is by becoming a government.*" He asked the Platformists, "*In which manner do you wish to direct?*" [**The Anarchist Revolution**, p. 108]

He goes on to say that while he thought, from his knowledge of Makhno and his work, that the answer must be the second way, he was "*assailed by doubt that [Makhno] would also like to see, within the general movement, a central body that would, in an authoritarian manner, dictate the theoretical and practical programme for the revolution.*" This was because of the "*Executive Committee*" in the Platform which would "*give ideological and organisational direction to the [anarchist] association.*" [**Op. Cit.**, p. 110]

Maximoff makes the same point when he notes that when the Platform argues that anarchists must "*enter into revolutionary trade unions as an organised force, responsible to accomplish work in the union before the general anarchist organisation and orientated by the latter*" [**The Organisational Platform of the Libertarian Communists**, p. 25] this implies that anarchists in the unions are responsible to the anarchist federation, **not** to the union assemblies that elected them. As he puts it, according to the Platform, anarchists "*are to join the Trades Unions with ready-made recipes and are to carry out their plans, if necessary, against the will of the Unions themselves.*" [**Constructive Anarchism**, p. 19] However, Maximoff's argument may be considered harsh as the Platform argues that anarchism "*aspires neither to political power nor dictatorship*" [**Op. Cit.**, p. 21] and so they would hardly be urging the opposite principles within the trade union movement. If we take the Platform's comments within a context informed by the "*leadership of ideas*" concept (see [section J.3.6](#)) then what they meant was simply that the anarchist group would convince the union members of the validity of their ideas by argument and so the disagreement becomes one of unclear (or bad) use of language by the Platform's authors. Something Maximoff would not have disagreed with, we are sure.

Despite many efforts and many letters on the subject (in particular between Malatesta and Makhno) the question of "leadership" could not be clarified to either side's satisfaction, in part because there was an additional issue for dispute. This was the related issue of organisational principles (which in themselves make up the defining part of the original Platform). Malatesta argued that this did not conform with anarchist methods and principles, and so could not "*help bring about the triumph of anarchism.*" [**The Anarchist Revolution**, p. 97] This was because of two main reasons, the first being the issue of the Platform's "secretariats" and "executive committee" and the issue of "Collective Responsibility." We will take each in turn.

With an structure based round "secretariats" and "executive committees" the "*will of the [General] Union [of Anarchists] can only mean the will of the majority, expressed through congresses which nominate and control the **Executive Committee** and decide on all important issues. Naturally, the congresses would consist of representatives elected by the majority of member groups . . . So, in the best of cases, the decisions would be taken by a majority of a majority, and this could easily, especially when the opposing opinions are more than two, represent only a minority.*" This, he argues, "*comes down to a*

pure majority system, to pure parliamentarianism" and so non-anarchist in nature. [Op. Cit., p. 100]

As long as a Platformist federation is based on "secretariats" and "executive committees" directing the activity and development of the organisation, this critique is valid. In such a system, as these bodies control the organisation and members are expected to follow their decisions (due to "theoretical and tactical unity" and "collective responsibility") they are, in effect, the government of the association. While this government may be elected and accountable, it is still a government simply because these bodies have executive power. As Maximoff argues, individual initiative in the Platform *"has a special character . . . Each organisation (i.e. association of members with the right to individual initiative) has its secretariat which . . . directs the ideological, political and technical activities of the organisation . . . In what, then, consists the self-reliant activities of the rank-and-file members? Apparently in one thing: initiative to obey the secretariat and carry out its directives."* [Constructive Anarchism, p. 18] This seems to be the logical conclusion of the structure suggested by the Platform. *"The spirit,"* argued Malatesta, *"the tendency remains authoritarian and the educational effect would remain anti-anarchist."* [The Anarchist Revolution, p. 98]

Malatesta, in contrast, argued that an anarchist organisation must be based on the *"[f]ull autonomy, full independence and therefore the full responsibility of individuals and groups"* with all organisational work done *"freely, in such a way that the thought and initiative of individuals is not obstructed."* The individual members of such an organisation *"express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others."* Moreover, the administrative bodies such organisations nominate would *"have no executive powers, have no directive powers"* leaving it up to the groups and their federal meetings to decide their own fates. While they may be representative bodies, the congresses of such organisations would be *"free from any kind of authoritarianism, because they do not lay down the law; they do not impose their own resolutions on others. . . and do not become binding and enforceable except on those who accept them."* [Op. Cit., p. 101, p. 102, p. 101] Such an organisation does not exclude collective decisions and self-assumed obligations, rather it is based upon them.

Most groups inspired by the Platform, however, seem to reject this aspect of its organisational suggestions. Instead of "secretariats" and "executive committees" they have regular conferences and meetings to reach collective decisions on issues and practice unity that way. Thus the **really** important issue is of "theoretical and tactical unity" and "collective responsibility," not in the structure suggested by the Platform. Indeed, this issue was the main topic in Makhno's letter to Malatesta, for example, and so we would be justified in saying that this is the key issues dividing "Platformists" from other anarchists.

So in what way did Malatesta disagree with this concept? As we mentioned in the [last section](#), the Platform defined the idea of "Collective Responsibility" as *"the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union."* To which Malatesta commented as follows:

"But if the Union is responsible for what each member does, how can it leave to its members and to the various groups the freedom to apply the common programme in the way they think best? How can one be responsible for an action if it does not have the means to prevent it? Therefore, the Union and in its name the Executive Committee, would need to monitor the action of the individual member and order them what to do and what not to do; and since disapproval after the event cannot put right a previously accepted responsibility, no-one would be able to do anything at all before having obtained the go-ahead, the permission of the committee. And, on the other hand, can an individual accept responsibility for the actions of a collectivity before knowing what it will do and if he cannot prevent it doing what he disapproves of?" [Op. Cit., p. 99]

In other words, the term "collective responsibility" (if taken literally) implies a highly inefficient and somewhat authoritarian mode of organisation. Before any action could be undertaken, the organisation would have to be consulted and this would crush individual, group and local initiative. The organisation would respond slowly to developing situations, if at all, and this response would not be informed by first hand knowledge and experience. Moreover, this form of organisation implies a surrendering of individual judgement, as members would have to *"submit to the decisions of the majority before they have even heard what those might be."* [Op. Cit., 101] In the end, all a member could do would be to leave the organisation if they disagree with a tactic or position and could not bring themselves to further it by their actions.

This structure also suggests that the Platform's commitment to federalism is in words only. As most anarchists critical of the Platform argued, while its authors affirm federalist principles they, in fact, *"outline a perfectly centralised organisation with an Executive Committee that has responsibility to give ideological and organisational direction to the different anarchist organisations, which in turn will direct the professional organisations of the workers."* ["The Reply", **Constructive Anarchism**, pp. 35-6]

Thus it is likely that "Collective Responsibility" taken to its logical end would actually **hinder** anarchist work by being too bureaucratic and slow. Let us assume that by applying collective responsibility as well as tactical and theoretical unity, anarchist resources and time will be more efficiently utilised. However, what is the point of being "efficient" if the collective decision reached is wrong or is inapplicable to many areas? Rather than local groups applying their knowledge of local conditions and developing theories and policies that reflect these conditions (and co-operating from the bottom up), they may be forced to apply inappropriate policies due to the "Unity" of the Platformist organisation. It is true that Makhno argued that the *"activities of local organisations can be adapted, as far as possible, to suit local conditions"* but only if they are *"consonant with the pattern of the overall organisational practice of the Union of anarchists covering the whole country."* [**The Struggle Against the State and Other Essays**, p. 62] Which still begs the question on the nature of the Platform's unity (however, it does suggest that the Platform's position may be less extreme than might be implied by the text, as we will discuss). That is why anarchists have traditionally supported federalism and free agreement within their organisations, to take into account the real needs of localities.

However, if we do not take the Platform's definition of "Collective Responsibility" literally or to its

logical extreme (as Makhno's comments suggest) then the differences between Platformists and non-Platformists may not be that far. As Malatesta pointed out in his reply to Makhno's letter:

"I accept and support the view that anyone who associates and co-operates with others for a common purpose must feel the need to co-ordinate his [or her] actions with those of his [or her] fellow members and do nothing that harms the work of others . . . and respect the agreements that have been made. . . [Moreover] I maintain that those who do not feel and do not practice that duty should be thrown out the of the association.

"Perhaps, speaking of collective responsibility, you mean precisely that accord and solidarity that must exist among members of an association. And if that is so, your expression amounts. . . to an incorrect use of language, but basically it would only be an unimportant question of wording and agreement would soon be reached." [Op. Cit., pp. 107-8]

This, indeed, seems to be the way that most Platformist organisation do operate. They have agreed broad theoretical and tactical positions on various subjects (such as, for example, the nature of trade unions and how anarchists relate to them) while leaving it to local groups to act within these guidelines. Moreover, the local groups do not have to report to the organisation before embarking on an activity. In other words, most Platformist groups do not take the Platform literally and so many differences are, to a large degree, a question of wording.

While many anarchists are critical of Platformist groups for being too centralised for their liking, it is the case that the Platform has influenced many anarchist organisations, even non-Platformist ones (this can be seen in the "class struggle" groups discussed in the [next section](#)). This influence has been both ways, with the criticism the original Platform was subjected to having had an effect on how Platformist groups have developed. This, of course, does not imply that there is little or no difference between Platformists and other anarchists. Platformist groups tend to stress "collective responsibility" and "theoretical and tactical unity" more than others, which has caused problems when Platformists have worked within "synthesis" organisations (as was the case in France, for example, which resulted in much bad-feeling between Platformists and others).

Constructive Anarchism by the leading Russian anarcho-syndicalist G.P. Maximoff gathers all the relevant documents in one place. As well as Maximoff's critique of the Platform, it includes the "synthesis" reply and the exchange of letters between Malatesta and Makhno on the former's critical article on the Platform (which is also included). **The Anarchist Revolution** also contains Malatesta's article and the exchange of letters between him and Makhno.

J.3.5 Are there other kinds of anarchist federation?

Another type of anarchist federation is what we term the "*class struggle*" group. Many local anarchist groups in Britain, for example organise in this fashion. They use the term "class struggle" to indicate that

their anarchism is based on collective working class resistance as opposed to reforming capitalism via lifestyle changes and the support of, say, co-operatives (many "class struggle" anarchists do these things, of course, but they are aware that they cannot create an anarchist society by doing so). We follow this use of the term here. And just to stress the point again, our use of "class struggle" to describe this type of anarchist federation and group does not imply that "synthesis" or "Platformist" do not support the class struggle. They do!

This kind of group is half-way between the "synthesis" and the "Platform." The "class struggle" group agrees with the "synthesis" in so far as it is important to have a diverse viewpoints within a federation and that it would be a mistake to try to impose a common-line on different groups in different circumstances as the Platform does. However, like the "Platform," the class struggle group recognises that there is little point in creating a forced union between totally different strands of anarchism. Thus the "class struggle" group rejects the idea that individualist or mutualist anarchists should be part of the same organisation as anarchist communists or syndicalists or that anarcho-pacifists should join forces with non-pacifists. Thus the "class struggle" group acknowledges that an organisation which contains viewpoints which are dramatically opposed can lead to pointless debates and the paralysis of action due to the impossibilities of overcoming those differences.

Instead, the "class struggle" group agrees a common set of "aims and principles" which are the basic terms of agreement within the federation. If an individual or group does not agree with this statement then they cannot join. If they are members and try to change this statement and cannot get the others to agree its modification, then they are morally bound to leave the organisation. In other words, the aims and principles is the framework within which individuals and groups apply their own ideas and their interpretation of agreed policies. It means that individuals in a group and the groups within a federation have something to base their local activity on, something which has been agreed collectively. Hence, there would be a common thread to activities and a guide to action (particularly in situations where a group or federation meeting cannot be called). In this way individual initiative and co-operation can be reconciled, without hindering either. In addition, the "*aims and principles*" would show potential members where the anarchist group was coming from.

Such a federation, like all anarchist groups, would be based upon regular assemblies locally and in frequent regional, national, etc., conferences to continually re-evaluate policies, tactics, strategies and goals. In addition, such meetings prevent power from collecting in the higher administration committees created to co-ordinate activity. The regular conferences aim to create federation policies on specific topics and agree common strategies. Such policies, once agreed, are morally binding on the membership, who can review and revise them as required at a later stage but cannot take action which would hinder their application (they do not have to apply them themselves, if they consider them as a big mistake). In other words, "*[i]n an anarchist organisation the individual members can express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others.*" [Errico Malatesta, **The Anarchist Revolution**, p. 102]

For example, minorities in such a federation can pursue their own policies as long as they clearly state that theirs is a minority position and does not contradict the federation's aims and principles. In this way

the anarchist federation combines united action and dissent, for no general policy will be applicable in all circumstances and it is better for minorities to make mistakes than for them to pursue policies which they know will make even greater problems in their area. As long as their actions and policies do not contradict the federations basic political ideas, then diversity is an essential means for ensuring that the best tactic and ideas are identified. The problem with the "synthesis" grouping is that any such basic political ideas would be hard to agree and be so watered down as to be almost useless (for example, a federation combining individualist and communist anarchists would find it impossible to agree on such things as the necessity for communism, communal ownership, and so on).

Thus, supporters of the "class struggle" group agree with Malatesta when he argued that anarchist groups must be founded on "*[f]ull autonomy, full independence and therefore full responsibility of individuals and groups; free accord between those who believe it is useful to unite in co-operating for a common aim; moral duty to see through commitments undertaken and to do nothing that would contradict the accepted programme. It is on these bases that the practical structures, and the right tools to give life to the organisation should be built and designed. Then the groups, the federations of groups, the federations of federations, the meetings, the congresses, the correspondence committees and so forth. But all this must be done freely, in such a way that the thought and initiative of individuals is not obstructed, and with the sole view of giving greater effect to efforts which, in isolation, would be either impossible or ineffective.*" [Op. Cit., p. 101]

The "class struggle" group, like all anarchist groupings, is convinced that (to use Murray Bookchin's words) "*anarcho-communism cannot remain a mere mood or tendency, wafting in the air like a cultural ambience. It must be organised -- indeed **well-organised** -- if it is effectively articulate and spread this new sensibility; it must have a coherent theory and extensive literature; it must be capable of duelling with the authoritarian movements [capitalist or state socialist] that try to denature the intuitive libertarian impulses of our time and channel social unrest into hierarchical forms of organisation.*" ["Looking Back at Spain," pp. 53-96, **The Radical Papers**, p. 90]

J.3.6 What role do these groups play in anarchist theory?

The aim of these groups and federations is to spread anarchist ideas within society and within social movements. They aim to convince people of the validity of anarchist ideas and analysis, of the need for a libertarian transformation of society and of themselves. They do so by working with others as equals and "*through advice and example, leaving people . . . to adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others.*" [Errico Malatesta, **The Anarchist Revolution**, p. 108]

The role of "affinity groups" and their federations play a key role in anarchist theory. This is because anarchists are well aware that there are different levels of knowledge and consciousness in society. While it is a basic element of anarchism that people learn through struggle and their own experiences, it is also a fact that different people develop at different speeds, that each individual is unique and subject to different influences. As one anarchist pamphlet puts it, the "*experiences of working class life*

constantly lead to the development of ideas and actions which question the established order . . . At the same time, different sections of the working class reach different degrees of consciousness." [**The Role of the Revolutionary Organisation**, p.3] This can easily be seen from any group of individuals of the same class or even community. Some are anarchists, others Marxists, some social democrats/labourites, others conservatives, other liberals, most "apolitical," some support trade unions, others are against and so on.

Because they are aware that they are one tendency among many, anarchists organise as anarchists to influence social struggle. Only when anarchist ideas are accepted by the vast majority will an anarchist society be possible. We wish, in other words, to win the most widespread understanding and influence for anarchist ideas and methods in the working class and in society, primarily because we believe that these alone will ensure a successful revolutionary transformation of society. Hence Malatesta's argument that anarchists *"must strive to acquire overwhelming influence in order to draw the movement towards the realisation of our ideals. But such influence must be won by doing more and better than others, and will be useful of won in that way . . . [therefore] we must deepen, develop and propagate our ideas and co-ordinate our forces in a common action. We must act within the labour movement to prevent it being limited to and corrupted by the exclusive pursuit of small improvements compatible with the capitalist system. . . We must work with . . . [all the] masses to awaken the spirit of revolt and the desire for a free and happy life. We must initiate and support all movements that tend to weaken the forces of the State and of capitalism and to raise the mental level and material conditions of the workers."* [**Life and Ideas**, p. 109]

Anarchist organisation exists to help the process by which people come to anarchist conclusions. It aims to make explicit the feelings and thoughts that people have (such as, wage slavery is hell, that the state exists to rip people off and so on) by exposing as wrong common justifications for existing society and social relationships by a process of debate and providing a vision of something better. In other words, anarchist organisations seek to explain and clarify what is happening in society and show why anarchism is the only real solution to social problems. As part of this, we also have combat false ideas such as Liberalism, Social Democracy, right-wing Libertarianism, Leninism and so on, indicating why these proposed solutions are not real ones. In addition, an anarchist organisation must also be a 'collective memory' for the oppressed, keeping alive and developing the traditions of the labour movement and anarchism so that new generations of anarchists have a body of experience to build upon and use in their struggles.

Anarchist organisations see themselves in the role of aiders, **not** leaders. As Voline argued, the minority which is politically aware minority *"should intervene. But, in every place and under all circumstances, . . . [they] should freely participate in the common work, as true collaborators, not as dictators. It is necessary that they especially create an example, and employ themselves. . . without dominating, subjugating, or oppressing anyone. . . Accordingly to the libertarian thesis, it is the labouring masses themselves, who, by means of the various class organisations, factory committees, industrial and agricultural unions, co-operatives, et cetera, federated. . . should apply themselves everywhere, to solving the problems of waging the Revolution. . . As for the 'elite' [i.e. the politically aware], their role, according to the libertarians, is to help the masses, enlighten them, teach them, give*

them necessary advice, impel them to take initiative, provide them with an example, and support them in their action -- but not to direct them governmentally." [The Unknown Revolution, pp. 177-8]

This role is usually called providing a "*leadership of ideas*" (Bakunin used the unfortunate term "*invisible dictatorship*" to express approximately the same idea -- see [section J.3.7](#) for details).

Anarchists stress the difference of this concept with authoritarian notions of "leadership" such as Leninist ideas about party leadership where in members of the vanguard party are elected to positions of power or responsibility within an organisation. While both anarchist and Leninist organisations exist to overcome the problem of "uneven development" within the working class (i.e. the existence of many different political opinions within it), the aims, role and structure of these groups could not be more different. Essentially, Leninist parties (as well as reproducing hierarchical structures within the so-called "revolutionary" organisation) see socialist politics as arising **outside** the working class, in the radical intelligentsia (see Lenin's **What is to be Done** for details) rather than as the product of working class experience (in this, we must add, Lenin was following standard Social Democratic theory and the ideas of Karl Kautsky -- the "Pope of Marxism" -- in particular).

Anarchists, on the other hand, argue that rather than being the product of "outside" influence, (libertarian) socialist ideas are the natural product of working class life. In other words, (libertarian) socialist ideas come from **within** the working class. Bakunin, for example, constantly referred to the "*socialist instinct*" of the working classes and argued that the socialist ideal was "*necessarily the product of the people's historical experience*" and that workers "*most basic instinct and their social situation makes them . . . socialists. They are socialists because of all the conditions of their material existence.*" [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 100, **The Basic Bakunin**, pp. 101-2]

Needless to say, instinct in itself is not enough (if it was, we would be living in an anarchist society!) and so Bakunin, like all anarchists, stressed the importance of self-liberation and self-education through struggle in order to change "*instinct*" into "*thought*." He argued that there was "*but a single path, that of emancipation through practical action . . . [by] workers' solidarity in their struggle against the bosses. It means trade unions, organisation, and the federation of resistance funds . . . [Once the worker] begins to fight, in association with his comrades, for the reduction of his working hours and for an increase in his salary. . .and become[s] increasingly accustomed to relying on the collective strength of the workers . . . The worker thus enlisted in the struggle will necessarily . . . recognise himself [or herself] to be a revolutionary socialist.*" [The Basic Bakunin, p. 103]

In addition to recognising the importance of popular organisations (such as trade unions) and of direct action in developing libertarian socialist thought, Bakunin also stressed the need for anarchist groups to work with these organisations and on the mass of the population in general. These groups would play an important role in helping to clarify the ideas of those in struggle and undermining the internal and external barriers against these ideas. The first of these are what Emma Goldman termed the "*internal tyrants*," the "*ethical and social conventions*" of existing, hierarchical society which accustom people to

authoritarian social relationships, injustice, lack of freedom and so on. External barriers are what Chomsky terms "*the Manufacture of Consent*," the process by which the population at large are influenced to accept the status quo and the dominant elites viewpoint via the education system and media. It is this "manufacture of consent" which helps explain why, relatively speaking, there are so few anarchists even though we argue that anarchism is the natural product of working class life. While, objectively, the experiences of life drives working class people to resist domination and oppression, they enter that struggle with a history behind them, a history of education in capitalist schools, of reading pro-capitalist papers, and so on.

This means that while social struggle is radicalising, it also has to combat years of pro-state and pro-capitalist influences. So even if an anarchist consciousness springs from the real conditions of working class life, because we live in a class society there are numerous counter-tendencies that **inhibit** the development of that consciousness (such as religion, current morality the media, pro-business and pro-state propaganda, state and business repression and so on). This explains the differences in political opinion within the working class, as people develop at different speeds and are subject to different influences and experiences. However, the numerous internal and external barriers to the development of anarchist opinions created our "internal tyrants" and by the process of "manufacturing consent" can be, and are, weakened by rational discussion as well as social struggle and self-activity. Indeed, until such time as we "*learned to defy them all [the internal tyrants], to stand firmly on [our] own ground and to insist upon [our] own unrestricted freedom*" we can never be free or successfully combat the "manufacture of consent." [Emma Goldman, **Red Emma Speaks**, p. 140] And this is where the anarchist group can play a part, for there is an important role to be played by those who have been through this process already, namely to aid those going through it.

Of course the activity of an anarchist group does not occur in a vacuum. In periods of low class struggle, where there is little collective action, anarchist ideas will seem to be utopian and so dismissed by most. In these situations, only a few will become anarchists simply because the experiences of working people do not breed confidence that an alternative is possible to the current system. In addition, if anarchist groups are small, many who are looking for an alternative may join other groups which are more visible and express a libertarian sounding rhetoric (such as Leninist groups, who often talk about workers' control, workers' councils and so on while meaning something distinctly different from what anarchists mean by these terms). However, as the class struggle increases and people become more inclined to take collective action, they can become empowered and radicalised by their own activity and be more open to anarchist ideas and the possibility of changing society. In these situations, anarchist groups grow and the influence in anarchist ideas increases. This also explains why anarchist ideas are not as widespread as they could be. It also indicates another important role for the anarchist group, namely to provide an environment and space where those drawn to anarchist ideas can meet and share experiences and ideas during periods of reaction.

The role of the anarchist group, therefore, is **not** to import a foreign ideology into the working class, but rather to help develop and clarify the ideas of those working class people who are moving from "instinct" to the "ideal" and so aid those undergoing that development. They would aid this development by providing propaganda which exposes the current social system (and the rationales for it) as bankrupt

as well as encouraging resistance to oppression and exploitation. The former, for Bakunin, allowed the *"bringing [of] a more just general expression, a new and more congenial form to the existent instincts of the proletariat . . . [which] can sometimes facilitate and precipitate development . . . [and] give them an awareness of what they have, of what they feel, of what they already instinctively desire, but never can it give to them what they don't have."* The latter *"is the most popular, the most potent, and the most irresistible form of propaganda"* and *"awake[s] in the masses all the social-revolutionary instincts which reside deeply in the heart of every worker"* so allowing instinct to become transformed into *"reflected socialist thought."* [cited by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 107, p. 108 and p. 141]

In other words, *"the [anarchist] organisation cannot see itself solely as a propaganda group. Above all it is an assembly of activists. It must actively work in all the grassroots organisations of the working class such as rank and file [trade union] groups, tenants associations, squatters and unemployed groups as well as women's, black and gay groups . . . It does not try to make these movements into an appendage of the revolutionary organisation just as it respects the autonomy and self-organisation of the rank and file workers movement that may develop . . . [while] spread[ing] its ideas in these movements."* [**The Role of the Revolutionary Organisation**, p.5] Such an organisation is not vanguardist in the Leninist sense as it recognises that socialist politics derive from working class experience, rather than "science" (as Lenin and Kautsky argued), and that it does not aim to dominate popular movements but rather work within them as equals.

Indeed, Bakunin (in his discussion of the evils of the idea of god) presents an excellent summary of why Leninist ideas of vanguardism always end up created the dictatorship of the party rather than socialism. As he put it:

"[F]rom the moment that the natural inferiority of man and his fundamental incapacity to rise by his own effort, unaided by any divine inspiration, to the comprehension of just and true ideas, are admitted. it becomes necessary to admit also all the theological, political, and social consequences of the positive religions. From the moment that God, the perfect supreme being, is posited face to face with humanity, divine mediators, the elect, the inspired of God spring from the earth to enlighten, direct, and govern in his name the human race." [**God and the State**, p. 37]

In **What is to be Done?**, Lenin argued that socialist *"consciousness could only be brought to [the workers] from without. . . the working class, exclusively by its own efforts, is able to develop only trade union consciousness"* and that the *"theory of socialism"* was developed by *"the educated representatives of the propertied classes, the intellectuals"* and, in so doing, replaced God with Marxism [**The Essential Works of Lenin**, p. 74] Hence Trotsky's comments at the Communist Party's 1921 congress that *"the Party [is] entitled to assert its dictatorship even if that dictatorship temporarily clashed with the passing moods of the workers' democracy!"* and that it is *"obliged to maintain its dictatorship . . . regardless of temporary vacillations even in the working class"* come as no surprise [quoted by M. Brinton, **The Bolsheviks and Workers' Control**, p. 78]. They are just the logical, evil consequences of vanguardism (and, of course, it is the Party -- upholders of the correct ideology , of *"scientific"* socialism-- which

determines what is a "*passing mood*" or a "*temporary vacillation*" and so dictatorship is the logical consequence of Leninism). The validity of Bakunin's argument can easily be recognised. Little wonder anarchists reject the concept of vanguardism totally.

So while we recognise that "advanced" sections do exist within the working class and that anarchists are one such section, we also recognise that **central** characteristic of anarchism is that its politics are derived from the concrete experience of fighting capitalism and statism directly -- that is, from the realities of working class life. This means that anarchists must also learn from working class people in struggle. If we recognise that anarchist ideas are the product of working class experience and self-activity and that these constantly change and develop in light of new experiences and struggles then anarchist theory **must be open to change by learning from non-anarchists**. Not to recognise this fact is to open the door to vanguardism and dogma. Because of this fact, anarchists argue that the relationship between anarchists and non-anarchists must be an egalitarian one, based on mutual interaction and the recognition that no one is infallible or have all the answers -- particularly anarchists! With this in mind, while we recognise the presence of "advanced" groups within the working class (which obviously reflects the uneven development within it), anarchists aim to minimise such unevenness by the way anarchist organisations intervene in social struggle, intervention based on involving **all** in the decision making process (as we discuss below).

Thus the general aim of anarchist groups is to spread ideas -- such as general anarchist analysis of society and current events, libertarian forms of organisation, direct action and solidarity and so forth -- and win people over to anarchism (i.e. to "make" anarchists). This involves both propaganda and participate as equals in social struggle and popular organisation. Anarchists do not think that changing leaders is a solution to the problem of (bad) leadership. Rather, it is a question of making leaders redundant by empowering all. As Malatesta argued, we "*do not want to **emancipate** the people; we want the people to **emancipate themselves**.*" [Op. Cit., p. 90] Thus anarchists "*advocate and practise direct action, decentralisation, autonomy and individual initiative; they should make special efforts to help members [of popular organisations] learn to participate directly in the life of the organisation and to dispense with leaders and full-time functionaries.*" [Op. Cit., p. 125]

This means that anarchists reject the idea that anarchist groups and federations must become the "leaders" of organisations. Rather, we desire anarchist ideas to be commonplace in society and in popular organisations, so that leadership by people from positions of power is replaced by the "*natural influence*" (to use Bakunin's term) of activists within the rank and file on the decisions made **by** the rank and file. While we will discuss Bakunin's ideas in more detail in [section J.3.7](#), the concept of "*natural influence*" can be gathered from this comment of Francisco Ascaso (friend of Durruti and an influential anarchist militant in the CNT and FAI in his own right):

"There is not a single militant who as a 'FAIista' intervenes in union meetings. I work, therefore I am an exploited person. I pay my dues to the workers' union and when I intervene at union meetings I do it as someone who is exploited, and with the right which is granted me by the card in my possession, as do the other militants, whether they belong

to the FAI or not." [cited by Abel Paz, **Durruti: The People Armed**, p. 137]

This shows the nature of the "leadership of ideas." Rather than be elected to a position of power or responsibility, the anarchist presents their ideas at mass meetings and argues his or her case. This means obviously implies a two-way learning process, as the anarchist learns from the experiences of others and the others come in contact with anarchist ideas. Moreover, it is an egalitarian relationship, based upon discussion between equals rather than urging people to place someone into power above them. And it ensures that everyone in the organisation participants in making, understands and agrees with the decisions reached. This obviously helps the political development of all involved (including, we must stress, the anarchists). As Durruti argued, *"the man [or woman] who alienates his will, can never be free to express himself and follow his own ideas at a union meeting if he feel dominated by the feeblest orator. . . As long as a man doesn't think for himself and doesn't assume his own responsibilities, there will be no complete liberation of human beings."* [**Op. Cit.**, p. 184]

Because of our support for the "leadership of ideas", anarchists think that all popular organisations must be open, fully self-managed and free from authoritarianism. Only in this way can ideas and discussion play an important role in the life of the organisation. Since anarchists *"do not believe in the good that comes from above and imposed by force. . .[and] want the new way of life to emerge from the body of the people and advance as they advance. It matters to use therefore that all interests and opinions find their expression in a conscious organisation and should influence communal life in proportion to their importance."* [Errico Malatesta, **Op. Cit.**, p. 90] Bakunin's words with regards the first International Workers Association indicate this clearly:

"It must be a people's movement, organised from the bottom up by the free, spontaneous action of the masses. There must be no secret governmentalism, the masses must be informed of everything . . . All the affairs of the International must be thoroughly and openly discussed without evasions and circumlocutions." [**Bakunin on Anarchism**, p. 408]

(Such a assertion by Bakunin may come as a surprise to some readers who are aware -- usually via Marxist sources -- that Bakunin argued for a *"invisible dictatorship"* in some of his letters. As we discuss in [section J.3.7](#), the claims that Bakunin was a closet authoritarian are simply wrong.)

Equally as important as **how** anarchists intervene in social struggles and popular organisations and the organisation of those struggles and organisations, there is the question of the nature of that intervention. We would like to quote the following by the British libertarian socialist group **Solidarity** as it sums up the underlying nature of anarchist action and the importance of a libertarian perspective on social struggle and change and how politically aware minorities work within them:

*"**Meaningful action**, for revolutionaries, is whatever increases the confidence, the autonomy, the initiative, the participation, the solidarity, the egalitarian tendencies and the self-activity of the masses and whatever assists in their demystification. **Sterile and***

harmful action is whatever reinforces the passivity of the masses, their apathy, their cynicism, their differentiation through hierarchy, their alienation, their reliance on others to do things for them and the degree to which they can therefore be manipulated by others - even by those allegedly acting on their behalf." [As We See it]

Part of this "meaningful action" involves encouraging people to "*act for yourselves*" (to use Kropotkin's words). As we noted in [section A.2.7](#), anarchism is based on **self-liberation** and self-activity is key aspect of this. Hence Malatesta's argument:

"Our task is that of 'pushing' the people to demand and to seize all the freedom they can and to make themselves responsible for providing their own needs without waiting for orders from any kind of authority. Our task is that of demonstrating the uselessness and harmfulness of government, provoking and encouraging by propaganda and action, all kinds of individual and collective activities.

"It is in fact a question of education for freedom, of making people who are accustomed to obedience and passivity consciously aware of their real power and capabilities. One must encourage people to do things for themselves. . . " [Op. Cit., pp. 178-9]

This "pushing" people to "do it themselves" is another key role for any anarchist organisation. The encouragement of direct action is just as important as anarchist propaganda and popular participation within social struggle and popular organisations.

As such social struggle developments, the possibility of revolution becomes closer and closer. While we discuss anarchists ideas on social revolution in [section J.7](#), we must note here that the role of the anarchist organisation does not change. As Murray Bookchin argues, anarchists "*seek to persuade the factory committees, assemblies [and other organisations created by people in struggle] . . . to make themselves into **genuine organs of popular self-management**, not to dominate them, manipulate them, or hitch them to an all-knowing political party.*" [Post-Scarcity Anarchism, p. 217] In this way, by encouraging self-management in struggle, anarchist lay the foundations of a self-managed society.

J.3.7 Doesn't Bakunin's "*Invisible Dictatorship*" prove that anarchists are secret authoritarians?

This claim is often made by Leninists and other Marxists and expresses a distinct, even wilful, misunderstanding of the role revolutionaries should play in popular movements and the ideas of Bakunin on this issue. In actual fact, the term "*invisible dictatorship*" does not prove that Bakunin or anarchists are secret authoritarians, for reasons we will explain.

Marxists quote Bakunin's terms "*invisible dictatorship*" and "*collective dictatorship*" out of context, using it to "prove" that anarchists are secret authoritarians, seeking dictatorship over the masses. More

widely, the question of Bakunin and his "invisible dictatorship" finds its way into the most sympathetic accounts of anarchist ideas. For example, Peter Marshall writes that it is *"not difficult to conclude that Bakunin's invisible dictatorship would be even more tyrannical than a . . . Marxist one"* and that it expressed a *"profound authoritarian and dissimulating streak in his life and work."* [**Demanding the Impossible**, p. 287] So, the question of setting the record straight about this aspect of Bakunin's theory is of more importance than just correcting a few Leninists. In addition, to do so will help clarify the concept of *"leadership of ideas"* we discussed in the [last section](#). For both these reasons, this section, while initially appearing somewhat redundant and of interest only to academics, is of a far wider interest.

It is particularly ironic that Leninists (followers of a person who created an actual, **very visible**, dictatorship) accuse anarchists of seeking to create a "dictatorship" -- but then again, irony and a sense of humour is not usually noted in Leninists and Trotskyists. In a similar fashion, they (quite rightly) attack Bakunin for being anti-Jewish but keep quiet strangely quiet on Marx and Engels anti-Slavism. Indeed, Marx once published an article by Engels which actually preached race hatred and violence -- *"that hatred of the Russians was and remains the primary revolutionary passion of the Germans; and since the revolution it extends to the Czechs and the Croatsians . . . we . . . can safeguard the revolution only by the most determined terrorism against these Slavic peoples"* and that the *"stubborn Czechs and the Slovaks should be grateful to the Germans, who have taken the trouble to civilise them."* [cited in **Bakunin on Anarchism**, p.432] Obviously being anti-Slavic is okay, being anti-Jewish is not (they also keep quiet on Marx's anti-Jewish comments). The hypocrisy is clear.

Actually, it is in their attempts to smear anarchism with closet authoritarianism that the authoritarianism of the Marxists come to the fore. For example, in the British Socialist Workers Party journal **International Socialism** number 52, we find this treat of "logic." Anarchism is denounced for being *"necessarily deeply anti-democratic"* due to its *"thesis of the absolute sovereignty of the individual ego."* Then Hal Draper is quoted arguing that *"[o]f all ideologies, anarchism is the most fundamentally anti-democratic in principle."* [p. 145] So, because anarchism favours individuals being free and making their own decisions, it is **less** democratic than Fascism, Nazism and Stalinism! Makes you wonder what they mean by democracy if ideologies which actively promote leader worship and party/leader dictatorships are more "democratic" than anarchism! Of course, in actuality, for most anarchists individual sovereignty implies direct democracy in free associations (see, for example, [section A.2.11](#) or Robert Graham's excellent essay *"The Anarchist Contract"* in **Reinventing Anarchy, Again**). Any "democracy" which is not based on individual freedom is too contradictory to be taken seriously.

But to return to our subject. Anarchists have two responses to claims that Bakunin (and, by implication, all anarchists) seek an *"invisible"* dictatorship and so are not true libertarians. Firstly, and this is the point we will concentrate upon in this section, Bakunin's expression is taken out of context and when placed within its context it takes on a radically different meaning than that implied by critics of Bakunin and anarchism. Secondly, even **if** the expression means what the critics claim it does, it does not refute anarchism as a political theory (any more than Bakunin's racism or Proudhon's sexism and racism). This is because anarchists are **not** Bakuninists (or Proudhonists or Kropotkinites or any other person-ist). We

recognise other anarchists as what they are, human beings who said lots of important and useful things but, like any other human being, they make mistakes and often do not live up to all of their ideas. For anarchists, it is a question of extracting the useful parts from their works and rejecting the useless (as well as the downright nonsense!). Just because Bakunin said something, it does not make it right! This common-sense approach to politics seems to be lost on Marxists. Indeed, if we take the logic of these Marxists to its conclusion, we must reject everything Rousseau wrote (he was sexist), Marx and Engels (their comments against Slavs spring to mind, along with numerous other racist comments) and so on. But, of course, this never happens to non-anarchist thinkers when Marxists write their articles and books.

However, to return to our main argument, that of the importance of context. What does the context around Bakunin's term "*invisible dictatorship*" bring to the discussion? Simply that whenever Bakunin uses the term "invisible" or "collective" dictatorship he also explicitly states his opposition to government (or official) power and **in particular** the idea that anarchist organisations should take such power. For example, the **International Socialist** review mentioned above quotes the following passage from "*a Bakuninist document*" to "prove" that the "*principle of anti-democracy was to leave Bakunin unchallenged at the apex of power*":

"It is necessary that in the midst of popular anarchy, which will constitute the very life and energy of the revolution, unity of thought and revolutionary action should find an organ. This organ must be the secret and world-wide association of the international brethren."

This passage is from point 9 of Bakunin's "*Programme and Purpose of the Revolutionary Organisation of International Brothers*." In the sentence **immediately before** those quoted, Bakunin stated that "*[t]his organisation rules out any idea of dictatorship and custodial control.*" [**Michael Bakunin: Selected Writings**, p. 172] Strange that this part of point 9 of the programme was not quoted! Nor do they quote Bakunin when he wrote, in point 4 of the same programme, "*[w]e are the natural enemies of those revolutionaries -- future dictators, regimentors and custodians of revolution -- who. . . [want] to create new revolutionary States just as centralist and despotic as those we already know. . .*" Nor, in point 8, that since the "*revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations. . . organised from the bottom upwards by means of revolutionary delegations. . . [who] will set out to administer public services, not to rule over peoples.*" [**Op. Cit.**, p. 169, p. 172]

(As an aside, we can understand why Leninists would not willing to quote point 8, as Bakunin's position is far in advance of Marx's on the structure of revolutionary society. Indeed, it was not until 1917, when Lenin supported the spontaneously created Soviets as the framework of his socialist state -- at least in rhetoric, in practice, as we discuss in the appendix on "[What happened during the Russian Revolution?](#)", he did not -- that Marxists belatedly discovered the importance of workers' councils. In other words, Bakunin predicted the rise of workers' councils as the framework of a socialist revolution -- after all the Russian soviets were, originally, "*a free federation of agricultural and industrial associations.*" It must

be embarrassing for Leninists to have one of what they consider as a key contribution to Marxism predicted over 50 years beforehand by someone Marx called an "*ignoramus*" and a "*non-entity as a theoretician.*"

Similarly, when we look at the situations where Bakunin uses the terms "*invisible*" or "*collective*" dictatorship (usually in letters to comrades) we find the same thing -- the explicit denial **in these same letters** that Bakunin thought the revolutionary association should take state/governmental power. For example, in a letter to Albert Richard (a fellow member of the anarchist "*Alliance of Social Democracy*") Bakunin states that "*[t]here is only one power and one dictatorship whose organisation is salutary and feasible: it is that collective, invisible dictatorship of those who are allied in the name of our principle.*" He then immediately adds that "*this dictatorship will be all the more salutary and effective for not being dressed up in any official power or extrinsic character.*" Earlier in the letter he argues that anarchists must be "*like invisible pilots in the thick of the popular tempest. . . steer[ing] it [the revolution] not by any open power but by the collective dictatorship of all the allies -- a dictatorship without insignia, titles or official rights, and all the stronger for having none of the paraphernalia of power.*" Explicitly opposing "*Committees of Public Safety and official, overt dictatorship*" he explains his idea of a revolution based on "*workers hav[ing] joined into associations . . . armed and organised by streets and **quartiers**, the federative commune.*" [Op. Cit., p. 181, p. 180 and p. 179] Hardly what would be expected from a would-be dictator?

As Sam Dolgoff notes, "*an organisation exercising no overt authority, without a state, without official status, without the machinery of institutionalised power to enforce its policies, cannot be defined as a dictatorship. . . Moreover, if it is borne in mind that this passage is part of a letter repudiating in the strongest terms the State and the authoritarian statism of the 'Robespierres, the Dantons, and the Saint-Justs of the revolution,' it is reasonable to conclude that Bakunin used the word 'dictatorship' to denote preponderant influence or guidance exercised largely by example. . . In line with this conclusion, Bakunin used the words 'invisible' and 'collective' to denote the underground movement exerting this influence in an organised manner.*" [Bakunin on Anarchism, p. 182]

This analysis is confirmed by other passages from Bakunin's letters. In a letter to the Nihilist Sergi Nechaev (within which Bakunin indicates exactly how far apart politically they were -- which is important as, from Marx onwards, many of Bakunin's opponents quote Nechaev's pamphlets as if they were "Bakunist," when in fact they were not) we find him arguing that:

*"These [revolutionary] groups would not seek anything for themselves, neither privilege nor honour nor power. . . [but] would be in a position to direct popular movements . . . [via] **the collective dictatorship** of a secret organisation. . . The dictatorship. . . does not reward any of the members. . . or the groups themselves. . . with any. . . official power. It does not threaten the freedom of the people, because, lacking any official character, it does not take the place of State control over the people, and because its whole aim. . . consists of the fullest realisation of the liberty of the people.*

*"This sort of dictatorship is not in the least contrary to the free development and the self-development of the people, nor its organisation from the bottom upward. . . for it influences the people exclusively through the natural, personal influence of its members, who have not the slightest power. . . to direct the spontaneous revolutionary movement of the people towards. . . the organisation of popular liberty. . . This secret dictatorship would in the first place, and at the present time, carry out a broadly based popular propaganda. . . and by the power of this propaganda and also by **organisation among the people themselves** join together separate popular forces into a mighty strength capable of demolishing the State."* [Michael Bakunin: Selected Writings, pp. 193-4]

The key aspect of this is the term "*natural influence*." In a letter to Pablo, a Spanish member of the Alliance, we find Bakunin arguing that the Alliance "*will promote the Revolution only through the **natural but never official influence** of all members of the Alliance. . .*" [Bakunin on Anarchism, p. 387] This term was also used in his public writings. For example, we find in one of his newspaper articles Bakunin arguing that the "*very freedom of every individual results from th[e] great number of material, intellectual, and moral influences which every individual around him and which society. . . continually exercise on him*" and that "*everything alive . . . intervene[s] . . . in the life of others. . . [so] we hardly wish to abolish the effect of any individual's or any group of individuals' natural influence upon the masses.*" [The Basic Bakunin, p. 140, p. 141]

Thus "*natural influence*" simply means the effect of communicating with others, discussing your ideas with them and winning them over to your position, nothing more. This is hardly authoritarian, and so Bakunin contrasts this "*natural*" influence with "*official*" influence, which replaced the process of mutual interaction between equals with a fixed hierarchy of command and thereby induced the "*transformation of natural influence, and, as such, the perfectly legitimate influence over man, into a right.*" [cited by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 46]

As an example of this difference, consider the case of a union militant (as will become clear, this is the sort of example Bakunin had in mind). As long as they are part of the rank-and-file, arguing their case at union meetings or being delegated to carry out the decisions of these assemblies then their influence is "*natural*." However, if this militant is elected into a position with executive power in the union (i.e. becomes a full-time union official, for example, rather than a shop-steward) then their influence becomes "*official*" and so, potentially, corrupting for both the militant and the rank-and-file who are subject to the rule of the official.

Indeed, this notion of "*natural*" influence (or authority) was also termed "*invisible*" by Bakunin -- "*[i]t is only necessary that one worker in ten join the [International Working-Men's] Association earnestly and with full understanding of the cause for the nine-tenths remaining outside its organisation nevertheless to be influenced invisibly by it. . .*" [The Basic Bakunin, p. 139] So, as can be seen, the terms "*invisible*" and "*collective*" dictatorship used by Bakunin in his letters is strongly related to the term "*natural influence*" used in his public works and seems to be used simply to indicate the effects of an organised political group on the masses. To see this, it is worthwhile to quote Bakunin at length about the nature of this "*invisible*" influence:

"It may be objected that this. . . [invisible] influence. . . suggests the establishment of a system of authority and a new government. . . [but this] would be a serious blunder. The organised effect of the International on the masses. . . is nothing but the entirely natural organisation -- neither official nor clothed in any authority or political force whatsoever -- of the effect of a rather numerous group of individuals who are inspired by the same thought and headed toward the same goal, first of all on the opinion of the masses and only then, by the intermediary of this opinion (restated by the International's propaganda), on their will and their deeds. But the governments. . . impose themselves violently on the masses, who are forced to obey them and to execute their decrees. . . The International's influence will never be anything but one of opinion and the International will never be anything but the organisation of the natural effect of individuals on the masses." [Op. Cit., pp. 139-40]

Therefore, from both the fuller context provided by the works and letters selectively quoted by anti-anarchists **and** his other writings, we find that rather than being a secret authoritarian, Bakunin was, in fact, trying to express how anarchists could "*naturally influence*" the masses and their revolution. As he himself argues:

*"We are the most pronounced enemies of every sort of **official power**. . . We are the enemies of any sort of publicly declared dictatorship, we are social revolutionary anarchists. . . if we are anarchists, by what right do we want to influence the people, and what methods will we use? Denouncing all power, with what sort of power, or rather by what sort of force, shall we direct a people's revolution? **By a force that is invisible. . . that is not imposed on anyone. . . [and] deprived of all official rights and significance.**" [Michael Bakunin: Selected Writings, pp. 191-2]*

Continually opposing "*official*" power, authority and influence, Bakunin used the term "*invisible, collective dictatorship*" to describe the "*natural influence*" of organised anarchists on mass movements. Rather than express a desire to become a dictator, it in fact expresses the awareness that there is an "uneven" political development within the working class, an unevenness that can only be undermined by discussion within the mass assemblies of popular organisations. Any attempt to by-pass this "unevenness" by seizing or being elected to positions of power (i.e. by "*official influence*") would be doomed to failure and result in dictatorship by a party -- "*triumph of the Jacobins or the Blanquists [or the Bolsheviks, we must add] would be the death of the Revolution.*" [Op. Cit., p. 169]

This analysis can be seen from Bakunin's discussion on union bureaucracy and how anarchists should combat it. Taking the Geneva section of the IWMA, Bakunin notes that the construction workers' section "*simply left all decision-making to their committees. . . In this manner power gravitated to the committees, and by a species of fiction characteristic of all governments the committees substituted their own will and their own ideas for that of the membership.*" [Bakunin on Anarchism, p. 246] To combat this bureaucracy, "*the construction workers. . . sections could only defend their rights and their*

autonomy in only one way: the workers called general membership meetings. Nothing arouses the antipathy of the committees more than these popular assemblies. . . In these great meetings of the sections, the items on the agenda was amply discussed and the most progressive opinion prevailed. . ." [Op. Cit., p. 247]

Given that Bakunin considered *"the federative Alliance of all working men's [sic!] associations. . . [would] constitute the Commune"* made up of delegates with *"accountable and removable mandates"* we can easily see that the role of the anarchist federation would be to intervene in general assemblies of these associations and ensure, through debate, that *"the most progressive opinion prevailed."* [Michael Bakunin: Selected Writings, p. 170, p. 171] Rather than seek power, the anarchists would seek **influence** based on the soundness of their ideas, the *"leadership of ideas"* in other words. Thus the anarchist federation *"unleashes their [the peoples] will and gives wider opportunity for their self-determination and their social-economic organisation, which should be created by them alone from the bottom upwards . . . The [revolutionary] organisation . . . [must] not in any circumstances. . . ever be their [the peoples] master . . . What is to be the chief aim and pursue of this organisation? To help the people towards self-determination on the lines of the most complete equality and fullest human freedom in every direction, without the least interference from any sort of domination. . . that is without any sort of government control."* [Op. Cit., p. 191]

Having shown that the role of Bakunin's revolutionary organisations is drastically different than that suggested by the selective quotations of Marxists, we need to address two more issues. One, the so-called hierarchical nature of Bakunin's organisations and, two, their secret nature. Taking the issue of hierarchy first, we can do no better than quote Richard B. Saltman's summary of the internal organisation of these groups:

"The association's 'single will,' Bakunin wrote, would be determined by 'laws' that every member 'helped to create,' or at a minimum 'equally approved' by 'mutual agreement.' This 'definite set of rules' was to be 'frequently renewed' in plenary sessions wherein each member had the 'duty to try and make his view prevail,' but then he must accept fully the decision of the majority. Thus the revolutionary association's 'rigorously conceived and prescribed plan,' implemented under the 'strictest discipline,' was in reality to be 'nothing more or less than the expression and direct outcome of the reciprocal commitment contracted by each of the members towards the others.'" [The Social and Political Thought of Michael Bakunin, p. 115]

While many anarchists would not agree 100 per cent with this set-up (although we think that most supporters of the "Platform" would) all would agree that it is **not** hierarchical. If anything, it appears quite democratic in nature. Moreover, comments in Bakunin's letters to other Alliance members support the argument that his revolutionary associations were more democratic in nature than Marxists suggest. In a letter to a Spanish comrade we find him suggesting that *"all [Alliance] groups. . . should. . . from now on accept new members not by majority vote, but unanimously."* In a letter to Italian members of the IWMA he argued that in Geneva the Alliance did not resort to *"secret plots and intrigues."* Rather:

"Everything was done in broad daylight, openly, for everyone to see . . . The Alliance had regular weekly open meetings and everyone was urged to participate in the discussions. . . The old procedure where members sat and passively listened to speakers talking down to them from their pedestal was discarded.

"It was established that all meetings be conducted by informal round-table conversational discussions in which everybody felt free to participate: not to be talked at, but to exchange views . . . "[Bakunin on Anarchism, p. 386, pp. 405-6]

Moreover, we find Bakunin being out-voted within the Alliance, hardly what we would expect if they **were** top-down dictatorships run by Bakunin (as Marxists claim). The historian T.R. Ravindranathan indicates that after the Alliance was founded *"Bakunin wanted the Alliance to become a branch of the International [Worker's Association] and at the same time preserve it as a secret society. The Italian and some French members wanted the Alliance to be totally independent of the IWA and objected to Bakunin's secrecy. Bakunin's view prevailed on the first question as he succeeded in convincing the majority of the harmful effects of a rivalry between the Alliance and the International. On the question of secrecy, he gave way to his opponents. . ."* [Bakunin and the Italians, p. 83]

These comments and facts suggest that the picture painted by Marxists of Bakunin and his secret societies is somewhat flawed. Moreover, if Bakunin **did** seek to create a centralised, hierarchical organisation, as Marxists claim, he did not do a good job. We find him complaining that the Madrid Alliance was breaking up (*"The news of the dissolution of the Alliance in Spain saddened Bakunin. he intensified his letter-writing to Alliance members whom he trusted. . . He tried to get the Spaniards to reverse their decision"*) and we find that while the "Bakuninist" Spanish and Swiss sections of the IWMA sent delegates to its infamous Hague congress, the "Bakuninist" Italian section did not (and these "missing" votes may have been enough to undermine the rigged congress). Of course, Marxists could argue that these facts show Bakunin's cunning nature, but the more obvious explanation is that Bakunin did not create (nor desire to create) a hierarchical organisation with himself at the top. As Juan Gomez Casa notes, the Alliance *"was not a compulsory or authoritarian body . . . [I]n Spain [it] acted independently and was prompted by purely local situations. The copious correspondence between Bakunin and his friends . . . was at all times motivated by the idea of offering advice, persuading, and clarifying. It was never written in a spirit of command, because that was not his style, nor would it have been accepted as such by his associates."* Moreover, there *"is no trace or shadow or hierarchical organisation in a letter from Bakunin to Mora . . . On the contrary, Bakunin advises 'direct' relations between Spanish and Italian Comrades."* The Spanish comrades also wrote a pamphlet which *"ridiculed the fable of orders from abroad."* [Anarchist Organisation, pp. 37-8, p.25 and p. 40] This is confirmed by George R. Esenwein who argues that *"[w]hile it is true that Bakunin's direct intervention during the early days of the International's development in Spain had assured the pre-dominance of his influence in the various federations and sections of the FRE [Spanish section of the International], it cannot be said that he manipulated it or otherwise used the Spanish Alliance as a tool for his own subversive designs."* Thus, *"though the Alliance did exist in Spain, the society did not bear any resemblance to the nefarious organisation that the Marxists depicted."* [Anarchist Ideology and the Working Class Movement in Spain, p. 42] Indeed, as Max Nettlau points out, those Spaniards who did break with the Alliance were

persuaded of its *"hierarchical organisation. . . not by their own direct observation, but by what they had been told about the conduct of the organisation in the abovementioned countries"* (which included England, where no evidence of any Alliance group has ever been recorded!) [cited by Casa, **Op. Cit.**, pp. 39-40]. In addition, if Bakunin **did** run the Alliance under his own personal dictatorship we would expect it to change or dissolve upon his death. However the opposite happened -- *"the Spanish Alliance survived Bakunin, who died in 1876, yet with few exceptions it continued to function in much the same way it had during Bakunin's lifetime."* [George R. Esenwein, **Op. Cit.**, p. 43]

Moving on to the second issue, the question of why should the revolutionary organisation be secret? Simply because, at the time of Bakunin's activism, many states were despotic monarchies, with little or no civil rights. As he argued, *"nothing but a secret society would want to take this [arousing a revolution] on, for the interests of the government and of the government classes would be bitterly opposed to it."* [**Michael Bakunin: Selected Writings**, p. 188] For survival, Bakunin considered secrecy an essential. As Juan Gomez Casas notes, *"[i]n view of the difficulties of that period, Bakunin believed that secret groups of convinced and absolutely trustworthy men were safer and more effective. They would be able to place themselves at the head of developments at critical moments, but only to inspire and to clarify the issues."* [**Op. Cit.**, p. 22] Even Marxists, faced with dictatorial states, have organised in secret. And as George R. Esenwein points out, the *"claim that Bakunin's organisation scheme was not the product of a 'hard-headed realism' cannot be supported in the light of the experiences of the Spanish Alliancists. It is beyond doubt that their adherence to Bakunin's program greatly contributed to the FRE's [Spanish section of the First International] ability to flourish during the early part of the 1870s and to survive the harsh circumstances of repression in the period 1874-1881."* [**Op. Cit.**, p. 224f] However, few, if any, anarchists would agree with this position now, shaped as it was by Bakunin's personal experiences in Tsarist Russia and other illiberal states (and let us not forget that Bakunin had been imprisoned in the Peter and Paul prison for his activities).

This is not to suggest that all of Bakunin's ideas on the role and nature of anarchist groups are accepted by anarchists today. Most anarchists would reject Bakunin's arguments for secrecy and love of conspiracy, for example (particularly as secrecy cannot help but generate an atmosphere of deceit and, potentially, manipulation). Anarchists remember that anarchism did not spring fully formed and complete from Bakunin's (or any other individual's) head. Rather it was developed over time and by many individuals, inspired by many different experiences and movements. Because of this, anarchists recognise that Bakunin was inconsistent in some ways, as would be expected from a theorist breaking new ground, and this applies to his ideas on how anarchist groups should work within, and the role they should play, in popular movements. Most of his ideas are valid, once we place them into context, some are not. Anarchists embrace the valid ones and voice their opposition to the invalid ones.

In summary, any apparent contradiction (a contradiction which Marxists try hard to maintain and use to discredit anarchism by painting Bakunin as a closet dictator) between the "public" and "private" Bakunin disappears once we place his comments into context within both the letters he wrote and his overall political theory. In fact, rather than promoting a despotic dictatorship over the masses his concept of *"invisible dictatorship"* is very similar to the *"leadership of ideas"* concept we discussed in [section J.3.6](#).

As Brian Morris argues, those who, like Leninist Hal Draper, argue that Bakunin was in favour of despotism only come to *"these conclusions by an incredible distortion of the substance of what Bakunin was trying to convey in his letters to Richard and Nechaev"* and *"[o]nly the most jaundiced scholar, or one blinded by extreme antipathy towards Bakunin or anarchism, could interpret these words as indicating that Bakunin conception of a secret society implied a revolutionary dictatorship in the Jacobin sense, still less a 'despotism'"* [**Bakunin: The Philosophy of Freedom**, p. 144, p. 149]

J.3.8 What is anarcho-syndicalism?

Anarcho-syndicalism (as mentioned in [section A.3.2](#)) is a form of anarchism which applies itself (primarily) to creating industrial unions organised in an anarchist manner, using anarchist tactics (such as direct action) to create a free society. Or, in the words of the International Workers' Association:

"Revolutionary Syndicalism basing itself on the class-war, aims at the union of all manual and intellectual workers in economic fighting organisations struggling for their emancipation from the yoke of wage slavery and from the oppression of the State. Its goal consists in the re-organisation of social life on the basis of free Communism, by means of the revolutionary action of the working-class itself. It considers that the economic organisations of the proletariat are alone capable of realising this aim, and, in consequence, its appeal is addressed to workers in their capacity of producers and creators of social riches, in opposition to the modern political labour parties which can never be considered at all from the points of view of economic re-organisation." [**The Principles of Revolutionary Syndicalism**, point 1]

The word *"syndicalism"* is basically an English rendering of the French for *"revolutionary trade unionism"* (*"syndicalisme revolutionarie"*). In the 1890s many anarchists in France started to work within the trade union movement, radicalising it from within. As the ideas of autonomy, direct action, the general strike and political independence of unions which were associated with the French **Confederation Generale du Travail** (General Confederation of Labour) spread across the world (partly through anarchist contacts, partly through word of mouth by non-anarchists who were impressed by the militancy of the CGT), the word *"syndicalism"* was used to describe movements inspired by the example of the CGT. Thus *"syndicalism," "revolutionary syndicalism"* and *"anarcho-syndicalism"* all basically mean *"revolutionary unionism"* (the term *"industrial unionism"* used by the IWW essentially means the same thing).

The main difference is between revolutionary syndicalism and anarcho-syndicalism, with anarcho-syndicalism arguing that revolutionary syndicalism concentrates too much on the workplace and, obviously, stressing the anarchist roots and nature of syndicalism more than revolutionary syndicalism. In addition, particularly in France, anarcho-syndicalism is considered compatible with supporting a specific anarchist organisation to complement the work of the revolutionary unions. Revolutionary syndicalism, in contrast, argues that the syndicalist unions are sufficient in themselves to create libertarian socialism and rejects anarchist groups along with political parties. However, the dividing line

can be unclear (and, just to complicate things even more, **some** syndicalists support political parties and are not anarchists -- there have been a few Marxist syndicalists, for example. We will ignore these syndicalists in our discussion and concentrate on the libertarian syndicalists). We will use the term syndicalism to describe what each branch has in common.

Syndicalism is different from ordinary trade unionism (sometimes called business unionism by anarchists and syndicalists as it treats the union's job purely as the seller of its members labour power and acts like any other business). Syndicalism, in contrast with trade unionism, is based on unions managed directly by the rank and file membership rather than by elected officials and bureaucrats. The syndicalist union is not based on where the worker lives (as is the case with many trade unions). Instead, the union is based and run from the workplace. It is there that union meetings are held, where workers are exploited and oppressed and where their economic power lies. Syndicalism is based on local branch autonomy, with each branch having the power to call and end strikes and organise its own affairs. No union officials have the power to declare strikes "unofficial" as every strike decided upon by the membership is automatically "official" simply because the branch decided it in a mass meeting. Power would be decentralised into the hands of the union membership, as expressed in local branch assemblies.

To co-ordinate strikes and other forms of action, these autonomous branches are part of a federal structure. The mass meeting in the workplace mandates delegates to express the wishes of the membership at "labour councils" and "industrial unions."

The labour council is the federation of all workplace branches of all industries in a geographical area (say, for example, in a city or region) and it has the tasks of, among other things, education, propaganda and the promotion of solidarity between the different union branches in its area. Due to the fact it combines all workers into one organisation, regardless of industry or union, the labour council plays a key role in increasing **class** consciousness and solidarity. This can be seen from both the Italian USI and the Spanish CNT, to take two examples. In the later case, the *"territorial basis of organisation linkage brought all the workers from one area together and fomented working-class solidarity over and before corporate solidarity."* [J. Romero Maura, *"The Spanish Case"*, contained in **Anarchism Today**, D. Apter and J. Joll (eds.), p. 75] The example of the USI also indicates the validity of French syndicalist Fernand Pelloutier's passionate defence of the **Bourse du Travail** as a revolutionary force (see Carl Levy, *"Italian Anarchism: 1870-1926"* in **For Anarchism**, David Goodway (ed.), pp. 48-9).

The industrial union, on the other hand, is the federation of union branches **within the same industry** in a given area (there would be a coal miners industry wide union, a software workers industrial union and so on). These councils would organise industry wide struggles and solidarity. In this way workers in the same industry support each other, ensuring that if workers in one workplace goes on strike, the boss cannot swap production to another workplace elsewhere and so weaken and defeat the action (see Berkman's **ABC of Anarchism**, p. 54, for a fuller discussion of why such industrial unionism is essential to win strikes).

In practice, of course, the activities of these dual federations would overlap: labour councils would

support an industry wide strike or action while industrial unions would support action conducted by its member unions called by labour councils. However, we must stress that both the industrial federations and the cross-industry (territorial) labour councils are *"based on the principles of Federalism, on free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 53]

As well as being decentralised and organised from the bottom up, the syndicalist union differs from the normal trade union by having no full-time officials. All union business is conducted by elected fellow workers who do their union activities after work or, if it has to be done during work hours, they get the wages they lost while on union business. In this way no bureaucracy of well paid officials is created and all union militants remain in direct contact with their fellow workers. Given that it is their wages, working conditions and so on that are effected by their union activity they have a real interest in making the union an effective organisation and ensuring that it reflects the interests of the rank and file. In addition, all part-time union "officials" are elected, mandated and recallable delegates. If the fellow worker who is elected to the local labour council or other union committee is not reflecting the opinions of those who mandated him or her then the union assembly can countermand their decision, recall them and replace them with someone who **will** reflect the decisions of the union.

The syndicalist union is committed to **direct action** and refuses links with political parties, even labour or "socialist" ones. A key idea of syndicalism is that of union autonomy -- the idea that the workers' organisation is capable of changing society by its own efforts and that it must control its own fate and not be controlled by any party or other outside group (including anarchist federations). This is sometimes termed *"workerism"* (from the French *"ouvrierisme"*), i.e. workers' control of the class struggle and their own organisations. Rather than being a cross-class organisation like the political party, the union is a **class** organisation and is so uniquely capable of representing working class aspirations, interests and hopes. There is *"no place in it for anybody who was not a worker. Professional middle class intellectuals who provided both the leadership and the ideas of the socialist political movement, were therefore at a discount. As a consequence the syndicalist movement was, and saw itself as, a purely working class form of socialism . . . [S]yndicalism appears as the great heroic movement of the proletariat, the first movement which took seriously . . . [the argument] that the emancipation of the working class must be the task of labour unaided by middle class intellectuals or by politicians and aimed to establish a genuinely working class socialism and culture, free of all bourgeois taints. For the syndicalists, the workers were to be everything, the rest, nothing."* [Geoffrey Ostergaard, **The Tradition of Workers' Control**, p. 38]

Therefore syndicalism is *"consciously anti-parliamentary and anti-political. It focuses not only on the realities of power but also on the key problem of achieving its disintegration. Real power in syndicalist doctrine is economic power. The way to dissolve economic power is to make every worker powerful, thereby eliminating power as a social privilege. Syndicalism thus ruptures all the ties between the workers and the state. It opposes political action, political parties, and any participant in political elections. Indeed it refuses to operate in the framework of the established order and the state . . . [S]yndicalism turns to direct action -- strikes, sabotage, obstruction, and above all, the revolutionary*

general strike. Direct action not only perpetuates the militancy of the workers and keeps alive the spirit of revolt, but awakens in them a greater sense of individual initiative. By continual pressure, direct action tests the strength of the capitalist system at all times and presumably in its most important arena -- the factory, where ruled and ruler seem to confront each other most directly." [Murray Bookchin, **The Spanish Anarchists**, p. 121]

This does not mean that syndicalism is "apolitical" in the sense of ignoring totally all political issues. This is a Marxist myth. Syndicalists follow other anarchists by being opposed to all forms of authoritarian/capitalist politics but do take a keen interest in "political" questions as they relate to the interests of working people. Thus they do not "ignore" the state, or the role of the state. Indeed, syndicalists are well aware that the state exists to protect capitalist property and power. For example, the British syndicalists' *"vigorous campaign against the 'servile state' certainly disproves the notion that syndicalists ignored the role of the state in society. On the contrary, their analysis of bureaucratic state capitalism helped to make considerable inroads into prevailing Labourist and state socialist assumptions that the existing state could be captured by electoral means and used as an agent of through-going social reform."* [Bob Holton, **British Syndicalism: 1900-1914**, p. 204]

Indeed, Rudolf Rocker makes the point very clear. *"It has often been charged against Anarcho-Syndicalism,"* he writes, *"that it has no interest in the political structure of the different countries, and consequently no interest in the political struggles of the time, and confines its activities entirely to the fight for purely economic demands. This idea is altogether erroneous and springs either from outright ignorance or wilful distortion of the facts. It is not the political struggle as such which the Anarcho-Syndicalist from the modern labour parties, both in principle and tactics, but form of this struggle and the aims which it has in view. . . their efforts are also directed, even today, at restricting the activities of the state . . . The attitude of Anarcho-Syndicalism towards the political power of the present-day state is exactly the same as it takes towards the system of capitalist exploitation . . . [and] pursue the same tactics in their fight against . . . the state . . . [T]he worker cannot be indifferent to the economic conditions of life . . . so he cannot remain indifferent to the political structure of his [or her] country . . ."* [Op. Cit., p.63]

Thus syndicalism is not indifferent to or ignores political struggles and issues. Rather, it fights for political change and reforms as it fights for economic ones -- by direct action and solidarity. If revolutionary and anarcho-syndicalists *"reject any participation in the works of bourgeois parliaments, it is not because they have no sympathy with political struggles in general, but because they are firmly convinced that parliamentary activity is for the workers the very weakest and most hopeless form of the political struggles."* [Op. Cit., p. 65] Syndicalists (like other anarchists) argue that the political and the economic must be **integrated** and that integration must take place in working class organisations, which, for syndicalists, means their unions (or union-like organisations such as workplace councils or assemblies). Rather than being something other people discuss on behalf of working class people, syndicalists, again like all anarchists, argue that politics must no longer be in the hands of so-called experts (i.e. politicians) but instead lie in the hands of those directly affected by it. Also, in this way the union encourages the political development of its members by the process of participation and self-management.

In other words, political issues must be raised in economic and social organisations and discussed there, where working class people have real power. In this they follow Bakunin who argued that an *"it would be absolutely impossible to ignore political and philosophical questions"* and that an *"exclusive preoccupation with economic questions would be fatal for the proletariat."* Therefore, the unions must be open to all workers, be independent of all political parties and be based on economic solidarity with all workers, in all lands, but there must be *"free discussion of all political and philosophical theories"* *"leaving the sections and federations to develop their own policies"* since *"political and philosophical questions . . . [must be] posed in the International . . . [by] the proletariat itself . . ."* [**Bakunin on Anarchism**, p. 301, p. 302, p. 297, p. 302]

Thus revolutionary and anarcho-syndicalism are deeply political in the widest sense of the word, aiming for a radical change in political, economic and social conditions and institutions. Moreover, it is political in the narrower sense of being aware of political issues and aiming for political reforms along with economic ones. They are only "apolitical" when it comes to supporting political parties and using bourgeois political institutions, a position which is "political" in the wider sense of course! This is obviously identical to the usual anarchist position (see [section J.2](#))

Which indicates another importance difference between syndicalism and trade unionism. Syndicalism aims at changing society rather than just working within it. Thus syndicalism is revolutionary while trade unionism is reformist. For syndicalists the union *"has a double aim: with tireless persistence, it must pursue betterment of the working class's current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital."* [Emile Pouget, **No Gods, No Masters**, p. 71] Thus syndicalism aims to win reforms by direct action and by this struggle bring the possibilities of a revolution, via the general strike, closer. Indeed any *"desired improvement is to be wrested directly from the capitalist. . . [and] must always represent a reduction in capitalist privileges and be a partial expropriation."* [**Op. Cit.**, p. 73] Thus Emma Goldman:

"Of course Syndicalism, like the old trade unions, fights for immediate gains, but it is not stupid enough to pretend that labour can expect humane conditions from inhumane economic arrangements in society. Thus it merely wrests from the enemy what it can force him to yield; on the whole, however, Syndicalism aims at, and concentrates its energies upon, the complete overthrow of the wage system.

"Syndicalism goes further: it aims to liberate labour from every institution that has not for its object the free development of production for the benefit of all humanity. In short, the ultimate purpose of Syndicalism is to reconstruct society from its present centralised, authoritative and brutal state to one based upon the free, federated grouping of the workers along lines of economic and social liberty.

"With this object in view, Syndicalism works in two directions: first, by undermining the

existing institutions; secondly, by developing and educating the workers and cultivating their spirit of solidarity, to prepare them for a full, free life, when capitalism shall have been abolished. . .

"Syndicalism is, in essence, the economic expression of Anarchism..." [Red Emma Speaks, p. 68]

Which, in turn, explains why syndicalist unions are structured in such an obviously libertarian way. On the one hand, it reflects the importance of empowering every worker by creating a union which is decentralised and self-managed, a union which every member plays a key role in determining its policy and activities. Participation ensures that the union becomes a *"school for the will"* (to use Pouget's expression) and allows working people to learn how to govern themselves and so do without government and state. On the other hand, *"[a]t the same time that syndicalism exerts this unrelenting pressure on capitalism, it tries to build the new social order within the old. The unions and the 'labour councils' are not merely means of struggle and instruments of social revolution; they are also the very structure around which to build a free society. The workers are to be educated [by their own activity within the union] in the job of destroying the old propertied order and in the task of reconstructing a stateless, libertarian society. The two go together."* [Murray Bookchin, **Op. Cit.**, p. 121] The syndicalist union is seen as prefiguring the future society, a society which (like the union) is decentralised and self-managed in all aspects.

Thus, as can be seen, syndicalism differs from trade unionism in its structure, its methods and its aims. Its structure, method and aims are distinctly anarchist. Little wonder the leading syndicalist theorist Fernand Pelloutier argued that the trade union, *"governing itself along anarchic lines,"* must become *"a practical schooling in anarchism."* [No Gods, No Masters, p. 55, p. 57] In addition, most anarcho-syndicalists support community organisations and struggle alongside the more traditional industry based approach usually associated within syndicalism. While we have concentrated on the industrial side here (simply because this is a key aspect of syndicalism) we must stress that syndicalism can and does lend itself to community struggles, so our comments have a wider application (for example, in the form of community unionism as a means to create community assemblies -- see [section J.5.1](#)). It is a myth that anarcho-syndicalism ignores community struggles and organisation, as can be seen from the history of the Spanish CNT for example (the CNT helped organise rent strikes, for example).

It must be stressed that a syndicalist union is open to all workers regardless of their political opinions (or lack of them). The union exists to defend workers' interests as workers and is organised in an anarchist manner to ensure that their interests are fully expressed. This means that an syndicalist organisation is different from an organisation of syndicalists. What makes the union syndicalist is its structure, aims and methods. Obviously things can change (that is true of any organisation which has a democratic structure) but that is a test revolutionary and anarcho-syndicalists welcome and do not shirk from. As the union is self-managed from below up, its militancy and political content is determined by its membership. As Pouget put it, the union *"offers employers a degree of resistance in geometric proportion with the resistance put up by its members."* [Op. Cit., p. 71] That is why syndicalists ensure that power rests in

the members of the union.

Syndicalists have two main approaches to building revolutionary unions -- "*dual unionism*" and "*boring from within*." The former approach involves creating new, syndicalist, unions, in opposition to the existing trade unions. This approach was historically and is currently the favoured way of building syndicalist unions (American, Italian, Spanish, Swedish and numerous other syndicalists built their own union federations in the heyday of syndicalism between 1900 and 1920). "Boring from within" simply means working within the existing trade unions in order to reform them and make them syndicalist. This approach was favoured by French and British syndicalists, plus a few American ones. See also sections [J.5.2](#) and [J.5.3](#) for more on industrial unionism and anarchist perspectives on existing trades unions.

However, these two approaches are not totally in opposition. Many of the dual unions were created by syndicalists who had first worked within the existing trade unions. Once they got sick of the bureaucratic union machinery and of trying to reform it, they split from the reformist unions and formed new, revolutionary, ones. Similarly, dual unionists will happily support trade unionists in struggle and often be "two carders" (i.e. members of both the trade union and the syndicalist one). Rather than being isolated from the majority of trade unionists, supporters of dual unionism argue that they would be in contact with them where it counts, on the shop floor and in struggle rather than in trade union meetings which many workers do not even attend. Dual unionists argue that the trade unions, like the state, are too bureaucratic to be changed and that, therefore, trying to reform them is a waste of time and energy (and it is likely that rather than change the trade union, "boring from within" would more likely change the syndicalist by watering down their ideas).

However, syndicalists no matter what tactics they prefer, favour autonomous workplace organisations, controlled from below. Both tend to favour syndicalists forming networks of militants to spread anarchist/syndicalist ideas within the workplace. Indeed, such a network (usually called "*Industrial Networks*" -- see [section J.5.4](#) for more details) would be an initial stage and essential means for creating syndicalist unions. These groups would encourage syndicalist tactics and rank and file organisation during struggles and so create the potential for building syndicalist unions as syndicalist ideas spread and are seen to work.

While the names "syndicalism" and "anarcho-syndicalism" date from the 1890s in France, the ideas associated with these names have a longer history. Anarcho-syndicalist ideas have developed independently in many different countries and times. As Rudolf Rocker notes, anarcho-syndicalism itself was "*a direct continuation of those social aspirations which took shape in the bosom of the First International and which were best understood and most strongly held by the libertarian wing of the great workers' alliance . . . Its theoretical assumptions are based on the teachings of Libertarian or Anarchist Socialism, while its form of organisation is largely borrowed from revolutionary Syndicalism.*" [**Anarcho-Syndicalism**, p. 49]

Indeed, anyone familiar with Bakunin's work will quickly see that much of his ideas prefigure what was latter to become known as syndicalism. Bakunin, for example, argued that the "*organisation of the trade*

*sections, their federation in the International, and their representation by the Chambers of Labour, not only create a great academy, in which the workers of the International, combining theory and practice, can and must study economic science, they also bear in themselves the living germs of **the new social order**, which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself."* [quoted by Rocker, **Op. Cit.**, p. 45] Bakunin continually stressed that trade unions were the "*only really efficacious weapons the workers now can use against*" the bourgeoisie, as well as the importance of solidarity and the radicalising and empowering effect of strikes and the importance of the general strike as a means of "*forc[ing] society to shed its old skin.*" [**The Basic Bakunin**, p. 153, p. 150]

(We must stress that we are **not** arguing that Bakunin "invented" syndicalism. Far from it. Rather, we are arguing that Bakunin expressed ideas already developed in working class circles and became, if you like, the "spokes-person" for these libertarian tendencies in the labour movement as well as helping to clarify these ideas in many ways. As Emma Goldman argued, the "*feature which distinguishes Syndicalism from most philosophies is that it represents the revolutionary philosophy of labour conceived and born in the actual struggle and experience of workers themselves -- not in universities, colleges, librarries, or in the brain of some scientists.*" [**Op. Cit.**, pp. 65-6] This applies equally to Bakunin and the first International).

Thus, rather than being some sort of revision of anarchism or some sort of "semi-Marxist" movement, syndicalism was, in fact, a reversion to the ideas of Bakunin and the anarchists in the first International (although, as we discuss in the [next section](#), with some slight differences) after the disastrous experience of "*propaganda by the deed*" (see sections [A.2.18](#) and [A.5.3](#)). Given the utter nonsense usually written by Marxists (and liberals) about Bakunin, it is not hard to understand why Marxists fail to see the anarchist roots of syndicalism -- not being aware of Bakunin's ideas, they think that anarchism and syndicalism are utterly different while, in fact, (to use Emma Goldman's words) syndicalism "*is, in essence, the economic expression of Anarchism*" and "*under Bakunin and the Latin workers, [the International was] forging ahead along industrial and Syndicalist lines.*" [**Red Emma Speaks**, p. 68, p. 66] Similarly, we find that the American **Black International** (organised by anarchists in the 1880s) "*anticipated by some twenty years the doctrine of anarcho-syndicalism*" and "*[m]ore than merely resembling the 'Chicago Idea' [of the **Black International**], the IWW's principles of industrial unionism resulted from the conscious efforts of anarchists . . . who continued to affirm . . . the principles which the Chicago anarchists gave their lives defending.*" [Salvatore Salerno, **Red November, Black November**, p. 51 and p. 79] Thus, ironically, many Marxists find themselves in the curious position of ascribing ideas and movements inspired by Bakunin to Marx!

Moreover, ideas similar to anarcho-syndicalism were also developed independently of the libertarian wing of the IWMA nearly 40 years previously in Britain. The idea that workers should organise into unions, use direct action and create a society based around the trade union federation had been developed within the early labour movement in Britain. The Grand National Consolidated Trade Union of Great Britain and Ireland had, as one expert on the early British Labour movement put it, a "*vision [which] is an essentially syndicalist one of decentralised socialism in which trade unions. . . have*

acquired. . . the productive capacity to render themselves collectively self-sufficient as a class" and a union based "*House of Trades*" would replace the existing state [Noel Thompson, **The Real Rights of Man**, p.88]. This movement also developed Proudhon's ideas on mutual banks and labour notes decades before he put pen to paper. For an excellent history of this period, see E.P. Thompson's **The Making of the English Working Class** and for a fuller history of proto-syndicalism Rudolf Rocker's **Anarcho-Syndicalism** cannot be bettered.

Thus syndicalism and anarcho-syndicalism (or anarchist-syndicalism) is revolutionary labour unionism. Its theoretical assumptions and organisation are based on the teachings of libertarian socialism (or Anarchism). Syndicalism combines the day-to-day struggle for reforms and improvements in working class life within the framework of existing capitalist society (reforms gained by direct action and considered as partial expropriations) with the long term aim of the overthrow of capitalism and statism. The aim of the union is workers' self-management of production and distribution after the revolution, a self-management which the union is based upon in the here and now.

Syndicalists think that such an organisation is essential for the successful creation of an anarchist society as it builds the new world in the shell of the old, making a sizeable majority of the population aware of anarchism and the benefits of anarchist forms of organisation and struggle. Moreover, they argue that those who reject syndicalism "*because it believes in a permanent organisation of workers*" and urge "*workers to organise 'spontaneously' at the very moment of revolution*" promote a "*con-trick, designed to leave 'the revolutionary movement,' so called, in the hands of an educated class. . . [or] so-called 'revolutionary party'. . . [which] means that the workers are only expected to come in the fray when there's any fighting to be done, and in normal times leave theorising to the specialists or students.*" [Albert Meltzer, **Anarchism: Arguments for and Against**, p. 57] The syndicalist union is seen as a "school" for anarchism, "*the germ of the Socialist economy of the future, the elementary school of Socialism in general. . . [we need to] plant these germs while there is yet time and bring them to the strongest possible development, so as to make the task of the coming social revolution easier and to insure its permanence.*" [Rudolf Rocker, **Op. Cit.**, p. 52] A self-managed society can only be created by self-managed means, and as only the practice of self-management can ensure its success, the need for libertarian popular organisations is essential. Syndicalism is seen as the key way working people can prepare themselves for revolution and learn to direct their own lives. In this way syndicalism creates, to use Bakunin's terms, a true politics of the people, one that does not create a parasitic class of politicians and bureaucrats ("*We wish to emancipate ourselves, to free ourselves*", Pelloutier wrote, "*but we do not wish to carry out a revolution, to risk our skin, to put Pierre the socialist in the place of Paul the radical*").

This does not mean that syndicalists do not support organisations spontaneously created by workers' in struggle (such as workers' councils, factory committees and so on). Far from it. Anarcho-syndicalists and revolutionary syndicalists have played important parts in these kinds of organisation (as can be seen from the Russian Revolution, the factory occupations in Italy in 1920, the British Shop Steward movement and so on). This is because syndicalism acts as a catalyst to militant labour struggles and serves to counteract class-collaborationist tendencies by union bureaucrats and other labour fakirs. Part of this activity must involve encouraging self-managed organisations where none exist and so

syndicalists support and encourage all such spontaneous movements, hoping that they turn into the basis of a syndicalist union movement or a successful revolution. Moreover, most anarcho-syndicalists recognise that it is unlikely that every worker, nor even the majority, will be in syndicalist unions before a revolutionary period starts. This means **new** organisations, created spontaneously by workers in struggle, would have to be the framework of social struggle and the post-capitalist society rather than the syndicalist union as such. All the syndicalist union can do is provide a practical example of how to organise in a libertarian way within capitalism and statism and provide **part** of the framework of the free society, along with other spontaneously created organisations.

Hence spontaneously created organisations of workers in struggle play an important role in revolutionary and anarcho-syndicalist theory. Since syndicalists advocate that it is the workers, using their own organisations who will control their own struggles (and, eventually, their own revolution) in their own interests, not a vanguard party of elite political theorists, this is unsurprising. It matters little if the specific organisations are revolutionary industrial unions, factory committees, workers councils', or other labour formations. The important thing is that they are created and run by workers themselves. Meanwhile, anarcho-syndicalists are industrial guerrillas waging class war at the point of production in order to win improvements in the here and now and strengthen tendencies towards anarchism by showing that direct action and libertarian organisation is effective and can win partial expropriations of capitalist and state power.

Lastly, we must point out here that while syndicalism has anarchist roots, not all syndicalists are anarchists. A few Marxists have been syndicalists, particularly in the USA where the followers of Daniel De Leon supported Industrial Unionism and helped form the Industrial Workers of the World. The Irish socialist James Connelly was also a Marxist-syndicalist, as was Big Bill Haywood a leader of the IWW and member of the US Socialist Party. Marxist-syndicalists are generally in favour of more centralisation within syndicalist unions (the IWW was by far the most centralised syndicalist union) and often argue that a political party is required to complement the work of the union. Needless to say, anarcho-syndicalists and revolutionary syndicalists disagree, arguing that centralisation kills the spirit of revolt and weakens a unions real strength [Rudolf Rocker, **Anarcho-Syndicalism**, p. 53] and that political parties divide labour organisations needlessly and are ineffective when compared to militant unionism [**Op. Cit.**, p. 51] So not all syndicalists are anarchists and not all anarchists are syndicalists (we discuss the reasons for this in the [next section](#)). Those anarchists who are syndicalists often use the term "anarcho-syndicalism" to indicate that they are both anarchists and syndicalists and to stress the libertarian roots and syndicalism.

For more information on anarcho-syndicalist ideas, Rudolf Rocker's classic introduction to the subject, **Anarcho-Syndicalism** is a good starting place, as is the British syndicalist Tom Brown's **Syndicalism**. Daniel Guerin's **No Gods, No Masters** contains articles by leading syndicalist thinkers and is also a useful source of information.

J.3.9 Why are many anarchists not anarcho-syndicalists?

Before discussing why many anarchists are not anarcho-syndicalists, we must clarify a few points first. Let us be clear, non-syndicalist anarchists usually support the ideas of workplace organisation and struggle, of direct action, of solidarity and so on. Thus most non-syndicalist anarchists do not disagree with anarcho-syndicalists on these issues. Indeed, many even support the creation of syndicalist unions. Thus many anarcho-communists like Alexander Berkman, Errico Malatesta and Emma Goldman supported anarcho-syndicalist organisations and even, like Malatesta, helped form such revolutionary union federations (he helped form the FORA in Argentina) and urged anarchists to take a leading role in organising unions. So when we use the term "non-syndicalist anarchist" we are not suggesting that these anarchists reject all aspects of anarcho-syndicalism. Rather, they are critical of certain aspects of anarcho-syndicalist ideas while supporting other aspects of it.

In the past, a few communist-anarchists **did** oppose the struggle for improvements within capitalism as "reformist." However, these were few and far between and with the rise of anarcho-syndicalism in the 1890s, the vast majority of communist-anarchists recognised that only by encouraging the struggle for reforms would people take them seriously. Only by showing the benefits of anarchist tactics and organisation in practice could anarchist ideas grow in influence. Thus syndicalism was a healthy response to the rise of "abstract revolutionarism" that infected the anarchist movement during the 1880s, particularly in France and Italy. Thus communist-anarchists agree with syndicalists on the importance of struggling for and winning reforms and improvements within capitalism.

Similarly, anarchists like Malatesta also recognised the importance of mass organisations like unions. As he argued, *"to encourage popular organisations of all kinds is the logical consequence of our basic ideas . . . An authoritarian party, which aims at capturing power to impose its ideas, has an interest in the people remaining an amorphous mass, unable to act for themselves and therefore easily dominated . . . But we anarchists do not want to **emancipate** the people; we want the people to **emancipate themselves** . . . we want the new way of life to emerge from the body of the people and correspond to the state of their development and advance as they advance."* [**Life and Ideas**, p. 90] And this can only occur when there are popular organisations, like trade unions, within which people can express themselves, come to common agreements and act. Moreover, these organisations must be autonomous, self-governing, be libertarian in nature **and** be independent of all parties and organisations (including anarchist ones). The similarity with anarcho-syndicalist ideas is striking.

So why, if this is the case, are many anarchists not anarcho-syndicalists? There are two main reasons for this. First, there is the question of whether unions are, by their nature, revolutionary organisations. Second, whether syndicalist unions are sufficient to create anarchy by themselves. We will discuss each in turn.

As can be seen from any country, the vast majority of unions are deeply reformist and bureaucratic in nature. They are centralised, with power resting at the top in the hands of officials. This suggests that in themselves unions are not revolutionary. As Malatesta argued, this is to be expected for *"all movements founded on material and immediate interests (and a mass working class movement cannot be founded on anything else), if the ferment, the drive and the unremitting efforts of men [and women] of ideas struggling and making sacrifices for an ideal future are lacking, tend to adapt themselves to*

circumstances, foster a conservative spirit, and fear of change in those who manage to improve their conditions, and often end up by creating new privileged classes and serving to support and consolidate the system one would want to destroy." [Op. Cit., pp. 113-4]

If we look at the **role** of the union within capitalist society we see that in order for it to work, it must offer a reason for the boss to recognise it and negotiate with it. This means that the union must be able to offer the boss something in return for any reforms it gets and this "something" is labour discipline. In return for an improvement in wages or conditions, the union must be able to get workers to agree to submit to the contracts the union signs with their boss. In other words, they must be able to control their members -- stop them fighting the boss -- if they are to have anything with which to bargain with. This results in the union becoming a third force in industry, with interests separate than the workers which it claims to represent. The role of unionism as a seller of labour power means that it often has to make compromises, compromises it has to make its members agree to. This necessitates a tendency for power to be taken from the rank and file of the unions and centralised in the hands of officials at the top of the organisation. This ensures that *"the workers organisation becomes what it must perforce be in a capitalist society -- a means not of refusing to recognise and overthrowing the bosses, but simply for hedging round and limiting the bosses' power."* [Errico Malatesta, **The Anarchist Revolution**, p. 29]

Anarcho-syndicalists are aware of this problem. That is why their unions are decentralised, self-managed and organised from the bottom up in a federal manner. As Durruti argued:

"No anarchists in the union committees unless at the ground level. In these committees, in case of conflict with the boss, the militant is forced to compromise to arrive at an agreement. The contracts and activities which come from being in this position, push the militant towards bureaucracy. Conscious of this risk, we do not wish to run it. Our role is to analyse from the bottom the different dangers which can beset a union organisation like ours. No militant should prolong his job in committees, beyond the time allotted to him. No permanent and indispensable people." [Durruti: **The People Armed**, p. 183]

However, structure is rarely enough in itself to undermine the bureaucratic tendencies created by the role of unions in the capitalist economy. While such libertarian structures can slow down the tendency towards bureaucracy, non-syndicalist anarchists argue that they cannot stop it. They point to the example of the French CGT which had become reformist by 1914 (the majority of other syndicalist unions were crushed by fascism or communism before they had a chance to develop fully). Even the Spanish CNT (by far the most successful anarcho-syndicalist union) suffered from the problem of reformism, causing the anarchists in the union to organise the FAI in 1927 to combat it (which it did, very successfully). According to Jose Peirats, the *"participation of the anarchist group in the mass movement CNT helped to ensure that CNT's revolutionary nature."* [**Anarchists in the Spanish Revolution**, p. 241] This indicates the validity of Malatesta's arguments concerning the need for anarchists to remain distinct of the unions organisationally while working within them (just as Peirat's comment that *"[b]linkered by participation in union committees, the FAI became incapable of a wider vision"* indicates the validity of Malatesta's warnings against anarchists taking positions of responsibility in unions! [Op. Cit., pp. 239-40]).

Moreover, even the structure of syndicalist unions can cause problems. *"In modelling themselves structurally on the bourgeois economy, the syndicalist unions tended to become the organisational counterparts of the very centralised apparatus they professed to oppose. By pleading the need to deal effectively with the tightly knit bourgeoisie and state machinery, reformist leaders in syndicalist unions often had little difficulty in shifting organisational control from the bottom to the top."* [Murray Bookchin, **The Spanish Anarchists**, p. 123]

In addition, as the syndicalist unions grow in size and influence their initial radicalism is usually watered-down. This is because, *"since the unions must remain open to all those who desire to win from the masters better conditions of life, whatever their opinions may be . . . , they are naturally led to moderate their aspirations, first so that they should not frighten away those they wish to have with them, and because, in proportion as numbers increase, those with ideas who have initiated the movement remain buried in a majority that is only occupied with the petty interests of the moment."* [Errico Malatesta, *"Anarchism and Syndicalism"*, contained in Geoffrey Ostergaard, **The Tradition of Workers' Control**, p. 150]

Which, ironically given that increased self-management is the means of reducing tendencies towards bureaucracy, means that syndicalist unions have a tendency towards reformism simply because the majority of their members will be non-revolutionary if the union grows in size in non-revolutionary times. This can be seen from the development of the Swedish syndicalist union the SAC, which went from being a very militant minority union to watering down its politics to retain members in non-revolutionary times

So, if the union's militant strategy succeeds in winning reforms, more and more workers will join it. This influx of non-anarchists and non-syndicalists must, in a self-managed organisation, exert a de-radicalising influence on the unions politics and activities in non-revolutionary times. The syndicalist would argue that the process of struggling for reforms combined with the educational effects of participation and self-management will reduce this influence and, of course, they are right. However, non-syndicalist anarchists would counter this by arguing that the libertarian influences generated by struggle and participation would be strengthened by the work of anarchist groups and, without this work, the de-radicalising influences would outweigh the libertarian ones. In addition, the success of a syndicalist union must be partly determined by the general level of class struggle. In periods of great struggle, the membership will be more radical than in quiet periods and it is quiet periods which cause the most difficulties for syndicalist unions. With a moderate membership the revolutionary aims and tactics of the union will also become moderated. As one academic writer on French syndicalism put it, syndicalism *"was always based on workers acting in the economic arena to better their conditions, build class consciousness, and prepare for revolution. The need to survive and build a working-class movement had always forces syndicalists to adapt themselves to the exigencies of the moment."* [Barbara Mitchell, *"French Syndicalism: An Experiment in Practical Anarchism"*, contained in **Revolutionary Syndicalism: An International Perspective**, Marcel can der Linden and Wayne Thorpe (eds.), p. 25]

As can be seen from the history of many syndicalist unions (and, obviously, mainstream unions too) this seems to be the case -- the libertarian tendencies are outweighed by the de-radicalising ones. This can also be seen from the issue of collective bargaining:

"The problem of collective bargaining foreshadowed the difficulty of maintaining syndicalist principles in developed capitalist societies. Many organisations within the international syndicalist movement initially repudiated collective agreements with employers on the grounds that by a collaborative sharing of responsibility for work discipline, such agreements would expand bureaucratisation within the unions, undermine revolutionary spirit, and restrict the freedom of action that workers were always to maintain against the class enemy. From an early date, however, sometimes after a period of suspicion and resistance, many workers gave up this position. In the early decades of the century it became clear that to maintain or gain a mass membership, syndicalist unions had to accept collective bargaining." [Marcel van der Linden and Wayne Thorpe, **Op. Cit.**, p. 19]

Thus, for most anarchists, *"the Trade Unions are, by their very nature reformist and never revolutionary. The revolutionary spirit must be introduced, developed and maintained by the constant actions of revolutionaries who work from within their ranks as well as from outside, but it cannot be the normal, natural definition of the Trade Unions function."* [Errico Malatesta, **Life and Ideas**, p. 117]

This does not mean that anarchists should not work within labour organisations. Nor does it mean rejecting anarcho-syndicalist unions as an anarchist tactic. Far from it. Rather it is a case of recognising these organisations for what they are, reformist organisations which are not an end in themselves but one (albeit, an important one) means of preparing the way for the achievement of anarchism. Neither does it mean that anarchists should not try to make labour organisations as anarchistic as possible or have anarchist objectives. Working within the labour movement (at the rank and file level, of course) is essential to gain influence for anarchist ideas, just as working with unorganised workers is also important. But this does not mean that the unions are revolutionary by their very nature, as syndicalism suggests. As history shows, and as syndicalists themselves are aware, the vast majority of unions are reformist. Non-syndicalist anarchists argue there is a reason for that and syndicalist unions are not immune to these tendencies just because they call themselves revolutionary. Due to these tendencies, non-syndicalist anarchists stress the need to organise as anarchists first and foremost in order to influence the class struggle and encourage the creation of autonomous workplace and community organisations to fight that struggle. Rather than fuse the anarchist and working class movement, non-syndicalist anarchists stress the importance of anarchists organising as anarchists to influence the working class movement.

All this does not mean that purely anarchist organisations or individual anarchists cannot become reformist. Of course they can (just look at the Spanish FAI which along with the CNT co-operated with the state during the Spanish Revolution). However, unlike syndicalist unions, the anarchist organisation is not pushed towards reformism due to its role within society. That is an important difference -- the institutional factors are not present for the anarchist federation as they are for the syndicalist union

federation.

The second reason why many anarchists are not anarcho-syndicalists is the question of whether syndicalist unions are sufficient in themselves to create anarchy. Pierre Monatte, a French syndicalist, argued that "*[s]yndicalism, as the [CGT's] Congress of Amiens proclaimed in 1906, is sufficient unto itself. . . [as] the working class, having at last attained majority, means to be self-sufficient and to reply on no-one else for its emancipation.*" [**The Anarchist Reader**, p. 219]

This idea of self-sufficiency means that the anarchist and the syndicalist movement must be fused into one, with syndicalism taking the role of both anarchist group and labour union. Thus a key difference between anarcho-syndicalists and other anarchists is over the question of the need for a specifically anarchist organisation. While most anarchists are sympathetic to anarcho-syndicalism, few totally subscribe to anarcho-syndicalist ideas in their pure form. This is because, in its pure form, syndicalism rejects the idea of anarchist groups and instead considers the union as **the** focal point of social struggle and anarchist activism. However, this "pure" form of syndicalism may be better described as revolutionary syndicalism rather than as anarcho-syndicalism. In France, for example, anarcho-syndicalism is used to describe the idea that unions can be complemented with anarchist groups while revolutionary syndicalism is used to describe the idea of union self-sufficiency. Thus an anarcho-syndicalist may support a specific anarchist federation to work within the union and outside. In the eyes of other anarchists anarcho-syndicalism in its "pure" (revolutionary syndicalist) form makes the error of confusing the anarchist and union movement and so ensures that the resulting movement can do neither work well. As Malatesta put it, "*[e]very fusion or confusion between the anarchist movement and the trade union movement ends, either in rendering the later unable to carry out its specific task or by weakening, distorting, or extinguishing the anarchist spirit.*" [**Life and Ideas**, p. 123]

This is not to suggest that anarchists should not work in the labour movement. That would be a mistake. Anarchists should work with the rank and file of the labour movement while keeping their own identity as anarchists and organising as anarchists. Thus Malatesta: "*In the past I deplored that the comrades isolated themselves from the working-class movement. Today I deplore that many of us, falling into the contrary extreme, let themselves be swallowed up in the same movement.*" [**The Anarchist Reader**, p. 225]

Most anarchists agree with Malatesta when he argued that "*anarchists must not want the Trade Unions to be anarchist, but they must act within their ranks in favour of anarchist aims, as individuals, as groups and as federations of groups. . . [I]n the situation as it is, and recognising that the social development of one's workmates is what it is, the anarchist groups should not expect the workers' organisation to act as if they were anarchist, but should make every effort to induce them to approximate as much as possible to the anarchist method.*" [**Life and Ideas**, pp. 124-5] Given that it appears to be the case that labour unions **are** by nature reformist, they cannot be expected to be enough in themselves when creating a free society. Hence the need for anarchists to organise **as anarchists** as well as alongside their fellow workers as workers in order to spread anarchist ideas on tactics and aims. This activity within existing unions does not mean attempting to "reform" the union in a libertarian manner (although some anarchists would support this approach). Rather it means working with the rank

and file of the unions and trying to create autonomous workplace organisations, independent of the trade union bureaucracy and organised in a libertarian way.

This involves creating anarchist organisations separate from but which (in part) works within the labour movement for anarchist ends. Let us not forget that the syndicalist organisation is the union, it organises all workers regardless of their politics. A "union" which just let anarchists joined would not be a union. It would be an anarchist group organised in workplace. As anarcho-syndicalists themselves are aware, an anarcho-syndicalist union is not the same as a union of anarcho-syndicalists. How can we expect an organisation made up of non-anarchists be totally anarchist? Which raises the question of the conflict between being a labour union or a revolutionary anarchist organisation. Because of this tendencies always appeared within syndicalist unions that were reformist and because of this most anarchists, including many anarcho-syndicalists we must note, argue that there is a need for anarchists to work within the rank and file of the existing unions (along with workers who are **not** in a union) to spread their anarchist ideals and aims, and this implies anarchist organisations separate from the labour movement, each if that movement is based on syndicalist unions. As Bakunin argued, the anarchist organisation *"is the necessary complement to the International [i.e. the union federation]. But the International and the Alliance [the anarchist federation], while having the same ultimate aims, perform different functions. The International endeavours to unify the working masses . . . regardless of nationality or religious and political beliefs, into one compact body: the Alliance, on the other hand, tries to give these masses a really revolutionary direction."* This did not mean that the Alliance is imposing a foreign theory onto the members of the unions, because the *"programs of one and the other . . . differ only in the degree of their revolutionary development . . . The program of the Alliance represents the fullest unfolding of the International."* [**Bakunin on Anarchism**, p. 157]

Which means for most anarchists that syndicalist unions need to be complemented by anarchist organisations. Which means that the syndicalist union is not sufficient in itself to create an anarchist society (needless to say, popular organisations of all sorts are an essential part of creating an anarchist society, they are the framework within which self-management will be practised). The anarchist group is required to promote anarchist tactics of direct action and solidarity, anarchist types of organisation within the union and anarchist aims (the creation of an anarchist society) within the workplace, as well as outside it. This does not imply that anarchists think that unions and other forms of popular organisations should be controlled by anarchists. Far from it! Anarchists are the strongest supporters of the autonomy of all popular organisations. As we indicated in [section J.3.6](#), anarchists desire to influence popular organisations by the strength of our ideas within the rank and file and **not** by imposing our ideas on them.

In addition to these major points of disagreement, there are minor ones as well. For example, many anarchists dislike the emphasis syndicalists place on the workplace and see *"in syndicalism a shift in focus from the commune to the trade union, from all of the oppressed to the industrial proletariat alone, from the streets to the factories, and, in emphasis at least, from insurrection to the general strike."* [Murray Bookchin, **The Spanish Anarchists**, p. 123] However, most anarcho-syndicalists are well aware that life exists outside the workplace and so this disagreement is largely one of emphasis

more than anything else. Similarly, many anarchists disagreed with the early syndicalist argument that a general strike was enough to create a revolution. They argued, with Malatesta in the forefront, that while a general strike would be "*an excellent means for starting the social revolution*" it would be wrong to think that it made "*armed insurrection unnecessary*" since the "*first to die of hunger during a general strike would not be the bourgeois, who dispose of all the stores, but the workers.*" In order for this **not** to occur, the workers would have to take over the stores and the means of production, protected by the police and armed forces and this meant insurrection. [Errico Malatesta, **The Anarchist Reader**, pp. 224-5] Again, however, most modern syndicalists accept this to be the case and see the "*expropriatory general strike,*" in the words of French syndicalist Pierre Besnard, as "*clearly insurrectional.*" [cited by Vernon Richards, **Life and Ideas**, p. 288] We mention this purely to counter Leninist claims that syndicalists subscribe to the same ones they did in the 1890s.

Despite our criticisms we should recognise that the difference between anarchists and anarcho-syndicalists are slight and (often) just a case of emphasis. Most anarchists support anarcho-syndicalist unions where they exist and often take a key role in creating and organising them. Similarly, many self-proclaimed anarcho-syndicalists also support specific organisations of anarchists to work within and outwith the syndicalist union. Anarcho-syndicalist and revolutionary unions, where they still exist, are far more progressive than any other union. Not only do they create democratic unions and create an atmosphere where anarchist ideas are listened to with respect but they also organise and fight in a way that breaks down the divisions into leaders and led, doers and watchers. On its own this is very good but not good enough. For non-syndicalist anarchists, the missing element is an organisation winning support for anarchist ideas and anarchist methods both within revolutionary unions and everywhere else working class people are brought together.

For a further information on the anarchist critic of syndicalism, we can suggest no better source than the writings of Errico Malatesta. **The Anarchist Reader** contains the famous debate between the syndicalist Pierre Monatte and Malatesta at the International Anarchist conference in Amsterdam in 1907. The books **Malatesta: Life and Ideas** and **The Anarchist Revolution** contain Malatesta's viewpoints on anarchism , syndicalism and how anarchists should work within the labour movement.

I.2 Is this a blueprint for an anarchist society?

No, far from it. There can be no such thing as a "*blueprint*" for a free society. All we can do here is indicate those general features that we believe a free society **must** have in order to qualify as truly libertarian. For example, a society based on hierarchical management in the workplace (like capitalism) would not be libertarian and would soon see private or public states developing to protect the power of those at the top hierarchical positions ("*Anarchy without socialism. . . [is] impossible to us, for in such case it could not be other than the domination of the strongest, and would therefore set in motion right away the organisation and consolidation of this domination, that is to the constitution of government.*" [Errico Malatesta, **Life and Ideas**, p. 148]). Beyond such general considerations, however, the specifics of how to structure a non-hierarchical society must remain open for discussion and experimentation:

"Anarchism, meaning Liberty, is compatible with the most diverse economic [and social] conditions, on the premise that these cannot imply, as under capitalist monopoly, the negation of liberty." [D. A. de Santillan, **After the Revolution**, p. 95]

So, this section of the anarchist FAQ should not be regarded as a detailed plan. Anarchists have always been reticent about spelling out their vision of the future in too much detail for it would be contrary to anarchist principles to be dogmatic about the precise forms the new society must take. Free people will create their own alternative institutions in response to conditions specific to their area and it would be presumptuous of us to attempt to set forth universal policies in advance. In Kropotkin's words:

"Once expropriation [of social wealth by the masses] has been carried through . . . then, after a period of grouping, there will necessarily arise a new system of organising production and exchange . . . and that system will be a lot more attuned to popular aspirations and the requirements of co-existence and mutual relations than any theory, however splendid, devised by the thinking and imagination of reformers. . ." [**No Gods, No Masters**, vol. 1, p. 232]

This, however, did not stop him "*predicting right now that [in some areas influenced by anarchists]. . . the foundations of the new organisation will be the free federation of producers' groups and the free federation of Communes and groups in independent Communes.*" [**Ibid.**] This is because what we think now will influence the future just as real experience will influence and change how we think. Moreover, given the ways in which our own unfree society has shaped our ways of thinking, it is probably impossible for us to imagine what new forms will arise once humanity's ingenuity and creativity is unleashed by the removal of its present authoritarian fetters. Thus any attempts to paint a detailed picture of the future will be doomed to failure. Ultimately, anarchists think that "*the new society should be organised with the direct participation of all concerned, from the periphery to the centre, freely and spontaneously, at the prompting of the sentiment of solidarity and under pressure of the natural needs of society.*" [E. Malatesta and A. Hamon, **No Gods, No Masters**, vol. 2, p. 20]

Nevertheless, anarchists have been willing to specify some broad principles indicating the general framework within which they expect the institutions of the new society to grow. It is important to emphasise that these principles are not the arbitrary creations of intellectuals in ivory towers. Rather, they are based on the actual political, social and economic structures that have arisen **spontaneously** whenever working class people have attempted to throw off its chains during eras of heightened revolutionary activity, such as the Paris Commune, the Russian Revolution, the Spanish Revolution, and the Hungarian uprising of 1956, to name just a few. Thus, for example, it is clear that self-managed, democratic workers' councils are basic libertarian-socialist forms, since they have appeared during all revolutionary periods -- a fact that is not surprising considering that they are rooted in traditions of communal labour, shared resources, and participatory decision making that stretch back tens of thousands of years, from the clans and tribes of prehistoric times through the "*barbarian*" agrarian village of the post-Roman world to the free medieval city, as Kropotkin documents in his classic study **Mutual Aid**. Ultimately, such organisations are the only alternatives to government. Unless we make our own decisions ourselves, someone else will.

So, when reading these sections, please remember that this is just an attempt to sketch the outline of a possible future. It is in no way an attempt to determine **exactly** what a free society would be like, for such a free society will be the result of the actions of all of society, not just anarchists. As Malatesta argued:

"None can judge with certainty who is right and who is wrong, who is nearest to the truth, or which is the best way to achieve the greatest good for each and everyone. Freedom, coupled by experience, is the only way of discovering the truth and what is best; and there is no freedom if there is a denial of the freedom to err." [**Life and Ideas**, p. 49]

And, of course, real life has a habit of over-turning even the most realistic sounding theories, ideas and ideologies. Marxism, Leninism, Monetarism, laissez-faire capitalism (among others) have proven time and time again that ideology applied to real life has effects not predicted by the theory before hand (although in all four cases, their negative effects were predicted by others; in the case of Marxism and Leninism by anarchists). Anarchists are aware of this, which is why we reject ideology in favour of theory and why we are hesitant to create blue-prints for the future. After all, history has proven Proudhon right when he stated that "*every society declines the moment it falls into the hands of the ideologists.*" [**System of Economical Contradictions**, p. 115]

Only life, as Bakunin stressed, can create and so life must inform theory -- and so if the theory is producing adverse results it is better to revise the theory than deny reality or justify the evil effects it creates on real people. Thus this section of the FAQ is not a blue print, rather it is a series of suggestions (suggestions drawn, we stress, from actual experiences of working class revolt and organisation). These suggestions may be right or wrong and informed by Malatesta's comments that:

*"We do not boast that we possess absolute truth, on the contrary, we believe that **social***

truth is not a fixed quantity, good for all times, universally applicable or determinable in advance, but that instead, once freedom has been secured, mankind will go forward discovering and acting gradually with the least number of upheavals and with a minimum of friction. Thus our solutions always leave the door open to different and, one hopes, better solutions." [Op. Cit., p.21]

It is for this reason that anarchists, to quote Bakunin, think that the *"revolution should not only be made for the people's sake; it should also be made by the people."* [No Gods, No Masters, vol. 1, p. 141] Social problems will be solved in the interests of the working class only if working class people solve them themselves. This applies to a social revolution -- it will only liberate the working class if working class people make it themselves, using their own organisations and power. Indeed, it is the course of struggling for social change, to correct social problems, by, say, strikes, occupations, demonstrations and other forms of direct action, that people can transform their assumptions about what is possible, necessary and desirable. The necessity of organising their struggles and their actions ensures the development of assemblies and other organs of popular power in order to manage their activity. These create, potentially, an alternative means by which society can be organised. As Kropotkin argued, *"[a]ny strike trains the participants for a common management of affairs."* [quoted by Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism**, p. 233] The ability of people to manage their own lives, and so society, becomes increasingly apparent and the existence of hierarchical authority, the state, the boss or a ruling class, becomes clearly undesirable and unnecessary. Thus the framework of the free society will be created by the very process of class struggle, as working class people create the organisations required to fight for improvements and change within capitalism (for more discussion, see section [I.2.3](#)).

Thus, the **actual** framework of an anarchist society and how it develops and shapes itself is dependent on the needs and desires of those who live in such a society or are trying to create one. This is why anarchists stress the need for mass assemblies in both the community and workplace and their federation from the bottom up to manage common affairs. Anarchy can only be created by the active participation of the mass of people. In the words of Malatesta, an anarchist society would be based on *"decisions taken at popular assemblies and carried out by groups and individuals who have volunteered or are duly delegated."* The *"success of the revolution"* depends on *"a large number of individuals with initiative and the ability to tackle practical tasks: by accustoming the masses not to leave the common cause in the hands of a few, and to delegate, when delegation is necessary, only for specific missions and for limited duration."* [Life and Ideas, p. 129] This self-management would be the basis on which an anarchist society would change and develop, with the new society created by those who live within it. Thus Bakunin:

"revolution everywhere must be created by the people, and supreme control must always belong to people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation." [Michael Bakunin: Selected Writings, p. 172]

And, we must not forget that while we may be able to roughly guess the way an anarchist society could start initially, we cannot pretend to predict how it will develop in the long term. A social revolution is just the beginning of a process that will soon lead to such a different society that we cannot predict how it will look. Unfortunately, we have to start where we are now, not where we hope to end up! Therefore our discussion will, by necessity, reflect the current society as this is the society we will be transforming. While, for some, this outlook may not be of a sufficient qualitative break with the world we now inhabit, it is essential. We need to offer and discuss suggestions for action in the **here and now**, not for some future pie in the sky world which can only possibly exist years, even decades, **after** a successful revolution.

For example, the ultimate goal of anarchism, we stress, is **not** the self-management of existing workplaces or industries. However, a revolution will undoubtedly see the occupation and placing under self-management much of existing industry and we start our discussion assuming a similar set-up as exists today. This does not mean that an anarchist society will continue to be like this, we simply present the initial stages using examples we are all familiar with. It is simply the first stage of transforming industry into something more ecologically safe, socially integrated and individually and collectively empowering for people.

These words of the strikers just before the 1919 Seattle General Strike expresses this perspective well:

"Labour will not only SHUT DOWN the industries, but Labour will REOPEN, under the management of the appropriate trades, such activities as are needed to preserve public health and public peace. If the strike continues, Labour may feel led to avoid public suffering by reopening more and more activities,

"UNDER ITS OWN MANAGEMENT.

*"And that is why we say that we are starting on a road that leads -- NO ONE KNOWS WHERE!" [quoted by Jeremy Brecher, **Strike!**, p. 110]*

Some people **seriously** seem to think that after a social revolution working people will continue using the same technology, in the same old workplaces, in the same old ways and not change a single thing (except, perhaps, electing their managers). They simply transfer their own lack of imagination onto the rest of humanity. We have little doubt that working people will quickly transform their work, workplaces and society into one suitable for human beings, rejecting the legacy of capitalism and create a society we simply cannot predict. The occupying of workplaces is, we stress, simply the first stage of the process of transforming them and the rest of society.

People's lives in a post-revolutionary society will not centre around fixed jobs and workplaces as they do now. Productive activity will go on, but not in the alienated way it does today. Similarly, in their communities people will apply their imaginations, skills and hopes to transform them into better places to live (the beautification of the commune, as the CNT put it). The first stage, of course, will be to take

over their existing communities and place them under community control. Therefore, it is essential to remember that our discussion can only provide an indication on how an anarchist society will operate in the months and years after a successful revolution, an anarchist society still marked by the legacy of capitalism. However, it would be a great mistake to think that anarchists do not seek to transform all aspects of society to eliminate that legacy and create a society fit for unique individuals to live in. As an anarchist society develops it will, we stress, transform society in ways we cannot guess at now, based on the talents, hopes, dreams and imaginations of those living in it.

Lastly, it could be argued that we spend too much time discussing the "*form*" (i.e. the types of organisation and how they make decisions) rather than the "*content*" of an anarchist society (the nature of the decisions reached). Moreover, the implication of this distinction also extends to the organisations created in the class struggle that would, in all likelihood, become the framework of a free society. However, form is as, perhaps more, important than content. This is because "*form*" and "*content*" are inter-related -- a libertarian, participatory "*form*" of organisation allows the "*content*" of a decision, society or struggle to change. Self-management has an educational effect on those involved, as they are made aware of different ideas, think about them and decide between them (and, of course, formula and present their own ones). Thus the nature of these decisions can and will evolve. Thus form has a decisive impact on "*content*" and so we make no apologies for discussing the form of a free society. As Murray Bookchin argues:

"To assume that the forms of freedom can be treated merely as forms would be as absurd as to assume that legal concepts can be treated merely as questions of jurisprudence. The form and content of freedom, like law and society, are mutually determined. By the same token, there are forms of organisation that promote and forms that vitiate the goal of freedom . . . To one degree or another, these forms either alter the individual who uses them or inhibit his [or her] further development." [Post-Scarcity Anarchism, p. 147]

And the **content** of decisions are determined by the individuals involved. Thus participatory, decentralised, self-managed organisations are essential for the development of the content of decisions because they develop the individuals who make them.

I.2.1 Why discuss what an anarchist society would be like at all?

Partly, in order to indicate why people should become anarchists. Most people do not like making jumps in the dark, so an indication of what anarchists think a desirable society would look like may help those people who are attracted intellectually by anarchism, inspiring them to become committed to its practical realisation. Partly, it's a case of learning from past mistakes. There have been numerous anarchistic social experiments on varying scales, and its useful to understand what happened, what worked and what did not. In that way, hopefully, we will not make the same mistakes twice.

However, the most important reason for discussing what an anarchist society would look like is to ensure that the creation of such a society is the action of as many people as possible. As Errico Malatesta

indicated in the middle of the Italian revolutionary *"Two Red Years"* (see [section A.5.5](#)), *"either we all apply our minds to thinking about social reorganisation, and right away, at the very same moment that the old structures are being swept away, and we shall have a more humane and more just society, open to future advances, or we shall leave such matters to the 'leaders' and we shall have a new government."* [**The Anarchist Revolution**, p. 69]

Hence the importance of discussing what the future will be like in the here and now. The more people who have a fairly clear idea of what a free society would look like the easier it will be to create that society and ensure that no important matters are left to the *"leaders"* to decide for us. The example of the Spanish Revolution comes to mind. For many years before 1936, the C.N.T. and F.A.I. put out publications discussing what an anarchist society would look like (for example, **After the Revolution** by Diego Abel de Santillan and **Libertarian Communism** by Isaac Puente). In fact, anarchists had been organising and educating in Spain for almost seventy years before the revolution. When it finally occurred, the millions of people who participated already shared a similar vision and started to build a society based on it, thus learning firsthand where their books were wrong and which areas of life they did not adequately cover.

So, this discussion of what an anarchist society might look like is not a drawing up of blueprints, nor is it an attempt to force the future into the shapes created in past revolts. It is purely and simply an attempt to start people discussing what a free society would be like and to learn from previous experiments. However, as anarchists recognise the importance of building the new world in the shell of the old, our ideas of what a free society would be like can feed into how we organise and struggle today. And vice versa; for how we organise and struggle today will have an impact on the future.

As Malatesta pointed out, such discussions are necessary and essential, for *"[i]t is absurd to believe that, once government has been destroyed and the capitalists expropriated, 'things will look after themselves' without the intervention of those who already have an idea on what has to be done and who immediately set about doing it. . . . [for] social life, as the life of individuals, does not permit of interruption."* He stresses that *"[t]o neglect all the problems of reconstruction or to pre-arrange complete and uniform plans are both errors, excesses which, by different routes, would led to our defeat as anarchists and to the victory of new or old authoritarian regime. The truth lies in the middle."* [**Op. Cit.**, p. 121]

Moreover, the importance of discussing the future can help indicate whether our activities are actually creating a better world. After all, if Karl Marx had been more willing to discuss his vision of a socialist society then the Stalinists would have found it much harder to claim that their hellish system was, in fact, socialism. Unfortunately he failed to understand this. Given that anarchists like Proudhon and Bakunin gave a board outline of their vision of a free society it would have been impossible for anarchism to be twisted as Marxism was.

We hope that this Section of the FAQ, in its own small way, will encourage as many people as possible to discuss what a libertarian society would be like and use that discussion to bring it closer.

I.2.2 Will it be possible to go straight to an anarchist society from capitalism?

Possibly, it depends what is meant by an anarchist society.

If it is meant a fully classless society (what some people, inaccurately, would call a "*utopia*") then the answer is a clear "*no, that would be impossible.*" Anarchists are well aware that "*class difference do not vanish at the stroke of a pen whether that pen belongs to the theoreticians or to the pen-pushers who set out laws or decrees. Only action, that is to say direct action (not through government) expropriation by the proletarians, directed against the privileged class, can wipe out class difference.*" [Luigi Fabbri, "*Anarchy and 'Scientific' Communism*", in **The Poverty of Statism**, pp. 13-49, Albert Meltzer (ed.), p. 30]

For anarchists, a social revolution is a **process** and not an event (although, of course, a process marked by such events as general strikes, uprisings, insurrections and so on). As Kropotkin argued:

"It is a whole insurrectionary period of three, four, perhaps five years that we must traverse to accomplish our revolution in the property system and in social organisation." [**Words of a Rebel**, p. 72]

His famous work **The Conquest of Bread** aimed, to use his words, at "*prov[ing] that communism -- at least partial -- has more chance of being established than collectivism, especially in communes taking the lead . . . [and] tried . . . to indicate how, during a revolutionary period, a large city -- if its inhabitants have accepted the idea -- could organise itself on the lines of free communism.*" [**Kropotkin's Revolutionary Pamphlets**, p. 298] Indeed, he stresses in **The Conquest of Bread** that anarchists "*do not believe that in any country the Revolution will be accomplished at a stroke, in the twinkling of a eye, as some socialists dream.*" [**The Conquest of Bread**, p. 81] Indeed, he stressed that "*[n]o fallacy more harmful has ever been spread than the fallacy of a 'One-day Revolution.'*" [**Op. Cit.**, p. 81f] The revolution, in other words, would progress towards communism after the initial revolt:

*"we know that an **uprising** can overthrow and change a government in one day, while a **revolution** needs three or four years of revolutionary convulsion to arrive at tangible results . . . if we should expect the revolution, from its **earliest** insurrections, to have a communist character, we would have to relinquish the possibility of a revolution, since in that case there would be need of a strong majority to agree on carrying through a change in the direction of communism."* [Kropotkin, quoted by Max Nettlau, **A Short History of Anarchism**, pp. 282-3]

In addition, different areas will develop in different speeds and in different ways, depending on the influences dominant in the area. "*Side by side with the revolutionised communes,*" argued Kropotkin,

"[other] places would remain in an expectant attitude, and would go on living on the Individualist system . . . revolution would break out everywhere, but revolution under different aspects; in one country State Socialism, in another Federation; everywhere more or less Socialism, not conforming to any particular rule." Thus "the Revolution will take a different character in each of the different European nations; the point attained in the socialisation of wealth will not be everywhere the same." [The Conquest of Bread, pp. 81-2 and p. 81] In this, as we shall see, he followed Bakunin.

Kropotkin was also aware that a revolution would face many problems, including the disruption of economic activity, civil war and isolation. He argued that it was *"certain that the coming Revolution . . . will burst upon us in the middle of a great industrial crisis . . . There are millions of unemployed workers in Europe at this moment. It will be worse when Revolution has burst upon us . . . The number of the out-of-works will be doubled as soon as barricades are erected in Europe and the United States . . . we know that in time of Revolution exchange and industry suffer most from the general upheaval . . . A Revolution in Europe means, then, the unavoidable stoppage of at least half the factories and workshops."* He stressed that there would be *"the complete disorganisation"* of the capitalist economy and that during a revolution *"[i]nternational commerce will come to a standstill" and "the circulation of commodities and of provisions will be paralysed."* This would, of course, have an impact on the development of a revolution and so the *"circumstances will dictate the measures."* [Op. Cit., pp. 69-70, p. 191 and p. 79]

Thus we have anarcho-communism being introduced *"during a revolutionary period"* rather than instantly and the possibility that it will be *"partial"* in many, if not all areas, depending on the *"circumstances"* encountered. Therefore the (Marxist inspired) claim that anarchists think a fully communist society is possible overnight is simply false -- we recognise that a social revolution takes time to develop after it starts. As Malatesta put it, *"after the revolution, that is after the defeat of the existing powers and the overwhelming victory of the forces of insurrection, . . . then . . . gradualism really comes into operation. We shall have to study all the practical problems of life: production, exchange, the means of communication, relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way; relations between town and country . . . -- and so on."* [Life and Ideas, p. 173]

However, if by *"anarchist society"* it is meant a society that has abolished the state and started the process of transforming society from below then anarchists argue that such a society is not only possible after a successful revolution, it is essential. Thus the anarchist social revolution would be political (abolition of the state), economic (abolition of capitalism) and social (abolition of hierarchical social relationships). Or, more positively, the introduction of self-management into every aspect of life. In other words, *"political transformation . . . [and] economic transformation . . . must be accomplished together and simultaneously."* [Bakunin, **The Basic Bakunin**, p. 106] This transformation would be based upon the organisations created by working class people in their struggle against capitalism and the state (see [next section](#)). Thus the framework of a free society would be created by the struggle for freedom itself, by the class struggle **within** but **against** hierarchical society. This revolution would come *"from below"* and would expropriate capital as well as smash the state:

"the revolution must set out from the first to radically and totally destroy the State . . . The natural and necessary consequence of this destruction will be . . . [among others, the] dissolution of army, magistracy, bureaucracy, police and priesthood. . . confiscation of all productive capital and means of production on behalf of workers' associations, who are to put them to use . . . the federative Alliance of all working men's associations . . . will constitute the Commune." [Michael Bakunin: Selected Writings, p. 170]

As can be seen, anarchists have long argued that a social revolution must be directed against both capitalism **and** the state. Moreover, we have always stressed the key role that workers' councils (or "soviets") would play in a socialist revolution as both a means of struggle and the basis of a free society.

Such a society, as Bakunin argued, will not be "perfect" by any means:

"I do not say that the peasants [and workers], freely organised from the bottom up, will miraculously create an ideal organisation, confirming in all respects to our dreams. But I am convinced that what they construct will be living and vibrant, a thousands times better and more just than any existing organisation. Moreover, this . . . organisation, being on the one hand open to revolutionary propaganda . . . , and on the other, not petrified by the intervention of the State . . . will develop and perfect itself through free experimentation as fully as one can reasonably expect in our times.

"With the abolition of the State, the spontaneous self-organisation of popular life . . . will revert to the communes. The development of each commune will take its point of departure the actual condition of its civilisation . . ." [Bakunin on Anarchism, p. 207]

The degree which a society which has abolished the state can progress towards free communism depends on objective conditions. Bakunin and other collectivists doubted the possibility of introducing a communistic system instantly after a revolution. For Kropotkin and many other anarcho-communists, communistic anarchy can, and must, be introduced as far as possible and as soon as possible in order to ensure a successful revolution. We should mention here that some anarchists, like the individualists, do not support the idea of revolution and instead see anarchist alternatives growing within capitalism and slowly replacing it.

So, clearly, the idea of "one-day revolution" is one rejected as a harmful fallacy by anarchists. We are aware that revolutions are a **process** and not an event (or series of events). However, one thing that anarchists do agree on is that it's essential for both the state and capitalism to be undermined as quickly as possible. It is true that, in the course of social revolution, we anarchists may not be able to stop a new state being created or the old one from surviving. It all depends on the balance of support for anarchist ideas in the population and how willing people are to introduce them. There is no doubt, though, that for a social revolt to be fully anarchist, the state and capitalism must be destroyed and new forms of oppression and exploitation not put in their place. How quickly after such a destruction we move to a fully communist-anarchist society is a moot point, dependent on the conditions the revolution is facing

and the ideas and wants of the people making it.

In other words anarchists agree that an anarchist society cannot be created overnight, for to assume so would be to imagine that anarchists could enforce their ideas on a pliable population. Libertarian socialism can only be created from below, by people who want it and understand it, organising and liberating themselves. "*Communist organisations*," argued Kropotkin, "*must be the work of all, a natural growth, a product of the constructive genius of the great mass. Communism cannot be imposed from above; it could not live even for a few months if the constant and daily co-operation of all did not uphold it. It must be free.*" [Kropotkin's **Revolutionary Pamphlets**, p. 140] The results of the Russian Revolution should have cleared away long ago any contrary illusions about how to create "socialist" societies. The lesson from every revolution is that the mistakes made by people in liberating themselves and transforming society are always minor compared to the results of creating authorities, who eliminate such "ideological errors" by destroying the freedom to make mistakes (and so freedom as such). Freedom is the only real basis on which socialism can be built ("*Experience through freedom is the only means to arrive at the truth and the best solutions; and there is no freedom if there is not the freedom to be wrong.*" [Malatesta, **Life and Ideas**, p. 72]).

Therefore, most anarchists would support Malatesta's claim that "*[t]o organise a [libertarian] communist society on a large scale it would be necessary to transform all economic life radically, such as methods of production, of exchange and consumption; and all this could not be achieved other than gradually, as the objective circumstances permitted and to the extent that the masses understood what advantages could be gained and were able to act for themselves.*" [Malatesta: **Life and Ideas**, p. 36]

This means that while the conditions necessary of a free society would be created in a broad way by a social revolution, it would be utopian to imagine everything will be perfect immediately. Few anarchists have argued that such a jump would be possible -- rather they have argued that revolutions create the conditions for the evolution towards an anarchist society by abolishing state and capitalism. "*Besides*," argued Alexander Berkman, "*you must not confuse the social revolution with anarchy. Revolution, in some of its stages, is a violent upheaval; anarchy is a social condition of freedom and peace. The revolution is the **means** of bringing anarchy about but it is not anarchy itself. It is to pave the road to anarchy, to establish conditions which will make a life of liberty possible.*" However, "*to achieve its purpose the revolution must be imbued with and directed by the anarchist spirit and ideas. The end shapes the means. . . the social revolution must be anarchist in method as in aim.*" [**The ABC of Anarchism**, p. 81]

This means that while acknowledging the possibility of a transitional **society**, anarchists reject the notion of a transitional **state** as confused in the extreme (and, as can be seen from the experience of Marxism, dangerous as well). An anarchist society can only be achieved by anarchist means. Hence French Syndicalist Fernand Pelloutier's comments:

"Nobody believes or expects that the coming revolution . . . will realise unadulterated anarchist-communism. . . it will erupt, no doubt, before the work of anarchist education

has been completed . . . [and as] a result . . . , while we do preach perfect communism, it is not in the certainty or expectation of [libertarian] communism's being the social form of the future: it is in order to further men's [and women's] education . . . so that, by the time of the day of conflagration comes, they will have attained maximum emancipation. But must the transitional state to be endured necessarily or inevitability be the collectivist [i.e. state socialist/capitalist] jail? Might it not consist of libertarian organisation confined to the needs of production and consumption alone, with all political institutions having been done away with?" [No Gods, No Masters, vol. 2, p. 55]

One thing **is** certain: an anarchist social revolution or mass movement will need to defend itself against attempts by statists and capitalists to defeat it. Every popular movement, revolt, or revolution has had to face a backlash from the supporters of the status quo. An anarchist revolution or mass movement will face (and indeed has faced) such counter-revolutionary movements. However, this does not mean that the destruction of the state and capitalism need be put off until after the forces of reaction are defeated (as Marxists usually claim). For anarchists, a social revolution and free society can only be defended by anti-statist means, for example, by "*arming everyone . . . and of interesting the mass of the population in the victory of the revolution.*" This would involve the "*creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution.*" [Malatesta, **Life and Ideas**, p. 173 and p. 166] For more discussion of this important subject see sections [I.5.14](#) and [J.7.6](#).

So, given an anarchist revolution which destroys the state, the type and nature of the economic system created by it will depend on local circumstances and the level of awareness in society. The individualists are correct in the sense that what we do now will determine how the future develops. Obviously, any "*transition period*" starts in the **here and now**, as this helps determine the future. Thus, while social anarchists usually reject the idea that capitalism can be reformed away, we agree with the individualists that it is essential for anarchists to be active today in constructing the ideas, ideals and new liberatory institutions of the future society within the current one. The notion of waiting for the "*glorious day*" of total revolution is not one held by anarchists.

Thus, all the positions outlined at the start of this section have a grain of truth in them. This is because, as Malatesta put it, "*[w]e are, in any case, only one of the forces acting in society, and history will advance, as always, in the direction of the resultant of all the [social] forces.*" [**Malatesta: Life and Ideas**, p. 109] This means that different areas will experiment in different ways, depending on the level of awareness which exists there -- as would be expected in a free society which is created by the mass of the people.

Ultimately, the most we can say about the timing and necessary conditions of revolution is that an anarchist society can only come about once people liberate themselves (and this implies an ethical and psychological transformation), but that this does not mean that people need to be "*perfect*" nor that an anarchist society will come about "*overnight*," without a period of self-activity by which individuals

reshape and change themselves as they are reshaping and changing the world about them.

I.2.3 How is the framework of an anarchist society created?

Anarchists do not abstractly compare a free society with the current one. Rather, we see an **organic** connection between what is and what could be. In other words, anarchists see the initial framework of an anarchist society as being created under statism and capitalism when working class people organise themselves to resist hierarchy. As Kropotkin argued:

"To make a revolution it is not . . . enough that there should be . . . [popular] risings . . . It is necessary that after the risings there should be something new in the institutions [that make up society], which would permit new forms of life to be elaborated and established." [The Great French Revolution, vol. 1, p. 200]

Anarchists have seen these new institutions as being linked with the need of working class people to resist the evils of capitalism and statism. In other words, as being the product of the class struggle and attempts by working class people to resist state and capitalist authority. Thus the struggle of working class people to protect and enhance their liberty under hierarchical society will be the basis for a society **without** hierarchy. This basic insight allowed anarchists like Bakunin and Proudhon to predict future developments in the class struggle such as workers' councils (such as those which developed during the 1905 and 1917 Russian Revolutions). As Oskar Anweiler notes in his definitive work on the Russian Soviets (Workers' Councils):

"Proudhon's views are often directly associated with the Russian councils . . . Bakunin . . ., much more than Proudhon, linked anarchist principles directly to revolutionary action, thus arriving at remarkable insights into the revolutionary process that contribute to an understanding of later events in Russia . . ."

"In 1863 Proudhon declared . . . 'All my economic ideas as developed over twenty-five years can be summed up in the words: agricultural-industrial federation. All my political ideas boil down to a similar formula: political federation or decentralisation.' . . . Proudhon's conception of a self-governing state [sic!] founded on producers' corporations [i.e. federations of co-operatives], is certainly related to the idea of 'a democracy of producers' which emerged in the factory soviets. To this extent Proudhon can be regarded as an ideological precursor of the councils . . ."

"Bakunin . . . suggested the formation of revolutionary committees with representatives from the barricades, the streets, and the city districts, who would be given binding mandates, held accountable to the masses, and subject to recall. These revolutionary deputies were to form the 'federation of the barricades,' organising a revolutionary commune to immediately unite with other centres of rebellion . . ."

"Bakunin proposed the formation of revolutionary committees to elect communal councils, and a pyramidal organisation of society 'through free federation from the bottom upward, the association of workers in industry and agriculture -- first in the communities, then through federation of communities into districts, districts into nations, and nations into international brotherhood.' These proposals are indeed strikingly similar to the structure of the subsequent Russian system of councils . . .

"Bakunin's ideas about spontaneous development of the revolution and the masses' capacity for elementary organisation undoubtedly were echoed in part by the subsequent soviet movement. . . Because Bakunin . . . was always very close to the reality of social struggle, he was able to foresee concrete aspects of the revolution. The council movement during the Russian Revolution, though not a result of Bakunin's theories, often corresponded in form and progress to his revolutionary concepts and predictions." [The Soviets, pp. 8-11]

Paul Avrich also notes this:

"As early as the 1860's and 1870's, the followers of Proudhon and Bakunin in the First International were proposing the formation of workers' councils designed both as a weapon of class struggle against capitalists and as the structural basis of the future libertarian society." [The Russian Anarchists, p. 73]

In this sense, anarchy is not some distant goal but rather an aspect of the current struggles against domination, oppression and exploitation (i.e. the class struggle, to use an all-embracing term, although we must stress that anarchists use this term to cover all struggles against domination). *"Anarchism,"* argued Kropotkin, *"is not a mere insight into a remote future. Already now, whatever the sphere of action of the individual, he [or she] can act, either in accordance with anarchist principles or on an opposite line."* It was *"born among the people -- in the struggles of real life"* and *"owes its origin to the constructive, creative activity of the people."* [Kropotkin's Revolutionary Pamphlets, p. 75, p. 150 and p. 149]

Thus, *"Anarchism is not . . . a theory of the future to be realised by divine inspiration. It is a living force in the affairs of our life, constantly creating new conditions."* It *"stands for the spirit of revolt"* and so *"[d]irect action against the authority in the shop, direct action against the authority of the law, of direct action against the invasive, meddlesome authority of our moral code, is the logical, consistent method of Anarchism."* [Emma Goldman, **Anarchism and Other Essays**, p. 63 and p. 66]

Anarchism draws upon the autonomous self-activity and spontaneity of working class people in struggle to inform both its political theory and its vision of a free society. The struggle against hierarchy, in other words, teaches us not only how to be anarchists but also gives us a glimpse of what an anarchist society would be like, what its initial framework could be and the experience of managing our own activities which is required for such a society to function successfully.

Therefore, as is clear, anarchists have long had a clear vision of what an anarchist society would look like and, equally as important, where such a society would spring from. Which means, of course, that Lenin's assertion in **The State and Revolution** that anarchists "*have absolutely no clear idea of what the proletariat will put in its [the states] place*" is simply false. [Essential Works of Lenin, p. 358] Anarchists supported the idea of a federation of workers' councils as the means to destroy the state over 50 years before Lenin argued that the soviets would be the basis of his "*workers*" state.

It would, therefore, be useful to give a quick summary of anarchist views on this subject.

Proudhon, for example, looked to the self-activity of French workers, artisans and peasants and used that as the basis of his ideas on anarchism. While seeing such activity as essentially reformist in nature, he saw the germs of anarchy as being the result of "*generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the State and subjugate them*" as "*it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave.*" [System of Economical Contradictions, p. 399 and p. 398] What, decades later, Proudhon called an "*agro-industrial federation*" in his **Principal of Federation**.

He argued that workers should follow the example of those already creating Mutual Banks and co-operatives. He stressed the importance of co-operatives:

"Do not the workmen's unions at this moment serve as the cradle for the social revolution, as the early Christian communities served as the cradle of Catholicity? Are they not always the open school, both theoretical and practical, where the workman learns the science of the production and distribution of wealth, where he studies, without masters and without books, by his own experience solely, the laws of that industrial organisation, which was the ultimate aim of the Revolution of '89 . . . ?" [The General Idea of the Revolution, p. 78]

Proudhon linked his ideas to what working people were already doing:

"labour associations . . . hav[e] grasped spontaneously . . . [that] merely by liasing with one another and making loans to one another, [they] have organised labour . . . So that, organisation of credit and organisation of labour amount to one and the same. It is no school and no theoretician that is saying this: the proof of it, rather, lies in current practice, revolutionary practice . . . If it were to come about that the workers were to come to some arrangement throughout the Republic and organise themselves along similar lines, it is obvious that, as masters of labour, constantly generating fresh capital through work, they would soon have wrested alienated capital back again, through their organisation and competition . . . We want the mines, canals, railways handed over to democratically organised workers' associations . . . We want these associations to be models for agriculture, industry and trade, the pioneering core of that vast federation of

companies and societies woven into the common cloth of the democratic social Republic." [No Gods, No Masters, vol. 1, pp. 59-61]

This linking of the present and the future through the self-activity and self-organisation of working class people is also found in Bakunin. Unlike Proudhon, Bakunin stressed **revolutionary** activity and so he saw the militant labour movement, and the revolution itself, as providing the basic structure of a free society. As he put it, *"the organisation of the trade sections and their representation in the Chambers of Labour . . . bear in themselves the living seeds of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself."* [Bakunin on Anarchism, p. 255]

The needs of the class struggle would create the framework of a new society, a federation of workers councils, as *"strikes indicate a certain collective strength already, a certain understanding among the workers . . . each strike becomes the point of departure for the formation of new groups."* [The Basic Bakunin, pp. 149-50] This pre-revolutionary development would be accelerated by the revolution itself:

"the federative alliance of all working men's associations . . . [will] constitute the Commune . . . [the] Communal Council [will be] composed of . . . delegates . . . vested with plenary but accountable and removable mandates. . . all provinces, communes and associations . . . by first reorganising on revolutionary lines . . . [will] constitute the federation of insurgent associations, communes and provinces . . . [and] organise a revolutionary force capable defeating reaction . . . [and for] self-defence . . . [The] revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation. . ." [Michael Bakunin: Selected Writings, pp. 170-2]

Like Bakunin, Kropotkin stressed that revolution transformed those taking part in it. As he noted in his classic account of the French Revolution, *"by degrees, the revolutionary education of the people was being accomplished by the revolution itself."* [Op. Cit., vol. 1, p. 261] Part of this process involved creating new organisations which allowed the mass of people to take part in the decision making of the revolution. He pointed to *"the popular Commune,"* arguing that *"the Revolution began by creating the Commune . . . and through this institution it gained . . . immense power."* He stressed that it was *"by means of the 'districts' [of the Communes] that . . . the masses, accustoming themselves to act without receiving orders from the national representatives, were practising what was to be described later as Direct Self-Government."* Such a system did not imply isolation, for while *"the districts strove to maintain their own independence"* they also *"sought for unity of action, not in subjection to a Central Committee, but in a federative union."* The Commune *"was thus made from below upward, by the federation of the district organisations; it spring up in a revolutionary way, from popular initiative."* [Op. Cit., p. 200 and p. 203]

Thus the process of class struggle, of the needs of the fighting against the existing system, generated the framework of an anarchist society -- *"the districts of Paris laid the foundations of a new, free, social*

organisation." Little wonder he argued that *"the principles of anarchism . . . already dated from 1789, and that they had their origin, not in theoretical speculations, but in the **deeds** of the Great French Revolution"* and that *"the libertarians would no doubt do the same to-day."* [**Op. Cit.**, p. 206, p. 204 and p. 206]

Similarly, we discover him arguing in **Mutual Aid** that strikes and labour unions were an expression of mutual aid in capitalist society and of *"the worker's need of mutual support."* [**Mutual Aid**, p. 213] Elsewhere Kropotkin argued that *"labour combinations"* like the *"Sections"* of French revolution were one of the *"main popular anarchist currents"* in history, expressing the *"same popular resistance to the growing power of the few."* [**Kropotkin's Revolutionary Pamphlets**, p. 159] For Kropotkin, like Bakunin, libertarian labour unions were *"natural organs for the direct struggle with capitalism and for the composition of the future social order."* [quoted by Paul Avrich, **The Russian Anarchists**, p. 81]

As can be seen, the major anarchist thinkers pointed to forms of organisation autonomously created and managed by the working class as the framework of an anarchist society. Both Bakunin and Kropotkin pointed to militant, direct action based labour unions while Proudhon pointed towards workers' experiments in co-operative production and mutual credit.

Later anarchists followed them. The anarcho-syndicalists, like Bakunin and Kropotkin, pointed to the developing labour movement as the framework of an anarchist society, as providing the basis for the free federation of workers' associations which would constitute the commune. Others, such as the Russians Maximov, Arshinov, Voline and Makhno, saw the spontaneously created workers' councils (soviets) of 1905 and 1917 as the basis of a free society, as another example of Bakunin's federation of workers' associations.

Thus, for all anarchists, the structural framework of an anarchist society was created by the class struggle, by the needs of working class people to resist oppression, exploitation and hierarchy. As Kropotkin stressed, *"[d]uring a revolution new forms of life will always germinate on the ruins of the old forms . . . It is impossible to legislate for the future. All we can do is vaguely guess its essential tendencies and clear the road for it."* [**Evolution and Environment**, pp. 101-2]

These essential tendencies were discovered, in practice, by the needs of the class struggle. The necessity of practising mutual aid and solidarity to survive under capitalism (as in any other hostile environment) makes working people and other oppressed groups organise together to fight their oppressors and exploiters. Thus the co-operation necessary for a libertarian socialist society, like its organisational framework, would be generated by the need to resist oppression and exploitation under capitalism. The process of resistance produces organisation on a wider and wider scale which, in turn, can become the framework of a free society as the needs of the struggle promote libertarian forms of organisation such as decision making from the bottom up, autonomy, federalism, delegates subject to instant recall and so on.

For example, a strikers' assembly would be the basic decision-making forum in a struggle for improved

wages and working conditions. It would create a strike committee to implement its decisions and send delegates to spread the strike. These delegates inspire other strikes, requiring a new organisation to coordinate the struggle. This results in delegates from all the strikes meeting and forming a federation (i.e. a workers' council). The strikers decide to occupy the workplace and the strike assemblies take over the means of production. The strike committees becomes the basis for factory committees which could administer the workplaces, based on workers' self-management via workplace assemblies (the former strikers' assemblies). The federation of strikers' delegates becomes the local communal council, replacing the existing state with a self-managed federation of workers' associations. In this way, the class struggle creates the framework of a free society.

This, obviously, means that any suggestions of how an anarchist society would look like are based on the fact that the *actual* framework of a free society will be the product of *actual* struggles. This means that the form of the free society will be shaped by the process of social change and the organs it creates. This is an important point and worth repeating.

So, as well as changing themselves while they change the world, a people in struggle also create the means by which they can manage society. By having to organise and manage their struggles, they become accustomed to self-management and self-activity and create the possibility of a free society and the organisations which will exist within it. Thus the framework of an anarchist society comes from the class struggle and the process of revolution itself. Anarchy is not a jump into the dark but rather a natural progression of the struggle for freedom in an unfree society. The contours of a free society will be shaped by the process of creating it and, therefore, will not be an artificial construction imposed on society. Rather, it will be created from below up by society itself as working class people start to break free of hierarchy. The class struggle thus transforms those involved as well as society **and** creates the organisational structure and people required for a libertarian society.

This clearly suggests that the **means** anarchists support are important as they have a direct impact on the ends they create. In other words, means influence ends and so our means must reflect the ends we seek and empower those who use them. In the words of Malatesta:

"In our opinion all action which is directed toward the destruction of economic and political oppression, which serves to raise the moral and intellectual level of the people; which gives them an awareness of their individual rights and their power, and persuades them themselves to act on their own behalf . . . brings us closer to our ends and is therefore a good thing. On the other hand all activity which tends to preserve the present state of affairs, that tends to sacrifice man against his will for the triumph of a principle, is bad because it is a denial of our ends." [**Life and Ideas**, p. 69]

The present state of affairs is based on the oppression, exploitation and alienation of the working class. This means that any tactics used in the pursuit of a free society must be based on resisting and destroying those evils. This is why anarchists stress tactics and organisations which increase the power, confidence, autonomy, initiative, participation and self-activity of oppressed people. As we indicate in

section J (["What Do Anarchists Do?"](#)) this means supporting direct action, solidarity and self-managed organisations built and run from the bottom-up. Only by fighting our own battles, relying on ourselves and our own abilities and power, in organisations we create and run ourselves, can we gain the power and confidence and experience needed to change society for the better and, hopefully, create a new society in place of the current one.

Needless to say, a revolutionary movement will never, at its start, be purely anarchist:

"All of the workers' and peasants' movements which have taken place . . . have been movements within the limits of the capitalist regime, and have been more or less tinged with anarchism. This is perfectly natural and understandable. The working class do not act within a world of wishes, but in the real world where they are daily subjected to the physical and psychological blows of hostile forces . . . the workers continually feel the influence of all the real conditions of the capitalist regime and of intermediate groups . . . Consequently it is natural that the struggle which they undertake inevitably carries the stamp of various conditions and characteristics of contemporary society. The struggle can never be born in the finished and perfected anarchist form which would correspond to all the requirements of the ideas . . . When the popular masses engage in a struggle of large dimensions, they inevitably start by committing errors, they allow contradictions and deviations, and only through the process of this struggle do they direct their efforts in the direction of the ideal for which they are struggling." [Peter Arshinov, **The History of the Makhnovist Movement**, pp. 239-40]

The role of anarchists is *"to help the masses to take the right road in the struggle and in the construction of the new society"* and *"support their first constructive efforts, assist them intellectually."* However, the working class *"once it has mastered the struggle and begins its social construction, will no longer surrender to anyone the initiative in creative work. The working class will then direct itself by its own thought; it will create its society according to its own plans."* [Arshinov, **Op. Cit.**, pp. 240-1] All anarchists can do is help this process by being part of it, arguing our case and winning people over to anarchist ideas (see [section J.3](#) for more details). Thus the process of struggle and debate will, hopefully, turn a struggle **against** capitalism and statism into one **for** anarchism. In other words, anarchists seek to preserve and extend the anarchistic elements that exist in every struggle and to help them become consciously libertarian by discussion and debate as members of those struggles.

Lastly, we must stress that it is only the **initial** framework of a free society which is created in the class struggle. As an anarchist society develops, it will start to change and develop in ways we cannot predict. The forms in which people express their freedom and their control over their own lives will, by necessity, change as these requirements and needs change. As Bakunin argued:

*"Even the most rational and profound science cannot divine the form social life will take in the future. It can only determine the **negative** conditions, which follow logically from a rigorous critique of existing society. Thus, by means of such a critique, social and*

*economic science rejected hereditary individual property and, consequently, took the abstract and, so to speak, **negative** position of collective property as a necessary condition of the future social order. In the same way, it rejected the very idea of the state or statism, meaning government of society from above downward . . . Therefore, it took the opposite, or negative, position: anarchy, meaning the free and independent organisation of all the units and parts of the community and their voluntary federation from below upward, not by the orders of any authority, even an elected one, and not by the dictates of any scientific theory, but as the natural development of all the varied demands put forth by life itself.*

"Therefore no scholar can teach the people or even define for himself how they will and must live on the morrow of the social revolution. That will be determined first by the situation of each people, and secondly by the desires that manifest themselves and operate most strongly within them." [Statism and Anarchy, pp. 198-9]

Therefore, while it will be reasonable to conclude that, for example, the federation of strike/factory assemblies and their councils/committees will be the framework by which production will initially be organised, this framework will mutate to take into account changing production and social needs. The actual structures created will, by necessity, will be transformed as industry is transformed from below upwards to meet the real needs of society and producers. As Kropotkin argued, *"the 'concentration' [of capital into bigger and bigger units] so much spoken of is often nothing but an amalgamation of capitalists for the purpose of **dominating the market**, not for cheapening the technical process."* [**Fields, Factories and Workshops Tomorrow**, p. 154] This means that the first task of any libertarian society will be to transform both the structure and nature of work and industry developed under capitalism.

Anarchists have long argued that that capitalist methods cannot be used for socialist ends. In our battle to democratise the workplace, in our awareness of the importance of collective initiatives by the direct producers in transforming the work situation and the economic infrastructure, we show that factories are not merely sites of production, but also of reproduction -- the reproduction of a certain structure of social relations based on the division between those who give orders and those who take them, between those who direct and those who execute. Therefore, under workers' self-management industry, work and the whole structure and organisation of production will be transformed in ways we can only guess at today. We can point the general direction (i.e. self-managed, ecologically balanced, decentralised, federal, empowering, creative and so on) but that is all.

Similarly, as cities and towns are transformed into ecologically integrated communes, the initial community assemblies and their federations will transform along with the transformation of our surroundings. What they will evolve into we cannot predict, but their fundamentals of instant recall, delegation over representation, decision making from the bottom up, and so on will remain.

So, while anarchists see *"the future in the present"* as the initial framework of a free society, we recognise that such a society will evolve and change. However, the fundamental principles of a free

society will not change and so it is useful to present a summary of how such a society could work, based on these principles.

A.5 What are some examples of "Anarchy in Action"?

Anarchism, more than anything else, is about the efforts of millions of revolutionaries changing the world in the last two centuries. Here we will discuss some of the high points of this movement, all of them of a profoundly anti-capitalist nature.

Anarchism **is** about radically changing the world, not just making the present system less inhuman by encouraging the anarchistic tendencies within it to grow and develop. While no purely anarchist revolution has taken place yet, there have been numerous ones with a highly anarchist character and level of participation. And while these have **all** been destroyed, in each case it has been at the hands of outside force brought against them (backed either by Communists or Capitalists), not because of any internal problems in anarchism itself. These revolutions, despite their failure to survive in the face of overwhelming force, have been both an inspiration for anarchists and proof that anarchism is a viable social theory and can be practised on a large scale.

What these revolutions share is the fact they are, to use Proudhon's term, a "**revolution from below**" -- they were examples of *"collective activity, of popular spontaneity."* It is only a transformation of society from the bottom up by the action of the oppressed themselves that can create a free society. As Proudhon asked, *"[w]hat serious and lasting Revolution was not made **from below**, by the people?"* For this reason an anarchist is a *"revolutionary from below."* Thus the social revolutions and mass movements we discuss in this section are examples of popular self-activity and self-liberation (as Proudhon put it in 1848, *"the proletariat must emancipate itself"*). [quoted by George Woodcock, **Pierre-Joseph Proudhon: A Biography**, p. 143 and p. 125] All anarchists echo Proudhon's idea of revolutionary change from below, the creation of a new society by the actions of the oppressed themselves. Bakunin, for example, argued that anarchists are *"foes . . . of all State organisations as such, and believe that the people can only be happy and free, when, organised from below by means of its own autonomous and completely free associations, without the supervision of any guardians, it will create its own life."* [**Marxism, Freedom and the State**, p. 63] In [section J.7](#) we discuss what anarchists think a social revolution is and what it involves.

Many of these revolutions and revolutionary movements are relatively unknown to non-anarchists. Most people will have heard of the Russian revolution but few will know of the popular movements which were its life-blood before the Bolsheviks seized power or the role that the anarchists played in it. Few will have heard of the Paris Commune, the Italian factory occupations or the Spanish collectives. This is unsurprising for, as Hebert Read notes, history *"is of two kinds -- a record of events that take place publicly, that make the headlines in the newspapers and get embodied in official records -- we might call this overground history"* but *"taking place at the same time, preparing for these public events, anticipating them, is another kind of history, that is not embodied in official records, an invisible underground history."* [quoted by William R. McKercher, **Freedom and Authority**, p. 155] Almost by

definition, popular movements and revolts are part of "*underground history*", the social history which gets ignored in favour of elite history, the accounts of the kings, queens, politicians and wealthy whose fame is the product of the crushing of the many.

This means our examples of "anarchy in action" are part of what the Russian anarchist Voline called "*The Unknown Revolution*." Voline used that expression as the title of his classic account of the Russian revolution he was an active participant of. He used it to refer to the rarely acknowledged independent, creative actions of the people themselves. As Voline put it, "*it is not known how to study a revolution*" and most historians "*mistrust and ignore those developments which occur silently in the depths of the revolution . . . at best, they accord them a few words in passing . . . [Yet] it is precisely these hidden facts which are important, and which throw a true light on the events under consideration and on the period.*" [**The Unknown Revolution**, p. 19] Anarchism, based as it is on revolution from below, has contributed considerably to both the "*underground history*" and the "*unknown revolution*" of the past few centuries and this section of the FAQ will shed some light on its achievements.

It is important to point out that these examples are of wide-scale social experiments and do not imply that we ignore the undercurrent of anarchist practice which exists in everyday life, even under capitalism. Both Peter Kropotkin (in **Mutual Aid**) and Colin Ward (in **Anarchy in Action**) have documented the many ways in which ordinary people, usually unaware of anarchism, have worked together as equals to meet their common interests. As Colin Ward argues, "*an anarchist society, a society which organises itself without authority, is always in existence, like a seed beneath the snow, buried under the weight of the state and its bureaucracy, capitalism and its waste, privilege and its injustices, nationalism and its suicidal loyalties, religious differences and their superstitious separatism.*" [**Anarchy in Action**, p. 14]

Anarchism is not only about a future society, it is also about the social struggle happening today. It is not a condition but a process, which we create by our self-activity and self-liberation.

By the 1960's, however, many commentators were writing off the anarchist movement as a thing of the past. Not only had fascism finished off European anarchist movements in the years before and during the war, but in the post-war period these movements were prevented from recovering by the capitalist West on one hand and the Leninist East on the other. Over the same period of time, anarchism had been repressed in the US, Latin America, China, Korea (where a social revolution with anarchist content was put down before the Korean War), and Japan. Even in the one or two countries that escaped the worst of the repression, the combination of the Cold War and international isolation saw libertarian unions like the Swedish SAC become reformist.

But the 60's were a decade of new struggle, and all over the world the 'New Left' looked to anarchism as well as elsewhere for its ideas. Many of the prominent figures of the massive explosion of May 1968 in France considered themselves anarchists. Although these movements themselves degenerated, those coming out of them kept the idea alive and began to construct new movements. The death of Franco in 1975 saw a massive rebirth of anarchism in Spain, with up to 500,000 people attending the CNT's first

post-Franco rally. The return to a limited democracy in some South American countries in the late 70's and 80's saw a growth in anarchism there. Finally, in the late 80's it was anarchists who struck the first blows against the Leninist USSR, with the first protest march since 1928 being held in Moscow by anarchists in 1987.

Today the anarchist movement, although still weak, organises tens of thousands of revolutionaries in many countries. Spain, Sweden and Italy all have libertarian union movements organising some 250,000 between them. Most other European countries have several thousand active anarchists. Anarchist groups have appeared for the first time in other countries, including Nigeria and Turkey. In South America the movement has recovered massively. A contact sheet circulated by the Venezuelan anarchist group **Corrio A** lists over 100 organisations in just about every country.

Perhaps the recovery is slowest in North America, but there, too, all the libertarian organisations seem to be undergoing significant growth. As this growth accelerates, many more examples of anarchy in action will be created and more and more people will take part in anarchist organisations and activities, making this part of the FAQ less and less important.

However, it is essential to highlight mass examples of anarchism working on a large scale in order to avoid the specious accusation of "utopianism." As history is written by the winners, these examples of anarchy in action are often hidden from view in obscure books. Rarely are they mentioned in the schools and universities (or if mentioned, they are distorted). Needless to say, the few examples we give are just that, a few.

Anarchism has a long history in many countries, and we cannot attempt to document every example, just those we consider to be important. We are also sorry if the examples seem Eurocentric. We have, due to space and time considerations, had to ignore the syndicalist revolt (1910 to 1914) and the shop steward movement (1917-21) in Britain, Germany (1919-21), Portugal (1974), the Mexican revolution, anarchists in the Cuban revolution, the struggle in Korea against Japanese (then US and Russian) imperialism during and after the Second World War, Hungary (1956), the "the refusal of work" revolt in the late 1960's (particularly in "the hot Autumn" in Italy, 1969), the UK miner's strike (1984-85), the struggle against the Poll Tax in Britain (1988-92), the strikes in France in 1986 and 1995, the Italian COBAS movement in the 80's and 90's, the popular assemblies and self-managed occupied workplaces during the Argentine revolt at the start of the 21st century and numerous other major struggles that have involved anarchist ideas of self-management (ideas that usually develop from the movement themselves, without anarchists necessarily playing a major, or "leading", role).

For anarchists, revolutions and mass struggles are "*festivals of the oppressed*," when ordinary people start to act for themselves and change both themselves and the world.

A.5.1 The Paris Commune

The Paris Commune of 1871 played an important role in the development of both anarchist ideas and the

movement. As Bakunin commented at the time,

"revolutionary socialism [i.e. anarchism] has just attempted its first striking and practical demonstration in the Paris Commune . . . [It] show[ed] to all enslaved peoples (and are there any masses that are not slaves?) the only road to emancipation and health; Paris inflict[ed] a mortal blow upon the political traditions of bourgeois radicalism and [gave] a real basis to revolutionary socialism." [**Bakunin on Anarchism**, pp. 263-4]

The Paris Commune was created after France was defeated by Prussia in the Franco-Prussian war. The French government tried to send in troops to regain the Parisian National Guard's cannon to prevent it from falling into the hands of the population. *"Learning that the Versailles soldiers were trying to seize the cannon,"* recounted participant Louise Michel, *"men and women of Montmartre swarmed up the Butte in surprise manoeuvre. Those people who were climbing up the Butte believed they would die, but they were prepared to pay the price."* The soldiers refused to fire on the jeering crowd and turned their weapons on their officers. This was March 18th; the Commune had begun and *"the people wakened . . . The eighteenth of March could have belonged to the allies of kings, or to foreigners, or to the people. It was the people's."* [**Red Virgin: Memoirs of Louise Michel**, p. 64]

In the free elections called by the Parisian National Guard, the citizens of Paris elected a council made up of a majority of Jacobins and Republicans and a minority of socialists (mostly Blanquists -- authoritarian socialists -- and followers of the anarchist Proudhon). This council proclaimed Paris autonomous and desired to recreate France as a confederation of communes (i.e. communities). Within the Commune, the elected council people were recallable and paid an average wage. In addition, they had to report back to the people who had elected them and were subject to recall by electors if they did not carry out their mandates.

Why this development caught the imagination of anarchists is clear -- it has strong similarities with anarchist ideas. In fact, the example of the Paris Commune was in many ways similar to how Bakunin had predicted that a revolution would have to occur -- a major city declaring itself autonomous, organising itself, leading by example, and urging the rest of the planet to follow it. (See *"Letter to Albert Richards"* in **Bakunin on Anarchism**). The Paris Commune began the process of creating a new society, one organised from the bottom up. It was *"a blow for the decentralisation of political power."* [Voltairine de Cleyre, *"The Paris Commune,"* **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 67]

Many anarchists played a role within the Commune -- for example Louise Michel, the Reclus brothers, and Eugene Varlin (the latter murdered in the repression afterwards). As for the reforms initiated by the Commune, such as the re-opening of workplaces as co-operatives, anarchists can see their ideas of associated labour beginning to be realised. By May, 43 workplaces were co-operatively run and the Louvre Museum was a munitions factory run by a workers' council. Echoing Proudhon, a meeting of the Mechanics Union and the Association of Metal Workers argued that *"our economic emancipation . . . can only be obtained through the formation of workers' associations, which alone can transform our*

position from that of wage earners to that of associates." They instructed their delegates to the Commune's Commission on Labour Organisation to support the following objectives:

"The abolition of the exploitation of man by man, the last vestige of slavery;

"The organisation of labour in mutual associations and inalienable capital."

In this way, they hoped to ensure that *"equality must not be an empty word"* in the Commune. [**The Paris Commune of 1871: The View from the Left**, Eugene Schulkind (ed.), p. 164] The Engineers Union voted at a meeting on 23rd of April that since the aim of the Commune should be *"economic emancipation"* it should *"organise labour through associations in which there would be joint responsibility"* in order *"to suppress the exploitation of man by man."* [quoted by Stewart Edwards, **The Paris Commune 1871**, pp. 263-4]

As well as self-managed workers' associations, the Communards practised direct democracy in a network popular clubs, popular organisations similar to the directly democratic neighbourhood assemblies (*"sections"*) of the French Revolution. *"People, govern yourselves through your public meetings, through your press"* proclaimed the newspaper of one Club. The commune was seen as an expression of the assembled people, for (to quote another Club) *"Communal power resides in each arrondissement [neighbourhood] wherever men are assembled who have a horror of the yoke and of servitude."* Little wonder that Gustave Courbet, artist friend and follower of Proudhon, proclaimed Paris as *"a true paradise . . . all social groups have established themselves as federations and are masters of their own fate."* [quoted by Martin Phillip Johnson, **The Paradise of Association**, p. 5 and p. 6]

In addition the Commune's *"Declaration to the French People"* which echoed many key anarchist ideas. It saw the *"political unity"* of society as being based on *"the voluntary association of all local initiatives, the free and spontaneous concourse of all individual energies for the common aim, the well-being, the liberty and the security of all."* [quoted by Edwards, **Op. Cit.**, p. 218] The new society envisioned by the communards was one based on the *"absolute autonomy of the Commune. . . assuring to each its integral rights and to each Frenchman the full exercise of his aptitudes, as a man, a citizen and a labourer. The autonomy of the Commune will have for its limits only the equal autonomy of all other communes adhering to the contract; their association must ensure the liberty of France."* [*"Declaration to the French People"*, quoted by George Woodcock, **Pierre-Joseph Proudhon: A Biography**, pp. 276-7] With its vision of a confederation of communes, Bakunin was correct to assert that the Paris Commune was *"a bold, clearly formulated negation of the State."* [**Bakunin on Anarchism**, p. 264]

Moreover, the Commune's ideas on federation obviously reflected the influence of Proudhon on French radical ideas. Indeed, the Commune's vision of a communal France based on a federation of delegates bound by imperative mandates issued by their electors and subject to recall at any moment echoes Proudhon's ideas (Proudhon had argued in favour of the *"implementation of the binding mandate"* in 1848 [**No Gods, No Masters**, p. 63] and for federation of communes in his work **The Principle of Federation**).

Thus both economically and politically the Paris Commune was heavily influenced by anarchist ideas. Economically, the theory of associated production expounded by Proudhon and Bakunin became consciously revolutionary practice. Politically, in the Commune's call for federalism and autonomy, anarchists see their *"future social organisation. . . [being] carried out from the bottom up, by the free association or federation of workers, starting with associations, then going into the communes, the regions, the nations, and, finally, culminating in a great international and universal federation."* [Bakunin, **Op. Cit.**, p. 270]

However, for anarchists the Commune did not go far enough. It did not abolish the state within the Commune, as it had abolished it beyond it. The Communards organised themselves *"in a Jacobin manner"* (to use Bakunin's cutting term). As Peter Kropotkin pointed out, while *"proclaiming the free Commune, the people of Paris proclaimed an essential anarchist principle . . . they stopped mid-course"* and gave *"themselves a Communal Council copied from the old municipal councils."* Thus the Paris Commune did not *"break with the tradition of the State, of representative government, and it did not attempt to achieve within the Commune that organisation from the simple to the complex it inaugurated by proclaiming the independence and free federation of the Communes."* This led to disaster as the Commune council became *"immobilised . . . by red tape"* and lost *"the sensitivity that comes from continued contact with the masses . . . Paralysed by their distancing from the revolutionary centre -- the people -- they themselves paralysed the popular initiative."* [**Words of a Rebel**, p. 97, p. 93 and p. 97]

In addition, its attempts at economic reform did not go far enough, making no attempt to turn all workplaces into co-operatives (i.e. to expropriate capital) and forming associations of these co-operatives to co-ordinate and support each other's economic activities. Paris, stressed Voltairine de Cleyre, *"failed to strike at economic tyranny, and so came of what it could have achieved"* which was a *"free community whose economic affairs shall be arranged by the groups of actual producers and distributors, eliminating the useless and harmful element now in possession of the world's capital."* [**Op. Cit.**, p. 67] As the city was under constant siege by the French army, it is understandable that the Communards had other things on their minds. However, for Kropotkin such a position was a disaster:

"They treated the economic question as a secondary one, which would be attended to later on, after the triumph of the Commune . . . But the crushing defeat which soon followed, and the blood-thirsty revenge taken by the middle class, proved once more that the triumph of a popular Commune was materially impossible without a parallel triumph of the people in the economic field." [**Op. Cit.**, p. 74]

Anarchists drew the obvious conclusions, arguing that *"if no central government was needed to rule the independent Communes, if the national Government is thrown overboard and national unity is obtained by free federation, then a central **municipal** Government becomes equally useless and noxious. The same federative principle would do within the Commune."* [Kropotkin, **Evolution and Environment**, p. 75] Instead of abolishing the state within the commune by organising federations of directly democratic mass assemblies, like the Parisian "sections" of the revolution of 1789-93 (see Kropotkin's **Great French Revolution** for more on these), the Paris Commune kept representative government and

suffered for it. *"Instead of acting for themselves . . . the people, confiding in their governors, entrusted them the charge of taking the initiative. This was the first consequence of the inevitable result of elections."* The council soon became *"the greatest obstacle to the revolution"* thus proving the *"political axiom that a government cannot be revolutionary."* [**Anarchism**, p. 240, p. 241 and p. 249]

The council become more and more isolated from the people who elected it, and thus more and more irrelevant. And as its irrelevance grew, so did its authoritarian tendencies, with the Jacobin majority creating a *"Committee of Public Safety"* to *"defend"* (by terror) the "revolution." The Committee was opposed by the libertarian socialist minority and was, fortunately, ignored in practice by the people of Paris as they defended their freedom against the French army, which was attacking them in the name of capitalist civilisation and "liberty." On May 21st, government troops entered the city, followed by seven days of bitter street fighting. Squads of soldiers and armed members of the bourgeoisie roamed the streets, killing and maiming at will. Over 25,000 people were killed in the street fighting, many murdered after they had surrendered, and their bodies dumped in mass graves. As a final insult, **Sacré Coeur** was built by the bourgeoisie on the birth place of the Commune, the Butte of Montmartre, to atone for the radical and atheist revolt which had so terrified them.

For anarchists, the lessons of the Paris Commune were threefold. Firstly, a decentralised confederation of communities is the necessary political form of a free society (*"This was the form that the social revolution must take -- the independent commune."* [Kropotkin, **Op. Cit.**, p. 163]). Secondly, *"there is no more reason for a government inside a Commune than for government above the Commune."* This means that an anarchist community will be based on a confederation of neighbourhood and workplace assemblies freely co-operating together. Thirdly, it is critically important to unify political and economic revolutions into a **social** revolution. *"They tried to consolidate the Commune first and put off the social revolution until later, whereas the only way to proceed was to consolidate the Commune by means of the social revolution!"* [Peter Kropotkin, **Words of a Rebel** , p. 97]

For more anarchist perspectives on the Paris Commune see Kropotkin's essay *"The Paris Commune"* in **Words of a Rebel** (and **The Anarchist Reader**) and Bakunin's *"The Paris Commune and the Idea of the State"* in **Bakunin on Anarchism**.

A.5.2 The Haymarket Martyrs

May 1st is a day of special significance for the labour movement. While it has been hijacked in the past by the Stalinist bureaucracy in the Soviet Union and elsewhere, the labour movement festival of May Day is a day of world-wide solidarity. A time to remember past struggles and demonstrate our hope for a better future. A day to remember that an injury to one is an injury to all.

The history of Mayday is closely linked with the anarchist movement and the struggles of working people for a better world. Indeed, it originated with the execution of four anarchists in Chicago in 1886 for organising workers in the fight for the eight-hour day. Thus May Day is a product of *"anarchy in action"* -- of the struggle of working people using direct action in labour unions to change the world.

It began in the 1880s in the USA. In 1884, the **Federation of Organised Trades and Labor Unions of the United States and Canada** (created in 1881, it changed its name in 1886 to the **American Federation of Labor**) passed a resolution which asserted that *"eight hours shall constitute a legal day's work from and after May 1, 1886, and that we recommend to labour organisations throughout this district that they so direct their laws as to conform to this resolution."* A call for strikes on May 1st, 1886 was made in support of this demand.

In Chicago the anarchists were the main force in the union movement, and partially as a result of their presence, the unions translated this call into strikes on May 1st. The anarchists thought that the eight hour day could only be won through direct action and solidarity. They considered that struggles for reforms, like the eight hour day, were not enough in themselves. They viewed them as only one battle in an ongoing class war that would only end by social revolution and the creation of a free society. It was with these ideas that they organised and fought.

In Chicago alone, 400 000 workers went out and the threat of strike action ensured that more than 45 000 were granted a shorter working day without striking. On May 3, 1886, police fired into a crowd of pickets at the McCormick Harvester Machine Company, killing at least one striker, seriously wounding five or six others, and injuring an undetermined number. Anarchists called for a mass meeting the next day in Haymarket Square to protest the brutality. According to the Mayor, *"nothing had occurred yet, or looked likely to occur to require interference."* However, as the meeting was breaking up a column of 180 police arrived and ordered the meeting to end. At this moment a bomb was thrown into the police ranks, who opened fire on the crowd. How many civilians were wounded or killed by the police was never exactly ascertained.

A reign of terror swept over Chicago. Meeting halls, union offices, printing shops and private homes were raided (usually without warrants). Such raids into working-class areas allowed the police to round up all known anarchists and other socialists. Many suspects were beaten up and some bribed. *"Make the raids first and look up the law afterwards"* was the public statement of J. Grinnell, the States Attorney, when a question was raised about search warrants. [*Editor's Introduction*], **The Autobiographies of the Haymarket Martyrs**, p. 7]

Eight anarchists were put on trial for accessory to murder. No pretence was made that any of the accused had carried out or even planned the bomb. Instead the jury were told *"Law is on trial. Anarchy is on trial. These men have been selected, picked out by the Grand Jury, and indicted because they were leaders. They are no more guilty than the thousands who follow them. Gentlemen of the jury; convict these men, make examples of them, hang them and you save our institutions, our society."* [**Op. Cit.**, p. 8] The jury was selected by a special bailiff, nominated by the State's Attorney and was composed of businessmen and a relative of one of the cops killed. The defence was not allowed to present evidence that the special bailiff had publicly claimed *"I am managing this case and I know what I am about. These fellows are going to be hanged as certain as death."* [**Ibid.**] Not surprisingly, the accused were convicted. Seven were sentenced to death, one to 15 years' imprisonment.

An international campaign resulted in two of the death sentences being commuted to life, but the world wide protest did not stop the US state. Of the remaining five, one (Louis Lingg) cheated the executioner and killed himself on the eve of the execution. The remaining four (Albert Parsons, August Spies, George Engel and Adolph Fischer) were hanged on November 11th 1887. They are known in Labour history as the Haymarket Martyrs. Between 150,000 and 500,000 lined the route taken by the funeral cortege and between 10,000 to 25,000 were estimated to have watched the burial.

In 1889, the American delegation attending the International Socialist congress in Paris proposed that May 1st be adopted as a workers' holiday. This was to commemorate working class struggle and the "*Martyrdom of the Chicago Eight*". Since then Mayday has become a day for international solidarity. In 1893, the new Governor of Illinois made official what the working class in Chicago and across the world knew all along and pardoned the Martyrs because of their obvious innocence and because "*the trial was not fair*".

The authorities had believed at the time of the trial that such persecution would break the back of the labour movement. They were wrong. In the words of August Spies when he addressed the court after he had been sentenced to die:

"If you think that by hanging us you can stamp out the labour movement . . . the movement from which the downtrodden millions, the millions who toil in misery and want, expect salvation -- if this is your opinion, then hang us! Here you will tread on a spark, but there and there, behind you -- and in front of you, and everywhere, flames blaze up. It is a subterranean fire. You cannot put it out." [Op. Cit., pp. 8-9]

At the time and in the years to come, this defiance of the state and capitalism was to win thousands to anarchism, particularly in the US itself. Since the Haymarket event, anarchists have celebrated May Day (on the 1st of May -- the reformist unions and labour parties moved its marches to the first Sunday of the month). We do so to show our solidarity with other working class people across the world, to celebrate past and present struggles, to show our power and remind the ruling class of their vulnerability. As Nestor Makhno put it:

"That day those American workers attempted, by organising themselves, to give expression to their protest against the iniquitous order of the State and Capital of the propertied . . .

"The workers of Chicago . . . had gathered to resolve, in common, the problems of their lives and their struggles. . .

"Today too . . . the toilers . . . regard the first of May as the occasion of a get-together when they will concern themselves with their own affairs and consider the matter of their emancipation." [The Struggle Against the State and Other Essays, pp. 59-60]

Anarchists stay true to the origins of May Day and celebrate its birth in the direct action of the oppressed. Oppression and exploitation breed resistance and, for anarchists, May Day is an international symbol of that resistance and power -- a power expressed in the last words of August Spies, chiselled in stone on the monument to the Haymarket martyrs in Waldheim Cemetery in Chicago:

"The day will come when our silence will be more powerful than the voices you are throttling today."

To understand why the state and business class were so determined to hang the Chicago Anarchists, it is necessary to realise they were considered the "leaders" of a massive radical union movement. In 1884, the Chicago Anarchists produced the world's first daily anarchist newspaper, the **Chicagoer Arbeiter-Zeitung**. This was written, read, owned and published by the German immigrant working class movement. The combined circulation of this daily plus a weekly (**Vorbote**) and a Sunday edition (**Fackel**) more than doubled, from 13,000 per issues in 1880 to 26,980 in 1886. Anarchist weekly papers existed for other ethnic groups as well (one English, one Bohemian and one Scandinavian).

Anarchists were very active in the Central Labour Union (which included the eleven largest unions in the city) and aimed to make it, in the words of Albert Parsons (one of the Martyrs), *"the embryonic group of the future 'free society.'"* The anarchists were also part of the **International Working People's Association** (also called the *"Black International"*) which had representatives from 26 cities at its founding convention. The I.W.P.A. soon *"made headway among trade unions, especially in the mid-west"* and its ideas of *"direct action of the rank and file"* and of trade unions *"serv[ing] as the instrument of the working class for the complete destruction of capitalism and the nucleus for the formation of a new society"* became known as the *"Chicago Idea"* (an idea which later inspired the **Industrial Workers of the World** which was founded in Chicago in 1905). [*"Editor's Introduction," The Autobiographies of the Haymarket Martyrs*, p. 4]

This idea was expressed in the manifesto issued at the I.W.P.A.'s Pittsburgh Congress of 1883:

"First -- Destruction of the existing class rule, by all means, i.e. by energetic, relentless, revolutionary and international action.

"Second -- Establishment of a free society based upon co-operative organisation of production.

"Third -- Free exchange of equivalent products by and between the productive organisations without commerce and profit-mongery.

"Fourth -- Organisation of education on a secular, scientific and equal basis for both sexes.

"Fifth -- Equal rights for all without distinction to sex or race.

"Sixth -- Regulation of all public affairs by free contracts between autonomous (independent) communes and associations, resting on a federalistic basis." [Op. Cit., p. 42]

In addition to their union organising, the Chicago anarchist movement also organised social societies, picnics, lectures, dances, libraries and a host of other activities. These all helped to forge a distinctly working-class revolutionary culture in the heart of the *"American Dream."* The threat to the ruling class and their system was too great to allow it to continue (particularly with memories of the vast uprising of labour in 1877 still fresh. As in 1886, that revolt was also met by state violence -- see **Strike!** by J. Brecher for details of this strike movement as well as the Haymarket events). Hence the repression, kangaroo court, and the state murder of those the state and capitalist class considered "leaders" of the movement.

For more on the Haymarket Martyrs, their lives and their ideas, the **The Autobiographies of the Haymarket Martyrs** is essential reading. Albert Parsons, the only American born Martyr, produced a book which explained what they stood for called **Anarchism: Its Philosophy and Scientific Basis**. Historian Paul Avrich's **The Haymarket Tragedy** is a useful in depth account of the events.

A.5.3 Building the Syndicalist Unions

Just before the turn of the century in Europe, the anarchist movement began to create one of the most successful attempts to apply anarchist organisational ideas in everyday life. This was the building of mass revolutionary unions (also known as syndicalism or anarcho-syndicalism). The syndicalist movement, in the words of a leading French syndicalist militant, was *"a practical schooling in anarchism"* for it was *"a laboratory of economic struggles"* and organised *"along anarchic lines."* By organising workers into *"libertarian organisations,"* the syndicalist unions were creating the *"free associations of free producers"* within capitalism to combat it and, ultimately, replace it. [Fernand Pelloutier, **No Gods, No Masters**, vol. 2, p. 57, p. 55 and p. 56]

While the details of syndicalist organisation varied from country to country, the main lines were the same. Workers should form themselves into unions (or *syndicates*, the French for union). While organisation by industry was generally the preferred form, craft and trade organisations were also used. These unions were directly controlled by their members and would federate together on an industrial and geographical basis. Thus a given union would be federated with all the local unions in a given town, region and country as well as with all the unions within its industry into a national union (of, say, miners or metal workers). Each union was autonomous and all officials were part-time (and paid their normal wages if they missed work on union business). The tactics of syndicalism were direct action and solidarity and its aim was to replace capitalism by the unions providing the basic framework of the new, free, society.

Thus, for anarcho-syndicalism, *"the trade union is by no means a mere transitory phenomenon bound up*

with the duration of capitalist society, it is the germ of the Socialist economy of the future, the elementary school of Socialism in general." The *"economic fighting organisation of the workers"* gives their members *"every opportunity for direct action in their struggles for daily bread, it also provides them with the necessary preliminaries for carrying through the reorganisation of social life on a [libertarian] Socialist plan by their own strength."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 59 and p. 62] Anarcho-syndicalism, to use the expression of the I.W.W., aims to build the new world in the shell of the old.

In the period from the 1890's to the outbreak of World War I, anarchists built revolutionary unions in most European countries (particularly in Spain, Italy and France). In addition, anarchists in South and North America were also successful in organising syndicalist unions (particularly Cuba, Argentina, Mexico and Brazil). Almost all industrialised countries had some syndicalist movement, although Europe and South America had the biggest and strongest ones. These unions were organised in a confederal manner, from the bottom up, along anarchist lines. They fought with capitalists on a day-to-day basis around the issue of better wages and working conditions and the state for social reforms, but they also sought to overthrow capitalism through the revolutionary general strike.

Thus hundreds of thousands of workers around the world were applying anarchist ideas in everyday life, proving that anarchy was no utopian dream but a practical method of organising on a wide scale. That anarchist organisational techniques encouraged member participation, empowerment and militancy, and that they also successfully fought for reforms and promoted class consciousness, can be seen in the growth of anarcho-syndicalist unions and their impact on the labour movement. The Industrial Workers of the World, for example, still inspires union activists and has, throughout its long history, provided many union songs and slogans.

However, as a mass movement, syndicalism effectively ended by the 1930s. This was due to two factors. Firstly, most of the syndicalist unions were severely repressed just after World War I. In the immediate post-war years they reached their height. This wave of militancy was known as the "red years" in Italy, where it attained its high point with factory occupations (see [section A.5.5](#)). But these years also saw the destruction of these unions in country after country. In the USA, for example, the I.W.W. was crushed by a wave of repression backed whole-heartedly by the media, the state, and the capitalist class. Europe saw capitalism go on the offensive with a new weapon -- fascism. Fascism arose (first in Italy and, most infamously, in Germany) as an attempt by capitalism to physically smash the organisations the working class had built. This was due to radicalism that had spread across Europe in the wake of the war ending, inspired by the example of Russia. Numerous near revolutions had terrified the bourgeoisie, who turned to fascism to save their system.

In country after country, anarchists were forced to flee into exile, vanish from sight, or became victims of assassins or concentration camps after their (often heroic) attempts at fighting fascism failed. In Portugal, for example, the 100,000 strong anarcho-syndicalist CGT union launched numerous revolts in the late 1920s and early 1930s against fascism. In January 1934, the CGT called for a revolutionary general strike which developed into a five day insurrection. A state of siege was declared by the state,

which used extensive force to crush the rebellion. The CGT, whose militants had played a prominent and courageous role in the insurrection, was completely smashed and Portugal remained a fascist state for the next 40 years. [Phil Mailer, **Portugal: The Impossible Revolution**, pp. 72-3] In Spain, the CNT (the most famous anarcho-syndicalist union) fought a similar battle. By 1936, it claimed one and a half million members. As in Italy and Portugal, the capitalist class embraced fascism to save their power from the dispossessed, who were becoming confident of their power and their right to manage their own lives (see [section A.5.6](#)).

As well as fascism, syndicalism also faced the negative influence of Leninism. The apparent success of the Russian revolution led many activists to turn to authoritarian politics, particularly in English speaking countries and, to a lesser extent, France. Such notable syndicalist activists as Tom Mann in England, William Gallacher in Scotland and William Foster in the USA became Communists (the last two, it should be noted, became Stalinist). Moreover, Communist parties deliberately undermined the libertarian unions, encouraging fights and splits (as, for example, in the I.W.W.). After the end of the Second World War, the Stalinists finished off what fascism had started in Eastern Europe and destroyed the anarchist and syndicalist movements in such places as Bulgaria and Poland. In Cuba, Castro also followed Lenin's example and did what the Batista and Machado dictatorship's could not, namely smash the influential anarchist and syndicalist movements (see Frank Fernandez's **Cuban Anarchism** for a history of this movement from its origins in the 1860s to the 21st century).

So by the start of the second world war, the large and powerful anarchist movements of Italy, Spain, Poland, Bulgaria and Portugal had been crushed by fascism (but not, we must stress, without a fight). When necessary, the capitalists supported authoritarian states in order to crush the labour movement and make their countries safe for capitalism. Only Sweden escaped this trend, where the syndicalist union the SAC is still organising workers. It is, in fact, like many other syndicalist unions active today, growing as workers turn away from bureaucratic unions whose leaders seem more interested in protecting their privileges and cutting deals with management than defending their members. In France, Spain and Italy and elsewhere, syndicalist unions are again on the rise, showing that anarchist ideas are applicable in everyday life.

Finally, it must be stressed that syndicalism has its roots in the ideas of the earliest anarchists and, consequently, was not invented in the 1890s. It is true that development of syndicalism came about, in part, as a reaction to the disastrous "propaganda by deed" period, in which individual anarchists assassinated government leaders in attempts to provoke a popular uprising and in revenge for the mass murders of the Communards and other rebels (see [section A.2.18](#) for details). But in response to this failed and counterproductive campaign, anarchists went back to their roots and to the ideas of Bakunin. Thus, as recognised by the likes of Kropotkin and Malatesta, syndicalism was simply a return to the ideas current in the libertarian wing of the First International.

Thus we find Bakunin arguing that *"it is necessary to organise the power of the proletariat. But this organisation must be the work of the proletariat itself. . . Organise, constantly organise the international militant solidarity of the workers, in every trade and country, and remember that however*

weak you are as isolated individuals or districts, you will constitute a tremendous, invincible power by means of universal co-operation." As one American activist commented, this is *"the same militant spirit that breathes now in the best expressions of the Syndicalist and I.W.W. movements"* both of which express *"a strong world wide revival of the ideas for which Bakunin laboured throughout his life."* [Max Baginski, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 71] As with the syndicalists, Bakunin stressed the *"organisation of trade sections, their federation . . . bear in themselves the living germs of the new social order, which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself."* [quoted by Rudolf Rocker, **Op. Cit.**, p. 50]

Such ideas were repeated by other libertarians. Eugene Varlin, whose role in the Paris Commune ensured his death, advocated a socialism of associations, arguing in 1870 that syndicates were the *"natural elements"* for the rebuilding of society: *"it is they that can easily be transformed into producer associations; it is they that can put into practice the retooling of society and the organisation of production."* [quoted by Martin Phillip Johnson, **The Paradise of Association**, p. 139] As we discussed in [section A.5.2](#), the Chicago Anarchists held similar views, seeing the labour movement as both the means of achieving anarchy and the framework of the free society. As Lucy Parsons (the wife of Albert) put it *"we hold that the granges, trade-unions, Knights of Labour assemblies, etc., are the embryonic groups of the ideal anarchistic society . . ."* [contained in Albert R. Parsons, **Anarchism: Its Philosophy and Scientific Basis**, p. 110] These ideas fed into the revolutionary unionism of the I.W.W. As one historian notes, the *"proceedings of the I.W.W.'s inaugural convention indicate that the participants were not only aware of the 'Chicago Idea' but were conscious of a continuity between their efforts and the struggles of the Chicago anarchists to initiate industrial unionism."* The Chicago idea represented *"the earliest American expression of syndicalism."* [Salvatore Salerno, **Red November, Black November**, p. 71]

Thus, syndicalism and anarchism are not differing theories but, rather, different interpretations of the same ideas (see for a fuller discussion [section H.2.8](#)). While not all syndicalists are anarchists (some Marxists have proclaimed support for syndicalism) and not all anarchists are syndicalists (see [section J.3.9](#) for a discussion why), all social anarchists see the need for taking part in the labour and other popular movements and encouraging libertarian forms of organisation and struggle within them. By doing this, inside and outside of syndicalist unions, anarchists are showing the validity of our ideas. For, as Kropotkin stressed, the *"next revolution must from its inception bring about the seizure of the entire social wealth by the workers in order to transform it into common property. This revolution can succeed only through the workers, only if the urban and rural workers everywhere carry out this objective themselves. To that end, they must initiate their own action in the period before the revolution; this can happen only if there is a strong workers' organisation."* [Selected Writings on Anarchism and Revolution, p. 20] Such popular self-managed organisations cannot be anything but *"anarchy in action."*

A.5.4 Anarchists in the Russian Revolution.

The Russian revolution of 1917 saw a huge growth in anarchism in that country and many experiments

in anarchist ideas. However, in popular culture the Russian Revolution is seen not as a mass movement by ordinary people struggling towards freedom but as the means by which Lenin imposed his dictatorship on Russia. The truth is radically different. The Russian Revolution was a mass movement from below in which many different currents of ideas existed and in which millions of working people (workers in the cities and towns as well as peasants) tried to transform their world into a better place. Sadly, those hopes and dreams were crushed under the dictatorship of the Bolshevik party -- first under Lenin, later under Stalin.

The Russian Revolution, like most history, is a good example of the maxim "history is written by those who win." Most capitalist histories of the period between 1917 and 1921 ignore what the anarchist Voline called "*the unknown revolution*" -- the revolution called forth from below by the actions of ordinary people. Leninist accounts, at best, praise this autonomous activity of workers so long as it coincides with their own party line but radically condemn it (and attribute it with the basest motives) as soon as it strays from that line. Thus Leninist accounts will praise the workers when they move ahead of the Bolsheviks (as in the spring and summer of 1917) but will condemn them when they oppose Bolshevik policy once the Bolsheviks are in power. At worse, Leninist accounts portray the movement and struggles of the masses as little more than a backdrop to the activities of the vanguard party.

For anarchists, however, the Russian Revolution is seen as a classic example of a social revolution in which the self-activity of working people played a key role. In their soviets, factory committees and other class organisations, the Russian masses were trying to transform society from a class-ridden, hierarchical statist regime into one based on liberty, equality and solidarity. As such, the initial months of the Revolution seemed to confirm Bakunin's prediction that the "*future social organisation must be made solely from the bottom upwards, by the free associations or federations of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal.*" [Michael Bakunin: **Selected Writings**, p. 206] The soviets and factory committees expressed concretely Bakunin's ideas and Anarchists played an important role in the struggle.

The initial overthrow of the Tsar came from the direct action of the masses. In February 1917, the women of Petrograd erupted in bread riots. On February 18th, the workers of the Putilov Works in Petrograd went on strike. By February 22nd, the strike had spread to other factories. Two days later, 200 000 workers were on strike and by February 25th the strike was virtually general. The same day also saw the first bloody clashes between protestors and the army. The turning point came on the 27th, when some troops went over to the revolutionary masses, sweeping along other units. This left the government without its means of coercion, the Tsar abdicated and a provisional government was formed.

So spontaneous was this movement that all the political parties were left behind. This included the Bolsheviks, with the "*Petrograd organisation of the Bolsheviks oppos[ing] the calling of strikes precisely on the eve of the revolution destined to overthrow the Tsar. Fortunately, the workers ignored the Bolshevik 'directives' and went on strike anyway . . . Had the workers followed its guidance, it is doubtful that the revolution would have occurred when it did.*" [Murray Bookchin, **Post-Scarcity Anarchism**, p. 194]

The revolution carried on in this vein of direct action from below until the new, "socialist" state was powerful enough to stop it.

For the Left, the end of Tsarism was the culmination of years of effort by socialists and anarchists everywhere. It represented the progressive wing of human thought overcoming traditional oppression, and as such was duly praised by leftists around the world. However, **in** Russia things were progressing. In the workplaces and streets and on the land, more and more people became convinced that abolishing feudalism politically was **not** enough. The overthrow of the Tsar made little real difference if feudal exploitation still existed in the economy, so workers started to seize their workplaces and peasants, the land. All across Russia, ordinary people started to build their own organisations, unions, co-operatives, factory committees and councils (or "soviets" in Russian). These organisations were initially organised in anarchist fashion, with recallable delegates and being federated with each other.

Needless to say, all the political parties and organisations played a role in this process. The two wings of the Marxist social-democrats were active (the Mensheviks and the Bolsheviks), as were the Social Revolutionaries (a populist peasant based party) and the anarchists. The anarchists participated in this movement, encouraging all tendencies to self-management and urging the overthrow of the provisional government. They argued that it was necessary to transform the revolution from a purely political one into an economic/social one. Until the return of Lenin from exile, they were the only political tendency who thought along those lines.

Lenin convinced his party to adopt the slogan "*All Power to the Soviets*" and push the revolution forward. This meant a sharp break with previous Marxist positions, leading one ex-Bolshevik turned Menshevik to comment that Lenin had "*made himself a candidate for one European throne that has been vacant for thirty years -- the throne of Bakunin!*" [quoted by Alexander Rabinowitch, **Prelude to Revolution**, p. 40] The Bolsheviks now turned to winning mass support, championing direct action and supporting the radical actions of the masses, policies in the past associated with anarchism ("*the Bolsheviks launched . . . slogans which until then had been particularly and insistently voiced by the Anarchists.*" [Voline, **The Unknown Revolution**, p. 210]). Soon they were winning more and more votes in the soviet and factory committee elections. As Alexander Berkman argues, the "*Anarchist mottoes proclaimed by the Bolsheviks did not fail to bring results. The masses relied to their flag.*" [**What is Anarchism?**, p. 120]

The anarchists were also influential at this time. Anarchists were particularly active in the movement for workers self-management of production which existed around the factory committees (see M. Brinton, **The Bolsheviks and Workers Control** for details). They were arguing for workers and peasants to expropriate the owning class, abolish all forms of government and re-organise society from the bottom up using their own class organisations -- the soviets, the factory committees, co-operatives and so on. They could also influence the direction of struggle. As Alexander Rabinowitch (in his study of the July uprising of 1917) notes:

"At the rank-and-file level, particularly within the [Petrograd] garrison and at the

Kronstadt naval base, there was in fact very little to distinguish Bolshevik from Anarchist. . . The Anarchist-Communists and the Bolsheviks competed for the support of the same uneducated, depressed, and dissatisfied elements of the population, and the fact is that in the summer of 1917, the Anarchist-Communists, with the support they enjoyed in a few important factories and regiments, possessed an undeniable capacity to influence the course of events. Indeed, the Anarchist appeal was great enough in some factories and military units to influence the actions of the Bolsheviks themselves." [Op. Cit., p. 64]

Indeed, one leading Bolshevik stated in June, 1917 (in response to a rise in anarchist influence), "[b]y fencing ourselves off from the Anarchists, we may fence ourselves off from the masses." [quoted by Alexander Rabinowitch, **Op. Cit.**, p. 102]

The anarchists operated with the Bolsheviks during the October Revolution which overthrew the provisional government. But things changed once the authoritarian socialists of the Bolshevik party had seized power. While both anarchists and Bolsheviks used many of the same slogans, there were important differences between the two. As Voline argued, "[f]rom the lips and pens of the Anarchists, those slogans were sincere and concrete, for they corresponded to their principles and called for action entirely in conformity with such principles. But with the Bolsheviks, the same slogans meant practical solutions totally different from those of the libertarians and did not tally with the ideas which the slogans appeared to express." [**The Unknown Revolution**, p. 210]

Take, for example, the slogan "*All power to the Soviets.*" For anarchists it meant exactly that -- organs for the working class to run society directly, based on mandated, recallable delegates. For the Bolsheviks, that slogan was simply the means for a Bolshevik government to be formed over and above the soviets. The difference is important, "*for the Anarchists declared, if 'power' really should belong to the soviets, it could not belong to the Bolshevik party, and if it should belong to that Party, as the Bolsheviks envisaged, it could not belong to the soviets.*" [Voline, **Op. Cit.**, p. 213] Reducing the soviets to simply executing the decrees of the central (Bolshevik) government and having their All-Russian Congress be able to recall the government (i.e. those with **real** power) does not equal "all power," quite the reverse.

Similarly with the term "*workers' control of production.*" Before the October Revolution Lenin saw "*workers' control*" purely in terms of the "*universal, all-embracing workers' control over the capitalists.*" [**Will the Bolsheviks Maintain Power?**, p. 52] He did not see it in terms of workers' management of production itself (i.e. the abolition of wage labour) via federations of factory committees. Anarchists and the workers' factory committees did. As S.A. Smith correctly notes, Lenin used "*the term ['workers' control'] in a very different sense from that of the factory committees.*" In fact Lenin's "*proposals . . . [were] thoroughly statist and centralist in character, whereas the practice of the factory committees was essentially local and autonomous.*" [**Red Petrograd**, p. 154] For anarchists, "*if the workers' organisations were capable of exercising effective control [over their bosses], then they also were capable of guaranteeing all production. In such an event, private industry could be eliminated quickly but progressively, and replaced by collective industry. Consequently, the Anarchists rejected the vague nebulous slogan of 'control of production.'* They advocated **expropriation -- progressive, but**

immediate -- of private industry by the organisations of collective production." [Voline, **Op. Cit.**, p. 221]

Once in power, the Bolsheviks systematically undermined the popular meaning of workers' control and replaced it with their own, statist conception. "*On three occasions,*" one historian notes, "*in the first months of Soviet power, the [factory] committee leaders sought to bring their model into being. At each point the party leadership overruled them. The result was to vest both managerial **and** control powers in organs of the state which were subordinate to the central authorities, and formed by them.*" [Thomas F. Remington, **Building Socialism in Bolshevik Russia**, p. 38] This process ultimately resulted in Lenin arguing for, and introducing, "*one-man management*" armed with "*dictatorial*" power (with the manager appointed from above by the state) in April 1918. This process is documented in Maurice Brinton's **The Bolsheviks and Workers' Control**, which also indicates the clear links between Bolshevik practice and Bolshevik ideology as well as how both differed from popular activity and ideas.

Hence the comments by Russian Anarchist Peter Arshinov:

"Another no less important peculiarity is that [the] October [revolution of 1917] has two meanings -- that which the working' masses who participated in the social revolution gave it, and with them the Anarchist-Communists, and that which was given it by the political party [the Marxist-Communists] that captured power from this aspiration to social revolution, and which betrayed and stifled all further development. An enormous gulf exists between these two interpretations of October. The October of the workers and peasants is the suppression of the power of the parasite classes in the name of equality and self-management. The Bolshevik October is the conquest of power by the party of the revolutionary intelligentsia, the installation of its 'State Socialism' and of its 'socialist' methods of governing the masses." [**The Two Octobers**]

Initially, anarchists had supported the Bolsheviks, since the Bolshevik leaders had hidden their state-building ideology behind support for the soviets (as socialist historian Samuel Farber notes, the anarchists "*had actually been an unnamed coalition partner of the Bolsheviks in the October Revolution.*" [**Before Stalinism**, p. 126]). However, this support quickly "withered away" as the Bolsheviks showed that they were, in fact, not seeking true socialism but were instead securing power for themselves and pushing not for collective ownership of land and productive resources but for government ownership. The Bolsheviks, as noted, systematically undermined the workers' control/self-management movement in favour of capitalist-like forms of workplace management based around "*one-man management*" armed with "*dictatorial powers.*"

As regards the soviets, the Bolsheviks systematically undermining what limited independence and democracy they had. In response to the "*great Bolshevik losses in the soviet elections*" during the spring and summer of 1918 "*Bolshevik armed force usually overthrew the results of these provincial elections.*" Also, the "*government continually postponed the new general elections to the Petrograd Soviet, the term of which had ended in March 1918. Apparently, the government feared that the opposition parties would*

show gains." [Samuel Farber, **Op. Cit.**, p. 24 and p. 22] In the Petrograd elections, the Bolsheviks *"lost the absolute majority in the soviet they had previously enjoyed"* but remained the largest party. However, the results of the Petrograd soviet elections were irrelevant as a *"Bolshevik victory was assured by the numerically quite significant representation now given to trade unions, district soviets, factory-shop committees, district workers conferences, and Red Army and naval units, in which the Bolsheviks had overwhelming strength."* [Alexander Rabinowitch, *"The Evolution of Local Soviets in Petrograd"*, pp. 20-37, **Slavic Review**, Vol. 36, No. 1, p. 36f] In other words, the Bolsheviks had undermined the democratic nature of the soviet by swamping it by their own delegates. Faced with rejection in the soviets, the Bolsheviks showed that for them "soviet power" equalled party power. To stay in power, the Bolsheviks had to destroy the soviets, which they did. The soviet system remained "soviet" in name only. Indeed, from 1919 onwards Lenin, Trotsky and other leading Bolsheviks were admitting that they had created a party dictatorship and, moreover, that such a dictatorship was essential for any revolution (Trotsky supported party dictatorship even after the rise of Stalinism).

The Red Army, moreover, no longer was a democratic organisation. In March of 1918 Trotsky had abolished the election of officers and soldier committees:

"the principle of election is politically purposeless and technically inexpedient, and it has been, in practice, abolished by decree." [**Work, Discipline, Order**]

As Maurice Brinton correctly summarises:

"Trotsky, appointed Commissar of Military Affairs after Brest-Litovsk, had rapidly been reorganising the Red Army. The death penalty for disobedience under fire had been restored. So, more gradually, had saluting, special forms of address, separate living quarters and other privileges for officers. Democratic forms of organisation, including the election of officers, had been quickly dispensed with." [**The Bolsheviks and Workers' Control**, p. 37]

Unsurprisingly, Samuel Farber notes that *"there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [**Before Stalinism**, p. 44]

Thus after the October Revolution, anarchists started to denounce the Bolshevik regime and call for a *"Third Revolution"* which would finally free the masses from all bosses (capitalist or socialist). They exposed the fundamental difference between the rhetoric of Bolshevism (as expressed, for example, in Lenin's **State and Revolution**) with its reality. Bolshevism in power had proved Bakunin's prediction that the *"dictatorship of the proletariat"* would become the *"dictatorship over the proletariat"* by the leaders of the Communist Party.

The influence of the anarchists started to grow. As Jacques Sadoul (a French officer) noted in early

1918:

"The anarchist party is the most active, the most militant of the opposition groups and probably the most popular . . . The Bolsheviks are anxious." [quoted by Daniel Guerin, **Anarchism**, pp. 95-6]

By April 1918, the Bolsheviks began the physical suppression of their anarchist rivals. On April 12th, 1918, the Cheka (the secret police formed by Lenin in December, 1917) attacked anarchist centres in Moscow. Those in other cities were attacked soon after. As well as repressing their most vocal opponents on the left, the Bolsheviks were restricting the freedom of the masses they claimed to be protecting. Democratic soviets, free speech, opposition political parties and groups, self-management in the workplace and on the land -- all were destroyed in the name of "socialism." All this happened, we must stress, **before** the start of the Civil War in late May, 1918, which most supporters of Leninism blame for the Bolsheviks' authoritarianism. During the civil war, this process accelerated, with the Bolsheviks' systematically repressing opposition from all quarters -- including the strikes and protests of the very class who they claimed was exercising its "dictatorship" while they were in power!

It is important to stress that this process had started well **before** the start of the civil war, confirming anarchist theory that a "workers' state" is a contraction in terms. For anarchists, the Bolshevik substitution of party power for workers power (and the conflict between the two) did not come as a surprise. The state is the delegation of **power** -- as such, it means that the idea of a "workers' state" expressing "workers' power" is a logical impossibility. If workers **are** running society then power rests in their hands. If a state exists then power rests in the hands of the handful of people at the top, **not** in the hands of all. The state was designed for minority rule. No state can be an organ of working class (i.e. majority) self-management due to its basic nature, structure and design. For this reason anarchists have argued for a bottom-up federation of workers' councils as the agent of revolution and the means of managing society after capitalism and the state have been abolished.

As we discuss in [section H](#), the degeneration of the Bolsheviks from a popular working class party into dictators over the working class did not occur by accident. A combination of political ideas and the realities of state power (and the social relationships it generates) could not help but result in such a degeneration. The political ideas of Bolshevism, with its vanguardism, fear of spontaneity and identification of party power with working class power inevitably meant that the party would clash with those whom it claimed to represent. After all, if the party is the vanguard then, automatically, everyone else is a "backward" element. This meant that if the working class resisted Bolshevik policies or rejected them in soviet elections, then the working class was "wavering" and being influenced by "petty-bourgeois" and "backward" elements. Vanguardism breeds elitism and, when combined with state power, dictatorship.

State power, as anarchists have always stressed, means the delegation of power into the hands of a few. This automatically produces a class division in society -- those with power and those without. As such, once in power the Bolsheviks were isolated from the working class. The Russian Revolution confirmed

Malatesta's argument that a "government, that is a group of people entrusted with making laws and empowered to use the collective power to oblige each individual to obey them, is already a privileged class and cut off from the people. As any constituted body would do, it will instinctively seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to its special interests. Having been put in a privileged position, the government is already at odds with the people whose strength it disposes of." [Anarchy, p. 34] A highly centralised state such as the Bolsheviks built would reduce accountability to a minimum while at the same time accelerating the isolation of the rulers from the ruled. The masses were no longer a source of inspiration and power, but rather an alien group whose lack of "discipline" (i.e. ability to follow orders) placed the revolution in danger. As one Russian Anarchist argued,

"The proletariat is being gradually enserfed by the state. The people are being transformed into servants over whom there has arisen a new class of administrators -- a new class born mainly from the womb of the so-called intelligentsia . . . We do not mean to say . . . that the Bolshevik party set out to create a new class system. But we do say that even the best intentions and aspirations must inevitably be smashed against the evils inherent in any system of centralised power. The separation of management from labour, the division between administrators and workers flows logically from centralisation. It cannot be otherwise." [The Anarchists in the Russian Revolution, pp. 123-4]

For this reason anarchists, while agreeing that there is an uneven development of political ideas within the working class, reject the idea that "revolutionaries" should take power on behalf of working people. Only when working people actually run society themselves will a revolution be successful. For anarchists, this meant that "[e]ffective emancipation can be achieved only by the **direct, widespread, and independent action . . . of the workers themselves, grouped . . . in their own class organisations . . . on the basis of concrete action and self-government, helped but not governed,** by revolutionaries working in the very midst of, and not above the mass and the professional, technical, defence and other branches." [Voline, **Op. Cit.**, p. 197] By substituting party power for workers power, the Russian Revolution had made its first fatal step. Little wonder that the following prediction (from November 1917) made by anarchists in Russia came true:

*"Once their power is consolidated and 'legalised', the Bolsheviks who are . . . men of centralist and authoritarian action will begin to rearrange the life of the country and of the people by governmental and dictatorial methods, imposed by the centre. The[y] . . . will dictate the will of the party to all Russia, and command the whole nation. **Your Soviets and your other local organisations will become little by little, simply executive organs of the will of the central government.** In the place of healthy, constructive work by the labouring masses, in place of free unification from the bottom, we will see the installation of an authoritarian and statist apparatus which would act from above and set about wiping out everything that stood in its way with an iron hand."* [quoted by Voline, **Op. Cit.**, p. 235]

The so-called "workers' state" could not be participatory or empowering for working class people (as the

Marxists claimed) simply because state structures are not designed for that. Created as instruments of minority rule, they cannot be transformed into (nor "new" ones created which are) a means of liberation for the working classes. As Kropotkin put it, Anarchists *"maintain that the State organisation, having been the force to which minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges."* [**Anarchism**, p. 170] In the words of an anarchist pamphlet written in 1918:

"Bolshevism, day by day and step by step, proves that state power possesses inalienable characteristics; it can change its label, its 'theory', and its servitors, but in essence it merely remains power and despotism in new forms." [quoted by Paul Avrich, *"The Anarchists in the Russian Revolution,"* pp. 341-350, **Russian Review**, vol. 26, issue no. 4, p. 347]

For insiders, the Revolution had died a few months after the Bolsheviks took over. To the outside world, the Bolsheviks and the USSR came to represent "socialism" even as they systematically destroyed the basis of real socialism. By transforming the soviets into state bodies, substituting party power for soviet power, undermining the factory committees, eliminating democracy in the armed forces and workplaces, repressing the political opposition and workers' protests, the Bolsheviks effectively marginalised the working class from its own revolution. Bolshevik ideology and practice were themselves important and sometimes decisive factors in the degeneration of the revolution and the ultimate rise of Stalinism.

As anarchists had predicted for decades previously, in the space of a few months, and before the start of the Civil War, the Bolshevik's "workers' state" had become, like any state, an alien power **over** the working class and an instrument of minority rule (in this case, the rule of the party). The Civil War accelerated this process and soon party dictatorship was introduced (indeed, leading Bolsheviks began arguing that it was essential in any revolution). The Bolsheviks put down the libertarian socialist elements within their country, with the crushing of the uprising at Kronstadt and the Makhnovist movement in the Ukraine being the final nails in the coffin of socialism and the subjugation of the soviets.

The Kronstadt uprising of February, 1921, was, for anarchists, of immense importance (see the appendix ["What was the Kronstadt Rebellion?"](#) for a full discussion of this uprising). The uprising started when the sailors of Kronstadt supported the striking workers of Petrograd in February, 1921. They raised a 15 point resolution, the first point of which was a call for soviet democracy. The Bolsheviks slandered the Kronstadt rebels as counter-revolutionaries and crushed the revolt. For anarchists, this was significant as the repression could not be justified in terms of the Civil War (which had ended months before) and because it was a major uprising of ordinary people for *real* socialism. As Voline puts it:

"Kronstadt was the first entirely independent attempt of the people to liberate themselves of all yokes and carry out the Social Revolution: this attempt was made directly . . . by the working masses themselves, without political shepherds, without leaders or tutors. It was the first step towards the third and social revolution." [Voline, **Op. Cit.**, pp. 537-8]

In the Ukraine, anarchist ideas were most successfully applied. In areas under the protection of the Makhnovist movement, working class people organised their own lives directly, based on their own ideas and needs -- true social self-determination. Under the leadership of Nestor Makhno, a self-educated peasant, the movement not only fought against both Red and White dictatorships but also resisted the Ukrainian nationalists. In opposition to the call for "national self-determination," i.e. a new Ukrainian state, Makhno called instead for working class self-determination in the Ukraine and across the world. Makhno inspired his fellow peasants and workers to fight for real freedom:

"Conquer or die -- such is the dilemma that faces the Ukrainian peasants and workers at this historic moment . . . But we will not conquer in order to repeat the errors of the past years, the error of putting our fate into the hands of new masters; we will conquer in order to take our destinies into our own hands, to conduct our lives according to our own will and our own conception of the truth." [quoted by Peter Arshinov, **History of the Makhnovist Movement**, p. 58]

To ensure this end, the Makhnovists refused to set up governments in the towns and cities they liberated, instead urging the creation of free soviets so that the working people could govern themselves. Taking the example of Aleksandrovsk, once they had liberated the city the Makhnovists *"immediately invited the working population to participate in a general conference . . . it was proposed that the workers organise the life of the city and the functioning of the factories with their own forces and their own organisations . . . The first conference was followed by a second. The problems of organising life according to principles of self-management by workers were examined and discussed with animation by the masses of workers, who all welcomed this ideas with the greatest enthusiasm . . . Railroad workers took the first step . . . They formed a committee charged with organising the railway network of the region . . . From this point, the proletariat of Aleksandrovsk began to turn systematically to the problem of creating organs of self-management."* [Op. Cit., p. 149]

The Makhnovists argued that the *"freedom of the workers and peasants is their own, and not subject to any restriction. It is up to the workers and peasants themselves to act, to organise themselves, to agree among themselves in all aspects of their lives, as they see fit and desire . . . The Makhnovists can do no more than give aid and counsel . . . In no circumstances can they, nor do they wish to, govern."* [Peter Arshinov, quoted by Guerin, **Op. Cit.**, p. 99] In Alexandrovsk, the Bolsheviks proposed to the Makhnovists spheres of action - their Revkom (Revolutionary Committee) would handle political affairs and the Makhnovists military ones. Makhno advised them *"to go and take up some honest trade instead of seeking to impose their will on the workers."* [Peter Arshinov in **The Anarchist Reader**, p. 141]

They also organised free agricultural communes which *"[a]dmittedly . . . were not numerous, and included only a minority of the population . . . But what was most precious was that these communes were formed by the poor peasants themselves. The Makhnovists never exerted any pressure on the peasants, confining themselves to propagating the idea of free communes."* [Arshinov, **History of the Makhnovist Movement**, p. 87] Makhno played an important role in abolishing the holdings of the landed gentry. The local soviet and their district and regional congresses equalised the use of the land

between all sections of the peasant community. [**Op. Cit.**, pp. 53-4]

Moreover, the Makhnovists took the time and energy to involve the whole population in discussing the development of the revolution, the activities of the army and social policy. They organised numerous conferences of workers', soldiers' and peasants' delegates to discuss political and social issues as well as free soviets, unions and communes. They organised a regional congress of peasants and workers when they had liberated Aleksandrovsk. When the Makhnovists tried to convene the third regional congress of peasants, workers and insurgents in April 1919 and an extraordinary congress of several regions in June 1919 the Bolsheviks viewed them as counter-revolutionary, tried to ban them and declared their organisers and delegates outside the law.

The Makhnovists replied by holding the conferences anyway and asking "*[c]an there exist laws made by a few people who call themselves revolutionaries, which permit them to outlaw a whole people who are more revolutionary than they are themselves?*" and "*[w]hose interests should the revolution defend: those of the Party or those of the people who set the revolution in motion with their blood?*" Makhno himself stated that he "*consider[ed] it an inviolable right of the workers and peasants, a right won by the revolution, to call conferences on their own account, to discuss their affairs.*" [**Op. Cit.**, p. 103 and p. 129]

In addition, the Makhnovists "*fully applied the revolutionary principles of freedom of speech, of thought, of the press, and of political association. In all cities and towns occupied by the Makhnovists, they began by lifting all the prohibitions and repealing all the restrictions imposed on the press and on political organisations by one or another power.*" Indeed, the "*only restriction that the Makhnovists considered necessary to impose on the Bolsheviks, the left Socialist-Revolutionaries and other statists was a prohibition on the formation of those 'revolutionary committees' which sought to impose a dictatorship over the people.*" [**Op. Cit.**, p. 153 and p. 154]

The Makhnovists rejected the Bolshevik corruption of the soviets and instead proposed "*the free and completely independent soviet system of working people without authorities and their arbitrary laws.*" Their proclamations stated that the "*working people themselves must freely choose their own soviets, which carry out the will and desires of the working people themselves, that is to say. ADMINISTRATIVE, not ruling soviets.*" Economically, capitalism would be abolished along with the state - the land and workshops "*must belong to the working people themselves, to those who work in them, that is to say, they must be socialised.*" [**Op. Cit.**, p. 271 and p. 273]

The army itself, in stark contrast to the Red Army, was fundamentally democratic (although, of course, the horrific nature of the civil war did result in a few deviations from the ideal -- however, compared to the regime imposed on the Red Army by Trotsky, the Makhnovists were much more democratic movement).

The anarchist experiment of self-management in the Ukraine came to a bloody end when the Bolsheviks turned on the Makhnovists (their former allies against the "Whites," or pro-Tsarists) when they were no

longer needed. This important movement is fully discussed in the appendix ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#) of our FAQ. However, we must stress here the one obvious lesson of the Makhnovist movement, namely that the dictatorial policies pursued by the Bolsheviks were not imposed on them by objective circumstances. Rather, the political ideas of Bolshevism had a clear influence in the decisions they made. After all, the Makhnovists were active in the same Civil War and yet did not pursue the same policies of party power as the Bolsheviks did. Rather, they successfully encouraged working class freedom, democracy and power in extremely difficult circumstances (and in the face of strong Bolshevik opposition to those policies). The received wisdom on the left is that there was no alternative open to the Bolsheviks. The experience of the Makhnovists disproves this. What the masses of people, as well as those in power, do and think politically is as much part of the process determining the outcome of history as are the objective obstacles that limit the choices available. Clearly, ideas do matter and, as such, the Makhnovists show that there was (and is) a practical alternative to Bolshevism -- anarchism.

The last anarchist march in Moscow until 1987 took place at the funeral of Kropotkin in 1921, when over 10,000 marched behind his coffin. They carried black banners declaring *"Where there is authority, there is no freedom"* and *"The Liberation of the working class is the task of the workers themselves."* As the procession passed the Butyrki prison, the inmates sang anarchist songs and shook the bars of their cells.

Anarchist opposition within Russia to the Bolshevik regime started in 1918. They were the first left-wing group to be repressed by the new "revolutionary" regime. Outside of Russia, anarchists continued to support the Bolsheviks until news came from anarchist sources about the repressive nature of the Bolshevik regime (until then, many had discounted negative reports as being from pro-capitalist sources). Once these reliable reports came in, anarchists across the globe rejected Bolshevism and its system of party power and repression. The experience of Bolshevism confirmed Bakunin's prediction that Marxism meant *"the highly despotic government of the masses by a new and very small aristocracy of real or pretended scholars. The people are not learned, so they will be liberated from the cares of government and included in entirety in the governed herd."* [**Statism and Anarchy**, pp. 178-9]

From about 1921 on, anarchists outside of Russia started describing the USSR as a *"state-capitalist"* nation to indicate that although individual bosses might have been eliminated, the Soviet state bureaucracy played the same role as individual bosses do in the West (anarchists **within** Russia had been calling it that since 1918). For anarchists, *"the Russian revolution . . . is trying to reach . . . economic equality . . . this effort has been made in Russia under a strongly centralised party dictatorship . . . this effort to build a communist republic on the basis of a strongly centralised state communism under the iron law of a party dictatorship is bound to end in failure. We are learning to know in Russia how **not** to introduce communism."* [**Anarchism**, p. 254]

For more information on the Russian Revolution and the role played by anarchists, see the appendix on ["The Russian Revolution"](#) of the FAQ. As well as covering the Kronstadt uprising and the Makhnovists, it discusses why the revolution failed, the role of Bolshevik ideology played in that failure and whether

there were any alternatives to Bolshevism.

The following books are also recommended: **The Unknown Revolution** by Voline; **The Guillotine at Work** by G.P. Maximov; **The Bolshevik Myth** and **The Russian Tragedy**, both by Alexander Berkman; **The Bolsheviks and Workers Control** by M. Brinton; **The Kronstadt Uprising** by Ida Mett; **The History of the Makhnovist Movement** by Peter Arshinov; **My Disillusionment in Russia** and **Living My Life** by Emma Goldman.

Many of these books were written by anarchists active during the revolution, many imprisoned by the Bolsheviks and deported to the West due to international pressure exerted by anarcho-syndicalist delegates to Moscow who the Bolsheviks were trying to win over to Leninism. The majority of such delegates stayed true to their libertarian politics and convinced their unions to reject Bolshevism and break with Moscow. By the early 1920's all the anarcho-syndicalist union confederations had joined with the anarchists in rejecting the "socialism" in Russia as state capitalism and party dictatorship.

A.5.5 Anarchists in the Italian Factory Occupations

After the end of the First World War there was a massive radicalisation across Europe and the world. Union membership exploded, with strikes, demonstrations and agitation reaching massive levels. This was partly due to the war, partly to the apparent success of the Russian Revolution. This enthusiasm for the Russian Revolution even reached Individualist Anarchists like Joseph Labadie, who like many other anti-capitalists, saw *"the red in the east [giving] hope of a brighter day"* and the Bolsheviks as making *"laudable efforts to at least try some way out of the hell of industrial slavery."* [quoted by Carlotta R. Anderson, **All-American Anarchist** p. 225 and p. 241]

Across Europe, anarchist ideas became more popular and anarcho-syndicalist unions grew in size. For example, in Britain, the ferment produced the shop stewards' movement and the strikes on Clydeside; Germany saw the rise of IWW inspired industrial unionism and a libertarian form of Marxism called "Council Communism"; Spain saw a massive growth in the anarcho-syndicalist CNT. In addition, it also, unfortunately, saw the rise and growth of both social democratic and communist parties. Italy was no exception.

In Turin, a new rank-and-file movement was developing. This movement was based around the *"internal commissions"* (elected ad hoc grievance committees). These new organisations were based directly on the group of people who worked together in a particular work shop, with a mandated and recallable shop steward elected for each group of 15 to 20 or so workers. The assembly of all the shop stewards in a given plant then elected the "internal commission" for that facility, which was directly and constantly responsible to the body of shop stewards, which was called the *"factory council."*

Between November 1918 and March 1919, the internal commissions had become a national issue within the trade union movement. On February 20, 1919, the Italian Federation of Metal Workers (FIOM) won a contract providing for the election of "internal commissions" in the factories. The workers

subsequently tried to transform these organs of workers' representation into factory councils with a managerial function. By May Day 1919, the internal commissions *"were becoming the dominant force within the metalworking industry and the unions were in danger of becoming marginal administrative units. Behind these alarming developments, in the eyes of reformists, lay the libertarians."* [Carl Levy, **Gramsci and the Anarchists**, p. 135] By November 1919 the internal commissions of Turin were transformed into factory councils.

The movement in Turin is usually associated with the weekly **L'Ordine Nuovo** (The New Order), which first appeared on May 1, 1919. As Daniel Guerin summarises, it was *"edited by a left socialist, Antonio Gramsci, assisted by a professor of philosophy at Turin University with anarchist ideas, writing under the pseudonym of Carlo Petri, and also of a whole nucleus of Turin libertarians. In the factories, the Ordine Nuovo group was supported by a number of people, especially the anarcho-syndicalist militants of the metal trades, Pietro Ferrero and Maurizio Garino. The manifesto of Ordine Nuovo was signed by socialists and libertarians together, agreeing to regard the factory councils as 'organs suited to future communist management of both the individual factory and the whole society.'"* [**Anarchism**, p. 109]

The developments in Turin should not be taken in isolation. All across Italy, workers and peasants were taking action. In late February 1920, a rash of factory occupations broke out in Liguria, Piedmont and Naples. In Liguria, the workers occupied the metal and shipbuilding plants in Sestri Ponente, Cornigliano and Campi after a breakdown of pay talks. For up to four days, under syndicalist leadership, they ran the plants through factory councils.

During this period the Italian Syndicalist Union (USI) grew in size to around 800 000 members and the influence of the Italian Anarchist Union (UAI) with its 20 000 members and daily paper (**Umanita Nova**) grew correspondingly. As the Welsh Marxist historian Gwyn A. Williams points out *"Anarchists and revolutionary syndicalists were the most consistently and totally revolutionary group on the left . . . the most obvious feature of the history of syndicalism and anarchism in 1919-20: rapid and virtually continuous growth . . . The syndicalists above all captured militant working-class opinion which the socialist movement was utterly failing to capture."* [**Proletarian Order**, pp. 194-195] In Turin, libertarians *"worked within FIOM"* and had been *"heavily involved in the Ordine Nuovo campaign from the beginning."* [**Op. Cit.**, p. 195] Unsurprisingly, **Ordine Nuovo** was denounced as "syndicalist" by other socialists.

It was the anarchists and syndicalists who first raised the idea of occupying workplaces. Malatesta was discussing this idea in **Umanita Nova** in March, 1920. In his words, *"General strikes of protest no longer upset anyone . . . One must seek something else. We put forward an idea: take-over of factories. . . the method certainly has a future, because it corresponds to the ultimate ends of the workers' movement and constitutes an exercise preparing one for the ultimate act of expropriation."* [**Errico Malatesta: His Life and Ideas**, p. 134] In the same month, during *"a strong syndicalist campaign to establish councils in Mila, Armando Borghi [anarchist secretary of the USI] called for mass factory occupations. In Turin, the re-election of workshop commissars was just ending in a two-week orgy of passionate discussion and workers caught the fever. [Factory Council] Commissars began to call for occupations."* Indeed, *"the council movement outside Turin was essentially anarcho-*

syndicalist." Unsurprisingly, the secretary of the syndicalist metal-workers *"urged support for the Turin councils because they represented anti-bureaucratic direct action, aimed at control of the factory and could be the first cells of syndicalist industrial unions . . . The syndicalist congress voted to support the councils. . . . Malatesta . . . supported them as a form of direct action guaranteed to generate rebelliousness . . . Umanita Nova and Guerra di Classe [paper of the USI] became almost as committed to the councils as L'Ordine Nuovo and the Turin edition of Avanti."* [Williams, **Op. Cit.**, p. 200, p. 193 and p. 196]

The upsurge in militancy soon provoked an employer counter-offensive. The bosses organisation denounced the factory councils and called for a mobilisation against them. Workers were rebelling and refusing to follow the bosses orders -- "indiscipline" was rising in the factories. They won state support for the enforcement of the existing industrial regulations. The national contract won by the FIOM in 1919 had provided that the internal commissions were banned from the shop floor and restricted to non-working hours. This meant that the activities of the shop stewards' movement in Turin -- such as stopping work to hold shop steward elections -- were in violation of the contract. The movement was essentially being maintained through mass insubordination. The bosses used this infringement of the agreed contract as the means combating the factory councils in Turin.

The showdown with the employers arrived in April, when a general assembly of shop stewards at Fiat called for sit-in strikes to protest the dismissal of several shop stewards. In response the employers declared a general lockout. The government supported the lockout with a mass show of force and troops occupied the factories and mounted machine guns posts at them. When the shop stewards movement decided to surrender on the immediate issues in dispute after two weeks on strike, the employers responded with demands that the shop stewards councils be limited to non-working hours, in accordance with the FIOM national contract, and that managerial control be re-imposed.

These demands were aimed at the heart of the factory council system and Turin labour movement responded with a massive general strike in defence of it. In Turin, the strike was total and it soon spread throughout the region of Piedmont and involved 500 000 workers at its height. The Turin strikers called for the strike to be extended nationally and, being mostly led by socialists, they turned to the CGL trade union and Socialist Party leaders, who rejected their call.

The only support for the Turin general strike came from unions that were mainly under anarcho-syndicalist influence, such as the independent railway and the maritime workers unions (*"The syndicalists were the only ones to move."*). The railway workers in Pisa and Florence refused to transport troops who were being sent to Turin. There were strikes all around Genoa, among dock workers and in workplaces where the USI was a major influence. So in spite of being *"betrayed and abandoned by the whole socialist movement,"* the April movement *"still found popular support"* with *"actions . . . either directly led or indirectly inspired by anarcho-syndicalists."* In Turin itself, the anarchists and syndicalists were *"threatening to cut the council movement out from under"* Gramsci and the **Ordine Nuovo** group. [Williams, **Op. Cit.**, p. 207, p. 193 and p. 194]

Eventually the CGL leadership settled the strike on terms that accepted the employers' main demand for limiting the shop stewards' councils to non-working hours. Though the councils were now much reduced in activity and shop floor presence, they would yet see a resurgence of their position during the September factory occupations.

The anarchists *"accused the socialists of betrayal. They criticised what they believed was a false sense of discipline that had bound socialists to their own cowardly leadership. They contrasted the discipline that placed every movement under the 'calculations, fears, mistakes and possible betrayals of the leaders' to the other discipline of the workers of Sestri Ponente who struck in solidarity with Turin, the discipline of the railway workers who refused to transport security forces to Turin and the anarchists and members of the Unione Sindacale who forgot considerations of party and sect to put themselves at the disposition of the Torinesi."* [Carl Levy, **Op. Cit.**, p. 161] Sadly, this top-down "discipline" of the socialists and their unions would be repeated during the factory occupations, with terrible results.

In September, 1920, there were large-scale stay-in strikes in Italy in response to an owner wage cut and lockout. *"Central to the climate of the crisis was the rise of the syndicalists."* In mid-August, the USI metal-workers *"called for both unions to occupy the factories"* and called for *"a preventive occupation"* against lock-outs. The USI saw this as the *"expropriation of the factories by the metal-workers"* (which must *"be defended by all necessary measures"*) and saw the need *"to call the workers of other industries into battle."* [Williams, **Op. Cit.**, p. 236, pp. 238-9] Indeed, *"[i]f the FIOM had not embraced the syndicalist idea of an occupation of factories to counter an employer's lockout, the USI may well have won significant support from the politically active working class of Turin."* [Carl Levy, **Op. Cit.**, p. 129] These strikes began in the engineering factories and soon spread to railways, road transport, and other industries, with peasants seizing land. The strikers, however, did more than just occupy their workplaces, they placed them under workers' self-management. Soon over 500 000 "strikers" were at work, producing for themselves. Errico Malatesta, who took part in these events, writes:

"The metal workers started the movement over wage rates. It was a strike of a new kind. Instead of abandoning the factories, the idea was to remain inside without working . . . Throughout Italy there was a revolutionary fervour among the workers and soon the demands changed their characters. Workers thought that the moment was ripe to take possession once [and] for all the means of production. They armed for defence . . . and began to organise production on their own . . . It was the right of property abolished in fact . . .; it was a new regime, a new form of social life that was being ushered in. And the government stood by because it felt impotent to offer opposition." [**Errico Malatesta: His Life and Ideas**, p. 134]

Daniel Guerin provides a good summary of the extent of the movement:

"The management of the factories . . . [was] conducted by technical and administrative workers' committees. Self-management went quite a long way: in the early period assistance was obtained from the banks, but when it was withdrawn the self-management

system issued its own money to pay the workers' wages. Very strict self-discipline was required, the use of alcoholic beverages forbidden, and armed patrols were organised for self-defence. Very close solidarity was established between the factories under self-management. Ores and coal were put into a common pool, and shared out equitably." [**Anarchism**, p. 109]

Italy was "paralysed, with half a million workers occupying their factories and raising red and black flags over them." The movement spread throughout Italy, not only in the industrial heartland around Milan, Turin and Genoa, but also in Rome, Florence, Naples and Palermo. The "militants of the USI were certainly in the forefront of the movement," while **Umanita Nova** argued that "the movement is very serious and we must do everything we can to channel it towards a massive extension." The persistent call of the USI was for "an extension of the movement to the whole of industry to institute their 'expropriating general strike.'" [Williams, **Op. Cit.**, p. 236 and pp. 243-4] Railway workers, influenced by the libertarians, refused to transport troops, workers went on strike against the orders of the reformist unions and peasants occupied the land. The anarchists whole-heartedly supported the movement, unsurprisingly as the "occupation of the factories and the land suited perfectly our programme of action." [Malatesta, **Op. Cit.**, p. 135] Luigi Fabbri described the occupations as having "revealed a power in the proletariat of which it had been unaware hitherto." [quoted by Paolo Sprinao, **The Occupation of the Factories**, p. 134]

However, after four weeks of occupation, the workers decided to leave the factories. This was because of the actions of the socialist party and the reformist trade unions. They opposed the movement and negotiated with the state for a return to "normality" in exchange for a promise to extend workers' control legally, in association with the bosses. The question of revolution was decided by a vote of the CGL national council in Milan on April 10-11th, without consulting the syndicalist unions, after the Socialist Party leadership refused to decide one way or the other.

Needless to say, this promise of "workers' control" was not kept. The lack of independent inter-factory organisation made workers dependent on trade union bureaucrats for information on what was going on in other cities, and they used that power to isolate factories, cities, and factories from each other. This led to a return to work, "in spite of the opposition of individual anarchists dispersed among the factories." [Malatesta, **Op. Cit.**, p. 136] The local syndicalist union confederations could not provide the necessary framework for a fully co-ordinated occupation movement as the reformist unions refused to work with them; and although the anarchists were a large minority, they were still a minority:

"At the 'interproletarian' convention held on 12 September (in which the Unione Anarchia, the railwaymen's and maritime workers union participated) the syndicalist union decided that 'we cannot do it ourselves' without the socialist party and the CGL, protested against the 'counter-revolutionary vote' of Milan, declared it minoritarian, arbitrary and null, and ended by launching new, vague, but ardent calls to action." [Paolo Spriano, **Op. Cit.**, p. 94]

Malatesta addressed the workers of one of the factories at Milan. He argued that "[t]hose who celebrate the agreement signed at Rome [between the Confederazione and the capitalists] as a great victory of yours are deceiving you. The victory in reality belongs to Giolitti, to the government and the bourgeoisie who are saved from the precipice over which they were hanging." During the occupation the "bourgeoisie trembled, the government was powerless to face the situation." Therefore:

"To speak of victory when the Roman agreement throws you back under bourgeois exploitation which you could have got rid of is a lie. If you give up the factories, do this with the conviction [of] hav[ing] lost a great battle and with the firm intention to resume the struggle on the first occasion and to carry it on in a thorough way. . . Nothing is lost if you have no illusion [about] the deceiving character of the victory. The famous decree on the control of factories is a mockery . . . because it tends to harmonise your interests and those of the bourgeois which is like harmonising the interests of the wolf and the sheep. Don't believe those of your leaders who make fools of you by adjourning the revolution from day to day. You yourselves must make the revolution when an occasion will offer itself, without waiting for orders which never come, or which come only to enjoin you to abandon action. Have confidence in yourselves, have faith in your future and you will win." [quoted by Max Nettlau, **Errico Malatesta: The Biography of an Anarchist**]

Malatesta was proven correct. With the end of the occupations, the only victors were the bourgeoisie and the government. Soon the workers would face Fascism, but first, in October 1920, "after the factories were evacuated," the government (obviously knowing who the real threat was) "arrested the entire leadership of the USI and UAI. The socialists did not respond" and "more-or-less ignored the persecution of the libertarians until the spring of 1921 when the aged Malatesta and other imprisoned anarchists mounted a hunger strike from their cells in Milan." [Carl Levy, **Op. Cit.**, pp. 221-2] They were acquitted after a four day trial.

The events of 1920 show four things. Firstly, that workers can manage their own workplaces successfully by themselves, without bosses. Secondly, on the need for anarchists to be involved in the labour movement. Without the support of the USI, the Turin movement would have been even more isolated than it was. Thirdly, anarchists need to be organised to influence the class struggle. The growth of the UAI and USI in terms of both influence and size indicates the importance of this. Without the anarchists and syndicalists raising the idea of factory occupations and supporting the movement, it is doubtful that it would have been as successful and widespread as it was. Lastly, that socialist organisations, structured in a hierarchical fashion, do not produce a revolutionary membership. By continually looking to leaders, the movement was crippled and could not develop to its full potential.

This period of Italian history explains the growth of Fascism in Italy. As Tobias Abse points out, "the rise of fascism in Italy cannot be detached from the events of the **biennio rosso**, the two red years of 1919 and 1920, that preceded it. Fascism was a preventive counter-revolution . . . launched as a result of the failed revolution" ["The Rise of Fascism in an Industrial City", p. 54, in **Rethinking Italian Fascism**, David Forgacs (ed.), pp. 52-81] The term "preventive counter-revolution" was originally coined by the leading anarchist Luigi Fabbri.

As Malatesta argued at the time of the factory occupations, "*[i]f we do not carry on to the end, we will pay with tears of blood for the fear we now instil in the bourgeoisie.*" [quoted by Tobias Abse, **Op. Cit.**, p. 66] Later events proved him right, as the capitalists and rich landowners backed the fascists in order to teach the working class their place. In the words of Tobias Abse:

*"The aims of the Fascists and their backers amongst the industrialists and agrarians in 1921-22 were simple: to break the power of the organised workers and peasants as completely as possible, to wipe out, with the bullet and the club, not only the gains of the **biennio rosso**, but everything that the lower classes had gained . . . between the turn of the century and the outbreak of the First World War."* [**Op. Cit.**, p. 54]

The fascist squads attacked and destroyed anarchist and socialist meeting places, social centres, radical presses and Camera del Lavoro (local trade union councils). However, even in the dark days of fascist terror, the anarchists resisted the forces of totalitarianism. "*It is no coincidence that the strongest working-class resistance to Fascism was in . . . towns or cities in which there was quite a strong anarchist, syndicalist or anarcho-syndicalist tradition.*" [Tobias Abse, **Op. Cit.**, p. 56]

The anarchists participated in, and often organised sections of, the **Arditi del Popolo**, a working-class organisation devoted to the self-defence of workers' interests. The Arditi del Popolo organised and encouraged working-class resistance to fascist squads, often defeating larger fascist forces (for example, "*the total humiliation of thousands of Italo Balbo's squadristi by a couple of hundred Arditi del Popolo backed by the inhabitants of the working class districts*" in the anarchist stronghold of Parma in August 1922 [Tobias Abse, **Op. Cit.**, p. 56]).

The Arditi del Popolo was the closest Italy got to the idea of a united, revolutionary working-class front against fascism, as had been suggested by Malatesta and the UAI. This movement "*developed along anti-bourgeois and anti-fascist lines, and was marked by the independence of its local sections.*" [**Red Years, Black Years: Anarchist Resistance to Fascism in Italy**, p. 2] Rather than being just an "anti-fascist" organisation, the Arditi "*were not a movement in defence of 'democracy' in the abstract, but an essentially working-class organisation devoted to the defence of the interests of industrial workers, the dockers and large numbers of artisans and craftsmen.*" [Tobias Abse, **Op. Cit.**, p. 75] Unsurprisingly, the **Arditi del Popolo** "*appear to have been strongest and most successful in areas where traditional working-class political culture was less exclusively socialist and had strong anarchist or syndicalist traditions, for example, Bari, Livorno, Parma and Rome.*" [Antonio Sonnessa, "*Working Class Defence Organisation, Anri-Fascist Resistances and the Arditi del Popolo in Turin, 1919-22,*" pp. 183-218, **European History Quarterly**, vol. 33, no. 2, p. 184]

However, both the socialist and communist parties withdrew from the organisation. The socialists signed a "Pact of Pacification" with the Fascists in August 1921. The communists "*preferred to withdraw their members from the Arditi del Popolo rather than let them work with the anarchists.*" [**Red Years, Black Years**, p. 17] Indeed, "*[o]n the same day as the Pact was signed, Ordine Nuovo published a PCd'I*

*[Communist Party of Italy] communication warning communists against involvement" in the Arditi del Popolo. Four days later, the Communist leadership "officially abandoned the movement. Severe disciplinary measures were threatened against those communists who continued to participate in, or liase with," the organisation. Thus by "the end of the first week of August 1921 the PSI, CGL and the PCd'I had officially denounced" the organisation. "Only the anarchist leaders, if not always sympathetic to the programme of the [Arditi del Popolo], did not abandon the movement." Indeed, **Umanita Nova** "strongly supported" it "on the grounds it represented a popular expression of anti-fascist resistance and in defence of freedom to organise." [Antonio Sonnessa, **Op. Cit.**, p. 195 and p. 194]*

However, in spite of the decisions by their leaders, many rank and file socialists and communists took part in the movement. The latter took part in open "defiance of the PCd'I leadership's growing abandonment" of it. In Turin, for example, communists who took part in the **Arditi del Pololo** did so "less as communists and more as part of a wider, working-class self-identification . . . This dynamic was re-enforced by an important socialist and anarchist presence" there. The failure of the Communist leadership to support the movement shows the bankruptcy of Bolshevik organisational forms which were unresponsive to the needs of the popular movement. Indeed, these events show the "libertarian custom of autonomy from, and resistance to, authority was also operated against the leaders of the workers' movement, particularly when they were held to have misunderstood the situation at grass roots level." [Sonnessa, **Op. Cit.**, p. 200, p. 198 and p. 193]

Thus the Communist Party failed to support the popular resistance to fascism. The Communist leader Antonio Gramsci explained why, arguing that "the party leadership's attitude on the question of the Arditi del Popolo . . . corresponded to a need to prevent the party members from being controlled by a leadership that was not the party's leadership." Gramsci added that this policy "served to disqualify a mass movement which had started from below and which could instead have been exploited by us politically." [**Selections from Political Writings (1921-1926)**, p. 333] While being less sectarian towards the Arditi del Popolo than other Communist leaders, "[i]n common with all communist leaders, Gramsci awaited the formation of the PCd'I-led military squads." [Sonnessa, **Op. Cit.**, p. 196] In other words, the struggle against fascism was seen by the Communist leadership as a means of gaining more members and, when the opposite was a possibility, they preferred defeat and fascism rather than risk their followers becoming influenced by anarchism.

As Abse notes, "it was the withdrawal of support by the Socialist and Communist parties at the national level that crippled" the Arditi. [**Op. Cit.**, p. 74] Thus "social reformist defeatism and communist sectarianism made impossible an armed opposition that was widespread and therefore effective; and the isolated instances of popular resistance were unable to unite in a successful strategy." And fascism could have been defeated: "Insurrections at Sarzanna, in July 1921, and at Parma, in August 1922, are examples of the correctness of the policies which the anarchists urged in action and propaganda." [**Red Years, Black Years**, p. 3 and p. 2] Historian Tobias Abse confirms this analysis, arguing that "[w]hat happened in Parma in August 1922 . . . could have happened elsewhere, if only the leadership of the Socialist and Communist parties thrown their weight behind the call of the anarchist Malatesta for a united revolutionary front against Fascism." [**Op. Cit.**, p. 56]

In the end, fascist violence was successful and capitalist power maintained:

"The anarchists' will and courage were not enough to counter the fascist gangs, powerfully aided with material and arms, backed by the repressive organs of the state. Anarchists and anarcho-syndicalists were decisive in some areas and in some industries, but only a similar choice of direct action on the parts of the Socialist Party and the General Confederation of Labour [the reformist trade union] could have halted fascism." [Red Years, Black Years, pp. 1-2]

After helping to defeat the revolution, the Marxists helped ensure the victory of fascism.

Even after the fascist state was created, anarchists resisted both inside and outside Italy. Many Italians, both anarchist and non-anarchist, travelled to Spain to resist Franco in 1936 (see Umberto Marzochhi's **Remembering Spain: Italian Anarchist Volunteers in the Spanish Civil War** for details). During the Second World War, anarchists played a major part in the Italian Partisan movement. It was the fact that the anti-fascist movement was dominated by anti-capitalist elements that led the USA and the UK to place known fascists in governmental positions in the places they "liberated" (often where the town had already been taken by the Partisans, resulting in the Allied troops "liberating" the town from its own inhabitants!).

Given this history of resisting fascism in Italy, it is surprising that some claim Italian fascism was a product or form of syndicalism. This is even claimed by some anarchists. According to Bob Black the *"Italian syndicalists mostly went over to Fascism"* and references David D. Roberts 1979 study **The Syndicalist Tradition and Italian Fascism** to support his claim. [Anarchy after Leftism, p. 64] Peter Sabatini in a review in **Social Anarchism** makes a similar statement, saying that syndicalism's *"ultimate failure"* was *"its transformation into a vehicle of fascism."* [Social Anarchism, no. 23, p. 99] What is the truth behind these claims?

Looking at Black's reference we discover that, in fact, most of the Italian syndicalists did not go over to fascism, if by syndicalists we mean members of the USI (the Italian Syndicalist Union). Roberts states that:

"The vast majority of the organised workers failed to respond to the syndicalists' appeals and continued to oppose [Italian] intervention [in the First World War], shunning what seemed to be a futile capitalist war. The syndicalists failed to convince even a majority within the USI. . . the majority opted for the neutralism of Armando Borghi, leader of the anarchists within the USI. Schism followed as De Ambris led the interventionist minority out of the confederation." [The Syndicalist Tradition and Italian Fascism, p. 113]

However, if we take "syndicalist" to mean some of the intellectuals and "leaders" of the pre-war movement, it was a case that the *"leading syndicalists came out for intervention quickly and almost unanimously"* [Roberts, **Op. Cit.**, p. 106] after the First World War started. Many of these pro-war

"leading syndicalists" did become fascists. However, to concentrate on a handful of "leaders" (which the majority did not even follow!) and state that this shows that the *"Italian syndicalists mostly went over to Fascism"* staggers belief. What is even worse, as seen above, the Italian anarchists and syndicalists were the most dedicated and successful fighters against fascism. In effect, Black and Sabatini have slandered a whole movement.

What is also interesting is that these "leading syndicalists" were not anarchists and so not anarcho-syndicalists. As Roberts notes *"[i]n Italy, the syndicalist doctrine was more clearly the product of a group of intellectuals, operating within the Socialist party and seeking an alternative to reformism."* They *"explicitly denounced anarchism"* and *"insisted on a variety of Marxist orthodoxy."* The *"syndicalists genuinely desired -- and tried -- to work within the Marxist tradition."* [Op. Cit., p. 66, p. 72, p. 57 and p. 79] According to Carl Levy, in his account of Italian anarchism, *"[u]nlike other syndicalist movements, the Italian variation coalesced inside a Second International party. Supporters were partially drawn from socialist intransigents . . . the southern syndicalist intellectuals pronounced republicanism . . . Another component . . . was the remnant of the Partito Operaio."* ["Italian Anarchism: 1870-1926" in **For Anarchism: History, Theory, and Practice**, David Goodway (Ed.), p. 51]

In other words, the Italian syndicalists who turned to fascism were, firstly, a small minority of intellectuals who could not convince the majority within the syndicalist union to follow them, and, secondly, Marxists and republicans rather than anarchists, anarcho-syndicalists or even revolutionary syndicalists.

According to Carl Levy, Roberts' book *"concentrates on the syndicalist intelligentsia"* and that *"some syndicalist intellectuals . . . helped generate, or sympathetically endorsed, the new Nationalist movement . . . which bore similarities to the populist and republican rhetoric of the southern syndicalist intellectuals."* He argues that there *"has been far too much emphasis on syndicalist intellectuals and national organisers"* and that syndicalism *"relied little on its national leadership for its long-term vitality."* [Op. Cit., p. 77, p. 53 and p. 51] If we do look at the membership of the USI, rather than finding a group which *"mostly went over to fascism,"* we discover a group of people who fought fascism tooth and nail and were subject to extensive fascist violence.

To summarise, Italian Fascism had nothing to do with syndicalism and, as seen above, the USI fought the Fascists and was destroyed by them along with the UAI, Socialist Party and other radicals. That a handful of pre-war Marxist-syndicalists later became Fascists and called for a "National-Syndicalism" does not mean that syndicalism and fascism are related (any more than some anarchists later becoming Marxists makes anarchism "a vehicle" for Marxism!).

It is hardly surprising that anarchists were the most consistent and successful opponents of Fascism. The two movements could not be further apart, one standing for total statism in the service of capitalism while the other for a free, non-capitalist society. Neither is it surprising that when their privileges and power were in danger, the capitalists and the landowners turned to fascism to save them. This process is

a common feature in history (to list just four examples, Italy, Germany, Spain and Chile).

A.5.6 Anarchism and the Spanish Revolution.

As Noam Chomsky notes, *"a good example of a really large-scale anarchist revolution -- in fact the best example to my knowledge -- is the Spanish revolution in 1936, in which over most of Republican Spain there was a quite inspiring anarchist revolution that involved both industry and agriculture over substantial areas . . . And that again was, by both human measures and indeed anyone's economic measures, quite successful. That is, production continued effectively; workers in farms and factories proved quite capable of managing their affairs without coercion from above, contrary to what lots of socialists, communists, liberals and other wanted to believe."* The revolution of 1936 was *"based on three generations of experiment and thought and work which extended anarchist ideas to very large parts of the population."* [**Radical Priorities**, p. 212]

Due to this anarchist organising and agitation, Spain in the 1930's had the largest anarchist movement in the world. At the start of the Spanish "Civil" war, over one and one half million workers and peasants were members of the CNT (the *National Confederation of Labour*), an anarcho-syndicalist union federation, and 30,000 were members of the FAI (the *Anarchist Federation of Iberia*). The total population of Spain at this time was 24 million.

The social revolution which met the Fascist coup on July 18th, 1936, is the greatest experiment in libertarian socialism to date. Here the last mass syndicalist union, the CNT, not only held off the fascist rising but encouraged the widespread take-over of land and factories. Over seven million people, including about two million CNT members, put self-management into practise in the most difficult of circumstances and actually improved both working conditions and output.

In the heady days after the 19th of July, the initiative and power truly rested in the hands of the rank-and-file members of the CNT and FAI. It was ordinary people, undoubtedly under the influence of Faistas (members of the FAI) and CNT militants, who, after defeating the fascist uprising, got production, distribution and consumption started again (under more egalitarian arrangements, of course), as well as organising and volunteering (in their tens of thousands) to join the militias, which were to be sent to free those parts of Spain that were under Franco. In every possible way the working class of Spain were creating by their own actions a new world based on their own ideas of social justice and freedom -- ideas inspired, of course, by anarchism and anarcho-syndicalism.

George Orwell's eye-witness account of revolutionary Barcelona in late December, 1936, gives a vivid picture of the social transformation that had begun:

"The Anarchists were still in virtual control of Catalonia and the revolution was still in full swing. To anyone who had been there since the beginning it probably seemed even in December or January that the revolutionary period was ending; but when one came straight from England the aspect of Barcelona was something startling and

overwhelming. It was the first time that I had ever been in a town where the working class was in the saddle. Practically every building of any size had been seized by the workers and was draped with red flags or with the red and black flag of the Anarchists; every wall was scrawled with the hammer and sickle and with the initials of the revolutionary parties; almost every church had been gutted and its images burnt. Churches here and there were being systematically demolished by gangs of workman. Every shop and cafe had an inscription saying that it had been collectivised; even the bootblacks had been collectivised and their boxes painted red and black. Waiters and shop-walkers looked you in the face and treated you as an equal. Servile and even ceremonial forms of speech had temporarily disappeared. Nobody said 'Señor' or 'Don' or even 'Usted'; everyone called everyone else 'Comrade' or 'Thou', and said 'Salud!' instead of 'Buenos dias'. . . Above all, there was a belief in the revolution and the future, a feeling of having suddenly emerged into an era of equality and freedom. Human beings were trying to behave as human beings and not as cogs in the capitalist machine." [Homage to Catalonia, pp. 2-3]

The full extent of this historic revolution cannot be covered here. It will be discussed in more detail in [Section I.8](#) of the FAQ. All that can be done is to highlight a few points of special interest in the hope that these will give some indication of the importance of these events and encourage people to find out more about it.

All industry in Catalonia was placed either under workers' self-management **or** workers' control (that is, either totally taking over **all** aspects of management, in the first case, or, in the second, controlling the old management). In some cases, whole town and regional economies were transformed into federations of collectives. The example of the Railway Federation (which was set up to manage the railway lines in Catalonia, Aragon and Valencia) can be given as a typical example. The base of the federation was the local assemblies:

"All the workers of each locality would meet twice a week to examine all that pertained to the work to be done... The local general assembly named a committee to manage the general activity in each station and its annexes. At [these] meetings, the decisions (direccion) of this committee, whose members continued to work [at their previous jobs], would be subjected to the approval or disapproval of the workers, after giving reports and answering questions."

The delegates on the committee could be removed by an assembly at any time and the highest co-ordinating body of the Railway Federation was the "**Revolutionary Committee**," whose members were elected by union assemblies in the various divisions. The control over the rail lines, according to Gaston Leval, "did not operate from above downwards, as in a statist and centralised system. The Revolutionary Committee had no such powers. . . The members of the. . . committee being content to supervise the general activity and to co-ordinate that of the different routes that made up the network." [Gaston Leval, **Collectives in the Spanish Revolution**, p. 255]

On the land, tens of thousands of peasants and rural day workers created voluntary, self-managed collectives. The quality of life improved as co-operation allowed the introduction of health care, education, machinery and investment in the social infrastructure. As well as increasing production, the collectives increased freedom. As one member puts it, *"it was marvelous. . . to live in a collective, a free society where one could say what one thought, where if the village committee seemed unsatisfactory one could say. The committee took no big decisions without calling the whole village together in a general assembly. All this was wonderful."* [Ronald Fraser, **Blood of Spain**, p. 360]

We discuss the revolution in more detail in [section I.8](#). For example, sections [I.8.3](#) and [I.8.4](#) discuss in more depth how the industrial collectives. The rural collectives are discussed in sections [I.8.5](#) and [I.8.6](#). We must stress that these sections are summaries of a vast social movement, and more information can be gathered from such works as Gaston Leval's **Collectives in the Spanish Revolution**, Sam Dolgoff's **The Anarchist Collectives**, Jose Peirats' **The CNT in the Spanish Revolution** and a host of other anarchist accounts of the revolution.

On the social front, anarchist organisations created rational schools, a libertarian health service, social centres, and so on. The *Mujeres Libres* (free women) combated the traditional role of women in Spanish society, empowering thousands both inside and outside the anarchist movement (see **The Free Women of Spain** by Martha A. Ackelsberg for more information on this very important organisation). This activity on the social front only built on the work started long before the outbreak of the war; for example, the unions often funded rational schools, workers centres, and so on.

The voluntary militias that went to free the rest of Spain from Franco were organised on anarchist principles and included both men and women. There was no rank, no saluting and no officer class. Everybody was equal. George Orwell, a member of the POUM militia (the POUM was a dissident Marxist party, influenced by Leninism but not, as the Communists asserted, Trotskyist) makes this clear:

"The essential point of the [militia] system was the social equality between officers and men. Everyone from general to private drew the same pay, ate the same food, wore the same clothes, and mingled on terms of complete equality. If you wanted to slap the general commanding the division on the back and ask him for a cigarette, you could do so, and no one thought it curious. In theory at any rate each militia was a democracy and not a hierarchy. It was understood that orders had to be obeyed, but it was also understood that when you gave an order you gave it as comrade to comrade and not as superior to inferior. There were officers and N.C.O.s, but there was no military rank in the ordinary sense; no titles, no badges, no heel-clicking and saluting. They had attempted to produce within the militias a sort of temporary working model of the classless society. Of course there was not perfect equality, but there was a nearer approach to it than I had ever seen or that I would have thought conceivable in time of war. . . " [Op. Cit., p. 26]

In Spain, however, as elsewhere, the anarchist movement was smashed between Stalinism (the Communist Party) on the one hand and Capitalism (Franco) on the other. Unfortunately, the anarchists

placed anti-fascist unity before the revolution, thus helping their enemies to defeat both them and the revolution. Whether they were forced by circumstances into this position or could have avoided it is still being debated (see [section I.8.10](#) for a discussion of why the CNT-FAI collaborated and [section I.8.11](#) on why this decision was **not** a product of anarchist theory).

Orwell's account of his experiences in the militia's indicates why the Spanish Revolution is so important to anarchists:

"I had dropped more or less by chance into the only community of any size in Western Europe where political consciousness and disbelief in capitalism were more normal than their opposites. Up here in Aragon one was among tens of thousands of people, mainly though not entirely of working-class origin, all living at the same level and mingling on terms of equality. In theory it was perfect equality, and even in practice it was not far from it. There is a sense in which it would be true to say that one was experiencing a foretaste of Socialism, by which I mean that the prevailing mental atmosphere was that of Socialism. Many of the normal motives of civilised life -- snobbishness, money-grubbing, fear of the boss, etc. -- had simply ceased to exist. The ordinary class-division of society had disappeared to an extent that is almost unthinkable in the money-tainted air of England; there was no one there except the peasants and ourselves, and no one owned anyone else as his master. . . One had been in a community where hope was more normal than apathy or cynicism, where the word 'comrade' stood for comradeship and not, as in most countries, for humbug. One had breathed the air of equality. I am well aware that it is now the fashion to deny that Socialism has anything to do with equality. In every country in the world a huge tribe of party-hacks and sleek little professors are busy 'proving' that Socialism means no more than a planned state-capitalism with the grab-motive left intact. But fortunately there also exists a vision of Socialism quite different from this. The thing that attracts ordinary men to Socialism and makes them willing to risk their skins for it, the 'mystique' of Socialism, is the idea of equality; to the vast majority of people Socialism means a classless society, or it means nothing at all . . . In that community where no one was on the make, where there was a shortage of everything but no boot-licking, one got, perhaps, a crude forecast of what the opening stages of Socialism might be like. And, after all, instead of disillusioning me it deeply attracted me. . ." [Op. Cit., pp. 83-84]

For more information on the Spanish Revolution, the following books are recommended: **Lessons of the Spanish Revolution** by Vernon Richards; **Anarchists in the Spanish Revolution** and **The CNT in the Spanish Revolution** by Jose Peirats; **Free Women of Spain** by Martha A. Ackelsberg; **The Anarchist Collectives** edited by Sam Dolgoff; *"Objectivity and Liberal Scholarship"* by Noam Chomsky (in **The Chomsky Reader**); **The Anarchists of Casas Viejas** by Jerome R. Mintz; and **Homage to Catalonia** by George Orwell.

A.5.7 The May-June Revolt in France, 1968.

The May-June events in France placed anarchism back on the radical landscape after a period in which many people had written the movement off as dead. This revolt of ten million people grew from humble beginnings. Expelled by the university authorities of Nanterre in Paris for anti-Vietnam War activity, a group of anarchists (including Daniel Cohn-Bendit) promptly called a protest demonstration. The arrival of 80 police enraged many students, who quit their studies to join the battle and drive the police from the university.

Inspired by this support, the anarchists seized the administration building and held a mass debate. The occupation spread, Nanterre was surrounded by police, and the authorities closed the university down. The next day, the Nanterre students gathered at the Sorbonne University in the centre of Paris. Continual police pressure and the arrest of over 500 people caused anger to erupt into five hours of street fighting. The police even attacked passers-by with clubs and tear gas.

A total ban on demonstrations and the closure of the Sorbonne brought thousands of students out onto the streets. Increasing police violence provoked the building of the first barricades. Jean Jacques Lebel, a reporter, wrote that by 1 a.m., "*[l]iterally thousands helped build barricades. . . women, workers, bystanders, people in pyjamas, human chains to carry rocks, wood, iron.*" An entire night of fighting left 350 police injured. On May 7th, a 50,000-strong protest march against the police was transformed into a day-long battle through the narrow streets of the Latin Quarter. Police tear gas was answered by molotov cocktails and the chant "*Long Live the Paris Commune!*"

By May 10th, continuing massive demonstrations forced the Education Minister to start negotiations. But in the streets, 60 barricades had appeared and young workers were joining the students. The trade unions condemned the police violence. Huge demonstrations throughout France culminated on May 13th with one million people on the streets of Paris.

Faced with this massive protest, the police left the Latin Quarter. Students seized the Sorbonne and created a mass assembly to spread the struggle. Occupations soon spread to every French University. From the Sorbonne came a flood of propaganda, leaflets, proclamations, telegrams, and posters. Slogans such as "*Everything is Possible,*" "*Be Realistic, Demand the Impossible,*" "*Life without Dead Times,*" and "*It is Forbidden to Forbid*" plastered the walls. "*All Power to the Imagination*" was on everyone's lips. As Murray Bookchin pointed out, "*the motive forces of revolution today. . . are not simply scarcity and material need, but also quality of everyday life,.. the attempt to gain control of one's own destiny.*" [**Post-Scarcity Anarchism**, pp. 249-250]

Many of the most famous slogans of those days originated from the Situationists. The **Situationist International** had been formed in 1957 by a small group of dissident radicals and artists. They had developed a highly sophisticated (if jargon riddled) and coherent analysis of modern capitalist society and how to supersede it with a new, freer one. Modern life, they argued, was mere survival rather than living, dominated by the economy of consumption in which everyone, everything, every emotion and relationship becomes a commodity. People were no longer simply alienated producers, they were also alienated consumers. They defined this kind of society as the "*Spectacle.*" Life itself had been stolen

and so revolution meant recreating life. The area of revolutionary change was no longer just the workplace, but in everyday existence:

"People who talk about revolution and class struggle without referring explicitly to everyday life, without understanding what is subversive about love and what is positive in the refusal of constraints, such people have a corpse in their mouth." [quoted by Clifford Harper, **Anarchy: A Graphic Guide**, p. 153]

Like many other groups whose politics influenced the Paris events, the situationists argued that *"the workers' councils are the only answer. Every other form of revolutionary struggle has ended up with the very opposite of what it was originally looking for."* [quoted by Clifford Harper, **Op. Cit.**, p. 149] These councils would be self-managed and not be the means by which a "revolutionary" party would take power. Like the anarchists of **Noire et Rouge** and the libertarian socialists of **Socialisme ou Barbarie**, their support for a self-managed revolution from below had a massive influence in the May events and the ideas that inspired it. **Beneath the Paving Stones** by Dark Star is a good anthology of situationist works relating to Paris 68 which also contains an eye-witness account of events.

On May 14th, the Sud-Aviation workers locked the management in its offices and occupied their factory. They were followed by the Cleon-Renault, Lockheed-Beauvais and Mucel-Orleans factories the next day. That night the National Theatre in Paris was seized to become a permanent assembly for mass debate. Next, France's largest factory, Renault-Billancourt, was occupied. Often the decision to go on indefinite strike was taken by the workers without consulting union officials. By May 17th, a hundred Paris Factories were in the hands of their workers. The weekend of the 19th of May saw 122 factories occupied. By May 20th, the strike and occupations were general and involved six million people. Print workers said they did not wish to leave a monopoly of media coverage to TV and radio, and agreed to print newspapers as long as the press *"carries out with objectivity the role of providing information which is its duty."* In some cases print-workers insisted on changes in headlines or articles before they would print the paper. This happened mostly with the right-wing papers such as **'Le Figaro'** or **'La Nation'**.

With the Renault occupation, the Sorbonne occupiers immediately prepared to join the Renault strikers, and led by anarchist black and red banners, 4,000 students headed for the occupied factory. The state, bosses, unions and Communist Party were now faced with their greatest nightmare -- a worker-student alliance. Ten thousand police reservists were called up and frantic union officials locked the factory gates. The Communist Party urged their members to crush the revolt. They united with the government and bosses to craft a series of reforms, but once they turned to the factories they were jeered out of them by the workers.

The struggle itself and the activity to spread it was organised by self-governing mass assemblies and co-ordinated by action committees. The strikes were often run by assemblies as well. As Murray Bookchin argues, the *"hope [of the revolt] lay in the extension of self-management in all its forms -- the general assemblies and their administrative forms, the action committees, the factory strike committees -- to all*

areas of the economy, indeed to all areas of life itself." [Op. Cit., pp. 251-252] Within the assemblies, *"a fever of life gripped millions, a reworking of senses that people never thought they possessed."* [Op. Cit., p. 251] It was not a workers' strike or a student strike. It was a **peoples'** strike that cut across almost all class lines.

On May 24th, anarchists organised a demonstration. Thirty thousand marched towards the Palace de la Bastille. The police had the Ministries protected, using the usual devices of tear gas and batons, but the Bourse (Stock Exchange) was left unprotected and a number of demonstrators set fire to it.

It was at this stage that some left-wing groups lost their nerve. The Trotskyist JCR turned people back into the Latin Quarter. Other groups such as UNEF and Parti Socialiste Unifie (United Socialist Party) blocked the taking of the Ministries of Finance and Justice. Cohn-Bendit said of this incident *"As for us, we failed to realise how easy it would have been to sweep all these nobodies away. . . .It is now clear that if, on 25 May, Paris had woken to find the most important Ministries occupied, Gaullism would have caved in at once. . . ."* Cohn-Bendit was forced into exile later that very night.

As the street demonstrations grew and occupations continued, the state prepared to use overwhelming means to stop the revolt. Secretly, top generals readied 20,000 loyal troops for use on Paris. Police occupied communications centres like TV stations and Post Offices. By Monday, May 27th, the Government had guaranteed an increase of 35% in the industrial minimum wage and an all round-wage increase of 10%. The leaders of the CGT organised a march of 500,000 workers through the streets of Paris two days later. Paris was covered in posters calling for a *"Government of the People."* Unfortunately the majority still thought in terms of changing their rulers rather than taking control for themselves.

By June 5th most of the strikes were over and an air of what passes for normality within capitalism had rolled back over France. Any strikes which continued after this date were crushed in a military-style operation using armoured vehicles and guns. On June 7th, they made an assault on the Flins steelworks which started a four-day running battle which left one worker dead. Three days later, Renault strikers were gunned down by police, killing two. In isolation, those pockets of militancy stood no chance. On June 12th, demonstrations were banned, radical groups outlawed, and their members arrested. Under attack from all sides, with escalating state violence and trade union sell-outs, the General Strike and occupations crumbled.

So why did this revolt fail? Certainly not because "vanguard" Bolshevik parties were missing. It was infested with them. Fortunately, the traditional authoritarian left sects were isolated and outraged. Those involved in the revolt did not require a vanguard to tell them what to do, and the "workers' vanguards" frantically ran after the movement trying to catch up with it and control it.

No, it was the lack of independent, self-managed confederal organisations to co-ordinate struggle which resulted in occupations being isolated from each other. So divided, they fell. In addition, Murray Bookchin argues that *"an awareness among the workers that the factories had to be **worked**, not merely*

occupied or struck," was missing. [**Op. Cit.**, p. 269]

This awareness would have been encouraged by the existence of a strong anarchist movement before the revolt. The anti-authoritarian left, though very active, was too weak among striking workers, and so the idea of self-managed organisations and workers self-management was not widespread. However, the May-June revolt shows that events can change very rapidly. The working class, fused by the energy and bravado of the students, raised demands that could not be catered for within the confines of the existing system. The General Strike displays with beautiful clarity the potential power that lies in the hands of the working class. The mass assemblies and occupations give an excellent, if short-lived, example of anarchy in action and how anarchist ideas can quickly spread and be applied in practice.

J.7 What do anarchists mean by "*social revolution*"?

In anarchist theory, "*social revolution*" means far more than just revolution. For anarchists, a true revolution is far more than just a change in the political makeup, structure or form of a society. It must transform all aspects of a society -- political, economic, social, interpersonal relationships, sexual and so on -- and the individuals who comprise it. Indeed, these two transformations go hand in hand, complementing each other and supporting each other -- individuals, while transforming society, transform themselves in the process.

As Alexander Berkman put it, "*there are revolutions and revolutions. Some revolutions change only the governmental form by putting a new set of rulers in place of the old. These are political revolutions, and as such they are often met with little resistance. But a revolution that aims to abolish the entire system of wage slavery must also do away with the power of one class to oppress another. That is, it is not any more a mere change of rulers, of government, not a political revolution, but one that seeks to alter the whole character of society. That would be a **social** revolution.*" [ABC of Anarchism, p. 34]

It means two related things. Firstly, it means transforming all aspects of society and not just tinkering with certain aspects of the current system. Where political revolution means, in essence, changing bosses, social revolution means changing society. Thus social revolution signifies a change in the social, economic and cultural and sexual in a libertarian direction, a transformation in the way society is organised and run. Social revolution, in other words, does not aim to alter one form of subjection for another, but to do away with everything that can enslave and oppress the individual. Secondly, it means bringing about this fundamental change **directly** by the mass of people in society, rather than relying on political means of achieving this end, in the style of Marxist-Leninists and other authoritarian socialists. For anarchists, such an approach is a political revolution only and doomed to failure. Hence the "*actual, positive work of the social revolution must . . . be carried out by the toilers themselves, by the labouring people.*" [Alexander Berkman, **Op. Cit.**, p. 45]

That is not to say that an anarchist social revolution is not political in content -- far from it; it should be obvious to anyone reading this FAQ that there are considerable political theories at work within anarchism. What we **are** saying, however, is that anarchists do not seek to seize power and attempt, through control of law enforcement and the military (in the style of governments) to bring change about from the top-down. Rather, we seek to bring change upward from below, and in so doing, make such a revolution inevitable and not contingent on the machinations of a political vanguard. As Durruti argued, "*[w]e never believed that the revolution consisted of the seizure of power by a minority which would impose a dictatorship on the people . . . We want a revolution by and for the people. Without this no revolution is possible. It would be a Coup d'Etat, nothing more.*" [quoted by Abel Paz, **Durruti: The People Armed**, pp. 135-7]

Thus, for anarchists, a social revolution is a movement from below, of the oppressed and exploited struggling for their own freedom. Moreover, such a revolution does not appear as if by magic. Rather, it is the case that revolutions *"are not improvised. They are not made at will by individuals. They come about through the force of circumstance and are independent of any deliberate will or conspiracy."* [Michael Bakunin, quote by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 139] They are, in fact, a product of social evolution and of social struggle. As Malatesta reminds us:

"the oppressed masses . . . have never completely resigned themselves to oppression and poverty, and who today more than ever than ever show themselves thirsting for justice, freedom and wellbeing, are beginning to understand that they will not be able to achieve their emancipation except by union and solidarity with all the oppressed, with the exploited everywhere in the world. And they also understand that the indispensable condition for their emancipation which cannot be neglected is the possession of the means of production, of the land and of the instruments of labour." [**Anarchy**, p. 30]

Thus any social revolution proceeds from the daily struggles of working class people (just as anarchism does). It is not an event, rather it is a **process** -- a process which is occurring at this moment. Thus, for anarchists, a social revolution is not something in the future but an process which is occurring in the here and now. As German Anarchist Gustav Landauer put it:

"The State is not something that can be destroyed by a revolution, but it is a condition, a certain relationship between human beings, a mode of human behaviour; we destroy it by contracting other relationships, by behaving differently." [quoted by George Woodcock, **Anarchism**, p. 421]

This does not mean that anarchists do not recognise that a revolution will be marked by, say, insurrectionary events (such as a general strike, wide scale occupations of land, housing, workplaces, etc., actual insurrections and so on). Of course not, it means that we place these events in a process, within social movements and that they do not occur in isolation from history or the evolution of ideas and movements within society.

Berkman echoes this point when he argued that while *"a social revolution is one that entirely changes the foundation of society, its political, economic and social character,"* such a change *"must first take place in the ideas and opinions of the people, in the minds of men [and women]."* This means that *"the social revolution must be prepared. Prepared in these sense of furthering evolutionary process, of enlightening the people about the evils of present-day society and convincing them of the desirability and possibility, of the justice and practicability of a social life based on liberty."* [Alexander Berkman, **Op. Cit.**, p. 38] And such preparation would be the result of social struggle in the here and now, social struggle based on direct action, solidarity and self-managed organisations. While Berkman concentrates on the labour movement in his classic work, but his comments are applicable to all social movements:

"In the daily struggle of the proletariat such an organisation [a syndicalist union] would

be able to achieve victories about which the conservative union, as at present built, cannot even dream. . . . Such a union would soon become something more than a mere defender and protector of the worker. It would gain a vital realisation of the meaning of unity and consequent power, of labour solidarity. The factory and shop would serve as a training camp to develop the worker's understanding of his proper role in life, to cultivate his [or her] self-reliance and independence, teach him [or her] mutual help and co-operation, and make him [or her] conscious of his [or her] responsibility. He will learn to decide and act on his [or her] own judgement, not leaving it to leaders or politicians to attend to his [or her] affairs and look out for his [or her] welfare. . . He [or she] will grow to understand that present economic and social arrangements are wrong and criminal, and he [or she] will determine to change them. The shop committee and union will become the field of preparation for a new economic system, for a new social life." [Op. Cit., p. 59]

In other words, the struggle against authority, exploitation, oppression and domination in the here and now is the start of the social revolution. It is this daily struggle which creates free people and the organisations it generates *"bear . . . the living seed of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself."* [Michael Bakunin, **Bakunin On Anarchism**, p. 255] Hence Bakunin's comment that anarchists think socialism will be attained only *"by the development and organisation, not of the political but of the social organisation (and, by consequence, anti-political) power of the working masses as much in the towns as in the countryside."* [Michael Bakunin: **Selected Writings**, pp. 197-8] Such social power is expressed in economic and community organisations such as self-managed unions and workplace/community assemblies (see [section J.5](#)).

Anarchists try and follow the example of our Spanish comrades in the C.N.T. and F.A.I. who, when *"faced with the conventional opposition between reformism and revolution, they appear, in effect, to have put forward a third alternative, seeking to obtain immediate practical improvements through the actual development, in practice, of autonomous, libertarian forms of self-organisation."* [Nick Rider, *"The Practice of Direct Action: The Barcelona Rent Strike of 1931"*, in **For Anarchism**, pp. 79-105, David Goodway (ed.), p. 99] While doing this, anarchists must also *"beware of ourselves becoming less anarchist because the masses are not ready for anarchy."* [Malatesta, **Life and Ideas**, p. 162]

Therefore, revolution and anarchism is the product of struggle, a social process in which anarchist ideas spread and develop. However, *"[t]his does not mean. . . that to achieve anarchy we must wait till everyone becomes an anarchist. On the contrary. . . under present conditions only a small minority, favoured by specific circumstances, can manage to conceive what anarchy is. It would be wishful thinking to hope for a general conversion before a change actually took place in the kind of environment in which authoritarianism and privilege now flourish. It is precisely for this reason that [we] . . . need to organise for the bringing about of anarchy, or at any rate that degree of anarchy which could become gradually feasible, as soon as a sufficient amount of freedom has been won and a nucleus of anarchists somewhere exists that is both numerically strong enough and able to be self-sufficient and to spread its influence locally."* [Errico Malatesta, **The Anarchist Revolution**, pp. 83-4]

Thus anarchists influence the struggle, the revolutionary process by encouraging anarchistic tendencies within those who are not yet anarchists but are instinctively acting in a libertarian manner. Anarchists spread the anarchist message to those in struggle and support libertarian tendencies in it as far as they can. In this way, more and more people will become anarchists and anarchy will become increasingly possible. We discuss the role of anarchists in a social revolution in [section J.7.4](#) and will not do so now.

For anarchists, a social revolution is the end product of years of social struggle. It is marked by the transformation of a given society and the breaking down of all forms of oppression and the creation of new ways of living, new forms of self-managed organisation, a new attitude to live itself. Moreover, we do not wait for the future to introduce such transformations in our daily life. Rather, we try and create as much anarchistic tendencies in today's society as possible in the firm belief that in so doing we are pushing the creation of a free society nearer.

So anarchists, including revolutionary ones, try to make the world more libertarian and so bring us closer to freedom. Few anarchists think of anarchy as something in (or for) the distant future, rather it is something we try and create in the here and now by living and struggling in a libertarian manner. Once enough people do this, then a more extensive change towards anarchy (i.e. a revolution) is inevitable.

J.7.1 Are all anarchists revolutionaries?

No, far from it. While most anarchists do believe that a social revolution is required to create a free society, some reject the idea. This is because they think that revolutions are by their very nature violent and coercive and so are against anarchist principles. In the words of Proudhon (in reply to Marx):

*"Perhaps you still hold the opinion that no reform is possible without a helping **coup de main**, without what used to be called a revolution but which is quite simply a jolt. I confess that my most recent studies have led me to abandon this view, which I understand and would willingly discuss, since for a long time I held it myself. I do not think that this is what we need in order to succeed, and consequently we must not suggest **revolutionary** action as the means of social reform because this supposed means would simply be an appeal to force and to arbitrariness. In brief, it would be a contradiction."* [Selected Writings of Pierre-Joseph Proudhon, p. 151]

Also they point to the fact that the state is far better armed than the general population, better trained and (as history proves) more than willing to slaughter as many people as required to restore "order." In face of this power, they argue, revolution is doomed to failure.

Those opposed to revolution come from all tendencies of the movement. Traditionally, Individualist anarchists are usually against the idea of revolution, as was Proudhon. However, with the failure of the Russian Revolution and the defeat of the C.N.T.-F.A.I. in Spain, some social anarchists have rethought support for revolution. Rather than seeing revolution as the key way of creating a free society they

consider it doomed to failure as the state is too strong a force to be overcome by insurrection. Instead of revolution, such anarchists support the creation of alternatives, such as co-operatives, mutual banks and so on, which will help transform capitalism into libertarian socialism. Such alternative building, combined with civil disobedience and non-payment of taxes, is seen as the best way to creating anarchy.

Most revolutionary anarchists agree on the importance of building libertarian alternatives in the here and now. They would agree with Bakunin when he argued that such organisations as libertarian unions, co-operatives and so on are essential *"so that when the Revolution, brought about by the natural force of circumstances, breaks out, there will be a real force at hand which knows what to do and by virtue thereof is capable of taking the Revolution into its own hands and imparting to it a direction salutary for the people: a serious, international organisation of worker's organisations of all countries, capable of replacing the departing political world of the States and the bourgeoisie."* [**The Political Philosophy of Bakunin**, p. 323] Thus, for most anarchists, the difference of evolution and revolution is one of little import -- anarchists should support libertarian tendencies within society as they support revolutionary situations when they occur.

Moreover, revolutionary anarchists argue that, ultimately, capitalism cannot be reformed away nor will the state wither away under the onslaught of libertarian institutions and attitudes. They do not consider it possible to *"burn Property little by little"* via *"some system of economics"* which will *"put back into society . . . the wealth which has been taken out of society by another system of economics"*, to use Proudhon's expression. [**Op. Cit.**, p. 151] Therefore, libertarian tendencies within capitalism may make life better under that system but they cannot, ultimately, get rid of it. This implies a social revolution, they argue. Such anarchists agree with Alexander Berkman when he writes:

"This is no record of any government or authority, of any group or class in power having given up its mastery voluntarily. In every instance it required the use of force, or at least the threat of it." [**ABC of Anarchism**, p. 32]

Even the end of State capitalism ("Communism") in the Eastern Block does not contradict this argument. Without the mass action of the population, the regime would have continued. Faced with a massive popular revolt, the Commissars realised that it was better to renounce power than have it taken from them. Thus mass rebellion, the start of any true revolution, was required.

Moreover, the argument that the state is too powerful to be defeated has been proven wrong time and time again. Every revolution has defeated a military machine which previously been claimed to be unbeatable. For example, the people armed in Spain defeated the military in two-thirds of the country. Ultimately, the power of the state rests on its troops following orders. If those troops rebel, then the state is powerless. That is why anarchists have always produced anti-militarist propaganda urging troops to join strikers and other people in revolt. Revolutionary anarchists, therefore, argue that any state can be defeated, if the circumstances are right and the work of anarchists is to encourage those circumstances.

In addition, revolutionary anarchists argue that even if anarchists did not support revolutionary change,

this would not stop such events happening. Revolutions are the product of developments in human society and occur whether we desire them or not. They start with small rebellions, small acts of refusal by individuals, groups, workplaces, communities and grow. These acts of rebellion are inevitable in any hierarchical society, as is their spreading wider and wider. Revolutionary anarchists argue that anarchists must, by the nature of our politics and our desire for freedom, support such acts of rebellion and, ultimately, social revolution. Not to do so means ignoring people in struggle against our common enemy and ignoring the means by which anarchists ideas and attitudes will grow within existing society. Thus Alexander Berkman is right when he wrote:

"That is why it is no prophecy to foresee that some day it must come to decisive struggle between the masters of life and the dispossessed masses.

"As a matter of fact, that struggle is going on all the time. There is a continuous warfare between capital and labour. That warfare generally proceeds within so-called legal forms. But even these erupt now and then in violence, as during strikes and lockouts, because the armed fist of government is always at the service of the masters, and that fist gets into action the moment capital feels its profits threatened: then it drops the mask of 'mutual interests' and 'partnership' with labour and resorts to the final argument of every master, to coercion and force.

"It is therefore certain that government and capital will not allow themselves to be quietly abolished if they can help it; nor will they miraculously 'disappear' of themselves, as some people pretend to believe. It will require a revolution to get rid of them." [Op. Cit., p. 33]

However, all anarchists are agreed that any revolution should be as non-violent as possible. Violence is the tool of oppression and, for anarchists, violence is only legitimate as a means of self-defence against authority. Therefore revolutionary anarchists do not seek "violent revolution" -- they are just aware that when people refuse to kow-tow to authority then that authority will use violence against them. This use of violence has been directed against non-violent forms of direct action and so those anarchists who reject revolution will not avoid state violence directed against.

Nor do revolutionary anarchists think that revolution is in contradiction to the principles of anarchism. As Malatesta put it, "*[f]or two people to live in peace they must both want peace; if one insists on using force to oblige the other to work for him and serve him, then the other, if he wishes to retain his dignity as a man and not be reduced to abject slavery, will be obliged, in spite of his love of peace, to resist force with adequate means.*" [Malatesta, **Life and Ideas**, p. 54] Under any hierarchical system, those in authority do not leave those subject to them in peace. The boss does not treat his/her workers as equals, working together by free agreement without differences in power. Rather, the boss orders the worker about and uses the threat of sanctions to get compliance. Similarly with the state. Under these conditions, revolution cannot be authoritarian -- for it is not authoritarian to destroy authority! To quote Rudolf Rocker:

"We . . . know that a revolution cannot be made with rosewater. And we know, too, that the owning classes will never yield up their privileges spontaneously. On the day of victorious revolution the workers will have to impose their will on the present owners of the soil, of the subsoil and of the means of production, which cannot be done -- let us be clear on this -- without the workers taking the capital of society into their own hands, and, above all, without their having demolished the authoritarian structure which is, and will continue to be, the fortress keeping the masses of the people under dominion. Such an action is, without doubt, an act of liberation; a proclamation of social justice; the very essence of social revolution, which has nothing in common with the utterly bourgeois principle of dictatorship." [Anarchism and Sovietism]

Errico Malatesta comments reflect well the position of revolutionary anarchists with regards to the use of force:

"We neither seek to impose anything by force nor do we wish to submit to a violent imposition.

"We intend to use force against government, because it is by force that we are kept in subjection by government.

"We intend to expropriate the owners of property because it is by force that they withhold the raw materials and wealth, which is the fruit of human labour, and use it to oblige others to work in their interest.

"We shall resist with force whoever would wish by force, to retain or regain the means to impose his will and exploit the labour of others. . .

"With the exception of these cases, in which the use of violence is justified as a defence against force, we are always against violence, and for self-determination." [Op. Cit., p. 56]

This is the reason why most anarchists are revolutionaries. They do not think it against the principles of anarchism and consider it the only real means of creating a free society -- a society in which the far greater, and permanent, violence which keeps the majority of humanity in servitude can be ended once and for all.

J.7.2 Is social revolution possible?

One objection to the possibility of social revolution is based on what we might call "the paradox of social change." This argument goes as follows: authoritarian institutions reward and select people with an authoritarian type of personality for the most influential positions in society; such types of people have both (a) an interest in perpetuating authoritarian institutions (from which they benefit) and (b) the

power to perpetuate them; hence they create a self-sustaining and tightly closed system which is virtually impervious to the influence of non-authoritarian types. Therefore, institutional change presupposes individual change, which presupposes institutional change, and so on. Unless it can be shown, then, that institutions and human psychology can both be changed **at the same time**, hope for a genuine social revolution (instead of just another rotation of elites) appears to be unrealistic.

Connected with this problem is the fact that the psychological root of the hierarchical society is addiction to power -- over other people, over nature, over the body and human emotions -- and that this addiction is highly contagious. That is, as soon as any group of people anywhere in the world becomes addicted to power, those within range of their aggression also feel compelled to embrace the structures of power, including centralised control over the use of deadly force, in order to protect themselves from their neighbours. But once these structures of power are adopted, authoritarian institutions become self-perpetuating.

In this situation, fear becomes the underlying emotion behind the conservatism, conformity, and mental inertia of the majority, who in that state become vulnerable to the self-serving propaganda of authoritarian elites alleging the necessity of the state, strong leaders, militarism, "law and order," capitalist bosses, etc. Hence the simultaneous transformation of institutions and individual psychology becomes even more difficult to imagine.

Serious as these obstacles may be, they do not warrant despair. To see why, let's note first that "paradigm shifts" in science have not generally derived from new developments in one field alone but from a convergence of cumulative developments in several different fields at once. For example, the Einsteinian revolution which resulted in the overthrow of the Newtonian paradigm was due to simultaneous progress in mathematics, physics, astronomy and other sciences that all influenced, reacted on, and cross-fertilised each other (see Thomas Kuhn, **The Structure of Scientific Revolutions**, 1962). Similarly, if there is going to be a "paradigm shift" in the social realm, i.e. from hierarchical to non-hierarchical institutions, it is likely to emerge from the convergence of a number of different socio-economic and political developments at the same time. We have discussed these developments in [section J.4](#) and so will not repeat ourselves here. In a hierarchical society, the oppression which authority produces resistance, and so hope. The "*instinct for freedom*" cannot be repressed forever.

That is why anarchists stress the importance of direct action and self-help (see sections [J.2](#) and [J.4](#)). By the very process of struggle, by practising self-management, direct action, solidarity people create the necessary "paradigm shift" in both themselves and society as a whole. In the words of Malatesta, "*[o]nly freedom or the struggle for freedom can be the school for freedom.*" [**Life and Ideas**, p. 59] Thus the struggle against authority is the school of anarchy -- it encourages libertarian tendencies in society and the transformation of individuals into anarchists. In a revolutionary situation, this process is accelerated. It is worth quoting Murray Bookchin at length on this subject:

"Revolutions are profoundly educational processes, indeed veritable cauldrons in which all kinds of conflicting ideas and tendencies are sifted out in the minds of a revolutionary

people. . .

"Individuals who enter into a revolutionary process are by no means the same after the revolution as they were before it began. Those who encounter a modicum of success in revolutionary times learn more within a span of a few weeks or months than they might have learned over their lifetime in non-revolutionary times. Conventional ideas fall away with extraordinary rapidity; values and prejudices that were centuries in the making disappear almost overnight. Strikingly innovative ideas are quickly adopted, tested, and, where necessary, discarded. Even newer ideas, often flagrantly radical in character, are adopted with an elan that frightens ruling elites -- however radical the latter may profess to be -- and they soon become deeply rooted in the popular consciousness. Authorities hallowed by age-old tradition are suddenly divested of their prestige, legitimacy, and power to govern. . .

*"So tumultuous socially and psychologically are revolutions in general that they constitute a standing challenge to ideologues, including sociobiologists, who assert that human behaviour is fixed and human nature predetermined. Revolutionary changes reveal a remarkable flexibility in 'human nature,' yet few psychologists have elected to study the social and psychological tumult of revolution as well as the institutional changes it so often produces. Thus much must be said with fervent emphasis: **to continue to judge the behaviour of a people during and after a revolution by the same standards one judged them by beforehand is completely myopic.***

"I wish to argue [like all anarchists] that the capacity of a revolution to produce far-reaching ideological and moral changes in a people stems primarily from the opportunity it affords ordinary, indeed oppressed, people to exercise popular self-management -- to enter directly, rapidly, and exhilaratingly into control over most aspects of their social and personal lives. To the extent that an insurrectionary people takes over the reins of power from the formerly hallowed elites who oppressed them and begins to restructure society along radically populist lines, individuals grow aware of latent powers within themselves that nourish their previously suppressed creativity, sense of self-worth, and solidarity. They learn that society is neither immutable nor sanctified, as inflexible custom had previously taught them; rather, it is malleable and subject, within certain limits, to change according to human will and desire." [The Third Revolution, vol. 1, pp. 6-7]

So, social revolutions are possible. Anarchists anticipate successful co-operation within certain circumstance. People who are in the habit of taking orders from bosses are not capable of creating a new society. Tendencies towards freedom, self-management, co-operation and solidarity are not simply an act of ethical will which overcomes the competitive and hierarchical behaviour capitalism generates within those who live in it. Capitalism is, as Malatesta argued, based on competition -- and this includes the working class. Thus conflict is endemic to working class life under capitalism. However, **co-operation** is stimulated within our class by our struggles to survive in and resist the system. This tendency for co-operation generated by struggle against capitalism also produces the habits required for

a free society -- by struggling to change the world (even a small part of it), people also change themselves. Direct action produces empowered and self-reliant people who can manage their own affairs themselves. It is on the liberating effects of struggle, the tendencies towards individual and collective self-management and direct action it generates, the needs and feelings for solidarity and creative solutions to pressing problems it produces that anarchists base their positive answer on whether social revolution is possible. History has shown that we are right. It will do so again.

J.7.3 Doesn't revolution mean violence?

While many try and paint revolutions (and anarchists) as being violent by their very nature, the social revolution desired by anarchists is essentially non-violent. This is because, to quote Bakunin, "*[i]n order to launch a radical revolution, it is . . . necessary to attack positions and things and to destroy [the institution of] property and the State, but there will be no need to destroy men and to condemn ourselves to the inevitable reaction which is unfailingly produced in every society by the slaughter of men.*" [Michael Bakunin: Selected Writings, pp. 168-9]

As Bakunin noted elsewhere, the end of property is also non-violent:

*"How to smash the tyranny of capital? Destroy capital? But that would be to destroy all the riches accumulated on earth, all primary materials, all the instruments of labour, all the means of labour. . . Thus capital cannot and must not be destroyed. It must be preserved. . . there is but a single solution -- **the intimate and complete union of capital and labour** . . . the workers must obtain not individual but **collective** property in capital . . . the collective property of capital . . . [is] the absolutely necessary conditions for of the emancipation of labour and of the workers."* [The Basic Bakunin, pp. 90-1]

The essentially non-violent nature of anarchist ideas of social revolution can be seen from the Seattle General Strike of 1919. Here is a quote from the Mayor of Seattle (we do not think we need to say that he was not on the side of the strikers):

"The so-called sympathetic Seattle strike was an attempted revolution. That there was no violence does not alter the fact . . . The intent, openly and covertly announced, was for the overthrow of the industrial system; here first, then everywhere . . . True, there were no flashing guns, no bombs, no killings. Revolution, I repeat, doesn't need violence. The general strike, as practised in Seattle, is of itself the weapon of revolution, all the more dangerous because quiet. To succeed, it must suspend everything; stop the entire life stream of a community . . . That is to say, it puts the government out of operation. And that is all there is to revolt -- no matter how achieved." [quoted by Howard Zinn, **A People's History of the United States**, pp. 370-1]

If the strikers had occupied their workplaces and local communities can created popular assemblies then the attempted revolution would have become an actual one without any use of violence at all. This

indicates the strength of ordinary people and the relative weakness of government and capitalism -- they only work when they can force people to respect them.

In Italy, a year latter, the occupations of the factories and land started. As Malatesta pointed out, "*in Umanita Nova [the daily anarchist newspaper] we . . . said that if the movement spread to all sectors of industry, that is workers and peasants followed the example of the metallurgists, of getting rid of the bosses and taking over the means of production, the revolution would succeed without shedding a single drop of blood.*" Thus the "*occupation of the factories and the land suited perfectly our programme of action.*" [**Life and Ideas**, p. 135]

Therefore the notion that a social revolution is necessarily violent is a false one. For anarchists, social revolution is essentially an act of self-liberation (of both the individuals involved and society as a whole). It has nothing to do with violence, quite the reverse, as anarchists see it as the means to end the rule and use of violence in society. Therefore anarchists hope that any revolution is essentially non-violent, with any violence being defensive in nature.

Of course, many revolutions are marked by violence. However, as Alexander Berkman argues, this is not the aim of anarchism or the revolution and has far more to do with previous repression and domination than anarchist ideas:

"We know that revolution begins with street disturbances and outbreaks; it is the initial phase which involves force and violence. But that is merely the spectacular prologue of the real revolution. The age long misery and indignity suffered by the masses burst into disorder and tumult, the humiliation and injustice meekly borne for decades find vents in facts of fury and destruction. That is inevitable, and it is solely the master class which is responsible for this preliminary character of revolution. For it is even more true socially than individually that 'whoever sows the wind will reap the whirlwind;' the greater the oppression and wretchedness to which the masses had been made to submit, the fiercer the rage [of] the social storm. All history proves it . . ." [**ABC of Anarchism**, p. 50]

He also argues that "*[m]ost people have very confused notions about revolution. To them it means just fighting, smashing things, destroying. It is the same as if rolling up your sleeves for work should be considered the work itself that you have to do. The fighting bit of the revolution is merely the rolling up of your sleeves.*" The task of the revolution is the "*destruction of the existing conditions*" and "**conditions** are not destroyed [by] breaking and smashing things. You can't destroy wage slavery by wrecking the machinery in the mills and factories . . . You won't destroy government by setting fire to the White House." He correctly points out that to think of revolution "*in terms of violence and destruction is to misinterpret and falsify the whole idea of it. In practical application such a conception is bound to lead to disastrous results.*" [**Op. Cit.**, pp. 40-1]

Thus when anarchists like Bakunin speak of revolution as "destruction" they mean that the idea of authority and obedience must be destroyed, along with the institutions that are based on such ideas. We

do not mean, as can be clearly seen, the destruction of people or possessions. Nor do we imply the glorification of violence -- quite the reserve, as anarchists seek to limit violence to that required for self-defence against oppression and authority.

Therefore a social revolution **may** involve some violence. It may also mean no-violence at all. It depends on the revolution and how widely anarchist ideas are spread. One thing is sure, for anarchists social revolution is **not** synonymous violence. Indeed, violence usually occurs when the ruling class resists the action of the oppressed -- that is, when those in authority act to protect their social position.

The wealthy and their state will do anything in their power to prevent having a large enough percentage of anarchists in the population to simply "ignore" the government and property out of existence. If things got that far, the government would suspend the legal rights, elections and round up influential subversives. The question is, what do anarchists do in response to these actions? If anarchists are in the majority or near it, then defensive violence would likely succeed. For example, "*the people armed*" crushed the fascist coup of July 19th, 1936 in Spain and resulted in one of the most important experiments in anarchism the world has ever seen. This should be contrasted with the aftermath of the factory occupations in Italy in 1920 and the fascist terror which crushed the labour movement. In other words, you cannot just ignore the state even if the majority are acting, you need to abolish it and organise self-defence against attempts to re-impose it or capitalism.

We discuss the question of self-defence and the protection of the revolution in [section J.7.6](#).

J.7.4 What would a social revolution involve?

Social revolution necessitates putting anarchist ideas into daily practice. Therefore it implies that direct action, solidarity and self-management become increasingly the dominant form of living in a society. It implies the transformation of society from top to bottom. We can do no better than quote Errico Malatesta on what revolution means:

"The Revolution is the creation of new living institutions, new groupings, new social relationships; it is the destruction of privileges and monopolies; it is the new spirit of justice, of brotherhood, of freedom which must renew the whole of social life, raise the moral level and the material conditions of the masses by calling on them to provide, through their direct and conscious action, for their own futures. Revolution is the organisation of all public services by those who in them in their own interest as well as the public's; Revolution is the destruction of all of coercive ties; it is the autonomy of groups, of communes, of regions; Revolution is the free federation brought about by a desire for brotherhood, by individual and collective interests, by the needs of production and defence; Revolution is the constitution of innumerable free groupings based on ideas, wishes, and tastes of all kinds that exist among the people; Revolution is the forming and disbanding of thousands of representative, district, communal, regional, national bodies which, without having any legislative power, serve to make known and to co-ordinate the

desires and interests of people near and far and which act through information, advice and example. Revolution is freedom proved in the crucible of facts -- and lasts so long as freedom lasts. . ." [Life and Ideas, p. 153]

This, of course, presents a somewhat wide vision of the revolutionary process. We will need to give some more concrete examples of what a social revolution would involve. However, before so doing, we stress that these are purely examples drawn from previous revolutions and are not written in stone. Every revolution creates its own forms of organisation and struggle. The next one will be no different. Just as we argued in [section I](#), an anarchist revolution will create its own forms of freedom, forms which may share aspects with previous forms but which are unique to themselves. All we do here is give a rough overview of what we expect (based on previous revolutions) to see occur in a social revolution. We are not predicting the future. As Kropotkin put it:

*"A question which we are often asked is: 'How will you organise the future society on Anarchist principles?' If the question were put to . . . someone who fancies that a group of men [or women] is able to organise society as they like, it would seem natural. But in the ears of an Anarchist, it sounds very strangely, and the only answer we can give to it is: 'We cannot organise you. It will depend upon **you** what sort of organisation you choose.'"* [Act for Yourselves, p. 32]

And organise themselves they have. In each social revolution, the oppressed have organised themselves into many different self-managed organisations. These bodies include the Sections during the Great French Revolution, the workers councils ("soviets" or "rate") during the Russian and German revolutions, the industrial and rural collectives during the Spanish Revolution, the workers councils during the Hungarian revolution of 1956, assemblies and action committees during the 1968 revolt in France, and so on. These bodies were hardly uniform in nature and some were more anarchistic than others, but the tendency towards self-management and federation existing in them all. This tendency towards anarchistic solutions and organisation is not unsurprising, for, as Nestor Makhno argued, "*[i]n carrying through the revolution, under the impulsion of the anarchism that is innate in them, the masses of humanity search for free associations. Free assemblies always command their sympathy. The revolutionary anarchist must help them to formulate this approach as best they can.*" [The Struggle Against the State and Other Essays, p. 85]

In addition, we must stress that we are discussing an **anarchist** social revolution in this section. As we noted in [section I.2.2](#), anarchists recognise that any revolution will take on different forms in different areas and develop in different ways and at different speeds. We leave it up to others to describe their vision of revolution (for Marxists, the creation of a "workers' state" and the seizure of power by the "proletarian" vanguard or party, and so on).

So what would a libertarian social revolution involve? Firstly, a revolution *"it is not the work of one day. It means a whole period, mostly lasting for several years, during which the country is in a state of effervescence; when thousands of formerly indifferent spectators take a lively part in public affairs . .*

[and] criticises and repudiates the institutions which are a hindrance to free development; when it boldly enters upon problems which formerly seemed insoluble." [Peter Kropotkin, **Op. Cit.**, pp. 25-6] Thus, it would be a **process** in which revolutionary attitudes, ideas, actions and organisations spread in society until the existing system is overthrown and a new one takes its place. It does not come overnight. Rather it is an accumulative development, marked by specific events of course, but fundamentally it goes on in the fabric of society. For example, the **real** Russian revolution went on during the period between the 1917 February and October insurrections when workers took over their workplaces, peasants seized their land and new forms of social life (soviets, factory committees, co-operatives, etc.) were formed and people lost their previous submissive attitudes to authority by using direct action to change their lives for the better (see **The Unknown Revolution** by Voline for more details and evidence of this revolutionary process in action). Similarly, the Spanish Revolution occurred after the 19th of July, 1936, when workers again took over their workplaces, peasants formed collectives and militias were organised to fight fascism (see **Collectives in the Spanish Revolution** by Gaston Leval for details).

Secondly, *"there **must** be a rapid modification of outgrown economical and political institutions, an overthrow of the injustices accumulated by centuries past, a displacement of wealth and political power."* [**Op. Cit.**, p. 25]

This aspect is the key one. Without the abolition of the state and capitalism, not real revolution has taken place. As Bakunin argued, *"the program of social revolution" is "the abolition of all exploitation and all political or juridical as well as governmental and bureaucratic oppression, in other words, to the abolition of all classes through the equalisation of economic conditions, and the abolition of their last buttress, the state."* That is, *"the total and definitive liberation of the proletariat from economic exploitation and state oppression."* [**Statism and Anarchy**, pp. 48-9]

We should stress here that, regardless of what Marxists may say, anarchists see the destruction of capitalism occurring **at the same time as** the destruction of the state. We do not aim to abolish the state first, then capitalism as Engels asserted we did. This perspective of a simultaneous political and economic revolution is clearly seen when Bakunin wrote that a city in revolt would *"naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour and every kind of capital and building; armed and organised by streets and **quartiers**, they will form the revolutionary federation of all the **quartiers**, the federative commune. . . All . . .the revolutionary communes will then send representatives to organise the necessary services and arrangements for production and exchange . . . and to organise common defence against the enemies of the Revolution."* [**Michael Bakunin: Selected Writings**, p. 179]

As can be seen from Bakunin's comments just quoted that an essential part of a social revolution is the *"expropriation of landowners and capitalists for the benefit of all."* This would be done by workers occupying their workplaces and placing them under workers' self-management. Individual self-managed workplaces would then federate on a local and industrial basis into workers' councils to co-ordinate joint activity, discuss common interests and issues as well as ensuring common ownership and universalising

self-management. *"We must push the workers to take possession of the factories, to federate among themselves and work for the community, and similarly the peasants should take over the land and the produce usurped by the landlords, and come to an agreement with the industrial workers on the necessary exchange of goods."* [Errico Malatesta, **Op. Cit.**, p. 198 and p. 165]

In this way capitalism is replaced by new economic system based on self-managed work. The end of hierarchy in the economy, in other words. These workplace assemblies and local, regional, etc., federations would start to organise production to meet human needs rather than capitalist profit. While most anarchists would like to see the introduction of communistic relations begin as quickly as possible in such an economy, most are realistic enough to recognise that tendencies towards libertarian communism will be depend on local conditions. As Malatesta argued:

"It is then that graduation really comes into operation. We shall have to study all the practical problems of life: production, exchange, the means of communication, relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way; relations between town and country, the utilisation for the benefit of everyone of all natural resources of the different regions [and so on] . . . And in every problem [anarchists] should prefer the solutions which not only are economically superior but which satisfy the need for justice and freedom and leave the way open for future improvements, which other solutions might not." [**Op. Cit.**, p. 173]

No central government could organise such a transformation. No centralised body could comprehend the changes required and decide between the possibilities available to those involved. Hence the very complexity of life, and the needs of social living, will push a social revolution towards anarchism. *"Unavoidably,"* argued Kropotkin, *"the Anarchist system of organisation -- free local action and free grouping -- will come into play."* [**Op. Cit.**, p. 72] Without this local action and the free agreement between local groups to co-ordinate activity, a revolution would be dead in the water and fit only to produce a new bureaucratic class structure, as the experience of the Russian Revolution proves. Unless the economy is transformed from the bottom up by those who work within it, socialism is impossible. If it is re-organised from the top-down by a centralised body all that will be achieved is state capitalism and rule by bureaucrats instead of capitalists.

Therefore, the key economic aspect of a social revolution is the end of capitalist oppression by the direct action of the workers themselves and their re-organisation of their work and the economy by their own actions, organisations and initiative from the bottom-up. As Malatesta argued:

"To destroy radically this oppression without any danger of it re-emerging, all people must be convinced of their right to the means of production, and be prepared to exercise this basic right by expropriating the landowners, the industrialists and financiers, and putting all social wealth at the disposal of the people." [**Op. Cit.**, p. 167]

However, the economic transformation is but part of the picture. As Kropotkin argued, *"throughout history we see that each change in the economic relations of a community is accompanied by a corresponding change in what may be called political organisation . . . Thus, too, it will be with Socialism. If it contemplates a new departure in economics it **must** be prepared for a new departure in what is called political organisation."* [Op. Cit., p. 39] Thus the anarchist social revolution also aims to abolish the state and create a confederation of self-governing communes to ensure its final elimination. To really destroy something you must replace it with something better. Hence anarchism will destroy the state by a confederation of self-managed, free communities (or communes).

This destruction of the state is essential. This is because *"those workers who want to free themselves, or even only to effectively improve their conditions, will be forced to defend themselves from the government . . . which by legalising the right to property and protecting it with brute force, constitutes a barrier to human progress, which must be beaten down . . . if one does not wish to remain indefinitely under present conditions or even worse."* Therefore, *"[f]rom the economic struggle one must pass to the political struggle, that is to the struggle against government."* [Malatesta, Op. Cit., p. 195]

Thus a social revolution will have to destroy the state bureaucracy and the states forces of violence and coercion (the police, armed forces, intelligence agencies, and so on). If this is not done then the state will come back and crush the revolution. Such a destruction of the state does not involve violence against individuals, but rather the end of hierarchical organisations, positions and institutions. It would involve, for example, the disbanding of the police, army, navy, state officialdom etc. and the transformation of police stations, army and naval bases, state bureaucracy's offices into something more useful (or, as in the case of prisons, their destruction). Town halls would be occupied and used by community and industrial groups, for example. Mayors' offices could be turned into creches, for example. Police stations, if they have not been destroyed, could, perhaps, be turned into storage centres for goods. In William Morris' utopian novel, **News from Nowhere**, the Houses of Parliament were turned into a manure storage facility. And so on. Those who used to work in such occupations would be asked to pursue a more fruitful way of life or leave the community. In this way, all harmful and useless institutions would be destroyed or transformed into something useful and of benefit to society.

In addition, as well as the transformation/destruction of the buildings associated with the old state, the decision making process for the community previously usurped by the state would come back into the hands of the people. Alternative, self-managed organisations would be created in every community to manage community affairs. From these community assemblies, confederations would spring up to co-ordinate joint activities and interests. These neighbourhood assemblies and confederations would be means by which power would be dissolved in society and government finally eliminated in favour of freedom (both individual and collective).

Ultimately, anarchism means creating positive alternatives to existing institutions which provide some useful function. For example, we propose self-management as an alternative to capitalist production. We propose self-governing communes to organise social life instead of the state. *"One only destroys, and effectively and permanently,"* argued Malatesta, *"that which one replaces by something else; and to put off to a later date the solution of problems which present themselves with the urgency of necessity,*

would be to give time to the institutions one is intending to abolish to recover from the shock and reassert themselves, perhaps under other names, but certainly with the same structure." [Op. Cit., p. 159] This was the failure of the Spanish Revolution, which ignored the state rather than abolish it via new, self-managed organisations (see [section I.8](#)).

Hence a social revolution would see the "[o]rganisation of social life by means of free association and federations of producers and consumers, created and modified according to the wishes of their members, guided by science and experience, and free from any kind of imposition which does not spring from natural needs, to which everyone, convinced by a feeling of overriding necessity, voluntarily submits." [Errico Malatesta, **Life and Ideas**, p. 184]

These organisations, we must stress, are usually products of the revolution and the revolutionary process itself:

*"Assembly and community must arise from within the revolutionary process itself; indeed, the revolutionary process must **be** the formation of assembly and community, and with it, the destruction of power. Assembly and community must become 'fighting words,' not distinct panaceas. They must be created as **modes of struggle** against existing society . . . The future assemblies of people in the block, the neighbourhood or the district -- the revolutionary sections to come -- will stand on a higher social level than all the present-day committees, syndicates, parties and clubs adorned by the most resounding 'revolutionary' titles. They will be the living nuclei of utopia in the decomposing body of bourgeois society" In this way, the "specific gravity of society . . . [will] be shifted to its base -- the armed people in permanent assembly." [Post-Scarcity Anarchism, pp. 167-8 and pp. 168-9]*

Such organisations are required because, in the words of Murray Bookchin, "[f]reedom has its forms . . . a liberatory revolution always poses the question of what social forms will replace existing ones. At one point or another, a revolutionary people must deal with how it will manage the land and the factories from which it requires the means of life. It must deal with the manner in which it will arrive at decisions that affect the community as a whole. Thus if revolutionary thought is to be taken at all seriously, it must speak directly to the problems and forms of social management." [Op. Cit., p. 143] If this is not done, capitalism and the state will not be destroyed and the social revolution will fail. Only by destroying hierarchical power by abolishing state and capitalism by self-managed organisations can individuals free themselves and society.

As well as these economic and political changes, there would be other changes as well -- far too many to chronicle here. For example, "[w]e will see to it that all empty and under-occupied houses are used so that no one will be without a roof over his [or her] head. We will hasten to abolish banks and title deeds and all that represents and guarantees the power of the State and capitalist privilege. And we will try to reorganise things in such a way that it will be impossible for bourgeois society to be reconstituted." [Malatesta, **Op. Cit.**, p. 165] Similarly, free associations will spring up on a whole range

of issues and for a whole range of interests and needs. Social life will become transformed, as will many aspects of personal life and personal relationships. We cannot say in which way, but there will be a general libertarian movement in all aspects of life as women resist and overcome sexism, gays resist and end homophobia, the young will expect to be treated as individuals, not property, and so on.

Society will become more diverse, open, free and libertarian in nature. And, hopefully, it and the struggle that creates it will be **fun** -- anarchism is about making life worth living and so any struggle must reflect that. The use of fun in the struggle is important. There is no incongruity in conducting serious business and having fun. We are sure this will piss off the "serious" Left no end. The aim of revolution is to emancipate **individuals** not abstractions like "the proletariat," "society," "history" and so on. And having fun is part and parcel of that liberation. As Emma Goldman said, *"If I can't dance, it's not my revolution."* Revolutions should be *"festivals of the oppressed"* -- we cannot *"resolve the anarchic, intoxicating phase that opens all the great revolutions of history merely into an expression of class interest and the opportunity to redistribute social wealth."* [Murray Bookchin, **Op. Cit.**, p. 277f]

Therefore a social revolution involves a transformation of society from the bottom up by the creative action of working class people. This transformation would be conducted through self-managed organisations which will be the basis for abolishing hierarchy, state and capitalism. *"There can be no separation of the revolutionary process from the revolutionary goal. A society based on self-administration must be achieved by means of self-administration. . . . If we define 'power' as the power of man over man, power can only be destroyed by the very process in which man acquires power over his own life and in which he not only 'discovers' himself, but, more meaningfully, formulates his selfhood in all its social dimensions."* [Murray Bookchin, **Op. Cit.**, p. 167]

J.7.5 What is the role of anarchists in a social revolution?

All the great social revolutions have been spontaneous. Indeed, it is cliché that the revolutionaries are usually the most surprised when a revolution breaks out. Nor do anarchists assume that a revolution will initially be libertarian in nature. All we assume is that there will be libertarian tendencies which anarchists work within and try to strengthen. Therefore the role of anarchists and anarchist organisations is to try and push a revolution towards a social revolution by encouraging the tendencies we discussed in the [last section](#) and by arguing for anarchist ideas and solutions. In the words of Vernon Richards:

"We do not for one moment assume that all social revolutions are necessarily anarchist. But whatever form the revolution against authority takes, the role of anarchists is clear: that of inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority." [**Lessons of the Spanish Revolution**, p. 44]

For anarchists, their role in a social revolution is clear. They try to spread anarchist ideas and encourage autonomous organisation and activity by the oppressed. For example, during the Russian Revolution

anarchists and anarcho-syndicalists played a key role in the factory committee movement for workers' self-management. They combated Bolshevik attempts to substitute state control for workers' self-management and encouraged workplace occupations and federations of factory committees (see Maurice Brinton's **The Bolsheviks and Workers' Control** for a good introduction to the movement for workers' self-management during the Russian Revolution and Bolshevik hostility to it). Similarly, they supported the soviets (councils elected by workers in their workplaces) but opposed their transformation from revolutionary bodies into state organs (and so little more than organs of the Communist Party and so the enemies of self-management). The anarchists tried to *"work for their conversion from centres of authority and decrees into non-authoritarian centres, regulating and keeping things in order but not suppressing the freedom and independence of local workers' organisations. They must become centres which link together these autonomous organisations."* [G. P. Maksimov in Paul Avrich (ed.) **The Anarchists in the Russian Revolution**, p. 105]

Therefore, the anarchist role, as Murray Bookchin puts it, is to *"preserve and extend the anarchic phase that opens all the great social revolutions"* by working *"within the framework of the forms created by the revolution, not within the forms created by the party. What this means is that their commitment is to the revolutionary organs of self-management . . . to the social forms, not the political forms. Anarcho-communists [and other revolutionary anarchists] seek to persuade the factory committees, assemblies or soviets to make themselves into genuine organs of popular self-management, not to dominate them, manipulate them, or hitch them to an all-knowing political party."* [**Post-Scarcity Anarchism**, p. 215 and p. 217]

Equally as important, *"is that the people, all people, should lose their sheeplike instincts and habits with which their minds have been inculcated by an age-long slavery, and that they should learn to think and act freely. It is to this great task of spiritual liberation that anarchists must especially devote their attention."* [Malatesta, **Op. Cit.**, pp. 160-1] Unless people think and act for themselves, no social revolution is possible and anarchy will remain just a tendency with authoritarian societies.

Practically, this means the encouragement of self-management and direct action. Anarchists thus *"push the people to expropriate the bosses and put all goods in common and organise their daily lives themselves, through freely constituted associations, without waiting for orders from outside and refusing to nominate or recognise any government or constituted body in whatever guise . . . even in a provisional capacity, which ascribes to itself the right to lay down the law and impose with force its will on others."* [Malatesta, **Op. Cit.**, p. 197] This is because, to quote Bakunin, anarchists do *"not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction."* [**Michael Bakunin: Selected Writings**, p. 237]

As the history of every revolution shows, *"revolutionary government"* is a contradiction in terms. Government bodies mean *"the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the*

struggle and its objectives [are] also transferred to a governing hierarchy, and this could have no other than an adverse effect on the morale of the revolutionary fighters." [Vernon Richards, **Lessons of the Spanish Revolution**, pp. 42-3] Such a centralisation of power means the suppression of local initiatives, the replacing of self-management with bureaucracy and the creation of a new, exploitative and oppressive class of officials and party hacks. Only when power rests in the hands of everyone can a social revolution exist and a free society created. If this is not done, if the state replaces the self-managed associations of a free people, all that happens is the replacement of one class system by another. This is because the state is an instrument of minority rule -- it can never become an instrument of majority rule, its centralised, hierarchical and authoritarian nature excludes such a possibility (see [section H.3.7](#) for more discussion on this issue).

Therefore an important role of anarchists is to undermine hierarchical organisation by creating self-managed ones, by keeping the management and direction of a struggle or revolution in the hands of those actually conducting it. It is **their** revolution, **not** a party's and so they should control and manage it. They are the ones who have to live with the consequences of it. *"The revolution is safe, it grows and becomes strong,"* correctly argues Alexander Berkman, *"as long as the masses feel that they are direct participants in it, that they are fashioning their own lives, that they are making the revolution, that they are the revolution. But the moment that their activities are usurped by a political party or are centred in some special organisation, revolutionary effort becomes limited to a comparatively small circle from the which the large masses are practically excluded. The natural result of that [is that] popular enthusiasm is dampened, interest gradually weakens, initiative languishes, creativeness wanes, and the revolution becomes the monopoly of a clique which presently turns dictator."* [**Op. Cit.**, p. 65]

The history of every revolution proves this point, we feel, and so the role of anarchists (like those described in [section J.3](#)) is clear -- to keep a revolution revolutionary by encouraging libertarian ideas, organisation, tactics and activity. To requote Emma Goldman:

"No revolution can ever succeed as factor of liberation unless the MEANS used to further it be identical in spirit and tendency with the PURPOSE to be achieved." [**Patterns of Anarchy**, p. 113]

Anarchists, therefore, aim to keep the means in line with the goal and their role in any social revolution is to combat authoritarian tendencies and parties while encouraging working class self-organisation, self-activity and self-management and the spreading of libertarian ideas and values within society.

J.7.6 How could an anarchist revolution defend itself?

To some, particularly Marxists, this section may seem in contradiction with anarchist ideas. After all, did Marx not argue in a diatribe against Proudhon that anarchist *"abolishing the state"* implies the *"laying down of arms"* by the working class? However, as will become very clear nothing could be further from the truth. Anarchists have always argued for defending a revolution -- by force, if necessary. Anarchists do not think that abolishing the state involves *"laying down arms."* We argue that Marx (and Marxists)

confuse self-defence by "*the people armed*" with the state, a confusion which has horrific implications (as the history of the Russian Revolution shows -- see the appendix on ["What happened during the Russian Revolution?"](#) for details).

So how would an anarchist revolution (and by implication, society) defend itself? Firstly, we should note that it will **not** defend itself by creating a centralised body, a new state. If it did this then the revolution will have failed and a new class society would have been created (a society based on state bureaucrats and oppressed workers as in the Soviet Union). Thus we reject Marx's notion of "*a revolutionary and transitory form*" of state as confused in the extreme. [Marx quoted by Lenin, **Essential Works of Lenin**, p. 315] Rather, we seek libertarian means to defend a libertarian revolution. What would these libertarian means be?

History, as well as theory, points to them. In all the major revolutions of this century which anarchists took part in they formed militias to defend freedom. For example, anarchists in many Russian cities formed "Black Guards" to defend their expropriated houses and revolutionary freedoms. In the Ukraine, Nestor Makhno helped organise a peasant-worker army to defend the social revolution against authoritarians of right and left. In the Spanish Revolution, the C.N.T. and F.A.I. organised militias to free those parts of Spain under fascist rule after the military coup in 1936.

(As an aside, we **must** point out that these militias had nothing in common -- bar the name -- with the present "militia movement" in the United States. The anarchist militias were organised in a libertarian manner and aimed to defend an anti-statist, anti-capitalist revolution from pro-state, pro-capitalist forces. In contrast, the US "militia movement" is organised in a military fashion, defend property rights and want to create their own governments.)

These anarchist militias were as self-managed as possible, with any "officers" elected and accountable to the troops and having the same pay and living conditions as them. Nor did they impose their ideas on others. When a militia liberated a village, town or city they called upon the population to organise their own affairs, as they saw fit. All the militia did was present suggestions and ideas to the population. For example, when the Makhnovists passed through a district they would put on posters announcing:

"The freedom of the workers and the peasants is their own, and not subject to any restriction. It is up to the workers and peasants to act, to organise themselves, to agree among themselves in all aspects of their lives, as they themselves see fit and desire. . . . The Makhnovists can do no more than give aid and counsel In no circumstances can they, nor do they wish to, govern." [quoted by Peter Marshall, **Demanding the Impossible**, p. 473]

Needless to say, the Makhnovists counselled the workers and peasants "*to set up free peasants' and workers' councils*" as well as to expropriate the land and means of production. They argued that "*[f]reedom of speech, of the press and of assembly is the right of every toiler and any gesture contrary to that freedom constitutes an act of counter-revolution.*" [No Gods, No Masters, vol. 2, pp. 157-8] The

Makhnovists also organised regional congresses of peasants and workers to discuss revolutionary and social issues (a fact that annoyed the Bolsheviks, leading to Trotsky trying to ban one congress and arguing that "*participation in said congress will be regarded as an act of high treason.*" [Op. Cit., p. 151] Little wonder workers' democracy withered under the Bolsheviks!).

The Makhnovists declared principles were voluntary enlistment, the election of officers and self-discipline according to the rules adopted by each unit themselves. Remarkably effective, the Makhnovists were the force that defeated Denikin's army and helped defeat Wrangel. After the Whites were defeated, the Bolsheviks turned against the Makhnovists and betrayed them. However, while they existed the Makhnovists defended the freedom of the working class to organise themselves against both right and left statists. See Voline's **The Unknown Revolution** and Peter Arshinov's **History of the Makhnovist Movement** for more information or the appendix on "[Why does the Makhnovist movement show there is an alternative to Bolshevism?](#)" of this FAQ.

A similar situation developed in Spain. After defeating the military/fascist coup on 19th of July, 1936, the anarchists organised self-managed militias to liberate those parts of Spain under Franco. These groups were organised in a libertarian fashion from the bottom up:

*"The establishment of war committees is acceptable to all confederal militias. We start from the individual and form groups of ten, which come to accommodations among themselves for small-scale operations. Ten such groups together make up one **centuria**, which appoints a delegate to represent it. Thirty **centurias** make up one column, which is directed by a war committee, on which the delegates from the **centurias** have their say. . . although every column retains its freedom of action, we arrive at co-ordination of forces, which is not the same thing as unity of command."* [No Gods, No Masters, vol. 2, pp. 256-7]

Like the Makhnovists, the anarchist militias in Spain were not only fighting against reaction, they were fighting for a better world. As Durruti argued, "*Our comrades on the front know for whom and for what they fight. They feel themselves revolutionaries and they fight, not in defence of more or less promised new laws, but for the conquest of the world, of the factories, the workshops, the means of transportation, their bread and the new culture.*" [Op. Cit., p. 248]

When they liberated towns and villages, the militia columns urged workers and peasants to collectivise the land and means of production, to re-organise life in a libertarian fashion. All across anti-Fascist Spain workers and peasants did exactly that (see [section I.8](#) for more information). The militias only defended the workers' and peasants' freedom to organise their own lives as they saw fit and did not force them to create collectives or dictate their form.

Unfortunately, like the Makhnovists, the C.N.T. militias were betrayed by their so-called allies on the left. The anarchist troops were not given enough arms and were left on the front to rot in inaction. The "unified" command by the Republican State preferred not to arm libertarian troops as they would use

these arms to defend themselves and their fellow workers against the Republican and Communist led counter-revolution. Ultimately, the "*people in arms*" won the revolution and the "People's army" which replaced it lost the war. See Abel Paz's **Durruti: The People Armed**, Vernon Richards **Lessons of the Spanish Revolution** and George Orwell's **Homage to Catalonia** for more information.

While the cynic may point out that, in the end, these revolutions and militias were defeated, it does not mean that their struggle was in vain or a future revolution will not succeed. That would be like arguing in 1940 that democracy is inferior to fascism because the majority of democratic states had been (temporarily) defeated by fascism or fascist states. It does not mean that these methods will fail in the future or that we should embrace apparently more "successful" approaches which end in the creation of a society the total opposite of what we desire (means determine ends, after all, and statist means will create statist ends and apparent "successes" -- like Bolshevism -- are the greatest of failures in terms of our ideas and ideals). All we are doing here is pointing how anarchists have defended revolutions in the past and that these methods were successful for a long time in face of tremendous opposition forces.

Thus, in practice, anarchists have followed Malatesta's argument for the "*creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution.*" [**Op. Cit.**, p. 166] This militia would be based on an armed population and "[t]he power of the people in arms can only be used in the defence of the revolution and the freedoms won by their militancy and their sacrifices." [Vernon Richards, **Lessons of the Spanish Revolution**, p. 44] It does not seek to impose a revolution, for you cannot impose freedom or force people to be free against their will.

Hence anarchists would seek to defend a revolution because, while anarchism "*is opposed to any interference with your liberty . . . [and] against all invasion and violence*" it recognises that when "*any one attacks you, then it is he who is invading you, he who is employing violence against you. You have a right to defend yourself. More than that, it is your duty, as an anarchist to protect your liberty, to resist coercion and compulsion. . . In other words, the social revolution will attack no one, but it will defend itself against invasion from any quarter.*" [Alexander Berkman, **ABC of Anarchism**, p. 81]

As Berkman stresses, this revolutionary defence "*must be in consonance with th[e] spirit [of anarchism]. Self-defence excludes all acts of coercion, of persecution or revenge. It is concerned only with repelling attack and depriving the enemy of opportunity to invade you.*" Any defence would be based on "*the strength of the revolution . . . First and foremost, in the support of the people . . . If they feel that they themselves are making the revolution, that they have become masters of their lives, that they have gained freedom and are building up their welfare, then in that very sentiment you have the greatest strength of the revolution. . . Let them believe in the revolution, and they will defend it to the death.*" Thus the "*armed workers and peasants are the only effective defence of the revolution.*" [**Op. Cit.**, pp. 81-81]

Part of this strength lies in liberty, so no attempt would be made to "defend" the revolution against mere

talk, against the mere expression of an opinion. To *"suppress speech and press is not only a theoretical offence against liberty; it is a direct blow at the very foundations of the revolution. . . It would generate fear and distrust, would hatch conspiracies, and culminate in a reign of terror which has always killed revolution in the pass."* [Op. Cit., p. 83]

Moreover, in the case of foreign intervention, the importance of international solidarity is important. As Bakunin argued, *"a social revolution cannot be a revolution in one nation alone. It is by nature an international revolution."* [Michael Bakunin: Selected Writings, p. 49] Thus any foreign intervention would face the problems of solidarity actions and revolts on its own doorstep and not dare send its troops abroad for long, if at all. Ultimately, the only way to support a revolution is to make your own.

Within the revolutionary area, it is the actions of liberated people than will defend it. Firstly, the population would be armed and so counter-revolutionaries would face stiff opposition to their attempts to recreate authority. Secondly, they would face liberated individuals who would reject their attempts:

*"The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary . . . In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom . . . without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system . . . Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the **maintenance** of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition."* [Kropotkin, Op. Cit., pp. 87-8]

Thus any authoritarian would face the direct action of a free people, of free individuals, who would refuse to co-operate with the would-be authorities and join in solidarity with their friends and fellow workers to resist them. The only way a counter-revolution could spread internally is if the mass of the population can become alienated from the revolution and this is impossible in an anarchist revolution as power remains in their hands. If power rests in their hands, there is no danger from counter-revolutionaries.

In the end, an anarchist revolution can be defended only by applying its ideas as widely as possible. Its defence rests in those who make it. If the revolution is an expression of their needs, desires and hopes then it will be defended with the full passion of a free people. Such a revolution **may** be defeated by superior force, who can tell? But the possibility is that it will not and that is what makes it worth trying. To not act because of the possibility of failure is to live half a life. Anarchism calls upon everyone to live the kind of life they deserve as unique individuals and desire as human beings. Individually we can make a difference, together we can change the world.

J.7 What do anarchists mean by "social revolution"?

J.4 What trends in society aid anarchist activity?

In this section we will examine some modern trends which we regard as being potential openings for anarchists to organise. These trends are of a general nature, partly as a product of social struggle, partly as a response to economic and social crisis, partly involving people's attitudes to big government and big business partly in relation to the communications revolution we are currently living through, and so on. We do this because, as Kropotkin argued, the anarchist "*studies human society as it is now and was in the past. . . He [or she] studies society and tries to discover its **tendencies**, past and present, its growing needs, intellectual and economical, and in his ideal he merely points out in which direction evolution goes.*" [**Anarchism and Anarchist Communism**, p. 24] In this section we highlight just a few of the tendencies in modern society which point in an anarchist direction.

Of course, looking at modern society we see multiple influences, changes which have certain positive aspects in some directions but negative ones in others. For example, the business-inspired attempts to decentralise or reduce (certain) functions of governments. In the abstract, such developments should be welcomed by anarchists for they lead to the reduction of government. In practice such a conclusion is deeply suspect simply because these developments are being pursued to increase the power and influence of business and capital and undermine working class power and autonomy. Similarly, increases in self-employment can be seen, in the abstract, as reducing wage slavery. However, if, in practice, this increase is due to corporations encouraging "independent" contractors to cut wages and worsen working conditions, increase job insecurity and undermine paying for health and other employee packages then is hardly a positive sign. Obviously increases in self-employment would be different if such an increase was the result of an increase in the number of co-operatives, for example.

Thus few anarchists celebrate many apparently "libertarian" developments as they are not the product of social movements and activism, but are the product of elite lobbying for private profit and power. Decreasing the power of the state in (certain) areas while leaving (or increasing) the power of capital is a retrograde step in most, if not all, ways. Needless to say, this "rolling back" of the state does not bring into question its role as defender of property and the interests of the capitalist class -- nor could it, as it is the ruling class who introduces and supports these developments.

As an example of these multiple influences, we can point to the economic crisis which has staggered on since 1973 in many Western countries. This crisis, when it initially appeared, led to calls to reduce taxation (at least for the wealthy, in most countries the tax-burden was shifted even more onto the working class -- as was the case in Thatcher's Britain). In most countries, as a result, government "got off the back" of the wealthy (and got even more comfy on **our** back!). This (along with slower growth) helped to create declining revenue bases in the advanced capitalist nations has given central governments an excuse to cut social services, leaving a vacuum that regional and local governments have had to fill along with voluntary organisations, thus producing a tendency toward decentralisation that dovetails with anarchist ideals.

As Murray Bookchin points out, a sustainable ecological society must shift emphasis away from nation-states as the basic units of administration and focus instead on municipalities -- towns, villages, and human-scale cities. Interestingly, the ongoing dismantling of the welfare state is producing such a shift by itself. By forcing urban residents to fend for themselves more than ever before in meeting transportation, housing, social welfare, and other needs, the economic crisis is also forcing them to relearn the arts of teamwork, co-operation, and self-reliance (see his **Remaking Society: Pathways to a Green Future**, p. 183).

Of course the economic crisis also has a downside for anarchists. As hardships and dislocations continue to swell the ranks and increase the militancy of progressive social movements, the establishment is being provoked to use ever more authoritarian methods to maintain control (see D.9). As the crisis deepens over the next few decades, the reactionary tendencies of the state will be reinforced (particularly as the neo-liberal consensus helps atomise society via the market mechanism and the resulting destruction of community and human relationships). However, this is not inevitable. The future depends on our actions in the here and now. In this section of the FAQ we highlight some developments which do, or could, work to the advantage of anarchists. Many of these examples are from the US, but they apply equally to Britain and many other advanced industrial states.

In this section, we aim to discuss tendencies from **below**, not above -- tendencies which can truly "roll back" the state rather than reduce its functions purely to that of the armed thug of Capital. The tendencies we discuss here are not the be all nor end all of anarchist activism or tendencies. We discuss many of the more traditionally anarchist "openings" in [section J.5](#) (such as industrial and community unionism, mutual credit, co-operatives, modern schools and so on) and so will not do so here. However, it is important to stress here that such "traditional" openings are not being downplayed -- indeed, much of what we discuss here can only become fully libertarian in combination with these more "traditional" forms of "*anarchy in action.*"

For a lengthy discussion of anarchistic trends in society, we recommend Colin Ward's classic book **Anarchy in Action**. Ward's excellent book covers many areas in which anarchistic tendencies have been expressed, far more than we can cover here. The libertarian tendencies in society are many. No single work could hope to do them justice.

J.4.1 Why is social struggle a good sign?

Simply because it shows that people are unhappy with the existing society and, more importantly, are trying to change at least some part of it. It suggests that certain parts of the population have reflected on their situation and, potentially at least, seen that **by their own actions** they can influence and change it for the better.

Given that the ruling minority draws its strength of the acceptance and acquiescence of the majority, the fact that a part of that majority no longer accepts and acquiesces is a positive sign. After all, if the majority did not accept the status quo and acted to change it, the class and state system could not

survive. Any hierarchical society survives because those at the bottom follow the orders of those above it. Social struggle suggests that some people are considering their own interests, thinking for themselves and saying "no" and this, by its very nature, is an important, indeed, the most important, tendency towards anarchism. It suggests that people are rejecting the old ideas which hold the system up, acting upon this rejection and creating new ways of doing things.

"Our social institutions," argues Alexander Berkman, *"are founded on certain ideas; as long as the latter are generally believed, the institutions built upon them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present-day conditions means the ultimate breakdown of government and capitalism."* [**The ABC of Anarchism**, p. xv]

Social struggle is the most obvious sign of this change of perspective, this change in ideas, this progress towards freedom.

Social struggle is expressed by direct action. We have discussed both social struggle and direct action before (in sections [J.1](#) and [J.2](#) respectively) and some readers may wonder why we are covering this again here. We do so for two reasons. Firstly, as we are discussing what trends in society help anarchist activity, it would be wrong **not** to highlight social struggle and direct action here. This is because these factors are key tendencies towards anarchism as anarchism will be created by people and social struggle is the means by which people create the new world in the shell of the old. Secondly, social struggle and direct action are key aspects of anarchist theory and we cannot truly present a picture of what anarchism is about without making clear what these are.

So social struggle is a good sign as it suggests that people are thinking for themselves, considering their own interests and working together collectively to change things for the better. As the French syndicalist Emile Pouget argues:

"Direct action . . . means that the working class, forever bridling at the existing state of affairs, expects nothing from outside people, powers or forces, but rather creates its own conditions of struggle and looks to itself for its methodology . . . Direct Action thus implies that the working class subscribes to notions of freedom and autonomy instead of genuflecting before the principle of authority. Now, it is thanks to this authority principle, the pivot of the modern world - democracy being its latest incarnation - that the human being, tied down by a thousand ropes, moral as well as material, is bereft of any opportunity to display will and initiative." [**Direct Action**]

Social struggle means that people come into opposition with the boss and other authorities such as the state and the dominant morality. This challenge to existing authorities generates two related processes: the tendency of those involved to begin taking over the direction of their own activities and the development of solidarity with each other. Firstly, in the course of a struggle, such as a strike,

occupation, boycott, and so on, the ordinary life of people, in which they act under the constant direction of the bosses or state, ceases, and they have to think, act and co-ordinate their actions for themselves. This reinforces the expression towards autonomy that the initial refusal that lead to the struggle indicates. Thus struggle re-enforces the initial act of refusal and autonomy by forcing those involved to act for themselves. Secondly, in the process of struggle those involved learn the importance of solidarity, of working with others in a similar situation, in order to win. This means the building of links of support, of common interests, of organisation. The practical need for solidarity to help win the struggle is the basis for the solidarity required for a free society to be viable.

Therefore the real issue in social struggle is that it is an attempt by people to wrestle at least part of the power over their own lives away from the managers, state officials and so on who currently have it and exercise it themselves. This is, by its very nature, anarchistic and libertarian. Thus we find politicians and, of course, managers and property owners, often denouncing strikes and other forms of direct action. This is logical. As direct action challenges the real power-holders in society and because, if carried to its logical conclusion, it would have to replace them, social struggle and direct action can be considered in essence a revolutionary process.

Moreover, the very act of using direct action suggests a transformation within the people using it. *"Direct action's very powers to fertilise,"* argues Pouget, *"reside in such exercises in imbuing the individual with a sense of his own worth and in extolling such worth. It marshals human resourcefulness, tempers characters and focuses energies. It teaches self-confidence! And self-reliance! And self-mastery! And shifting for oneself!"* Moreover, *"direct action has an unmatched educational value: It teaches people to reflect, to make decisions and to act. It is characterised by a culture of autonomy, an exaltation of individuality and is a fillip to initiative, to which it is the leaven. And this superabundance of vitality and burgeoning of 'self' in no way conflicts with the economic fellowship that binds the workers one with another and far from being at odds with their common interests, it reconciles and bolsters these: the individual's independence and activity can only erupt into splendour and intensity by sending its roots deep into the fertile soil of common agreement."* [Pouget, **Op. Cit.**]

Emma Goldman also recognised the transforming power of direct action. Anarchists, she argues, *"believe with Stirner that man has as much liberty as he is willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social and moral. But defiance and resistance are illegal. Therein lies the salvation of man. Everything illegal necessitates integrity, self-reliance, and courage. In short, it calls for free independent spirits. . ."* [**Red Emma Speaks**, p. 61-2]

Social struggle is the beginning of a transformation of the people involved and their relationships to each other. While its external expression lies in contesting the power of existing authorities, its inner expression is the transformation of people from passive and isolated competitors into empowered, self-directing, self-governing co-operators. Moreover, this process widens considerably what people think is "possible." Through struggle, by collective action, the fact people **can** change things is driven home, that **they** have the power to govern themselves and the society they live in. Thus struggle can change people's conception of "what is possible" and encourage them to try and create a better world. As

Kropotkin argued:

*"since the times of the [first] International Working Men's Association, the anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of labour against capital and its protector -- the State.*

"Such a struggle, they say, . . . permits the worker to obtain some temporary improvements. . . , while it opens his [or her] eyes to the evil that is done by capitalism and the State. . . , and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State." [Kropotkin's Revolutionary Pamphlets, p. 171]

In other words, social struggle has a **radicalising** and **politicising** effect, an effect which brings into a new light existing society and the possibilities of a better world ("*direct action*", in Pouget's words, "*develops the feeling for human personality as well as the spirit of initiative . . . it shakes people out of their torpor and steers them to consciousness.*"). The practical need to unite and resist the boss also helps break down divisions within the working class. Those in struggle start to realise that they need each other to give them the power necessary to get improvements, to change things. Thus solidarity spreads and overcomes divisions between black and white, male and female, heterosexual and homosexual, trades, industries, nationalities and so on. The real need for solidarity to win the fight helps to undermine artificial divisions and show that there are only two groups in society, the oppressed and the oppressors.

Moreover, struggle as well as transforming those involved is also the basis for transforming society as a whole simply because, as well as producing transformed individuals, it also produces new forms of organisation, organisations created to co-ordinate their struggle and which can, potentially at least, become the framework of a libertarian socialist society.

Thus anarchists argue that social struggle opens the eyes of those involved to self-esteem and a sense of their own strength, and the groupings it forms at its prompting are living, vibrant associations where libertarian principles usually come to the fore. We find almost all struggles developing new forms of organisation, forms which are often based on direct democracy, federalism and decentralisation. If we look at every major revolution, we find people creating mass organisations such as workers' councils, factory committees, neighbourhood assemblies and so on as a means of taking back the power to govern their own lives, communities and workplaces. In this way social struggle and direct action lays the foundations for the future. By actively taking part in social life, people are drawn into creating new forms of organisation, new ways of doing things. In this way they educate themselves in participation, in self-government, in initiative and in asserting themselves. They begin to realise that the only alternative to management by others is self-management and organise to achieve thus.

Given that remaking society has to begin at the bottom, this finds its expression in direct action, individuals taking the initiative, building new, more libertarian forms of organisation and using the

power they have just generated by collective action and organisation to change things by their own efforts. Social struggle is therefore a two way transformation -- the external transformation of society by the creation of new organisations and the changing of the power relations within it and the internal transformation of those who take part in the struggle. And because of this, social struggle, "*[w]hatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off. . . and immediately make greater demands and have greater needs. If they do not succeed they will be led to study the causes of their failure and recognise the need for closer unity and greater activism and they will in the end understand that to make their victory secure and definitive, it is necessary to destroy capitalism. The revolutionary cause, the cause of the moral elevation and emancipation of the workers must benefit by the fact that workers unite and struggle for their interests.*" [Errico Malatesta, **Life and Ideas**, p. 191]

Hence Nestor Makhno's comment that "*[i]n fact, it is only through that struggle for freedom, equality and solidarity that you reach an understanding of anarchism.*" [**The Struggle Against the State and other Essays**, p. 71] The creation of an anarchist society is a **process** and social struggle is the key anarchistic tendency within society which anarchists look for, encourage and support. Its radicalising and transforming nature is the key to the growth of anarchist ideas, the creation of libertarian structures and alternatives within capitalism (structures which may, one day, replace capitalism and state) and the creation of anarchists and those sympathetic to anarchist ideas. Its importance cannot be underestimated!

J.4.2 Won't social struggle do more harm than good?

It is often argued that social struggle, by resisting the powerful and the wealthy, will just do more harm than good. Employers often use this approach in anti-union propaganda, for example, arguing that creating a union will force the company to close and move to less "militant" areas.

There is, of course, some truth in this. Yes, social struggle can lead to bosses moving to more compliant workforces -- but, of course, this also happens in periods lacking social struggle too! If we look at the down-sizing mania that gripped the U.S. in the 1980s and 1990s, we see companies down-sizing tens of thousands of people during a period where unions were weak, workers scared about losing their jobs and class struggle basically becoming mostly informal and "underground." Moreover, this argument actually indicates the need for anarchism. It is a damning indictment of any social system that it requires people to kow-tow to their masters otherwise they will suffer economic hardship. It boils down to the argument "*do what you are told, otherwise you will regret it.*" Any system based on that maxim is an affront to human dignity!

It would, in a similar fashion, be easy to "prove" that slave rebellions are against the long term interests of the slaves. After all, by rebelling the slaves will face the anger of their masters. Only by submitting to their master can they avoid this fate and, perhaps, be rewarded by better conditions. Of course, the evil

of slavery would continue but by submitting to it they can ensure their life can become better. Needless to say, any thinking and feeling person would quickly dismiss this reasoning as missing the point and being little more than apologetics for an evil social system that treated human beings as things. The same can be said for the argument that social struggles within capitalism do more harm than good. It betrays a slave mentality unfitting for human beings (although fitting for those who desire to live off the backs of workers or desire to serve those who do).

Moreover, this kind of argument ignores a few key points. Firstly, by resistance the conditions of the oppressed can be maintained or even improved. After all, if the boss knows that their decisions will be resisted they may be less inclined to impose speed-ups, longer hours and so on. If they know that their employees will agree to anything then there is every reason to expect them to impose all kinds of oppressions, just as a state will impose draconian laws if it knows that it can get away with it. History is full of examples of non-resistance producing greater evils in the long term and of resistance producing numerous important reforms and improvements (such as higher wages, shorter hours, the right to vote for working class people and women, freedom of speech, the end of slavery, trade union rights and so on).

So social struggle has been proven time and time again to gain successful reforms. For example, before the 8 hour day movement of 1886 in America, for example, most companies argued they could not introduce that reform without doing bust. However, after displaying a militant mood and conducting an extensive strike campaign, hundreds of thousands of workers discovered that their bosses had been lying and they got shorter hours. Indeed, the history of the labour movement shows what bosses say they can afford and the reforms workers can get via struggle are somewhat at odds. Given the asymmetry of information between workers and bosses, this is unsurprising. Workers can only guess at what is available and bosses like to keep their actual finances hidden. Even the threat of labour struggle can be enough to gain improvements. For example, Henry Ford's \$5 day is often used as an example of capitalism rewarding good workers. However, this substantial pay increase was largely motivated by the unionisation drive by the **Industrial Workers of the World** among Ford workers in the summer of 1913 [Harry Braverman, **Labour and Monopoly Capitalism**, p. 144]. More recently, it was the mass non-payment campaign against the poll-tax in Britain during the late 1980s and early 1990s which helped ensure its defeat (and the 1990 poll-tax riot in London also helped and ensured that the New Zealand government did not introduce a similar scheme in their country too!). In the 1990s, France also saw the usefulness of direct action. Two successive prime ministers (Edouard Balladur and Alain Juppe) tried to impose large scale "reform" programmes that swiftly provoked mass demonstrations and general strikes amongst students, workers, farmers and others. Confronted by crippling disruptions, both governments gave in. Compared to the experience of, say Britain, France's tradition of direct action politics proved more effective in maintaining existing conditions or even improving on them.

Secondly, and in some ways more importantly, it ignores that by resistance those who take part can the social system they live in can be **changed**. This radicalising effect of social struggle can open new doors for those involved, liberate their minds, empower them and create the potential for deep social change. Without resistance to existing forms of authority a free society cannot be created as people adjust themselves to authoritarian structures and accept what is as the only possibility. By resisting, people

transform and empower themselves, as well as transforming society. In addition, new possibilities can be seen (possibilities before dismissed as "utopian") and, via the organisation and action required to win reforms, the framework for these possibilities (i.e. of a new, libertarian, society) created. The transforming and empowering effect of social struggle is expressed well by the ex-IWW and UAW-CIO shop steward Nick DeGaetano in his experiences in the 1930s:

"the workers of my generation from the early days up to now had what you might call a labour insurrection in changing from a plain, humble, submissive creature into a man. The union made a man out of him. . . I am not talking about benefits . . . I am talking about the working conditions and how they affected the man in plant. . . Before they were submissive. Today they are men." [quoted in **Industrial Democracy in America**, Nelson Lichtenstein and Holwell John Harris (eds.), p. 204]

Other labour historians note the same radicalising process elsewhere (modern day activists could give more examples!):

"The contest [over wages and conditions] so pervaded social life that the ideology of acquisitive individualism, which explained and justified a society regulated by market mechanisms and propelled by the accumulation of capital, was challenged by an ideology of mutualism, rooted in working-class bondings and struggles. . . Contests over pennies on or off existing piece rates had ignited controversies over the nature and purpose of the American republic itself." [David Montgomery, **The Fall of the House of Labour**, p. 171]

This radicalising effect is far more dangerous to authoritarian structures than better pay, more liberal laws and so on as they need submissiveness to work. Little wonder that direct action is usually denounced as pointless or harmful by those in power or their spokespersons, for direct action will, taken to its logical conclusion, put them out of a job! Struggle, therefore, holds the possibility of a free society as well as of improvements in the here and now. It also changes the perspectives of those involved, creating new ideas and values to replace the ones of capitalism.

Thirdly, it ignores the fact that such arguments do not imply the end of social struggle and working class resistance and organisation, but rather its **extension**. If, for example, your boss argues that they will move to Mexico if you do not "shut up and put up" then the obvious solution is to make sure the workers in Mexico are also organised! Bakunin argued this basic point over one hundred years ago, and it is still true -- *"in the long run the relatively tolerable position of workers in one country can be maintained only on condition that it be more or less the same in other countries."* If, for example, workers in Mexico have worse wages and conditions than you do, these same conditions will be used against you as the *"conditions of labour cannot get worse or better in any particular industry without immediately affecting the workers in other industries, and that workers of all trades are inter-linked with real and indissoluble ties of solidarity,"* ties which can be ignored only at your own peril. Ultimately, *"in those countries the workers work longer hours for less pay; and the employers there can sell their products cheaper,*

successfully competing against conditions where workers working less earn more, and thus force the employers in the latter countries to cut wages and increase the hours of their workers." Bakunin's solution was to organise internationally, to stop this undercutting of conditions by solidarity between workers. As recent history shows, his argument was correct [**The Political Philosophy of Bakunin**, pp. 306-7]. Thus it is **not** social struggle or militancy which is bad, just **isolated** militancy, struggle which ignores the ties of solidarity required to win, extent and keep reforms and improvements. In other words, our resistance must be as transnational as capitalism is.

The idea that social struggle and working class organisation are harmful was expressed constantly in the 1970s. If we look at the arguments of the right in the 1970s, we also find evidence that the "struggle does more harm than good" viewpoint is flawed. With the post-war Keynesian consensus crumbling, the "New Right" argued that trade unions (and strikes) hampered growth and that wealth redistribution (i.e. welfare schemes which returned some of the surplus value workers produced back into their own hands) hindered "wealth creation" (i.e. economic growth). Do not struggle over income, they argued, let the market decide and everyone will be better off.

This argument was dressed up in populist clothes. Thus we find the right-wing guru F.A. von Hayek arguing that, in the case of Britain, the *"legalised powers of the unions have become the biggest obstacle to raising the standards of the working class as a whole. They are the chief cause of the unnecessarily big differences between the best- and worse-paid workers."* He maintained that *"the elite of the British working class. . . derive their relative advantages by keeping workers who are worse off from improving their position."* Moreover, he *"predict[ed] that the average worker's income would rise fastest in a country where relative wages are flexible, and where the exploitation of workers by monopolistic trade union organisations of specialised workers are effectively outlawed."* ["1980s Unemployment and the Unions" reproduced in **The Economic Decline of Modern Britain**, p. 107, p. 108, p. 110]

Now, if von Hayek's claims were true we could expect that in the aftermath of Thatcher government's trade union reforms we would have seen: a rise in economic growth (usually considered as **the** means to improve living standards for workers by the right); a decrease in the differences between high and low paid workers; a reduction in the percentage of low paid workers as they improved their positions when freed from union *"exploitation"*; and that wages rise fastest in countries with the highest wage flexibility. Unfortunately for von Hayek, the actual trajectory of the British economy exposes his claims as nonsense.

Looking at each of his claims in turn we discover that rather than "exploit" other workers, trade unions are an essential means to shift income from capital to labour (which is way capital fights labour organisers tooth and nail). And, equally important, labour militancy aids **all** workers by providing a floor under which wages cannot drop (non-unionised/militant firms in the same industry or area have to offer similar programs to prevent unionisation and be able to hire workers) and by maintaining aggregate demand. This positive role of unions/militancy in aiding **all** workers can be seen by comparing Britain before and after Thatcher's von Hayek inspired trade union and labour market reforms.

As far as economic growth goes, there has been a steady fall since trade union reforms. In the "bad old days" of the 1970s, with its strikes and "militant unions" growth was 2.4% in Britain. It fell to 2% in the 1980s and fell again to 1.2% in the 1990s [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236]. So the rate of "wealth creation" (economic growth) has steadily fallen as unions were "reformed" in line with von Hayek's ideology (and falling growth means that the living standards of the working class as a whole do not rise as fast as they did under the "exploitation" of the "monopolistic" trade unions). If we look at the differences between the highest and lowest paid workers, we find that rather than decrease, they have in fact shown *"a dramatic widening out of the distribution with the best-workers doing much better"* since Thatcher was elected in 1979 [Andrew Glyn and David Miliband (eds.), **Paying for Inequality**, p. 100]

Given that inequality has also increased, the condition of the average worker must have suffered. For example, Ian Gilmore states that *"[i]n the 1980s, for the first time for fifty years. . . the poorer half of the population saw its share of total national income shirk."* [**Dancing with Dogma**, p. 113] According to Noam Chomsky, *"[d]uring the Thatcher decade, the income share of the bottom half of the population fell from one-third to one-fourth"* and the between 1979 and 1992, the share of total income of the top 20% grew from 35% to 40% while that of the bottom 20% fell from 10% to 5%. In addition, the number of UK employees with weekly pay below the Council of Europe's *"decency threshold"* increased from 28.3% in 1979 to 37% in 1994 [**World Orders, Old and New**, p. 144, p. 145] Moreover, *"[b]ack in the early 1960s, the heaviest concentration of incomes fell at 80-90 per cent of the mean. . . . But by the early 1990s there had been a dramatic change, with the peak of the distribution falling at just 40-50 per cent of the mean. One-quarter of the population had incomes below half the average by the early 1990s as against 7 per cent in 1977 and 11 per cent in 1961. . . ."* [Elliot and Atkinson, **Op. Cit.**, p. 235] "Overall," notes Takis Fotopoulos, *"average incomes increased by 36 per cent during this period [1979-1991/2], but 70 per cent of the population had a below average increase in their income."* [**Towards an Inclusive Democracy**, p. 113]

Looking at the claim that trade union members gained their *"relative advantage by keeping workers who are worse off from improving their position"* it would be fair to ask whether the percentage of workers in low-paid jobs decreased in Britain after the trade union reforms. In fact, the percentage of workers below the Low Pay Unit's definition of low pay (namely two-thirds of men's median earnings) **increased** -- from 16.8% in 1984 to 26.2% in 1991 for men, 44.8% to 44.9% for women. For manual workers it rose by 15% to 38.4%, and for women by 7.7% to 30.7% (for non-manual workers the figures were 5.4% rise to 13.7% for men and a 0.5% rise to 36.6%). If unions **were** gaining at the expense of the worse off, you would expect a **decrease** in the number in low pay, **not** an increase. [**Paying for Inequality**, p.102] An OECD study concluded that *"[t]ypically, countries with high rates of collective bargaining and trade unionisation tend to have low incidence of low paid employment."* [**OECD Employment Outlook**, 1996, p. 94]

Nor did unemployment fall after the trade union reforms. As Elliot and Atkinson point out, *"[b]y the time Blair came to power [in 1997], unemployment in Britain was falling, although it still remained higher than it had been when the [the last Labour Government of] Callaghan left office in May 1979."* [**Op. Cit.**, p. 258] Von Hayek did argue that falls in unemployment would be *"a slow process"*

but over 10 years of higher unemployment is moving at a snail's pace! And we must note that part of this fall in unemployment towards its 1970s level was due to Britain's labour force shrinking (and so, as the July 1997 Budget Statement correctly notes, "*the lower 1990s peak [in unemployment] does not in itself provide convincing evidence of improved labour performance.*" [p. 77]).

As far as von Hayek's prediction on wage flexibility leading to the "*average worker's income*" rising fastest in a country where relative wages are flexible, it has been proved totally wrong. Between 1967 and 1971, real wages grew (on average) by 2.95% per year (nominal wages grew by 8.94%) [P. Armstrong, A. Glyn and John Harrison, **Capitalism Since World War II**, p.272]. In comparison, in the 1990s real wages grew by 1.1 per cent, according to a TUC press release entitled **Productivity Record, how the UK compares** released in March 1999.

Needless to say, these are different eras so it would also be useful to compare the UK (often praised as a flexible economy after Thatcher's "reforms") to France (considered far less flexible) in the 1990s. Here we find that the "flexible" UK is behind the "inflexible" France. Wages and benefits per worker rose by almost 1.2 per cent per year compared to 0.7% for the UK. France's GDP grew at a faster rate than Britain's, averaging 1.4 per cent per year, compared with 1.2 per cent. Worker productivity is also behind, since 1979 (Thatcher's arrival) Britain's worker productivity has been 1.9 per cent per year compared to France's 2.2 per cent [Seth Ackerman, "*The Media Vote for Austerity*", **Extra!**, September/October 1997]. And as Seth Ackerman also notes, "*[w]hile France's dismal record of job creation is on permanent exhibit, it is never mentioned that Britain's is even more dismal.*" [Ibid.]

Moving further afield, we find von Hayek's prediction falsified yet again. If we look at the USA, frequently claimed as a model economy in terms of wage flexibility and union weakness, we discover that the real wages of the average worker has **decreased** since 1973 (the weekly and hourly earnings of US production and non-supervisory workers, which accounts for 80% of the US workforce, have fallen in real terms by 19.2% and 13.4% respectively [**Economic Report of the President 1995**, Table B-45]). If we look at figures from U.S. Bureau of the Census (Current Population Survey) we can see how increased flexibility has affected income:

Income Growth by Quintile

Quintile	1950-1978	1979-1993
Lowest 20%	138%	-15%
2nd 20%	98	-7
3rd 20%	106	-3
4th 20%	111	5
Highest 20%	99	18

As can be seen, flexible wages and weaker unions have resulted in the direct opposite of von Hayek's predictions. Within the US itself, we discover that higher union density is associated with fewer workers

earning around the minimum wage -- *"the percentage of those earning around the minimum wage are both substantially higher in right-to-work states [i.e. those that pass anti-union laws] than overall and lower in high union density states than overall"* and *"in right-to-work states . . . wages have traditionally been lower."* [Oren M. Levin-Waldman, **The Minimum Wage and Regional Wage Structure**] If unions **did** harm non-union workers, we would expect the opposite to occur. It does not. Of course, being utterly wrong has not dented his reputation with the right nor stopped him being quoted in arguments in favour of flexibility and free market reforms.

Moreover, the growth of the US economy has also slowed down as wage flexibility and market reform has increased (it was 4.4% in the 1960s, 3.2% in the 1970s, 2.8% in the 1980s and 1.9% in the first half of the 1990s [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236]). In addition, inequality in the US has dramatically increased since the 1970s, with income and wealth growth in the 1980s going predominately to the top 20% (and, in fact, mostly to the top 1% of the population). The bottom 80% of the population saw their wealth grow by 1.2% and their income by 23.7% in the 1980s, while for the top 20% the respective figures were 98.2% and 66.3% (the figures for the top 1% were 61.6% and 38.9%, respectively). [Edward N. Wolff, *"How the Pie is Sliced"*, **The American Prospect**, no. 22, Summer 1995]

Comparing the claims of von Hayek to what actually happened after trade union reform and the reduction of class struggle helps to suggest that the claims that social struggle is self-defeating are false (and probably self-serving, considering it is usually bosses and employer supported parties and economists who make these claims). A **lack** of social struggle has been correlated with low economic growth, stagnant (even declining) wages and the creation of purely paid service jobs to replace highly paid manufacturing ones. So while social struggle **may** make capital flee and other problems, lack of it is no guarantee of prosperity (quite the reverse, if the last quarter of the 20th century is anything to go by!). Indeed, a lack of social struggle will make bosses be more likely to cut wages, worsen working conditions and so on -- after all, they feel they can get away with it! Which brings home the fact that *"to make their [the working class'] victory secure and definitive, it is necessary to destroy capitalism."* [Errico Malatesta, **Life and Ideas**, p. 191]

Of course, no one can **know** that struggle will make things better. It is a guess; no one can predict the future. Not all struggles are successful and many can be very difficult. If the *"military is a role model for the business world"* (in the words of an ex-CEO of Hill & Knowlton Public Relations [quoted by John Stauber and Sheldon Rampton in **Toxic Sludge Is Good For You!**, p. 47]), and it is, then **any** struggle against it and other concentrations of power may, and often is, difficult and dangerous at times. But, as Zapata once said, *"better to die on your feet than live on your knees!"* All we can say is that social struggle can and does improve things and, in terms of its successes and transforming effect on those involved, well worth the potential difficulties it can create. Moreover, without struggle there is little chance of creating a free society, dependent as it is on individuals who refuse to bow to authority and have the ability and desire to govern themselves. In addition, social struggle is always essential, not only to **win** improvements, but to **keep** them as well. In order to fully secure improvements you have to abolish capitalism and the state. Not to do so means that any reforms can and will be taken away (and if social struggle does not exist, they will be taken away sooner rather than later). Ultimately, most

anarchists would argue that social struggle is not an option -- we either do it or we put up with the all the petty (and not so petty) impositions of authority. If we do not say "no" then the powers that be will walk all over us.

As the history of the last 20 years shows, a lack of social struggle is fully compatible with worsening conditions. Ultimately, if you want to be treated as a human being you have to stand up for your dignity -- and that means thinking and rebelling. As Bakunin often argued, human development is based on thought and rebellion (see **God and the State**). Without rebellion, without social struggle, humanity would stagnate beneath authority forever and never be in a position to be free. We would agree wholeheartedly with the Abolitionist Frederick Douglass:

"If there is no struggle, there is no progress. Those who profess to favour freedom and yet deprecate agitation are people who want crops without plowing up the ground. They want rain without thunder and lightning. That struggle might be a moral one; it might be a physical one; it might be both moral and physical, but it must be a struggle. Power concedes nothing without a demand. It never did and never will. People might not get all that they work for in this world, but they must certainly work for all they get."

J.4.3 Are the new social movements a positive development for anarchists?

When assessing the revolutionary potential of our own era, we must note again that modern civilisation is under constant pressure from the potential catastrophes of social breakdown, ecological destruction, and proliferating weapons of mass destruction. These crises have drawn attention as never before to the inherently counter-evolutionary nature of the authoritarian paradigm, making more and more people aware that the human race is headed for extinction if it persists in outmoded forms of thought and behaviour. This awareness produces a favourable climate for the reception of new ideas, and thus an opening for radical educational efforts aimed at creating the mass transformation of consciousness which must take place alongside the creation of new liberatory institutions.

This receptiveness to new ideas has led to a number of new social movements in recent years. From the point of view of anarchism, the four most important of these are perhaps the feminist, ecology, peace, and social justice movements. Each of these movements contain a great deal of anarchist content, particularly insofar as they imply the need for decentralisation and direct democracy. Since we have already commented on the anarchist aspects of the ecology and feminist movements, here we will limit our remarks to the peace and social justice movements.

It is clear to many members of the peace movement that international disarmament, like the liberation of women, saving the planet's ecosystem, and preventing social breakdown, can never be attained without a shift of mass consciousness involving widespread rejection of hierarchy, which is based on the authoritarian principles of domination and exploitation. As C. George Bennello argued, *"[s]ince peace involves the positive process of replacing violence by other means of settling conflict. . . it can be argued*

that some sort of institutional change is necessary. For if insurgency is satisfied with specific reform goals, and does not seek to transform the institutional structure of society by getting at its centralised make-up, the war system will probably not go away. This is really what we should mean by decentralising: making institutions serve human ends again by getting humans to be responsible at every level within them." [From the Ground Up, p. 31]

When pursued along gender, class, racial, ethnic, or national lines, these two principles are the primary causes of resentment, hatred, anger, and hostility, which often explode into individual or organised violence. Therefore, both domestic and international peace depend on decentralisation, i.e. dismantling hierarchies, thus replacing domination and exploitation by the anarchist principles of co-operation, sharing, and mutual aid.

But direct democracy is the other side of decentralisation. In order for an organisation to spread power horizontally rather than concentrating it at the apex of hierarchy, all of its members have to have an equal voice in making the decisions that affect them. Hence decentralisation implies direct democracy. So the peace movement implies anarchism, because world peace is impossible without both decentralisation and direct democracy. Moreover, "*[s]o long as profits are tied to defence production, speaking truth to the elites involved is not likely to get very far*" as "*it is only within the boundaries of the profit system that the corporate elites would have any space to move.*" [Op. Cit., p. 34] Thus the peace movement implicitly contains a libertarian critique of both forms of the power system -- the political and economical.

In addition, certain of the practical aspects of the peace movement also suggest anarchistic elements. The use of non-violent direct action to protest against the war machine can only be viewed as a positive development by anarchists. Not only does it use effective, anarchistic methods of struggle it also radicalises those involved, making them more receptive to anarchist ideas and analysis (after all, as Benello correctly argues, the "*anarchist perspective has an unparalleled relevance today because prevailing nuclear policies can be considered as an ultimate stage in the divergence between the interests of governments and their peoples . . . the implications when revealed serve to raise fundamental questions regarding the advisability of entrusting governments with questions of life and death. . . There is thus a pressing impetus to re-think the role, scale, and structure of national governments.*" [Op. Cit., p. 138]).

If we look at the implications of "*nuclear free zones*" we can detect anarchistic tendencies within them. A nuclear free zone involves a town or region declaring an end of its association with the nuclear military industrial complex. They prohibit the research, production, transportation and deployment of nuclear weapons as well as renouncing the right to be defended by nuclear power. This movement was popular in the 1980s, with many areas in Europe and the Pacific Basin declaring that they were nuclear free zones. As Benello points out, "*[t]he development of campaigns for nuclear free zones suggests a strategy which can educate and radicalise local communities. Indeed, by extending the logic of the nuclear free zone idea, we can begin to flesh out a libertarian municipalist perspective which can help move our communities several steps towards autonomy from both the central government and the*

existing corporate system." While the later development of these initiatives did not have the radicalising effects that Benello hoped for, they did "represent a local initiative that does not depend on the federal government for action. Thus it is a step toward local empowerment. . . Steps that increase local autonomy change the power relations between the centre and its colonies. . . The nuclear free zone movement has a thrust which is clearly congruent with anarchist ideas. . . The same motives which go into the declaration of a nuclear free zone would dictate that in other areas where the state and the corporate systems services are dysfunctional and involve excessive costs, they should be dispensed with." [Op. Cit., p. 137, pp. 140-1]

The social justice movement is composed of people seeking fair and compassionate solutions to problems such as poverty, unemployment, economic exploitation, discrimination, poor housing, lack of health insurance, wealth and income inequalities, and the like. Such concerns have traditionally been associated with the left, especially with socialism and trade-unionism. Recently, however, many radicals have begun to perceive the limitations of both Marxist-Leninist and traditional trade-unionist solutions to social justice problems, particularly insofar as these solutions involve hierarchical organisations and authoritarian values.

Following the widespread disillusionment with statism and centrally planned economies generated by the failure of "Communism" in the ex-Soviet Union and Eastern European nations, many radicals, while retaining their commitment to social justice issues, have been searching for new approaches. And in doing so they've been drawn into alliances with ecologists, feminists, and members of the peace movement. (This has occurred particularly among the German Greens, many of whom are former Marxists. So far, however, few of the latter have declared themselves to be anarchists, as the logic of the ecology movement requires.)

It is not difficult to show that the major problems concerning the social justice movement can all be traced back to the hierarchy and domination. For, given the purpose of hierarchy, the highest priority of the elites who control the state is necessarily to maintain their own power and privileges, regardless of the suffering involved for subordinate classes.

Today, in the aftermath of 12 years of especially single-minded pursuit of this priority by two Republican administrations, the United States, for example, is reaping the grim harvest: armies of the homeless wandering the streets; social welfare budgets slashed to the bone as poverty, unemployment, and underemployment grow; sweatshops mushrooming in the large cities; over 43 million Americans without any health insurance; obscene wealth inequalities; and so on. This decay promises to accelerate in the US during the coming years, now that Republicans control both houses of Congress. Britain under the neo-liberal policies of Thatcher and Major has experienced a social deterioration similar to that in the US.

In short, social injustice is inherent in the exploitative functions of the state, which are made possible by the authoritarian form of state institutions and of the state-complex as a whole. Similarly, the authoritarian form of the corporation (and capitalist companies in general) gives rise to social injustice

as unfair income differentials and wealth disparity between owners/management and labour.

Hence the success of the social justice movement, like that of the feminist, ecology, and peace movements, depends on dismantling hierarchies. This means not only that these movement all imply anarchism but that they are related in such a way that it's impossible to conceive one of them achieving its goals in isolation from any of the others.

To take just one example, let's consider the relationship between social justice and peace, which can be seen by examining a specific social justice issue: labour rights.

As Dimitrios Roussopoulos points out, the production of advanced weapons systems is highly profitable for capitalists, which is why more technologically complex and precise weapons keep getting built with government help (with the public paying the tab by way of rising taxes).

Now, we may reasonably argue that it's a fundamental human right to be able to choose freely whether or not one will personally contribute to the production of technologies that could lead to the extinction of the human race. Yet because of the authoritarian form of the capitalist corporation, rank-and-file workers have virtually no say in whether the companies for which they work will produce such technologies. (To the objection that workers can always quit if they don't like company policy, the reply is that they may not be able to find other work and therefore that the choice is not free but coerced.) Hence the only way that ordinary workers can obtain the right to be consulted on life-or-death company policies is to control the production process themselves, through self-management.

But we can't expect real self-management to emerge from the present labour relations system in which centralised unions bargain with employers for "concessions" but never for a dissolution of the authoritarian structure of the corporation. As Roussopoulos puts it, self-management, by definition, must be struggled for locally by workers themselves at the grassroots level:

"Production for need and use will not come from the employer. The owners of production in a capitalist society will never begin to take social priorities into account in the production process. The pursuit of ever greater profits is not compatible with social justice and responsibility." [Dissidence]

For these reasons, the peace and social justice movements are fundamentally linked through their shared need for a worker-controlled economy.

We should also note in this context that the impoverished ghetto environments in which the worst victims of social injustice are forced to live tends to desensitise them to human pain and suffering -- a situation that is advantageous for military recruiters, who are thereby able to increase the ranks of the armed forces with angry, brutalised, violence-prone individuals who need little or no extra conditioning to become the remorseless killers prized by the military command. Moreover, extreme poverty makes military service one of the few legal economic options open to such individuals. These considerations

illustrate further links between the peace and social justice movements -- and between those movements and anarchism, which is the conceptual "glue" that can potentially unite all the new social movement in a single anti-authoritarian coalition.

J.4.4 What is the "economic structural crisis"?

There is an ongoing structural crisis in the global capitalist economy. Compared to the post-war "Golden Age" of 1950 to 1973, the period from 1974 has seen a continual worsening in economic performance in the West and for Japan. For example, growth is lower, unemployment is far higher, labour productivity lower as is investment. Average rates of unemployment in the major industrialised countries have risen sharply since 1973, especially after 1979. Unemployment *"in the advanced capitalist countries (the 'Group of 7'. . .) increased by 56 per cent between 1973 and 1980 (from an average 3.4 per cent to 5.3 per cent of the labour force) and by another 50 per cent since then (from 5.3 per cent of the labour force in 1980 to 8.0 per cent in 19994)." [Takis Fotopoulos, **Towards and Inclusive Democracy**, p. 35]* Job insecurity has increased (in the USA, for example, there is the most job insecurity since the depression of the 1930s [**Op. Cit.**, p. 141]). In addition, both national economies and the international economy have become far less stable.

This crisis is not confined to the economy. It extends into the ecological and the social. *"In recent years,"* point out Larry Elliot and Dan Atkinson, *"some radical economics have tried to [create] . . . an all-embracing measure of well-being called the Index of Sustainable Economic Welfare [ISEW] . . . In the 1950s and 1960s the ISEW rose in tandem with per capita GDP. It was a time not just of rising incomes, but of greater social equity, low crime, full employment and expanding welfare states. But from the mid-1970s onwards the two measures started to move apart. GDP per head continued its inexorable rise, but the ISEW start to decline as a result of lengthening dole queues, social exclusion, the explosion in crime, habitat loss, environmental degradation and the growth of environment- and stress-related illness. By the start of the 1990s, the ISEW was almost back to the levels at which it started in the early 1990s."* [**The Age of Insecurity**, p. 248] Which indicates well our comments in [section C.10](#), namely that economic factors cannot, and do not, indicate human happiness. However, here we discuss economic factors. This does not imply that the social and ecological crises are unimportant or are reducible to the economy. Far from it. We concentrate on the economic factor simply because this is the factor usually stressed by the establishment and it is useful to indicate the divergence of reality and hype we are currently being subjected to.

Ironically enough, as Robert Brenner points out, *"as the neo-classical medicine has been administered in even stronger doses [since the 1960s], the economy has performed steadily less well. The 1970s were worse than the 1960s, the 1980s worse than the 1970s, and the 1990s have been worse than the 1980s."* [*"The Economics of Global Turbulence"*, **New Left Review**, no. 229, p. 236] This is ironic because during the crisis of Keynesianism in the 1970s the right argued that too much equality and democracy harmed the economy, and so us all in the long run (due to lower growth, sluggish investment and so on). However, after over a decade of pro-capitalist governments, rising inequality, increased freedom for capital and its owners and managers, the weakening of trade unions and so on, economic

performance has become worse!

If we look at the USA in the 1990s (usually presented as an economy that "got it right") we find that the *"cyclical upturn of the 1990s has, in terms of the main macro-economic indicators of growth -- output, investment, productivity, and real compensation -- has been even less dynamic than its relatively weak predecessors of the 1980s and the 1970s (not to mention those of the 1950s and 1960s)." [Op. Cit., p. 5]* Of course, the economy is presented as a success because inequality is growing, the rich are getting richer and wealth is concentrating into fewer and fewer hands. For the rich and finance capital, it can be considered a "Golden Age" and so is presented as such by the media. Indeed, it is for this reason that it may be wrong to term this slow rot a "crisis" as it is hardly one for the ruling elite. Their share in social wealth, power and income has steadily increased over this period. For the majority it is undoubtedly a crisis (the term *"silent depression"* has been accurately used to describe this) but for those who run the system it has by no means been a crisis.

Indeed, the only countries which saw substantial and dynamic growth after 1973 were those which used state intervention to violate the eternal "laws" of neo-classical economics, namely the South East Asian countries (in this they followed the example of Japan which had used state intervention to grow at massive rates after the war). Of course, before the economic crisis of 1997, "free market" capitalists argued that these countries were classic examples of "free market" economies. For example, right-wing icon F.A von Hayek asserted that *"South Korea and other newcomers" had "discovered the benefits of free markets"* when, in fact, they had done nothing of the kind [*"1980s Unemployment and the Unions"* reproduced in **The Economic Decline of Modern Britain**, p. 113]. More recently, in 1995, the **Heritage Foundation** released its index of economic freedom. Four of the top seven countries were Asian, including Japan and Taiwan. All the Asian countries struggling just four years later were qualified as "free." However, as Takis Fotopoulos argues, *"it was not laissez-faire policies that induced their spectacular growth. As a number of studies have shown, the expansion of the Asian Tigers was based on massive state intervention that boosted their export sectors, by public policies involving not only heavy protectionism but even deliberate distortion of market prices to stimulate investment and trade."* [Op. Cit., p. 115] After the crisis, the free-marketeers discovered the statism that had always been there and danced happily on the grave of what used to be called *"the Asian miracle."*

Such hypocrisy is truly sickening and smacks of a Stalinist/Orwellian desire to re-write history so as to appear always right. Moreover, such a cynical analysis actually undermines their own case for the wonders of the "free market." After all, until the crisis appeared, the world's investors -- which is to say "the market" -- saw nothing but blue skies ahead for these economies. They showed their faith by shoving billions into Asian equity markets, while foreign banks contentedly handed out billions in loans. If Asia's problems are systemic and the result of these countries' statist policies, then investors' failure to recognise this earlier is a blow against the market, not for it.

Still more perverse is that, even as the supporters of "free-market" capitalism conclude that history is rendering its verdict on the Asian model of capitalism, they seem to forget that until the recent crisis they themselves took great pains to deny that such a model existed. Until Asia fell apart, supporters of "free-market" capitalism happily held it up as proof that the only recipe for economic growth was open

markets and non-intervention on the part of the state. Needless to say, this re-writing of history will be placed down the memory-hole, along with any other claims which have subsequently been proved utter nonsense.

So, as can be seen, the global economy has been marked by an increasing stagnation, the slowing down of growth, in the western economies (for example, the 1990s business upswing has been the weakest since the end of the Second World War). This is despite (or, more likely, **because of**) the free market reforms imposed and the deregulation of finance capital (we say "because of" simply because neo-classical economics argue that pro-market reforms would increase growth and improve the economy, but as we argued in [section C](#) such economics have little basis in reality and so their recommendations are hardly going to produce positive results). Of course as the ruling class have been doing well in this New World Order this underlying slowdown has been ignored and obviously

In recent years crisis (particularly financial crisis) has become increasingly visible, reflecting (finally) the underlying weakness of the global economy. This underlying weakness has been hidden by the speculator performance of the world's stock markets, whose performance, ironically enough, have helped create that weakness to begin with! As one expert on Wall Street argues, "*Bond markets . . . hate economic strength . . . Stocks generally behave badly just as the real economy is at its strongest. . . Stocks thrive on a cool economy, and wither in a hot one.*" [**Wall Street**, p. 124] In other words, real economic weakness is reflected in financial strength.

Henwood also notes that "[w]hat might be called the rentier share of the corporate surplus -- dividends plus interest as a percentage of pre-tax profits and interest -- has risen sharply, from 20-30% in the 1950s to 60% in the 1990s." [**Op. Cit.**, p. 73] This helps explain the stagnation which has afflicted the economies of the west. The rich have been placing more of their ever-expanding wealth in stocks, allowing this market to rise in the face of general economic torpor. Rather than being used for investment, surplus is being funnelled into the finance markets, markets which do concentrate wealth very successfully (retained earnings in the US have decreased as interest and dividend payments have increased [Brenner, **Op. Cit.**, p. 210]). Given that "*the US financial system performs dismally at its advertised task, that of efficiently directing society's savings towards their optimal investment pursuits. The system is stupefyingly expensive, gives terrible signals for the allocation of capital, and has surprisingly little to do with real investment.*" [Henwood, **Op. Cit.**, p. 3] As most investment comes from internal funds, the rise in the rentiers (those who derive their incomes from returns on capital) share of the surplus has meant less investment and so the stagnation of the economy. And the weakening economy has increased financial strength, which in turn leads to a weakening in the real economy. A viscous circle, and one reflected in the slowing of economic growth over the last 30 years.

In effect, especially since the end of the 1970s, has seen the increasing dominance of finance capital. This dominance has, in effect, created a market for government policies as finance capital has become increasingly global in nature. Governments must secure, protect and expand the field of profit-making for financial capital and transnational corporations, otherwise they will be punished by the global markets (i.e. finance capital). These policies have been at the expense of the underlying economy in

general, and of the working class in particular:

"Rentier power was directed at labour, both organised and unorganised ranks of wage earners, because it regarded rising wages as a principal threat to the stable order. For obvious reasons, this goal was never stated very clearly, but financial markets understood the centrality of the struggle: protecting the value of their capital required the suppression of labour incomes." [William Greider, **One World, Ready or Not**, p. 302]
